C. That part-time appointments should be established and held by general practitioners.

D. That in rural areas the appointment of part-time general-practitioner specialists should be retained and encouraged. Such appointments will both benefit the Service and absorb practitioners who, having had specialist training, are reluctant or unable to obtain consultant appointments. General practice in these localities should be no bar to the holding of a specialist appointment.

E. That the attendance of general practitioners at hospitals should be welcomed for the purposes of consultation, ward rounds, clinical and scientific meetings, and inclusion in the hospital teams.

ELECTIONS TO COUNCIL

During the course of the day the results of elections to Council were announced as follows:

Ten members of Council elected by the Representative Body as a whole: Mr. Lawrence Abel, Dr. O. C. Carter, Dr. H. G. Dain, Dr. R. Forbes, Dr. J. A. Gorsky, Lord Horder, Dr. J. A. L. Vaughan Jones, Mr. H. H. Langston, Dr. J. A. Pridham, Sir Lionel Whitby.

Two members elected by representatives of Scottish constituencies: Dr. I. D. Grant, Dr. G. W. Ireland.

One member elected by representatives of constituencies in Wales (including Monmouthshire): Dr. H. R. Frederick.

Surgeon Vice-Admiral Sir Sheldon Dudley was elected as representative of the Medical Branch of the Royal Navy on the Council to fill the vacancy caused by the resignation of Surgeon Rear-Admiral C. H. M. Gimlette for the remaining period of the latter's term of office, 1949–50.

Air Vice-Marshal D'Arcy Power was elected as the representative of the Medical Branch of the Royal Air Force for the period 1950–1.

The Chairman, before closing the meeting, reminded the members of the vast amount of business remaining—108 motions and amendments on the agenda—for the last day of the meeting.

The meeting adjourned at 5 p.m.

MONDAY, JULY 17

The Representative Body reassembled at 9.30 a.m.

THE 1951 MEETING IN SOUTH AFRICA

Government Policy of Racial Discrimination

A private session of the Representative Body was held to consider as a matter of urgency a recommendation from the Council concerning the arrangements for the proposed joint meeting with the Medical Association of South Africa, to be held at Johannesburg in July, 1951. This recommendation was in the following terms:

That the following message be sent to the Medical Association of South Africa:

That the British Medical Association fully recognizes and appreciates that the Medical Association of South Africa imposes no colour bar whatever. Nevertheless, finding itself faced with the possibility that—as a result of local social customs and legislative policy on racial questions—some of its members may be deprived of their rights and privileges while visiting South Africa, the British Medical Association feels compelled to withdraw its acceptance of the invitation to meet jointly with the Medical Association of South Africa in Johannesburg in 1951.

In regretfully reaching this conclusion the Association has no desire whatever to interfere in the domestic affairs of South Africa.

Still hoping that a joint meeting—to which it has looked forward for so long—will be possible, the Association invites the Medical Association of South Africa to consider the possibility of such a joint meeting being held in London in 1951 or subsequently.

After a long discussion, in which the debate reached a very high level, the Representative Body by a very considerable majority rejected the Council's recommendation and decided to adhere to the decision to hold a joint meeting with the South African Medical Association in Johannesburg in 1951.

The Secretary's Request

Dr. Gregg and Dr. Hill made statements on the staffing arrangements consequent upon the election of the Secretary to Parliament. Dr. Hill explained that his Parliamentary work made it difficult for him, even though on leave of absence for Parliamentary work, to continue in the post of Secretary, and he had asked the Chairman of Council that he should be released from the duties of Secretary at the earliest convenient moment.

To the motion by Oxford regarding the position of the Secretary in Parliament was moved and carried an amendment by Torquay welcoming Dr. Hill's election to Parliament. A motion by Bromley on the subject of the Secretariat and political candidatures was withdrawn.

ORDER OF BUSINESS

Attention was called at this point to the eleven pages of agenda still remaining, and the necessity of completing certain business in time to permit of the necessary resolution altering the articles being submitted to the Extraordinary General Meeting of the Association to be held at 12.30 p.m.

It was decided accordingly to take this business under "Organization," and Dr. R. Forbes (Council) moved and Dr. T. W. Morgan (Kingston-on-Thames) seconded that the remaining business be remitted to a Special Representative Meeting to be held in London in the autumn. This was agreed to.

ORGANIZATION

Election of Central Council

Dr. J. A. Pridham, Chairman of the Organization Committee, having moved the reception of the report of Council under that heading, Dr. J. E. Morrison (Stirling) moved that in view of the fact that Group 27 comprises 1,757 members, the representation of the Group on the Council be increased from one to two. Group 27 comprises Glasgow West of Scotland Branch (County Divisions), Stirling Branch, and Border Counties Branch. He said that for every group with over 1,600 members there were two members of Council. Why, then, select out Group 27 for special treatment? In considering the Scottish figures, his motion, if carried, would give one Scottish member on the Council for every 800 members. England was represented on the Council by one seat for every 782 members.

Dr. H. B. Muir (Fife) said that there was no doubt that if the Stirling motion were carried Scotland would gain a certain advantage, but it should be generally agreed that Scotland, in view of the difficult geography of its regions, could not be represented properly by fewer than seven members.

Dr. I. D. Grant (Glasgow) said that he was not speaking as a perfervid nationalist. He was asking only that Group 27 be treated in the same way as other groups which had more than 1,600 members.

Dr. Pridham accepted the Stirling motion, but pointed out that it had been amended by the mover, and as now put forward it did not mean that Scotland got an extra total number; it meant merely a rearrangement of the present representation.

The Stirling motion was carried. Dr. Grant said that he was very unhappy if, as the Chairman of the Committee had suggested, it meant that as a *quid pro quo* Scotland had to sacrifice one of its members elected by representatives of Scottish constituencies.

The Chairman said that the Scottish situation must be unravelled later. The timetable did not permit of any more discussions or of any further motions to be taken. The remainder of the business would be taken at an Adjourned Representative Meeting to be held in London probably in October.

The meeting accorded a vote of thanks to those who had facilitated the work of the representatives at Southport—namely, the Mayor and Corporation, the publicity manager, the assistant manager of the Floral Hall, the chief constable, and the chairman and members of the Southport Annual Meeting Executive Committee, of the Ladies Committee, and of the Southport Division.

The meeting stood adjourned at 12.30 p.m.

THE REPRESENTATIVES' DINNER

At the close of the first day of the Representative Meeting the representatives dined together at the Prince of Wales Hotel, Southport, with their Chairman, Dr. J. A. Brown, presiding. After paying the usual compliment to the Chairman, the company joined the ladies at the Palace Hotel for dancing.

Mr. Lawrence Abel, in proposing the health of Dr. Brown, delivered an amusing speech, serious and gay, but mostly gay, and seasoned with transatlantic stories and classical quotations. By the strict rules of the Representative Body, he said, this was the only occasion during the meeting that a representative was permitted to address his fellow representatives—a reference to the fact that some speakers during the day had unwittingly transgressed the rules by addressing "Ladies and gentlemen" instead of "Mr. Chairman." Mr. Abel went on to speak of the individualism of doctors, and the threat to such individualism entailed by "National Health Servitude." The Representative Meeting was one of the sanctuaries remaining where such individualism had full play. He also referred breezily to the financial position—"We are owed 17½ million—16½ million for general practitioners, plus one million for merit awards for consultants." For two years general practitioners had been waiting, and still there was not a cloud of promise in the sky as big as a man's hand.

After these various entertaining excursions, Mr. Abel turned to the subject of his toast, speaking "as a mere consultant concerning our leading general practitioner." He congratulated the Representative Body on being so clever as to elect J. Alexander Brown to its chairmanship. Dr. Brown had been for 15 years a representative; for 10 years he had served on the Insurance Acts Committee, and after that on the General Medical Services Committee; he had been for eight years on the B.M.A. Council, and was now a direct representative on the General Medical Council. He was a busy and popular general practitioner, who had never been known to fail a colleague or a patient who called upon him for help. He was a man who talked—but not too much—and a kind and respected physician. The chairmanship of the Representative Body was a very important position, both from the public and the Association point of view, and so long as a succession of men like those who had occupied the chair continued to lead the Association there need be no fear for the future of the profession in this country.

Dr. Brown, who was given musical honours, confined himself to thanking Mr. Abel for the kind things he had said. His predecessor, Dr. J. B. Miller, had said earlier in the day that when he was elected chairman of the Representative Body it was the proudest moment of his life, and he himself had the same feeling. The Representative Body was noted for its kindness to its chairmen and the indulgence which it accorded to their occasional, but inevitable, mistakes.

ANNUAL GENERAL MEETING

The 118th Annual General Meeting of the British Medical Association was held at the Floral Hall, Southport, on Monday, July 17. The retiring President, Dr. C. W. Curtis Bain, was in the chair.

Induction of President, 1950–1

The minutes of the last Annual Meeting held at Harrogate on June 27, 1949, were confirmed. The President then inducted into the chair Professor Sir Henry Cohen as President of the Association, 1950–1, and invested him with the presidential badge of office. He mentioned that at 24 Sir Henry Cohen was the youngest man ever to be elected to the staff of the Liverpool Royal Infirmary. At 34 he was the youngest professor of medicine the university had ever had. Whether or not he was the youngest President in the history of the Association he did not know, but it must be a very long time since three successive Presidents were all physicians and all in their early fifties. It was a good answer to those who held that the Association was controlled by old men.

Sir Henry Cohen, on taking the presidential chair, said he could assure them that he was not unaware of his deficiencies, but that did not prevent him from feeling the deepest pleasure and satisfaction at the high compliment and the great honour they were doing him in accepting him as President for the ensuing year. He stood in succession to a line of predecessors with whom he did not venture to challenge comparison except in two respects: his admiration for the Association, which had grown immeasurably during the last few years, and his appreciation of the place in which the Association stood in relation to the profession.

Balance Sheet and Appointment of Auditors

On the motion of the President the balance sheet and income and expenditure account for the year 1949 was submitted and approved.

The motion that Messrs. Price, Waterhouse and Co. be reappointed auditors of the Association until the next Annual General Meeting at a fee of 450 guineas was moved by Dr. I. G. Innes, seconded by Dr. O. C. Carter, and adopted.

President, 1951–2

The President announced that the Representative Body had elected Dr. Alan William Stuart Sichel, of Capetown, as President of the Association, 1951–2.

Vote of Thanks to Past President

The Chairman of Council (Dr. Gregg) moved:

That the hearty thanks of the Annual General Meeting of the Association be given to the retiring President, Dr. C. W. Curtis Bain, for his services as President, 1949–50.

He said that in the pleasure and satisfaction of successive Annual Meetings not the least important factor was the personality of the President. Dr. Bain had certainly lived up to the presidential tradition. It was a gratifying thing, at a time when their relations with the Royal College of Physicians were so close, that they should have had three successive Presidents who were distinguished Fellows of that College. In their expression of thanks to him as President they associated the name of Mrs. Bain, their very gracious hostess at Harrogate.

The vote of thanks was duly accorded, and the meeting adjourned until the evening of the following day at Liverpool for the President's Address.

PROCEEDINGS OF COUNCIL

Saturday, July 15, 1950

A meeting of the outgoing Council was held in the Town Hall, Southport, on Saturday morning, July 15, an hour before the assembly of the Representative Body. Dr. E. A. Gregg was in the chair.

A letter of sympathy was sent to Dr. L. A. Parry, a former member of Council, in his serious illness.

The congratulations of the Council were tendered to the members of the Association on whom honours had recently been conferred by the King.

A report from the Central Consultants and Specialists Committee was presented by Mr. R. L. Newell. It contained two recommendations, both of which were adopted. One of these concerned the constitution of the Radiologists' Group Committee, and the other, put forward on behalf of the Tuberculosis and Diseases of the Chest Group Committee, concerned the fee for examination of employees or prospective employees. It was agreed that the fee for a consultant opinion given by a chest physician upon an employee or prospective employee, at the request of the employer, should be not less than 2½ guineas, with an additional half-guinea if the use of *x*-ray apparatus was involved.

A report from the General Medical Services Committee, presented by Dr. Wand, contained a recommendation, which was agreed to, that the Association be appointed a trustee of the superannuation and death benefit scheme approved by the Medical Insurance Agency. At the Committee's suggestion, the Medical Insurance Agency has drafted proposals for superannuation and death benefit schemes for employees of doctors, such as secretaries and dispensers. The scheme covers pension on retirement at 65 for men and 60 for women, based on salary and length of service, death benefit (for women), and return of contributions on withdrawal from the scheme before death or retirement.

The Council received with pleasure a letter from the president of the Medical Women's Federation stating that at the recent meeting of the council of that body much satisfaction was expressed at the conclusion of the joint negotiations, over a long period, regarding the status of women doctors serving in the armed Forces of the Crown. The letter continued: "We know how important the support of the British Medical Association has been, and I would like, as president, to send you a note of sincere thanks for the B.M.A.'s understanding response to our approach to this thorny question. . . . Of course we would have liked to gain our further point concerning conscription of women doctors. We still feel strongly about this, for we ask for equality of sacrifice as well as equality of opportunity."

A report by the Chairman of Council on his recent visit to Australia to attend the recent British Commonwealth Medical Conference at Brisbane was laid before the Council. The Chairman said that it had been a journey well worth while, and within the possibilities of a short visit it did accomplish some useful results. He expressed his warm thanks to Dr. Macrae, joint deputy secretary, who had accompanied him and had been most helpful. The Council unanimously accorded its grateful thanks to Dr. Gregg for undertaking the journey.

One important matter remained on the agenda, and a special meeting of Council was arranged for the following (Sunday) evening.

HEARD AT THE FLORAL HALL

"Sunny Southport" hardly came up to its adjective so far as the weather was concerned, but lack of sunshine and blue skies was offset as usual by hospitality and friendliness. The management of the Floral Hall, an immense auditorium where the Representative Meeting was held, did everything possible for their guests. Perhaps the opportunities for stealing out for tea or coffee during the duller part of the debates were too abundant and compelling. The staff of the Association, especially the "back-room boys" who remain late at night doing work of which the representatives are scarcely aware, have seldom been better accommodated. They could look out of their rooms from the gallery upon a forum of debate during the day which was transformed in the evening to a hall of gaudy entertainment. The most brilliant scene was on the Friday evening when the Mayor of Southport (Colonel Fleetwood Hesketh) gave a civic reception in honour of the meeting, and dancing and vocal and instrumental entertainment continued until a late hour.

The first words uttered at any Representative Meeting are invariably "Can you hear me?" The microphone is a continual source of frustration—to use a word which figured very largely in the discussions in another connexion. In some parts of the hall one could hear perfectly, but there were pockets of inaudibility, where an isolated sentence would come through crystal clear, quite startling in its apparent irrelevance, preceded and followed by bursts of indistinct rumbling. Some of the older representatives who recalled the meetings of years ago—such as the last time the meeting was held in Lancashire, in 1929—hankered after the days when there were no such "contraptions," and speakers had to exercise their natural powers to make themselves heard, instead of shouting down a sort of telephone. The natural human voice is infinitely preferable to the voice as mechanized and distorted by amplifiers. The omnipresence of the microphone spells death not only to ornamental oratory but to effective debate. Even the eloquence of Demosthenes and of that Cicero whom Mr. Lawrence Abel so effectively quoted at the Representatives' Dinner would have gone down before it.

The number of new members of the Representative Body was unusually large, and many of them made maiden speeches. When it was known that a maiden speech was being made the reception of the speaker was as cordial as it is traditionally in the House of Commons. Speakers showed considerable restraint. Hardly one disregarded the red light warning, and most of them when they finished were still on the green. One laxity which would have been heavily frowned upon in days gone by was the practice of addressing "ladies and gentlemen" instead of the chair.

Humour at Southport was not very much forthcoming. Dr. Ff. Roberts, of Cambridge, amused the assembly by his account of long-drawn-out Government correspondence and lost letters. Some of the two dozen women representatives contributed their share to the humour of the proceedings. One of them described the dinosaur at the Smithsonian Institution, Washington, which is said to have had two brains, one in the head and the other in the tail, and so became extinct because it could not make head or tail of it. Then there was the lady who declared that to be able to come to the microphone and tell her troubles to all of them was her idea of perfect heaven. It was she who introduced the much derided phrase "sub-consultant" and the barely pronounceable word "Shmose" to describe senior hospital medical officers.

One story told at Southport concerned a doctor who was called from his club late at night to examine a man who had been brought to the police station on the suspicion of being drunk in charge of a car. The examining doctor proceeded with the examination, drawing a "straight" chalk line on the floor. The accused man looked at it and said, "Well, if that is a straight line, then I am drunk." One of a little bunch of stories told by the Chairman at the Representative Dinner concerned a nurse at a hospital in Birmingham who was asked at an examination, "What are rose hips?" and replied, "Rose hips are very frequently the commencing sign of a bed sore."

ARMED WITH IRON BAR

In a case that came before a medical service committee a man was said to have gone to a doctor's house armed with an iron bar.

According to the report of the committee the father of a child telephoned the doctor (Dr. A) asking him to visit the child, who had been sick, since he thought the child would choke. The child was on Dr. A's Health Service list. The doctor declined to visit: he was suffering from a severe attack of eczema at the time, and was heavily bandaged. He was being assisted by another doctor (Dr. B) who lived three or four miles away, but thought it unnecessary to ask Dr. B. to carry out the visit if it were no more than a case of the child having brought up its feed.

The father, armed with an iron bar, then went to Dr. A's house and saw the doctor's wife, to whom he was extremely abusive. The doctor's wife arranged for an immediate visit by the district nurse, and promised a visit by Dr. B if the nurse thought it necessary. After examining the child and watching the next feed the nurse did not think it necessary, and notified Dr. A that there seemed to be nothing wrong with the child. After a telephone call from the father to Dr. A the next morning, Dr. B visited the child and found it perfectly well.

Findings of Committee

The committee's opinion was that Dr. A in no way failed to comply with his terms of service. It placed on record its dismay at the action of the father, which he freely admitted, of approaching the doctor's house armed with an iron bar, and of his subsequent rudeness to the doctor's wife. The committee felt that his complaint against the doctor was actuated by malice, and recommended that he be reprimanded.

Questions Answered

Assisting at Operations

Q.—*In a cottage hospital with no resident medical officer assistance at surgical operations performed by the visiting surgeons is given by the general practitioner of the patient concerned. Is remuneration for such work covered by the annual capitation fee?*

A.—Remuneration for assistance at surgical operations is considered to be covered by the capitation fee if the patient operated on is on the list of the doctor assisting. If the patient is not on the doctor's list remuneration is effected through the hospital staff fund (£25 per average occupied bed).

Cost of Periodicals

Q.—*Can I, as a whole-time salaried medical officer, claim an income-tax allowance in respect of periodicals?*

A.—The operative rule under Schedule E forbids the deduction of expenses not "incurred wholly, exclusively, and necessarily in the performance of the duties." Expenses which are incurred to fit the individual to perform the duties are regarded by the courts as not incurred "in" the performance of the duties, and for that reason the cost of professional literature is not allowable in the case of salaried employment.

Advice on Contraception

Q.—*Is advice on contraception included in the terms of our contract under the N.H.S.?*

A.—A practitioner is required under his terms of service to give all necessary advice and treatment to patients on his medical list. While no hard-and-fast ruling is possible, it might be assumed that a practitioner would give contraceptive advice to a patient on medical grounds, and it would be left to his discretion whether it was given on other grounds. Certainly a practitioner would not be committing a breach of his terms of service if he declined to give such advice. A fee for such advice may not be charged to a patient on his medical list.

X-RAY EXAMINATION OF EMIGRANTS

The Australian and New Zealand Governments have now agreed that the fee for the *x*-ray examination of prospective Government-sponsored emigrants should be £2 2s., with a reduction to £1 11s. 6d. in respect of additional members of the same family examined at the same time. This is the fee which has been agreed between radiologists and the Dominions for a full examination, including screening. Radiologists undertaking this work are asked to submit their claim direct to the Dominion representatives concerned and not to the emigrant.

Prospective emigrants to Canada and South Africa are required to meet the expense themselves, and it is suggested that the above fee be regarded as a maximum in these cases.

COMPENSATION FOR GOODWILL

Under the National Health Service Act, 1946, and Medical Practices Compensation Regulations, 1948, compensation for loss of right to sell the goodwill of a medical practice is to be calculated "by reference to the last two accounting years immediately preceding the appointed day." The question was recently raised in the Divisional Court[1] whether such accounts can be made up *ad hoc* for the two years ending on the appointed day. The court answered that they could not, and that the words mean the last two annual periods before the appointed day for which the accounts were normally made up for income-tax purposes.

Correspondence

Merit Awards

SIR,—In the South Somerset Clinical Area consultants have recently met to discuss Merit Awards, and I have recently received my ballot paper to vote for names. On it are the names of 21 consultants in the area, and I am asked to put an X against the nine most deserving.

I have examined the list and found that, excluding myself, no less than eleven consultants are unknown to me even by sight; further, in eleven cases I do not know their specialty. No doubt this ignorance is my own fault and due to my work being at a hospital some 30 miles away from the town where the majority of these consultants work.

I cannot believe that this is a fair way of choosing names for what amounts to a very considerable increase in salary for the favoured few. Taking names out of a hat would be almost as fair.

As regards co-operation with the Ministry in the selection of names, a meeting of consultants was held a short while previously. It was said that the Ministry had £1½ m. which it was most anxious to distribute, and it was further believed that unless the money was accepted now the offer might be withdrawn. The meeting was informed that it was unlikely that anyone under 45 would receive a Merit Award, and that the idea of them was to make up for the loss of private practice.

There was a strong feeling that, while the medical profession was engaged in a long struggle to improve conditions of service and pay in the National Health Service, it was undesirable to co-operate at all about Merit Awards until the profession had gained some satisfaction about much more important matters. A vote was taken as to co-operation; six votes were cast in favour and five against, so the discussion continued and the ballot method of selecting names was decided upon.

I feel very strongly that whatever the rights and wrongs of Merit Awards the present is not the moment for the profession to occupy itself with them. There are large numbers of S.H.M.O.s doing consultant work who are not even eligible for Merit Awards.

If the Ministry is anxious to distribute money, it should be spread widely through the profession to make up for the lamentable fall in income of many doctors, and so help to recover their lost professional status. If the Merit Awards really are to make up for the fall in income due to loss of private practice, they should be divided among all doctors and not given to those whose income has in many cases fallen less than others.

I hope I have made myself clear: in my view specialists should at present adopt a policy of non-cooperation. I intend to write across my ballot paper to this effect, so that it is invalid. I believe that this type of action will show the Ministry that the profession means business, and that it is not merely "throwing a spanner in the works" for no useful purpose.—I am, etc.,

Yeovil, Somerset. R. J. BUXTON.

Grading

SIR,—Some of your readers will be weary of the plaintive cries of S.H.M.O.s, not least among them the erstwhile paid members of professional assessment committees. Others will feel, as I do, that the nadir in the history of medical ethics should not be allowed to be forgotten. The foreign infection which invaded a number of British minds and thus enabled them to judge their fellows *in absentia* will, it is hoped, be rooted out by the only antidote left to us—namely, a renewed and firmer faith in our sense of justice.

I may have overlooked one or two copies of the *B.M.J.*, but so far as I am aware no member of a professional assessment committee has had face enough to announce publicly either his motive or his justification for receiving money as payment for acting as judge and jury in a case where the defendant was not permitted to speak nor even be present either at his trial or appeal. These eminent gentlemen will naturally prefer anonymity, for nemesis is overtaking them. We, the downgraded, have no redress but the satisfaction of knowing that they are now the accused and the entire profession is jury. It has, I think, reached its verdict. The penalty is the condemnation and censure of their more noble-minded colleagues, coupled possibly with the pangs of conscience.

The Minister of Health is not entirely to blame. After all, he is not a doctor and doesn't allow his keen sense of oppression and injustice to interfere with his duty to the State purse. He has from time to time the unfortunate duty of taking Ministerial evasive action. His assertion (*Journal*, July 1, p. 54) that "some posts graded for consultants were inevitably held by individuals who had been graded only as senior hospital medical officers" (note the word "inevitably") will not satisfy the most simple-minded of his critics. When I was graded S.H.M.O. in Liverpool I was invited to undertake fresh duties with greater responsibilities. I suggested that, as I was not graded as a consultant, the regional hospital board might grade the new post as for a consultant. I was told that in that event the post would have to be advertised, and that if I was not the successful applicant I would find myself left as S.H.M.O. with approximately half my original eleven sessions.

Having promptly been placed on a short-list of three for the advisory post to another regional hospital board and lecturer to a university, and, being unsuccessful there, having subsequently achieved consultant status elsewhere, I find my own case forcibly strengthened by the fact that the post I vacated in Liverpool was advertised as a consultant post. It has been filled by a former colleague who ought to have had consultant status allotted to him last year. A third colleague has packed his traps, shaken the Merseyside dust off his feet, and booked his passage to Canada. Yet a fourth colleague must surely achieve consultant status when the review committees sit in 1951, thus making the required apprenticeship a mere matter of about eighteen years.

Mr. Bevan seeks to offset this Gilbertian state of affairs by suggesting the hardship would be worse if a S.H.M.O. "could never have a chance of being regarded as a consultant." I would that he footed our bills for solicitors' fees, stamp duties, and removal costs necessitated by the resultant domestic upheaval, to say nothing of finding new school outfits for the children and pacifying our bank managers.

Is it too much to hope that the review committees will be entirely reappointed (why not elected ?) and that they will reconsider the original gradings ? The unforgivable miscarriage of justice in 1949 and the subsequent failure of other appointment committees to implement not only the Spens recommendations but the instructions of the N.H.S. Act terms and conditions of service have cost us dear. In my own case the loss is approximately £1,250 gross to date. If all else fails, perhaps some librettist and composer will seize on what is obviously the subject of a new comic opera.—I am, etc.,

Worcester. ARTHUR S. WIGFIELD.

Pharmacy More Remunerative

SIR,—In the *Chemist and Druggist Supplement* of July 1 there is an advertisement:

"Medical practitioner (retired) wishes to undertake retail dispensing work in London during next three months."

The present salaries being paid to pharmacists are completely out of relation to those paid to doctors, comparing them from their pre-war standpoint, and it is possible that a doctor might find more remunerative employment in pharmacy than in his own profession. Indeed, I believe this is the case in the official scales for hospitals in respect of the newly qualified. Comment is superfluous.—I am, etc.,

Newcastle-upon-Tyne. A. FORSTER.

Vaccination

SIR,—In the *Supplement* of July 1 (p. 11) the Secretary of the B.M.A. writes a footnote to a letter on vaccination. He states that the Ministry maintains that vaccination forms part of a practitioner's service for which he is already remunerated by capitation fee.

Are not the B.M.A. advisers to the medical profession being a little slow in the uptake on these argumentative subjects ? If what the B.M.A. Secretary writes is true, then the whole basis for assessing the total sum paid as a capitation fee falls to the ground. We have repeatedly been informed that we only see a certain percentage of our patients, therefore the capitation fee is so much. If we are now forced to see every infant whose mother can be persuaded to co-operate for two (sometimes four) attendances for vaccination and two for inoculation in the first year of its life, then it is obvious that the whole new population will have visits or attendances to their credit from the very first year of their lives. In other words every G.P. who does his job *must* see every infant at least on four occasions, and more probably on six, for the first capitation of 16s.

Now this state of affairs was never meant to be, and I consider it a very important item in the argument for a higher rate of pay. We had 16s. paid for being at risk to everyone, and not 16s. with the promise that every newborn member of the Health Service should receive half a dozen items of attendance at 2s. 8d. a time.—I am, etc.,

Christchurch, Hants. EDWARD F. HUNT.

Four Days Lost

SIR,—My appointment as E.N.T. surgeon under the new Health Service having recently been terminated by that authority, the fees due to me up to date of termination of my appointment were paid less four days for the period July 1–4, 1948, as the new Service started on July 5, 1948—surely an extraordinary method of accountancy. Presumably this will apply to all employed in this Gilbertian form of service, though it is obvious that in many cases the four-days deduction will be made in the dim and distant future—whenever particular appointments are terminated.

Incidentally, on being absorbed into this Service, my fees, hitherto paid by the local authority monthly, were automatically reduced by about 33⅓%, in spite of the fact that a responsible Cabinet Minister stated in the House of Commons that H.M. Government gave an assurance that wherever an industry is nationalized employees so taken over would suffer no financial loss. Presumably the medical profession does not share in this assurance.—I am, etc.,

Exeter. CHARLES H. CARROLL.

Payment in the Health Service

SIR,—During the first complete year of the Service I felt that with the novelty of "free" treatment and drugs, and the calls made on us by Form O.S.C.1, figures of work done for the amount paid would be unreliable. With the second year now at an end I am able to provide details of a London practice in a year of little general sickness and no epidemic, and it is of interest that in fact more work was done in the second year than in the first.

The number of items of service per head was just over 4½, and the payment per item, taking the reduction for superannuation into account, was 3s. 9d. gross, less expenses, now 40%, or 2s. 3d. net.

On January 1, 1946, the capitation fee was 15s. 6d., and it is now 17s., not, as many think, 18s., since the Ministry does not pay for the 5% it estimates as not using the Service, though these have to pay for its cost, and we are at risk for them. This shows an increase in the capitation fee of 10% only.

I note that in the year 1946–7 the number of items of service per head was 3.6, and the payment for each, 4s. 7d. gross, less expenses (then at 32%), or 3s. 1d. net. In other words, there has been a drop of 28% in the fee per service rendered. —I am, etc.,

London, S.W.1. A. HARBOUR.

The B.M.A. War Memorial

SIR,—We have had welcome evidence in recent years of our national recovery from the sculptural epidemic of the nineteenth century. It is regrettable that our Council should suffer a relapse, and it will be tragic if those they represent cannot cure them.

A return to peace and plenty may some time make it reasonable to patronize the Arts, but while the world, the British Empire, our country, and our profession are all struggling to keep above the bread line we of all people should not spend £10,000 to enhance the beauty of our house. Our dead brothers merit more than that.

Let the Council reverse the order of their objects. Let us establish a fund of £50,000 for the children of the fallen, with 50,000s. for an illuminated roll of honour—one guinea from each doctor—and anything given in excess of these totals could be expended on statuary.—I am, etc.,

Grimsby, Lincs. E. J. THOMSON.

POINTS FROM LETTERS

Numbers on Lists

Dr. ROBERT WIGODER (*London, S.E.6*) writes: In the *Daily Telegraph* dated June 6 it was reported that the commanding officer of the British Military Hospital in Singapore complained that he was short of staff, as he only had four general practitioners instead of 13 to 406 patients. Mr. Bevan says one doctor should be able to look after 4,000 civilians of all ages from birth to 90. I think no further comment is necessary.

Return to Private Practice

Dr. BASIL S. GRANT (East Horsley, Surrey) writes: It is refreshing to read Dr. C. L. Carter's letter (*Supplement*, June 24, p. 301) after so many others have moaned and groaned about the size of the central pool and the capitation fee. . . . The remedy lies with us—mass resignation to regain our freedom and our status. After which the Minister can use some of the millions which he is at present squandering on a third-rate health service to build houses for the homeless and to finance a provident scheme, grant-in-aid, or some other form of financial help towards the cost of illness. All this can only be obtained by a return to private practice.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Councils.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Captains R. P. Hickey, P. M. Bretland, and W. G. Miln have retired, receiving a gratuity, and have been granted the honorary rank of Major.

Short Service Commissions.—Majors J. C. Scott and H. A. Kreiser have retired, receiving a gratuity. Captains K. D. Foggitt, D. Dexter, and T. D. S. Oswald have retired, receiving a gratuity, and have been granted the honorary rank of Major.

Captain P. J. C. Burton to be Major.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Colonel R. C. Clarke, O.B.E., T.D., has relinquished his appointment as Honorary Colonel of a T.A. Unit, tenure expired.

Captain J. C. Knox, C.B.E., to be Honorary Colonel of a T.A. Unit, in succession to Brigadier W. Anderson, O.B.E. (deceased).

Major (Acting Colonel) C. K. D. Edwards has relinquished the acting rank of Colonel.

Major D. P. Holmes to be acting Colonel.

Majors M. W. Gonin, D.S.O., T.D., and J. S. H. Wade to be acting Lieutenant-Colonels.

Majors (Honorary Lieutenant-Colonels) H. B. Lee and R. G. Evans, M.B.E., from T.A.R.O., to be Majors.

Major D. W. E. Lloyd, M.C., from T.A.R.O., to be Major, and has been granted the acting rank of Lieutenant-Colonel.

Captain (Honorary Major) A. MacOuiston, from T.A.R.O., to be Major.

Captains A. Chambers and H. R. Shields, from T.A.R.O., to be Majors.

Captains J. R. McBoyle and B. W. Wells to be Majors.

Captain (acting Major) D. W. L. Leslie has relinquished the acting rank of Major.

Lieutenants S. H. Madden and W. G. Daynes to be Captains, and have been granted the acting rank of Major.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel T. T. P. Murphy, O.B.E., T.D., from Active List, to be Lieutenant-Colonel.

Majors H. Gass, O.B.E., and H. B. Porteous, M.B.E., from Active List, to be Majors, and have been granted the honorary rank of Lieutenant-Colonel.

Major (Honorary Lieutenant-Colonel) E. G. Mackie, having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O.

Major E. N. Owen, from Active List, to be Major.

Major R. M. Pearce, having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O.

Captains J. K. H. McCullough and M. J. G. Lynch, from Active List, to be Captains, and have been granted the honorary rank of Major.

Captains (Honorary Majors) D. E. O'Connor-Cuffey, S. A. R. Chadwick, J. T. Dunkerley, and C. H. Bulcock, M.C., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.

ROYAL AIR FORCE

Air Commodore (Acting Air Vice-Marshal) W. E. Barnes to be Air Vice-Marshal.

Group Captain (Acting Air Commodore) R. H. Stanbridge, O.B.E., to be Air Commodore.

Squadron Leaders, G. R. Gunn, O.B.E., A. L. Knipe, J. W. Reade, and E. B. Bright, A.F.C., to be Wing Commanders.

Flight Lieutenant M. S. Hughes has relinquished his temporary commission, retaining the rank of Squadron Leader.

Flight Lieutenants R. J. Young and S. M. Rigg to be Squadron Leaders.

ROYAL AIR FORCE VOLUNTEER RESERVE

Flight Lieutenant C. H. Levick to be Squadron Leader.

INDIAN MEDICAL SERVICE

Lieutenant-Colonel H. S. Waters has retired.

Majors D. K. L. Lindsay, O.B.E., T. E. Palmer, O.B.E., and G. F. Harris have retired, and have been granted the honorary rank of Colonel.

Majors T. M. Williams, M. D. Black, W. W. Laughland, L. S. F. Woodhead, M.B.E., W. McN. Niblock, S. W. Allinson, and R. D. MacRae have retired, and have been granted the honorary rank of Lieutenant-Colonel.

Majors W. S. Morgan, A. A. Pullar, O.B.E., H. B. Wright, W. J. Virgin, E. H. Wallace, G. B. Thomas, O.B.E., W. D. Goodall, and J. D. Murdoch, O.B.E., have retired.

Captain J. Lightbody has retired, and has been granted the honorary rank of Lieutenant-Colonel.

Captain P. J. Wormald has retired, and has been granted the honorary rank of Major.

Association Notices

KATHERINE BISHOP HARMAN PRIZE

The Council of the British Medical Association is prepared to consider an award of the Katherine Bishop Harman Prize in the year 1951. The value of the prize is £75. The purpose of the prize, founded in 1926, is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and childbearing. It will be awarded for the best essay submitted in open competition, competitors being left free to select the work they wish to present, provided this falls within the scope of the prize. Any registered medical practitioner in the British Empire is eligible to compete.

Should the Council of the Association decide that no essay submitted is of sufficient merit the prize will not be awarded in 1951 but will be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine. The decision of the Council will be final.

Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. The title of the proposed essay and the motto should be notified in writing to the Secretary by November 1, 1950, and a form for this purpose can be obtained from the Secretary. Essays must be forwarded so as to reach the Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than December 31, 1950. Inquiries relative to the prize should be addressed to the Secretary.

PRIZE ESSAY COMPETITION FOR MEDICAL STUDENTS

The Council of the British Medical Association is prepared to consider the award, in 1951, of prizes to medical students for essays submitted in open competition. The subject of the essays shall be "The Importance of Accurate History-taking in Diagnosis." In their essays students will be expected to refer to cases within their own experience.

The purpose of this competition is to promote systematic observation among medical students. In awarding the prize due regard will be given to evidence of personal observation. No study or essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. A prizewinner in any year is not eligible for a second award of the prize.

Any medical student who is a registered member of a medical school in the United Kingdom and the Colonial Empire at the time of submission of the essay is eligible to compete for a prize. If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. In determining the number and amount of prizes to be awarded, the Council will take into consideration the number of essays received. In 1950 three prizes of £50 and three prizes of £20 each have been awarded. Should the Council decide that no essay entered is of sufficient merit, no award will be made.

Essays must be typewritten or legibly written in the English language on foolscap paper, on one side only, must be unsigned, and must be accompanied by a form of application which can be obtained from the Secretary of the British Medical Association. Essays must be forwarded so as to reach the Secretary not later than January 31, 1951. Inquiries relative to the competition should be addressed to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

OCCUPATIONAL HEALTH PRIZE

The Council of the British Medical Association is prepared to consider the award of an "Occupational Health Prize" in the year 1951. The prize consists of a certificate and a money award to the value of £50. The prize is established by the Council of the Association to encourage interest and research in the field of occupational health. The prize will be awarded biennially. Any member of the Association who is engaged in the practice of occupational health, either whole-time or

part-time, is eligible to compete for the prize. Candidates may select their own subject.

The essay submitted must include personal observations and experiences collected by the candidate in the course of his work. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for a second award of the prize. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay, the decision of the Council on any such point shall be final. Preliminary notice of entry for this competition is required on a form of application to be obtained from the Secretary not later than November 1, 1950. Each essay must be typewritten or printed on one side of the paper only, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Inquiries relative to the prize should be addressed to the Secretary.

Diary of Central Meetings

JULY

24 Mon. Staff Side, Committee "C," 11.30 a.m.
24 Mon. Full Meeting, Committee "C" (at Ministry of Health), 2 p.m.
27 Thurs. General Medical Services Committee, 11 a.m.
27 Thurs. Tuberculosis and Diseases of the Chest Group Committee, 2 p.m.
28 Fri. Drafting Subcommittee, 10.45 a.m.
28 Fri. Venereologists Group, 2.30 p.m.

AUGUST

3 Thurs. Committee on Psychiatry and the Law, 2 p.m.
30 Wed. General Practice Review Committee, 2 p.m.

Branch and Division Meetings to be Held

NORFOLK BRANCH.—At Guildhall, King's Lynn, Thursday, July 27, 3.30 p.m., annual meeting. Address by Dr. Charles Hill, M.P.

NORTH OF ENGLAND BRANCH.—At Bamburgh Castle Golf Club, Thursday, July 27, 12.30 p.m., annual meeting.

Meetings of Branches and Divisions

WINCHESTER DIVISION

The Division held its annual meeting at Winchester on May 20, the chief guest being Mr. Reginald Vick, consulting surgeon to St. Bartholomew's Hospital. Over seventy members and their guests attended.

After the guests had been welcomed by the chairman, Dr. Margaret Savory, of Andover, Mr. Vick gave an address on "Who Would be a Doctor?" He said that he hoped the title did not suggest that he had come down to Winchester to decry the profession or the new and trying circumstances under which it now worked; on the contrary, he had come to praise it. The backbone and most important member of the profession was still the general practitioner, and he hoped that the Health Service would eventually settle down and leave undisturbed the family doctor in his happy relationship with his patient. But he feared the very real danger of over-specialization, which was the trend at present. He had a sympathetic word to say about the doctor's wife, and then discussed all sections of the profession.

After tea the members from outside Winchester were entertained by Winchester doctors until the second part of the meeting. Mr. H. H. Langston was elected chairman for the ensuing year, and Dr. G. G. M. Edelsten, of Sutton Scotney, vice-chairman. The following resolution, among others, was unanimously adopted for the Representative Meeting to be held in July:

"That Council be instructed to form a committee to investigate in all its aspects the case for and against a whole-time salaried medical service, and to report thereon; this report to be published as soon as possible so that the medical profession and the general public as a whole may be adequately prepared for, realize the implications of, and be in the strongest possible position to counter (if thought desirable) any attempt by a future Government to introduce a whole-time salaried medical service."

The Division was congratulated on the success of its campaign to reorganize the B.M.A. The members then adjourned to the Chairman's Sherry Party and the Annual Dinner. Dr. W. S. Larcombe, of Alton, in proposing a toast to the retiring chairman, said that she had, as the first lady chairman of the Division, carried out her duties during a very arduous year in a manner well meriting the appreciation and gratitude of the Division. Mr. Vick, replying to the toast to the guests, caused much amusement in his references to examiners and examinees he had known during his career.

NORTH OF ENGLAND BRANCH

The first meeting of the spring course of scientific meetings was held on February 16. Dr. H. G. Miller and Miss Morley gave a demonstration of speech defects in childhood. The aetiology was discussed and a method of classification offered. The results to be obtained in the various types were demonstrated, and the audience was greatly impressed.

Professor C. H. Stuart Harris then gave an address on "The Practitioner and the Influenza Problem." He emphasized the need for laboratory control of diagnosis for research purposes, and said that with the aid of the laboratory influenza could be broken down into at least four classes: (1) influenza due to virus A and B; (2) febrile catarrh; (3) atypical pneumonia with its aetiological factors; (4) common cold, which is usually afebrile. He described the recent trends of influenza epidemics and how the disease spread through communities and from country to country. At present, deaths from influenza occurred chiefly in the aged, and death was usually from pneumonia, often staphylococcal, or from heart failure. He drew attention to the role of familial infections in influenza. It was apparent that viruses could change their behaviour and virulence. Thus poliomyelitis was increasing in this country, and no one could predict at present whether an influenza pandemic would occur.

He described attempts to control influenza, and mentioned the difficulties that were involved. The general practitioner could help in three ways. In remote country districts he could assist by collecting evidence of the mode of spread and incubation period. He could collect data from the careful observation of families with one or more influenzal members. He could assist in attempts to prevent influenza.

Dr. S. V. Tinsley was in the chair, and Dr. D. Court proposed the vote of thanks. There were 120 members present.

The second meeting was held on March 30. The Nuffield Department of Industrial Health arranged a series of demonstrations of work in progress. These included investigations into erosion of teeth in factory workers who were handling organic acids, and experiments designed to obtain fundamental information about the relationship between man and machine. Other demonstrations emphasized the importance of occupational history and social history in the diagnosis and management of various diseases in industrial workers. Professor R. C. Browne spoke briefly about the work of the department and showed a film on nystagmus in miners.

Dr. F. H. Beards read a paper on the work of an industrial medical officer, illustrating the lecture by reference to the conditions at a large chemical works covering a variety of processes.

Professor R. C. Browne was in the chair, and Dr. H. H. Goodman proposed the vote of thanks.

The third meeting, held on April 20, was devoted to radiology. A fascinating display of radiographs revealed all the common x-ray changes in the various commoner diseases. The display was extensive and carefully documented, and was the work of Dr. D. Ramage, Dr. B. Houston, and Dr. F. Warwick.

Dr. S. Whately Davidson then reviewed the place of radiology in modern diagnosis. He traced the development of x rays, and mentioned the growth of the x-ray department of the Royal Victoria Infirmary, which last year dealt with over 54,000 new patients. He mentioned the newer techniques and then gave a comprehensive review of the radiology of the chest. There were 95 members present, and the meeting was greatly appreciated.

B.M.A. FILM LIBRARY

The following films have been presented to the Film Library.

The Taking of Blood. Sound, monochrome, 1 reel, 22 mins. Author: Bayer Products, Ltd.

Signs and Stages of Anaesthesia. Sound, monochrome, 1 reel, 23 mins. Author: Imperial Chemical Industries, Ltd.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY AUGUST 5 1950

SURVEY OF GENERAL PRACTICE

The Medical Practices Committee has completed its survey as at January 1, 1950, of the number of general practitioners practising in the various parts of England and Wales. The executive council areas or parts of them are listed in four schedules as in the previous survey (*Supplement*, August 6, 1949, p. 70). The areas have been listed in the schedules as follows:

SCHEDULE I

Open areas with high average lists compared with the rest of the country. Any application to practise in these will be granted forthwith.

England: Counties

Cheshire.—District of Runcorn (with the exception of Frodsham and Helsby). Crewe (Crewe and Nantwich District). Haslington (Crewe and Nantwich District).

Derbyshire.—Borough of Ilkeston. Urban Districts of Alfreton, Clay Cross, Heanor, Long Eaton, Ripley, Swadlincote. Rural Districts of Blackwell and Chesterfield.

Durham.—Borough of Hartlepool. Borough of Jarrow and the Urban Districts of Blaydon, Felling, Hebburn, Ryton, Whickham. Urban Districts of Bishop Auckland, Crook and Willington, Shildon, Spennymoor, Tow Law. Urban Districts of Bolden, Hetton, Houghton-le-Spring, Seaham and the Rural Districts of Easington, Sunderland.

Essex.—Boroughs of Barking, Chelmsford, Dagenham, Romford. Urban Districts of Billericay, Canvey Island, Hornchurch, Rayleigh.

Gloucester County and City.—Kingswood and Warmley.

Hampshire.—Borough of Eastleigh.

Kent and Canterbury.—Boroughs of Bexley, Chatham, Dartford (and Rural District of Dartford), Erith, Gravesend. Urban District of Crayford.

Lancashire.—Boroughs of Leigh, Middleton. Urban Districts of Abram, Aspull, Audenshaw, Denton, Droylsden, Golborne, Haydock, Hindley, Newton-le-Willows, Standish-with-Langtree, Tyldesley, Westhoughton, Worsley (including Astley and Little Hulton). Haigh (Wigan Rural District). Maghull (West Lancashire Rural District). Poulton-with-Fearnhead (Warrington Rural District). Southworth-with-Croft (Warrington Rural District).

Leicestershire and Rutland.—Hinckley. Melton Mowbray (with the exception of Somerby).

Middlesex.—Boroughs of Edmonton, Tottenham and Wood Green, Heston and Isleworth, Southall. Urban Districts of Hayes and Harlington, Staines, Yiewsley and West Drayton.

Northumberland.—Borough of Wallsend. Urban Districts of Ashington, Bedlingtonshire.

Nottingham County and City.—Arnold, Beeston, Carlton and Netherfield, Carlton-in-Lindrick, Eastwood, Edwinstowe and Ollerton, Kimberley, Warsop.

Staffordshire.—Boroughs of Newcastle-under-Lyme, Rowley Regis, Tipton, Wednesbury. Urban Districts of Brierley Hill, Brownhills, Darlaston, Sedgley, Wednesfield, Willenhall.

Suffolk East.—Borough of Beccles. Rural District of Wainford.

Warwickshire.—Urban District of Bedworth. Rural District of Atherstone.

Worcestershire.—District of Halesowen.

Yorkshire (East Riding).—District of Haltemprice.

Yorkshire (West Riding).—Borough of Ossett, Urban District of Horbury and Rural District of Wakefield. Urban Districts of Adwick-le-Street and Bentley-with-Arksey; Conisborough, Dearnie and Mexborough; Cudworth, Darton and Royston; Darfield, Dodsworth, Wombwell and Worsborough. Urban District of Tickhill, and the Rural District of Doncaster.

England: County Boroughs

Dudley, East Ham, Gateshead, Great Yarmouth, Kingston-upon-Hull, Rotherham, Smethwick, South Shields, Stoke-on-Trent, Walsall, Warrington, West Bromwich, West Hartlepool.

Wales: Counties

Denbighshire and Flintshire.—Borough of Denbigh.

Glamorgan.—Urban District of Pontypridd.

Monmouthshire and Newport.—Urban District of Cwmbran.

SCHEDULE II

Other open areas where applications would be automatically granted.

England: Counties

Bedfordshire.—Boroughs of Bedford, Dunstable, Luton. Urban Districts of Biggleswade, Leighton Buzzard, Sandy. Rural Districts of Ampthill (including Ampthill, Cranfield, Toddington, and Woburn). Bedford (with the exception of Harrold, Riseley, Sharnbrook, and Turvey). Biggleswade (including Arlesey and Shefford). Luton (including Barton and Shillington).

Berkshire.—Urban and Rural Districts of Abingdon, Wallingford, Wantage (with the exception of Brightwalton), Wokingham. Urban District of Maidenhead. Rural Districts of Bradfield, Easthampstead, Faringdon.

Buckinghamshire.—Districts of Aylesbury (with the exception of Brill, Haddenham, Long Crendon), Buckingham, Bletchley, Chesham, High Wycombe (with the exception of Hambleden, Horsley Green, Prestwood, Stokenchurch), Slough.

Cambridgeshire.—Borough of Cambridge. Rural Districts of Chesterton, Newmarket, South Cambridgeshire.

Cheshire.—Districts of Bredbury and Romiley, Cheadle and Gatley, Congleton, Crewe and Nantwich (with the exception of Crewe and Haslington), Hyde, Dukinfield and Stalybridge (with the exception of Hollingworth and Mottram), Macclesfield (with the exception of Bollington), Sale (with the exception of Carrington), Wirral. Districts surrounding the County Borough of Chester (including the Urban Districts of Ellesmere Port and Hoole and the Rural District of Chester). District of Mid-Cheshire (including the Urban Districts of Middlewich, Northwich and Weaverham and Winsford). Frodsham (Runcorn District). Lymm (Knutsford and Wilmslow District).

Cornwall.—Albaston and Calstock, Bodmin, Bugle and St. Dennis, Callington, Camborne, Camelford, Carn Brea, Chacewater, Delabole, Grampound, Helston, Launceston, Looe, Newquay, Penryn, Penzance, Perranporth, Polperro, Porthleven, Port Isaac, Probus, Redruth, St. Austell, St. Blazey, St. Columb, St. Just, Saltash, Torpoint, Truro.

Cumberland.—Aspatria, Brampton, Cleator Moor and Whitehaven, Cockermouth, Distington and Harrington, Egremont, Longtown, Maryport, Penrith, Wetherall, Wigton, Workington.

Derbyshire.—Boroughs of Chesterfield, Glossop. Urban and Rural Districts of Ashbourne, Bakewell, Belper. Urban Districts of Bolsover, Dronfield, Matlock, New Mills, Staveley, Wirksworth. Rural Districts of Chapel-en-le-Frith, Clowne, Repton, Shardlow.

Devon and Exeter.—Axminster, Dartmouth, Exeter and Ide, Ilfracombe, Ivybridge, Kingsbridge, Kingsteignton and Newton Abbot, Plympton, Plymstock and Elburton, Silverton, South Molton, Tavistock, Tiverton, Topsham, Torquay.

Dorsetshire.—Beaminster, Blandford, Branksome, Poole, Parkstone, Canford Cliffs, Sandbanks, Bridport, Portland, Shaftesbury and District, Sherborne, Weymouth and District, Wimborne and District.

Durham.—Durham City, the Urban District of Brandon and Byshottles and the Rural Districts of Durham, Lanchester. Urban and Rural Districts of Barnard Castle (with the exception of Middleton-in-Teesdale, Gainford, and the Rural District of Darlington). Urban and Rural Districts of Chester-le-Street and the Urban

Districts of Consett, Stanley, Washington. Urban and Rural Districts of Stockton, the Urban District of Billingham, and the Rural District of Sedgefield (with the exception of Sedgefield Village and Stillington).

Essex.—Boroughs of Chingford, Colchester, Harwich, Ilford, Leyton, Maldon, Saffron Walden, Walthamstow. Urban Districts of Benfleet, Braintree and Bocking, Brentwood, Burnham-on-Crouch, Chigwell, Clacton-on-Sea, Epping, Halstead, Thurrock, Waltham Holy Cross, Witham, Wivenhoe. Rural Districts of Braintree, Chelmsford, Dunmow, Epping, Halstead, Lexden and Winstree, Maldon, Ongar, Rochford, Saffron Walden, Tendring (with the exception of Great Bentley, St. Osyth and Thorpe-le-Soken).

Gloucester County and City.—Almondsbury, Berkeley, Bitton, Chipping Sodbury, Cinderford, Blakeney, Drybrook, Newnham and Westbury-on-Severn, Cirencester and Rendcomb, Dursley, Uley and Wotton-under-Edge, Filton, Gloucester, Hambrook, Hanham, Hucclecote and Churchdown, Lydbrook, Lydney, Bream, Coleford and Parkend, Mangotsfield, Mitcheldean, Northleach, Stroud, Cainscross, Chalford, Eastcomb, Painswick, Pitchcombe and Stonehouse, Tewkesbury, Tidenham, Winchcombe and Bishops Cleeve.

Hampshire.—Boroughs of Aldershot, Andover, Basingstoke, Gosport, Romsey, Winchester. Urban Districts of Alton, Fareham, Farnborough, Havant and Waterloo, Petersfield. Rural Districts of Andover, Basingstoke, Droxford, New Forest, Petersfield, Ringwood and Fordingbridge, Romsey and Stockbridge, Winchester.

Herefordshire.—Bromyard and district, Hereford and district, Leominster and district, Ross-on-Wye and district (with the exception of Whitchurch), Vowchurch.

Hertfordshire.—Boroughs of Hemel Hempstead, Hertford, St. Albans, Watford (with the exception of the Garston district). Urban Districts of Baldock, Berkhamsted, Bishop's Stortford, Bushey, Cheshunt (including Waltham Cross), Chorley Wood and Rickmansworth, Harpenden, Hitchin, Hoddesdon, Letchworth, Royston, Sawbridgeworth, Tring, Ware, Welwyn Garden City. Rural Districts of Berkhamsted, Braughing, Hatfield, Hemel Hempstead, Hitchin, St. Albans, Ware, Watford, Welwyn.

Huntingdonshire.—Huntingdon, Kimbolton, Ramsey, St. Ives, St. Neots, Somersham, Warboys, Yaxley.

Isle of Ely.—Chatteris with Doddington, Ely, Haddenham with Sutton March, Parson Drove, Thorney, Whittlesey, Wisbech.

Isle of Wight.—Cowes, Newport.

Kent and Canterbury.—Boroughs of Bromley, Canterbury, Deal, Dover, Faversham, Gillingham, Maidstone, Margate, Ramsgate, Rochester. Urban Districts of Ashford, Chislehurst and Sidcup (except St. Paul's Cray and St. Mary's Cray), Northfleet, Orpington, Penge, Sittingbourne and Milton, Swanscombe, Tonbridge, Whitstable. Rural Districts of Bridge Blean, Eastry, Elham, Maidstone, Malling, Strood. Isle of Sheppey.

Lancashire.—Boroughs of Accrington, Ashton-under-Lyne, Bacup, Chorley, Clitheroe, Colne, Crosby, Darwen, Eccles, Farnworth, Fleetwood, Haslingden, Heywood, Lancaster, Morecambe and Heysham, Nelson, Prestwich, Radcliffe, Rawtenstall, Stretford, Swinton and Pendlebury, Widnes. Urban Districts of Adlington, Ashton-in-Makerfield, Atherton, Barrowford, Billinge and Winstanley, Blackrod, Brierfield, Chadderton, Church, Clayton-le-Moors, Crompton, Dalton-in-Furness, Failsworth, Formby, Fulwood, Great Harwood, Horwich, Huyton with Roby, Ince-in-Makerfield, Irlam, Kearsley, Kirkham, Lees, Leyland, Litherland, Littleborough, Little Lever, Longridge, Milnrow, Ormskirk, Orrell, Oswaldtwistle, Padiham, Poulton-le-Fylde, Prescot, Rainford, Ramsbottom, Rishton, Royton, Skelmersdale, Thornton Cleveleys, Tottington, Trawden, Turton, Ulverston, Upholland, Urmston, Walton-le-Dale, Wardle, Whitefield, Whitworth, Withnell. Rural Districts of Blackburn, Burnley, Chorley, Clitheroe, Fylde (except Freckleton), Garstang (with the exception of Bleasdale, Pilling and Stalmine-with-Staynall), Lancaster, Limehurst, Lunesdale, Preston, Ulverston (except Broughton West, Coniston, Hawkshead, Kirkby Ireleth, Lower Allithwaite and Lowick), Warrington (except Poulton-with-Fearnhead and Southworth-with-Croft), West Lancashire (except Maghull), Whiston, Wigan (except Haigh).

Sussex West.—Arundel, Billingshurst, Chichester, Cowfold, Crawley Development Area, Horsham, Lancing, Littlehampton, Petworth, Pulborough, Shoreham and Southwick, West Wittering.

Warwickshire.—Urban Districts of Kenilworth, Leamington Spa, Nuneaton, Rugby, Solihull, Stratford-on-Avon, Sutton Coldfield, Warwick. Rural Districts of Alcester, Meriden (with the exception of Hampton in Arden), Rugby, Tamworth, Warwick, Southam (Southam Rural District).

Westmorland.—Borough of Appleby.

Wiltshire.—Amesbury, Box, Calne, Castle Combe, Chippenham, Corsham, Cricklade, Devizes and Bourton, Downton, Highworth, Ludgershall, Malmesbury, Melksham, Purton, Ramsbury, Salisbury, Stratton St. Margaret, Swindon, Trowbridge, Upavon, Warminster, Westbury, Wilton, Wootton Bassett, Wroughton.

Worcestershire.—Districts of Bromsgrove, Droitwich, Evesham, Kidderminster, Knightwick, Oldbury, Pershore, Redditch, Stourbridge, Stourport-on-Severn, Tenbury, Upton-on-Severn, Worcester (Rural).

Yorkshire (East Riding).—Borough of Hedon and District. Borough and Rural Districts of Beverley, Bridlington. Urban and Rural Districts of Driffield. Rural District of Pocklington. South Holderness district, North and South Cave district, Market Weighton, Newport.

Yorkshire (North Riding).—Boroughs of Redcar, Scarborough, Thornaby-on-Tees. Borough and Rural District of Richmond (with the exception of Aldbrough St. John and Newsham). Urban and Rural Districts of Malton (except Hovingham and Welburn). Urban Districts of Eston, Guisborough, Loftus, Saltburn and Marske, Skelton and Brotton. Urban District of Scalen and Rural District of Scarborough. Rural Districts of Flaxton, Stokesley (except Hutton Rudby, Stokesley and Great Ayton).

Yorkshire (West Riding).—Borough of Batley and Urban District of Heckmondwike Brighouse and Urban Districts of Elland, Queensbury and Shelf. Borough and Rural District of Goole and Urban and Rural Districts of Selby. Borough of Pontefract, Urban Districts of Featherstone, Knottingley and Rural District of Osgoldgross. Borough of Pudsey, Urban Districts of Aireborough, Horsforth. Borough of Todmorden, Urban Districts of Hebden Royd, Ripponden, Sowerby Bridge, and Rural District of Hepton. Borough of Keighley. Borough of Morley. Urban and Rural Districts of Hemsworth; Penistone; Urban Districts of Hoyland Nether, Stocksbridge and Rural District of Wortley. Skipton and Urban Districts of Barnoldswick, Earby, Silsden. Urban Districts of Baildon, Bingley, Denholme, Shipley, Castleford, Normanton, Colne Valley, Denby Dale, Holmfirth, Kirkburton, Meltham, Garforth, Rothwell, Stanley, Mirfield, Spendborough, Rawmarsh, Swinton, Wath-upon-Dearne, Saddleworth, Maltby and Rural Districts of Kiveton Park Rotherham. Rural Districts of Bowland, Sedbergh, Settle, Nidderdale, Ripon and Pateley Bridge (with the exception of Kirkby Malzeard), Tadcaster, Wetherby, Thorne, Wharfedale.

England: County Boroughs

Barnsley, Barrow-in-Furness, Bath, Birkenhead, Birmingham, Blackburn, Bolton, Bootle, Bradford, Brighton (excluding Postal District No. 6), Bristol, Burnley, Burton-upon-Trent, Bury, Carlisle, Coventry, Croydon, Darlington, Derby, Dewsbury, Doncaster, Grimsby, Halifax, Huddersfield, Ipswich, Leeds, Leicester, Lincoln, Liverpool, Manchester, Middlesbrough, Newcastle-upon-Tyne, Northampton, Norwich, Oldham, Plymouth, Portsmouth, Preston, Reading, Rochdale, St. Helens, Salford, Sheffield, Southampton, Southend-on-Sea, Stockport, Sunderland, Tynemouth, Wakefield, Wallasey, West Ham, Wigan, Wolverhampton, Worcester, York.

Wales: Counties

Anglesey.—Urban Districts of Amlwch, Holyhead and Holyhead Island. Rural District of Twrcelyn (with the exception of Llanerchymedd). Rhosneigr (Valley Rural District).

Breconshire.—Brecon and district, Brynmawr and district, Cefn Coed and district, Crickhowell and district, Ystradgynlais with Abercrave, Cwmtwrch, and Pontneathvaughan.

Caernarvonshire.—Boroughs of Bangor, Pwllheli. Urban Districts of Llandudno, Llanfairfechan. Rural District of Gwyrfai (with the exception of Waenfawr).

Cardiganshire.—Tregaron.

Carmarthenshire.—Ammanford and Llandebie, Brynamman, Burry Port and Kidwelly, Cross Hands and Penygroes, Garnant and Glanamman, Llandilo, Llanelly, St. Clears.

Denbighshire and Flintshire.—Buckley Urban District, Caergwrle district, Chirk district, Connah's Quay Urban District, Flint Borough, Hawarden Rural District, Holywell Rural District (except Ffynnongroew), Mold Urban District, Overton Rural District (except Hanmer), Rhyl Urban District, Ruthin Rural District, St. Asaph Rural District (except Dyserth), Wrexham Urban and Rural Districts (except Holt) including Brynbo, Cefn Mawr, Coedpoeth, Garth, Gresford, Llay, Rhosllanerchrugog, Rossett, Ruabon, Summerhill, Trevor.

Glamorgan.—Boroughs of Barry, Port Talbot. Borough and Rural District of Neath. Urban Districts of Aberdare, Bridgend, Caerphilly, Gelligaer, Glyncorrwg, Llwchwr, Maesteg, Mountain Ash, Ogmore and Garw, Rhondda. Rural Districts of Llantrisant and Llantwit Fardre, Penybont, Pontardawe. Bishopston, Reynoldston (Gower Rural District), Rhiwbina, Whitchurch (Cardiff Rural District), Llanharan (Cowbridge Rural District).

Merionethshire.—Dolgelley, Blaenau Festiniog, Festiniog.

Monmouthshire and Newport.—County Borough of Newport. Urban and Rural Districts of Abergavenny, Monmouth (with the exception of Raglan), Pontypool. Urban Districts of Abercarn, Abertillery, Bedwas and Machen, Bedwellty, Blaenavon, Ebbw Vale, Mynyddislwyn, Nantyglo and Blaina, Rhymney, Risca, Tredegar. Rural District of Magor and St. Mellons.

Montgomeryshire.—Montgomery.

Pembrokeshire.—Fishguard and Goodwick, Haverfordwest, Milford Haven, Newcastle Emlyn (parts of the Pembrokeshire Executive Council's area adjacent to this district), Neyland, Pembroke, Pembroke Dock.

Wales: County Boroughs

Cardiff, Merthyr Tydfil, Swansea.

SCHEDULE III

Doubtful areas where additional doctors are not specifically needed and where each application must be carefully considered in the light of the position at the time.

England: Counties

Berkshire.—Urban and Rural Districts of Newbury, Windsor. Rural Districts of Cookham, Hungerford (with the exception of Lambourn).

Buckinghamshire.—Amersham, Haddenham.

Cheshire.—District of Altrincham.

Cornwall.—Bude, Falmouth, Liskeard, Lostwithiel, Padstow, St. Ives and Carbis Bay.

Cumberland.—Kirkbride, Silloth.

Devon and Exeter.—Appledore, Bideford and Northam, Barnstaple, Crediton, Cullompton, Okehampton.

Dorsetshire.—Bere Regis, Charmouth and Lyme Regis, Dorchester, Verwood, Wareham, Winfrith and Wool.

Durham.—Rural District of Weardale.

Essex.—Borough of Wanstead and Woodford.

Gloucester County and City.—Cheltenham, Charlton Kings, Cleeve Hill, and Prestbury. Marshfield, Newent and Corse, Stow-in-the Wold and Bourton-on-the-Water, Thornbury.

Hampshire.—Borough of Christchurch. Urban District of Fleet. Rural Districts of Alton, Hartley Wintney, Kingsclere and Whitchurch.

Herefordshire.—Cradley, Ledbury.

Hertfordshire.—Urban Districts of Barnet and East Barnet, Stevenage. Rural District of Hertford.

Isle of Ely.—Littleport.

Isle of Wight.—Ryde (with the exception of Seaview), Sandown, Shanklin and Brading, Ventnor.

Kent and Canterbury.—Boroughs of Beckenham, Folkestone, Hythe. Urban District of Southborough. Rural Districts of Hollingbourne, Swale, Tonbridge.

Lancashire.—Borough of Mossley.

Lincolnshire (Kesteven).—Sleaford.

London.—Boroughs of Chelsea, Hampstead, Holborn, Kensington, Paddington, St. Marylebone, Westminster.

Middlesex.—Borough of Hendon.

Norfolk.—Urban Districts of Cromer, Sheringham.

Northumberland.—Borough of Berwick-on-Tweed. Urban and Rural Districts of Alnwick. Rural Districts of Belford, Hexham.

Nottingham County and City.—Lowdham and district.

Oxford County and City.—Chipping Norton and district, Deddington and district, Goring-on-Thames, Henley-on-Thames.

Salop.—Chirbury.

Somerset.—Adjacent districts of Bridgwater (with the exception of Dunster, Minehead, Porlock, Stogumber, Williton). Adjacent districts of Taunton (with the exception of Dulverton). Weston-super-Mare and adjacent districts (with the exception of Nailsea, Wedmore, Yatton). Adjacent districts of Yeovil (with the exception of Churchinford, Ilchester, Ilminster, Curry Rivel, Langport, Long Sutton, Keinton Mandeville, Somerton).

Suffolk East.—Urban District of Felixstowe. Otley (Deben Rural District).

Suffolk West.—Rural Districts of Clare, Cosford.

Surrey.—Boroughs of Barnes, Epsom and Ewell, Guildford, Reigate, Richmond, Wimbledon. Urban Districts of Caterham and Warlingham, Coulsdon and Purley, Dorking, Esher, Farnham, Frimley and Camberley, Woking. Rural Districts of Bagshot, Dorking and Horley, Godstone, Guildford, Hambledon.

Sussex East.—Boroughs of Hove, Lewes. Urban Districts of East Grinstead, Portslade, Seaford. Rural Districts of Chailey, Hailsham, Uckfield.

Sussex West.—Bognor Regis, Harting and Rogate, Haslemere (area adjoining Surrey border), Henfield, Midhurst, Steyning.

Warwickshire.—Rural District of Shipston-on-Stour.

Westmorland.—Borough of Kendal. Urban District of Windermere (including Bowness-on-Windermere).

Wiltshire.—Marlborough.

Yorkshire (East Riding).—Urban District of Filey. Urban and Rural Districts of Norton. Beeford, Sherburn, Wetwang, Yedingham.

Yorkshire (North Riding).—Urban and Rural Districts of Northallerton, Pickering, Whitby (except Danby and Grosmont). Rural District of Startforth.

Yorkshire (West Riding).—City of Ripon. Borough of Harrogate and Urban District of Knaresborough. Urban Districts of Ilkley, Otley.

England: County Boroughs

Blackpool, Brighton (Postal District No. 6 only), Chester, Eastbourne, Hastings, Southport.

Wales

Anglesey.—Brynsiencyn.

Breconshire.—Builth and Llanwrtyd and district, Hay-on-Wye and Talgarth and district, Sennybridge and district.

Caernarvonshire.—Borough of Caernarvonshire, Conway and Llandudno Junction. Urban District of Bethesda.

Cardiganshire.—Aberystwyth, Llangeitho.

Carmarthenshire.—Carmarthen, Newcastle Emlyn, Pontyberem, Whitland.

Denbighshire and Flintshire.—Abergele Urban District, Conway Bay Borough, Dyserth (St. Asaph Rural District), and Prestatyn Urban District, Ffynnongroew (Holywell Rural District), Holt (Wrexham Rural District), Llanrwst Urban District.

Glamorgan.—Urban Districts of Penarth, Porthcawl.

Merionethshire.—Penrhyndeudraeth.

Monmouthshire and Newport.—Urban and Rural District of Chepstow (with the exception of Tintern). Urban District of Usk.

Montgomeryshire.—Caersws and Llanidloes, Cemmaes Road, Machynlleth and Aberilefenni, Llanfair Caereinion, Llanfyllin, Llansantffraid and Penybontfawr, Newtown, Welshpool.

Pembrokeshire.—Narberth, Saundersfoot, Tenby.

SCHEDULE IV

Closed areas where the number of doctors is considered to be adequate.

England: Counties

Bedfordshire.—Bedford Rural District: Harrold, Riseley, Sharnbrook, Turvey.

Berkshire.—Brightwalton (Wantage Rural District), Lambourn (Hungerford Rural District).

Buckinghamshire.—Brill, Long Crendon, Chalfont St. Giles, Chalfont St. Peter, Gerrard's Cross, Seer Green, Great Missenden, Prestwood, Hambleden, Horsley Green, Stokenchurch, Beaconsfield.

Cheshire.—Districts of Hoylake and West Kirby, Knutsford and Wilmslow (with the exception of Lymm), Bollington (Macclesfield district), Carrington (Sale district), Helsby (Runcorn district), Hollingworth (Dukinfield, Hyde, and Stalybridge district), Mottram (Dukinfield, Hyde, and Stalybridge district).

Staffordshire.—Rural District of Uttoxeter.

Suffolk East.—Boroughs of Aldeburgh, Southwold. Urban District of Saxmundham. Earl Soham, Peasen Hall, Yoxford (Blyth Rural District), Orford (Deben Rural District), Stradbroke and Pressingfield (Hartismere Rural District), Wangford and Wrentham (Lothingland Rural District).

Suffolk West.—Rural District of Melford.

Surrey.—Urban Districts of Banstead, Haslemere, Leatherhead.

Sussex East.—Borough of Bexhill. Urban and Rural Districts of Cuckfield (including Haywards Heath but with the exception of the Crawley Development Area). Urban District of Rye. Rural District of Battle.

Sussex West.—Angmering, Rustington and East Preston, Barnham, Eastergate and Yapton, Loxwood, Rudgwick and Slinfold, Selsey, Storrington, Worthing.

Warwickshire.—Rural Districts of Southam (except Southam), Stratford-on-Avon. Hampton-in-Arden (Meriden Rural District).

Westmorland.—Ambleside, Arnside, Brough, Glenridding, Grasmere, Kirkby Lonsdale, Kirkby Stephen, Milnthorpe, Orton, Shap, Staveley, Temple Sowerby.

Wiltshire.—Aldbourne, Bradford-on-Avon, Broadchalke, Burbage, Codford St. Mary, Fovant, Great Bedwyn, Hindon, Lacock, Market Lavington and Littleton Panell, Mere, Pewsey, Sherston, Shrewton, Sutton Benger, Tisbury, Whiteparish.

Worcestershire.—Districts of Hundred House, Malvern.

Yorkshire (East Riding).—Rural District of Howden. Urban District of Hornsea. Bubwith, Elvington, Escrick, Holme-on-Spalding-Moor, Leven, Middleton-on-the-Wolds, Rillington, Roos, Stamford Bridge.

Yorkshire (North Riding).—Rural Districts of Aysgarth, Bedale, Easingwold, Helmsley, Kirby Moorside, Leyburn, Masham, Reeth, Thirsk, Wath. Aldbrough St. John and Newsham, Danby and Grosmont, Great Ayton, Hutton Rudby and Stokesley, Hovingham and Welburn.

Yorkshire (West Riding).—Kirkby Malzeard (Ripon and Pateley Bridge Rural District).

England: County Borough

Bournemouth.

Wales: Counties

Anglesey.—Borough of Beaumaris. Urban Districts of Llangefni, Menai Bridge. Rural Districts of Aethwy with the exception of Brynsiencyn), Valley (with the exception of Holyhead Island and Rhosneigr). Llanerchymedd.

Caernarvonshire.—Urban Districts of Bettwys-y-Coed, Criccieth, Penmaenmawr, Portmadoc. Rural Districts of Lleyn, Nant Conway, Waenfawr (Gwyrfai Rural District).

Cardiganshire.—Aberayron, Borth, Cardigan, Crosswood, Henllan, Lampeter, Llandyssul, New Quay, Pontrhydygroes.

Carmarthenshire.—Caio, Conwil Elvet with Abernant and Newchurch, Drefach and Tumble, Ferryside, Llandovery, Llangadock, Llanybyther, Nantgaredig, Pontyates, Trimsaran. Areas immediately adjacent to Henllan and Lampeter in the Cardiganshire Executive Council's area.

Denbighshire and Flintshire.—Cerrigydruidion, Glynceiriog, Hanmer (Overton Rural District), Llanfairtalhaiarn, Llangollen Urban District, Llanrhaiadr-ym-Mochant.

Glamorgan.—Borough and Rural District of Cowbridge (with the exception of Llanharan). Rural District of Cardiff (with the exception of Whitchurch and Rhiwbina). Glamorgan Rural District: Llanmorlais, Penclawdd.

Merionethshire.—Aberdovey, Bala, Barmouth, Corris, Corwen, Harlech, Towyn.

Monmouthshire and Newport.—Urban District of Caerleon. Raglan (Monmouth Rural District), Tintern (Chepstow Rural District).

Pembrokeshire.—Boncath, Maenclochog, Newport, St. Davids, Solva, Trecwn.

Radnorshire.—Whole of County.

GENERAL MEDICAL SERVICES COMMITTEE

THE INQUIRY INTO REMUNERATION

An all-day meeting of the General Medical Services Committee was held on July 27. The Committee extended its congratulations to its chairman, Dr. Wand, on his election as deputy chairman of the Representative Body, and expressed its appreciation of the way in which he had presented the Committee's work to the Annual Representative Meeting.

Dr. Hutchinson drew attention to a film, "The Birth of a Baby," which was being sponsored by the Ministry of Health and in which, it was stated, there was a bias against the participation of the general practitioner in maternity work. The Committee resolved to approach the Chief Medical Officer of the Ministry on the subject and also to protest to a newspaper concerning a statement in its columns.

The chairman reported that representations had been made to the Ministry concerning the incidence of the petrol tax, but no satisfaction had been obtained except that it had been promised that in the inquiry into practice expenses allowance would be made for any material increases in the items making up expenses.

The Committee considered the resolutions of the recent Special Conference concerning remuneration, especially the instruction to make preparation for the termination of contracts to take effect should there be no prospect of a satisfactory settlement of the practitioners' claim. The many aspects of this matter, including the percentage of resignations which was to be judged effective, were considered. It was agreed that the British Medical Guild should be the central machinery, working through local Medical Guild committees, which would be expected for the purpose of this dispute to be adequately representative of the membership of the local medical committees. Three additional members were appointed from the General Medical Services Committee to the Guild Executive.

The Problem of Inflation

A letter from the Ministry was reported stating that, like the profession, it was anxious to deal with the problem of inflation and to arrive at the true number of people on doctors' lists. The Ministry was by no means satisfied that this amounted to as much as 95% of the population. The representative of Northern Ireland on the Committee produced figures from his area, where there was no possibility of overlapping, showing that doctors' lists comprised 97.5% of the population. He believed that for a large proportion of the remaining 2.5% the doctors were also at risk. The chairman said that this authenticated figure from Northern Ireland was most valuable. His own impression was that in many areas up to 99% were on the lists. The Leeds representative said that in his city 496,997 out of a population of 503,500 (about 98.7%) were on the lists.

The Committee had before it the Ministry's "first thoughts" on the scope of the inquiries into remuneration and practice expenses. Dr. Wand said that the immediate reaction of the representatives of the Committee when the Ministry's plan was divulged to them was that the year 1949, the figures for which it was proposed to take as the basis of the calculations, was one with a large background of private practice receipts, as well as certain other extra receipts, including a settling-up cheque for National Health Insurance. As the purpose of the inquiry was to determine the net remuneration for, say, 1951, it was important that no item should be included which would not in fact come into remuneration for that year.

On the other aspect of the inquiry, concerning practice expenses, again, a number of points arose. The first was petrol tax and perhaps other impositions which would be an extra expense in 1951 but would not be shown in the 1949 figures. He mentioned also house repairs and other considerations. Care must be taken that this inquiry, which might determine remuneration for some time to come, was not loaded against the doctor from the beginning. The need for all reasonable speed in arriving at the results of the inquiry had also been impressed on the Ministry.

It was pointed out in the Committee that all that was really necessary was to bring the Spens figures up to date. If the Ministry wanted to include any factor over and above what was taken into consideration in arriving at the Spens figure it was for the Ministry to prove the necessity for it.

The Committee appointed six of its members, headed by Dr. Wand, to go into immediate consultation with the actuary and income-tax assessor acting on their behalf, and also to ask Professor Bradford Hill for his comments, as it was upon his computations that the Spens figures were established, the same body to meet the officials of the Ministry early in the following week.

Health Centres

An interim report from the Health Centres Subcommittee was brought forward. This subcommittee was appointed to consider the position of doctors in areas where a health centre was contemplated. It had held seven meetings at which detailed consideration had been given to a number of important points, including the method of selection and mode of entry to practise in a health centre, co-operation between the practising doctors, and existing practice liabilities.

In discussion in the full Committee questions were raised concerning rents of premises, and the principle was put forward that a doctor going into a health centre should not be called

upon to pay a rent, but, on the other hand, he should not be subsidized in this respect as compared with his colleagues outside. The interim report was accepted for reference to Council, the Committee giving authority, pending Council's approval, for the document to be used as a basis for any advice or action which might be necessary.

The question of change of doctor was the subject of correspondence which appeared on the agenda. The Ministry had drafted certain documents dealing, among other matters, with the introduction of a waiting period before change of doctor could take place. One point to which the Committee took exception was in a draft E.C.N. for issue to doctors which stated that "the procedure for immediate transfer of persons to the successor of a doctor who has died or retired, subject to the person's right to choose another doctor at any time, remains unchanged in all cases." The words "at any time" were replaced by "within one month," and with this modification the documents were approved.

Attention was drawn to the appearance of advertisements offering positions of trainee assistant at salaries in excess of the amount allowed by the Government to a principal for employing a trainee assistant. The Assistants Subcommittee was of opinion that such augmented salaries were undesirable, and that practitioners should be required to adhere to the allowance made by the Government for this purpose. After a brief discussion the Committee argeed to recommend to the Council that advertisements of the kind to which objection was taken on this ground should not be accepted by the *British Medical Journal*.

The Committee considered a memorandum, referred to it by the Central Consultants and Specialists Committee, on the appointment of registrars. The dangers of inbreeding, whereby registrars had difficulty in getting appointments outside their own hospital area, were regarded by the General Medical Services Committee as a matter for concern.

In its long session the Committee considered, among a multitude of other matters, ways and means of effecting economy in prescribing, basic salaries, maternity medical services, the protection of practices in a national emergency (the committee originally appointed on this subject being asked to look at it again in the light of the new international situation), the arrangements for the remuneration of doctors when assisting dentists, and the "mileage" question as affecting doctors called to lighthouses. It is proposed to divide lighthouses into those easily accessible (for which £2 per visit should be paid) and others (£5 per visit), but no payment beyond ordinary mileage would be made in the case of lighthouses which are in a centre of habitation.

IRISH MEDICAL ASSOCIATION

PRESIDENTIAL ADDRESS

Dr. P. T. O'Farrell was elected president of the Irish Medical Association on July 5, and delivered the presidential address. After paying tribute to the work of the previous president, Dr. Patrick Moran, and to his predecessors, Dr. O'Farrell said that they realized social medicine played an important part in the betterment of the people's health and that as individuals they could not always give an efficient service without some form of State aid, particularly in the province of preventive medicine. "But," he said, "we do resent State interference in professional matters until we have been properly consulted as an association." While this promise had been given to them, it had not always been honoured to their satisfaction. They deprecated a form of controlled medicine which believed in exerting authority before acquiescence. In particular they feared a general extension of State medicine which would make them Civil Servants subservient to a soulless and oppressive bureaucracy.

Modern Governments seemed to have little regard for the niceties of moral obligations, and by a form of insidious propaganda and political clamour were able to make the people subservient to what Lord Horder called "a doctrinaire Socialistic adventure." If freedom was threatened, they must be prepared to show the people that State-controlled medicine might be not only bad but sometimes pernicious. To disrupt the doctor-patient relationship could not commend itself to anyone who gave reasonable thought to the subject. The best of medicine should be made available to all citizens, but this did not imply that everyone should be treated free. On both practical and moral grounds they must reject the concept of an exclusive State responsibility for the health and well-being of their people.

Modern medicine was an expensive business not easily borne by a large section of the population, and for that particular group they welcomed some limited form of State aid, provided liberty of action was allowed in the practice of their profession. In pursuance of this policy, they reaffirmed their willingness to work in close collaboration with Government Departments. Their Association had submitted a carefully considered scheme for an improved health service, but it seemed to have been pigeonholed. Acceptance of help should not necessarily entail unquestioned acceptance of authority. When there were differences of opinion between State Departments and the profession, hasty tempers should not be aroused, for peaceful solutions were often better than the enforcement of policies not freely acceptable.

General Practice

The keystone of any form of medical service depended in the first instance on the general practitioner, whom Osler had rightly called the "flower of the profession." The general practitioner should be encouraged in every way, and there was no reason why private practice should not be continued side by side with health services organized by the State.

The association did not approve of the principle of a free medical service for those who could afford to pay. If they accepted it, then private practice would to a great extent disappear. There was, however, a public demand for an extension of the present State health service which they would not wish to oppose. Accordingly they must be prepared to arrive at some kind of reasonable understanding. But they could not agree to a complete State control of the profession. No State medical service could ever be satisfactory or work efficiently without the co-operation and good will of the profession. To get this co-operation some fundamental principles must be conceded—namely, free choice of doctor whenever possible, professional secrecy at all times, and adequate remuneration for services rendered. They must also guard against the dangers of overwork.

On the surface the relations of the association with the Ministry of Health might appear to be somewhat strained, but they assured the Minister of their willingness to co-operate in every way they could, for they respected the good work that he had already done. It should be possible by friendly negotiation to smooth out various differences to achieve the common aim of bringing to the people the best of medicine.

In conclusion he touched on affairs of a more domestic nature. Their relations with the B.M.A., he said, were of a most cordial kind, and they had received much guidance and assistance from B.M.A. Headquarters. At the same time the B.M.A. fully acknowledged the complete independence of the Irish Medical Association, the new name which had recently been agreed upon.

Corrections

In our report of the Annual Representative Meeting (*Supplement*, July 22) under "General Medical Services (Resumed)" at p. 51, we mistakenly reported Dr. H. F. Moffit as having made a speech which was in fact made by Dr. J. A. Pridham.

Under "Elections to Council," in the report of the Meeting, the term of office for which Surgeon Vice-Admiral Sir Sheldon Dudley was elected should have been recorded as 1949–52, not 1949–50.

HOSPITAL COST ACCOUNTING

The Ministry of Health has sent to hospital boards and committees a circular describing an interim scheme of accounting. It is intended for use as from April 1 this year, the main object being to provide reliable information for the purpose of estimates and financial control. While all hospitals must use the system outlined, they are left free to undertake further cost analyses as may be practicable within the present limitations on the appointment of additional staff.

PROBLEMS OF ASSISTANTS

A special subcommittee appointed to consider the various problems of assistantships in general practice under the National Health Service has recently completed its task and reported to the General Medical Services Committee. The subcommittee included a number of practitioners who are engaged as assistants in the N.H.S., and many suggestions and comments sent in by assistants were carefully considered. A report will be discussed by the Annual Conference of Local Medical Committees in October.

Since there has been little opportunity for assistants to make their views known on the various committees of the Association, it has been decided that, in order that the various problems affecting assistants can be brought to light and examined, the subcommittee should form part of the permanent structure of the G.M.S. Committee. It will of course be necessary to change the assistant members of the subcommittee from time to time.

TOILET PREPARATIONS

RECOMMENDATIONS OF COMMITTEE

The Definition of Drugs Joint Subcommittee (chairman, Sir Henry Cohen) of the Central and Scottish Health Services Councils has now issued its report on the classification of toilet preparations. The Committee states that, as in the case of foods, decisions on classification must to some extent be arbitrary, but it lays down the following general principles:

It is unethical for a doctor to order a preparation of undisclosed composition. Attention may also be directed to Section 11 of the Pharmacy and Medicines Act, 1941, which requires that the composition of any articles sold "recommended as a medicine" shall be clearly stated on the label. Preparations of undisclosed composition should therefore not be ordered on Form E.C.10.

Preparations normally used for toilet purposes should not be ordered on Form E.C.10 even though their composition is disclosed and even though they are included in the *British Pharmacopoeia* or *British Pharmaceutical Codex*.

(i) The following are to be regarded as being covered by the phrase "preparations normally used for toilet purposes": astringent lotions, bath salts, cold creams, face powders, hair tonics, hand creams, shampoos, shaving creams, shaving soaps, shaving styptics, skin lotions, soaps, toothpastes, tooth powders, talcum powders, vanishing creams, and similar preparations.

(ii) The following are examples of preparations coming within this category which are included in the *British Pharmaceutical Codex*: Cologne spirit, ointment of rose water, paste of stearic acid, paste of hamamelis.

Certain proprietary preparations for which prophylactic or therapeutic claims are made should not normally be ordered on Form E.C.10 if they may be used for routine toilet purposes. A doctor who prescribes such preparations may be required to justify his action to the local medical committee if he is to avoid being surcharged with the cost of the preparation. The following proprietary preparations are in this category: toilet preparations of alleged prophylactic value, such as anti-midge and barrier creams; toilet preparations which are vehicles for some form of medicament, such as medicated soaps; toilet preparations for use by persons susceptible to allergic or trophic skin reactions.

Correspondence

Doctors and Hospital Management Committees

SIR,—Whilst all must agree with the firm stand taken at the A.R.M. about the action which the Ministry is taking to reduce the medical membership of management committees, seeing that such membership is part of the agreement made with the profession, it seems to me that it is time for us to pause and think whether the presence of doctors on these committees is really an advantage or a source of strength to the profession. A wholly lay management committee now, in the same way as the lay boards of governors in the past, could hardly afford to neglect the advice sent to it by a medical committee. It might ask for modification or further discussion but could never entirely ignore it, and we know that this method of hospital government has stood the test of time and was most satisfactory to both sides, administration and medical. However, have only one medical man on the management committee and the whole complexion of things is altered. Recommendations from medical committees can then be discussed by the lay members, who can bring their medical colleague into the discussion, and it would be a most unusual person who, in this position, would never give an opinion as a doctor but would always weigh the evidence impartially and as a layman. And if he is not so disposed he can obviously wield more power than his professional brethren who do not happen to be present. And a lay committee so fortified may, and often will, feel in a strong enough position to refuse a request or recommendation which has been made after careful consideration by a medical advisory or staff committee. It is certain that doctors will never be granted such a number of seats on these committees that their voting-power would be a justification for the retention of the right of membership, and it seems unlikely that the principles of democracy will ever be put into practice so that the medical members could be elected by the vote of their colleagues. Moreover, it is rapidly becoming the custom for the local M.O.H. to be elected to membership by nomination of the local authority, so that the present small medical membership is often further weakened by one who has the mind of an administrator and loyalty only to those whom he represents.

It would be a pity if, in order to retain what are our undoubted rights, which are admittedly in danger of being whittled away, we sought to perpetuate an arrangement which is not to our advantage, places those doctors who are elected to, or are placed on, management committees in a difficult position, and, finally, weakens the power of the medical advisory and staff committees. Rather, I feel that our power and the salvation of the hospital services rest in the reinstatement of the old order of lay management committee and medical advisory committee. I would go further and say that the latter committee should be composed of the senior hospital staff committee-members plus a sufficient number of general practitioners and other doctors (e.g., public health M.O.s, etc.), to give the latter adequate voting power.

Abolition of medical membership on management committees is a loss which the profession can well afford to cut.—I am, etc.,

Swindon. GUY ROWORTH.

Status of General Practice

SIR,—Permit me to express my entire concurrence with the views expressed in Dr. R. E. Clarke's letter (*Supplement*, July 8, p. 25). Might we please hear rather less about the alleged shortcomings and incompetence of the modern general practitioner? It is nauseating to note the Pharisaical smugness with which suggestions for refresher courses, additional postgraduate study, and what not are advocated for the G.P. with such readiness and assurance by anyone not engaged in general practice.

To me it would appear that the present policy of the B.M.A. is to lend colour to the prevalent suggestions that the G.P. of to-day is an ignorant, inefficient, and antiquated individual from whom the darling public must be protected at all costs, and our interests are not best served at the present time by appointing a special committee to inquire into our future training and education, etc.

I sincerely wish that the same zeal would be displayed in appointing a special committee to inquire into and to make practical suggestions for the immediate remedy of the innumerable injustices and often intolerable working conditions under which the G.P. labours, including among other things a long overdue and sane revision of the hours which he is expected to work in relation to his miserable remuneration. What about a special committee to re-educate the public in these matters first?

Furthermore I am appalled at the proposed extension of disciplinary powers of the B.M.A. to include publication in the *British Medical Journal* of expulsion together with relevant facts in the matter of a doctor who in future shall fall from grace. Whatever the merits of the case, the B.M.A. exists primarily to protect the doctor's interests, and if it appears to have an indifferent record in this respect it will at least be expected to refrain from kicking a man who is down.

Article 11 might possibly serve a useful purpose yet if only it arouses practitioners from their apathy and brings them to a full realization of the position into which they are drifting. I, for one, will certainly resign without regrets from membership of the B.M.A. on the same day that it comes into operation.—I am, etc.,

Skelmersdale, Lancs. J. A. BELL.

A.R.M. Correction

SIR,—I was surprised when reading the *Supplement* of July 22 to find you report on p. 52 that "Dr. T. Rowland Hill (Marylebone) moved to add certain words. . . ." This, Sir, was moved by Mr. Lawrence Abel, not Dr. Rowland Hill.

I am therefore not surprised to find that your reporter completely missed the point when I addressed the Representative Meeting. I did say that a group of well-known but Socialist-minded people in the South-west Metropolitan Hospital Regional Board had verbally threatened to bring in a whole-time Service within two years. I also mentioned that G.P. specialists would be limited in the number of their sessions by the number on their executive lists irrespective of partnerships, etc.

Whereas I do appreciate that you cannot possibly report on each individual speech, nevertheless important parts should be mentioned instead of the smallest. If you get the names of important men mixed up, how can we take any of it as being a true and reliable report of the meeting?—I am, etc.,

LESLIE GIBBONS,
Hon. Sec., Reigate Division.

*** We regret the mistake which our correspondent refers to, which was due to the great speed with which the reports have to be prepared on these occasions. The words were moved by Mr. Lawrence Abel and seconded by Dr. T. Rowland Hill.—ED., *B.M.J.*

The G.P.'s Job

SIR,—So Lord Quibell thinks that we must do a better job of work before becoming entitled to an increase in pay. He quite obviously has no idea of the amount of work we are doing. If he takes the trouble to read the statistics of disease, infant and maternal mortality, etc., perhaps he could tell us just where we are lacking.

He says that the work of hospital out-patient departments "has increased out of all reason." Of course it has. Our patients are always demanding to be sent to hospital, and we have not the time for a full and complete investigation ourselves.

Could he let us have a list of those "trifling" cases that we are supposed to send to hospital "automatically"? At the same time he could list those doctors who are "not doing the work they are paid to do."

Has he made this statement with the knowledge and approval of the Minister, in which case he is hardly likely to obtain very much co-operation from us? Or are we faced with another case of the tail wagging the dog?

Would Lord Quibell be willing to tell us what his employment was prior to his elevation to the House of Lords, what his remuneration was, and also his hours of work? If we knew this we could perhaps assess the true value of his lordship's opinion and statements.—I am, etc.,

Coventry. JOHN HALE POWER.

Independent Court of Arbitration

SIR,—In the leading article in the *Journal* of July 29 (p. 256) you draw attention to the fact that the A.R.M. at Southport turned down a motion which called for an *independent* court of arbitration. Your readers may well ask why. They may seek the answer in the accurate report of the debate in the *Supplement* of July 22. I think they will find the answer very inadequate. Dr. Breach, supporting the motion, thought that the public would consider it quite reasonable for the profession to claim the right to refer disputes to arbitration. Dr. Gorsky, also supporting the motion, said that, with the spread of public services, there was a strong case for reconsidering the method of settling differences in which the Minister was a party to the dispute as well as the judge.

Dr. Wand opposed the Guildford motion because he maintained that it would embarrass those who were carrying on negotiations for general practitioners. Dr. Wand (who for the moment held the meeting in the hollow of his hand) succeeded in having this important motion rejected. Now that the heat of debate has passed, perhaps Dr. Wand will tell your readers in more detail why he took the grave responsibility of opposing a demand for independent arbitration, especially in view of the imminence of compulsory arbitration stated so clearly by Dr. Charles Hill. I trust that general practitioners will never agree to compulsory arbitration.

The object of the Guildford motion was to suggest arbitration with the consent of both parties, consent with regard to the constitution of the court and the terms of reference. Should we offer to accept such independent arbitration instead of withdrawal, resignation, termination of contracts, instead of a "strike," we should be offering to accept what is spoken of in international relations as "the rule of law." America and Britain, with other powers, are defending that principle at this very hour.—I am, etc.,

West Clandon, Surrey. C. P. WALLACE.

Association Notices

ADJOURNED A.R.M., 1950

The Adjourned Annual Representative Meeting, 1950, will be held at B.M.A. House, London, W.C.1, on Thursday, September 28. The Meeting will begin at 9.30 a.m., and it is expected that the business will be completed in one day.

A.R.M., 1951

On behalf of the Council, the Chairman of Council, in consultation with the Chairman of the Representative Body, has decided to convene the Annual Representative Meeting, 1951, in the week immediately preceding the departure for South Africa of those travelling by sea to attend the Joint Meeting with the Medical Association of South Africa in Johannesburg. The decision has been taken now because of the expected difficulty of obtaining hotel accommodation in London at short notice during the Festival of Britain next year.

The A.R.M., 1951, will be held at B.M.A. House, London, W.C.1, and will begin on the morning of Wednesday, June 13, and continue until Saturday, June 16.

CHARLES HILL,
Secretary.

Diary of Central Meetings

30 Wed. General Practice Review Committee, 2 p.m.

H.M. Forces Appointments

COLONIAL MEDICAL SERVICE

The following appointments have been announced: J. Taylor, M.B., D.T.M.&H., D.P.H., Senior Medical Officer, Seychelles; H. T. Laycock, M.B., F.R.C.S., A. McD. Allan, M.B., C. G. I. Gordon, M.D., and T. K. Sweeney, M.B., Medical Officers, Tanganyika; I. E. Dawson, M.B., Medical Officer, Kenya; W. Dering, M.D., Medical Officer, Somaliland Protectorate.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY AUGUST 12 1950

THE WAY DIVIDES*

BY

FRANK GRAY, M.B., B.Chir.

There is abundant evidence both that something is wrong and is felt to be wrong by a very large number of general practitioners. For many months past it has been impossible to open the *Journal* without finding articles or letters of complaint. Other publications have also provided evidence—not always so reliable. Apart from the question of finance, which is receiving the fullest consideration elsewhere, the chief trouble appears to have been accentuated and displayed, but not originated, by the National Health Service Acts. It is the question of status. It also seems, at any rate at first sight, that there is a remarkable degree of unanimity on the remedy—the association of general practitioners with hospitals.

It is always a wise rule in our profession to take nothing for granted, and I am going to ask you to look at this question more closely. Perhaps you will agree that we should take this problem of medicine as a medical problem. What is the complaint? It appears to be fivefold: the general practitioner complains of (1) inadequate time to do his work properly; (2) excessive clerical work; (3) the demands of his patients—unnecessary and unreasonable; (4) being a signpost; (5) the nature of his clinical work—the trivial cases.

No prolonged examination is required here. All will probably agree on the facts, though perhaps some are already beginning to wonder just how the "hospital remedy" is going to meet this situation. On the actual complaints I think we shall also agree:

(1) That the general practitioner must have more time, though precisely how he uses that time is another matter.

(2) That unnecessary clerical work must be cut out, though there is a certain irreducible minimum which the general practitioner must do himself.

(3) That the general practitioner must have some protection against the unreasonable patient, though he must also do something to protect himself. It is plain, from the experience of many, that to pay Danegeld by giving the patient everything she asks for has one inevitable result—to bring her back asking for more.

(4) A signpost may not be an object of beauty, but it has an essential function to perform. Moreover, in our profession skilled guidance is very necessary: witness the unfortunate results to some who have strayed to Harley Street without it.

(5) That the bulk of the general practitioner's cases are trivial ones. Here we come to the crux of the problem. Most have known this for years, but it has recently been discovered by a Committee of the B.M.A. to the astonishment of their consultant members. Yet this Committee—on "General Practice and the Training of the General Practitioner"—having made this discovery, can only go on to suggest the usual remedy—more association with hospitals. So we must turn to study this remedy, bearing in mind that the majority of the general practitioner's cases are trivial, and also two other platitudes—for it is platitudes that are most often overlooked—(*a*) There are only twenty-four hours in the day, and (*b*) The general practitioner has no financial interest in the ill-health of his patients (in the vast majority of cases).

Characteristics of Hospital Medicine

What are the chief characteristics of hospital medicine? Though there are always exceptions—in individual hospitals and consultants, and to some extent in certain branches of medicine—the general characteristics would appear to be as follows:

(1) The answers we get depend on the questions we ask, and the question asked at hospitals is, What is wrong with this patient?—the answer almost invariably being expressed in physical terms. Sometimes the further question is asked, How did the patient get this illness? but never, Why has this patient got ill at all? Always what, sometimes how, never why. In this lack of inquiry and limited outlook hospital medicine shows itself to be unscientific.

(2) In confining itself to physical phenomena it is based on a system of philosophy long since discarded by all other educated sections of the community—that is, it is materialistic.

(3) It deals almost exclusively with serious and advanced cases. Now a large object is easier to see than a small one, and a large deviation from health than a small one. In other words, it is elementary.

(4) Ever-increasing reliance is being placed on instrumental aids in diagnosis. Once they were an adjunct to intelligence; now they are becoming a substitute for it. It is a pathetic sight to see the functional case being "signposted" to one mechanical test after another by the registrar (the consultant of the future). In Manchester they have invented a mechanical brain which perhaps may one day do the job: at present a registrar is not only cheaper to produce but occupies much less space.

(5) When the treatment is finished the patient is unlikely to see the hospital again. It is the general practitioner who will have to live with the results, and in not a few cases to endeavour to explain

> The fault, dear patient, is not in our scars,
> But in ourselves, that we are invalids.

The hospital is irresponsible.

(6) A prison, a monastery, and a hospital have this in common: they are cut off from the outside world. Hospital medicine, in dealing with patients cut off from their natural surroundings, is unreal.

(7) It follows from these facts that only curative work can be done in the hospital, or "salvage department" as it has so aptly been named. It is quite incapable of preventive medicine.

The position may be summarized by saying that, while the hospital is a suitable place to teach students the elements of medicine, it is quite incapable of supplying the advanced training required for general practice. But if, in spite of this, general practitioners were to return to hospital, what would be the effect on the greater part of their work—the trivial case? Can we doubt that there is only one possible answer—increased neglect?

If this is the value of the conventional remedy, how has it come to be so universally prescribed? As medical students we were all trained by consultants and specialists, and in our formative years we had them as exemplars before us. Theirs was the position to which we looked up, and to which we might perhaps hope to attain. The cases which they treated were obviously the ones that mattered, the cases they disdained equally of no importance. Moreover, we were aware that they not only attained the highest honours but also attracted the highest fees; they had the double advantage of both kudos and cash. When this attitude, quite natural in the student, persists in the mind of an established general practitioner, it is of course an example of our old friend the inferiority complex. But is it true? Is it justified? "Always down the breeze comes the siren song of the specialist; anything you do I can do better." I do not need to give you the source of this dictum; it could have appeared only in the editorial columns of the *Lancet*. But is it true? Can you see a specialist doing your morning surgery? The truth is, of course, that in its aerial passage from Harley Street to Charing Cross the siren song has been

*Presidential Address delivered to the Metropolitan Counties Branch on July 4.

sadly mutilated; the actual words are, "Anything that I allow to think is worth doing I can do better than you can." In its corrected form the song is not only accurate, it is positively intelligible. The specialist does not allow that the trivial case is worth "doing," because he himself is quite incapable of "doing" it.

The Challenge of the Trivial Case

So we come back once more, as we always must, to the main part of the general practitioner's work—the trivial case. What is the real objection which so many general practitioners have to these cases? The usual reply is that they are not interesting. But why? What is "interesting" work? The answer is that interesting work is work in which we take an interest—just that, no more and no less. Then why do so many doctors take no interest in these cases? Partly because, under the conditions of private practice, they were not called to give them much attention, but mainly because, having been trained by consultants who naturally did not see such cases, they were themselves not capable of dealing with them. In other words, the general practitioner who bemoans the trivial case does so from a mixture of ignorance, incompetence, and inferiority complex.

Suppose we face the problem, what do we find? The "trivial" case includes the earliest stages of nearly all serious complaints, and not only early but therefore also curable; the really slight cases which can be put right quickly and thoroughly by anyone who has the "know-how"; and a variety of "functional" cases, with most of which nobody else is in a position to deal.

Now what are the functions of the general practitioner? The B.M.A. Committee to which I referred has classified them thus: (1) continuous care of patients; (2) the treatment of the patient as an individual; (3) health education and preventive medicine; (4) a mixed bag, which may be lumped together as co-operation with other people in treatment.

How does this link up with the trivial case? The continuous care, and the knowledge of the individual, enable the general practitioner to assess the complaint when he hears it. Have we not all had the neurotic, continually crying wolf, and yet one day coming with a slightly different attitude—if anything less anxious? "Hullo," we say, "here's something different"—and nearly always there is. On the other hand, would we not agree that the usual order of events is stress, strain, or worry first, illness after? And have we not felt, from our knowledge of the individual and his intimate family circumstances, that a little chat to us on these worries has not only eased his feelings but also improved his health? In fact we may have prevented some further illness. This brings us to another special function of the general practitioner—preventive medicine and health education.

When is John Bull really interested in keeping well? Not when he is well—unless he has reached that state of anxiety neurosis to which it is apparently the chief object of the advertising world to bring him (and then he would not really be well). No, when he is well he does not care two hoots about health education. On the other hand, when he is suffering from pneumonia, or is under a surgical anaesthetic, he is not capable of profiting from the best advice. So the only time when he is both able and willing to attend to preventive measures is when he has a trivial complaint. Again, when the disease is advanced it is too late for prevention. It is only in the really early stages—that important section of the "trivial" complaints—that preventive advice is of any use. Moreover, not only is the general practitioner the only person who sees the patient at this stage, but he alone has another advantage—he knows the patient's background and his individual make-up. Both are essential—not merely to understand the real causes of the trouble, but also to make sure that the advice given is put across and accepted. The best advice is useless when it is not taken.

It is often assumed that preventive medicine is a specialty to which the general practitioner will seldom attain—though the youngest member of the public health service seems to achieve it automatically, even before acquiring the D.P.H. In fact, the main qualification for preventive work is not so much special experience as an attitude of mind—an attitude of the keenest scientific inquiry into all possible causes of trouble, coupled with a willingness to give detailed attention to the remedy. While paying a well-deserved tribute to the pioneer work of our public health colleagues in this field, we must remember that they can labour only under a severe handicap; not only do they lack the personal knowledge of the patient, but also they are dealing with "diseases." We all speak, for convenience, of the prevention of disease, but "disease" is a philosophic concept. The doctor's job is to keep people well. If the cure of one disease can be pronounced only when the patient has died of something else it is small consolation to the relatives; and if the death rate from one disease goes down, while that from another goes up, it is no real credit to preventive medicine. So the real job can be properly done only in general practice—with human beings.

If the general practitioner's job is to keep his patient well, when should he begin? Obviously as early as possible—in the patient's infancy. It is difficult to understand why infant welfare, which is surely the general practitioner's own natural field, and which many of us so much enjoyed before the war, should be handed over to immature young women to titillate their maternal instincts. A successful start in early life not only benefits the patient but gives the general practitioner less work later.

Raising Status of General Practice

If, as I have tried to prove, general practice is a specialized branch of medicine, whose chief material is trivial complaints and whose chief object is to keep people well, what is needed to raise its status? In the first place the general practitioner must have more time for his work. There are too few doctors with really intelligent employers, but I am sure that both of us would agree that our most valuable possession is time to think. The general practitioner must have this too; he must also have time to take a careful history of every patient, and in appropriate cases to make a thorough physical examination.

Some would say that he should make a thorough physical examination of every patient who comes to see him. No single measure could have a worse effect on the health of the community. Enough neurotics have been created or made worse by this very procedure at hospitals. The general practitioner has the duty, as well as the responsibility, of not making an examination where it is not necessary—and, incidentally, not helpful. On the other hand a detailed and careful history is always helpful, whatever the complaint.

In the second place the general practitioner needs special training in the handling of these most difficult of all cases—the trivial complaints. From whom is he to get this training? Not from consultants or any other branch of his profession: they know nothing about it. The answer is that he must get it from his colleagues. General practitioners must pool their experiences and help to educate each other. They must also educate themselves; in other words, they must have time to do some research in their own specialty. The highest standards can be maintained only by continuous research.

The next question is, Who is to act? The G.M.C.? This body is concerned with undergraduate education, and is composed (and will continue to be composed) chiefly of academic representatives. The Ministry of Health? This is a question which requires intelligent study. Who looks for intelligence in a Government Department? The aim of both politicians and Civil Servants is to make things look well (the difference between them being that, to achieve this desirable object, the politician is convinced that he must do something, the Civil Servant that he must do nothing). Moreover, the Treasury would have to be asked for additional money, and the Treasury would rather provide £60m. to cure disease than £6m. to prevent it. In fact, to adapt a famous saying, it appears that in the Civil Service "the other departments use the Treasury as their lunatic asylum."

There is only one solution: the general practitioners must do it themselves. Is that possible? Can we raise ourselves by our own bootlaces? Yes, and it is being done at this moment by another section of our own profession. Not so many years ago I can remember the *Journal* containing article after article by the leading obstetricians of the day, who, having discovered the anatomical proximity of the rectum to the vulva, proceeded to deduce from this somewhat elementary knowledge that puerperal sepsis was due to the dirty general practitioner conveying germs from one orifice to the other. It was to prevent this sort of rubbish from being put out that the obstetricians and gynaecologists founded their college, and, though we may think that at times they still show traces of their barbarous ancestry, yet we must admit that they have done a great deal to raise the standards of their branch of the profession. What the obstetricians have done the general practitioners can do.

I have been considering general practitioners as specialists, but of course there must be the fullest co-operation between them and their colleagues in other branches of the profession—on equal terms. By all means let us continue to have lectures to general practitioners by consultants; let us also have lectures by general practitioners to consultants, who need them just as much. And after the necessary preliminary period let it be laid down that no one shall be qualified to deliver these lectures unless he himself has attended a course in, or has had personal experience of, the practice of his audience. It is just as well that we should all know what we are talking about.

To-day there are two alternatives before the general practitioner; he may crawl into hospital, to eat humbly of the crumbs that fall from the consultant's table and day-dream of the position to which he will never attain, or he may stand outside, devoting himself to his own self-chosen task, a specialist in his own right. The choice lies before him, and must soon be made. The way divides.

GENERAL PRACTICE REVIEW COMMITTEE

Concern has recently been expressed at the conditions obtaining in general practice and the reported loss of prestige of general practitioners. The Council of the B.M.A. therefore appointed a committee to inquire into the matter. The following are the terms of reference:

To review the present position in general practice, its difficulties and its trends, both generally and with reference to the two years' experience of the National Health Service Acts, and to the B.M.A. Report on "General Practice and the Training of the General Practitioner," and to make recommendations.

In addition to the *ex officio* members the committee is composed mainly of general practitioners. Its chairman is Dr. C. W. Walker, a general practitioner in Cambridge. The committee members are representative of various types of general practice—urban, rural, private, and N.H.S. In order that general practice can be studied in all its facets consultants, public health medical officers, and industrial and administration medical officers are included in the membership. The committee held its first meeting in July, when the views of general practitioners on present-day troubles were received and discussed.

At its next meeting on August 30 the committee will decide on what further evidence is required and how it is to be obtained in order that a comprehensive statement may be prepared setting forth the nature of the difficulties and anxieties of the general practitioner of to-day and the faults in general practice from the point of view of both the patient and the doctor. Thereafter the committee will consider what should be done in the future.

HEALTH SERVICE GLASSES

The Ministry of Health states that bifocal and lenticular lenses will now be included in the range of glasses of a special type obtainable under the Health Service towards the cost of which the patient makes a payment. No contribution from public funds will be paid towards the cost of replacing scratched lenses, except where it can be shown that the damage has been caused by something outside the patient's control, such as a street accident. The patient will receive a leaflet on the care of plastic lenses, since they are liable to be scratched easily.

EXAMINATION OF MIGRANTS

Following negotiations with the Canadian and Australian immigration authorities, agreement has been reached that, as from July 1, 1950, the recommended fees for the examination of adults and unaccompanied children going to Canada or Australia will be £1 1s., and that for the examination of accompanied children under 16 years of age the fee will be 7s. 6d. These fees are payable by the migrants. Previously the recommended fees were 10s. 6d. and 5s. respectively.

The New Zealand Government has recently decided to accept certain categories of family groups under its immigration scheme. As formerly, fees for the medical examinations required will be paid by the New Zealand authorities. It has been agreed that, for the examination of adults and unaccompanied children, a fee of £1 1s. will be payable. In the case of accompanied children under 16 years of age proceeding to New Zealand, the authorities concerned ask for a more detailed report than that required for similar classes going to Australia or Canada. For these reports, therefore, the agreed fee is 10s. 6d.

PUBLIC HEALTH DISPUTE

AGREED TERMS OF REFERENCE

As reported last week (*Journal*, August 5, p. 336), the dispute on public health salaries is to be taken to the industrial court. The two sides of the Whitley Council have agreed on the terms of reference in which the dispute will be submitted. They are as follows:

"To determine a difference between the management and staff sides of Committee C of the Medical Council of the Whitley Councils for the Health Services (Great Britain) arising out of the staff side's proposals for revised salary scales and conditions of service for medical officers employed by local authorities."

PREPARATIONS FOR WITHDRAWAL

ROLE OF BRITISH MEDICAL GUILD

Among the resolutions passed by the Special Conference of Local Medical Committees on June 29 was one instructing the General Medical Services Committee to make preparations forthwith for the termination of contracts by general practitioners in the Health Service.

There are certain legal limitations on what the B.M.A. and its autonomous bodies may do in this respect. The G.M.S. Committee and local medical committees are constitutionally precluded from undertaking the task. Therefore preparations for withdrawal, and if necessary their implementation, must be effected through the British Medical Guild. The Guild is at once to be made ready for action, and honorary secretaries of B.M.A. Divisions and of local medical committees have been sent guidance from Headquarters on the action to take now.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Councils.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

B.M.A. FILM LIBRARY

The following films have been purchased for inclusion in the Film Library.

A Case of Kernicterus Chorea. Silent, colour, 1 reel, 8 mins. Author: Guy's Hospital Medical School.

Blood Streams in the Basilar Artery. Silent, colour, 1 reel, 8 mins. Author: Wellcome Film Unit.

S.M.A. GENERAL MEETING

At its Annual General Meeting in May this year the Socialist Medical Association called on the Government and the Ministry of Health to make modern treatment available to a larger number of acute cases of tuberculosis by arranging for early cases to be treated in general hospitals. Night sanatoria and hospitals should be provided for patients who are infectious but do not need more than general care and attention. Existing hospitals and chest clinics should be modernized and readapted. New hospitals and clinics should be built, including hostels which can provide a sanatorium regime for those patients who do not require much skilled nursing. More domestic and other staff should be enrolled, and the salaries of nurses and others increased. The meeting called for an industrial health service to be integrated with the National Health Service, and deplored financial discrimination against health workers in the public health and preventive services. The meeting expressed its grave concern about the continued failure of the Government to provide health centres.

Greater economy in the hospital services is necessary and possible, the meeting considered, and savings could be made without detriment by (*a*) appointing full-time instead of part-time specialists where possible, and (*b*) reducing or abolishing the merit awards. The meeting urged that improvements of the standards of general practice be given priority. The maximum number on a doctor's list should be 3,000, and the entry of doctors into general practice facilitated. A higher standard of general practice would greatly reduce the pressure on hospitals, and thus lead to economies. The meeting asked the S.M.A. to press for the adoption of a 40-hour week for all health workers.

The meeting resolved that the drug industry should be nationalized and that the S.M.A. should press the necessity for a commission to work out the use of proprietary medicines in general and specialist practice.

Questions Answered

Travelling Expenses for Attending Course

Q.—*Am I entitled to claim against income tax any relief for travelling expenses incurred when attending courses for the Final Fellowship examination? I was living at home in Surrey, the course being at a hospital in London.*

A.—Costs incurred when studying for and obtaining further qualifications, degrees, etc., are regarded as capital outlay and cannot be treated as expenses necessarily incurred in the performance of professional duty.

Epileptics under Health and Insurance Schemes

Q.—*What is the position of epileptics under the National Health Service? As they are "unemployable," are they entitled to sickness benefit, and, if so, for how long?*

A.—Unemployment and sickness (cash) benefits under the National Insurance Act are dependent on a prescribed number of contributions having been made over a certain period. "Unemployable" persons who have not made the requisite contributions would not be eligible for such benefits. The medical, institutional, and other benefits of the National Health Service, however, are available to all and are not dependent on an insurance qualification.

Subsistence Allowance

Q.—*I visit two consulting-rooms each week. What can I claim for "subsistence" as an expense of my practice?*

A.—According to the regulations the amount to be claimed is the excess of the sums expended over the cost of the food, etc., at home. The amount to be set off in that way would presumably be small. No allowance is due for the cost of food, etc., consumed at home.

Correspondence

Registrars

SIR,—Registrars are divided into junior registrars, registrars, and senior registrars.

Junior Registrars.—It would appear that these are not true "trainee" appointments but are in reality senior house-officers from whom selection should be made to registrar posts. The title and status of junior registrars is now under consideration.

Registrars.—These are trainee posts, but many from this grade may be expected to enter general practice if senior registrar posts are not available or higher qualifications are not obtained. The number of registrar posts should be in proper proportion to the number of senior-registrar posts.

Senior Registrars.—Those so graded may be regarded as the consultants of the future. Wastage at this level should be small. In future a higher qualification will be a *sine qua non* for this grade, in which the number should bear a proper relationship to the number of consultants in each faculty.

All three grades exist in both teaching and non-teaching hospitals. In the interest of the Service registrars and senior registrars of the highest calibre are just as important in major non-teaching as in teaching hospitals.

There is, apparently, a tendency for consultant appointment committees to give undue preference to candidates from teaching hospitals, and perhaps to overestimate the value of research and publications, opportunities for which are greater in the teaching hospital. Such a trend would, if persisted in, lead candidates for registrar posts to avoid the major non-teaching hospitals as dead-end jobs. This would be to the detriment of the service of these hospitals and ignore the opportunities for practical training which they can provide.

Senior registrars in non-teaching hospitals should have the same opportunity of advancement as those in teaching hospitals. It could be fairly stated that the former obtain a greater practical experience than the latter but less academic advantage, whereas the latter have a greater academic opportunity but on the whole may lack extensive practical training and experience. Further, in professorial units they may be side-tracked for long periods on special research.

It should be clearly realized that the major non-teaching hospitals do more than three-quarters of the work of the country. It would indeed be a retrograde step if registrars of such hospitals are going to find themselves frustrated by undue preferment of teaching-school candidates. The result of such preferment is obvious; the larger non-teaching hospitals will be down-graded or, at least, their up-grading sadly retarded. The value of high-calibre registrar service to such hospitals is immeasurable, both in the total service to the community and in the training of house staff as future general practitioners.

Some scheme whereby registrars can be transferred from teaching schools to non-teaching hospitals and vice versa should be devised if justice is to be done in the future. By this means all senior registrars would have the undoubted advantages of a teaching hospital background together with the wider clinical experience which the regional non-teaching hospital affords. For the present it must be hoped that appointment committees will give consideration to practical experience at least equal to that given to academic attainment, volume of published work, or research, frequently of doubtful value.—We are, etc.,

CHARLES E. KINDERSLEY,
Chairman,
H. J. GIBSON,
Secretary,
South-western Regional Consultants and Specialists Committee.

The Ship Surgeon's Life

SIR,—At present there is a scarcity of doctors willing to act as ship surgeons. The pay is less than that of a locumtenent, but the work is lighter and the living conditions are better. If a doctor wants work as a ship surgeon he need not pay fees to an agent, but can get work by calling personally at the shipping office.

When I applied at the shipping office for work, pleasantly spoken clerks gave verbal promises which I foolishly did not get confirmed in writing. I was given the false impression that I had as assistants a fully trained nurse and an Indian surgery-boy who spoke both English and Hindustani, and also that my cabin was air-conditioned.

Just before a ship sails from the U.K. to a foreign port the crew sign "deep-sea articles" which bind them for perhaps two years. It is advisable to study these articles carefully, but in the rush and bustle of the day prior to departure this is usually impossible. When ships unload cargo at their destination abroad they then receive orders and new cargo, and there is no certainty that the ship will immediately return to the U.K.

The Ministry of Transport regulations for payment of crew and for deduction of income tax should also be studied. Doctors owning a banking account may not find it convenient to receive wages paid in cash. The agents of the shipping company provide local currency at foreign ports at more favourable rates of exchange than are available to private individuals. I found the cost of buying uniform for my first voyage about equal to two months' wages. The cost of tropical kit at such a port as Aden is less than in the U.K.

It is common now for shipping companies to employ aeroplane services in filling vacancies in their ship's crew in foreign ports. In such cases it is possible to travel light and then buy tropical kit and other necessities on landing. To wear shorts and open-neck shirt in the Tropics is comfortable, but shorts are not comely for the elderly with stout or lean figures.

The crew was kind to me and did not ask for my services unreasonably. The passengers needed little attention, and only in rare instances is a ship surgeon entitled to private fees.

Ministry of Transport regulations about drugs carried on board ship should be revised and brought up to date. Many of these drugs are useless, and some new drugs in common use are not on the list. It is difficult for men in the Mercantile Marine to get dental and optical treatment in the U.K., as they are seldom at home for more than two or three weeks.

The standard of medical services in India is below that in the U.K. Inefficiency, obstruction, with irritating delays, and poor-quality work are common. By contrast, in American hospitals it is usual to have elaborate laboratory tests as a routine. A lascar in a famous American hospital for treatment of digestive upset had a lumbar puncture done for no very obvious reason.

There is always uncertainty about the date of return to the U.K., which makes it difficult to plan civil employment a few months ahead.

The cargo ship on which I have happily served for seven months started her first voyage early in January, 1949, and has accommodation for twelve passengers. I have visited several similar ships and have not seen better accommodation.

A useful hint before starting a voyage is for a ship surgeon to make a careful list of kit required and money needed, and then take half the amount of kit and twice the amount of money.—I am, etc.,

Edinburgh. A. V. DILL.

Report of the A.R.M.

SIR,—Dr. Leslie Gibbons complains (*Supplement*, August 5, p. 84) that his remarks in the Representative Meeting were not more fully reported. This was because Dr. Gibbons, like several other speakers, was heard only with great difficulty at the microphone. He spoke into it instead of towards it—a common fault—with the result that, at all events in the front of the hall, including the Press table, only isolated phrases were audible. The page of my notebook which is devoted to Dr. Gibbons's speech is an exercise in frustration. A few words are heard and recorded, and the rest is lost in the confused roar which is set up when the microphone is misused. My Press colleague who sat beside me was equally embarrassed.

Would it not be possible for those who make maiden speeches in the Representative Body to have a little previous instruction in handling—or rather in not handling—this exasperating instrument so that they can be heard all over the hall?

It is unfortunate that the name of Dr. Rowland Hill was substituted for that of Mr. Lawrence Abel as the proposer of the motion, but in fact—what Dr. Gibbons does not state—Dr. Rowland Hill seconded it. It was a Marylebone motion sponsored by both gentlemen.—I am, etc.,

YOUR REPORTER.

The War Memorial

SIR,—As the originator in the Council of the suggestion that the proposed war memorial should provide for the education of the children of doctors who fell in the late war, and as the proposer of the Harrow amendment at the Harrogate A.R.M. last year which sought to reverse the Council's decision to erect a fountain, I write not only to support the letters of Drs. P. M. Vicary, I. H. Jones, and R. Blowers (*Supplement*, July 29, pp. 74–75) but to plead for the larger view. I feel that we are letting slip the opportunity to do something really big for the Association and to create something which will endure and live and flourish in a way that a stone memorial cannot possibly do.

Scattered about our beautiful countryside are many stately mansions which are deteriorating rapidly because their present owners, crippled by high taxation, cannot afford to maintain them. One such mansion, in Nottinghamshire, I had the opportunity of looking at on my way back from the Southport-Liverpool meeting. It would make a magnificent memorial school to which the orphaned children could go and at which other children of doctors, particularly doctors serving overseas, could receive their education. No doubt there are other and perhaps even more suitable mansions.

The principal initial difficulty, apart from inertia, in the foundation of such a school would be the provision of capital. Well, we are over 60,000 strong in the Association, and £1 added to our yearly subscription for the next two years will produce £120,000 in a magnificent cause.

There are precedents for the foundation of such a school as I have outlined. In 1843 Marlborough College was established for the sons of the clergy. Surely in 1950 doctors can provide similarly for the children of their fallen brethren and, incidentally, for their own in the years to come.—I am, etc.,

Harrow, Middlesex. J. B. WRATHALL ROWE.

"Removal or Transfer"

SIR,—The point that Dr. W. Davan Neill mentions (*Supplement*, July 29, p. 75) was raised in Cornwall some time ago, and the clerk of the executive council now makes an entry in the last column of the form requesting return of medical record cards—"local" if the transfer is to a neighbouring doctor, and in other cases the name of the town to which the patient has moved. This is a courtesy that is much appreciated.—I am, etc.,

St. Ives, Cornwall. P. C. MATTHEW.

Majors B. C. Jennings and A. McQuiston to be acting Lieutenant-Colonels.

Association Notices

PRIZE ESSAY COMPETITION FOR MEDICAL STUDENTS

The Council of the British Medical Association is prepared to consider the award, in 1951, of prizes to medical students for essays submitted in open competition. The subject of the essays shall be "The Importance of Accurate History-taking in Diagnosis." In their essays students will be expected to refer to cases within their own experience.

The purpose of this competition is to promote systematic observation among medical students. In awarding the prize *due regard will be given to evidence of personal observation.* No study or essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. A prizewinner in any year is not eligible for a second award of the prize.

Any medical student who is a registered member of a medical school in the United Kingdom and the Colonial Empire at the time of submission of the essay is eligible to compete for a prize. If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. In determining the number and amount of prizes to be awarded, the Council will take into consideration the number of essays received. In 1950 three prizes of £50 and three prizes of £20 each have been awarded. Should the Council decide that no essay entered is of sufficient merit, no award will be made.

Essays must be typewritten or legibly written in the English language on foolscap paper, on one side only, must be unsigned, and must be accompanied by a form of application which can be obtained from the Secretary of the British Medical Association. Essays must be forwarded so as to reach the Secretary not later than January 31, 1951. Inquiries relative to the competition should be addressed to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

SIR CHARLES HASTINGS CLINICAL PRIZE ESSAY COMPETITION

The Sir Charles Hastings Clinical Prize Essay Competition is established by the Association for the promotion of systematic observation, research, and record in general practice. The competition has been extended by the addition of a second prize known as the Charles Oliver Hawthorne Clinical Prize. The following are the regulations governing the awards:

1. The Sir Charles Hastings Clinical Prize, consisting of a certificate and 50 guineas, will be awarded for the best essay submitted.
2. The Charles Oliver Hawthorne Clinical Prize, consisting of a certificate and a sum of money slightly less than the amount of the Sir Charles Hastings Clinical Prize, will be awarded for the second best essay submitted.
3. Any member of the Association who is engaged in general practice is eligible to compete for these prizes.
4. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations in practice rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.
5. Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950.
6. A study or essay that has been published in the medical press or elsewhere will not be considered eligible for a prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for an award of either of the prizes in any subsequent year.
7. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay the decision of the Council on any such point shall be final.
8. Preliminary notice of entry for this competition is required, on a form of application to be obtained from the Secretary.
9. Each essay must be typewritten or printed and must be accompanied by a sealed envelope, enclosing the candidate's name and address, firmly affixed to the essay.
10. The writer of an essay to whom a prize is awarded may be requested to prepare a paper on the subject for publication in the *British Medical Journal* or for presentation to the appropriate Section of the Annual Meeting of the Association.
11. Inquiries relative to the prizes should be addressed to the Secretary.

OCCUPATIONAL HEALTH PRIZE

The Council of the British Medical Association is prepared to consider the award of an "Occupational Health Prize" in the year 1951. The prize consists of a certificate and a money award to the value of £50. The prize is established by the Council of the Association to encourage interest and research in the field of occupational health. The prize will be awarded biennially. Any member of the Association who is engaged in the practice of occupational health, either whole-time or part-time, is eligible to compete for the prize. Candidates may select their own subject.

The essay submitted must include personal observations and experiences collected by the candidate in the course of his work. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for a second award of the prize. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay, the decision of the Council on any such point shall be final. Preliminary notice of entry for this competition is required on a form of application to be obtained from the Secretary not later than November 1, 1950. Each essay must be typewritten or printed on one side of the paper only, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Inquiries relative to the prize should be addressed to the Secretary.

KATHERINE BISHOP HARMAN PRIZE

The Council of the British Medical Association is prepared to consider an award of the Katherine Bishop Harman Prize in the year 1951. The value of the prize is £75. The purpose of the prize, founded in 1926, is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and childbearing. It will be awarded for the best essay submitted in open competition, competitors being left free to select the work they wish to present, provided this falls within the scope of the prize. Any registered medical practitioner in the British Empire is eligible to compete.

Should the Council of the Association decide that no essay submitted is of sufficient merit the prize will not be awarded in 1951 but will be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine. The decision of the Council will be final.

Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. The title of the proposed essay and the motto should be notified in writing to the Secretary by November 1, 1950, and a form for this purpose can be obtained from the Secretary. Essays must be forwarded so as to reach the Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than December 31, 1950. Inquiries relative to the prize should be addressed to the Secretary.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY AUGUST 19 1950

ADVISORY APPOINTMENTS COMMITTEES

New regulations (National Health Service (Appointment of Specialists) Regulations, 1950) define the grades for which the advisory appointments committee machinery is to be used (for consultants and S.H.M.O.s), and to meet practical difficulties encountered under the old regulations.

The following are the principal changes made.

These categories of specialists are taken outside the scope of the advisory appointments committee machinery, though they will still be appointed by regional hospital boards and boards of governors:

(i) Professors, readers, and other members of professorial units at universities, medical schools, or postgraduate institutes, who will receive no remuneration from the hospital boards for their hospital appointments.

(ii) Consultants past normal retiring age appointed in an honorary unpaid capacity.

(iii) Clinical teachers who continue to hold existing posts at teaching hospitals and are appointed to the staff of a non-teaching hospital primarily in order to enable them to give clinical teaching to students at that hospital also.

(iv) Persons primarily engaged in research which necessitates appointment to a hospital staff, so long as the hospital appointment is unpaid.

(v) Persons appointed to posts whose tenure is, with the prior approval of the Minister, expressly limited (e.g., an eminent clinician from overseas who has come to work for a short time in a British hospital).

Regulation 8 prevents an advisory appointments committee which has not found among the applicants anyone of sufficient merit to fill a consultant vacancy from recommending that one of the applicants could be appointed to the post as an S.H.M.O.

APPOINTMENT OF REGISTRARS

The Minister of Health has decided that the appointment and dismissal of senior registrars and registrars in non-teaching hospitals should be the responsibility of regional hospital boards, though hospital management committees will still play an important part in their selection. This change has been made because it is considered essential that the universities, the medical schools, and postgraduate institutes should be closely concerned with the selection of men in these grades. It may also be necessary, in enlarging a man's experience, for him to move more freely between hospitals than may be possible if he is closely attached to one management committee group. (National Health Service (Functions of Regional Hospital Boards, etc.) (Amendment) Regulations, 1950.)

Machinery of Appointment

A circular from the Ministry of Health states that the machinery set up under the National Health Service (Appointment of Specialists) Regulations does not apply to the appointment of senior registrars and registrars, and it is not proposed to lay down precise machinery for the appointment of these grades by regulation. But hospital boards should follow the principles set out below.

(i) Posts should normally be advertised.

(ii) When a registrar holding a particular post divides his time between several hospitals, arrangements ought to be worked out between the boards concerned for the progress from hospital to hospital.

(iii) Because senior registrars and registrars are training grades, the university, medical school, or institute must be closely concerned in the selection for appointment.

(iv) In the case of an appointment to a non-teaching hospital the hospital management committee, and in all hospitals the medical staff of the hospital concerned, should also be represented on any selection committee.

(v) To secure common standards, the selection for both teaching and non-teaching hospitals in each region should so far as possible be made by committees with a common standing membership enlarged so as to reflect the local interests. (This is modified below for the London area owing to special difficulties.)

(vi) Committees of this kind may be advantageous not only to advise on a new appointment, but also to review holders of posts annually to decide whether they should be allowed to continue their training for a further year in the same grade or have their appointment terminated.

Composition of Selection Committees

The committees should consist of two elements: a standing nucleus, and additional members appointed *ad hoc* to suit the post or posts to be filled.

Outside the four metropolitan regions the minimum requirements for any such committee of selection should be:

A standing nucleus consisting of one medical and one lay member appointed by the regional hospital board, one lay member appointed by the board of governors, and two medical members appointed by the university; these five will all take part in the work, but only two of the medical or dental members and one of the lay members need sit at any one time when the committee is meeting; one of these five to be appointed chairman by the regional board or the board of governors, whichever is the appointing authority for the hospital concerned.

At non-teaching hospitals there should be three additional members, one lay and one medical or dental, appointed by the hospital management committee concerned, the medical or dental member being normally the person under whom the registrar would work; and one medical or dental member of the specialty concerned appointed by the regional board.

At teaching hospitals there should be two or three additional members, one lay (optional) and one medical or dental, appointed by the board of governors, the medical or dental member being normally the person under whom the registrar would work; and one medical or dental member of the specialty concerned appointed by the university.

All three elements should sit together to consider combined teaching and non-teaching hospital appointments.

In the four metropolitan regions the minimum requirements for any such committee should be as follows:

At non-teaching hospitals: (*a*) A standing nucleus consisting of one medical member and two lay members (of the latter of whom only one need take part at any one time when the committee meets) appointed by the regional board, and two medical members (of the latter of whom only one need take part at any one time when the committee meets) appointed by the regional postgraduate education committee, one of these five being appointed chairman by the regional board. (*b*) Three additional members, one lay and one medical or dental, appointed by the hospital management committee concerned, the medical or dental member being normally the person under whom the registrar would work; and one medical or dental member of the specialty concerned appointed by the regional board.

At teaching hospitals: (*a*) A standing nucleus consisting of one lay and one medical or dental member appointed by the board of governors, and two medical or dental members (of whom only one need take part at any one time when the committee meets) appointed by the medical or dental school or postgraduate institute, one of these four being appointed chairman by the board of governors. (*b*) Two additional members consisting of an additional medical or dental member, being normally the consultant under whom the registrar would work, appointed by the board of governors, and a medical or dental member of the specialty concerned appointed by the school or institute. In addition, the advice of the regional postgraduate education committee should be sought, whether by membership of the committee or otherwise.

Where a combined teaching and non-teaching hospital post is to be filled the standing elements in each committee should join with an agreed additional element on the above lines.

THE AMBULANCE SERVICES

REPORT OF SELECT COMMITTEE ON ESTIMATES

The Select Committee on Estimates has examined the ambulance services in England and Wales and in Scotland, and made a number of recommendations in its report (H.M.S.O., 4s.). The estimated cost of the ambulance services to the nation for the year 1950–1 is £7,986,000.

Discussing the improper use of ambulances and of permission being given for journeys obviously outside the scope of the Health Service, the committee found that there had been abuse, though relatively rarely, and that it could be dealt with by local health authorities. The committee recommends that consideration should be given to laying down a wide range of cases for which a medical certificate ought to be required before an ambulance can be called on. In some areas ambulance drivers are instructed to carry no one who has not a medical certificate, except in an emergency. But many had not such a rule. The committee believes that such a certificate would not cause too much administrative work. In general, ambulances should be ordered through the hospital rather than through the doctor, as is the rule of the London County Council.

Evidence given before the committee showed that some patients had chosen to receive treatment at hospitals far from their homes. Since they are entitled to free ambulance transport, considerable cost has fallen on the public. The committee recommends that, before admitting a patient from a distant place, hospitals should insist on a certificate stating that the necessary diagnosis or treatment cannot reasonably be obtained at a nearer hospital. It recommends also that the Ministry should emphasize by circular the economies to be obtained by using rail as opposed to road transport for long journeys. The need to carry out-patients to and from hospital requires examination, the committee thought, for it seemed that some out-patients had continued to be conveyed by ambulances and hospital cars after they had become fit to travel by ordinary means. The committee recommends that all local health authorities should keep a check on this.

In Scotland the ambulance service is borne by the Exchequer, whereas in England and Wales one-half is borne by the ratepayers. The Scottish ambulance service is therefore mainly paid for by the taxpayers of England and Wales. The committee recommends that the Departments concerned should consider how this anomaly might be removed.

The committee found wide variation in the ambulance services run by different local health authorities. Though opposed to greater centralization, it considers that the Ministry of Health should examine the situation and perhaps compare the running expenses of different authorities.

PAYMENT OF SCOTTISH CHEMISTS

Amending regulations have been made giving the Secretary of State power to alter the rates of payment to chemists in Scotland after consulting an organization which is in his opinion representative of the general body of chemists. The Court of Session recently upheld the chemists' argument that the regulations then existing did not give the Secretary of State this power.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Councils.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

Correspondence

Independent Court of Arbitration

SIR,—The letter of Dr. C. P. Wallace in the *Supplement* of August 5 (p. 84) on "Independent Court of Arbitration" is timely. He draws attention to the report of the debate on the subject in the *Supplement* of July 22 and to Dr. Hill's statement on "Whitley Machinery and Compulsory Arbitration" at p. 38 in the same issue. It is quite clear to me that a salutary clearance of verbal rubble is necessary if the profession is to understand the difficulties of the problem and the dangerous situation that confronts it. Terminology must be precise. Industrial arbitration has been defined as "the settlement by one or more presumably impartial persons of an issue on which the parties have failed to agree." This was the definition of the Royal Commission on Labour in its final report in May, 1894, which was followed by the Conciliation Act, 1896. Any difference or dispute arising with respect to our remuneration or conditions of service under the National Health Service Acts is deemed to be, by Section 13 of the National Health Service (Amendment) Act, 1949, a difference or dispute to which the Conciliation Act, 1896, applies. This latter Act was formerly administered by the Board of Trade and is now transferred to the Ministry of Labour.

As I intend to show that Dr. Hill was wrong in his statement to the R.B. as reported in the *Supplement* of July 22 (p. 38) it is first essential to state the powers of the Minister of Labour under the Conciliation Act, 1896, and the Industrial Courts Act, 1919, referred to in Clause 13 of the National Health Service (Amendment) Act, 1949, and his powers assumed by him under the Conditions of Employment and National Arbitration Order, 1940, made by virtue of the powers conferred on him by Regulations 58AA of the Defence (General) Regulations, 1939. I need hardly remind Dr. Hill that this latter Order was a wartime emergency creation, due to the vital necessity in time of war of reducing stoppages of work to a minimum. It provides that any "lock-out" or "strike" is illegal unless the dispute has been reported to the Minister of Labour and the Minister has not, during the ensuing 21 days, referred the dispute for settlement either to collective joint machinery suitable for settling the dispute or, failing that, to the tribunal.

Does Dr. Hill consider that mass resignation from the Service constitutes a "strike"? If he does not, then his statement to the R.B. is inaccurate. If he does consider mass withdrawal a "strike," then the legal opinions which we obtained when we were considering the constitutional position of the Association were not a correct evaluation of the position. That was my opinion 18 months ago when I had the temerity to express it in Council and in a letter to the *Supplement* of April 16, 1949 (p. 235). What is now interesting is that Dr. Hill agrees, and has so informed the R.B., that doctors are workmen employed in "trade or industry," that we have an employer, the Minister of Health, and that a dispute concerning our remuneration and terms of service is a "trade dispute" within the meaning of the Industrial Courts Act, the Conditions of Employment Order, 1940, and probably within the meaning of the Trade Disputes Act, 1906. It may still be necessary to reconsider the constitutional status of the Association in the light of Dr. Hill's remarks.

The Minister of Labour, under the Conciliation Act, 1896, where a difference exists or is apprehended between an employer and workmen, may, if he thinks fit, exercise all or any of the following powers—namely:

(*a*) inquire into the causes and circumstances of the difference;

(*b*) take such steps as may seem expedient to him for the purpose of enabling the parties to the difference to meet together, by themselves or their representatives, under a presidency of a chairman mutually agreed upon or nominated by the Minister of Labour, with a view to the amicable settlement of the difference;

(*c*) on the application of either parties interested appoint a board of conciliation;

(*d*) on the application of both parties to the difference appoint an arbitrator.

The Industrial Courts Act referred to in Section 13 of the Amending Act gives the Minister of Labour power to refer the matter for settlement to the industrial court or to an arbitrator or arbitrators appointed by him or to a board of arbitrators consisting of an equal number of nominees of the employees and employer concerned and an independent chairman nominated by the Minister of Labour. This can only be done with the consent of both parties. The Act also gives the Minister power to refer the dispute to a court of inquiry even without the parties' consent, but such a court can only issue recommendations and not an award. The court of inquiry has power to summon witnesses, take evidence on oath, and call for documents. Its report must be laid before both Houses of Parliament.

The Conditions of Employment Order lays down quite clearly that, if in the opinion of the Minister of Labour suitable means for settling the dispute already exist, then he must refer the matter for settlement in accordance with the provisions laid down; this would mean by virtue of the provisions of Section 13 of the Amending Act. Until that is done the Conditions of Employment and National Arbitration Order cannot apply. That is where Dr. Hill went wrong in his statement to the R.B.

I now come to the Guildford resolution and Dr. Wallace's letter. Until the advent of the National Health Service, when the State in the person of the Minister of Health became our employer, the disputes referred to in the Acts and Order mentioned above were between employees and an employer who was not a Minister of the Crown. Therefore it would appear right and proper for the Minister of Labour, as a Cabinet Minister, and as a presumably impartial umpire, to exercise his powers under the above-mentioned Acts and Order to settle a dispute in the interests of the State. But we are now confronted with a new constitutional situation where the State, in the person of one of its Cabinet Ministers, the Minister of Health, is the employer and a party to the dispute. Can the Conciliation Act, the Industrial Courts Act, and the Conditions of Employment Order operate? Is Clause 13 of the National Health Service (Amendment) Act valid? The House of Lords in *National Association of Local Government Officers* v. *Bolton Corporation* has shown quite clearly that it is a necessary consequence of compulsory arbitration that the parties thereto must sacrifice their power to exercise their own discretion in the matters referred. That means that the State, through its Cabinet Ministers, as employer of the doctors must subordinate its power to exercise its own discretion in the matters in dispute. This means a subordination of prerogative if the Cabinet is to remain an instrument of democracy. It is difficult to see how the Minister of Labour can exercise his powers on behalf of a colleague in the Cabinet where that Minister is directly or indirectly a party to the dispute as well as a judge. If the doctrine of Cabinet collective responsibility is to remain as part of democratic government, then there is a clear case for reconsidering the method of settling differences when the State is the employer.

Guildford and Dr. Wallace are right in demanding an independent court of arbitration. The judiciary is still independent and its integrity beyond dispute. I quote the late Professor Laski: "It is difficult to overestimate the significance of the judiciary in the modern State. The work of the executive has become so vast, the powers delegated to it by the legislature are so wide, that the judges are, perhaps more than at any previous time, the real safeguard of personal liberty." An independent court is the only answer to the Minister's and Cabinet's veto.—I am, etc.,

London, W.8. J. ARTHUR GORSKY.

*** The Secretary of the B.M.A. writes: When the Association is in need of legal advice it obtains it from its legal advisers and, where necessary, from the most eminent counsel in the branch of law concerned. This procedure was followed recently when the General Medical Services Committee desired an interpretation of Clause 13 of the National Health Service (Amendment) Act, 1949, and the Conditions of Employment and National Arbitration Order, 1940. The statement made by Dr. Hill to the Representative Body was based on the opinion of distinguished counsel. Dr. Gorsky can accept or reject this legal opinion as he pleases. When he says Dr. Hill is wrong in this and that, he is challenging the legal opinion upon which Dr. Hill's factual statement was based. This footnote is based on this and other legal opinions obtained by the Association.

Dr. Gorsky's letter confuses the issue by contrasting the legal advice given to the Association on the "trade union" issue in 1949 with the legal advice given a few weeks ago on the question of arbitration. The 1949 controversy related to the powers of a medical trade union. The present issue concerns the power of the Minister to invoke compulsory arbitration under the Conditions of Employment and National Arbitration Order, 1940. These are different problems, just as the definitions of the term "trade dispute" are different in the Trade Disputes Act, 1906, and the 1940 Order.

On the first point the substance of the legal advice given to the Association in 1949 was that there was substantial doubt whether the Trade Disputes Act of 1906 applied to a medical trade union.

On the second point the crux of our present position in relation to what has come to be described as "compulsory arbitration" is provided by the answer to the question: "Do medical practitioners engaged in the provision of personal medical services under the N.H.S. come under the Conditions of Employment and National Arbitration Order, 1940?" Under this Order either party to a dispute which cannot be settled by existing machinery can report it to the Minister of Labour, and if a prompt settlement cannot be reached by other means the Minister is bound to refer the dispute for settlement to the National Arbitration Tribunal. Strikes and lock-outs are prohibited by the Order unless the dispute has been so reported to the Minister and unless within 21 days he has not referred the dispute to the tribunal.

There is "existing machinery" for determining disputes affecting medical practitioners employed in the N.H.S.—namely, the Whitley Councils for the Health Services (Great Britain). That machinery does not at present include any provision for arbitration, although an arbitration agreement is under discussion. Under the two Acts mentioned in Section 13 of the N.H.S. Amendment Act—i.e., the Conciliation Act, 1896, and the Industrial Courts Act, 1919—the consent of both parties to the dispute is necessary before reference to the forms of arbitration provided by these Acts. A fortnight before the Annual Representative Meeting at Southport leading counsel expressed the view that there were three points to be considered in determining whether the 1940 Order applied to practitioners providing general medical services under the N.H.S.:

(1) Whether doctors in that position are employed by the Crown.

(2) If so, whether the Crown is bound by the 1940 Order.

(3) Do the words of the Order include persons in the position of doctors?

On question (1) counsel expresses the opinion that the duty is placed on executive councils to make arrangements with medical practitioners for the provision of general medical services and that an executive council is a separate public corporation distinct from the Crown. In other words, if doctors are "employed," they are employed by executive councils and not by the Crown.

On question (2) counsel's view is that article 4 of the 1940 Order, which prohibits strikes and lock-outs except after the fulfilment of certain conditions, does not apply to the Crown and that the Crown cannot be made to go to any form of compulsory arbitration.

On question (3) counsel's view is—this point gave him considerable trouble—that doctors providing general medical services are within the purview of the 1940 Order. Counsel adds that the effect of this will be that if such doctors wish to withdraw their services, thus coming within the definition of "strike," which means "the cessation of work by a body of persons employed acting in combination or a concerted refusal or a refusal under a common understanding of any number of persons employed to continue to work for an employer in consequence of a dispute," they must give 21 days' notice required by article 4 of the 1940 Order. They must also give this notice to the Ministry of Labour before they give their own three months' notice to terminate their employment.

The Minister of Labour, of course, during those 21 days would be free, if he chose, to proceed to compulsory arbitration.

The second point to which Dr. Gorsky refers is that a necessary consequence of compulsory arbitration is that the parties thereto sacrifice their power to exercise their own discretion in the matters referred. This, Dr. Gorsky adds, means a subordination of prerogative if the Cabinet is to remain an instrument of democracy. Leading counsel was asked to advise the Association on the following two points:

(1) If the National Arbitration Tribunal has the power to lay down as a matter of law binding on executive councils, as well as the doctors in contract with them, that the remuneration of the doctors shall be a certain figure, is Parliament bound to give the Minister such a vote as will enable him to meet this order?

(2) If the National Arbitration Tribunal's order is for remuneration greater than that laid down by the Minister in some statutory regulations hereafter made, does the order override the regulations?

His answers to these questions, shorn of legal arguments which need not be detailed here, are as follows:

(1) Parliament is not bound to give the Minister money sufficient to cover the remuneration awarded to the doctors, but it can be assumed that it would in fact do so unless some national emergency made it necessary to impose cuts.

(2) A conflict between a statutory regulation and an award of the National Arbitration Tribunal could not in law occur. Alternatively, if it were possible in law, it would not in practice be allowed to arise, or, if it did by inadvertence arise, it would be solved by legislative action. Whether the legislative solution would be in the sense of the tribunal's award or of the Minister's legislation would depend upon the circumstances prevailing at the time: the probability is that the tribunal's award would be followed.

The Industrial Medical Officer

SIR,—Statements expressed at the Annual Meeting convince me more than ever of the folly of generalizing on the work of the industrial medical officer.

I recently left the service of a well-known firm with several factories here and overseas. At Factory A, near Chester, the shortage of labour compelled the labour officer to accept reluctantly all sorts of persons, some over 65 years of age. The function of the preliminary medical examination was to assist in placing applicants—so as to make the best use of available man-power—and to determine each individual's limitations. It must be realized that the foremen were very loath to accept persons who were obviously elderly or below par unless the doctor explained precisely what the worker could or could not reasonably be expected to do.

On the other hand, at Factory B, only 25 miles away, there was such an abundance of unskilled unemployed that the labour officer usually weeded out all except the brightest, smartest, most promising young men. In theory medical examination was unnecessary after such thorough selection, but in practice some of these men, despite outward appearances, were totally unfit, or fit only for restricted duties. Several had deliberately failed to [illegible]tion disabilities (such as herniae) which we, for our own reasons, considered extremely important. The "liberty of the subject" is irrelevant. If a labour officer can interfere with the "liberty of the subject" by rejecting perhaps 90% of the applicants, the doctor is surely justified in rejecting an occasional one.

What then were our criteria for judging fitness? It all hinged on the fact that my chief loyalty was to the existing workers in the factory. At Factory B many men were remaining in unsuitable jobs to their health's detriment because they preferred that to the dole. Their names were on our waiting-list, and they hoped, in the course of time, to be transferred to light or permanent day work. This state of affairs was very distressing. When examining applicants for employment the doctor was acutely conscious of that waiting-list, and he rejected any who were likely to congest it still further within a few years. This leads to a great principle—namely, that if one is going to make conditions of service as easy and pleasant as possible for the existing workers one has to be strict with the entrants. (The same principle explains the need for medically examining bank clerks, who enjoy the benefits of pension and sickness schemes.)

Preliminary medical examination also eliminates applicants who would otherwise spoil the harmony of the workshop. Verminous men, for instance, soon cause unrest. Men who would fail to pull their weight, through frequent sickness absence, are eliminated because they would tend to reduce the output—and the bonus—of their team, and be most unpopular.

From the managerial point of view, at Factory B the aim was to try to fit the square pegs into the square holes right from the beginning instead of by a process of trial and error. It took an average of six months for a worker to attain proficiency, so if he resigned, or requested a transfer, the loss and inconvenience were great. All successful applicants were expected to remain in their jobs for many years. The doctor therefore had to be thoroughly familiar with the prognosis of various disabilities, with the sequence of promotion in the departments, with environmental conditions, and with the peculiarities of the individual foremen.

In other words, let each industrial medical officer work out the aims and methods most suited to his own factories.—I am, etc.,

Matlock Bath, Derbyshire. RALPH N. WILSON.

The G.P.'s Job

SIR,—I quite agree with Lord Quibell that we G.P.s tend to send to hospital many cases which we would ourselves deal with in a private practice. I am, however, very surprised that the very man who was chastised by the Government for introducing bonus payments to his bricklayers should be so blind to the cause of our sins of omission. If his lordship can explain how we are to supply two clean and sterile towels, sterile instruments, and sterile or antiseptic dressings for each incision of a septic finger, plus the anaesthetic, out of a payment of 2s. 6d. per hundred patients, my wife and I will be very thankful; or how to find the time to do an E.S.R. and full blood count on each case of the rheumatoid type which presents itself, and repeat them regularly, when it is economically essential to have at least 3,000 patients, every one of whom was expressly told by Mr. Bevan to use the Service to the full, and many of whom do their best to obey.

Though there will always be slackers, the truth has to be recognized that most of us would much rather do these things ourselves and feel that we were at least pretending to be proper doctors, but cannot afford to do them. The Government put the cart before the horse in 1948, and, as do individuals, must have a period of extra expense during the changeover which will occur as soon as it is economically possible for us to do these jobs ourselves.—I am, etc.,

Cromer, Norfolk. A. H. GREGSON.

POINTS FROM LETTERS

The War Memorial

Dr. H. V. DEAKIN (London, N.W.3) writes: I welcome Dr. E. J. Thomson's letter (*Supplement*, July 22, p. 62) in reference to the B.M.A. War Memorial and shall be happy to contribute generously towards his admirable proposal—a fund of £50,000 for the children of the fallen. On receiving the appeal I wrote a letter of protest to the Chairman of the Council, for it appeared that the descendants were a minor consideration. I refuse to subscribe a penny towards enhancing the appearance of B.M.A. House, when a simple shrine and roll of honour should meet everyone's point of view. The children of our dead brothers should be our foremost and chief consideration. . . .

Association Notices

Branch and Division Meetings to be Held

MANCHESTER DIVISION.—At Christie Hospital and Holt Radium Institute, Wilmslow Road, Withington, Manchester, Friday, August 18, 2.30 p.m. Demonstration of methods of treating malignant disease by means of radiation, including radium, *x* rays, and radioactive isotopes.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY AUGUST 26 1950

NEW APPEAL MACHINERY

PROCEDURE FOR SETTLING INDIVIDUAL DISPUTES

Special machinery for hearing appeals by individual members of staff, including medical practitioners, engaged in the National Health Service concerning disputes affecting terms and conditions of employment, *other than dismissal or disciplinary action*, is now being set up. It is provided for under a General Whitley Council agreement.

Fourteen regional appeals committees will be appointed. They will consist of equal numbers of the management side and staff side of the Whitley Council. Management side members will be selected from a panel representing the Ministry of Health, regional hospital boards, boards of governors of teaching hospitals, executive councils, joint pricing committees, Dental Estimates Board, and the county councils and county borough councils in each regional area. Staff side members will be selected from representatives of the professional organizations and trade unions represented on the Whitley Councils for the Health Services and having members employed by the authorities concerned.

The four main steps in the procedure are:

(1) An appeal may be made by the employee to his employing authority.

(2) An appeal from the decision of the employing authority may be made by the employee's recognized professional organization or trade union to the regional appeals committee.

(3) If the regional appeals committee fails to reach a decision, the appeal may be referred by either party (staff organization or employing authority) to the appropriate Whitley Council.

(4) If the Whitley Council fails to reach a decision, either party to the dispute may take steps to have the matter referred to arbitration.

The Minister of Health is anxious to bring the new arrangements into operation as quickly as possible, and has asked for the early nomination of representatives to serve on the appeal panels.

HEALTH SERVICES FINANCE

The Committee of Public Accounts has some criticism to make of the finances of the National Health Service in its Fourth Report (H.M.S.O., 9d.). The committee recognizes the difficulties of accurately forecasting the effect of the Health Service on the remuneration and expenses of the people participating in it, but regrets that the initial rates were not made provisional until the relevant facts had been ascertained. But it adds that such an arrangement could probably not have been negotiated with the professional bodies concerned. Full information on earnings and expenses of doctors has not yet been obtained, though the available evidence suggests, says the report, that "the earnings of the general practitioners as a whole may have somewhat exceeded the Spens ranges."

The Ministry of Health stated to the committee that dentists had been able to work "unbelievably long hours." The Ministry thinks that it is possible for dentists to work considerably more than 1,500 chairside hours a year (on which the Spens recommendations were made) without detriment to their efficiency.

The number of prescriptions dispensed by chemists in 1949–50 was about 200 million instead of the 140 million expected. Cuts have been made in their remuneration, but the Departments do not know the total payments made to individual chemists, and they have little information on the effect of the Health Service on their earnings from private work.

Considering the finance of the hospital services, the committee endorsed the Government's view "that in the long run a reasonable degree of freedom to the hospital bodies to exercise their responsibilities without excessively detailed control should produce the best service." But it hopes that some system will be evolved to ensure that the money is administered wisely and with due regard to economy.

The committee was informed that large arrears of capital expenditure were accumulating and that many desirable schemes for improving the hospital services cannot be carried out. The Ministry of Health was aware that postponement of capital expenditure might sometimes be a false economy.

SUPPLEMENTARY OPHTHALMIC SERVICES

Amending regulations have been made enabling people whose glasses were prescribed more than two years previously to have them replaced or repaired without a further sight test, though for a person under 16 the previous prescription must have been issued within 12 months.

Another regulation deals with the case where a person loses or damages his glasses through carelessness but where full payment for the cost of replacement would cause undue hardship. In these circumstances, after appropriate investigation, ophthalmic services committees are given power to reduce or waive payment. This and some other changes are made in the National Health Service (Supplementary Ophthalmic Services) Amendment Regulations, 1950.

Some special ranges of hard-wearing spectacle frames suitable for children are now available under the Supplementary Ophthalmic Services.

MATERNITY MEDICAL SERVICES

New arrangements for paying for maternity medical services provided by two doctors to the same woman are described in a circular from the Ministry of Health. They have been made after consultation with the General Medical Services Committee of the B.M.A. The equivalent of a single inclusive fee is payable. Since it is difficult for the doctors to settle how the fee should be split, executive councils are asked to accept responsibility for the decision in consultation with the local medical committee. Executive councils "should normally reach a preliminary decision on the basis of the claims submitted by the doctors, inform the doctors what is proposed, and then reach a final decision after considering any representations made by the doctors."

GENERAL PRACTICE IN NORTHERN IRELAND

The Northern Ireland Committee of the Nuffield Provincial Hospitals Trust has decided to make an independent survey of the conditions of general practice in Northern Ireland. The main objects are to improve the status of the general practitioner and to find, if possible, how he can obtain reasonable time for leisure, contact with his colleagues, and postgraduate study. The assumption is that any improvement which can be made on these lines will be reflected in improved service to the patient.

Dr. J. A. Fisher, formerly of the Nuffield Department of Clinical Medicine, Oxford, has been appointed to make the survey, which will be based on sample surveys, questionaries, and direct interviews with practitioners. Although the Nuffield survey is independent, it is being made with the approval and encouragement of the Northern Ireland Ministry of Health, the Health Services Board, and other interested authorities there

PHYSIOTHERAPY IN THE N.H.S.

The General Medical Services Committee has continued to contest the Ministry's view that, because specialist facilities are available through the hospital service, a general practitioner cannot receive payment for specialist services to patients on his list unless he holds a hospital appointment. For some time the Ministry has been urged to find some way of giving general practitioners with the necessary experience the right to take part in the physiotherapy service, possibly as clinical assistants. The committee has felt such an innovation to be particularly necessary in rural areas where it is difficult for patients to attend hospitals for treatment.

While stating that it is looking into the position of a mobile physiotherapy service to cover the needs of patients who cannot reasonably be expected to attend at hospitals, the department has agreed that in certain circumstances it might be possible for regional hospital boards, in view of the limitations of hospital physiotherapy departments in isolated country districts, to make arrangements for general practitioners to undertake the work.

The Ministry feels this to be entirely a matter for the regional hospital board, but envisages that in the following circumstances general practitioners could participate in the physiotherapy service:

(1) when the patients concerned are not within easy reach of a hospital providing physiotherapy services;

(2) when the doctor holds a temporary clinical assistantship from the hospital management committee and is under the supervision of the director of the hospital department of physical medicine;

(3) when a substantial number of patients in the district are likely to require such services; the doctor could not thereby limit the services to his own patients.

STATUTORY LEVY FOR LOCAL MEDICAL COMMITTEES

Some executive councils have been making a statutory levy for local medical committees from the remuneration of general practitioners by deducting the sums from, and in proportion to, the amounts paid in respect of general medical services proper, maternity medical services, and pharmaceutical services. In view of representations by the profession these deductions will in future be made in proportion only to the capitation payments, and, where appropriate, basic salary.

FACULTY OF OPHTHALMOLOGISTS

At a meeting of the council held on June 30 a letter was received from the British Medical Association stating that the Ophthalmic Group Committee supported the Faculty's representations that orthoptists should not be included within the scope of the deliberations of the Inter-departmental Committee on the Statutory Registration of Opticians, but should be regarded as medical auxiliaries.

The Faculty's attention has been drawn to the fact that the Ministry of Health has given directions to regional hospital boards that school clinics held at hospitals should be run by ophthalmic opticians, who should refer cases which they thought fit to an ophthalmic surgeon, who would be nominally in charge. The Faculty's views have been asked for on this point before such a clinic is formed in the London County Council area. The council considers that the Ministry's direction is undesirable, and the honorary secretary was asked to write to the Chief Medical Officer of the London County Council drawing his attention to a memorandum on "An Ideal School Ophthalmic Service" prepared by the Ophthalmic Group Committee of the British Medical Association in May, 1948.

It has been agreed to contribute £30 towards the cost of the lectures in ophthalmology at the Royal College of Surgeons.

Correction.—Under the heading "Health Service Glasses" in the *Supplement* of August 12 (p. 87) we should have stated that bifocal and lenticular *plastic* lenses will now be included in the range of glasses of a special type obtainable under the Health Service towards the cost of which the patient makes a payment.

Heard at Headquarters

Priorities

A doctor, describing the following letter in the melancholy phrase "Commonplace in general practice these days," tells us that he received it recently from one of his patients: "Dear Dr. X, Would you please give Mary her priority for milk and eggs. Penicillin eye ointment for Mr. N., also certificate for Elizabeth for her broken nose, and slimming tablets for me. I have to give insurance man certificate for Elizabeth saying she has had a broken nose and has had operation on same. Thanking you.—Mrs. N. P.S. Also headache tablets for Mary."

Questions Answered

International Health Certificate

Q.—*Am I entitled to charge for the International Health Certificate of successful vaccination—that is, not for the vaccination but for the certificate?*

A.—Yes.

Employment of "Mother's Help"

Q.—*I am doing public health work—maternity and child-welfare sessions. In order to do this, I employ a "mother's help" to look after my child, aged 9 months, in my absence. Am I entitled to income-tax relief in respect of her wages? Unless I employ someone for the child, I cannot do the clinic work.*

A.—There is a judicial decision, now nearly 60 years old but still valid, against such a claim. The case was that of a man and wife acting as master and mistress of a school, and the claim was for a deduction of £30 in respect of the cost of a servant employed to free the wife for her school duties. The judge held that it was not an expense incurred in the performance of their duties as school teachers (*Law Reports* (1891), 1 Q.B. 560).

Deductions When on Holiday

Q.—*Each month a sum is deducted from my salary in respect of board, lodging, etc. On returning from a month's holiday I found that that amount was deducted for the period I was away. Is any rebate allowed for absence on holiday?*

A.—Hitherto hospital authorities have adopted different policies in this matter: some have continued to make the deduction for board and lodging while the officer was on holiday, while others have not. The point was not covered in the Terms of Service issued in June, 1949, but the Ministry has recently instructed in Circular R.H.B. 50/44 (H.M.C. 50/43) that—so far as house officers are concerned—the standard charge of £100 per annum should *not* be abated on account of absence on annual leave or normal periods of sick leave.

Where in cases of prolonged sick leave this gives rise to hardship, the hospital management committee has discretion to relax the charge. Singularly enough, the deductions for board and lodging are not made in the case of nursing staff on holiday.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Councils.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

Correspondence

Independent Court of Arbitration

SIR,—Despite the rebuke which Dr. Hill attempts to administer to me in his reply to my letter in the *Supplement* of August 19 (p. 92) I am unrepentant. I do not confuse the issue, because the matter raised in 1949 and the interpretation of Clause 13 of the National Health Service (Amendment) Act, 1949, are both part of the same problem. It is a difficult problem, I freely admit, but the issues cannot be dissociated. It is bound up with the right that every man must be permitted to withhold his labour if he wills, provided he breaks no contract and provided there is not in existence such a state of emergency as calls for the suppression of normal freedom. It was this state of emergency in 1940 that compelled the Minister of Labour and National Service to make the Conditions of Employment and National Arbitration Order. That emergency no longer exists, and what is allowed to a single person should be allowed to a number of persons acting in concert. The order has been temporarily continued in force, but it is not yet part of our permanent legislation. I feel certain that if any attempt is made to make it permanent it will be resisted by the trade unions. What is much more important is the fact that, although it is a criminal offence under this Order to strike without giving notice to the Minister of Labour, in practice no attempt has been made to enforce this Order.

Industrial arbitration has been defined as "the settlement by one or more, presumably impartial, persons of an issue on which the parties have failed to agree." Who are the parties under the National Health Service Act, 1946, and the Amendment Act, 1949? On the one hand there are the persons rendering varying services under the Acts and on the other hand there is the Minister of Health, who is bound "to provide or secure the effective provision of services in accordance with the following provisions of the Act" (Clause I (1)—Duty of Minister). It does not matter whether he does it directly or not; the Minister is the employer of all those giving services under the Act.

The definition of industrial arbitration mentioned above was contained in the final report in May, 1894, of the Royal Commission on Labour. As a result of this report the Conciliation Act, 1896, was enacted. This Act was formerly administered by the Board of Trade and substituted by the Minister of Labour in 1916. The Industrial Courts Act, 1919, re-enacts the substance of the Conciliation Act, 1896, and if Dr. Hill had read my letter carefully and the provisions of both these Acts in full he would, I am sure, have been more tolerant of my right to express my opinion. I again repeat that his interpretation of both these Acts in his reply is wrong.

Both Acts are now of importance to the profession, particularly the Conciliation Act, because any difference or dispute arising with respect to our remuneration or conditions of service under the National Health Service Acts is deemed to be by Section 13 of the National Health Service (Amendment) Act, 1949, a difference or dispute to which the Conciliation Act applies. The Minister of Health has clearly subordinated his power under Clause 47 of the original Act to decide disputes for himself, and in my opinion is now by Clause 13 of the Amendment Act a party to the dispute and not the sole arbiter. I am quite well aware that by the Fifth Schedule of the National Health Service Act each executive council is a body corporate, but I do not agree that the 163 executive councils in the British Isles are distinct from the Crown. Without going into detail on this matter I would submit that they are so constituted and bear so immediate a relation to the Crown that they must be regarded as branches of the executive Government of the realm, and—as defined in Salmond on Torts—they are incorporated servants of the Crown. They possess no legal personality or capacity otherwise than as agents of the Crown.

With great respect to the eminent leading counsel referred to by Dr. Hill, whose name I do not know, I submit that his interpretation of the 1940 Order is not accurate. He expresses his opinion on Clause 4, Part II, of the Order headed "Lock-outs and Strikes," and omits reference to Part I entitled "National Arbitration." Clause 2 (2) clearly states that, provided the dispute is referred to the Minister of Labour, the Minister must refer the matter to any collective machinery suitable for settling the dispute. He must therefore deal with it under all the provisions of Clause 13 of the Amendment Act, which means *all* the machinery of the Conciliation Act and the Industrial Courts Act. If he failed to do what is obligatory under Clause 2 and proceeded as Dr. Hill and learned counsel suggest under Clause 4 at once we should be entitled to ask the Courts to restrain him from so doing. In any case Clause 4 cannot apply unless the Minister of Labour declares that our withdrawal by giving proper notice under the Law of Contract is a "strike." If he does declare it a "strike" then the constitutional position of the Association will have to be reconsidered.

The proceedings before the industrial court are voluntary and are privileged. The decisions are not enforceable under the Arbitration Act of 1889, as that Act does not apply to any reference to the industrial court or to any reference under the Conciliation Act or Industrial Courts Act. Nor is there any penal provision enforceable against any person refusing to observe the terms of a decision. Where, however, a decision is accepted or acted upon it forms a condition or term of the contract of employment. If we do not like the terms, either as individuals or collectively, then we resign our contracts. There is nothing to stop us. Slavery was abolished years ago. Although few in number, decisions have been rejected. So why be fearful?

I have not had the advantage, as a member of the Council of the B.M.A. or as a duly elected member of the Representative Body of the Association, of seeing the full report of counsel's opinion. But the answers to the two questions submitted to counsel, on page 94 of the *Supplement* of August 19, are very curious. The answer to the first is a presumption, and I would be glad to see the full legal arguments on which he bases his assumption. His answer to the second question shorn of legal arguments and as presented by Dr. Hill means just nothing to me. It is a mass of "ifs and ors" and ends in the guesswork of probability. There are at least four contingencies. With great respect I do not consider that the answer to Question 2 will assist the General Medical Services Committee in their deliberations.

I would again repeat and stress my opinion expressed in my previous letter that we are confronted, and have been since July 5, 1948, with a new constitutional situation, where the Minister of Health is an employer and a party to a "trade dispute" as enacted in Clause 13 of the Amendment Act. Under Whitley machinery, which is voluntary, he can exercise the Crown's prerogative. Under Clause 47 of the National Health Service Act the Crown's prerogative could be exercised by the Minister of Health as sole arbiter of disputes. Parliament, however, has abrogated the prerogative by statute in Clause 13 of the Amendment Act and the Minister has become a party to the dispute. Parliament is supreme, and, if it has thought fit to regulate a subject-matter in a manner which clearly seems to exclude the use of prerogative power, then effect must be given to its legislative mandate in Clause 13 of the Amendment Act. It has been clearly defined judicially that a statutory provision can extinguish or curtail the Crown's prerogative (*Min. of Health* v. *R. ex parte Yaffe*, 1931, and *Att.-General* v. *De Keyser's Hotel*, 1920).

May I finally register a protest, which will doubtless be supported by many members of Council? Some weeks after the Southport meeting we are informed, as the result of a letter of mine, that a fortnight before the A.R.M. the opinion of leading counsel was obtained at the request of the General Medical Services Committee. I appreciate the fact that the G.M.S. Committee possesses autonomy, which has already been referred to as illogical. Nevertheless, it is still a Standing Committee of the Association. Was the matter so secret and so confidential that it was withheld from members of the Council of the Association? The issues are of vital importance to the profession. It was on the agenda of the A.R.M. Dr. Wand, as chairman of the General Medical Services Committee, must have been aware of counsel's opinion when he made his

impassioned speech on withdrawal of service. Why did he not inform the Representative Body of the fact? Dr. Hill was cognizant of this fact when he made his *ex cathedra* statement to the Representative Body at Southport. Why was the Council and the R.B. ignored? It calls for an explanation.—I am, etc.,

London, W.8. J. ARTHUR GORSKY.

Resignation and Arbitration

SIR,—The first question to be answered in this very complex controversy is, Are we "employed" and, if so, by whom? Legal opinion quoted in the Secretary's answer to the letter from Dr. J. A. Gorsky (*Supplement*, August 19, p. 92) makes it quite clear that if general practitioners are employed they are employed by the executive councils and not by the Crown.

I believe that we are *not* employed. When we signed E.C.16 we agreed to provide general medical services under the provisions of the N.H.S. Act, 1946, no more and no less. Section 21 of the Act specifically forbids the L.H.A. to employ general medical practitioners in health centres, and nowhere in Part IV of the Act is any mention made of the executive councils' employing general practitioners. It would indeed be an odd constitutional situation if we as doctors were members of an executive council which is our own employer. Our position in relation to the executive councils is so vastly different from that of the public health medical officer and the local health authority by whom he is employed.

The second question is, If we collectively terminate our contracts with executive councils, is it a "strike"? Let us take the legal definition of a strike. A strike means "the cessation of work by a body of persons employed acting in combination or a concerted refusal or a refusal under a common understanding of any number of persons employed to continue to work for an employer in consequence of a dispute." This would apply to a group of public health doctors employed by the L.H.A., but it cannot apply to general practitioners. If we collectively terminate our contracts with executive councils we do not cease work. In fact we continue to provide general medical services for the public, including, I hope, certificates of incapacity. All we have done in effect is to change our methods of remuneration and collect our fees from the patient direct instead of through the agency of the Government.

It will be seen at once that the 1940 Order cannot apply to general practitioners, since we are not employed and we do not strike.

All the points in relation to Section 13 of the Amendment Act have already been covered by Dr. Gorsky's letter and the Secretary's reply thereto, except this—that the Amendment Act was passed after most of our contracts were signed and is therefore retroactive legislation and as such is incompatible with my sense of justice and fair dealing.

Whatever else we do we should not lose the right to collectively terminate our contracts. This affects consultants as much as general practitioners.—I am, etc.,

Solihull, Warwickshire. ARTHUR BEAUCHAMP.

The War Memorial

SIR,—I have followed this correspondence with a good deal of concern. It has seemed to indicate that there is not the unanimous welcome response that I had thought would follow any proposal made by the Council after due consideration and supported by high artistic authority. Whatever the proposal had been, I should have sent in my modest contribution so long as it included a memorial which could be *seen*. I never enter our courtyard without an affectionate glance at the gates which we dedicated to the 1914–18 fallen, and I have not met anyone who did not admire the taste and judgment of those responsible for that memorial.

I was therefore perturbed when some of the critics of the present proposal seemed to suggest that it would not be in keeping with the Lutyens façade or was likely to mar the beauty of the courtyard. I was glad when I was offered the privilege of visiting the studio of the artist and examining the model with the help of his explanations. I came away feeling that the whole conception is worthy of the position it is designed to hold, of the artist, and above all of those whose sacrifice we desire to commemorate. I believe it will add a new glory to the House of which we are so proud.

A word about the suggestion that we should not use the money for a visible memorial but, so to speak, put it into something "useful." Personally I should object to this, remembering the many memorial schemes which have left nothing to quicken the imagination, and I should hate the idea of the B.M.A. using it to compete with that great foundation, Epsom. I remember a strong movement at one time in favour of establishing an independent B.M.A. charity fund. This was heavily defeated, and for some years now the ability of the Association to raise money in a good cause has been used to co-operate with the R.M.B.F. to the satisfaction of all concerned. I would therefore suggest that any money left after the Memorial is paid for should be offered to Epsom in the form of B.M.A. scholarships and pensions. That body with its vast experience would know, in consultation with the Association, how best to use such funds.—I am, etc.,

ALFRED COX.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Captain (War Substantive Major) J. J. Voller, *from Short Service* (Specialist) Commission, to be Captain.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Major (Honorary Colonel) J. W. Bowden, *formerly* I.M.S., to be Major, retaining the honorary rank of Colonel.

Lieutenant (War Substantive Captain) G. J. Cleland, M.B.E., *from* Emergency Commission, to be Captain, and has been granted the honorary rank of *Major*.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel W. W. Crawford, T.D., to be acting Colonel.

Captain (acting Major) I. W. Buirski to be acting Lieutenant-Colonel.

Captains A. H. Bulleid and J. Gregory to be Majors.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel G. A. Kane, O.B.E., T.D., from Active List, to be Lieutenant-Colonel.

Major (Honorary Lieutenant-Colonel) A. Pain, O.B.E., T.D., having exceeded the age limit for liability to recall, has ceased to belong to the T.A.R.O.

Captain (Honorary Major) J. M. G. Wilson has relinquished his commission.

ROYAL AIR FORCE

Squadron Leader E. F. Mason, M.B.E., has resigned his commission, retaining his rank.

ROYAL AIR FORCE VOLUNTEER RESERVE

Flight Lieutenant T. L. Adamson has relinquished his commission on appointment to the reconstituted R.A.A.F., retaining the rank of Squadron Leader.

INDIAN MEDICAL SERVICE

Major D. P. Dewe has retired.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY SEPTEMBER 2 1950

British Medical Association

REPORT OF GENERAL MEDICAL SERVICES COMMITTEE, 1949

Preliminary

Personnel of General Medical Services Committee, 1949–50

Ex-officio: Dr. C. W. C. Bain, F.R.C.P., Harrogate (President); Dr. J. A. Brown, Birmingham (Acting Chairman of Representative Body); Dr. E. A. Gregg, J.P., London (Chairman of Council); Mr. A. M. A. Moore, F.R.C.S., Upminster, Essex (Treasurer); Dr. W. Jope, Blantyre, Lanarkshire (Chairman of Conferences of Local Medical Committees).

Elected by A.R.M. of B.M.A. (1949): England and Wales: Dr. H. Guy Dain, LL.D., Birmingham; Dr. H. H. Goodman, Newcastle-upon-Tyne; Dr. F. Gray, London; Dr. S. Wand, Birmingham; *Scotland:* Dr. W. M. Knox, Glasgow; *Northern Ireland:* Dr. J. Bleakley, Belfast.

Direct Representatives of Local Medical Committees: Dr. J. T. Baldwin, Penicuik, Midlothian (Group "A.1"); Dr. A. C. Hendry, Bucksburn, Aberdeenshire (Group "A.2"); Dr. J. T. McCutcheon, Glasgow (Group "A.3"); Dr. R. C. Hamilton, Kilmarnock (Group "A.4"); Dr. P. V. Anderson, Shildon, Co. Durham (Group "B"); Dr. H. F. Hollis, Leeds, and Dr. R. H. Sunderland, Bradford (Group "C"); Dr. C. Baxter, Liverpool, Dr. A. Campbell, Accrington, and Dr. S. A. Winstanley, Urmston (Group "D"); Dr. D. B. Evans, Wrexham, and Dr. A. E. Jenkins, Pontypridd (Group "E"); Dr. J. B. Bennett, Hyde, Cheshire (Group "F"); Dr. A. B. Davies, Walsall (Group "G"); *Dr. G. Waring Taylor, Leicester, and Dr. A. S. Wilson, Gosberton, Lincs (Group "H"); †Dr. W. D. Steel, Worcester, and Dr. F. A. Smorfitt, Southam, Warwickshire (Group "I"); Dr. W. Woolley, Bristol (Group "J"); Dr. I. C. Pearce, Diss, Norfolk (Group "K"); Dr. C. F. R. Killick, Williton, Somerset (Group "L"); Dr. H. S. Howie Wood, Isle of Wight (Group "M"); Dr. D. F. Whitaker, Guildford, and Dr. A. T. Rogers, Bromley (Group "N"); Dr. J. L. McKenzie Brown, Walthamstow, and Dr. D. F. Hutchinson, Acton (Group "O"); Dr. J. F. Murphy, London, S.W.8, and Dr. H. H. D. Sutherland, London, W.10 (Group "P"); Dr. J. B. Young, Belfast, Northern Ireland (Group "Q").

Elected by Annual Conference of Local Medical Committees, 1949: Dr. A. Beauchamp, Birmingham; Dr. S. A. Forbes, South Croydon; Dr. I. G. Innes, Hull; Dr. J. A. Ireland, Shrewsbury; Dr. F. M. Rose, Preston; Dr. J. A. Pridham, Weymouth.

Nominees of Other Bodies: Mr. R. L. Newell, F.R.C.S., Cheadle, and Mr. T. Rowland Hill, F.R.C.P., London (*Central Consultants and Specialists Committee*); Dr. Catherine Harrower, O.B.E., Glasgow (Medical Women's Federation); Dr. J. A. Struthers, London (Society of Medical Officers of Health).

Co-opted Member: Dr. O. C. Carter, Bournemouth.

Observer from the British Dental Association: Mr. J. W. Gilbert, L.D.S. R.C.S., London, E.7.

*Resigned June, 1950. †Resigned January, 1950.

Chairman

1. Dr. S. Wand was appointed Chairman for the session 1949–50.

Obituary

2. The Committee regrets to record the deaths of: Dr. D. G. Greenfield (Rushden, Northants), a Past-Chairman of the Conference of L.M.C.s, and for many years a member of the Insurance Acts Committee and Chairman of its Rural Practitioners' Subcommittee. Dr. C. M. Stevenson (Cambridge), a member of the Insurance Acts Committee in 1938–9, and a representative at Conferences for many years. Dr. C. G. Martin (London), a member and representative of the London Local Medical Committee for many years, and a member of the wartime Medical Planning Commission. Dr. Ernest Martin (Manchester), Honorary Secretary of the Oldham L.M. and Panel Committee before joining the Ministry of Health Divisional Medical Staff. Dr. J. W. Little (Newmains, Lanarkshire), a member of the Insurance Acts Scottish Subcommittee for many years, and Secretary of the Lanarkshire Panel Committee. Dr. A. W. Holthusen (Southend), a representative at Conferences for many years, and a member of the Southend Insurance Committee.

Work of the Committee

3. The Committee's efforts to secure an improvement in the capitation fee were set out in M.28 and reported to the Special Conference of Local Medical Committees on June 29. In addition a review has been undertaken of many of the Regulations affecting general practitioners in the Service. These activities, together with an increasing volume of routine business, have inevitably increased the Committee's activities, and with the exception of February it has been found necessary to hold monthly meetings since the last Annual Conference. Each meeting has occupied the attention of the Committee for at least six hours and on several occasions the Agendas have contained more than fifty items as well as reports from subcommittees. In addition to meetings of the full Committee there have been numerous subcommittee meetings, deputations to the Ministry of Health, and informal discussions with representatives of other bodies associated with the National Health Service.

4. A list of attendances at various meetings is given in Appendix "A." This does not include attendances of members at Whitley Council meetings or other Association Committees upon which they serve as representatives of the G.M.S. Committee.

Election of Direct Representatives on the Committee

5. The regrouping of Local Medical Committees for the purpose of electing direct representatives on the G.M.S. Committee, as approved at the last Annual Conference, comes into operation at the forthcoming election. A separate communication on the subject is being sent to Secretaries of Local Medical Committees.

Representation on B.M.A. Committees

6. The G.M.S. Committee is represented on the following B.M.A. Committees: Private Practice (Dr. S. Wand); Central Consultants and Specialists (Drs. A. T. Rogers and D. F. Hutchinson); Ophthalmic Group (Dr. W. Woolley); Occupational Health (Dr. H. F. Hollis); Public Relations (Drs. S. Wand, D. F. Hutchinson, F. M. Rose, C. Baxter, H. H. D. Sutherland, and W. Woolley); Health Centre (Dr. D. F. Hutchinson); Compensation and Superannuation (Drs. S. Wand, W. Jope, and A. Campbell); Committee *re* Association of G.P.s with Hospital Work (Drs. S. Wand, D. F. Hutchinson, and C. F. R. Killick); Joint Committee of B.M.A. and Pharmaceutical Society (Drs. S. Wand, F. Gray, and W. Jope); Joint Subcommittee on Report of Working Party on Midwives (Drs. A. T. Rogers, H. H. D. Sutherland, and J. G. Thwaites); Joint Formulary Committee of B.M.A. and Pharmaceutical Society (Drs. A. B. Davies, S. A. Forbes, A. Smith Pool, and D. F. Whitaker); Joint Subcommittee of Central Consultants and Specialists and General Medical Services Committees (Drs. D. F. Hutchinson, A. T. Rogers, and H. S. Howie Wood).

Nominees on the Ministry of Health Distribution Committees

7. The following nominees were accepted by the Ministry for appointment to the Central Distribution Committees for 1949–50:

International Distribution Committee: Dr. F. Gray (London), Dr. W. M. Knox (Glasgow), Dr. J. D. Wells (Billericay, Essex), and Dr. E. J. Rees (Pontypridd).

Distribution Committee for England and Wales: Dr. F. Gray (London), Dr. W. Woolley (Bristol), Dr. E. J. Rees (Pontypridd), and Dr. D. P. Stevenson (Deputy Secretary of the B.M.A.); together with Dr. J. C. Pearce (Diss, Norfolk), Dr. J. D. Wells (Billericay, Essex), and Dr. C. F. R. Killick (Williton, Somerset) when questions concerning mileage are under consideration.

8. This representation has enabled the Committee to present its views direct to Ministry Committees which are concerned with the distribution of the Central Pool. In this way the Committee has been able to press for an interdepartmental committee to re-examine the distribution of the Mileage Fund and the desirability of setting up machinery to check the inflation of doctors' lists.

Medical Practices Committee

9. Dr. W. E. Dornan has been reappointed Chairman of the Medical Practices Committee for a further period.

10. A number of informal meetings have been held between representatives of the General Medical Services Committee and the medical members of the Medical Practices Committee, at which matters of mutual interest have been discussed.

11. The Committee would like to record its appreciation of the ready way in which the medical members of the Medical Practices Committee have co-operated in these discussions, and on one occasion a joint approach has been made to the Ministry on an important problem affecting the filling of vacant practices.

Representation on the Joint Pricing Committee for England

12. The Committee's nominee, Dr. Joel Green (London, N.W.6), has been reappointed to the Joint Pricing Committee for England.

Liaison with the Dentists

13. The British Dental Association has agreed to an exchange of observers. Dr. F. Gray (London) represents the G.M.S. Committee on the appropriate committee of the B.D.A., and Mr. J. W. Gilbert, L.D.S. R.C.S. (London), represents the B.D.A. on the G.M.S. Committee.

Liaison with Consultants and Specialists

14. The Committee has accepted an invitation from the Central Consultants and Specialists Committee to form a joint subcommittee to consider matters of major importance affecting the interests of both general practitioners and consultants and specialists.

15. The General Medical Services Committee will be represented by Drs. S. Wand, A. Campbell, H. S. Howie Wood, D. F. Hutchinson, C. F. R. Killick, W. Jope, and A. T. Rogers.

Remuneration

16. Local Medical Committees will remember that the Special Conference on June 29, 1950, passed the following resolutions:

(1) That the Conference places on record the fact that at no time, either before or since the appointed day, has the remuneration of general practitioners been agreed.

(2) That the Conference is seriously disturbed at the repeated hold-ups and prolonged delays in the negotiations on general-practitioner remuneration, and calls upon the Minister of Health to state immediately what the global sum should, in his opinion, be in the Central Pool to implement the recommendations in the Spens Report.

(3) That the Conference deplores the failure of the Minister of Health to give an unqualified assurance that negotiations on general-practitioner remuneration will always be conducted through Whitley machinery.

(4) That the Conference, recognizing that an equitable settlement of the remuneration issue may be influenced by early and accurate information on general-practitioner income from National Health Service sources and practice expenses, is willing to participate in the proposed inquiry.

(5) That the Conference instructs the General Medical Services Committee to make preparations forthwith for the termination of contracts by general medical practitioners in the National Health Service.

(6) That if and when it becomes evident that there is no prospect of a satisfactory settlement of the claim, a Conference be called to name a date on which general practitioners are advised to end their contracts with local executive councils; and that in any case a Conference be called to consider the position in December, 1950, if a settlement has not been reached by that time.

17. These resolutions were forwarded to the Ministry of Health on June 30, 1950, and a reply was received to the effect that a memorandum setting out the Ministry's proposals for the inquiries into general practice income and expenses would be available at an early date. The letter went on to say that, in view of the delay in arriving at the necessary settlement to enable the inquiries to proceed, there was some doubt as to whether it would be possible to complete the inquiries by November 1.

18. The Committee has since received the memorandum referred to above and has discussed it in detail with officers of the Ministry. During the discussions the Committee's representatives were accompanied by an eminent actuary and an accountant with experience of doctors' accounts and income-tax problems. Sufficient agreement has been reached with the Ministry on the general lines upon which the inquiries are to be conducted to enable the collection of the factual information to be proceeded with forthwith.

19. The Committee has also considered the necessary steps to be taken to give effect to the instruction of the Special Conference to prepare forthwith for the termination of general practitioners' contracts with Executive Councils. It will be remembered that the British Medical Guild was set up specifically for the purpose of dealing with disputes arising between the Government and any section of the profession, and, bearing in mind that for constitutional reasons the G.M.S. Committee is unable to organize mass withdrawal from the Service, it is inevitable that the Guild should make the necessary preparations. Local Medical Committees will by now have received Memorandum I issued by the Executive Committee of the Guild, and a further memorandum will shortly be issued dealing with the more detailed arrangements to be made by the Local Guild Committees as soon as they have been set up in every area.

Mileage

20. It will be remembered that, following a comprehensive survey of mileage payments throughout the country, the Committee concluded that the global sum of £2 million was adequate for Great Britain as a whole, but that the figures revealed discrepancies in some areas which indicated that the distribution of the Fund was urgently in need of revision. Concurrently with the Committee's survey the Ministry collected data for use as the basis of future distribution of the Central Fund between Executive Councils. Every Executive Council concerned with the payment of mileage was asked to submit returns of units claimed on a standard basis of one unit for each mile or part of a mile over two miles from the doctor's residence to the patient's address. By a process of dividing the total number of persons on the doctor's list by the total number of mileage units credited to him, the practices were then classified into (*a*) rural, (*b*) semi-rural, and (*c*) urban, and the units in the rural and semi-rural practices weighted by 100% and 50% respectively.

21. Subsequently the Ministry submitted statements showing the effect of applying the new proposals, and, whilst the Committee was not surprised to see that a substantial redistribution would be effected by the adoption of the new criteria, the absence of any reference to "walking" units resulted in an incomplete picture of the mileage position generally.

22. Further discussions and examinations of the problem have shown that many of the inequalities are due to the lack of any up-to-date basis for the allocation of the Reserve portion of the Fund. The original grants from the Reserve portion were determined by a Ministry of Health Committee after a comprehensive survey some 25 years ago, and, with subsequent increases in the Mileage Fund, the present size and distribution of the Reserve portion bears little relation to the difficulties of access actually involved.

23. Additionally, although the new proposals vary the weightings which are applied to the different categories of practice, the actual method by which the practices are classified for the purpose of compiling returns which govern the distribution of the Ordinary portion of the Fund is also some 25 years old and therefore cannot wholly account for changing conditions in various areas. It is clear, therefore, that the factors on which the Committee's proposals were based would not necessarily lead to a permanently equitable distribution of the Fund.

24. The Committee concluded that the only remedy lay in the appointment of a Government Committee to review the whole mileage problem afresh. The Ministry has agreed to take this course, but, as some time will elapse before any new scheme can be evolved, it has been decided as an interim measure to vary the "weightings" from April 1, 1950, in accordance with the proposals which the Committee had made. It is felt that this step will reduce some of the more obvious inequalities in distribution pending the completion of the work of the Government Committee.

25. The Committee has also undertaken an examination of the specially difficult areas with a view to helping the practitioners in these areas, either from the Special Inducement Fund or by making special payments as a first charge on the Central Mileage Fund in cases of difficulty where payments from the Special Inducement Fund would not be considered appropriate. In view of the appointment of a Government Committee to investigate the mileage question in detail, however, it is considered that this question could more satisfactorily be resolved in the course of that Committee's investigations, and no further action is being taken for the time being. It is hoped that the interim scheme will go some way towards alleviating some of the more extreme cases of special difficulty.

26. Consideration has been given to the question of mileage payments for doctors attending patients at lighthouses. The doctor's liability in terms of time spent is considerable and might well involve absence from his practice for a long period during bad weather. Pending further consideration of the subject by the Government Committee mentioned above it has been decided that mileage payments should be based on the following factors:

(1) cost of boat hire where necessary and on each occasion when it is necessary;

(2) mileage based on the distance from the doctor's home to the point of embarkation less two miles;

(3) payment for loss of remunerative time based on a classification of lighthouses into two grades: (*a*) easily accessible, £2 per visit; (*b*) others, £5 per visit.

27. Where the lighthouse is on the mainland and within reasonable distance of the centre of an area of habitation it will not be included in these special arrangements.

Basic Salary

28. The 1949 Annual Representative Meeting of the B.M.A. recorded its objection to the Minister of Health allowing an appeal against the refusal of a Local Medical Committee and Executive Council to grant basic salary. It was suggested to the Ministry that appeals of this nature should be referred to the Medical Practices Committee, or at any rate that that Committee should be consulted before the Minister announced his decision on appeal. The Ministry's view is that the result of an appeal is a quasi-judicial ruling which should be given by the Minister, who is alone responsible.

29. The Minister has subsequently, on a number of occasions, allowed appeals by general practitioners against decisions of Executive Councils that basic salary should not be granted. The reason given by the Minister was that the doctor was building up a practice. In one particular case the doctor in question had limited his list to children under 16 years of age, and the Local Medical Committee pointed out that this was not only contrary to the spirit of the N.H.S. Act, but was against the view expressed by the Minister in the House of Commons on July 19, 1948, when he described as reprehensible the idea of a doctor taking younger members of a family on his list and refusing the older members. Apart from this, if the doctor in question had not restricted his practice to children, it is reasonable to suppose that he would have acquired a list of sufficient size to make it unnecessary to consider granting him basic salary. The G.M.S. Committee has registered a strong protest against the Minister's action in allowing the second appeal.

30. The Ministry, after representations had been made by the Committee, has advised Executive Councils that they should not grant basic salary to a doctor who is also on the list of an adjoining area without consultation with the other Executive Council concerned. In the event of disagreement it is suggested that the decision should rest with the Executive Council in whose area the doctor has the largest list.

Central Practitioners' Fund—Basis of Calculation

31. In 1948 it was agreed that the population factor in the calculation of the Central Practitioners' Fund—95% of the population in Great Britain—should hold good for two years. Discussions are taking place with the Ministry of Health in order to determine what modifications are necessary in the light of changed conditions, and it will be necessary to obtain further exact information before any decisions are taken. A major point of disagreement between the Committee and the Ministry is the degree of inflation of doctors' lists.

Special Inducement Fund

Partnerships

32. The question was taken up with the Ministry of reductions made when granting inducement payments of partnerships where the practitioners concerned are related. Whilst the Committee considers that it is reasonable to reduce grants when two doctors are sharing a house, a reduction of £500 was regarded as excessive, and the Department was informed of the Committee's view that the primary consideration should be the needs of the applicant and not the medical man-power needs of the area. The Ministry agreed that, whilst the existing criterion for an inducement payment—namely, an income of less than £1,000 net—was unchanged, a difference of £500 in the case of related partners would be excessive.

Scope of the Fund

33. The Committee's attention was drawn to instances where inducement payments had been applied for on the grounds of a reduction in income as a result of the introduction of the National Health Service, but refused by the Ministry because the doctors concerned practised in an area where inducement payments would not be appropriate. The Ministry agreed in principle that the balance of the Inducement Fund should be

immediately available to assist practitioners in cases of hardship irrespective of whether the area in which they practised is regarded as an "Inducement area," and details of the scheme were issued to general practitioners through Executive Councils in March. The circumstances of all such cases will be reviewed annually, and, though it is recognized that payments will have to be made in certain cases over a number of years while the doctors adjust themselves to the new circumstances, it is contemplated that such payments will be on a descending scale. Payments may be made retrospective to July 5, 1948.

Superannuation—Annual Statement

34. The 1949 Annual Conference (Minute 78) asked that as soon as practicable after April 5 each year a single statement be made available to every general practitioner in the Service showing the total amount deducted in respect of superannuation contributions from all sources. When making representations to the Ministry on the subject the Committee pointed out that some doctors were on more than one Executive Council list and were also employed by hospitals, and a comprehensive statement of their superannuation position would be appreciated.

35. The Ministry's reply is that the Superannuation Division maintains a file for each doctor which contains a form completed by each body (Executive Council, Regional Hospital Board, etc.) with which he is in contract, but not a running record of contributions. Pensions are based on earnings, not on contributions, and the Ministry is only concerned with the amount of contributions in the case of those doctors who leave the Service and are entitled to a refund; the amount can then be obtained direct from the Executive Council and other authorities concerned.

36. It would require a substantial increase in staff, for a limited purpose, to put the Ministry in a position of giving every doctor a statement of the amount of his contributions, but the Ministry is prepared to consider getting this information in any exceptional case where absence of figures could be shown to result in hardship.

Whitley Council Machinery

37. The following have been appointed to represent the interests of general medical practitioners on the Staff Side of the Medical Functional Council: Dr. S. Wand (Birmingham), Dr. E. A. Gregg (London), Dr. W. Jope (Blantyre, Lanarks), Dr. W. M. Knox (Glasgow), Dr. Charles Hill, M.P., Dr. A. E. Jenkins (Pontypridd), Dr. C. F. R. Killick (Williton, Somerset). These representatives, together with the following, form the Staff Side of the Committee of the Council dealing with general medical services: Dr. J. A. Brown (Birmingham), Dr. I. G. Innes (Hull).

Petrol Tax

38. Immediately following the announcement that the Chancellor of the Exchequer proposed to increase the tax on petrol by ninepence a gallon representations were made to the Ministry of Health, on the ground that the increased tax constituted a net reduction of general-practitioner remuneration, falling heaviest on those who travel the greatest number of miles. Subsequently the Ministry stated that this was a matter for the Treasury to deal with, and a request was made to the Chancellor to receive a small deputation. The reply on behalf of the Chancellor was a reference to questions and answers in Parliament to the effect (*a*) that it was impracticable to relieve doctors of the increase in petrol duty, and (*b*) that the imposition of a new tax could not be regarded as constituting grounds for an addition to remuneration. In the circumstances the Chancellor felt that no useful purpose would be served by his receiving a deputation.

39. The Committee was not satisfied with the position and asked the Minister of Health to receive a deputation. This request was granted and at the interview the Minister stated that the petrol tax was essentially a Treasury matter affecting many classes of persons. Whilst doctors might be in a slightly worse position than other sections of the community the Minister held that they could not expect an upward revision of their remuneration merely on the ground that the cost of petrol had been increased. So far as it affected the net remuneration of doctors from a fixed central pool, the Minister felt that he could not act until the proposed inquiries into income and practice expenses were completed and it could be seen whether the Spens Committee's recommendations were being implemented. He agreed, however, that as the figures relating to practice expenses would cover a period anterior to the imposition of the additional tax on petrol, an adjustment would have to be made in respect of these or other factors which had changed materially in the meantime.

Temporary Residents

40. By agreement between the Committee and the Ministry, Form E.C.19 has been amended so as to require the doctor to certify that he has actually given treatment to the patient in respect of whom he is claiming a temporary resident fee.

Maternity Medical Services

41. In consequence of a number of anomalies which have arisen in regard to maternity medical services, the Ministry, after consultation with the Committee, issued a circular letter to Executive Councils which it is hoped will clarify the position.

42. Several questions have been under discussion, notably the position of a woman who, during her pregnancy, frequently travels from one area to another, and that of a woman discharged from hospital within a few days after the confinement.

43. The Ministry has agreed that early discharge from hospital after confinement is undesirable except in special home circumstances and has undertaken to discuss with the Senior Administrative Officers of Regional Hospital Boards how far unnecessarily early discharge can be prevented in the future. The Committee is anxious to have information of cases in which this has been done.

44. The Committee also raised the question of women who are receiving antenatal care at a hospital or antenatal clinic but who require treatment in their own homes, and a list of the following conditions, which in the Committee's view arise solely from pregnancy, has been sent to the Department:

(1) Toxaemia of pregnancy.
(2) Antepartum haemorrhage.
(3) Any pelvic or vulval abnormality arising out of pregnancy.
(4) Genito-urinary infections.
(5) Hyperemesis gravidarum.

45. The Ministry proposed that doctors who, although providing treatment for these conditions, are not responsible for the antenatal care should receive a fee of 10s. 6d. (7s. 6d. if the doctor is not a general-practitioner obstetrician) for each attendance or visit, subject to an overriding maximum of the Part I fee. In cases of doubt as to whether a particular condition does arise from pregnancy, it has been agreed that the Local Obstetric Committee should adjudicate.

46. A number of difficulties have arisen as to what can be construed as a "reasonable effort" to obtain a patient's attendance for a post-natal examination and thus enable the doctor to claim a Part II fee. The Committee has expressed the view that two serious attempts should be sufficient for this purpose and, in view of the uncertainty which exists, the Ministry has been asked to issue some guidance on the subject.

Anaesthetics

47. The Central Consultants and Specialists Committee has been asked to consider, with a view to appropriate representations to the Ministry of Health, a proposal that a general practitioner should be able to call upon the services of a consultant anaesthetist in connexion with a maternity service rendered in a nursing-home, without the necessity for calling in a consultant obstetrician.

Forms E.C.24 and 24A

48. Arising from a circular letter (E.C.L. 16/50) to Executive Councils, referred to in paragraph 41, the notes on the inside back cover of pads of Forms E.C.24 and 24A are being revised and will, it is hoped, clarify a number of points upon which practitioners have been in difficulty in the past in completing the forms. Provision is to be made in the forms for practitioners to claim mileage in appropriate cases.

49. Following a suggestion made by the Executive Councils' Association, the Ministry was asked to arrange for pads of Forms E.C.24 and 24A to be numbered in serial order with a numerical index for the patients' names. It is considered that this proposal will be of assistance to doctors.

50. The Ministry states, however, that the cost of this proposal would be out of proportion to the advantages gained. Instead, there will be printed on the front page of each pad of forms a number of lines which the doctor can use as an index.

Access of General Practitioners to Maternity Hospitals

51. The Committee has expressed its agreement with the suggestion made by the Ministry in its circular letter R.H.B. (49) 132 that, where a general practitioner has access to beds in maternity units, a selected general-practitioner obstetrician should have the general oversight of the unit.

Range of Treatment

52. The Committee has raised the question of payment for circumcision in cases where the doctor is called in by a midwife within fourteen days after the confinement. The Ministry is unwilling to prescribe a specific fee for circumcision carried out in these circumstances, because in the light of current medical thought it does not wish to encourage an increase in the number of such operations. It therefore appears that the only source from which payment for circumcision can be claimed is the scale of fees for medical practitioners called in by midwives whereby a practitioner can claim 12s. 6d. for the first visit and 10s. 6d. for each subsequent visit to the mother or child. These fees however are only appropriate where the doctor is called in under the "Medical Aid" arrangements.

53. The Medical Practitioners (Fees) (No. 2) Regulations, 1948, provide for a fee in respect of an attendance at an abortion, miscarriage, etc., after the 28th week. Now that the Ministry has agreed to pay a Part I fee in cases where a practitioner is called to attend a miscarriage occurring after the eighth week, the Committee has asked for these Regulations to be amended and thus bring the Medical Aid arrangements into line with the agreement which has been reached. The Ministry has undertaken to consider amending the Regulations when a convenient opportunity occurs.

Drugs and Dressings for Maternity Patients

54. The Committee has suggested a number of additions to the present maternity pack, and detailed suggestions have been sent to the Department. It is understood, however, that the contents of these outfits are at present under consideration by the Obstetrical and Gynaecological Group of the Medical Supplies Working Party, and the Department has undertaken to consider the Committee's proposals in the light of the advice given by the Working Party.

55. The Ministry has agreed that, in the case of drugs and dressings supplied by a dispensing doctor providing maternity medical services for patients on another doctor's dispensing list, the cost can be recovered by prescribing the drugs and dressings on Form E.C.10, which should be passed to the Executive Council. Still under consideration is the question of allowing the cost of minor and inexpensive dressings supplied to a maternity patient on the doctor's own list.

Mileage in Maternity Cases

56. Agreement has been reached with the Ministry on the payment, as a first charge on the Central Mileage Fund, of mileage in maternity cases, the basis being a "per case" payment per mile for each outward mile in excess of two miles from the doctor's residence to the patient's address. Maternity mileage is payable only when the patient resides in an area in which mileage is normally paid. The payment per mile would be 3s. when the full maternity service is given and 1s. 6d. when only a Part I or Part II service is given. In cases where any lesser maternity fee is claimed maternity mileage is not payable.

Obstetric Emergencies

57. The Committee has taken no exception to the Ministry's proposal that midwives under certain circumstances should be empowered to call upon the services of an Obstetric "Flying Squad" where such arrangements are made by local authorities, although it has emphasized that before doing so midwives should make every effort to secure the services of the patient's doctor or, failing him, another doctor.

Review of General Practitioners on Obstetric List

58. The Ministry has agreed that Executive Councils, when reviewing names of doctors included in the local Obstetric List, should look at those practitioners concerning whose suitability for retention in the list there might be some doubt, rather than carry out a general review of all the doctors on the list.

Employment of Assistants in Maternity Work

59. With a view to assisting young doctors to obtain obstetric experience, consideration is being given to the possibility of extending a scheme which is in operation in Middlesex, which provides facilities for young doctors to attend obstetric clinics as clinical assistants.

Change of Doctors

60. Arising from resolutions passed by the 1949 Annual Representative Meeting and the Annual Conference, discussions have taken place with the Ministry on the desirability of reverting to the practice under the N.H.I. Act whereby, except with the consent of the two doctors concerned, a patient could change his doctor only at the end of a specified period.

61. As a result of these discussions the Ministry submitted a proposal that, as in the case of a patient who withdraws from a doctor's list, a patient who wishes to transfer to another doctor should be required to give a fortnight's notice of his intention to the Executive Council. This requirement would be operative only if the patient did not change his address. In the event of removal, either within or outside the Executive Council area, no notification would be necessary.

62. The Committee has accepted this proposal as satisfactory for a trial period, on condition that provision should also be made for an immediate change of doctor with the consent of the two doctors concerned. The Ministry has agreed to this arrangement and it is hoped to introduce the new scheme at an early date.

Filling of Vacancies

63. Arising from a resolution passed at the 1949 Annual Conference, agreement has been reached with the Medical Practices Committee that, when that Committee is considering an application for an appointment to a practice vacancy, provision should be made for the attendance of a nominee of the Executive Council concerned (such nominee to be a member of the Local Medical Committee) either at the request of the Executive Council or of the Medical Practices Committee. The Executive Council's nominee would attend for the purpose of giving supplementary information relating to candidates whose applications were under consideration, but would not be present at the interview with the candidates, nor when the final selection is made.

64. In consequence of a further resolution of the Annual Conference, an investigation has been made of the machinery for hearing appeals by unsuccessful applicants with a view to eliminating delay which might endanger both the successor to the practice and the continuity of general medical services. After careful consideration, however, the Committee felt that much of the delay could be obviated by the establishment of a joint subcommittee of the Executive Council and the Local Medical Committee for the purpose of considering applications for vacancies in the first instance.

65. The Committee shares the Ministry's anxiety about the position of a doctor appointed to fill a vacancy but who finds that another doctor has secured the only available accommodation. The question has been discussed both with officials of the Ministry and with representatives of the Medical Practices

Committee, and consideration is being given to the possibility of overcoming the present unsatisfactory situation. Among the proposals under discussion are the closing of a small area around the practice premises and an amendment of the Terms of Service prohibiting a doctor, other than the one selected to fill the vacancy, from providing general medical services from the premises used by the outgoing doctor for a period except with the consent of the Medical Practices Committee.

Classification of "Open" Areas

66. Concurrently with the publication of the First Report of the Medical Practices Committee listing areas which were inadequately doctored or where more doctors were stated to be required, a circular letter was issued by the Ministry urging Executive Councils, in co-operation with Local Medical Committees, in areas where the need for more doctors was considered to be a matter of priority, to take effective action to increase the number of practitioners. It was suggested that steps should be taken to advertise the need for a specified number of doctors.

67. The Ministry's action gave rise to resentment by Local Medical Committees in some of the areas listed as being under-doctored, and, after consultation with the Medical Practices Committee on the subject, a strong protest was sent to the Ministry that in spite of previous assurances it did not see fit to consult the profession's representatives before issuing its letter to Executive Councils.

68. The Committee recognizes that, in some areas where the average number of patients on doctors' lists in an Executive Council area exceeds 3,000, a *prima facie* case exists for an immediate investigation by the Local Medical Committees in those areas, although this should not exclude the possibility of an investigation at the other end of the scale in areas which are over-doctored. It does not, however, agree to the steps outlined in the Ministry's letter, and Local Medical Committees were asked not to give effect to the Ministry's suggestion pending a more satisfactory statement from the Department.

69. The Committee now understands that the Department does not propose to press Executive Councils to take any further action until the results of the Medical Practices Committee's second survey are known. An undertaking has been received that the profession's representatives will be consulted before any action is taken on the Committee's Second Report.

Exchange of Practices

70. Difficulties have been experienced by doctors wishing to exchange practices, particularly in cases where Executive Councils would not co-operate in consenting to exchanges. The question has been discussed with the Medical Practices Committee, and that Committee has suggested to Executive Councils that applications received from doctors to exchange practices should receive favourable consideration. The Medical Practices Committee has undertaken to take up on behalf of the doctor concerned any case in which the Executive Council is not willing to co-operate.

Health Centres

71. A resolution passed by the 1949 Annual Conference, expressing the need for protecting the practices of doctors who consent to practise from Health Centres, has been sent to the Department.

72. The special subcommittee appointed to consider the problem of Health Centres generally has prepared an Interim Report which has been adopted by the Committee and is set out in Appendix "B."

Constitution and Procedure of Medical Service Committees

73. The Committee has carried out a complete review of the constitution and procedure of Medical Service Committees, with the object of recommending changes where it is considered that the existing machinery is defective or is not working smoothly. Local Medical Committees were given an opportunity of making suggestions in the light of experience gained during the first 18 months of the new Service.

74. Among the proposals which have been discussed with the Ministry of Health are:

(*a*) limitation of the scope of complaints to those made by the patient, or someone on his behalf when he is unable himself to make a complaint;

(*b*) the reduction, from six to four weeks, of the period within which a complaint must be lodged;

(*c*) a specific requirement that the report of the Medical Service Committee shall be considered by the Executive Council not later than one month after the inquiry:

(*d*) that in formulating its recommendation the Medical Services Committee should confine itself strictly to the facts of the case under consideration, and should not make any recommendation intended to have a wider implication;

(*e*) the introduction of machinery similar to that in operation under the N.H.I. Act, enabling a complaint to be made against a patient;

(*f*) the preparation of a handbook of procedure for the consideration of complaints under the N.H.S. Act for the use of Local Medical Committees and Executive Councils.

75. The Ministry's view is that, whilst the framework of the procedure must be set out in Regulations, the Department's policy is, generally speaking, to refrain from making additional Regulations except where the need for them is clearly established. The intention is to communicate the Department's views to Executive Councils on matters of detail in a manner which gives them a reasonable measure of discretion. This object will be achieved, it is believed, by the issue of a handbook, a draft of which the G.M.S. Committee is now discussing with officers of the Ministry.

76. The question of legal representation at hearings of Medical Service Committees has also been carefully considered. In 1949 the A.R.M. by a narrow majority—125 to 123—asked the Council to seek an amendment of the Regulation to bring it into line with that in Northern Ireland, whereby a defendant doctor can, if he so desires, have the services of a solicitor or paid advocate. After careful consideration of all aspects of the problem, the Committee is satisfied that the present position holds greater advantages for the defendant doctor than the change suggested by the A.R.M. In view, however, of certain new aspects of this problem which have recently come to light, the Committee is giving further consideration to the whole question of representation at Medical Service Committee hearings.

Medical Membership of Tribunal Under Section 42 of the N.H.S. Act

77. The Tribunal for the purpose of inquiring into representations that the continued inclusion of a person on any Executive Council list would be prejudicial to the efficiency of the Service originally provided for the appointment of only one "practitioner member" of each of the professions concerned. Under the 1949 Amending Act each profession will have a panel from which the "practitioner member" will be selected. The following have been nominated for the medical panel: Dr. H. Guy Dain (Birmingham), Dr. S. A. Winstanley (Urmston, Lancs), Dr. A. E. Jenkins (Pontypridd), Dr. A. T. Rogers (Bromley, Kent), Dr. C. F. R. Killick (Williton, Somerset), Dr. Graham P. Williams (Holyhead), Dr. A. S. Wilson (Gosberton, Lincs), Dr. D. T. McDonald (Northumberland).

Disciplinary Machinery—Medical Advisory Committee

78. When the Minister of Health has decided to withhold a sum of money from a medical practitioner's remuneration in respect of an alleged breach of the terms of service he is required, in certain circumstances, to set up a Medical Advisory Committee consisting of the Chief Medical Officer of Health or his deputy and two other medical practitioners in the service of the Ministry, together with three medical practitioners selected from a panel nominated by a body representative of those engaged in the provision of general medical services. All the members of the G.M.S. Committee who are actively engaged in general medical services under the Act have been nominated to form the panel for this purpose.

Publicity for Disciplinary Cases

79. The Committee has objected to publicity being given to the names of parties to disciplinary proceedings, especially when the decision of the Tribunal was that the doctor's name should not be removed from the medical list. The official reply is that it is the Minister's duty under Section 42 (7) (*c*) of the Act and Regulation 43 of the Service Committee and Tribunal Regulations to publish the decisions of Tribunals, and that it is appropriate in publishing the decision to include a summary of the more important points of the case.

Vaccination and Immunization

80. Clearly it cannot be disputed that vaccination and immunization are services within the competence of a general practitioner. The Ministry, however, go further and hold to the view that these services form part of a general practitioner's terms of service for which he is already remunerated by the Local Executive Council. Nevertheless, the Committee claimed that, when these services are performed in conjunction with a Local Authority's scheme in which general practitioners are invited to participate, they are no longer services which are entirely within a general practitioner's contract under the N.H.S. Act. It was finally agreed that a doctor's participation in a Local Authority's scheme under Section 26 of the Act involves an element of advocacy of vaccination and immunization and the submission of records; and that as these factors go beyond the practitioner's ordinary Part IV obligations they fall to be taken into account in determining the scale of fees to be paid by the local Health Authority on receipt of the record.

81. In December last agreement was reached on the fees for notified vaccination and immunization. The Local Authorities' Associations undertook to recommend their constituent bodies to pay a fee of 5s. for each record received from a general practitioner. The fee will be paid for evidence of a successful vaccination on the first attempt or where a second attempt has been made after an unsuccessful first attempt. A third attempt will be regarded as a fresh vaccination and an additional fee of 5s. will be paid for it.

82. For immunization a fee of 5s. will be paid in respect of the complete process, normally involving two injections. A fee of 5s. will also be paid for a "boost."

83. It should be borne in mind that the offer of a fee of 5s. for each record received had to be considered (*a*) in the light of the discussions with the Ministry of Health and the Local Authorities' Associations; (*b*) in the knowledge that the proposal represented an increase of 100% over the original offer; (*c*) on the information that the Treasury would not agree to a higher fee, having regard to the national economic situation, and (*d*) on the realization that the rejection of the offer might mean that alternative arrangements might be made, possibly by the establishment of Local Authority clinics, for vaccination and immunization.

84. The terms outlined above were accepted on the understanding that they would apply retrospective in all cases where records had been returned since July 5, 1948, and without prejudice to the reopening of the question of the fee in the light of changed circumstances. Subsequently, however, reports received from various parts of the country showed that some Local Authorities were paying medical practitioners the agreed fee of 5s. only in respect of patients on their N.H.S. lists. There appears to be no justification for this discrimination, which is not in accordance with the official view. Appropriate and successful action has been taken in all cases brought to the notice of the Committee.

85. Information was also received that some local authorities were refusing to pay the notification fee for an incomplete case when the doctor was prevented by circumstances outside his control from successfully completing the vaccination or immunization. The Ministry's view is that the local authority would be justified in paying a fee when it is satisfied that failure to complete the procedure was not the doctor's fault. Local authorities seeking a ruling from the Ministry have been informed in this sense.

86. With a view to standardizing and simplifying the reports to be used in connexion with vaccination and immunization, revised forms have been approved for recommendation to Local Authorities. The Ministry is not in a position to do more than recommend the adoption of the suggested models. Local Medical Committees may feel that inquiries should be made in the appropriate quarter as to what action is being taken locally in this matter.

87. The Committee has discussed with the Ministry the question of payment for combined whooping-cough and diphtheria inoculations involving three items of service instead of two. The point was made that these injections carried an added liability, in so far as the increased number of injections made it more difficult to contact the patient, and it was suggested that whooping-cough immunization should form the subject of a separate notification with an appropriate fee. The Ministry's reply was that they could not depart from the principle that the inoculation was included in a general practitioner's ordinary obligations to patients for whom he is providing general medical services, and that the element of propaganda and the submission of a report were not more onerous in the case of combined reports. It was stated, also, that the number of Local Health Authorities making use of a combined antigen was not large and would probably diminish.

88. Local Authorities making inquiries on the point have been advised by the Ministry that, where a separate record of inoculation against whooping-cough is required, a separate fee should be paid, and it is thought that similar arrangements would probably be applicable if an Authority had in an emergency a draft scheme in operation for reports of inoculation against typhoid fever.

89. The Ministry has ruled that a doctor taking part in the National Health Service is not entitled to charge a fee for inoculating any of his own N.H.S. patients before they go abroad, but he can charge a fee for the International Certificate, if required.

Vaccination and Inoculation of Merchant Seamen

90. When a merchant seaman is required to be vaccinated or inoculated, the doctor (frequently a part-time medical officer of the Shipping Federation) giving the service, under present arrangements, is entitled to take the man on his list and receive a temporary resident fee of 15s. from the "pool," in addition to the fees for notification (5s.) and International Certificate (3s.). This is felt to be a payment out of proportion to the service rendered and may prove to be a substantial liability to the "pool." It has been agreed, therefore, that the Shipping Federation shall be paid from the "pool" a fixed sum of £1,000 a year to cover all vaccinations and inoculations carried out by their part-time medical officers. The fee to be paid by the Federation to its medical officers will be negotiated between the Federation and the B.M.A. The arrangement is to be reviewed in two years.

Range of Service

Physiotherapy

91. Following prolonged representations by the Committee to the Ministry of Health, Regional Hospital Boards have been given power to arrange for a general practitioner with experience in physiotherapy to become associated with the Hospital Service in an isolated country district. The conditions will be on the following lines:

(i) that the patients concerned are not within easy reach of a hospital providing physiotherapy services;

(ii) that the doctor holds a temporary clinical assistantship from the hospital management committee and is under the supervision of the director of the hospital department of physical medicine;

(iii) that a substantial number of patients in the district are likely to require such services. (There can be no question of limiting the service to his own patients because the patients receiving physiotherapy would in effect be out-patients of the hospital.)

Liability to Attend Accidents Occurring In or About a Mine

92. At the request of the Private Practice Committee Counsel's opinion has been obtained on the liability of medical

practitioners to visit patients below ground in a mine. Briefly the opinion expressed was as follows:

(1) A private practitioner, whether specialist or general practitioner, would not be liable to descend a mine, unless he was treating a patient for a recurrent condition which suddenly flared up while the patient was below earth and further medical attention was necessary before he could be brought to the surface.

(2) A general practitioner under the National Health Service Act has a liability to visit and treat a person below ground whose condition so requires.

(3) A practitioner who enters into a special contract with the National Coal Board might also according to his contract be liable to be called to see a patient below ground.

93. In all these instances it is the opinion of Counsel that the doctor must expose himself to danger unless the probability is that by giving the treatment the doctor would himself be injured and the patient thus not assisted, i.e., he must take all reasonable, but not unreasonable, risks.

Medical Treatment

94. General approval has been given to the following definition of "medical treatment" prepared by the Ministry of Health:

"Medical treatment consists in the employment of the professional skill of the medical profession to alleviate suffering, to restore normal functions, to maintain health, and to prevent disease or other conditions harmful to health.

"The word 'health' here refers to the mental as well as to the physical state."

Emergency Treatment

95. The Private Practice Committee of the Association has been asked to consider whether the present fee of 12s. 6d. payable under the Road Traffic Act for emergency treatment is adequate in the light of present-day conditions.

Representation of General Practitioners on Regional Hospital Boards and Hospital Management Committees

96. The appointment of members of Regional Hospital Boards is in the hands of the Minister, who is obliged to consult "such organizations as he may recognize as representative of the profession in the area or generally." In practice, the Minister has invited the Association (centrally) to make nominations, and, since the establishment of the Central Consultants and Specialists Committee with its regional organization, the matter has been dealt with through that Committee. Regional consultant and specialist committees have been advised to consult Local Medical Committees in the region before submitting names. This procedure, as a result of the difficulties involved, has in practice not had the desired effect so far as general practitioners are concerned. At the same time, it is noticeable that there has been a continuing tendency to reduce the medical representatives on Regional Hospital Boards, and the appointments made by the Minister in March last show that in eight cases medical members have been replaced by laymen. It has been agreed with the Ministry that, in future, the Association will submit separate lists of consultants and specialists and general practitioners.

97. Some concern was felt at the limitation placed by the Ministry on the sources from which names for vacancies for medical members of Hospital Management Committees may come. In the Ministry's circular R.H.B. (49) 143 it is stated that "medical and dental members should normally be derived, as implied by the Act, from names proposed by the hospital staffs and not from other sources." No such inference as that indicated can be drawn from the Act, and it was pointed out to the Ministry that this limitation for practical purposes prevents general practitioners from finding their way to Hospital Management Committees. The Ministry has agreed to issue a clarifying circular before the next annual elections to Hospital Management Committees take place, in the light of the Committee's recommendation.

98. When the B.M.A. is invited to nominate for appointment to Regional Hospital Boards, the Secretary will communicate with (*a*) Secretaries of Regional Consultants and Specialists Committees and (*b*) representatives of grouped Local Medical Committees for the purpose of securing names and informing those bodies of the number of vacancies available.

Relationship of General Practitioners to Hospitals

99. The attention of Local Medical Committees is drawn to the following minute of a Special Conference of Representatives of Local Medical Committees held on June 29, 1950:

"15. That the following motion be referred to the General Medical Services Commitee:

"That it be suggested to Local Medical Committees that they should voluntarily form Joint Committees with the other Local Medical Committees in the area of a Regional Hospital Board, and that the Committees thus formed should seek liaison with the Boards."

100. A Joint Committee on the lines indicated has proved useful in one or two areas where it has been formed.

General Practitioners and Special Departments of Hospitals

101. The 1949 Annual Conference (Minute 69) asked that general practitioners be given direct access to *x*-ray and physiotherapy departments of hospitals and to pathological laboratories. When this resolution was discussed with the Ministry, it was pointed out that where facilities were available general practitioners had direct access to pathological laboratories, and that Senior Administrative Medical Officers and regional advisers in pathology had been asked to encourage this wherever possible. Lewisham, Portsmouth, and Southampton were quoted as examples of areas where these facilities were available.

102. So far as radiological facilities were concerned, where they were available they were open to general practitioners. In general there was a shortage of plant and staff, and it would be necessary to retain the out-patient departments as a screen for some time to come. The ultimate aim, when circumstances permit, will be to give general practitioners direct access to the radiological department.

Remuneration of General Practitioners on the Staffs of Cottage Hospitals

103. Local Medical Committees have been asked for their views on the basis and adequacy of the present payment at the rate of £25 per occupied bed and the method of distributing the Staff Fund to doctors of the hospital medical staff. A special subcommittee has been appointed to consider the problem, but after an examination of the replies received from Local Medical Committees it was decided to institute a more detailed inquiry designed to reveal the nature and extent of the duties which fell upon general practitioners in cottage hospitals, with particular reference to the time factor. The Committee has in mind a detailed catalogue of the various hospital activities and the amount of time devoted to them.

104. The results of the original inquiry indicate that in a number of cottage hospitals general practitioners are performing duties which were not envisaged when the Staff Fund method of payment was originated, and at this stage it is felt that the problem of inadequate remuneration which has been stressed by the staffs of many hospitals might be overcome by the grading of a larger number of practitioners who render services outside the scope of a general practitioner's terms of service as part-time Medical Officers under paragraph 10 (*b*) of the Terms and Conditions of Service for Hospital, Medical, and Dental Staff (England and Wales). Before the possibilities of this proposal are explored to any degree, however, it is considered that more precise information must be obtained as to the conditions which exist in a number of representative cottage hospitals throughout the country, and with this end in view a survey of the work involved over the period September to November, 1950, will be undertaken.

105. Discussions are to take place with officials of the Ministry on the financial implications of beds in general-practitioner hospitals being taken over by consultants and specialists.

106. In a number of areas beds in charge of consultants are not counted in the number of beds on which the Staff Fund is assessed, although a considerable amount of work devolves upon the general practitioner in the absence of the consultant.

Contracts for Doctors Undertaking General-practitioner Services at Cottage Hospitals

107. As a result of complaints from one or two areas consideration has been given to the form of contract for use between Hospital Management Committees and doctors giving general-practitioner services at cottage hospitals. With a view to establishing the general principles to be incorporated in these contracts and issuing some guidance on the subject, the Committee has asked Local Medical Committees to supply information as to the nature of any contracts which have been offered to practitioners. When this data has been collected the question will be considered in more detail.

Certification

108. The report of the Interdepartmental Committee on Certification was published towards the end of 1949. Generally speaking, it showed much sympathy with the views expressed in the Association's evidence to the Committee. It endorsed the Association's view that certification should not take precedence over the doctor's clinical work, and drew attention to the inroads which unnecessary certification can make on a doctor's opportunities for study and leisure.

109. Another point upon which the Interdepartmental Committee and the Association are in agreement, and which has already been implemented, is the list in the Regulations of those certificates which a doctor is required to give as part of his terms of service. Amending Regulations were issued in December last which prescribed the certificates to be given without charge. The Committee was consulted before the list of certificates was finally determined, and five forms which do not appear in the list were withdrawn at the Committee's request.

110. Further certificates cannot be added without prior consultation with a Joint Subcommittee set up for the purpose upon which the General Medical Services Committee will be represented. The Joint Subcommittee will consist of 11 members —a Departmental Committee Administrator (in the Chair), a representative of the Organization and Methods Branch of the Ministry, a representative of the corresponding Branch of the Treasury, a Ministry of Health Medical Officer, a Ministry legal adviser, a representative of the Department of Health for Scotland, and five general practitioners nominated by the B.M.A. The General Medical Services Committee has nominated Drs. S. Wand (Birmingham), W. Jope (Blantyre, Lanarks), J. A. Arthur (Gateshead), W. Woolley (Bristol), and R. C. Hamilton (Kilmarnock) (representing Scotland).

111. Proposals for a simplified omnibus certificate for National Insurance purposes have been discussed with representatives of the Ministry of National Insurance. There are certain administrative difficulties associated with a single form for all purposes, and the Ministry is submitting counter-proposals the effect of which would be to reduce to two the number of books of certificates which a practitioner would require to have in use.

112. The Ministry of National Insurance has been asked to agree to amend the Certification Rules so that a doctor attending a pregnant woman who is incapable of work and is claiming sickness benefit (not being entitled to maternity allowance) can issue a certificate covering six weeks before and four weeks after the confinement.

Notification of Infectious Diseases

113. At the Committee's request the Public Health Committee of the Association is taking action with a view to the introduction of a single form of certificate, for use throughout the country, to cover the present form for common infectious diseases, the form for notification of puerperal pyrexia, and the form for the notification of measles and whooping-cough.

Maximum Numbers on Doctors' Lists

114. In November, 1948, the Ministry decreed that doctors should no longer be allowed to exceed the normal prescribed maximum number of persons on their lists. Those who had more than the maximum number were asked not to accept more persons until their lists fell below the limit. A year later, after consultation with the Committee Executive, Councils were instructed to take steps to bring lists below the limit (plus an allowance of 5% for possible inflation). The General Medical Services Committee took no exception to these measures.

Limited Lists

115. Under the National Assistance Act a Local Authority is required to provide residential accommodation for aged and infirm persons for whose care and attention provision cannot otherwise be made. The normal arrangement for general medical services for these persons is by a doctor on the Executive Council's list who may be a whole- or part-time employee of the Local Authority. The Committee's view is that where an institution providing accommodation of this character is under the direction of a Local Authority, there should ordinarily be free choice of doctor, and that only in exceptional circumstances should a medical officer of the Authority be responsible for general medical services; in these exceptional circumstances the capitation fees in respect of inmates should be reduced. The Ministry is in general agreement with this view.

Patients in Mental Hospitals

116. Despite the Committee's opposition, the Ministry has decided to remove from doctors' lists mental patients who have been more than two years in hospital. The Ministry's view is that the retention of these patients on doctors' lists is a growing source of inflation.

Prescribing and Dispensing

Doctors Paid on a Prescription Basis

117. The Ministry has agreed that doctors paid on a prescription basis should, on convenient occasions and with the patients' consent, be allowed to issue prescriptions to be dispensed by a chemist. The necessary amendment of the Regulations will be made at the earliest opportunity.

Prescribing for Residential Schools and Institutions

118. The Ministry has accepted the Committee's proposals for bulk prescribing for residential schools and institutions, and has issued instructions incorporating these arrangements. Subsequently, it was found necessary by reason of the provisions of the Dangerous Drugs Act to exclude dangerous drugs and Fourth Schedule poisons from these arrangements. The Ministry has recently claimed that the scheme should apply only to preparations set out in the *National Formulary* and not to drugs which are individually mentioned but appear as ingredients of preparations in the *Formulary*. The Committee disputes this contention and the matter is still under consideration.

Prescribing of Preparations which are not Drugs or Medicines

119. The Ministry has issued to Executive Councils the First and Second Reports of the Joint Subcommittee of the Standing Medical, Pharmaceutical, and General Practitioner Advisory Committees, which has been reviewing a number of borderline preparations held by the Department not to be drugs. The Ministry was asked, in sending these reports to Executive Councils, to stress that they had no statutory force and were issued only for advisory purposes.

Specially Expensive Drugs

120. Following representations by the Committee, the Ministry has agreed to the inclusion of the following in the list of specially expensive drugs and appliances for the supply of which dispensing doctors paid by capitation fee receive payment over and above such fee:

(*a*) All sulphonamide drugs costing over 5s. per 100 tablets.

(*b*) Plaster-of-Paris and other medicated bandages.

(c) The therapeutic equivalents of:
Ergotamine tartrate
Amylobarbitone and amylobarbitone sodium
Cyclobarbitone
Diphenan
Isoprenaline sulphate
Compound spray of adrenaline and atropine, *B.P.C.*

121. The Committee is also seeking the addition of the following to the specially expensive list:

All antibiotic drugs;
Vitamin B_{12}.

Medicines and Appliances for Doctors' Surgeries

122. Discussions have taken place between representatives of the General Medical Services Committee and of the chemists on a suggestion that doctors should be allowed to order on official prescription forms stocks of medicines and dressings for emergency use in their surgeries. This procedure would take the place of the present somewhat unsatisfactory arrangement under which doctors are paid a very small sum (2s. 6d. a 100 patients per annum) to cover the drugs and dressings they are required to keep in stock for an emergency or before a supply can be obtained in the ordinary way from a chemist.

123. General agreement with the chemists has been reached on the list of medicines and dressings which may be ordered in this way, including the quantities which may be ordered at any one time, and the list has been sent to the Ministry on behalf of the organized bodies of doctors and chemists.

Unofficial Prescription Forms

124. The Committee has given its approval to a circular letter, since issued to Executive Councils and general practitioners by the Ministry, prohibiting the use of unofficial prescription forms and stressing the necessity for the use of Form E.C.10 in all cases. As from February 1, 1950, Pricing Offices have been instructed not to accept any prescription not given on an E.C.10.

Use of Form E.C.10 for Private Patients

125. As a protection against the unauthorized use of Form E.C.10, the Ministry proposes to reintroduce, in a modified form, the old N.H.I. arrangements for scrutinizing a proportion of prescriptions after they have been priced. Any apparent irregularities which this scrutiny might bring to light will be investigated in accordance with the machinery laid down in the Regulations.

Dispensing Doctors Paid on the Basis of the Drug Tariff

126. Representations have been made to the Ministry against its decision to apply the reduction of the "on cost" allowance on drugs from 33% to 16% from May 1, 1950, to doctors who elect to be paid for their dispensing on the same basis as chemists. At the same time that the reduction was imposed negotiations were still being carried on through the Chemists' Whitley machinery, and the Minister has undertaken that if the percentage "on cost" finally agreed on the Whitley Council (or awarded by an arbitrator) differs from the 16% which will apply from May 1, the different percentage will apply retrospectively from the same date. This is a cut in doctors' remuneration which cannot be recovered.

Standard Dressings

127. The Committee suggested to the Ministry of Health that the specification of the existing standard dressings is both uneconomical and obsolete. Agreement has been reached with the Department on the revision of the component parts of the standard dressing laid down in the Drug Tariff. It has been decided that the new standard dressings would consist of three 2-in. bandages, 1 sq. yd. of white gauze, and 1 oz. of cotton-wool.

Discount on Drugs

128. Discussions have been held with the association of the British Pharmaceutical Industry with a view to securing a higher rate of discount for dispensing doctors who obtain their drugs from wholesale houses.

129. Investigations have shown that, at present, doctors are usually supplied by the majority of manufacturing chemists with non-proprietary drugs at wholesale prices (i.e., after allowing for the usual discount), and that it is only on a number of proprietary preparations (approximately 18% of preparations ordered by doctors from manufacturers) that no discount, or at the most 10%, is allowed to doctors. The higher discount allowed to chemists is intended to reimburse them for the large stocks they are obliged to carry. In the circumstances the Committee decided not to press for any further discount on these proprietary preparations.

Pricing of Dispensing Doctors' Prescriptions

130. The Committee has approved the Ministry's instruction to Executive Councils that dispensing doctors who are paid on the basis of the Drug Tariff should sort their prescriptions for pricing purposes. Several complaints have been received against this requirement, but the Committee felt that in view of the alternative method of payment which exists it could take no exception to the Ministry's proposal.

Drugs Administered by a Doctor in Person

131. Some doubt has arisen as to the interpretation of paragraph 7 (9) (ii) of the Terms of Service, which states that a practitioner "may supply any other drug which is administered by him in person."

132. The Ministry, after taking legal advice, expressed the opinion that the wording implies the actual application of the drug to the patient's body, but the Committee, although not denying that that may be the intention of the regulation, is unable to accept this explanation as a fair interpretation of the wording. Having regard to the various interpretations which can be placed upon the context of this particular paragraph, it should be amended in order that the intention of the regulation shall no longer be in doubt.

List of Appliances

133. The Ministry has agreed in principle to include the following in the list of appliances which general practitioners may prescribe for their patients, and is now in the process of amending the list:

Clinitest apparatus;
Male and female portable urinals;
Sponge rubber.

134. The Committee has also asked the Ministry to agree to the inclusion of adhesive sponge rubber, elastonet, and elasto-crepe bandages.

135. The Department still has under consideration the suggestion that the words "dressings (any specification)" should be substituted for the list of dressings in the Third Schedule to the Regulations.

Circulation of Lists of Pharmacists to General Practitioners

136. Following a question in the House of Commons on the cost of circulating lists of pharmacists to general practitioners, the Ministry of Health asked for the Committee's views on the continuation of this practice. The Committee has informed the Ministry that a satisfactory arrangement would be the circulation to each general practitioner once a year of a cyclostyled list of pharmacists in the area covered by his practice.

Economy in Prescribing

137. Arising from a resolution of the 1949 Annual Conference, the Committee sought the advice of the Science Committee of the Association on the question of the nomenclature of drugs and the standardization of bulk in packages, with a view to eliminating waste and extravagant prescribing. The Committee welcomed a suggestion from the Science Committee that an *ad hoc* committee should be established to examine this problem.

Supplies of Oxygen

138. The revised arrangements for the supply of oxygen and oxygen-tents (through the Hospital Service) have been under consideration. Whilst welcoming the suggestion that oxygen cylinders and tents should be available, the Committee informed the Ministry that it takes strong exception to the decision that oxygen-tents should be available only on the authority of a specialist. The Ministry has undertaken to make arangements to ensure the speedy supply of a tent without a consultant authority in special cases—e.g., premature babies and carbon monoxide poisoning.

Testing of Drugs and Appliances

139. There have been protests against the requirement in the terms of service that, when requested, doctors must provide prescriptions for the purpose of testing drugs and appliances supplied by chemists.

140. The Committee, appreciating the need for maintaining a high standard of dispensing, is satisfied that a drug-testing scheme is desirable and necessary. In view, however, of complaints received about the present scheme, the Committee intends to discuss with the Ministry of Health the possibility of an alternative arrangement after consultation with the Pharmaceutical Society.

Partners and Assistants

141. The Medical Practices Committee expressed some anxiety at the position which had arisen in a number of cases which had come to that Committee's notice whereby, although two practitioners claimed to be in partnership for the purpose of increasing the combined list to 8,000 patients, the relationship which did exist was, in point of fact, that of principal and assistant, in which case the maximum combined list permitted would be 6,400 patients.

142. After consultation with the Medical Practices Committee and officials of the Ministry, the Committee advised that unless a practitioner is in the position of a principal in connexion with the practice with a share in the partnership of not less than one-third of that held by the partner with the maximum share, he should be regarded as a salaried partner and that the combined lists of a principal and a salaried partner should not exceed the maximum for a principal and one assistant, namely, 6,400.

143. The Ministry is implementing these principles in a circular to Executive Councils.

144. A special subcommittee, under the Chairmanship of Dr. J. T. McCutcheon (Glasgow), was appointed to consider the general position of assistants in general practice under the National Health Service. Two aspects of the problem have been considered—(1) the position of the permanent assistant, and (2) the position of the assistant "with a view." So far as the permanent assistant is concerned, the conclusion reached is that there is little positive action which can be taken to improve the position of a doctor who prefers to remain permanently as an assistant. His relationship with his principal and his conditions of service are purely matters of private arrangement which it is not possible to regulate.

145. The assistant who wishes, eventually, to practise as a principal in his own right is in a different category. It is disturbing to find that a number of appointments advertised as "with a view" prove eventually to have no real prospects of partnership. It is considered to be undesirable to limit by regulation the time within which a principal taking an assistant with a view to partnership must inform the assistant of his decision. Indeed, it is felt to be undesirable to govern by regulation the relationship between assistant and principal. It is in the interests of both parties that there should be an assistantship agreement, prepared by a solicitor with experience in the legal pitfalls of medical practice, and in this connexion the new *Medical Practitioners' Handbook* published by the Association will contain a section dealing with the conditions which should be incorporated in such an agreement.

146. The G.M.S. Committee has decided to make the appointment of an Assistants' Subcommittee a permanent feature of its work.

147. After a careful examination of the problem the Committee has decided that it is not in favour of any departure from the present position that the Medical Practices Committee has no power to intervene in the matter of the engagement of assistants. Having regard however to that Committee's responsibility for limiting the number of doctors in each area, the Committee has expressed the opinion that consent to the employment of a third or subsequent assistant should be given only by the Medical Practices Committee.

Definition of a Permanent Assistant

148. With the object of issuing some guidance to Executive Councils on the subject, the Ministry sought the Committee's advice upon what might be construed as a "permanent assistantship" for the purpose of calculating the permitted maximum number of patients on a doctor's list. The Committee has agreed that while the facts of each case must be looked at on their merits, in general it would be reasonable to regard as a permanent assistant for this purpose not only a full-time assistant, but also an assistant regularly employed part-time for at least one-half of the time that a full-time assistant would serve. In the case of such a part-time assistant any increase in the principal's list would be limited to a proportion of 2,400 approximately equal to the proportion of the time given by the part-time assistant in relation to a full-time assistant.

149. The Committee is of the opinion that no increase should be allowed in respect of any assistant who is employed for less than half the time which an ordinary assistant would give to the practice.

Superannuation and Assistants

150. A concession of some importance has been made by the Treasury. As from April 1, 1950, a principal will be relieved of the responsibility of paying the employer's contribution towards an assistant's superannuation. This responsibility will be assumed by the Treasury.

Trainee Assistants

151. Discussions have taken place with the Medical Practices Committee on the provision made in the amending regulation for a right of appeal to the Medical Practices Committee against the refusal of an Executive Council to agree to the employment of an assistant. It has been agreed that this right of appeal should not apply to trainee assistants.

152. A county Local Medical Committee has, under legal guidance, drawn up a draft form of contract for use by its members employing trainee assistants. A copy of this draft together with the comments of the Association's solicitors thereon can be obtained from the Secretary of the General Medical Services Committee.

153. It is apparent from advertisements appearing in the medical press that in some cases trainee assistants are being offered salaries in excess of the amount allowed by the Government to a principal who undertakes the training of an assistant. This practice is considered to be undesirable, and the Council of the B.M.A. is being recommended to refuse advertisements offered to the *B.M.J.* where the salary exceeds the Government grant.

Form E.C.1

154. Following discussions with the Ministry, the Department has redrafted Form E.C.1 (application for inclusion in a doctor's list) with the object of revealing whether or not the person completing the form is already on a doctor's list. It was felt that the readiness with which Form E.C.1 was available and could be used even when a medical card was available and should be used was a large contributory factor in inflating the numbers on doctors' lists. The revised form contains a declaration that the applicant is not already on the list of a doctor in any area, and it is available only through Executive Councils and individual doctors.

155. Subsequently the Ministry's attention was drawn to the fact that the new Form E.C.1 (Rev.) does not require the patient's signature when the patient wishes to transfer to another doctor and the medical card is missing, although when the patient has a medical card and wishes to change his doctor he is required to sign the appropriate part of the card.

156. It has also been pointed out that a signature to the declaration on the card, as to the accuracy of the information given, is necessary in the case of a first application but not when the patient loses his medical card and wishes to change his doctor.

157. The necessary amendments to the wording of Form E.C.1 are being made by the Department, who will at the same time take advantage of the opportunity to make one or two

further amendments consequent upon the new procedure for change of doctor.

Fees for Anaesthetics

158. The Ministry of Health is preparing a memorandum dealing with circumstances in which fees may or may not be charged for the administration of anaesthetics.

Fees for Dental Anaesthetics

159. The recent decision of the Minister to impose an overall reduction of 10% in dental fees means that doctors who are asked to give anaesthetics for dental operations may receive a corresponding reduction in the fees due to them. The Committee felt that the time had arrived when the position of the doctor in relation to dental anaesthetics should be reviewed, and representations have been made to the Ministry of Health:

(i) for recognition of the principle that a doctor who is called upon to administer an anaesthetic in connexion with a dental operation is entitled to be paid for the time spent and responsibility involved;

(ii) that the fee to be paid to a doctor for this service should be 30s. per administration, irrespective of the number of teeth to be extracted;

(iii) that whilst it is desirable that fees for anaesthetics administered in connexion with dental operations should be paid direct to the doctor, no objection is raised to the continuance of the present method of paying the fees, namely, through the dentist performing the operation.

160. The Ministry's reply was that responsibility for providing an anaesthetist in connexion with a dental operation rests with the dentist, and the fee to be paid to a doctor giving an anaesthetic is a matter to be settled between the two practitioners. The Ministry cannot hold out any hope of increasing dental fees (including fees for dental anaesthetics).

Emergency Treatment Following Dental Operations

161. It is hoped that provision may soon be made for a doctor to be paid a fee when he is called in to an emergency following a dental operation, the dentist not being available. The proposal is under discussion with the Ministry, the difficulties being mainly of a legal nature.

Administration of Anaesthetics by Trainee Assistants

162. Agreement has been reached with the Ministry that it would not be appropriate for a fee to be claimed by a trainee assistant for the administration of an anaesthetic where the operation is performed by the principal. The necessary instructions have been issued to Executive Councils.

Frivolous and Unjustified Emergency Calls

163. The Ministry of Health was asked to reintroduce the rules for the conduct of patients which were printed on the medical card under the N.H.I. Act. It was felt that this would have the effect of relieving doctors of many frivolous and unjustified calls. The Ministry's view, however, is that a better understanding of doctors' difficulties would be secured by propaganda rather than by direction. A publicity campaign embracing the Press, radio, and women's organizations is being planned with this object in view; the Committee has not to date, however, seen much indication of the Ministry's efforts in this direction.

164. The 1949 Annual Conference (Minute 58) asked that there should be provision for a doctor to make a complaint against a patient, as was the case under the N.H.I. Act. This is one of the matters upon which representations have been made to the Ministry in connexion with the Service Committee and Tribunal Regulations.

Definition of "Night Visit"

165. Following representations by the Committee, the Ministry agreed to recommend to Executive Councils that in the scale of fees for emergency treatment a night visit should be defined as a "visit made between the hours of 8 p.m. and 9 a.m. in response to a call received between those hours."

Treatment of Seamen

166. Whole-time medical officers of the Shipping Federation are frequently called upon to give general medical services to seamen, and it has been agreed that in respect of those services a limited sum shall be made available from the Central Practitioners' Fund.

167. It has also been agreed that boys accommodated in Shipping Federation Training Schools should be regarded as temporary residents, the attending doctor being paid a quarter of the ordinary capitation fee for each one, and that remuneration for a routine examination will be regarded as a separate matter which is outside the terms of service of general practitioners under the National Health Service.

168. The Committee has not succeeded in securing an augmentation of the "pool" to cover the treatment of foreign seamen. The Ministry's argument is that the liability is very small and that foreign seamen, along with the other visitors to this country, are counterbalanced by British nationals going abroad for short periods and certain classes of persons (lunatics, people in hospital, etc.) for whom payments are made into the "pool" without any liability for medical treatment by general practitioners.

169. In cases where a seaman is on the list of a doctor in a port it appears that unless the doctor limits the area of his practice he can be called upon to treat the seaman even when he is aboard a ship off-shore or lying in the roads without being able to claim any additional payment, and the Ministry was informed that unless these arrangements were modified it might be necessary to advise doctors to exclude the immediate port area from the area in which they undertake to visit N.H.S. patients.

170. The Ministry agreed that there is no reason why a port vicinity should not be excluded from a doctor's area of practice under the N.H.S. Act, but it is thought the position should be covered by a previous arrangement with the Shipping Federation by which the latter reimburses its part-time medical officers for visits to ships in midstream, over and above the temporary resident fee which the medical officer receives from N.H.S. funds.

Reinstatement of Demobilized Service Personnel in Doctors' Lists

171. The 1949 Annual Conference (Minute 93) asked that steps be taken to ensure that the names of Service patients are restored to the lists of doctors in which they were included before enlistment. The point was taken up with the Ministry, but could not be pressed in face of the statement that it would involve the employment of a substantial number of additional clerks.

Temporary Release from the Forces

172. Prior to 1950 persons temporarily released from the Forces for short periods of less than three months were handed a form (E.C.13) with a leaflet advising them to apply for inclusion in a doctor's list under the National Health Service. Now, where the temporary release is for a period of not more than three months, the Service concerned will not follow this procedure. If treatment is required, the member of the Forces will become a temporary resident. Where, however, the temporary release is for more than three months, the Service concerned will issue E.C.13 (overstamped "Temporary Release from the Forces") with the appropriate leaflet, and will collect the medical card when he returns to duty.

173. The number of temporary releases is very small, but the procedure outlined above will, it is believed, avoid inflation of lists from this source, and the Committee is assured that the number released temporarily from the Forces will be added to the population upon which the Central Practitioners' Fund is based.

Reports to Regional Medical Officers

174. Two days is considered to be insufficient time within which to expect general practitioners to complete and return reports on patients referred to Regional Medical Officers. The Ministry was asked to instruct Regional Offices to allow not less than four days for this purpose, but is unable to do more than agree that in exceptional circumstances the time limit of two days will be extended. The Ministry of National Insurance points out that it has a duty to guard against improper expenditure on sickness benefit and is unwilling to agree to a general prolongation of the time allowed for returning reports on patients.

Telephone Charges

175. Following reports of increased expenditure on telephone calls since the inception of the National Health Service, the Committee has carried out an inquiry with the object of assessing the actual increase which has taken place.

176. The results show that, after offsetting the general increase which has been imposed by the G.P.O. since 1948, no case exists for any action being taken for the time being. The Committee will, however, keep the subject under review.

Refresher Courses

177. Government-sponsored courses of postgraduate study for general practitioners have been supplemented by a new type of course which consists of three half-day sessions at the week-end or during the week. The conditions of grant and procedure are similar to those applicable to the longer courses.

"Covering" an Unqualified Practitioner

178. The question was raised as to the position of the general practitioner who discovers that his patient is receiving treatment from an unqualified practitioner, with particular reference to the issue of certificates. A comparison was made between the new and old Regulations, and legal advice was sought on the point. The result has been the promulgation of an Amending Regulation providing that a practitioner "shall not be required to issue a certificate where the patient is receiving medical treatment otherwise than from, or under the supervision of, a medical practitioner."

Medical Examination of Nurses

179. The Committee has under discussion with the Hospital Division of the Ministry the requirement by some hospitals that a candidate for a nursing post shall produce a pre-employment certificate of fitness, for which there is no provision for a fee payable by the hospital. The service does not come within a general practitioner's contract under the Act, and it is considered that the hospital authorities should pay an appropriate fee for the examination direct to the practitioner.

Registration of Babies

180. Following representations by the Committee, Form H.S.L., which is issued to all persons registering the birth of a baby, has been amended so that the general phraseology of the form is now in the nature of advice rather than an instruction. It has not been found possible, however, to persuade the Ministry to draw attention, on this form, to the fact that opportunity still exists for treatment as a private patient.

New Acceptances—Medical Record Cards

181. It was suggested to the Ministry that Form E.C.15 (on which a doctor is notified that patients have been put on his list) is too flimsy to be filed conveniently in doctors' record cabinets, and that in its place a continuation medical record card, which could be linked up with the medical record envelope later on, should be sent.

182. The Ministry has no objection to this procedure, and has suggested to Executive Councils where it is not already in operation that they should consider, in consultation with their Local Medical Committees, whether they now wish to adopt it.

Medical Examination of Claimants to Unemployment Benefit Where Capability for Work is in Doubt

183. It is a condition of payment of Unemployment Benefit that a claimant should be capable of work. Where doubt arises as to a claimant's capability to work or as to his medical fitness for a particular kind of work offered to him, he is referred to an Examining Medical Officer for a report. These cases are usually referred to doctors who act as medical referees for the Ministry of Labour and National Service, the fee for each case (12s. 6d.) having been agreed between the Association and the Ministry of Labour. Experience has shown that an Examining Medical Officer does not comply with the suggestion in the official form sent to him to consult the patient's own doctor "*in appropriate cases.*" This leads to conflicting medical views between the E.M.O. and the patient's own doctor and often between these authorities and the R.M.O. on the health side. A paragraph is to be added to the form making it necessary for the E.M.O. to contact the patient's own doctor in every case, and not only when he considers it appropriate to do so.

Appointment of Medical Practitioners to National Service Medical Boards and Disablement Advisory Committees

184. The Ministry of Labour will make an announcement annually in the medical journals towards the end of April or the beginning of May to the effect that appointments to National Service Medical Boards throughout the country are about to be reviewed and that any doctor who would like to be considered should inform his Local Medical Committee or the Ministry of Labour and National Service.

185. It has also been decided that an announcement regarding membership of Disablement Advisory Committees and their panels should be included in the advertisements, although in these instances only casual vacancies will be involved. The Committee has expressed satisfaction with the proposal to review National Service Medical Boards and Disablement Advisory Committees on a national basis in future.

186. The desirability of extending this procedure to Ministry of Pensions and Ministry of National Insurance Boards is under consideration.

Health Education

187. The Central Council for Health Education contemplates calling a Conference on health education in schools in the near future, and the Committee has appointed two representatives (Drs. Gray and Sutherland) to attend such a conference. The subject is of some importance to general practitioners in that ignorance of the simplest rules of health is likely to increase the volume of work they are called upon to do.

The School Health Service and the General Practitioner

188. The 1949 A.R.M. passed the following resolution:

"77. **Resolved:** That a School Medical Officer should send any child he considers to need hospital treatment to the family doctor; he should not, except in case of urgency, send the child to any particular hospital or to any particular consultant, the choice of which is the proper province of the family doctor in conjunction with the parents."

189. This resolution was considered jointly by the B.M.A. and the Society of Medical Officers of Health, and both bodies have agreed that the following procedure should be followed when a School Medical Officer considers that a child needs special investigation or treatment:

(1) Where in the opinion of a medical officer employed by a Local Authority a child needs special investigation (other than an ophthalmic examination) or treatment, he should send the child to a specialist only after prior consultation with the child's own doctor, upon whom rests the responsibility for general medical care.

(2) In consulting the general practitioner, the medical officer should give him the opportunity to make the arrangements for the consultation or to agree—by replying or in the absence of a reply—that the arrangements should be made by the medical officer.

(3) A copy of any special report on the child received by the medical officer should be sent to the child's own doctor.

Aftercare

190. Section 28 of the N.H.S. Act empowers a Local Authority to make arrangements "for the purpose of the prevention of illness, the care of persons suffering from illness or mental defectiveness, or the aftercare of such persons. . . ." The G.M.S. Committee had an opportunity of commenting on a proposal by the Medical Officer of Health of a large county to introduce a scheme for aftercare. Part of the scheme was that a Health Visitor should be seconded to work in a hospital to provide information concerning the background and home conditions of patients for the use of the hospital medical staff. The Committee's comment was that there appeared to be insufficient liaison between the Health Visitor and the patient's

own doctor, and that difficulties were likely to arise if the proposal was allowed to develop without proper regional control.

Spa Treatment in Great Britain

191. The Committee has appointed two of its members (Drs. F. A. Smorfitt and D. F. Whitaker) to represent it on the Spa Practitioners' Group Committee, which is preparing a report on spa treatment in Great Britain. The report will take the form of a guide for the use of the medical profession.

Election of Chairmen of Executive Councils

192. The 1949 Amending Act gives an Executive Council authority to appoint its own Chairman at a special meeting convened for the purpose. Under the original Act the Chairman was appointed by the Minister.

General Practitioners Attending Training Camps

193. General practitioners attending training camps with the Supplementary Reserve or the Territorial Army incur expenses in the provision of locums which, it is felt, should be a charge on public funds. The Ministry's view is that it is taken into account, as a practice expense, in fixing the remuneration of general medical practitioners. The Committee is not satisfied with the position and is making representations on the subject to the Service Departments.

Pension and Insurance Schemes for Doctors and Their Employees

194. The Pension and Insurance Scheme which was available to insurance practitioners and other members of the B.M.A. until December, 1948, has been revised by agreement with the insurance companies concerned. Like its predecessor, the revised scheme provides for pension, for family provision, and for disability. A supplementary scheme has also been evolved which is likely to be of particular interest to practitioners in the National Health Service who are anxious to make adequate provision for their dependants, as well as possibly to augment their pension at retirement.

195. A further scheme has been prepared providing for superannuation and death benefits for employees of doctors. The scheme covers:

(*a*) A pension on retirement at 65 and 60 for a woman, based on salary and length of service with (for men) the option of a "survivor" pension for widows,

(*b*) death benefits (for women), and

(*c*) return of contributions on withdrawal from the scheme before death or retirement.

The Defence Trusts

196. As set out in the last report to the Conference, there are now two Defence Trusts—the National Insurance Defence Trust and the General Medical Services Defence Trust. The creation of the G.M.S. Defence Trust was necessary on legal grounds, but this step does not involve any modification of the objects for which money already subscribed will be used. All contributions from Local Medical Committees now go to the G.M.S. Defence Trust and all payments within the objects of the two funds (which are identical) will be made from the N.I.D.T. until such time as the moneys at its disposal are exhausted. In any emergency the funds of both Trusts will, if necessary, be used for identical purposes, namely, the protection of the interests of general practitioners. The trustees of both funds are the members of the General Medical Services Committee of the B.M.A.

197. The balance sheet and statement of expenditure and income of the N.I.D.T. for the year ending December 31, 1949, are being sent to every Local Medical Committee. The amount at present standing to the credit of the G.M.S. Defence Trust is over £15,000.

198. It has been decided that the target for the combined funds shall remain unchanged at £1,000,000. This decision was reached after a review of the extent to which areas have already subscribed in terms of their quotas to a £1,000,000 fund. A statement showing the contributions so far received from each area is being circulated to Local Medical Committees.

199. An appeal was made to Local Medical Committees in November last to revive their voluntary levies for Defence Trust purposes as soon as arrangements could be made to do so. The response to this appeal so far has not been as good as was anticipated. The need for a strong defence fund cannot be overemphasized, and current events in the field of general medical practice indicate the advisability of strengthening the funds without delay. Local Medical Committees which have not already done so are urged to take this matter in hand immediately.

S. WAND,
Chairman, General Medical Services Committee.

GENERAL MEDICAL SERVICES SUBCOMMITTEE (SCOTLAND)

Chairman and Deputy Chairman

200. Dr. W. M. Knox and Dr. W. Iope were appointed Chairman and Deputy Chairman respectively for the session 1949–50.

Subcommittees

201. The Subcommittee appointed the following subcommittees: Chairman's, Rural Practitioners', Colliery Practitioners, Dispensing Capitation Fee, Allocation of Partnership Shares, and a Joint Subcommittee with the Consultants and Specialists Committee (Scotland) on Relation of General Practitioners to Hospitals.

Representation

202. Representatives of the subcommittee have been appointed to other Committees as follows: Maternity Services Subcommittee and Public Health Subcommittee of the Scottish Committee, International Advisory Distribution Committee, Scottish Advisory Distribution Committee, and the Tribunal established under Section 43 of the Scottish Act.

Meetings with Department of Health

203. Arrangements have been made for regular meetings at three-monthly intervals between representatives of the Department of Health and of the Subcommittee for the purpose of discussion of general medical service matters.

Part-time Services Rendered to Local Authorities

204. Discussions have been proceeding with representatives of the Scottish Local Authorities' Association on the question of fees payable by Local Authorities for part-time services rendered by general medical practitioners. Substantial agreement has been reached on the various items, including the fee for the report on vaccination and immunization. The terms of this agreement, though not identical with the agreement reached with the Local Authorities' Association in England and Wales, are no less satisfactory so far as Scotland is concerned. The question of mileage is reserved for further discussion. The agreement in respect of the fee for the report on vaccination and immunization will be promulgated shortly and will be retrospective to July 5, 1948. The agreement in respect of other items of service has still to be confirmed by the respective bodies, and when this has been done the date of implementation must await a separate and later decision in the light of Government policy with regard to increases of personal incomes.

Inducement Fund

205. The question of the method of application for and extension of the scope of grants from the Inducement Fund has been discussed with the Department of Health. The Department received favourably a proposal that applications for the grants from the Fund should be made centrally and not to the local Executive Council, though it is agreed that there must at the appropriate stage be some consultation of a non-financial nature with the Executive Council, advised by the Local Medical Committee. It has been agreed that the scope of the Fund should be extended to cover assistance to general practitioners who have suffered loss of income, attributable to the operation of the National Health Service. A suggestion by the Department that the Fund should be used to promote the introduction of practitioners into under-doctored areas is being examined.

Vacancies in Medical Practices

206. Amendments of the General Medical and Pharmaceutical Services (Scotland) Regulations in respect of procedure for the filling of vacancies in general practice have been agreed with the Scottish G.M.S. Subcommittee and issued by the Department of Health to Executive Councils for circulation to general practitioners. The object of these amendments is to speed up the procedure, and they provide that the selection of applicants for practice vacancies should be a matter for Executive Councils, after consultation with the Local Medical Committees, subject to a right of appeal to the Scottish Medical Practices Committee.

Draft Allocation Scheme and Limitation of Numbers on Practitioners' Lists

207. After consultation with the Scottish G.M.S. Subcommittee a model Allocation Scheme has been prepared by the Department of Health and is being issued to Executive Councils in Scotland. In this connexion the steps to be taken to bring practitioners' lists within the permissible limits have been discussed with the Department of Health. As a result of these discussions, practitioners in Scotland will be notified through the Executive Councils that as from September 30, 1950, payment for patients on a doctor's list will be made only to the prescribed maximum of 4,000 for a doctor in single-handed practice without an assistant.

Partnership Arrangements under the National Health Service

208. Present indications are to the effect that joining an established senior or seniors in partnership is likely to become the commonest form of entry into general practice under the N.H.S. Consequently it is a matter of concern to the profession and in its best interests that partnerships should be entered into under equitable and satisfactory agreements. The principal matters and contingencies which require to be provided for in an agreement dealing with a partnership under the National Health Service are accordingly under consideration. In arriving at conclusions special attention will be paid to preserving freedom of action to the partners in the matter of partnership arrangements, the provision of adequate opportunities for improvement in the position of the junior partner, and to discouraging the employment of salaried partners.

Dispensing Capitation Fee

209. The question of the dispensing capitation fee in Scotland (5s. as compared with 6s. 6d. in England and Wales) has been further considered. As indicated in the report to the 1949 Annual Conference, the Department of Health agreed to review the matter if evidence could be shown after one year's working of the Act that the fee was inadequate. Information regarding particulars of costs and expenses has been sought from dispensing practitioners in Scotland and this information is now the subject of consideration by a special subcommittee.

Change of Doctor

210. Steps have been taken in Scotland, after consultation with the General Medical Services Subcommittee, to bring the procedure in respect of change of doctor by a patient into line with that which is now being adopted in England and Wales.

Medical Certificates

211. General agreement has been reached with the Department of Health on the certificates to be prescribed under Regulations as certificates which the doctor is required to issue free of charge to his patients or their representatives under Section 34 (2) (*d*) of the 1947 Act. Objection was taken on behalf of the profession in Scotland to the inclusion of jury exemption certificates in the list, but after discussion with the Department the objection has been waived, on the understanding that the certificates are not required to be given on "soul and conscience."

Constitution and Procedure of Medical Service Committees

212. Discussions for amendmen of the Service Committees and Tribunal Regulations (1948) (on lines similar to those which have taken place with the Ministry of Health in respect of the English Regulations) have been held with the Department of Health for Scotland. Substantial agreement with the Department has been reached, subject, where necessary, to discussion between the Department of Health and the Scottish Association of Executive Councils.

Joint Subcommittee on Relation of General Practitioners to the Hospital and Specialist Services

213. The Secretary of State has invited the Scottish Health Services Council to consider and advise him on the relationship between the general practitioner and the hospital and specialist service. The question has accordingly been referred to a special Joint Subcommittee of three of the Standing Advisory Committees of that council. A Joint Subcommittee of the General Medical Services Subcommittee (Scotland) and the Central Consultants and Specialists Committee (Scotland) has presented, on behalf of the Association, an interim report on the relationship of general practitioners and hospital and specialist services under the National Health Service, and this report has been supported by verbal evidence. The Subcommittee is now preparing its final report.

Representation on Regional Hospital Boards and Hospital Boards of Management

214. There is dissatisfaction in Scotland with the position in respect of medical representation on Regional Hospital Boards and on Hospital Boards of Management. Particulars of the actual representation at the present time have been obtained, and the question will be considered further in the light of this information and any necessary action taken.

Mileage

215. The method of distribution of the Mileage Fund, adopted for a trial period of twelve months in England and Wales, has been rejected as not suitable to Scotland. The question of the best method of distribution of Scotland's share of the fund is accordingly under active consideration.

Examination of Patients on the Instruction of R.M.O.s of the Ministry of National Insurance

216. Representations having been made that patients of practitioners who were claimants for Industrial Disablement Benefit were being medically examined on the instruction of the Regional Medical Officer of the Ministry of National Insurance, without any notification to the practitioner either of the fact that the patient was to be examined or of the result of the examination, the whole position has been discussed by the Subcommittee with the R.M.O. The Subcommittee's suggestion was that the practitioner should be notified both that the claimant was about to be boarded and of the findings of the board. Any arrangement which might be made for such notification would have to be made on a U.K. basis, and the R.M.O. has undertaken to discuss this suggestion with the appropriate officials of the Ministry of National Insurance. The matter will be further considered when the report of this discussion is available.

Maternity Record Form

217. The question of the adoption of a standard maternity record form for Scotland is at the present time under discussion with the Department of Health.

Prescribing of Expensive Medicines and Appliances

218. Following consultation with the Subcommittee, the Chief Medical Officer of the Department of Health has issued, through Executive Councils in Scotland to general practitioners, under cover of an explanatory letter, the second Interim Report of the Joint Committee on Prescribing.

Fees for Services Rendered to Mineworkers in Scotland

219. Discussions are proceeding with representatives of the Coal Board and the Mineworkers' Union in Scotland on questions relating to emergency calls to mine accidents, death and disablement benefits, fees for services rendered to mineworkers, and notification of practitioners in pneumoconiosis post-mortem cases.

Treatment of Venereal Disease

220. Discussions have been proceeding with the Department of Health on the question of the domiciliary treatment of venereal diseases, particularly in the rural areas, which the Subcommittee contends cannot be regarded as coming within the contract of the general practitioner under the National Health Service and should carry with it a special fee. Consequent upon these discussions, it is proposed to refer the matter

for consideration to the Standing Medical Advisory Committee of the Scottish Health Services Council.

Executive Council for the Outer Isles

221. Attempts to secure the establishment of a separate Executive Council for the Outer Isles, in accordance with the wishes of the profession in the Islands, have been unsuccessful. The Department of Health has, however, intimated that the profession's views will be borne in mind, and the matter has been noted for further action at the appropriate time.

Medical Treatment of Aged and Chronic Invalids in Institutions

222. The Subcommittee and the Department are agreed that residents in Local Authority institutions should have the right of free choice of doctor, and the Department has undertaken to investigate any complaints on this score.

W. M. KNOX,
Chairman, General Medical Services Subcommittee (Scotland).

APPENDIX "B"

INTERIM REPORT OF HEALTH CENTRES SUBCOMMITTEE

General Considerations

1. The Subcommittee was appointed to consider the position of doctors in an area where the establishment of a Health Centre is contemplated and whether such doctors should be afforded some measure of protection during the period immediately before and after the transition from present conditions of practice at the doctor's residence to Health Centre practice. It has held seven meetings at which detailed consideration has been given to a number of important points. In view of the complexity of the subject, however, the Subcommittee has decided to issue an interim report on the questions which have so far been examined. Several matters remain unresolved, notably the preliminary association which may be formed by doctors likely to enter a Health Centre, and their relationship with Local Health Authorities. Similarly, an examination must be made of the possibilities which might arise from a Health Centre comprising more than one building. The Subcommittee will express its views on these and other matters in a later report.

2. There are indications that pressure may be brought to bear in favour of the erection of a large number of Health Centres throughout the country at the earliest possible date. The general economic situation and the restriction of capital development will undoubtedly retard the Health Centre programme, but in view of this pressure the Subcommittee feels that every opportunity should be taken to reinforce the view expressed by the Council of the B.M.A. in its Report on Health Centres that widespread development of Health Centres cannot, and should not, be commenced without experimental trial in different types of Health Centres in varying areas. Centres are already under construction and the need is urgent.

Local Consultation

3. The first essential to the establishment of a Health Centre is that it should be properly sited. It is during this stage of preliminary discussion and before the site is chosen that the Local Health Authority through the machinery of the Local Medical Committee should consult the local doctors, whose knowledge of local conditions would be invaluable.

4. Encouragement should be given to doctors through the Local Medical Committee to initiate proposals for the establishment of a Health Centre in areas where practitioners desire the introduction of such Centres.

5. It may often happen that certain existing buildings, suitably adapted, could usefully be converted to or associated with the Health Centre, and early consultation would be essential on this point before plans were too far developed.

6. As soon as possible all questions of major policy should be determined nationally. The local application of these principles should be agreed locally and made available to practitioners as long as possible before contracts are exchanged.

Protection from Encroachment

7. The successful establishment of a Health Centre is largely dependent upon the adequacy and ability of the professional staff, and the Subcommittee is convinced not only of the need for a full complement of doctors at the Centre but also that it must be attractive to the best general practitioners in the area. Every general practitioner in the area should have an opportunity of applying for admission to the staff, and a doctor contemplating transferring his practice to a Health Centre should be influenced by his ability to adapt himself to the new form of practice and not by the fear of other doctors coming into the area and taking advantage of his action. This fear is very real, since the National Health Service Act by abolition of the sale and purchase of practices has materially altered the position of the new entrant, and these factors, combined with the provision of basic salary, encourage more doctors to commence practice on their own by squatting. Any transition from present-day practice to Health Centre practice provides obvious openings for such doctors. Ordinarily, the establishment of a practice in this way is fraught with hardship, but the conditions inherent in the establishment of a Health Centre would make the area an obvious choice for these practitioners. A newcomer might well attract patients who prefer to be attended in the vicinity of the old surgery premises rather than go to a Health Centre.

8. As an example, in the early part of 1949 there was a movement afoot by the London County Council to establish a Health Centre at Poplar. This project is now in abeyance, but when the doctors in the area to be served by the Health Centre were approached they indicated their willingness to staff the Centre on condition that their existing practices were safeguarded by the district being declared a "closed" area for a defined period.

9. Those who enter Health Centres will be virtually in the position of engaging, on behalf of the profession and the community, in an experimental form of practice, and it does not seem to the Subcommittee to be unreasonable that they should be given a measure of protection against any possible encroachment on their means of livelihood; indeed, such a measure of protection will continue to be necessary until practice from Health Centres becomes the usual method of providing general medical services. Unless some measure of protection is afforded it is felt that there will not be the same incentive to doctors already well established in practice in the area to take part in the work of the Centre. It is recognized that the medical profession collectively has, in the past, favoured absolute freedom of practice, but it is submitted that the circumstances associated with the establishment of a Health Centre call for a modification of this policy. On this point the following resolution has, on the recommendation of the General Medical Services Committee, been passed by the Annual Conference of Local Medical Committees:

"That it be regarded as an essential preliminary during the experimental period that, in every area in which a Health Centre is to be opened, no doctor (other than one of the principals in the Health Centre, or a doctor who, at the commencement of the period specified below, had premises in the area from which he practised and was at that time on the Executive Council List) should be allowed to open a surgery (including a surgery at his residence) within an agreed area around the Health Centre for a specified period before and after the opening of such Centre."

10. The Subcommittee is also of the opinion that an exchange of contracts between the Local Executive Council and the general practitioners whom it is agreed shall work from the Health Centre should take place before the commencement of building, and that the area surrounding the Centre should be closed to newcomers from the signing of contracts or the commencement of building, whichever is the earlier, until one year after it is functioning as a Health Centre.

Method of Selection and Mode of Entry to Practise in a Health Centre

11. The provision of general medical services at a Health Centre, as elsewhere, is the duty of the Executive Council. It is therefore assumed that these questions will be resolved in conjunction with the Local Medical Committee, preferably through a small joint committee.

12. In the Subcommittee's opinion the following principles should apply in connexion with the staffing of the Centre:

(1) When it has been decided to open a Health Centre the Executive Council should approach all the doctors in the area (to be delimited *ad hoc* in each case) and invite them to apply for admission.

(2) If the number of applicants does not exceed the number who can work together in the Centre, then subject to 4 (*a*) they should all be admitted.

(3) If the number of applicants is less than the number of doctors who the Executive Council considers should work together in the Centre, then the Council might, if they think fit, extend the invitation to include doctors practising in a larger area around the Centre. The Executive Council should not invite any additional doctors from outside the area unless, and subject to paragraph (4) (*a*):

(*a*) there is a vacancy in the area at the time, or

(*b*) the combined lists of the accepting doctors, including assistants, exceed the permitted maximum.

(4) If the number of applicants from the delimited area is greater than the number of doctors who can work in the Health Centre, then the Executive Council should proceed to select those who are to go in. In so doing:

(*a*) Only those doctors who have mutually agreed to work together shall be selected.

(*b*) Regard should be had to any preferences expressed by those whom it is proposed to select as to their colleagues.

(5) If a vacancy occurs at a Health Centre or if the practitioners wish to add to their number, the remaining doctors should select another practitioner. A proposed addition would be subject to the consent of the Executive Council, such consent not to be unreasonably withheld, having regard to the accommodation available. If it is proposed not to fill a vacancy the consent of the Medical Practices Committee should be obtained.

13. Whilst the Subcommittee wishes to emphasize the necessity for preserving the right of a practitioner to choose his own partner and to work in co-operation with those outside the Centre, it is opposed to any steps being taken which might lead to the overstaffing of a Health Centre.

Co-operation Between Doctors Practising from a Health Centre

14. Those in partnership when the Health Centre is functioning will probably wish to continue with current arrangements. In other cases, although it should not be an obligation, it is felt to be eminently desirable that there should be some form of co-operative arrangement between practitioners from the clinical, administrative, and financial standpoints. The allocation of moneys received for services rendered at the Health Centre is, of course, a matter of private arrangement between the doctors concerned, and the Subcommittee does not think it would be desirable to make any suggestions on this aspect of Health Centre practice.

Procedure for Terminating the Contract of a Doctor Working at a Health Centre

15. A doctor wishing to retire from a Health Centre should give the usual three months' notice to the Executive Council and should either:

(1) Withdraw from the area and give up his list of patients, or

(2) Subject to the terms of any partnership or similar agreement

(*a*) continue in N.H.S. practice in the area, or

(*b*) give up his list of patients and continue in private practice in the area.

16. In the circumstances set out in (1) and (2) (*b*) above the Subcommittee holds the view that a vacancy would exist, whilst the continuance in N.H.S. practice in the area would not create a vacancy.

Terms of Service at Health Centres

17. It is contemplated that the terms of service at a Health Centre will be governed by the terms and conditions of service for general practitioners now in force. There should be no differentiation between the terms of service for those practising in a Health Centre and those practising outside the Centre.

Existing Practice Liabilities

18. In cases where a doctor owns his surgery premises it is not anticipated that any difficulties will arise so far as continuing liabilities are concerned. In the event of his moving into other premises, however, it is desirable that he should restrict the future use of his existing surgery premises to prevent another doctor from using the property for surgery purposes. Such a safeguard could be easily effected by including a restrictive covenant to this effect in the conveyance.

19. Many doctors entering Health Centre practice will, however, be faced with the problem of continued liability under the leases of their existing surgery premises. The Subcommittee feels that these practitioners should not be influenced against Health Centre work by the possibility of financial loss, and due regard must be given to the means whereby the doctor can terminate his liability without being penalized in any way. Here, again, the future use of the premises must be restricted to prevent another doctor from using the property for surgery purposes within a reasonable period of time.

20. There are at present three ways in which a tenant can be wholly or partially released from the obligations of his lease: the lease can be terminated by agreement with the landlord; the remaining term of the lease can be assigned; or the premises can be sublet. In the last two cases the tenant remains liable to his landlord but can have recourse to his assignee or subtenant. The adoption of the first of these alternatives would probably involve a cash payment by way of compensation to the landlord, whilst subletting or assigning is only possible if the lease permits it.

21. In view of the Ministry's desire to see doctors participating in Health Centre practice, the Subcommittee feels that it is not unreasonable to ask that such practitioners should be safeguarded against the possible consequences of agreeing to enter a Health Centre. Such a safeguard would require the introduction of legislation to provide that the lease should have written into it, at the option of the landlord, either that the doctor has the right to surrender the lease without incurring a penalty, or that he has the absolute right to assign or sublet. Either provision would be invoked only at the wish of the tenant. It should also be a condition of the surrender of the lease that the landlord should not let or otherwise dispose of the premises to another doctor for a specified term.

22. Consideration has also been given to the position of doctors who for various reasons may not immediately wish to terminate their leases and vacate their surgeries. These practitioners would be faced with the alternatives of (*a*) leaving the surgery vacant although retaining possession; (*b*) keeping the premises furnished and holding periodical surgeries; or (*c*) installing a caretaker.

23. Although in the case of (*a*) there is a distinct danger of requisitioning, and also in the case of a whole house which is partly used for surgery purposes and partly as a flat for the caretaker it might be held by the Local Authority that the actual surgery part of the building was not required for occupation and could be subject to requisitioning, the Subcommittee feels that the Ministry of Health, which controls housing policy, could overcome this difficulty by issuing a directive that Local Authorities should not requisition premises so vacated for a given period.

24. In the event of a caretaker being installed, several difficulties may arise to prevent the doctor recovering possession of the premises. Without the benefit of a service tenancy agreement specifically stating that the caretaker occupies the premises solely as a condition of his employment by the doctor, it appears that a caretaker could normally claim the protection of a statutory tenancy and the doctor would be faced with considerable difficulty in obtaining vacant possession in the event of the caretaker refusing to quit at the termination of the arrangement. If a service agreement is completed the doctor should normally have no difficulty in obtaining possession if he requires the premises for use by another employee, although should he himself wish to reoccupy the premises he must first offer the service tenant suitable alternative accommodation. Even if suitable alternative accommodation is offered a Court would only make an order for possession in certain cases if the doctor acquired his interest in the premises before September 1, 1939 (or in some cases December 6, 1937), and if the Court is satisfied that the hardship to the landlord in not granting the order is greater than the hardship to the tenant of doing so. The acceptance of rent for one rent period between the time that the doctor ceases to use the premises as a surgery and the time that notice is given to the caretaker might well invalidate any service tenancy agreement by turning what started as a service tenancy into an ordinary tenancy fully protected by the Rent Restrictions Acts.

25. To overcome these difficulties, if caretakers are to be taken as the best solution of the doctor's problem, the doctor must be provided with some means whereby he can:

(1) obtain immediate possession of any premises in which he has installed a caretaker for the time being;

(2) prevent the requisitioning of any vacant part of his premises.

26. (1) above can be secured by legislation amending the Rent Restrictions Acts or by the doctor himself ensuring that the rent paid by the caretaker does not exceed two-thirds of the rateable value of the property let to the caretaker, thus removing the caretaker's tenancy from the scope of the Rent Restrictions Acts. The safeguard required in (2) would require the introduction of amending legislation to guarantee the doctor against requisitioning for a specific period, which it is suggested should be for two years. The only alternative is for the doctor to secure an undertaking from the requisitioning authority that the premises would be handed back should he require them, but this arrangement would not be altogether satisfactory, as the doctor's obligations under his lease would not necessarily be covered by the requisition rental paid and repairing obligations accepted by the requisitioning authority.

27. It is felt that apart from other considerations it is necessary for the doctor to be able to leave the Health Centre and revert to practice outside if it is desirable for him to do so. The full implications of Health Centre practice are not known, and in the interest of all parties it should be possible for the doctor to leave the Centre if either he desires to do so for personal or professional reasons or if his continued attendance at the Centre would in any way disrupt the harmony or efficient working of the Centre. Similarly, by prohibiting the use of any vacated premises by another doctor some measure of protection would be afforded against encroachment, a step which is considered highly desirable if practitioners are to be encouraged to enter Health Centre practice.

Development Charges under the Town and Country Planning Act, 1947

28. The question also arises as to the liability of a doctor for a development charge under the Town and Country Planning Act if on assigning or subletting his surgery premises the new tenant carries out any alterations or effects any material change of user which would attract a development charge. Generally speaking, any development charge is paid by the "developer," but in some circumstances it is possible that the doctor will be called upon to pay this charge. It therefore seems desirable that a doctor should be protected against incurring such a payment in consequence of his entering Health Centre practice, and of necessity subletting or assigning his existing surgery premises. Here again it seems that amending legislation is the only certain way of overcoming the difficulty.

29. Normally a development charge would not be attracted if a doctor who owned his premises merely ceased to use them for surgery purposes and used them purely for his residence; if, however, he put the surgery premises to some other use—e.g., for office accommodation or for letting as a separate flat—he would normally have to pay a development charge. If, however, on entering health centre practice he no longer required the premises at all and sold them, while a development charge might be incurred if there was any material change in the use of the premises it would fall to the purchaser for payment. In so far as this factor would have a bearing upon the purchase price of the house, it is considered that the doctor should be indemnified against any possible loss.

Model Contract

30. Detailed consideration has been given to the matters which it is thought desirable to incorporate in the contract to be entered into by a doctor who agrees to practise from a Health Centre. A model contract drawn up by the solicitors in the light of the Subcommittee's deliberations is shown in Appendix I. Although it is suggested that this contract should be used by those who join a newly formed Health Centre, some modifications will undoubtedly be necessary in the light of experience.

31. The Subcommittee is of the opinion that so far as possible doctors agreeing to practise from Health Centres should be governed by the same terms and conditions of service as exist at present, and is of the opinion that the introduction of additional regulations or restrictions should be avoided. To this end the contract should be with the Executive Council, thus placing the doctor in the position of subtenant, the Executive Council being the main tenant of the Local Health Authority.

32. In examining the matters for which it is thought provision should be made in the contract, the Subcommittee had reason to examine a number of related questions which, although in all cases are not capable of detailed incorporation in a model contract, should be agreed between the parties concerned.

The views of the Subcommittee on these matters and an amplification of some of the terms of the model contract are set out below:

Services Available at the Health Centre

33. The contract sets out the majority of the services which the Executive Council would undertake to provide at the Health Centre, but the Subcommittee wishes to stress that full provision must be made for the doctor to have such professional, technical, and clerical assistance as he may reasonably require, and the importance of ensuring that facilities are provided for the reception of telephone and other messages during the twenty-four hours. It is considered desirable that any arrangements for the running of the Centre shall include the services of a caretaker upon whom the practitioner can call to perform small maintenance tasks in the building, etc.

Payment for Accommodation at a Health Centre

34. The Subcommittee has carried out a detailed examination of the method of computing the rent which practitioners are to be charged for the accommodation and services which are provided at a Health Centre, and is in agreement with the following basis, which has been determined by the Ministry of Health and communicated to Local Health Authorities: "The rent to be charged should be a reasonable computation of what it would cost the doctors to provide facilities for practice from their own surgeries in the neighbourhood of the Centre."

35. The payment for accommodation and services should not exceed the cost of obtaining private surgery accommodation and comparable services in the district on the basis of an assessment by the district valuer, and in no circumstances should it exceed the cost to the Local Health Authority or the Local Executive Council. The total rent should be related only to the accommodation and services in use.

36. In some circumstances it is envisaged that it will be necessary for the doctor to join the staffs of two Health Centres or, where the nature of the countryside demands it, to maintain a branch surgery in addition to his Health Centre practice. To permit him to undertake Health Centre practice without financial hardship the rent might have to be adjusted in order that it bears a relation to the actual user of the accommodation and services.

Administrative Arrangements

37. As circumstances will necessarily differ from area to area the Subcommittee is of the opinion that it is inadvisable to incorporate these arrangements in any detail in the contract. The general administrative arrangements should be determined locally between the Local Health Authority, the Executive Council, and the Local Medical Committee.

38. The doctors on the staff of a Health Centre should form themselves into a Medical Staff Committee and include in the membership of the Committee the Medical Officer of Health of the Local Health Authority or his medical representative. Such a committee should receive official recognition and should appoint an accredited representative who would represent them in matters affecting the day-to-day management of the Centre.

39. It may ultimately prove desirable in the light of experience to establish Joint Medical Staff Committees of Health Centres.

40. The matters which should be agreed locally should include, *inter alia*, the following items:

(a) Lay assistance in the administration of the Centre

At each Health Centre some person should be given the necessary authority and deputed to deal with administrative details arising from the day-to-day running of the Centre. Such an individual would keep in the closest touch and co-operate with the doctors in the Centre.

(b) Management

The doctor's share in the management of the Centre should be exercised through the committee formed by the doctors in the Health Centre.

(c) Disputes

Disputes between two doctors should be placed before the Medical Staff Committee, and, failing agreement, thereafter the Local Medical Committee.

Any complaint made by a patient against a practitioner in the Health Centre must, as in the case of a doctor outside the Centre, be made to the Executive Council and dealt with in the usual manner by the Council.

(d) Services for patients

Agreement should be reached between the Executive Council, the Local Professional Committees, and any other interested bodies as to the services which will be available at the Health Centre (e.g., dental, ophthalmic, and pharmaceutical services), and the practitioners concerned fully informed.

(e) Facilities for doctor

Similarly, the doctor should be advised of any agreement reached between these bodies as to the right which he has to utilize any arrangements in force at the Health Centre for filing records, supplying drugs, pathological examinations, etc.

The Doctor–Staff Relationship

41. The necessity for the provision of such ancillary staff as are reasonably necessary to meet the doctor's requirements has already been stressed and a clause to this effect is included in the model contract. The Subcommittee, however, considers that the doctors at the Centre should be free to arrange between themselves how the services of the secretarial, dispensing, and

clerical staff should be shared. Presumably, any such staff will be employed by the Local Health Authority and their hours and general conditions of service will be governed by those applicable to Local Authority staffs. Consequently the doctor will not have the right to dismiss a member of the staff, but it is felt that he should have the right to take immediate disciplinary action which shall be reported to the Local Health Authority, who shall be responsible for deciding what further steps are necessary.

42. Many doctors going into Health Centres will probably wish to take their existing secretaries with them, and the contract provides that the appointing authority shall, so far as possible, afford the doctor the opportunity of taking his own secretary, clerk, and/or dispenser.

43. In connexion with the provision of lay staff at a Health Centre, the Subcommittee wishes to emphasize the advantages and economies which it is considered would be effected by the installation of labour- and time-saving devices such as dictaphones.

Surgery Arrangements

44. The model contract contains a clause which would set out the doctor's rights in regard to waiting-room accommodation. On this question the Subcommittee is of the opinion that it is generally desirable that there should be one waiting-room for every consulting-room, but the construction of the building should be such that it is capable of being adapted so that there could be one waiting-room for more than one consulting-room.

45. The internal arrangements of this nature should be such as would satisfy the Local Medical Committee, and particular emphasis is laid upon the need for safeguarding the security and privacy of patients' records.

46. No reference is made to specific surgery hours, as, in the opinion of the Subcommittee, these would be determined as at present.

Security of Tenure

47. Provision has been made in the model contract to specify what security of tenure a doctor has in his surgery, and that normally the Executive Council has no right to evict him. The Subcommittee is of the opinion that, ordinarily, a doctor should have the right to remain in the Health Centre for so long as his name appears on the Medical List. It is, however, of the opinion that some machinery should be established whereby in very exceptional circumstances a practitioner's tenancy could be terminated or allow his immediate resignation from the Centre. Any such machinery should include a full and proper right of appeal. Similarly, if the continuance of a doctor's Health Centre practice would result in any breach of a restrictive covenant in a partnership agreement (e.g., that the doctor would not practise in the area) and the agreement was upheld in the Courts, then the doctor should, in those circumstances, be required to leave the Centre.

Summary of Main Recommendations

48. In its Report the Subcommittee has given its views on a number of detailed points relating to the establishment, staffing, and administration of a Health Centre. Many of the recommendations cannot be implemented until plans for the establishment of Health Centres are more advanced or can be applied under local arrangements. It is, however, considered necessary that early consideration should be given to the adoption of some of the major proposals which will require either amending regulations or legislation and which are set out below:

(1) That it be regarded as an essential preliminary during the experimental period that, in every area in which a Health Centre is to be opened, no doctor (other than one of the principals in the Health Centre, or a doctor who, at the commencement of the period specified below, had premises in the area from which he practised and was at that time on the Executive Council List) should be allowed to open a surgery (including a surgery at his residence) within an agreed area around the Health Centre for a specified period before and after the opening of such Centre.

(This recommendation has been approved by the Annual Conference of Local Medical Committees.)

(2) That legislation should be introduced to provide that, if a practitioner who enters a Health Centre wishes to be wholly or partially released from his obligations under the lease of his existing surgery premises, the lease shall have written into it, at the option of the landlord, either that the doctor has the right to surrender the lease without incurring a penalty or that he has the absolute right to assign or sublet.

(3) That to safeguard the position of practitioners who do not immediately wish to terminate their leases and/or vacate their surgeries, amending legislation should be introduced:

"(*a*) to amend the Rent Restrictions Acts so that a doctor may obtain immediate possession of any premises or part of premises in which he has installed a caretaker or other person for the time being, and

(*b*) to guarantee the doctor against the requisitioning of any vacant part of his premises for a specific period, which it is suggested should be for two years.

(4) That doctors be protected against incurring a development charge in consequence of entering Health Centre practice, and, of necessity, subletting, assigning, or selling their existing surgery premises.

(5) That Local Health Authorities and Local Executive Councils should be required to adhere to the principle laid down that the rent to be charged to doctors for accommodation and services should be a reasonable computation of what it would cost the doctors to provide facilities for practice from their own surgeries in the neighbourhood of the Centre.

(6) That Local Health Authorities and Local Executive Councils should be advised to give official recognition to the Medical Staff Committee formed by the doctors of the Health Centre.

APPENDIX I TO THE REPORT OF THE HEALTH CENTRES SUBCOMMITTEE

Model Contract

THIS AGREEMENT is made the day of 19 BETWEEN THE EXECUTIVE COUNCIL FOR THE COUNTY [BOROUGH] OF (hereinafter called "the Council") of the one part and of in the County of Registered Medical Practitioner (hereinafter called "the Practitioner") of the other part.

WHEREAS:

(1) Pursuant to the powers in that behalf contained in the National Health Service Act, 1946, there has been established a Health Centre at the premises (hereinafter called "the premises").

(2) The Practitioner carries on medical practice in or about aforesaid under contract with the Council under Part IV of the said Act and is desirous of carrying on such practice from the said premises.

(3) The Council have agreed to grant to the Practitioner a licence to use the said premises upon the terms hereinafter appearing.

NOW in pursuance of the said agreement and for the consideration hereinafter appearing THIS AGREEMENT WITNESSETH as follows:

1. THE Council hereby grant the Practitioner and/or any partner or assistant designated by him licence and authority to have as from the day of 19 :

(*a*) the sole and exclusive right for himself or themselves or his or their patients and visitors to use the room(s) designated on the floor of the premises as [a] consulting room(s) for the purposes of his or their said practice

(*b*) the right for himself or themselves or his or their patients and visitors to use [in common with [ ] other practitioners and their patients and visitors] the room(s) designated on the floor of the premises as [a] waiting room(s) for the purpose of his or their said practice

(*c*) the sole and exclusive right to use the space(s) designated in the [garage] [parking place] annexed to the premises for the accommodation of his or their motor car(s)

(*d*) the right for himself or themselves or his or their patients and visitors in common with all others entitled thereto to use all entrance doors halls stairways lifts passages roadways and other means of egress and regress necessary or convenient for the purpose of obtaining access to the before mentioned rooms or [garage] [parking space] or any of them

(*e*) the right for himself or themselves or his or their patients and visitors in common with all others entitled thereto to use the lavatory and sanitary accommodation in and about the premises

2. THE Practitioner shall pay to the Council for such licence a sum at the rate of £ per annum payable quarterly in arrear on the in every year the first payment (being in respect of the period from the until the) being made on the day of 19 .

3. THE Council shall:

(*a*) furnish the said rooms with all necessary and proper furniture fittings and equipment and in the case of [each of] the said consulting room(s) the said furniture fittings and equipment shall include the items set out in the First Schedule hereto and the Council shall replace from time to time as occasion shall require such of the said furniture fittings and equipment as may require replacement PROVIDED ALWAYS

(i) that the Practitioner may at any time notify the Council in writing that he does not require [in any specified room] any item or items or furniture fittings or equipment set out in such Schedule and upon the receipt of such notice the Council shall remove the same

(ii) that the Practitioner shall be at liberty at any time and from time to time to bring into [any of] the said consulting room(s) such of his own furniture fittings and equipment as he may decide

(*b*) at all time maintain the premises and in particular the rooms hereinbefore referred to in good and substantial repair and condition both internally and externally and keep the said furniture fittings and equipment in good repair and condition

(*c*) once in every [ ] years paint in a good and workmanlike manner the interior of the said rooms usually painted and paper wash stop distemper grain varnish and whiten all parts usually papered washed stopped distempered grained varnished and whitened. The colour of the decorations to the said consulting room(s) shall be chosen by the Practitioner and the colour of the decorations to the said waiting room shall be chosen by the Practitioner jointly with the other practitioners using the same or on failure to agree by the Council

(*d*) supply a telephone to [each of] the said consulting room(s) and pay all charges and expenses in connexion therewith other than such as are not attributable to the use of the premises for the purposes of the practice carried on by the Practitioner which shall be borne and paid by him

(*e*) pay all rates taxes and other outgoings whatsoever in respect of the premises and indemnify the Practitioner against all liability in respect thereof

(*f*) at all times keep the said rooms and all such parts of the premises as are used by the Practitioner or any such partner or assistant or his or their patients and visitors in common with other persons properly cleaned and lighted and warmed to such extent as may be reasonably necessary from time to time

(*g*) provide to the satisfaction of the Health Centre Medical Staff Committee hereinafter referred to the services referred to in the first part of the Second Schedule hereto

(*h*) provide to the satisfaction of the Local Medical Committee for the County [Borough] of the services referred to in the Third Schedule hereto and permit to the Practitioner and any such partner or assistant the full enjoyment thereof

(*i*) indemnify the Practitioner and any such partner or assistant against all liability howsoever arising in respect of:

(i) any accident sustained by or any injury to any person coming in or upon the premises not being an accident or injury arising directly out of or in consequence of professional treatment given by the Practitioner or any such partner or assistant

(ii) any failure (not being attributable to the personal act or default of the Practitioner or any such partner or assistant) to ensure that all records papers and other documents relating to patients of the Practitioner or any such partner or assistant are preserved from disclosure save to the Practitioner or any such partner or assistant or to the patients to whom they respectively relate or to any other person having power lawfully to require such disclosure

(iii) any negligence or wrongful act or default on the part of any person in or about the premises other than the Practitioner or any such partner or assistant

(iv) any accident sustained by or any injury to any person employed in and about the premises (not being attributable to the personal act or default of the Practitioner or any such partner or assistant)

4. THIS Licence shall be determinable:

(*a*) By the Practitioner at any time on giving to the Council three months' notice in writing to terminate the same

(*b*) By the Council on giving to the Practitioner two months' previous notice in writing to terminate the same on the happening of one of the following events:

(i) if the Practitioner's name shall for any reason be removed from the Medical List of the Council

(ii) if the sum payable under Clause 2 hereof shall be in arrear and unpaid for 21 days after the same shall have been legally demanded in writing

(iii) if the Practitioner shall be guilty of such conduct as shall in the opinion of the National Health Service Tribunal on a reference by the Council after considering a report of their Medical Service Committee justify the termination of this Agreement (subject to appeal to the Minister of Health as provided by the said Act)

5. (*a*) THERE shall be constituted a Committee to be known as the [ ] Health Centre Medical Staff Committee which shall be composed of all the medical practitioners carrying on practice at the premises as Principals and being under contract with the Council under Part IV of the said Act together with the Medical Officer of Health for the County [Borough] of [ ]

(*b*) The said Medical Staff Committee shall be empowered to make regulations governing the nomination of a Chairman and the conduct of business by the Committee

(*c*) The said Medical Staff Committee shall have power:

(i) to determine on behalf of the Practitioner all matters arising out of the liability of the Council under Clause 3 (*g*) hereof

(ii) to consider and make recommendations (after such inquiry as they may think proper) for the settlement of all matters of dispute between the Practitioner or any such partner or assistant and any other medical practitioner (not being a partner or assistant of the Practitioner) practising at the premises (subject to appeal to the Local Medical Committee of the County [Borough] of)

(iii) to consider and make recommendations (after such inquiry as they may think proper) for the settlement of all complaints made by the Council against the Practitioner or any such partner or assistant in connexion with his use and enjoyment of the rights hereby granted subject to the right of either party to require the matter to be referred by the Council to their Medical Service Committee

(iv) to make regulations which shall be binding on the Practitioner and any such partner or assistant with regard to the matters set out in the Second Part of the Second Schedule hereto

(v) to nominate on behalf of the Practitioner and any such partner or assistant a representative or representatives to a Committee which shall manage and control the Health Centre on behalf of the Council and all other interested parties.

6. THE right of the Practitioner and any such partner or assistant to carry on his or their practice from the premises shall not be restricted to practise under the National Health Service Act but shall extend to all medical practice carried on by him from time to time.

7. THE Practitioner shall:

(*a*) refund to the Council the cost of all telephone calls made by him or any such partner or assistant from the premises otherwise than in the bona fide conduct of his or her practice

(*b*) refund to the Council the cost of all work carried out by it under Clause 3 (*b*) hereof in respect of the said consulting room(s) which is necessary for reasons other than fair wear and tear in the conduct of his practice

(*c*) conform and ensure that any such partner or assistant shall conform to the satisfaction of the said Medical Staff Committee with all regulations properly made by them under Clause 5 (c) (iv) hereof.

8. IF at any time the premises are destroyed or so damaged by fire storm tempest or any other cause as to deprive the Practitioner of his rights hereunder or any material part thereof the Council shall forthwith make suitable alternative provision therefor and shall take all reasonable and proper steps to restore to the Practitioner as soon as possible the rights so lost.

AS WITNESS etc.

THE FIRST SCHEDULE

List of basic furniture fittings and equipment for consulting rooms to be provided by Executive Council

THE SECOND SCHEDULE

PART I

Services to be provided by the Council to the satisfaction of the Medical Staff Committee

1. The Health Centre shall be open and fully staffed during all hours approved by the Council as the surgery hours of the Practitioners practising therefrom and for [one hour] before the commencement of the earliest and [one hour] after the end of the latest of such surgery hours.

2. For the purpose of the last preceding paragraph the full staff of the Health Centre shall include persons suitable and trained to carry out:

(i) Such duties (including secretarial duties) in connexion with the attendance on patients as the practitioner or the said Medical Staff Committee may reasonably require

(ii) the duties of the Council under paragraph 2 of the Third Schedule hereto relating to medical records and other documents

(iii) to ensure that all calls and messages handed in or sent to the Health Centre for the Practitioner or any partner or assistant designated by him in his absence shall be immediately and accurately transmitted to him or his nominated deputy

3. At all times when the Health Centre is not open and fully staffed the Council shall maintain on the premises such staff as may be required:

(i) to enable the Practitioner and any partner or assistant designated by him to gain access to and use his consulting room and [garage] [parking space] for all reasonable and proper purposes

(ii) to enable the Practitioner and any partner or assistant designated by him to obtain ready access to the records of any of his patients

(iii) to enable all calls and messages handed in or sent to the Health Centre for the Practitioner or any partner or assistant designated by him to be immediately and accurately transmitted to such practitioner or his nominated deputy

4. The Council shall provide at all times a reasonably sufficient supply of hot water to all hot water taps within the premises.

5. The Council shall at all times nominate a person or persons to have (*inter alia*) the following responsibilities and to be available at all reasonable times to the Practitioner and any partner or assistant designated by him:

(i) the general control and direction of the lay staff of the Health Centre and the carrying out of the obligations of the Council in accordance with this Agreement

(ii) the carrying out at the request of the Practitioner or any partner or assistant designated by him such minor repairs and decorative measures as are reasonably required and are the responsibility of the Council hereunder.

THE SECOND SCHEDULE

PART II

Matters on which the Medical Staff Committee may make Regulations

1. The conduct of the practitioners practising in the Health Centre towards each other and the rights of each individual practitioner in relation to the others in connexion with all services and facilities at the Health Centre enjoyed by all the practitioners in common.

2. The conduct of such practitioners towards the lay staff employed by the Council, the rights of the individual practitioners to give orders to such staff and to receive attention personally from them to the exclusion of other matters and all matters in connexion therewith PROVIDED ALWAYS that such Regulations shall so far as reasonably practicable:

(*a*) give to the practitioner who on commencing practice in the Health Centre arranges with the Council to employ at the Health Centre any secretary or other person previously employed by him all reasonable preference in the services of that person

(*b*) empower the practitioner nominated by the said Committee as the representative of such Committee under Clause 5 (c) (v) hereof (or his deputy in his absence) to take immediate disciplinary action with regard to any member of the lay staff of the Health Centre whom he has reason to believe guilty of serious misconduct pending action on the part of the Local Health Authority.

THE THIRD SCHEDULE

Services to be provided by the Council to the satisfaction of the Local Medical Committee for the County [Borough] of [ ]

1. The Council will provide within the Health Centre the following facilities:

[Here will follow a list of other services at the Centre—e.g., dental, ophthalmic, and pharmaceutical services.]

2. The Council will make arrangements for the proper filing and safe custody of all medical records reports correspondence and other documents belonging to practitioners practising from the Health Centre or held by them for the purposes of their practices and shall take all steps reasonably necessary for ensuring the privacy thereof.

FAILURE TO TREAT ROAD ACCIDENT

£50 PENALTY RECOMMENDED

In a case that came before the Birmingham Medical Service Committee recently a member of the public, Mr. A, alleged that a general practitioner, Dr. X, failed to give emergency treatment to a person who, on June 10, was involved in a road accident from which he subsequently died.

The case was initiated by a letter from Mr. A, which stated that a milkman was knocked down by his bolting horse, that he was severely injured, and had since died. At the time of the accident, wrote Mr. A, he asked Dr. X, who was in his surgery less than 100 yards away, to go along to see if he could do anything for the injured man. The doctor refused, and Mr. A was told to telephone 999 for an ambulance. Mr. A added that the doctor could have offered to telephone for the ambulance, but another man had to wait several minutes to get through in a public phone box.

The clerk of the executive council asked for the observations of Dr. X on the matter, and Dr. X replied in a letter that, without vouchsafing for the veracity of Mr. A's statement, it was correct in basic facts. The letter continued:

"At the time, I was busy in my surgery and had about 30-40 patients waiting, and I believe my secretary told the person who rushed in to say that I should come out at once to see a man injured, lying in the road, and was informed by her to send for the police. She was obeying my instructions to her. As a rule I do not go out to attend accidents on the King's Highway, for I find that there are too many accidents on the ———, and it interferes in my routine; though if a patient applied to me for treatment at my surgery or a request to visit at his home, it is immediately attended to. I am not aware that it is obligatory on me to attend road accidents, if so the Minister should issue a directive to that effect; if not, no notice should have been taken of such a letter as that of Mr. A's. He is probably one of those people who write letters to the Ministers or daily Press for the love of it or for self-righteousness. It is unfortunate that the telephone booth was occupied. I suggest that the Postmaster-General be approached with a view to have a few more installed on the ———."

Hearing Before Committee

When the case was heard on July 19 by the medical service committee, Mr. A said he had been an eye-witness of the accident, and in view of the serious injuries sustained by the milkman had personally sought the doctor's assistance. He had told the doctor's receptionist what had happened, and asked her to tell the doctor and ask him to attend. The receptionist had informed Mr. A that a lady had already reported the accident and had been told to dial 999. He (Mr. A) had not been permitted to see the doctor.

Dr. X stated that he had given implicit instructions to his receptionist that he was not to be interrupted during surgery hours, except for maternity cases and for patients who had

sustained accidents and were brought to his surgery. On no other account would he leave his surgery routine. His receptionist reported any summons to the scenes of accidents at the end of surgery times only. His evidence, according to the report of the medical service committee, included the statement, "I have been summoned to many accidents, but I have not been to any."

Dr. X was shown a paragraph of the executive council's allocation scheme (which forms part of the terms of service). He stated that he had not read it, though he possessed a copy of the scheme. The paragraph is as follows:

"If neither the practitioner responsible for a person's treatment nor his deputy is available for giving the person any treatment immediately required owing to an accident or other emergency, it shall be the duty of any practitioner who may be summoned, and is available, to give any necessary treatment."

After considering the evidence, the medical service committee concluded that Dr. X's name had been on the executive council's medical list since July 5, 1948; that he had been summoned to give emergency treatment immediately following an accident; and that he had not attended to give emergency treatment although he was available when summoned. The committee found that Dr. X had contravened his terms of service, and deprecated his giving standing instructions to his receptionist that he was not to be interrupted during his surgery in respect of road accidents. The committee's unanimous opinion was that Dr. X's failure to attend this case amounted to negligence or neglect of his professional duty.

The committee recommended that Dr. X be severely reprimanded and that representations be made to the Minister of Health that the sum of £250 be withheld from Dr. X's remuneration. It also recommended that the relevant regulations should be sent to Dr. X, and that he be required to adhere more closely to them in future.

Executive Council Reduces Penalty

When the executive council met on August 4 it adopted these recommendations with one exception—namely, that the Minister of Health should be recommended to withhold £50 from the remuneration due to Dr. X, and not £250.

MEDICAL PRACTICES COMMITTEE

SECOND REPORT

The Medical Practices Committee for England and Wales has prepared a report covering the second year of operation of the Health Service. The committee's recent classification of areas, according to the number of general practitioners in them, was published in the *Supplement* of August 5, p. 77. The report is presented in shortened form below.

Distribution of General Practitioners

The report states that the total number of principals among general practitioners admitted to the medical lists during the year was 1,242 as against 912 withdrawals. The apparent increase during the year is probably less than the true figure, for some practitioners delayed their impending retirement from general practice until such time after the appointed day as would enable them to secure in reasonable time the capital sums due as compensation. Prompt repayment of even a portion was not possible in the early months of the operation of the Act.

Last year the committee hazarded the opinion that there was already discernible a desirable adjustment in the location of general practitioners more suited to the needs of the public. To-day it is clear that this movement is well established. In areas where the patient–doctor ratio was high the number of resident practitioners on the lists of the executive councils concerned has increased by 168 from 3,627 to 3,795, a general increase of 4.7%. Where the converse was the case there has been a decrease of resident practitioners on the lists of 44, from 597 to 553—namely, 7.4% of those formerly in practice. This decrease has resulted from doctors retiring altogether from general practice and to a lesser degree from movement out of "over-doctored" areas to practices in other areas without replacement by fresh admissions to the list in either group. It is expected that this trend will continue until a state of equilibrium is more nearly reached.

The committee included in Schedule I [open areas with high average lists] only areas where on the facts and figures supplied to it the patient–principal ratio exceeds 3,000–1, but for various reasons not all such areas were included. Criticism has been levelled at the committee during the year on the basis of its assessment of such areas. It has been claimed that since the maximum for a principal to have on his list was 4,000 registered patients the committee had no cause to suggest that additional practitioners were required in areas where the average did not exceed 4,000. It was unable to accept this view.

On the basis of the number of doctors at present available as general practitioners, the average figure would be 2,000–3,000. These limits are elastic enough to cover the situation in most parts of the country. It may well be that in the more sparsely populated rural districts even this lower figure is too high.

The committee takes into account the part played by assistants. It considers that the value of assistants as part of the medical man-power of an area should be assessed as half that of a principal, because of the statutory limitation of 2,400 additional registrations allowed and other factors such as their impermanence and inexperience. The optimum average of registrations in respect of assistants should be, therefore, between 1,000 and 1,500, though this figure underestimates the value of many assistants.

The list of areas in Schedule I is shorter than it was last year because of (1) the increase in principals on the lists of the executive councils concerned during the year; (2) correction of inflation caused by duplicate registration of patients; (3) the taking account of assistants, though this has not made as much difference as might have been expected.

The implications to be drawn from the inclusion of an area in Schedule I are that such an area is worth special consideration by doctors who wish to start new practices and that there is a prima facie case for consideration by the executive council whether or not additional doctors ought to be specifically invited or possibly even induced to practise. Many executive councils have recognized that additional doctors were required in their area and have published advertisements accordingly or encouraged doctors with the larger practices to take new partners or assistants. During the year 374 new practitioners have entered into partnership with doctors already in practice. On the other hand some executive councils have considered, and in many cases convinced the Ministry and the committee, that there was no need to take active steps but that the normal increase of doctors could be awaited.

But there are parts of the country in the areas of county executive councils which do not appear in Schedule I and yet where the general-practitioner services may not be adequate. In such areas doctors have lists well above the average together with large mileage commitments and are often obliged to dispense medicines for their patients. In addition some of the doctors are in contract with the regional hospital board or a hospital management committee for a varying number of weekly sessions. The overall work of these practitioners may exceed that of many doctors with full lists in urban areas and additional practitioners be more urgently required than in most industrial areas. There is also the factor of the varying level of demand for medical care in different areas. The problem of arriving at a simple formula which would focus attention upon such areas is still under consideration by the committee.

Shortage of Accommodation

Doctors who wish to commence new practices and executive councils who are anxious to attract such doctors repeatedly have been balked in their efforts by the difficulty and sometimes impossibility of obtaining any suitable premises from which a practice might be conducted. This is equally the case in built-up and in new development areas, though in the latter

instance some local authorities are prepared to co-operate with the executive councils and the committee. But the committee states that the general-practitioner services should generally be expanded as the new population moves in and not be provided for as an afterthought when the people are already settled and accepted on the lists of those local doctors who were in the neighbourhood before the development was contemplated and who may be overburdened by the new patients.

It has often proved more satisfactory for new entrants into practice to start as partners of existing practitioners. The existing surgery accommodation can frequently be made adequate for the new partner to work from. The new doctor is of immediate benefit to the people of the area, providing services for the patients on his partner's list. The doctor himself is occupied from the time of settling into practice and avoids the anxious period of almost complete lack of work and remuneration which is the usual experience of a doctor who seeks to start an entirely new practice, even though he may attract a basic salary. Generally, the new partner is more acceptable to the other practitioners in the district than the doctor commencing a new practice.

Admissions to the List

Applications to Start Practices

During the year there have been 256 applications made by doctors to commence new practices; 250 were granted and six refused, these latter on the grounds that the number of doctors in the area was already adequate. There have been two appeals against the decision of the committee in this respect, the committee's decision being upheld in both these cases. Of doctors who have started new practices since the National Health Service began some have quite early attracted to themselves a number of patients, which suggests that their venture is on the way to success. Others, however, particularly in the more popular districts, would appear to have little prospect of ever achieving a competence in their present location. London, for instance, presents a peculiarly difficult problem, and the committee has again suggested to the London Executive Council and local medical committee that parts of the areas should be "closed" to new entrants. It is awaiting advice before arriving at a decision on this point.

Assistants

The 1949 Amendment Act and regulations have had the effect that as from February 1, 1950, no application by an assistant as such to be placed on the medical list could be made. This does not preclude assistants' being admitted to the list for purposes other than their assistantship or doctors already on the medical list from acting as assistants. Prior to the above date, 625 assistants were admitted to the medical list since July 1, 1949. Since under the Amendment Act and regulations assistants are no longer admitted to medical lists, any principal who fails to obtain the permission of an executive council to employ an assistant is entitled to appeal to the Medical Practices Committee. The committee has so far considered that it would not be proper to declare that the number of doctors practising in an area was adequate and so close the area to the entry of new principals on the score of assistants employed by the existing practitioners.

Last year the committee emphasized the importance of a period of service as an assistant in general practice before becoming a principal. In a recent report a committee under the chairmanship of Sir Henry Cohen also emphasized this point. The special value of such a period to assistants contemplating general practice as their objective is confirmed by the fact that, as compared with a total of 690 vacancies which were otherwise filled, 178 assistants succeeded or became partners of their former principals during the year. There were approximately 1,700 assistants employed by principals on the list on January 1, 1950. In addition a considerable number of assistants were appointed as principals to other vacancies.

Vacancies

Last year the committee drew attention to the problem of selection of practitioners to succeed to vacancies in established practices. Since that time the position has been clarified by the Amendment Act and regulations. The effect of these will be to render the machinery of appointment more effective. In England and Wales rather more than half of the general practitioners work in partnership. When a partner leaves the Service it is left entirely with the remaining partners to decide whether they wish to assimilate such of their late partner's patients who may care to continue with them; they may do this by themselves, or with assistance, or by the choice of a new partner, subject only to such conditions as the executive council in accordance with its allocation scheme may require to be fulfilled. Here, therefore, is implementation of the Minister's promise to the profession that the wishes of the local doctors should be closely considered when the appointment of successors to practices is made in those cases where it is most pertinent that they should be considered. The admission of any new partner chosen by remaining partners to the medical list is automatic.

In other cases a doctor who has been an assistant or a deputy in a practice for some time, or a relation of the doctor who goes off the list, is regarded as the "logical" successor. Where that step is recommended by an executive council in consultation with the local medical committee, the M.P.C. is ready to endorse their view.

When the executive council advertises a vacancy it usually prepares a short list of the most likely candidates and after interviewing these makes recommendation to the M.P.C. Save in exceptional circumstances the M.P.C. has been able without hesitation to accept the advice tendered and select accordingly. Rarely has it felt it was necessary to ask for further information before accepting this advice and only in one or two cases to take steps to reinterview the candidates before making a selection. Some executive councils prefer to leave the interviewing of candidates to the M.P.C.

The machinery for such appointments has been criticized as being cumbersome. The committee has been critical of the delay which occurred in one phase or another of the process, particularly in the early days. In recent months it has been possible for a successor to take over before the date of a retiring doctor's resignation became effective. In cases of withdrawals from the list caused by death, or at short notice by reason of ill-health, the vacancies are usually filled without a long period of delay, and it has been possible to provide satisfactory interim arrangements for the care of the patients pending the appointment of a successor.

The committee is pleased to observe that the time occupied by the Ministry to inquire into the circumstances of any appeal against a selected candidate and by the Minister to decide such appeals has been reduced to a minimum during the year. In no case has delay from such a cause been of any appreciable hardship to patients, successful applicants, or appellants.

The purport of Section 34 (9) of the National Health Service Act, 1946, is that, in the selection of an applicant to go on the list, regard shall be had by the committee, and by the Minister on appeal, to mutual desires of the applicant and a doctor or doctors already on the list to enter into partnership. Where there is a relationship between the parties concerned the committee, and the Minister on appeal, are enjoined to have special regard to this. The qualification means that in neither instance is there a direction to the committee to grant these applications. Nevertheless, where such applications are for the purpose of going on the list in respect of an existing practice and within that practice only, the committee regards this section of the Act as virtually mandatory. It is difficult to envisage circumstances which might cause any application of this kind to be refused.

On the other hand the problem is different when an applicant for a previously independent practice proposes a partnership with a doctor or doctors who are already on the list. In cases where the merit of applicants is equal or nearly equal it may be proper that an applicant contemplating partnership should succeed. Indeed, the very arrangements for conducting the practice proposed by the new partnership may well make this applicant the most suitable.

Whenever an application affected by this section of the Act comes before the committee it gives it the fullest consideration. Should it appear that the executive council has not appreciated the force of such an application, or that the information submitted is incomplete, the committee has advised it of the position and awaited further comment before proceeding. The matter having been exhaustively considered, the M.P.C. has on occasion in the face of such proposals selected a candidate who desired to practise independently, as superiority in other respects cannot be disregarded. The committee is convinced that its carefully considered decision has been right in these cases, and notes that when an appeal against the decision of the committee has been made the decision of the Minister has been in accord with its own.

Practice Exchanges

Early this year the committee noted with some concern that since July 5, 1948, only two practice exchanges had been effected and gave consideration to this matter. Discussion with representatives of the profession and consultation with the Ministry led to the issue of a circular. Since that date two further practice exchanges have been completed. Several preliminary advertisements have recently appeared in the medical press. These would appear to justify the committee in its belief that there is, as before July 5, 1948, a desire for such arrangements, and that where agreement between the doctors concerned can be reached the necessary administrative steps should and would afford no difficult obstacle.

Practice Premises

The committee calls attention to the difficulties caused by the shortage of houses, in particular of premises with suitable accommodation for consulting-rooms. Many doctors have made application to go on the list in areas where their services are needed, only to find that they have been unable to obtain any building from which they can conduct a practice. A further and more serious cause for anxiety has been occasioned in finding premises to conduct existing practices, often where the number of patients attached to the practice was substantial. In some cases the retiring doctor or his family continued to live at the practice house and were unwilling or unable to find other accommodation, and equally diffident about providing, even temporarily, surgery accommodation for the use of a successor. Some retiring doctors or their legal successors who were owners of the property have co-operated with executive councils at considerable inconvenience to themselves.

More difficult, however, is the circumstance in which the available premises are disposed of to a doctor other than the successful applicant for the practice vacancy. This is calculated to set at naught the machinery of appointment to practices under the Acts and regulations, the purchaser being already on, or applying to come on, the medical list. Many such situations have occurred and have given rise to grave anxiety and a sense of frustration to doctors who have been appointed to vacancies, to executive councils, local medical committees, and to the M.P.C. The frequency is increasing as its effect becomes more widely known. The profession was well aware of this possibility before the Act became law, and the Ministry was advised accordingly. Recently there have been renewed discussions on the problem between officials of the Ministry, the representatives of the profession, and the M.P.C., and the committee believes that a satisfactory solution will not be long delayed.

Appeals

There have been a number of appeals to the Minister during the year against the decisions of the committee. Most have been made by unsuccessful candidates for a practice vacancy. In some instances there have been two or more appellants. All appeals save one have been decided on written evidence, and no appellant has been successful during the year.

Sale of Property

Applications for certificates that proposed transactions do not involve the sale of goodwill have been dealt with in somewhat increased numbers. In some of these cases the committee has been forced to refuse a certificate purely on the technical grounds that the transactions outlined in the application were no longer in the state of being proposals, but had been completed. Where refusal was on such grounds only and where the committee would, had application been made at a time when the transaction was yet a proposal, have granted the required certificate, the parties concerned have been so informed. Where the reverse has been the case, the applicants have been told of this and sometimes have submitted fresh proposals modifying the transaction, and the committee has issued a certificate in respect of such fresh proposals.

Partnership Agreements

Several applications during the year for certificates in respect of partnership agreements have been refused on the grounds that the proposed share of the junior partner bore no proper relation to the work he might reasonably be expected to do, or that he was in effect in the position of a salaried assistant. Under the regulations governing the old National Health Insurance scheme no partnership was recognizable as such by an insurance committee if the share of one partner was less than one-third of the share of any other partner. No similar regulation has been made under the present Act. In law it appears that a partnership exists, and the parties assume the responsibilities and privileges of partnership by merely holding themselves out to be partners. Therefore as matters stand executive councils are bound to recognize all partnerships notified to them as being fully effective, and in particular for the purpose of numbers of patients on their lists to recognize all partners in contract with them as principals.

There would appear to be a small but material percentage of partnerships which fall outside the definition of the old N.H.I. regulations. This may well prejudice an estimate of the true medical man-power in an area and undermine the proper working of the allocation scheme. In other obvious respects such arrangements may be undesirable. The committee has drawn the attention of the representative professional body and the Ministry to these matters, and understands that the proposal has been made to issue instructions on the lines of the N.H.I. regulations. Thus, where it is not established that a partner receives at least one-third of the share of any other partner, the partners would be treated, for the purpose of numbers on their lists, as a principal and assistant.

Inducement Payments

The Ministry has continued to consult the committee about payments made from the Inducement Fund, and in some cases the committee's advice has been incorporated by the Minister in his final decision.

As a clearer picture of the likely demands on this limited fund has become available, it has been possible to arrive at a more permanent basis of assessment of inducement payments. Consideration of claims made on the grounds of hardship caused to some practitioners by the establishment of the National Health Service is now possible, and a formula has been agreed under which recognition can be made of the unfortunate situation in which these practitioners are placed. An experimental plan has been produced with the co-operation of the Ministry, the B.M.A., the executive council concerned, and the M.P.C. to utilize some of the money in this fund to induce doctors to practise in the less attractive and more heavily populated parts of the area of one large county executive council. The working of this plan will be wholly a matter for the executive council, subject to Ministerial approval. The committee hopes that the results may make the scheme worth repeating in other similar areas.

Friendly Liaison

Close and friendly liaison has been continued with the General Medical Services Committee of the B.M.A. The committees have never failed to reach an understanding after consultations on any point at issue.

Inevitable difference of viewpoint arises on occasion between executive councils, local medical committees, and the M.P.C. This has been relatively rare, which is a tribute to the sound advice that has usually been received from the executive

councils. Any differences are largely explained by virtue of the scope of the M.P.C.'s operations, for it must take a wider view than is always possible for the local bodies.

The following Table shows the numbers of appointments to and withdrawals from medical lists, made by or reported to the committee:

Principals—Resident Areas

	General Practice	Limited List	Total
Total number on medical lists at July 1, 1949	16,651	889	17,540
Admissions to medical list	967	275	1,242
Total	17,618	1,164	18,782
Withdrawals—deaths and resignations ..	715	197	912
Total number of principals on medical lists at July 1, 1950	16,903	967	17,870
Refusals (other than for vacancies) ..			6

Arrangements at Representative Meetings

SIR,—It is time that a strong protest was made about the arrangements for Annual Representative Meetings. It is fair to say that the proceedings at Harrogate, when there was insufficient time even to permit of chairmen of many committees saying a few words about their reports when presenting them, were disgraceful although unavoidable.

One would have expected that those who arrange the time-table would have learned from his experience that three and a half days is insufficient time to set aside for an A.R.M. The recent meeting at Southport, however, shows this not to have been so. Even had the lengthy discussion about the visit to South Africa not taken place there would have been still too little time to complete the agenda, and it is never possible to be certain that no such serious matter will be raised and so upset the time-table.

After these two experiences it is astonishing to learn that the 1951 A.R.M. has already been arranged to take place on *four* days next June, the last of the four being the Saturday before some members depart for South Africa and therefore presumably precluding any extension of the meeting should it prove necessary.

Is an attempt being made systematically to curtail the time available to the Representative Body for debate, or what is the motive? It should surely be obvious that in the early years of a new National Health Service there would be much to discuss, and it is perhaps desirable to draw attention, as has often been done before, to the fact that most of the items on the agenda represent the devoting of much time and thought on the part of many members of Divisions and Branches. Surely time should therefore be allowed for their adequate consideration.

This is not a request for the meetings to be made any longer than is absolutely necessary, but only for some elasticity to be provided for in future arrangements—e.g., starting the 1951 meeting on the Tuesday and ending on the Friday or the Saturday as may prove necessary.—I am, etc.,

Churchdown, Glos. H. G. DOWLER.

Independent Court of Arbitration

SIR,—This is the most important matter we have had to discuss since the profession became employees of the State in July, 1948. The profession should be grateful to Dr. J. A. Gorsky (*Supplement*, August 19, p. 92) and Dr. C. P. Wallace (*Supplement*, August 5, p. 84) for their determined pursuance of the subject in face of substantial opposition. The attitude adopted by Dr. Hill and Dr. Wand at the Southport meeting will cause uneasiness in many minds.

The position of the Government as employer and arbitrator is untenable. There is a clear case for reconsidering the method of settling differences between employees and employers when the State is the employer: should legislation be necessary to cover new constitutional situations then we must demand it. If this subject is pursued with determination and courage we shall be rendering a great service not only to the medical profession but to the community as a whole. Indeed, it is our duty as democratic citizens in an age of nationalization if we are to avoid the totalitarian State.

It was unfortunate that Dr. Hill, when making his much-publicized statement upon the legal aspect of arbitration and withdrawal from the N.H.S., failed to inform the R.B. that he was acting upon eminent counsel's opinion. His eagerness to correct this error in the *Supplement* of August 19 is to be welcomed. Nevertheless, Dr. Wand, though fully cognizant of counsel's opinion, made a rousing speech on the same day urging the profession to withdraw from the Health Service. Are we to assume that he was not in agreement with Dr. Hill? Surely we are entitled to some explanation of these contradictory statements by leading members of the Association.

Clearly, this all-important issue should be the subject of a thorough and impartial investigation.—I am, etc.,

Guildford, Surrey. J. O. M. REES.

*** The Secretary of the B.M.A. writes: The General Medical Services Committee decided to seek counsel's opinion as to whether medical practitioners engaged in the provision of personal medical services come under the Conditions of Employment and National Arbitration Order, 1940. Counsel's opinion to the effect that doctors are within this Order was reported to the Special Conference of Local Medical Committees at its meeting on June 29. Dr. Wand, in his opening speech at Southport, made the following statement (*Supplement*, July 22, p. 38): "He wanted to make it clear that withdrawal of services did not mean that they stopped giving advice and treatment to their patients. It meant only that they ended their contracts with the Minister, *which might mean compulsory arbitration*."

Association Notices

PROPOSED ENFIELD AND POTTERS BAR DIVISION

Notice is hereby given by the Council of a proposal to form an Enfield and Potters Bar Division of the Metropolitan Counties Branch; the area of the new Division to comprise the postal and Urban Districts of Enfield and the Urban District of Potters Bar.

Any member affected by this proposal and objecting thereto should write to the Secretary of the Association not later than September 30, 1950.

CHARLES HILL,
Secretary.

Diary of Central Meetings

SEPTEMBER

14 Thurs. A.R.M. Agenda Committee, 11.30 a.m.
15 Fri. Staff Side, Committee "C," 2 p.m.
21 Thurs. General Medical Services Committee, 11 a.m.
28 Thurs. **Adjourned Annual Representative Meeting**, 9.30 a.m. **Council** (after conclusion of adjourned A.R.M.).

OCTOBER

3 Tues. Committee on Psychiatry and the Law, 2 p.m.

Branch and Division Meetings to be Held

SOUTH MIDDLESEX DIVISION.—At Public Health Department, Bath Road, Hounslow, Sunday, September 3, 7.30 p.m. Meeting to explain functions of British Medical Guild and to elect members of local Guild committee. All medical practitioners in South Middlesex are invited to attend.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY SEPTEMBER 9 1950

HEALTH SERVICE IN AUSTRALIA
FREE MEDICINE SCHEME

A scheme for providing free medicine in Australia, devised by Sir Earle Page, started on September 4 (*The Times*, September 5). There are 135 drugs that may be prescribed free, including the sulphonamides, penicillin, insulin, and vitamin B_{12}. Chemists, friendly societies, and hospitals will be reimbursed by the Government. According to *The Times*, members of the B.M.A. are co-operating unreservedly in the new scheme. Nearly all the doctors in Australia had refused to work the previous plan devised by Mr. Chiffley's Government.

PUBLIC HEALTH DISPUTE
DATE FIXED FOR HEARING

The dispute over remuneration in the public health service will be heard for arbitration by the industrial court in London on Monday, October 9.

INCREASES OF PAY IN ARMED FORCES

The recently announced increases in pay for officers in the armed Forces do not apply to medical officers. The Government White Paper on Service Emoluments (Cmd. 8027) included the following note:

"Separate consideration is being given to the position of the Medical, Dental, Veterinary, and Chaplains Services, of Quartermasters, and of officers employed in certain legal, educational, and other special duties."

The B.M.A. remains in close touch with the Ministry of Defence about the remuneration of medical officers in the armed Forces, and it is hoped to be able to publish a detailed announcement in the near future.

SCOTTISH CHEMISTS TO LEAVE HEALTH SERVICE

Over 1,300 chemists in Scotland have given three months' notice of their intention to withdraw from the National Health Service. This decision is a result of their dispute with the Secretary of State for Scotland over the 8% cut recently imposed on their pay.

RECIPROCITY WITH CHANNEL ISLANDS

A reciprocal health service agreement has been concluded between the Ministry of Health and the Department of Health for Scotland on the one hand and the States of Jersey and Guernsey on the other. Channel Islanders visiting Great Britain are entitled to use all the facilities of the National Health Service (other than those relating to mental health and mental deficiency). In particular they are permitted to come to Great Britain for the specific purpose of being admitted as patients to National Health Service hospitals (other than mental health and mental deficiency hospitals) where adequate hospital facilities do not exist in Jersey and Guernsey.

The States of Jersey will provide free in-patient treatment and out-patient treatment so far as it is available in Jersey hospitals for all visitors from Great Britain, but no family-doctor service.

The States of Guernsey (including Alderney) will provide free in-patient treatment so far as it is available in the Guernsey hospital for all visitors from Great Britain and a family-doctor service for these visitors. The family-doctor service for this purpose consists of the services of a general medical practitioner and a supply of drugs. This service will be free of charge. The arrangements do not cover the provision of dental or ophthalmic treatment to the visitors by the States of either Island.

The facilities provided by the States are for visitors from Great Britain only, and not for those who become resident in the Islands. If treatment is obtained privately in the Channel Islands, responsibility for payment remains as before a matter for settlement between patient and practitioner; the Minister has no power to reimburse the cost in such a case.

Northern Ireland is shortly to be made a party to the agreement with the States of Jersey and Guernsey.

Questions Answered

Professional Secrecy in the Forces

Q.—*To what extent can a medical officer serving in one of H.M. Forces maintain the normal ethical standards of professional secrecy? As a regimental medical officer I am frequently approached by my senior officers for detailed information regarding illnesses of the men under their command. Should I obtain the patient's consent before giving such information? As it is, whether or not my patients do give their consent, I am required to write the diagnosis after their names on a "morning sick report." This Army form is not considered to be confidential, so that within a regiment a diagnosis is common knowledge.*

A.—The requirements of the regulations to which all Service personnel are subject by law must be deemed in the special circumstances prevailing to absolve the Service doctor from obeying in its strictest sense the rule of professional secrecy. The health of a member of the Forces has a close bearing not only on his efficiency as a fighting man but also on the well-being of the unit with which he is serving. These considerations are of primary importance to the commanding officer, and the Service authorities have recognized this by ensuring that he is provided with adequate information about the health of those under his command. King's Regulations and Admiralty Instructions require (Articles 1407–8) that the medical officer shall submit a daily sick book and a weekly return of sick to his captain. Articles 1410–11 lay down in addition the rules for the submission of quarterly journals. Similar instructions appear in King's Regulations and Air Council Instructions for the Royal Air Force (para. 1480), and in Regulations for the Medical Services of the Army (para. 169). The duties of medical officers may in theory be enforced as a matter of discipline, but there is no reason to suppose that this is ever necessary in practice, since the position seems to be generally understood and accepted in the Forces.

A soldier is normally aware that the nature of his complaint is entered on the sick report, and in ordinary circumstances it is reasonable to assume that consent for disclosure to his commanding officer is implied. All Service medical documents are regarded as confidential—i.e., not to be disclosed to anyone whose official duty does not require him to have knowledge of their contents. If, however, the medical officer has serious doubts in a particular case regarding the propriety of entering the diagnosis on the sick report, he should omit it and either communicate it orally to the commanding officer or enclose it in a sealed envelope.

SIR CHARLES HASTINGS FESTIVAL

The Council of the B.M.A. has decided to hold a Sir Charles Hastings Festival in Worcester on May 30, 1951, and it is hoped that as many members as possible will be able to attend. The Mayor and Corporation of the City have kindly intimated their willingness to place the Guildhall at the disposal of the Association for the occasion, and the Bishop of Worcester hopes to be able to take part in the festival. There will be an address on Sir Charles Hastings by Dr. W. H. McMenemey. Full particulars will be announced later.

Correspondence

General Practitioner Maternity Services

SIR,—This memorandum has been drafted by the Bristol Local Medical Committee in conjunction with groups of doctors practising in Bristol, and constitutes an attempt to formulate a policy for the future of the Bristol maternity services as they affect general practitioners.

It is realized that paragraph 9(A) (i) as it stands is in conflict with paragraph 2 (*a*) of the Ministry of Health E.C.L.16/50, which circular lays down that where arrangements are made for confinement in hospital the hospital would normally be expected to undertake full antenatal and post-natal facilities subject to certain exceptions. The committee considered, however, that the present arrangements as laid down by regulation are open to the criticism that often the patient is seen by one doctor at the antenatal clinic, delivered by a second in hospital, and post-natally examined by a third: not one of them is the doctor whom she has chosen to look after her under the National Health Service.

It is felt that the document is of more than local interest, and the Bristol Local Medical Committee would be glad to receive, either through the *Journal* or direct, the comments of local medical committees and others who are interested in large urban areas where such a scheme might be useful. The Bristol committee would value copies of similar schemes in operation in other cities.

If sufficient support is forthcoming the General Medical Services Committee will be asked to seek amendment, where necessary, of the regulations.—I am, etc.,

WALTER WOOLLEY,
Hon. Secretary,
Bristol Local Medical Committee.

SUGGESTIONS FOR GENERAL PRACTITIONER MATERNITY SERVICES IN A LARGE URBAN AREA

Preamble

1. Midwifery should be regarded as a normal province of the G.P., and the present tendency to divorce the G.P. from the practice of midwifery is deplorable, as it removes from the scene the one individual who is likely to be most informed on the past history of the patient and most closely acquainted with her health, temperament, and domestic circumstances.

2. It is absurd to pay lip-service to the extreme importance of the family doctor and then deprive him of the opportunity of attending his patient at a time when the value of his association with the patient and her family is at its highest to them. It is also directly contrary to the Minister's policy as set out in R.H.B. (49) 132 and to his promise that under the National Health Service every expectant mother can have the doctor of her choice.

3. In the past it has sometimes not been possible for the working-class mother to have the services of both a doctor and a midwife on account of the financial strain involved, but with the provision of a comprehensive National Health Service an attempt should be made to get back to the ideal arrangement of family doctor as well as midwife in all midwifery.

4. The present-day distinction between a "midwife" and a "maternity nurse" is purely artificial and is largely responsible for the feeling of disquiet and sense of "indignity" that is felt by the midwives' profession. The two terms are interchangeable and identical and the fact that a "midwife" is acting in co-operation with a doctor in no way lessens the skill, responsibility, and dignity that is required of her in the practice of her profession. Therefore, the designation "maternity nurse" should be abolished. The functions of doctor and midwife are complementary and not antagonistic.

5. As the maternity services as at present constituted leave much to be desired, the following suggestions are put forward in an endeavour to remove the more outstanding difficulties.

Suggestions for the Improvement of the Service

6. Every expectant mother should consult her own doctor at an early stage of pregnancy. The present position in which the doctor responsible for the health of the patient may remain in ignorance of her pregnancy is ludicrous. If the woman attends at a clinic in the first instance she should be instructed to consult her doctor.

7. Ideally, no patient should be seen at an antenatal clinic unless referred with a letter from her doctor, as is the normal procedure in other departments of medicine.

8. If her own doctor does *not* practise midwifery, he will refer her to a colleague who does so and who will accept her by signing Form E.C.24 or E.C.24a.

9. Having accepted the patient, the doctor will determine if she is likely to require delivery in a maternity centre or unit.

(A) *Maternity Centre Cases.*—(i) If it is considered necessary on *obstetric grounds* for the patient to have her confinement in a maternity centre, she will be referred to an obstetric consultant, who, if he agrees, will arrange the necessary bed and then refer the patient back to her doctor, who will then be responsible for her antenatal care in collaboration with the consultant. (ii) On discharge from hospital the patient will be referred back to her own doctor, who should have a prior report on her hospital treatment. (iii) The post-natal examination will normally be carried out by the general practitioner who referred the case.

(B) *Maternity Units.*—(i) It must be stressed that there is an urgent need for general-practitioner beds to which patients can be admitted whom, for domestic or other reasons, it is impossible or inadvisable to confine at home. It is hoped, therefore, that the proposal for the development of maternity units, as set out in the Report of the Maternity Services Subcommittee to the South-western Regional Hospital Board, will be expedited with the minimum delay, and that, if possible, one or more of these units may be sited at a maternity centre.

(C) *Domiciliary Cases.*—(i) If the patient is to be confined at home it is desirable that there should be the closest liaison between the doctor and the midwife, each realizing that co-operation as a team is necessary throughout the pregnancy, confinement, and puerperium; and this should be such that the patient will derive from each their own particular skill. (ii) At the first consultation the doctor should advise the patient how to obtain the services of a midwife. If a midwives clinic exists in the district the patient should be encouraged to avail herself of the facilities which it affords. The doctor should also arrange with the midwife the supervision of the antenatal care and confinement. (iii) Ideally it is desirable that the doctor and the midwife should see the patient together at one prenatal examination, preferably between the 35th and 38th weeks. (iv) It is suggested that expectant mothers should attend at times set aside for them where adequate time can be given to the examination and the long wait in a crowded surgery could be avoided.

10. It is emphasized that the present number of compulsory examinations by a doctor as laid down in the regulations under the Act is intended as a minimum only, and every doctor realizes that more examinations are desirable in the interests of the patient in every case.

11. It is recognized that the doctor must be at pains to maintain his efficiency in obstetrics and must therefore have adequate facilities for postgraduate education. It is strongly recommended that doctors shall be encouraged to attend maternity centres as honorary registrars or clinical assistants to the obstetric department.

12. A standardized form for antenatal notes and full details of the pregnancy and puerperium should be issued. This form should be of a size suitable for inclusion in the medical record envelope.

War Service

SIR,—In view of the present unsettled state of world affairs and the possibility of large numbers of medical officers being again required for the armed Forces, one wonders what has been done by way of preparing for this in advance. It would appear that no time should be lost in preparing a scheme which could be put into operation at short notice, and the following points seem worthy of consideration:

(1) Though it worked in practice, the arrangements made and operated in the 1939-45 war gave rise to dissatisfaction, particularly among those called up for the armed Forces. Many of these men and women felt and still feel that they had the worst of it as compared with their colleagues who remained in civil practice. In spite of statements that "doctors in the Forces were lucky to be enjoying the sun in Italy while their fellows at home were killing themselves with overwork," the majority would gladly have changed places with those at home. Separation from families was the most important single factor in the minds of most.

(2) In the event of mobilization at the present time, those who served longest and through the real war years would be the first to go again.

(3) The protection of practices, though admirable in theory, was far from all it should have been in many instances.

(4) Since modern war involves everyone, medical mobilization should apply to all in active medical practice. It should imply the immediate institution of a State medical service embracing every doctor in the country. Some would be earmarked for the fighting services, others for duties at home.

(5) Pay for all should be standardized on one scale linked to age and experience. Over and above basic pay there should be a heavy financial reward attached to service with the armed Forces and an even heavier reward for overseas service. The basic home (civil) salary would naturally be comparatively small to offset the Forces and overseas weighting.

(6) There should be no question of physical fitness—anyone able to carry out his professional duties at home is fit for comparable duties overseas in appropriate conditions.

(7) Service with the armed Forces in the 1939-45 war should be taken into account in earmarking practitioners for the armed Forces in the future, those with no such service or with the least being called up first, those with the most last. Naturally this last consideration would not apply to those voluntarily accepting advance commitments such as Territorials, etc., and naturally a high age limit for overseas service would have to be accepted.

No doubt there are many more considerations, but I would emphasize the following points: the first should be last; the all-embracing form of service; the principle indicated for payment; and the urgency of preparatory work.—I am, etc.,

Stockton-on-Tees. ERIC H. TRAVERS.

Protection of Practices

SIR,—In view of the present political situation it would seem both sensible and fair to establish the necessary conditions for the protection of the practices of those practitioners who may shortly be absent on war service. It is generally agreed that the protection-of-practices scheme in the recent war did not work very well. Many doctors returned to find themselves facing virtual ruin. This should not be allowed to happen again, and now that most of us receive the majority of our remuneration from the N.H.S. its prevention should be much easier.

What is required is protection both of practices and incomes of doctors absent on war service. I have put forward as a tentative policy, for which the B.M.A. should press, the following:

(1) All doctors absent on war service to be paid, as a minimum, the fees they would have received for the number of patients on their N.H.S. list (or the salary they would have received from a hospital or specialist appointment) at the outbreak of hostilities—this to continue for the duration of the war and six months beyond.

(2) Where necessary for the protection of his practice (e.g., when the absent practitioner has been or is becoming incapable of providing at his own expense a suitable locumtenent) the Minister of Health shall be responsible for providing one at the absent practitioner's expense. This should not be a local practitioner normally practising in the neighbourhood, save under special circumstances and with special safeguards, as well as the absent practitioner's consent.

(3) Both the above clauses to be cancelled in exceptional circumstances—e.g., the death of the absent practitioner, and on the advice of the local executive council.

I would like to add for the benefit of those who may think that these proposals go too far that the salaries of most State employees were made up to their civilian level during the recent war and their jobs guaranteed to them at its termination. In Switzerland this is done by the State for all persons, State-employed or not, called up for military service, as many Swiss were for long periods during the recent war.

I have put these proposals to the B.M.A. through our local representative, and the Secretary has promised to consider them in the future. The local executive council have discussed the matter, and have been content to await instructions from the Ministry of Health. Without pretending to be a political prophet, may I suggest that the matter may well be urgent, and it is only just to get fair conditions established as soon as possible, so that those of us who, like myself, will again join the armed Forces may do so with the knowledge that their practices and families are, so far as possible, provided for.—I am, etc.,

Theale, Berks. H. S. SAMUEL.

*** The Secretary of the B.M.A. writes: The G.M.S. Committee is giving urgent consideration to this problem.

Status of General Practice

SIR,—Dr. Shackleton Bailey (*Supplement*, July 8, p. 25) tries to make a good case for "nice little talks" and to insinuate that we are now less "attentive and concerned" than when paid by our patients. I wonder if it ever dawns on Dr. Bailey that at least one could then charge for being a mug? May I give him three examples, which incidentally occurred on three consecutive days recently?

(1) A National Health Service patient is to see the E.N.T. specialist. *She* decides to see him privately, and *they* decide that she will go into the nursing-home. I receive a letter from the specialist, the final paragraph of which suggests that I might arrange to notify her of the arrangements for her admission in two days' time. Am I supposed to act as errand boy, run round and tell her? I didn't, but did see the message arrived in time, at the cost of a telephone call.

(2) An N.H.S. patient *wants* to see a specialist but can't wait the three weeks required to see him even privately, so the specialist has to come and see her—cost to me about 1s. in telephone calls. Good thing for the specialist financially, but not for me, and one and a half hours of my time used.

(3) An N.H.S. patient rings up between 11 a.m. and 12.45 p.m. for a visit to his wife. Message taken by my wife's help, who suggests that it will now be afternoon. Comes the reply that the patient will be out, could Doctor come to-morrow morning, and if he wants any more information he can ring up. *This message was treated with the contempt which I think it deserves.*

Apparently we used to dispense "kindly courteous actions" when we were paid for them. This has now ceased, according to Dr. Bailey. A lot of it has, and a jolly good job too. Those who are ill still receive "kindly courteous actions," but those who aren't should not expect to be pampered by an underpaid profession or by anybody else.

It is my contention that examples like the above are the chief cause of an infuriated profession, and also that we, on average, are the one body playing the game to the full in the N.H.S. (a long way beyond the Act as written), and, again on average, the patients are a bad last, along with Mr. Bevan. If we continue to be the mug, even in the guise of "kindly courteous actions," then we never shall regain our status.—I am, etc.,

Baildon, Yorks. G. H. COOPER.

Pharmacy and Medicine

SIR,—I feel, with reference to Dr. A. Forster's comments (*Supplement*, July 22, p. 62) concerning the salaries paid to pharmacists, that his conclusions are arrived at rather hastily and without due consideration of the facts. That a retired doctor should wish to do dispensing does not necessarily mean that financial gain is the sole objective, as one is seldom called out at night, and in addition the post is static.

I myself would welcome a better training in the medical curriculum as regards pharmacy, as many newly qualified doctors are quite unable to write a proper prescription, let alone dispense, and practically none have any idea of the cost of the items ordered. In my opinion it is high time that the proper status of pharmacy be recognized in England as it is in France, and that the pharmacist be regarded as a professional man and not merely a vendor of toilet preparations and general bottle-washer.

The standard of examinations has been considerably raised of recent years in pharmaceutical training, and if Dr. Forster thinks that the way to pharmacy is an easy and lucrative one I would suggest that he consult the syllabuses for the M.P.S., Ph.C., and B.Ph., and consider doing a two- or three-years apprenticeship in addition.

To compare the lower-paid grades of medicine with those of pharmacy is only half the story, for I am quite certain that there is a very considerable difference between the salaries of the

higher grades. One good point at least about the new National Health Service is that it has tended to make the pharmacist rely more on his professional ability than on the sale of druggists' sundries to earn his living.

I make these observations with a reasonable knowledge of the facts, as I am both a practising consultant as well as a qualified pharmacist who has spent a three-years apprenticeship with a past-president and examiner of the Pharmaceutical Society, and who has had practical experience of both retail and hospital pharmacy.—I am, etc.,

Lowestoft, Suffolk. J. F. PERREDES.

Answer Charges

SIR,—Surely Dr. A. P. Hardman (*Supplement*, July 29, p. 73) is wrong. In his letter "Are G.P.s Working?" he states that "it would be both irrelevant and a little too serious-minded to reply to the allegations in detail." It is this attitude that in my opinion is causing the complete lack of understanding throughout the country of the G.P.'s difficulties, both financial and professional.

Daily we read various frivolous statements made about G.P.s by Ministers, editors of newspapers, and "Pro Bono Publico." Usually the various charges are left unanswered, and our silence is taken as the various readers would wish. The profession—I am referring to G.P.s—is passing through a most critical phase and cannot escape criticism, but we should not let false accusations go unanswered, and in my opinion a committee of our more likeable colleagues should be established with the sole object of dealing with such problems.

If extravagant statements are followed by a detailed reply by an official body we will soon fall from this unhappy limelight.—I am, etc.,

Shipley, Yorks. J. A. FRAIS.

Eye Examinations of Recruits

SIR,—By the stroke of a pen, the Ministry of Labour, in a frantic attempt to save money, has dispensed with the services of ophthalmic medical practitioners. These doctors have been giving continuous valuable help in assisting chairmen of National Service medical boards in the proper grading of recruits—a national service that has been given promptly since 1939.

From August 1 all these recruits are referred to the out-patient department of the hospital nearest to their home. Hospitals are being asked to give preference to recruits at the expense of ordinary patients, and the result will be added congestion to our out-patient departments. In the abrupt "sacking" of these men with such haste the Ministry has omitted the courtesy of "Thank you" for a job well done.—I am, etc.,

London, S.E.13. M. L. HUDSON EVANS.

Nurses' Salaries

SIR,—In view of the pressing national need for nurses, I think these salary figures are worth consideration in that they reveal one of the many curious anomalies in the profession.

Assistant nurse	£285–£385
Staff nurse S.R.N.	£315–£415
Ward sister	£375–£500
Staff midwife	£335–£435
Midwifery sister	£395–£520
Health visitor	£335–£435

A young woman contemplating nursing as a career may thus enrol as an assistant nurse, dispense with examinations, and earn after eight years £385. She may decide to train. After three years she takes her State nurse's qualification and may then earn up to £415.

In some hospitals it is possible to become a ward sister without further training, but most now insist on the midwifery qualification involving 1–2 years' further work, and then a possible salary of £500 (after eight years as ward sister).

If she now decides to take her health visitor's training she finds that, after two more years of study and examinations, not only is her starting salary less than the one she earned as a ward sister or even as a staff nurse, but it is actually less than the salary earned by her friend who entered nursing at the same time but who decided to dispense with the grind of continued study and to become an assistant nurse.

I cannot imagine that doctors would take kindly to a salary scale for themselves which had a starting level at less than that earned by their receptionists. It takes seven years to train a health visitor, and a little less to train a doctor, and in each case the years of study are arduous and expensive. I submit that these salary relationships are quite ludicrous.—I am, etc.,

Newcastle-upon-Tyne. MARGARET C. WATKINSON.

Reform of N.H.S.

SIR,—In 1914–18 and again in 1939–45 the elasticity of the organization of our profession was such that it was able to overcome the strains placed on its resources by war and meet them successfully. Our planners' orgy has now placed such a strait-jacket upon us that I do not think our previous success could be repeated. Indeed, even near-war might now lead to a breakdown of the medical services of the country.

These considerations alone appear to me as sufficient to require reform of the National Health Service, and I suggest that this, urgent as it is on many other grounds, is on this ground alone a No. 1 priority.—I am, etc.,

Wolverhampton. R. S. V. MARSHALL.

The War Memorial

SIR,—Your correspondent Dr. Alfred Cox has completely missed the point in his letter on the war memorial (*Supplement*, August 26, p. 98). We have protested because we are justly and primarily concerned with the families of those who died, and not with the beauty and glory of B.M.A. House. Some of us who can remember the years 1911 and 1948 are a little critical of this glory.

The suggestion which he makes of competition with Epsom is ridiculous, for we are only concerned with the help we can give the children of those who died, and those alone. You can certainly devote any surplus to Epsom, where it will be more usefully employed than on bricks and dignified rest-rooms. A simple shrine and roll of honour can be *seen*, and should satisfy Dr. Cox and those who put visible memorials before helping the descendants of the fallen.—I am, etc.,

London, N.W.3. H. V. DEAKIN.

SIR,—There is hardly a question on which opinions are more diverse than that concerning the form which a war memorial should take, and my only reason for taking part in this correspondence is that since 1946, for certain reasons, I have studied the question, having listened to debates and broadcasts, perused correspondence, and questioned many people, listening sometimes in patient amazement to what some of them had to tell me.

In 1946 I listened to a debate in which nearly all the speakers urged a "utilitarian scheme" as a memorial. The last speaker, after criticizing severely the previous ones, ended his remarks thus: "If you want a memorial erect a visible memorial; if you want a project by all means carry it out, but, for pity's sake, do not call it a war memorial, for its memorial value is *nil*." About the same time I received a circular from my old school appealing for funds for a memorial. Among other things there was proposed a scholarship open to the sons of old boys who had fallen in the war, and a fund to help in the education of others whose families were in straitened financial circumstances, the appeal ending somewhat as follows: "If thought advisable, a certain limited sum will be set aside for the erection of a visible memorial in the school grounds, which shall itself be an object of beauty, which shall beautify the part of the grounds where it is placed, and will be so placed that it will be passed at least once daily by all the residents proceeding to and from their daily work." These, it would seem, are the three essentials of a visible memorial.

As I write, I have before me in Winston Churchill's *Great War* a panorama of the war cemetery "Tyne Cot" near Ypres, the description stating that there lie the remains of 11,851 British and Empire soldiers who fell in action in the salient.

If one could visualize a thousand less graves it would represent a week's ration in killed of the early days of the battle of the Somme. As one scans this picture certain thoughts naturally arise: first, that these men should have had before them another forty years of useful life, or thereabouts, and, secondly, that their sacrifice was in vain; they were let down, and the whole ghastly business, this time carrying with it the lives of hundreds of thousands of civilians, had to be gone through again. If all these men were alive again, whether they were medical or no, one is almost certain that they would say, "No memorial for us, please; spend the money on some scheme which will do people some good." At the same time, before they died they passed through considerable tribulation, and I think they would wish for two things: first, that they should be remembered personally, and should not be forgotten, and, secondly, that it should be remembered that they made the supreme sacrifice in order that never again should those whom they left behind have to lie awake through another black night of war. Both these things are brought vividly to mind as one scans even the simplest visible memorial in the open, but they are emphatically not so brought to mind by any project or utilitarian scheme, however beneficent.

So far then I think that the actual proposal for the B.M.A. memorial is correct. As to the proposed form, however, I disagree entirely, and here I join issue with Drs. P. M. Vicary, I. H. Jones, and R. Blowers (*Supplement*, July 29, pp. 74–75). In the first place the illuminated Roll of Honour, in which a fresh page is turned daily, is itself a visible memorial of considerable beauty, and, in the second place, a certain limited sum only need be set aside for such a memorial; and if more than the Roll is desired I should think that a tenth or less of the sum proposed would be sufficient for a column, simple but dignified, entirely devoid of symbolic figures, and bearing a simple inscription—in English, of course, for the sake of those of us in whose cerebra the Latin-perceiving portions have become atrophic. I think that this is what Dr. E. J. Thomson means (*Supplement*, July 22, p. 62), though his approach is different. As he indicated, this should leave a considerable sum for the carrying out of the beneficent schemes which have been proposed.—I am, etc.,

Rustington, Sussex. W. E. WALLER.

Doctors and Hospital Management Committees

SIR,—In the interests of the efficient management of our hospitals I cannot agree with Dr. Guy Roworth's contention (*Supplement*, August 15, p. 83) that medical men should not serve on hospital management committees. To begin with, the basis of the argument is false. He says, "A wholly lay management committee now, in the same way as the lay boards of governors in the past . . ." It will probably be a surprise to the majority of the specialists to learn that in the past the boards of governors in the hospitals were entirely lay. It was one of the strengths of these committees that there were always two or three medical men to guide the deliberations of the lay members. In the same way the municipal hospitals health committees were attended by medical officers of health, and the medical superintendents of the hospitals were often present. These facts at once refute his argument that the lay committee was immune from the advice of individual members of the profession as distinct from advice tendered by the medical advisory committee.

Nor is there any weight in Dr. Roworth's contention that "it would be a most unusual person who . . . would never give an opinion as a doctor but would always weigh the evidence impartially and as a layman" (I will omit any elaboration of the insult in the remark). The medical members of management committees have two functions, distinct yet complementary. The first is to convey the considered views of their colleagues—*even though contrary to their own personal opinions.* Perhaps Dr. Roworth has been unfortunate in his experience of this aspect of our work. But he is not "weighing the evidence impartially" if he thinks this is a common experience. There are many medical men with legal experience. If not, why are there medical coroners or medical members of Parliament? The second is to give technical advice.

The value of this advice is that it is not a matter of personal or other opinion, but that it is technical advice, and that it is advice that can be given only by a medical man. It will be a sad day for the Health Service if the management committees cease to contain a leavening of medical men. As well expect a board of directors of an engineering concern to run it without an engineer as a member, or the officers of the *Queen Mary* to consist of surgeon, engineer, radio operator, social secretary, and the like, but no trained sailors.

Hospitals are places where medical and surgical work is done. Medical men must serve on the management committees to guide them in a complicated task.—I am, etc.,

Manchester. W. SAYLE-CREER.

B.M.A. LIBRARY

The following books have been added to the Library:

Abse, D. W.: Diagnosis of Hysteria. 1950.
American Men of Science: a biographical directory. Edited by Jaques Cattell. Eighth edition. 1949.

Association Notices

KATHERINE BISHOP HARMAN PRIZE

The Council of the British Medical Association is prepared to consider an award of the Katherine Bishop Harman Prize in the year 1951. The value of the prize is £75. The purpose of the prize, founded in 1926, is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and child-bearing. It will be awarded for the best essay submitted in open competition, competitors being left free to select the work they wish to present, provided this falls within the scope of the prize. Any registered medical practitioner in the British Empire is eligible to compete.

Should the Council of the Association decide that no essay submitted is of sufficient merit the prize will not be awarded in 1951 but will be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine. The decision of the Council will be final.

Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. The title of the proposed essay and the motto should be notified in writing to the Secretary by November 1, 1950, and a form for this purpose can be obtained from the Secretary. Essays must be forwarded so as to reach the Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than December 31, 1950. Inquiries relative to the prize should be addressed to the Secretary.

OCCUPATIONAL HEALTH PRIZE

The Council of the British Medical Association is prepared to consider the award of an "Occupational Health Prize" in the year 1951. The prize consists of a certificate and a money award to the value of £50. The prize is established by the Council of the Association to encourage interest and research in the field of occupational health. The prize will be awarded biennially. Any member of the Association who is engaged in the practice of occupational health, either whole-time or part-time, is eligible to compete for the prize. Candidates may select their own subject.

The essay submitted must include personal observations and experiences collected by the candidate in the course of his work. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for a second award of the prize. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay, the decision of the Council on any such point shall be final. Preliminary notice of entry for this competition is required on a form of application to be obtained from the Secretary not later than November 1, 1950. Each essay must be typewritten or printed on one side of the paper only, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Inquiries relative to the prize should be addressed to the Secretary.

PRIZE ESSAY COMPETITION FOR MEDICAL STUDENTS

The Council of the British Medical Association is prepared to consider the award, in 1951, of prizes to medical students for essays submitted in open competition. The subject of the essays shall be "The Importance of Accurate History-taking in Diagnosis." In their essays students will be expected to refer to cases within their own experience.

The purpose of this competition is to promote systematic observation among medical students. In awarding the prizes *due regard will be given to evidence of personal observation.* No study or essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. A prizewinner in any year is not eligible for a second award of the prize.

Any medical student who is a registered member of a medical school in the United Kingdom and the Colonial Empire at the time of submission of the essay is eligible to compete for a prize. If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. In determining the number and amount of prizes to be awarded, the Council will take into consideration the number of essays received. In 1950 three prizes of £50 and three prizes of £20 each have been awarded. Should the Council decide that no essay entered is of sufficient merit, no award will be made.

Essays must be typewritten or legibly written in the English language on foolscap paper, on one side only, must be unsigned, and must be accompanied by a form of application which can be obtained from the Secretary of the British Medical Association. Essays must be forwarded so as to reach the Secretary not later than January 31, 1951. Inquiries relative to the competition should be addressed to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

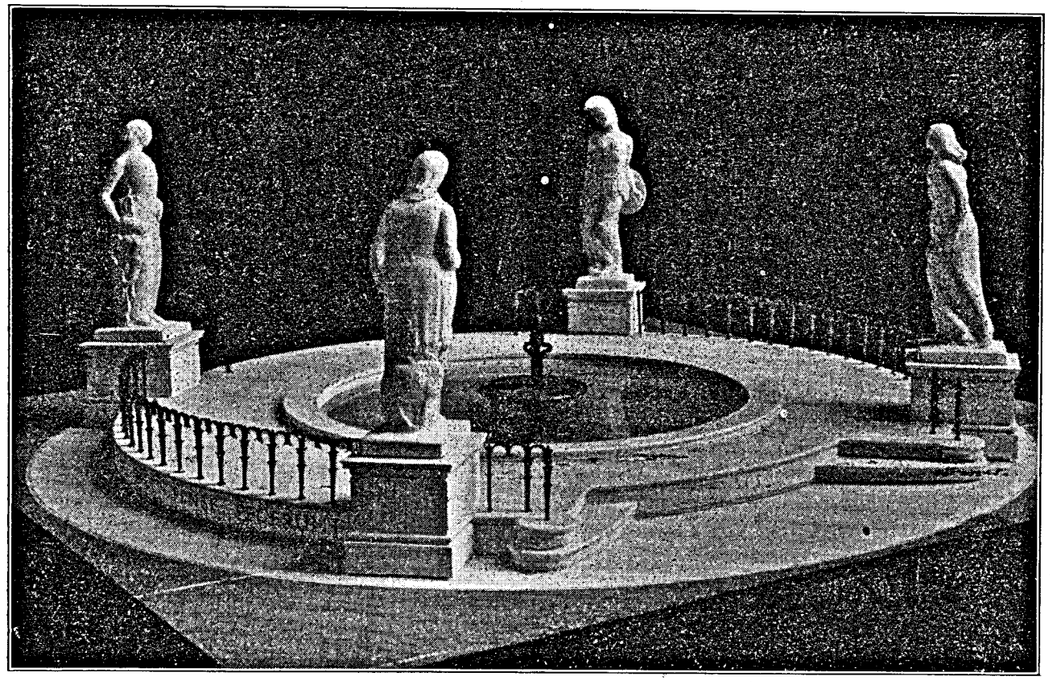
Diary of Central Meetings

SEPTEMBER

14	Thurs.	A.R.M. Agenda Committee, 11.30 a.m.
15	Fri.	Staff Side, Committee "C," 2 p.m.
19	Tues.	Organization Committee, 11.30 a.m.
21	Thurs.	General Medical Services Committee, 11 a.m.
28	Thurs.	**Adjourned Annual Representative Meeting,** 9.30 a.m. **Council** (after conclusion of adjourned A.R.M.).

OCTOBER

3	Tues.	Committee on Psychiatry and the Law, 2 p.m.



Branch and Division Meetings to be Held

EAST HERTS DIVISION.—At County Hospital, Hertford, Wednesday, September 13, at 8.30 p.m. Dr. E. Grey Turner (Assistant Secretary, B.M.A.): "The Purpose and Objects of the British Medical Guild." All medical practitioners in East Herts are invited to attend.

Faculty of Ophthalmologists: Correction

There was a mis-statement in the report from the Faculty of Ophthalmologists which appeared in the *Supplement* of August 26 (p. 96). It was not intended to make a statement that the Ministry of Health had given directions to regional hospital boards that school clinics held at hospitals should be run by ophthalmic opticians, and no such direction has in fact emanated from the Ministry, which has not yet expressed its final policy on this matter. Further, the policy of the Ministry in connexion with the arrangements to be made in ophthalmic clinics in hospitals was expressed long ago and is unchanged.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY SEPTEMBER 16 1950

THE WAR MEMORIAL

Herewith we print a photograph of the model for the B.M.A. war memorial, which has been designed by Mr. James Woodford, R.A. It is to consist of a bronze fountain surrounded by four symbolic figures carved in classic style in Portland stone and by a low wrought-iron railing, and is to be placed in the forecourt of the Association's building in Tavistock Square. The figures are:

Sacrifice.—Machaon, the soldier-surgeon son of Aesculapius, was killed in the Trojan War. He was the first recorded medical war casualty and also distinguished himself in battle. He was wounded by Paris but was carried from the field by Nestor. He was said to be one of those heroes concealed in the wooden horse. He is depicted with his sponge for the staunching of blood and a vase of soothing ointments to be applied to wounds.

Cure.—A figure representative of the ancient post-Greek phase of medicine, linked with early instruments and the process of "cupping."

Prevention.—A figure, of about the period of 1770, with accessories symbolic of the introduction of antiseptics and the early researches into inoculation.

Aspiration.—Towards greater achievement, represented by a mother leading forward a child into the future—a more idealized figure than the others.

It is proposed to place the new fountain in the centre of the existing island, the present road-kerb being used but the four stone blocks removed. An area of grass surrounding the new work is also proposed.

It has been thought wise, in fact essential, to keep the main axis of the Court open as at present, rather than to close it by the erection of any sort of mass set on the centre of the existing island. It is for this reason that the memorial has been designed to take the form shown in the model: a low central water-basin with a small centre feature in the form of the classical "serpent-and-staff" symbol, and a slightly raised platform on the perimeter of which four pedestals are placed on the diagonals of the Court. On each of the stone pedestals a stone figure will be placed. Inscriptions, to be subsequently selected, are proposed on the two vertical, external faces of the platform, with a date on the front face.

The model was chosen as the best in a special limited competition by two assessors from the Royal Society of British Sculptors and Mr. C. H. James, R.A., F.R.I.B.A.

MOTION-STUDY INVESTIGATION INTO THE CLERICAL WORK OF A DOCTOR'S SURGERY

BY

E. D. WILLIS, F.R.C.S.Ed.

AND

ANNE G. SHAW, M.A.

The National Health Service with its increase of compulsory record-keeping has thrown into relief the problem of the already considerable amount of clerical work involved in a doctor's practice. The practice in question, before the beginning of the National Health Service in July, 1948, was largely private, with a small panel of about 500 patients. On the introduction of the scheme a number of the patients registered.

In an attempt to find some solution to this problem a motion-study investigation was carried out. The technique used was that employed by modern industry to simplify working methods and to increase individual output. Motion study has been defined as the scientific investigation of the movements involved in the performance of any piece of work and the development of methods which eliminate unnecessary movement and conserve energy, time, and materials.

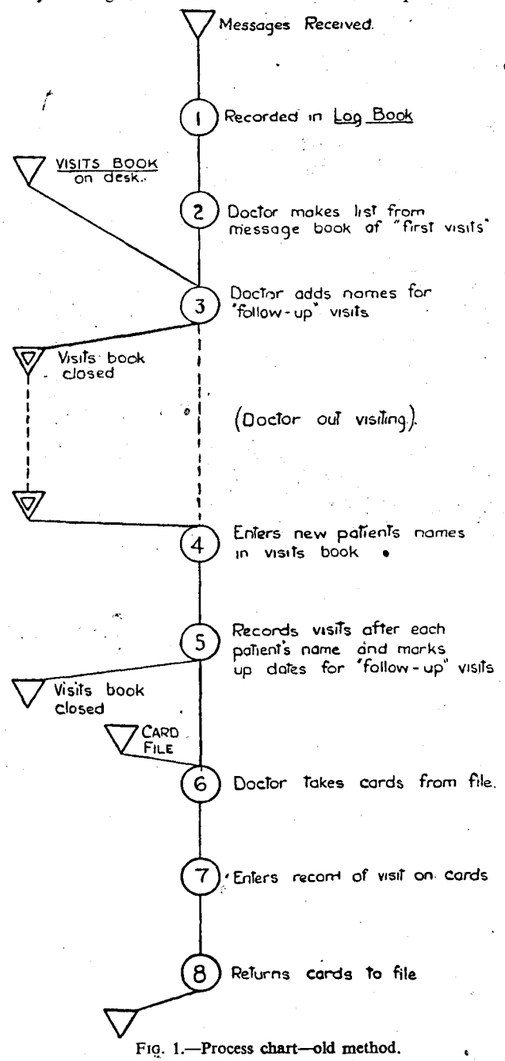


FIG. 1.—Process chart—old method.

In making a motion-study investigation, before any suggestions for improvement are considered all details of existing practice must be fully recorded and analysed. There are both simple and more elaborate techniques available for this purpose, and the investigator chooses the technique that is suitable for a particular investigation. In this case it was necessary to use only the simplest—the process chart. The value of this technique lies in its presentation of a series of facts in such a way that they can be both visualized as a whole and also examined in detail. In making an analysis of a process chart each detail is questioned: Is it necessary? Is its place in the sequence right? Can it be combined with any other detail? Can it be simplified (by some alteration in equipment, etc.)?

Clerical Work

This investigation was confined in the first place to a study of the clerical work involved in the daily round of visits and to a consideration of the layout of the surgery.

The investigator began by observing and charting the activities of the doctor and her secretary in planning a day's round and keeping the normal records of visits. The situation as seen by the investigator was as follows:

Personnel.—There were two doctors who shared an office and a secretary. Since one acted as the other's assistant, both to some extent dealt with the same group of patients.

Records.—(1) A log-book. This was kept beside the telephone, and in it was entered against the time received all messages (telephoned, verbal, or written) regarding visits, prescriptions, certificates, or appointments. (2) Patients' record "cards." These were National Health Service envelopes; the private patients were card-indexed on individual white cards of about the same size. (3) A "visits" book. This was ruled off into columns for the name, address, and each day of the month. Names and addresses were entered as the first visit was made and were therefore not in alphabetical order, and a mark in the appropriate column indicated the date on which the next visit was due. This mark was crossed when the visit had been made. At the end of each month those not signed off were transferred to a fresh page to start the next month's list. This meant for the doctor about two hours' work, which could not be delegated, and it was essential that it was done on the last day of the month.

Procedure.—When either of the doctors was preparing to go out visiting she needed to know (1) what new messages had come in asking for visits ("new visits"), and (2) which of the patients known to be ill required follow-up visits and which chronic patients were due for a visit ("follow-up visits"). She therefore consulted the log-book for "new visits" and the visits book for "follow-up visits." If she needed further information about the patients she also referred to their cards in the file and then made out her list. On returning from the round new names were recorded in the visits book and the day's visits were marked off against them and against the names already in the book, with a further mark under the day on which the next visit was due. The identical information was then entered on the patients' cards with case notes.

Analysis of Existing Practice and Resulting Improvements

A chart (Fig. 1) was made to contain this information, which was analysed in the following way.

Necessity.—The only record that could possibly be eliminated was the visits book. The message book was inevitable in some form, and the keeping of the cards was a statutory obligation on the doctor. The visits book was traditional, but an examination of its use showed that much of its function had departed with the introduction of the new Health Act. It had been the chief source of information for monthly accounts. Few of these were now necessary, and its remaining function was as a reminder for follow-up visits. If this could be managed in some other way the visits book would be virtually obsolete.

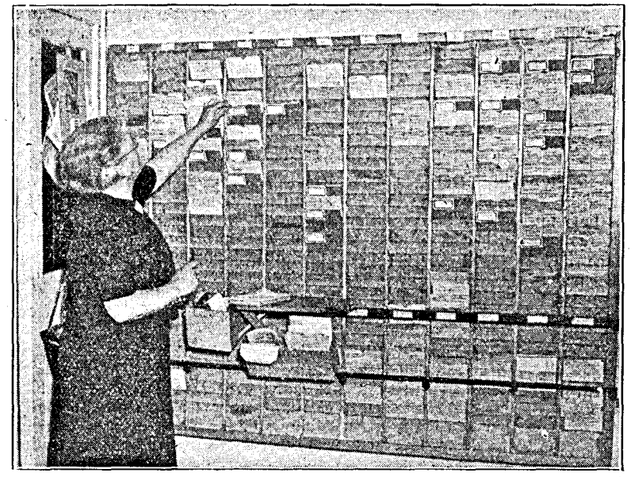

FIG. 2.—The card rack in operation.

Sequence and Combination.—An examination of the sequence of events suggested that more use would be made of the record cards if they were taken out of the file at an earlier stage and by the secretary at her convenience rather than by the doctor, who was nearly always in a hurry after completing her round. They would be useful to the doctor when making up her list. This led on to the idea that by keeping the cards of current patients in a separate place they might be used to remind the doctor about future visits in place of the visits book.

Simplification.—It was obvious that the cards could be used in this way only if some arrangement could be made to keep them safely in a special file of some sort. Here the investigator's experience of factory production methods provided a suggestion. In some modern factories slotted racks are used to hold cards representing work in hand and available for different types of machines. An adaptation of this rack was therefore suggested and made (Fig. 2). The columns were laid out on the lines of the visits book, but instead of using 31 columns, one for each day of the month, the seven days of the week headed the first seven columns, followed by "week 2," "week 3," and "week 4." The eleventh column was headed with the name of the next month, and the twelfth with the name of the following month. In this rack were kept the cards of all current patients, and cards were moved from column to column as they were visited and as further visits were necessary.

The rack was designed to screw on to the wall, and a bar was fitted across it to carry a sliding table. Below this table were boxes for the cards that were ready to be returned to the permanent file as no longer requiring visits. At the side was another small box for prescription pads and certificate books and the *National Formulary*, since the desk is used for writing the prescriptions and certificates arising from the visits. The doctor moved the table along each day until it was under the cards for that day, and entered information on to the cards on the spot so that there was no danger of any being mislaid. The rack was used for private patients' cards as well as for National Health Service cards, and accounts were made out directly from the information on the private cards, on which the doctor recorded the fee as the visit was entered.

The assistant doctor had a similar board containing her own patients' cards and any others temporarily put there for her attention by the other doctor. By this interchange of cards both doctors benefit from each other's case notes. This is particularly useful where there is a trainee.

To find space to put the racks, shelves and a cupboard previously used in a dispensing practice were removed, retaining a small cupboard for emergency drugs only. Removal of the shelves and cupboard also provided space near the secretary's desk and the telephone for the new National Health Service card-filing cabinets—a necessity if the scheme was to work successfully. Fig. 3 shows the new method.

Comment

The main part of this solution was based on the discovery, very common in the experience of a motion-study investigator, that present practice is often dictated by past conditions and that closer examination will often disclose parts of it that are obsolete.

The visits book had served its purpose in the past but had lost much of its usefulness under the new conditions. The surgery was now mainly an office and served as a dispensary only in a very minor way. Record-keeping and form-filling had largely replaced the dispensing of drugs and the sending out of accounts. It was therefore time to reorganize the system of work and to modify the records and the lay-out of the room. By eliminating the obsolete, and by rearranging the operations that remained and designing equipment to simplify them, much redundant work was cut out, and the new arrangements made it possible not only to get through the essential clerical work but to do it more efficiently and completely.

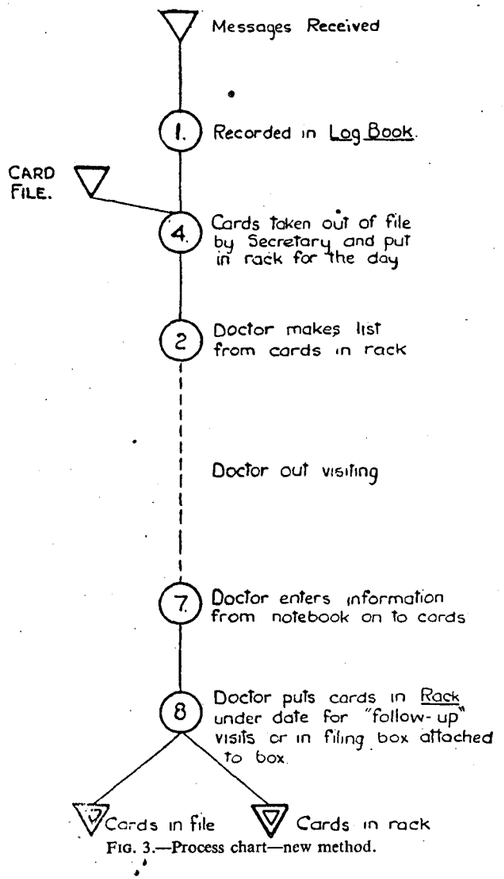

FIG. 3.—Process chart—new method.

During the six months that the system has been in operation it has amply fulfilled the functions for which it was instituted. It has also had certain subsidiary good effects. Records are now always up to date when cards are called in by the executive councils, and from the cards in the rack it is possible to find the doctor when out on rounds. Telephone numbers, if available, have been added to the cards to make this easier, and even a casual helper has been able to trace the doctor for an emergency call.

A further use has been made of the rack to hold temporarily any specialists' reports or other letters received in the morning's mail and referring to the day's visits, before there is time to examine them and transfer them to the permanent records.

An adaptation made to the lowest quarter of the rack accommodates the year's midwifery engagements under monthly headings. These cards are left in the rack, and act as a permanent reminder until the final examination has been made.

Cases seen on behalf of another doctor are recorded on insert cards and left in the board until the date of the doctor's return. They are then sent to him, without writing a further report, for filing in the patient's National Health Service envelope.

It should of course be emphasized that this system is only the solution to one doctor's problem. It would need adaptation to suit a practice staffed in a different way. All motion-study improvements are made to suit individual circumstances, and each problem must be studied without prejudice.

APPLICATIONS FOR FOREIGN CURRENCY

All applications made to the Bank of England for foreign currency for visits abroad by hospital medical and dental staff are submitted by the Bank to the Ministry of Health for approval before they can be granted. Since foreign exchange for short-term visits to many countries now costs more than hitherto, the Department is under the necessity of taking a stricter line before approving applications for currency for visits abroad, especially to North America. Such approvals cannot be given simply because positive advantages can be urged in favour of a visit, but only where serious disadvantages would seem likely to result if the visit were not made.

SCOTTISH CHEMISTS AND THE HEALTH SERVICE

The Secretary of State for Scotland has issued a Press statement on the three months' notice of withdrawal from the National Health Service which has been given by the majority of chemists in Scotland (over 1,300 out of 1,750). He explains that the 8% cut recently imposed on their pay is provisional, pending a decision by the Whitley Committee, or by a neutral arbiter, on what their rate of payment should be. If there were no provisional cut, but the negotiated decision later imposes one, it would be impossible for the Ministry to make it retrospective and to recover the money overpaid to the chemists, and the taxpayer would thereby suffer. But if the negotiations go in the chemists' favour the 8% will be refunded to them.

As regards the Pricing Bureau it is true that the operation of pricing individually each item in every one of the million and a half prescriptions dispensed each month is not promptly undertaken, and indeed for most months is not undertaken at all. The advance payment a chemist receives monthly is calculated by an approximate method, intended to give him something like 90% of the exact sum due, but this percentage varies considerably. For those months when full pricing is not done, the final settlement—at present about a year in arrears—is based on an averaging system giving much more accurate results than the simple formula used for the advance payment. Extra payments can be made, and are made, for exceptional reasons such as hardship.

VACCINATION AND INOCULATION OF MERCHANT SEAMEN

On October 1 new arrangements start for paying doctors employed by the Shipping Federation for the vaccination or inoculation of merchant seamen on shore or in a ship lying within a port area. They have been made by the Minister of Health after consultation with the Shipping Federation and the General Medical Services Committee of the B.M.A. These doctors will receive payment for vaccination or inoculation from the Federation, which will be paid quarterly a sum from the Central Practitioners' Pool.

The Federation has obtained an undertaking from the doctors concerned that from October 1 they will not claim temporary-resident fees from the executive council in respect of merchant seamen to whom they give no treatment other than vaccination or inoculation (or what follows these services—e.g., inspection). If a doctor gives treatment other than vaccination or inoculation to a merchant seaman not on his National Health Service list he may claim a temporary-resident fee from the executive council.

Vaccine lymph will be obtainable free of charge from the Public Health Laboratory Service.

The Shipping Federation will continue to be responsible for paying the part-time doctors concerned for each International Certificate of vaccination or inoculation given. If the doctors are taking part in the local health authority arrangements under Section 26 of the National Health Service Act, 1946, the usual fee for the submission of any records of vaccination required by the authority in accordance with those arrangements would be payable by the authority.

JUNIOR MEDICAL POSTS IN HOSPITALS

According to a Ministry of Health circular, the Central Medical War Committee has agreed that after September 30, 1950, the classification of posts as A, B2, or B1 shall no longer be used, and the N.H.S. titles will suffice.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.
Non-County Borough Councils.—Dartford.
Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

Questions Answered

Scholarships and Income Tax

Q.—*Is income tax payable on a scholarship?*

A.—The position with regard to scholarships is governed by Section 28 of the Finance Act, 1920. It provides that "income arising from a scholarship held by a person receiving full-time instruction at a university, college, school, or other educational establishment shall be exempt from income tax." Scholarships which do not carry full-time instruction are not within the exemption.

Correspondence

School Health Service and the General Practitioner

SIR,—The procedure recommended jointly by the B.M.A. and the Society of Medical Officers of Health (see *Supplement*, September 2, p. 111) has one important omission, namely, failure to mention the parent. If a school medical officer discovers a defect requiring special investigation, then the parent should be asked whether she, or he, would prefer the matter to be dealt with through the family doctor service or through the school medical service. If the former is chosen, then the school doctor can write a note for the parent to take to the child's family doctor, leaving the initiative with him; if the latter is chosen, then it seems fair that the school doctor should take the initiative by reporting to the family doctor direct in writing, and then proceeding with the arrangements for further investigations, unless an objection is raised by the family doctor within a specified period. I consider that a school medical inspection is of little or no value without the presence of parents, and if they take the trouble to come then they should not be made to feel that the discovery of a defect is of more importance to the family doctor than to them. Furthermore, the school medical service will not survive if it is made subservient to the family doctor.—I am, etc.,

Withyham, Sussex. P. DUPRÉ.

National Service Medical Officers

SIR,—With the increase in the length of National Service from 18 months to two years I feel the time has come to bring to the fore the plight of serving medical officers. My own case is typical of many others, and therefore I will deal with it alone.

On qualifying I took two house appointments, and then felt that the time had arrived to carry out my period of National Service. By this time I had decided to attempt a higher qualification in surgery, and was delighted on entering the R.A.F. to be told that every consideration would be given to my aims. After nine months of duty as a station medical officer, performing practical work that could be done by a junior medical student, the desire to learn a little of one's preferred specialty becomes urgent. On inquiry one is told that the only way to obtain hospital work is to take a short-service commission or sign on as a regular. One is thus left with the prospect of two years spent performing work of a trivial nature and a return to a house appointment, after one's release, at a very small salary. The remedy is surely obvious. An appointment of nine months to a year as a station medical officer would be of value if it were followed by a year doing the work of one's choice in an R.A.F. hospital.

We are told that eighteen months is too short a period to teach a pilot all he should know, but it should be remembered that a doctor can forget in eighteen months a great deal that he did know.—I am, etc.,

R.A.F. MEDICAL OFFICER.

Withdrawal from N.H.S.

SIR,—We are told that steps are now being taken to put in hand the preparations for a general withdrawal from service. We cannot deny that there is a marked reluctance on the part of established practitioners to commit themselves to such a step without knowing what such withdrawals really entail.

So far we have had no authoritative statement from the British Medical Association or the British Medical Guild outlining the likely course of events when mass resignations are handed in to the executive councils. Your columns contain long letters of controversy regarding the status of the G.P.—Is he a "workman," or is he "self-employed"? Is the British Medical Guild a legally constituted body or otherwise? Do we resort to Whitley machinery or to compulsory arbitration? Are local medical committees and B.M.A. Divisions precluded from helping to organize such withdrawals or not? All these are of minor interest compared to the more pressing question of what will happen if and when we do withdraw.

The G.P. who has built up his practice and who has heavy family responsibilities is entitled to know exactly what he incurs by sending his *undated* letter of resignation to the British Medical Guild. It is very like handing over a blank cheque, and blank cheques have an unpleasant habit of proving very troublesome to both giver and receiver.

Some of the points which are troubling G.P.s were raised in a recent issue of a contemporary medical journal.

(1) If resignations are sent in to executive councils, are patients officially informed that, as their doctor is no longer in the N.H.S., they should transfer to a practitioner who is still in the Service?
(2) What happens to compensation and superannuation? Is the former paid and the latter withheld?
(3) If we decide to re-enter the Service, do we have to make a fresh application for permission to practise in the same area, and will such permission be granted automatically?
(4) Do we forfeit our previous years of service for superannuation purposes?
(5) If the fight with the Ministry is prolonged are there sufficient funds in the British Medical Guild to meet our commitments?

These are but some of the questions occupying our minds at the moment, and answers to them will help us to decide whether or not to support the British Medical Guild.—I am, etc.,

London, W.6. B. ROSEFIELD.

The War Memorial

SIR,—Dr. Alfred Cox's letter (*Supplement*, August 26, p. 98) about the war memorial calls for some reply, as it epitomizes the difference in outlook between those who will enjoy seeing the new memorial and those who will seldom have the opportunity of doing so, and the latter are surely the majority of our members. It is for this reason that the decision of the Council in such a matter probably does not truly represent the wishes of the members, many of whom feel that their contributions are to be spent more for the gratification of those who frequently visit the House than for the cause of the fallen or the benefit of their heirs. The unfortunate result of this is that those who feel that their money will not be spent as they would wish either withhold their contributions or give less than they would otherwise have done.

Many of us think that the provision of scholarships at Epsom or contributions to the Benevolent Fund would more fittingly commemorate the sacrifice of our colleagues and accord with their wishes than a visible memorial however magnificent. It would seem that the fairest way to decide this important issue would be by postal vote of all members, or by a statement accompanying each contribution to indicate the preference of the donor, those who have already subscribed also having the opportunity to make their choice.—I am, etc.,

St. Day, Cornwall. CHRISTOPHER HEATH.

*** A photograph of the model of the memorial appears on the first page of the *Supplement*.—ED., *B.M.J.*

Obligation to Emergency Cases

SIR,—I have read with concern in the *Supplement* of September 2 (p 120) the report under the heading "Failure to Treat Road Accident: £50 Penalty Recommended." This raises the questions: (1) When is a doctor available? (2) Can a doctor attend two patients at the same time in different places, and, if not, who should decide which case he should attend?

It seems to me that the answer to these questions is self-evident. A doctor is not available to treat a patient when he is treating another patient, for it is quite impossible for even a doctor to be in two places at the same time, and the only person who can decide which case to attend must be the doctor.

According to the report the facts are that the doctor in question was in his surgery attending a patient, with 30 or 40 patients in his waiting-room, when he received a call to a street accident, and it would seem to me that the doctor's decision to continue to treat patients with whom he has a direct contract at the time and place which he had contracted to treat them under the terms of service, rather than dash out to an emergency street accident where the best he could do would be to render first-aid and hang about until the ambulance came, was the correct one.

The medical services committee's conclusion in this case that the doctor was available would seem to me to be a most peculiar

one, cutting right across the old National Health Insurance Committee ruling that a doctor should be available and should be in his surgery attending his patients at surgery hours, at the same time leaving the practitioner in a quandary about the best course of action to adopt under these circumstances. If two or more patients make a demand upon the same doctor at the same time, surely the doctor's first obligation is to the patients who are on his own list.—I am, etc.,

JAMES G. McDOWELL.

Southampton.

SIR,—With no wish to enter into the rights and wrongs of the refusal of Dr. X to attend the victim of a road accident (*Supplement*, September 2, p. 120), I should like to ask for some informed comment on the application of the paragraph of the Terms of Service which you quote: "If neither the practitioner responsible for a person's treatment nor his deputy is available . . . it shall be the duty of any practitioner who may be summoned, etc."

In the absence of any evidence that the services of the practitioner responsible or his deputy were sought by anyone, was the paragraph operative in the case of Dr. X?

People are prone to lose their heads in cases of accident and very frequently fail to ask the simple question, "Who is your doctor?" with the result that Dr. A may be dragged away from a busy surgery while Dr. B, who is in fact responsible, is sitting at home scanning the pages of the *Journal* or some lighter periodical.—I am, etc.,

DONALD M. O'CONNOR.

Launceston, Cornwall.

Mr. B. Nivison-Brown has been appointed manager, and will welcome inquiries. The telephone number is Central 5597, and the telegraphic address "Associate, Glasgow, C.2."

Association Notices

SIR CHARLES HASTINGS CLINICAL PRIZE ESSAY COMPETITION

The Sir Charles Hastings Clinical Prize Essay Competition is established by the Association for the promotion of systematic observation, research, and record in general practice. The competition has been extended by the addition of a second prize known as the Charles Oliver Hawthorne Clinical Prize. The following are the regulations governing the awards:

1. The Sir Charles Hastings Clinical Prize, consisting of a certificate and 50 guineas, will be awarded for the best essay submitted.
2. The Charles Oliver Hawthorne Clinical Prize, consisting of a certificate and a sum of money slightly less than the amount of the Sir Charles Hastings Clinical Prize, will be awarded for the second best essay submitted.
3. Any member of the Association who is engaged in general practice is eligible to compete for these prizes.
4. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations in practice rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.
5. Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950.
6. A study or essay that has been published in the medical press or elsewhere will not be considered eligible for a prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for an award of either of the prizes in any subsequent year.
7. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay the decision of the Council on any such point shall be final.
8. Preliminary notice of entry for this competition is required, on a form of application to be obtained from the Secretary.
9. Each essay must be typewritten or printed and must be accompanied by a sealed envelope, enclosing the candidate's name and address, firmly affixed to the essay.
10. Inquiries relative to the prizes should be addressed to the Secretary.

Diary of Central Meetings

SEPTEMBER

19	Tues.	Organization Committee, 11.30 a.m.
21	Thurs.	General Medical Services Committee, 11 a.m.
21	Thurs.	Tuberculosis and Diseases of the Chest Group Committee, 12 noon.
28	Thurs.	**Adjourned Annual Representative Meeting**, 9.30 a.m. **Council** (after conclusion of adjourned A.R.M.).
28	Thurs.	Board of Trustees of British Medical Guild (at conclusion of Council).
29	Fri.	Venereologists Group Committee, 2.30 p.m.

Branch and Division Meetings to be Held

ST. PANCRAS DIVISION.—At B.M.A. House, Tavistock Square, London, W.C., Friday, September 22, (1) 8.30 p.m., meeting of all medical practitioners in the area of the Division for formation of local branch of British Medical Guild; (2) 9 p.m., film by Mr. A. Dickson Wright: "Total Sympathectomy for a Case of Hypertension." Mr. Dickson Wright will attend to speak on his film.

SOUTH MIDDLESEX DIVISION.—At St. John's Hospital, Twickenham, Thursday, September 21, 8.45 p.m., Dr. Marjorie Warren: "Geriatrics and the General Practitioner."

SWINDON DIVISION.—At Victoria Hospital, Swindon, Wednesday, September 20, 8.30 p.m., local formation of British Medical Guild. All medical practitioners in the area of the Division are invited.

TUNBRIDGE WELLS DIVISION.—At Royal Mount Ephraim Hotel, Tunbridge Wells, Sunday, September 24, 3 p.m., meeting of all medical practitioners in Tunbridge Wells, Tonbridge, and Sevenoaks areas for election of a local committee of British Medical Guild.

WEST MIDDLESEX DIVISION.—At Nelson Room, Town Hall, Ealing, W., Friday, September 22, 9 p.m. Meeting of British Medical Guild. Dr. Angus Weston: "Remuneration." All medical practitioners in the area of the Division are invited.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY SEPTEMBER 23 1950

INTERCHANGE BETWEEN NATIONAL HEALTH SERVICE AND COLONIAL MEDICAL SERVICE

A scheme has been introduced by which doctors in the National Health Service may transfer for a limited period to the Colonial Medical Service without loss of superannuation rights. The scheme was prepared by the Colonial Office in consultation with the Ministry of Health. The authors of the scheme expressed the opinion that the Colonial Medical Service offered special opportunities for experience not obtainable at home, and that such experience should count very much in favour of the doctor on his return to this country, whether as a candidate for a practice or for a hospital appointment.

A doctor entering the scheme will be required to serve in a participating colony for one, two, or three tours of service, not exceeding six years in all. He will continue to participate in the National Health Service superannuation scheme, and the Colonial Government concerned will pay the employer's contributions (8% of the doctor's colonial salary, excluding cost-of-living allowance, if any).

The doctor will be permitted at any time, provided that the Colonial Government desires to retain his services, to elect to transfer permanently to the Colonial Medical Service. On transfer, payment of contributions under the National Health Service (Superannuation) Regulations will cease and he will at once commence to earn a colonial pension in accordance with colonial pension laws. His service under the National Health Service (Superannuation) Regulations will count towards the minimum of 10 years necessary to qualify for a colonial pension, but will not count in the computation of such pension. His pension rights under the National Health Service superannuation scheme will, on application to the Ministry of Health under Regulation 55 (5), be placed in cold storage.

If the doctor elects to revert to the National Health Service at the expiration of his period of service in the Colonial Medical Service, his service in the National Health Service superannuation scheme will be continuous and he will, subject to satisfactory service, also be granted a gratuity of 20% of the aggregate of his salary earned during his period in the Colonial Medical Service. The purpose of this gratuity is twofold—namely, to assist the doctor to meet the expenses of resettlement in the United Kingdom, and to provide a supplement to his National Health Service superannuation in respect of service in a tropical climate.

The arrangements will apply to medical officers who are appointed to the service of participating Colonial Governments within 12 months of ceasing to be employed by a regional hospital board, board of governors, hospital management committee, or local executive council, or within six months of ending National Service, if contributions have been paid during that service. Any doctor wishing to take advantage of the scheme must elect to do so within three months of commencing colonial service. Provided that a doctor participating in the scheme re-enters the National Health Service within 12 months of the termination of his engagement in the Colonial Medical Service, his superannuation rights will be treated as continuous. The scheme does not apply to doctors employed by local authorities.

Although doctors appointed under the scheme will be short-term officers, the backbone of the Colonial Medical Service is made up of those who are prepared to make their careers in the Colonies, and the Colonial Office is naturally concerned to continue to recruit doctors for the Colonial Medical Service on a permanent basis. It is hoped that a proportion of those recruited under the scheme will then become permanent members of the Colonial Medical Service.

Full details of the scheme, which is merely outlined above, may be obtained from the Director of Recruitment, Colonial Office, Sanctuary Buildings, Great Smith Street, London, S.W.1.

PAY OF PERMANENT ASSISTANTS IN GENERAL PRACTICE

According to a recent Press report the Bradford Health Executive Council has agreed to a recommendation of their medical service committee that no permanent full-time assistant in a practice should receive less than £700 a year, the salary of trainee assistants under N.H.S. This recommendation has been passed to the Ministry of Health and the B.M.A. It arose out of discussion of a case in which a doctor with about 6,000 patients on his list was employing as his assistant a foreigner over 65 years old and unable to drive a car, and was paying him an annual salary of £420. It was said that when the medical service committee commented on this to the doctor concerned he offered to give his assistant a rise of £60, which the committee felt was inadequate.

CHANGE OF DOCTOR—NEW ARRANGEMENTS

After consulting with the G.M.S. Committee of the B.M.A. and with the Executive Councils' Association, the Minister of Health has decided to place some restrictions on the right of patients to transfer from one N.H.S. practitioner to another. The new regulations come into force on October 1, 1950, and provide that a person who has not changed his address from that shown on his medical card may change to another doctor only in one of two ways. Either his doctor agrees, in which case page 3 of the medical card is annotated at the top, "I consent to transfer," with date and signature; or the patient sends his medical card to the executive council with a letter requesting transfer. In this case he gets his card back with a special slip affixed, permitting him one calendar month in which to find a new doctor, and this valid period only begins a fortnight after receipt of his request by the council. This limits the frequency of transfer. Full details are to be circulated to all practitioners involved.

Correspondence

Professional Secrecy and Accidents

SIR,—After an accident or an assault hospitals and doctors are pestered by the popular press with long-distance telephone calls asking for information about the injuries and condition of the patients. This I always refuse to give, considering that to do so would be a breach of professional secrecy, even though a matter of public interest. Judging from newspaper reports not every doctor thinks the same. What is your view ?—I am, etc.,

St. Ives. T. E. BARWELL.

H.M. Forces Appointments

ROYAL NAVY

Surgeon Captain T. Madill, O.B.E., to be Surgeon Rear-Admiral.
Surgeon Commander D. R. F. Bertram, O.B.E., has retired.
Surgeon Lieutenant-Commander (Emergency) W. S. Parker has been removed from the Emergency List on entry into the permanent R.N.V.R.
Acting Interim Surgeon Lieutenant-Commander G. A. Binns to be Surgeon Lieutenant-Commander.
Acting Interim Surgeon Lieutenant-Commander M. J. G. Davies has retired.

ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Commanders J. B. Hutchison, V.R.D., F. E. D. Hallon, V.R.D., and C. A. Mather, V.R.D., have retired.
Surgeon Lieutenant-Commanders E. H. Parkinson, V.R.D., W. J. Heely, and R. L. Kennedy, O.B.E., have retired.
Surgeon Lieutenants G. P. Hartigan and V. O. B. Gartside to be Surgeon Lieutenant-Commanders.
W. S. Parker to be Surgeon Lieutenant-Commander.

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel J. E. Rea has retired on retired pay and has been granted the honorary rank of Colonel.
Lieutenant (War Substantive Captain) D. K. Newbigging has relinquished his commission and has been granted the honorary rank of Major.
Short Service Commission (Specialist).—Captain I. E. Harries to be Major.

REGULAR ARMY RESERVE OF OFFICERS

Major-Generals R. C. Priest, C.B., J. W. L. Scott, C.B., D.S.O., and R. W. D. Leslie, C.B., C.B.E., late R.A.M.C., having attained the age limit of liability to recall, have ceased to belong to the Reserve of Officers.
Colonels (Honorary Brigadiers) E. W. Wade, D.S.O., O.B.E., W. P. Croker, and D. G. Cheyne, C.B.E., M.C., and Colonels G. D'R. Carr, M.C., F. S. Gillespie, F. G. Flood, O.B.E., M.C., G. A. Bridge, M.C., A. E. S. Pringle-Pattison, W. Campbell, K. P. Mackenzie, and E. Percival, D.S.O., M.C., late R.A.M.C., having attained the age limit of liability to recall, have ceased to belong to the Reserve of Officers.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonels R. L. Turner, O.B.E., T.D., and A. P. McEldowney, from Active List, to be Lieutenant-Colonels.
Majors (Honorary Lieutenant-Colonels) F. B. Mackenzie, D.S.O., M.C., T.D., and T. C. McKenzie, T.D., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.
Majors R. A. Stark, M.C., T.D., and W. Barclay, M.C., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O., and have been granted the honorary rank of Colonel.
Majors G. V. Davies, C. J. Fox, T.D., G. M. Heiron, and A. M. Hughes, O.B.E., M.C., T.D., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O., and have been granted the honorary rank of Lieutenant-Colonel.
Majors C. W. F. Greenhill, T.D., and E. T. H. Lea, having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.
Majors J. T. Wybourn, F. V. Allen, O.B.E., and P. B. Williams, from Active List, to be Majors.
Captain (Honorary Major) H. L. Cohen, having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O.
Captain E. A. Downes, having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O., and has been granted the honorary rank of Colonel.
Captains H. S. Allen, O.B.E., J. F. Ward, H. P. Gabb, M.C., T.D., and L. B. Stott, M.C., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O., and have been granted the honorary rank of Lieutenant-Colonel.
Captains W McG. Mitchell, M.C., S. C. Swinburne, H. G. Dodd, H. M. Brown, A. W. Uloth, M.C., H. B. Dodwell, E. L. Hancock, and H. Wilson, M.C., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O., and have been granted the honorary rank of Major.

British Medical Guild: Formation of Local Branches

Open meetings to discuss this will be held on Sunday, September 24, at 3.30 p.m. in the Guildhall, Rochester, Kent: and at 6 p.m. the same day in the Nurses' Lecture Room, Lowestoft and N. Suffolk Hospital; and also on Tuesday, September 26, at 8.30 p.m. in the museum of the Norfolk and Norwich Hospital.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY SEPTEMBER 30 1950

GENERAL MEDICAL SERVICES COMMITTEE

PREPARATIONS FOR COLLECTION OF RESIGNATIONS

An all-day meeting of the General Medical Services Committee was held on September 21, with Dr. S. Wand in the chair. The committee learned with great regret of the death of Dr. C. Baxter, of Liverpool, who had been a member since 1943. A resolution of sympathy with his family was passed.

In presenting an agreed report on a meeting of representatives of the committee with officers of the Ministry of Health, the Government Actuary's department, and the Board of Inland Revenue, the chairman said that the Ministry had agreed that no conclusions would be drawn from the figures from the inquiry into remuneration until further discussion had taken place on certain adjustments which the committee would be seeking in the light of changes in incomes and practice expenses. It was hoped that the figures would be available to the Ministry by the middle of October. So far as possible the total income and total expenses were to be taken for a selected period ending December 31, 1949, or March 31, 1950. The method of selection for the expenses inquiry was that the British Medical Association should itself prepare a list of about 3,000 doctors, selected by taking every fifth name on its card index, but rejecting doctors known not to be in the National Health Service. The list would be sent to the Ministry, where rural and urban practices would be distinguished. In the opinion of the actuaries on both sides the size of the sample was sufficient.

British Medical Guild

The committee had before it draft memoranda which it is proposed should be issued at the appropriate time by the British Medical Guild. An earlier memorandum was issued in August setting out the Guild's proposals for putting into effect the decision of the Special Conference of Local Medical Committees to call for the withdrawal of practitioners from the Service in the event of a satisfactory settlement of their claims not being reached.

A long discussion took place on these documents, especially on the need for intensive propaganda locally for the benefit of those practitioners who had neglected to keep themselves abreast of events in the profession. In particular it was felt that the purpose and functions of the British Medical Guild should be made plain, and it should be ensured that Guild committees were set up in every area.

It was agreed unanimously that a document fully explaining the position and indicating that forms of resignation would be collected at a specific date should go out immediately to all practitioners.

Medical Practices Committee

The second report of the Medical Practices Committee, which has completed its survey of England and Wales as at January last, deals with the classification of areas throughout the country. The Ministry had forwarded for the consideration of the General Medical Services Committee a draft of a letter to executive councils suggesting lines of action which they might take, in consultation with local medical committees, to secure an adequate service in all areas—or, in the words of the draft, "to secure additional doctors in those areas in which they are most urgently needed," a phrase which the committee suggested should be replaced by ". . . which offer more scope for new entrants."

The committee considered this letter in detail, and agreed with its statement that existing practitioners might be encouraged to take new partners (or assistants with a view to partnership), but it was averse from a suggested alternative that the need for one or more doctors to set up in practice be advertised, with the promise that a fixed annual payment would normally be made. It was also desired that the view of the Medical Practices Committee that the law of supply and demand was now beginning to operate should be incorporated in the letter.

A letter from the West Riding Local Medical Committee was considered. This committee had submitted certain points to the Ministry on the classification of districts within its area. One paragraph in the Ministry's letter read:

> "A list of 4,000 is a maximum and was never envisaged as an average. An average of 3,000 has been taken by the Medical Practices Committee as representing a high optimum for a good general practitioner. The Minister sees no reason to object to the action of the Medical Practices Committee in this matter."

It was agreed to send this to the Medical Practices Committee for its observations.

Protection of Practices on Call-up

Dr. D. F. Hutchinson reported for a subcommittee which has been considering this subject. He said that the subcommittee felt that the system which was followed during the last war would not meet the case to-day. An entirely different type of scheme was suggested, based primarily on the idea that wherever possible the income of the practitioner who was called upon to serve should not be diminished as a result of his service, and that the extra cost should be borne centrally rather than by the local area, because the proportion of doctors called up in different areas might vary widely. The Ministry had been loath to approve any "freezing" of the list—that is, making all transfers only temporary during the period of emergency—but the subcommittee felt that it was essential to any protection scheme that the list should be closed, and any patients taken on thereafter should rank as temporary acceptances during the emergency period. One point concerned reception areas, which would receive a greatly increased population; it was thought that there should be a proviso that new doctors going into the area would be on a temporary basis.

It was pointed out that even a small call-up might unbalance the service in a rural or even in an industrial district. Moreover, civil defence would require more medical personnel than in the last war.

The committee gave general approval to the proposals. It was mentioned that the position of the private practitioner was to be considered by the Private Practice Committee and the general proposals extended accordingly.

Other Business

Among much other business—there were 50 items on the agenda—the draft amending regulations for the procedure for change of doctor were considered and approved. A proposed new certificate, intended to reduce and simplify the National Insurance certificates (in size and appearance very like the old), was also approved.

A draft E.C.L. from the Ministry giving effect to the recent agreement regarding payment for complications arising from pregnancy was noted. The chairman pointed out that this was actually an increase in the remuneration of general practitioners.

Attention was drawn to a situation which had arisen in one area of the North-west Metropolitan Hospitals Region, where there was a surplus of maternity beds and the county council had been importuned to persuade pregnant women to book them. It was agreed again to press upon the Ministry the desirability that all general practitioners wishing to conduct their own midwifery cases in the maternity hospital should be given facilities for doing so. This, with several other points, was referred for discussion by the committee's representatives at the next meeting with the Ministry's officers.

Very elaborate proposals for the investigation of cases of alleged excessive prescribing were placed before the committee by the Ministry, and the committee had before it also a large amount of correspondence with local medical committees, and reports and minutes from other bodies.

GENERAL MEDICAL COUNCIL AND THE APPROVED NAMES OF MEDICINES

In order to avoid the difficulties which arise from the multiplication of names for the same medicinal substance, the General Medical Council has adopted the practice of recognizing as Approved Names certain non-proprietary names which may be used freely by manufacturers.

The Approved Names are devised or selected in the first instance by the British Pharmacopoeia Commission, and the intention is that if any of the drugs to which those Approved Names are applied should eventually be described in the *British Pharmacopoeia* the Approved Name should be its official title. On the other hand, the recognition of an Approved Name does not imply that the substance will necessarily be included in the *British Pharmacopoeia.*

The Pharmacopoeia Commission is prepared to consider requests from manufacturers and others for Approved Names for products which appear likely to come into established use. Such requests should be accompanied by:

(*a*) reports of pharmacological and clinical investigations on the drug concerned;

(*b*) a number of suggestions for a suitable name, having regard to the need to avoid similarity to existing trade marks and other current names.

In the selection of an Approved Name the Nomenclature Committee of the Commission will be prepared to consult with authorized representatives of the manufacturer concerned, but the final decision will rest with the Pharmacopoeia Commission.

If a manufacturer should desire to issue under a proprietary name a drug for which an Approved Name has been provided, it is strongly recommended that the label shall bear the Approved Name of the substance in letters no less conspicuous than those in which the proprietary name is printed or written. In the following list some proprietary names are included for information under Other Names.

The following general principles are stated for guidance in devising new names:

1. Names should, preferably, be free from any anatomical, physiological, pathological, or therapeutic suggestion.
2. An attempt should first be made to form a name by the combination of syllables from the scientific chemical name, in such a way as to indicate the significant groupings of the compound.
3. Names should, in general, not exceed four syllables.
4. Names should be distinctive in sound and spelling, and should not be liable to confusion with names already in use.
5. Names which are difficult to pronounce or to remember should be avoided.
6. The addition of a terminal capital letter or number should be avoided.
7. Names used in the *United States Pharmacopoeia,* the *British Pharmaceutical Codex,* or in *New and Nonofficial Remedies* should receive preferential consideration.
8. The following terminations should be used:

-ine (Latin -ina)	..	for alkaloids and organic bases.
-in (Latin -inum)	..	for glycosides, glycerides, and neutral principles.
-ol	..	for alcohols and phenols (-OH group).
-al	..	for aldehydes.
-one	..	for ketones and other substances containing a >CO group.
-barbitone or -itone	..	for drugs of the barbiturate group.
-caine or -aine	..	for local anaesthetics.

Communications relating to Approved Names should be addressed to the secretary, British Pharmacopoeia Commission, 44, Hallam Street, London, W.1.

SUPPLEMENTARY LIST

Approved Name	*Other Names*
Alphaprodine	α-1:3-Dimethyl-4-phenyl-4-propionoxypiperidine.
Amidone	6-Dimethylamino-4:4-diphenylheptan-3-one. Physeptone.
Antazoline	2-*N*-Benzylanilinomethyliminazoline. Antistin; Histostab.
Benzhexol	1-*cyclo*Hexyl-1-phenyl-3-piperidino-1-propanol. Artane is the hydrochloride.
Betaprodine	β-1:3-Dimethyl-4-phenyl-4-propionoxypiperidine.
Chloramphenicol	D-(−)-*threo*-2-Dichloroacetamido-1-*p*-nitrophenyl-1:3-propanediol. Chloromycetin.
Chlorcyclizine	(±)-1-(*p*-Chlorobenzhydryl)-4-methylpiperazine. Histantin is the hydrochloride; Di-paralene is the hydrochloride.
Dapsone	4:4′-Diaminodiphenyl sulphone.
Decamethonium iodide	Decamethylene-1:10-bistrimethylammonium diiodide. C.10.
Dexamphetamine	(+)-Amphetamine. Dexedrine is the sulphate.
Diethazine	*N*-2-Diethylaminoethylphenothiazine. Diparcol is the hydrochloride.
Dimethyltubocurarine iodide	Dimethyl ether iodide of (+)-tubocurarine.
Diphenhydramine	Benzhydryl 2-dimethylaminoethyl ether. Benadryl is the hydrochloride.
Ethyl pyrophosphate	Tetraethyl pyrophosphate. T.E.P.P.
Gallamine	1:2:3-Tri(2′-diethylaminoethoxy)benzene. Flaxedil is the triethiodide.
Hexamethonium iodide	Hexamethylene-1:6-bistrimethylammonium diiodide. C.6.
Hydroxypethidine	Ethyl 4-*m*-hydroxyphenyl-1-methylpiperidine-4-carboxylate.
Isoamidone	6-Dimethylamino-5-methyl-4:4-diphenylhexan-3-one.
Isoprenaline	*iso*Propylnoradrenaline. Aleudrine is the sulphate; Neo-Epinine is the sulphate; Isupren is the hydrochloride; Neodrenal is the sulphate.

SUPPLEMENTARY LIST *(Continued)*

Approved Name	*Other Names*
Ketobemidone	4-*m*-Hydroxyphenyl-1-methyl-4-propionyl-piperidine.
Lignocaine	Diethylaminoacet-*m*-2-xylidide. Xylocaine is the hydrochloride.
Lindane	γ-1:2:3:4:5:6-Hexachloro*cyclo*hexane.
Menadoxime	Ammonium salt of 2-methylnaphthaquinone 4-oxime *O*-carboxymethyl ether. Kapilon soluble.
Mephenesin	1:2-Dihydroxy-3-(2′-methylphenoxy)propane. Myanesin.
Mepyramine	*N*-*p*-Methoxybenzyl-*N′N′*-dimethyl-*N*-2-pyridylethylenediamine. Anthisan is the hydrogen maleate; Neoantergan is the hydrogen maleate.
Methacholine chloride	Acetyl-β-methylcholine hydrochloride. Mecholyl Chloride; Amecol.
Methadol	6-Dimethylamino-4:4-diphenylheptan-3-ol.
Methadyl acetate	6-Dimethylamino-4:4-diphenyl-3-heptyl acetate.
Methoin	5-Ethyl-3-methyl-5-phenylhydantoin. Mesontoin.
Mustine	Di-(2-chloroethyl)methylamine. Nitrogen mustard is the hydrochloride.
Naphazoline	2-(Naphthyl-1-methyl)iminazoline. Privine is the nitrate.
Pentamethonium iodide	Pentamethylene-1:5-bistrimethylammonium diiodide. C.5.
Phenadoxone	6-Morpholino-4:4-diphenylheptan-3-one. Heptalgin is the hydrochloride.
Phenindamine	1:2:3:4-Tetrahydro-2-methyl-9-phenyl-2-azafluorene. Thephorin is the hydrogen tartrate.
Phenylpropanolamine	2-Amino-1-phenyl-1-propanol. Propadrine is the hydrochloride.
Potassium menaphthosulphate	Dipotassium 2-methyl-1:4-disulphatonaphthalene dihydrate.
Promethazine	*N*-(2-Dimethylamino-*n*-propyl)phenothiazine. Phenergan is the hydrochloride.
Quinalbarbitone sodium	Monosodium derivative of 5-allyl-5-(1-methylbutyl)barbituric acid. Seconal sodium.
Thiacetazone	4-Acetamidobenzaldehyde thiosemicarbazone.
Tolazoline	2-Benzyliminazoline. Priscol is the hydrochloride.
Troxidone	3:5:5-Trimethyloxazolidine-2:4-dione. Tridione.
Tripelennamine	*N*-Benzyl-*N′N′*-dimethyl-*N*-2-pyridylethylenediamine. Pyribenzamine is the hydrochloride.

PRESCRIBING OF PROPRIETARY MEDICINES

One of the main recommendations in the second report issued last July of the Joint Committee on Prescribing, under the chairmanship of Sir Henry Cohen, was that doctors taking part in the National Health Service should not prescribe proprietary preparations which are advertised direct to the public. The Ministry of Health has now arranged for doctors taking part in the Service, both in general practice and in hospitals, to receive a booklet naming about 700 medicinal proprietary preparations which should not be prescribed.

COURSES IN DOMESTIC ADMINISTRATION FOR HOSPITAL STAFFS

The Ministry of Health is organizing a series of 11-week non-residential courses in staff management to instruct those responsible for the recruitment, training, organization, supervision, and welfare of hospital domestic staffs. It is intended that the places on the courses will mostly be filled on the recommendation of hospital management committees or boards of governors.

Correspondence

Obligation to Emergency Cases

SIR,—I have read with surprise Dr. J. G. McDowell's letter (*Supplement,* September 16, p. 135) and entirely disagree with his final sentence. If two or more patients make a demand upon the same doctor at the same time, surely the doctor's first obligation is *not* to the patient who is on his list, but to the patient who most urgently needs medical care. As in the case that initiated this correspondence, an emergency call to a road accident is likely to need priority over the ambulatory cases waiting for attention at the surgery.

It would be a bad day for both the public and our own profession if doctors were to sacrifice their humanity in the name of personal convenience.—I am, etc.,

Birmingham. L. GOLDMAN.

SIR,—At a time when the profession is protesting against being subjected to rules and regulations, and against being turned into medical clerks, it is distressing to see a colleague's refusal to attend a road accident discussed in your columns under "terms of service" and "legal obligations" (*Supplement,* September 2, p. 120). Of the particular case I know nothing, and we are all agreed that at most road accidents there is little to be done for the injured but render first aid. We also have seen the cut radial and the precariously hanging limb.

Does Dr. J. G. McDowell (*Supplement,* September 16, p. 135) consider that the 30 or 40 patients in a waiting-room constitute a prior claim, when either of the above conditions may be lying outside? He is more fortunate than most of us if he sees two or three worth-while cases amongst the 30 or 40, and he will hardly contend that one of these is likely to suffer detriment if he is away half an hour. And when nothing but first aid can be rendered to the injured, is he disdainful of the comfort to the relatives that "all that was possible was done," or of the effect of his trained attitude on the crowd?

This is a question of vocation, not of "terms of service," and when the claims of efficiency in dealing with our crowded surgeries become a reason for refusing the calls of common humanity the traditions of our profession will have been lost indeed, and the esteem in which our fathers have been held will be withdrawn from us, not by a change of system, but by a change of heart.—I am, etc.,

Wembley. H. M. HARRIS.

Refusing N.H.S. Patients

SIR,—It is my privilege to live in a delightful community of some 5,000 inhabitants who are doctored by two practices each containing two doctors. Thus this small community may well be described as over-doctored. Recently two critical, cantankerous, and ungrateful patients from the other practice asked if my practice would accept their medical cards. This I refused to do, as some years ago these same patients were on my National Health Insurance list, and informed the other practice of the proposed secession of two of their adherents. The other practice took the view that, because the patients were dissatisfied with their treatment under the National Health Service Act, they constituted a source of embarrassment to them, and promptly wrote to the local committee asking for their names to be removed from their medical lists. The patients were now in a somewhat Gilbertian situation, and after frantic efforts to get on to the lists of several doctors in a neighbouring city had proved unavailing they invoked the aid of the local committee, who in turn summoned their allocation committee. This allocation committee promptly appointed my wife as doctor to these two people, but upon receipt of their communication advising us of this decision I wrote in, thanking them for the honour which they had done us, but regretting that we could not see our way to accepting.

Here then is a situation which I think worthy of wide publicity. Up till now doctors throughout the country have squirmed defencelessly and have been at the mercy of the

whims and fancies of their patients, and as a result many doctors have been metaphorically slapped in the face and kicked in the pants by patients who have used their veto crushingly, and often for no very good reason.

Mr. Bevan in publicizing his National Health Service has stressed that every patient is entitled to a free choice of doctor, and fortunately he has reserved to the doctors the right to refuse a patient. In this Gilbertian situation which has arisen my practice is standing on its rights and is refusing to accept these patients. Judging by the file of correspondence which has accumulated, it would seem that the foothold is somewhat precarious, and in order to preserve a proper balance I have called in my legal advisers in the form of my medical defence union, to whom all the facts have been communicated.

I should be interested to know if a similar situation has arisen in other practices, and if so what the outcome has been.—I am, etc.,

Lossiemouth. HUGH M. TUCKER.

The War Memorial

SIR,—If it is desired to record publicly the names of the fallen, then an inscribed tablet is most suitable.

I see no reason why large masses or figures of stone should be placed in the quadrangle, unless they form that indefinable thing known as a work of art. The proposed memorial shown in the photograph (*Supplement*, September 16, p. 131) is not a work of art.

It would, from your columns, be in accord with the wishes of most members if the memorial were not proceeded with, but the money devoted to the education of war orphans.—I am, etc.,

Lincoln. W. PATRICK ROE.

SIR,—It seems clear that there is a considerable body of members who feel that a very considerable proportion—if not all—of the money subscribed towards the memorial should be devoted to the education of the children of the fallen. With this view I agree. I should like, however, to suggest that such assistance should not be limited to education at Epsom College only. Many men are "old-school" minded and very keen that their sons shall follow them to their own old school. Also it is in my experience, which for a good many years was concerned with schoolboys, not advisable to consign a boy at an early age to any one particular school, for when he reaches the age of entry it may be that for psychological reasons, or on more general health grounds, that particular school may be unsuitable for him.

In my opinion educational grants to children of the fallen should be made available at any suitable and reputable school and/or university.—I am, etc.,

Bishop Auckland. G. H. BICKMORE.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Captain J. H. Bennett to be Major.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel (Honorary Colonel) A. R. Barlas, having attained the age limit of liability to recall, has ceased to belong to the Reserve of Officers.

Major J. Simons, J.P., from Emergency Commission, to be Major, and has been granted the honorary rank of Lieutenant-Colonel.

Captains (Honorary Majors) C. C. H. Chavasse and A. B. Cowley, having attained the age limit of liability to recall, have ceased to belong to the Reserve of Officers.

COLONIAL MEDICAL SERVICE

The following appointments have been announced: Geoffrey Ashe, M.B., Ch.B., D.T.M.&H., Senior Medical Officer, Somaliland Protectorate; G. T. Barnes, M.B., Ch.B., D.T.M.&H., Pathologist, Nigeria; William Barnetson, M.B., Ch.B., D.T.M.&H., Senior Medical Officer, Uganda; D. G. Snell, M.B., B.S., D.T.M.&H., Senior Medical Officer, Uganda; S. M. Adye-Curran, L.R.C.P.&S.I., Medical Officer, Tanganyika; D. H. Miller, M.B., Ch.B., Medical Officer, Hong Kong.

Association Notices

OPHTHALMIC GROUP COMMITTEE

As a result of elections the following have been elected to fill the vacancies on the Ophthalmic Group Committee caused by the retirement of members at the end of the 1949–50 session:

N. P. R. Galloway (representing Region 2).
J. J. Healy (representing Region 3).
O. G. Morgan (representing Region 4).
J. R. Wheeler (representing Region 6).
R. A. Greeves and D. A. Langley (representing non-members of the Group on the Central Ophthalmic List).

ELECTION OF MEMBERS OF COUNCIL TO REPRESENT THE SOUTH AUSTRALIAN, TASMANIAN, VICTORIAN, AND WESTERN AUSTRALIAN BRANCHES FOR THE PERIOD 1950–2

Owing to the resignation of J. H. Anderson, who was appointed a member of Council for the period 1949–52 to represent the above Branches, nominations were invited from the Branches concerned for a member to fill the vacancy. An unopposed nomination was received in favour of Myles Formby, T.D., M.B., F.R.C.S., and he has accordingly been elected a member of Council to represent the South Australian, Tasmanian, Victorian, and Western Australian Branches for the remainder of the period to the termination of the Annual Representative Meeting, 1952.

CHARLES HILL,
Secretary.

Diary of Central Meetings

OCTOBER

2	Mon.	Psychological Medicine Group Committee, 2 p.m.
3	Tues.	Committee on Psychiatry and the Law, 2 p.m.
4	Wed.	Journal Committee, 2 p.m.
4	Wed.	Special Committee for Spa Practice Report, 2 p.m.
4	Wed.	Film Committee, 4 p.m.
10	Tues.	Central Ethical Committee, 2 p.m.
11	Wed.	Tuberculosis and Diseases of the Chest Group Committee, 2 p.m.
11	Wed.	Private Practice Committee, 2 p.m.
12	Thurs.	Occupational Health Committee, 2 p.m.
13	Fri.	Central Professional Committee, 11.30 a.m.
13	Fri.	Library Subcommittee, 12 noon.
13	Fri.	Ophthalmic Group Committee, 2 p.m.
13	Fri.	Science Committee, 2 p.m.
13	Fri.	Colonies and Dependencies Committee, 2 p.m.
18	Wed.	Welsh Committee (at Lion Hotel, Shrewsbury), 2.15 p.m.
20	Fri.	Charities Committee, 2 p.m.

Branch and Division Meetings to be Held

BIRMINGHAM CENTRAL DIVISION.—At Birmingham University (the Great Hall), Bournbrook, Wednesday, October 4 8.30 p.m. Dr. Charles Hill, M.P.: "The British Medical Guild." *(Change of date.)*

BUCKINGHAMSHIRE DIVISION.—At St. Mary's Hospital, Amersham, Bucks, Friday, October 6, 8.30 p.m., address by Dr. Robert Forbes, Secretary, Medical Defence Union: "Legal Hazards in Medical Practice."

COVENTRY DIVISION.—At Pilot Hotel, Burnaby Road, Coventry, Tuesday, October 3, 7.45 for 8.15 p.m. Supper-meeting. Inaugural address by the chairman: "The Role of Surgery in the Treatment of Peptic Ulcer."

EAST HERTS DIVISION.—At County Hospital, Hertford, Wednesday, October 4, 8.45 p.m., address by Lord Amulree: "Towards a Healthy Old Age."

GUILDFORD DIVISION.—At Brookwood Hospital, Brookwood, Thursday, October 5, 7.30 p.m., clinical meeting.

HERTFORDSHIRE BRANCH.—At Physiotherapy Department, County Hospital, Hertford, Wednesday, October 4, 8.15 p.m., annual general meeting. To be followed by East Herts Divisional meeting at which Branch Members will be the guests of East Herts Division. Address by Lord Amulree: "Towards a Healthy Old Age."

SWANSEA DIVISION.—At Osborne Hotel, Langland, Thursday, October 5, 7.30 p.m., address by Dr. T. W Davies (chairman): "The Problem of Tuberculosis." The lecture will be preceded by dinner.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 7 1950

British Medical Association

ADJOURNED ANNUAL REPRESENTATIVE MEETING, 1950

Thursday, September 28, 1950

The adjourned Annual Representative Meeting, to complete the business which was left unfinished at Southport in July owing to lack of time, was held in the Great Hall of B.M.A. House, London, on Thursday, September 28. The chair was taken by Dr. J. A. BROWN (Birmingham), Chairman of the Representative Body, who was supported by the President of the Association (Sir Henry Cohen), the Chairman of Council (Dr. E. A. Gregg), and the Treasurer (Mr. A. M. A. Moore). The meeting began at 9.30 a.m., and completed its work at 6.15 p.m. There were about 100 motions and amendments on the agenda.

Procedure at Future Representative Meetings

A report was submitted by the Agenda Committee on the improvement of the procedure for dealing with the business of Representative Meetings. The present difficulties have arisen owing to the increase in membership of the Representative Body, and therefore of potential speakers, the increase in the volume of the Association's work, and the relationship between the Representative Body and the autonomous bodies. The Committee considered that a four-day meeting, with sessions continuing until 6.30 p.m. each day, was the maximum time which the majority of representatives would be willing to devote. It would therefore be undesirable to lengthen the duration of the meeting, and the imposition of a time-table for different sections of the report would sooner or later result in the mandatory dismissal of a number of motions.

The "starred motion" procedure adopted at Southport has proved satisfactory, and the Committee considered it should be extended. The Agenda Committee should meet at intervals during the meeting and examine the progress made, and make recommendations. The Chairman should have power to prevent "tedious repetition." Time-limits for speeches should be strictly imposed. An explanatory memorandum should be issued to Divisions describing the field of the autonomous bodies and pointing out the opportunities for examination of problems in these fields by the Council and its committees throughout the year.

After a brief discussion the recommendations of the Committee were agreed to.

MISCELLANEOUS MOTIONS BY DIVISIONS

The first business, which would ordinarily have been taken on the last day of the meeting at Southport, was the consideration of motions by Divisions and Branches not relating to reports of Council.

The Problem of Tuberculosis

Dr. C. O. STALLYBRASS (Liverpool) called upon the meeting to express its grave concern at the present inadequacy of the measures to deal with the growing problem of tuberculosis. It was not too much to say that a crisis had arisen. The waiting-list of cases had risen to 11,000. One of the causes of the crisis was the shortage of nurses in sanatoriums. If it was impossible to get nurses to go into the country they must be put in towns where amenities existed and paid adequately. There was no added risk in nursing in a sanatorium; the risk was the undiagnosed case in the general hospital. Another factor was the increased length of stay in hospital, largely owing to improved surgical and medical measures. He thought that too many arrangements were made for the ascertainment of cases while there were inadequate arrangements for treatment; the two things were getting out of step. Another important point to be remembered at the present time was that so many of these cases were in elderly people. There were not enough beds. In Scandinavian countries they had waiting beds instead of waiting-lists, and that was what they should aim at. There was gross inadequacy also in carrying out preventive work. If adequate methods of prevention and follow-up were to be instituted the number of tuberculosis officer-hours available for this work must be greatly increased. The Tuberculosis Advisory Committee had formulated an excellent scheme, but it must be implemented, and this could not be done on the cheap. We had not got in this country a scheme which was co-ordinated and properly proportioned between prevention and cure.

Dr. D. S. ROBERTSON (Edinburgh) said that it was a sad commentary on our civilization that so little, comparatively speaking, was done to prevent what was a preventable disease. It was true it was much more difficult to eradicate tuberculosis than to eradicate smallpox or cholera, but it was not impossible. In view of the amount spent on teeth and on spectacles, which in many cases were not necessary, and certainly were not matters of life or death, it was remarkable how little was spent on tuberculosis. He suggested that every Division of the Asssociation should put into operation a vigorous campaign on this subject with the object of dispelling indifference, and should give our legislators and administrators no rest until, regardless of anything else, a nation-wide attack on this disease was instituted.

Dr. E. A. GREGG (Chairman of Council) said that there was a report pending on this subject from the Tuberculosis Group Committee, and that report would be put forward at the next meeting of the Council in November.

The motion was carried unanimously.

Remuneration of Dentists and Pharmacists

Dr. K. C. BAILEY (West Somerset) moved a resolution expressing the strongest possible disapproval of the manner in which the recent alteration of the remuneration of dental practitioners has been applied.

The motion was carried.

Dr. DONALDSON (Belfast) moved:

That the British Medical Association refuse to co-operate in any action designed to cut down the remuneration of members of other professions within the National Health Service.

He said that this motion arose because of the feeling of unrest engendered in Belfast due to a report in the *Supplement* of July 8 (p. 18) of a deputation from the General Medical Services Committee to the Ministry of Health which seemed to envisage the possibility that remuneration for medical men might be increased at the expense of others working the

Service. The Minister of Health had stated that the general practitioner was the Cinderella of the National Health Service; probably he saw himself as the Prince Charming. The Minister had agreed to practitioners' remuneration before the Service started on the basis of the Spens Committee, and if he could not budget for the Health Service it was not their business. The Minister must not ask them to do his dirty work for him.

Dr. KELLY (Belfast), in supporting the motion, said that their case was plain and straightforward, and must not be sidetracked by herrings of any hue.

Dr. E. A. GREGG (Chairman of Council) considered that they should be particularly careful in a matter of this kind. For a long period of years they had striven in order that certain matters in relation to the Health Service should remain in their hands and that their advice should be taken by the Minister. There was evidence that in certain quarters prescribing had been unduly extravagant. The great body of doctors were loyally carrying on their duties, but it was always possible for a young and inexperienced practitioner to slip up. Those of them who had assistants knew perfectly well that from time to time they prescribed in a way which was not necessary. Sometimes also there might be thoughtlessness in this respect on the part of older practitioners. The result of all these slips was that a larger amount of money was being spent in meeting the cost of these prescriptions than should be spent. He hoped that this Belfast resolution in its present form would not be passed, because he thought it would be a very unwise thing to do. The meeting would be well advised to pass to the next business and not sponsor a resolution giving the impression that the doctors were not willing to co-operate in any way whatever.

Dr. E. C. DAWSON (Derby) considered the motion to be too binding. It might be that at some time it would be convenient for the British Medical Association to give an opinion on the remuneration of other professions in the Service.

Dr. J. C. WISHART hoped that nothing would be done which would have the effect of cutting down the remuneration of their brethren in the Service.

Dr. FRANK GRAY (Council) hoped that the Representative Body realized the implication of this motion. They had been concerned at the amount of work which general practitioners had to do—often unnecessary work. Would it not be right for the general practitioner to be relieved of some of this unnecessary work? But if this was done did it not follow that by reducing the work the number of prescriptions that he issued would be reduced, and therefore the remuneration of the chemists? Did Belfast—which, after all, had not got quite the same scheme as they had in Great Britain—wish them to say that general practitioners should go on doing unnecessary work because, if any steps were taken to cut it down, it would affect the money which the chemists received? The meeting would be well advised with a dangerous motion of this kind to pass to the next business.

Dr. S. WAND (chairman, General Medical Services Committee) said that the present position was that with the increasing cost of the Health Service the Chancellor of the Exchequer had imposed the necessity of economy, and the Minister had stated that what was saved, under present conditions, did not necessarily revert to the Treasury. To say that the medical profession would refuse to co-operate meant that it would not in any circumstances be a party to reducing the remuneration paid to the pharmacists, although part of that remuneration was due to over-prescribing. A number of doctors had been prescribing proprietary preparations for which a less costly but equally effective equivalent might have been prescribed. Was the profession to say that it would not co-operate in such an economy?

It was agreed to pass to the next business.

Representation of Profession on Local Authorities

Dr. W. N. LEAK (Mid-Cheshire) moved: "That this meeting considers that representatives on local authorities, etc., should not be penalized through membership of the medical profession." He pointed out that there were not many doctors on local councils, with the result that the profession was poorly represented and its ideals inadequately voiced on the committees which did the detailed work of public bodies. He complained of a bias exercised against doctors serving on committees for which they were technically qualified. To hinder doctors from serving in this way was an injustice to those who sent doctors to represent them on public bodies, and a disadvantage to the public bodies themselves, which were thus deprived of the full benefit of the knowledge and advice of those well qualified to impart it.

The motion was carried.

The British Medical Guild

Dr. J. G. R. CLARKE (South Bedfordshire) moved to request the Council to make strong representations to the British Medical Guild to take immediate steps to attain the objective of a united profession. He complained of a lack of interest in the development of the Guild. Only during the last few weeks had the necessary steps been taken in many areas to form a local committee. It would be helpful to publish in the *Supplement* a full account of the functions of the Guild. The time was approaching when the various areas should receive more attention from headquarters in this respect.

Dr. WATNEY ROE (Chelsea and Fulham) said that the trustees of the Guild would command more confidence if directly elected by the members of the profession. It would be much safer if there were no direct connexion between the Guild and the B.M.A.

Dr. A. C. E. BREACH (Bromley) said that they all wanted to ensure that the Guild was active and effective, but there was in the South Bedfordshire motion a suggestion of censure on what had so far been done, and that personally he thought was unfair.

Dr. H. GUY DAIN said that the Council had been driven by legal conditions to establish a method of collective bargaining, and the machinery had to be such as would not be open to the serious criticism on legal grounds which would attach to the Association itself should it undertake this responsibility. It was now of first importance to form the new organization and get it properly running. When it was started there was no urgent problem facing it, and people were inclined to refuse to look at it seriously. The real opportunity to use it was approaching. The General Medical Services Committee was inviting the Guild to take the responsibility for collective action by the end of this year, and it was essential to get down to the job and do it properly. Obviously the success of this business depended upon the small units in the profession. Here it was necessary to establish confidence between doctors when collective action was required. Those of them who had had occasion to look into it closely were satisfied with the methods which the Guild proposed, and they asked that it be made known in the different areas and that each Division should have its local committee. Some areas had taken it up with enthusiasm; others had not really looked at the problem. But it was urgent to get it going. This was the opportunity to show how successfully the medical profession could organize itself in the matter of its business affairs.

The South Bedfordshire motion was carried.

Dr. A. G. HOLMAN (East Norfolk) moved to request the Council to approach the Ministry to grant the pension rights of those Poor Law medical officers who had had superannuation contributions deducted in the past. Dr. WAND read the regulation on the subject and said that any individual case which had not come under the arrangements would be looked into by the Superannuation Committee and steps taken to see what could be done with the Minister.

The motion was carried as a reference to Council.

THE GENERAL PRACTITIONER AND THE HOSPITAL

The Southport Meeting adopted in an amended form a recommendation by Council on the general practitioner and hospital work. The full text of the resolution appeared in the *Supplement* of July 22 (p. 57). It called for the retention by the general practitioner of the smaller general-practitioner and cottage hospitals, and the setting aside for the general practitioner of certain wards in district hospitals; the setting up of clinical assistantships; the establishment of part-time appointments to be held by general practitioners; the retention and

encouragement in rural areas of the appointment of part-time general-practitioner specialists, and the encouragement of the attendance of general practitioners at hospitals for consultations, ward rounds, clinical and scientific meetings, and inclusion in hospital teams.

The interim report of the Council on the association of the general practitioner with hospital work was published in the *Supplement* of April 22 (p. 165).

Dr. W. N. LEAK moved on behalf of the South Lancashire and East Cheshire Branch a resolution deploring the tendency to oust the general practitioner from hospital work and calling on the Representative Body to take steps to remedy the ever-shrinking status and scope of the general practitioner. Apart from the effect on the general practitioner himself, it was very bad for the patients, who were not prepared to accept an outsider in the way in which they accepted their own doctor. Thus the patients were denied free choice.

Mr. STAVELEY GOUGH, chairman of the Committee on the General Practitioner and Hospital Work, said that the motion seemed to imply that nothing had been done, but that was not so. The report on "The General Practitioner and Hospital Work" had itself done a great deal to restore the situation, and the report was only an interim one. It was now hoped to build up the practitioner's return to hospital.

Dr. LEAK said that from the experience in his part of the country he thought Mr. Staveley Gough's optimism was not justified.

The motion was carried as an instruction to Council.

The General-Practitioner Specialist

Dr. LEAK, on behalf of Mid-Cheshire, further moved:

That this meeting considers that greater recognition should be given to the established practitioner with specialist experience, who seems strangely neglected in the Council's recommendations on general practitioners and hospital work.

He said that the people concerned felt very keenly having to give up their specialist jobs after many years. They might not have the F.R.C.S., but they were people with excellent records and experience, and trusted by their patients, having lived for a long period with their successes and their failures.

Mr. STAVELEY GOUGH said that he felt again that the wording of this motion showed a lack of understanding of the report. At least three sections of the report were concerned with the introduction of the general practitioner in a specialist capacity into the hospital system. The boards of the hospitals had a public duty to see that the members of the staffs held certain qualifications or had had certain experience as assessed by committees of their brethren or by tests in open competition following public advertisement. Thus any general practitioner having the necessary experience and qualifications could answer a public advertisement for a post and if he was a good man he would get the job. It had been realized that in the past there was an implication that he might not get the job because he was a general practitioner. But the report specifically stated that the fact of being a general practitioner would not be a bar.

Mr. LAWRENCE ABEL (Marylebone) moved an amendment to end the motion at the words "specialist experience," omitting the denigratory reference to the Council's recommendations. The report covered these established practitioners and declared that the appointment of general-practitioner specialists should be retained and encouraged. This was bound up with the grading question. The grading would be re-examined in 1951. Many men had suffered three years' diminution of income owing to the fact that they had been incorrectly graded.

The motion as amended was carried.

Designations of General Practitioners in Hospitals

Dr. A. G. HERON (Bristol) moved:

That the Council be requested to provide a clear designation for general practitioners engaged (*a*) in paid sessional work in hospitals, and (*b*) in honorary appointments for educational purposes, and shall endeavour to procure the acceptance of these designations by the regions, and that safeguards be set up so that a general practitioner attending a hospital as a clinical assistant for educational purposes shall not be used to fill an otherwise remunerable employment.

He said that the Council had laid it down as a principle that the term "clinical assistant" should be used only in its strictest sense. But in the planning of action later on in the report a dangerous ambiguity appeared to creep in. If these appointments involved useful work in hospital surely such work should be paid for, even though it had educational value. Why should the underpaid general practitioner be the only member of the profession still required to work on an honorary basis? What hope had the general-practitioner anaesthetist, for instance, of achieving consultant status, with the queue of senior registrars and registrars awaiting appointments?

Mr. STAVELEY GOUGH said that his committee approached this matter with some care. The term "clinical assistant" had in the past generally been associated with an honorary job. The first part of the committee's report was concerned with the endeavour to get hospital accommodation for the general practitioner. It was stated most specifically that if a post was created for educational purposes it must be purely educational and carry no degree of clinical responsibility towards the patient. If clinical assistantship carried with it clinical responsibility, this must be paid for. With regard to part-time appointments, they were satisfied that such appointments should be paid ones. The question of "no pay" or "pay" was steadily in the mind of the committee, and in the final report a clarification would be made.

Dr. WATNEY ROE supported the motion. The solution of the trouble was the early institution in hospitals and clinics of paid posts open to general practitioners.

Dr. HERON said that Mr. Staveley Gough seemed to come dangerously near accepting the principle of sweated labour in order to get general practitioners into hospital. The committee had not faced the question: When is a clinical assistant not a clinical assistant, and when he is not, what is he?

The Bristol motion was carried.

Dr. H. H. D. SUTHERLAND (Kensington and Hammersmith) moved a resolution welcoming and supporting the recommendations in para. 73 of the Annual Report of Council (for the full integration of the general practitioner and hospital services) and asking that a small committee in each area representative of the hospital staff and of the B.M.A. Division should be set up to work out the essential details to implement them. He said that some of them felt that, though this report was an excellent one, there was still an opportunity of making some demarcation between members of the staff who were paid and those who did the work in an honorary capacity. It might be difficult to differentiate the posts to which payment should attach and those which, being purely educational, should not be remunerated; but this might be easily overcome if these groups were set up in which members representing the hospital staff and others the local Division looked at the problem from the point of view of local need and opportunity.

Dr. R. C. MCCONNEL (Buckinghamshire) considered that the reference in the motion to the representatives of the hospital staff and of the Division as constituting the area committee tied it down too much, and he moved that these words be omitted. This was agreed to, and the motion was passed in the following form:

That this meeting welcomes and supports the recommendations in para. 73 and asks that a small committee in each area be set up to work out the essential details.

Dr. W. SMITH (Greenwich and Deptford) moved a resolution insisting that adequate use be made by regional hospital boards of the services of general practitioners as clinical assistants. He had in his area general practitioners who had been acting as clinical assistants for many years and who just did not know what was going to happen. If their assistance was not to be continued it would not be possible for the hospital to function. He hoped the motion would be regarded as a reference to Council.

In that sense the motion was carried.

The General Practitioner and Major Surgery

Dr. A. C. E. BREACH (Bromley) moved that there be omitted from the Council's interim report the statement that "it is stressed that major surgery should not be included in it," i.e.,

the scope of general-practitioner work, and the further statement under the heading "Ways in which integration may be achieved":

He [the general practitioner] should, of course, not undertake major surgery. He must keep to such work as is within his sphere. Major surgery should not be performed in general-practitioner hospitals, although, of course, even in the smallest hospital this may be necessary in an emergency.

He said that they were impressed by the overall excellence of this report. What Bromley was asking for was not a positive assertion of the right of the general practitioner to practise major surgery, but the deletion of a prohibition. They felt that if that prohibition was allowed to go through unchallenged it would come to be regarded as a part of the policy of the Association that a general practitioner, unless recognized by some other standards, such as assessment by selection boards and so forth, was not *ipso facto* entitled to practise the art in which he had qualified. If they once accepted the idea there was no limit to the number of restrictions that could be imposed under the Medical Acts. It was intolerable that any committee, whether Governmental or of their own profession, should say that a man who had achieved qualification as a surgeon must not practise surgery unless he had satisfied some extraneous board.

Mr. STAVELEY GOUGH begged the meeting not to be persuaded by an emotional approach to their rights as members of the profession. They were public servants. They had a responsibility to their patients and to their profession. The purpose of this report was to get general-practitioner beds back and new wards open to the general practitioner. There were two sections of general practitioners: those who did general practice only, and those who also did, and had a right to do, specialist work outside general practice. The bodies responsible for hospitals had a right, if asked for general-practitioner beds, to require them to be used for general-practitioner purposes. The general-practitioner specialist had other possibilities of entering the hospital, but he must be prepared to show that he had the necessary special experience.

Mr. C. F. MAYNE (Plymouth) supported all that Mr. Gough had said. He had spent ten years in general practice before becoming a specialist, during which time he was on the staff of a hospital as a general practitioner. There must be safeguards for the patient, and he thought those safeguards were provided for in the present report. It was wrong for general-practitioner surgeons to attack malignant disease in a small rural hospital when they were not in full collaboration with the radiotherapist of the area. The amendment in his view would have the effect of deleting certain safeguards which were in the patient's interests.

Lord HORDER (Marylebone) thought that the words which Bromley wanted deleted were unfortunate. Care must be taken not to lay down limits, whether it be to the practice of medicine, surgery, or midwifery. He did not mean by this that any general practitioner, however good he might be, should deal with a difficult and complicated surgical procedure for advanced malignant disease. That would be a travesty of common sense. But he thought it unfortunate that the word "must" came in ("He *must* keep to such work as is within his sphere"). It would be within the memory of them all that a short time ago they were threatened with a veto upon attending a woman for the delivery of her baby unless they had some special qualification or sanction to do so. They must notice how near they were standing to the sabotage of their own privileges. He would make the phrase to which Bromley objected read: "He would not undertake major surgery. He would keep to such work as is within his sphere."

Dr. A. E. J. ETHERIDGE (Hampstead) said that it must be borne in mind that impressions or opinions contained in any report of Council would receive the close attention of politicians. What was decided on professional grounds there that day might later be embodied in legislation. If these words were left in they might later have political action definitely limiting the functions of the general practitioner in this matter. No man worthy of his profession would undertake surgery which honestly was beyond him, but the speaker was bitterly opposed to any item which restricted or restrained any qualified man in what he might or might not do in practice. These words could well be omitted from the report without detracting from it in any way.

Dr. J. M. ALSTON (City of London) supported Bromley. He spoke as a member of a management committee in the Greater London area. It would be very unfortunate at the present time to take away from the general practitioner what he had carried out very well. He did not think it necessary to restrict him in this arbitrary way. The patient was guarded by the general practitioner's good judgment and by the good judgment of the other doctors who sent the patient into the general-practitioner hospital.

Dr. A. V. RUSSELL (Wolverhampton) also supported the Bromley amendment. They did not want to give a handle to any politician whereby it could be said that the profession itself wanted to exclude any general practitioner from doing surgery.

Mr. DICKSON WRIGHT (Marylebone), while applauding the report, thought that it would be improved by the omission suggested by Bromley. He did not like this *ex cathedra* way of talking about "major surgery" and leaving out "major medicine." Public opinion and hospital opinion would soon stop the doctor if he did more than he should. "Major surgery" was not a proper medical expression. There was a lay smell about it. When the patient said to him, "Is it major or minor?" he wanted to say it was minor so as to reassure him to the point of having it done, while at the same time he wanted to say it was major so as to convince him that he was doing a great deal for him. He really did not know where major surgery ended and minor surgery began.

The Bromley amendment to leave out the words in question was carried by a very large majority, and the interim report as amended was approved.

TRAINING OF THE GENERAL PRACTITIONER

Sir HENRY COHEN introduced the recently published report, the work of a special committee of the Council, on "The Training of the General Practitioner."

He said that the report described the various types of responsibility which would fall to the general practitioner. The essential point was that it emphasized the need for regarding general practice as a special form of practice and one which therefore demanded a special type of training. The report was a little different from the earlier one on the training of the doctor, for the Committee in that earlier case had a great deal of documentary evidence to consider. In framing the present report there were in fact no existing documents which gave them a lead. He hoped that the recommendations commended themselves to the Representative Body as they had already done to the Council.

Dr. T. MILLING (Bristol) moved to instruct the Council to emphasize to the Minister that as long as the present inadequate capitation fee prevailed, so long would the majority of general practitioners, beset with the difficulty of meeting expenses, have little if any time for study, rest, and recreation so rightly stressed by the Goodenough and Cohen committees as primary requisites to efficient practice. He said that the response to postgraduate courses in Bristol had been disappointing for the simple reason that general practitioners had not time to attend them.

The Bristol motion was carried.

Dr. H. G. F. HEAL (Willesden) moved:

That this meeting, having considered the report of the B.M.A. Committee on the Training of the General Practitioner, is of the opinion that the recommendations are unsatisfactory, especially in regard to the excessive length of the proposed training period, and requests Council to refer the matter back for further consideration.

He said that the trend of the recommendations was rather idealistic. They suggested too much regimentation of the practitioner from the time of his registration. With the additional year the medical student was already compelled to study for six and a half years before entering his profession, and the present report proposed to add a further three years, making nine and a half years in all, before the practitioner was allowed to undertake independent practice. This additional three years was too long and would inhibit candidates from entering the profession of medicine. There were also various economic and administrative considerations against these recommendations.

His Division was in agreement with the proposal that there should be a year during which the young practitioner acted as a trainee assistant; this was regarded as a valuable form of education for the prospective general practitioner. They considered, however, that the second or hospital year advocated in the report should definitely be abrogated in the case of those who had done military service, and the third year eliminated altogether.

Dr. A. E. J. ETHERIDGE (Hampstead) said that he was afraid that the recommendations in the report might be taken up by the politicians as a basis for restrictive legislation in the future. Surely it would be wise to refer this matter back. By all means the additional three years should remain as a suggestion, but it should not be regarded as something to lay insistence upon.

Dr. H. BARBARA WOODHOUSE (Harrow) said that the length of training for the general practitioner which was now suggested was comparable to that required for many specialties. If general practitioners were to do all this, why should they not have a remuneration comparable in all respects to that of all other specialists?

Dr. C. P. WALLACE (Guildford) considered that this was the most important subject before the Representative Body, and he supported wholeheartedly the Willesden amendment. The conclusion of this report was wrong, and he believed that it was wrong because the premises were wrong. One of the premises was that the status of the general practitioner had fallen, and that was stated in a sense which suggested that the fall was due to the incompetence of the general practitioner. He suggested, on the contrary, that never before in the history of the medical profession had the general practitioners in this country been so highly qualified. To-day it was necessary under the new Act for a young man to study for five or five and a half years before he qualified, and for another year before he registered. The suggestion in this report was that before he was off the leading-strings he should undertake another three or three and a half years. He also maintained that it was wrong to suggest that general practice was a special branch of medicine. This was a contradiction in terms. It was much nearer the truth when it was said that general practice was a coherence of all the specialties. He begged the meeting not to be intimidated by the fact that the report had been endorsed by *The Times*. He had been reading *The Times* for 30 years and had found very little wisdom in its first leading article, very much in its fourth, and even more in its correspondence. (Laughter.)

Dr. J. A. GORSKY (Westminster and Holborn) pointed out that the meeting was not asked to approve the report of the Committee but to approve the report of Council under this heading. Therefore he supported the Willesden amendment. He feared that, if the Government accepted the report, the Working Party's Report might be put into operation in certain respects at once. He urged that the report should be considered by the Study Groups of the Divisions and brought up again to the Representative Meeting next year.

Dr. J. C. ARTHUR (Gateshead) was of opinion that what young practitioners needed was not so much more training but more confidence to use the training they had already received. Some of them were afraid of doing midwifery cases because they had been told that they must not conduct confinements in a house. They were afraid of opening a septic finger because they were told that this was a matter for the hospital. What was needed was a change of heart on the part of their teachers which would give the students confidence in what they had been taught so that they could put it into practice themselves.

Sir HENRY COHEN, in reply, said how gratified he was that this report had given rise to so interesting a discussion—interesting, but unenlightened, because there was clear evidence from what had been said that the report had not been read very carefully. When this Committee met it was not concerned with political implications, it was an Education Committee. It was asked to advise on certain problems in general practice, and it was not the appropriate body to decide what the implications of its recommendations might be. Indeed, as they all knew, there had been established a General Practice Review Committee which recognized that there might be obstacles to the implementation of many of the recommendations in the report, but it completely hamstrung the workings of any committee whose primary purpose was education to have at the back of its mind what might be the political implications of its findings, and that would be entirely inappropriate for a committee of that Association, which, at any rate in a party sense, was essentially non-political.

The members of his Committee included some of the ablest general practitioners in the Association. They might be wrong in what they had decided, but to suggest that they were merely silly was the bathos of argument. The Committee was not unaware that the proposals it was putting forward had idealistic trends, but it believed that unless they were impelled by ideals they would achieve nothing, and any machinery without ideals was bound to rust.

At the end of his undergraduate training the student when registered was not capable of carrying out independent general practice. Every general practitioner of any note had appreciated that and had in fact fulfilled the conditions of this report by spending usually a year or 18 months in a hospital appointment and had usually gone as assistant to an established general practitioner for a period varying from a year to several years. The report recommended that instead of a student, on the completion of his undergraduate training, going directly into hospital if he wished to be a general practitioner, he should spend a year in general practice as a trainee assistant, during which period he would be remunerated. The Committee suggested that he should go into general practice first in order that he should know the scope, responsibilities, and potentialities of general practice, and then on coming back into the general hospital he would know what were the particular problems to which he should devote his attention. In other words, his year in general practice would have given him the proper orientation.

What was the common fate of students who had spent a year or more before going into general practice? Many of them had told him that they wished they had known the kind of work they would meet in general practice, in which case their work in hospital would have been more profitable to them. It was the unanimous view of the Committee that it would be advisable to spend a year as trainee assistant with an appropriate general practitioner and then to go to hospital. The third year presented a choice of opportunity and it might include special hospital appointments. A man might feel that he required to do a little more midwifery or to pay a little more attention to dermatology, or to ear, nose, and throat work, or he might like to spend a further period in general practice as an assistant. In other words, the three years were now suggested as an appropriate period of postgraduate training for the general practitioner and would cover the kind of work which he might well meet with in general practice. It was designed on a time-table of sequences which would give him a greater opportunity of understanding when he went into hospital the needs of general practice. He was perfectly certain that a very large number of those present would themselves have undergone that kind of training.

Sir Henry Cohen went on to say that they were concerned with one point which was to them of great significance—namely, that medicine, in both its extent and its value, had advanced enormously as an art and as a science, and it was quite futile that what was thought proper in 1858 should be thought appropriate to-day. It was for that reason that when "The Training of the Doctor" was put forward it was stressed that such training was designed to give every student in medicine a general medical background. Anyone who knew the facts and was not swayed by words was aware that to be an efficient general practitioner, to co-ordinate the knowledge both of medicine and of men which was necessary for general practice, it was essential to have a period of postgraduate study. It was for that reason that they stressed in this report the need for such study and also the sequences in which the various parts of it might usefully be taken. Every specialist in this country, whatever branch he followed, was now asked by his specialist organization to agree to conditions which would make specialist training a very heavy and arduous task.

They believed in this Committee that character and intellect of no less degree were necessary for general practice than for many other specialties, and it was because of that they emphasized

the need for this training. With it they hoped there would be a proper recognition of the general practitioner's status and services to the community. There could be little doubt that the status of the general practitioner had not been properly recognized *vis-à-vis* the specialist, and they had emphasized the need to bring the general practitioner in line with the specialist.

In conclusion, Sir Henry Cohen said that they recognized the difficulties which might face the immediate implementation of some of these recommendations. This three-year period, however, was merely the putting on paper of what in a very large number of instances in some form or other had been practised hitherto. General practice was indeed a special form of practice and required a special form of experience and grading in order that the proper responsibility might be discharged. (Applause.)

Dr. HEAL (Willesden) said that Sir Henry Cohen had stated that political considerations were not taken into account by his Committee. How anyone could consider recommendations so extensive as those embodied in this report and not deal with political implications he was at a loss to understand. He repeated that there was, however, too much regimentation of the general practitioner.

On a show of hands the Willesden amendment referring back to the Council for further consideration the recommendations concerning the excessive length of the proposed training period was carried. There voted: in favour, 231; against, 91.

The following motion was handed in and was put from the chair and agreed to without discussion:

That the Representative Body defers expressing its opinion on the Cohen report or on the report of Council under the heading "The Training of the General Practitioner" until such time as the Divisions have considered the report as suggested by the Council.

NUTRITION

Lord HORDER, chairman of the Nutrition Committee, formally moved approval of the report of Council under the heading "Nutrition," and this was given without debate.

OCCUPATIONAL HEALTH

In the absence of Dr. Vaughan Jones, chairman of the Committee, Dr. S. WAND presented the report under "Occupational Health." He said that they would all be glad to learn that Dr. Vaughan Jones, who had had a serious illness, was now very much better, and the meeting would desire that a letter be sent to him wishing him a speedy recovery. He had done excellent work as chairman of this Committee, and had played a very important part in bringing the subject to the forefront of medical practice. (Applause.)

Probably the outstanding item in the report was the reference to the Dale Committee, which was still sitting. He hoped it would not make any violent changes in the set-up of industrial medicine until a proper period of experiment had taken place. He moved a lengthy recommendation of Council for approval of revised scales of salaries for whole-time and part-time industrial medical officers (*Supplement*, June 10, p. 267).

The recommendation was adopted.

PUBLIC HEALTH

Dr. C. METCALFE BROWN, chairman of the Public Health Committee, moved the adoption of the Annual Report under "Public Health."

He referred to the negotiations on salaries in the Public Health Service. He had intended, had this item been reached at the Southport meeting, to speak with some indignation on this subject, but there had been a change since then in that the matter had been referred to arbitration. The two sides had been unable to agree, and, with the consent of both, the matter had been referred to the Industrial Court and the hearing would begin on October 9. As the matter was before the Industrial Court the less that was said about the details of the claim the better. He felt that arbitration was important not only from the point of view of the Public Health Service but of the whole profession.

School Health Service and the General Practitioner

Dr. METCALFE BROWN went on to move:

"Where, in the opinion of a medical officer employed by a local authority, a child needs special investigation (other than an ophthalmic examination) or treatment, he should send the child to a specialist only after prior consultation with the child's own doctor, upon whom rests the responsibility for general medical care.

In consulting the general practitioner, the medical officer should give him the opportunity to make the arrangements for the consultation or to agree—by replying or in the absence of a reply—that the arrangements should be made by the medical officer.

A copy of any special report on the child received by the medical officer should be sent to the child's own doctor.

He said that this was a prolonged matter which had had the consideration of a joint meeting of the Association with the Society of Medical Officers of Health. There was agreement about what should be done, and that was incorporated in the recommendation before the meeting. The general practitioner must have responsibility for the general medical care of his patient. On the other hand, the school medical officer had duties laid on him by statute with regard to the school child. It was essential that there should be no cleavage in this matter. He had consulted some of his colleagues, in particular the county medical officer of Lancashire, who, together with the speaker, served an area with a population of nearly 3 million, and although one of them had been in office for 12 years, and the other eight, neither had had the slightest difficulty with his colleagues in this matter.

The recommendation was carried.

Vaccination and Immunization

Dr. ELSIE WARREN proposed a motion urging that the Ministry, the local authorities, and general practitioners should all undertake a more intense propaganda campaign to bring home the value of vaccination and immunization. Such propaganda was promised to them before 1948.

Dr. METCALFE BROWN accepted the motion, which was adopted.

"BRITISH MEDICAL JOURNAL"

Dr. O. C. CARTER, chairman of the Journal Committee, presented the annual and supplementary Reports of Council under "British Medical Journal." He said that this report for convenience was referred to as the Report of the Journal Committee, but in fact was the report of a standing committee responsible for all the scientific publications of the Association. The Association published more medical journals than any publishing firm in the country. It published 13 quarterly journals, three of them acquired during the past year. In these publications were valuable contributions to medical literature. This great service was not only not costing the Association any money, but last year the net result of the work was a surplus of some £43,000, which had been ploughed back into other Association activities. (Applause.)

Of course the *British Medical Journal* still remained the most important of their publications, and its status and circulation continued to rise. The weekly circulation was now 76,000, and owing to the removal of restrictions on paper it had increased in size also. During the year 300,000 more copies had been issued than in the previous year and the complete set of *Journals* contained 1,000 more pages. There were those who had feared that as a result of the big increase in circulation and size of the *Journal* there would be a deficit at the end of the year, but this was not so, thanks to the valuable advertisement revenue and the fact that £20,000 worth of the *Journal* was sold to non-members. There was scarcely any place of importance in the world where the *Journal* did not go.

The *Supplement* still continued to be an important part of the *Journal*. It was hoped to revert as soon as possible to the pre-war practice of publishing the *Supplement* as a loose inset. One special number of the *Journal* during the year took the form of a symposium on "Fifty Years of Medicine." This was an outstanding success and was to be published in book form.

The publication of a popular health journal was a new feature and represented an enormous undertaking. The arrangements for this journal were going ahead. One important thing was to have the right man as Editor, and fortunately they had already the right man on the staff of the *Journal*—namely, Dr. Harvey Flack—and they wished him well in his big undertaking. (Applause.) The new journal would be issued early in the new year.

Dr. CATHERINE HARROWER (Glasgow) moved:

That the Representative Body deprecates the practice of the *Journal* in publishing the estates of deceased doctors.

She said that her Division felt that no useful purpose was served by this practice, which could have no relevant bearing on professional merit or status. She realized that these figures were published in the lay press, but she did not think a professional journal should make this concession to the curiosity of the public.

Dr. CARTER pointed out that such matters could not be kept secret, and the publication might occasionally serve a useful purpose.

The Glasgow motion was carried, but Dr. CARTER pointed out that the meeting could not instruct the Editor what he was to publish, it could only express its view.

MEDICAL ETHICS

Powers of Association in Regard to its Members

Dr. J. G. THWAITES, chairman of the Central Ethical Committee, moved:

That the Association take the following powers in regard to its members:

(*a*) Publication in the *Journal* of notices regarding expulsion, together with the relevant facts.

(*b*) Publication in the *Journal* of notices regarding censure, together with the relevant facts.

(*c*) Notification of expulsions to all local medical committees, all regional consultants' and specialists' committees, medical societies in the area in which the expelled member resides, and other appropriate medical organizations.

Dr. Thwaites said that during the last 50 years in the course of many disciplinary inquiries it had been shown that in some respects the disciplinary powers of the Association were not entirely effective or adequate. Therefore the Council put this recommendation before the present meeting. In case there was any apprehension with regard to these new powers he wished to say at once that there was no intention on the part of the Council to go witch-hunting. They knew from experience that in the profession there was occasionally friction arising, often founded on misunderstandings between doctors, but, whatever its cause, it was obvious that these frictions were of a non-malignant character, and in no sense was this recommendation intended to be directed towards such minor disputes and irritations as formed the major part of the ethical business. But in the medical profession as in all professions there was bound to be a very small hard core of individuals who seemed to have no ethical sense, who did not heed advice and did not intend to learn how to behave decently towards their colleagues. In the experience of his Committee their ethical powers were not effective in this class of case. The Association had the power of censure and expulsion, but censure and expulsion had always been a more or less secret affair. What was wanted was something which would bring home to these individuals the fact that they were doing harm to their profession and their colleagues.

His Committee had looked into the disciplinary powers held by comparable professions and found that in every case there was power not only to expel but to publish the name of the offender and the nature of his offence. He reminded the meeting that all these cases had to be dealt with at three stages—the Division, the Ethical Committee, and the Council—and that in every case they were dealt with only by medical people who were fully aware of the problems arising in practice. The Association took no cognizance of complaints against doctors by the lay public. There was nothing in this recommendation which need disturb the law-abiding members of the Association.

Dr. A. M. MAIDEN (Lincoln) moved:

That this meeting is strongly opposed to any extension of the disciplinary powers of this Association over its members and in consequence does not approve of the recommendations.

He said that his Division was very much perturbed by these proposals, though they admitted that they were brought forward by sincere men. The medical profession was governed by a plethora of regulations. The arm of the General Medical Council was a very long one, and the type of "crime" which the Ethical Committee was contemplating in these recommendations was a minor type of which the General Medical Council did not take cognizance. But the penalty which it was proposed to inflict was publication, and publication might be a very savage penalty. The investigating committee was an informal one; it was not composed of men who had had legal training. The evidence given before it could not be taken on oath, and the evidence was limited to those who were willing to give it. Further, there was no appeal. Was the honour of the medical profession going to be safeguarded by a witch-hunt like this? Expulsion alone should be the punishment.

Dr. ALASTAIR FRENCH (Harrow) begged the meeting to think carefully before it passed this recommendation, because the question involved the fundamental rights of every British citizen to have freedom within the law and a proper trial by a judicial body. If they passed this recommendation every individual member of the Association when he realized its implications would be bound to forgo his right of appeal against miscarriage of justice. He wondered whether those members of the Council who were also members of the General Medical Council approved of this usurpation of the functions of that body. Publicity would not enhance the prestige of the Association; it might in certain circumstances be to the advantage of the "rascal" who had been thrown out.

Dr. J. A. GORSKY (Westminster and Holborn) begged the meeting to throw out this malicious recommendation. Dr. Thwaites had mentioned that they had considered the procedure in comparable professions. But what he had forgotten to say was that the legal opinion upon which this rule was based was given in two interesting cases, one of them referable to the Motor Traders' Association and the other to the Stock Exchange. Was the Association comparable with either of these bodies? It was important to appreciate that the Ethical Committee would act as a limited tribunal. It could publish its decisions, but no one would have a right to demand a reason for them. Moreover, if these recommendations were agreed to any member of the Association who might disagree with the verdict and continued to meet professionally the man who had been expelled would himself be liable also to expulsion. (Cries of "No.")

Dr. S. NOY SCOTT (Plymouth) spoke in favour of the recommendation. He stressed the extreme rarity with which the proposed new rule would be applied. He assured them that the Committee did not come to its decision without very careful and prolonged consideration. It had seen the force of most of the objections which might be raised. The fact remained that in the case of these offenders expulsion did not really affect them, but publication would get under the thickest elephantine skin.

Dr. FRANK GRAY (Council) said that the Association, if it published a sentence of expulsion which was quite ineffective, would make itself a laughing-stock.

Dr. THWAITES, replying on the discussion, reminded the meeting that they were professional men inquiring into complaints by one professional man against another. The proposal that a man would render himself liable to expulsion if he met the expelled member had been taken out. The Association did not take any action on cases which were in the province of the General Medical Council, and, on the other hand, the General Medical Council did not touch certain offences with which the Association dealt.

Dr. MAIDEN said that what his Division was quarrelling with was not the present disciplinary procedure but its extension. They were being asked to give undesirable powers to certain individuals in their profession.

The Lincoln amendment, affirming that the meeting was strongly opposed to any extension of the disciplinary powers of the Association, was carried on a show of hands: in favour, 155; against, 115.

Rules of Procedure Governing Ethical Matters

The next recommendation of Council was for approval of the revised rules governing procedure in ethical matters of a Division not itself a Branch, of a Branch composed of one Division, and of a Branch composed of several Divisions; that all be urged to adopt the revised rules; and that after July 31, 1951, the British Medical Association should not accept responsibility for any ethical proceedings otherwise than in accordance with the rules. The rules were set out in Appendix III to the Annual Report of Council.

This was agreed to without discussion.

The revised Rules of the Central Ethical Committee (Appendix III of the Annual Report) were also approved.

It was further moved that the resolution of the Annual Representative Meeting, 1946, concerning the procedure of the Central Ethical Committee with regard to action against a member who accepted an appointment which was the subject of an Important Notice, be rescinded in favour of the revised rules.

This was agreed to.

Rules for Medical Consultations

Approval was next sought for the proposed ethical rules for medical consultations in practice, other intra-professional obligations, guidance for professional conduct in relation to dentists, and examining medical officers' ethical rules (Appendix IV of Annual Report).

Dr. H. N. MILES (Worcester and Bromsgrove) moved that the practice of attending practitioners asking consulting practitioners to visit and examine patients unattended, save in exceptional circumstances, should be considered unethical. It was reported by a specialist in his Division that this practice of asking specialists to visit unattended was becoming quite common in his area. He believed that the general practitioner and the specialist both derived benefit from the contact, and, from the patient's point of view, the patient's confidence in the specialist was very much increased by the tactful introduction by the general practitioner and his approval of what the specialist had to say. If the specialist visited the patient unattended it ceased to be a consultation.

Dr. N. NELSON (Dundee) opposed the Worcester amendment. After all, if the consultation took place at the specialist's house the patient usually went unattended by his general practitioner, and what was the difference between that and an attendance at the patient's house?

Dr. THWAITES said that they were all in agreement with the intention of the amendment, but he suggested that the final word should be "undesirable" rather than "unethical."

With this alteration the amendment was carried.

Dr. H. L. TAYLOR (Newcastle-upon-Tyne) drew attention to a discrepancy in the rules concerning the ethics of medical consultation. It was laid down under "Other intra-professional obligations" that a practitioner ought not to accept as his patient anyone who was under the active care of a colleague, save in certain exceptional circumstances. But a later rule laid it down that when a practitioner was asked for treatment by a patient and had reason to believe that the patient was already under medical care and that the request was made without the knowledge of the attending practitioner, and the patient refused to permit him to communicate with such practitioner, then, if the circumstances were exceptional, the practitioner was at liberty to examine the patient and to tell him his findings and conclusions, though he should not accept the patient for treatment. Newcastle thought that this clause allowed too much latitude to the individual doctor, who would be the only arbiter of what should be done.

He moved that this rule be referred back.

The Newcastle amendment was lost.

In moving the paragraph in the ethical section dealing with television, Dr. THWAITES said that this was a vexed question. On the visual screen complete anonymity could not be preserved, and there were many programmes in which medical men appeared and in which their names were announced. The Ethical Committee was keeping an eye on this situation.

PRIVATE PRACTICE

Dr. I. D. GRANT, chairman of Private Practice Committee, moved the reception of the sections of the report under this heading. The record of the committee had been one of steady but not spectacular achievement. The remuneration of the medical officers of approved schools had been increased. The new car badge had proved useful in overcoming parking difficulties. He could not say that the situation with regard to doctors' cars was satisfactory, but until devaluation occurred some progress was made; since then the Government had insisted on the greatest possible number of cars being sent for export. The Motor Manufacturers Association were doing the best they could.

Dr. J. C. WISHART (Bromley) asked the Council again to explore the possibilities of an absent subscriber telephone service, and Dr. GRANT undertook on behalf of his committee to do so, at the same time begging for suggestions about a feasible method.

A motion by Dr. W. SMITH (Greenwich and Deptford) expressing complete dissatisfaction with the position of doctors in obtaining new cars was passed.

In reply to a Derby motion asking that the policy of the Association that fees for certification under the Lunacy Act be at least two guineas should come into force, Dr. GRANT said that the fee had been agreed with the associations of local authorities, but it had not yet been possible to get a date fixed for bringing it into effect.

Dr. HALE-WHITE (Marylebone) moved that a directive should be given that the doctor of an ex-Service patient should, with the patient's permission, have the right of access to copies of Service medical reports and records. Dr. GRANT said that this matter had been taken up, and the position now was that the Ministry of Health would send to the local executive council in any area the necessary records on application. Dr. WAND added that the records would be available to any doctor, National Health Service or private. The motion was withdrawn.

Dr. ALSTON (City of London) had two motions concerning the passage of documents or reports between coroners and certifying doctors, but Dr. GORSKY said that what the City asked for was in fact already the practice of coroners or their officers.

ASSOCIATION FINANCE

The TREASURER (Mr. Moore), in presenting the financial report, said that the accounts were clearly set out in the Financial Statement appended to the Annual Report of Council. Without being unduly optimistic he could say that the Association was in a sound position. It might surprise representatives to be told that the Association spent a sum approaching £20,000 a year in paying the fares of members attending meetings at B.M.A. House. The expenses of the regional offices were growing, but it was expected that as these offices were used more and more by Divisions there would be a corresponding decrease in capitation grants from the head office.

It was difficult to budget for the coming year. Subscription income was expected to increase by about £40,000; other sources of income would remain more or less at the same level. Expenditure was increasing heavily, and on this point he must sound a note of warning. If the income was substantial so indeed was the expenditure.

After stating that the Finance Committee was unable to recommend a life membership subscription, which in any case would be less attractive to members because it would not be possible to charge the subscription when computing income tax liability, Mr. Moore made one proposal for subscription remittance—namely, that the subscription of non-clinical professors should be three guineas per annum. Apparently non-clinical professors—about 80 of whom were members of the Association—were unable to make the same use of the local services of the Association as other members.

This recommendation was agreed to.

Dr. KELSON FORD (Chelsea and Fulham) urged that more should be spent on the improvement of amenities at B.M.A. House. Mr. Moore reminded the representatives of what had been done already, but said that he was willing that the matter should be looked into further.

In response to a Doncaster motion, that payment of adequate subsistence allowances should be made to members attending Council, committee, or Representative Meetings, Mr. Moore said that he was now prepared to approach the matter with a little more sympathy than his predecessors. But he estimated that if a subsistence allowance were paid to Council and committee members it would entail an expenditure of some £4,000 a year, and, if it were paid to representatives away from home for five nights in the year, almost another £4,000. He was prepared to have this referred to the Council for consideration.

In concluding the business under "Finance" Mr. Moore said how grateful he was to the accountant, Mr. W. S. Giles, and his staff for the very efficient work they carried out.

BUILDING

Mr. L. DOUGAL CALLANDER, chairman of the Building Committee, who introduced this part of the Annual Report, said that the south wing in Tavistock Square was almost completed and several tenants were already occupying the building. The question of setting up a travel bureau on the ground floor was being considered. Fluorescent lighting had been installed in the library. Very extensive alterations were being carried out in the House at Edinburgh. An office had been obtained at Glasgow. At Cardiff a property to serve as the Welsh House of the Association had been purchased. In the near future a house was being bought in Dublin for the Irish Medical Association. He described in detail certain plans for adding to the facilities at the London headquarters, but mentioned the difficulty in obtaining the necesary licences. Like Mr. Moore, he paid a tribute to the helpfulness of the accountant and his staff.

SCIENCE

Mr. LAWRENCE ABEL, acting chairman of the Science Committee, in introducing the report under this heading, said how greatly they all deplored the death of the chairman of the committee, Dr. R. G. Gordon. No tribute could be too high to his services to the Association. Mr. Abel then reviewed the Association prizes, research scholarships, and lectures.

Dr. R. M. S. MCCONAGHY (Torquay) moved that the question of the administration of analgesics in accident cases by unqualified persons be considered by a special committee set up by the Council. It was stated in the report that the Council saw no objection to morphine being administered by an adequately trained ambulance attendant to a person suffering from serious injury. This was giving a power to ambulance attendants which was not at present given to trained nurses.

Mr. LAWRENCE ABEL said that the Council had no knowledge of any maladministration of morphine under such conditions in the Services in wartime, and what was the difference between the battlefield and the roads of England to-day? A dose of morphine given by a person, not indeed medically qualified but qualified by experience, might quite likely save a life.

The Torquay motion was lost.

PUBLIC RELATIONS

Dr. H. G. DAIN, chairman of the Public Relations Committee, said that they had been very active during the year, although their work was not always apparent. The whole publicity situation from the point of view of the profession was constantly under survey.

Dr. N. STRANG (South Shields) moved a resolution deploring the lack of measures by the committee to counteract adverse reports on the medical profession which so frequently appeared in the Press. Dr. J. C. ARTHUR (Gateshead) supported this motion, saying that the time had come for a change of direction in public relations policy. Much had been said about the difficulties under which practitioners laboured; it was time the public was made to realize the good work done in general practice to-day. Dr. A. E. J. ETHERIDGE (Hampstead) also supported. He considered that the B.M.A. had an extremely "thin" Press. He called for more active functioning of the department.

Dr. H. B. MORGAN, M.P., said that these criticisms were unfounded. The Public Relations Department should keep up its good work, and he hoped it would not listen to criticism of this kind. The Press had never been representative of public opinion in this country. The department was not to be expected to rebut every petty criticism of the profession, justified or not.

Dr. DAIN said that the critics had very much mistaken the function of public relations. A resolution in the name of Gateshead talked about "the prevalent tendency to denigrate the doctor." The only people he had heard doing that were doctors who wrote to the Press and said that for one reason or another they were bound to give bad service. The department could not contradict every statement in the Press, but when the public relations officer came upon a misstatement he did everything possible to get the paper to print a correction. The Press did tend to make much of cases against doctors in court; that could not be counteracted, though he thought there were not now the big headlines for doctors' misdoings that there were some years ago. He begged doctors if they had grievances to bring them to the Association and not to write letters in the lay Press.

Dr. STRANG said that doctors who wrote to the Press did so in a feeling of despair because Headquarters were not doing it for them.

The South Shields resolution was lost by a large majority. A resolution from Manchester that regional Press relations officers be appointed to deal with questions appearing in the local Press which affected the interests of practitioners was also lost. Chelsea and Fulham wanted a broadcast debate to be arranged on the present position of practitioners in the National Health Service, but this also did not find favour with the meeting, and a further motion regretting that the committee had failed to acquaint the public with the inadequacy of the remuneration received by general practitioners was met by a motion to proceed to the next business. This was a motion by Belfast deprecating as undignified the appearance of letters in the daily Press discussing the remuneration of doctors, and this was carried.

ARMED FORCES

This section of the Annual Report was presented by Air Vice-Marshal D'Arcy Power, who paid a tribute, endorsed by the meeting, to Sir Percy Tomlinson for his able chairmanship of the Armed Forces Committee and wished him a speedy recovery from his illness. He mentioned the long delay in obtaining agreement on the Council's proposals for the revision of rates of pay for medical officers in the Services. The discussions had now been in progress for eighteen months.

The meeting approved the addition to the committee of six members directly elected by members in the regular and reserve Forces.

ORGANIZATION

Dr. H. ALEXANDER (Wandsworth) moved to amend the appropriate by-law to provide that every candidate for election to the Council for any constituency should be a member of one of the Divisions in that constituency. He was only asking, he said, that the principle which had applied in the past in the old larger constituencies should continue to apply in the new smaller constituencies under the recently adopted scheme for elections to Council.

Mr. LAWRENCE ABEL said that all that need be done, if it was desired to have as a candidate someone who "lived in the wrong street," was to elect him as an honorary member of the Division, when he would become eligible for election to Council. The Wandsworth proposal was ridiculous and most undemocratic. Parliamentary candidates did not have to live in the constituency for which they were nominated.

Mr. H. H. LANGSTON (Winchester) supported the Wandsworth proposal, which conformed to the policy Winchester had put forward at the Special Representative Meeting. A member of Council should live and practise in a Division in the

constituency he represented. Dr. FRANK GRAY also supported the motion. There should be one rule for everybody the country over.

The Wandsworth motion was carried by the necessary majority.

A motion was on the agenda concerning affiliation with the Indian Medical Association; it was withdrawn by the mover, but the Chairman of Council said that he would like at that meeting to express their appreciation of the opportunity of having associated with them their medical colleagues in India. ("Hear, hear.")

Dr. J. A. PRIDHAM, chairman of the Organization Committee, in concluding the business paid a tribute, endorsed by the meeting, to the work of the honorary secretaries of Divisions and Branches.

Remainder of Report

Dr. I. D. GRANT, in presenting the section under "Scotland," expressed gratitude for the renovation of the Edinburgh House, the acquisition of an office in Glasgow, and the appointment of an Assistant Scottish Secretary.

Dr. H. R. FREDERICK, chairman of the Welsh Committee, spoke appreciatively of the Welsh House in Cardiff, and also of the work done behind the scenes in making it possible for Wales to have a directly elected representative on the General Medical Council.

The CHAIRMAN OF COUNCIL moved the adoption of the sections of the report concerning "World Relations," "Other Association Activities," and the evidence given on behalf of the Association to the Royal Commission on Capital Punishment. With regard to this last he referred to the excellent work done by Dr. Macrae, Deputy Secretary, in preparing the memorandum.

Dr. R. FORBES presented the report under "Patenting in the Medical Field," and moved the following recommendation:

That the Representative Body approves and urges the adoption of the policy of patenting in the medical field by members of the profession, provided that patents are assigned to the National Research Development Corporation to secure that the inventions and discoveries to which they relate are made available, developed, and exploited in the best interests of the public.

He said that this did not really vary the policy of the Association with regard to patenting. It implemented what the Association had had in mind some years ago, though at that time a method of accomplishing it did not present itself.

The motion was adopted.

This completed the business, and on the motion of Dr. ALASTAIR FRENCH an enthusiastic vote of thanks was accorded to the Chairman, Dr. J. A. BROWN, who, in his response, paid a compliment to the secretaries and staff at B.M.A. House.

The meeting was followed by a meeting of the Council and of the trustees of the British Medical Guild. These meetings were necessary because the technical effect of adjourning the Annual Representative Meeting at Southport was to postpone the beginning of the term of office of a number of members of the Council and of members of the Trust to the end of the Adjourned Meeting. The resolutions carried at the meeting of members of Council at Southport were made resolutions of the Council, and the same procedure was followed at the subsequent meeting of the trustees of the Guild.

CALL-UP OF DOCTORS

A small number of doctors who are regular reservists have been called back to H.M. Forces for a further period of service. A further number have received warning notices. It has been confirmed with the Ministry that any doctor who, prior to his recall, was engaged in general practice and whose name was included in the list of an executive council should (unless he decides to give notice of withdrawal from the Service) make deputizing arrangements where possible through his partner or partners or by the employment of a locum tenens or assistant for the conduct of his practice during his absence. His name will be retained on the medical list of the executive council until his return.

The General Medical Services Committee has submitted proposals to the Ministry for the protection of absentee doctors' practices in the event of more extensive mobilization, and these proposals are now under consideration. The question of protection of private practice is also to be considered by the Private Practice Committee of the Association.

Branch and Division Meetings to be Held

CITY DIVISION.—At St. Leonard's Hospital, Nuttall Street, Kingsland Road, London, N., Tuesday, October 10, 8.30 p.m., meeting.

EAST KENT DIVISION.—At Chez Laurie Restaurant, Thanet Way, Herne Bay, Thursday, October 12, 7.30 p.m., dinner; 8.45 p.m., joint meeting with British Medical Guild. All medical practitioners in the area of the Division are invited.

HAMPSTEAD DIVISION.—At Central Library (Arkwright Road entrance), Wednesday, October 11, 8.30 p.m., meeting to form Hampstead Division of British Medical Guild and election of local Guild Committee. All medical practitioners in the area of the Division are invited.

HERTFORDSHIRE BRANCH.—At Waterend Barn, St. Albans, Friday, October 13, 8 for 8.30 p.m., Dinner-dance.

KINGSTON-ON-THAMES DIVISION.—At Kingston Hospital, Wolverton Avenue, Kingston-on-Thames, Tuesday, October 10, 8 for 8.30 p.m. Dr. P. M. F. Bishop: "Endocrinology in General Practice."

NORFOLK BRANCH.—At Stuart Hall, St. Andrew's Street, Norwich, Wednesday, October 11, 7.30 p.m., reception; 8 p.m., talk by Mr. R. R. Simpson: "Shakespeare and Medicine."

SOUTH-WEST ESSEX DIVISION.—At Clinic Hall, Thorne Coombe Maternity Hospital, 714, Forest Road, Walthamstow, E., Wednesday, October 11, 8.30 p.m., lecture by Dr. Stanley White, Ph.C.: "Clinical Aspects of the Newer Antibiotics, with Special Reference to Chloromycetin." Lantern slides and probably a short film will be shown.

SUNDERLAND DIVISION.—At Royal Infirmary, Sunderland, Friday, October 13, 8 p.m., address by Mr. McIntosh Marshall: "Some Obstetrical Problems in General Practice."

WEST SUFFOLK DIVISION.—At Everard's Hotel, Bury St. Edmunds, Wednesday, October 11, 8.15 p.m., annual B.M.A. lecture by Dr. Keith Simpson: "The Reconstruction of Crime." To be illustrated by lantern slides. The lecture should be of interest to the legal profession and certain members of the Police Force.

British Medical Guild: Formation of Local Branches

An open meeting will be held on Sunday, October 8, at 3.30 p.m. in the Exhibition Hall Restaurant, Belle Vue Gardens, Manchester, to discuss the formation of a local branch.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 14 1950

THE BRITISH MEDICAL GUILD*

The British Medical Association is a company registered under the Companies Acts. It is permitted by the Board of Trade to dispense with the word "Limited" in its title, but the price of that dispensation is the inclusion of two provisions in its Memorandum of Association. The first is the proviso to Clause 3:

"Provided that the Association shall not support with its funds any object or endeavour to impose on or procure to be observed by its Members or others any regulation restriction or condition which if an object of the Association would make it a trade union."

The second is Clause 4:

"The income and property of the Association, from whatever source derived, shall be applied solely towards the promotion of the objects of the Association as set forth in this Memorandum of Association, and no portion thereof shall be paid or transferred directly or indirectly by way of dividend or bonus or otherwise, by way of profit to the persons who at any time are or have been Members of the Association, or to any person claiming through any of them, provided that nothing herein shall prevent the payment in good faith of remuneration to any officers or servants of the Association, or to any Member of the Association or other person in return for any services actually rendered to the Association."

Let us re-examine the effect of Clause 4. Put simply, it is that the Association is prevented by its constitution from contributing towards any loss which its members might sustain in following the advice of the Association. In this respect the Association is prevented from financing a fighting fund.

The proviso to Clause 3 is of considerable significance. The Association must not do things which, if it did them, would make it a trade union. To appreciate the importance of this proviso one needs to examine the legal position of a trade union. In law a trade union is a combination which has as its principal objects the regulation of the relations between workmen and masters, or between workmen and workmen, or between masters and masters, or the imposing of restrictive conditions on the conduct of any trade or business, and also the provision of benefits to members. We can set aside the first of these objects, because we are advised that a doctor is neither a master nor a workman. But we cannot dismiss the second object, because we are advised that legally medical practice would be held to be a business.

It follows that should the Association have as one of its objects the imposition of restrictive conditions on the conduct of medical practice it might be held to be acting as a trade union and so in conflict with its constitution. This is entirely a matter of legal interpretation. The fact we must face is that there is a consensus of legal opinion that for the Association to organize withdrawal from any service, or a general refusal to enter a service, might well be held to conflict with Clause 4 of its Memorandum of Association. If the Association were exposed to the risk that it could be challenged on this point, the result would be that any person or persons so disposed might—for example, during a major dispute involving the profession—seek from the court an injunction to restrain the Association from using its funds in contravention of its Memorandum. While such an action was *sub judice* the Association might well be rendered ineffective and be unable to continue the activity which was challenged for as long as the matter was under consideration by the courts.

To sum up, we are legally advised that in the constitution of the Association there are two weaknesses which might militate against the Association playing its full part in any conflict between the profession and other bodies or persons. It is true that, so far, the Association's actions have not been challenged. It is possible, too, that the lawyers might be wrong, for the matter could be finally determined only in the courts. But in the presence of such doubts the Council decided that in one way or another these weaknesses must be removed.

Alternatives Considered

A number of solutions were considered. It might be possible to dispense with the proviso to Clause 3 and Clause 4 by withdrawing the request to the Board of Trade to omit the word "Limited" from the Association's title. On the other hand it would hardly be consistent with the Association's standing and prestige to be known as the British Medical Association Limited, and in any case we might incur an obligation to pay income tax where at present we enjoy immunity. Further, if it were subsequently held that the Association was in reality a trade union it might lose its registration under the Companies Act altogether.

Next was considered the conversion of the Association into a body of an entirely different constitution, trade union or other. The short answer to this is that a necessary preliminary to the creation of a new organization on a new basis would be to wind up the Association and to distribute its assets among its members.

Next was considered the possibility of forming a parallel yet distinct body which would be free from the impediment on the two points which might fetter the Association's activities under its present constitution. The possibility of establishing a parallel trade union was explored. Those who favour this form of organization have emphasized the protection which is afforded to trade unions by the Trade Disputes Act, 1906.

Without going into the obscurities of trade union law, the short effect of Sections 3 and 4 of that Act is to give immunity from legal proceedings for certain acts which ordinarily would be actionable wrongs, provided that these acts are committed in furtherance of a trade dispute or committed by or on behalf of a trade union. This Act of 1906 was passed following a decision of the courts which seriously menaced the legality of trade unionism. An action for damages brought against a union of railwaymen succeeded on the ground (*inter alia*) that picketing by the union members was unlawful and that the union was responsible for the wrongful acts of its members and officials. The expression "trade dispute" is defined in the Act as meaning a dispute (connected with employment) "between masters and workmen or between workmen and workmen" and the expression "workmen" is defined as meaning "all persons engaged in trade or industry." In the opinion of learned counsel the medical practitioner is not employed in trade or industry and is not a workman within the meaning of the Act. Learned counsel advise us that, unlike a trade union of workmen, a trade union composed of medical practitioners could derive no protection from these sections of the Act.

Moreover, the sanction of expulsion or threatened expulsion from a trade union as a means of depriving a member of

*The substance of some observations made by the Secretary at a meeting of Birmingham practitioners on October 4.

opportunities for employment (under the "closed shop" principle), which can safely be imposed by workmen's trade unions because of the Trade Disputes Act, is not one that can be effectively imposed by an organization of medical practitioners, even if the profession favoured this method of bringing dissidents into line.

In the light of such considerations as these, the lawyers advised the Association that in the organization and enforcement of collective action a medical trade union would be no more effective than a body with a different form of constitution. They advised, in brief, that there were no substantial advantages for us in the trade union form of organization.

Parallel Body

After carefully considering all these factors, the Council finally came to the conclusion that the whole of its difficulties could be met by leaving the Association's present constitution unchanged and by establishing as a parallel body a board of trustees which, within the normal limits of law but without the limitations of the Association's constitution, could seek to impose restrictions on the conduct of medical practice and organize collective action in disputes with public or other bodies.

The British Medical Guild has been set up for this purpose and its functions are described in the statement below.

BRITISH MEDICAL GUILD

The following statement has been sent to every general practitioner in the National Health Service:

The Special Conference of Local Medical Committees in June decided that, if a satisfactory settlement of the profession's claim for an increase in the remuneration of general practitioners was not speedily achieved, practitioners were to be advised to terminate their contracts with local executive councils and that the necessary preparations should be made at once.

You will shortly receive a letter from the trustees of the British Medical Guild inviting you to complete a form of resignation from the National Health Service. The conditions and safeguards under which such resignations would become effective are explained later in this document.

This is a drastic step. You will naturally wish to know the reasons for it. You may well also wish to know, if you do not already know, what the British Medical Guild is, and why it should be writing to you on such a matter.

What the Guild is

Q.—What is the Guild ?

A.—The Guild is a trust fund vested in trustees. The trustees are members for the time being of the Council of the British Medical Association.

Q.—Why was the Guild established ?

A.—The British Medical Association is prohibited by its constitution from taking part in trade union activities. For example, it is unable legally to organize or finance collective withdrawal from the National Health Service. Nor could it compensate from its own funds any member who suffered financial hardship as a consequence of collective withdrawal. In 1948 some members pressed strongly for the Association to be converted into a trade union. Lengthy investigation showed that such a conversion was neither desirable nor practicable. The Association's legal advisers gave their opinion that the profession could acquire the desired additional power by setting up a British Medical Guild which could act for the profession in an emergency. Accordingly the Guild was established in 1949 by a resolution of the Representative Body at Harrogate.

Q.—Has the Guild any local organization ?

A.—Yes, the trustees have recently invited honorary secretaries of B.M.A. Divisions to take the initiative in setting up local Guild committees in their areas. Members of the profession within the area of each committee will then be divided up into groups of eight to twelve under a group organizer. Thus every practitioner—member or non-member of the B.M.A.—will be enabled to take part in discussions with his *immediate* colleagues on any dispute which is referred to the Guild.

Q.—What is the policy of the Guild ?

A.—The Guild is not a policy-making body. The policy of the profession will continue to be framed by the Representative Body of the B.M.A. and (within their respective fields) by the Conference of Local Medical Committees and the Central Consultants and Specialists Committee.

Q.—What is the membership of the Guild ?

A.—There is no membership. The Guild is *not* a separate body which doctors can join. It is a legal instrument, but an essential one.

Q.—What is the subscription to the Guild ?

A.—There is no subscription to the Guild. The three main sections of the profession (general practitioners, consultants and specialists, and the public health service) have established, or will shortly establish, separate defence funds, and the Guild will, as and when necessary, receive grants from the separate funds. Individual members of the profession will be asked to contribute to the trust fund for their own section of the profession and not direct to the Guild. Thus no practitioner will be asked to subscribe twice.

Q.—If the Guild has no *separate* policy, income, or membership, what is the function of the local Guild committee and its organizers ?

A.—*To facilitate discussion in small groups, to persuade members of the profession to accept the policy favoured by the majority, and to secure unity during a conflict.*

Q.—Who will decide whether general practitioners are to be asked to resign from the National Health Service ?

A.—The Conference of Local Medical Committees.

The Remuneration Issue

Q.—Is the question of withdrawal an urgent one ?

A.—Yes. The dispute with the Government over general-practitioner remuneration has now dragged on for over two years. It is a claim for an upward adjustment of the Central Pool the size of which was not negotiated before the appointed day. The Government has consistently refused to say what in its view should be the size of the general-practitioner "pool" in order to carry out the Spens recommendations, having regard to the rise in the cost of living since 1939. The British Medical Association has insistently pressed its claim for additional moneys in the "pool," basing its claim on a betterment factor of 70%. Since the cost-of-living figure was assessed by a distinguished economist over a year ago, there has been a further rise in the cost of living. Yet the Ministry, in spite of repeated representations, is unable or unwilling to say what the betterment factor should be to-day, and therefore what should be the correct amount of money in the "pool." The profession's claims have been discussed with the Minister and his officers on many occasions. There has already been one inquiry into general-practitioner incomes. Now there are to be two further inquiries: one into total remuneration received by general practitioners from N.H.S. sources during the year ended March 31, 1950; and a second inquiry into the percentage of income which practitioners pay in practice expenses.

In spite of the further delay these inquiries entail, the Conference of Local Medical Committees in June agreed to await their results. These will be considered by a Special Conference in December. The Conference also decided in June that, if a satisfactory settlement was not reached as a result of these inquiries, practitioners were to be advised to terminate their contracts with local executive councils.

Q.—What is likely to happen to the present dispute ?

A.—Prophecy is dangerous. There is a possibility that the dispute will be referred to arbitration, either under the National Health Service (Amendment) Act, 1949, with the consent of both parties, or compulsorily under the Conditions of Employment and National Arbitration Order, 1940, which is still operative.

But a willingness to resign in certain circumstances is an essential part of the fight.

Collecting and Holding Resignations

Q.—How does the Guild come into all this ?

A.—The General Medical Services Committee at their meeting on September 21 asked the trustees of the Guild to inform every general practitioner in the National Health Service that it is intended in a letter, to be issued not before November 1, to invite practitioners to complete a signed form of resignation from the Service.

Q.—Why was November 1 chosen as a date ?

A.—To allow time for local discussion.

Q.—What will happen to these signed forms of resignation ?

A.—They will be *held* by the honorary secretary of the local Guild committee *pending* a decision by the Special Conference of Local Medical Committees to be held in December on whether these resignations should be handed in to local executive councils.

Q.—What am I committing myself to if I sign this form of resignation ?

A.—The Guild undertakes that the resignations will only be *used*: (1) In connexion with the *present* dispute with the Ministry over the remuneration of general practitioners. (2) If the resignations of not less than 80% of practitioners in the Service are held; with the proviso that, even if the resignations of 80% are obtained, they will be handed in to the local executive council *only* if the Special Conference of Local Medical Committees so decides.

The Guild further undertakes that the resignations will be *destroyed*: (1) If the dispute is satisfactorily settled, or (2) if the Special Conference of Local Medical Committees so decides, or (3) if 80% of resignations are not held, or (4) if at any time the practitioner concerned requests in writing that his resignation form should be destroyed.

Thus every practitioner will know that his undertaking will not be put into effect unless at least 80% of general practitioners have given similar undertakings. There will be every opportunity for local meetings of practitioners before any decision is taken.

General Questions about Withdrawal

Q.—What happens to my compensation if I leave the Service ?

A.—A general practitioner who has established a claim to compensation for the goodwill of his practice in no way prejudices his compensation by temporarily removing his name from the medical list.

Q.—Is my superannuation affected if I resign ?

A.—A practitioner on resigning from the Service does not lose his superannuation rights if he re-enters the Service within 12 months.

Q.—What will happen to essential medical services if general practitioners withdraw from the Service ?

A.—In the event of withdrawal practitioners would, of course, carry on with their work. But as they will no longer be in contract with executive councils, the question of payment of fees would be a matter for arrangement between patient and doctor. It is not recommended that certificates of incapacity should be withheld.

Q.—What about the question of readmission to the medical list if a practitioner leaves the Service as the result of collective decision during the dispute with the Ministry ?

A.—It will be a *sine qua non* of a satisfactory settlement of the dispute that there shall be no disturbance of the practitioner's position on the medical list or lists in which his name previously appeared, including the restoration of his former patients to his list.

Time-table for Action

The trustees of the Guild are confident that you will agree that the time has arrived when strong measures must be taken. The steps necessary to carry out the decisions of the Conference of Local Medical Committees fall into two phases:

From receipt of this letter to November 1 ..	Organization and discussion through local Guild committees and groups.
From November 1, on the issue of further instructions by the trustees ..	Collecting and holding of signed forms of resignation.

You are urged as a first step to attend meetings of your local group of practitioners which are now being arranged by local Guild committees. These meetings will afford an opportunity for frank discussion and enable the trustees to estimate the support they can count on during the second phase of the preparations for withdrawal.

If by any chance a local Guild committee has not yet been appointed for your area, will you please ask the local B.M.A. secretary what is being done in the matter ?

PAY OF MEDICAL OFFICERS IN THE ARMED FORCES

Further representations have been made to the Ministry of Defence. The B.M.A. wrote to the Ministry:

"There is probably no need for me to inform you that the specific exclusion of the medical branches from the pay increases recently announced for the Forces as a whole has had a most depressing effect upon medical officers.

"We find difficulty in explaining to our members how it comes about that, although we took up this matter with you as long ago as March, 1949, it has not proved possible to settle new pay rates for the medical branches with the same speed as new rates appear to have been worked out and announced for the other branches."

The following reply has been received:

"I am sorry that we have not been able to meet your delegation again before now, and that we are still not ready to do so. I can assure you, however, that we are doing our utmost to reach early conclusions on the remuneration of medical officers in the Forces, and we will arrange another meeting with you at the earliest possible date. We hope this will be very soon."

GENERAL MEDICAL AND PHARMACEUTICAL SERVICES: REVISED LIST OF APPLIANCES AND REAGENTS

The Minister of Health, after consultation with the British Medical Association and the Central N.H.S. (Chemist-Contractors) Committee, has decided to add the following to the lists of appliances and reagents which may be prescribed in the National Health Service.

Appliances

Applicators.
Arm slings.
Bandages:
  Cotton or rayon and elastic.
  T shape.
Breast shields.
Connexions.
Funnels.
Perfusion fittings:
  Set for intravenous administration of perfusion fluids.
Pinchcocks.
Sponge rubber.
Urinals, portable.
Urine sugar analysis set.

Reagents

Diagnostic solution-tablets of copper.
Gerhardt's reagent.
Indicators required for measurement of pH of urine.
Litmus papers.
Rothera's reagent.
Strong solution of ammonia.
Urine sugar analysis set.

(This contains: test tube, dropper, colour chart, instruction sheet, and analysis record, with one bottle of 36 diagnostic solution-tablets of copper, in a suitable container. The tablets contain: copper sulphate, anhyd., 0.01875 g.; citric acid, anhyd., 0.3 g.; sod. hydroxide, anhyd., 0.25 g.; sod. bicarbonate, 0.0625 g.; excipient.)

The new provisions come into force on December 1.

HANDBOOK FOR GENERAL PRACTITIONERS

The Ministry of Health has prepared a handbook explaining to general practitioners the provisions of the National Health Service. Copies will be sent to executive councils for distribution. An extra copy will be sent to a doctor who employs an assistant not on the executive council's list.

HEARING OF PUBLIC HEALTH DISPUTE

The Industrial Court began on October 9 to hear the case for improved terms and conditions of service for public health medical officers. The claims had been submitted through the Whitley machinery, but negotiations broke down. Representatives of the staff and management sides of Committee C of the Medical Functional Whitley Council were present at the hearing.

ULSTER CHEMISTS DEFER RESIGNATION

More than 500 chemists in Northern Ireland, who were due to leave the health service on October 1 for reasons similar to those of the Scottish chemists (*Supplement*, September 16, p. 134), have postponed this move for two months, since the threatened 8% reduction of their pay has not been made in the months of July and August, as had previously been expected.

British Medical Association

COUNCIL AND COMMITTEES FOR 1950-1

COUNCIL

Ex Officio

Professor Sir Henry Cohen, Liverpool, *President*.
Dr. E. A. Gregg, London, *Chairman of Council*.
Mr. A. M. A. Moore, London, *Treasurer*.
Dr. J. A. Brown, Birmingham, *Chairman of Representative Body*.
Dr. A. W. S. Sichel, Capetown, South Africa, *President-Elect*.
Dr. C. W. C. Bain, Harrogate, *Immediate Past-President*.
Dr. S. Wand, Birmingham, *Deputy Chairman of Representative Body*.
Dr. T. Rowland Hill, London, *Chairman, Central Consultants and Specialists Committee*.

Thirty-nine Elected by Grouped Branches in Great Britain and Northern Ireland

England and Wales :

Dr. H. Alexander, London.
Dr. J. C. Arthur, Low Fell, Co. Durham.
Dr. Alexander Brown, Linton, Cambs.
Mr. L. Dougal Callander, Doncaster.
Dr. J. Cottrell, Grimsby.
Mr. S. F. L. Dahne, Reading.
Dr. E. C. Dawson, Derby.
Dr. W. E. Dornan, Sheffield.
Dr. D. B. Evans, Wrexham.
Dr. R. Gibson, Winchester.
Dr. H. M. Golding, Bristol.
Mr. A. Staveley Gough, Watford.
Dr. F. Gray, London.
Dr. R. Hale-White, London.
Dr. D. F. Hutchinson, London.
Dr. I. G. Innes, Hull.
Dr. R. P. Liston, Tunbridge Wells.
Mr. Percy Malpas, Liverpool.
Dr. J. I. Milne, Manchester.
Dr. J. A. Moody, Ilford, Essex.
Dr. J. R. Nicholson-Lailey, Taunton.
Mr. D. R. Owen, Chester.
Dr. R. R. Powell, Reigate, Surrey.
Mr. D. S. Pracy, Atherstone, Warwickshire.
Dr. J. O. M. Rees, Guildford.
Dr. F. M. Rose, Preston.
Dr. A. V. Russell, Wolverhampton.
Dr. S. Noy Scott, Plympton, Devon.
Dr. H. H. D. Sutherland, London.
Mr. J. W. Tudor Thomas, Cardiff.
Dr. J. G. Thwaites, Brighton.
Mr. Weldon P. T. Watts, Newcastle-upon-Tyne.
Dr. Angus Weston, Greenford, Middlesex.

Scotland :

Dr. Mary Esslemont, Aberdeen.
Dr. J. G. M. Hamilton, Edinburgh.
Dr. W. Jope, Blantyre, Lanarkshire.
Dr. W. M. Knox, Glasgow.

Northern Ireland :

Dr. N. S. Dickson, Templepatrick, Co. Antrim.
Mr. Ian J. Fraser, Belfast.

Seven Elected by Branches outside Great Britain and Northern Ireland

Professor J. S. English, Newtownards, Co. Down.
Dr. P. C. C. Garnham, Slough, Bucks.
Dr. Isaac Jones, London.
Dr. H. B. Morgan, London.
Dr. P. T. O'Farrell, Dublin.
Mr. J. A. Stallworthy, Oxford.
One vacancy.

Ten Elected by Representatives as a Whole

Mr. A. Lawrence Abel, London.
Dr. O. C. Carter, Bournemouth.
Dr. H. Guy Dain, Birmingham.
Dr. R. Forbes, London.
Dr. J. A. Gorsky, London.
The Rt. Hon. Lord Horder, London.
Dr. J. A. L. Vaughan Jones, Leeds.
Mr. H. H. Langston, Winchester
Dr. J. A. Pridham, Weymouth.
Sir Lionel Whitby, Cambridge.

Two Elected by Representatives of Scottish Constituencies

Dr. Ian D. Grant, Glasgow.
Dr. G. W. Ireland, Ford, Midlothian.

One Elected by Representatives of Constituencies in Wales, including Monmouthshire

Dr. H. R. Frederick, Port Talbot, Glam.

Two Elected by Public Health Service Members

Dr. C. Metcalfe Brown, Manchester.
Dr. J. M. Gibson, Huddersfield.

Three Elected by Representative Body to Represent the Services

Major-General Sir Percy Tomlinson, Hove.
Air Vice-Marshal D'Arcy Power, Kingston Hill, Surrey.
One vacancy.

One Elected by Women Members

Miss Annis Gillie, London.

COMMITTEES

I. STANDING COMMITTEES

(Note.—The President, Chairman of Representative Body, Chairman of Council, and Treasurer are members, *ex officio*, of all Standing Committees.)

AMENDING ACTS COMMITTEE

Mr. A. Lawrence Abel, London.
Dr. A. C. E. Breach, Orpington, Kent.
Dr. H. Guy Dain, Birmingham.
Dr. Mary Esslemont, Aberdeen.
Dr. J. A. Gorsky, London.
Dr. D. F. Hutchinson, London.
Dr. J. A. Moody, Ilford, Essex.
Dr. A. V. Russell, Wolverhampton.
Dr. H. H. D. Sutherland, London.
Dr. E. C. Warner, London.

ARMED FORCES COMMITTEE

Dr. J. L. McCallum, London.
Dr. J. E. Rusby, Leeds.
Mr. Eric Steeler, London.
Dr. Angus Weston, Greenford, Middlesex.
One representative from each of the following: Medical Branch, Royal Navy; Royal Army Medical Corps; and Medical Branch, Royal Air Force.
With power to co-opt one representative from each of the following Services: Royal Naval Medical Service, Royal Army Medical Corps, Royal Air Force Medical Service, Royal Naval Volunteer Reserve, Royal Army Medical Corps (Territorial Army), and Royal Air Force Medical Service (Volunteer Reserve).

CENTRAL CONSULTANTS AND SPECIALISTS COMMITTEE

Members Appointed by Representative Body :

England and Wales: Mr. R. L. Newell, Cheadle, Cheshire; Mr. A. Dickson Wright, London.
Scotland: Dr. Alexander Smith, Stonehouse, Lanarks.
Northern Ireland: Vacancy.

Members Appointed by Council :

Mr. A. Staveley Gough, Watford, Herts.
Dr. S. Cochrane Shanks, London.

Members Appointed by Regional Consultants and Specialists Committees :

Mr. Roy Banham, Northampton.
Dr. W. A. Bourne, Hove.
Mr. G. H. Buckley, Blackpool.
Professor P. C. P. Cloake, Birmingham.
Dr. Beryl D. Corner, Bristol.

Dr. A. A. Cunningham, Kingston-on-Thames, Surrey.
Mr. E. R. Frizelle, Leicester.
Mr. W. H. George, Birmingham.
Mr. H. L. Hardy Greer, Belfast.
Professor S. J. Hartfall, Leeds.
Dr. T. Rowland Hill, London.
Dr. A. W. Holgate, Chester.
Mr. H. H. Langston, Winchester.
Dr. R. D. Lawrence, London.
Dr. R. G. McInnes, Oxford.
Mr. O. E. J. McOustra, Cheltenham.
Mr. P. Malpas, Liverpool.
Dr. Robert Marshall, Belfast.
Dr. J. Murray, Iver Heath, Bucks.
Dr. A. A. McI. Nicol, Sunderland.
Dr. R. A. Noble, Cambridge.
Mr. D. W. C. Northfield, London.
Dr. A. G. Ogilvie, Newcastle-upon-Tyne.
Professor T. H. Oliver, Manchester.
Dr. W. Esmond Rees, Swansea.
Mr. T. Holmes Sellors, London.
Professor G. I. Strachan, Cardiff.
Mr. E. Cowper Tamplin, Southsea.
Mr. J. M. Ridley Thomas, Norwich.
Dr. E. C. Warner, London.
Mr. Donald Watson, Bradford.
Dr. J. Wilkie, Sheffield.

Members Appointed by the Consultants and Specialists Subcommittee of Scottish Committee :

Professor L. J. Davis, Glasgow.
Dr. I. D. Easton, Perth.
Mr. I. Simson Hall, Edinburgh.
Dr. J. G. M. Hamilton, Edinburgh.
Dr. J. B. King, Edinburgh.
Mr. N. J. Logie, Hallyards, by Banchory.
Mr. W. S. Mack, Glasgow.
Mr. T. Murray Newton, Glasgow.
Dr. A. R. Wilson, Inverness.
Dr. J. H. Wright, Glasgow.

Co-opted Member :

Mr. C. E. Kindersley, Bath.

Together with five part-time consultants and specialists; two members appointed by the General Medical Services Committee; one member appointed by each of the following committees: Occupational Health, Public Health, and Private Practice; and one member by each of the following Group Committees: Anaesthetists, Consulting Pathologists, Dermatologists, Non-Professorial, Ophthalmic, Orthopaedic, Otolaryngologists, Physical Medicine, Psychological Medicine, Radiologists, Registrars, Spa Practitioners, Tuberculosis and Diseases of the Chest, and Venereologists.

CENTRAL ETHICAL COMMITTEE

Dr. E. C. Dawson, Derby.
Dr. R. Forbes, London.
Dr. H. R. Frederick, Port Talbot, Glam.
Dr. G. W. Ireland, Ford, Midlothian.
Dr. J. F. Lambie, Glasgow.
Dr. T. W. Morgan, New Malden, Surrey.
Dr. S. Noy Scott, Plympton, Devon.
Dr. H. H. D. Sutherland, London.
Mr. J. W. Tudor Thomas, Cardiff.
Dr. J. G. Thwaites, Brighton.
Mr. N. E. Waterfield, Little Bookham, Surrey.
Dr. F. B. Winfield, Birmingham.

CHARITIES COMMITTEE

Dr. Janet K. Aitken, London.
Dr. Trevor R. Bryant, Tredegar, Mon.
Dr. H. M. Golding, Bristol.
Dr. H. W. Pooler, Ashover, near Chesterfield.
Dr. H. Robinson, Tunbridge Wells.
Dr. N. B. Stewart, Edinburgh.
Dr. N. E. Waterfield, Little Bookham (Representative of Association on Council of Epsom College).
Mr. A. Dickson Wright, London (Representative of Association on Committee of Management of the Royal Medical Benevolent Fund).

COLONIES AND DEPENDENCIES COMMITTEE

Dr. J. Cottrell, Grimsby.
Professor J. S. English, Newtownards, Co. Down.
Dr. P. C. C. Garnham, Slough, Bucks.
Mr. J. L. Gilks, Petersfield, Hants.
Dr. Isaac Jones, London.
Mr. C. F. Mayne, Plymouth.
Dr. H. B. Morgan, London.
Dr. P. T. O'Farrell, Dublin.
Dr. J. B. Wrathall Rowe, Wealdstone, Middlesex.
Mr. J. A. Stallworthy, Oxford.
One vacancy.
One member appointed by the Organization Committee

FINANCE COMMITTEE

The Chairman of the following Committees: Organization, Journal, Science, Private Practice, Central Ethical, General Medical Services, and Building.
Dr. H. Guy Dain, Birmingham.
Dr. T. Gardner, Featherstone, near Pontefract.
Dr. Fenwick Lishman, Bishop Auckland.
Dr. J. O. McDonagh, Stanley, Perth.

GENERAL MEDICAL SERVICES COMMITTEE

Dr. W. Jope, Blantyre, Lanarks (Chairman of Conference of Local Medical Committees).

Six Elected by Representative Body:

Dr. J. Bleakley, Bangor, Co. Down.
Dr. H. Guy Dain, Birmingham.
Dr. H. H. Goodman, Newcastle-upon-Tyne.
Dr. F. Gray, London.
Dr. W. M. Knox, Glasgow.
Dr. S. Wand, Birmingham.

With twenty-seven Direct Representatives of Local Medical Committees in Great Britain and Northern Ireland. Six to be elected by the Annual Conference of Representatives of Local Medical Committees, two nominated by the Central Consultants and Specialists Committee, one nominated by the Medical Women's Federation, one nominated by the Society of Medical Officers of Health, with power to co-opt.

JOURNAL COMMITTEE

Dr. O. C. Carter, Bournemouth.
Dr. Mary Esslemont, Aberdeen.
Dr. J. A. Gorsky, London.
Dr. W. N. Leak, Winsford, Cheshire.
Dr. R. P. St. L. Liston, Tunbridge Wells.
Dr. J. C. Matthews, Downton, Wilts.
Dr. S. Noy Scott, Plympton, Devon.
Dr. R. W. L. Ward, Doncaster.
Chairman of the Central Ethical Committee.
One member appointed by the Organization Committee.
One member appointed by the Science Committee.

OCCUPATIONAL HEALTH COMMITTEE

Dr. H. Alexander, London.
Mr. L. Dougal Callander, Doncaster.
Dr. N. J. Cochran, Burton-on-Trent, Staffs.
Dr. B. Hutchison, Cambuslang, Lanarks.
Dr. J. A. L. Vaughan Jones, Leeds.
Professor R. E. Lane, Manchester.
Dr. J. B. Wrathall Rowe, Wealdstone, Middlesex.
Dr. Donald Stewart, Birmingham.
One member appointed by the following Committees: Private Practice, Central Consultants and Specialists, General Medical Services, Public Health, and Dermatologists Group.
Three members nominated by the Association of Certifying Surgeons.
Four members nominated by the Association of Industrial Medical Officers.
With power to co-opt.

ORGANIZATION COMMITTEE

Dr. H. R. Frederick, Port Talbot, Glam.
Dr. F. Gray, London.
Dr. Kate Harrower, Glasgow.
Dr. I. G. Innes, Hull.
Mr. H. H. Langston, Winchester.
Dr. J. H. E. Moore, Leeds.
Dr. J. A. Pridham, Weymouth.
Dr. F. M. Rose, Preston.
One member appointed by the Colonies and Dependencies Committee.
Chairman of Conference of Honorary Secretaries.

PRIVATE PRACTICE COMMITTEE

Dr. O. C. Carter, Bournemouth.
Dr. Robert Forbes, London.
Dr. H. M. Golding, Bristol.
Dr. E. W. Goodwin, Leicester.

Dr. J. A. Gorsky, London.
Mr. A. Staveley Gough, Watford.
Dr. I. D. Grant, Glasgow.
Dr. Mona Macnaughton, Newcastle-upon-Tyne.
Dr. T. W. Morgan, New Malden, Surrey.
Dr. H. H. D. Sutherland, London.
Dr. C. W. Warner, Liverpool.
Dr. F. B. Winfield, Birmingham.
One member to be appointed by each of the following Committees: Central Consultants and Specialists, Public Health, and General Medical Services.
With power to co-opt.

PUBLIC HEALTH COMMITTEE

Dr. R. Gordon Cooke, Derby.
Dr. H. Guy Dain, Birmingham.
Dr. Mary Esslemont, Aberdeen.
Dr. J. A. Ireland, Shrewsbury.
Dr. J. B. Miller, Bishopbriggs, Lanarkshire.
Mr. D. S. Pracy, Atherstone, Warwickshire.
Dr. J. Riddell, Edinburgh.
Dr. C. O. Stallybrass, Heswall, Cheshire.
Dr. J. A. Stirling, Chesterfield.
Dr. J. B. Tilley, Newcastle-upon-Tyne.
Two members of Council elected by Public Health Service members: Dr. C. Metcalfe Brown, Manchester; Dr. J. M. Gibson, Huddersfield.
Two members nominated by the Society of Medical Officers of Health.
One member appointed by the Private Practice Committee.
One member appointed by the Central Consultants and Specialists Committee.
With power to co-opt three additional members.

SCIENCE COMMITTEE

Mr. A. Lawrence Abel, London.
Dr. Janet K. Aitken, London.
Mr. Hugh Carson, Birmingham.
Professor L. P. Garrod, Harpenden, Herts.
Dr. R. P. Liston, Tunbridge Wells.
Dr. J. C. Macarthur, Carluke, Lanarkshire.
Dr. J. R. Nicholson-Lailey, Taunton.
Mr. L. N. Pyrah, Leeds.
Professor R. J. Willan, London.
Dr. J. C. Matthews, Downton, Wilts.
One member to be appointed by the Journal Committee.

SCOTTISH COMMITTEE

Members of Council:
Dr. Mary Esslemont, Aberdeen.
Dr. Ian D. Grant, Glasgow.
Dr. J. G. M. Hamilton, Edinburgh.
Dr. G. W. Ireland, Ford, Midlothian.
Dr. W. Jope, Blantyre, Lanarkshire.
Dr. W. M. Knox, Glasgow.

Members Elected by Divisions in Scotland:
Dr. J. C. Adam, Forres.
Dr. F. A. Anderson, Stranraer.
Dr. W. D. Anderson, Glasgow.
Dr. J. T. Baldwin, Penicuik.
Dr. R. B. Bell, Alloa.
Dr. W. Gibson, Old Kilpatrick.
Dr. W. Nicol Gray, Helmsdale.
Dr. Kate Harrower, Glasgow.
Dr. J. Wallace Henderson, Renfrew.
Dr. J. M. Johnstone, Leven.
Dr. J. Kelman, Perth.
Dr. D. Dale Logan, Newmains, Lanarkshire.
Dr. K. McLay, Galashiels.
Dr. A. F. Wilkie Millar, Edinburgh.
Dr. D. Myles, Forfar.
Dr. A. Smith Pool, Glasgow.
Dr. R. Richards, Aberdeen.
Dr. D. S. Robertson, Edinburgh.
Dr. R. A. B. Rorie, Dundee.
Dr. A. Scott, Ayr.
Dr. J. G. B. Shand, Cults.
Dr. J. Watson, Thornhill.
Dr. D. C. Wilson, Inverness.
One vacancy.
Together with three representatives of Scottish Royal Medical Corporations.
With power to co-opt not more than three members.

WELSH COMMITTEE

Members of Council Representing Branches in Wales and Monmouthshire:
Dr. D. B. Evans, Wrexham.
Dr. H. R. Frederick, Port Talbot, Glam.
Mr. J. W. Tudor Thomas, Cardiff.

Secretaries of the North Wales and South Wales and Monmouthshire Branches:
Mr. J. T. Rice Edwards, Newport, Mon.
Mr. O. Vaughan Jones, Menai Bridge, Anglesey.

Representatives in Representative Body of Constituencies in Wales, Monmouthshire, and Shropshire:
Dr. Trevor R. Bryant, Tredegar, Mon.
Mr. C. J. Cellan-Jones, Swansea.
Dr. J. F. Clarke, Newtown, Mont.
Dr. T. W. Davies, Swansea.
Mr. J. B. Dobson, Mold, Flints.
Dr. C. E. Harries, Cardiff.
Dr. Wilfred V. Howells, Swansea.
Dr. D. M. Hughes, St. Clears, Carmarthen.
Dr. J. A. Ireland, Shrewsbury.
Dr. A. Maddock Jones, Llandudno.
Dr. J. Griffith Jones, Pontypridd.
Dr. H. C. C. Joyce, Rhiwbina, near Cardiff.
Dr. E. O. Lakey, Rhyl, N. Wales.
Dr. J. O. McCarter, Whitchurch, Salop.
Dr. H. Moffit, Aberdare.
Dr. D. G. Morgan, Cardiff.
Dr. G. P. Williams, Holyhead.
Dr. M. G. Williams, Cardiff.
Dr. Oscar Williams, Llanelly.

II. GROUP COMMITTEES

(NOTE.—One-third of the members of the Group Committees will retire annually by rotation.)

ANAESTHETISTS GROUP COMMITTEE

*Dr. J. F. Bereen, Belfast.
Dr. H. W. Featherstone, Burton-on-Trent.
Dr. A. C. Forrester, Glasgow.
*Dr. T. Cecil Gray, Liverpool.
*Dr. R. P. Harbord, Harrogate.
*Dr. G. S. A. Knowles, London.
Dr. W. Alexander Low, London.
Dr. Z. Mennell, Petworth.
Dr. W. W. Mushin, Cardiff.
Dr. G. Organe, London.
One vacancy.

CONSULTING PATHOLOGISTS GROUP COMMITTEE

Dr. E. N. Allott, Beckenham, Kent.
*Professor D. F. Cappell, Glasgow.
Professor R. Cruickshank, London.
Dr. S. C. Dyke, Wolverhampton.
*Dr. J. D. Allan Gray, London.
Dr. J. G. Greenfield, London.
*Dr. P. Lazarus-Barlow, Hastings.
Dr. W. H. McMenemey, London.
Professor R. J. V. Pulvertaft, London.

DERMATOLOGISTS GROUP COMMITTEE

*Dr. G. W. Bamber, Liverpool.
Dr. R. T. Brain, London.
Dr. F. F. Hellier, Leeds.
Dr. D. Rhys Lewis, Swansea.
*Dr. I. H. McCaw, Belfast.
*Dr. R. M. B. Mackenna, London.
Dr. J. R. Simpson, Exeter.
Dr. J. Ferguson Smith, Glasgow.
Dr. H. J. Wallace, London.
Dr. C. H. Whittle, Cambridge.
Dr. J. E. M. Wigley, London.
Dr. D. I. Williams, London.

FULL-TIME NON-PROFESSORIAL MEDICAL TEACHERS, LABORATORY AND RESEARCH WORKERS GROUP COMMITTEE

Dr. T. Anderson, Glasgow.
Mr. B. N. Brooke, Birmingham.
Dr. J. C. Brundret, Liverpool.
Dr. M. M. Bull, Cambridge.

*Members elected as a result of recent elections.

Dr. H. E. Harding, Sheffield.
Dr. P. D'Arcy Hart, London.
Dr. J. F. Heggie, London.
Dr. M. C. G. Israels, Manchester.
Dr. H. W. Kosterlitz, Aberdeen.
Mr. A. G. R. Lowdon, Edinburgh.
Dr. F. R. Magarey, Cardiff.
Dr. W. R. M. Morton, Belfast.
Dr. C. L. Oakley, Bromley.
Dr. M. R. Pollock, London.
Dr. I. Rannie, Newcastle-upon-Tyne.
Dr. A. H. T. Robb-Smith, Oxford.
Dr. G. R. Tudhope, Dundee.
Dr. Dorothy Woodman, Bristol.
One vacancy.

OPHTHALMIC GROUP COMMITTEE

Dr. H. R. Bickerton, Liverpool.
Mr. N. Cridland, Southsea.
Sir Stewart Duke-Elder, London.
Mr. L. P. J. Evans, Birmingham.
Dr. N. P. R. Galloway, Nottingham.
Dr. R. U. Gillan, London.
*Mr. R. A. Greeves, London.
Dr. J. J. Healy, Llanelly.
*Mr. D. A. Langley, London.
Mr. F. W. Law, London.
Dr. E. G. Mackie, Sheffield.
Dr. J. Marshall, Glasgow.
Mr. O. Gayer Morgan, London.
Dr. V. Purvis, Chesterton, near Bicester.
Mr. A. McK. Reid, Liverpool.
Dr. J. N. Tennent, Glasgow.
Mr. J. W. Tudor Thomas, Cardiff.
Mr. F. O. Walker, Dartford.
Mr. J. R. Wheeler, Belfast.
Together with six members to be appointed by the Council of the Faculty of Ophthalmologists and one member appointed by the General Medical Services Committee.

ORTHOPAEDIC GROUP COMMITTEE

Mr. R. Barnes, Glasgow.
Mr. N. L. Capener, Exeter.
Mr. H. O. Clarke, London.
*Mr. V. H. Ellis, London.
Mr. C. G. Irwin, Newcastle-upon-Tyne.
Mr. S. A. S. Malkin, Nottingham.
Mr. A. B. Pain, Leeds.
*Professor Sir Harry Platt, Manchester.
Mr. Philip Wiles, London.
One vacancy.
President for the time being of British Orthopaedic Association.

OTOLARYNGOLOGISTS GROUP COMMITTEE

Mr. A. D. Bateman, Bath.
Mr. E. D. D. Davis, London.
Mr. R. L. Flett, Derby.
Mr. R. B. Lumsden, Edinburgh.
Dr. J. E. G. McGibbon, Liverpool.
Mr. F. A. MacLaughlin, Belfast.
Mr. R. D. Owen, Cardiff.
Mr. E. Cowper Tamplin, Southsea.
Mr. Donald Watson, Bradford.
Dr. Gavin Young, Glasgow.

PHYSICAL MEDICINE GROUP COMMITTEE

Dr. R. G. Anderson, Cheltenham.
Dr. L. D. Bailey, Northwood.
Dr. P. Bauwens, London.
Dr. F. S. Cooksey, London.
Dr. W. S. C. Copeman, London.
Dr. J. Cowan, Manchester.
Dr. M. H. Jupe, London.
Dr. J. W. T. Patterson, Droitwich.
Dr. W. S. Tegner, London.
Dr. D. Wilson, Bognor.

PSYCHOLOGICAL MEDICINE GROUP COMMITTEE

Dr. N. H. M. Burke, St. Albans.
Professor H. V. Dicks, London.
*Professor D. R. MacCalman, Leeds.
Dr. P. K. McCowan, Dumfries.
*Dr. W. G. Masefield, Eastbourne.
*Dr. Doris Odlum, London.
Dr. J. R. Rees, London.
Dr. T. P. Rees, Warlingham, Surrey.
Professor T. Ferguson Rodger, Glasgow.
Dr. J. Ivison Russell, York.
Dr. W. Rees Thomas, London.

RADIOLOGISTS GROUP COMMITTEE

Dr. G. L. Buckley, Bournemouth.
Dr. J. O. Y. Cole, Londonderry.
Dr. S. Whately Davidson, Newcastle-upon-Tyne.
Dr. J. L. A. Grout, Sheffield.
Dr. R. A. K. Harper, London.
Dr. J. B. King, Edinburgh.
Dr. R. Boulton Myles, Worthing.
Dr. S. D. Scott Park, Glasgow.
Dr. Ralston Paterson, Manchester.
Dr. S. Cochrane Shanks, London.
Dr. J. V. Sparks, Bristol.
Dr. C. G. Teall, Birmingham.
Professor B. W. Windeyer, London.

REGISTRARS GROUP COMMITTEE

Central Group Council to be elected, comprising three members from each hospital region, including one from a teaching hospital and one from a non-teaching hospital.

SPA PRACTITIONERS GROUP COMMITTEE

Dr. R. G. Anderson, Cheltenham.
Dr. J. E. Dawson, Droitwich.
Dr. C. R. Gibson, Bath.
Dr. T. G. Reah, Harrogate.
Dr. R. W. Stewart, Buxton.
Dr. D. Wilson, Bognor Regis.
Dr. W. Yeoman, Harrogate.

TUBERCULOSIS GROUP COMMITTEE

Dr. C. K. Cullen, London.
Dr. T. W. Davies, Swansea.
Dr. P. W. Edwards, Market Drayton, Salop.
Dr. J. E. Geddes, Birmingham.
Dr. F. Hall, Preston.
Dr. R. Y. Keers, Tor-Na-Dee, Aberdeenshire.
Dr. H. Ramsay, Theydon Bois, Essex.
Dr. F. Ridehalgh, Leeds.
Mr. T. Holmes Sellors, London.
Dr. W. H. Tattersall, Reading.
Dr. H. G. Trayer, Manchester.
Dr. J. Norris Whyte, Co. Antrim.

VENEREOLOGISTS GROUP COMMITTEE

*Dr. D. J. Campbell, Sheffield.
Dr. A. H. Harkness, London.
Colonel L. W. Harrison, London.
Mr. A. J. King, London.
Dr. S. M. Laird, Ipswich.
Dr. R. Lees, Manchester.
*Dr. W. N. Mascall, London.
Dr. A. E. W. McLachlan, Bristol.
*Dr. I. N. Orpwood Price, London.
*Dr. Mary Michael Shaw, London.
Dr. C. H. Wilkie, Leicester.
One vacancy.

III. OTHER COMMITTEES

ADVISORY COMMITTEE RE SALARIES OF WHOLE-TIME PUBLIC HEALTH MEDICAL OFFICERS

Dr. C. Metcalfe Brown, Manchester.
Dr. R. G. Cooke, Derby.
Dr. J. M. Gibson, Huddersfield.
Dr. F. Gray, London.
Dr. F. Hall, St. Annes-on-Sea.
Dr. Jean Mackintosh, Birmingham.
Dr. J. A. Stirling, Chesterfield.
Dr. Charles Hill.

REPRESENTATIVE BODY AGENDA COMMITTEE

Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Dr. S. Wand, Birmingham (*Deputy Chairman of Representative Body*).
Dr. A. Beauchamp, Solihull, Warwicks.

*Members elected as a result of recent elections.

Dr. Walter Jope, Blantyre, Lanarkshire.
Dr. R. Cove Smith, London.
Dr. W. Woolley, Bristol.

SPECIAL ARRANGEMENTS COMMITTEE FOR ANNUAL MEETING, 1951

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. C. W. C. Bain, Harrogate (*Immediate Past-President*).
Dr. E. R. Cullinan, London.
The Rt. Hon. Lord Horder, London.
Mr. R. H. Maingot, London.
Sir Heneage Ogilvie, London.
Mr. C. D. Read, London.
Chairmen of the following Committees: Science, Central Consultants and Specialists, General Medical Services, and Public Health.
With power to co-opt.

BUILDING COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. Alexander Brown, Linton, Cambs.
Mr. L. Dougal Callander, Doncaster.
Dr. O. C. Carter, Bournemouth.
Dr. H. Guy Dain, Birmingham.
Dr. P. J. Gibbons, Liverpool.
Miss Annis Gillie, London.
Dr. D. F. Hutchinson, London.
Dr. J. A. Moody, Ilford, Essex.
Dr. J. G. Thwaites, Brighton.
Dr. H. Vickers, Uxbridge.

COMMITTEE ON THE ASSOCIATION OF THE GENERAL PRACTITIONER WITH HOSPITAL WORK

Three representatives appointed by each of the following Committees: Health Centre, Private Practice, Public Health, and General Medical Services.
Six representatives appointed by the Central Consultants and Specialists Committee.

COMMITTEE ON CO-ORDINATION OF POLICY RE REMUNERATION

Chairmen or nominees of the General Medical Services, Private Practice, Public Health, Central Consultants and Specialists, Occupational Health, and Scottish Committees.
Dr. E. A. Gregg, London (*Chairman of Council*).

COMPENSATION AND SUPERANNUATION COMMITTEE

Three members to be appointed by the General Medical Services Committee.
Three members to be appointed by the Public Health Committee.
Three members to be appointed by the Central Consultants and Specialists Committee.

FILM COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Mr. A. Lawrence Abel, London.
Sir Alexander Biggam, Edinburgh.
Mr. V. Zachary Cope, London.
Dr. J. Cottrell, Grimsby.
Dr. P. Hansell, London.
Professor H. R. Hewer, London.
Dr. R. P. Liston, Tunbridge Wells.
Professor G. P. Meredith, Leeds.
Dr. R. G. W. Ollerenshaw, Manchester.
Dr. P. Phillips, Bristol.
Mr. H. Reid, Liverpool.
Dr. J. B. Wrathall Rowe, Wealdstone, Middlesex.
Dr. C. M. Seward, Exeter.
Dr. Angus Weston, Greenford, Middlesex.
Mr. A. Dickson Wright, London.
Chairman or nominee of the Science Committee, together with two representatives of the B.M.S.A.

GENERAL PRACTICE REVIEW COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. H. Alexander, London.
Dr. G. O. Barber, Great Dunmow, Essex.
Dr. L. W. Batten, London.
Dr. Alexander Brown, Linton, Cambs.
Mr. V. Zachary Cope, London.
Dr. H. Guy Dain, Birmingham.
Dr. N. S. Dickson, Templepatrick, Co. Antrim.
Dr. H. R. Frederick, Port Talbot, Glam.
Miss Annis Gillie, London.
Mr. A. Staveley Gough, Watford.
Dr. Ian D. Grant, Glasgow.
Dr. D. M. Hughes, St. Clears, Carmarthen.
Dr. G. W. Ireland, Ford, Midlothian.
Dr. J. A. L. Vaughan Jones, Leeds.
Dr. W. Jope, High Blantyre, Lanarkshire.
Professor Hilda N. Lloyd, Birmingham.
Dr. J. I. Milne, Manchester.
Dr. R. R. Powell, Reigate, Surrey.
Dr. J. O. M. Rees, Guildford, Surrey.
Dr. J. Revans, Southampton.
Dr. A. T. Rogers, Bromley.
Dr. J. A. Stirling, Chesterfield.
Dr. J. G. Thwaites, Brighton.
Dr. C. W. Walker, Cambridge.
Dr. S. Wand, Birmingham.

HEALTH CENTRE COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*)
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. G. O. Barber, Great Dunmow, Essex.
Dr. A. Beauchamp, Solihull, Warwicks.
Professor J. S. English, Newtownards, Co. Down.
Dr. P. J. Gibbons, Liverpool.
Miss Annis Gillie, London.
Mr. A. Staveley Gough, Watford.
Dr. F. Gray, London.
Dr. D. F. Hutchinson, London.
Dr. C. F. R. Killick, Williton, Somerset.
Mr. G. Lowe, Tiverton, Devon.
Dr. G. MacFeat, Douglas, Lanarkshire.
Dr. T. W. Morgan, New Malden, Surrey.
Mr. D. R. Owen, Chester.
Sir Arthur Porritt, London.
Dr. A. Talbot Rogers, Bromley, Kent.
Dr. J. A. Scott, London.
Dr. H. R. Youngman, Cambridge.
Dr. J. Yule, Stockport.
Together with a representative of the General Medical Services Committee and observers of the Ministry of Health.

INTERNATIONAL RELATIONS COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Mr. A. Lawrence Abel, London.
Dr. J. Clayre, Southampton.
Dr. Alfred Cox, London.
Dr. H. Guy Dain, Birmingham.
Dr. S. C. Dyke, Wolverhampton.
Dr. J. C. Matthews, Downton, Wilts.
Dr. G. de Swiet, London.
Chairmen or nominees of the Organization, Journal, Science, General Medical Services, and Colonies and Dependencies Committees, Chairman or nominee of the Committee of Management of the Empire Medical Advisory Bureau, together with a representative of the British Council and of the B.M.S.A.

COMMITTEE ON NUTRITION

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Mrs. M. C. Bowley, Harpenden, Herts.
Dr. G. F. Buchan, London.
Dr. Harriette Chick, Cambridge.

Professor S. J. Cowell, London.
Professor G. P. Crowden, London.
Sir Jack Drummond, Nottingham.
Professor R. W. B. Ellis, Edinburgh.
Mrs. E. Hedley-Prole, London.
The Rt. Hon. Lord Horder, London.
Dr. F. Avery Jones, London.
Dr. Jean Mackintosh, Birmingham.
Professor J. R. Marrack, London.
Professor V. H. Mottram, Shaftesbury, Dorset.
Dr. R. A. Murray Scott, Leeds.
Dr. H. M. Sinclair, Oxford.
Dr. R. E. Smith, Rugby.
Dr. Donald Stewart, Birmingham.
Dr. J. G. Thwaites, Brighton.
Professor John Yudkin, London.
Together with one representative from the Ministry of Health as an observer, with power to co-opt four.

COMMITTEE ON ORGANIZATION OF SCIENTIFIC SECTIONS AT ANNUAL MEETINGS

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Mr A. Lawrence Abel, London.
Professor L. P. Garrod, Harpenden, Herts.
Professor Sir James Spence, Newcastle-upon-Tyne.
Dr. J. G. Thwaites, Brighton.
Dr. J. V. Wilson, Harrogate.
With power to co-opt.

PARLIAMENTARY ELECTIONS COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. S. F. L. Dahne, Reading.
Dr. H. Guy Dain, Birmingham.
Dr. H. R. Frederick, Fort Talbot, Glam.
Dr. F. Gray, London.
Dr. J. G. Thwaites, Brighton.
Dr. S. Wand, Birmingham.
Representative of the Medical Women's Federation.

JOINT COMMITTEE ON FEES FOR PART-TIME WORK UNDER LOCAL AUTHORITIES

Three members to be appointed by the Central Consultants and Specialists Committee.
Three members to be appointed by the Private Practice Committee.
Three members to be appointed by the Public Health Committee.

PUBLIC RELATIONS COMMITTEE

Dr. E. A. Gregg, London (*Chairman of Council*).
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. H. Guy Dain, Birmingham.
Dr. C. Metcalfe Brown, Manchester (or nominee).
Dr. F. Gray, London.
Dr. W. M. Knox, Glasgow.
Six representatives to be appointed by the General Medical Services Committee.

COMMITTEE ON SALARIES OF MEDICALLY QUALIFIED TEACHERS, ETC.

Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. Janet K. Aitken, London.
Dr. James Fenton, London.
Professor A. C. Frazer, Birmingham.
Dr. G. W. Harris, Cambridge.
Professor A. St. G. Huggett, London.
Dr. M. C. G. Israels, Manchester.
Dr. I. Rannie, Newcastle-upon-Tyne.
Dr. S. Cochrane Shanks, London.
Sir Lionel Whitby, Cambridge.
Together with a representative of the Staff of the Medical Research Council.

COMMITTEE RE REPORT ON SPA TREATMENT

Dr. R. G. Anderson, Cheltenham.
Dr. C. W. Buckley, Ashbourne, Derbyshire.
Professor Sir Henry Cohen, Liverpool.
Dr. J. E. Dawson, Droitwich.
Dr. C. R. Gibson, Bath.
Professor S. J. Hartfall, Leeds.
The Rt. Hon. Lord Horder, London.
Dr. G. D. Kersley, Bath.
Dr. T. G. Reah, Harrogate.
Dr. F. A. Smorfitt, Southam, Warwicks.
Dr. R. W. Stewart, Buxton.
Dr. D. F. Whitaker, Guildford.
Dr. D. Wilson, Bognor Regis.
Dr. H. Barbara Woodhouse, Stanmore, Middlesex.
Dr. W. Yeoman, Harrogate.
Together with Ministry of Health observers.

WAR MEMORIAL COMMITTEE

Professor Sir Henry Cohen, Liverpool (*President*).
Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. J. A. Brown, Birmingham (*Chairman of Representative Body*).
Mr. A. M. A. Moore, London (*Treasurer*).
Dr. H. Guy Dain, Birmingham.
Together with the chairmen or nominees of the Building, Armed Forces, Charities, and Organizations Committees.
With power to co-opt.

COMMITTEE ON PSYCHIATRY AND THE LAW

Dr. F. Bodman, Bristol.
Dr. Denis Carroll, London.
Dr. Hermann Mannheim, London.
Mr. Claud Mullins, Petworth, Sussex.
Dr. Doris Odlum, London.
Dr. T. P. Rees, Warlingham, Surrey
Dr. J. G. Thwaites, Brighton.
With representatives of the Magistrates' Association.

JOINT COMMITTEE OF B.M.A. WITH PHARMACEUTICAL SOCIETY

Dr. E. A. Gregg, London (*Chairman of Council*).
Three members appointed by the Private Practice Committee.
Three members appointed by the General Medical Services Committee.
One member appointed by the Scottish Committee.
Chairman or nominee of the Central Ethical Committee.
Together with representatives of the Pharmaceutical Society.

B.M.A. AND ROYAL COLLEGE OF NURSING LIAISON COMMITTEE

Dr. E. A. Gregg, London (*Chairman of Council*).
Dr. Mary Esslemont, Aberdeen.
Mr. A. Staveley Gough, Watford.
Dr. H. Joules, London.
Mr. M. P. Reddington, London.
Chairmen or nominees of the Central Consultants and Specialists, Private Practice, Central Ethical, Occupational Health, and Public Health Committees.

JOINT COMMITTEE OF B.M.A. AND T.U.C.

Eight members to be selected for any meeting from the following panel:
Mr. A. Lawrence Abel, London.
Dr. H. Alexander, London.
Dr. C. Metcalfe Browne, Manchester.
Dr. J. Cottrell, Grimsby.
Dr. H. Guy Dain, Birmingham.
Dr. Ian D. Grant, Glasgow.
Dr. F. Gray, London.
Dr. E. A. Gregg, London.
Dr. H. F. Hollis, Leeds.
Dr. J. A. L. Vaughan Jones, Leeds.
Professor R. E. Lane, Manchester.
Mr. R. L. Newell, Cheadle, Cheshire.
Dr. R. Nightingale, Stockport.
Dr. Donald Stewart, Birmingham.
Mr. J. W. Tudor Thomas, Cardiff.
Dr. S. Wand, Birmingham.

JOINT FORMULARY COMMITTEE OF B.M.A. AND PHARMACEUTICAL SOCIETY

Four members to be appointed by the General Medical Services Committee.
Two members to be appointed by the Central Consultants and Specialists Committee.
Two members to be appointed by the Science Committee.
Two members to be appointed by the Royal College of Physicians.
Together with representatives of the Ministry of Health.
With power to co-opt.

THE S.H.M.O. GRADE

The following circular has been sent by the Ministry of Health to hospital boards:

Senior Hospital Medical Officers†

The extent to which the medical establishments of hospitals should include senior hospital medical officer posts has been discussed with the profession, and the following paragraphs embody the agreement which has been reached in the fields in which such posts are appropriate.

Future Appointments to Established Consultant Posts

Consultant posts in the medical establishments of hospitals should not be filled by senior hospital medical officers except where, after advertisement, no candidate applies who is regarded as of consultant status by the appropriate Advisory Appointments Committee, but the post cannot be left vacant if the essential needs of the service are to be met.

In these exceptional circumstances, a board should not offer the vacant appointment to one of the applicants as a senior hospital medical officer post, but should take the following steps:

(*a*) consider whether by a rearrangement of the duties of the appointment the field of applicants of consultant status could be extended;

(*b*) if this course is not practicable or fails to attract candidates of consultant status, the vacancy may be readvertised as a senior hospital medical officer post.

Appointment of Part-time General Practitioner to S.H.M.O. Posts

Boards should not overlook the possibility that in some specialties general practitioners may be qualified for part-time appointments on the senior hospital medical officer scale—for instance, as assistant anaesthetists, assistant geriatricians, assistant paediatricians, or as medical officers in charge of small infectious diseases hospitals.

Revision of Establishments: Effect on Existing Officers

Boards should now proceed to revise their establishments, making proper provision for senior hospital medical officer posts in accordance with the principles set out below. Any such revision should not, however, be allowed to affect the personal status of the officers at present holding a post the status of which is changed as a result of the revision. This means that practitioners personally graded as senior hospital medical officers who are holding consultant posts or those personally graded as consultants holding posts which become senior hospital medical officer posts should retain their present personal status. When such a post becomes vacant, however, it should be advertised with its revised status, and a new appointment made in accordance with the grading of the post.

*Specialties in Which Establishments Should Not Provide for Senior Hospital Medical Officer Posts, Except in the Circumstances Set out Below (Such Specialties Being Marked *)*

* Anaesthetics. General medicine. General surgery (including urology, proctology, *orthopaedics, and *ophthalmology). Obstetrics and gynaecology (practised together). Cardiology. Dermatology. Otolaryngology. Neurology. Neurosurgery. *Paediatrics. *Pathology. *Psychiatry and mental deficiency. Plastic surgery. *Radiology. Thoracic surgery.

Specialties in Which Establishments May Provide for Senior Hospital Medical Officer Posts

These specialties are set out in alphabetical order, specifying in each case the type or types of appointment for which senior hospital medical officer posts are appropriate.

Blood Transfusion.—Posts below that of director of regional blood transfusion service.

Diseases of the Chest.—Posts in a restricted part of this field—e.g., limited to routine tuberculosis dispensary work only; posts as medical officers of sanatoria either in charge of small units or below the rank of superintendent in charge; and posts as assistant to a consultant in charge.

Geriatrics.—Posts below the rank of head of a large department; and other posts where the scope for investigation and active treatment or the clinical responsibility is insufficient to justify consultant status.

Infectious Diseases.—Medical superintendents of small hospitals; at other hospitals posts below that rank.

Obstetrics (practised alone).—(1) Posts at antenatal and post-natal clinics. (2) Posts in maternity departments which are under the general supervision of a consultant.

Ophthalmology.—Posts primarily concerned with non-operative work—e.g., refraction.

Orthopaedics.—Posts primarily concerned with non-operative work.

Paediatrics.—Posts at welfare centres and other posts primarily concerned with child welfare.

Physical Medicine.—Post of officer in charge of a small clinic; in large departments posts other than head of the department.

Psychiatry and Mental Deficiency.—(1) Posts of medical superintendent of small institutions; at larger mental institutions some posts below that rank. (2) Posts primarily concerned with limited fields of psychiatry.

Venereal Disease.—As for Physical Medicine.

Specialties in Which Establishments May Provide for Assistantships to Consultants Remunerated on the S.H.M.O. Scale

Anaesthetics.—Hospital establishments should include an adequate complement of widely experienced anaesthetists of consultant status (vide paragraphs 79 to 81 of the pamphlet "Development of Consultant Services"). In addition to this complement of consultants and to trainees, there will often be a need in some hospitals for assistant anaesthetists remunerated on the senior hospital medical officer scale.

Pathology.—The staff of a pathological department should consist of consultants and trainees as appropriate, with a limited field for the appointment of assistant pathologists remunerated on the senior hospital medical officer scale. The complement of consultants must depend on the size of the department, but, in any event, where there are separate sections each in the charge of a pathologist under the general control of the head of the department—e.g., morbid anatomy, biochemistry, haematology, bacteriology, blood transfusion—each should be of consultant status.

Radiology and Radiotherapy.—The establishment of radiodiagnostic or radiotherapeutic departments should include at least one practitioner of consultant status with trainees as appropriate. Where the complement of consultants and trainees is not sufficient to deal with the work of the department, it may be necessary to appoint assistant radiologists of narrower training and with more limited responsibility than the consultant, remunerated on the senior hospital medical officer scale.

Specialties not Mentioned Above.—Boards should not establish any consultant or S.H.M.O. post in a specialty not mentioned above without the approval of the Ministry.

† It should be made clear that, although the term "senior hospital medical officer" is used here and elsewhere as a convenient phrase for identifying and describing a particular grade and salary scale, there is every advantage (provided the grade is made clear) in describing the posts concerned in terms of the specialty involved—e.g., assistant anaesthetist, assistant paediatrician, etc.

ANNUAL CONFERENCE OF REPRESENTATIVES OF LOCAL MEDICAL COMMITTEES

MOTIONS AND AMENDMENTS FROM LOCAL MEDICAL COMMITTEES

Remuneration

MOTION by Middlesex: That this Conference instructs the General Medical Services Committee to request the British Medical Guild to arrange to collect signed resignations forthwith.

MOTION by Buckinghamshire: That this Conference is of the opinion that a more equable distribution of the Practitioners' Fund would result if the capitation fees for that part of a practitioner's list between 500 and 1,500 were loaded, and instructs the General Medical Services Committee to give careful consideration to this opinion and empowers the Committee to act thereon without a further reference to the Conference.

MOTION by Wolverhampton: That this Conference urges the General Medical Services Committee that, in reaching any agreement on arbitration, it should use its best endeavours to ensure that the court is in fact independent.

Mileage

AMENDMENT by Berkshire: That this Conference considers the mileage fee for rural practitioners is still inadequate.

AMENDMENT by Oxfordshire and Oxford: That this Conference expresses dissatisfaction with the amount of mileage remuneration, and instructs the G.M.S. Committee to press for a mileage "pool" of £10,000,000, in which all practitioners shall participate if they have patients beyond two miles from their surgeries.

Basic Salary

MOTION by Gateshead: That this Conference endorses the Committee's view that appeals against the non-award of basic salary shall be addressed to the Medical Practices Committee and not to the Minister of Health, and instructs the Committee to continue to press this point.

Maternity Medical Services

AMENDMENT by Worcester City: That it is the opinion of the Conference that the sending by post to the patient of a request to attend by appointment should be deemed to constitute a serious attempt to carry out a post-natal examination.

MOTION by Middlesex: That this Conference is of the opinion that maternity cases should be accepted at clinics or hospitals only on the recommendation of the general practitioner.

General Practitioners and Hospital Maternity Units

MOTION by Newcastle-upon-Tyne: That more beds should be made available in hospital maternity units for general-practitioner obstetricians.

Maternity Medical Services—Range of Treatment

AMENDMENT by Middlesex: That this Conference does not accept the view of the Ministry as stated in paragraph 52, and instructs the General Medical Services Committee to press for a special fee for circumcision.

Mileage in Maternity Cases

AMENDMENT by Bedfordshire: That in mileage areas the payment for mileage should be 3s. per outward mile in excess of two miles in all maternity cases irrespective of whether the full service, Part I, Part II, or any lesser service is given.

Constitution and Procedure of Medical Service Committees

AMENDMENT by Gateshead: That with reference to paragraph 74 of the Committee's report, where an inquiry by the Medical Service Committee is deemed necessary, such inquiry shall be held within three months from the date on which the complaint is lodged.

Publicity for Disciplinary Cases

AMENDMENT by Worcester City: That this Conference considers that the Ministry's reply on the subject of publicity in disciplinary proceedings is unsatisfactory, and requests the General Medical Services Committee to press further for the exclusion of the doctor's name from the published decision of the tribunal.

Co-operation Between Hospital and General-practitioner Services

MOTION by York: That this Conference views with grave concern the absence of co-operation between the regional hospital boards and the general-practitioner service, and strongly urges the General Medical Services Committee to take steps to remedy this unsatisfactory state of affairs.

Remuneration of General Practitioners on the Staffs of Cottage Hospitals

MOTION by Durham: That this Conference is of opinion that the remuneration of general practitioners on the staffs of cottage hospitals with large out-patient departments should include a payment, as provided for in paragraph 10 (*b*) of the Terms and Conditions of Service for hospital medical and dental staff (England and Wales), in addition to the normal remuneration based upon the number of occupied beds.

Specially Expensive Drugs

MOTION by Worcester City: That *all* types of supporting and corrective pessaries should be added to the list of specially expensive appliances for the supply of which dispensing doctors paid by capitation fee may receive payment over and above such fee.

List of Appliances

MOTION by Worcester City: That *all* types of supporting and corrective pessaries should be added to the list of appliances which general practitioners can prescribe for their patients.

Trainee Assistants

MOTION by Lancashire: That this Conference deplores the continuation of the Trainee Assistant Scheme, and instructs the General Medical Services Committee to secure its abolition.

Fees for Dental Anaesthetics

AMENDMENT by Worcester City: That this Conference is of the opinion that practitioners called upon to administer anaesthetics for dentists should insist upon receiving the full fee laid down in the Regulations prior to the recent cut in dentists' remuneration.

Frivolous and Unjustified Emergency Calls

MOTION by Gateshead: That, with reference to paragraph 163 of the Committee's report, the attention of the meeting be drawn to the fact that, up to the present, all Government propaganda has urged the public to make more use of the doctor and not less.

MOTION by Middlesex: That this Conference instructs the General Medical Services Committee to demand from the Ministry the formulation of rules for patients to prevent frivolous calls on the services of general practitioners and that these rules be printed on the Medical Card.

Reinstatement of Demobilized Service Personnel in Doctors' Lists

AMENDMENT by Middlesex: That this Conference does not accept the Ministry's statement, and urges the General Medical Services Committee to take this matter up again.

School Health Service and the General Practitioner

AMENDMENT by Middlesex: That under no circumstances should a local health authority medical officer refer a school-child to any specialist (other than for ophthalmic examination) unless requested (in writing) to do so by the child's family doctor.

Aftercare

AMENDMENT by Middlesex: That this Conference considers the present system whereby health visitors attend mothers, children, and others without the knowledge of the family doctor to be against the best interests of the persons visited.

Arrangements for Practice in a National Emergency

MOTION by Hampshire: That this Conference is concerned about the calling up of doctors in the event of hostilities, and urges the General Medical Services Committee to arrange with the appropriate authority that the doctors who are on the Reserve by reason of their having served in the last war are not called up at once, to the detriment of their practice, pending the call-up of other medical men.

MOTION by Hampshire: That this Conference instructs the General Medical Services Committee to arrange with the Ministry that in the event of war all medical practitioners engaging in practice in an area other than their own shall automatically be placed on a special list of the executive council of that area. The executive council shall have power to remove their names from its list at the end of hostilities.

Superannuation

MOTION by Bedfordshire: That when a practitioner retires or dies before becoming entitled to superannuation the Government contributions of 8% plus interest should be paid to the practitioner or his personal representative in addition to his own contributions of 6% plus interest.

MOTION by Lancashire: That the method of calculating the superannuation to which a doctor becomes entitled should ensure that there is no reduction of the amount of the superannuation by reason only of the employment of an assistant.

Financial Position of Elderly Practitioners

MOTION by Cambridgeshire: that the attention of this Conference is drawn to the plight of many elderly practitioners who are unable to retire on account of financial stringency; and that approach be made to the Minister of Health to investigate the possibility of financial aid for these practitioners to enable them to retire.

Compensation

MOTION by Hampshire: That this Conference, seriously disturbed at the continued delay in fixing the amount of compensation payable to individual doctors for their practice, recommends that an adequate sum from the Compensation Fund be set aside to meet the claims not yet agreed. The balance, to be divided among the agreed claims, would raise considerably the compensation value of their practices, which up to now has been arbitrarily fixed at one year.

MOTION by Isle of Wight: That the amount of repayment of capital value of practice payable on retirement be subject to increment or decrement according to the then value of the £ relative to the £ in 1948.

Appointment of Part-time Regional Medical Officers

MOTION by Bristol: That appointments of part-time regional medical officers shall be made only after consultation with local medical committees in the area, as is the case with appointments of part-time regional medical officers of the Ministry of National Insurance and the Ministry of Labour and National Service.

Prescribing and Dispensing—Dispensing Capitation Fee

MOTION by Durham: That this Conference begs to draw the attention of the Minister to the very great discrepancy between the sum of 6s. 6d. per annum (plus special drug payment) per patient granted to dispensing practitioners for the supply of drugs and the sum of 15s., which is the appropriate cost to the Exchequer of supplying drugs to each prescribing patient.

Status of General Practitioners

MOTION by East Riding of Yorkshire: That in any negotiations with the Minister it should be impressed on him that the dissatisfaction of the profession with the National Health Service is not limited to the question of remuneration, but also includes the conditions of service and the tendency to lower the status of the general practitioner.

Removal of Names from Doctors' Lists

MOTION by East Sussex: That this Conference requests the General Medical Services Committee to make representations to the Minister with a view to obtaining the amendment of Form E.C.22A in order to include the information which was contained in National Health Insurance Form G.P.34 (Green), thereby enabling a practitioner to know when a patient has transferred to another practitioner in the neighbourhood of his practice.

Alteration of Terms of Service

MOTION by Berkshire: That it is desirable that the General Medical Services Committee should consult local medical committees in all cases before agreeing to changes in or additions to regulations affecting general practitioners.

Appreciation of Work of G.M.S. Committee

MOTION by Buckinghamshire: That this Conference is impressed by the immense field of work which has been covered in the past year by the G.M.S. Committee and expresses its appreciation of the results so far obtained. It wishes to place on record that the efforts of the committee are steadily improving the working of the National Health Service.

MOTION by Devon and Exeter: That this Conference congratulates the General Medical Services Committee on the vast amount of work which it has achieved during the last year and on the success which has crowned its efforts in so many of the problems which it has tackled.

Secretaryship of G.M.S. Committee

MOTION by Wolverhampton: That this Conference considers that it is absolutely essential, in view of the approaching conflict, that the secretary of the General Medical Services Committee should have ample G.P. experience.

H.M. Forces Appointments

ARMY

Colonel W. C. Mackinnon, late R.A.M.C., having reached the age limit for retirement, has been retained on the Active List supernumerary to establishment.

Lieutenant-Colonel W. G. S. Foster, O.B.E., from R.A.M.C., to be Colonel.

ROYAL ARMY MEDICAL CORPS

Major W. Stewart, M.B.E., to be Lieutenant-Colonel.

Captains J. P. Scrivener, M.B.E., and H. D. G. Hetherington to be Majors.

War Substantive Captain A. C. Byles has relinquished his commission and has been granted the honorary rank of Major.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Major F. G. L. Dawson, having attained the age limit of liability to recall, has ceased to belong to the Regular Army Reserve of Officers.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonels (acting Colonels) G. E. Parker, D.S.O., F. R. Langmaid, O.B.E., T.D., and H. Sissons, O.B.E., T.D., to be Colonels.

Major (acting Colonel) W. H. D. Patterson, T.D., to be Colonel.

Lieutenant-Colonel G. Rigby-Jones, M.C., to be acting Colonel.

Lieutenant-Colonel H. J. Croot has resigned his commission.

Majors (acting Lieutenant-Colonels) R. Passmore, P. G. McGrath, M. J. Lindsey, M.C., F. J. Manning, T.D., W. D. F. Lytle, O.B.E., M. W. Gonin, D.S.O., T.D., and J. Smith, O.B.E., T.D., to be Lieutenant-Colonels.

Majors C. J. Wells, M.B.E., C. Berens, and J. R. Macintyre to be acting Lieutenant-Colonels.

Captains (acting Majors) D. T. Rowlands and C. S. McKendrick to be acting Lieutenant-Colonels.

Captains P. B. Williams and M. C. L. Smith, M.C., to be Majors.

COLONIAL MEDICAL SERVICE

The following appointments have been announced: E. J. Bury, M.R.C.S., L.R.C.P., D.P.H., D.T.M.&H., Director of Medical Services, Gambia; G. I. Shaw, M.M., M.B., Ch.B., D.P.H., D.T.M.&H., Deputy Director of Health Services, Hong Kong; G. B. Smart, M.B., F.R.F.P.S., D.P.H., D.T.M.&H., Pathologist, Hong Kong; K. H. Uttley, M.D., D.T.M.&H., Deputy Director of Medical Services, Hong Kong; K. C. Yeo, M.D., D.P.H., D.T.M.&H., Deputy Director of Medical and Health Services, Hong Kong; C. R. Subryan, M.B., D.P.H., Deputy Director of Medical Services (Health), British Guiana; W. G. L. Allan, M.B., Medical Officer, Tanganyika; K. W. Blaikie, M.B., Medical Officer, Uganda; S. G. Cowper, B.S., Ph.D., D.T.M., Pathologist, Mauritius; C. E. Gorrod, M.B., Ch.B., D.P.H., Medical Officer of Health, Kenya.

1	Wed.	**Council**, 10 a.m.

Branch and Division Meetings to be Held

CHESTERFIELD DIVISION.—At Chesterfield Royal Hospital, Friday, October 13, 8.45 p.m., presidential address by Dr. R. R. Lane: "Some Reflections on General Practice."

GREENWICH AND DEPTFORD DIVISION.—At Miller Hospital, Greenwich High Road, London, S.E., Friday, October 20, 8.45 p.m., meeting.

LEWISHAM DIVISION.—At Miller Hospital, Greenwich High Road, London, S.E., Friday, October 20, 8.45 p.m., joint meeting with Greenwich and Deptford, and Woolwich Divisions.

NORTH OF ENGLAND BRANCH.—At New Lecture Theatre, Royal Victoria Infirmary, Newcastle-upon-Tyne, Thursday, October 19, 7.15 p.m., clinical demonstration by Mr. F. Braithwaite: "Some Principles of Plastic Surgery"; 8.45 p.m., address by Mr. L. W. Plewes: "Hand and Finger Infections."

OLDHAM DIVISION.—At Oldham Hotel, Rhodes Bank, Oldham, Monday, October 16, 9 p.m., Professor Wilfrid Gaisford (Manchester): "Infections in Children."

STRATFORD DIVISION.—At Queen Mary's Hospital for the East End, West Ham Lane, Stratford, London, E., Tuesday, October 17, 8.30 p.m., clinical meeting.

SWANSEA DIVISION.—At Swansea General Hospital, Thursday, October 19, 8 p.m., clinical meeting.

SWINDON DIVISION.—At Goddard Arms, Swindon, Wednesday, October 18, 7.30 for 8 p.m., dinner. Address by Dr. Keith Simpson: "Crime and the Doctor."

British Medical Guild Meetings to be Held

CHELSEA AND FULHAM DIVISION.—At Fulham Town Hall, London, S.W., Friday, October 20, 8.45 p.m.

ISLE OF WIGHT.—At Whitecroft Hospital, Newport, Isle of Wight, Sunday, October 15, 11.30 a.m., formation of local Guild Committee, etc. All Island medical practitioners are invited to attend.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 21 1950

CENTRAL CONSULTANTS AND SPECIALISTS COMMITTEE

RELATIONSHIP TO JOINT COMMITTEE AND WHITLEY MACHINERY

A meeting of the Central Consultants and Specialists Committee was held at B.M.A. House, London, on October 5. It was intimated that Mr. R. L. Newell, who has been chairman of the Committee since its formation, did not seek re-election to the chair, owing to his many commitments and his recent appointment as dean of postgraduate medical studies, Manchester University. The Committee passed a warm vote of thanks to Mr. Newell for his exceptional services in the chair. Dr. T. ROWLAND HILL was elected chairman of the Committee in Mr. Newell's stead.

Mr. KINDERSLEY took the chair before Dr. Hill was formally elected, and he presided during a preliminary discussion on the relationship of the Committee to the Joint Committee and the Whitley machinery. He reminded the Committee that the Joint Committee was formed in order that consultants and specialists might speak with one voice. Six of its members were appointed from the Central Committee. The relationship had been friendly and satisfactory.

After a brief discussion the relationship to the Joint Committee was reaffirmed.

The chairman then introduced the question of the Whitley machinery. Those who had attended the meetings of the Whitley Council, he said, were learning how to do the work, and it would be a pity, at this early stage, to disturb the arrangement.

It was pointed out that, as the Central Committee had reaffirmed its position in relation to the Joint Committee, it seemed to follow that the latter had the confidence of the Commitee in this respect also, and would automatically continue as the staff side of Whitley. It was understood that the Joint Committee would report from time to time on what had been done, and thus what was happening in the Whitley negotiations would be made known.

In reply to a question whether the staff side of Whitley had the power to commit the profession generally, the CHAIRMAN (Mr. Kindersley) pointed out that once an agreement had been reached it was, of course, binding, and he went on to make a serious plea that those who were concerned in these negotiations should be trusted to look after the interests of the profession. If everything had to be referred back to the individual organizations, which in turn might decide that it must go to the regions, they would get nowhere.

The Secretary pointed out that the Joint Committee made certain that it was expressing the point of view of the profession, going back to it on any item on which it felt doubt. Mr. LAWRENCE ABEL also said that members might feel assured that anything of a major nature would not be agreed without prior consultation with the committee. A member expressed the hope that that statement would be emphasized, because it would carry great reassurance. It was agreed that the present position be continued.

Review of Grading

Dr. ROWLAND HILL, who was now in the chair, presented a report of the Executive Committee. The recent Representative Meeting had expressed dissatisfaction with the composition of the former grading committees. The Executive Committee felt that in view of the Ministry's undertaking to carry out a review of practitioners originally graded S.H.M.O. in the latter half of 1951 there would be no possibility of persuading the Ministry to reconsider the grading of individual practitioners before such revision, but it felt that the time had now come when the Ministry should be pressed to announce the date of the 1951 review. The Committee endorsed the view of the Representative Body that the review of grading should be extended to include general practitioners working in hospitals under para. 10(b) of the Terms of Service; also that the Joint Committee be urged to consider and discuss with the Ministry the procedure to be adopted in carrying out the review.

At its previous meeting the Central Committee received representations from the Public Health Committee of the Association that in two regions medical officers of health who were in charge of isolation hospitals had been graded as to their clinical status by a professional committee on which consultants in infectious diseases were not represented. The Ministry had been questioned on this matter and had replied that in both the regions concerned the treatment of infectious diseases was regarded as a branch of general medicine, not as a separate specialty, and in these circumstances, especially as so long a time had elapsed since the gradings, it was not considered right to intervene.

It was pointed out in the Committee that the diagnosis and treatment of infectious diseases had been recognized both by the Ministry and the profession as a separate specialty, and that it should not be open to a regional board to act in a manner inconsistent with this decision; nor was it felt that the lapse of time was a sufficient excuse to prevent any rectification. It was agreed to bring these views to the attention of the Ministry and to ask that rectification should be retrospective.

The Committee devoted some time to the detailed consideration of the N.H.S. (Appointment of Specialists) Regulations recently issued by the Ministry and also to the regulations on the procedure to be adopted in the case of registrars. Among other proposals which the Committee resolved to put forward was that the medical staff of the hospital or group of hospitals concerned in the appointment of a specialist should have at least three representatives on the appointments committee, one of whom should, if practicable, be in the same specialty as the practitioner to be appointed.

On the question of registrars the suggestion was made that, in general, registrars should be appointed to teaching and non-teaching hospitals jointly, spending a period of their tenure in a hospital under a board of governors and another period in a hospital under a regional board. Mr. KINDERSLEY said that registrars were just as valuable in non-teaching hospitals as in teaching, and in both classes of institution they would get useful experience. The idea of this interchange was opposed by some members on the grounds of practicability, but the general view was accepted that an arrangement could be made regionally between teaching and non-teaching hospitals whereby a period in the last year of the senior registrar's appointment might be spent in each of the two classes of hospital. Any procedure whereby a registrar who had not been in a teaching hospital would be prejudiced in seeking a consultant appointment was to be deprecated. To institute a shuttle service of some kind was thought not to be impracticable.

The Committee as usual had a long agenda of more than 50 items, including such matters as study leave, private beds, medical administration, domiciliary consultations, advisory committees, mileage payments, and superannuation, which occupied it for the whole day. Some important matters were referred for special discussion at the next meeting.

SIXPENCE CHARGE FOR PRESCRIPTIONS

NEW REGULATIONS IN MANX HEALTH SERVICE

Tynwald, the Isle of Man parliament, has approved new regulations in response to the call for economy that followed the presentation of an estimate of £800,773 for the National Health Service in the island this year. Since October 1, chemists are required to charge sixpence for every form of prescription for medicine, and extra for every medicine bottle or carton unless the customer provides his own container. Dentists are entitled to 10% of the amount by which fees for their services under the scheme exceed £1—in other words, for 30s. worth of treatment the patient pays one shilling. All children under school-leaving age, irrespective of the school they attend, receive free treatment through the Health Service only from the dental officers at the school clinic. Parents who prefer to select a private dentist for their children must pay for the treatment at the ordinary fee. Amounts paid to chemists and to dentists under the new regulations will be deducted from the fees paid to them by the Health Service Board.

The provisions were opposed on behalf of the dentists' and chemists' associations. The Isle of Man Medical Association (there are over sixty doctors on the Island) also petitioned against the draft regulations, on the ground that they were capable of abuse, or liable to cause confusion or embarrassment between doctor and patient. No limit was provided to the amount that could be put on one prescription form, and under the old Health Insurance system several prescriptions were often written on one form. In some cases doctors dispensed their own medicines, but no allowance had been made for this.

In reply, Mr. T. C. Cowin, chairman of the Health Service Board, said that the charge of sixpence was for one form, which might have three or more prescriptions on it if it related to only one person. A doctor did not prescribe for people *en masse*; he prescribed individually. The charge of sixpence would act as a deterrent to people who, because they were getting the service free, tried to "cash in" whether they wanted it or not. Provision was made whereby the board could exempt old people or young people suffering exceptional hardship. But the board would evolve a system by which the chemist could know who was exempt. He disagreed with the argument that the scheme should not be adopted because England had intended to charge a shilling but had been unable to put the charge into effect. Why had they to wait for England? The chemists had suggested that the doctors should collect it, but the chemist had a shop, a cash register, and change.

Refusal to Comply

Both the chemists and the doctors are reported to be refusing to comply with the Health Board's regulation. After the meeting of the executive committee of the Isle of Man Medical Society a spokesman said the doctors would support the Chemists' Association in their stand against what he described as the "arbitrary and improper" action of the Medical Service Board in introducing new regulations without adequate prior consultation with the Advisory Council constituted by the Act.

"The Society views with grave alarm," the spokesman said, "the state of chaos in which the Health Services are now operated in the Isle of Man, and we are anxious to avert a complete breakdown of the scheme. The Advisory Council is composed of professional men and laymen, and it should be consulted before any fundamental changes are made, otherwise the whole scheme is doomed to failure."

On October 6 the Manx Chemists' Association decided on a "united front with the doctors." The following statement was issued by Mr. Charles H. Kerruish, the honorary secretary:

"Acting on information not available at the extraordinary general meeting of the association of Thursday, October 5, the committee of the Manx Chemists' Association felt compelled to contact all members of the association and place the facts before them. As a result it was unanimously agreed by all members contacted that the committee on behalf of its contacted members should issue an official notice as follows:

"'Manx Chemists' Association: official notice. The public will not be called upon to pay the sixpenny prescription form or the container charge until further notice by members of the Manx Chemists' Association. By order of the committee, Chas. H. Kerruish, honorary secretary. This is the only official notice issued by the above association.'"

C.M.S. SALARIES IN EAST AND CENTRAL AFRICA

The Uganda Government has agreed to implement the proposals for improvements of salaries in the Colonial Medical Service recently negotiated between the British Medical Association and the Colonial Office. The new salaries, which will date from July 1 last, are as follows:

Director of Medical Services	£1,950
Deputy Director of Medical Services ..	£1,775
Medical Superintendent, Mulago ..	£1,725
Assistant Director of Medical Services	£1,700
Senior Medical Officer	£1,650
Medical Officer	£865; £865; £935 by £35 to £1,005 (EB) by £45 to £1,140 (PB) by £45 to £1,320 (EB) by £45 to £1,590

(EB = Efficiency Bar; PB = Promotion Bar)

Proposals about specialist salaries are under consideration.

Discussions are still proceeding with the Governments of Northern Rhodesia and Zanzibar.

ADDITIONS TO LIST OF SPECIAL DRUGS

In response to representations made by the B.M.A. the Minister of Health has included the following drugs in the list of those for which doctors receive payment over and above their capitation fee: streptomycin and preparations of streptomycin; dihydrostreptomycin and preparations of dihydrostreptomycin; *para*-aminosalicylic acid.

Vitamin B_{12} is now included in "liver extracts and the active principles of liver."

REMUNERATION OF MEDICAL ADMINISTRATIVE OFFICERS OF REGIONAL HOSPITAL BOARDS, MEDICAL SUPERINTENDENTS, AND REGIONAL PSYCHIATRISTS

Following earlier discussions with the Ministry on the remuneration of these officers, it was decided that the Joint Consultants Committee's claim for a review of the exising scales should be referred to the Whitley Council. The staff side of Committee B of the Medical Functional Council has now tabled its claim, and the first meeting with the management side took place recently. The management side has asked for further time in which to consider the claims, and discussions will be resumed early in December.

MATERNITY MEDICAL SERVICES

The Minister of Health has been considering, in consultation with the representatives of the medical profession, the payments to be made by executive councils in the case of women who have made arrangements to be confined at a hospital and to have the necessary antenatal care there, but who find themselves unable to attend there because of some complication arising out of pregnancy and call in their own general practitioner or a general-practitioner obstetrician. It has been agreed that in cases of this kind the general practitioner should be able to enter into arrangements and claim payment under the maternity medical services, the payment to be at the rate of 10s. 6d. (7s. 6d. if the doctor is not a general-practitioner obstetrician) for each time the doctor sees the patient in connexion with the treatment required—i.e., the same payment as for a single antenatal examination, with an overriding maximum of the full Period I fee.

The following conditions would normally qualify for this extra payment in these cases: toxaemia of pregnancy, antepartum haemorrhage (when not an "obstetric emergency"); any pelvic or vulval abnormality arising out of pregnancy; genito-urinary infections; hyperemesis gravidarum. If in doubt the executive council should consult the local obstetric committee and accept their advice.

WHITLEY COUNCILS FOR THE HEALTH SERVICES

The Ministry of Health announces that Professional and Technical Council "B" has agreed the salaries to be paid to assistants in dispensing. These range from £110 p.a. at age 16 to £290 p.a., with annual £10 increments, to £370 commencing at 22. They have also decided the circumstances under which technicians in physics departments may be paid the higher rates appropriate to medical laboratory technicians.

GENERAL MEDICAL COUNCIL

INCREASE OF REGISTRATION FEES

A special meeting of the General Medical Council was held in London on October 10, with the president in the chair, for the principal purpose of deciding upon an increase of fees for first registration under the Medical Acts.

Three new members were introduced and took their seats—namely, Dr. Walter Russell Brain, representing the Royal College of Physicians of London, Professor Hilda Lloyd, representing the Royal College of Obstetricians and Gynaecologists, and Professor J. W. McLeod, representing the University of Leeds.

Professor Hilda Lloyd is the first woman to take her seat on the General Medical Council. The late Dr. Christine Murrell many years ago was elected a direct representative, but died before she could take her seat.

The Council decided that in the exercise of the powers conferred upon it under Section 24 of the Medical Act, 1950, on and after October 11 the amount of the fees payable on first registration under the Medical Acts should be eleven guineas, whether application for registration is made by virtue of qualifications granted in the British Isles, of recognized qualifications granted elsewhere in the Commonwealth, or of recognized qualifications granted in foreign countries. Fees for the registration of additional qualifications, including the D.P.H., will not be increased.

The Council considered certain matters *in camera*. No disciplinary business was taken.

JOINT ANNUAL MEETING, 1951

Members of the B.M.A. wishing to attend the Joint Annual Scientific Meeting with the Medical Association of South Africa in Johannesburg next July are offered a wide choice of travel arrangements. The various itineraries which have been prepared are being sent to those who have provisionally notified their intention to attend the meeting. Any other members who would like to receive them are asked to make immediate application to the Secretary of the Association at B.M.A. House.

The Organizing Committee in Johannesburg has urgently requested information on the numbers likely to travel by the different routes and on the wishes of members in regard to accommodation in Johannesburg during the period of the meeting. The committee is anxious also that the B.M.A. should proceed at once with the appointment of certain officers of the Scientific Sections, and these appointments must be completed in the near future. For these reasons members who are thinking of going to the Joint Meeting and have not yet notified the Secretary are particularly requested to do so immediately. They will then receive detailed information about travel arrangements, costs, etc., and will be asked to complete and return a registration form at an early date.

GENERAL MEDICAL SERVICES COMMITTEE

ELECTION OF DIRECT REPRESENTATIVES, 1950–1

The following direct representatives upon the General Medical Services Committee have been *elected unopposed* for the Groups mentioned:

Group A1
Dr. J. T. Baldwin (Penicuik, Midlothian).

Group A3
Dr. J. R. Langmuir (Glasgow).

Group A4
Dr. R. C. Hamilton (Kilmarnock).

Group H
Dr. A. B. Davies (Walsall).

Group I
Dr. F. A. Smorfitt (Southam, Warwickshire).

Group J
Dr. C. F. R. Killick (Williton, Somerset).

Group K
Dr. R. W. McConnel (Wendover, Bucks).

Group L
Dr. J. D. R. Murray (Exmouth, Devon).

Group M
Dr. J. C. Pearce (Diss, Norfolk).

Group N
Dr. H. S. Howie Wood (Isle of Wight).

Group O
Dr. D. F. Whitaker (Guildford).

Group P
Dr. A. W. Gardner (Lewes, Sussex).

Group Q
Dr. A. T. Rogers (Bromley, Kent)

Group R
Dr. D. F. Hutchinson (Middlesex).
Dr. A. N. Mathias (London, N.W.2).

Group S
Dr. J. L. McKenzie Brown (London, E.18).
Dr. C. M. Scott (New Barnet, Herts).

Group T
Dr. Max Sorsby (London, E.5).
Dr. H. H. D. Sutherland (London, W.10).

Group U
Dr. J. B. Young (Belfast).

In the contested Groups—namely, A2, B, C, D, E, F, and G—the results were as follows:

Group A2
Dr. C. J. Swanson (Aberfeldy, Perthshire). *Elected.*
Dr. I. M. Macleod (Inverness).

Group B
Dr. J. C. Arthur (Gateshead). *Elected.*
Dr. F. Lishman (Bishop Auckland). *Elected.*
Dr. H. Dickie (Morpeth, Northumberland).
Dr. F. J. Stevenson (Carlisle).

Group C
Dr. H. F. Hollis (Leeds). *Elected.*
Dr. H. Thorp (Todmorden, Yorks). *Elected.*
Dr. R. H. Sunderland (Bradford).

Group D
Dr. A. Campbell (Accrington, Lancs). *Elected.*
Dr. P. J. Gibbons (Liverpool). *Elected.*
Dr. S. A. Winstanley (Urmston, Manchester). *Elected.*
Dr. J. Stewart (Blackpool).

Group E
Dr. J. B. Bennett (Hyde, Cheshire). *Elected.*
Dr. I. M. MacAlister (Wallasey).

Group F
Dr. D. B. Evans (Wrexham). *Elected.*
Dr. A. E. Jenkins (Pontypridd). *Elected.*
Dr. A. Maddock Jones (Llandudno).

Group G
Dr. E. W. Goodwin (Leicester). *Elected.*
Dr. A. S. Wilson (Gosberton, Lincs). *Elected*
Dr. E. J. Allan (Glossop).

Correspondence

Tribunal and Medical Services Committees

SIR,—Among the many vigorous and constructive decisions of the Representative Body at Southport was a directive to Council to make a thorough examination, with legal assistance, of the status, composition, procedure, and functioning of the medical service committees and tribunal and to report before the end of this year. The decision was unanimous, and it is therefore safe to assume that this subject is of topical as well as permanent interest to the profession. Having given some study to the matter, and fortified myself with some eminent legal advice, may I be permitted to express an opinion on the problem as I see it, in the hope of provoking informed comment?

It must be admitted at once that the system, as we know it, is in line with systems which have in recent years been inflicted upon other branches of the national life. It cannot be fully considered in isolation, and, indeed, it is only a small part of a problem which is keenly exercising the minds of many people inside and outside Parliament: How far is it in the best interests of the country that powers which have hitherto belonged only to the judicature should be allowed to pass into the hands of Ministers of the Crown? It is generally admitted that, in a state of national emergency, some such transference of power is inevitable, and that tribunals, courts martial, and other devices for obtaining summary justice must be accepted as a necessary evil; but it would be a tragic and retrograde step if England were to allow more orderly processes of justice, which are the pride of our democracy and the envy of the civilized world, to be permanently displaced in peacetime by arbitrary and hastily conceived expedients.

Some doctors, with understandable modesty, argue that this is a legal problem and that they have not the technical training to discuss it. Surely they are mistaken. The laws of England are made by Parliament, which is by no means composed of lawyers. Others argue that it is only doctors like "that horrid fellow X" who come within the clutches of the disciplinary system. But this is not so. I am convinced, after two years' service on a medical services committee, that A or B or C or any other doctor trying to do his job in an imperfect world is just as likely to be caught up in the toils of this machine. It only requires that we should do something to arouse the anger of some spiteful type of patient to become the object of an attack which will at the best involve us in great trouble and anxiety and which may lead to much more serious consequences.

The whole system at present in operation is so widely at variance with the accepted principles of justice that it is hard to criticize it constructively. At no level is it related to the judicial system of the country, so that erroneous interpretations of the law are probable. Evidence before the services committees is not taken on oath and there is no penalty for false statements, so that errors on questions of fact are all too possible. At no level do the provisions ensure that those called upon to judge disputes are independent or unbiased in their approach. Perhaps the most calamitous feature of the whole set-up is that it is, from top to bottom, an instrument of ministerial power which can be guided and modified by political considerations.

It would seem impossible to modify the system adequately by minor alterations in the regulations. A fresh approach to the whole matter is necessary and no doubt new legislation will be required. It may be that the best solution is to replace the services committees with judges of the High Court holding court on circuit in the various county towns of England, aided perhaps by lay and medical assessors, with an independent central court of appeal, properly constituted as such.

No doubt this thorny question will receive the attention of the newly reconstituted Amending Act Standing Committee of the B.M.A.—I am, etc.,

Orpington, Kent. A. C. E. BREACH.

Obligation to Emergency Cases

SIR,—As a single-handed practitioner it is my custom to leave my name and seat number at the office when I visit the theatre. I therefore have some 1,500–2,000 extra patients at risk during my leisure hours. I think the least the executive council can do would be to provide a box free of charge in the theatre, with medical equipment. It also occurs to me that I have my neighbours' private patients "at risk" to me also, as their doctors have no legal obligation to attend them, so my potential list must be a third greater than that for which I am paid.—I am, etc.,

Liverpool, 17. H. M. BLAQUIERE.

SIR,—May I try to relieve Dr. H. M. Harris's distress (*Supplement*, September 30, p. 141) by pointing out that Dr. X was charged (see *Supplement*, September 2, p. 120) not with violating any canon of humanity, not with betraying his vocation, but with a breach of his terms of service? Dr. X's nose appears to have been well and truly rubbed in one paragraph of the official terms of service. It seemed to me that on a purely legalistic point it was not clear that the paragraph was at all applicable, and I am still hoping that some colleague learned in the law will let us have his views on that one point.

The verdict against Dr. X seems to render every one of us liable to a heavy fine if we fail to respond instantly and in all circumstances to the demand by any flurried layman that we attend an accident.—I am, etc.,

Launceston, Cornwall. DONALD M. O'CONNOR.

SIR,—I am surprised and shocked at Dr. J. G. McDowell's letter under the above heading in the *Supplement* of September 16 (p. 135).

Apart from any considerations of "availability" or "terms of service," common sense, humanity, and the traditions of the profession all dictate that a doctor summoned to a serious road accident should go at once, unless either he is too ill to go or a patient he is attending at the time cannot safely be left. If two or more patients make a demand upon the same doctor at the same time, the doctor's first obligation is to the patient whose need is the more urgent. All this is, to me, so obvious that I am surprised that anyone with any regard for the reputation of the profession should even be in doubt on the subject.—I am, etc.,

Aylsham. JOHN SAPWELL.

Difficulties of the G.P.

SIR,—I would like to reassure Dr. J. A. Frais (*Supplement*, September 9, p. 128) and agree that the difficulties of G.P.s should be presented to the public fully and in every possible way. I still maintain, however, that statements such as the particular one referred to in my letter (*Supplement*, July 29, p. 73) condemn themselves by the obviousness of their exaggeration, and probably do their originators the greater harm.

Our difficulties are both diverse and numerous. High on the list, I think, is the difficulty of free time for the busy practitioner. It can hardly be denied that, without "group practice," the frequent after-hour and night-calls give him little or no time for leisure, and unless he can get a break away from his own premises complete relaxation is utterly impossible. If he leaves his premises he has to arrange for some other doctor to take his calls, and to leave someone at home to take messages. I think many will agree that this is often impossible, or so difficult that one rarely contemplates it. Even an annual holiday is difficult to arrange. Locums are not always easily found, and domestic help to look after them frequently involves much arrangement and forethought. The end result is often that the practitioner, who has so little time normally to relax and enjoy his family, takes his holiday one time and his wife and family another. I think that inadequate leisure is certainly one of our major problems. Group practice and consequent duty-hours is probably the answer, though groups cannot always be easy to form.

I have heard of members of other professions suggesting remuneration of G.P.s as a yardstick in settling their own, but I have never heard a suggestion that anything approaching the same number of duty hours (or expenses) be involved. Long and often worrying hours at the constant beck and call of a not over-thoughtful public are often our daily (and nightly) lot, and I find it hard to suppose that any other section of the community would tolerate these conditions. Let this point then be brought home to the public. This is surely the background—an unhappy one it is—a background of hard work and anxiety, and the many smaller irritations we all know so well and which we exasperatedly record in these pages from time to time. Against this background the G.P. finds himself liable to be reported and investigated for *any* allegation made by a patient, and yet he himself has no redress whatever against the frivolities of some of his flock. I have on one occasion received a note through the letter-box in the evening, requesting my immediate attendance on a patient, only to find on arrival that the house was locked up and the patient asleep and expecting my visit the following morning, and every G.P. I am sure could with me quote many such abuses of our services.

I feel, too, that it is not widely enough stressed that all except real emergency calls should reach the doctor before 10 a.m. One all too frequently experiences the unreasonable late call which takes one back to within a few yards of a call made earlier in the day on the normal visiting round.

On the financial side the heavy expenses which come out of income cannot be stressed enough: rising cost of car upkeep, heavy telephone bills, electricity and heating accounts, secretarial and domestic help, and general wear and tear on premises, to mention but a few. Some of us have built and equipped modern surgeries separate from our houses, a high capital expenditure with high upkeep costs.

Of our many difficulties the above are but a few which seem to me to be prominent in our daily lives and for which we must seek a solution. They should be brought to the public notice on every possible occasion. One cannot dispute that there are many more problems, but perhaps an improvement in these basic ones would at least let us view the lesser ones in a happier frame of mind.

Let Dr. Frais's suggested committee expend its energies in trying to publicize the nature of our difficulties and the justness of our cause, and not, as I stated in my earlier letter, become involved in any slanging campaign.—I am, etc.,

Feltham, Middlesex. A. P. HARDMAN.

Clash of Dates

SIR,—Many inquiries are being made why there is a clash of dates between the meeting of the L.M.C. Conference and of the Annual Meeting of the Association of Executive Councils.

At the end of the last conference in June I told the secretary of the B.M.A. that the suggested date for the conference was that of the Annual Meeting. I received an assurance that, as so long notice had been given and the conference was not tied to a particular date at that time, there should be no difficulty in avoiding the clash. I left it at that and was more than surprised when I discovered that the date had not been altered. Your readers will realize that, as the date of the meeting at Harrogate had been fixed months before in consultation with the municipal authorities, it was impossible for it to be altered. Indeed, no suggestion was made that this should be done.

I think the clash is most regrettable, as many doctors whom one would have wished to see at both meetings, and who could most usefully take part in the proceedings of both bodies, will now be prevented from attending one or other.—I am, etc.,

NOEL E. WATERFIELD,
President, Association of Executive Councils (England).

*** The Secretary of the B.M.A. states: The Annual Conference of Local Medical Committees has by long custom taken place on a late Thursday in October, and the clash of dates was reported to the G.M.S. Committee at its meetings on July 27 and September 21. The Committee gave careful consideration to the matter, but decided for a variety of reasons—including the timing of the Special Conference—that it was impracticable to change the date. Arrangements have been made for prior consultation between the secretaries of the two bodies before the dates of future conferences are arranged.

Organizing our Clerical Work

SIR,—I was very interested in the article by Miss E. Dorothy Willis and Miss Anne G. Shaw published in the *Supplement* (September 16, p. 132). It seems that they have come to a simple solution of the clerical work that troubles all general practitioners. I have worked the same system since 1935 and found it very efficient in a practice that was, up to 1948, 90% private. It saves a considerable amount of time, and I often wish I had started it years before.

There is one criticism I should like to make. In the scheme the writers describe the two wall racks would seem to take up about 11 ft. of linear wall space. This, I feel, is an over-elaboration of a good system. I have kept my cards in a compartment in my desk drawer with guide cards numbered 1–31. Cards are posted into the day of the month indicated by the number, and cards for the following month in front of a guide card after 31, if the posting date would overlap the present month—for example, date patient visited, September 2; date of next visit five weeks ahead, October 7; the card would be posted in front of the blank and re-posted on September 30.

The whole of the visiting list even in a large practice only needs a depth of about 9 to 12 in. of a drawer, and all work is done at the ordinary writing-desk. Otherwise the routine is identical: it is simple, time-saving, and appeals to those of us with a lazy streak in our make-up.—I am, etc.,

Newcastle-upon-Tyne. H. B. PORTEOUS.

War Service

SIR,—I find myself somewhat in disagreement with your correspondent Dr. E. H. Travers regarding his views on payment in the Forces (*Supplement*, September 9, p. 126). As a serving officer in the recent war I had constantly to tell critics that I did not join the Services for the money involved even though I could ill afford to make this statement as a lieutenant in 1939 and after. The assertion that we, as medical men, should be bribed to join the Forces is a deplorable one, and this in effect is what your correspondent suggests. Personally I counted it a privilege to be worthy of service. As for the "others," those who did not or would not make themselves available for a host of reasons which they are still attempting to justify, I would suggest that their claims for exemption be more thoroughly examined if there is a "next time" and not assume that since they were indispensable [*sic*] in 1939–45 they are equally so now. I am sure that many of us would readily be able to supply a few names for consideration. However, "they" have had to live with their consciences since their evasion, ours are fortunately clear.—I am, etc.,

London, S.W.15. F. ELLIOTT.

Fate of the Disabled Doctor

SIR,—May I put in a plea for the disabled doctor, sometimes at a comparatively early age paying for the stress of the last war? Some of the disabilities that I have in mind are coronary occlusion, hypertension, and diabetes mellitus, but there are many more. These disabilities may be so severe as to necessitate the doctor giving up his present work, but need not render him completely unemployable. Only those doctors, however, who have been forced by illness to look for lighter work probably realize how difficult this is to find. General practice, in its present form, is out of the question; the hospital service is rightly recruited from the younger men, and public health work is debarred by the medical standard required for purposes of superannuation. By law, industry must absorb its 3% of disabled employees, and I submit that the National Health Service should impose on itself some similar requirement. Examples of non-clinical work where the doctor's training would not be wasted are the keeping of hospital records and the compiling of statistics. Non-exacting clinical work would be child-welfare and school clinics, the importance of which

Dr. I. C. Monro stressed in his recent letter (*Journal*, September 16, p. 678), and medical referee work.

May I suggest that in order to assess the magnitude of this problem the British Medical Association draws up a register of disabled doctors? In conclusion I would add that I have no axe to grind. After many anxious months following two major operations I have, thanks to the kindly influence and introduction of my surgeon, found a very suitable job.—I am, etc.,

GRADE C.

The War Memorial

SIR,—I should like to add my support to the views of Drs. W. P. Roe and G. H. Bickmore (*Supplement*, September 30, p. 142). Certainly I think an inscribed tablet the most suitable memorial combined with memorial grants towards the education of children of the fallen, and not necessarily at Epsom, excellent though that College is.—I am, etc.,

Thame, Oxon. C. H. BARBER.

National Service Medical Officers

SIR,—It was with pleasure that I read the letter from "R.A.F. Medical Officer" in the *Supplement* of September 16 (p. 135). He has dealt most adequately with the effect of National Service on each of us individually, but I do not think he lays sufficient stress on a far more important aspect of the matter—namely, the lowering of the standard of medicine that will be practised by the present generation of doctors now stagnating in Service sick-quarters. What clinical skill shall we have after two years treating shaving rashes, painful feet, and spots in healthy adolescents? Even the unattractive alternative of signing on for a short service commission mentioned by "R.A.F. Medical Officer" by no means guarantees one a hospital appointment: that is covered by the singularly elastic and much-used expression, "Subject to the exigencies of the Service."

The B.M.A. would be doing a great service to British medicine if they would intervene on our behalf, so that for the last year or even six months we could refresh our memories by working in a Service hospital prior to taking our share of responsibility in civil life at the same time as fulfilling our obligations under the National Service Act.

For obvious reasons I cannot sign my name to this letter.—I am, etc.,

ANOTHER R.A.F. MEDICAL OFFICER.

Withdrawal from Health Service

SIR,—I am frequently reminded that a generation ago 97% of G.P.s signed their resignations from the panel. It is debatable how many would have stuck to their principles had the then Minister of Health called their bluff, but it worked. We got the arbitration for which we had asked.

Usually the fallacious corollary follows that as we did it once we can do it again. But, Sir, the state of economics in general practice in those days and now is vastly different. When I signed my old resignation the average G.P. in this part of the world derived at least 75% of his earned income from private practice and less than 25% from the panel, so that if he resigned he could still count on at least 75% of his former income on which to exist during the fight; and remember that the then panel patients were used to paying directly or through some club for their wives, families, and dependants, and probably a high proportion of them would have paid cheerfully for themselves. As long as the profession held together (a doubt which obtains even more acutely now) we were risking very little. We were, in fact, in a very strong position then.

Had we refused to enter the new Service on the appointed day the same conditions would have obtained, but, on the advice of the Association and with the Minister dangling his £66m. whip before our eyes, reluctantly we did so, and now the conditions are entirely altered.

Here, now, the average G.P. derives over 90% of his income from the N.H.S. and less than 10% from his remaining private practice. This means that if he withdraws now he can hope to enjoy less than 10% of his present income; and the State patients, having for over two years paid out only shillings for certificates and already paying far more for their doctoring than they ever did in their lives before, will certainly not pay up as their fathers would have done.

It would seem, therefore, that, leaving out every other consideration, if a mass withdrawal is engineered now the Minister of Health, who is certainly no fool, would simply have to sit back smiling to think of the money we were saving the Exchequer till we are forced by poverty to admit ourselves beaten and crawl back with our tails between our legs. Then when we have demonstrated our lamentable weakness he can impose a heavy cut on the capitation fee (probably then with the approval of the general public), knowing that we are helpless and can do nothing about it.

I have refrained from mentioning all the other conditions which would be added facts making a mass withdrawal a lamentable flop. Surely this is enough.

I do hope, Sir, we will not go on with this folly and make a public exhibition of our ineptitude. We signed away our birthrights two years ago. At least let us keep the mess of pottage.—I am, etc.,

St. Neots, Hunts. H. C. CRAVEN VEITCH.

SIR,—Would you be so kind as to permit me to answer some of the questions raised by your correspondent, Dr. Rosefield, in the *Supplement* (September 16, p. 135)?

(1) The act of resignation carries with it certain necessary and inevitable consequences. As soon as a doctor resigns from the Service he is entitled to his part of the contributions (6%) which has been paid towards superannuation, and he loses any right to the 8% paid by the Minister since the N.H.S. came into being. On rejoining he would have to begin his contributions again for the purpose of calculating his pension—he could thus suffer a substantial loss.

(2) There is the matter of the doctor's list. Once his resignation is effected all patients on his list are removed. If he rejoins, all patients would again have to register. Doctors with large lists might not find themselves so well off.

(3) To re-enter, a fresh application has to be made; it is by no means certain that this would be granted automatically, especially in over-doctored areas.

(4) The legal position is very complicated, but the matter might be referred to compulsory arbitration. The findings of this court would have to be accepted by the profession, which might be very unpleasant.

No doubt in due course the B.M.A. will advise the profession of the grounds on which they are prepared "to accept battle" this time. We can only hope they will be sounder than some of the "principles" which were put forward in 1948.—I am, etc.,

Worthing. HAROLD LEESON.

*** The Secretary writes: On resignation from the Service a practitioner does not lose superannuation rights if he re-enters the Service within twelve months.

Occupational Risk of Medical Practice

SIR,—I would be most grateful if you could shed some light on the problem of whether or not the conduct of a general medical practice involves an occupational risk. This matter has interested me for some time, and comes into my mind every time I have occasion to treat a case of open tuberculosis, or to attend upon some other case of serious infectious illness. Recently I read in the public press that a doctor in practice in Lincolnshire had contracted infantile paralysis while treating an epidemic of that disease in his area, and just prior to this I noted with regret that there had been deaths in the medical and nursing profession consequent upon an outbreak of smallpox in Glasgow. Bearing these facts in mind, and remembering that every other general practitioner has a duodenal ulcer, and remembering, too, that insurance statistics show that the average general practitioner dies at the age of 52 of either coronary thrombosis or some other heart complaint, it seems to me that doctoring is definitely fraught with risk.

If this is the case, what then is the attitude of the State when it is confronted with the fact that a doctor has been killed, or permanently incapacitated, by general practice? Does it express regret for a life lost in its service, in the same way as, say, the War Office does when an officer is killed on active service? Or does it simply ignore such sentimental usages, and proceed directly to the advertisement of the vacancy so that some other willing applicant for an early death may take his place? Finally, does it do anything concrete to provide financial security for the wife and family of the deceased doctor, on a level consistent with their former status, or are the latter in exactly the same position as John Citizen's wife and family when he has the misfortune to die of any of the above-mentioned complaints?

This matter seems to me to be one of importance at this time, since the minimum service under the National Health Service Act which qualifies for a pension is, I understand, ten years. This means that I have slightly less than eight years to go before I qualify for a pension, and I shudder to think what will happen if I am permanently incapacitated by some sickness which I contract from one of my patients, or if I am disabled as a result of a heart or other disease.—I am, etc.,

Lossiemouth HUGH M. TUCKER.

Increasing the Capitation Fee

SIR,—The question of increasing the capitation fee on the first thousand patients has gained wide support among a large section of the profession, but some of us are not entirely happy that the desired result of helping the less fortunate of our colleagues would be achieved in this way. It is obvious that, if any doctor can continue to practise with a list of 500 or less, then he has either private means or a considerable private practice or other appointments, and indeed I think it will be generally agreed that what little private practice remains is more concentrated in certain areas.

I would suggest, therefore, that in order that those most in need should benefit—those with lists between 500 and 2,000 patients—the extra capitation fee should be paid for the next 1,000 patients after the first 500. I assume that the basic salary would help the genuine 500-or-under list, which is another argument in favour of the suggestion.—I am, etc.,

Newport Pagnell, Bucks. A. A. CLAY.

G.P.s as Employed Persons

SIR,—In the courts it is very difficult to enforce a right that has been previously waived. The Crown has had the opportunity to classify G.P.s as employed persons, but has in fact, by its officers, classified us as self-employed persons, and confirmed this 52 times a year in the case of every practitioner by instructing us to stamp our cards weekly as such. The matter of our status should be definitely decided in the courts, by test case if necessary, as many may find the uncertainty demoralizing.—I am, etc.,

Walsall, Staffs. FRANCIS W. KEMP.

Change of Doctor

SIR,—I do want to congratulate the G.M.S. Committee of the B.M.A. on the arrangements made, in consultation with the Minister of Health, for limiting the right of patients to change their doctor. I am sure I am speaking for all the older tiring practitioners whose livelihood is constantly at the mercy of the young upstart down the road making a great show of his hospital learning but without real experience. There is now some chance that we shall be able to keep our lists up. Especially in a rather backward country area like this, where to write a letter to the executive council with a view to making a change in the future would be more than most patients could undertake, we shall now be pretty safe. Congratulations! If any member is this way, I hope he will call in. I would be glad to show him some pretty shooting.—I am, etc.,

Bonar Bridge, Sutherland. DONALD MCGREGOR.

SIR,—In this age of form-filling the simple way in which a patient could change his N.H.S. doctor was surprising and encouraging. It is difficult to understand why it has been replaced by a much more complicated procedure (*Supplement*, September 23, p. 137) which will need extra administrative labour at a time when the country's resources are said to be stretched to the full. It almost looks as if form-filling has been introduced for its own sake. This new administrative arrangement will not stop patients changing doctors for frivolous reasons: this can be done only by the doctors themselves and is quite simple if neighbouring doctors co-operate, as Dr. Tucker shows in his letter (*Supplement*, September 30, p. 141).

The main effect of this change must be to slow up the rate at which a new practitioner's list grows. The difficulties in the way of a squatter are considerable, and include the high cost of housing, the delay in dealing with an application for permission to practise, even in an "open" area, and the method of payment, which is always three to six months in arrears. If it is really desired to encourage doctors to start up in under-doctored areas it is surprising that it has been made more difficult to do so.—I am, etc.,

Orpington, Kent. L. M. FRANKLIN.

SIR,—The revised arrangements for changing doctors which came into force on October 1 have prompted me to examine two facts: (1) the initiative came from the General Medical Services Committee of the B.M.A.; (2) the Minister at first refused to accede to the committee's request, but later co-operated.

The committee represents the views of the majority of G.P.s who are, for the most part, established practitioners. The latter have a vested interest in large lists. On the other hand, the Minister is, *pro tem.*, the fairy godmother of the young practitioner trying to build up his practice. He sees in his new regulations a serious threat to the well-being of his protégés.

Few patients are likely to avail themselves of the new method, which involves either an interview with their present doctor or correspondence with the executive council (except on change of address). Why, then, did the Minister co-operate? I suggest that he is merely waiting for the outcry from the young practitioners before restoring the *status quo*, thereby gaining considerable kudos with the rising generation.

The new regulations are easy in theory, but not in practice. Apart from the extra bother involved, it is extraordinary how many members of the general public believe that they are now wedded for life to their present doctors, or that they can change only if they move to another town. Already I can quote several instances of these misapprehensions. Surely such a state of affairs was never intended by the General Medical Services Committee. Where is our cherished free choice of doctor now?

Two alternatives lie before us. Either the *status quo* must be restored, or adequate publicity must be given, in very simple words, to the gist of the new regulations. I believe that the solution lies in the latter, and that each executive council should publish a suitable notice in its local newspaper(s). Furthermore, I can see no real need for retaining the method of transfer by consent. It only confuses the issue, and a letter to the executive council is a much more gentle way of changing delicate horses in midstream.—I am, etc.,

York. S. S. HART.

SIR,—I do not know whose idea it was to make these new arrangements, but to my mind we are no better off than before, nor is the patient who is disgruntled and wishes to select a new doctor. Surely the person who really suffers is the doctor, who, after spending considerable time and energy on a patient, finds suddenly that his list will be reduced by the amount of the patient who has changed, despite all his trouble and bother.

The sensible thing would have been to leave things as they are, but credit the doctor with his patient for the current quarter anyway. In other words the patient can change when he likes, but the doctor does not suffer one quarter's loss of that capitation fee.—I am, etc.,

Sheerness. A. MADWAR.

Public Relations

SIR,—During the debate on public relations at the Representative Meeting on September 28 (*Supplement*, October 7, p. 143) it was repeatedly said that recent letters to the lay press from practitioners were to be deprecated, as denigrating themselves and their work. On reading them with closer attention, does it not emerge that the writers are trying, in weariness

of body and frustration of soul, to get the public to realize the burden of the Act and the extent of its exploitation? Perhaps one speaker realized this; hence the effervescence. But we require no such clamant defence of our actions in our own debate, though its content and even manner might be useful in "another place."

It may well be that we expect impossibilities of our public relations department, hence the attempts to get at the public direct in hopes of mitigating the not uncommon attitude of (1) press the button; (2) criticize the results.

Perhaps the story has reached you of the lady owner of a "long-sitting" lipoma of a well-covered part sending for her doctor at 11.30 p.m. because she thought it would be convenient for him to see her in bed. If apocryphal, it is not too great a caricature of a public relationship which we should be glad to see altered.—I am, etc.,

Kington-on-Arrow, Herefordshire. G. W. DRYLAND.

Part-time Appointments

SIR,—It has been stressed repeatedly by every branch of the profession that they are opposed to a full-time salaried service, yet part-time appointments in hospitals are being advertised as full-time ones without prior consultation with the staffs of the hospitals concerned.

An example of this has been brought to my notice in this area, where a part-time radiologist has been recently retired on reaching the age limit. His appointment has been advertised, and I think filled by this time, by a full-time man, thus depriving the district of any private *x*-ray facilities, apart from the hardship sustained by the retiring radiologist, who is unable to dispose of the practice and plant he purchased when originally appointed.

In my opinion part-time appointments should be scheduled by the B.M.A., and they should not be advertised in the *Journal* as full-time appointments except after consultation with the staffs of the hospitals concerned.—I am, etc.,

Newport, Mon. J. T. RICE-EDWARDS.

Pay in the Armed Forces

SIR,—Regarding the recent increases in pay for the armed Forces, it is to be noted that no announcement is yet forthcoming on the matter of increased remuneration for serving medical officers.

Presumably the matter is still under discussion, but unless the new rates, when revealed, represent a substantial increase over present rates recruitment will fall to a very low level indeed. There is already a marked discrepancy between Service rates and those obtaining in general practice. For example, the minimum rate payable to a "trainee assistant" is about £15 a week; in addition to this, board and lodging or an equivalent allowance are supplied. Also a car allowance of about £100 per annum is provided if the assistant is fortunate enough to possess a car.

The Service rate for an equivalent position—i.e., lieutenant, R.A.M.C., or F/O, R.A.F.—is 22s. a day, and incidentally, apropos this latter rate, it is interesting to note that in 1925 the rate for the same rank was 21s. 8d. per day. So the pay of medical officers of this rank has risen by 4d. per day over the last 25 years. So it may be seen that the pay of the junior medical officers must be at least doubled in order to fairly relate them to civilian rates.

Finally, may I enter a plea for the plight of National Service medical officers? I sincerely hope they will not be dealt with in the same light as the other National Service men have been recently. The National Service doctor is a trained professional man. He is at present performing duties throughout the Services equal to and as responsible as those which the smaller number of regular officers have to perform. He cannot be lightly grouped together with the conscript of 18 years, who has no trade or profession and is, in fact, a liability requiring training for the bulk of his two years' service.

I trust those who are discussing this matter will ensure a fair deal for the serving medical officer.—I am, etc.,

SERVING MEDICAL OFFICER.

Poor Prospects of Assistants in General Practice

SIR,—In these days when there is much ado about the remuneration of G.P.s I should like to say a word or two about the invidious position of assistants as exemplified by my own two years' experience.

After two years in hospitals I married and was in my first assistantship for over a year. There were 6,700 patients, and after 12 months I inquired about a partnership. I was informed that the practice couldn't afford it," and, as my employer honestly yet crudely put it, "Why should I for no personal advantage give you a large slice of my income?"—a remark that ably sums up the whole problem.

I then started quietly to look round for a job with prospects, and got myself on to a short list for a vacancy. The result was that another man got the post, and I got the sack on the grounds that "if you are unsettled you can leave."

Next phase—three months in lodgings doing locums, looking for a job with a house and prospects. We were finally chosen out of about 40 applicants for a job with partnership in six months in a growing practice of over 5,000 "units" (what a dreadful word!). At a cost for removals of nearly £30, we moved in.

In those six months I have borne by far the greater share of the work. We have had two weeks' holiday (the boss is having four weeks). We have been obliged to man the telephone for an average of 151 hours per week (out of a possible total of 168 hours) for 24 weeks. The only requests we ignored were one that we should pay a woman to sit in and take calls on our half-day, and another that my wife should act as receptionist in surgery. After all that I am refused a partnership. "Have not come up to expectations," was the mumbled excuse with downcast eyes. I was the third assistant "with view" in two years.

I have applied repeatedly for practice vacancies without result. *The Lancet* states that younger men have little chance with 40–50 after each post. Having bought a car and furniture, we lack the capital to buy a house and to see us through the lean period of setting up on our own, the course Mr. Bevan advises for young doctors.

Maybe we have been unfortunate, but many must be worse off, especially those with young families. A friend of mine has had 50 hours off duty in seven months as an assistant. There must be hundreds like us milling round from "prospect" to "prospect," getting nowhere, stooging for established men who regard having an assistant as an excuse to have an easy time, and who regard the promise of partnership as a convenient dodge to keep a man docile and willing while his wife becomes a telephone drudge.

It seems to me that, the old approach of entry into general practice by purchase having been closed, no new doors have really been opened. I imagine the sum total of frustration and resentment pent up in the breasts of Britain's 1,650-odd assistants could be diverted into more useful emotional channels by a little wise administration from the top directed towards giving us all a bit of a break for a change.—I am, etc.,

FAIR PLAY.

POINTS FROM LETTERS

Improving the Prescription Pads

Dr. FRANK HAMILTON (Birmingham) writes: I invariably get into difficulties with the prescription pads issued by the N.H.S.—the so-called Form E.C.10—and waste a good deal of time trying to tear prescriptions off without ripping them in two. Many have to be rewritten every day. If the wire staples holding them together were inserted from the back instead of the front, it would be a much easier manœuvre just to lift each form off, simply by first prising up the bent-over ends of the wire.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Councils.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

B.M.A. LIBRARY

Association Notices

SIR CHARLES HASTINGS CLINICAL PRIZE ESSAY COMPETITION

The Sir Charles Hastings Clinical Prize Essay Competition is established by the Association for the promotion of systematic observation, research, and record in general practice. The competition has been extended by the addition of a second prize known as the Charles Oliver Hawthorne Clinical Prize. The following are the regulations governing the awards:

1. The Sir Charles Hastings Clinical Prize, consisting of a certificate and 50 guineas, will be awarded for the best essay submitted.

2. The Charles Oliver Hawthorne Clinical Prize, consisting of a certificate and a sum of money slightly less than the amount of the Sir Charles Hastings Clinical Prize, will be awarded for the second best essay submitted.

3. Any member of the Association who is engaged in general practice is eligible to compete for these prizes.

4. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations in practice rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

5. Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950.

6. A study or essay that has been published in the medical press or elsewhere will not be considered eligible for a prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for an award of either of the prizes in any subsequent year.

7. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay the decision of the Council on any such point shall be final.

8. Preliminary notice of entry for this competition is required, on a form of application to be obtained from the Secretary.

9. Each essay must be typewritten or printed and must be accompanied by a sealed envelope, enclosing the candidate's name and address, firmly affixed to the essay.

10. Inquiries relative to the prizes should be addressed to the Secretary.

OCCUPATIONAL HEALTH PRIZE

The Council of the British Medical Association is prepared to consider the award of an "Occupational Health Prize" in the year 1951. The prize consists of a certificate and a money award to the value of £50. The prize is established by the Council of the Association to encourage interest and research in the field of occupational health. The prize will be awarded biennially. Any member of the Association who is engaged in the practice of occupational health, either whole-time or part-time, is eligible to compete for the prize. Candidates may select their own subject.

The essay submitted must include personal observations and experiences collected by the candidate in the course of his work.

If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for a second award of the prize. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay, the decision of the Council on any such point shall be final. Preliminary notice of entry for this competition is required on a form of application to be obtained from the Secretary not later than November 1, 1950. Each essay must be typewritten or printed on one side of the paper only, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Inquiries relative to the prize should be addressed to the Secretary.

PRIZE ESSAY COMPETITION FOR MEDICAL STUDENTS

The Council of the British Medical Association is prepared to consider the award, in 1951, of prizes to medical students for essays submitted in open competition. The subject of the essays shall be "The Importance of Accurate History-taking in Diagnosis." In their essays students will be expected to refer to cases within their own experience.

The purpose of this competition is to promote systematic observation among medical students. In awarding the prizes *due regard will be given to evidence of personal observation*. No study or essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. A prizewinner in any year is not eligible for a second award of the prize.

Any medical student who is a registered member of a medical school in the United Kingdom and the Colonial Empire at the time of submission of the essay is eligible to compete for a prize. If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. In determining the number and amount of prizes to be awarded, the Council will take into consideration the number of essays received. In 1950 three prizes of £50 and three prizes of £20 each have been awarded. Should the Council decide that no essay entered is of sufficient merit, no award will be made.

Essays must be typewritten or legibly written in the English language on foolscap paper, on one side only, must be unsigned, and must be accompanied by a form of application which can be obtained from the Secretary of the British Medical Association. Essays must be forwarded so as to reach the Secretary not later than January 31, 1951. Inquiries relative to the competition should be addressed to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

KATHERINE BISHOP HARMAN PRIZE

The Council of the British Medical Association is prepared to consider an award of the Katherine Bishop Harman Prize in the year 1951. The value of the prize is £75. The purpose of the prize, founded in 1926, is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and childbearing. It will be awarded for the best essay submitted in open competition, competitors being left free to select the work they wish to present, provided this falls within the scope of the prize. Any registered medical practitioner in the British Empire is eligible to compete.

Should the Council of the Association decide that no essay submitted is of sufficient merit the prize will not be awarded in 1951 but will be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine. The decision of the Council will be final.

Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. The title of the proposed essay and the motto should be notified in writing to the Secretary by November 1, 1950, and a form for this purpose can be obtained from the Secretary. Essays must be forwarded so as to reach the Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than December 31, 1950. Inquiries relative to the prize should be addressed to the Secretary.

REGISTRARS GROUP

NORTH-EAST METROPOLITAN REGION

A general meeting of registrars in the North-east Metropolitan Region will be held at B.M.A. House on Thursday, November 2, at 8 p.m. All registrars in the region are invited to attend.

Diary of Central Meetings

OCTOBER

25 Wed. Central Council of the Registrars' Group, 2 p.m.
26 Thurs. Annual Conference of Representatives of Local Medical Committees, 10 a.m.
27 Fri. War Memorial Committee, 11.30 a.m.
27 Fri. Consulting Pathologists Group Committee, 2 p.m.

NOVEMBER

1 Wed. **Council**, 10 a.m.
2 Thurs. Otolaryngologists Group Committee, 2 p.m.

DECEMBER

7 Thurs. Committee on Psychiatry and the Law, 2 p.m.

Branch and Division Meetings to be Held

BOURNEMOUTH DIVISION.—At Royal Bath Hotel, Bournemouth, Friday, October 27, 7.30 for 7.45 p.m., annual dinner.

CHELSEA AND FULHAM DIVISION.—At Chenil Galleries, Chelsea Town Hall, King's Road, London, S.W., Friday, October 27, 8.30 p.m., general meeting. The Paddington, Kensington and Hammersmith, and Westminster and Holborn Divisions are invited as guests.

DERBYSHIRE BRANCH.—At Devonshire Royal Hospital, Buxton, Sunday, October 22, 3 p.m., combined meeting of Glossop, Buxton, and Matlock Divisions. Lecture by Mr. A. G. G. Melville: "Radiation Aspects of Civil Defence." All members of the medical profession in the area are invited to attend.

EAST HERTS DIVISION.—At Luton and Dunstable Hospital, Wednesday, October 25, 8.30 p.m., members are invited to a meeting of the South Bedfordshire Division.

FURNESS DIVISION.—At Orthopaedic Department, North Lonsdale Hospital, Tuesday, October 24, 8 p.m., combined meeting with Barrow and Furness Clinical Society.

MONMOUTHSHIRE DIVISION.—At St. Cadoc's Hospital, Caerleon, Thursday, October 26, 8 p.m., address and practical demonstration by Dr. G. King: "Hypnotism."

NORTH MIDDLESEX DIVISION.—At North Middlesex Hospital, Edmonton, N., Friday, October 27, 9 p.m., film: "The Treatment of Infections of the Hand."

OXFORD DIVISION.—At Maternity Department Lecture Theatre, Radcliffe Infirmary, Oxford, Wednesday, October 25, 8.15 p.m., symposium by Drs. R. W. Armstrong, R. G. McInnes, C. W. M. Whitty, J. E. Duffield, and Sir Hugh Cairns: "The Operative Treatment of Mental Disorders."

SOUTH ESSEX DIVISION.—At Nurses Lecture Theatre, Oldchurch Hospital, Romford, Friday, October 27, 9 p.m., divisional meeting.

SOUTH MIDDLESEX DIVISION.—At Public Health Department, Bath Road, Hounslow, Wednesday, October 25, 8.45 p.m., Dr. F. J. V. Jenner: "Common Skin Diseases and their Treatment" (illustrated by slides).

TOWER HAMLETS DIVISION.—At St. Andrew's Hospital, Bow, E., Friday, October 27, 3 p.m., clinical meeting. Ear, nose, and throat demonstration by Mr. N. Asherson.

TUNBRIDGE WELLS DIVISION.—At Spa Hotel, Tunbridge Wells, Saturday, October 28, dinner and social evening.

WIGAN DIVISION.—At The Hollies, Wigan Lane, Wigan, Thursday, October 26, 8.15 p.m., annual general meeting.

Meetings of Branches and Divisions

COVENTRY DIVISION

On September 16 the chairman of the Division, Mr. Trevor Berrill, and Mrs. Berrill held a reception to which they invited all members of the Division and their wives. They entertained 150 guests during an evening which was singularly pleasant and enjoyable.

On September 27 the members of the Division were invited to pay a visit to the Rehabilitation Unit of the Ministry of Labour and National Service by the medical director, Dr. C. R. Hoskyn. Rather more than thirty members of the Division accepted the invitation and spent an instructive afternoon inspecting the gymnasium and workshops. They were then entertained to tea by Dr. Hoskyn and his team of workers, following which instructive discussion was encouraged.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 28 1950

GLASGOW OFFICE OF B.M.A.

There was a large and representative gathering at the official opening on October 18 of the Regional Office at 234, St. Vincent Street, Glasgow (Tel.: Glasgow Central 5597). In addition to those who took part in the ceremony, those present included Dr. J. G. M. Hamilton, deputy chairman of the Scottish Committee of the Association, Dr. W. M. Knox, chairman of the General Medical Services Subcommittee (Scotland), and the Scottish Secretary of the Association, Dr. E. R. C. Walker, together with members of the Scottish Committee, officers and representatives of the Glasgow and West of Scotland Branch of the Association, the Divisions of the Branch, the local medical committees of the Western Regional area, bodies established under the National Health Service Act, and the principal medical organizations and allied bodies in the Western Region.

The officer in charge is the recently appointed Assistant Scottish Secretary, Dr. J. T. McCutcheon.

An extensive scheme of alterations and redecorations has been carried out with pleasing effect, the premises providing an adequate public office, a committee room, and the Assistant Scottish Secretary's room. Adjoining is the Glasgow office of the Medical Insurance Agency.

Loyal Supporters

Dr. I. D. Grant, chairman of the Scottish Committee, presided. He began by saying that that day they were seeing in the provision of a regional office the fulfilment of an ambition which many of them in the West had nursed for a long time. It was sometimes felt that their colleagues across the Border were apt to regard the Scots as clannish and partisan, but he assured them that nowhere in the United Kingdom would they find more loyal supporters of the Association. It had been suggested in some quarters that Scottish members wanted to secede from the Association because of London domination, but that was not true. Scots had always taken a prominent place in the counsels of the Association, and he instanced the work of Dr. J. B. Miller and Dr. W. Jope.

The developing need for autonomy in domestic affairs had been recognized by the Association, first by the setting up of a standing Scottish Committee in 1903, then the appointment of a full-time secretary for Scotland in 1919 when the Scottish House was opened in Edinburgh; and now they had an Assistant Scottish Secretary and a regional office in Glasgow. They did not think that they had been ill-served by the Association. On broad national issues they themselves felt that they were better served by discussion on a United Kingdom basis, but on all domestic matters they were granted as much freedom as the most ardent Scot could desire. The Association not only laboured for doctors, but always kept in the forefront of their deliberations the welfare of the patient. Doctors felt that they had a duty unselfishly to attend to the needs of those who were sick or afflicted, and they would carry out that duty. That did not mean, however, that they agreed with the views which Governments of various political hues imposed on doctors by way of terms and conditions of service.

Dr. Grant went on to speak of the assistance given by Headquarters towards the proposed reconstruction of B.M.A. House, Edinburgh, although that work was meantime held up because of the lack of a building licence. Now they had also agreed that Scotland should have an Assistant Secretary. Dr. McCutcheon was known to all of them as a most capable colleague. His charm of manner and disarming smile enabled him to smooth away all difficulties, and he was certain that that same serenity, tact, and charm would make the regional office a pleasant place to visit.

They were indebted to Dr. Walker and to Miss Brookes, chief clerk, for the artistic furnishings. Equally they were indebted to Mr. Giles, the Association's accountant, for all he had done. Miss Munro, previously of Scottish House, had become clerk in charge of the regional office, and he extended to her a most cordial welcome.

Office Declared Open

Dr. J. B. Miller, vice-president of the Association and a former chairman of the Representative Body, declared the offices open. He recalled that the Glasgow and West of Scotland Branch was founded in 1876, the first president being Allen Thomson, the distinguished anatomist. Since 1876, two annual meetings had been held in Glasgow. The first was in 1888, when the president was Sir William Gairdner. The only other Annual Meeting to be held in Glasgow was that in 1922, when Sir William Macewen was president. Of the medical politicians of note he need mention only one name—J. C. MacVail, who was a member of the committee which drew up the modern constitution of the Association.

"During these years," he added, "the Branch and its various Divisions has had no abiding place for the soles of its feet, and members, therefore, are delighted to have this beautiful suite of rooms."

The Association existed for two purposes—to promote the medical and allied sciences and to look after the honour and dignity of the members of the profession. In opening these new premises—and he had great pleasure in doing so formally—they were taking further steps towards the fulfilment of these objects.

Dr. A. Macrae, Deputy Secretary of the Association, apologized for the absence of Dr. Charles Hill, Secretary, owing to his parliamentary duties. It gave him great pleasure, he said, to be present, together with Mr. John Pringle, the Association's public relations officer, and Mr. Giles. They were pleased to be there to express on behalf of London Headquarters the friendliest of greetings—the warmest family greetings—to the members in Scotland. They knew the heavy burden which had fallen on the shoulders of the Scottish Secretary, but they were also aware of how fortunate they were in having such an able Scottish staff. They were very glad indeed that a valuable reinforcement—probably a long overdue reinforcement—had been provided in the appointment of Dr. McCutcheon as Assistant Scottish Secretary.

Dr. L. Dougal Callander, chairman of the Association's Building Committee, apologized for the absence of Dr. Gregg, Chairman of Council, who was in America. Dr. Callander added that he had always looked upon Dr. Miller as one of the doyens of the Association. They could never forget his inimitable and brilliant chairmanship of the Representative Body during the most critical period in the Association's history. He had done a great deal for the Association, and for his added service that day they thanked him most sincerely.

PUBLIC HEALTH COMMITTEE

The first meeting of the new session of the Public Health Committee of the Association was held on September 29 under the chairmanship of Dr. C. Metcalfe Brown.

The Committee reappointed the representatives on the staff side of Committee C of the Medical Whitley Council. The panel of deputy representatives was also reappointed.

The chairman reported on the dispute between the management and staff sides of Committee C in regard to the remuneration and conditions of service of public health medical officers. He said that five meetings of Committee C had been held, but as it had not been possible to reach agreement both sides had decided to refer the matter for arbitration under the Industrial Courts Act, 1919. [Proceedings before the Industrial Court opened on October 9.]

A letter from the Ministry of Health before the Committee related to the agreement reached by representatives of the Association and the associations of local authorities in November, 1949, regarding fees for part-time services undertaken by medical practitioners for local authorities. This letter stated that the local authority associations were still of the opinion that consideration of the question of the operative date of the agreement should be deferred. The Committee expressed concern at this continued delay and instructed its representatives on the Joint Committee on Fees for Part-time Work under Local Authorities to press for the implementation of this agreement.

Whitley Machinery and Dual Appointments

It was reported to the Committee that the Ministry had suggested the setting up of a Joint Subcommittee of Committees B and C of the Medical Whitley Council to consider problems relating to the contracts and remuneration of medical officers holding appointments under both hospital authorities and local authorities. This matter had been receiving the attention of the Public Health Committee during the past session.

Information was placed before the Committee confirming that no specialist in infectious diseases had been present on the Review Committee on the occasion of the grading of medical officers of health who were in charge of isolation hospitals in certain regions. A report was made to the Committee on recommendations being considered by the Central Consultants and Specialists Committee with a view to retrospective adjustments being made in those cases where injustices had occurred. One of the proposals to come before the Central Consultants and Specialists Committee was that the rectification of these anomalies should be carried out on the occasion of the review of gradings which would be taking place in 1951.

Membership of Local Authority Committees

The position of medical practitioners in relation to membership of the council or committees of local authorities was also considered. The present position appeared to be that a medical practitioner would be disqualified from such membership if he undertook regular sessional work under a local authority or if there were some general expectation of work under the authority. Representatives were appointed to seek a meeting with the Ministry to ensure that medical practitioners were not debarred from any rights of membership of the council or committees of a local authority which were open to other members of the public.

Following representations made by the Committee during the last session, it was reported that the Ministry was taking steps to issue a circular to local authorities on the use of a single composite form for notifying cases of infectious diseases and of food-poisoning. The proposed form appeared to the Committee to meet its suggestion for the simplification of the present procedure for notifying infectious diseases.

Advertisement Ban

In view of the introduction of a contributory superannuation scheme in Northern Ireland, the Committee expressed the view that advertisements from local authorities in Northern Ireland should not be accepted for publication in the *British Medical Journal* if the salaries offered were less than the appropriate Askwith minimum.

PUBLIC HEALTH SERVICE DEFENCE TRUST

The first meeting of the trustees on the newly established Public Health Service Defence Trust was held at the conclusion of the meeting of the Public Health Committee. The trustees, who are members of the Public Health Committee, signed the Declaration of Trust and appointed the following officers: chairman, Dr. C. Metcalfe Brown; honorary treasurer, Mr. A. M. A. Moore; secretary, Dr. A. V. Kelynack.

The Trustees decided to issue, at an early date, to public health medical officers a letter appealing for funds. The trustees recommended that the annual contribution should be at the rate of 2s. per £100 of remuneration.

PRIVATE PRACTICE COMMITTEE

REGULATIONS FOR CREMATION

The first meeting of the new session of the Private Practice Committee was held on October 11. Dr. I. D. GRANT was re-elected to the chair.

Lord HORDER attended to assist the Committee in its consideration of the recent report of the Interdepartmental Committee on Cremation. He said that the Cremation Council of Great Britain, in its evidence to that body, had urged the simplification of the law relating to cremation and that if possible the procedure should be made more economical. It had been hoped that the Interdepartmental Committee would be satisfied with a simple certificate from the attending doctor and that the confirmatory certificate might be eliminated. After all, the doctor who gave the latter only viewed the body and was dependent for information on the doctor who had been in charge of the patient. The Interdepartmental Committee, however, did not see its way to agree.

One recommendation of the Committee was a departure from present practice. It proposed that the confirmatory certificate should also serve the purpose of the present form whereby the medical referee gave authority to cremate, and that this certificate should be given by the medical officer of health, who would thus take over the functions of the medical referee.

After discussion the Private Practice Committee arrived unanimously at the conclusion that the confirmatory certificate should be retained, but it was averse from the proposal that the medical officer of health should take over the functions of the medical referee. It considered that this should be an independent appointment by the cremation authorities, and that the appointed person should not necessarily be the medical officer of health.

The question of fees for certificates was also considered, and it was agreed that a suitable fee both for Form B, the certificate of the medical attendant, and for Form C, the confirmatory certificate, would be two guineas.

Fees for Special Services

It was reported to the Committee that after interviews with the immigration authorities for Australia, Canada, and New Zealand it had been agreed that the recommended fee for completion of reports on adults and unaccompanied children proceeding to those Dominions should be increased to one guinea, and for accompanied children to 7s. 6d., except in the case of New Zealand, where the report is more comprehensive and the fee for accompanied children should be 10s. 6d.

Discussions with the Shipping Federation on the remuneration of part-time medical officers for vaccination and immunization of seamen had reached a satisfactory conclusion.

An unsatisfactory position was revealed concerning those cases in which a doctor is called upon by the police to give emergency treatment but the police are not responsible for the fee. It was stated that the police in certain areas still customarily called doctors who had been police surgeons, although their appointment had now terminated. The feeling of the Committee was that if the patient was conscious his own doctor should if possible be called, and if the police were compelled to send for some other doctor an arrangement concerning remuneration should be made.

The scale of payment to general practitioners called upon to perform services on behalf of the police was also mentioned. It was agreed that the honorary secretary of the Metropolitan Police Surgeons Association should be invited to be present when the Committee discussed the matter; also that the scale of fees payable in the Metropolitan Police area should be as widely published as possible.

The Committee had proposed a revision of the scale of sessional fees for medical officers of industrial rehabilitation units, but the Ministry of Labour and National Service was unable to agree that there was a sufficiently good case for increasing these fees to £3 3s. for each session as against the present rate of £2 15s. The claim for mileage allowance, however, was conceded. The Committee decided to continue to press for a larger sessional fee.

A request for more liberal payment for part-time regional medical officers was considered. It was pointed out, however, that the remuneration of part-time officers did not compare unfavourably with that of whole-time officers, and that the moment to deal with part-time remuneration would be when the recommendations of the committee considering whole-time salaries were known.

Doctors' Cars

On the subject of doctors' cars the ASSISTANT SECRETARY (Dr. L. S. Potter) made a statement in which he said that the only real obstacle to doctors' obtaining cars was the extreme shortage of cars for the home market. The number of cars produced, expressed in round figures month by month, might seem large, but, as this was shared among many hundreds of dealers in all parts of the country, the number of cars at the disposal of a particular agent was only a fraction of the number of doctors on his books. It was pointed out that the Association continued to maintain a department wholly occupied with the large amount of correspondence on car priorities, and all that could be done was being done. A new and complicating factor was the possible effect of the rearmament programme.

The Committee also considered the car badges issued by the Association and recommended that information about the availability of these devices should be published periodically in the advertisement columns of the *Journal*.

OCCUPATIONAL HEALTH

The first meeting of the session of the Occupational Health Committee of the Association was held on October 12. Dr. J. A. L. Vaughan Jones was re-elected to the chair. Two new members were welcomed—namely, Dr. N. J. Cochrane (Burton-on-Trent) and Dr. B. Hutchison (Cambuslang). Certain subcommittees were reappointed, including one on remuneration.

The new scale of salaries for industrial medical officers, whole-time and part-time, which was recently approved by the Representative Body was set out in a printed leaflet which was distributed to the members. Methods of implementing the new scales were considered. The suggestion was made that there should be a general approach to employers on the subject, but it was agreed to defer action until the publication of the award of the Industrial Court, expected shortly, on public health medical officers' salaries.

The Committee briefly considered a report from the Central Ethical Committee on the ethical aspects of a suggestion which had been placed before it that the Ministry of National Insurance should as a matter of routine inform employers of cases where employees received benefit for industrial dermatitis. Attention was also drawn to the possible dangers of such a procedure. The matter was referred to the Occupational Dermatitis Subcommittee for further consideration.

The Committee scrutinized Form B.I.91 of the Ministry of National Insurance—the medical report on claimant under the Industrial Injuries Acts (prescribed diseases). It was the opinion of several members of the Committee that the form was not very suitable for cases of industrial dermatitis, and that there should be a separate form for such cases. It was agreed to transmit a recommendation to the Ministry in that sense.

A short time ago the Committee held a special meeting to consider the draft manual on industrial first aid to be issued by the St. John Ambulance Association. It considered that the draft needed extensive revision, although this in no way diminished its appreciation of the initiative taken by the body which had brought it forward. Comments had been sent to the St. John Ambulance Association, and its reply was awaited.

It was reported that the Branch Council of the North of England Branch had expressed the opinion that the examination of suspected cases of pneumoconiosis should be accelerated; also that a copy of the report of the findings of the board should be sent to the patient's doctor. This opinion had been transmitted to the Ministry of National Insurance, which had replied that the question of acceleration was being looked into. It was bound up with the question of medical staff requirements which were now under review. With regard to informing the patient's own doctor of the findings, the Ministry agreed that this should be done in these pneumoconiosis cases, and arrangements were being made accordingly.

COST OF HEALTH SERVICE IN SCOTLAND

According to a news report the Scottish N.H.S. local executive councils paid out £17,115,185 in the year ended March 31 last for medical, dental, pharmaceutical, and ophthalmic services, and the expenses of administration and superannuation. The number of people on doctors' lists was just short of five million, and they received 12,584,154 prescriptions during the year, and 613,121 routine eye examinations. The total expense breaks down as follows: Doctors received £5,185,206, dentists £5,436,922, pharmacists and appliance makers £3,763,433, and opticians £2,331,708. Administration cost £222,754, or 1.3% of the total expenditure.

WHITLEY COUNCIL REGIONAL APPEALS COMMITTEES

The following are the names and addresses of management side secretaries:

Newcastle.—J. L. Streeting, Ministry of Health Regional Office, 1, Osborne Road, Newcastle-upon-Tyne, 2 (Newcastle 28861).

Leeds.—F. Stead, Ministry of Health Regional Office, Century House, South Parade, Leeds, 1 (Leeds 32771).

Sheffield.—J. R. Taylor, Ministry of Health Regional Office, Government Buildings, Block 5, Chalfont Drive, Western Boulevard, Nottingham (Nottingham 77711).

East Anglian.—C. A. Harding, Ministry of Health Regional Office, Government Offices, Block D, Brooklands Avenue, Cambridge (Cambridge 54461).

North-east, North-west, South-east, and South-west Metropolitan.—H. V. White, Ministry of Health, 1, Richmond Terrace, Whitehall, London, S.W.1 (Whitehall 7621).

Oxford.—Miss M. Soper, Ministry of Health Regional Office, 17, Bath Road, Reading, Berks (Reading 60481).

South-western.—A. E. Merriott, Ministry of Health Regional Office, 19, Woodland Road, Tyndalls Park, Bristol, 8 (Bristol 26671).

Wales.—J. H. Clement, Welsh Board of Health, Cathays Park, Cardiff (Cardiff 5120).

Birmingham.—J. E. Worth, Ministry of Health Regional Office, 139, Hagley Road, Edgbaston, Birmingham, 16 (Edgbaston 0932 and 1533).

Manchester and Liverpool.—H. G. Jones, Ministry of Health Regional Office, Sunlight House, Quay Street, Manchester, 3 (Deansgate 2444).

THE AMENDING ACTS COMMITTEE

The Amending Acts Committee, set up as a result of a resolution of the Representative Body at Southport this year, met on October 19. Dr. H. H. D. Sutherland was elected chairman for the current session. A preliminary discussion took place on terms of reference and method of procedure. The committee is anxious to proceed with its work with all possible speed and has arranged to meet about once a month.

PAYMENT ON ACCOUNT FOR EXPENSIVE PRESCRIPTIONS

To help chemists who have to dispense expensive prescriptions, particularly if they may otherwise fall into financial difficulties through being newly set up in business, the Minister of Health has agreed that certain categories of prescriptions, including those where the ingredients have an aggregate value of at least £20, may be specially and rapidly priced in advance of the routine pricing and payment under the National Health Service. A letter on the special procedure for this has been sent to those concerned.

Questions Answered

Extension of Professional Accommodation

Q.—*I have had my house extended so as to have a larger surgery and waiting-room and to allow more privacy for my family. The old professional rooms have been reconverted to a living-room and hall. Am I entitled to income-tax relief for this reconversion?*

A.—The expenditure is clearly in the nature of capital outlay incurred to improve future conditions, and no deduction can be claimed. The Income Tax Act of 1945 introduced a new allowance for capital expenditure of a similar nature, but it is restricted to "industrial" and "agricultural" buildings, and would not apply to premises used for professional purposes or, for example, retail trade.

Allowance for Car

Q.—*What income-tax allowances may be claimed in respect of a car used in practice?*

A.—The standard allowances are: (1) initial allowance, at 40% of the amount paid for the car, and (2) wear-and-tear allowance, at 25% on the written-down value of the car. The former allowance can be claimed for the year following the year in which the car was purchased. If the car is used for private as well as professional purposes, some restriction of the above allowances will be due—e.g., in the ratio of the mileage for the two purposes.

Visitor from Abroad

Q.—*Under what conditions do I become liable to pay British income tax? I am a South African and will be spending approximately a year in Britain doing postgraduate work. I am living almost entirely on capital.*

A.—The questioner has evidently come to the United Kingdom for a temporary purpose only, and will accordingly not be liable for any financial year (i.e., for a year ending on April 5) in which he is not residing in this country for six months. For any financial year in which he is so resident, he will be liable to account for income tax on any *income* he receives in this country. Amounts of *capital* received will not be liable to income tax.

Correspondence

The S.H.M.O. Grade

SIR,—Workers in the field of tuberculosis will be dismayed by the recent announcement (*Supplement*, October 14, p. 162) by the Ministry of Health concerning the posts that may suitably be filled by senior hospital medical officers. It appears that medical officers who have spent years in specializing in the field of tuberculosis will, in the vast majority of cases, be unable, under this ruling, to attain consultant rank. It is specifically stated that those who choose to remain in the field of chest clinic work in particular are unlikely to be eligible for consultant status.

This decision follows upon the Ministry's discussion with professional bodies, and it is difficult to avoid the conclusion that not only the Ministry of Health itself but consultants in other fields of medicine, who at present of course represent most of the professional bodies having the ear of the Ministry, are determined to maintain the degraded position of the tuberculosis service that has been its lot for some decades.

It was hoped with the advent of the National Health Service that this position would be radically altered and that all medical officers who had made a single specialty their life work would be considered on equal terms provided their individual achievement was of sufficient merit. Here, however, we have the singling out of a specific branch of medicine (among others such as geriatrics and infectious diseases) as a specialty in which, whatever one's personal achievement, the likelihood of consultant grading is remote.

With the present shortage of beds and the emphasis for the greatest responsibility in the care of the tuberculous falling upon the chest clinic physician and his staff, the present decision is obviously extremely short-sighted. There is no doubt that to-day tuberculosis forms the greatest problem facing the Health Service, and yet a national service chooses to disregard its national responsibilities. Until tuberculosis workers are given the recognition which their work and responsibilities demand, there is little hope of drawing the best men into this field and of maintaining the high standard of efficiency that is required to control the disease.—I am, etc.,

London, W.12. PETER STRADLING.

SIR,—Would it be permissible to ask, How should the agreement which has been reached between the Ministry and the Joint Committee "go far to allay much of the dissatisfaction," as suggested in your leading article (*Journal*, October 14, p. 876)? The dissatisfaction to which you refer does not arise out of the future but out of the past application of this grade, and there is nothing in the Ministry's circular (*Supplement*, October 14, p. 162) which would in any way "allay" any of this dissatisfaction. As far as the future use of the S.H.M.O. grade is concerned, the profession would have possessed an efficient remedy simply by refusing to apply for such appointments. Moreover, the B.M.A., if it was not satisfied with any of these appointments, could have black-listed them and refused to advertise such appointments in the *Journal*. Hitherto we have been told by both the Ministry and the B.M.A. that the S.H.M.O. grade was purely an interim measure which was to be abolished altogether, and now we are informed that its use has not only been extended over a wide field but even applauded by the B.M.A. To say the least, this is somewhat confusing and contradictory.

The Joint Committee is certainly to be congratulated on their ceaseless *efforts* but not on their *achievements* to undo the damage which was originally done by the Grading Committees. As the Ministry's circular clearly states that "practitioners personally graded as senior hospital medical officers who are holding consultant posts . . . should retain their present personal status," I doubt very much that there will be even one of the many senior hospital medical officers who will join publicly the B.M.A. in expressing congratulations to the Joint Committee. The only positive achievement seems to be that for the first time the Ministry openly admits that senior hospital medical officers *do* consultant work without the status or salary

of consultants, and in a country which for centuries prided itself with a deep sense of justice and fair play this would appear to be far more an occasion of feeling ashamed than being congratulated upon.

The Ministry's circular is a further step towards the final defeat, and it would have been far better to recognize it as such instead of making an illogical and hopeless effort to hail it as a victory.—I am, etc.,

Colchester. F. KELLERMAN.

SIR,—In your leading article (*Journal*, October 14, p. 876) you say that the Ministry's circular on the subject is a welcome approach to the delicate problems of the S.H.M.O. grade and should go far to allay much of the dissatisfaction that has been felt about it. While this is to some extent true, it will surely create new problems. Who is to define a "small" hospital? If the patient with a faulty bladder or rectum is always to be assured of attention by a consultant, why should the tuberculous or mentally sick patient be denied this right unless he happens to be admitted to a large hospital? Does not this ruling tend to establish a discrimination between specialties which is contrary to the Spens recommendations?

Which are the "limited fields of psychiatry"? Child guidance, which deals with the seeds of adult disorder? Mental deficiency, which concerns probably 1% of the population? Delinquency? Or merely the paranoia which is rapidly overtaking many previously stable members of our profession?

The circular also recommends, in a footnote, that S.H.M.O.s should be described as assistants. Should we not then insist that they be employed as such and never be asked to accept full responsibility even in a "small unit" or "limited field"? —I am, etc.,

Morpeth, Northumberland. C. GUY MILLMAN.

80% Resignations

SIR,—In the statement issued by the British Medical Guild and circulated to general practitioners we are informed that "the Guild undertakes that the resignations will only be used . . . if the resignations of not less than 80% of practitioners in the Service are held." Also "the Guild further undertakes that the resignations will be destroyed . . . if 80% of resignations are not held." Who chose 80%? Was it decided by the Council of the B.M.A., by the General Medical Services Committee, or by a conference of representatives of Local Medical Committees? It was certainly not decided or approved by the Representative Body. When the chairman of the General Medical Services Committee spoke of withdrawal at Southport, he omitted any reference to this all-important decision.

If the cause is just, we should be prepared to stand fast with a much smaller majority. It would be too absurd if a coalition of those who are comfortable and satisfied, those who would not resign on principle, those who are timid, and some who just lack vision, forming a minority of 21%, should be in a position to dictate the policy of the whole body of general practitioners.

It may well be that in waiting for 80% we are "riding for a fall," and nothing would be more disastrous for the profession at the present juncture.—We are, etc.,

W. L. WINSLOW SMITH,
Chairman of the Guildford Division.
G. L. MCCALL BLAIR.
C. P. WALLACE.

SIR,—I was amazed to read that, unless 80% of those doctors in the N.H.S. favour withdrawal, this action will not be taken. Such a figure is surely unnecessarily high and is unlikely to be reached. Failure to reach the objective will spell defeat and the end, for many years, of our hopes of constructing a service worthy of our profession and our country.

Surely if two-thirds of those concerned are in favour of withdrawal this will constitute a majority adequate to attain our objects and to demonstrate to the Minister and to the country our extreme dissatisfaction with the present state of affairs. It appears that, by placing the figure so high, the whole plan has been sabotaged before it has been begun. One can already discern the same subversive elements at work that gave rise to the astounding *volte-face* at the last plebiscite. Cannot a more reasonable figure be substituted before it is too late?—I am, etc.,

East Horsley, Surrey. BASIL S. GRANT.

Trainee Assistants

SIR,—I was very pleased to see that the Lancashire Local Medical Committee had proposed a motion for the abolition of the trainee assistant scheme to be discussed at the annual conference of Representatives of the Local Medical Committees.

I have just completed a year as a trainee assistant. I have learnt a great deal and gained much experience, but I am sure I have done as much work as most ordinary assistants, and my principal has had my services paid for almost entirely by the State.

It seems to me to be quite wrong that some arbitrarily chosen doctors are able to have an assistant for practically nothing. The intentions of the scheme are obviously good, but I am sure that very few practitioners can afford the time to treat an assistant more like an apprentice. Hitherto young doctors who wished to enter general practice were prepared to obtain the necessary experience at their own expense, and I am sure would still be prepared to do so.

It is a pity that the money being spent on the trainee scheme could not be used in some way to encourage the formation of partnerships, which are very difficult to obtain at the present time. Since the abolition of the goodwill value of practices a principal stands to lose money by taking a partner, and such partnerships as are offered must find some return for the principal.—I am, etc.,

TRAINEE ASSISTANT.

The Doctor's Clerical Work

SIR,—Mr. E. D. Willis and Miss A. G. Shaw (*Supplement*, September 16, p. 132) give an account of a "simplified" system of recording visits which, however, still seems unnecessarily complicated. The following system has been in use in my practice for the two and a quarter years that have elapsed since the inception of the National Health Service and has given complete satisfaction with a minimum of clerical labour.

The basis of the system is the N.H.S. continuation card, not the complete record, and, in contrast to Willis and Shaw's paper, "card" here refers to a single continuation sheet. The only apparatus used is a small box to hold cards in the surgery and a strong rexine-covered cardboard wallet to fit comfortably in the jacket pocket and hold both cards and a selection of N.H.S. forms for use when visiting.

When a request for a visit is received the current continuation card is extracted from the patient's records (or a new one is made out), the date on which the visit is to be made is inserted in the appropriate column, and the card placed in the box. Guide cards for the days of the week or month can be used if the bulk of visiting is great, but are not necessary otherwise. Before starting a round of visits the cards for that day are taken out of the box, sorted into the order most economical of time and petrol, and put in that order in the wallet. As each patient is seen, notes are entered direct on the card and all necessary prescriptions and certificates written. The date for the next visit is then written on the next line of the card, which is transferred to the back of the bundle. On return to the surgery cards are sorted, those requiring further visits being placed in the box and those finished with being placed in a filing tray.

It will be observed that the only work which cannot be delegated is the recording of clinical notes at the time of seeing the patient. Furthermore, nothing is written more than once, as no visiting book, visiting list, or notebook is kept. Unexpected visits ("While you're here, Doctor, would you mind seeing . . .") are recorded on fresh continuation cards, of which a supply is carried in the wallet. (The waste of cards involved by so doing is trivial compared with the waste of time that would be occasioned if rough notes were made and afterwards transcribed.)

The wallet is made like the covers of a book, with a limp back. Cards are held in place against the back cover by strips

of elastic which pass across the two lower corners. There is a pocket on the front cover which contains small bundles of prescription and certificate forms stapled together at the corner. The complete books would of course be too bulky, especially in view of the stroke of bureaucratic genius which separated the first from the intermediate and final certificates. Before the war it will be remembered that all the usual N.H.I. certificates were on a single form. Is it too much to hope that this admirable arrangement should be reverted to?—I am, etc.,

J. W. NICHOLAS.

Silver End, Essex.

POINTS FROM LETTERS

Clear Demands

Dr. J. W. O. FREETH (Dorchester, Dorset) writes: It has become clear that the general practitioner wants something done, and done at once, to improve his remuneration and conditions of service. It has also become clear that at present the holding of meetings between the B.M.A. and the Ministry of Health is, for this purpose, a waste of time. The frustration is such that practitioners are now considering either (*a*) the withholding of certificates, or (*b*) withdrawal from the Service. In my opinion neither of these is practical. If certificates were refused, the terms of service would be broken and executive councils could withhold part of the remuneration, so that only the profession would be worse off. Withdrawal from the Service would mean getting the compensation money at once, but would interfere with superannuation and with the right to continue to practise in the same locality as heretofore. Either action may be further complicated by the National Arbitration Order of 1940, and by the Industrial Courts Act of 1919, so that it is impossible to foresee any clear victory by adopting one of these expensive methods of persuading the Government that we need more pay. However, there is a much more effective and cheap way of getting some satisfaction. The factors which persuade politicians to act are not reasoned documents and accounts, nor even the £7,000,000 publicity campaign which the American Medical Association is organizing, but actions like those of the suffragettes of forty years ago. The Ministry will give us more remuneration if we can create a popular and persistent demand that we should have it. . . . Every general practitioner should have a rubber stamp, and all certificates of whatever nature should have the words "Your Doctor Needs More Pay" stamped across them. Income-tax and all other papers passing through our hands should be similarly treated. . . . We should stick up notices, big and small, telling the world that his doctor needs more pay, until he really understands that we mean it. . . . The time for polite requests to the Ministry has gone, but the time for financial suicide by resigning or withholding certificates is not yet here, for any Government will listen to the demands of the voters (and non-voters) if the demands are proclaimed with sufficient force. We must make our demands clear to all.

Association Notices

AREAS OF LEEWARD ISLANDS AND ST. LUCIA BRANCHES

Notice is hereby given by the Council to all concerned that it is proposed to transfer the Island of Dominica from the area of the Leeward Islands Branch to the area of the St. Lucia Branch. It is also proposed to exclude the Island of St. Eustatius from the area of the Leeward Islands Branch, it not being a British Colony.

Any member or body affected by this proposal and objecting thereto is requested to write to the Secretary of the Association by December 9, 1950, stating the objection and the ground therefor.

CHARLES HILL,
Secretary.

PROPOSED ENFIELD AND POTTERS BAR DIVISION

Notice is hereby given that the Council has formed an Enfield and Potters Bar Division of the Metropolitan Counties Branch; the area of the new Division to comprise the postal and urban districts of Enfield and the urban district of Potters Bar.

CHARLES HILL,
Secretary.

SCOTTISH COMMITTEE
Session 1950–1

Election to fill vacancy in the three representatives of the Group of eight Divisions comprising Orkney, Shetland, Caithness, Sutherland, Inverness, Outer Islands, Ross and Cromarty, and Argyllshire.

Only two members having been nominated under the election procedure laid down in the Standing Orders of the Scottish Committee, a further election is, on the instructions of the Scottish Committee, to be held for the purposes of filling the vacancy. Under the Standing Orders nominations for this election shall be in writing and may be made (*a*) by a Division or (*b*) over the signatures of not fewer than three members in the grouped Divisions. Nomination under (*a*) does not invalidate nomination under (*b*) or vice versa. Nomination forms have been sent to the honorary secretaries of the Divisions in the Group, and can also be obtained on application to the Scottish Office. Nominations should be sent to me at the Scottish Office, 7, Drumsheugh Gardens, Edinburgh, not later than Saturday, November 4, 1950.

E. R. C. WALKER,
Scottish Secretary.

Diary of Central Meetings

NOVEMBER

1	Wed.	**Council**, 10 a.m.
2	Thurs.	Otolaryngologists Group Committee, 2 p.m.
7	Tues.	Orthopaedic Group Committee, 2 p.m.
8	Wed.	Medical Witnesses Subcommittee, 2.30 p.m.
9	Thurs.	General Medical Services Committee, 11 a.m.
10	Fri.	Ophthalmic Qualifications Committee, 11.30 a.m.
15	Wed.	Film Committee, Executive Subcommittee, 2.15 p.m.
16	Thurs.	International Relations Committee, 2 p.m.
17	Fri.	Amending Acts Committee, 2 p.m
17	Fri.	Tuberculosis and Diseases of the Chest Group Committee, 2 p.m.
24	Fri.	Venereologists *Group Committee*, 2 p.m.

Branch and Division Meetings to be Held

EAST NORFOLK DIVISION.—At Norfolk and Norwich Hospital, Wednesday, November 1, 2.45 p.m., annual general meeting.

FINCHLEY DIVISION.—At Finchley Memorial Hospital, N., Tuesday, October 31, 8.30 p.m., election of new secretary.

KENSINGTON AND HAMMERSMITH DIVISION.—At Postgraduate School of Medicine, Ducane Road, London, W., Tuesday, October 31, 8.30 p.m., clinical meeting. Dr. C. L. Cope and Dr. E. G. L. Bywaters: "A.C.T.H. and Cortisone."

KESTEVEN DIVISION.—At George Hotel, Grantham, Thursday, November 2, 7.15 for 7.45 p.m., address by Dr. F. G. Tryhorn, D.Sc., F.R.I.C.: "Forensic Chemistry as it Affects the Medical Profession." The lecture will be preceded by a dinner.

MID-HERTS DIVISION.—At Red Lion Hotel, St. Albans, Friday, October 27, 8.45 p.m., annual general meeting.

STOCKPORT DIVISION.—At Stockport Infirmary, Tuesday, October 31, 8.30 p.m., annual general meeting.

SWANSEA DIVISION.—At Guildhall, Swansea, Thursday, November 2, 7.30 p.m., annual dinner.

SWINDON DIVISION.—At Stratton St. Margaret Hospital, Swindon, Sunday, October 29, 11 a.m., clinical meeting. Non-members of the B.M.A. are invited.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—At Herefordshire General Hospital, Hereford, Thursday, November 2, 3 p.m., clinical meeting.

British Medical Guild Meetings to be Held

FINCHLEY.—At Finchley Memorial Hospital, Tuesday, October 31, 9 p.m., election of new secretary and formation of group.

STOCKPORT.—At Stockport Infirmary, Tuesday, October 31, 9 p.m., meeting of all medical practitioners in the area for formation of local organization of British Medical Guild.

B.M.S.A. ANNUAL REPORT

The British Medical Students Association has issued its annual report for the year 1949–50. It provides a record of work performed during the year, and is obtainable from the secretary, Mr. A. E. Vince, at B.M.A. House, Tavistock Square, London, W.C.1.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY NOVEMBER 4 1950

ANNUAL CONFERENCE OF REPRESENTATIVES OF LOCAL MEDICAL COMMITTEES

The Annual Conference of Representatives of Local Medical Committees was held at B.M.A. House, London, on Thursday, October 26. The chair was taken by Dr. W. JOPE (Blantyre, Lanarkshire), who was supported by Dr. S. Wand, chairman of the General Medical Services Committee. The annual report of that Committee, published in the *Supplement* of September 2, was the basis of most of the day's business.

Dr. Arthur Kelly, Assistant Secretary of the Canadian Medical Association, was present and was welcomed by the Chairman.

A motion by Birmingham that the Annual Conference be held at a date just before the Annual Representative Meeting in July, instead of in October as at present, was lost.

WORK OF THE GENERAL MEDICAL SERVICES COMMITTEE
Statement by the Chairman

Dr. WAND said that the Committee had had a very active year. A number of improvements in the terms and conditions of service had been effected. The inquiry into the volume of work being undertaken by G.P.s had proceeded and it was hoped to have fully detailed and analysed information in the near future. On the Whitley question the arbitration machinery had not yet been determined; it was under discussion. The whole of the staff side of Whitley was in agreement about the general terms of arbitration, but the management side had not seen fit as yet to take their point of view.

On the question of mileage, in view of the difficulties which had arisen it had been suggested that there should be a complete inquiry into the whole mileage position. The Government had agreed and a special committee had begun work. The basis on which mileage payments had been paid dated back for many years before the war and it was time the whole position was revised. The Rural Practitioners Subcommittee had been asked to investigate the dispensing capitation fee, and the inquiry was now taking place. Steps had been taken in connexion with basic salary to get certain improvements in the present position regarding cases in which it was considered that the Minister had been unreasonable in allowing basic salary on appeal. The scope of the Inducement Fund had been extended.

On the question of the petrol tax, in the remuneration inquiry now proceeding the Committee was to be given the opportunity of making representation that the practice expense figures should be adjusted in view of the imposition of the new tax.

In the maternity field they had been able to persuade the Ministry that cases which had been in hospital and which came to them for treatment of complications arising out of pregnancy should carry a fee. On the question of change of doctor the Ministry had accepted their point of view and the machinery was already in being. The Ministry had made it clear that, where doctors wished to exchange practices, such facilities would be given as far as possible, and the Medical Practices Committee was doing what it could to help in that field. Representations had been made on the regulations governing the conduct of the medical service committees and the Ministry had published an explanatory handbook on this subject. The result would be watched by a special subcommittee which was sitting under the chairmanship of Dr. Dain, and further amendments to the regulations would be pressed.

With regard to certification, a number of improvements had been made since the last Annual Conference. After long discussions with the Ministry they had been able to get a considerable improvement in the position under the Act. Those who had read carefully the list in its attenuated form as finally decided would agree that the certificates required now were little more than those required in practice before the passing of the Act. In future all forms of new certificate would require the sanction of a special interdepartmental committee on which they had representatives before being added to the "free list."

A number of subcommittees had been set up. One of them was dealing with the question of protection of practices; another with assistants, and a third with the position of trainees. On the vaccination question a fee of 5s. had been agreed after the Ministry and the local authorities had at first suggested a fee of 2s. 6d., and after representations the Ministry had given as its view that if vaccination or immunization could not be completed for causes outside the doctor's control the fee would still be paid. Representations had been made concerning physiotherapy services in remote rural areas, and there were now arrangements whereby certain doctors with the necessary experience would be able to provide such services. Steps had been taken whereby it was hoped the practitioners might be more adequately represented on hospital boards and management committees. On the criteria for determining the difference between a salaried partner and an assistant their contentions had been accepted by the Minister. He was glad to be able to say that they had been able to persuade the Minister to increase compensation payments to doctors who had retired or representatives of deceased doctors from 1.25 to 1.4 year's purchase, and it was hoped when statistics were available that this might be increased to 1.5.

He went on to refer to the growing volume of newspaper publicity concerning complaints made by patients against doctors. This was bringing the Service into discredit. Although in tribunal cases the name of the doctor was not published, it was not difficult in many areas to pin-point the doctor, who might find himself very embarrassed over a matter which was not his fault. Very often he felt that insufficient allowance was made for the fatigue of the doctor at the end of the day. They had pressed on the Ministry the need for propaganda to the public on the use of the Service in a sensible sort of way, and the Ministry had promised to put some propaganda across, but so far it had been of a very limited kind. It was the purpose of the Committee to bring home the need for more adequate propaganda.

In conclusion Dr. Wand said that it was the purpose of the Committee to see that the Health Service was satisfactory and that the conditions of work for the doctor were the best possible. When it was remembered that their association with the hospitals had not yet been properly determined, that the remuneration problem had not been settled, that the postgraduate education question remained open, it would be realized that they had still before them a tremendous amount of

constructive work. They had set up a Joint Committee with the Central Consultants and Specialists Committee, and another useful liaison was with the World Medical Association, from whose Conference he had just returned. That body had a Social Security Committee on which their own member, Dr. J. A. Pridham, had a seat. (Applause.)

THE REMUNERATION PROBLEM AND THE INQUIRY

Postponement of Special Conference

Dr. WAND, in opening the subject of remuneration, said that it would be remembered that they had agreed with the Ministry on an inquiry into practice expenses and into doctors' incomes which should be completed by a certain date. It had also been agreed that the machinery of the British Medical Guild should be put into operation, and again certain steps had been taken to ensure, if possible, its completion within a certain time. A Special Conference was to be called in December in order to discuss these matters. They had now received certain information which made it necessary that a resolution should be put to the present Conference to vary the date of that special meeting. During the last few weeks there had been a printers' strike in London, and this had held up certain matters. The document that went out to individual practitioners concerning the Guild had been delayed and up to the moment only 58% of local Guild committees had been set up. It was very important that the setting up of these committees should be completed and in particular that the consolidation of the small groups should be made effective.

Again, it was not possible because of printing difficulties for the Ministry to get out the 20,000 documents to executive councils by the determined date. When they were received the councils were in the course of the preparation of the quarterly cheques, so that again there had to be delay, and the full results were not yet available. So far as the expenses inquiry was concerned great progress had been made in the compilation of the figures, but unfortunately a very large number of the accounts were found not to have been agreed between doctors and their local inspector of taxes. They were now awaiting the actuary's opinion on whether the amount of information in hand was statistically sufficient to justify a general figure. He was certain that the Ministry was anxious to get on with this work. He wanted the Conference to believe, as he did, that these delays were impossible to avoid. He accordingly moved:

That in view of the information just received that the official inquiries now proceeding cannot, for reasons outside the control of the Ministry and the General Medical Services Committee, be completed by the end of the year, the special Conference be postponed until March, 1951, or the completion of the inquiries, whichever is the earlier.

He read into this resolution that the meaning was that not only should the inquiries be completed, but the discussion by the Committee on the results of those inquiries should be completed also. One thing they did not want to do was to cramp themselves by a predetermined time-table.

Dr. S. JOHNSTON (Halifax): Can we have some assurance that whatever settlement is arrived at it will be retrospective?

The CHAIRMAN: That is not at the moment before the Conference, but it is the policy of the General Medical Services Committee, if that is any comfort to you.

Dr. I. D. GRANT: Does that mean that the earliest possible date for resignations being effective will be June 1?

The CHAIRMAN: In practice, yes.

The resolution was carried with two or three dissentients.

The British Medical Guild

A motion by Middlesex was moved instructing the Committee to request the British Medical Guild to arrange to collect signed resignations forthwith.

Dr. C. T. MILLS (Worcester) moved an amendment to the effect that the publication of the Minister's decision on the surveys now going on should precede the collection of resignations, unless the publication were unreasonably delayed.

Dr. A. V. RUSSELL (Wolverhampton) supported the amendment. He had every confidence that if they were given time to organize and get things moving they could get up to full strength.

Dr. MAX SORSBY (London) said that the whole purpose of the postponement was to organize themselves in such a way that they would be sure of achieving success.

Dr. W. WOOLLEY (Bristol) could not agree with any suggestion that they had been rushed. They had had nearly a year to get the new machinery set up.

Dr. A. BEAUCHAMP (Birmingham) said that there was a great deal to be done in the education of the rank and file of the work to be done, and the members of the Conference, he hoped, profession, and its members had to be told in plain straightforward fashion exactly what was intended.

Dr. FRANK GRAY (London) agreed that there was much hard would take the lead in that work. The amount of information which it was necessary to put across to the periphery was tremendous. He hoped it would be understood that the Guild machinery was not something just set up for a few months. It was a machinery which must be there all the time so that people in the periphery could know what was going on.

The Worcester amendment was carried with one dissentient.

A motion by London requesting the Guild to inform all practitioners approximately to what extent the capitation fee would be augmented if the just demands of the profession were conceded was referred to the Committee for consideration in the preparation of the documents which would go out.

Proposed Withholding of Medical Certificates

Dr. F. J. ROBERTSON (Newcastle-upon-Tyne) moved:

That in the opinion of this meeting, no mass withdrawal from the Service could be effective without the withholding of medical certificates.

He said that mass resignation by itself was an empty threat. They must take their gloves off in order that it might be a short sharp fight, even though the general public might be inconvenienced.

Dr. A. M. MAIDEN (Lincoln) said that the vast majority of practitioners in his area felt that if resignations were to be effective they must be effective quickly, and the only way of getting quick results was to refuse to give certificates. Some people had suggested that mass resignation was to a certain extent immoral. "If that be the case, let us go the whole hog, refuse certificates, and at least make our criminality of short duration."

Dr. F. M. ROSE (Preston) said that the only thing that would make the Guild successful in the constituencies was a strong line of action, and the public must be the spearhead.

Dr. J. B. BENNETT (Cheshire) asked whether the Conference realized that it was not necessary for the patient to have a certificate to get sickness benefit. Any satisfactory information was sufficient. He failed to see how in his area he was to make a living unless he issued certificates and charged for them.

Dr. A. V. RUSSELL (Wolverhampton) supported the motion. "If we are going to fight, let us fight, and if it causes upset and dissatisfaction, well, it must do so."

Dr. A. CAMPBELL (Accrington) also supported. He said that some of his constituents would not come out at all unless they went the "whole hog."

Dr. J. P. JOHNSON (Wigan) said that in his area at a meeting 100% of those present said that they would agree to resignation if the withholding of certificates was made a part of the policy, but only a few were willing to withdraw unconditionally.

Dr. FRANK GRAY (London) begged the Conference to be realists. Supposing it came to resignation, was not public opinion one of the most important ways of bringing pressure on the Ministry? Every doctor would be in a position to influence public opinion through those patients who came to him. But if the doctor said, "This is a strike, and I will not give you certificates," he would be throwing away the opportunity of influencing the very people who would be on his side. And who would be hurt? Not the community at large, but only those who were ill, those whom their professional training compelled them to help. Would this be a weapon? Certificates could be obtained from osteopaths and others. There was nothing to prevent the Ministry of National Insurance accepting a certificate from a clergyman. The weapon would only break in their hands and damage themselves.

Dr. I. D. GRANT said that if it was going to be war it had to be total war, and in total war some innocent people suffered.

The Newcastle motion that no mass withdrawal from the Service could be effective without the withholding of medical certificates was carried by a large majority.

Dr. R. C. R. GETHEN (Surrey) said that his committee was dissatisfied concerning a clause in the document sent out by the British Medical Guild—the clause, namely, relating to the right of a practitioner to withdraw his resignation papers at any time. It seemed to them that there was insufficient safeguard against practitioners who might, having handed in the resignation form, subsequently cancel their resignation without the knowledge of their local colleagues. If it was not practicable to delete this clause it should be required that in the event of any cancellation all the other signatories in the locality should be informed by the Guild secretary. Only in this way could they get knowledge of what their colleagues were doing, and so maintain a united front. Dr. T. W. MORGAN (Surrey) spoke in the same sense, and a motion to this effect was carried.

The Necessary Majority

Dr. S. JOHNSTON (Halifax) referred to the 80% majority required, and thought that figure should be reconsidered. It would be better to leave the question of the adequacy of a working majority to the discretion of the General Medical Services Committee.

Dr. J. C. ARTHUR (Gateshead) hoped the 80% would not be altered.

Dr. WAND said there was something in the point that if the majority proved to be a unit or two below 80% it ought not to paralyse their action. What was wanted was something to the effect that the Committee would decide what was an adequate majority of the profession to justify them in going forward with the resignations. In the opinion of the Committee this majority should be round about 80%, but if it proved to be 79% it ought not to stop them from taking action. He suggested that this question be referred to the Committee in the light of the discussion.

This was agreed to.

He added that he interpreted that vote as indicating the wish of the Conference that the figure of 80% should be preserved unless some very good reason could be found for a slight alteration in the percentage. (Indications of approval.)

Dr. KENNEDY (I.O.W.) moved a resolution recommending that any practitioners who were unwilling to hand in their resignations should be invited to give an undertaking that they would not accept a patient on the list of a colleague whose resignation had been put into effect. Dr. I. D. GRANT suggested that assistants of members who did come out should be asked to give a similar undertaking.

Dr. WAND said that the proper undertaking for a man to give was an undertaking to resign; otherwise he was not with them. No undertaking other than resignations should be valid. But in view of what Dr. Grant had just said concerning assistants—and there were others who might be brought in in the same connexion—he suggested that this problem should be referred to the Committee.

This also was agreed to.

Loading of Lists

Dr. R. W. MCCONNEL (Buckinghamshire) asked the Conference to express the opinion that a more equitable distribution of the Practitioners' Fund would result if the capitation fees for that part of a practitioner's list between 500 and 1,500 were loaded. He asked that the Committee be instructed to give careful consideration to this opinion and be empowered to act thereon without further reference to the Conference.

Dr. WILSON (Inverness) moved as an amendment that the loading should be, instead of between 500 and 1,000, the first 1,000. He urged that that was a better method of loading.

Dr. SMITH POOL (Glasgow) said that of 659 practitioners in Glasgow, 463 had lists of under 2,500. It was quite obvious that there was great hardship in many cases. Only in the higher list practices did the figures approximate to Spens. An increase for the first 1,000 on the list would encourage partnerships. He supported the Inverness amendment.

Dr. W. M. KNOX (Glasgow) said that they were all in agreement that redistribution would be a good thing, but if it were proceeded with without any addition to the pool it would work out badly.

Dr. F. E. GOULD (Birmingham) reminded the Conference that it had already agreed that it was the extra moneys which should be distributed in this particular manner. What both the motion and the amendment asked was that present moneys should be redistributed, and he thought that should be turned down.

Dr. C. W. NYE (East Riding) thought that the Buckinghamshire motion would be helpful in readjusting the remuneration of practitioners in over-doctored areas. They would by loading the capitation fee for the part of the list between 500 and 1,500 give an indication of what they felt the capitation fee ought to be.

Both the Inverness amendment and the Buckinghamshire motion (each relating to the redistribution of present moneys) were lost.

Dr. A. V. RUSSELL (Wolverhampton) moved to urge the Committee that in reaching any agreement on arbitration it should endeavour to ensure that a court of arbitration should be in fact independent and unbiased. It had been said that if they went to arbitration they would not get all they wanted, which might be true, but it was also true that the Minister would not get all that he wanted. With an independent arbitration they would at all events get a fair deal.

The motion was carried.

Dr. C. W. NYE (East Riding) moved that in any negotiations with the Minister it should be impressed on him that the dissatisfaction of the profession with the Service was not limited to the question of remuneration, but also included the conditions of service and the tendency to lower the status of the general practitioner. The mover was greeted with cries of "Agreed."

Dr. WAND said that his Committee had been very urgent on this question of status in all their talks with the Minister and his officials.

Rural Mileage

Dr. R. ROSE (Berkshire) moved: "That this Conference considers the mileage fee for rural practitioners is still inadequate." For a long time past the rural practitioner had not received an adequate grant. The rural practitioner was called upon to do considerable journeys, involving excessive wear and tear of his car, and in several respects he was disadvantaged as compared with his urban colleague.

Dr. W. F. HUDSON (Oxfordshire), who said that 4.3d. per quarter was the unit payment for mileage in his area, considered that the Minister must have been extremely pleased when he heard that the Committee was "satisfied" with the addition made not long ago to the mileage pool. His local medical committee felt great dissatisfaction at the amount of mileage remuneration and wanted the General Medical Services Committee to press for a mileage pool of £10m., in which all practitioners would participate if they had patients beyond two miles from their surgeries.

Dr. WAND said that it must not be supposed that the Committee obtained the additional half-million for mileage easily; it never got anything easily. But the Rural Practitioners Subcommittee was satisfied. He had been informed of doctors with very large lists, living in small towns and serving neighbouring villages, who obtained as much as £2,000, or in one case £3,000, in mileage. When the Doctors' Remuneration Tables were produced a little while ago it was found that the average net income of the rural practitioner was greater than that of his colleague in the town. It was also evident that any addition to the mileage fund must at the present moment be at the expense of the general fund, which meant that the capitation fee would be reduced. He hoped that Oxfordshire would be asked how they arrived at their claim for a mileage pool of £10m. It was a "nice round sum," but it seemed to him fantastic.

Dr. C. F. R. KILLICK (chairman of the Rural Practitioners Subcommittee) described the work which had been undertaken to secure proper mileage remuneration for country practitioners.

He considered that the rural practitioners were being well compensated for their special difficulties. It was ridiculous to come to that Conference and claim that the mileage pool should be increased to £10m. There were still isolated difficulties which he hoped might be overcome when the review now taking place was completed.

Dr. R. ROSE (Berkshire) said that the rural practitioners in his county felt that they were not getting quite enough. Dr. Wand had quoted wholly exceptional cases, but exceptional cases did not alter the position of the average doctor.

The Berkshire amendment declaring that the mileage fee was still inadequate was lost, and an Oxfordshire amendment to press for a mileage pool of £10m. was ruled out.

Basic Salary

Dr. J. C. ARTHUR (Gateshead) moved to endorse the Committee's view that appeals against the non-award of basic salary should be addressed to the Medical Practices Committee and not to the Minister of Health, and to instruct the Committee to continue to press the point. He said that this was a self-evident matter and moved it without a speech. The motion was carried.

Maternity Services

Dr. C. T. MILLS (Worcester), in connexion with the maternity medical services, moved that the sending by post to the patient of a request to attend by appointment should be deemed to constitute a serious attempt to carry out a post-natal examination.

Dr. WAND did not think this to be justifiable. The sending by post of one request to attend was not a very serious attempt. The Ministry had been asked to indicate what was meant by a serious attempt, but had preferred to leave the matter fluid. They would, however, press the point. They must be reasonable about this. They could not agree to the suggestion of the Worcester motion.

The Worcester motion was lost.

Dr. H. VICKERS (Middlesex) asked the Conference to express the opinion that maternity cases should be accepted at clinics or hospitals only on the recommendation of the patient's general practitioner. Their patients were being taken away from them to have their babies in hospital, and health visitors were telling their patients that there was no need to bother their doctors.

Dr. W. WOOLLEY (Bristol) said that this motion would bring the midwifery work into line with other parts of their work. Dr. N. NELSON (Dundee) said that for years expectant mothers had attended hospitals and clinics and had engaged beds at hospitals. He saw no reason why they should upset these arrangements now.

The Middlesex motion was carried, as was also a motion by Newcastle-upon-Tyne that more beds should be made available in hospital maternity units for general-practitioner obstetricians.

Dr. C. D. MEADOWCROFT (Middlesex) asked the Conference not to accept the view of the Ministry (as set out in para. 52 of the Annual Report) concerning circumcision. The Ministry was unwilling to prescribe a specific fee for circumcision, because in the light of current medical thought it did not wish to encourage an increase in the number of such operations. It seemed as though this operation, if done by a general practitioner, might be looked upon, like abortion, as illegal. General practitioners could do the job infinitely better than a junior house-surgeon.

The Middlesex motion on this subject was lost.

Dr. D. R. SNELLGROVE (Bedfordshire) moved that in all maternity cases in mileage areas the payment for mileage should be 3s. per outward mile in excess of two miles, irrespective of the amount of service given. His committee saw no reason why a difference should be made in mileage payment as between Part I and Part II. Attendance under Part I might involve as many visits and as much work as under Part II.

Dr. KILLICK said that the Rural Practitioners Subcommittee had felt that it was a fair thing that if they did half the work they should get half the fee, and they could not see that it should come out of the ordinary mileage fund.

The motion was lost.

The Filling of Vacancies

Dr. A. SCOTT (Ayrshire) moved that steps be taken to give powers to Medical Practices Committees, in decisions concerning the addition of names to a medical list, to ensure that the letter of the law did not clash with established ethical principles. He gave an instance in which an assistant had applied for permission to start practice in the same area as his principal, unknown to the latter. The local medical committee turned down the application, but the Medical Practices Committee in Edinburgh, to the general astonishment, approved it.

Dr. I. D. GRANT, as a member of the Scottish Medical Practices Committee, said that they could not refuse an application from anyone to practise in an area unless they were satisfied that that area was already adequately served. He mentioned a case in which a doctor who had been assistant to a principal in the area, and was under a bond not to practise there, nevertheless made an application, and, the area being under-doctored, the committee, after taking the best advice they could, were unable to turn him down. It must, however, be for the profession to say—after very careful consideration—whether they wished to extend the powers of the Medical Practices Committee.

Dr. F. E. GOULD (Birmingham) said that the problem could be solved in the majority of cases by reason of the fact that the applicant would want a basic salary or an inducement grant, to which they need not agree, and thus the case would fall to the ground.

Dr. G. P. WILLIAMS (Anglesey) said that it appeared from what had been stated that assistants' bonds were useless.

Dr. WAND said that, of course, if there was a legal agreement this could be enforced in courts of law, but the Medical Practices Committee had no legal authority to take note of any ethical principle. If that committee got involved in ethical questions it would open up a channel whereby some of its work might cause dissatisfaction in the profession. Members of the Medical Practices Committees who were present endorsed Dr. Wand's statement.

The motion was accepted as a reference to the General Medical Services Committee.

Medical Service Committees

Dr. J. C. ARTHUR (Gateshead) moved that, where an inquiry by a medical service committee was deemed ncessary, such inquiry should be held within three months of the lodging of the complaint. At present the interval between the receipt of a complaint by the executive council and the hearing by the appropriate tribunal might drag on for as long as six months. Originally they had asked for a limit of only six weeks, but they had been told that that might not be long enough to complete investigations in certain cases. But it should not be more than three months.

The motion was carried.

On the motion of Dr. A. C. E. BREACH (Kent) the General Medical Services Committee was requested to co-operate to the fullest extent with the B.M.A. Council in undertaking at once a full investigation of the status, composition, procedure, and functioning of the tribunal and medical service committees, taking legal evidence, and publishing a full report with recommendations as a preliminary step to securing amending legislation. This was in line with a resolution passed at the Annual Representative Meeting.

The meeting also, at the instance of Worcester, carried a resolution declaring the Ministry's reply on the subject of publicity in disciplinary proceedings unsatisfactory, and requesting the Committee to press further for the exclusion of the doctor's name from the published decision of the tribunal, except where that decision was to remove the doctor's name from the medical list.

Several resolutions at this stage of the Conference were passed without discussion. One by York urged the Committee to take steps to remedy the absence of co-operation between the regional hospital boards and the general-practitioner service. Another by Worcester called for the addition of all types of supporting and corrective pessaries available to the prescribing doctor to the list of specially expensive appliances for the supply of which dispensing doctors, paid by capitation fee, may receive payment over and above such fee.

Trainee Assistants

Dr. J. J. DEVLIN (Manchester) proposed a motion deploring the continuation of the trainee assistant scheme and calling for its abolition. The scheme, he said, induced a general sense of frustration and futility. Young men should be given an opportunity of going into practices where they would have an opportunity of succession or of becoming partners.

Dr. S. A. WINSTANLEY (Manchester) said that this scheme did not implement for a moment the Spens Committee's recommendation. It was actually preventing certain practitioners who needed an assistant from engaging one because they believed that if they waited long enough they would be subsidized. He was afraid the scheme was subsidizing the acquisitive practitioner.

Dr. TALBOT ROGERS (Kent), as chairman of the subcommittee dealing with this matter, agreed that the present scheme was not the one envisaged in the Spens report. His committee had been instructed that at the end of a further year, now running out, they should collect evidence on how the scheme was working and report back to the General Medical Services Committee whether the scheme should be continued.

Dr. WAND said that he was prepared to accept motions on this subject as a reference to his Committee. He thought he had got the feeling of the Conference fairly well. The Committee had recently asked the Council of the Association to refuse advertisements for trainee assistants at rates of remuneration in excess of those laid down in the scheme. In a scheme of this kind it would be unfair to submit definite opinions until it had been running for some little time.

The various motions on this subject were referred to the Committee. They included one by Bristol deploring the abuses of the scheme and instructing the Committee to ensure that local medical committees exercised very much greater care in the selection of trainers.

Fees for Dental Anaesthetics

On a motion by Worcester City—

That this Conference is of the opinion that practitioners called upon to administer anaesthetics for dentists should insist upon receiving the full fee laid down in the regulations prior to the recent cut in dentists' remuneration—

Dr. WAND said that they had pressed this over and over again and were still pressing it. They had been in consultation with their dental friends, who went with them to the Ministry on one occasion, but they had not got what they asked for.

The motion was carried.

Dr. W. N. MAPLE (East Sussex) moved that such fees should be received automatically by the doctor through the executive council for the area. The Ministry's suggestion was that dental anaesthetic fees should be the subject, apparently, of a wrangle between dentists and anaesthetists. Surely it was desirable that there should be an agreed scale.

Dr. WAND said that they were trying to get this settled without amending legislation, but if they were tied down to a particular method it would definitely need amending legislation.

The motion was agreed to as a reference to the Committee.

Frivolous Calls

Dr. J. C. ARTHUR (Gateshead) moved formally, and it was agreed, that the attention of the Ministry should be drawn to the fact that, up to the present, all Government propaganda had urged the public to make more use of the doctor and not less.

Dr. A. N. MATHIAS (Middlesex) moved to instruct the Committee to demand from the Ministry the formulation of rules for patients to prevent frivolous calls on the services of general practitioners, and that these rules should be printed on the medical card. He said that there were 96 pages of rules concerning the conduct of doctors to their patients, but no rules for the conduct of patients.

Dr. WAND said that the Public Relations Department had been in communication with the Ministry and indications of the line of propaganda that would help them had been sent, but the Ministry's propaganda had been very weak. The trouble was that there was no sanction which could be applied.

The Middlesex resolution was agreed to.

A motion by Blackburn that the defined hours of night visits for the purpose of payment of emergency treatment should be from 6 p.m. to 9 a.m. was met by a motion to proceed to the next business.

Dr. WAND said that after the modifications which had recently been made in the definition of night visits it was a little churlish to bring the time forward to 6 p.m., and that in any case it was largely a matter of local application.

Dr. A. N. MATHIAS (Middlesex) moved that the Conference should not accept the Ministry's statement set out in para. 171 of the Annual Report that the reinstatement of demobilized Service personnel in doctors' lists would involve the employment of a substantial number of additional clerks and therefore could not be undertaken. This was an example of bureaucratic inertia.

Dr. WAND said that they were told that a large number of these demobilized people came back to other areas and that the check would need a considerable number of clerks, who were in short supply.

The motion was withdrawn.

School Health Service and the General Practitioner

On the motion of East Sussex the opinion was expressed that under no circumstances should a local health authority medical officer refer a schoolchild to any specialist (other than for an ophthalmic examination) except with the approval, expressed or implied, of the child's family doctor.

Aftercare

Dr. BARBARA WOODHOUSE (Middlesex) moved:

That this Conference considers the present system whereby health visitors attend mothers, children, and others without the knowledge of the family doctor to be against the best interests of the persons visited.

She said that the health visitor was valuable, but the value was minimized because it was often not carried on in co-operation with the family doctor. In many cases there was overlapping, and in some actual antagonism. General practice was in great danger of being shorn of its completeness. Maternity was disappearing from its purview and general-practitioner hospital beds were being snatched from them. Instead of general practice it would soon have to be called "limited practice" unless they took a firm stand and kept the responsibility for their patients.

After a brief discussion the motion was carried apparently unanimously.

On a motion by Durham it was agreed to draw the attention of the Minister to the very great discrepancy between the sum of 6s. 6d. per annum (plus special drug payment) per patient granted to dispensing practitioners for the supply of drugs and the sum of 15s. which was the approximate cost to the Exchequer of supplying the drugs to each prescribing patient.

This concluded the consideration of the Annual Report, which was then approved.

Arrangements for National Emergency

A motion stood on the agenda in the name of Hampshire expressing concern about the calling up of doctors in the event of a national emergency and urging the Committee to arrange that doctors who were on the reserve by reason of having served in the last war should not be called up at once, to the detriment of their practice, pending the call-up of other medical men.

Dr. D. F. HUTCHINSON (G.M.S. Committee) said that the position to-day with regard to the call-up of doctors was entirely different from that which obtained before the last war. There were now some 20,000 doctors in this country who were under a legal liability to serve if recalled. He agreed with Hampshire that to uproot a man because he had such legal liability, entirely irrespective of what he was doing in the civil profession, was ridiculous. They had impressed upon the Ministry the urgency of deciding upon some screening machinery, and at a conference during the previous week a skeleton plan had been worked out. The position now was that a subcommittee had been formed to hammer out details. It was

likely that these details would not differ widely from the arrangements in force during the last war.

The Hampshire motion was carried.

Hampshire had a further motion instructing the Committee to arrange with the Ministry that in the event of war all practitioners engaging in practice in an area other than their own should automatically be placed on a special list of the executive council of that area.

Dr. HUTCHINSON made a further statement on this motion. The broad outlines of a protection of practices scheme had been discussed. The plan which it was hoped to operate was that a practitioner who was called up should have his remuneration from the Services made up to the net annual figure of his civil practice, on the basis of the last quarter's payment. This would be a first charge on the pool, so that such a burden would fall on every part of the country, instead of on the local area. This would be a fairer method, although, of course, it would entail that the capitation fee would be somewhat lower. It was hoped shortly to publish a scheme to the profession.

The Hampshire motion was carried.

Superannuation

Dr. D. R. SNELLGROVE (Bedfordshire) moved that when a practitioner retired or died before becoming entitled to superannuation the Government contributions of 8% plus interest should be paid to the practitioner or his representative in addition to the repayment of his own contributions of 6% plus interest.

The motion was withdrawn after Dr. Wand had given an assurance that the Superannuation Committee had the point under consideration.

On a further motion by Lancashire, that the method of calculating the superannuation to which a doctor became entitled should ensure that there was no reduction of the amount by reason only of the employment of an assistant, Dr. WAND said that on the face of it this was a reasonable proposition, but on meeting one of the officers of the Ministry and discussing the matter they encountered certain arguments which it was difficult to meet. The Government was anxious to superannuate people on their earnings. When a man had an assistant, if they employed the method indicated in the Lancashire motion, it would mean that the Government would pay a greater amount in superannuation than would have been the case had the principal and assistant been in practice in the same area or even in the same house, but separately, having the same size of list. He thought they should leave the matter there. Where a list exceeded 4,000, the argument was even stronger on the Ministry's side.

The motion was referred to the General Medical Services Committee.

Dr. W. P. HEDGCOCK (Cambridgeshire) moved to draw the attention of the Conference to the plight of many elderly practitioners who were unable to retire on account of financial stringency. He urged that an approach should be made to the Minister to investigate the possibility of financial aid for these practitioners to enable them to retire. In earlier years this matter had been dealt with by the National Insurance Defence Trust.

Dr. WAND said that under the former Insurance Acts some of the moneys held in trust funds were devoted to this purpose, but it was not a very popular thing and during the last years of the Act it was used hardly at all. The Compensation Superannuation Committee had a similar resolution before it from the Annual Representative Meeting and had decided to initiate discussions with the Minister. The possibilities would be explored, but it should be remembered that they were tied down by the limits of their pool and that any such payments might come as a further charge on the pool. He accepted the motion as a reference to the Committee, but he warned representatives that it was a difficult problem with the Ministry in a service on which a ceiling had been set, with claims in other directions.

Compensation

Dr. F. R. B. H. KENNEDY (Isle of Wight) moved that the amount of repayment of capital value of practice payable on retirement should be subject to increment or decrement according to the then value of the £ relative to the £ in 1948. The value of the £ might depreciate considerably. The CHAIRMAN suggested that they should be careful about this motion. There was an Act on the statute book under which £66m. was the global sum for compensation, and no allowance was made for any variation. It might be more cautious to refer this to the Committee. The mover agreed to that course.

Dr. P. LOWDEN (Hampshire) moved that, in view of the continued delay in fixing the amount of compensation payable to individual doctors, the Conference should recommend that an adequate sum from the compensation fund should be set aside to meet claims not yet agreed. The balance, to be divided amongst the agreed claims, would raise considerably the compensation value of the practices, which up to now had been arbitrarily fixed at one year. He did not want to see compensation consigned to the limbo of post-war credits.

Dr. L. S. POTTER (Assistant Secretary) said that they had been waiting a long time for the regulations implementing the compensation clauses, and he was now promised that a full statement would be made shortly, probably to appear in the *Journal* within the next fortnight. It was often said that this was the profession's own money; that was true, and it was all the more important that it should be distributed equitably. He believed that there was evidence now in the hands of the department which made a fairly accurate estimation possible. They had been pressing the department for advance payments to doctors who had retired and were entitled to the full amount. The business of completing the assessments was going forward. Delay was unavoidable, but everything was being done in the interests of expedition.

The Hampshire motion was referred to the Committee.

Part-time Regional Medical Officers

Dr. W. H. HAYES (Bristol) moved that appointments of part-time regional medical officers should be made only after consultation with local medical committees in the area. Dr. W. WOOLLEY said that he had tried to find out how such officers were appointed. He was told that the appointments were made centrally, but were not advertised, and that as far as possible men with small lists were chosen. It seemed a hole-and-corner way of choosing these men. They ought to be men in whom practitioners would have faith.

Dr. WAND said that this matter was under consideration to the extent that representations had been made to try to get local medical committees in on this.

The Bristol motion was carried.

In dealing with a motion from Berkshire that the General Medical Services Committee should consult local medical committees in all cases before agreeing to changes in or additions to regulations affecting general practitioners, Dr. WAND said that the Conference elected its executive committee, and if that committee was to do its work it was not reasonable that it should have to refer everything to the periphery. On the matter of regulations he could recall no regulation that had been put out for a long time now without the fullest consultation with the Committee. That was a great achievement and it was a very good thing that the Government had been persuaded that it was the right thing to do. In what other field in this country was that likely to obtain? If through an excess of democracy everything had to be referred to the local committees they would get nowhere. If any major problem came up, of course the Committee would consult either the Conference or the local committees.

The Berkshire motion was "lost unanimously."

General-practitioner Hospitals

Dr. G. D. THOMPSON (Lancashire) moved:

That this Conference deplores the present apparent policy of converting general-practitioner hospitals to other uses, and strongly urges the Committee to take immediate steps to secure the reversal of this policy.

He said that on October 4, 1949, the Minister had explicitly encouraged the use of local hospitals at which general practitioners in the neighbourhood could attend cases which, for various reasons, could not be treated at home. Unfortunately regional hospital boards were not carrying out that policy. They were converting general-practitioner hospitals to other uses. He knew of about 30 cases all over the country in which this was being done, two of them in his own county. It was in this way that the status of the general practitioner was being lowered. Surely it did not need an F.R.C.P. to treat pneumonia? There should be more general-practitioner hospitals, not less.

Dr. T. W. MORGAN (Surrey) said that he was interested in a hospital of 44 beds which had been recommended for change of use. They had for the last 16 months been trying to fight this recommendation. His colleagues in that particular hospital had been offered two alternatives: one, the use of a smaller hospital which some years ago was given up as a modern hospital and had since been used for the chronic sick; the other, clinical assistantships at the general hospital. While the matter was still under negotiation the local hospital management committee had issued a notice of closure within 12 days; they had stated that no more cases were to be admitted after October 31. This was while negotiations were still in progress with the regional board. General-practitioner hospitals were an essential factor in keeping up the standard of the general practitioner. This decision had been condemned by two borough councils and by the executive council for Surrey.

The Lancashire motion deploring the present policy and calling for immediate steps to be taken for its reversal was carried unanimously.

Dr. R. C. BURTON (Sheffield) asked the Committee to reconsider its decision that no payment be requested for practitioners who complete the forms of investigation into virus infections in pregnancy, issued by the Ministry. He urged that as a matter of policy an adequate fee should be requested for the completion of any forms of investigation along the lines of research. The danger was that if these forms were sent in without a fee attached the Minister would be given a loophole through which he could push more and more work on them and this would eventually by regulation be included in the terms of service.

Dr. WAND pointed out that the completion of these forms was not compulsory. The Conference had been stressing the need for improvement of status and the desire of practitioners to be associated with more scientific work. It was important to show their good will towards the Ministry or anybody who was conducting an inquiry of this kind so long as the inquiry was reasonable, and he hoped the Conference would support the Committee.

The Sheffield motion on this subject was lost.

Secretaryship of the G.M.S. Committee

Dr. A. V. RUSSELL (Wolverhampton) moved:

That this Conference considers that it is absolutely essential, in view of the approaching conflict, that the Secretary of the G.M.S. Committee should have ample general-practitioner experience.

Dr. Russell desired to alter the terms of his motion, but the Conference would not permit him to do so. He said that they were about to lose the experience of Dr. Hill, and it was important to ensure that the Secretary of the Committee, which would be the headquarters of the fight which lay ahead of them, should be a man with special knowledge of general practice.

Dr. W. WOOLLEY (Bristol) hoped the Conference would defeat this motion. It was for the Committee to choose its own secretary. The motion if passed would hamper its hands.

Dr. WAND: Do I need to say anything about this motion? (Cries of "No.")

The motion was lost, only one or two hands being held up in its favour.

Elections

It was announced that Dr. W. Jope had been re-elected Chairman of the Conference unopposed.

The six members of the General Medical Services Committee elected by the representatives at the Conference were the following: Dr. A. Beauchamp, Dr. S. A. Forbes, Dr. I. G. Innes, Dr. J. A. Pridham, Dr. F. M. Rose, Dr. W. Woolley.

The Defence Trusts

The report of the trustees of the National Insurance Defence Trust and the G.M.S. Defence Trust as to action taken during the past year and as to the contributions received from Local Medical Committees was submitted to the Conference. Dr. WAND, chairman of the trustees, spoke of the healthy state of the investments and appealed for regular and adequate subscriptions to the Fund. This was the only means by which the Committee could measure the support available at the periphery.

Vote of Thanks to Committee

Dr. S. NOY SCOTT (Devon and Exeter) proposed a motion congratulating the General Medical Services Committee on the vast amount of work which it had achieved during the last year and on the success which had crowned its efforts in so many of the problems which it had tackled. The motion was supported by Dr. R. MCCONNEL (Buckinghamshire) and by Dr. B. HUTCHISON (Lanarkshire), and carried by acclamation.

The Conference ended at 5.30 p.m., after according a vote of thanks to its Chairman.

CONFERENCE DINNER

At the close of the Conference the representatives assembled for dinner at the Dorchester Hotel, with Dr. W. JOPE in the chair, the members of the General Medical Services Committee being the guests. The health of the Committee was proposed by Dr. WILFRED HUDSON, who said that during the day the Committee had come in for some occasional criticism, but they all agreed that it had done a grand job of work and deserved their thanks. Dr. S. WAND, in responding, referred to Dr. Hill's resignation. That was a suitable moment, he said, to say how sorry they were and how grateful for what he had done in the past. They must not be selfish. They had had his services for a number of years. Their best wishes followed him in this new turn in his career, and they hoped it would carry him to very high places. Dr. Wand also paid a tribute to Dr. Stevenson, the present secretary of the Committee, to Dr. Potter, and to the clerical staff. He made a special acknowledgment of the work of Mr. Scrivener, who had been clerk of the Committee and of the Insurance Acts Committee before it for many years.

Dr. DAIN made an appeal for contributions to the Dain Fund, the purpose of which was to help to educate the sons and daughters of doctors, particularly National Health Service doctors, who had fallen by the wayside. He asked for individual contributions and contributions from local medical committees. A collection taken at the tables realized £157, which was a record.

Dr. W. M. KNOX proposed the health of the chairman of the Conference, whom he complimented on his masterly handling of the day's proceedings, and Dr. JOPE, in his reply, paid a further tribute to Dr. Hill. Dr. HILL was given an ovation on rising to speak. He said that his decision to leave the Association had not been taken without a great deal of thought, but he was convinced that it was the right course to take. No one who had spent many years in the service of the Association could leave it without a feeling of sadness. He had received there "an immensity of kindness," and he referred in particular to the present Chairman of Council, Dr. Gregg, to Dr. Wand, the chairman of the Committee, Dr. Jope, the chairman of the Conference, and Dr. Dain. Dr. Hill concluded by saying that now that he had decided to take his chance in another field he hoped his work there might not be without value to his colleagues in the medical profession.

Dr. ARTHUR KELLY, assistant secretary of the Canadian Medical Association, who was welcomed as a guest, said that he had been particularly interested during the Conference in the references to general-practitioner hospitals. In Canada the general practitioners constituted the staff of the majority of hospitals. They were proud of the capabilities of their general practitioners, and deprecated any loss of their rights. He

wanted to see an open door for the general practitioner in hospitals, and he hoped that the present trend in Great Britain would be reversed.

Brief remarks were made by Dr. STEVENSON, who paid a tribute to Dr. Hill on behalf of the assistant secretaries and the staff, and by Dr. MCCUTCHEON, the Assistant Scottish Medical Secretary, who spoke as a newcomer in that capacity though not as a representative.

A clever entertainment added to the enjoyment of the evening.

MEDICAL PRACTICES COMMITTEE

The Medical Practices Committee has issued the following amendments to the four schedules compiled from its survey (*Supplement*, August 5, p. 77).

Schedule I

England: Counties

DELETIONS

Derbyshire.—Urban District of Ripley.

Leicestershire and Rutland.—Melton Mowbray (excluding Somerby.

Schedule II

England: Counties

ADDITIONS

Cheshire.—Insert "except Cheadle Hulme" after Cheadle and Gatley; Marple Bridge.

Derbyshire.—Urban District of Ripley.

Kent and Canterbury.—Insert "except the Poverest Ward" after the Urban District of Orpington.

Leicestershire and Rutland.—Melton Mowbray (except Somerby).

Suffolk (East).—Insert "Wickham Market with Orford and Otley" after the Rural District of Deben.

DELETIONS

Cheshire.—Bredbury and Romiley.

Derbyshire.—Rural District of Chapel-en-le-Frith.

Lincolnshire (Holland).—Delete the words "with the exception of Gedney Hill" after the Rural District of East Elloe.

Lincolnshire (Kesteven).—Ancaster; Caythorpe; Navenby.

Sussex (East).—Crawley Development Area (Rural District of Cuckfield).

Sussex (West).—Crawley Development Area.

CORRECTIONS

Durham.—Urban and Rural Districts of Barnard Castle, etc., should read: Urban and Rural Districts of Barnard Castle (with the exception of Middleton-in-Teesdale and Gainford); Rural District of Darlington.

Norfolk.—Rural District of Erpington should read: Rural District of Erpingham.

Schedule III

England: Counties

ADDITIONS

Cheshire.—Bredbury, Romiley, and Woodley; Hazel Grove and Bramhall; Cheadle Hulme.

Derbyshire.—Rural District of Chapel-en-le-Frith.

Devon and Exeter.—Brixham; Torrington.

Surrey.—Crawley New Town.

Sussex (East).—Crawley New Town.

Sussex (West).—Crawley New Town.

Schedule IV

England: Counties

ADDITIONS

Cheshire.—Malpas.

Kent and Canterbury.—Poverest Ward of Orpington Urban District (area adjacent to St. Paul's Cray).

Lincolnshire (Kesteven).—Ancaster; Caythorpe; Navenby.

Suffolk (East).—Wickham Market (Deben Rural District).

DELETIONS

Devon and Exeter.—Brixham; Torrington.

Lincolnshire (Holland).—Gedney Hill (East Elloe Rural District).

CORRECTIONS

Kent and Canterbury.—St. Mary's Cray should read St. Mary Cray.

Suffolk (East).—Pressingfield (Hartismere Rural District) should read: Fressingfield (Hartismere Rural District).

THE DOCTOR-PATIENT RELATIONSHIP

WEEK-END COURSE AT ASHRIDGE

The General Practice Review Committee considered at a recent meeting a suggestion that the Association should participate in a week-end course at Ashridge on the general theme of the doctor–patient relationship. Ashridge is the residential college near Berkhamsted, Hertfordshire, which, in addition to the full-time courses at its House of Citizenship, organizes short courses and discussions on subjects of public interest.

It is proposed that the week-end shall be March 9–12, 1951, and the course will be open to all medical practitioners. There will probably be five speakers (one of whom will be lay) to open talks on subjects connected with general practice and its trends, and those present will then break up into discussion groups to consider the various points raised. The General Practice Review Committee considers the suggestion a very valuable one which should provide an excellent forum for a reasoned exchange of views on conditions in general practice to-day.

The fee for the course, including accommodation at Ashridge, is £3 10s. Full particulars about application for the course and the number of participants who can be accommodated will be announced as soon as possible, but this preliminary notice is published in order that practitioners may make a note of the date.

MANX CHEMISTS' DISPUTE

Chemists in the Isle of Man are still not prepared to operate the regulation making a charge of sixpence on each prescription form. They have raised the objection that other regulations might be introduced in "the same inconsiderate manner."

Representatives of the Isle of Man Medical Society had a conference with the Isle of Man Health Services Board on October 18, and on October 20 stated that their differences with the Board had for the moment been settled.

In a statement issued by the Society previously the following observation was made: "It must be clear to all that the fundamental trouble lies in the endeavours of the Health Services Board to manage without those statutory bodies, the Advisory Council and the Services Committee, which were designed to assist in the running of a highly technical service by providing technical advice."

The doctors have been complaining for some time that decisions are made without consultation with the bodies set up under the Act to give technical advice.

THE NATIONAL FORMULARY

Some weeks ago a firm of pharmaceutical manufacturers issued, by means of a circular letter to doctors, a leaflet containing an indication for the exhibition of one of its proprietary preparations. The leaflet was adapted for inclusion in the *National Formulary* and was headed: "National Formulary, 1949." Inquiries were received from doctors and local medical committees whether this leaflet had been issued with the approval or with the authority of the Joint Formulary Committee. In order to remove all possible doubt, the firm in question has authorized the publication of the following letter addressed to the publisher of the *National Formulary*.

Dear Sirs,

We understand that the issue by us of a leaflet headed "1949 National Formulary. A summary of the uses of Crookes Lacto-Calamine" may inadvertently have given the impression that you countenance the advertising of proprietary products in the *Formulary*.

Such of course was not our intention and we wish to express our regret for any embarrassment we may have caused you.

We shall not issue similar leaflets in the future.—Your faithfully,

CROOKES LABORATORIES, LTD.

Heard at Headquarters

Presidents of the W.M.A.

The General Assembly of the World Medical Association heard with much regret at its meeting in New York that Dr. Charles Hill, its retiring president, was prevented by his Parliamentary duties from being present. Dr. Hill is succeeded as president by Dr. Elmer L. Henderson, also president of the American Medical Association. Those of us who may be so misguided as to think that the way of the American doctor is easy will be interested to know that as a youth Elmer Henderson worked on a farm. Deciding to take up medicine, he financed his own education by picking cotton, selling men's wear, running street cars, managing rides in an amusement park, and fixing pipes for a gas company. This kind of experience is, we understand, not uncommon in the U.S.A. and lends point to the saying that America is the land of opportunity. Dr. Henderson is a practising surgeon in Louisville, Kentucky, and served overseas in the war of 1914–18 as a major. In the war of 1939–45 he was chairman of the committee which arranged for the supply of physicians, dentists, and veterinarians for the fifth Service Command. Although he is past his sixtieth year, he gets up at 6.30 a.m. to begin his day's work.

The president elect of the W.M.A. is Dr. Dag Knutson, who will preside over the Fifth General Assembly of the W.M.A. in Sweden next year. Dr. Knutson is a member of the board of the Swedish Medical Association and has been its president since 1946. He has been an active member of the organizing committee and then of the council of the W.M.A. since 1946. He is a specialist in internal medicine and is head of the University Polyclinic for Internal Disease at Karolinska Sjukhuset, Stockholm.

More about W.M.A.

An innovation which was warmly appreciated at this year's meeting of the W.M.A. was a scientific session held during one afternoon. Those present were fascinated by the film shown by Dr. Alfred Blalock, chief surgeon at Johns Hopkins' Hospital, Baltimore, in his discussion on recent advances in surgery of the heart. Delegates also had the opportunity of listening to Dr. Louis K. Diamond, of Boston, speaking on the therapeutic uses of blood and blood derivatives; to Professor Hans Selye on stress and the general adaptation syndrome; and to Dr. Albert F. R. Andresen, of Brooklyn, on peptic ulcer. They were particularly interested in Dr. Andresen's remark that he had not used antacids for more than 30 years.

Another innovation was the holding of a meeting of medical editors, when Dr. Morris Fishbein, editor of the *Bulletin* of the World Medical Association, was in the chair. Of the papers read at this meeting the most interesting was the contribution by Dr. Joseph Garland, editor of the *New England Journal of Medicine*, on "Editorials, their Significance and Possibilities." This was a scholarly contribution which made those medical editors present go home and think afresh about the position of the leading article in contemporary medical journalism. Dr. Stanley B. Weld, editor of the *Connecticut State Medical Journal*, read a paper on medical advertising in which he gave a well-informed account of the control exercised by the American Medical Association through its Bureau of Pharmacy and Chemistry on the advertisement of drugs and appliances in the American medical press. When this article is printed in the *Bulletin* of the World Medical Association it will be of much help to editors of medical journals in other countries. In the absence of Professor M. W. Woerdeman, Dr. Fishbein gave an interesting informal talk on the inquiry which is now being conducted in America into the highly complicated work of abstracting and indexing medical literature. He drew attention to the need for co-operation in this kind of work, a form of co-operation which is in fact being encouraged by Unesco through its Co-ordinating Committee on Abstracting and Indexing of the Medical and Biological Sciences. Dr. Sandford V. Larky, librarian to the Welsh Medical Library, Baltimore, read a paper packed with information on the medical journals of various countries and of their indexing and abstracting. Dr. Hugh Clegg, Editor of the *British Medical Journal*, devoted most of his paper on anonymity in medical journalism to bringing forward arguments in favour of signing book reviews.

Correspondence

G.P.s on Hospital Staffs

SIR,—Recent correspondence in the *Journal* has shown that much thought is now being given to the problem of teaching medical students something about general practice. Unfortunately there is little agreement on how this can best be achieved.

The man who wishes to specialize to-day and get on to the staff of a teaching hospital has too much knowledge and experience to acquire in his own field to enable him to spend any time in general practice and so learn what to teach the students about it, while the general practitioner is far too busy to find time for the daily teaching of students, whom it has been suggested should be attached to him. Indeed, the relationship between patient and practitioner would be badly upset if a third person were to listen to every confidential chat.

An obvious solution to the problem is to appoint one or more suitable general practitioners to the staff of every teaching hospital. The G.P. in an occasional lecture, round, or out-patient attendance with or without his colleagues on the staff, and at an occasional visit to his own surgery, would be able to present a picture of general practice to the students. At the same time his contact with the staff would ensure a better appreciation of the problems of general practice in the hospital and lead to a closer co-operation between the hospital and the local practitioners. If it is true that the G.P. is the backbone of the medical services, it is incredible that he has been kept off the staff for so long.

Any student who has had the principles of medicine taught him at his medical school, and who has learnt about the problems of general practice from the G.P. on the staff of his hospital, should be fully qualified to take up a post as an assistant or junior partner in practice. He would not then have to waste any of his precious weeks sitting aimlessly in a surgery watching his tutor fill up endless forms and make wonderfully quick and usually accurate diagnoses as a result of his previous knowledge of the patients.—I am, etc.,

London, W.8. H. STEPHEN PASMORE.

Disciplinary Machinery in the N.H.S.

SIR,—Dr. A. C. E. Breach (*Supplement*, October 21, p. 168) is to be congratulated on bringing forward one of the most fundamental long-term problems in the conditions of service. The growing flood of instances of executive fines of an unparalleled viciousness must give rise to grave disquiet in the minds of doctors trying their hardest to make the best of a very hotch-potch Service.

As was feared in the beginning, the administrative bodies set up are already getting bogged down in the execution of regulations and in watching the economy of the Service. Ideas of improvement in conditions will slowly be strangled. Certain members of these administrative bodies with preconceived ideas of penalizing bad doctors (a very characteristic mixture of love and hate with which the public think of the profession) are making life burdensome for the ordinary doctor, who at any moment may be caught in the many traps set for his unwary feet.

For years the citizens of this country have battled to wrest power from centralized authority and to set checks and safeguards. It is quite obvious that we have been chosen as an example of the reverse of this process—of how a great and learned body of men can be beaten into submission and how disciplinary machinery set up can be controlled by a Minister of the Crown in civil life more rigidly even than by any commander in the armed Forces.

In the main the medical members on these committees do sterling work and few mistakes have been made as yet. But the danger is too great. Disciplinary procedure must be put

into the hands of an independent judiciary just as arbitration must be put into independent hands. The G.M.C. has just conceded this and the Minister must do likewise.—I am, etc.,

London, W.C.1. J. L. McCALLUM.

SIR,—A history don has reminded me that a revolution was necessary to abolish the Star Chamber. As your correspondent points out (*Supplement*, October 21, p. 168), Star Chambers are gradually being called again into existence in all walks of life.

Doctors and dentists are subjected to heavy fines, as in Star Chamber days anyone might be, with but a farce of a trial. A milkman was recently fined by a trade union for getting up too early. A workman was fined for doing too much work, etc. Doctors are already subject to the discipline of the General Medical Council. No other court should be necessary except that of the ordinary law of the land.

The recent case of a medical man being told by a mob in which order he should see his patients raises an old question. Many years ago witnesses of an accident would call all the doctors in the neighbourhood, till at last doctors refused to attend an accident without the written summons of a policeman. This the policeman would refuse to give, but the onus was on the police. Later, therefore, the police were well trained in first aid and the patient was rapidly delivered to hospital. Now the onus is back on the doctor, and he is the subject of a People's Court with a Minister of Health at its head.—I am, etc.,

Bosham, Sussex. F. C. B. GITTINGS.

Financial Difficulty in Essex

SIR,—Now that the general practitioners are occupied with the problem of the threat to resign from the National Health Service, many who are earning a satisfactory income are wondering whether there is in fact any need for them to bother. Some of them are not convinced that some doctors are in real financial difficulty. In the hope that these figures may make them have second thoughts on the subject, I would like them to be known as widely as possible, not only in Essex but all over the country.

In Essex 50 doctors have between 500 and 1,000 patients on their list, and 192 doctors have less than 500 patients on their list. This latter group are in real financial difficulty and need the collective help of all doctors of good will to help them out of their plight.

In England and Wales there are 4,132 general practitioners whose net income is under £840.

In Essex 43 full-time hospital officers have lists of N.H.S. patients for which they draw a capitation fee out of the Essex pool. This money has to be paid into the regional hospital board. In effect the G.P.s are personally contributing to the cost of the hospital service.—I am, etc.,

Upminster, Essex. E. ANTHONY.

Cui Bono?

SIR,—We learn in practice that the common often deserves note more than the rare. It is for this reason that I report the following case.

A patient of mine was admitted, after consultation, for observation and treatment of an acute pelvic condition to a 120-bed hospital in London on July 25. Investigation, treatment, and nursing were admirably successful, and she was discharged on August 8.

On October 6 I received the first and only information I have had from the hospital concerning her, and this was of the briefest. I should add, in fairness, that in reply to a personal letter the consultant concerned had given me details of her case early in September, but clearly the hospital did not consider itself excused or it would not have written at all.

I believe I am not alone in finding that the appointments system is associated with longer waits for patients. It seems that increased clerical staffs at hospitals are associated with longer delays in receiving reports.

What was the name of the Roman who was wont to ask *cui bono*? I feel just like him.—I am, etc.,

London, N.W.3. LINDSEY W. BATTEN.

Association Notices

PROPOSED DISSOLUTION OF THE MERIONETHSHIRE AND MONTGOMERYSHIRE DIVISION

Notice is hereby given by the Council of the following proposal:

That the Merionethshire and Montgomeryshire Division should be dissolved; and that Merionethshire be transferred to the Caernarvon and Anglesey Division and that Montgomeryshire be transferred to the Shropshire and Mid-Wales Branch.

Any member or body affected by this proposal objecting thereto should write to the Secretary of the Association by December 2, 1950, stating the objection and the ground therefor.

CHARLES HILL,
Secretary.

October 31.

Diary of Central Meetings

NOVEMBER

7	Tues.	Orthopaedic Group Committee, 2 p.m.
8	Wed.	Arrangements Committee, 11 a.m.
8	Wed.	Medical Witnesses Subcommittee, 2.30 p.m.
9	Thurs.	General Medical Services Committee, 11 a.m.

Branch and Division Meetings to be Held

BURNLEY DIVISION.—At "The Romany" Dance Hall, Nelson. *Friday*, November 10, 8 p.m. to 2 a.m., annual medical ball. Midnight cabaret.

CHESTERFIELD DIVISION.—At Chesterfield Royal Hospital, Friday, November 10, 8.45 p.m., Professor C. H. Stuart-Harris: "The Poliomyelitis Problem."

GUILDFORD DIVISION.—At Royal Surrey County Hospital, Guildford, Friday, November 10, 8.30 p.m., Dr. William Evans: "Unwarranted Cardiac Invalidism."

SUTTON COLDFIELD DIVISION.—At Sutton Coldfield Hospital, Friday, November 10, 8.30 p.m., B.M.A. Lecture by Professor J. R Rees: "The Anxiety States."

British Medical Guild Meetings to be Held

BURNLEY.—At Nelson Hotel, Nelson, Friday, November 3. 8.30 p.m., meeting of all medical practitioners in the area to discuss formation of local organization of British Medical Guild, etc.

LANCASTER AND MORECAMBE.—At Alexandra Hotel, Lancaster. Sunday, November 5, 3 p.m., meeting of all medical practitioners in the area.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.
Non-County Borough Councils.—Dartford.
Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY NOVEMBER 11 1950

British Medical Association

PROCEEDINGS OF COUNCIL

Wednesday, November 1, 1950

A meeting of the Council of the British Medical Association was held at B.M.A. House, London, on Wednesday, November 1, with Dr. E. A. GREGG in the chair. The meeting lasted from 10 a.m. until 6.30 p.m., and even then several important matters were left over for consideration at an adjourned meeting to be called for November 22.

Facing the members was a handsome flag which had been presented to the Association by the World Medical Association at the recent General Assembly of that body in the United States. The flag was a mark of recognition of the hospitality given to the previous assembly in 1949 at the Association House in London. The Chairman of Council, who with Dr. Wand, Dr. Pridham, and Dr. Clegg (Editor of the *British Medical Journal*) had attended the recent assembly, spoke of the interest of the meeting, the helpful contacts which had been made, and the hospitality of the American hosts. He proposed that a letter of thanks be sent to the World Medical Association for the flag, which he had accepted on behalf of the Council and had promised should have a place of honour in their building. The vote of thanks was heartily accorded.

Personal

The death of a former member of Council, Dr. F. S. Heaney, of Liverpool, was reported, and the Chairman was authorized to send a letter of condolence to his relatives.

The Council received with regret the resignation of two members—Surgeon Vice-Admiral Sir Sheldon Dudley and Major-General Sir Percy Tomlinson—in both cases owing to ill-health. It was decided to nominate Major-General J. C. A. Dowse for election as the representative of the Army Medical Service in place of Sir Percy Tomlinson.

Dr. Rowland Hill, the new chairman of the Central Consultants and Specialists Committee, was welcomed as a new member of Council *ex officio*.

The Council sent a message of sympathy and good wishes to its Clerk, Mr. A. Twelftree, who has been a patient in University College Hospital for two months. It was reported that he was making good progress.

Resignation of the Secretary

The Council accepted with deep regret the resignation of Dr. Charles Hill, M.P., from the office of Secretary of the Association. On behalf of the Council, the CHAIRMAN expressed warm thanks for the faithful and brilliant services which Dr. Hill had rendered to the Association for nearly 19 years. Dr. Hill, said Dr. Gregg, had shown extraordinary ability, both in the deliberations of the Council and its committees and in negotiations with the Ministry of Health and a multitude of other public bodies. The Council was confident that he would achieve high distinction in any field of activity in which he engaged. Members of Council, he added, found satisfaction in the fact that it was in the work of the Association that Dr. Hill had attained the stature which had now brought him into a wider field of public service. In the future, when they observed reports of his activities, they would say with pride, "He used to be our Secretary."

The Council decided unanimously to appoint Dr. Angus Macrae as Secretary of the Association in succession to Dr. Hill. The Chairman expressed the good wishes of the Council to Dr. Macrae in his new appointment. Dr. Macrae became an Assistant Secretary in 1935 and a Deputy Secretary in 1948.

Scottish Representation on Council

Dr. J. A. PRIDHAM presented the report of the Organization Committee. An unexpectedly complicated matter arose concerning Scottish representation on the Council. The contention of the Scottish Committee was that Scotland in relation to England and Wales was under-represented. The Organization Committee, while unable to accept this view, and pointing out that any of the ten elected by the Representative Body to the Council might be Scottish members, nevertheless considered that some slight readjustment might be made in the method of election whereby one of these ten would be starred as a Scottish representative. This recommendation, however, was afterwards withdrawn because the Scottish Committee regarded the proposal as of the nature of an expedient and found it unacceptable.

Dr. J. G. M. HAMILTON, for the Scottish Committee, contended that on a strict interpretation of the proceedings of the Annual Representative Meeting there were to be two representatives of the Stirling group of constituencies (No. 27), which would have the effect of increasing the total membership of the Council by one. The Organization Committee, on the other hand, had maintained that the by-laws laid down a certain total number of Council members which could not be exceeded. Dr. Hamilton's answer to this was that the total number of members was merely the sum of the individual items. The earmarking of candidates in the manner proposed by the Organization Committee, although it would give Scotland one extra seat, was, in the Scottish Committee's view, a bad method of election.

The matter arose again on the Report of the Scottish Committee itself, brought forward by Dr. I. D. GRANT. He said that in Scotland they were fully satisfied with the resolution passed at the Annual Representative Meeting giving an additional member to Group 27, but some dispute had arisen about the exact implications of the Representative Body's decision. Dr. F. GRAY said that on any fair-minded examination of the representation as between England and Wales on the one hand and Scotland on the other the Scottish membership at present was adequate.

The chairman of the Representative Body, Dr. J. A. BROWN, said that in his view the Representative Meeting was not fully alive to all the repercussions of this resolution. He thought the matter of difference between the Scottish Committee and

the Organization Committee should be discussed between them, with the help of legal advice in addition to that which the latter committee had already taken.

This course, after a brief discussion, was agreed to.

Other Organizational Matters

It was agreed that the seal of the Association be affixed to an agreement incorporating the Ceylon Medical Association. The Ceylon Branch had sought to become an incorporated body under this title and had submitted a draft memorandum and articles of association which had been approved by the Organization Committee.

The recommendation of the Representative Body that methods should be considered whereby Divisions might honour members who had rendered outstanding services had been discussed by the Organization Committee, but it was felt that such services were already usually recognized by making the member chairman of the Division or president or vice-president of the Branch.

The Council agreed to recommend to the Representative Body that no action be taken, apart from the means already available to Divisions, to honour such members.

Medical Practitioners' Handbook

Dr. PRIDHAM drew the attention of the Council to the newly issued *Medical Practitioners' Handbook*. He said that this was a most valuable compilation and might very well be considered almost indispensable to men actively engaged in practice. It contained a vast amount of highly compressed information. His Committee had decided to adhere to the previous practice of distributing a free copy of the *Handbook* (which was issued at the price of 5s.) to all new graduates. It was also proposed to insert a special note of welcome in the *Handbook* to the newly qualified practitioner.

Members who had already secured a copy of the *Handbook* spoke highly of its usefulness.

The Medical Whitley Council

Dr. C. METCALFE BROWN, chairman of the Public Health Committee, brought forward recommendations for the appointment of representatives and deputy representatives on the staff side of Committee C of the Medical Whitley Council, which deals with the remuneration and conditions of service of public health medical officers. Those appointed as representatives were the Chairman of Council or his nominee, the Secretary of the Association, Drs. C. Metcalfe Brown, J. M. Gibson, F. Hall, Charles Hill, J. A. Ireland, Jean M. Mackintosh, Wyndham Parker, J. A. Stirling, and J. A. Struthers, and the Scottish representatives were Drs. J. Riddell, W. G. Clark, and G. V. T. McMichael. The deputy representatives were Drs. K. Cowan, H. Guy Dain, I. G. Davies, Mary Esslemont, C. E. E. Herington, E. Catherine Morris-Jones, and H. C. Maurice Williams, and the Scottish deputy representatives Drs. G. Matthew Fyfe, J. Kelman, and B. R. Nisbet. The appointment of the Scottish representatives was subject to confirmation by the Scottish Committee.

Dr. Metcalfe Brown also reported that there had been five meetings of Committee C, but as no agreement had been reached between the staff side and the management side both had decided to refer the dispute for settlement under the Industrial Courts Act, 1919. The case was heard on October 9 and 10. As public health officers they were extremely grateful to the Association for its policy in this matter and for the support received, and especially to Dr. Charles Hill for his evidence in the arbitration proceedings and his advice on the presentation of the case and to Dr. Kelynack for marshalling the documents. Whatever the result, the Association had put forward a just case as effectively as possible.

Tuberculosis and the National Health Service

Dr. PETER EDWARDS, chairman of the Tuberculosis and Diseases of the Chest Group Committee, attended the Council to present a report, embodied in that of the Central Consultants and Specialists Committee, on tuberculosis and the National Health Service. He said that this report represented many meetings of the Group Committee and concerned itself with the treatment of tuberculosis on both the clinical and the public health side. It was a comprehensive document dealing with the principles to be observed in the development of future chest clinics, the question of hospital accommodation, the control and working of mass radiography units, the training of chest physicians, and the problem of nursing tuberculosis cases. A further section dealt with prevention, care and aftercare, and rehabilitation. He stressed the urgency of the problem of tuberculosis.

Dr. J. M. GIBSON, in congratulating Dr. Edwards and his Group Committee, said that, while they appreciated the interest of the Ministry concerning cases of tuberculosis left at home untreated or treated under unsatisfactory conditions, they could not feel that it was the best step to have these cases treated in a general hospital. He also hoped that the suggestion for the appointment of almoners in clinics would not be carried too far. The health visitor could do all the almoner work that was necessary in the tuberculosis clinic.

The report was approved.

Domiciliary Consultations in Psychiatry

Dr. W. G. MASEFIELD, chairman of the Psychological Medicine Group Committee, attended the Council to present the views of his committee on a resolution recently passed by the Central Consultants and Specialists Committee concerning domiciliary consultations in psychiatry. The resolution had asked that general practitioners should be supplied with a list of consultants undertaking domiciliary consultations in the area in which they practised, provided that the list contained the names of all consultants so available, and that the names of whole-time consultants were set out together in the list with a footnote to the effect that they should be called upon only when no part-time consultant was available. The Group Committee, said Dr. Masefield, was concerned at the effect of this resolution in the special field of psychiatry and was anxious to avoid any perpetuation of the distinction between whole-time and part-time consultants. It wanted to ensure that the well-established custom whereby a general practitioner might call on the psychiatrist of his choice for domiciliary consultation should continue. He should have a free choice to call upon the medical superintendent or other full-time member of the staff of the mental institution to which a patient was likely to be admitted. The recommendation of the Central Committee would be most unfortunate.

Dr. ROWLAND HILL, chairman of the Central Committee, said that he did not think his committee would object to an addition to its resolution providing for the special field of psychiatry in the way that Dr. Masefield had suggested. He recognized that in psychiatry a large proportion of consultants were full-time. He was prepared to bring the matter again before his committee.

The matter was left on that understanding.

Private Practice

Dr. I. D. GRANT, chairman of the Private Practice Committee, brought forward a recommendation on the question of protection of practices during service with the Forces. It read that where a general practitioner is unable to make suitable arrangements for his private practice appointments to be covered by a partner he be advised to notify his employing authorities when called for service in H.M. Forces and to ask that one-third of the fees or salary of the appointment be paid into his account during his period of service and that the remaining two-thirds be paid to the practitioner undertaking the work of the appointment.

Dr. O. C. CARTER pointed out that the resolution referred not to private practice at all but to contract practice. He also took exception to a preamble to the resolution which referred to the "negligible amount of private practice undertaken by N.H.S. practitioners." It was small, but not negligible, and no matter how small private practice might be something should be done to preserve it. Dr. W. M. KNOX pointed out that there was no reference in the recommendation to the preservation of the contract; it was solely concerned with the remuneration during absence.

It was agreed that the recommendation be referred back for reconsideration.

A section of the report of the Private Practice Committee was concerned with the report of the Interdepartmental Committee on Cremation. Lord HORDER said that the Cremation Society, of which he was chairman, found themselves entirely in consonance with the views of the Private Practice Committee, especially with regard to the danger of abolishing medical referee appointments and the mistaken policy of limiting the number of practitioners allowed to complete certificate C to a panel chosen by the local authority.

Association Finance and Buildings

Mr. A. M. A. MOORE (Treasurer), in presenting the accounts for the period, drew attention to the increasing expenditure of the Association, but on the other side he pointed out that the subscription income had remained steady at above the expected level; also that a large proportion of the expenditure had been capital expenditure on the new building.

Mr. L. DOUGAL CALLANDER submitted the report of the Building Committee, which was concerned largely with alterations and redecorations at B.M.A. House. The total cost of the contracts had worked out at less than was anticipated.

Dr. F. GRAY congratulated the Building Committee on the changes which had been made in the Council chamber to accommodate the enlarged Council.

Dr. P. T. O'FARRELL thanked the Council for the generous loan of £10,000 without interest to the Irish Medical Association for the purchase of a house in Dublin. Dr. I. D. GRANT for the Scottish Committee also thanked the Council for affording funds to take up the Glasgow Regional Office.

The Council gave authority for the establishment of reference library facilities in the Scottish House at Edinburgh at an initial cost for the first year of approximately £620.

The Popular Health Journal

Dr. O. C. CARTER, chairman of the Journal Committee, made a detailed statement on the forthcoming publication of the popular health journal, the suggested title of which was *Family Doctor*. He said that when this proposal was first brought before the Council two years ago the title proposed was *Family Doctor*, and in the meantime no better title had presented itself. He also gave details of the budget for the launching campaign, involving trade advertising and various forms of publicity.

The Council agreed that the title of the journal should be *Family Doctor*, and that the first issue should be published in April next year. It also authorized expenditure for the launching and first year's promotion of the journal.

Various Business

The Central Consultants and Specialists Committee brought to the Council an important statement of evidence on internal hospital administration which it was proposed to tender to a committee appointed by the Central Health Services Council to study the administration of hospitals. It was felt that this statement deserved longer discussion than could be given to it at the end of a long day, and in view of this and the general state of the agenda it was resolved to adjourn the meeting to a later date in November.

Before this was done, however, certain non-contentious business was taken. It was agreed, on the recommendation of the General Medical Services Committee, that the practice of offering positions as trainee assistants at salaries in excess of the amount allowed by the Government to a principal for employing such an assistant was undesirable, and instructions were given to refuse advertisements for the *Journal* when the salary offered exceeded such allowance.

In the terms of service of hospital medical staff, para. 12 (*a*) has given rise to a number of disputes between consultants and their employing authorities about the effective date from which seniority on the consultant salary scale should be reckoned. Most of these disputes have been satisfactorily settled, but a few cases remain where the employing authority has arbitrarily fixed a later date. The Council decided that the rights of an individual practitioner in this respect be tested at law at the joint expense of the Association and the Medical Defence Union in a case selected mutually.

On the report of the Compensation and Superannuation Committee Dr. R. GIBSON urged that the utmost publicity be given to all matters concerning compensation. He was informed that a full explanation of the position would shortly appear in the *Journal*.

The Welsh Committee was authorized to make the necessary arrangements at the appropriate time to secure the election of the Association's nominee for Wales on the General Medical Council.

The Northern Ireland Committee reported that a serious situation had arisen in Northern Ireland regarding the grading of anaesthetists. The policy of the hospitals authority there is to grade as consultants only those who possess a higher degree in addition to a D.A.—a policy at variance with that obtaining in Great Britain. The Council supported the Committee in taking up the matter with the Ministry of Health.

Dr. R. P. LISTON, for the Film Committee, presented a report on his representation of the Association at the film session of the International Medical Congress at Verona, when the B.M.A. film on the treatment of hand infections received a prize for the best film on medical matters.

Certain recommendations of the Science Committee relating to the Association prizes were agreed to, and on the recommendation of that Committee it was also agreed to ask the Home Office to arrange for lectures to local meetings of the profession on the effects of atomic explosions from the medical—particularly the first-aid—point of view.

On the recommendation of the Central Ethical Committee it was agreed to inform the World Medical Association that the Council concurred with its recent pronouncement on euthanasia, that the practice was contrary to the spirit of the Declaration of Geneva and was to be condemned in any circumstances.

A proposal by the Colonies and Dependencies Committee that arrangements should be made for the secretary of the Committee (Dr. Grey Turner) to visit Gibraltar, Malta, Cyprus, and certain Branches in the Near East was sanctioned.

A sum of £687 received in subscriptions and legacies and standing to the credit of the B.M.A. Charities Trust Fund was allocated among medical charities in accordance with proposals of the Charities Committee.

The Council adjourned until November 22.

THE BRITISH MEDICAL GUILD

A meeting of the Trustees of the British Medical Guild was held at B.M.A. House, London, on Wednesday, November 1, with Dr. E. A. GREGG in the chair. In reply to a request Dr. S. WAND, chairman of the General Medical Services Committee, repeated the explanation he had given to the Conference of Local Medical Committees the previous week of the postponement of the Special Conference originally arranged for December and now fixed for March, 1951, unless the completion of the inquiries into practice expenses and N.H.S. income now being undertaken by the Ministry should be reached earlier.

Dr. R. P. LISTON urged the need for educating practitioners at the periphery in the purposes of the Guild. Dr. H. H. D. SUTHERLAND suggested that in areas where the local organization was not working properly certain practitioners who fully knew the subject should be selected to act as organizers. The Guild should also produce a short document, re-edited from time to time, which would be the vade-mecum of those entrusted with the organization. Dr. NOY SCOTT commented on a lack of information about the Guild and its purposes. Dr. FRANK GRAY said that a heavy responsibility rested on the trustees of the Guild, who were members of the Council of the British Medical Association, and it was fortunate that matters had

now been so arranged that the majority of members of Council had certain regional responsibilities. They should certainly do what they could to encourage the local groups in their areas. Dr. HALE-WHITE pleaded for a more systematic consideration of matters of the Guild at meetings of the trustees. Dr. R. GIBSON wanted better "public relations" for the local groups. Dr. J. A. MOODY considered that it was to practitioners with the large lists that the Guild would have particularly to address itself. Dr. A. BROWN spoke of Guild organization in a rural area, and Dr. F. M. ROSE, Dr. I. G. INNES, and Dr. H. ALEXANDER discussed peripheral organization generally.

Mr. LAWRENCE ABEL said that consultants were just as uninstructed in this matter as many general practitioners. If it was difficult to educate a general practitioner who had had thirty years of National Health Insurance, how much more difficult was it to bring the real position home to consultants. Dr. J. C. ARTHUR said that the practitioners in Gateshead were prepared to act with their fellows on the understanding that 80% of resignations over the whole country were secured, and that it was conceded that a fight could not take place without somebody getting hurt. Dr. A. V. RUSSELL said that some consultants seemed to be of opinion that this was a "general-practice war" and took no interest in it. Mr. TUDOR THOMAS said that group leaders must be well equipped with all the information and arguments they wanted. He suggested that a detailed commentary and series of arguments be sent to Guild secretaries.

Dr. WAND pointed out that the Guild had already issued two memoranda to local secretaries with instructions on procedure, and had issued a statement to every general practitioner explaining the purpose and functions of the Guild. Local Guild Committees had been asked to arrange for group leaders to hold meetings of general practitioners to clear up points of doubt and test the general feeling of practitioners in the area. This dispute had been going on for two years. There had been Special Representative Meetings and Conferences one after another, all of which had emphasized the importance of action. What they wanted was more than money, but in order to bring about the desired improvement of the Service it was necessary to have more money in the pool, and for this object the backing of the profession was essential. If people at the periphery were still not informed of the position it must be because people at the centre had not hit upon the right method of informing them.

The CHAIRMAN said that this had been a desultory discussion, but a very necessary one, and the conclusion that appeared to follow was that there was a necessity for much greater personal activity on the part of every trustee of the Guild. There might also be a need for simplification of some of the literature sent out, and for giving it greater pungency.

The Recent Conference of Local Medical Committees

Questions were asked by some trustees concerning the resolutions of the Conference of Representatives of Local Medical Committees (*Supplement*, November 4), in particular the resolution concerning the withholding of certificates in the event of a dispute, and the responsibility of the General Medical Services Committee (to which these resolution had been referred), the Council of the British Medical Association, and the Guild Trust respectively. The CHAIRMAN explained that the Guild was not a policy-making body but an instrument for implementing the policy of the Association by methods which the Association itself could not use.

Dr. WAND said that if certain resolutions were endorsed by his committee it would be his duty to inform the Chairman of Council, who might consider calling a special meeting of Council.

Mr. LAWRENCE ABEL pointed out that the resolution to withhold certificates in the event of a dispute would affect the whole profession, and if such a resolution was to be referred to the General Medical Services Committee he thought it should also go to the Central Consultants and Specialists Committee and the Public Health Committee. Dr. F. M. ROSE said that while such a resolution undoubtedly affected all branches of the profession its effect for general practitioners far exceeded all the rest.

Dr. J. G. THWAITES said that the action contemplated by such a resolution might bring the whole profession into disrepute, and it certainly concerned the whole profession.

Dr. WAND said that if his committee endorsed the opinion of the Conference on this particular issue it meant that it felt that this fight was sufficiently important to justify temporarily unpopular measures to ensure its success. It would be for the Public Relations Department to see that the public understood the reasons for the fight.

Dr. THWAITES: I want an assurance that we can debate the matter at some time.

The CHAIRMAN: It will have to be debated, and if there is matter which requires action the Guild will have to set about it. Can we not leave it at that?

Before the meeting of Trustees was concluded Dr. Angus Macrae was appointed secretary of the Guild in place of Dr. Charles Hill.

EXECUTIVE COUNCILS' ASSOCIATION

SIR JOHN CHARLES AT ANNUAL MEETING

The third annual meeting of the Executive Councils' Association (England) was held at Harrogate on October 26 and 27 under the presidency of Dr. NOEL E. WATERFIELD.

Sir JOHN CHARLES, Chief Medical Officer to the Ministry of Health, gave an inaugural address in which he declared that the National Health Service was the freest in existence, but that freedom could continue only if everyone taking part, practitioners and patients alike, regarded themselves as members together of a service and co-operated in making it as effective as possible. More was needed on the part of the practitioner than his personal and traditional responsibility for the individual patient; he must consider the Service as the acceptance of a duty to the community as a whole, and the patient on his part must use the Service sensibly.

He considered that the total number of general practitioners was probably adequate with the present maximum list at 4,000, though if the maximum was lowered a different state of affairs might arise. The distribution of practitioners, however, could still be improved. Executive councils had a particular interest in co-operating with the Medical Practices Committee in taking action to improve distribution. The Ministry was now confirmed in the view that the best way of getting additional doctors in an area was as partners or assistants of settled doctors.

The cost and volume of prescribing, Sir John Charles added, was still causing anxiety. In the second year of the Service 211 million prescriptions were issued at an average cost, in the second half of 1949, of 3s. 1¼d. It was difficult to believe that medicine-drinking on this scale was of even temporary benefit to the health of the nation. The general practitioner could make his main contribution to improvement by a judicious regulation of his own prescribing. The investigation of excessive prescribing by individual doctors was being resumed, and a special investigating unit had been established by the Ministry. Any prima facie case would be discussed with the doctor concerned, but might be referred to the local medical committee. Co-operation was also called for in the relations between general practitioners and hospitals. General practitioners could help by not calling on the Emergency Bed Bureau before they had themselves tried to get the case admitted in the ordinary way. Unnecessary reference of patients to out-patient departments should be avoided.

The Permitted Maximum

Dr. N. E. WATERFIELD, in the course of his presidential address, said that there was general satisfaction that the suggested charge of 1s. for a bottle of medicine had been dropped. Although it might have acted as a deterrent to some patients who would otherwise bother the doctor with trivial complaints, it might easily have prevented others from doing so when a real necessity arose. The necessity for the greatest economy in the Service was constantly impressed upon them, and in view of the economic situation, with large additional

funds required for defence, it appeared that there was little hope of the Service reaching a higher place in the priority list for many years to come. But the limitation on expenditure engendered a sense of frustration. The non-provision of health centres had been a disappointment to a number of practitioners who were looking forward to the day when it would no longer be necessary for them to use their private residences as their professional premises.

Dr. Waterfield said that he was going to be bold enough to make some comments on the controversial subject of permitted maximum lists. He agreed that in exceptional circumstances and with exceptional men the public might be able to obtain satisfactory service from practitioners with lists of 4,000, but he was convinced that in the great majority of cases satisfactory service could not be given and the objects of the National Health Service attained with lists of more than 3,000. If the new Service was to be a real one doctors would, in addition to the treatment of patients, have other and equally important duties to perform. They would have the duty to educate the public in health matters. They had also duties to themselves—to devote sufficient time to reading, to attendance at medical meetings, and to relaxation, so as to prevent them from becoming stale. There was a proposal on foot for a sliding capitation fee, with a substantial loading for the first thousand on the list. This would discourage the building up of large lists and materially benefit those with small or moderate lists; but it must be realized that unless more money was put into the pool those with large lists would suffer a reduction of income.

A number of doctors, for the most part in good-class residential areas, were suffering very serious financial loss due to the transfer of their private patients to the Health Service. The fixed annual payments or grants from the Inducement Fund were mere flea-bites and did little to alleviate the existing distress. He had never seen it suggested that a capital payment or a loan without interest might be offered to doctors who were willing to transfer to a district where their services were needed; but that, in his opinion, was the only long-term policy which would put these doctors on their feet again and get them into practice in areas where they could hope to earn a living.

After speaking of the dental, ophthalmic, and pharmaceutical services, Dr. Waterfield concluded with an acknowledgment of the really remarkable co-operation which existed between all members, lay and professional, of executive councils.

Doctors' Surgeries

On a matter brought forward from the Salford Executive Council urging that, when a doctor transferred his practice to a health centre, practice from the premises previously occupied by him should be prohibited for an agreed period, Dr. HOWIE WOOD (Isle of Wight) said that they must make sure that they did not prohibit the doctor from practising in his own premises. It was more than likely that a doctor would wish to avail himself of facilities for practice at a health centre and at the same time continue a practice for the convenience of patients who wished to see him at his own residence. Discussions with the Medical Practices Committee are to take place on this question.

On a cognate subject, Mr. A. N. WRIGHT (vice-president of the association) said that one executive council had asked whether a minimum standard for surgeries could be approved by the medical profession. At the present moment it was very difficult to suggest a standard, even if such was desirable, because of lack of facilities. The management committee of the association felt that executive councils had power to bring surgeries up to a standard which they desired, and it was felt that it should be left to the executive council in each area to take whatever action seemed necessary to improve the surgery accommodation available.

On the question of change of doctor, Mr. W. T. BOWEN (Birmingham) said that certain restrictions had now been imposed, but there had been no evidence of abuse or frivolous change. In Birmingham the figures had been carefully checked, and only 3% of those on the lists had changed their doctors for reasons other than a change of address. He considered these new regulations a betrayal of the principle of full freedom of choice. He moved the reference back of this part of the report with a view to approaching the Minister of Health, who had been unwisely stampeded by certain institutions. The motion was opposed on the ground that the new regulations should be given time to work, and was not carried.

Dr. HOWIE WOOD moved a resolution that the remuneration of all elements in the National Health Service should be on such a level as is necessary to prevent dissatisfaction and frustration. Major J. BURNIE (Bootle) seconded. If a first-class service was wanted, those in the Service in whatever capacity must be paid an adequate remuneration. After a slight discussion, in which some delegates thought it would be a mistake to interfere in what was the function of the Whitley Councils, the resolution was passed.

Another Isle of Wight resolution was that patients in hospitals admitting maternity cases should be granted the right, implicit in the Act, to have the general-practitioner obstetrician of their choice, and that the whole question of beds available to patients who chose to be attended by the general-practitioner obstetrician of their own selection should be reconsidered. Dr. R. W. MCCONNEL (Buckinghamshire) seconded the resolution, and Dr. J. A. IRELAND (Shropshire) said that the cottage hospital was losing its status as a maternity unit served by general-practitioner obstetricians, and this was interfering materially with the care of the parturient woman. After a lively discussion the resolution was carried by a large majority.

The 123 executive councils in England were represented by over 300 delegates. The new president is Mr. A. N. Wright, J.P. (Norfolk).

THE DAIN FUND

REPORT OF THE TRUSTEES, 1949–50

The period to which the report refers is the year September 1, 1949, to August 31, 1950. During the year a considerable number of requests for advice and help have been received, and it has been possible for the Fund to assist three new cases while continuing the grants for the school year 1950–1 to 12 old applicants, covering 15 children. As was explained in the last report the trustees decided to accept responsibility of a long-term nature in certain cases in view of the importance of ensuring the continuity of the education of the individual child. Three of these are medical students, all of whom are doing well, and the reports received from the deans of the medical schools show satisfactory progress. £75 is being allowed in each case.

Another case, where grants for school education have been given over a period of years, is receiving continued help (£50) to assist with the fees for the first year of training at a school of physiotherapy. Subject to a satisfactory report it is anticipated that for the further two years of the training a grant will be available from the local education authority for training fees and maintenance. Assistance towards school fees is being given to nine children, the grants varying between £30 and £95 for the school year. A further case was given a special grant of £30 towards clothes and school equipment. This child has been receiving help from the Dain Fund for two years, and it was with great satisfaction that the trustees heard that she had gained an open scholarship at a well-known girls' school.

In addition to the continued help as described above the trustees have been able to assist three new applicants, details of which are given below:

Case 1.—The daughter of a deceased doctor asked for help early in 1950 towards living expenses and payment for books until July, 1950, when she was taking the final medical examination. The report regarding this student was satisfactory and a grant of £30 was made immediately. This girl is now qualified and has obtained a hospital appointment.

Case 2.—A doctor's widow made application for assistance for her three children, two boys and a girl. This case was a particularly deserving one, and it was possible, in co-operation with the Royal Medical Foundation of Epsom College and the Royal Medical Benevolent Fund, to make arrangements for the children. The elder boy is being assisted by the Royal Medical Benevolent Fund and the local education authority. The younger boy has obtained a place

at Epsom College. The girl, now doing the Froebel training, was given £100, this amount being shared by the Dain Fund and Royal Medical Foundation of Epsom College.

Case 3.—A doctor (a widow) made application for help towards the fees of one of her four children. Reports stated that this boy showed considerable promise, and it was felt important that he should be able to stay on at the same school. A grant of £50 was made, and the trustees have been informed that he passed the School Certificate with credits in all subjects at the age of 14½ years.

The total sum of £970 was available for distribution. This was made up of £148 from investments, £75 gift from the proceeds of the Metropolitan Counties Branch ball, the balance being from donations from local medical committees and individual doctors. The total amount distributed in grants was £940.

It will be evident from this report that the Dain Fund is giving valuable assistance to many children. It is a matter of regret to the trustees that each year certain applications have to be refused owing to lack of funds. While greatly appreciating the support of many individuals and committees, the trustees hope that members of the profession will give real and practical help to the Fund by completing a form of covenant for seven years or by sending a donation to the secretary. A gift, even if a small one of one or two guineas given under the seven-year covenant, means that the trustees have at their disposal a sum of money nearly double in value. The trustees make a most earnest appeal for more funds.

In conclusion it is desired to acknowledge the help and co-operation of the Royal Medical Benevolent Fund, the Royal Medical Foundation of Epsom College, and certain local medical committees for their share in the responsibility of some of the cases assisted during the year.

H. GUY DAIN,
Chairman of the Trustees.

GENERAL PRACTICE IN SCOTLAND

There was a long agenda before a meeting of the General Medical Services Subcommittee (Scotland) at B.M.A. House, Edinburgh, on October 12, Dr. W. M. KNOX presiding.

The action of the Scottish Medical Practices Committee in admitting two doctors to the executive council areas of Ayrshire and of the Lothians and Peebles was strongly criticized. In the Ayrshire case an assistant practising as such was given permission to start up independent practice in the area of the former principal. The application, it was explained, had been made without the knowledge of the principal and granted against the recommendation of the local medical committee and the Ayrshire Executive Council.

Dr. SCOTT claimed that an important principle was at stake. They ought, if necessary, to have consulted the Minister. In defence of the Medical Practices Committee it was pointed out that the area was not over-doctored and that only on such grounds could they have rejected the application. No area so far had been declared closed. This was in line with the view which the profession had always hitherto expressed that direction, even negative, was objectionable. It seemed possible that the powers of the committee were either too little or too great and should be adjusted. Members also emphasized the need for a restrictive clause prohibiting an assistant from starting in opposition to a principal and which would be upheld in a court of law.

In the Lothians and Peebles case, the executive council rejected an application by two partners for permission to engage a permanent assistant on the ground that the combined lists totalled 2,098; that the whole practice, therefore, appeared to be within the scope of a single practitioner; and that it was unreasonable from the point of view of neighbouring practitioners. Subsequently, however, the Medical Practices Committee sanctioned the application of the would-be assistant for permission to be included in the council's medical list as a principal in partnership with the two original partners. The application was granted, it was stated, on the grounds that, since the applicant's partners were already included in the list, his exclusion could be no more than a technicality. While not disputing the correctness of the Medical Practices Committee's decision, the Lothians and Peebles Local Medical Committee expressed the belief that, if that interpretation of the terms of service was to be accepted, it appeared that any practitioner might employ a deputy for such period as he might wish without the consent of the executive council.

The Subcommittee decided that an *ad hoc* committee should be appointed to discuss with the Medical Practices Committee the points raised in discussion.

Differential Capitation Fees

Further consideration was given to the question of a differential capitation fee in respect of the first 1,000 patients, or some such number, on a doctor's list. When proposals were considered for either a fixed annual payment to all practices or a fixed annual payment to practices of, say, 1,000 or under, the fear was expressed that at some future date the question of a whole-time service might arise. It was left to the Chairman's Subcommittee to continue its consideration of the matter.

It was reported that not all areas had adopted emergency treatment schemes and that the "knock-for-knock" arrangement, commonly adopted in the old N.H.I. service, still obtained in these areas. The Subcommittee felt that it was desirable that in the new circumstances emergency treatment schemes should be adopted, though it should be left to local medical committees to determine the extent to which they should be applied.

In connexion with a request from the Dundee Local Medical Committee for comment regarding a proposal to employ local authority midwives under a hospital authority, the Subcommittee recommended that the Dundee Local Medical Committee should in the first instance approach the hospital authority and the medical officer of health with a view to discussing with him the repercussions of the proposed scheme. Should the outcome of this action not be satisfactory the local medical committee should report back, when the matter would be taken up with the Department of Health.

REGISTRAR APPOINTMENTS

The Ministry of Health has issued a circular (of which fuller details will be given next week) about the number of posts that should be held by registrars in England and Wales. About 150 appointments for senior registrars will become available annually. The number of training posts should not exceed 600 for senior registrars and 1,100 for registrars. At present there are too many in both grades. The maximum total number of posts for each regional area, including teaching hospitals in the area, should be as shown in the following table.

	Senior Registrar (Total for First, Second, and Third Year)	Registrar (Total for First and Second Year)
Newcastle	34	63
Leeds	36	65
Sheffield	42	76
East Anglia	18	32
N.W. Metropolitan	75	138
N.E. Metropolitan	48	86
S.E. Metropolitan	52	96
S.W. Metropolitan	83	151
Oxford	22	42
South-western	30	56
Wales	28	51
Birmingham	52	96
Manchester	52	96
Liverpool	28	52

ATTRACTING GENERAL PRACTITIONERS

The Ministry of Health has sent a circular (E.C.L. 115/50) to executive councils drawing attention to the schedules prepared by the Medical Practices Committee (*Supplement*, November 4, p. 188). In Schedule 1 areas with high average lists, executive councils are asked to consider, in consultation with the local medical committee, whether action should be taken to attract more doctors to the area. Executive councils with Schedule 2 areas, where the services may be inadequate, are asked to review them carefully in consultation with the local medical committee, and decide if it is desirable to increase the number of doctors there.

Other measures to be taken by executive councils in consultation with local medical committees include encouraging doctors to take new partners (or assistants, preferably with a view to partnership), and advertising the need for doctors to set up in practice in the area concerned. The possibility of an inducement payment might be included in the advertisement in the latter cases. Executive councils should maintain close touch with the local housing authority in order to help doctors obtain accommodation.

N.O.T.B. ASSOCIATION

At the eleventh meeting of the N.O.T.B. Association, held on October 13, Dr. J. N. Tennent was welcomed as the new chairman by Dr. David Wilson, who has retired from the chair but is continuing to serve on the committee. Mr. O. Gayer Morgan paid a tribute to Dr. Wilson's chairmanship lasting for ten years and covering a difficult period for the old N.O.T.B. and the present association.

It was noted with satisfaction that the memorandum put forward by the association on improvements to the Supplementary Ophthalmic Service has been accepted by the Ophthalmic Group Committee of the British Medical Association and, subject to certain minor changes, will go forward as a joint memorandum to the Ministry. There seem to be no immediate prospects of the cessation of the Supplementary Ophthalmic Service, and the memorandum has been prepared with a view to modifying and improving the existing service.

The association is submitting a memorandum to the interdepartmental committee which is considering evidence from interested bodies and persons on the statutory registration of opticians.

Questions Answered

Leave for Examinations

Q.—*Should the time taken for sitting for postgraduate examinations be taken out of the statutory period of holiday leave under the National Health Service, or be additional to the full holiday period?*

A.—An officer may take time for postgraduate examinations out of the statutory period of holiday leave. On the other hand, he may apply under paragraph 18 (*d*) of the Terms and Conditions of Service for "study leave," which includes the taking of examinations. Leave is granted for varying periods at the discretion of the board (*a*) without pay or expenses, or (*b*) with pay but without expenses.

Residential Emoluments

Q.—*Who fixes the rate of residential emoluments, and when there are grounds for appeal to whom should this be made? In one hospital here the resident registrars pay £100, while our hospital registrars pay £150 for the same accommodation as house-officers.*

A.—It is laid down in the Terms and Conditions of Service that a deduction at the rate of £100 per annum in respect of board and lodging and other services provided shall be made in the case of house-officers. In all other resident appointments charges for board and lodging are calculated in accordance with the services provided by the hospital management committee. This being so, there are likely to be differences in the charges made to house-officers and registrars who share the same quarters. If an officer holds the view that he is being overcharged for the services provided to him, he should take the matter up first with the hospital management committee concerned and bring evidence to support his claim.

Correspondence

Distribution of Central Pool

SIR,—In the coming months the profession is likely to cause the general public some inconvenience if the general practitioners withdraw from the National Health Service. This is inevitable in all disputes which have to come to such an unpleasantly forceful type of arbitration. The inconvenience caused will be resented more if we do not try to take the public into our confidence and explain as simply as possible the issues for which we are contending:

(1) That the general practitioner's remuneration has never been agreed upon.

(2) That in spite of many requests we have not been told what amount should be in the Central Pool to implement the Spens recommendation on which our acceptance of the National Health Service was based.

(3) That the total amount at present falls considerably short of what the financial experts advising the profession maintain it should be and that many doctors are very much worse off than before the scheme.

I feel also that in addition our leaders have been so far afraid to lead that they only timidly suggest that if any increase is gained by our efforts it should be just handed out equally to all to increase the capitation fee for the first 1,000. This means that those with maximum lists will be given a sum of money the majority of which will go back to the Chancellor of the Exchequer in income-tax and supertax and that the profession as a whole will be the loser to that extent.

The receipt of an adequate income throughout the profession should not depend on having to live in a crowded urban district. Would it be thought equitable in any other profession that a young man at the outset of his career should be able to acquire a maximum income and the wide responsibility entailed with a maximum list? Is there another Government-remunerated service where this is possible—dental profession apart?

The consultant is also at present content to take either a full-time salary or a part-time salary as a basis for his remuneration. Why should the G.P. not be as willing to receive a basic salary? But a basic salary should be graduated as is the consultant's, on an age scheme. If one does not like the word basic salary, call it an expense allowance.

This basic salary/expense allowance could commence as the "A" hospital post at £350, mounting in steps to £1,000 at 40 years of age, and should be the first charge on the Central Pool. The second charge on the Central Pool should be a capitation fee for the first 2,000 on a doctor's list, and the units should be of the same value throughout the country without deduction except for superannuation.

The next charge on the Central Pool should be anaesthetics, temporary residents, emergencies, and all other incidental expenses at present deducted before the doctor gets his capitation fee and which cause wide variations throughout the country. The rest of the pool should be divided among those with over 2,000 on their lists in units according to their extra numbers. These units would be less than those taken as a second charge and would vary from time to time as our present capitation does.

Mileage payments would still be needed, and there would be no inquiry into individuals' incomes by local committees before a basic salary were granted. The young man would be catered for, and as his family responsibilities grew he would know there would be an increase in income. And the man with a large list would know that as he got older he could shed a few without serious detriment to his income. A simple administrative adjustment could prevent the type who merely wished to sit down and take a few patients and draw a basic salary. This is the type who would have to explain to a committee his reasons—not the man who was trying to make headway. Lastly, if, when a partner is taken on, a proportion of the principal's compensation were paid to the principal—corresponding to the share arranged with the new partner—a number of assistants might well find that they had a greater chance of becoming partners.

This scheme would, I maintain, be fairer to all, easily worked, and could be applied to any size of Central Pool. Capitation fees for the first 2,000 and basic salary would be the same over the whole country, and inducement funds would rarely if at all be necessary.—I am, etc.,

Newcastle-upon-Tyne. H. B. PORTEOUS.

A Free Profession?

SIR,—We are about to hold meetings to decide whether doctors are going to extreme lengths to insist upon an increment to our remuneration, and there still seems to be a lot of misunderstanding concerning our motives. Many doctors and most members of the public seem to regard our case in a similar light to that of the gas workers and others. In some respects that is correct, but if that is all there is to it the sooner we drop it the better.

We are not going to get much sympathy from the public or the required amount of support from the profession in a mere scramble for more pay, even if there is statistical justification for it. The case of the hard-hit practitioners can be met by redistribution of the capitation fee according to a graduated scale. What we have to consider is whether Mr. Bevan's attitude to our claims has been consistent with our conception of a free profession or whether it constitutes the first major step along a road that leads to dictation by the Minister of Health. That is a question which is of vital concern to every doctor and patient whether the Service has improved his personal financial position or not.

If it can be shown that Mr. Bevan is overriding what have all along been just claims, that constitutes a challenge which we must take up now. Moreover, it must be made absolutely clear to the public exactly what is at stake. But anyone who regards the present juncture simply as a golden opportunity to get a little more money or to have a crack at Mr. Bevan would be well advised to go a little deeper into the matter.—I am, etc.,

Eye, Suffolk. J. SHACKLETON BAILEY.

Failure of Sheffield Health Centre

SIR,—Considerable acrimony between the profession and certain lay groups has resulted from the breakdown of negotiations for the opening of a health centre in Sheffield. The situation has brought to light an antagonism to the profession which should be known more widely so that, forewarned and thus fore-armed, we can guard these precious things in medicine that not only ensure our freedom but the freedom and care of our patients.

Briefly and factually, it was proposed to set up a health centre in Sheffield which involved the transfer of some doctors and their patients to the health centre. Certain local doctors said they were interested in the project, and discussions were undertaken without prejudice. At one time it seemed that the centre would be manned, but, as detail became clearer and other doctors in the area let it be known that they were not in favour, the original group decided against entering the centre. It may be stated that the projected centre provided amenities for doctors only—e.g., a communal surgery. Taking everything into consideration, the local medical committees and the profession generally backed the decision.

The stalemate prompted a member of the Sheffield Executive Council to state "that the people of Firth Park were being deprived of a health centre while doctors' surgeries in the area were overcrowded and people had to wait in the rain." It was ascertained, however, that no doctor in the area had a full list and no complaints had ever been received suggesting inadequate medical services.

The scene then shifted to the Sheffield City Council, where the views expressed were very illuminating if not complimentary. The same member of the executive council, as a city councillor, stated that "doctors were afraid of the health centre, as they feared the patients would get a better service, and that young doctors were getting £1,830 a year and 23% in Sheffield were getting over £3,000." She also stated "that doctors had allowed the local authority to spend money in plans for a centre and then they, the doctors, turned round and said, "No, we don't agree with it—we might lose a pound or two." She concluded by saying, "I do not know any other group of people in the city who would show themselves so lacking in public responsibility." This was followed by an alderman who said that the councillor already quoted "had made an exposure which should run round the country," and, "I did not know the doctors were so rich, but I almost feel that it is a pity that there was not conscription and that we cannot compel them to do it."

Such are the views of people who are in a position of responsibility, and it is perhaps as well to know what they think about us; and perhaps when we are conscripted they will conscript the patients for us to treat. But it is sad to reflect that only bitterness and harm to the advancement of medicine can result from such unwarranted attacks. In the discussions in the Sheffield Executive Council the position of the B.M.A. was correctly given by a professional member, but in the city council it was stated that the B.M.A. was in favour of the scheme, or, as a member stated, the breakdown was "the fault of the individual doctors, not of their trade union." Surely here is a pointer that the B.M.A. must get up to date and give a more definite lead in such cases—e.g., health centres in built-up areas—as there is a growing feeling that Headquarters is out of touch with the periphery.—I am, etc.,

Sheffield. A. STEPHEN.

Withhold Certificates

SIR,—Has the Medical Guild made up its mind whether it wishes to help to uphold the findings of the Spens Committee or not? According to the pamphlet recently sent round, I should say, "Definitely not." In the first place, the 80% asked for is unnecessarily high and 60% would be quite sufficient. Secondly, the proposed weapon—namely, that of charging patients—is one that will ricochet upon the doctor and no one else, for few of us will stand out for cash, and patients will merely run up bills which they have no intention of paying, while Mr. Bevan stands back and watches us starving ourselves into subjection. What better arrangement could he wish for?

No mention is made of whether we are to prescribe medicines on the N.H. scripts. Even if these are withheld, it will be very difficult for those who do their own dispensing to refuse to provide medicines. Tough opponents need tough resistance, and we should harden our hearts and use the one weapon with which we can force an issue—that is, the withholding of certificates. And this is calmly passed over. Unless this is done, the fight is doomed to failure.

It seems to me that the authorities responsible for this pamphlet are hoping that it will not receive full support, in consequence of which they can then put the onus on the wretched G.P. The whole affair savours of defeatism.—I am, etc.,

Pannal, Yorks. MAURICE H. JONES.

Control of the Midwifery Service

SIR,—There has recently been much discussion and dissatisfaction expressed with the division of control of the midwifery service under the National Health Service Act. Having worked in my present area for a year, I think I must consider myself fortunate in that no such division obtains in this area. In the county of Lanark area all antenatal clinics are run by members of the obstetrical and gynaecological staff of the hospitals within that area—i.e., consultants, senior hospital medical officers, and registrars. This has the undoubted advantage that uniformity of antenatal care in these clinics is obtained throughout the whole area. Furthermore, patients see the same personnel at the antenatal clinics as they do in hospital, which gives them a feeling of continuity of care. The system also allows our registrars to gain a very full experience in antenatal work, which is invaluable in the training of a consultant, and at the same time they have the opportunity of following and treating in hospital the patients they bring in from the clinics.

The nursing staff for the antenatal clinics come from the main hospital—i.e, from the Western Regional Hospital Board—while the local authorities supply premises, secretarial help, and some help by health visitors. The antenatal records are all kept in the main hospital, and should a practitioner be called in an emergency he can obtain full information by 'phoning up the registrar on duty at the main hospital. Should a practitioner desire a consultant's opinion apart from the antenatal services, out-patient sessions are run at the main hospital.

From my point of view this is a most happy state of affairs in which to work. I am sure it has been brought about by co-operation between the regional hospital board and the local authorities. It seems to me an example of what could well be followed in other areas.—I am, etc.,

East Kilbride, Lanarkshire. R. A. TENNENT.

Disciplinary Machinery in the N.H.S.

SIR,—I was delighted to read Dr. A. C. E. Breach's thoughtful and thought-provoking letter on the tribunal and medical services committees (*Supplement*, October 21, p. 168). They present a problem whose implications—at a time when one freedom after another is being withdrawn from the common man—pass beyond merely medical circles. And I should imagine that these extra-judicial bodies, obeying no rules of evidence, and with no appeal from their decision except to the Minister who set them up, ought to attract the burning interest of the legal profession.

These bodies are peculiar in many ways. They "try" only one kind of case—complaints by patients against doctors—and the defendant, if found guilty, stands to lose everything and to face complete professional ruin. If he is exonerated, and the complaint is found to be of a frivolous or malicious nature, does he recover costs, or can the plaintiff be censured or mulcted in damages? Certainly not.

In other words, the setting up of these bodies—more especially the setting up of the tribunal—is a retrograde step and one tending to place increasing power in the hands of the central executive. They might provide a short cut to tyranny, and can be compared only with the "Privilege" courts of the sixteenth century.

What is to be done about them? It is obvious that we must seek drastic reforms, which might lie along some such lines as the following:

(1) Rules of evidence must be carefully laid down for both committees and tribunal, and strictly followed.
(2) They must not be bodies which merely hear complaints from consumer against supplier, but also from supplier against consumer.
(3) The committee or tribunal must hear evidence on oath, and should be empowered to censure a plaintiff and to impose heavy costs when a complaint was found to be frivolous or malicious.
(4) Appeal to a superior court should be allowed on questions of law from the decision of a tribunal.
(5) Decisions should be unanimous; if not, appeal to a superior court on questions of fact should be allowed from a majority decision.
(6) Any decision given should be a *reasoned* decision, not an arbitrary one.
(7) Medical members of a tribunal should be appointed *by the profession* and given security of tenure and possibly a retainer.
(8) The law should be laid down by the superior court and *not* by the Government department concerned.

Though these are merely tentative suggestions, in which anybody more knowledgeable than I may pick holes, I hope that they will at least stimulate discussion and produce further suggestions—and perhaps not only from the medical sections of society.—I am, etc.,

Wolverhampton. VICTOR RUSSELL.

SIR,—I read with interest Dr. A. C. E. Breach's letter (*Supplement*, October 21, p. 168) on the subject of the tribunal and medical services committees, and am most grateful for his clear exposition of certain aspects of the present system.

The subject was under discussion at the last meeting of the Middlesex local medical committee and various suggestions were made for correcting existing inequalities as between doctor and patient.

Complaints can be made freely by patient against doctor, but never by doctor against patient. If a charge is proved the doctor may be liable for a heavy fine; if it is not proved, or even if shown to be entirely frivolous, the doctor is still penalized, for he has to endure the anxiety attendant on preparation of his defence, and besides this the fact that he has been called to defend himself may seriously injure his reputation. The doctor cannot even be granted costs, and therefore the time spent in attending the inquiry must involve financial loss. The patient on the other hand has nothing to lose. He may even fail to appear when his case is heard (as happened recently in Middlesex) and thus need run no risk of open censure should his complaint prove to be unfounded.

Surely, Sir, the rudiments of justice demand equal treatment for both parties. If the patient has the right to complain, the doctor should be granted the same right, and, if either defendant or complainant suffers injury or loss through no fault of his own, he should be granted compensation where the other party is responsible.—I am, etc.,

Stanmore, Middlesex. H. B. WOODHOUSE.

Prescribing of Drugs Advertised to Public

SIR,—In the list of proprietary preparations advertised directly to the public issued recently by the Ministry of Health I note that all neutral stabilized forms of aspirin, either in tablet or powder form, have been included in the list.

There are no equivalent medicines for these preparations in the *National Formulary*. I find them very useful in cases of rheumatism or acute respiratory conditions associated with chronic gastric disorders. Prescribing the standard preparation is likely to give rise to an inquiry. The only foolproof alternative is, therefore, to prescribe the following:

℞
Acid. acetylsalicylic. .. .. gr. 5
Calcium carb. .. .. gr. 1½
Acid. citric. .. .. gr. ½
Ft. pulv. c *dried ingredients*. Mitte xxx

This should meet with the full approval of the N.H.S. authorities. The drawback is that the chemist will probably receive about three or four shillings for making up these powders, whereas the same amount of proprietary tablets will cost only 2s. or 1s. 6d., and in all cases the formula is exactly the same. This probably is the case of various other preparations mentioned in the list of drugs.

I feel that the Minister should be approached and recommended that all useful and reasonably cheap drugs that are cheaper as standard medicines than if made up on prescriptions with the same formula should be allowed to be prescribed freely if they have no other cheaper recognized equivalent.—I am, etc.,

Aldershot, Hants. J. CHALON.

Threatened Hospitals

SIR,—As you undoubtedly know, the Kingston Victoria Hospital is conducting a campaign to preserve its identity as a general-practitioner hospital, and not to be the subject of a "change of use."

I have knowledge of a number of hospitals throughout the country in a similar predicament, but there must be many others whose continued existence can be regarded as precarious. I shall therefore be grateful if the staff of any other hospital in a similar plight will very kindly send me details as soon as possible.—I am, etc.,

Roselawn, New Malden, Surrey. T. W. MORGAN.

Promotion in the Armed Forces

SIR,—It will be interesting to know what the outcome of the 18 months' negotiations between the B.M.A. and the Ministry of Defence will be. This protracted delay will certainly not encourage medical officers to remain in the Services.

What the relative speeds of promotion in the different branches of the Army and R.A.F. are I do not precisely know, but in the Navy it makes peculiar reading. Excluding the medical and dental branches, the average age to promotion to lieutenant-commander is 30, then to commander rank in the executive, engineer, and electrical branches the zone of promotion is from two to eight years, in the supply branch it is from three and a half to eight and a half years, and in the instructor branch it is four years onwards. In other words, an executive, engineer, or electrical officer can become a commander from the age of 33 onwards.

With the medical branch it is entirely different. He usually becomes a surgeon lieutenant-commander at about 31, or later if the Cohen proposals are adopted. He then does six years as a surgeon lieutenant-commander, followed by a period of about

three years in the peculiar rank of acting interim surgeon commander, before becoming a fully fledged surgeon commander at about the age of 39–40 years, by which age his contemporaries in the other branches may have already attained a seniority of anything up to six years.

In the opinion of many doctors it was a pity that the terms of staff surgeon, fleet surgeon, etc., were ever changed.—I am, etc.,

SERVICE MEDICAL OFFICER.

Fair Conscription

SIR,—Recently the Prime Minister spoke on the wireless on civil defence. We all hope that this preparation for a state of emergency is somewhat premature, but by the same token I feel that now is the time to review the state of the medical profession in view of a possible call-up of reservists.

At present the position is that most of those who served in the last war are still on the reserve and could be subject to immediate call-up in a state of emergency. Many of those people served throughout the war, and, despite promises to the contrary, did not always find it easy to get jobs on their return to civilian life. These jobs frequently went to men who were of the same age and had been qualified the same time, but who during the war did not serve in the Forces, and thus gained far more civilian experience and possibly also higher qualifications. As matters stand at the moment, if another war started these same men would once more stay at home while the same group of ex-Servicemen were again called up.

If nothing is done about this until the emergency arises the usual excuse will be given—namely, that an ex-Serviceman is already trained and therefore of more value to the country immediately. I should like to suggest that it be made compulsory for every doctor who is fit and under 50, and who did not serve in the last war, to register at once. He should then be made to join a Territorial unit and be trained. I am a woman who entered the Army after two junior house jobs and, after three weeks at Crookham and one at the Army School of Hygiene, was considered fit to serve. I therefore do not feel that it would take very many hours a week to turn an experienced doctor into a suitable medical officer for any of the Forces.

These newly trained men should be the first to go in the event of a future war, and only after all of them have been called up should any ex-Serviceman be called upon. One thing I do remember hearing during my initial training was that it is very much easier to give something to the Army than to get it back. It will be no use for people once again called up to think about trying to get back to civilian life and give someone else a turn. If anything is to be done to plan this matter on a fair basis it should be done now, and I think my system is as good a way of arranging it as any.—I am, etc.,

Bath. LOIS E. N. PRICE.

Assistants in General Practice

SIR,—As one of the many hundreds of young doctors who have shared the frustration of "Fair Play" (*Supplement*, October 21, p. 172) during the last two dismal years, might I suggest that the time is ripe for the B.M.A. to take cognizance of the seriousness of the situation? It is not only that the young doctor is being exploited at the present time, but that the whole future and self-respect of the profession are at stake.

1. The maximum number on lists must be reduced (by stages if necessary) to 3,000 and eventually to 2,500.

2. Assistantships, except as a means of training or honest introduction to partnership, should be abolished.

3. Lists of localities (e.g., down to the level of wards) where young "squatters" are to be encouraged should be kept by all executive councils. These localities should include those where the doctor–patient ratio is less than 1:2,500.

4. It goes without saying that remuneration should be so increased that the capitation fees accruing from a present practice of 4,000 should accrue from a list of whatever maximum holds at the time: other salaries would vary either in proportion or according to some sliding scale.

5. There must be a complete mental reorientation on the part of the older practitioners. We are supposed to be brothers and sisters in a noble profession and not commercial competitors. The attitude of the Dr. McGregors (*Supplement*, October 21, p. 171) to the "young upstart down the road, etc.," must be modified, and they must realize that even the young have a right to practise in this profession.

Finally, may I suggest to my elders that if they base their demands for increased pay on some sound fundamental change in the system of the general medical services (such as that suggested above), then not only will they get a more sympathetic hearing from the public and Minister, but also they will take a step nearer the goal of professional unity and co-operation.—I am, etc.,

Edgware, Middlesex. A. D. MANNING.

SIR,—The conditions referred to in "Fair Play's" letter (*Supplement*, October 21, p. 172) are of course endemic to-day. There is only one way to treat this state of affairs now that the days of buying a share are passed, and that is to make it uneconomical for a principal to employ an assistant for a period of more than three months.

This could be ensured either by reducing the number of extra patients allowed in respect of each assistant (at present 2,400), or by making it necessary to give the assistant at least two-sevenths of the profit of the practice for doing half of the work (in the case of a one-man practice).

The underlying cause of this sad state of affairs is of course the internal mechanics of the National Health Service, in which the patient always comes last, for it is that unfortunate person who is subjected to the never-ending stream of disgruntled assistants.—I am, etc.,

ASSISTANT WITH DOUBTFUL VIEW.

SIR,—Need prospects of assistants in general practice necessarily be poor? "Fair Play's" experience (*Supplement*, October 21, p. 172) has not been a happy one. But not all assistants are faced with poor prospects. My own experience was quite the opposite.

After less than two years as an assistant my principal was instrumental in securing me a house and practice of my own. Furthermore he did all he could to "build me up." Smooth working in general practice very much depends on harmonious relationships with colleagues. Where relationships are healthy, holiday periods, half-days, and week-ends off are easily arranged.

"Fair Play" appears to have been up against it. But all senior colleagues are not ungenerous. I feel sure that if he keeps heart he will eventually find the right job.—I am, etc.,

Birmingham. ROBERT BROWNE.

SIR,—"Fair Play" (*Supplement*, October 21, p. 172) has reopened a subject which has for some time been out of the news. The whole question of the position and prospects of assistants in general practice was fully discussed during the early part of this year by a subcommittee consisting of principals and assistants (*Supplement*, August 5, p. 83), and the conclusions reached should, when implemented, do much to solve the difficulties which "Fair Play" enumerates.

Many of the disappointments in assistantship arise from the assistant's own failure to have written down at the outset the terms on which the job has been accepted. In the presence of a written agreement subsequent disputes can be settled through existing machinery of the Association. Without it protest may relieve the feelings of the injured party but will do little else. Model agreement forms are—I believe—supplied free to members; the only action required is for the assistant to make use of them.—I am, etc.,

Derby. JOHN GEMMELL.

*** Model agreement forms and advice are obtainable from the Association's Medical Practices Advisory Bureau.—ED., *B.M.J.*

Change of Doctor

SIR,—Practitioners in Scotland have just received notice of the new regulations regarding change of doctor. I believe I will be expressing the general feeling by saying that they are unpleasant but necessary.

The main reason why they are unpleasant is that they are a sad reflection on the poor ethical standards of the profession to-day. A large minority of general practitioners can be said to have used the methods and upheld the principles of barrow boys in the exercise of their profession. They have in effect put placards in front of their rather flashy stalls with the invitation: "Come to me! Everything free! Certificates and prescriptions *ad lib.* No questions asked."

We have been "nattering" at the National Health Service and the public in the manner of embittered spinsters, when in fact the trouble quite clearly lies with the doctors. We have gained the respect of nobody since the Service started, and we have not deserved to gain it. When we have pulled ourselves together and become men of honesty and high principles, I have no doubt we shall receive the just reward of our labours. At the moment we are getting just what we deserve.—I am, etc.,

Creetown, Kirkcudbrightshire. H. JARVIS.

POINTS FROM LETTERS

Fight Now

Dr. J. C. GILBERT (Bangor, Co. Down) writes: . . . I am certain that even a 40% withdrawal would wreck the National Health Service. Negotiation with the Minister is apparently impossible. General practice is doomed under present conditions. We must fight Aneurin Bevan *now*. This is our last chance. Let every man with guts get out.

H.M. Forces Appointments

ROYAL NAVY

Surgeon Lieutenant-Commander (Emergency) R. Schofield has been removed from the Emergency List.

ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Commander (Retired) J. C. Moor, V.R.D., has been removed from the Retired List.

Surgeon Commander E. G. Thomas, O.B.E., V.R.D., has retired.

Surgeon Lieutenant J. G. Taylor to be Surgeon Lieutenant-Commander.

ARMY

Brigadier A. J. Beveridge, O.B.E., M.C., late R.A.M.C., has been granted the local rank of Major-General.

Lieutenant-Colonel L. R. S. MacFarlane, O.B.E., from R.A.M.C., to be Colonel.

ROYAL ARMY MEDICAL CORPS

Major R. J. Niven, M.C., to be Lieutenant-Colonel.

Captain S. M. H. Naqvi has relinquished his commission and has been granted the honorary rank of Major.

Captain H. J. Elverson to be Major.

Short Service Commission (Type B).—Major P. T. Harper has retired, receiving a gratuity.

COLONIAL MEDICAL SERVICE

The following appointments have been announced: L. W. Banks, M.B., D.T.M.&H., A. G. W. Branch, M.B., D.T.M.&H., C. P. Campion, M.B., D.T.M.&H., W. Crawford, M.B., D.T.M.&H., H. A. A. Doherty, M.B., F. W. W. Fox, M.B., W. T. M. Gilbert, L.R.C.P.&S.I., and S. E. Onwu, M.B., Senior Medical Officers, Nigeria; R. E. Barrett, M.B., D.T.M.&H., D.P.H., Deputy Director of Medical Services, Nigeria; J. H. C. Clarke, M.B., D.T.M.&H., Senior Medical Officer, Northern Rhodesia; W. C. B. Harrison, L.R.C.P.&S.I., Deputy Director of Medical Services, Northern Rhodesia; A. J. Johnson, M.B., D.T.M.&H., Assistant Director of Medical Services, Sierra Leone; H. D. Elliott, M.B., Medical Officer, Kenya; P. D. Kemp, L.R.C.S., Medical Officer, Uganda; G. K. M. Knomo, M.B., Medical Officer, Nigeria; W. G. Smart, M.B., Medical Officer, Tanganyika; A. W. Mearns, M.B., D.P.H., Medical Officer, Jamaica; V. Romanowski, M.D., Temporary Medical Officer, Nigeria; M. Szryo, M.D., Anaesthetist (Medical Department), British Guiana.

Association Notices

NOTICE TO SHIP SURGEONS

BRITISH MEDICAL ASSOCIATION—MARITIME SUBCOMMITTEE

The Private Practice Committee of the British Medical Association has reappointed for the current session a subcommittee to consider all questions affecting medical practitioners concerned with merchant shipping.

The subcommittee will hold its first meeting of the session at B.M.A. House, Tavistock Square, London, W.C.1, on Thursday, November 30, at 2 p.m., and any doctors in active practice as ship surgeons who find it convenient to attend are invited to do so, if possible giving notice by letter or telephone of their intention to come.

A. MACRAE,
Secretary.

SCHOLARSHIPS IN AID OF SCIENTIFIC RESEARCH

The Council of the British Medical Association is prepared to receive applications for research scholarships, as follows:

An Ernest Hart Memorial Scholarship, of the value of £200.
A Walter Dixon Scholarship, of the value of £200.
Four Research Scholarships, each of the value of £150.

These scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State medicine) relating to the causation, prevention, or treatment of disease.

In addition, applications are invited for the award of the following research scholarship:

The Insole Scholarship, of the value of £250, for research into the causes and cure of venereal disease.

Each scholarship is tenable for one year, commencing on October 1, 1951. A scholar may be reappointed for not more than two additional terms. A scholar is not necessarily required to devote the whole of his or her time to the work of research, but may be a member of H.M. Forces or may hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment will not, in the opinion of the Science Committee, interfere with his or her work as a scholar.

Applications for scholarships must be made not later than March 31, 1951, on the prescribed form, a copy of which will be supplied on application to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated.

OCCUPATIONAL HEALTH PRIZE

The Council of the British Medical Association is prepared to consider the award of an "Occupational Health Prize" in the year 1951. The prize consists of a certificate and a money award to the value of £50. The prize is established by the Council of the Association to encourage interest and research in the field of occupational health. The prize will be awarded biennially. Any member of the Association who is engaged in the practice of occupational health, either whole-time or part-time, is eligible to compete for the prize. Candidates may select their own subject.

The essay submitted must include personal observations and experiences collected by the candidate in the course of his work. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December

31, 1950. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for a second award of the prize. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay, the decision of the Council on any such point shall be final. Preliminary notice of entry for this competition is required on a form of application to be obtained from the Secretary. Each essay must be typewritten or printed on one side of the paper only, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Inquiries relative to the prize should be addressed to the Secretary

PRIZE ESSAY COMPETITION FOR MEDICAL STUDENTS

The Council of the British Medical Association is prepared to consider the award, in 1951, of prizes to medical students for essays submitted in open competition. The subject of the essays shall be "The Importance of Accurate History-taking in Diagnosis." In their essays students will be expected to refer to cases within their own experience.

The purpose of this competition is to promote systematic observation among medical students. In awarding the prize *due regard will be given to evidence of personal observation.* No study or essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. A prizewinner in any year is not eligible for a second award of the prize.

Any medical student who is a registered member of a medical school in the United Kingdom and the Colonial Empire at the time of submission of the essay is eligible to compete for a prize. If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. In determining the number and amount of prizes to be awarded, the Council will take into consideration the number of essays received. In 1950 three prizes of £50 and three prizes of £20 each have been awarded. Should the Council decide that no essay entered is of sufficient merit, no award will be made.

Essays must be typewritten or legibly written in the English language on foolscap paper, on one side only, must be unsigned, and must be accompanied by a form of application which can be obtained from the Secretary of the British Medical Association. Essays must be forwarded so as to reach the Secretary not later than January 31, 1951. Inquiries relative to the competition should be addressed to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

KATHERINE BISHOP HARMAN PRIZE

The Council of the British Medical Association is prepared to consider an award of the Katherine Bishop Harman Prize in the year 1951. The value of the prize is £75. The purpose of the prize, founded in 1926, is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and childbearing. It will be awarded for the best essay submitted in open competition, competitors being left free to select the work they wish to present, provided this falls within the scope of the prize. Any registered medical practitioner in the British Empire is eligible to compete.

Should the Council of the Association decide that no essay submitted is of sufficient merit the prize will not be awarded in 1951 but will be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine. The decision of the Council will be final.

Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. The title of the proposed essay and the motto should be notified in writing, and a form for this purpose can be obtained from the Secretary. Essays must be forwarded so as to reach the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950. Inquiries relative to the prize should be addressed to the Secretary.

Diary of Central Meetings

NOVEMBER

14	Tues.	Standing Ethical Subcommittee, 2 p.m.
• 15	Wed.	Committee on Association of General Practitioner with Hospital Work, 2 p.m.

Branch and Division Meetings to be Held

BLACKBURN DIVISION.—At Swan and Royal Hotel, Clitheroe, Thursday, November 16, 8 p.m. to 1 a.m., annual dance.

BURTON-ON-TRENT DIVISION.—At General Infirmary, Burton-on-Trent, Tuesday, November 14, 8 p.m., meeting.

CAMBERWELL DIVISION.—At 134, Denmark Hill, Camberwell, London, S.E., Tuesday, November 14, 8.30 p.m., Mr. Lawrence Abel: "Assessment of Surgical Risk."

EAST HERTS DIVISION.—At County Hospital, Hertford, Thursday, November 16, 8.30 p.m., meeting.

EDINBURGH AND SOUTH-EAST OF SCOTLAND BRANCH.—At B.M.A. House, 7, Drumsheugh Gardens, Edinburgh, Wednesday, November 15, 8.30 p.m., symposium to be led by Sir Alexander Gray: "Industrial Rehabilitation." Members of Granton Rehabilitation Unit will be present to answer questions.

GUILDFORD DIVISION.—At Royal Surrey County Hospital, Guildford, Friday, November 10, 8.30 p.m., address by Dr. William Evans: "Unwarranted Cardiac Invalidism."

HENDON DIVISION.—At Hendon Hall Hotel, Ashley Lane, London, N.W., Tuesday, November 14, 8.30 p.m., Dr. J. A. Hobson: "Alcohol and Alcoholics."

LAMBETH AND SOUTHWARK DIVISION.—At Wingfield House, 261, South Lambeth Road, London, S.W., Tuesday, November 14, 8.30 p.m., meeting.

LEIGH DIVISION.—At Boar's Head Hotel, Leigh, Tuesday, November 14, 8.30 p.m., annual general meeting. Address by retiring chairman, Dr. L. G. Rymer Roberts: "A Visit to the Pyramids and Other Ancient Monuments of Egypt."

READING DIVISION.—At Royal Berkshire Hospital, Reading, Thursday, November 16, 8.30 p.m., lecture by Dr. Robert Forbes: "Legal Hazards in Medical Practice."

SOUTH BEDFORDSHIRE DIVISION.—At Nurses' Home, Luton and Dunstable Hospital, Luton, Friday, November 17, 9 p.m., Dr. Donald Teare: "Medical Methods in Criminology" (illustrated).

SOUTH WARWICKSHIRE DIVISION.—At Warneford Hospital, Leamington Spa, Thursday, November 16, adjourned annual general meeting to follow British Medical Guild meeting (see below).

SOUTHAMPTON DIVISION.—At Polygon Hotel, Wednesday, November 15, 8.30 p.m., general meeting of the Division to be held in conjunction with the Southern Counties Veterinary Society and Southern Branch of the Society of Medical Officers of Health.

SUNDERLAND DIVISION.—Thursday, November 16, (1) at Royal Infirmary, Sunderland, 3 p.m., annual address by Professor J. W. McNee: "Jaundice"; (2) at Seaburn Hotel, Sunderland, 7.30 p.m., annual dinner.

British Medical Guild Meetings to be Held

LAMBETH AND SOUTHWARK.—At Wingfield House, 261, South Lambeth Road, London, S.W., Tuesday, November 14, 8.45 p.m., discussion to be opened by Dr. L. S. Potter (Assistant Secretary, B.M.A.): "Present Position of General Practice." Questions will be answered.

SOUTH WARWICKSHIRE.—At Warneford Hospital, Leamington Spa, Thursday, November 16, 8 p.m., meeting of all medical practitioners in the area for the formation of local committee of British Medical Guild. To be addressed by Dr. E. E. Claxton.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY NOVEMBER 18 1950

COMPENSATION FOR PRACTICES

FINAL DATE FOR CLAIMS

The publication of the regulations implementing the provisions of the Amendment Act makes it possible to review the present position with regard to the assessment and payment of compensation for the loss of the right to sell the goodwill of general medical practices.

Under the Act of 1946 a sum of £66m. was earmarked for the payment of compensation, and the Minister was empowered to make regulations governing the assessment of goodwill and the arrangements for payment to those entitled. The main principles of these regulations were agreed by the Negotiating Committee in 1948 and may be summarized as follows:

(1) *Claims* from all practitioners entitled to compensation had to be submitted for assessment on a prescribed form by the end of October, 1948, but a period of six months was allowed during which late claims might be sent in.

The following were entitled to claim:

(*a*) Doctors whose names were included on the general medical services list of an executive council on July 5, 1948.

(*b*) Doctors who had retired and the representatives of doctors who had died between the passing of the Act and the appointed day and whose practices had not been sold (N.H.S. Act, Sect. 37). In addition provision for further claims by partners under the Amendment Act was contained in the regulations (Reg. 4).

(2) *Assessments* were to be based on the average of the accounts for the last two complete years before July 5, 1948, with special provision where the practice had changed hands within this period and for other anomalies. Clearly it would have been impossible to cover all the various circumstances by regulations, and therefore:

(3) A *Practices Compensation Committee* was established to advise the Minister on assessments. This committee contains a majority of medical men nominated by the B.M.A. Its only function is to determine the assessments in cases referred to it by the Minister. In fact, this has meant all cases which were not quite straightforward.

The Practices Compensation Committee is a statutory committee established by regulation with limited terms of reference and should not be confused with the Association's Compensation and Superannuation Committee, which replaced a subcommittee of the Negotiating Committee and is a committee of the Council.

(4) *Arbitration.*—The Negotiating Committee, and in particular its nominees to the Practices Compensation Committee, realized that no committee could be regarded as infallible when dealing with such a difficult question as the assessment of goodwill. It therefore pressed for, and obtained, the right of appeal to arbitration.

(5) *Payment of Compensation.*—Compensation is payable on the death or retirement of a practitioner, and retirement is defined as "retirement from practice as a medical practitioner providing general medical services under Part IV of the Act, or under Part IV of the National Health Service (Scotland) Act, 1947." If the amount of compensation has not been ascertained on the relevant date, it is to be paid as soon as possible after the amount is known, with the important proviso that any practitioner who claims to suffer hardship by delay can appeal to the Minister at any time for a payment on account. It is for the Minister to decide what sum shall be "fair and reasonable having regard to the evidence before him." He is under no obligation to consult the Practices Compensation Committee.

(6) Provision for interest to be payable on the sums standing to the credit of each doctor.

(7) A clause providing for additional and amending regulations to give effect to the Amendment Act, which had been promised but was not actually passed until December 16, 1949.

The Amendment Act has an important relation to the assessment and payment of compensation. First, it provides for a deferred appointed day for partners, and this means that a new group of doctors has been added to the list of those entitled to claim. This group is not large, but until February 16, 1950, it could not be known how many additional claims there would be. As these claims could not be submitted before the new regulations were published, they still await assessment. Secondly, it provides for the immediate payment of compensation in lieu of purchase price where shares are transferred in pursuance of partnership agreements in force on July 5, 1948.

Calculation of the Compensation Payable to Individual Practitioners.—When an assessment has been made the individual practitioner is notified and is given fourteen days within which he may, if he wishes, appeal for the amount of the annual loss to be determined by arbitration.

A simple arithmetical calculation is all that is necessary to determine the factor to be applied to the annual loss (*i.e., the value of the goodwill* at one year's purchase). The aggregate of all assessments divided into £66m. will give the rate, in years' purchase, that every doctor will receive. It is still impossible to announce this figure because all the assessments have not been completed.

There are two reasons for this:

(1) *Late Claims.*—Apart from the small group of partners who qualify under the Amendment Act, there are a number who, for a variety of reasons, failed to comply with the regulations and omitted to submit claims before April 30, 1949. In some cases the cause has been illness or the absence abroad of either the doctor or his accountant, and there have even been losses in the post. There is, however, definite evidence that a few doctors failed to send in claims because they thought that the time to do so was *on retirement.* The new regulations make it possible for bona-fide late claims to be accepted up to the end of this year (Clause 5), but *after the final date,* a short period of grace being allowed, *no further claims will be admitted.* In the interests of the growing number of doctors, or their representatives, now entitled to payment in full and suffering hardship through delay, further extension of time is impossible. Similarly, the withholding of or the failure to produce the required information under the regulations cannot be allowed to hold up the work of assessment now nearing completion.

(2) *Appeals to Arbitration.*—Though very small in relation to the total, there have been a substantial number of appeals to arbitration. Every effort has been made to deal with these expeditiously, but it has been impossible to complete the hearing of appeals in partnership cases until the new regulations were in force. It seems unlikely that the work can be completed for at least some months.

Advance Payments

When the work of assessments began, it was only possible to make a rough estimate of the rate at which compensation would ultimately be payable, and it was accepted that to protect the interest of the majority an upper limit must be imposed on payments of capital on account which would allow a safe margin. Evidence has since accumulated which has made a more accurate estimation possible, and indeed interest has been paid on a provisional rate of 1½ years' purchase. There is no doubt a case for more caution where repayment of capital is concerned, because overpayment of interest can be adjusted whereas capital once paid could not be recovered. Nevertheless, the Association is satisfied that a wider latitude is justified and that considerable hardship results from the too cautious adherence to rigid limits. For some time it has been urging the Ministry of Health to review the evidence in the hands of the Department and to increase the amounts payable

particularly to doctors who have retired or to executors who are anxious to wind up estates. The Department has intimated that in these categories the maximum amount payable in advance will be increased.

The New Regulations

The regulations are complex, and many of them are merely consequential following the passing of the Amendment Act. The important points, however, can be summarized quite briefly.

(1) The last date for the acceptance of any claims still outstanding is December 31, 1950, though there is a further extreme limit of two months after that date. As some claims are new claims a period of grace is justified.

(2) The principle of assessments in partnerships is clarified as foreshadowed in the original regulations, which applied mainly to single-handed practices. For example, a doctor who bought a practice a year or so before the appointed day is assessed on the accounts on which the purchase price was based. This would not be reasonable where a doctor bought a share, since it might result in partners being assessed by different methods. Clearly each partner should receive compensation in proportion to the share of the whole practice he held on July 5, 1948. The new regulations make this possible.

It will be seen from Regs. 7 and 8 of the 1950 regulations that, except where the Practices Compensation Committee considers special circumstances, the annual values of the shares of members of a partnership are to be calculated on the receipts for the two relevant accounting years regardless of any change in the membership of the partnership since the beginning of the first of the two accounting years. The same principle applies where a single-handed practitioner took a partner during the period. But where, for example, two doctors enter into partnership with one another and buy a practice after the beginning of the first of the two accounting years, the annual value of each doctor's share is to be calculated by reference to the average gross yearly receipts as estimated for the purpose of the purchase. This type of case is therefore to be dealt with on the same basis as that prescribed in the 1948 regulations where a single-handed practitioner bought a practice within the same period.

(3) Where one member of a partnership appeals to arbitration the assessment in relation to the whole practice will be considered.

(4) Where a partnership agreement in existence on the appointed day provides for the purchase of a share by instalments the compensation payable under the Amendment Act to the vendor may also be paid in instalments.

REGISTRAR GRADES

REVIEW OF APPOINTMENTS

The Ministry of Health has sent the following circular (briefly referred to in these columns last week) to hospital boards:

1. As boards will be aware, the Minister has had under review the numbers of appointments at present held in the hospital service in the grades of senior registrar and registrar. It has from the outset been made clear that these are regarded as training grades for potential consultants (or senior hospital medical or dental officers). It follows also that the total number of such appointments, particularly in the senior registrar grade, should be closely related to the number of openings likely to be available annually, since it is not justifiable from the point of view either of the service or of the individual to multiply training posts regardless of the probable needs for the recruitment of trained men.

2. It has also been indicated that training should be continued only for those practitioners who appear likely to benefit from it, and in particular that promotion from one grade to another should be competitive. The conception is one of a training ladder, up which the trainee proceeds as far as his abilities permit, and which at any time an individual practitioner may have to leave if he appears unlikely to benefit from further training. The base of the ladder should be the first year in the registrar grade, a post which should normally be obtained at least two years after qualification. (The junior registrar is not essentially a trainee of this kind, and is referred to again in para. 13 below.)

The registrar should be reviewed at the end of the first year, and if satisfactory should normally proceed to a second year in that grade. Those wishing to proceed further should then seek an appointment in open competition as senior registrar, the number of posts available being considerably less than the number of second-year registrar posts, thus allowing for a careful selection from among the applicants. The senior registrar should also be reviewed at the end of the first and second years, proceeding to the next year if considered satisfactory.

At the end of the third year as a senior registrar training should be complete, and appointment for a fourth year should be very exceptional and for the most part confined to certain specialties such as thoracic surgery, neurosurgery, or plastic surgery—if there are special circumstances justifying a further year of training—or to persons who have completed a training, as, for example, general physicians or general surgeons, and who now wish to take up other specialties such as psychiatry, ophthalmology, oto-rhino-laryngology, etc.—if there are special circumstances in which it is thought desirable to facilitate such further training.

150 Appointments Annually

3. Against this background it is necessary to consider what should be the present numbers of senior registrars and registrars in the service and to fix the training establishment from time to time. The information available indicates that for some years to come the number of appointments available to senior registrars who complete their training at hospitals in England and Wales is unlikely to exceed 150 annually. This includes not only consultant and senior hospital medical or dental officer appointments necessary to make good wastage through death or retirement, but also a proportion of additional posts and openings in other services and overseas as well as in hospitals in this country.

On this basis it appears that the number of training posts in England and Wales should not at present exceed the following:

Senior registrars	600
Registrars	1,100

The figure for registrars is a total of those in the first and second years of training, and that for senior registrars is a total of those in the first, second, and third years of training. The figures assume a wastage at the end of each year, as indicated in para. 2.

4. The present numbers in England and Wales considerably exceed the above, being upwards of 1,400 in each grade. It is therefore essential to take steps to bring the number of training posts as quickly as possible into line with the numbers required.

5. In taking these steps the objective should clearly be:

(*a*) To fix for each hospital regional area an establishment of training posts properly distributed between the different specialties and situated in those hospitals where adequate facilities in staff, beds, etc., are available for training.

(*b*) To reduce the present numbers by (i) making appointments in future only up to the new establishment figures; (ii) discontinuing appointments of senior registrars now in their third or subsequent years as the individual's present year of appointment ends. (But see end of para. 2, as applied by para. 9 (ii) for exceptions.)

(*c*) To make alternative appointments for carrying out the work of the hospitals in so far as the reduction in numbers of senior registrars and registrars necessitates the appointment of a substitute.

These points are dealt with further in the paragraphs that follow.

Fixing Establishments

6. In determining what posts should exist and in what hospitals, it is desirable that the position at both teaching and non-teaching hospitals should be looked at as a whole within each regional area. This will ensure the best use of all the facilities available, enable the needs of all specialties to be considered together, and facilitate arrangements for the training of an individual to be shared if desired between a teaching and a non-teaching hospital. The regional board and the board or boards of governors in each regional area are therefore requested to consider urgently together what trainee posts should be provided in the area within the maxima indicated below, and to submit their joint proposals to the Minister not later than January 1, 1951.

In preparing these proposals the co-operation of the dean or director of postgraduate medical studies of the university for the area should be sought; and they should indicate the number of senior registrar and registrar posts it is proposed should be provided in each specialty, and the hospitals where the posts are to be held. The Minister will review these proposals as a whole (with particular reference to the distribution between specialties which can be satisfactorily determined only on a national basis) and will approve them with or without modification accordingly.

7. After taking into account such factors as population, the number of consultants, the available training facilities, and the number of beds in the different regions, it would appear that the maximum total number of posts for each regional area (including teaching hospitals in the area) should be as follows:

	Senior Registrar (Total for First, Second, and Third Year)	Registrar (Total for First and Second Year)
Newcastle	34	63
Leeds	36	65
Sheffield	42	76
East Anglia	18	32
N.W. Metropolitan	75	138
N.E. Metropolitan	48	86
S.E. Metropolitan	52	96
S.W. Metropolitan	83	151
Oxford	22	42
South-western	30	56
Wales	28	51
Birmingham	52	96
Manchester	52	96
Liverpool	28	52

The distribution between specialties will, of course, need to vary slightly from region to region, according to the training facilities available in the various specialties in each region. The concentration of teaching resources in London in both undergraduate and postgraduate teaching hospitals will naturally have to be taken into account in determining the final regional distribution.

Reduction in Numbers

8. In addition to fixing total establishments, an approximate distribution in each region of the total into numbers for each year of training must obviously be made, though this distribution may vary a little at different times. It is also essential for the reasons already given to take the earliest possible steps to bring the numbers of registrars and senior registrars in posts into accordance with the number of posts in the new establishment and the approximate distribution by year of training. Accordingly, when the distribution of posts by specialty and hospital has been determined, it will be necessary to decide which of the existing first-year registrars or first- or second-year senior registrars can continue for a further year, and where new appointments in the first year of each grade can be made during the coming year. In addition to the information asked for in para. 6, the regional proposals should therefore also include a statement of the number of registrars and senior registrars by specialty in each year of training it is proposed to retain or recruit in the region during the coming year.

9. When the establishment proposals have been approved by the Minister—which will be as soon as possible after January 1, 1951—it will be for the boards to apply them to existing numbers and new recruits. The approved figures should be strictly adhered to from the date of approval onwards (though, as indicated in para. 8, the distribution into numbers for each year of training may sometimes vary a little). This means that from that date:

(i) The number of first-year registrars or senior registrars recruited during the year should be the number (within the approved total) which boards have decided is appropriate for the time being.

(ii) As the existing registrars and senior registrars reach the end of their personal year of appointment, second-year registrars and third-year senior registrars should have their appointments terminated (unless in the exceptional cases mentioned at the end of para. 2 there are special circumstances justifying appointments for a further year of training); and first-year registrars and first- and second-year senior registrars should be reviewed and reappointed for a further year's training only so far as that is possible within the approved total establishment figures for the region.

10. From the date of this memorandum, and in advance of any approval of establishment, it is desirable that what steps are possible should be taken to begin the reduction in numbers of present trainees. Accordingly, from now on boards should not renew the appointment of any second-year registrar whose personal year of appointment ends, or of any third (or subsequent) year senior registrar save in the exceptional cases mentioned at the end of para. 2 and subject to what is said in para. 11 (*a*) as to possible temporary interim arrangements if an alternative appointment is required. In renewing other appointments, or recruiting first-year registrars or senior registrars, they should have regard to the necessity for reducing numbers and to the probable maxima that will be approved.

Alternative Appointments

11. It is appreciated that in some instances—though not necessarily in all—a reduction in the numbers of persons in training in hospitals may necessitate the appointment of other practitioners as assistants in their place. Where a board is satisfied that the work of the hospital necessitates an alternative appointment in place of a *senior registrar*, but not otherwise, the following are among the steps which may be taken:

(*a*) An existing senior registrar whose appointment is not renewed for a further year as a trainee may be offered an appointment for one year only as a temporary senior registrar at his present salary rate. This is intended as a strictly interim arrangement, with the double purpose of assisting boards to overcome temporary staffing problems, and of giving the individual practitioners concerned a longer opportunity of seeking other work.

(*b*) Alternatively, boards may appoint a suitably experienced general practitioner (normally one with a higher qualification and experience as a senior registrar or registrar) on a part-time basis to act as a clinical assistant. This is intended as a long-term method of meeting staffing difficulties in the senior-registrar field, and has the advantage of providing a valuable link between the general practitioner and the hospital services. In making appointments of this kind it will be necessary for boards to satisfy themselves not only that the practitioner has the experience and qualifications required, but also that his commitments in general practice will not prevent his devoting the time needed to carry out the duties of the hospital post. The remuneration of part-time general practitioners appointed as clinical assistants will be announced later.

12. Where it is necessary to terminate the appointment of an existing registrar or senior registrar, the board will no doubt wish, when thanking him for the services he has given, to draw his attention to other possible openings. In addition to the various fields of civilian medical practice in this country, both within and outside the National Health Service, some of these practitioners may be interested in openings abroad or in H.M. Forces. A note about these is appended which should be brought to the notice of each person concerned.

Junior Registrar

13. As mentioned in para. 2, the grade of junior registrar is not regarded as a training grade like that of registrar, and the present title is misleading. In future, therefore, the grade should be called "senior house officer," the definition, remuneration, etc., of the post remaining unchanged. It is, of course, not proposed that the establishments in hospitals of the grade now to be known as senior house officers should be increased on account of the change of nomenclature. Nor does the change affect the method of recruiting registrars, who will still be persons with normally at least two years' hospital practice since registration.

Other Openings

1. *H.M. Forces.*—There is an urgent need for specialists. There are at present about 400 vacancies for such officers in the

Navy, Army, and Royal Air Force." They are particularly required in the following specialties: anaesthetics, surgery, otology, radiology, psychiatry, pathology, dermatology, and venereology. In addition there are over 100 vacancies for general duty officers. Those interested can obtain further information from:

Navy.—The Medical Department of the Navy, Admiralty, Queen Anne's Mansions, St. James's Park, London, S.W.1.

Army.—The Under-Secretary of State for War, The War Office (A.M.D.s), London, S.W.1.

Royal Air Force.—The Under-Secretary of State for Air (M.A.1), Awdry House, Kingsway, London, W.C.2.

2. *Colonial Medical Service.*—About 200 posts on a permanent or temporary basis are available in many parts of the Colonial Empire. Those interested can obtain further information from the Director of Recruitment, Colonial Service, Sanctuary Buildings, Great Smith Street, London, S.W.1.

3. *University and Hospital Appointments Abroad.*—A number of university and hospital appointments are vacant or will shortly be vacant principally in the Middle East and South-east Asia. Those interested can obtain further information in the first instance from the Technical and Scientific Register, York House, Kingsway, London, W.C.2.

BRANCH SURGERIES

An important principle affecting the establishment of branch surgeries has recently been made plain in a case that was taken to a successful appeal to the Ministry of Health.

Before the appointed day a firm of practitioners maintained a branch surgery at a village situated some three to four miles from the main surgery. In the light of experience gained over a period of 13 years it was found that the branch surgery was unnecessary. On the appointed day the practitioner concerned, on applying to have his name included in the medical list maintained by the executive council, excluded the branch surgery address. He maintained that the council, in accepting the application, could not have been unaware of the new arrangements.

Subsequently the council requested the doctor to reopen the branch surgery and insisted that it had powers to do so under Section 7 (4) of the First Schedule, Part I, of the General Medical and Pharmaceutical Services Regulations. The case then went to appeal, and the Minister ruled that the order of the executive council requiring the doctor to open the branch surgery be quashed.

GENERAL MEDICAL SERVICES COMMITTEE

FIRST MEETING OF NEW SESSION

The first meeting of the new session of the Committee was held at B.M.A. Headquarters on Thursday, November 9. Dr. S. WAND was unanimously re-elected chairman. About 10 new members were welcomed individually. The Committee expressed its regret at the retirement of several old members, special mention being made of Dr. P. V. Anderson, whose length of service on this Committee and the old Insurance Acts Committee wellnigh constituted a record.

On the proposition of Dr. HOWIE WOOD the Committee placed on record its gratitude to Dr. Charles Hill for his services as secretary and extended a warm welcome to Dr. Angus Macrae.

Dr. O. C. Carter was again co-opted to the Committee. The Scottish, Rural Practitioners, Health Centres, Protection of Practices, and other subcommittees were reappointed. The Assistants Subcommittee had its reference extended to include the interests of newly established principals.

The Committee set up a subcommittee to review the trainee assistants' scheme and make recommendations. The CHAIRMAN said that there was a good deal of feeling with regard to this problem and it was desirable to have a strong subcommittee. A representative subcommittee of 15 was appointed, and to this the various resolutions on this subject passed by the recent Conference were referred.

A letter from the London Local Medical Committee was read propounding the problem of attendance by trainee assistants at courses in midwifery. Dr. FRANK GRAY said that in London a certain number of trainers had been approved, but there was difficulty in arranging midwifery training. Such training was essential because the assistant on completing his traineeship might have to go to a part of the country where there was a great demand on the general-practitioner service for midwifery. The London Committee had come to the conclusion that a month's full-time course with practical instruction was the best procedure. This was in the spirit of the scheme, but he was not entirely sure that it was in the letter of it, and he hoped that the well-meant effort of London might have approval. Dr. D. F. HUTCHINSON mentioned a part-time course extending over three months which had been arranged in Middlesex and was working very well indeed.

Dr. J. C. ARTHUR suggested that the question deserved a little further consideration. If it was ordained that trainee assistants should receive instruction in obstetrics at some hospital outside the ordinary purview of general practice it might look as though they were adopting the attitude that further instruction in obstetrics at some training centre was desirable in the case of the general practitioner.

It was agreed to refer this question to the newly appointed subcommittee.

One other question regarding assistants engaged the attention of the Committee. Apparently it is the Ministry's view that it is necessary for a doctor, although he has got the required consent for the employment of an assistant, to notify the executive council should his assistant leave and to reapply for permission to employ a new assistant. The matter arose out of a difference of opinion between the West Ham Local Medical Committee and the executive council, on which the Ministry was asked to adjudicate. Its adjudication was to the effect that consent of the council to the employment of an assistant by a general practitioner applies to a particular named assistant, and that fresh consent is required in the event of a change in the person employed or even if there is a long break in the continuity of the employment of an assistant during which time conditions may have changed.

This requirement was objected to by the Committee, and the matter was put down as one of those to be discussed at the next meeting with the Ministry.

The Remuneration Position

The Committee received a report on the present position with regard to the inquiries into practice expenses and income from National Health Service sources, and it had also before it certain resolutions passed at the Conference. A full discussion on the situation took place, and encouragement was given to new members to express their views. It was agreed that a letter be sent to the Ministry deprecating these continued delays, even though it was appreciated that they were in part due to circumstances over which neither side had control, and asking for further discussions to take place on the various items outstanding from the last meeting. It was agreed also to ask the trustees of the British Medical Guild to send out a letter explaining the altered timetable to British Medical Guild committees and group leaders, and in the meantime to do everything possible to perfect the local machinery of the Guild. The CHAIRMAN suggested that regional conferences of group leaders might be possible as a future expedient.

The Conference resolution that no mass withdrawal from the Service could be effective without the withholding of medical certificates was specifically put to the Committee and endorsed *nem. con.*

Discussion took place on the Isle of Wight resolution that practitioners who were unwilling to hand in their resignations should be invited to give an undertaking not to accept on their list any patients who were on the list of a resigning practitioner. In support of this, Dr. HOWIE WOOD pointed out that, if resignations to the extent of 85% were obtained, the outstanding 15% of practitioners would still be a potential source of danger. Other members of the Committee supported this point of view, but some thought that it would offer too futile a means for a few doctors to salve their consciences by remaining in the Service, and one member at least was against the recognition of a group of "non-collaborationists."

The CHAIRMAN suggested that it be remitted for consideration at the next meeting on what action should be taken to secure the support of house-officers, registrars, full-time employees of local health authorities and institutions, and those who for various reasons did not see their way to sign the resignation form. Possibly it might be necessary later to appoint a small committee to look into the mechanics of resignation. The matter was deferred until the next meeting.

Rural Practitioners

On the report of the Rural Practices Subcommittee a proposal for a new mileage scheme by the Holland (Lincolnshire) Local Medical Committee was considered. The proposal was forwarded to the Government Mileage Committee. The subcommittee made the point—endorsed by the main committee—that any new distribution scheme should be referred to local medical committees before it was put into operation.

It was agreed on the proposal of the subcommittee that the name "Mileage Fund" should be changed to "Rural Practitioners Fund."

Medical Service Committees

The subcommittee which under Dr. Dain's chairmanship has been considering the constitution and procedure of medical service committees submitted a number of alterations which it proposed to recommend to be made in the handbook on medical service committee procedure prepared by the Ministry of Health. The proposed alterations were approved, and the resolutions bearing on medical service committee work which were passed at the recent conference were referred to the subcommittee. It was agreed that at the next meeting with the Ministry the question of publicity in disciplinary proceedings should be brought forward. The point it is desired to press is that a doctor's name should be withheld from the published decision of the tribunal except where that decision is that the doctor's name be removed from the medical list.

Amending Bill

It was reported that the Amending Acts Committee, which was meeting shortly, desired to learn of those matters which the Committee thought should be included in the programme for the amendment of the present Act and its ancillary regulations. Many matters were put forward last year for inclusion in the amending Bill, including the question of drugs and appliances for private patients and the reform of the disciplinary procedure. The General Medical Services Committee agreed to pass on from time to time any matters which it considered should be the subject of amendment.

Notification of Pneumonia

The notification of pneumonia was the subject of a letter from the Ministry of Health. At present what is called "acute primary (including influenzal) pneumonia" is not notifiable. The General Register Office had suggested that pneumonia should be notifiable in four categories, and, as the onus of placing patients in these categories would fall upon the general practitioner, the views of the Committee were sought. The Committee, after consideration, agreed to suggest that there should be only two categories, and not four—namely, acute primary pneumonia and acute secondary pneumonia, with any particulars of such cases if possible.

Discount on Drugs

It was reported that complaints were being received from dispensing doctors concerning the effect of the reduction of the "on-cost" allowance from 33⅓% to 16⅔%. This was said to result in the doctor's suffering a loss of 4% on cost price when supplying certain proprietary preparations (which may be necessary for the patient). When the reduction in the "on-cost" allowance was made by the Ministry the Committee registered a strong protest, but was unable to secure any concession for the doctors concerned. It now appears that the dispensing doctor is out of pocket on every supply of a proprietary to his patient. It was agreed to take this up with the Ministry.

Correspondence

Assistants in General Practice

SIR,—I have read with interest and sympathy the plight of "Fair Play" (*Supplement*, October 21, p. 172) and his fellow assistants. This state of affairs is not new, as the pursuit of a partnership by an impecunious assistant has always been an uncertain and arduous task. The only consolation I can offer him is that partnerships under such conditions as he describes would have meant an unhappy atmosphere and the continuation of his "dog's life" as a junior partner.

The true solution of this problem lies with the Minister initiating something on these lines:

(1) A capitation fee of 26s. 6d. for the first 1,000 patients, 22s. 6d. for the second 1,000 patients, with the remainder at the present figure.

(2) The limit of numbers for principals reduced from 4,000 to 3,000.

(3) The limit for assistants be reduced from 2,500 to 1,500.

(4) The total cost of an assistant to his principal be a minimum of £900 per annum.

Let us consider the effect of these four points. (1) The principal with 4,000 at the present rate would lose very little on 3,000 at the suggested rate. (2) An assistant could make a satisfactory start as a principal on 800 units. (3) The "misuse" of an assistant under conditions (3) and (4) will be much more unlikely than it is now.

Under such conditions I am convinced that: (1) The standard of general practice would rise again. (2) The hospital outpatient department would not be choked up with half-examined cases and those requiring minor surgery and dressings. (3) The practitioner would have an opportunity for improving personal contact with his patients and so re-establish the former doctor-patient relationship. (4) A profession with so many aggrieved and frustrated members can never be a united one, and never in the history of the profession has unity been more desirable than it is to-day.—I am, etc.,

Stalybridge, Cheshire. A. WYNROE.

Meeting of Unestablished Doctors

SIR,—Principals with inadequate lists, assistants without view, and other unestablished general practitioners comprise a section of our profession for which insufficient is being done in order to overcome the great difficulties which these doctors are experiencing.

It is widely recognized that the arrangements for entry into general practice as a principal are at present grossly unsatisfactory. It is extremely difficult to obtain an assistantship with view, there are insufficient executive council vacancies to satisfy the demand, and in most parts of the country the outlook facing the "squatter" is bleak. Many assistants are faced with poor prospects and undesirable conditions of employment, and the plight of some, as instanced by your correspondent "Fair Play" (*Supplement*, October 21, p. 172), constitutes a disgrace to the whole profession. The entrants into general practice who have achieved the status of principal, but who have only small lists of patients, are finding, in many cases, that they have little hope of significantly increasing the size of their practices within a reasonable time.

Little is being achieved by the numerous individual complaints which are being expressed both in private and in the medical press. A growing number of "unestablished" general practitioners, who have been discussing the state of affairs outlined above, have come to the obvious conclusion that doctors who are placed in the unfortunate circumstances to which I have referred should get together in order to produce and present their case for a square deal. An open meeting has therefore been arranged and will be held at the Russell Hotel, London, W.C.1, on Wednesday, November 29, at 8.15 p.m. It is hoped that doctors concerned will endeavour to attend this meeting, as it is clearly important that the views of as many as possible should be heard and discussed.

A statement on the professional problems of assistants and other "unestablished" (or inadequately established) general practitioners has been prepared. This statement also contains suggestions by which improvements for this section of our profession could be effected. I should be pleased to send a copy to anyone interested.—I am, etc.,

145, Upper Clapton Road, London, E.5. H. REZLER.

Change of Doctor

SIR,—I think Dr. D. McGregor's letter (*Supplement*, October 21, p. 171) asks for a reply, even although it might prejudice my opportunity of obtaining some shooting should I ever have the good fortune to be passing through Bonar Bridge.

I think that to regard one's younger or newly qualified colleagues as "young upstarts" is a somewhat unenlightened attitude on the part of the older members of what calls itself a liberal-minded profession. Experience can be acquired only in the course of years, and the refreshing optimism of the newly qualified is surely one of the lighter sides of medicine.

It is apparent from reading your correspondence columns that the "older tiring practitioners" are not in the least troubled by their consciences when it comes to exploiting the "young upstarts" as assistants.—I am, etc.,

London, S.W.15. C. W. A. SEARLE.

*** We have received a number of other letters in similar vein. The writers seem to have misunderstood Dr. McGregor's ironical letter.—ED., *B.M.J.*

General Practitioners and Hospitals

SIR,—Some months ago the executive committee of the Fellowship for Freedom in Medicine nominated a subcommittee, with wide terms of reference, to investigate the relationship between the general practitioner and the hospital services.

It has long been an accepted function of the Fellowship to watch the general practitioner's interests. Of late, the essential necessity of this duty has become even more obvious by reason of the undoubted tendency of some, at least, of the regional hospital boards to discount the general practitioner's potentialities. In many cases they have not only engineered his removal from posts in which he has for years exercised his skill (aided perhaps by a humanitarian approach, the direct outcome of his "general" work), but, even more important, have entirely altered the constitution and function of institutions for years accepted as general-practitioner hospitals, not only by the doctors themselves but also by the populations they serve.

Many instances of the truth of this have been collected by the subcommittee of which I have the honour to be chairman. We feel, however, that throughout the country there must be many other local hospitals which had G.P. or partially G.P. staffs, the members of which have suffered as the result of arbitrary action on the part of regional boards or hospital management committees. I would add that all members of the subcommittee have been most impressed by the awareness of the existing dangers shown not only in the Annual Report of the Council of the British Medical Association, but also by the important resolutions passed at the Annual Representative Meeting at Southport.

The object of this letter, therefore, is to ask that any relevant information may be made available for our inquiry. For this purpose a form of questionary is in preparation, copies of which will be forwarded on application to me, c/o The Fellowship for Freedom in Medicine, 45, Nottingham Place, London, W.1.—I am, etc.,

G. J. V. CROSBY.

Agreement has been reached through the Whitley Council on the salaries of secretaries and other officers in postgraduate teaching hospitals. The hospitals are in four groups, and salaries of secretaries range from £1,400 to £1,700 in the first group, down to £700 to £900 in the fourth group. There is in addition a London weighting allowance.

Branch and Division Meetings to be Held

CITY DIVISION.—At Finsbury Health Centre, Pine Street, London, E.C., Tuesday, November 21, 8.30 p.m., meeting. Talking film: "Angina Pectoris."

CORNWALL DIVISION.—At Regent Annexe, Truro, Monday, November 20, 5 p.m., annual meeting; election of officers. Dr. Charles Hill, M.P.: "The Present Position."

MACCLESFIELD AND EAST CHESHIRE DIVISION.—At Royal Oak Hotel, Alderley Edge, Wednesday, November 22, 8.30 p.m., lecture by Mr. Norman W. Bolton: "Acute Appendicitis."

NORTH MIDDLESEX DIVISION.—At North Middlesex Hospital, Silver Street, Edmonton, N., Tuesday, November 21, 2.30 p.m., clinical meeting.

NORTH OF ENGLAND BRANCH.—At New Lecture Theatre, Royal Victoria Infirmary, Newcastle-upon-Tyne, Thursday, November 23, 7.15 p.m., film: "The Treatment of Normal Breech Presentation"; 8.45 p.m., address by Professor Andrew M. Claye: "Some Observations on the Second Stage of Labour."

OLDHAM DIVISION.—At Oldham Hotel, Rhodes Bank, Oldham, Monday, November 20, 9 p.m., Dr. C. H. Adderley: "Laboratory Tests and their Application in General Practice."

OXFORD DIVISION.—At Maternity Department, Lecture Theatre, Radcliffe Infirmary, Oxford, Wednesday, November 22, 8.15 p.m., annual general meeting.

SOUTH ESSEX DIVISION.—At Nurses' Lecture Theatre, Oldchurch Hospital, Romford, Friday, November 24, 9 p.m., clinical lecture by Professor V. W. Dix: "Infections of the Urinary Tract."

SOUTH MIDDLESEX DIVISION.—At Jersey Rooms, Red Lion Hotel, Hounslow, Thursday, November 23, 7.30 for 8 p.m., annual dinner-dance.

SWANSEA DIVISION.—At Osborne Hotel, Langland, Thursday, November 23, 7.30 p.m., lecture by Mr. J. Pennybacker.

TOWER HAMLETS DIVISION.—St. Andrew's Hospital, Bow, E., Friday, November 24, 3 p.m., Dr. W. J. O'Donovan: "Dermatology."

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Councils.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY NOVEMBER 25 1950

DURHAM AND THE "CLOSED SHOP"

LOCAL MEETING

On November 1, 1950, the Durham County Council decided that all its staff should be members of an appropriate trade union. On November 10 a letter was sent by the county council to all its medical officers requesting evidence of membership of a trade union, and stating that if evidence of such membership was not furnished by November 22 the employee concerned would be given notice and would be offered re-employment on condition that he or she became a member of a trade union. The letter stated that, in the case of doctors, membership of the B.M.A. would meet the requirements of the county council.

News of the issue of this letter was received at B.M.A. House on November 15. Immediately a letter was sent by the Secretary of the Association to every medical officer employed by the Durham County Council reminding them of the Association's opposition to the "closed shop" and inviting them to postpone their action on the county council's letter until after a meeting of medical officers convened for November 18 at the Bishop Auckland General Hospital.

The meeting was attended by 36 medical officers employed by the Durham County Council. Letters of support were received from five medical officers who were unavoidably absent. Of the remaining 12 medical officers employed by the county council, two were known to be in hospital and one was on holiday. The chair was taken by Dr. G. Fenwick Lishman, immediate past-president of the North of England Branch.

Dr. C. Metcalfe Brown, chairman of the Public Health Committee, addressed the meeting. He explained that he was speaking as a member of the Council of the B.M.A., a member of the Council of the Society of Medical Officers of Health, and a trustee of the British Medical Guild. He said that the "closed shop" issue affected the whole profession. The B.M.A. was resolutely opposed to any requirement by an employing authority that medical practitioners should be obliged to join any trade union or professional organization. The fact that membership of the B.M.A. was acceptable to the Durham County Council was totally irrelevant. The B.M.A. was naturally anxious to include as many doctors as possible within its membership, but it was absolutely opposed to any acquisition of members by coercion. The resolution of the Durham County Council was an intolerable interference with the private affairs of individual doctors. The medical profession was united in its opposition to this policy, and the Durham medical officers could count upon the support of the British Medical Guild, which was backed by ample funds. The Medical Women's Federation wholeheartedly supported the policy of the B.M.A. and had sent a letter to its members. Dr. Metcalfe Brown believed that the Royal College of Nursing, the Royal College of Midwives, and the National Union of Teachers were also determined to oppose the county council's decision. The Government's position had been made clear in the House of Commons, where the Parliamentary Secretary to the Ministry of Health had stated that the Government regretted the action taken by the Durham County Council. Dr. Metcalfe Brown concluded by advising the medical officers to ignore the county council's letter of November 10.

Mutual Protection

A speaker pointed out that these events emphasized the necessity for the medical officers to stick together for mutual protection. He had felt in the past that the B.M.A. was concerned only with the interests of general practitioners, and he was delighted to find that the Association was prepared to take such energetic action on behalf of members of the public health service. It was totally unreasonable of the county council to demand that medical officers should comply with their request within twelve days or be dismissed.

Another speaker inquired about the position of holders of combined appointments—i.e., county district M.O.H. and assistant county M.O.H. Dr. Metcalfe Brown explained that termination of these appointments would involve the consent of the Minister of Health.

Collective Agreements Honoured

Dr. E. Grey Turner, Assistant Secretary, stated that the county council need have no fears about collective agreements. The B.M.A. would continue, as in the past, to negotiate collective agreements on behalf of the medical profession, and any agreements reached would continue, as in the past, to be honoured by the whole profession. He had never understood the argument sometimes put forward by advocates of the "closed shop" to the effect that union members could not bear to work alongside non-union men. In his experience the doctors working in a hospital would never dream of inquiring which of their colleagues were members of the B.M.A. or any other professional organization, let alone of objecting to any who were non-members. All that mattered was that doctors should give good service to their patients and to the public, and there was absolutely no reason to suppose that a doctor would give less good service to his patients because he happened not to be a member of the B.M.A. or any other organization.

County Council's Instructions Ignored

The meeting resolved by a unanimous vote to ignore the county council's instructions and to affirm its wholehearted support for the policy of the B.M.A. in regard to the "closed shop." Arrangements were made for those medical officers who were absent from the meeting to be contacted personally.

Dr. Lishman concluded the meeting by expressing thanks to Drs. Metcalfe Brown and Grey Turner, and said that he had never presided over a meeting at which the unanimity of feeling was more clearly obvious.

PUBLIC HEALTH COMMITTEE

"CLOSED SHOP" IN DURHAM

A special meeting of the Public Health Committee of the Association was held on November 16, under the chairmanship of Dr. C. METCALFE BROWN, principally to discuss two matters, the first of which was the situation in Durham following the resolution of the county council requiring all members of its staff to be members of an appropriate trade union.

The Committee had before it the full details of the correspondence which had taken place, a report of the adjournment debate in the House of Commons the previous evening, opened by Dr. Charles Hill, and the history of the subject in connexions other than Durham. In 1946, on the occasion of the Willesden dispute, the Minister of Health had stated that, while he was anxious that doctors should join a trade union, he considered that this matter should not be determined by the unilateral action of local authorities. In 1947 the Annual Representative Meeting declared it to be undesirable in principle that any practitioner should be required to join any body, B.M.A. or other (saving a defence society), and that where an authority imposed upon its officers or candidates for

office any such requirement the Association should protest to the authority concerned, and afford financial help to any practitioner suffering as a result of following the Association's advice.

It was reported that the clerk of the Durham County Council had been informed of the policy of the Association, and the county council had been asked to receive a deputation and in the meantime to withdraw its requirement. A letter had been sent to all medical officers, whole-time and part-time, employed by the county council, asking them to attend a meeting to be held at Bishop Auckland on November 18. The meeting would be addressed by one of the members of the Association's secretariat, and, to the great pleasure of the Committee, its chairman, Dr. Metcalfe Brown, agreed also to attend. It was agreed unanimously that the action of the Durham County Council was to be greatly deprecated.

The Withholding of Certificates

The second matter considered by the Committee arose out of the resolution of the recent Conference of Representatives of Local Medical Committees on the withholding of medical certificates in the event of a mass withdrawal from the National Health Service. The Council had referred this resolution for their comments to the Public Health and to other committees.

The matter was discussed at some length. It was agreed at once that in the event of mass withdrawal of general practitioners public health medical officers should be advised to give them all legal support within their power, but the question of certification raised other issues. The position of salaried officers in local government service was stated by one member of the Committee to the following effect: local authorities carrying out statutory duties could not extend these without appropriate legislation; medical officers engaged by local authorities were in contract to carry out the statutory duties of their authority and could not be diverted to other duties for which there was no statutory sanction; certificates signed by local authority medical officers were not in the same category as those signed by general practitioners, and refusal to sign them would render the medical officer liable to dismissal; no good purpose would be served by asking medical officers in local government not to sign certificates as heretofore, but certainly they should refuse to sign any additional certificate; it would be contrary to recent legislation for whole-time officers of local government bodies to prescribe for or treat the general public.

This view was generally in harmony with what the Committee felt. Some question arose about the clause in many agreements—"such other duties as the council may from time to time impose." The view was expressed that this could be interpreted only as referring to additional statutory duties which might be placed upon the local authority or which enabled the authority to carry out its administrative duties.

It was decided after discussion that the Council be recommended to express the opinion that the withholding of certificates in the event of mass withdrawal of general practitioners should not include private certificates, and that patients who were treated privately should be afforded all the usual facilities. The Committee was unanimous in its view that no additional certification should be undertaken by public health medical officers in the event of general practitioners withdrawing from the Service, and that public health medical officers should not undertake treatment which is normally given by general practitioners.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

County Council.—Durham.

Non-County Borough Council.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

APPOINTMENT OF CONSULTANTS AND SPECIALISTS

In July last the Minister laid before Parliament regulations regarding the machinery for the appointment of specialists. They came into effect on September 1 and revoked the regulations made in 1948. Some nine months previously the Ministry had indicated to the Joint Committee the nature of certain amendments which it was proposed to make to the original regulations, but the amendments embodied in the new regulations differ in many respects from those suggested earlier. The Joint Committee had insufficient time to comment on the new regulations in their final form.

Although the new regulations are in some respects an improvement on the old, they are unlikely to commend themselves to the profession in their entirety.

The new regulations prescribe by definition the classes of appointment to which they relate—i.e., those of consultant and S.H.M.O. (or S.H.D.O.) status. This removes the doubt which might have arisen under the original regulations about whether the regulations applied to a particular appointment.

The regulations preserve the advisory appointments committee procedure, and the principal changes of interest to the profession are those relating to the alterations in the composition of these committees.

In the case of appointments to non-teaching hospitals the total membership of the committee (7) and the members nominated by the board and hospital management committee (5 and 2 respectively) remain as before. But of these seven members it is now laid down for the first time that two (one nominated by the board and one by the H.M.C.) must be laymen. The presence of one layman, possibly as an impartial chairman, is perhaps of advantage. It is difficult, however, to see what can be gained by increasing the lay representation on a committee whose sole function is to weigh the respective merits of candidates for a clinical post, particularly when the effect is to reduce the representation of the senior medical staff of the hospital with whom the successful candidate will have to work. Hitherto the H.M.C. was free to nominate two medical practitioners as its representatives on the advisory appointments committee, and where two hospital management committees were concerned in the appointment it was possible for each to appoint a medical representative. This will not be possible under the new regulations. Admittedly under the new regulations the H.M.C. is obliged to nominate a member of the medical staff of the hospital concerned, but in practice this was usually done before.

It is difficult to avoid concluding that the deliberate introduction of more lay influence into matters which are the intimate and almost the sole concern of the profession is a definite policy and one which must cause grave disquiet.

It is the view of the Central Consultants and Specialists Committee as well as the Joint Committee (which has in fact made strong representations to the Ministry) that there should be at least three representatives of the medical staff of the hospital on the appointments committee, and that, when two or more H.M.C.s are concerned in the appointment, the medical staff of each hospital group should be represented.

Previously two of the medical members of the committee had to be engaged in the specialty concerned, one from within and one from outside the region. Now only one such member —from outside the region—is obligatory.

There is provision for augmenting the committee where the officer is to be employed partly under a local authority.

Appointments to Teaching Hospitals

In the case of an appointment to a teaching hospital, the total membership of the advisory appointments committee has been increased from seven to eight, and the representation of the university has been increased from two to four, bringing it into equality with that of the board of governors. Here again there is an obligation to appoint two laymen on the committee.

Previously the board of governors had the "direct" nomination of four members, a fifth being appointed after consultation with the regional hospital board of the area. Now the board has the direct nomination of only two members, the third being nominated after consultation with the regional hospital board and the fourth after consultation with the "appropriate" Royal College. Neither of these latter two may be members of the hospital medical staff. Of the two members directly nominated by the board of governors one must be a layman, the other a member of the medical staff of the hospital concerned. The net result of these changes is that this last member may be the only representative of the hospital medical staff on the committee, although it is of course open to the university to nominate members of the medical staff from among its three professional nominees. This possible loss of representation of the medical staff of the hospital is a retrograde step.

Provision for the appointment of two consultants in the specialty concerned has been retained in the case of teaching-hospital appointments, although—as already noted—this representation has been reduced in the case of the non-teaching-hospital appointment.

Where the teaching hospital is associated with the University of London it is provided that the University shall consult the appropriate medical school in regard to the nomination of two of its professional members. This provision might usefully be applied throughout the country.

It is interesting to note that in both the original and the present regulations the duty of the advisory appointments committee is to select such applicants as it considers suitable for the appointment and to submit their names to the board, which is responsible for making the appointment. In practice the advisory appointments committee often recommends only one candidate, and the appointment by the board is largely a formality. Some boards of governors, however, have adopted the policy of appointing an officer from the names selected by the advisory appointments committee, on the advice of their medical committee, and this is a practice which might with advantage be extended.

The lack of adequate consultation between the accredited representatives of the profession and the Ministry has resulted in amending regulations which leave a lot to be desired. Frequent changes in the regulations are to be deplored, but clearly some of the above points must be rectified if they prove unworkable. The Ministry has constantly been reminded that the full support of the profession to changes in the terms and conditions of service can always be achieved if there is ready consultation and give and take on both sides.

CONDITIONS OF SERVICE OF HOSPITAL MEDICAL STAFF

During the past months discussions have been proceeding, either directly between the Joint Committee and the Ministry, or through Committee B of the Whitley machinery, on a number of points affecting terms and conditions of service of consultants and other members of hospital medical staffs.

Remuneration of Medical Superintendents, Regional Administrative Medical Staff, and Regional Psychiatrists

The Joint Committee has never accepted the method of determining the salaries of medical superintendents laid down in the terms of service, and when the committee advised hospital staffs in June, 1949, to accept permanent contracts based on the terms it was on the understanding that negotiations with the Ministry would continue on a number of outstanding points, of which this was one.

Up to the time when the medical Whitley machinery was established no agreement had been reached with the Ministry, and it was therefore decided to pursue the matter through Whitley, as it was one affecting the terms of service.

In the case both of regional administrative medical staff and of regional psychiatrists provisional rates of remuneration were laid down by the Ministry, after discussions with the representatives of the profession, but before the publication of the Spens Committee Report, and it was understood that the salaries would be reviewed in the light of the findings of that committee. So far, however, no adjustment has been made, and the position of these officers was accordingly raised with the Ministry and more recently in the Whitley machinery.

At the beginning of July the staff side of Committee B put forward proposals for the improvement of the salaries of medical superintendents, regional administrative medical staff, and regional psychiatrists, but when these proposals were discussed with the management side at a meeting on September 29 the latter asked for a further period of time in which to consider the proposals, and it was agreed that the discussions should be resumed not later than the first week in December.

Pay-bed Regulations

Some twelve months ago the Joint Committee submitted proposals to the Ministry for a modification of the Pay-bed Regulations, the effect of which would have been to abolish the detailed classification of operations as "major," "intermediate," and "minor"; to omit the detailed fees laid down for particular procedures; and, as an alternative, to specify maximum fees in certain specialties for the guidance of the profession. It was thought that the committee had reached a substantial measure of agreement with the Ministry and had convinced the Department of the need for a higher overall maximum than 75 guineas in exceptional circumstances—e.g., multiple or complicated operations.

At a recent meeting, however, the Ministry, while agreeing that the present detailed schedules of operations contained many anomalies, informed the committee that it now felt that their retention was a necessary protection for the patient. Certain other points in the regulations on which the committee is seeking amendment are still under discussion, and the Ministry has asked the Joint Committee to assist the Department in reviewing the detailed schedule of operations with a view to its improvement.

Medical Examination on Appointment

Under the terms of service the passing of a medical examination is a condition of appointment to a hospital medical post within the National Health Service. Over the past twelve months the Joint Committee has repeatedly represented to the Ministry that, in view of the length and cost of medical training, it is unjust that a practitioner should be debarred from a hospital appointment because he cannot satisfy the requirements of a medical examination. Indeed, had such a rule operated in the past many distinguished consultants might not have reached their present positions. The committee has urged that no practitioner should be barred from a hospital post unless his employment is prejudicial to the health of his colleagues or patients, and has suggested that to meet the position there might be some adjustment of the sick-leave arrangements and superannuation provisions for those officers who fail to pass a medical examination.

The Ministry has agreed to waive the requirement in the case of house-officers, subject to an appropriate modification of the sick-leave entitlement, but is unwilling to extend the principle to posts above the house-officer grade. The committee attaches great importance to this point of principle and proposes to pursue the matter in Whitley Committee B.

Loan of Patients' Records

Requests are frequently made by outside bodies for the loan of patients' hospital records, and quite often it is in the patients' interests that these records should be available when questions such as further treatment or the assessment of a disability are being considered. There is no doubt, however, that the nationalization of the hospital service, coupled with the growth of the "Welfare State," has given rise to some anxiety that the degree of confidence surrounding patients' medical records would—at least to some extent—be lost.

The Joint Committee is therefore glad to be able to state that the Ministry has accepted the view that such records should not be loaned to outside bodies, including other Govern-

ment Departments, without the production of the patient's written consent, or without the knowledge and approval of the consultant in charge of the case.

Consultants Acting as Locumtenents

Following discussions in Whitley Committee B it has now been agreed that where, in exceptional circumstances, a consultant is engaged in a locum capacity to deputize for an S.H.M.O. he shall be paid at the rate of 5 guineas per notional half-day. The present rate of remuneration is 3½ guineas.

Retention of Fees (Para. 14 of Terms of Service)

The Joint Committee is discussing with the Ministry the classification of various types of examination and report which are within or outside the scope of the service to be provided under Section 3 of the Act, as set out in the Schedule to para. 14 of the terms of service, and it is hoped that an early announcement will be made on this point.

Consultation

Occasionally the Ministry has issued instructions to hospital boards on matters affecting the interests of hospital medical staff without consulting the profession, and the Joint Committee has asked that there should be adequate consultation with it on all such matters in the same way as the G.M.S. Committee is consulted on matters affecting general practitioners working in the National Health Service. The Ministry has agreed to do this so far as it is practicable.

MANX PRESCRIPTION DISPUTE

POSSIBILITY OF SETTLEMENT

The dispute between the Manx Chemists' Association and the Isle of Man Health Services Board about the payment by the public of sixpence for each prescription to the chemists may be settled. According to *The Times* of November 21, the chemists are willing to resume service immediately if the Board gives three months' notice from October 1.

On November 10 the Chemists' Association gave notice to the Board that they would withdraw from the Health Service on November 13.

The dispute began on October 1, when the Chemists' Association decided not to operate the regulation approved by Tynwald, the Manx Parliament, that a charge of sixpence be made for every doctor's prescription, and that a charge be made for containers supplied, on the ground that they had not had adequate notice from the Health Board to impose the charge.

ASSISTANTS AND YOUNG PRACTITIONERS SUBCOMMITTEE

The General Medical Services Committee decided on November 9 to reappoint the subcommittee which had been engaged in examining the various problems of assistants in the National Health Service. To widen the scope of the subcommittee, it has been reconstituted as the Assistants and Young Practitioners Subcommittee. It will now examine not only the difficulties of assistants but also the problems which face young doctors entering general practice for the first time.

The subcommittee will hold its first meeting on Wednesday, December 13, and it would be pleased to consider any problems or suggestions which practitioners in either of the two categories mentioned may care to put forward.

The subcommittee is also anxious to have representatives of these two classes of practitioners among its membership, and any assistant, or doctor who has recently entered practice, who would care to join the subcommittee is invited to apply to the Secretary at B.M.A. House.

KINGSTON VICTORIA HOSPITAL

The General Medical Services Committee of the B.M.A. has stated that it "is deeply concerned by the action of the South-west Metropolitan Regional Hospital Board in the matter of the Kingston Victoria Hospital." The committee considers that a full public inquiry should be held before further action is taken.

IRISH DOCTORS AND MILITARY SERVICE

Under the National Service Acts at present in force in Great Britain male doctors who are citizens of the Irish Republic, or of Irish birth or domicile, become liable for call-up to the armed Forces of Great Britain when they have been resident in this country for two years, unless they are by then over 30 years of age or are regarded by the Ministry of Labour and National Service as resident here for a purely temporary purpose, such as postgraduate study.

JUNIOR REGISTRARS

One of the changes resulting from Circular R.H.B. 50/106 on registrar grades (*Supplement*, November 18, p. 204) is the abolition of the title "junior registrar," consequent upon the decision of the Ministry that this type of post is not regarded as a step in the training ladder. In future this type of post will be considered that of a "senior house officer," the salary remaining unchanged.

Unfortunately this decision does not appear to have been notified to hospital management committees, by whom junior registrars are at present appointed, and advertisements of appointments in this grade are still being received for publication in the *Journal* except for teaching hospitals, which are already adopting the title of "senior house officer."

This is likely to continue for a little while until the position becomes clarified. But it is as well to remind intending applicants for posts advertised as junior registrar that although the salary is unchanged the designation of the post may be, and that in any case they should not regard the post as conferring upon them the status of a specialist in training.

The choice of the title "senior house officer" for these posts raises certain complications in view of the fact that in many hospitals it has already become the practice to classify the house appointments on the £350 to £450 scale as "senior" and "junior." The abolition of the junior registrar, although a wise move, creates a new problem of nomenclature.

The use of the three registrar grades was intended to overcome the multiplicity of designations, though there was much to be said for casualty officer, R.M.O., etc. At any rate, some suitable title will have to be found for the erstwhile junior registrar, though it is possible the Minister will need to reconsider the suitability of "senior house officer."

SCOTTISH COMMITTEE

The provision of a reference library and reading facilities at Scottish House was approved by the Scottish Committee at a meeting at Edinburgh on October 10. The scheme will be recommended to Council without prejudice to future developments in connexion with major alterations to Scottish House. The total estimated cost is £620, including furnishings (£220), books (£300), and staff (£100). In addition, it is expected that there will be a sum of £50 annually in respect of replacements of books.

In a report to Council on the proposal the Committee stated that the provision of reading- and writing-room facilities was envisaged as part of the major alterations to Scottish House which had already been approved by Council. As, however, it was most unlikely that these alterations would be made in full for a number of years, the Scottish Committee felt that provision should be made for library facilities without further

delay. The proposal was strongly supported by the Edinburgh Division, which pointed out that the libraries of the Royal Colleges were available only to their Fellows and that the only facilities generally available were those of the University Central Medical Library. For a time these were, and might again be, withdrawn and in any event were now available only to Edinburgh graduates. The Committee felt that the establishment of such facilities as recommended would serve as an experiment for the long-term arrangements which were proposed in connexion with the major alterations to Scottish House and also for the establishment of similar facilities in other centres. There would be placed at the disposal of practitioners a modest selection of standard books, together with quarterlies published by the Association, and the leading world periodicals, dictionaries, etc. The library would be available during office hours and during the evenings.

Scottish Representation on Council

There was a long debate on the question of Scottish representation on the Council. The Committee had before it proposals of the Organization Committee to give effect to the resolution of the Annual Representative Meeting that, in view of the fact that Group 27 comprised 1,757 members, the representation of this Group on the Council should be increased from one to two.

The view was expressed that the amendments proposed by the Organization Committee would in fact be contrary to the intentions of the Representative Body as set out in resolutions already passed by it.

The Scottish Committee considered that there could be no reasonable doubt that the intention of the Annual Representative Meeting was that its resolution would have the effect of altering the decision "that the number of members of Council elected by members in the Branches in Great Britain and Northern Ireland be increased from 22 to 39," and that the resolution "that two members of Council be elected by the representatives of constituencies in Scotland, one member by the representatives of constituencies in Wales with Monmouthshire, and 10 by the Representative Body as a whole" would be unaffected.

The view of the Committee was that the Organization Committee had no power to vary a decision of the Representative Body without the specific authority of that body, and that there was nothing in the Minutes of the Annual Representative Meeting to indicate that its decision on this point was subject to conditions. A starring of one of the 10 representatives to be elected by the Representative Body as a whole in favour of Scotland seemed to be simply in the nature of an expedient, and was not in itself an acceptable procedure.

Other Business

Dr. I. D. Grant (Glasgow) and Dr. J. G. M. Hamilton (Edinburgh) were reappointed chairman and vice-chairman of the Committee respectively.

In connexion with the representation on the Scottish Committee of the Grouped Highlands and Islands Divisions, it was reported that only two nominations for three places were timeously received—namely, those of Dr. W. Nicol Gray (Helmsdale) and Dr. D. C. Wilson (Inverness), who were accordingly elected. Two late nominations had been received. A vacancy accordingly existed, and it was resolved that this should be filled by a further postal election.

Dr. J. T. McCutcheon, the recently appointed Assistant Scottish Secretary, attended his first meeting of the Scottish Committee in an official capacity and was welcomed by the chairman.

THE B.M.A. IN WEST AFRICA

A general meeting of members of the B.M.A. in Nigeria is to be held at the pathological laboratory of the General Hospital, Broad Street, Lagos, at 5 p.m., on Friday, January 12, 1951, in order to discuss the possible formation of a Branch of the Association in Nigeria. There are 150 members in the territory. This is the largest unorganized group of members in the Commonwealth.

FACULTY OF OPHTHALMOLOGISTS

At a meeting of the council of the Faculty of Ophthalmologists held on October 13 it was agreed that a subcommittee consisting of the president, Mr. Frank W. Law, Mr. A. B. Nutt, and Mr. T. Keith Lyle should again interview Sir John Charles at the Ministry of Health on the question of the position of orthoptists in the organization of medical auxiliaries.

The Education and Research Subcommittee was asked to consider questions of postgraduate training, the revised criteria for consultants and specialists, and the section on ophthalmology in the Government publication "The Development of Consultant Services."

In connexion with the charging of fees for supplying certificates to outside bodies following ophthalmic examination, it was reported that the British Medical Association had decreed that it was in order for a fee to be charged, and this decision was endorsed.

It was reported that the following committee had been recognized by the Minister of Health to deal with future admissions to the Central Professional Committee's list of ophthalmic medical practitioners with the prescribed qualifications: The Hon. G. J. O. Bridgeman, Mr. Nigel Cridland, Mr. N. P. R. Galloway, Mr. J. J. Healy, Mr. H. V. Ingram, and Mr. E. G. Mackie. It was agreed to ask the Faculty's representatives to put forward the resolution that no ophthalmic medical practitioner should be admitted to the list unless he held a contract with a hospital, from S.H.M.O. grade upwards, and that if he relinquished his post he should cease to be included on the list.

The Faculty's views were requested on the following resolution which appeared on the agenda of a meeting of an ophthalmic services committee:

"That in view of the efficient service rendered by persons and firms included in executive councils' ophthalmic lists and of the excellent administrative machinery built up by executive councils, the Minister of Health be urged to take such action as will ensure the continuance of the existing Supplementary Ophthalmic Service on a permanent basis."

The council expressed the view that it did not consider that ophthalmic services committees were or should be concerned with matters of policy.

With reference to elections to the council, in view of the fact that it is necessary to hold a regional election and a national election in 1951, it was agreed that the regional election should be held first. It was agreed that the annual general meeting should be held on Wednesday, March 28, 1951. It was agreed that the Faculty's representatives on the Ophthalmic Group Committee, British Medical Association, should be re-elected.

THE FELLOWSHIP FOR FREEDOM IN MEDICINE

EXPANSION OF POLICY

The annual general meeting of the Fellowship for Freedom in Medicine was held on Saturday afternoon, November 18, at Caxton Hall, Westminster, under the chairmanship of Lord HORDER. In presenting the honorary secretary's report, Dr. E. C. WARNER said that the membership was just below 3,000; 178 new members had joined during the year. The principle of having lay associate members was agreed to at the last annual meeting, and Dr. Warner now presented a set of rules, which was adopted. The minimum annual subscription for such associates is one guinea.

Preservation of Private Practice

Dr. A. C. E. BREACH introduced a report of a subcommittee which has been considering matters for incorporation in a future amending Act. The one on which he laid most stress concerned the preservation of private practice. Two principal suggestions had been forthcoming. One was that, coupled with the provision of free drugs and appliances for private patients, there should be a system of grants-in-aid for patients who occupied private beds or rooms, the grants to be based on the cost to the State had these persons occupied a public bed.

The second suggestion was that there should be power for the individual citizen to contract out of the Service altogether and receive from the State a refund representing the cost to the State had he and his family remained in the Service. The new Australian national health insurance system, based on a combination of voluntary insurance and Government aid, was of interest in this connexion. The Fellowship had been in touch with persons in the insurance world with a view to the possibility of a group of insurance companies offering full cover without medical examination.

Dr. R. HALE-WHITE said that the insurance companies were rather timorous about such proposals, though he was not without hope that with a favourable Government something of the kind might be achieved. One company had indeed agreed that if there were a sufficient number of applications there would be no need for preliminary medical examination, the company taking, as doctors under contract did, the rough with the smooth, but the proposal was not carried further.

Dr. J. A. GORSKY referred to a statement of policy of the Canadian Medical Association in 1949 in the form of an insurance scheme, the State providing insurance premiums, in whole or part, for persons who were judged to be unable to provide for themselves. Dr. ALASTAIR FRENCH said that he understood the Canadian policy did not imply the intervention of an insurance company; the scheme was to be run by the profession itself.

Lord HORDER reminded the meeting that the matter arose out of a concern for the preservation of private practice. The executive would continue to explore possibilities.

The British Medical Guild

Dr. BREACH further reported on the relations between the Fellowship and the B.M.A. He said that it was realized that changes in the Service might be brought about more rapidly through the B.M.A. organization, which, moreover, had been recognized by the Ministry. The Fellowship had never feared losing its identity in the larger body. To urge matters of Fellowship policy in the B.M.A. a committee had met during the Annual Representative Meeting at Southport and the adjourned meeting in London, and had successfully supported certain motions which were in line with the policy of the Fellowship and had ensured that such motions were not sidestepped by procedural exigencies. They had also done their best to reassert the authority of the Representative Body over the autonomous bodies. Autonomy so far had been properly exercised, but they had insisted that the question should be raised every year whether autonomy should be continued. Members of the Fellowship were encouraged to secure election to the Representative Body and to the Conference of Local Medical Committees, which committees were among the few pieces of real democracy under the Act.

Dr. E. T. WRIGHT urged that a gesture of encouragement from that meeting to local British Medical Guild committees should be made. Dr. H. H. D. SUTHERLAND spoke to the same effect. The Fellowship, which was no cave of Adullam, had shown, and should further show, that they were one profession and not divided.

Lord HORDER said that the question of the British Medical Guild had not come before the executive; therefore at the moment the Fellowship had no policy on the subject. He himself had been opposed to the Guild at its formation, feeling that the Association itself should take whatever responsibility attached to these matters. But, the policy having been adopted, he thought they should stand by the Guild, and he hoped that it would prove to be stronger than the Association did two years ago. He felt that they were more than willing to be recorded as wholeheartedly in support of the Guild.

A show of hands was taken, and there were only one or two dissentients from this view.

The Kingston Dispute

Dr. G. J. V. CROSBY presented a report of a subcommittee which has been investigating the position of general practitioners in relation to hospitals. He said that there had been some loss of contact between the general practitioner and the hospital medical officer. This was not necessarily the fault of any particular group, but every encouragement should be given to the younger hospital officers to realize the general practitioners' capabilities. Diagnostic facilities should be made available to general practitioners throughout the country, but the general practitioner himself must accept some degree of responsibility in interpretation. Consideration had been given to the relation of regional hospital boards and hospital management committees to the general-practitioner hospitals, and a good deal of information had been collected. Referring to the Kingston Victoria Hospital case, he said that they were all heartily in support of Dr. Morgan and his colleagues.

Dr. T. W. MORGAN, who was cordially welcomed, said that, while it was true that regional hospital boards had been given autonomy, they had also been given a directive by the Minister (Circular R.H.B. (49) 132), and it was upon that circular that Kingston practitioners were relying in their fight. They had the assurance of certain high officials of the Ministry that the action of the board was deprecated, but apparently they were not prepared at the moment to come into the open. The hospital had had 12 days' notice to stop admissions; they had informed the management committee that they intended to take no notice of that order. It was stated that the hospital was to be closed on November 30, but on November 30 they would find the hospital still full, and the next move must lie with the authorities. Admittedly the general-practitioner staff had had an alternative offer, but one which they regarded as totally inadequate. If general practitioners were excluded from the hospital altogether then the standard which had been maintained would inevitably go down. The issue at Kingston had been raised from a local to a national level. The practitioners there had taken a stand for the preservation of freedom. What would happen on November 30 he did not know, but they were prepared to take the consequences in the interests of the status of general practitioners in this country. (Applause.)

Lord HORDER put the following resolution, which was carried unanimously:

That this meeting of the Fellowship for Freedom in Medicine considers that in the changed social conditions of to-day there is an increased need on medical grounds and an increased demand on the part of patients for general-practitioner hospitals. It deplores the decision of certain regional hospital boards and hospital management committees to convert general-practitioner hospitals to other use, contrary to the advice of the Minister himself (Circular R.H.B. (49) 132), and pledges support to the Kingston Victoria Hospital and to all other hospitals similarly threatened in their efforts to resist such changes.

It was stated that the Kingston praetitioners had received noteworthy support from Brigadier Skentelbery, and it was resolved to elect him as the first lay associate of the Fellowship. His wife, Dr. Barbara Skentelbery, was already a member.

Growing Influence of the Fellowship

Lord HORDER, who had postponed his address to the end of the meeting, then spoke briefly on the growing influence of the Fellowship. He had always maintained that the chief influence of the Fellowship was on the moral plane, and that it might well be that for the first year or two its achievements would be of the intangible type. But after what had been stated that afternoon it would be agreed that they were realists as well as idealists. They had started from scratch, at a time when the profession was stunned by the blows that had been delivered a few months earlier. The morale of the profession had then fallen to a very low level; it had lost faith in itself. It had resigned itself to dragooning by a dictator.

Therefore the tasks of the Fellowship at that period were quite considerable. It had to restore the morale of the profession. It had to disillusion the public in face of the weight of political propaganda designed to convince them that now for the first time in history they enjoyed a perfect health service. It had to call attention to inherent defects in the Service itself, especially as these affected professional standards. It had to provide remedies for deficiencies in the Act, and they were not yet satisfied that they had the complete answer about how such deficiencies should be dealt with. It set itself also to permeate the British Medical Association with the ideals that animated the Fellowship. These activities were basic and continuous.

Policy had to be defined also in relation to a number of other matters not unimportant. It was regrettable that the first sign of a "show-down" with the Minister was likely to be on the question of the pay packet. He had hoped that it might have been on the unsatisfactory nature of present-day medical practice. All the same the Fellowship supported wholeheartedly any strong action which the British Medical Association might take to obtain a satisfactory settlement with regard to remuneration, and was doing its best to publicize the fact that this claim was in respect of a portion of payment already agreed in principle, lest the public be induced to think that it was a case of the doctors demanding higher remuneration. They demanded only the adjustment of an outstanding claim which was recognized two years ago. If this was to be the first "show-down" then the Fellowship was "in on it."

After referring to other matters which had already been before the meeting, Lord Horder made a passing reference to the "closed shop." The attitude of the Fellowship on this matter was like that of President Coolidge's parson towards sin—it was "against it."

"I claim that in respect of these matters," he said in conclusion, "we have made definite progress. The very fact of our existence is a stimulus to the profession, whose morale, by the way, is definitely higher than it was even 12 months ago. It is you who are the Fellowship. It is by your lively interest that it will flourish. I am not worried about our membership still hovering about 3,000. It is true that we should like double that membership, and more. But 3,000, with wisdom and courage and energy, can save medicine in this country. At this moment the focal point in the resistance against increasing deterioration of standards, against the loss of our liberty, against the denial to the community of our expert contribution to its health and happiness, is the Fellowship. The conclusion that we must go forward is inescapable for me. My faith in the Fellowship remains what it has always been, and I think I have the support of this meeting in saying that we should redouble our efforts in support of the freedom of medicine." (Applause.)

Dr. KELLY, assistant secretary of the Canadian Medical Association, said a few words concerning the stimulus he had derived from the lively spirit abroad in British medicine and from his contact with the Fellowship in particular, and gave some account of the system of medical care sponsored by his association.

On the proposition of Dr. HALE-WHITE a hearty vote of thanks was accorded to Lord Horder, and the three hours' meeting terminated.

IRISH MEDICAL ASSOCIATION

ANNUAL MEETING, 1951

Ireland offers an attractive alternative to members of the British Medical Association who do not propose to attend their annual meeting in South Africa next year. During the first week of July the Irish Medical Association will hold its annual congress in University College, Galway, and cordially invites members of the British Medical Association to attend.

While full details of the four-day programme will be available early in the New Year, arrangements are already well in hand for the principal events of the meeting. These include the president's reception, annual dinner, a number of clinical sessions, a dance in aid of the Royal Medical Benevolent Fund, and a motor tour through Connemara.

Eighteen hundred years ago Galway was the principal city on the west coast of Europe, and to-day it offers, more than any other Irish town, the mellow charm of antiquity. During the Middle Ages this fair "City of the Tribes," as it is called, carried on an extensive trade with Spain, and a link with those days is still seen in its quaint architecture and ancient traditions. Salmon and trout fishing in the Corrib, which runs through the city, is the finest in Ireland. The angler is, indeed, offered an endless variety of lakes and rivers in the majestic Connemara scenery. Less than two miles from the city, on Galway Bay, is the resort of Salthill, where there is a splendid 18-hole golf course. Thirty miles off Galway lie the Aran Islands, with their colourful community of Gaelic-speaking fisher-folk. There is a regular steamer service and hotel accommodation on the largest of the islands.

July is a busy month in Galway, and visiting doctors are advised to book early. Details of hotels and other facilities can be had from the Irish Tourist Association, Upper O'Connell Street, Dublin.

REGISTRARS' GROUP

OPENINGS FOR PRACTICE

The first meeting of the central council of the Registrars' Group of the Association was held recently at B.M.A. House. The council comprises three representatives of each Regional Registrars' Group, at least one of whom is from a teaching hospital and at least one from a non-teaching hospital. Sixteen regional groups were represented at the meeting.

The council was pleased to receive a report that over 1,200 registrars had already joined the Group.

A number of matters of importance to registrars were discussed. The council had before it a draft memorandum for distribution to all registrars on "Future Openings for Registrars," which had been prepared by a special subcommittee appointed to consider the matter. This memorandum explains that, while the council will continue to press for an increase in the number of consultant appointments in accordance with the Ministry of Health's pamphlet, *The Development of Consultant Services*, it is inevitable that a number of those at present in the registrar grades will not secure consultant posts. In an endeavour to assist these registrars the memorandum offers advice regarding openings in medical practice outside the consultant field.

The council has referred certain problems to regional groups for discussion and for report back to the council before final decisions on policy are taken. Regional groups have been asked to consider, among other matters, the proper ratio between senior registrars and consultants and between registrars and senior registrars in the future hospital establishments, and the Ministry of Health circular recently issued to hospital authorities about the appropriate use of the S.H.M.O. grade.

The council expressed approval of the circular which has recently been issued by the Ministry of Health to hospital authorities indicating that in future, at non-teaching hospitals, senior registrars and registrars will be appointed by the regional hospital boards. This circular letter also included advice on the composition of the committees of selection.

The central council of the Group will meet at least twice annually, and it has appointed 10 of its members to form an executive committee, which will meet at least quarterly.

INOCULATION AND POLIOMYELITIS

DOCTOR ACQUITTED OF NEGLIGENCE

What must be the first case of its kind has resulted from the charge made by a parent that a medical practitioner was negligent in inoculating a child who developed poliomyelitis. The case first came before the Medical Service Committee of the London Executive Council. The father, Mr. A, who is a layman, said that he took his child to Dr. X for inoculation against diphtheria. Dr. X gave the injection, stating that immunization against whooping-cough was included. Eighteen days later, according to Mr. A, the child appeared to be unwell, developing symptoms of a cold, together with vomiting and diarrhoea. Dr. X considered that the boy was suffering from bronchitis, and prescribed medicine. A fortnight after that the doctor gave a second inoculation against diphtheria, the parents informing him that the child still showed symptoms of a cold. Seventeen days later Mr. A came to the conclusion that his son might be suffering from poliomyelitis. Dr. X saw the child on the same day and had him admitted to hospital, where the diagnosis was confirmed.

Mr. A told the committee that from a conversation he had had with a doctor at the hospital he had formed the opinion that his son's condition resulted from the whooping-cough immunization. An examination of some literature strengthened his conviction. He also contended that Dr. X should have been warned by the symptoms which the child exhibited after the first injection, and should have refrained from administering the second injection, and that Dr. X's giving the second inoculation amounted to negligence.

Dr. X told the committee he was satisfied when he made both the first and the second injection that, although the child had a slight cold, there was nothing in his condition to contra-indicate their administration. The vaccine and prophylactic had come from a reliable source and were administered in standard quantities. He was confident that the injections did not cause the poliomyelitis.

The committee found on questioning Mr. A that he had obtained advice from an organization "which is opposed to vaccination and like treatment."

The committee found no evidence to support the allegation of negligence on the part of the doctor. There was nothing to suggest that he had failed on any occasion to examine the child properly or to respond when asked to visit. The committee was satisfied that Dr. X acted in accordance with his professional opinion, and that there was no failure on his part to exercise due care and attention.

On May 25 the London Executive Council endorsed the decision of its Medical Service Committee. Mr. A appealed to the Minister of Health, and the Minister dismissed the appeal.

Questions Answered

Rubber Stamp or Signature?

Q.—*(a) Is it legal to use a rubber stamp of my signature on prescriptions given in general practice? (b) What is the position in hospitals?*

A.—(*a*) Apart from prescriptions for Dangerous Drugs, Schedule Four poisons, and substances covered by the Penicillin Act—i.e., penicillin and streptomycin preparations—and the Radioactive Substances Act, prescriptions need not be in any particular form and need not even be in writing. All that is necessary is that sufficient information must be supplied to the pharmacist to enable him to make a proper entry in the prescription book—i.e., ingredients and quantity of medicine, name of prescriber, name of patient, and date on which the prescription was given. In the cases of prescriptions for drugs included in the Acts mentioned above it is specifically stated in the Acts that the prescription must bear the prescriber's usual signature. While a prescriber who habitually uses a facsimile signature might argue that he is within the letter of the law, it is most unlikely that any pharmacist would dispense one of these prescriptions on such a signature. A final legal decision would probably require a judicial decision in a test case.

The regulations of the National Health Insurance specify that prescriptions must bear the prescriber's signature in his own handwriting, and facsimile signatures cannot therefore be accepted (General Medical and Pharmaceutical Regulations, 506, Schedule I, para. 7 (10)).

(*b*) *Non-poisons.*—There are no laws governing the supply of non-poisonous substances (apart from those covered by the Penicillin and Radioactive Substances Acts) in hospitals. It is of course desirable, and the usual custom, for drugs supplied to in-patients or out-patients to be recorded on their prescription sheets as a record of treatment. In such cases the use of facsimile signatures would be quite legal.

MEDICINES CONTAINING POISON

(1) *Supply to Out-patients.*—The medicine, whether a First Schedule poison or not, must not be supplied except by, or on and in accordance with, the prescription of a registered medical practitioner or dentist (for dental treatment). This prescription need not necessarily be in writing.

If the medicine contains a First Schedule poison a record must be kept on the premises in such a way that the following particulars can be traced for two years after the date of supply: (i) name and quantity of the poison supplied; (ii) date of supply; (iii) name and address of person to whom supplied; (iv) name of medical practitioner or dentist who supplied the drug or name of prescriber.

These facts are usually recorded on the case-sheet, and, provided these facts can readily be traced, it is not strictly necessary for the prescription on a case-sheet to be signed. The usual custom, however, is for the prescriber to sign or initial the prescription. In such cases the use of a facsimile signature appears to be legal, but the prescriber should, in his own interest, be certain that this method is not abused by unauthorized persons using the stamp, since he would almost certainly be held responsible for the prescription. He would be in a most invidious position if an unauthorized person stamped an incorrect prescription with his signature and then denied having done so.

(2) *Supplies for Use in the Institution.*—A medicine containing a poison (whether a First Schedule or not) must not be supplied except on a written order signed by a medical practitioner, dentist, or by a sister or nurse in charge of a ward, theatre, or other section of the institution. In an emergency the medicine containing poison can be supplied in the absence of a written order on the undertaking of the person ordering the medicine to supply such an order within twenty-four hours.

The written orders may be signed orders for stock preparations or prescriptions for individual patients. Such prescriptions on the patients' case-sheets are often initialled instead of signed by the prescriber. The legality of this practice has not been finally decided. Dewar, in his *Textbook of Forensic Pharmacy*, makes the following comment on this position: "In another connexion, the Poisons Rules require a prescription to be 'signed' by the person giving it with his usual signature, and the unqualified reference to 'signed' in the present connexion might conceivably be taken as implying that initials are sufficient." Here the use of a facsimile signature appears to be of doubtful legality and would probably be challenged by a pharmacist.

DANGEROUS DRUGS

(1) *Institutions Maintained by Public Authority out of Public Funds or by Charity or Voluntary Subscription.*—The procedure indicated above for Schedule One poisons applies with the additional requirement that the prescription must be in writing. The Act allows initialling in place of signing by the prescriber. It is almost certain that no pharmacist would accept a facsimile signature for a dangerous drug.

(2) *Private Institutions.*—Private institutions are not exempt from the provisions of the Dangerous Drugs Act regulations, and drugs must be obtained on prescriptions for individual patients exactly as in private practice.

Definition of Writing.—The Interpretation Act, 1889, S.20, states that writing includes printing, lithography, photography, and other modes of representing or reproducing words in a visible form.

Treating Oneself

Q.—*Is a registered medical practitioner who treats himself for an illness legally disqualified from issuing a medical certificate of incapacity for work on his own behalf under the National Insurance Act?*

A.—The Ministry of Health has ruled that a medical practitioner cannot have his name included on his own medical list, but the Ministry of National Insurance Certification Regulations are silent on the subject of a general practitioner giving himself a certificate. It is unlikely that the M.N.I. would accept such a certificate as conclusive evidence of incapacity.

Ownership of X-ray Films

Q.—*Are hospital patients who pay for their x-ray films entitled to them as their property, or are they the property of the hospital?*

A.—The ownership of the film is vested in the hospital where the film is taken, but the question posed does not really represent the actual state of affairs. Private patients do not pay for their *x*-ray films but for the radiological opinion. In certain long-term cases, such as pulmonary tuberculosis, it is of the utmost importance that whoever is dealing with the case should have access to all the films. This is always possible.

Correspondence

80% Resignations

SIR,—I have recently attended two meetings—a group meeting of the general practitioners in the Upper Ward of Lanarkshire, which is largely a rural area, and a meeting of all Lanarkshire doctors to elect the local committee of the British Medical Guild. From figures supplied by group leaders it would appear that more than 80% of Lanarkshire general practitioners are willing to resign from the National Health Service.

The younger practitioners and those with small lists are impelled by the necessity for increased remuneration, but the younger practitioners wish something more concrete than the statement that they will not have to suffer financial hardship as a result of their action. Those with big lists whose incomes may at present fully implement the Spens Committee recommendations are willing to resign out of loyalty to their colleagues.

It must not be assumed from the figure of 80% that the great majority of general practitioners in Lanarkshire are in favour of giving to the British Medical Guild, the General Medical Services Committee, or any other central body, complete independence of judgment and action—far from it. They are dissatisfied with the amount of information so far vouchsafed to the periphery and wish to be treated not only as ordinary members of the medical profession but as individuals who like to think they still retain some slight powers of reasoning.

They are told that the objectives are increased remuneration and improvement of the status of general practitioners in the National Health Service. Amplification of these points is required, including detailed information regarding the increased remuneration aimed at and the steps to be taken to improve the status.

Again, should it be decided to withdraw from the Service on July 1, 1951, they wish to know exactly what is to happen with regard to attendance on patients, certificates, fees, etc. It might be a salutary experience for our leaders if, armed with nothing more than the meagre information available, they were to meet groups of general practitioners and had to answer their many pertinent questions.

It may be thought that the details asked for could be supplied at a later date—after the necessary assurance of 80% had been obtained—but in my opinion if these gaps were filled in now it would be possible to get not the present unstable, rather distrustful 80%, but a more satisfied, united, and larger percentage of the profession.

I would like to add that the views expressed are purely personal and are based on my impressions of the attitude of the general practitioners who were present at the two meetings mentioned.—I am, etc.,

R. MCLEAN.
Chairman, Lanarkshire Division, B.M.A.

SIR,—I should like whole-heartedly to associate myself with the letters on this subject from the Guildford Division and from Dr. Basil S. Grant (*Supplement*, October 28, p. 179). The 80% minimum was decided upon at the Special Conference before this year's A.R.M. Gateshead put down a motion, introduced by Dr. Arthur—but not, I am sure, with any "subversive" motive—asking for a minimum figure of 85% of resignations. This was strongly opposed, and finally a reluctant compromise on a figure of 80% was reached, and accepted by the G.M.S. Committee.

At the time I voted against the proposal, because I could think of nothing more likely to make an attempt at resistance useless from the start. However, it is cheering to realize that a Special Motion aimed at destroying this 80% desideratum was passed at the Conference on October 26 and accepted by Dr. Wand.

Dr. Arthur's fearful warning that Gateshead practitioners would not support the profession in its approaching fight unless 80% of resignations was insisted upon prompts me to think that, after all, Gateshead is not the *only* area in the country, and that what Gateshead thinks to-day is not necessarily what England will think to-morrow.

In any case, 80% is not necessary for success: a two-thirds majority in favour of resignation should be ample.—I am, etc.,

Wolverhampton. VICTOR RUSSELL.

Lothians and Peebles Case

SIR,—In the *Supplement* of November 11 (p. 196), under the heading "General Practice in Scotland," a report is given of a meeting of the General Medical Services Subcommittee (Scotland) on October 12. Criticism was made of the action of the Medical Practices Committee in a Lothians and Peebles case in which the committee overruled the rejection of an application by the executive council. Two partners with a combined list of 2,098 were permitted to adopt a further partner after the latter had been refused permission to act as assistant. The grounds of the refusal in the first instance by the executive council were "that the whole practice appeared to be within the scope of a single practitioner and it was unreasonable from the point of view of neighbouring practitioners."

As this case reads on paper surely any reasonable person would agree with the view of the executive council. Certain facts of relevant importance, however, do not appear to have been given the place they merit at the meeting to which you refer, and it is fortunate in the interests of justice and fair play that the Medical Practices Committee appear to have grasped them. These facts are:

(1) The age of the senior partner (near the age to retire).

(2) The ill-health of the senior partner, as borne out by the very strong medical certificates.

(3) The unusually large private practice that had of necessity to be carried on.

(4) The inconvenience of making patients who could not be attended locally travel five or seven miles to the surgeries of the two nearest neighbouring practitioners.

(5) The fact that an attempt was made by the two partners to carry on the practice for eighteen months after July, 1948, until they gave up the task as beyond their powers.

The Medical Practices Committee undoubtedly saved the situation for patients and doctors alike in a case presenting rather unusual features.—I am, etc.,

THE SENIOR PARTNER CONCERNED.

Leadership Needed

SIR,—I am afraid Dr. Hill's tenure of office has seen the degradation of the profession at the hands of an astute politician, the Minister of Health. Mr. Bevan saw the weakness in the B.M.A. leadership and has exploited it to the full. It is true that up to the present the profession has felt an acute yearning for a proper leader and expression of its proper wish. The formation of the Guild and the movement towards direct action is evidence of awareness in leading circles, but I feel the latter are unwilling to risk their own position with the Ministry to support it.

It is obvious that only certain sections of the country are prepared to take direct action, but I feel that if those areas were organized and led the result would be capitulation by the Ministry. Middlesex is the third from worst-paid capitation, and I feel that, even if we were to organize local action and proceed, we would be successful. The under-doctored sections of the county which do not seem to be willing to join the Guild could be left to their own devices, and no harm done, provided the sections that went into action were united.

Another point where the B.M.A. has let the profession down is over the demand for which it is meant to be fighting. We want (1) implementation of Spens; (2) higher rates for the first 1,000 and (to encourage the self-satisfied council-house practices with large lists) a lower rate for the third and fourth thousand, unless a partner is taken; and (3) a uniform capitation rate. The B.M.A. should remember that its demands should be reasonable in the eyes of the general public if it wishes to encourage public support. Also, too little attention

has been paid by the Minister and the B.M.A. to the plight of assistants who go from job to job without finding anybody to take them on permanently and the younger doctors who cannot find an entry into practice anywhere.

It is a minority who will not join the Guild movement—those who have the larger industrial practices and are not encouraged to eliminate the unemployment among younger men. If they do not support us, very little harm would be done by ignoring them. We should carry on and take direct action. If we cannot get action through the B.M.A., surely it would be better to resign from it and join another more resolute body.—I am, etc.,

Hampton Hill, Middlesex. I. E. D. McLEAN.

Withdrawing from Health Service

SIR,—Dr. Craven Veitch (*Supplement*, October 21, p. 170) hoists the white flag before the contest is joined. He states: "Here, now, the average G.P. derives over 90% of his income from the N.H.S. and less than 10% from his remaining private practice. This means that if he withdraws now he can hope to enjoy less than 10% of his present income."

What an extraordinary fallacy! Here in Salford if it comes to a withdrawal we shall issue posters in short terse English, calling attention to this fact and saying that patients will be treated just the same but will have to pay for their treatment and that on a cash basis. We are already classed as vermin, so a little more opprobrium will not hurt. Let us for once show a united front.—I am, etc.,

Salford, Lancs. STANLEY HODGSON.

Disciplinary Machinery in the N.H.S.

SIR,—Dr. A. C. E. Breach is to be congratulated on his excellent letter (*Supplement*, October 21, p. 168). Prior to the inception of the N.H.S., one of the basic principles of the B.M.A. was the right of appeal from these tribunals, to the law courts. Because the Service is comparatively new and the routine work of these committees is not published, few think of their real significance. Meanwhile we are becoming conditioned to their existence.

As Dr. Breach points out, the Ministry can make these tribunals subservient to its wishes. In addition the personnel lack legal training; and the complainant is absolved from any penalty, financial or otherwise, no matter how outrageous a false accusation may be. Thus the defending doctor is without redress but, should he be considered guilty, liable to a savage sentence quite foreign to modern standards.

Much of the procedure is reminiscent of the ill-famed Revolutionary Committee of Public Safety. They are not required to furnish reasons for their findings, and their sessions are held in secret. The Minister decides what shall be published of their work. So far we have heard of the major misdeeds of a very few doctors, who have been severely fined. But the public remains ignorant of their routine work.

Lately much has been heard of controls. These may or may not be a good measure in industry, but certainly not in the courts. To-day it is possible for the central administration to control disciplinary tribunals, and we may find them with similar powers in wage-dispute arbitration. In the nation's interest we must resist such encroachments on our essential freedoms, and in this particular instance call for reform of these tribunals and medical service committees.—I am, etc.,

London, S.W.18. T. J. LEE.

British Medical Guild

SIR,—Can some pronouncement be made on the precise "loss" to practitioners which would be made good by the Guild in the event of mass resignation? Even if a practitioner could resume superannuation, he will not receive any N.H.I. remuneration between retirement and re-entry. His superannuation, however, is based on total remuneration received during his years of service, and if therefore there is any loss by reason of cessation will this be made good, and when?

As the practitioner will treat patients as private patients, how is the loss of remuneration to be calculated? As an example: N.H.S. quarterly cheque £500 not received, but £50 received in fees from former N.H.S. patients and £300 due from others. Is the loss to be £450 or £150? Must a practitioner exercise all his legal rights against the debtors before his loss can be determined? How soon will the loss be made good? How is income-tax to be dealt with? How will total loss compare with the fund available to meet such loss? Does not the deed constituting the Guild refer to "hardship" and not to loss? What loss amounts to hardship?

The whole problem bristles with difficulties which should be cleared up as soon as possible. Could some official statement to this effect be made?—I am, etc.,

Worthing, Sussex. HAROLD LEESON.

Failure of Sheffield Health Centre

SIR,—I read with interest Dr. A. Stephen's letter (*Supplement*, November 11, p. 198) on the subject of acrimony between the profession and certain lay groups, resulting from the breakdown of negotiations for the opening of a health centre in Sheffield.

Lest it should be thought that this is merely an isolated case, I wish to relate certain similar experiences during the negotiations about the health centre at Stechford. At the stage when the Ministry had for the time being turned down this latter project some members of the City Council, together with some members of the Birmingham executive council, sought to persuade the Ministry to reverse its decision on the ground that the doctors in the Stechford area were keen and anxious to participate.

Seeing that we had on previous occasions shown that we were by no means unanimous, a meeting was called in which five of the six doctors concerned (one could not be present, as he was a newcomer who had not yet settled in the district) met representatives of the two sponsoring bodies. When it was found that some of the doctors appeared unwilling to transfer their practices to the centre, one of the members of the executive council, who is also a member of the Birmingham City Council, deplored their attitude and said that health centres were provided for in the Act and were the will of the people. Although it was pointed out to him that the Act envisaged doctors who wished to do so practising outside health centres, he said that, if we persisted in obstructing the creation of a centre at Stechford, he would be prepared to fight us with every weapon on which he could lay his hands; that he would be prepared to organize trade union opinion in the area against us and call a public meeting of the people of Stechford to point out to them that the doctors were standing between them and the increased amenities which would be available to them if a centre were opened in Stechford.—I am, etc.,

Stechford, Birmingham. T. W. MASTERS.

Hospital Taken

SIR,—Your annotation in the *Journal* of November 11 (p. 1106) entitled "Hospital Threatened" prompts me to write, especially on the subject of your last paragraph—"presumably the regional board would have to reconsider its decision."

The North Herts and South Beds Hospital, Hitchin, had been in existence for over a century as a general-practitioner hospital, but a week after the issue of the circular you mention all the existing general practitioners on the staff were given notice to quit, having carried on the work of the hospital for over a year under the National Health Service.

We appealed to the Minister direct, with no result. The public was so disturbed that a petition to the Minister was organized by a few patients, and over 8,000 signatures against the change were obtained—a large percentage of the population—in just over a week. Result *nil*.

Our patients, now denied our services in hospital, regret the change as much as we do, as they and the general practitioners before us had built up a fine hospital.

I should mention that our past and present M.P.s have both taken great interest in the situation, and we still hope for some general-practitioner beds at the least, and at the most the return of the hospital to its former use.—I am, etc.,

Hitchin, Herts. ALAN S. PORTER.

Pay of Doctors and Dentists

SIR,—The following paragraph is from the *Daily Telegraph* of October 19:

"According to the annual report of the Executive Councils' Association (England), the highest total payment, £39,986,729, went to the 8,972 dentists in the Service. A total of 17,545 doctors received £37,999,462."

If the figures are accurate, they would seem to show that Mr. Bevan values one dentist at nearly two general practitioners (that is, after allowance is made for the higher overhead expenses of the dentist). I am not suggesting that the dentists are overpaid, nor that their payment should be cut.—I am, etc.,

Grantham, Lincs. D. V. HARRIS.

Examination for Hospital Reserve

SIR,—I would like to draw attention to the forms supplied to hospitals for medical examination of candidates for the National Hospital Reserve Service, which are proving the reverse of an incentive to enrolment.

The majority of women available in this area for this service are middle-aged married folk with long experience as State-registered nurses and/or with the St. John Ambulance or Red Cross, who gave valuable help in a similar capacity during the last war and are willing to do so again.

They object strongly, however, to spending at least an hour in submitting to a detailed examination which they feel to be largely unnecessary and which will involve submission of facts in their private lives which will be open to scrutiny by the hospital clerical staff. Surely a simple certificate from the candidate's own doctor that he or she is fit for this part-time emergency service would have met the case.—I am, etc.,

Beccles, Suffolk. C. GRANTHAM-HILL.

M.P.U. Scheme

SIR,—Practitioners all over the country will have received the M.P.U.'s latest pamphlet proposing an alternative scheme in our negotiations with the Government. This of course constitutes a serious threat to undermine the proposed strategy advocated by the British Medical Guild. It is only through lack of cohesion that we stand in our present plight.

While in no way wishing to support the proposals of the M.P.U., they are to be congratulated on an excellent exhibition of staff work and publicity without, so far as I am aware, half the funds available that the Guild could call on if the need presented itself. May I suggest that we of the B.M.A. and Guild profit by this excellent piece of propaganda (though contrary to our views) and embark upon a publicity campaign via the press and *Journal* that will evoke morale and cohesion in our own ranks and public sympathy, which is an all-important essential if we are to win our coming struggle?—I am, etc.,

Shipley, Yorks. J. A. FRAIS.

Jobs and Jobless

SIR,—*Vide* "Fair Play's" letter (*Supplement*, October 21, p. 172) on the 1,650 frustrated assistants and the scores of advertisements in the *Journal* of the same date for registrars, house-surgeons, casualty officers, etc. Could not some of the frustrated—perhaps jobless—assistants fill such posts?

It may be that they might think it *infra dig.* to accept such. But a medical training was meant primarily for the relief of suffering, and that end can be achieved whether as a specialist, G.P., or humble house-surgeon. Secondly, half a loaf is better than no bread—i.e., better earn a small stipend than be unemployed.

But principals who amass 6,700 patients and then leave an unfortunate assistant (£700 plus keep) to cope with the greater part of the work while they themselves collect the fat should be sternly dealt with. Their patients are not getting the attention they should—cannot possibly do so with only two doctors to work a practice of that number. Also, the hard unremittent work with leisureless days is bound to tell on the health of an assistant.

Surely overcrowded surgeries and overtired doctors ought not to exist under the Health Act. The remedy, I think, would be to make the N.H.S. a service in deed and in truth like the Navy or Army is, so that the entrants would not have to pay (and borrow) £2,000 to £4,000 to set themselves up in practice but could, like an Army man, start as a junior and progress.

The scheme would work like this. The principal amasses 4,000 units. It is realized he cannot cope with all this number himself, but instead of the full capitation fee on the last 2,000 he is allowed only a nominal sum—say 5s. per head—and the Government provides him with and pays for (plus keep and car) two assistants. This would (*a*) give unemployed assistants employment; (*b*) benefit the patient, since there are now three doctors where there were only two doctors previously, and thus more time can be given to individual patients; and (*c*) it will benefit the principal in that he should have more leisure and undisturbed nights than he otherwise would.

I am also in favour of having no evening surgeries. With overworked doctors and overcrowded surgeries no medical man or woman should be unemployed. Somewhere there should be a niche, large or small, which each might fill and thus avoid a valuable training going to waste.—I am, etc.,

Keighley, Yorks. F. M. E. DAVIES.

S.H.M.O. Grade

SIR,—I have been amazed to find such little protest in your columns against the B.M.A.'s acceptance of the grading of S.H.M.O. This is a grade which has been foisted upon the profession and was never envisaged in the Spens Report or in discussions with the profession prior to July, 1948.

There can be little doubt that many men who, prior to July, 1948, were engaged wholly in specialist practice and possessed the necessary specialist qualifications have been "degraded" by their fellow specialists on grossly inadequate grounds and are therefore deprived of their legitimate income.

It would now appear that the B.M.A. has finally accepted this grade and proposes to do nothing about its members who have been placed in this humiliating position. G.P.s propose to withdraw from the Service because their terms are not satisfactory and they are supported by the B.M.A. Does the B.M.A. propose to ignore the gross injustice to an equally honourable section of their membership? If so, I think that the ethics of the profession must have reached a very low ebb.—I am, etc.,

Macclesfield, Cheshire. A. GRIFFITHS.

POINTS FROM LETTERS

Strike Action

Dr. D. GWYN JONES (Tymawr, Cardigan) writes: . . . The projected strike is doomed to failure if it is not a total strike. As long as we continue issuing certificates or treating patients, then it is no strike at all. We must not have anything at all to do with the N.H.S. when the day of the strike dawns. Maybe there will be hardship and unnecessary suffering among the public, but unless we are prepared to allow this the strike will be of no avail, and we will find ourselves slipping back to the N.H.S. one by one. . . .

Ruins

Dr. GUY NEELY (London, S.E.3) writes: In my district a hospital which served out-patients for seventy years and was an educational centre for many of us is closed and through neglect becoming derelict. There are many ruins—Glastonbury, Rievaulx, and the like—which remind one of the predatory Henry VIII. Another Welshman in his own lifetime has his monument here in historic Blackheath. John of Gaunt said something about inky blots and parchment bonds, something about shame too. But no doubt the planners are very pleased with themselves and will give us a new set of forms in due course.

Association Notices

SIR CHARLES HASTINGS CLINICAL PRIZE ESSAY COMPETITION

The Sir Charles Hastings Clinical Prize Essay Competition is established by the Association for the promotion of systematic observation, research, and record in general practice. The competition has been extended by the addition of a second prize known as the Charles Oliver Hawthorne Clinical Prize. The following are the regulations governing the awards:

1. The Sir Charles Hastings Clinical Prize, consisting of a certificate and 50 guineas, will be awarded for the best essay submitted.
2. The Charles Oliver Hawthorne Clinical Prize, consisting of a certificate and a sum of money slightly less than the amount of the Sir Charles Hastings Clinical Prize, will be awarded for the second best essay submitted.
3. Any member of the Association who is engaged in general practice is eligible to compete for these prizes
4. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations in practice rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.
5. Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950.
6. A study or essay that has been published in the medical press or elsewhere will not be considered eligible for a prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for an award of either of the prizes in any subsequent year.
7. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay the decision of the Council on any such point shall be final.
8. Preliminary notice of entry for this competition is required, on a form of application to be obtained from the Secretary.
9. Each essay must be typewritten or printed and must be accompanied by a sealed envelope, enclosing the candidate's name and address, firmly affixed to the essay.
10. Inquiries relative to the prizes should be addressed to the Secretary.

Diary of Central Meetings

NOVEMBER

27	Mon.	Psychological Medicine Group Committee, 2 p.m.
29	Wed.	General Practice Review Committee, 2 p.m.
30	Thurs.	Maritime Subcommittee, 2 p.m.

DECEMBER

6	Wed.	Trainee Assistants Subcommittee, 10.30 a.m.
6	Wed.	Central Consultants and Specialists Committee, 11.30 a.m.
7	Thurs.	Committee on Psychiatry and the Law, 2 p.m.
7	Thurs.	Medical Students and Newly Qualified Practitioners Subcommittee, 2 p.m.
8	Fri.	Amending Acts Committee, 2 p.m.
13	Wed.	Private Practice Committee, 2 p.m.
15	Fri.	Ophthalmic Group Committee, 2 p.m.

JANUARY

9	Tues.	Amending Acts Committee, 2 p m

Branch and Division Meetings to be Held

BLACKBURN DIVISION.—At Queen's Park Hospital, Blackburn, Wednesday, November 29, 8 p.m., Annual B.M.A. Lecture by Professor J. W. McNee: "Some Problems of Jaundice."

COVENTRY DIVISION.—At Room 7, Coventry and Warwickshire Hospital, Tuesday, November 28, 8.30 p.m., second clinical meeting. Discussion: "The Early Diagnosis of Malignant Disease."

FURNESS DIVISION.—At Orthopaedic Clinic, North Lonsdale Hospital, Monday, November 27, 8 p.m., combined meeting with Barrow-in-Furness Clinical Society. Dr. F. S. Cliff, consultant dermatologist to the area, will show and discuss a number of skin cases.

HARROW DIVISION.—At Clay Pigeon Hotel, Field End Road, Eastcote, Ruislip, Tuesday, November 28, 8.30 p.m., address by Dr. Ronald Teare.

RICHMOND DIVISION.—At Royal Hospital, Richmond, Friday, December 1, 3.30 p.m., clinical meeting.

ROCHDALE DIVISION.—At Out-patient Department, Rochdale Infirmary, Monday, November 27, 8.30 p.m., combined meeting with Rochdale Pharmaceutical Society. Two films: "Birth of a Drug"; "Industrial Dermatitis."

ROCHESTER, CHATHAM, AND GILLINGHAM DIVISION.—At St. Bartholomew's Hospital, Rochester, Thursday, November 30, 8.30 p.m., lecture by Dr. P. Bishop: "The Clinical Use of Cortisone." All medical practitioners in the area of the Division are invited.

WESTMINSTER AND HOLBORN DIVISION.—At Westminster Arms Hotel, 75, Page Street, London, S.W., Thursday, November 30, 7.30 for 7.45 p.m., dinner meeting. Address by Dr. R. Forbes (Secretary, Medical Defence Union): "Medico-Legal Hazards in General Practice." Members of the Division may be accompanied by professional or lay guests.

Meetings of Branches and Divisions

BIRKENHEAD AND WIRRAL DIVISION

The adjourned annual general meeting was held on October 2. Dr. H. S. Pemberton (chairman) presided, and 25 other members of the Division were present. Dr. J. A. Elliot (Hoylake) was unanimously elected chairman of the Division for the ensuing year and took the chair. Dr. A. V. J. Russell was unanimously elected vice-chairman for the same period. The following officers and representatives were appointed: honorary secretary-treasurer, Dr. R. W. L. Pearson; assistant secretary and public relations secretary, Dr. H. C. W. Baker; representatives in Representative Body, Drs. Pearson and Russell; representatives in Branch Council, Drs. Elliot and Pearson. Drs. Carlisle, Farr, McAfee, and O'Friel were appointed to serve on the executive committee, and Dr. Hatton was also appointed to serve thereon as the representative of the public health service. It was suggested that the executive committee consider co-opting Dr. D. Wilkie as a member.

Dr. E. S. A. Ashe proposed the following motion, which was seconded by Dr. N. E. Mawby:

"We, the members of the Wirral Division, are thoroughly dissatisfied with the General Medical Services Committee and the inability to come to terms with the Minister of Health regarding increased remuneration for general practitioners, and we hereby propose that the present committee resign and a new committee be appointed."

A discussion took place, and on being put to the vote it was declared lost.

Dr. W. Laing thereupon moved the following resolution:

"The members of this Birkenhead and Wirral Division are thoroughly dissatisfied with the present National Health Service. They consider the B.M.A. as constituted is powerless to deal effectively with any Government unless the Association can enforce the opinions of the majority. The British Medical Guild should be constituted so as to carry out effectively the will of the majority."

On being put to the vote, the resolution was carried with only three dissentients.

The secretary gave a review of the functions of the British Medical Guild, and several members took part in the ensuing discussion.

A hearty vote of thanks was passed to Dr. H. S. Pemberton for his services as chairman, and to Dr. W. R. Floyd for his valuable services as a member of the executive committee over so long a period.

COVENTRY DIVISION

The first ordinary general meeting of the Division for 1950-1 was held on October 3, when between 60 and 70 members of the Division listened to the inaugural address of the chairman, Mr. Trevor Berrill, who spoke on the role of surgery in the treatment of peptic ulcer. Stressing the importance of the problem in view of the prevalence of ulcer, he discussed the aetiology, with special reference to the parts played by vagal and hormonal secretion. Ogilvie's conception of hormonal imbalance as in other stress diseases was felt to be the more acceptable theory. Comparison was made between the optimistic outlook of the surgeon with the somewhat defeatist attitude shown by the usual medical diet chart. Of operative treatment, vagotomy had a place, probably a restricted one, for duodenal and anastomotic ulcers, but partial gastrectomy was the treatment of choice. In support of these views an account was given of a follow-up of 100 cases treated by partial gastrectomy in Coventry with over 90% of satisfactory results.

The address was greatly appreciated and enjoyed by the Division, and an enthusiastic vote of thanks was accorded the chairman.

The annual church service of the Division was held in Stivichall Parish Church on October 22. The service was conducted by the vicar, the Rev. T. Bland, M.A. The lessons were read by the chairman, Mr. Trevor Berrill, and the vice-chairman, Dr. J. Ballantine. The address was delivered by the Rt. Rev. Dr. Neville Garton, Lord Bishop of Coventry. Dr. Garton spoke of the importance of the spiritual needs of the patient and of the usefulness of collaboration between the patient and the doctor.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 2 1950

British Medical Association

PROCEEDINGS OF COUNCIL

Wednesday, November 22

The meeting of Council which was adjourned from November 1 owing to unfinished business was held at B.M.A. House, London, on November 22, with Dr. E. A. GREGG in the chair.

The congratulations of the Council were accorded to Dr. H. Guy Dain on the attainment of his eightieth birthday, and it was also resolved to send a letter of congratulation to his mother, who is aged 101. The Council learned with regret of the illness of Dr. Alfred Cox, former Secretary, and sent him a message of sympathy, expressing hope for his speedy recovery.

Internal Hospital Administration

Dr. T. ROWLAND HILL, chairman of the Consultants and Specialists Committee, presented for approval a statement of evidence on medical administration of hospitals which it was proposed should be given to the committee appointed by the Central Health Services Council to study internal hospital administration. He said that while his Committee did not support the old idea of the all-purposes medical superintendent, who was not only head of the hospital but also had clinical charge of all patients, it thought there was room in many hospitals for a medical administrator who would be not so much the chief as the colleague of the clinical staff.

Dr. F. M. ROSE objected to one proposal in the draft evidence. Representative medical advisory committees were to be set up at both regional board and hospital management committee level, and to be recognized as a vital link in the administrative machinery, which was all to the good, but it was laid down that at regional board level not less than 50% of the members of such advisory committees should be elected directly by the consultants in the region, and at hospital management committee level "wholly by the medical staff of the hospital or group of hospitals." This would eliminate general practitioners and was entirely contrary to the policy of the Association. Dr. VAUGHAN JONES and other members supported this objection.

Dr. ROWLAND HILL explained that there was nothing in the recommendation to prevent the setting up of advisory committees containing representatives of all branches of the profession, including general practitioners, but in the recommendation they had had in view the need for a committee of the staff which would be concerned in intimate matters arising between the staff and the employing body.

Dr. S. WAND said that there had been a widening gap between the general practitioners and the hospitals, and many of them felt that if this gap was to be closed it could be done only by the inclusion of general practitioners of the area on bodies which could make representations about policy. Unless there was general-practitioner representation on the advisory body which was concerned with the intimate running of the hospital they were not going to get anywhere.

Dr. DAIN said that there was at present a tendency to remove doctors from administration of every kind, particularly and most dangerously from hospital administration. He was glad that this document affirmed that a medical superintendent should be in charge, but it should be stated at what size of hospital medical superintendency should start. Obviously with a small hospital of 30 beds it would not be necessary to appoint a medical superintendent, but there must be a size at which the task of administration became so big that a medical man should be in charge.

After considerable further discussion on the question of advisory and staff committees Dr. ROWLAND HILL undertook to redraft the appropriate paragraphs, and at a later stage the following was agreed to, to form part of the evidence:

"At hospital management committee level and, where the staff desire it, at the individual hospital level, medical staff committees should be established and officially recognized as a vital link in the administrative machinery. In addition, elected medical advisory committees should be recognized in relation to boards of governors, regional hospital boards, and hospital management committees, and these committees should be representative of the medical staff and other sections of the profession—e.g., general practice and public health. They should have access to hospital boards and committees for the purpose of tendering professional advice to those bodies on the work and administration of hospitals. At regional board level not less than 50% of the members of such advisory committees should be elected by consultants in the region, and in addition other sections of the profession such as general practice and public health should be adequately represented."

The statement of evidence was then approved.

On another recommendation of the Consultants and Specialists Committee it was agreed to participate in the organization of a forthcoming conference projected by the Institute of Public Administration on the administration of the National Health Service.

Dr. ROWLAND HILL, speaking on the question of the review of S.H.M.O. in 1951, said that his Committee endorsed the view of the Representative Body that the review should be extended to cover general practitioners working in hospitals under para. 10 (*b*) of the terms of service, and had urged the Joint Committee to make representations to that effect.

Policy of Withholding Medical Certificates

Dr. WAND, chairman of the General Medical Services Committee, reported that after careful consideration the Committee had expressed its agreement with the resolution of the recent Conference of Local Medical Committees that mass withdrawal from the Service would be ineffective without the withholding of medical certificates. He said that the policy of withholding certificates had been considered on previous occasions when disputes were pending with the Ministry of Health, but it had been turned down. Circumstances had now arisen which placed the matter on a different footing. The vast majority of the people of this country were now on doctors' lists. In former days when they were contemplating withdrawal of service the amount of contract work was considerably less—in terms of

remuneration it was between 30 and 40%—but it was now something over 95%. It was felt by those at the periphery—he emphasized that this decision was one from the periphery—that withdrawal of service was unlikely to be effective unless it was accompanied by withholding of certificates. The amount of feeling in favour of this policy shown at the recent conference had amazed him. The resolution at the conference, passed by an overwhelming majority, was due to a wave of feeling and was not inspired by memoranda from the centre.

Dr. S. F. L. DAHNE welcomed Dr. Wand's statement. The feeling at the periphery was not merely inspired by dissatisfaction on the matter of remuneration, but on many other aspects of the Service.

Dr. METCALFE BROWN, chairman of the Public Health Committee, said that whatever the feeling might be at the periphery there were many members of the Association who would stick to their old ethical standards in this matter. On the public health side they had the utmost sympathy for general practitioners, and with general practitioners the question of withdrawal from the Service and withholding certificates primarily lay. But those of them who were not general practitioners still had the right to express their views. The Public Health Committee had considered the matter. If general practitioners decided to withdraw from the Service their public health colleagues would support them, but on the other question it felt that the certificates withheld should not include private certificates. Apart from the ethical considerations, was it wise strategically to withhold private certificates, upsetting the patients by withholding something from them which they had a right to expect?

Dr. G. W. IRELAND said that the General Medical Services Committee was perhaps not equipped to deal with the question on a broad basis. Its function was protective. A good deal of its work had to be focused on remuneration. It had to adopt a crisis technique. It was ill equipped to deal with overall policy. The overriding question was how to make the Service a good one, how to iron out anomalies, and thereby to secure a good temper in the profession. He begged the Council to look at the matter very seriously and in all its aspects.

Dr. J. G. THWAITES said that if this policy went forward it would undoubtedly cause a big split in the profession. There would be so substantial a number of objectors as to do away with the possibility of getting 80% of resignations. Practitioners would not agree to withdraw if it meant withholding from their patients something necessary to their well-being. Had not the General Medical Services Committee failed to grasp the significance of this proposal? It asked the medical profession to do something which was entirely contrary to their duties to the State. The act would be unethical and would cause hardship to patients, cutting off some of them from any source of income. The proposal had been described as something temporarily unpopular which it would be the job of the Public Relations Department to explain to a bewildered public. He wondered whether anybody had asked the Public Relations Officer what was his opinion on the proposal. To proceed on the policy that the end justified the means was very dangerous. "You say you are out to improve the status of the profession, and the first thing you do is to lower the status in the eyes of the public." Although the General Medical Services Committee was bound to take the instruction of the Conference, it did not mean that the Association, of which the Council was the executive, was bound to agree. They had no right to lower their standards just as a matter of tactics. Dr. Thwaites also pointed out that the resolution carried at the Conference was on the supplementary agenda and therefore, unlike the resolutions on the original agenda, had not been considered by local medical committees throughout the country.

Dr. J. A. GORSKY said that Dr. Thwaites had expressed the views which he himself held. He also uttered a warning. Under Section 13 of the National Insurance Act it was not only doctors who could furnish certificates acceptable for the payment of sickness benefit.

Dr. J. A. PRIDHAM urged that no definite decision be taken that day, but that the whole situation be studied. Other branches of the profession had their grievances. Each had its impact on the others. The trouble with the registrars, for example, affected general practitioners. Had not the time come for some high-level discussions to co-ordinate the different branches of the profession, when these questions at issue would possibly fall into line?

Dr. I. D. GRANT was of opinion that no sympathy was to be expected from the general public in any stand made to improve remuneration or status. It seemed impossible to take resolute action without hurting someone, but such resolute action was justified if it brought the dispute to a quick end. Dr. HALE-WHITE said that it seemed to have been overlooked that ethical considerations might not have been absent from the minds of general practitioners when they dealt with this resolution. It might be that it was not so unethical after all to withhold certificates. The public was going to be inconvenienced anyway. Dr. W. JOPE, speaking as chairman of the Conference, said that he was tremendously impressed by the unanimity of opinion. The majority in favour of withholding certificates in the event stated was overwhelming. Dr. DAIN said that while he had admired the speeches of Dr. Thwaites and Dr. Ireland he thought they had put the ethical question on a wrong basis. He did not believe that there was any ethical question at all.

Dr. ANNIS GILLIE believed that the public would understand the motive behind the withholding. Dr. F. M. ROSE said that the two arguments used against this proposed strategy, that it would be ineffective, and that it would impose a cruel penalty on patients, cancelled each other out. Dr. H. B. MORGAN, M.P., begged the Council not to endorse drastic action. If the case of general practitioners was as strong as he thought it was they should be able to get negotiations going without such resort.

Dr. H. H. D. SUTHERLAND said that Dr. Thwaites and Dr. Ireland were in some way above the battle. This fight was not primarily over the question of inadequate remuneration: it concerned the loss of status, overwork, abuses of the Service, the threatening powers of the Minister, the high amount of expenses, the lack of health centres, and many subsidiary points. As for certificates, they all knew that the Ministries and allied bodies had been empowering their employees to demand from doctors National Insurance certificates for purposes other than National Insurance. Mr. LAWRENCE ABEL suggested from his experience of local meetings that the periphery was still largely uninformed about the position.

Dr. R. P. LISTON said that it now appeared that the resolution carried at the Conference of Local Medical Committees had not been discussed by the representatives with their constituents. In March, 1948, at the Special Representative Meeting, motions calling for the withholding of certificates were defeated. He thought they were still bound by that adverse vote. If necessary another Special Representative Meeting should be called before the Council took any decision. If it was considered that they were not bound by the vote of 1948 the matter should be referred to a plebiscite or, preferably, to the local British Medical Guild groups. Dr. NOV SCOTT thought that any vote in the constituencies would be inconclusive. He begged the Council not to come to any decision that day. Dr. FRANK GRAY said that he still held the view, which he had stated at the Conference, that the withholding of certificates would be entirely useless and one of the most damaging things they could do. He believed the decision of the Conference to be a tragic blunder, but, the decision having been made, to go against it would be an even more tragic blunder. No decision should be taken that day.

Dr. W. M. KNOX said that among the rank and file in Glasgow there was a strong feeling that certificates should be withheld. Mr. A. STAVELEY GOUGH said that he had been amazed at the strong feeling at the periphery, uninstructed or not, and he thought it would be dangerous for the Council to take a line contradictory to the Conference. Dr. ALEXANDER BROWN believed that the majority of the profession in his area were of opinion that to resign from the Service without withholding certificates would be to cut their own throats. Dr. H. M. GOLDING urged that if this question was referred to the constituencies it should be stated exactly what certificates it was proposed to withhold. Obviously certain certificates—deaths, infectious diseases, etc.—must be given.

The CHAIRMAN (Dr. Gregg), speaking personally, said that he held most strongly, as he had put it to the Representative Body in 1948, that to withhold certificates would be about the worst thing the profession could do. It would place them in the worst possible position with the public. Moreover, he was not satisfied about opinion in the periphery. Speaking as Chairman, there were one or two points to clear up. He was not sure how far they were bound by a negative vote—one turning down a resolution—on a point of detail in the Representative Body.

The SECRETARY read the appropriate by-law, from which it seemed that the Council was not bound by a vote of the Representative Body defeating the resolution in 1948.

Dr. WAND, replying on the debate, said that as chairman of the Committee he was in great difficulty. If they were going to fight they must fight to win, and they must have a weapon which could be used effectively. In his Committee, as in the Council, they were trying to ensure a proper service, with difficulties and hindrances removed, and for this purpose they required a large sum of money. Dr. Thwaites had made a most admirable plea on the grounds of ethics. But which was the greater evil: to allow the Service to go along as it was, with all its difficulties and anxieties, or to take some drastic step, even though such a step might be hurtful to a section of the public? The resolution passed at the Conference, even though it had not been specifically discussed between the representatives and their constituents, must have been in their minds to have secured such widespread support, and information which had come in since had revealed the support at the periphery. The members of the General Medical Services Committee, who were very responsible people, had agreed that the action proposed should be supported if when the time arrived it was felt that this was the course required to ensure success.

Dr. Wand went on to suggest that the Council should be satisfied with the undertaking that if and when the decision was made to withdraw service the machinery which his Committee regarded as essential for the successful carrying out of such withdrawal would be placed before all practitioners, and the question of certification, with the arguments for and against, would be clearly set out, so that a Special Conference would once again have the opportunity of discussing it fully in the light of the debate which had taken place in the Council that day.

The CHAIRMAN said that the General Medical Services Committee—like the old Insurance Acts Committee—with its associated Conference was a creation of the B.M.A. and part and parcel of the machinery of the Association. It was the channel which the Association had found most satisfactory for the conduct of certain of its affairs. Certain expressions of opinion had now come to the Council along that channel, but there remained a certain amount of doubt about the extent to which they reflected the opinion of the periphery. He thought the question might well be referred to the local committees of the Guild so far as these were already established. The reference should, of course, include a clear explanation of the particular classes of certificates it was intended to withhold. With the information thus acquired the Council would be able to help the General Medical Services Committee in carrying out its work.

Dr. GRAY said it would be a wise step for the General Medical Services Committee to refer this matter to the local committees, but if the Council itself did so it might be interpreted as going behind the back of the Committee and of the Conference.

The CHAIRMAN agreed with this point of view, saying that the only consideration was to ascertain the attitude at the periphery, inasmuch as the resolution carried at the Conference had not previously been discussed when the representatives were instructed. So long as they got reliable information the precise method by which it was obtained was not very important.

The Council agreed by a large majority to refer the matter back to the General Medical Services Committee for consideration and action in the light of the discussion which had taken place.

The Durham Case

Dr. METCALFE BROWN, chairman of the Public Health Committee, said that with Dr. E. Grey Turner, Assistant Secretary, he had attended on the previous Saturday a meeting in Durham of the medical officers employed by the county council. The meeting was unanimously in accord with the policy of the Association. The meeting was attended by 36 medical officers employed by the county council. Letters of support were received from five others who were absent. Of the remaining twelve, two were known to be in hospital and one on holiday. He had assured them of the support of the Association should any of them suffer as a result of their adherence. It was a highly satisfactory meeting. The Royal College of Nursing, the Royal College of Midwives, the Medical Women's Federation, and the National Union of Teachers were all taking the same stand. The chairman of the Durham meeting, Dr. G. Fenwick Lishman, past-president of the North of England Branch, said at the end that he had never presided at a meeting at which the unanimity of feeling was so obvious.

Other Business

In presenting a brief report of the General Practice Review Committee Dr. ALEXANDER BROWN said that the Committee had approved an analysis under twelve main headings of the range of its inquiry. Certain of the topics listed would be the subject of a field investigation.

Dr. H. H. D. SUTHERLAND submitted a report of the Amending Acts Committee, which had discussed the broad outline of its work in the light of a memorandum prepared by four of its members. It had decided to invite the co-operation of certain other committees and to study developments in other countries, particularly in Australia. Its terms of reference were to consider what changes were desirable in the National Health Service Act, the subsequent Acts for Scotland and Northern Ireland, the Amendment Act of last year, and the regulations and orders made under them.

On the report of the Public Relations Committee, presented by Dr. FRANK GRAY, it was agreed that, subject to the National Insurance Defence Trust consenting to pay half the actual expenditure as in previous years, the Committee be authorized to spend up to £10,000 in respect of 1951.

On the report of the War Memorial Committee, presented by Mr. L. DOUGAL CALLANDER, it was stated that the sculptor had substituted a figure representing "Sacrifice" for the one which depicted "Welfare," so that the group of figures now symbolized the whole field of service in medicine, including the battlefield. The response to the appeal (£7,791 up to October 27) had been sufficiently satisfactory to justify starting the work, but a great deal more money was necessary. Dr. H. R. FREDERICK suggested that the names of subscribers should be published.

The Council received a statement showing the extent to which the recommendations made by the Association in conjunction with the Defence Societies had been incorporated in the Medical Act, 1950.

The Council, which began its business at 10 a.m., rose at 5 p.m.

THE BRITISH MEDICAL GUILD

A meeting of the Board of Trustees of the British Medical Guild was held at B.M.A. House on November 22, with Dr. E. A. GREGG in the chair.

The Trustees received a memorandum prepared for their information on the dispute regarding the remuneration of general practitioners. The secretarial staff were congratulated on the preparation of the document.

A statement was made on the areas in which no Guild organization had so far been set up. It was stated that in a number of areas, although officers and committees had been appointed, so far no notification of this had been received at Headquarters.

Dr. NICHOLSON-LAILEY urged the need for a more attractive presentation of information to the periphery. The information was succinct and well prepared, but it was not set out in a manner to catch the eye. Dr. J. I. MILNE suggested the appointment of a paid organizer to "ginger up" the Guild. The CHAIRMAN promised that all these questions would be considered by the Executive.

It was reported that the Public Health Service Defence Trust had been formally established, the trustees being the members of the Public Health Committee for the time being in office who were willing to serve. An appeal for funds had been issued to public health medical officers. The suggested contribution was at the rate of 2s. per £100 of remuneration.

The resignation of Mr. R. L. Newell from the Board of Trustees and its executive committee was reported on his ceasing to be a member of Council. Dr. T. Rowland Hill was appointed to fill the vacancy in the executive committee.

THE KINGSTON HOSPITAL DISPUTE

MASS MEETING OF PROTEST

About 1,200 people of Kingston and Malden filled the largest hall in the locality on November 22 in a demonstration of protest against the decision of the South-west Metropolitan Regional Hospital Board to change the use of the Kingston and Malden Victoria Hospital from a general-practitioner hospital, which has been its status for more than fifty years, to a gynaecological unit. In numbers and enthusiasm it was an impressive assembly, and although behind it there was, of course, a good deal of organization, the spontaneity of the public feeling evoked was unmistakable. One objector described it as a "packed meeting," because some of the front seats had been reserved, but the major part of the hall, which was free to every citizen, was as enthusiastic as the "packed" part. The whole of the proceedings was relayed by loudspeakers to the street outside.

The Mayor of Kingston, who was in the chair, accompanied by the Mayors of Malden and Norbiton, said that about twelve months ago the Kingston and Malden councils wrote to the regional hospital board asking it to defer putting into effect the alteration of status of the Victoria Hospital and to receive representations on a matter which so vitally affected the people of the district. It was not his function to criticize the board, but neither of the authorities was afforded the opportunity of discussion and the decision went forward.

Mr. J. BOYD-CARPENTER, M.P. for Kingston, said that during the year or so in which he had been actively interested in this matter he had carefully avoided bringing party politics into the discussion, and he regretted that it should have been suggested that those who opposed the board's decision were seeking political ends or were expressing hostility to the National Health Service. In the early months of this year the chairman of the Kingston Group Hospitals Committee and three of his colleagues who had opposed the regional board's scheme were removed by the board, and other persons substituted. The board was not responsible to the House of Commons or to the county or borough councils, nor was it elected by anybody. As was said of the old corporations, it had neither a body to be kicked nor a soul to be saved.

The public, he went on, had been stirred by the spectacle of a small unit struggling for survival, and still more by the apparent immunity to democratic process with which regional hospitals boards were endowed. It was in small hospitals of this sort that patients could secure the continuance of their treatment by their family doctor. He honoured the courage of those who in defiance of authority were carrying on, some of them taking their professional lives in their hands. He hoped that those in positions of responsibility would not exercise their full legal powers; if they did they would not be lightly forgiven by the people of that district.

A way out had been suggested by the British Medical Association: let the present position continue for a year, during which period a public inquiry should be held. This would give feelings a chance to cool and permit the working out of a new arrangement. Those who had committed themselves in this controversy on either side should not take part in the renewed discussions.

A Rebel Board

Brigadier SKENTELBERY, chairman of the hospital, said that the press had called this a rebel hospital, but the real rebels were the regional board. He read from the circular issued by the Minister in October, 1949, to regional boards pointing out that the local loyalty which such hospitals commanded must not be ignored in any reorganization. On the regional board there was only one general practitioner, and on the Kingston Group Management Committee no general practitioner at all. If this hospital were turned over to specialist use it would be a severe deprivation to the public. The alternative offered by the regional board was an annexe built in 1882 which fifteen years ago Surbiton thought not good enough for its purpose. It had no operating theatre and no *x*-ray plant, whereas the Victoria was excellently equipped in this respect. Moreover, it would be nothing like so handy for the people of Kingston and Malden.

Dr. T. W. MORGAN, chairman of the honorary medical staff of the hospital, said that the regional hospital board appointed a review committee to examine the needs of the region; they visited all the groups and at Kingston met several of the staff of the Victoria. They asked what was the greatest need of the district, and the answer was quite obvious—more beds. There were only 700 to 800 beds for the acute sick in the whole group, covering a population of about 230,000. The number should be 1,700. All the specialties, not gynaecology alone, needed extra beds. The local medical advisory committee was asked to study the problem, and recommended that plans should be started now to provide an adequate bed complement as soon as the building even of hutted hospitals became practicable.

As medical men they recognized the urgent necessity for beds for all purposes. At the county hospital there were 75 beds for maternity and 32 for gynaecological cases. The suggestion was that the 32 should be taken over to increase the maternity complement, and that the gynaecological section should be transferred to the Victoria. Dr. Morgan showed that if this were done, owing to the various provisions which would have to be made, there would actually be accommodation for only 29 gynaecological beds at the Victoria, so that the complement would be smaller than now. Incidentally, of course, gynaecological cases were treated now, along with others, at the Victoria. He warmly repudiated the suggestion that the doctors were interested financially in the maintenance of private beds. The private rooms had always been full since the National Health Service Act came into operation, but not with fee-paying patients. No urgent case had been turned away from that hospital while a private room remained vacant. He also stated that, of 39 doctors in Kingston and Malden, 26 were on the staff of the hospital. The other 13 had never applied for inclusion; if they had done so they would not have been refused. There was no "closed shop."

Dr. Morgan warned the public of Kingston that if this hospital was transferred to another use and closed to the general practitioner it would mean that the ability of general practitioners to serve their patients would be diminished; they would tend to become mere sorting officers rather than physicians. "We are not against the Minister of Health. All we want to do is to provide him with the necessary information such as this meeting can give of the 'local loyalty' of which he has spoken in his circular, and to demand that the Kingston Victoria Hospital be retained on its present basis."

Mr. LAWRENCE ABEL made a rousing speech, declaring how much better was the general practitioner associated with such a hospital than the one who never entered a hospital after he had qualified. It was of enormous benefit to patients, when seriously ill, to have their own doctor to look after them in hospital. He described the action of the regional board as "bureaucracy gone mad."

When the meeting was thrown open for questions the first speaker was a patient of the hospital, who testified warmly to the attention he had received there, but at the same time, "being a humanist and not a 'hoggist,'" felt that the regional hospital board's point of view was quite reasonable in the interests of the good health of the community as a whole. Another speaker, the secretary of the local Labour Party, hoped that Mr. Boyd-Carpenter's suggested compromise would be accepted. Other speakers from the floor who ran contrary to the general feeling of the meeting had difficulty in making themselves heard, although the chairman did everything he could to ensure that every speaker got a fair hearing.

It was evident that the meeting was almost unanimously in accord with the protest. Forms were distributed for signature to a petition to be presented at the bar of the House of Commons praying that this retrograde step in the development of the National Health Service be prevented and that general practitioner hospitals such as the Kingston Victoria be firmly established as an essential part of the Service.

HOSPITAL EXPENDITURE

A circular from the Ministry of Health to hospital boards and committees emphasizes the responsibility of boards in giving their approval to the estimates of hospital management committees. The circular continues:

"It is one of their primary functions to plan and supervise the provision of services, and therefore to assess the relative merits of various developments in their respective regions in accordance with broad considerations of regional planning. As a part of this duty the Minister relies on them to scrutinize closely and, if necessary, revise the proposals of the committees for maintenance expenditure, and thus prepare for him reliable estimates on the basis of which the national position can be assessed and brought under review with other claims upon the budget.

"When dealing with the estimates for 1950–1 the Minister first approved the total figure for a region and then delegated to the regional hospital board the allocation of sums to the several committees within the regional total. This method of central allocation was inevitably inexact and took little account of varying standards. In the interval, however, there has in the hospital service been a marked increase in knowledge and experience of financial control. It should now be practicable, by co-operation between officers of the Ministry and representatives of the board, to make a sound assessment of the claims of the various hospital units in the Service. In the situation now prevailing this offers the best prospects of an equitable distribution of whatever proportion of the national resources can be made available for the purpose."

DISPLACED REGISTRARS

VIEWS OF THE JOINT COMMITTEE

It is important that the profession should know that the Ministry's proposals for dealing with the registrar problem contained in R.H.B. 50/106 (*Supplement*, November 18, p. 204) were not agreed by the Joint Committee. Indeed, during the discussions which took place the committee informed the Ministry that an unrealistic approach to the problem had been made, and that the proper way of remedying a situation for which the Government itself was partly responsible was gradually to increase consultant establishments to the levels suggested in the Ministry's memorandum on *The Development of the Consultant Services*.

Before commenting on the Ministry's proposals it will be as well to look more closely at the position. At the end of the war a considerable number of supernumerary registrar appointments was created under the Government scheme for the postgraduate training of ex-Service practitioners. In addition, during the first two years of the National Health Service there was a considerable expansion of registrar appointments, with the result that there are now upwards of 1,400 practitioners in each of the registrar and senior registrar grades.

Under present conditions the registrar cannot be regarded solely as a postgraduate student, and there is little doubt that the need for an increasing number of experienced practitioners in the hospitals has accounted, at least in part, for the increase in the number of registrar posts. Nevertheless, it is undesirable that practitioners should be trained in substantially greater numbers than the prospects of achieving consultant status permit, and the primary factor in determining the registrar "establishment" must be the number of new consultants required over the next few years.

If it be accepted that a national health service must provide an adequate consultant service covering the whole of the country, the first step in determining the proper establishment of registrars must be to decide whether the present number of consultants is sufficient. It is on this fundamental issue that the Joint Committee and the Ministry disagree.

At the beginning of the Service the Ministry issued its memorandum on *The Development of the Consultant Services*, and, revised and brought up to date, this was reissued early in 1950. On the basis of the memorandum the number of consultants that would be required in the various specialties to provide a full consultant service is about 7,500 employed whole-time, or a proportionately larger number employed part-time.

At present there are about 5,000 consultants in the Service, a large proportion serving part-time, and there is already evidence that this number is insufficient to provide a full consultant service in various parts of the country. The Joint Committee pointed out to the Ministry in the strongest possible terms that the existence of a substantial number of highly trained registrars presents an unparalleled opportunity of creating additional consultant posts and in turn a consultant service capable of covering all parts of the country.

The Ministry's proposals, however, will in fact prevent any expansion except of the most limited kind for some years to come. The age distribution of the 5,000 consultants is uneven, but about 80 can be expected to retire annually through age over the next five years. In addition there will be a smaller number of S.H.M.O.s retiring whose posts will be filled by consultants. This overall wastage the Ministry estimates to be somewhere in the neighbourhood of 100.

After allowing for this wastage, for probable openings for practitioners of consultant status in other spheres—e.g., H.M. Forces, the medical teaching schools, research, Colonial Service, *and for the expansion of consultant services*—the Ministry estimates the number of vacancies available for senior registrars who have completed their training as unlikely to exceed 150 a year.

It is understood that the Ministry has just begun a country-wide survey of hospital medical staffing, and the Joint Committee urged that no severe "pruning" of registrar establishments of the order now contemplated should be made until the results of the survey were available. But the Ministry, without awaiting the outcome of the survey, and in spite of its own memorandum, now predetermines that the present number of consultants is adequate. It is difficult to avoid the conclusion that the Ministry's action is governed by financial considerations rather than the needs of the Service. In the meantime 800 senior registrars, many of whom were encouraged to take up their training by the Government at the end of the war, are to have their appointments terminated with little prospect of obtaining the consultant posts for which they have been trained.

The loss of some 300 registrars over the whole country will probably not create an acute problem in medical staffing, but the Ministry realizes that in reducing the senior registrar establishment by nearly 60% alternative arrangements will be needed to maintain the work of many hospital departments. It proposes, therefore, that hospital boards might offer senior registrars whose appointments are not to be renewed a temporary appointment for one year at their present salary. This step is solely at the discretion of the board in the light of the needs of the hospital, and although it would be a mistake for all displaced senior registrars to expect such an appointment it is to be hoped that in this way the drastic effect of the Ministry's proposals may be tempered and a proportion of senior registrars be given a further year in which to find consultant posts or other professional work.

As a long-term policy the Ministry suggests that boards might offer clinical assistantships to suitably experienced general practitioners. So far the National Health Service has tended to widen the gulf between the general practitioner and hospital work, and any effective measure to link the general practitioner with the hospital by providing opportunities for hospital work would be welcomed by the profession.

Unfortunately it is doubtful whether the Ministry's proposals are practical. The work which the senior registrar undertakes requires the continuing responsibility of one man; in most specialties it involves highly technical procedures and, in the teaching hospitals, undergraduate teaching.

Under the present conditions of general practice it is doubtful if many general practitioners will be able to give the time necessary for registrar appointments, and it would be difficult

for work of this nature to be undertaken by a succession of practitioners each giving, say, one or two sessions a week. Clearly the Ministry's proposals require careful examination by both consultants and general practitioners before they can be commended in their present form.

One change about which there will be little regret is the abolition of the junior registrar grade as a step on the training ladder. There is no doubt that, however useful the salary scale attached to this grade for the remuneration of a necessary type of senior house-man, it has had the effect of encouraging young practitioners with little experience to regard themselves as having been accepted for training as specialists.

The Joint Committee has already informed the Ministry that, in its proposals for controlling the registrar establishments over the next few years, it has virtually brought to a standstill any development of the consultant services of the country, and has dealt most unrealistically with the opportunity now presented for bringing to fruition the Minister's undertaking to provide a consultant service covering the whole country. The expenditure of £1,000,000—a small sum in comparison with the cost of the Service as a whole—would provide an additional 500/600 part-time consultants, and it is to be hoped that wisdom will prevail before the experience of a considerable number of highly trained senior registrars is lost to the hospital service.

STATEMENT BY REGISTRARS' GROUP

The recent Ministry of Health circular on "Review of Appointments to Registrar Grades" (*Supplement*, November 18, p. 204) was considered at a special meeting of the Executive Committee of the Registrars' Group on November 20, after which the following statement was made:

The Executive Committee of the Registrars' Group of the B.M.A. has considered the Ministry of Health circular on "Review of Appointments to Registrar Grades," and on behalf of the Group it wishes to express its most profound disagreement with many of the proposals in the circular. The Ministry's proposals provide for the automatic dismissal of the majority of the most senior registrars on the completion of the normal tenure of their appointments.

The Executive Committee, on behalf of the Registrars' Group, protests in the strongest possible terms against this decision.

1. The Committee holds the view that the Government must accept responsibility for the present situation. The Ministry of Health clearly envisaged, in its pamphlet *The Development of Consultant Services*, a considerable increase in the number of consultants; and in anticipation of this policy, in the immediate post-war period, encouraged ex-Service men to train as specialists in registrar appointments by the provision of grants for this purpose. The Registrars' Group deplores the fact that 1,100 registrars and senior registrars are now to be dismissed solely on a numerical basis without regard to their suitability for future consultant posts. It is felt most strongly that this is entirely a wrong principle and that registrars of unquestioned ability should not be dismissed merely because their numbers are in excess of the artificially restricted opportunities for promotion.

2. The Ministry's proposal that the dismissal of registrars should commence forthwith, before the hospital establishments have been announced, is most strongly deplored.

3. The Committee points out that the arrangements for continuing the work at present undertaken by the large numbers of registrars and senior registrars who are to be dismissed, as proposed in the Ministry's circular, are quite inadequate. It is noted that no suggestion whatsoever is made for covering the work undertaken by the 300 registrars (immediately affected) who are not to be replaced on the completion of their appointments. General practitioners with the necessary qualifications, time, and ability are not available to take over the work of senior registrars. Furthermore, the Group is strongly opposed to the principle of general practitioners' undertaking specialist work in large numbers. It is also opposed to any suggestion that the work now done by registrars could be carried out by senior house officers.

4. It will be quite impossible to absorb the dismissed registrars in H.M. Forces and the Colonial Medical Service. There is no great demand in the Forces for general physicians, and the Ministry's proposals necessarily include the dismissal of large numbers of highly trained physicians.

5. The further expansion of consultant services is the first and most urgent need, and provides the best solution to the problems now created. This would overcome the proposed anomaly whereby the recruitment of untrained men to the registrar grade will continue while trained men are being dismissed on completing their appointments in the senior registrar grade. The Ministry's circular gives no reason why the proposals in its pamphlet *The Development of Consultant Services* should not be implemented. It is realized that available bed accommodation sets a limit to the expansion; but the reduction in the numbers of registrars and the mass of work in out-patient departments will make an increase in consultant establishments imperative. In this connexion it is to be noted that (*a*) many consultants are undertaking work grossly in excess of their contracted number of sessions; and (*b*) a considerable amount of consultant work in all departments is at present being carried out by senior registrars and by registrars.

6. The Committee urges that the Ministry's proposals for the reduction of registrar establishments should not be implemented until agreement has been reached on the matter between the Minister and the profession.

MEETINGS OF REGISTRARS

A general meeting of registrars in the South-west Metropolitan Region (Eastern Area) will be held at B.M.A. House on Wednesday, December 6, at 5 p.m.

A general meeting of registrars in the North-west Metropolitan Region will be held at B.M.A. House on Tuesday, December 5, at 6 p.m.

PUBLIC HEALTH COMMITTEE

THE DURHAM ISSUE

A meeting of the Public Health Committee of the Association was held on November 24, with Dr. C. METCALFE BROWN in the chair. The chairman gave an account of his visit, with Dr. E. Grey Turner, Assistant Secretary, to the meeting of medical officers of the Durham County Council on the previous Saturday to discuss the decision of the county council that all its staff should be members of their appropriate trade unions (*Supplement*, November 25, p. 209). The meeting had resolved by a unanimous vote to ignore the county council instruction and to affirm its whole-hearted support of B.M.A. policy in regard to the "closed shop."

The Industrial Court

It was reported to the Committee that the Industrial Court had sat on four occasions on the arbitration issue. The staff side had set out to obtain information concerning not only existing salaries of medical officers in the public health service but also the cost of the increase if their proposals were brought fully into effect. Two surveys on a questionary basis had been undertaken, and from the information obtained it was possible to assess each medical officer's salary under the proposals. The information obtained as a result of these surveys had been made available to the Court.

Other Business

The Committee had before it a resolution from the General Medical Services Committee that in no circumstances should the local health authority medical officer refer a school child to any specialist (other than for ophthalmic examination) except with the approval, expressed or implied, of the child's family doctor. The chairman of the Committee said that this represented no difference in substance from the resolution which the Committee had recommended last session. It was agreed to draw the attention of medical officers of health to the policy of the Association as set out in the resolution carried at the recent adjourned Representative Meeting and ask them to inform those of their officers who were likely to have to deal with this problem.

A resolution from the Annual Representative Meeting which had been referred to the Committee urged that more intense propaganda be undertaken for vaccination and immunization. The feeling of the Committee was against press propaganda, and it was suggested that personal propaganda by general practitioners and health visitors formed the most useful method. This suggestion was referred to the General Medical Services Committee.

The question of "dual appointments" again came forward. It had been agreed at an interview with the Ministry that this matter should be settled on a proper basis. It was deplorable that two and a half years after the appointed day a fundamental matter of this kind should remain undecided. The Committee decided to refer the matter to the staff side of Committee C, with a request that a settlement be sought through Whitley machinery.

A suggestion of Dr. Percy Stocks, of the General Register Office, had been received from the Ministry of Health regarding the notification of pneumonia. Four categories were suggested—acute primary pneumonia, atypical pneumonia, influenzal pneumonia, and pneumonia secondary to specific infective diseases not themselves notifiable. The council of the Society of Medical Officers of Health had supported this classification. It was pointed out that the onus would rest upon general practitioners. Therefore, the question had been considered by the General Medical Services Committee, which had suggested only two categories—namely, acute primary pneumonia and acute secondary pneumonia, the cause to be stated if possible. The Public Health Committee agreed with this view.

A request from the Amending Acts Committee concerning items to be included in the programme for amendment of the present National Health Service Acts and regulations and orders was referred in the first instance to the council of the Society of Medical Officers of Health, together with certain points brought forward by individual members.

The Committee considered a redraft of Puerperal Pyrexia Regulations, the present draft being regarded as somewhat ambiguous. Certain suggestions for classification were made. One of these was that the phrase "pyrexia during the puerperium" should be substituted for "puerperal pyrexia."

The Society of Medical Officers of Health was thanked for transmitting to the Committee the results of a survey on the extent to which medical officers of health were undertaking administrative responsibilities for arrangements made under the National Assistance Act.

PART-TIME NATIONAL SERVICE

The Armed Forces Committee of the B.M.A. has considered the duties which the three armed Forces will require from conscript medical officers during their period of part-time National Service. The requirements at present laid down by the three Service Departments differ considerably in extent. The committee, while appreciating the difficulty of making the requirements uniform in the three different Services, has represented to the Ministry of Defence that there should be more similarity than is at present planned.

INDUSTRIAL INJURIES INSURANCE

The rules for medical certification and for claiming injury benefit under the Industrial Injuries Act have been slightly modified by regulations which came into force on November 28. These regulations allow a doctor to give special intermediate certificates (used where incapacity has already lasted at least 28 days and is likely to be prolonged) at intervals of up to four weeks, even though he is seeing the patient more frequently. Claims to injury benefit may be made and dealt with on the strength of these special intermediate certificates, in advance of a further certificate confirming that the patient did in fact remain incapable of work throughout the period as forecast. Similar arrangements have already been made for certification under the National Insurance Act for sickness benefit.

Heard at Headquarters

A Good Woman

That there is nothing new about the strange demands patients occasionally make on their family doctors is emphasized by the following letter which a doctor received about 50 years ago soon after starting general practice:

"Dear Sir,

A few lines to see if yould could find me a good woman one that would rather go in as housekeepper or one that would marry I want a good country woman one that is a good milker and butter maker as I have gote some mony lift to me by a frend so I would like to get a woman with a hundred or two if I can get a woman with a little money I am fore trying to get into a small Farm I want a woman about 40 or between 40 & 50 years of age I want a good living woman as their is no middle addged woman round here so I hope you will do what you can fore me as I have no frends nothing but my mother and she is nearly blind so if you can see your way to help me I will give you a present in Gold if you get me a good woman You might write answer to this letter and let me know if you are going to look out fore one to me and oblige me."

The Litigious Patient

The story was told at the last meeting of the Ophthalmological Section of the Royal Society of Medicine of a paranoid patient who was operated on for cataract. Dissatisfied with his treatment, he tore off his dressings, then reported the nurse to the matron, the house-surgeon to the hospital committee, and the ophthalmic surgeon himself to the General Medical Council. Failing to get any satisfaction in all these endeavours, he turned round on his solicitors and reported them to the Law Society.

A General Practice Section

The inaugural meeting of the General Practice Section of the Royal Society of Medicine was extremely well attended, and this the youngest Section for the oldest branch of medicine has every prospect of a useful existence. But what was remarkable was the number of specialists who attended the meeting. Everywhere one looked one saw faces familiar in regional surgery, ophthalmology, ear, nose, and throat work, radiology, and the like. Perhaps one of the chief services of the Section will be to give specialists a new insight into the mysteries of general practice. Quite properly, the Section is beginning its discussions with definitions: What is general practice?

Peak of Earning Capacity

After Professor Bradford Hill had delivered his presidential address to the Royal Statistical Society (which was summarized in the *Journal* of November 24), his predecessor in the chair, Sir Geoffrey Heyworth, proposed a vote of thanks to him. In so doing he said that when it came to doctors' incomes he was struck by the small variation shown in the earnings of members of the profession throughout their lives up to the peak of their earning capacity at the age of 54. The pattern, said Sir Geoffrey, was a very different one from that obtaining in the fields of industry and commerce, where the fall in income after the age of 54 was not seen. The income of workers in industry generally rose continuously until the age of retirement, unless, of course, their career was interrupted because their doctors had not done their job properly, and coronary thrombosis or peptic ulcer or other occupational disease cut down the earning capacity in the last age group.

Financing the W.M.A.

Just as in the United Nations Great Britain and the United States seem to bear the major liability, so in the World Medical Association. Looking at the subscriptions to the Association for the last year one notices that the British Medical Association's share was £545, and that of the American Medical Association about £800 (2,340 dollars), the two making together very nearly as much as the other 22 subscribing associations. The smallest subscription (£3) was from the Icelandic Medical Association.

ARMED FORCES MEDICAL OFFICERS

INCREASES IN PAY

On November 20 a deputation from the Armed Forces Committee of the B.M.A., headed by the chairman, Air Vice-Marshal D'Arcy Power, met officials of the Defence Departments and learned the increases in pay which were about to be announced by the Government for medical officers in the armed Forces.

The Association's original proposals represented, broadly, average net remuneration in the National Health Service, with an addition of 20% to compensate for the unavoidable disadvantages of a career in the armed Forces. The Defence Departments rejected the Association's estimate of civilian remuneration and its assessment of the disadvantages of a Service career (*Supplement*, May 20, p. 223). On July 6, a deputation put forward the Association's case to the four Defence Ministers in person (*Supplement*, July 15, p. 29). In August the Government announced substantial pay increases for the armed Forces as a whole, but excluded the medical and certain other branches, to which it stated that separate consideration was being given. In the next two months the Ministry of Defence was repeatedly urged to expedite its decisions in respect of the medical branches. Pay increases for medical officers have now been announced dating retrospectively from September 1, 1950—i.e., the date from which the pay increases in other branches of the Services took effect.

* Includes pay, marriage allowance, and ration allowance grossed from £61 p.a. tax-free to £95 p.a.

Increases Awarded

The increases for medical officers are set out in Table I. Except in the first five years of service, and except in the ranks of surgeon vice-admiral, lieutenant-general, and air-marshal, the increases for general duty officers are considerably lower than the Association's original proposals. The deficiency is especially marked in the middle ranks, which is where the Association considered that improvement was most needed. It had, however, become clear in the course of the prolonged discussions with the Defence Departments that the Association's claim for a lead of 20% over civilian general-practitioner remuneration could not easily be substantiated. The increases now awarded by the Government represent, in an average career, a lead of 8–10% over corresponding civilian remuneration. (The exact percentage cannot be stated, because the average remuneration of civilian general practitioners is not yet accurately known.) This lead, though modest, will certainly go far to compensate the medical officers in the armed Forces for the unavoidable expenses and disadvantages of a Service career. It is probably fair to state that the new remuneration of general duty officers is not unreasonable in comparison with civil life.

TABLE II.—*Specialist Officers*

† Graded specialists.

Specialists

Unhappily, the specialist position is different. The rates of specialist pay in the Royal Navy and R.A.M.C. remain respectively at 5s. and 4s. a day for graded specialists, but are raised to 8s. a day for full specialists. (In the Royal Air Force there is no specialist pay, but specialists will continue to receive accelerated promotion.) A glance at Table II will show that the new remuneration of clinical specialists in the armed Forces does not compare with the salary scale of consultants in the National Health Service. It approximates much more closely to the senior hospital medical officer scale. On November 20 the Association's representatives pointed out that this was bound to lead eventually to a second-rate specialist service in the armed Forces. The Defence Departments disputed this, and stated that for a variety of reasons it was not possible for the armed Forces to pay the salaries received by consultants in the National Health Service.

The deputation urged that local overseas allowances, which play an important part in compensating the medical officer in the armed Forces for the expenses of overseas service, should be reviewed as frequently and as expeditiously as possible, and that in cases where an increase was made the increase should be back-dated to the time when the necessity for it first arose.

National Service Officers

The deputation also made energetic representations on behalf of National Service medical officers. The Defence Departments were urged to grant the increased rates of pay to all National Service medical officers, on the grounds that the latter are fully trained for their medical duties when they join the armed Forces and cannot be compared with other conscripts, who have to spend the first 18 months of their service in learning their duties. The Defence Departments were also urged to grant the full rate of marriage allowance to married National Service medical officers, on the grounds that the upper age limit for the call-up of doctors is four years later than that for the rest of the community and that a high proportion of National Service medical officers are therefore married and have family responsibilities as heavy as those of regular officers.

The Defence Departments replied that the position of National Service officers had been carefully considered by the Government before its decisions were made and that no exception could possibly be made in favour of any one group. The deputation pointed out that the Government did not hesitate to make exceptions with regard to the medical profession in matters such as the upper age limit of call-up. These arguments were of no avail. The position is, therefore, that National Service medical officers will receive the increased rates of pay only in their last six months of service and will at no time receive the full rate of marriage allowance.

In the past two years an immense amount of work has been undertaken by the Armed Forces Committee in preparing rational pay proposals and arguing them with the Defence Departments. The Government's pay decisions are a meagre return for the committee's efforts. The pay increases awarded to medical officers only slightly exceed those recently (and hurriedly) awarded to all other officers, and to all outward appearances it would seem, therefore, that the labours of the Armed Forces Committee have been but wasted energy. The committee will gladly swallow this disappointment, however, if the new pay-rates succeed in promoting contentment and efficiency in the medical branches of the armed Forces.

It is hoped that the pay increases will lead to an improvement in the rate of voluntary recruitment. The Association will closely observe this important index of success or failure, reserving the right to reopen the question of remuneration if the results of the present revision should prove disappointing.

NINTH ANNUAL GENERAL MEETING OF THE BRITISH MEDICAL STUDENTS' ASSOCIATION

[FROM A SPECIAL CORRESPONDENT]

The Ninth Annual General Meeting of the British Medical Students' Association was held in the University of Manchester on November 9–11, and was attended by 65 delegates representing 23 medical schools. Apart from the business sessions of the meeting all delegates enjoyed a very warm reception from their Manchester hosts and from the South Lancashire and East Cheshire Branch of the B.M.A., who entertained them to an informal tea. The Manchester Student Representative Council entertained them at a formal dinner, at which the toast of the association was proposed by the president of the B.M.A. Branch, Mr. R. L. Newell, and replied to by Dr. P. L. C. Diggory, the retiring president. Following this dinner the delegates were invited to attend the Manchester Students' Winter Ball.

On the first day of the meeting the election of an honorary president to succeed the late Professor J. A. Ryle was discussed, and it was decided that in future the honorary president should be appointed annually and that for the coming year Professor Sir Geoffrey Jefferson should be asked to accept this office.

Foreign Relations

In debating international work the association reported that during the last year a very large number of exchanges between medical students in this country and abroad had been arranged. The association is contemplating various schemes for increasing the scope of these exchanges and is attempting to obtain financial support for these projects. The retiring president reported on the World Student Congress of the International Union of Students in Prague, and, after approving his report, the meeting passed a series of resolutions to ensure that no formal links remain between the B.M.S.A. and the International Union of Students. At the same time it was agreed that the B.M.S.A. should co-operate with other interested medical student organizations with a view to setting up a non-political international medical student service to encourage and to facilitate the exchange of medical students, to direct and organize international medical student clinical congresses, and to serve as an international medical student news service. The new organization would not be confined to Western countries, and it was hoped that all interested medical student associations will avail themselves of it.

Medical Act, 1950

There was a lively discussion on the Medical Act, 1950, and it was reported that during the hurried passage of this Bill through the two Houses of Parliament the association had taken very vigorous and at least partially successful action to modify many of the original clauses. The present position was that many of the rules and regulations which would be of vital importance to medical students have still to be discussed and formulated by the General Medical Council. A large number of resolutions and recommendations to the General Medical Council were passed by the meeting, the main ones dealing with the nature and status of the junior house-officer. It was recommended that such officers should have charge of a minimum number of 20 beds in a teaching hospital and a larger number in a non-teaching hospital. Delegates felt keenly that the introduction of this scheme, though in itself acceptable to the student body, might give rise to considerable hardship if it were applied during the present generation of medical students, whose "contract of service" would thereby be altered, and a motion was passed recommending that the "appointed day" be deferred until October 1, 1954. It was pointed out also that Colonial students studying in Britain might well wish to serve their "intern year" on return to their own countries, and the association therefore recommended that suitable Colonial hospitals should be approved for this purpose to enable such students to obtain full British registration. The annual general meeting felt that the terms "general medicine" and "general surgery" as used in the Act should include paediatrics, skins, orthopaedics, casualty, E.N.T., eyes, etc.

Student Health

The meeting discussed at length the report of the British Co-ordinating Committee on Student Health, which advocated the establishment of a rehabilitation or post-cure centre for students recovering from tuberculosis. It was pointed out that no reliable figures of the incidence of tuberculosis were available, but the student committee had just completed a special survey which indicated that the incidence of tuberculosis among medical students was approximately five times as great as among the general community. It was reported that, although no official negotiations had yet taken place, a large number of influential bodies had been approached on an informal basis, and it was felt that the time had now come to set up a properly constituted British Students Tuberculosis Foundation and a British Students Tuberculosis Trust Fund. The annual general meeting gave formal approval to this course, so that the B.M.S.A. will become a founder member of both bodies. With or without help of various interested charitable organizations, it is proposed to purchase premises in the London region which could be used by both medical and other students studying in Britain. The facilities would cover the needs of a student fit for discharge from a sanatorium but unfit to return to work, and it was hoped to establish a university atmosphere with laboratory and lecture facilities so that a student might continue his studies, under medical supervision, as a form of occupational therapy.

Miscellaneous Matters

Among the many other resolutions passed at the meeting was one to establish a permanent Education Subcommittee, whose first task would be to survey the curricula of the various medical schools and prepare a report. This committee would also undertake to review and to comment upon the various recent reports on medical education.

The Grants Secretary reported considerable progress made during this year in the adjustment of various awards, but the attention of the meeting was also called to the fact that there were many wide discrepancies in remuneration by local education authorities for the same standard of academic ability. The association undertook to look into this matter in the coming year.

It was reported that the Canadian Association of Medical Students and Internes had asked to be affiliated to the B.M.S.A. This request was warmly welcomed and formally approved; it was hoped that very close and cordial relations would be established between the two associations in the future.

Finally the thanks of the British Medical Students' Association were expressed to the British Medical Association for its manifold help and encouragement and in particular for the continued and valued assistance of Mr. L. Vince. The free loan of medical films, the awards of essay prizes, and the reduced student subscription to the *British Medical Journal* all testified to the help given and interest taken by the B.M.A. in student matters.

Mr. Robin Coppock, of Cardiff, was elected Student President for the coming year, and Mr. H. A. Milne, of St. Mary's, becomes the new Secretary.

Correspondence

Officials with Maps

SIR,—The rural practitioner regards with some concern the division of country districts under the terms "open," "under-doctored," and so forth—this especially in the light of Mr. Bevan's recent announcements concerning extra inducement payments to encourage more doctors to settle in the thinly populated areas.

The terms to which I have alluded can be applied to most urban areas quite realistically, and do give a practical indication of the present position and desirable future policy. In the country the use of these terms becomes much more arbitrary, as the areas are ill-defined and the actual places of residence of doctors bear no constant or exact relationship to the area or extent of their field of practice. A doctor may attend everyone in the place he lives in, or on the other hand he may attend very few of the people there and do most of his work outside the town. In the latter case this may not be evenly distributed round the perimeter but concentrated in one or two directions, sometimes to a considerable distance. Thus officialdom with a map on which each doctor's residence is pin-pointed is very often completely misguided even if trouble is taken to consider the effect of population, arrangement of partnerships, numbers on doctors' lists, and so forth.

You can get a closed area with only one doctor in it if that doctor happens to have his residence in a small village. He has a protected monopoly with no limitation on the extent of his practice. This may extend into an area labelled "under-doctored." In his immediate neighbourhood there is no other doctor, and in emergency another one is difficult to obtain. On the other hand, in the "under-doctored" area there may not be a doctor within five miles, but there are perhaps half a dozen serving the area, and at least one is obtainable within a quarter of an hour in emergency. There are one or two branch surgeries, and, what with the number of doctors serving the area and the consequent competition, patients are very well attended and get as wide a choice of doctor as might be expected in a small "over-doctored" town.

The matter becomes serious when the country doctor has to face the ultimate consequences of this completely unrealistic labelling of his field of practice. In the country efficient service of any sort can be provided only if units serve large areas. If good work is to be attracted to the country under a capitation system it is essential, especially in sparsely populated areas, that doctors should remain comparatively few and far between. People who think they can improve things with the help of a map and a few coloured flags are as misguided as those who think they can interfere with the balance of nature indiscriminately.

Suppose you plant a doctor in the middle of the sort of "under-doctored" area I have described. He will, however inefficient, take a large proportion of patients in his immediate neighbourhood, but if he is to make any sort of living he will be forced to make more and more encroachments upon the lists of his neighbours, and will extend his practice even beyond their residences. He will certainly extend into the neighbouring "over-doctored" area. The final result gives relatively little improvement to the "under-doctored" area, while it generally reduces the standard of efficiency and life of all the doctors for miles around. They face reduced incomes and are forced to go to patients even further afield from their places of residence in attempts to maintain a subsistence. In the long run there may be a thicker and more evenly spread lot of doctors, but probably these will become of a less energetic type, and between the lot of them will not be able to place as much skill and hard work at the disposal of the countryside as did their relatively sparse but better-paid predecessors.

In a thinly populated area the pattern of practices is so intricate, and the effect of introducing one doctor anywhere so catastrophic and far-reaching, that little but harm can be done to everyone concerned by the heavy and insensitive hand of officials armed with labels and maps. Certain inducement grants and basic salaries are a help but should be very carefully dealt out, and then only by those who know the areas concerned extremely well. But there is far from sufficient money available for inducement grants to keep hard-working efficient men in the country if their areas of practice are going to become more and more limited to their own village or thinned out until they have to cover half a county in search of a living.—I am, etc.,

Eye, Suffolk. J. SHACKLETON BAILEY.

Approach M.P.s

SIR,—I have been asked to write to you in the belief that what follows will be of interest to all general practitioners. At a meeting of my committee held on November 16 the following resolution was passed unanimously:

Believing that as the Minister of Health is responsible to Parliament for the conduct of his Ministry it would be appropriate for each Division of the British Medical Association to bring to the notice of Members of Parliament our present grievances, the Lindsey (Lincs) Local Medical Committee urges the General Medical Services Committee to request all Divisions to approach their local Member and put before him the relevant arguments.

My committee have asked me to write both to you and to the General Medical Services Committee on this matter and to stress that our suggestion is an adjunct and not an alternative to any contemplated Guild action. We are fully aware of the disadvantages of making our case in any way a party issue, but feel nevertheless that the simple measure suggested in our resolution might result in the creation of an informed body of opinion on both sides of the House. We can see no disadvantage in this, and feel that it might help to get our terms of remuneration agreed either by negotiation or by arbitration without recourse to the desperate step of mass resignation.

We feel that our suggestion is simple, can be carried out with very little expenditure of time and energy, can do no harm, and might result in greatly increased sympathy for our profession in the House.—I am, etc.,

A. M. MAIDEN,
Honorary Secretary, Lincs (Lindsey) Local Medical Committee.

No Mass Resignations

SIR,—It would appear that the real doctor-patient relationship—namely, what the patients think of us—is deteriorating rapidly. To-day I overheard a patient say that the cost of National Insurance stamps is being increased because the doctors are asking for more money. Every time I read a newspaper report about the B.M.A. it appears to be on a money issue and gives the impression that we are asking for an increase in pay. The only other reports in which we are mentioned, so far as I can see, are those which describe some doctor's misdemeanours, or those which say how much we are costing already. Why is our Public Relations Department powerless to prevent this constant impression of mercenary medicos? Even if it were true, surely it would be the duty of the P.R. Department to make it appear not so.

But, Sir, it is not true. The General Medical Services Committee, by talking glibly of mass resignations, is proving itself to be completely out of touch with the ordinary G.P. and with

the spirit of the country as a whole. In this town 100% of the doctors decided that they had no desire to bring themselves to the level of workers striking for more pay at a time of national crisis, for, knowing what a bad press we always have, that is what it would seem to the general public.—I am, etc.,

Hatfield, Herts. KENNETH C. HUTCHIN.

"Closed Shop" at Durham

SIR,—The Minister of Health must be deeply disturbed by the decision of the Durham County Council to compel the doctors in that area to join a trade union, as in that case his medical personnel must inevitably cost him more. Under his contract with the regional board a surgeon or anaesthetist, who may only have a contract and be paid for one half-day a week in a particular hospital, is liable to be called upon at any hour of the day or night for an emergency operation in that hospital or any other hospital in the group without further payment. Would any trade unionist who had a contract for a 40-hour week be willing to work at night or on Sunday not only in his own town but in any neighbouring town without receiving double overtime?

It is surprising that the trade unionists, who have fought so hard for their rights, should be willing to admit to their numbers a body of men whose lack of business knowledge and adherence to their principles could only sabotage their movement.—I am, etc.,

Camberley, Surrey. LESLIE HARTLEY.

Service Pay

SIR,—It is now several weeks since the pay of Army officers, excluding those in the R.A.M.C., was raised. May I draw your attention to the injustice still directed against the serving medical officer debarred from resigning his commission?

My pay as a recognized specialist is £1,022 p.a., compared with the civilian £1,700 to £2,750 p.a. It is, however, often stated that our pay cannot be raised, as it would be unfair to officers of other corps. Apart from the fact that medical officers are commissioned after qualification, when some six years older than their non-medical colleagues, it is interesting to see if this statement is justified.

Five years ago, as a temporary lieutenant-colonel, I commanded a field ambulance in a brigade. The other three lieutenant-colonels in the brigade, though younger than I, drew higher pay, as medical officers were not eligible for command pay of 10s. per diem.

Now, whereas I am in my substantive rank of major, one of these three is a brigadier, the youngest is a substantive lieutenant-colonel, and the third has retired on pension (an infantry officer becomes eligible for a pension approximately seven years before a medical officer).

It will be seen that, whether regarded *vis-à-vis* his professional or military counterparts, the Army medical officer is at a considerable financial disadvantage.—I am, etc.,

SERVING M.O.

Trainee Assistants

SIR,—At the Annual Conference of the Representatives of the Local Medical Committees (*Supplement*, November 4, p. 181), the representatives for Manchester are reported to have said that the system of trainee assistants should be abolished on the grounds that it was subsidizing acquisitive practitioners, and that a young practitioner should have the opportunity of assistantship with a view to succession or partnership.

May I point out, first, that the argument is more applicable to those principals who employ permanent assistants without a view, and, secondly, that the scheme does not compel young practitioners to become trainee assistants. Those that do so—some hundred of them—do it because they feel they will be better fitted for a good assistantship with a view or for starting in general practice on their own.

The proposers of the resolution appear to have lost sight of the fact that a young practitioner out of hospital or the Services has not the faintest idea of the intricacies of general practice, a fact recognized by the members of the Cohen Committee. During his year of training the trainee learns much to help him to secure a good post with a view.

One does not deny that the principal who takes on a trainee assistant derives some benefit by doing so; one has a right to expect some return for one's labours, and this was recognized by the planners of the scheme.

If, as stated by the representative for Bristol, the scheme is being abused by some practitioners, and it does not conform with what was intended by Spens, then the scheme should be so modified to conform with Spens and to prevent abuses, but not abolished—I am, etc.,

London, S.W.3. R. CASTILLO.

British Medical Guild

SIR,—We, the undersigned, duly elected members of the committee of the British Medical Guild for St. Marylebone, London, W.1, wish to suggest the following important points.

(1) Definite membership of the Guild (contrary to the B.M.A. circular dated October 12, 1950) should be by payment of subscription, such subscription to be deducted from the annual B.M.A. subscription. In case of non-members of the B.M.A. a nominal payment to be agreed.

(2) We feel that the object of the Guild should be primarily the promotion of the interests of the general-practitioner section of the National Health Service.

(3) We feel we are expressing the dissatisfaction existing at present among a large section of the general practitioners in the N.H.S. (who are loyal members of the B.M.A.) at the present constitution of the British Medical Guild.—We are, etc.,

E. T. WRIGHT, *Chairman*. E. JACOBS.
R. M. BELL, *Secretary*. H. N. LEVITT.
J. L. BOYD. C. R. MCCLURE.
G. D. FLEMING.

Inside the N.H.S.

SIR,—A few weeks ago I was called at 9 a.m. one morning to a woman of 60 who had already been suffering from acute abdominal pain and vomiting for some hours. She was in great distress both of body and mind. She was alone in her flat, had not long since had a breast removed for carcinoma, and her husband was in hospital with coronary thrombosis. Yet, for all my attempts, it was impossible to get her admitted to hospital until the afternoon of the following day.

In a letter just received from the hospital I learn that she had a strangulated internal hernia and that about 18 in. of the bowel was gangrenous. "Infamous" was the laconic comment of one of my colleagues. And so it was. Many a man has been hauled in front of the G.M.C. and branded with that much-misused word for far less. But how can one brand an abstraction like the Ministry of Health with anything?

More recently than this I was called in the early afternoon to an old lady of 76 who had just been knocked over in the street. She had been carried to her flat, in which she lived alone, and it was reasonably clear that she had a fractured femur. Even so it was not possible to get her into hospital until the following day, and then only by calling out a surgeon to make a domiciliary visit.

The feeling of futility and frustration as one gets at the end of a telephone trying to get a patient admitted to hospital has to be experienced to be believed. It is clear that the Civil Service mentality, with "passed to you" as its motto, has dropped its very tentacles on medicine. How often is one advised to "try another hospital," or even dismissed with a breezy "Nothing doing." If the hospitals are as full as they say, and it is not feasible to send out some patient who would be going out possibly in a few days' time, then it should be permissible for the G.P. to get these cases admitted immediately into a private nursing-home, and he should be at liberty to call in the surgeon of his choice to deal with the case. The Ministry of Health would of course be liable for paying the account of the nursing-home.

A popular ditty of the past was called "I stopped, and I looked, and I listened," and one notes that the singer had at least the merit of listening. Is it not now about time that someone stopped and looked inside the N.H.S. and, what is more, listened to what those who have most of the running of

it have to say? Or is the permission (as stated in the Acts) to have beer prescribed on an E.C.10 thought to be adequate compensation to the electorate for the potential tragedies referred to above?—I am, etc.,

G. L. DAVIES.

Brighton.

Appointments at St. Paul's Cray

SIR,—When Miss Hornsby-Smith made her remarks about us in the House of Commons on November 16 she was clearly badly informed both about the procedure by which a doctor enters general practice and the details of our own cases. The general procedure is well known, but in view of the publicity that has arisen we should like to give a factual outline of how we started in practice.

In September, 1948, one of us (J. D. P.) applied to the L.C.C. for a house on one of the new housing estates with a view to starting a group general practice, and in December of that year was granted the tenancy of his present house as explained to the London County Council by the chairman of the housing committee on November 21. He obtained permission to practise in June, 1949. In July, 1949, and March, 1950, respectively, two more of us (L. M. F. and E. T.) applied for permission to practise, the area being an "open" one, and, despite the opposition of the local medical committee, were given permission some months after applying. Like three other doctors who started in practice in the area about this time, and whom Miss Hornsby-Smith seems to have overlooked, we both practise from privately owned houses.

It was learned in June of this year that the area had been "closed" although the population was, and still is, rapidly growing. Since we are limiting the size of our lists, it seemed clear that there would be insufficient doctors to serve the population adequately, and the three of us therefore supported the application which the fourth (R. T.) made in June for permission to practise. This was eventually granted in October of this year. He had obtained a house from the L.C.C. in August, 1950, after the tenancy had been offered to, and refused by, several other doctors.

Although Miss Hornsby-Smith made many inaccurate and irrelevant remarks, she touched on an important problem—namely, that the ability to enter general practice has largely become a question of the ability to acquire a house from which to practise. If her remarks lead to any easing of the difficulties which confront young entrants into practice—difficulties of which we are only too well aware—they will not have been entirely valueless.—We are, etc.,

L. M. FRANKLIN. E. TUCKMAN.
J. D. PAULETT. R. TEPPER.

St. Paul's Cray, Kent.

Terms of Slavery

SIR,—Exactly what do we hope to achieve by our threatened withdrawal from the National Health Service? This is a question I have been asked by lay people and I have heard asked by doctors working in the National Health Service.

It is strange that there are many doctors who cannot define any dissatisfaction with the N.H.S. Act except some vague feeling that the remuneration is inadequate. The events of the past 10 years have so trained us that we no longer protest or reason why as our liberties are cancelled and our wills subjected to the will of the administrator and all-powerful political remote-control. There are so many unsatisfactory facets of the Act as applied to the general practitioner that it is entirely beyond the scope of this letter to mention more than one.

Recently the big national dailies carried leading-column accounts of the resignations of three separate practitioners from the National Health Service. All resigned because they are dissatisfied with the terms of slavery imposed on the G.P., not on account of the remuneration, bad enough as it is.

A doctor on the list of the Warwickshire Executive Council has, in his own reported words (*Daily Express*, November 11), resigned because "I did not realize when I signed my contract that I had signed away my civil liberty to the extent that I have done. To be condemned on the unsupported word of a woman, not on oath, without the normal protection of the law, is more than I can tolerate." This doctor had, it is reported, five complaints made against him. Four were baseless. On the fifth he was reprimanded because he asked for a child to be brought to the surgery instead of visiting it.

Every day every doctor in the Service risks being the victim of any one of his patients' complaints, real or frivolous, made to the executive council. He can be tried, condemned, reprimanded, and fined sums of money on the evidence of any one of his patients who feels aggrieved on account of some transgression or omission on the part of the doctor. But however unreasonable the patients are, the doctor has no redress whatever. A patient can call him at two in the morning 10 miles into the country for the pleasure of telling the doctor that he would like a prescription for cotton-wool. The doctor can do nothing but have the patient removed from his list and so deprive his family and himself of a few more shillings of his dwindling income.

I have been called five miles into the country to see a baby reported as having "a terrible swelling on the buttock." On arrival at the cottage I was attacked by a savage dog, which I beat off with my black bag. The mother made no apology for this reception but departed down the garden to find the baby, who had gone for a walk with an elder sister. When examined, the baby was found to have a small fibrotic nodule in the buttock due to an antidiphtheria injection given some weeks previously. The nodule had been discovered accidentally the night previously while bathing the baby. I was denied the satisfaction of having this patient removed from my list, as she belonged to a sick colleague, a little of whose work I was doing in addition to my own.

The two other practitioners who resigned this week-end are reported as being (1) "fed up with killing myself treating people with colds in the nose," and (2) "having lost faith in myself as a result of the present conditions."

These courageous three have refused to bow down in the house of Rimmon, and their names should be honoured wherever doctors meet to discuss resignation—subject to 80% of the profession doing the same.

I plead that the *B.M.J.* will give all publicity to such cases and that every case of resignation of this type should be investigated fully. These sacrifices must not be allowed to go unnoticed. They must not be made in vain. Let the Minister know that there are still some doctors who value the integrity and honour of a once-respected profession sufficiently to risk placing ideals before cash receipts. Perhaps then he will listen more tenderly to the arguments which at present move him so little.—I am, etc.,

E. C. ATKINSON.

Sheffield.

THE B.M.A. LIBRARY

Under the rules of the B.M.A. Library a member of the Association may borrow a book for 28 days unless it is recalled by the librarian for the use of another member, in which case it must be returned at the expiration of 14 days from the date of issue. This may appear to be a hardship on those members whose commitments make it difficult for them to read a book in 14 days, but unfortunately no other arrangement is possible.

About 7,000 books are borrowed from the Library each year; and of this number some 20% are in great demand and are therefore restricted to a 14-day period. This applies only to new books, and when a book is popular a number of copies are purchased for loan to members. Every effort is made to meet the demands of members for such books, but there is a limit to the number of copies that can be purchased, especially since, after a comparatively short time, they are no longer in demand and remain on the Library shelves. It is not possible to extend the period of the loan indefinitely, nor is it possible to purchase a large number of copies of individual books, for the financial outlay would be out of all proportion to the service rendered. Comparison with subscription libraries is for various reasons inappropriate.

The Science Committee, which is responsible for the management of the Library, is anxious that members should be aware that the full resources of the Library, which are considerable, are always at the disposal of members, whose wishes will, so far as possible, be met without undue delay or inconvenience.

H.M. Forces Appointments

ARMY

Colonel T. H. Twigg, late R.A.M.C., having reached the age for retirement, has been retained on the Active List, supernumerary to establishment.

ROYAL ARMY MEDICAL CORPS

Major J. B. Evans has retired, receiving a gratuity.
Captain T. C. R. Archer to be Major.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel H. S. Waters, formerly I.M.S., to be Lieutenant-Colonel.
Major (Honorary Colonel) D. J. P. Parker, formerly I.M.S., to be Major.
Major (Honorary Lieutenant-Colonel) G. F. J. Thomas, formerly I.M.S., to be Major, retaining his honorary rank.
Major (Honorary Lieutenant-Colonel) J. M. Drew, O.B.E., formerly I.M.S., to be Major.
War Substantive Captain Phyllis M. Edwards, from Women's Forces Employed with R.A.M.C., to be Captain, and has been granted the honorary rank of Major.

SUPPLEMENTARY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Colonel C. H. Budd, M.C., T.D., D.L., to be Honorary Colonel of a Supplementary Reserve Unit.
Major E. V. Bevan, from Territorial Army, Active List, to be Major.

REGULAR ARMY: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

Captain F. S. Airey has relinquished his commission and has been granted the honorary rank of Major.

ROYAL AIR FORCE

Group Captain J. Hutchieson has retired on account of medical unfitness for Air Force service.
Squadron Leader W. Laurence has relinquished his temporary commission, retaining the rank of Wing Commander.
Squadron Leader R. J. Young has been transferred to the reserve (class D).
Flight Lieutenants G. H. Dhenin, J. E. Adamson, W. G. Alexander, P. R. Travers, J. C. A. L. Colenbrander, and E. S. Odbert to be Squadron Leaders.
Flight Lieutenant B. Sykes (employed with the Medical Branch of the R.A.F.) has resigned her commission, retaining the rank of Squadron Leader.
Flight Lieutenant G. Clayton has relinquished his temporary commission, retaining the rank of Squadron Leader.
Mary E. G. Sherwell (employed with the Medical Branch of the R.A.F.) to be Squadron Leader (permanent).

ROYAL AIR FORCE VOLUNTEER RESERVE

Squadron Leader S. Ball has resigned his commission and retains his rank.
Flight Lieutenant J. R. Groves has relinquished his commission on appointment to the reconstituted R.A.A.F., retaining the rank of Squadron Leader.

INDIAN MEDICAL SERVICE

Major A. C. Taylor, O.B.E., has retired, and has been granted the honorary rank of Colonel.
Majors C. S. Gamble and J. D. Munroe have retired, and have been granted the honorary rank of Lieutenant-Colonel.

COLONIAL MEDICAL SERVICE

The following appointments have been announced: G. Graham-Cumming, M.B., D.P.H., Senior Health Officer, Hong Kong; G. V. A. Griffith, M.D., Senior Medical Officer, Hong Kong; H. R. Hudd, M.D., D.A., Specialist (Anaesthetist), Uganda; J. A. McDonald, M.B., and J. M. Vaizey, M.D., D.T.M.&H., Medical Officers, Uganda; E. Carloni, M.D., Medical Officer, Tanganyika; J. J. T. Klimczynski, M.D., Assistant Medical Superintendent (Temporary) Mental Hospital, Barbados; M. Rucinski, M.D., Medical Officer (Temporary), British Guiana.

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

County Council.—Durham.
Metropolitan Borough Councils.—Fulham, Hackney, Poplar.
Non-County Borough Council.—Dartford.
Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

Association Notices

PRIZES FOR NURSES

The Council of the British Medical Association is prepared to consider the award in 1951 of prizes of the value of 20 guineas for the best essay, and 10 guineas for the second best essay, submitted in open competition by each of the following categories of nurses: (i) Student nurses; (ii) State-registered nurses working in a hospital; (iii) State-registered nurses not working in a hospital (i.e., district nurses, private nurses, etc.); (iv) State-enrolled assistant nurses.

The subjects of the essays for 1951 are:—Category (i): The handling of a patient on admission to hospital. Category (ii): What a nurse can do in preparing a patient for operation—including the handling of the nervous individual in strange surroundings. Category (iii): The opportunities of the nurse doing domiciliary work to educate the public in health matters. Category (iv): The special problems of nursing the long-term cases in hospital.

The purpose of these prizes is the promotion of systematic observation among nurses. In awarding the prizes *due regard will be given to evidence of personal observation.* No essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize.

Nurses who are undergoing a course of training at a hospital are eligible to compete under category (i); nurses registered by the General Nursing Council are eligible to compete under categories (ii), (iii), or (iv), whichever is appropriate.

If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. Should the Council decide that no essay entered is of sufficient merit, no award shall be made.

Each essay must be typewritten or legibly written in the English language, must be unsigned, and have attached to it a note containing the name and address of the candidate and the category into which he or she falls. Essays, which it is suggested should consist of from 2,000 to 5,000 words, must be forwarded so as to reach the Secretary of the British Medical Association not later than March 31, 1951.

Preliminary notice of entry for this competition is required, and a special form for this purpose is obtainable from the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

SIR CHARLES HASTINGS CLINICAL PRIZE ESSAY COMPETITION

The Sir Charles Hastings Clinical Prize Essay Competition is established by the Association for the promotion of systematic observation, research, and record in general practice. The competition has been extended by the addition of a second prize known as the Charles Oliver Hawthorne Clinical Prize. The following are the regulations governing the awards:

1. The Sir Charles Hastings Clinical Prize, consisting of a certificate and 50 guineas, will be awarded for the best essay submitted.
2. The Charles Oliver Hawthorne Clinical Prize, consisting of a certificate and a sum of money slightly less than the amount of the Sir Charles Hastings Clinical Prize, will be awarded for the second best essay submitted.
3. Any member of the Association who is engaged in general practice is eligible to compete for these prizes.
4. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations in practice rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.
5. Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950.
6. A study or essay that has been published in the medical press or elsewhere will not be considered eligible for a prize, and a

contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for an award of either of the prizes in any subsequent year.

7. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay the decision of the Council on any such point shall be final.

8. Preliminary notice of entry for this competition is required, on a form of application to be obtained from the Secretary.

9. Each essay must be typewritten or printed and must be accompanied by a sealed envelope, enclosing the candidate's name and address, firmly affixed to the essay.

10. Inquiries relative to the prizes should be addressed to the Secretary.

OCCUPATIONAL HEALTH PRIZE

The Council of the British Medical Association is prepared to consider the award of an "Occupational Health Prize" in the year 1951. The prize consists of a certificate and a money award to the value of £50. The prize is established by the Council of the Association to encourage interest and research in the field of occupational health. The prize will be awarded biennially. Any member of the Association who is engaged in the practice of occupational health, either whole-time or part-time, is eligible to compete for the prize. Candidates may select their own subject.

The essay submitted must include personal observations and experiences collected by the candidate in the course of his work. If no essay entered is of sufficient merit no award will be made. Candidates in their entries should confine their attention to their own observations rather than to comments on previously published work on the subject, though reference to current literature should not be omitted when it bears directly on their results, their interpretations, and their conclusions.

Essays, or whatever form the candidate desires his work to take, must be sent to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1, not later than December 31, 1950. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work. A prizewinner in any year is not eligible for a second award of the prize. If any question arises in reference to the eligibility of the candidate or the admissibility of his or her essay, the decision of the Council on any such point shall be final. Each essay must be typewritten or printed on one side of the paper only, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Inquiries relative to the prize should be addressed to the Secretary.

PRIZE ESSAY COMPETITION FOR MEDICAL STUDENTS

The Council of the British Medical Association is prepared to consider the award, in 1951, of prizes to medical students for essays submitted in open competition. The subject of the essays shall be "The Importance of Accurate History-taking in Diagnosis." In their essays students will be expected to refer to cases within their own experience.

The purpose of this competition is to promote systematic observation among medical students. In awarding the prize *due regard will be given to evidence of personal observation.* No study or essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. A prizewinner in any year is not eligible for a second award of the prize.

Any medical student who is a registered member of a medical school in the United Kingdom and the Colonial Empire at the time of submission of the essay is eligible to compete for a prize. If any question arises in reference to the eligibility of a candidate or the admissibility of his or her essay, the decision of the Council of the British Medical Association shall be final. In determining the number and amount of prizes to be awarded, the Council will take into consideration the number of essays received. In 1950 three prizes of £50 and three prizes of £20 each have been awarded. Should the Council decide that no essay entered is of sufficient merit, no award will be made.

Essays must be typewritten or legibly written in the English language on foolscap paper, on one side only, must be unsigned, and must be accompanied by a form of application which can be obtained from the Secretary of the British Medical Association. Essays must be forwarded so as to reach the Secretary not later than January 31, 1951. Inquiries relative to the competition should be addressed to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

Diary of Central Meetings

DECEMBER

4	Mon.	Subcommittee *re* Occupational Dermatitis, 2.30 p.m.
6	Wed.	Trainee Assistants Subcommittee, 10.30 a.m.
6	Wed.	Central Consultants and Specialists Committee, 11.30 a.m.
6	Wed.	Catalogue Subcommittee, 3.30 p.m.
7	Thurs.	Nursing Subcommittee, 11.15 a.m.
7	Thurs.	Committee on Psychiatry and the Law, 2 p.m.
7	Thurs.	Medical Students and Newly Qualified Practitioners Subcommittee, 2 p.m.
8	Fri.	Amending Acts Committee, 2 p.m.
12	Tues.	Central Ethical Committee, 2 p.m.
13	Wed.	Publishing Subcommittee, 11 a.m.
13	Wed.	Private Practice Committee, 2 p.m.
14	Thurs.	General Medical Services Committee, 11 a.m.
14	Thurs.	Staff Side of Committee "C," 11.30 a.m.
15	Fri.	Ophthalmic Group Committee, 2 p.m.
21	Thurs.	Journal Committee, 2 p.m.

Branch and Division Meetings to be Held

CHESTERFIELD DIVISION.—At Chesterfield Royal Hospital, Friday, December 8, 8.45 p.m., joint meeting with pharmacists to discuss problems of dispensing, arranged by Dr. J. P. Davie.

DARTFORD DIVISION.—At Brook Hospital, Shooter's Hill, Woolwich, S.E., Wednesday, December 6, 8 p.m., clinical meeting.

EAST HERTS DIVISION.—At Lister Hospital, Hitchin, Thursday, December 7, 8.30 p.m., clinical meeting.

FINCHLEY DIVISION.—At Finchley Memorial Hospital, Friday, December 8, 8.45 p.m., meeting.

GUILDFORD DIVISION.—At St. Luke's Hospital, Guildford, Thursday, December 7, 7.30 p.m., clinical meeting.

HAMPSTEAD DIVISION.—At Hampstead General and North-west London Hospital, Haverstock Hill, London, N.W., Wednesday, December 6, 8.30 p.m., lecture by Dr. R. T. Brain: "Some Problems in Dermatology." Illustrated by lantern slides. All medical practitioners in the area of the Division are invited.

HOLLAND DIVISION.—At Peacock and Royal Hotel, Boston, Sunday, December 10, 7 for 7.30 p.m., "Ladies' Night."

KESTEVEN DIVISION.—At George Hotel, Grantham, Thursday, December 7, 7.15 for 7.45 p.m., address by Dr. Margaret MacPherson: "Tuberculosis in Children—Prevention and Treatment."

MANCHESTER DIVISION and Manchester Local Medical Committee.—At Midland Hotel, Manchester, Tuesday, December 5, 7.30 for 8 p.m., medical ball; 9 p.m., dinner.

MID-HERTS DIVISION.—At Red Lion Hotel, St. Albans, Friday, December 8, 8.45 p.m., talk by Mr. M. H. Wostenholm: "The Discharging Ear."

MONMOUTHSHIRE DIVISION.—At St. Mellons County Club, Monday, December 4, 8 p.m., annual dance and cabaret.

NUNEATON AND TAMWORTH DIVISION.—At the Red Lion Hotel, Atherstone, Tuesday, December 5, 8.45 p.m., films of interest to general practitioners.

SOUTH-EAST ESSEX DIVISION.—At Southend General Hospital, Friday, December 8, 8.30 p.m., address by Dr. E. G. Sita-Lumsden: "The Diagnosis and Management of Tuberculosis in General Practice."

SUNDERLAND DIVISION.—At Royal Infirmary, Sunderland, Friday, December 8, 8 p.m., special lecture by Dr. Paige Arnold: "Atomic Warfare and its Relation to Medicine."

WEST BROMWICH AND SMETHWICK DIVISION.—At West Bromwich and District General Hospital, Sunday, December 3, 11 a.m., annual meeting.

Meetings of Branches and Divisions

PRESTON DIVISION

Professor H. L. Sheehan, of Liverpool, delivered the Annual B.M.A. Lecture to the Preston Division on November 14 at the Preston Royal Infirmary, with Dr. Andrew Gibb, chairman of the Division, in the chair. There was a large and appreciative audience of over eighty members. Professor Sheehan took for his subject "Clinical Aspects of Hypopituitarism," and illustrated it with an excellent series of lantern slides. Simmonds's syndrome is a subject which he has made particularly his own, and he successfully demonstrated the mechanism which produced the train of symptoms and physical signs attendant on destruction of the anterior lobe. In particular he debunked the fixed idea that the victim of Simmonds's syndrome is invariably emaciated. He showed one slide of a woman who was a living skeleton. This case had been diagnosed as Simmonds's disease about 27 years ago, and this illustration up to the present day had been copied from one textbook to another as typifying the disease. In fact, the patient had died five days after the photograph was taken, and necropsy showed a normal pituitary gland.

The lecture was followed by a discussion, and the lecturer answered a number of questions.

A vote of thanks was proposed by Dr. J. G. Lord and seconded by Dr. M. J. Flynn. A collection which was taken for the Royal Medical Benevolent Christmas Gift Fund realized seven guineas.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY DECEMBER 9 1950

GENERAL MEDICAL COUNCIL

178TH SESSION

The 178th session of the General Medical Council opened at 44, Hallam Street, London, W., on November 28, under the presidency of Professor DAVID CAMPBELL.

Mr. J. T. Morrison, F.R.C.S., as representative of the University of Liverpool for the term of one year, and Dr. D. S. Torrens, as representative of the University of Dublin for the term of five years, were introduced by Sir Henry Cohen and Dr. Moorhead respectively, and took their seats.

President's Address

The PRESIDENT began his address with a sympathetic reference to four former members of the Council who had died since the previous session—Dr. Edwin Matthew, Lord Hacking, Professor Dilling, and Sir William Thomson. Three other members had resigned or retired—Lord Moran, Dr. Joseph Bigger, and Dr. Matthew Stewart. He then went on to welcome five new members "whose qualifications are as varied as they are complementary"—Dr. Russell Brain, Professor McLeod, Mr. J. T. Morrison, Dr. D. S. Torrens, and Professor Hilda Lloyd. Professor Lloyd was not the first woman to become a member of the Council; that honour belonged to the late Dr. Christine Murrell, who was elected a direct representative in 1933, but died before she could take her seat. Professor Lloyd, however, had the distinction of being the first woman to undertake the full duties of membership of the Council. He also remarked that it was a happy coincidence that, when in the field of medical education the responsibility of the Council was extended beyond the undergraduate into the postgraduate or post-qualification stage, the Presidents of the three Royal Colleges in England were numbered among their members.

After a tribute to his predecessor in the chair, the late Sir Herbert Eason, and the paramount part which he had played in the discussions which had helped to shape the Medical Act, 1950, the President outlined the principal amendments made in the measure by the House of Commons, where the Minister of Health was in charge of the Bill "and laid us under a great obligation to him by one of his most masterly, if not one of his most masterful, displays of Parliamentary accomplishment."

The educational provisions of the Bill had been amended as follows. The Order of the Privy Council approving regulations of the Council by which the period of employment in a resident medical capacity in one or more approved hospitals or institutions was to be prescribed, was made subject to approval of the draft of the Order by resolution of each House of Parliament. He believed that some apprehension might still exist that the draft of the Order might be laid before Parliament prematurely. It should have been removed by the explicit assurance of the Minister that this is not going to be sprung upon the student immediately. It is going to take between a year and two years to make these arrangements. Members of the Education and Examination Committees, and the Council as a whole, would be under no illusion about their complexity or the time it will take to complete them.

"New provision was made empowering the Council to allow house officers who satisfy the Council that they will be, or have been, prevented by lasting physical disability from embarking on, or completing, any period of experience of the practice of surgery or midwifery, to count in lieu an equivalent period of experience of the practice of medicine (section 5 of the Act)."

As to amendments of the disciplinary provisions of the Bill, a requirement had been added about the arrangements to be made by the Medical Disciplinary Committee for the hearing of cases that at least two of the members of the Council elected by the profession, being members of the committee, must be eligible to attend every hearing (Section 15 (4) of the Act). The Minister had made it clear in accepting the amendment that the requirement was a requirement to invite two such members, but that proceedings before the committee were not to be invalidated because members so invited did not attend a hearing.

The scope of the rules of procedure to be made by the Medical Disciplinary Committee had been extended in order to secure that the rules should include provision for requiring that matters should not be referred to the committee until they had, in the manner provided by the rules, been brought before and investigated by a committee of the Council constituted in accordance with the rules (section 16 (2) (*a*) of the Act). Members would appreciate that the committee of first instance would in effect be the Penal Cases Committee as they now knew it. There was no mention of that committee in the Act of 1858, and the amendment made the procedure of the committee subject to regulation by statutory instrument.

"A further amendment affecting both the committee of first instance and the Medical Disciplinary Committee requires the latter committee to include provision in the rules for securing that any member of the Penal Cases Committee, other than the president, who has acted as such in relation to any matter shall not act in relation to that matter as a member of the Medical Disciplinary Committee (section 16 (2) (*a*) of the Act).

"The acceptance of this amendment by the Minister on the simple ground that 'the idea is that those who have already taken part in screening have a tendency to pre-judge' was the last word in a lengthy and ardent discussion of the proposal extending back to the preliminary stages of the preparation of a Bill.

"It would ill become the person who for the time being holds the office of president to discuss the certificate of immunity from bias which Parliament has thus granted to him; and it would not be fruitful to seek for the rationale of the protection against bias in reality, or even in appearance, against which it has been thought right to protect other members of the Council who might have served in the dual capacity. Our business is to accept cheerfully the decision of the Legislature and to make it work. I doubt not that we shall be able to man both committees as separate organizations.

"By another amendment arrived at after an amount of debate which has probably surprised my colleagues as much as it did me, the language of the subsection which makes findings of fact by superior courts in matrimonial proceedings conclusive evidence of any fact so found (section 18 (2) of the Act) was mollified in order, as the Minister put it in words which I would fain borrow, 'so to muffle the blade of the axe as to make it almost look like a benediction.'"

The President concluded by stating that the Council was not in a position to proceed to the appointment of the Medical Disciplinary Committee and the legal assessor or assessors to that committee at the present session, because the Act required the committee to include at least two lay members of the Council, and two such members additional to Lord Nathan who were to be nominated by the King with the advice of the Privy Council had not yet been nominated. In these

circumstances the Council felt that it was its duty to meet again in February, 1951, when the Medical Disciplinary Committee would be appointed and would set to work on its draft rules of procedure. At that meeting any disciplinary cases left over from the present session would be taken.

DISCIPLINARY CASES

Charge Against a Practitioner by a Patient

The Council on November 28 considered the case of John William Paterson Collier, M.B., Ch.B., registered as of Church Road, Yapton, Sussex, who was summoned on the charge that he called on April 9, 1949, at the house of a Mrs. Hitchman for the purpose of attending her infant child and was under the influence of alcohol to such an extent that his professional judgment was impaired. Information in the case was received from the Ministry of Health. The case was called at the previous session of the Council but was adjourned owing to the illness of certain witnesses.

Dr. Collier appeared in answer to the charge, accompanied by Mr. Gerald Howard, K.C., instructed by Messrs. Hempsons, on behalf of the Medical Defence Union of Scotland. The facts of the case were presented by Mr. Harold Brown, instructed by the solicitors to the Council.

Mr. Harold Brown said that Mr. and Mrs. Hitchman were on Dr. Collier's list. On April 7, 1949, he delivered Mrs. Hitchman of a male child. On the evening of the following day, at about 7.45 p.m., the parents thought the child looked ill, and, following a call by the district nurse, several unsuccessful efforts were made to get in touch with Dr. Collier by telephone. No answer was received to repeated calls, but at last, shortly after midnight, Dr. Collier arrived at the house. Mr. Hitchman said that the doctor was the worse for drink, that his breath smelt of alcohol, that he stumbled upstairs, and stumbled again when he went out of the door. Mrs. Hitchman stated that in the bedroom he slumped down on the bed, made a cursory examination of the child, and said, "The baby's all right." He left within ten minutes, and as he went out rubbed his hand over the nurse's face. The baby died within twenty minutes of Dr. Collier's departure; in the meantime the husband had telephoned Dr. Collier's then partner, but the baby was dead by the time he arrived. The district nurse, who was in the house from 7.30 p.m. to 1.30 a.m., had refused to give evidence, and the evidence, therefore, was confined to the husband and wife.

In cross-examination Mr. Hitchman refused to accept the suggestion that, being worried by the delay in the doctor's coming, and perhaps rather indignant, he made an inference about Dr. Collier's condition which was not justified. No post-mortem examination was made on the child, and Dr. Collier gave the certificate. He added that he and his wife were still on Dr. Collier's list.

Mrs. Gladys May Hitchman gave supporting testimony. She also stated that this was her third child, and the first had died apparently of a similar illness, so that she was naturally anxious. Asked whether she still had confidence in his skill and ability she replied, "Yes, as a doctor."

Dr. Collier, in giving evidence on his own behalf, said that the baby was premature and a sickly infant. The first child had died of atelectasis, and the parents were worried about this one. He had made a careful examination of the child on the morning of the day of this occurrence, but could find nothing really wrong. That evening he went to a party at a Bognor hotel, and between 11 and 11.30 p.m. he received a call and left for home at once. Arriving at his house, he collected his bag, and went to the Hitchmans'. He strongly denied that he was under the influence of drink. The child was breathless but no more ill than it had been in the morning. There was no more that he could have done for the child than he did. He considered that the child was at any time likely to die, but there was no special reason to expect sudden death that night.

In cross-examination he said that he put "atelectasis" on the death certificate. The child weighed 5¾ lb. Asked whether he appreciated that the baby had the same complaint as the first one, he said that he never made a definite clinical diagnosis. He was also asked whether he was surprised to learn that after his departure from the house the nurse sent for his partner; he replied, "I cannot say I thought about it." He learned from his partner of the baby's death an hour or so afterwards. He had taken a very moderate amount of alcohol at the party.

Dr. Collier was questioned about the cause of the baby's death. He said that where sudden death of such an infant occurred one had to select among a number of congenital states. The trouble did not appertain to the heart or brain; everything pointed to the chest, and he put down atelectasis as the differential diagnosis. From birth, although respiration was established, it was shallow respiration. The child always had a bluish tinge. It was not taking the breast properly.

Three witnesses who had been with Dr. Collier at the party testified to his absolute sobriety, as did another witness who saw him on his return home.

Mr. Howard, in a closing speech on behalf of Dr. Collier, said that the only thing for which he had to reproach himself was for leaving his practice unattended for a number of hours. He asked the Council to dismiss the allegation of being under the influence of alcohol and of any consequent negligence.

The Council deliberated *in camera*, and on the readmission of strangers the President announced that the Council had found that the facts alleged against Dr. Collier in the charge had not been proved to their satisfaction. The case was dismissed.

Cases Coming up for Judgment

The Council considered the case of Mrs. Ethel Grundy Toward, registered as of Birtley, Co. Durham, who, at a previous session, had been found to have been convicted at Gateshead on July 19, 1948, of driving a motor-car when under the influence of drink or drugs to such an extent as to be incapable of having proper control. Mrs. Toward appeared and produced satisfactory testimonials, and the Council decided not to instruct the Registrar to erase her name, and dismissed the case.

Cases Arising out of Convictions

The Council considered the case of Eric Leonard Neil Shoeten Sack, registered as of Trinity Court, Gray's Inn Road, London, W.C.1, who was summoned on the charge that he had been convicted at the Tower Bridge magistrates' court on March 13 last of receiving two suitcases containing property to the value of £50, knowing the same to have been stolen, and was fined £20 and 10 guineas costs. Dr. Sack appeared, and was accompanied by Mr. Leigh Taylor, of Messrs. Hempsons, solicitors, instructed by the Medical Defence Union.

The Council's solicitor having stated the facts revealed at the police court, and that Dr. Sack had given notice of appeal but had subsequently withdrawn it, the respondent went into the witness-box and in reply to Mr. Taylor said that at the time of the occurrence he held the position of ophthalmic registrar at King's College Hospital. In order to control nervousness and excitability he began to take sodium amytal fairly regularly, though when he was away from his work he did not take it. On the Monday of the week in which this occurrence took place, following some dispute between himself and a colleague, he began to increase the dose, and on the day in question he took as much, altogether, as 24 g. He had an appointment that afternoon with the Medical Defence Union; he remembered leaving their offices, but recalled nothing else until he found himself in a taxi with police officers and with the open suitcase in front of him. His memory of the events of that afternoon was quite incomplete. He had told this story to the magistrate, who had said that he had never known a man so drugged as not to know what he was doing. He decided to appeal, but afterwards withdrew his appeal in order to avoid further publicity. He had now altogether given up sodium amytal and felt himself absolutely confident of avoiding it altogether in the future. In reply to a question he said that the dosage on which he started was 3 g. a day.

Dr. Robert Forbes, secretary, Medical Defence Union, said that Dr. Sack came to see him by appointment on the day in question, and while he was taking the preliminary notes of the interview he was struck by his general demeanour, and began to take a professional interest in him. His face was congested, his pupils dilated, and he had some difficulty in speech and in holding up his head, and towards the end of the interview he was rather worse than at the beginning. He had made a note at the time, "His demeanour appeared to be that of someone who was under the influence of a drug." His demeanour and appearance were now quite different.

Mr. L. H. Savin, F.R.C.S., who was Dr. Sack's chief at King's College Hospital, said that Dr. Sack had held the appointment for about two months. He was a highly conscientious man, exceedingly scrupulous, a man of rather nervous temperament, and inclined to worry if a patient was not doing as well as he wished. His offence was certainly not in keeping with his normal character. He saw him after the conviction, at which time he could not speak coherently, and he called a psychiatrist colleague to see him. In the course of the next few hours he had recovered.

Dr. John Henry Watkin, medical superintendent, Leavesden Mental Home, under whom Dr. Sack was now working, said that he had formed a very high opinion indeed of his character. He was a keen medical officer, excellent at his work, and in extremely good relationship with his colleagues. From his own observation of Dr. Sack after three weeks' daily contact he had found no indication whatever that he was taking drugs.

In reply to questions Dr. Watkin said that sodium amytal was known as a drug of addiction, but he had not seen many patients addicted. He thought the danger of addiction was likely to be very much less than with morphine sulphate. The effect of the drug wore off very quickly. Asked whether a person who had taken the drug was likely to give an entirely fictitious name to the police, Dr. Watkin said he thought it quite likely.

Mrs. Sack gave evidence on behalf of her husband, saying that he was now entirely free from any influence of drugs.

Mr. Leigh Taylor, speaking on behalf of Dr. Sack, said that following the conviction eight months ago he had managed to maintain his freedom from the drug despite the stress and strain of his experiences, culminating in his appearance before the Council.

After the Council had deliberated *in camera* the President announced that the conviction had been proved, but in order to assist Dr. Sack to overcome the tendency to which he attributed the act leading to his conviction the Council had decided to postpone judgment for one year, until November, 1951, when Dr. Sack would be required to appear before the Council again and to produce testimonials from professional colleagues as to his conduct in the interval, with special reference to the question whether he had continued to refrain from the use of drugs.

The Council considered the case of Frederick James Hopkins-Husson, registered as of Ann Street, Edinburgh, M.B.Calcutta, 1941, who was summoned on the charge that at York Assizes beginning on November 5, 1949, he had been convicted of an offence against a boy aged 14 between June 1 and 30, 1949, at Stockton-on-Tees, and had been sentenced to be imprisoned for 12 calendar months. In May, 1950, the Council, on the application of the practitioner, postponed the inquiry pending the result of an appeal. The Council's solicitor presented the facts of the case, and Dr. Hopkins-Husson was represented by Mr. Harold Brown, counsel.

In opening the case for the respondent, Mr. Brown referred to the legal arguments in the Spackman case, on which there was judgment by the House of Lords. It was held that the Council could not go behind a conviction, but he felt that certain facts should be placed before the Council. This was not an ordinary case in which there was a conviction and nothing more to be said. As the Lord Chief Justice had stated in the Court of Criminal Appeal, the trial judge was obviously in favour of acquittal. The trial judge had stated that the verdict was an unexpected one; he deferred pronouncing sentence from Durham to York assizes, and in passing sentence he said that he did not agree with the verdict and did not understand it. When the matter came before the Appeal Court the Lord Chief Justice considered it to be so important that he ordered it to be heard before a full court of five judges. The appeal was dismissed on the ground that the court could not interfere with the verdict of the jury. The boy in question had not been treated by the doctor, though he was on the doctor's list. The point might arise on some occasion whether being on a doctor's list constituted a professional relationship. The family of the boy continued to be patients of the doctor for months afterwards, and, as the judge had said, "Can you believe the parents believed that boy's story?" Mr. Brown submitted that, even if the Council could not go behind a conviction, if they were presented merely with the bald fact of the conviction they would be incompletely armed with the relevant facts. The surrounding circumstances were a matter for the consideration of the Council.

Dr. Hopkins-Husson, in giving evidence, said he had at all times maintained his innocence. Since his release he had resumed practice in the same district and now had 1,600 patients on his list. Evidence of character was given by a doctor who had been a fellow student of Dr. Hopkins-Husson and by two patients. A statutory declaration was read, and the evidence as to character given at the assize court was repeated.

After deliberation *in camera* the Council found that Dr. Hopkins-Husson had been convicted of the misdemeanour, but it did not see fit to direct the Registrar to erase his name.

The Council considered the case of William Melrose, registered as of St. Paul's Square, Liverpool, L.R.C.P., L.R.C.S.Ed., 1924, L.R.F.P.S.Glas., 1924, who appeared on the charge that he had been convicted at Liverpool City Magistrates' Court on July 14, 1950 (after having pleaded guilty), of being found drunk, and had been fined 10s. The Council found the conviction proved, and the President stated that this was not the first time that Dr. Melrose had appeared before the Council in consequence of convictions for drunkenness. The Council took a grave view of this further conviction, which indicated that a habit of intemperance had been formed. It postponed judgment for two years, and at the end of the first year Dr. Melrose would have to appear before the Council with testimonials regarding his conduct in the meantime.

The Council considered the case, adjourned from two previous sessions, of Nigel Harold Maurice Russell Monro, registered as of Sloane Avenue, London, S.W.3, M.R.C.S.Eng., L.R.C.P.Lond., 1936, who appeared to answer to a series of convictions.

The first conviction was on January 23, 1947, at Ashford, Kent, for failing to comply with the Dangerous Drugs Regulations in respect of keeping a proper register. In February, 1947, he was convicted at Bow Street of insulting behaviour and assaulting a constable. In July, 1949, he was convicted at the West London court of being drunk and disorderly and of assaulting a constable. On this latter charge he was ordered to find surety for his good behaviour for the next twelve months. In November, 1949, he was convicted at the Central Criminal Court of assaulting his wife, thereby occasioning her actual bodily harm, and was sentenced to twelve months' imprisonment. The Council's solicitor, in describing the offence against the Dangerous Drugs Regulations, said that most of the entries were defective, many of the lines were taken up by dots, and quantities were given with Roman numerals but without denominations. The Home Office removed the doctor's authorization under the Dangerous Drugs Act.

Dr. Monro, speaking in his own defence, said he appreciated that these were serious charges, but he wanted the Council to understand the circumstances behind each conviction. The inaccurate or incomplete entries in the register were due to a technical error. He had in fact entered the drugs in the book but had entered them on the wrong page. He was wrong in adopting a hostile attitude towards the investigating authorities. He did not regard his first conviction as justified, and it was his sense of grievance, combined with the fact that he was not well at the time—and he had at that time been having drugs; he did not wish to hide anything from the Council—which accounted for the circumstances of the second conviction a fortnight later. The police officer pushed him along and would not listen to any explanation. Then for a period of two and a half years there was nothing against him. The third conviction arose out of a similar incident. The assault upon the police was the result of his resentment of physical compulsion; the police officer shoved him, and he shoved him back. He realized that he should not have done so. The assault upon his wife which led to the fourth conviction was the culmination of much domestic unhappiness. He bitterly regretted his loss of temper; he had suffered physically and mentally as the result. But the whole circumstance was magnified because this was at a time when he was under surety for good behaviour, and his breach of recognizances explained the severity of the sentence. Since leaving prison in July he had been engaged in private practice in London, and he read a number of grateful and appreciative letters which he had received from his present patients.

The Council considered the case in private. The President then said that these serious convictions had led the Council to consider whether it was in the public interest that Dr. Monro should continue to be a registered practitioner; but in view of his frank statement and the recent testimonials from patients the Council had decided to give him a further chance. Judgment would be postponed for two years, until November, 1952, but the Council would desire to see Dr. Monro in November, 1951, when he would be required to produce testimonials from professional colleagues and other persons of standing concerning his conduct in the interval.

In three cases down on the list for hearing it had been impossible to secure the attendance of the practitioners concerned, and the cases were postponed until the special February session.

Unproved Allegation against a Doctor

The Council considered the case of Florence Joseph O'Driscoll, registered as of Moss Lane, Liverpool, 9, M.B., B.Ch., 1928, N.U.Irel., who was summoned on the charge that on May 31, 1950, he was under the influence of drink so as to be incapable of carrying out his professional duties towards patients waiting to consult him, in particular in the case of a Mrs. Doreen Shone, one of the said patients. The Council received information in this case from the Chief Constable of Liverpool. The practitioner was represented by Mr. D. Braben, counsel, instructed by Messrs. Behn, Twyford, and Reece, solicitors.

Mr. Gerald Howard, K.C., *presented the facts to the Council.* He said that Mrs. Shone was not present and the only evidence would be that of two police officers. Inspector James Smale, of the Liverpool Constabulary, said that on May 31, in response to a telephone message, he, with a detective sergeant, went to the doctor's surgery. The doctor leaned against the door, his breath "smelt of spirits," and the inspector told him he was not in a fit condition to deal with further patients that night, to which the doctor replied, "I understand, inspector." When he told the doctor the nature of the complaint which had been received he asked for the name of the complainant, which was not given him. He considered that the doctor was under the influence of drink and unfit to deal with patients. Both officers were cross-examined, and Sergeant Metcalfe, when asked by what right he entered the house, agreed that they were on "rather delicate ground," but they were never told that they could not come in. Inspector Smale agreed that he asked the doctor his age, the facts of his tenancy, and whether he was married. The doctor's answers were all "thought over." He did not ask him how many drinks he had had ; he could see that he had had too many.

Dr. O'Driscoll, in evidence, said that Mrs. Shone was a patient on his list to whom he was giving antenatal treatment. When she came to his surgery on the night in question he inadvertently called her by the name of another patient, afterwards apologizing for his mistake. He was aware of nothing which caused Mrs. Shone to bring her complaint beyond the fact that he had called her by the wrong name. He thought the officers had forced themselves into the house, and to justify their action were going to make out a charge of drunkenness. His evening surgery had been open for an hour and a half, during which time he had seen about a dozen patients, none of whom had made any complaint. Two patients who had visited the doctor on the evening in question affirmed his sobriety, and another witness testified to the same effect.

After an address by the respondent's counsel the Council deliberated for a very short time *in camera*, after which it was announced that it had found the facts alleged not proved to its satisfaction.

Alleged Canvassing

The Council considered on December 1 the case of Eugene Wlodzimierz Collis, registered as of Woodstock Road, Oxford, M.D.Vilno, 1937, who was summoned on two charges relating to the procurement of patients. The first concerned the canvassing of the patients of the practice of Dr. G. G. Cooke, of Oldbury, Worcestershire, and the second of canvassing the patients of the practice of Drs. Lockley, Howson, and Barrada, who were in partnership in Oldbury, and specifically of procuring or endeavouring to procure five patients of this practice and, in two of the cases, their families also. The charge relating to one of these five cases was dropped owing to the inability of the patient to attend as a witness and the inadmissibility of a statutory declaration.

Dr. Collis attended, with Mr. E. J. P. Cussen, counsel. The complainants were Dr. R. M. Howson and Dr. Hazem Barrada, who were represented by Mr. Norman Richards, counsel. Dr. N. E. Waterfield, a member of the Council, said that similar charges were considered by the Central Ethical Committee of the British Medical Association, and as he was a member of that committee he thought it advisable that he should take no part in the present proceedings.

Mr. Norman Richards said that the charges covered the period, May, 1949, to September, 1950. Dr. Collis in 1949 settled in practice in Oldbury, purchasing the house of a Dr. Harper, who had died. In the summer of that year it became known that Dr. G. G. Cooke, another practitioner in the town, was about to retire, and there had been inquiries about who was to succeed to his practice. On July 18 Dr. Collis received a letter from the chairman of the executive council stating that he understood that, provided the executive council, the local medical committee, and the Medical Practices Committee agreed, he would be prepared to take over Dr. Cooke's practice on October 1, a condition being that by that time he would have obtained a permanent assistant with a view to partnership. The letter went on to say that in that case it would be advisable for him to get an assistant early in September. On August 11, however, he received another letter stating that it was understood to be agreed that Dr. Cooke's partner, Dr. Squair, was the logical successor in the practice.

The first charge related to a Mrs. E. H. Round, of Oldbury, who stated that Dr. Cooke was first called in to attend her mother-in-law in an accident, but later she asked Dr. Collis to attend privately. Dr. Collis was told that Dr. Cooke was the doctor who had Mrs. Round and her family on his list. Later on Dr. Collis called at the house without being requested and told Mrs. Round that he was taking over Dr. Cooke's practice. Thinking this to be the normal procedure, she handed over to him the medical cards of her family. In the second case a Mr. Benjamin Sadler, who had been Dr. Harper's patient, went to Dr. Harper's surgery and found Dr. Collis in possession. It was alleged that Dr. Collis asked about Mrs. Sadler, who was a patient of the practice of Dr. Mence, to which the present complainants were the successors, and told Mr. Sadler that if he could have both him and his wife on his list he could get them "full benefit." On this Mrs. Sadler went to the surgery, and, it was alleged, after some conversation was told that she was on the books of his practice. In a third case it was alleged that a Mr. Benjamin Griffiths, who wanted to come on to Dr. Collis's list, was told that his acceptance was subject to the transfer of the five members of his family, and Mr. Griffiths was induced to sign and return the cards. Another patient, Mrs. Daisy Cutler, who was on Dr. Barrada's list, was induced to sign a form of application for acceptance on Dr. Collis's list. Another patient who was on Dr. Barrada's list, a Mrs. Fletcher, desiring to have her child circumcised by Dr. Barrada under a private arrangement, arranged for the transfer of the child to the list of Dr. Collis, and then, it was alleged, Dr. Collis endeavoured to procure Mrs. Fletcher herself and her husband, who were patients of the partnership practice, to sign forms of application for acceptance by him.

Evidence bearing out counsel's statement was given by all these witnesses. Mrs. Round said that, after she had surrendered the cards, she realized that something was wrong or unethical. Mr. Sadler said that some months after Dr. Collis had taken both himself and his wife on his list he came round to their house, said that he was very much upset because people were complaining of him, and asked Mr. Sadler to sign a paper, which he did, though he did not read it. It was understood that this paper was a declaration that the change had been made on Mr. Sadler's initiative, and that it related not to the present inquiry before the Council, but to the inquiry by the Ethical Committee of the British Medical Association.

Dr. Collis, in evidence on his own behalf, said that he practised in Poland until 1939, served in the Polish Army until 1941, then volunteered for service in the British Forces and went in the R.A.M.C. to West Africa until July, 1944, when he was demobilized. In 1941 he was placed on the temporary *Medical Register* and transferred to the permanent one in 1946. From 1944 to 1949 he practised at various places as locumtenent, and in May, 1949, at Oldbury, purchased the house of a Dr. Harper who had recently died. He made the purchase by putting an advertisement in the *British Medical Journal*. While carrying on his practice there he had a conversation with Dr. Cooke, and learned that he proposed to retire. Dr. Cooke had a partner, but he understood that he had no intention of following on in the practice. The chairman of the executive council told him that there was no reason why he should not succeed to the practice, and he took that to be an indication that he was likely to succeed. Accordingly he took an assistant and made certain alterations to the premises. At his first meeting with Mrs. Round she said she would like him to be her private doctor. Later she said she had heard that Dr. Cooke was going to retire and that he was taking over the practice. He was surprised at the statement, because everything so far had been confidential ; he assumed that Dr. Cooke had divulged the information. He had had no idea of wilfully taking patients away from other doctors. Mr. Griffiths came to the surgery, told him that he was a patient of the late Dr. Harper, and asked him to accept him. Dr. Collis denied that he asked for the transference of the family ; on the contrary, he told Mr. Griffiths that he was a new man starting from scratch. What several of the witnesses had said was inaccurate and confused. The episode concerning Mrs. Fletcher occurred when he was away on holiday, and he never heard of the operation having been performed by his locumtenent until it was brought to his notice by the solicitors as a subject of complaint.

In reply to Sir Henry Cohen he said that he started at Oldbury 18 months ago from scratch ; he now had a list of 1,800, and he agreed it was likely that patients had come on to his list from that of the partners who were the complainants.

Mr. Cussen said that Dr. Collis was a Pole, and here and there his English had been difficult to follow even in the witness-box, so that it was very likely that this would account for confusion and misunderstanding in the various conversations which were the subject of evidence.

After a brief deliberation *in camera* the Council found that the facts alleged against Dr. Collis in the notice of inquiry had not been proved to its satisfaction, and dismissed the complaint.

Relationship with Female Patient

The Council considered on November 30 and December 1 the case of Illtyd Gwyn Williams, registered as of Tynewydd Road, Barry, Glam., M.B., Ch.B.Ed., 1923, who was summoned on the charge that in February, 1948, and on numerous occasions thereafter during the period ending in or about October, 1948, he had sexual intercourse with Mrs. Ceinwen Williams, of Barry, with whom at all material times he stood in professional relationship.

The complainant was Mrs. Ceinwen Williams, whose counsel, Mr. Morgan, in presenting the complaint, said that in 1940 Dr. Williams became the family doctor of Mrs. Williams's father and mother, and from 1945 or thereabouts Mrs. Williams's doctor also. At first Mrs. Williams was on the doctor's National Health Insurance list, but later, owing to reaching a higher income scale, she passed out of the National Health Insurance and continued as a private patient. The two people became friendly, and in December, 1947, Dr. Williams proposed marriage and was accepted. On the strength of this proposal Mrs. Williams permitted intercourse to take place. In October, 1948, she noticed a cooling off on the doctor's part, the engagement was broken, and a breach of promise action was begun which resulted in the complainant's favour, with damages of £1,500 and costs. Mrs. Williams gave evidence as to the professional attendances of Dr. Williams. She underwent a major operation in July, 1947, and it was Dr. Williams who made the necessary arrangements and attended her during convalescence.

Dr. Williams in his answer stated that from the time Mrs. Williams and he became engaged he treated her as his future wife and no professional relationship existed between them. He denied that there had been any cooling off on his part. It was Mrs. Williams's general behaviour which resulted in the break.

The Council after private deliberation found the facts proved and that Dr. Williams had been guilty of infamous conduct in a professional respect, and instructed the Registrar to erase the name of Illtyd Gwyn Williams from the *Medical Register*.

Restorations

It was announced that the following names had been restored to the *Medical Register*: William Hamilton, Gerald Donagh Flatley, and Henry Charles Coutts Hackney.

Latin Titles in the Pharmacopoeia

Of the business of the Council other than disciplinary the only item of note was the report of the Pharmacopoeia Committee, embodying a report of the British Pharmacopoeia Commission, which stated that the use of Latin titles for the monographs in the *British Pharmacopoeia* had been reviewed, and it was the unanimous opinion of the Commission that the main titles of the monographs in the volume of 1953 should be stated in English. It was proposed that Latin titles formerly used should be retained as synonyms, but that Latin titles should not be coined for new monographs. In the *Addendum* which is about to be published it is felt, in view of this decision, that no useful purpose would be served by inventing Latin titles for the monographs on preparations of human blood, which will appear as a separate section with titles in English.

ASSISTANTS AND UNESTABLISHED DOCTORS

SPECIAL GROUP ASKED FOR

A meeting was held in London on November 29 which was attended by a large number of unestablished practitioners and assistants. Dr. H. Rezler, in the chair, invited discussion on a provisional statement of policy which had been submitted by an interim committee, and asked for a decision concerning ways and means of putting forward the views of this group of doctors.

The discussion which followed covered a wide field, and included entry into general practice, the new procedure for the change of doctor, distribution of general practitioners, and the difficulties met with by doctors with small lists and assistants who had no prospects of becoming principals. The meeting approved by a large majority a resolution to apply to the British Medical Association for the formation of a Special Group as provided for in its constitution.

CHEMISTS' DISPUTE SETTLED

The dispute in the Isle of Man between chemists and the Manx Health Services Board has been settled (*The Times*, December 1). Chemists' shops are now dispensing National Health Service prescriptions.

DOCTORS' COMPENSATION

General practitioners who are entitled to claim compensation for the loss of the right to sell the goodwill of their practices and who have not yet submitted their claims should do so *at once*. Claims should be made by *December 31*. Claims made after that date will not be accepted unless the Minister of Health is satisfied that the delay was due to special circumstances. *Claims made after February 28, 1951, will not be accepted in any circumstances.* Doctors must *not* wait until their retirement before submitting claims.

Doctors who are in doubt about their title to compensation or who require claim forms should write to the Ministry of Health (A.G.D.3c), Whitehall, London, S.W.1.

INVESTIGATION INTO GENERAL PRACTICE

An inquiry into general practice is to be carried out by the General Practice Review Committee of the B.M.A. This Committee was set up by the Council in the summer of this year, and its chairman is Dr. C. W. Walker, of Cambridge.

At a meeting on November 29 the Committee decided that the inquiry should be in two parts. The first part consists in a personal investigation into practices by a single medical investigator with a co-investigator whose identity may vary according to the area. For this purpose it is hoped to obtain a random sample of 200 practices, the sample to be divided up between areas approximately corresponding to the regional hospital board areas in England, Scotland, and Wales.

The second part of the inquiry is to be carried out by means of a postal questionary sent to all general practitioners. There are about 20,000 general practitioners, and these will probably be divided up into groups of 500, doctors in each group being asked to reply to only two questions. In this way replies to about 80 questions can be obtained from the 40 groups.

The samples will be drawn and the questions framed with statistical precautions in mind, and the replies will be analysed by a statistician. Some of the material obtained from the intensive inquiry into 200 practices may also be subjected to statistical analysis.

"CLOSED SHOP" AT DURHAM

MEETING OF DOCTORS

On November 28 the Durham County Council was reported to have reaffirmed its decision to dismiss any of its employees who did not provide evidence of membership of a trade union or professional association. A second meeting of medical officers employed by the county council was accordingly held on December 2 at Durham. Thirty-nine medical officers attended and five others sent letters of support. Dr. William Hunter, honorary secretary of the North of England Branch of the B.M.A., took the chair.

The meeting was addressed by Dr. E. Grey Turner, Assistant Secretary, who said he had read in the Press an argument put forward by the county council in support of its closed shop policy—namely, that non-members of unions or associations should not enjoy the benefits of terms and conditions of work negotiated by the unions or associations. This was a selfish and narrow-minded attitude, he said, which did not appeal to doctors. The B.M.A. was quite content that the small minority of non-members should enjoy the fruits of its labours on behalf of the medical profession. Indeed, any non-member could walk into B.M.A. House in London and receive expert advice and help without hindrance or charge. The Association was convinced that an open-handed and generous attitude to non-members was far the best way of persuading them to become members.

Dr. Grey Turner gave further evidence of united support from the medical profession in opposition to the closed-shop policy and called upon the Durham medical officers to continue their resistance to the county council's instructions.

There followed a brief discussion. To meet the possibility of token dismissals by the county council, arrangements were planned by which the work of dismissed medical officers would not be undertaken by any other doctor. The meeting resolved unanimously to adhere to its earlier decision to ignore the instructions of the county council. Arrangements were again made to contact personally those doctors who were unavoidably prevented from attending the meeting.

CARIBBEAN CONFERENCE

A British Medical Association Conference will take place at Port of Spain, Trinidad, in the week beginning January 8, 1951. The Conference will consist of a business meeting, which will be attended by delegates from the Caribbean Branches of the Association and by Dr. H. Guy Dain and Dr. H. B. Morgan from the Council, and of a number of scientific sessions. The agenda for the business meeting will be heavy and will include discussion of the impact upon the medical services of the proposed federation of the Caribbean Colonies, of the relations between the B.M.A. Branches and the Colonial Governments, and of the relations between the medical profession and the Press. The Honorary Secretary of the Conference will be Dr. J. A. Waterman, 24, Coblentz Avenue, Port of Spain, Trinidad.

MEDICAL EXCHANGES WITH NORTH AMERICA

The International Relations Committee of the B.M.A. is in consultation with the Canadian and American Medical Associations in an endeavour to work out a scheme by which a limited number of British doctors could visit Canada or the U.S.A. each year in exchange for the same number of visiting doctors from North America. The visits will be for professional purposes and will be at the expense of the doctors concerned. The object of the scheme will be to overcome currency barriers, and in due course it will be submitted to the Bank of England for approval.

SHORT-SERVICE COMMISSIONS IN R.A.M.C.

The War Office has announced new regulations with regard to short-service commissions in the R.A.M.C. These provide for the recruitment of general duty medical officers, specialist medical officers, and women doctors. Commissions will be granted for a period of eight years from the date of appointment, of which any period from two to eight years may be spent on the active list and the balance in the Regular Army Reserve of Officers. Extensions of one or more years on the active list may be granted up to a total of eight years' active-list service.

Applicants with less than 12 months' service on full pay as a medical officer will be appointed in the rank of lieutenant. Those with 12 months or more of such service, whether National Service or other, will be appointed in the rank of captain. Promotion to captain takes place on completion of a total of 12 months' service on full pay.

On the satisfactory completion of the active-list period, short-service officers will receive on retirement tax-free gratuities as under:

For two years' service, £240.

For three years' service, £450 plus £150 for each year's completed service over three years.

Heard at Headquarters

Disciplinary Delays

At its recent session the General Medical Council had 17 disciplinary cases on its list, but some of them were postponed until a special session in February, and one until May. Only one case involved a charge of canvassing, and that was dismissed. Such charges seem to have diminished in number in recent years. The Council is notably patient with offenders. One practitioner was convicted of certain misdemeanours in 1945. He was summoned to appear before the Council, but failed to turn up owing to illness. The hearing was postponed at no fewer than six sessions. In 1948 the case was dealt with and the convictions proved, but judgment was postponed for a year. At the end of that year it was postponed for a further six months. When the case came forward at the session just held it was stated that the practitioner had had another conviction and was now in prison. The Council thereupon postponed judgment for a further three months.

R.C.S. and G.M.C.

Reference was made at the recent session of the General Medical Council to the close connexion between that body and the Royal College of Surgeons of England. The first President of the General Medical Council, in 1858, was Sir Benjamin Brodie, a Past President of the Royal College. The second President of the Council, Mr. J. H. Green, was also a Past President of the Royal College, and so was a later President of the Council, Mr. John Marshall. Those who have been Presidents of the Royal College and members of the Council include Sir William Lawrence, Richard Quain, Sir James Paget, Sir John Simon, and Sir Henry Morris, among others, and the present President of the Royal College, Sir Cecil Wakeley, is a member of the Council. With the election of Professor Hilda Lloyd as a member of the G.M.C., the Council has now among its members the Presidents of the three Royal Colleges in London.

Eye Service

The recent conference of executive councils at Harrogate threw some light on unexpected benefits from the National Health Service. One story told was of a charlady who, wanting a pair of spectacles, managed to get two pairs, and two pairs for her husband, and also a pair for her aged mother. Unfortunately, the mother died soon after she had been fitted, but were the spectacles wasted? Not at all. They were placed on her in her coffin, and the daughter declared that they made her look ten years younger. The neighbours all came in and said she "looked lovely."

REGISTRARS' GROUP

South-east Metropolitan Region.—A general meeting of registrars in the South-east Metropolitan Hospital Region will be held at B.M.A. House on Friday, December 15, at 7 p.m.

South-western Region.—A general meeting of registrars in the South-western Hospital Region will be held in the board-room of the Bristol Royal Infirmary on Tuesday, December 12, at 7.45 p.m.

South-west Metropolitan Region (Western Area).—A general meeting of registrars in the South-west Metropolitan Hospital Region (Western Area) will be held at the Royal South Hants Hospital, Southampton, on Saturday, December 16, at 3 p.m.

Correspondence

General-practitioner and Consultant Surgeons

SIR,—I do not often write about remuneration, but besides being important to the recipient it has a sort of prestige value and gives an indication of the value put on the services rendered. From this point of view it will probably be of interest to general practitioners—perhaps even to the Minister of Health, who is probably unaware of a lot that is done in his name—to state a few facts that have just been brought to light by representatives of the regional hospital board when they visited our local hospital to discuss the way the surgical needs of the local population may best be met. I am slightly affected by these matters, but I will try to put them quite fairly.

Our little hospital is one in which for some fifty years the local practitioners have done most of their own surgery, calling in consultants, etc., when desirable. Now this is changed, and we have one local practitioner appointed as S.H.M.O. (which, in spite of the prejudice against the grade, is a good thing) and a visiting surgeon who comes regularly once a week. The figures given to us at the meeting by the representatives of the regional hospital board show that in 1949 the S.H.M.O. and the surgeon between them performed 53 operations, while the general practitioners—whose remuneration, such as it is, comes from the "staff fund"—performed 433. These figures do not show quite what will happen this year, for the surgeon did not really function much till about July. Still, they are striking, and no less striking is the regulation that whereas a paid anaesthetist is provided for the surgeon and S.H.M.O. no anaesthetist is provided—or can be provided—for a G.P. surgeon.

The economics of this situation are intriguing. It was originally reckoned that operations would be performed on four days a week, and so four anaesthetic sessions were provided for. Now, however, that it proves that there is barely work for the S.H.M.O. and the visiting surgeon for one session each week the anaesthetists are to be cut down to two—a clear saving for the regional hospital board of two sessions a week, while doctors "give" anaesthetics for G.P. surgeons, who do the lion's share of the work, and get nothing for it. The economy drive is thus proving a strong incentive to the regional boards to use practitioners in hospitals—the recent action of the Minister about them replacing registrars is suggestive—for where G.P.s do the work they apparently get nothing, while the employment of a "surgeon" involves payment of an anaesthetist as well.

Even supposing—as may happen—that this year the S.H.M.O. and surgeon between them do 150 operations at Winsford and the G.P.s as few as 300, it will, I think, strike most people as unjust that the 150 should be paid for and that the 300 should be performed and anaesthetized by the G.P.s at financial loss to themselves, for the "staff fund" was really intended as a sort of token payment to G.P.s for looking after cases in hospital after they had been operated on by paid surgeons. We have carried on so far because our patients have wished it and because it was obviously the right thing to do. Had we not done so these patients would have been swelling the waiting-lists of other hospitals, for, inconvenient though it may be for the planners and sometimes for the doctors, if patients cannot get their own doctor to treat them in the local hospital they display the strongest objection to being operated on by an outsider, however much he may be recommended by the regional hospital board.

The Treasury may, as was implied by the regional board representatives, approve of these invidious financial regulations—as the Act lays down that it should—but that does not alter the fact that such unjust regulations should be changed forthwith, for even a G.P. is worthy of his hire.—I am, etc.,

Winsford, Cheshire. W. N. LEAK.

Unite the Profession

SIR,—At the moment we have a breathing-space before we begin to collect signatures to forms of resignation from the N.H.S. We must utilize this opportunity to survey the position.

No one can deny that this country deserves the finest medical service that it can afford, and no one can deny that there is much room for improvement in the one that it has got, and it is unlikely that it can function efficiently if many of its workers are unhappy in their work. Certainly a great many doctors are unhappy for a variety of causes. Some are financially embarrassed, others are working too hard, many feel that they are not doing the work of which they are capable or for which they have spent years of training. Some are uncertain of their future, some cannot find a sphere of work at all.

One of the causes of a great deal of difficulty is the fundamental disagreements between different branches of the profession. The most wise and sympathetic Minister of Health would find it difficult to decide between conflicting advice and claims.

Surely it would be useful now for the good of the Service, the general public, and the profession if all branches tried to reach agreement on those matters which at present divide them. Afterwards the next step must be for a common agreement on those remedies necessary to remove the present discontents. I mention some of the most pressing: remuneration for G.P.s and the public health officers; a better distribution of properly paid work among G.P.s so that none are overworked and there is room for more of those who wish to enter general practice; the present position of registrars; the vexed question of grading; the uncertain position of many specialists; and the frustrations of many in the public health service. We should be in a much stronger position if we could get together as a united profession and present to the country and the Minister a united claim to remedy our grievances.

Many of the problems that seek a solution affect more than one of the sections of the profession. As *The Times* pointed out in an excellent leading article on November 25, which dealt with the latest decree limiting the number of registrars, if these able men must find other spheres of usefulness, it leads directly to an examination of the numbers of G.P.s and how to get more men into practice. In turn this may lead to an integration of the hospital and G.P. services, so ending the lamentable divorce that now exists.

There are widely differing views on the maternity service. I am informed that the official standard of maternity beds in hospitals is based on providing for 75% of the expected number of confinements. If so, many members of the admirable corps of midwives will find themselves redundant. I have also been told that it would be cheaper to make a grant to women who decide to have their babies at home, pay for the G.P. obstetrician and midwife, and provide a home help where necessary, keeping only sufficient hospital beds for the complicated cases and for those whose home circumstances were impossible. Thus, besides a saving in costs, beds would be released for other pressing claims—e.g., tuberculosis.

I have not attempted, nor could I ask for space, to make an exhaustive examination of the points where remedies are needed or to show how interrelated are the different sections of the profession. At the moment the G.P. section is not only the most numerous but the better organized and has the most political experience. Moreover, it is the only one with a fighting fund. Nevertheless, its members know that they are members of a great profession and still feel that the wrongs of one branch are the affair of all. In the new British Medical Guild a

weapon is being fashioned to help each and every section. Here and now is an opportunity that shouts for recognition, but if allowed to slip may suffer the fate foretold by Shakespeare for those who fail to use a favourable tide.

To sum up, let the B.M.A. during the next few months make a determined effort to bring together all sections of the profession and iron out so far as possible their conflicting aims; then formulate a joint programme on which all can unite as a fair and just demand which will help to provide the country with a far better health service. There can be no doubt that such a programme backed by the whole profession would have an appeal and a weight behind it that neither the country nor the Minister could ignore.—I am, etc.,

Weymouth, Dorset. J. A. PRIDHAM.

Hospital Threatened

SIR,—There are many historical cases in which a resolute minority has forced a decision upon a reluctant majority, and doubtless some of the Kingston G.P.s who have obtained notoriety in their fight against the regional hospital board visualize themselves as such a historic band. Such victories, however, are won only when certain basic prerequisites are present—namely, that the case to be fought should be good and demonstrably in the public interest and that the fight should be conducted with scrupulous fairness and attention to such virtues as truth and a willingness to grant that the other side may also be socially activated.

The G.P.s at Kingston Victoria Hospital have lost because their revolt had not these sound foundations. The regional hospital board has done everything in its power to have its schemes publicized and criticized. The Press have been at every meeting of the board and the hospital management committee at which this question has been considered. The need was first given priority at a meeting eighteen months ago in the Victoria Hospital by the people who are now fighting it. It has been considered by, among others, the Medical Review, Surrey Area, Maternity, Chest Services, and Medical Advisory Committees of the board, and by the Group Medical Advisory Committee at Kingston. Dr. T. W. Morgan, as secretary of the latter, wrote to the hospital management committee that "the provision of an adequate gynaecological unit should be one of the first considerations." Its effects on staffing, finance, and turnover of patients have all been gone into in great detail. But no meeting of the *whole staff* has ever been called at the Victoria.

Yet neither in your columns nor that of any other periodical has the scheme been given with any accuracy. In the middle of November a leaflet was distributed in Kingston which declared (and underlined) "the Victoria Hospital is to be closed down." This was entirely untrue and possibly for that reason the leaflet bore no imprint and no one knows if it was issued by an individual doctor or the Conservative Party, whose former public relations officer is running the campaign.

Briefly, the change of user at the Victoria is necessary because the staff told the medical review committee that the needs of the area were maternity, gynaecology, orthopaedic, tuberculosis, and chronic-sick beds in that order. The present scheme answers all these demands, but the full details of the change can be understood only on the spot. The final result will be a pure G.P. unit at Surbiton, a gynaecological unit with its own operating theatre, each surgical team at Kingston will have its own theatre, an orthopaedic and fracture unit of 35 beds will be set up, 48 beds for tuberculosis will be opened, and an extra ward of 25 beds and 26 cots added to the maternity block. A change of user without purpose would be condemned by all: a change from which such benefits flow should be commended by all.

A demand has grown up for beds solely in the charge of G.P.s, and the Ministry of Health has suggested to hospital boards that they should make some effort to set aside beds "for such things as are within the scope of the G.P." Surbiton Annexe was offered to the G.P.s of Kingston in an attempt to fulfil that suggestion. Many people have examined it and think it can be made suitable; some of the Victoria G.P.s think it is unsuitable. To resolve this problem we need to know many things. How many beds per G.P. and what things are "within the scope of the G.P." are clearly the most important.

In the Kingston Hospital Group there are, according to the local executive committee list, 125 practitioners. There is no hospital solely staffed by G.P.s: at four G.P.s attend and are governed by the board's general policy that all hospital patients are under control of a specialist. For 153 beds in these smaller hospitals there are 38 sessions of specialist cover plus group services.

If G.P. beds are really "vital to the standard of medicine" should these 153 beds be solely under G.P.s, and are they enough for 125 practitioners? If they are enough for the type of case one has in mind, the case that a G.P. can look after if only he can be sure that the patient will have some nursing attention and that instruction *re* medicines and diet will be carried out, how are admissions to be arranged? Is the G.P. still to make his own decision on which case will go to the G.P. unit and which to the district hospital under consultant care? Can a hospital management committee responsible for the finance of the beds—in this group about £125,000 a year—be quite happy just to invite G.P.s to use the beds without employing them or having some direct contract of service? And if G.P.s have time to do this hospital work how does it affect on the one hand the registrar problem and, on the other, how does it reflect on the asserted busyness of the G.P. and on his rate of remuneration?

Clearly, much thinking is needed on this subject, and the South-west Metropolitan Regional Hospital Board is seeking a solution by proposing different experiments in different hospital groups; but nailing flags to masts, fighting to last ditches, and all the other procedures that were threatened at Kingston will get the G.P. nowhere. If G.P. beds on something like the above scale were provided all over the country they would cost the country some £20m. a year: and the country will want to be convinced by reason, not swayed by emotion, if it is to spend that proportion of the cost of the hospital service in this way.—I am, etc.,

D. STARK MURRAY,
Kingston Group Laboratory.

Public Relations

SIR,—There are several points in the letter from Dr. K. C. Hutchin (*Supplement*, December 2, p. 230) with which I find myself in complete disagreement. However, I particularly wish to comment on his remarks with regard to the work of our Public Relations Department. Dr. Hutchin makes the amazing suggestion that the P.R. Department should misrepresent when it seemed in our interest to do so.

The B.M.A. P.R. Department has built up with the Press a reputation for reliability and honesty that is of the greatest value to the Association in all its contacts with the public. The P.R. Department is in the charge of a very experienced journalist of the highest integrity. Honesty, even in public relations, is the best policy. How Dr. Hutchin expects we can foresee what comments will be made in the press I cannot imagine. In the case he specifies, it is the fact that three newspapers inaccurately reported that the increased contribution was for the National Health Service. The public relations officer immediately sent a letter of protest to the editors concerned. One editor ignored the letter, another published it in full, and the third replied in a personal letter of apology.

Our Public Relations Department is very wide awake.—I am, etc.,

H. GUY DAIN,
Chairman, P.R. Committee.

SIR,—I can well sympathize with Dr. K. C. Hutchin (*Supplement*, December 2, p. 230) and his colleagues in their desire not to strike for more money in a time of national crisis. Many doctors resent having to discuss money in a service whose first thought should be to pay them properly. Nevertheless, the General Medical Services Committee, with the duty of safeguarding our interests, has to swallow its pride and deal with the situation. In so doing, it is discussing a strike for more money. That is a fact, whether some like it or not: personally, I do not.

This being the case, surely Dr. Hutchin's suggestion that the Public Relations Department should suppress the truth and make this fact appear not so is a most dreadful one. It out-

Goebbels Goebbels and reduces us to the level of Moscow Radio. It is a direct insult to the integrity of our public relations officer. Few of us seem to realize that the P.R.O. to a medical organization has a most invidious job, calling for a superman. He has to publicize people who shrink from publicity like the plague. He has to expound the motives of people who would be horrified to think their motives needed expounding at all. He has to run a Chelsea Flower Show with exhibits limited to shrinking violets. Every time the Press publishes something that doctors do not like he is asked why he did not stop it. Yet if an ordinary reporter, uncertain in his ignorance of the motives of certain doctors (for example, those in Sheffield who recently refused to join a health centre), tries to interview them he is told abruptly that doctors do not talk to the Press; so that the poor P.R.O. trying to convey the truth has no support whatever from anybody.

When members of the B.M.A. start to help the Public Relations Department will be time enough for them to start criticizing it. Meanwhile, for pity's sake, let it stick to the truth.—I am, etc.,

Ashtead, Surrey. W. EDWARDS.

Refusal to Sign Death Certificates

SIR,—Much has been written in the *Journal* recently about the members resigning from the N.H.S. I am an opponent of this attitude, as I have already disclosed in the questionary which was sent to us a few months ago.

A local meeting of the Association was held in Burnley last year concerning this point, and I proposed then that the most effective way for us to act was by *not* signing a death certificate: let us attend to the living, but the relatives can look after their dead. I am sorry to say that the motion did not receive a seconder. The Assistant Secretary of the Association from London was present and turned down the proposition by saying it was too drastic. But, I added, what about the transport workers who go on strike and make citizens walk in rain and snow; also the miners who down tools and leave us with fireless grates?

I know that paragraph 11 in every form for medical certificates of the cause of death says "that the practitioner shall sign and give to some person required by this Act to give information concerning the death, etc." In my opinion, if this is to be a strike let us strike hard, and I am certain the Minister of Health will be compelled by public opinion to listen to us before a week passes.

It is so easy for many to sign forms about resignation, but when it comes to the time of trial some will falter—as is evident from the tone of the letters in the *Journal*—especially those practitioners with families and the burden of insurance and building societies.

When the negotiations take place, out-of-pocket expenses such as telephone, petrol, and the cost-of-living index should be considered. The medicals have had a raw deal, but we have ourselves to blame. A second ballot should not have been demanded.—I am, etc.,

Barnoldswick, Yorkshire. T. M. GLEN.

*** A registered medical practitioner is bound, under the Registration of Births and Deaths Acts of 1874 and 1926, to give a certificate of death in relation to a person he has attended during the fatal illness, provided he knows the cause of death. —ED., *B.M.J.*

Fair Conscription

SIR,—I feel that Dr. Lois Price's letter on fair conscription (*Supplement*, November 11, p. 200) calls for some comment. Is the R.A.M.C., which since its formation has had as fine a record as any regiment or corps in the British Army, to be officered, in the event of another emergency, largely by men selected for their failure to serve their country in the last war? Dr. Price was considered fit to serve after three weeks at Crookham and one at the Army School of Hygiene, but is she justified in regarding this as a reasonable standard of training for male officers? Did she have battle experience during her four weeks' initial training, or indeed in the whole of her Army career?

If there should be another emergency in the near future, Territorial officers will be required to serve in the field at the outset, and those who qualified just before or at the beginning of the late war, whom Dr. Price has particularly in mind, will be needed to take command of units. The probable consequences of carrying out Dr. Price's suggestion need no elaboration from me.

Generally speaking, men do not serve their country in time of war in order to qualify themselves for a civilian appointment on demobilization, and there seems no good reason why doctors should be any exception to this rule, particularly as they have the advantage over most other soldiers of being able to practise their profession in the Army, an advantage often overlooked by disgruntled temporary Service M.O.s.

It is difficult not to agree with many of Dr. Price's views, but, if really fair conscription is to be attained, those fit young doctors who stayed behind in the last war, leaving out of account those ready to serve who could not be spared, should be made to serve in any future emergency in some capacity other than that of officers in an honourable corps. This, however, would lead to such shortage of medical man-power that quite obviously fairness is impracticable.—I am, etc.,

Winchcombe, Glos. E. H. EASON.

Independent Inquiry into General Practice

SIR,—I am writing to plead for a serious examination of the position of general practice. The numerous letters which are written to journals and the general sense of dissatisfaction which pervades family doctors emphasize that all is not well with general practice. I am convinced that the universal agitation for increased remuneration will not, even if completely satisfied, produce any permanent happiness, since this ultimately depends on a good job well done, and it is obvious that the job is not a good one under present working conditions and, even with the best will in the world, cannot be done well. I should like to plead for an independent commission of inquiry to report on the state of general practice, to lay down basic needs which must be satisfied if the family doctor as we knew him is to be rehabilitated, to investigate the means by which the recommendations could be implemented, and to present to the people through the Government or directly a statement of the problem and its suggested solution.

Finally I should like to express my views on the basic needs of general practice. As I see them they are:

(1) An adequately trained doctor with time and opportunity to remain adequately trained.

(2) The individual care of one patient by one doctor with the assistance of specialist and public health services.

(3) Limitation of the number of patients to that which can be properly cared for and the doctor to eschew other remunerative employment.

(4) Adequate facilities for the practice of medicine. Radiological and laboratory facilities are as much extensions of manual examination as the stethoscope and the sphygmomanometer.

(5) Adequate record keeping.

I feel that this is a very urgent problem if the family doctor is to be saved before the present tendency to clinic and hospital care becomes too fixed for change to be possible. I believe it would be for the ultimate good of the community and could produce a race of practitioners that would equal the best that specialism could produce.—I am, etc.,

Blackburn, Lancs. FRANK LIVESEY.

*** An inquiry is to be carried out (see p. 239) by the General Practice Review Committee of the B.M.A.—ED., *B.M.J.*

Count Their Blessings

SIR,—I wonder how many of your correspondents, who are constantly writing in to grouse about money matters, realize how well off they are. I wonder, too, how they would like to be in my position.

I qualified three years ago, and my present total assets amount to £100, £90 of which was gained doing a locum this summer. Despite this, however, I am studying full-time for my D.P.H. so as to enter the so-called underpaid public health service.

I am, moreover, not grumbling: on the contrary I am happy and proud to be pursuing my interests. I have tried to take locums whenever I can, but the familiar phrase "Car essential" just makes me laugh: I could not afford a car (much less a wife) in a year of Sundays.

I lost my entire life's savings a couple of years ago during a bout of serious illness, but I did not go squealing to any medical charity, for reasons of pride and independence, and because I have confidence that, barring any further disasters, I can eventually make good. Is pay low in public health? £700 a year will be untold wealth to me. I will hardly know what to do with all that money.

I suggest that some of those who complain that they cannot carry on on £2,000 a year stop to count their blessings while they may and to appreciate just how lucky they are. To me they are rolling in cash; a humbler life would do them a world of good—perhaps they could sell their second Daimler to make ends meet.—I am, etc.,

London, N.4. ADAIR GIRBY.

Three Months' Grace

SIR,—From letters published in the *Supplement* it is obvious that many doctors have not a proper grasp of the situation in regard to resigning from the Health Service. It should be understood that three months' notice has to be given to the Ministry of Health on withdrawal, and before that three months is ended patients will be still treated under the scheme and doctors will still be paid. But what is important to the profession is to understand that, if the resignations amount to 80%, the Minister will have three months to come into line and agree to decent treatment of the doctors, and that the Health Service to patients may never be interrupted.—I am, etc.,

London, N.W.11. L. S. WOOLF.

Three Things Needed

SIR,—Strong play on the question of loyalty is now being made in all letters and discussions about the proposed withdrawal of doctors from the N.H.S. Many groups command our loyalty, and we do well to remember that loyalty to our colleagues in the profession is not *ipso facto* the most important.

This play on the question of loyalty must make many of us, even if we are not well-off or "self-satisfied possessors of council-house practices" (*Supplement*, November 25, p. 217), feel that we should, perhaps against our convictions, vote for resignation in order to support unknown colleagues. I should like to suggest that we need three things:

(1) Accurate facts about the incomes of doctors, and, especially, accurate facts about the average practice expenses.

(2) A clause in the proposed resignation forms so that we can, if we feel we should, vote against resignation at this time, but promise resignation if a smaller majority than that proposed by the Guild, say 70%, vote in favour of it.

(3) A plan, prepared on the lines of that drawn up by the M.P.U., which we shall put into practice if an increase in the capitation fee is obtained.

—I am, etc.,

Cosham, Hants. V. H. MARTINDALE.

POINTS FROM LETTERS

Shilling on Prescriptions

Dr. CONN MCCLUSKEY (Dungannon, N. Ireland) writes: Both Mr. Bevan and Dr. Edith Summerskill have recently declared at political meetings that a great quantity of unnecessary medicine is being prescribed and drunk or thrown out. Surely it follows that the Government has a moral duty to stop this excess? The most obvious way of doing this is to go ahead with the levy of one shilling on each prescription. One, I think, is entitled to presume that the only reason that they do not implement the measure (already on the statute book) is that it would cost the Labour Party votes or even their ruling majority in Parliament. . . . As things are now, every time I show myself at my surgery door, even outside hours, I am followed into the house by a patient who wants a prescription for something or other. . . .

Association Notices

AREA OF WEST NORFOLK AND EAST NORFOLK DIVISIONS

Notice is hereby given by the Council that it is proposed to transfer the civil parish of Fakenham from the area of the West Norfolk Division to that of the East Norfolk Division. Any member affected by this proposal and objecting thereto is requested to write to the Secretary of the Association by January 6, 1951, stating the objection and ground therefor.

A. MACRAE,
Secretary.

Branch and Division Meetings to be Held

CAMBERWELL DIVISION.—At 30, Half Moon Lane, Camberwell, London, S.E., Tuesday, December 12, 8.30 p.m., Mr. P. Mitchener: "Right-sided Abdominal Pain."

DORSET DIVISION.—At Kings Arms Hotel, Dorchester, Wednesday, December 13, 8.30 p.m., address by Dr. E. J. Jarrett: "Present Trends in the Treatment of Diabetes."

ENFIELD AND POTTERS BAR DIVISION.—At West Lodge Park Hotel, Thursday, December 14, 8.30 p.m., social meeting.

HENDON DIVISION.—At Hendon Hall Hotel, Ashley Lane, London, N.W., Tuesday, December 12, 8.30 p.m., an informal talk by Sir Henry Souttar.

LANCASTER DIVISION.—At Lecture Theatre, The Storey Institute, Market Street, Lancaster, Saturday, December 16, 8.30 p.m., B.M.A. Lecture by Professor A. M. Boyd: "Intermittent Claudication."

MIDLAND BRANCH.—At Medical Institute, 154, Great Charles Street, Birmingham, Thursday, December 14, 3 p.m., 89th annual meeting, paper by Dr. D. S. Pracy: "Midwifery in General Practice."

RICHMOND DIVISION.—At Richmond Hill Hotel, Richmond, Wednesday, December 13, 7.30 p.m., annual dinner and dance.

ROCHDALE DIVISION.—At Exchange, Town Hall, Rochdale, Thursday, December 14, 8 for 8.30 p.m., annual dinner.

SOUTH BEDFORDSHIRE DIVISION.—At Warden Tavern, Tuesday, December 12, 8.30 p.m., annual general meeting.

SOUTH-WEST ESSEX DIVISION.—At Clinic Hall, Thorpe Coombe Maternity Hospital, Walthamstow, London, E., Wednesday, December 13, 8.30 p.m., lecture by Surgeon-Commander G. D. Wedd, R.N.: "Medical Aspects of Atomic Warfare."

SWANSEA DIVISION.—At Osborne Hotel, Langland, Thursday, December 14, 7.30 p.m., lecture by Professor H. Scarborough.

TUNBRIDGE WELLS DIVISION.—At Kent and Sussex Hospital, Tunbridge Wells, Wednesday, December 13, 8.30 p.m., clinical meeting.

WEST HERTS DIVISION.—At Nurses' Home, The Peace Memorial Hospital, Watford, Wednesday, December 13, 8.30 p.m., B.M.A. Lecture by Professor L. P. Garrod: "The History and Uses of Antibiotics."

TRADE UNION MEMBERSHIP

The following is a list of local authorities which are understood to require employees to be members of a trade union or other organization:

County Council.—Durham.

Metropolitan Borough Councils.—Fulham, Hackney, Poplar.

Non-County Borough Council.—Dartford.

Urban District Councils.—Denton, Droylsden, Houghton-le-Spring, Huyton-with-Roby.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 16 1950

DISPLACED REGISTRARS

JOINT COMMITTEE DISAGREES WITH MINISTER

An emergency meeting of the Joint Committee was held on December 6 to consider the recent Ministry Circular R.H.B. (50) 106 on registrar establishments (*Supplement*, November 18, p. 204).

The committee was informed that the following statement had been made by the Minister in the House of Commons on November 30 (*Journal*, December 9, p. 1338):

"This circular, which has been grossly misrepresented, was issued after full consultations with the profession's representatives. Its object is in the interests of the profession itself—to secure a proper relationship between the numbers of training posts for future specialists and the number of specialist posts likely to be available. In estimating the latter it allows for a reasonable annual expansion over and above mere replacements in present posts, and the numbers of training posts will be reviewed as and when further expansion occurs in later years. The urgency of the circular is that the number of trainees has already risen to nearly twice the number needed to produce the specialists likely to be required and about four times the pre-war number, a situation thoroughly unfair to all concerned. The circular was not prompted by economy—indeed, it provides for alternative appointments if necessary for the work of the hospital."

Although there was consultation between the Ministry and the Joint Committee prior to the issue of the circular, the Committee made it perfectly clear to the Ministry that it completely disagreed with the Ministry's proposals for dealing with the problem. To this extent the Minister's statement in the House is capable of misunderstanding.

The original fears of the Committee have not been allayed by reports it has received from consultants and registrars throughout the country, and the Committee has urged the Ministry to reopen discussions on the whole question and to postpone the implementation of the proposals pending the outcome of these discussions.

CENTRAL CONSULTANTS AND SPECIALISTS COMMITTEE

THE REGISTRAR GRADES

A meeting of the Central Consultants and Specialists Committee was held at B.M.A. House on December 6, with Dr. T. ROWLAND HILL in the chair.

The CHAIRMAN reported on a special meeting of the Joint Committee which had been held earlier that day at which consideration was given to the Ministry's circular concerning the review of appointments to registrar grades. He said that the Joint Committee proposed to issue a statement on the subject. [The statement appears above.] It was proposed also that the chairman of the Joint Committee should inform the Secretary of the Ministry of the serious view taken of the registrar position, which made it desirable that the proposals in the circular should be deferred pending further discussion.

Apart from the question of senior registrars, the Joint Committee had expressed the view that the number of registrars in the country should be determined by the needs of hospital work and not be estimated from the vacancies for hospital appointments.

Dr. COCHRANE SHANKS urged that the number of senior registrars as related to the requirements of the consultant services should be considered, not as a global figure, but in terms of the specialties.

The registrars' representative on the Committee made a full statement of the feeling of registrars on this subject. He pointed out that many senior registrars had been doing consultant work; also that it had been urged that for such appointments three years was the minimum required in training, whereas the Ministry was now interpreting this as the maximum. The opinion was expressed by one member that it was not so much economy as administrative incompetence which had led to the view that there was no need for an increase of consultants.

A question was asked about the staffing of health centres from the consultants' point of view and whether registrars could be absorbed in this way. Dr. D. F. HUTCHINSON said that he did not think it had been envisaged that consultants should be attached to health centres, which were intended to be general-practitioner centres only, and Dr. R. D. LAWRENCE agreed that the purpose of health centres was to encourage group practice by general practitioners, who would staff the centres. No doubt health centres, when established, would offer excellent openings for registrars who had gone into general practice.

The Committee passed a resolution expressing its entire disapproval of the Ministry's circular on the review of appointments to registrar grades, and urging that no attempt should be made to bring it into effect. It was considered impracticable to work out the registrar establishment as quickly as the circular suggested, nor indeed could this be done at all until the establishment of consultants—including the establishment of consultants for each specialty—had been determined. The view was expressed that the employment of consultants over the age of 65 was blocking promotion for younger men.

The CHAIRMAN explained that the view of the staff side of Whitley Committee "B" was that 65 should be the firm retiring age, and that any appointments above that age should be supernumerary to the establishments.

Medical Administration in Hospitals

The Committee considered a statement of policy on the question of medical administration of hospitals which had been prepared for presentation to the committee of the Central Health Services Council which has been appointed to study hospital administration. In explanation the CHAIRMAN said that in essence the old practice of having medical advisory committees with access to the managers should be strengthened and perpetuated, but it was felt that there was an advantage, in addition, in many hospitals in having the day-to-day medical administration made the responsibility of a special member of the medical staff, appointed for the purpose. The old idea of the all-purposes medical superintendent—an institutional *Führer* or clinical "boss"—was not desirable, but the medical administrator or superintendent as colleague of the senior staff should in many hospitals be retained. At the same time it was felt that in certain types of hospitals, such as mental or infectious-diseases hospitals, there could be no question of the desirability of retaining a medical superintendent.

The desirability of having at the head of a hospital a medical man equipped to deal with the lay bodies which now considered that they should have a determining voice in the running of a hospital was pointed out. The statement of policy was criticized by certain members of the Committee, and it was eventually agreed that it should be referred to regional committees before coming forward for final adoption. The motion proposing this course was carried by 20 votes to 17. The document has already been before the Council of the Association and accepted with some slight modifications. These modifications will be embodied in the draft which is to be sent to the regions.

Ministry Survey: Complaint of Discourtesy

A complaint was received from the Birmingham Regional Consultants and Specialists Committee concerning the procedure adopted by the Ministry's team surveying the medical staffing in the region. It was stated that the inspection officers questioned house-officers and registrars on how many rounds certain of the consultants performed in the hospital, and at what time they arrived and how long they took over their rounds. This information was asked for, not from the consultants themselves, but from junior officers employed by the hospital management committee. One member complained that the visiting team at his hospital catechized consultants in the presence of a lay secretary.

The Committee unanimously passed a resolution disapproving of the manner in which, according to this report, the review of medical establishments and hospitals on behalf of the Ministry was being carried out in certain districts. It considered that it was lacking in normal professional courtesy.

Future Application of S.H.M.O. Grade

It was reported that the circular issued by the Ministry to hospital boards on the use of the S.H.M.O. grade had been referred to regional committees and the special groups of the Association, and the comments of these bodies were presented. One point made by the Psychological Medicine Group, which was endorsed by the Central Committee, related to the need for clarifying the phrase "limited fields of psychiatry." They felt that child psychiatry was a major field, and there was some misgiving lest it should be included in the "limited fields." The need for an assurance that promotion was possible from the S.H.M.O. grade was also stressed.

The Committee endorsed the view that the proceedings on this circular illustrated the value of consultation between the Ministry and representatives of the profession before instructions were issued to hospital boards.

Procedure on Complaints

Dr. ROBERT FORBES, secretary of the Medical Defence Union, attended by invitation to speak on a procedure for dealing with complaints. This procedure had been put forward by a group hospital management committee. He said that it was recognized that complaints would continue to be raised by hospital authorities concerning the work of members of hospital staffs and might be well or ill founded. When such a complaint was received by a hospital authority it could not be dismissed out of hand, and each hospital must determine for itself the procedure it would adopt towards the complaint received. In the Medical Defence Union it was thought that there would be material advantages if those who could speak on behalf of medical staffs of hospitals stepped in at this early stage and defined the procedure they considered reasonable and proper. He suggested that the matter be submitted to an expert committee for report and recommendations.

The Committee proceeded to set up a subcommittee for this purpose.

Other Business

On a report on the representation of the profession on hospital boards and hospital management committees, Dr. TALBOT ROGERS drew attention to the desirability of making sure that nominees were able and willing to serve. He said that failure to do this had sometimes been to the disadvantage of medical representation.

The Committee agreed to be represented on the International Hospital Federation.

A report was laid before the Committee on the suggestion that arrangements should be made for the holding of a national conference of representatives of consultants as and when the occasion might be desirable, and a draft scheme was presented for such a conference. It was pointed out that the conference would be purely advisory and not legislative. A Scottish representative said that this question had been considered in Scotland, where it was felt that no useful purpose would be served by such a conference. That appeared also to be the view of the Central Committee, and the matter was allowed to lie on the table.

REMUNERATION OF CHEST PHYSICIANS

In certain regions chest physicians are discontented over remuneration. Boards there are paying chest physicians only for the hospital work performed, leaving a balance to be paid when agreement on dual contracts and rates of pay for work done for local authorities has been reached. Other boards have agreed to pay a full salary and make their own arrangements with local authorities.

The delay over negotiation and settlement is causing great dissatisfaction, not only because of the hardship for those practitioners who are now carrying out the work, but also for the future of the specialty. A practitioner who holds a registrar appointment is not encouraged to take up a career as a chest physician when he recognizes that he may receive less remuneration than is received by consultants in other specialties.

The question of dual appointments was first raised at a conference with the Ministry of Health in March, when representatives of the B.M.A. urged that practitioners who work partly for a regional hospital board and partly for a local authority should have one contract with the authority in whose work they were predominantly engaged. It appeared that a satisfactory conclusion had been reached when the Ministry agreed to reconsider the matter. But the formula produced by the Ministry was most unsatisfactory. The matter was again pressed with the Ministry, but since a solution has not been reached it will be raised through Whitley machinery.

This problem must be settled before the rates of remuneration for the local-authority work can be determined. The policy of the Tuberculosis and Diseases of the Chest Group is a single contract at the standard rate of remuneration.

THE MANX CHEMISTS

As reported last week, the chemists' dispute in the Isle of Man has been settled. Members of the Manx Chemists' Association, who withdrew from the Health Service scheme because of regulations governing the charging for prescription forms and medicinal containers, are now dispensing in conformity with the Health Service Board's regulations for a period of three months to see how they work.

Though no statement has been issued by either side, it is understood that the chemists have obtained a concession that a specified period of notice will be given in respect of any further regulations affecting them, and that negotiations are to take place in respect of the Board's decision to debit the chemists' accounts with sixpence for each form of prescription dispensed between October 1, when the regulation came into force, and November 13, when they ceased to dispense under the Service.

Since the withdrawal of the chemists from the Service, and the subsequent emergency arrangements for handling prescriptions, the Manx police collected and distributed an average of 150 each day throughout the island over a period of 18 days.

PUBLIC HEALTH DISPUTE

The Industrial Court sat for four days hearing the case for higher remuneration put forward by representatives of medical officers in the public health service. On October 19—the last day on which it sat—the president of the Court asked for further information on the cost of the proposals put before it. This information, which was prepared in detail, was submitted to the Court on November 8. The medical officers' representatives made clear to the Court that their case was a matter of urgency and importance to the profession, and the Court appreciated this. The date when the Court will announce its decision is not known.

Further information will be published in this *Journal* when it is available.

COMPENSATION FOR GENERAL PRACTITIONERS

FINAL DATE FOR CLAIMS

General practitioners entitled to claim compensation for the loss of the right to sell the goodwill of their practices should submit claims for compensation *without delay* if they have not already done so.

Under regulations recently laid before Parliament claims may now be accepted until December 31, 1950. Claims made after that date will not be accepted unless the Minister of Health is satisfied that the delay was due to special circumstances. Claims made after February 28, 1951, will not be accepted in any circumstances.

Some doctors have been under the impression that these claims need not be made until they retire. This is quite incorrect. All outstanding claims should be made by the end of this year.

Doctors who are in doubt as to their title to compensation or who require claim forms should write to the Ministry of Health (A.G.D. 3C), Whitehall, London, S.W.1.

NATIONAL SERVICE FOR DOCTORS IN MEDICAL GRADES III AND IV

The Central Medical War Committee has been notified by the Ministry of Health that, with effect from December 1, registered medical practitioners who are placed in medical fitness Grade III or Grade IV by National Service Medical Boards, provided that they are considered suitable for employment in the armed Forces, are to be regarded as available for National Service in the same way as doctors in Grade I and Grade II.

It is not at present proposed that this should be applied to doctors who were placed in Grade III or Grade IV before December 1 and who may therefore have been officially informed that they are outside the field for call-up.

Doctors graded III or IV by National Service Medical Boards on or after December 1, 1950, cannot assume that they are unfit for National Service unless and until they are so notified by the Central Medical War Committee.

This change in the recruitment arrangements for doctors, which has been approved by the Central Medical War Committee, is necessary in view of the present shortage of medical officers in the Forces.

ALL-PAKISTAN MEDICAL CONFERENCE

The first All-Pakistan Medical Conference, which will be a purely scientific meeting, will be held in Karachi in the last week of February, 1951, under the auspices of the Pakistan Medical Association. Any members of the B.M.A. who expect to be in Pakistan at that time and might be able to represent the Association at the Conference are invited to communicate with the Secretary at B.M.A. House.

Heard at Headquarters

Week-end at Ashridge

The committee of the Association which is reviewing general practice has arranged for a discussion group during a March week-end at Ashridge in Hertfordshire, when the theme will be "The Doctor–Patient Relationship." Those who have never been to Ashridge will not be prepared for its attractions. It is a noble, baronial sort of place standing in a vast park, and, although less than 30 miles from London, the nearest railway station is three or four miles away. Ashridge has been in its time a monastery, a palace—Queen Elizabeth slept there, of course—a military hospital, and a residential college. Those who have spent a few days there are full of appreciation of its beautiful hall, refectory, and chapel, and also of the modern comfort of its bedrooms. The suggestion of past splendour seems to encourage rather than to intimidate discussion and study-grouping.

Questions Answered

Service in Forces

Q.—*House-officer appointments are advertised at the rates of £350, £400, or £450 for first, second, or third posts respectively. Is service in H.M. Forces allowable in making this calculation?*

A.—A house officer who obtains an appointment after completion of service with the Forces would receive salary in relation to the number of house-officer appointments previously held at the above scale. If, during his period of service in the Forces, he had acted as a house officer in a military hospital, he could count this in claiming salary in relation to the number of previous hospital appointments held. Most discharged medical officers have not had hospital experience while in the Forces, and therefore they cannot claim payment at a higher stage than colleagues who have held two or more house-officer appointments.

Superannuation and Income-tax

Q.—*Are superannuation contributions free from income-tax?*

A.—The 6% superannuation contributions paid under the National Health Service Act are free from income-tax. In practice they are included in the income-tax assessment, but a deduction is then made from the assessment equal to the amount of the contributions, thus cancelling them out.

Report for Police

Q.—*A female patient of mine collapsed while shopping. The same day the police asked for a report on the patient's health and the cause of her attack. I questioned this procedure, but the police officer said that it was quite in order and the usual thing when the police gave first aid. I consider that to give the report would be a breach of confidence and contrary to medical ethics. What is your opinion?*

A.—The police apparently require some sort of diagnosis for completion of their records, and in many cases they obtain this without difficulty. Nevertheless there is no requirement on a doctor to disclose professional information, and he is advised not to do so except where he has obtained the prior consent of the patient.

Locumtenent in Hospital

Q.—*I have heard that expenses incurred when taking up a post as a locumtenent (registrar) in hospital may be reclaimed from the hospital. Is this true?*

A.—No. There is nothing in the terms of service that would enable a hospital employing authority to defray the expenses incurred by a locumtenent in taking up his appointment.

Correspondence

Hospital Threatened

SIR,—May I beg the publicity of your columns to answer from first-hand experience one of the assertions made by Dr. D. Stark Murray (*Supplement*, December 9, p. 242)? He says, "The regional hospital board has done everything in its power to have its schemes publicized and criticized." I am afraid that that statement is diametrically opposed to the facts.

When the findings of the Review Committee were about to be sent to the Kingston Group Hospital Management Committee (of which I was at that time a member), the regional board issued a confidential memorandum which was issued to each member of the hospital management committee. Under the heading of "Change of Use of Hospitals," hospital management committees were advised to keep their plans secret until they were ready to be put into effect, so as to avoid the trouble which might be caused by opposition arising from local sentiment.

I protested strongly at the meeting of the hospital management committee at which these instructions were considered, and made public my views in the local press immediately afterwards. It is this policy of secrecy and total disregard of local opinion (which is much better informed than that of a politically bigoted person) that we at the Kingston "Vic" are fighting.—I am, etc.,

N. SKENTELBERY,
Brigadier,
Chairman, Kingston and Malden Victoria Hospital, and late member of Kingston Group H.M.C.

SIR,—Dr. Stark Murray's essay on philosophy (*Supplement*, December 9, p. 242) only too pointedly shows that his basic knowledge of the subject both of philosophy and the "Kingston Victoria" is sadly at fault, and his recognized manner of quoting extracts from reports reminds one of the old adage that "even the Devil can quote scripture for his purposes."

It is true that the Press have been present at every meeting of the regional board and the hospital management committee, but the "Victoria" has usually been discussed in "Part 2," which is taken *in camera*. This method of treatment was deliberate and part of an arranged plan to avoid publication of recommendations until the time arrived for their implementation.

The medical advisory committee at Kingston did agree that "the provision of an adequate gynaecological unit should be one of the first considerations," but Dr. Murray very carefully omits the governing phrase "as and when more beds become available in the group." That was the essential point of their decision. Dr. Murray, however, is most anxious to use it in its wrong context. The recommendations of the review committee, of which he was a member, can all be met without changing the use of the Victoria Hospital. Incidentally, in addition to being a member of that committee, Dr. Murray has stated elsewhere that he also gave evidence as an (alleged) member of the consulting staff of the Victoria. He was appointed to the staff in 1938 for a period of three years only; on the expiration of this period in 1941 his appointment was not renewed.

As is well known, Dr. Murray is also a member of the medical advisory committee for the region and also of the regional board. Now it is an established axiom of British jurisprudence that no one can at the same time be regarded as a witness, a member of the jury, and a judge in any particular case. Yet this has happened in this instance. This action gives a most unpleasant odour to the whole affair, is quite foreign to British methods, and provides an incontrovertible argument in support of a fresh inquiry into the matter.

Due to an unfortunate oversight, Dr. Stark Murray is correct on one point. We did issue a leaflet in November which bore no imprint, but to suggest that it was put out by the Conservative party is just wishful thinking on his part. We have scrupulously endeavoured to exclude politics from our campaign. However, politics did enter by the direct action of the Labour party in the area: they countered our leaflet with one issued by them officially. Although he is right in the first part of his remark, he is grossly wrong in the second part. The former public relations officer of the Conservative party is *not* running the campaign. We had the benefit of his advice on an honorary basis for some two weeks earlier on in our effort, but I understand he has been in Spain for some considerable time now.

Dr. Stark Murray states that there is no hospital in the area staffed solely by general practitioners. This is quite wrong. There are four, in which all the beds are in the control of the general practitioners, with adequate specialist cover available. It is due to this arrangement that the general practitioners are able to maintain a reasonably high standard in the service they are able to offer to their patients in the consulting-rooms and in the patients' homes. If this present arrangement is destroyed—and it appears that Dr. Stark Murray would have it destroyed—then the standard of general practice will inevitably fall, the patient will be the loser, and the Service will suffer. Is it the policy of the regional hospital board to build up a hospital service at the expense of the general-practitioner service? If this is so, I am sure it is not what Parliament intended nor what the public have been led to expect.

In the penultimate paragraph of his communication Dr. Stark Murray refers to a very pertinent aspect of the whole question—the financial control of the Health Service. In this he becomes curiously altruistic. In all the years before the advent of the Act general practitioners all over the country were performing hospital duties—not for nothing, but for the honour of their particular hospital, and with no thought of financial gains whatsoever. I am quite sure they are prepared to go on for many more years on exactly the same basis. The running costs of the general-practitioner hospital always bore favourable comparison with those of the larger ones, and I know that the weekly bed-cost was considerably lower in many cases than that of their neighbours. The raising of the finance bogy is just another of Dr. Stark Murray's red herrings. Dr. Murray can find—if he chooses to look—adequate evidence in financial statements of hospitals prior to 1948 that general-practitioner medical boards and the lay committees exerted all the conscientious care in the administration of their hospitals and in the provision of top-grade service to the patient that was, and still is, desirable, but of which he seems to think they are no longer capable. It would appear that he wishes to assume, in addition to that of the Minister of Health, the mantle of the Chancellor of the Exchequer.

Indeed, Sir, much thinking is still needed on this subject, and it is by "nailing flags to masts, fighting to last ditches," and asking for adequate public inquiry where the matter can be properly discussed that we sincerely hope such can be obtained, and which apparently Dr. Stark Murray, as the evidently self-appointed spokesman of the regional board, is anxious to avoid.—I am, etc.,

New Malden, Surrey. T. W. MORGAN.

"Posting" of House Officers

SIR,—In the contracts for house officers in the hospital in which I hold a post the following paragraph appears:

"The duties attaching to the appointment are those assigned to you by the management committee and, so far as is consistent with the proper discharge of those duties, include any additional duties undertaken from time to time as substitute for other house officers of the group during their temporary absence."

The implications of the liability to additional duties in other hospitals of the group are most serious. All house officers about to sign their contracts are urged to consider the effects of agreeing to this condition if it exists in their cases.

Regardless of assurances to the contrary, it places the candidate at the disposal of the management committee. The house officer is then in a similar position to a doctor in the armed Forces, in that he can be posted to and fro at a moment's notice. In the Services such conditions are accepted as inevitable, but in civil life they will produce insecurity, prevent the planning of one's own work, and be an unjustifiable intrusion into private affairs.

With such power the administrators can all too easily maintain house staff at those hospitals in the group which are either unpopular or do not provide the kind of experience wanted by the applicant. Moreover, such a "posting" can be made to be "consistent with the proper discharge of those duties" by the same authority.

Were a real emergency to arise, such that house officers were required to work elsewhere for a short period, it is certain that there would be an immediate response to the crisis without having to sign this ominous contract.—I am, etc.,

Rochester, Kent. G. P. DEBENHAM.

Withholding Certificates

SIR,—From the report on the Proceedings of Council held on November 22 (*Supplement*, December 2, p. 221), several highly ethical members were greatly concerned with what the public would think of us if we withdrew from the N.H.S. and withheld certificates (chiefly N.H.S. and private certificates). One member expressed the sentiment that, by withholding certificates, we would lower our status in the eyes of the public. Writing as a G.P., I think our status considerably deteriorated in 1948, and has not risen at all since then. I have the impression that the public is interestedly and (in the main) sympathetically watching to see whether the medical profession now has more enterprise than it had in 1948, and whether it will regain the public's respect by taking firm and concerted action in this present dispute, or whether its status will deteriorate still further by shirking a four-square and spirited fight for what we think are necessary improvements in conditions of service and remuneration.

To withdraw from the Service and still continue to issue certificates will be to fail in our endeavours at the outset. If I withhold certificates, I shall be sorry that my patients will have to suffer the inconvenience, but together we shall be fellow sufferers, for I imagine that my income will be considerably reduced until the dispute is settled. While I appreciate the hardship to my patients and their families for, I hope, a short time only, I further appreciate that my family and dependants are now adversely affected since the advent of the N.H.S., and that there will be little hope of improvement if the present conditions and remuneration continue. And 'tis said that "charity begins at home." I, for one, will withdraw from the Service only on condition that it includes withholding certificates, for I wholeheartedly agree with Dr. Alexander Brown, who expressed the belief that the majority of G.P.s in his area hold the opinion that to resign without withholding certificates would be to cut our own throats, and I have no intention of doing that to mine just to be, as some would call it, "highly ethical," but which I would describe as being plain adjectival foolish.

How the Minister of Health and the Chancellor of the Exchequer would gleefully rub their hands if we still issued certificates. They would then have (1) patients receiving treatment gratis (or almost gratis); (2) patients happily receiving their sick pay; (3) about fourpence per patient per week saved to the Exchequer; (4) G.P.s heading towards insolvency or knocking at the door of the National Assistance Board; but (5) doctors' status would rise—I wonder?—I, am, etc.,

Bradford, Yorks. G. R. GRANTON.

SIR,—In 1912 an insurance body refused to recognize a certificate for sick benefit because the signing practitioner was not in contract with the National Health Insurance scheme. It was held in the courts that they were bound to accept a certificate given by a registered medical practitioner, whether in contract with N.H.I. or not. The Ministry of National Insurance has apparently accepted this ruling.

Any registered medical practitioner can give valid N.I. certificates, and can obtain the forms free of charge from his local executive council. Many general practitioners seem to imagine that unless they are working under contract with an executive council they are unable to give valid certificates for N.I. purposes.

For practitioners within the Service to refuse certificates would be a breach of contract for which they could be fined to the extent of their payments due, and which would expose them to removal from the executive council list. If they resign there is no point in refusing certificates and every reason for giving them, since the National Health Service (according to Lords Beveridge and Simon) was introduced to discipline the certificate writer. To leave the Service *and* be meticulous in giving N.I. certificates is to strike a blow for freedom.—I am, etc.,

London, W.1. J. EWART PURVES.

Under regulations made on November 13, the National Health Service Amendment Act (with minor modifications) is extended to the Scilly Isles. The constitution of the executive council for the Isles is altered to consist of the following members: (*a*) members of the Council of the Isles who have formally expressed a desire to serve on the executive council; (*b*) medical and dental practitioners and registered pharmacists permanently resident or practising in the Isles who have formally notified their desire to serve; and (*c*) three members appointed by the Minister.

H.M. Forces Appointments

ROYAL NAVY

Acting Surgeon Lieutenant-Commander G. M. Baird to be Surgeon Lieutenant-Commander.

ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Lieutenant-Commanders A. G. W. Hill and K. R. Pallot have been removed from the Active List.

Surgeon Lieutenants P. G. Dalgleish, J. E. Russell, H. H. G. Eastcott, and J. G. H. James to be Surgeon Lieutenant-Commanders.

ARMY

Lieutenant-Colonel P. J. L. Capon, from R.A.M.C., to be Colonel.

REGULAR ARMY RESERVE OF OFFICERS

Colonel C. Popham, O.B.E., late R.A.M.C., having exceeded the age limit of liability to recall, has ceased to belong to the R.A.R.O.

ROYAL ARMY MEDICAL CORPS

Major (Honorary Lieutenant-Colonel) J. S. Richardson has ceased to belong to the Reserve of Officers.

Major J. D. Condon has ceased to belong to the Reserve of Officers.

Captains (Honorary Majors) K. D. Foggitt and R. A. Daly have ceased to belong to the Reserve of Officers.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Colonel C. H. Budd, M.C., T.D., has relinquished the appointment of Honorary Colonel of a T.A. unit on transfer of unit to the Supplementary Reserve.

Colonel R. A. Lennie, T.D., has relinquished the appointment of Honorary Colonel of a T.A. unit on transfer to the Supplementary Reserve.

Colonel C. A. Webster, T.D., having exceeded the age limit, has retired.

Captain (Honorary Colonel) J. C. Knox, C.B.E., has relinquished the appointment of Honorary Colonel of a T.A. unit on transfer to the Supplementary Reserve.

Lieutenant-Colonel A. C. Haddow, T.D., has been appointed Honorary Colonel of a T.A. unit, in succession to Colonel F. Whalley, C.B.E., D.S.O., T.D., whose tenure has expired.

Major A. K. Dougall, M.C., from T.A.R.O., to be Major.

Captain (War Substantive Major) J. F. Hedley has retired, and has been granted the honorary rank of Lieutenant-Colonel.

Captains (acting Majors) R. Semple and A. J. Daly to be Majors.

Captains G. D. W. Adamson, G. L. Broderick, E. J. Williams, C. G. Rob, M.C., R. H. Berry, I. G. Hardinge, J. C. Fletcher, A. J. Thomson, and J. Bunting to be Majors.

Lieutenant R. C. Webster to be Captain, and has been granted the acting rank of Major.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Colonel C. A. Ferguson, T.D., from Active List, to be Colonel.

Colonel A. C. Macdonald, M.C., T.D., having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O.

Major (Honorary Colonel) A. O'Hanlon, T.D., having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O.

Major (Honorary Lieutenant-Colonel) G. M. Lewis, T.D., having attained the age limit of liability to recall, has ceased to belong to the T.A.R.O.

Majors (Honorary Lieutenant-Colonels) J. C. MacKay, O.B.E., M.C., T.D., H. G. Wimbush, T.D., and F. N. N. Roberts, T.D., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.

Major M. L. Formby, T.D., from Active List, to be Major, and has been granted the honorary rank of Colonel.

Majors D. M. Mitchell, T.D., and G. G. Farrington, from Active List, to be Majors, and have been granted the honorary rank of Lieutenant-Colonel.

Major I. G. Hardinge, from Active List, to be Major, and has been granted the honorary rank of Lieutenant-Colonel. (Substituted for the notification in a *Supplement* to the *London Gazette*, dated January 4, 1949.)

Majors A. F. Alsop and N. H. H. Longton, from Active List, to be Majors.

Majors L. D. Williams, D. P. MacIver, M.C., T.D., and E. Davies-Thomas, having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.

Major R. D. W. Butler has ceased to belong to the T.A.R.O.

Captains (Honorary Majors) M. Park, J. G. Elmslie, L. T. Clarke, D. S. MacPherson, V. C. Cornwall, R. A. Highmoor, J. M. Martin, T.D., E. A. Sparks, C. E. Burridge, J. Murray, and D. McM. Carson, having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.

Captains J. Donovan and E. G. Wade, from Active List, to be Captains, and have been granted the honorary rank of Lieutenant-Colonel.

Captains C. R. S. Jackson, K. H. Smith, and H. Bolton, from Active List, to be Captains and have been granted the honorary rank of Major.

Association Notices

KATHERINE BISHOP HARMAN PRIZE

The Council of the British Medical Association is prepared to consider an award of the Katherine Bishop Harman Prize in the year 1951. The value of the prize is £75. The purpose of the prize, founded in 1926, is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and childbearing. It will be awarded for the best essay submitted in open competition, competitors being left free to select the work they wish to present, provided this falls within the scope of the prize. Any registered medical practitioner in the British Empire is eligible to compete.

Should the Council of the Association decide that no essay submitted is of sufficient merit the prize will not be awarded in 1951 but will be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine. The decision of the Council will be final.

Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address. Essays must be forwarded so as to reach the Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than December 31, 1950. Inquiries relative to the prize should be addressed to the Secretary.

SCHOLARSHIPS IN AID OF SCIENTIFIC RESEARCH

The Council of the British Medical Association is prepared to receive applications for research scholarships, as follows:

An Ernest Hart Memorial Scholarship, of the value of £200.

A Walter Dixon Scholarship, of the value of £200.

Four Research Scholarships, each of the value of £150.

These scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State medicine) relating to the causation, prevention, or treatment of disease.

In addition, applications are invited for the award of the following research scholarship:

The Insole Scholarship, of the value of £250, for research into the causes and cure of venereal disease.

Each scholarship is tenable for one year, commencing on October 1, 1951. A scholar may be reappointed for not more than two additional terms. A scholar is not necessarily required to devote the whole of his or her time to the work of research, but may be a member of H.M. Forces or may hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment will not, in the opinion of the Science Committee, interfere with his or her work as a scholar.

Applications for scholarships must be made not later than March 31, 1951, on the prescribed form, a copy of which will be supplied on application to the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated.

DISSOLUTION OF THE MERIONETHSHIRE AND MONTGOMERYSHIRE DIVISION

Notice is hereby given by the Council that the Merionethshire and Montgomeryshire Division has been dissolved; that Merionethshire has been transferred to the Caernarvon and Anglesey Division; and that Montgomeryshire has been transferred to the Shropshire and Mid-Wales Branch.

A. MACRAE,
Secretary.

Diary of Central Meetings

DECEMBER

18 Mon. Armed Forces Committee, 2 p.m.
20 Wed. Staff Side of Committee "C," 11 a.m. (*change of date and time*).
20 Wed. Committee on the Association of the General Practitioner with Hospital Work, 2 p.m.
20 Wed. Film Committee, 2 p.m.
21 Thurs. General Practice Review Committee, 10 a.m.
21 Thurs. Journal Committee, 2 p.m.
21 Thurs. Occupational Health Committee, 2 p.m.
22 Fri. Colonies and Dependencies Committee, 2 p.m.
29 Fri. Science Committee, 2 p.m.

JANUARY

2 Tues. Organization Committee, 2 p.m.
9 Tues. Amending Acts Committee, 2 p.m.
10 Wed. Film Catalogue Subcommittee, 4 p.m.
24 Wed. Consulting Pathologists Group Committee, 2.15 p.m
31 Wed. Amending Acts Committee, 2 p.m.

Branch and Division Meetings to be Held

FURNESS DIVISION.—At Orthopaedic Department, North Lonsdale Hospital, Tuesday, December 19, 8 p.m., combined meeting with Barrow and Furness Clinical Society.

SOUTH ESSEX DIVISION.—At Hospital Cinema, Oldchurch Hospital Romford, Friday, December 15, 9 p.m., lecture by Mr. L. C. Oliver: "Cordotomy in the Treatment of Parkinsonism." To be illustrated by a ciné film and slides.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY DECEMBER 23 1950

GENERAL MEDICAL SERVICES COMMITTEE

An all-day meeting of this Committee was held on December 14, with Dr. S. Wand in the chair, but at 6.30 p.m. its business was by no means completed and it was decided to hold a further special meeting on December 21. Much of the time was occupied in considering and deciding on the strategy to be adopted in the event of the dispute with the Government culminating in a withdrawal of service.

Another matter which occupied time was the consideration of a request by the Medical Practitioners Union to reopen discussions with a view to representation of that body on the Whitley Council either directly or through membership of the General Medical Services Committee. Three representatives of the Medical Practitioners Union attended and put forward their case for representation, at the same time giving assurances of their acceptance of the obligations which membership of the Committee would impose. After hearing the representatives the Committee decided by a very large majority that two nominees of the Medical Practitioners Union should be invited to attend the meetings of the Committee, pending a recommendation to amend the constitution of the Committee being referred to the Conference of Local Medical Committees and the Representative Body for confirmation. Meanwhile legal advice was to be sought on the Committee's powers of co-option.

The Committee also received five representatives of "unestablished practitioners," meaning by this term locumtenents and unemployed doctors seeking entry into general practice, newly established principals, and assistants, who put forward their views in support of an application which they had already forwarded to Council for the formation of a Special Group in the Association. They did not consider that the Assistants and Young Practitioners Subcommittee, recently set up by the Committee, had a sufficiently representative basis. The Committee's report on this claim will be made to the Council.

A full report of the meeting of the Committee will be published in the next issue.

G.M.S. SUBCOMMITTEE (SCOTLAND)

The General Medical Services Subcommittee (Scotland) at a meeting at B.M.A. House, Edinburgh, on November 30 decided that the question of the dispensing capitation fee in Scotland should be reopened with the Department of Health. The matter was the subject of a report by a subcommittee, which recommended the negotiation of a substantial increase, or alternatively a return to the method in operation in Scotland under the National Health Insurance scheme, by which dispensing practitioners were paid at the chemists' rate for the area.

Dr. G. W. IRELAND, chairman of the subcommittee, explained that there was a strong feeling that the fee of the dispensing doctor in Scotland was much too low. Chemists were receiving about 13s., as against the doctors' 5s. per head. Investigation showed that the cost of scheduled expensive drugs did not nearly account for this discrepancy.

The remuneration of dispensing doctors operating the "per script" method of calculation had been found to be substantially more than 5s., plus the cost of specially expensive drugs. Apart altogether from comparisons of this kind, it had been found that some doctors were spending more on drugs than they were receiving from executive councils for this pharmaceutical service.

Mileage Payments

After discussion it was agreed that the Chairman's Subcommittee inquire into the position which has arisen as a result of the decision of Renfrewshire Executive Council to discontinue mileage payments to doctors resident in the city of Glasgow. Dr. W. M. KNOX, who presided, pointed out that the matter had been taken up with the Department of Health, which considered that it was a matter of local arrangement, and for that reason was not prepared to take any action.

Dr. ANDERSON explained that the local medical committee received the executive council's circular on the 17th of the month, pointing out that the decision would take effect as from the first day of the month. Several doctors lived on the boundary. Those on the Glasgow side who went into the county were not now to receive any payment, whereas those living 10 yards on the county side of the boundary line would. Several doctors were having to part with old patients who lived in the county area.

The SCOTTISH SECRETARY, Dr. E. R. C. Walker, said a question of principle was involved—namely, whether these payments were to be regarded as relating to the situation of the doctor or that of the patient. Conflicting views were held on this point.

In connexion with medical practices compensation the Committee agreed with the appointment as referee of Mr. Raymond Jennings, K.C., B.C.L., to act in Scottish as well as English appeals, Scottish appeals being heard with the Scottish Medical and Accounting Assessors previously appointed.

Dr. Knox was unanimously reappointed chairman of the subcommittee.

PRIVATE PRACTICE COMMITTEE

A meeting of the Private Practice Committee was held at the Association House, London, on December 13, with Dr. I. D. GRANT in the chair. It was announced with regard to the forthcoming election of direct representatives to the General Medical Council that under the new Act there would be eight representatives for England and Wales, one of them to be resident in Wales. The procedure which would be followed for nomination of B.M.A. candidates was outlined.

Fees for Police Calls

Dr. R. D. SUMMERS, honorary secretary of the Metropolitan Police Surgeons Association, attended the meeting to discuss further the revision of the scale of fees for payment to practitioners called upon to perform services on behalf of the police. He stated that the Home Office had ruled that in the metropolitan police area when a surgeon attended one or more persons, at least one of whom was a case where attendance was prolonged or involved special examination or treatment, or was related to a possible charge of a serious nature, the fees which might be paid were three guineas in the day (8 a.m. to 8 p.m.) and four guineas at night. If the surgeon was engaged on his examination or treatment for more than one hour, the fee was five guineas in the day and seven guineas at night. The

Committee agreed to recommend to the Council that the metropolitan fees were considered fair payment for the duties involved, and that steps be taken to implement them generally.

Doctors' Telephones

The secretary of the Committee, Dr. Hadfield, presented the report of an interview which he had had with officers of the General Post Office on the possibilities of extension on a nation-wide basis of telephone facilities for doctors whose telephones were left unattended for varying periods. He felt satisfied that the General Post Office was aware of the problem and the fact that it was a growing one. Owing to the shortage of men and materials it was not possible to say when adequate facilities would be available all over the country, but the G.P.O. policy was directed to this end. The Committee agreed that the G.P.O. be asked to notify the Association of every new area where these facilities were available, and also asked for a reconsideration of the installation of the message-taking bureau method. The facilities which are being increased are transfer devices.

Ministry of Pensions Treatment Sessions

The Committee had asked for further information about the duties of practitioners undertaking treatment sessions for the Ministry of Pensions, the fees for which, it had been suggested, should be increased from 2½ guineas to 3 guineas. The Committee was informed that a "treatment session" was a session at which it was decided what treatment a patient required, and whether he should be treated in hospital, and, if so, what type of hospital. The "treatment board" was a one-man board; the doctor concerned must have a knowledge of Ministry of Pensions procedure, and would often be one who, in an ordinary board, would rank as chairman. The Committee agreed that if this work was to be done by a single doctor the fee should be three guineas.

Protection of Practices

During a previous discussion on a recommendation by the Committee concerning the protection of the private practice of a practitioner called up for service in the Forces it had been pointed out in the Council that the recommendation did not give security of tenure to the ordinary private practitioner, and on this and other grounds the recommendation was referred back to the Committee. The Chairman said that the Council had felt that when a man came back from service his part-time appointments should normally be restored to him. Dr. FORBES pointed out that it was hardly fair to ban the other practitioner permanently from taking certain appointments because he had assisted someone who had been away. After some discussion the consideration of what was acknowledged to be a rather delicate problem was deferred to the next meeting.

Other Business

A communication from Trinity House concerning increases of fees to be paid to general practitioners by the Corporation was regarded as very satisfactory. The practitioners concerned were those who acted as Trinity House District Medical Officers. The general fee for examination of candidates and personnel was 25s., and for the periodical examination of Workmen's Compensation Act cases existing on July 4, 1948, 42s.

Reports were presented by the Medical Witnesses Subcommittee and by the Maritime Subcommittee and were adopted.

A complaint was received from a practitioner that the fee payable for the examination of members of the Air Training Corps on fitness for gliding was only five shillings. The Committee agreed to press for one guinea, but suggested that if the "short form" of insurance certificate only was required it could be completed for half a guinea.

A letter from the honorary secretary of the Isle of Wight Local Medical Committee drew attention to the high cost of prescribing drugs for Service personnel on leave in relation to the remuneration paid. Dr. WAND said that it should be pointed out to the Service departments that when the present fees for occasional attendance on Service personnel were negotiated antibiotics were not used in the same way as now, and not only was treatment now much more expensive but doctors also had more facilities for dispensing then than they had now. It was agreed that representations on these lines should be made.

The Committee agreed to recommend to the Council that the tribunals under the Dangerous Drugs Regulations to which might be referred any suspected case of improper supply or prescription of drugs, and which, although arrangements had been made for them, had never met, should be reappointed, and that nominations of Association representatives for England and Wales and for Scotland should be made.

It was agreed, on the suggestion of the Isle of Wight Local Medical Committee, to ask the Ministry whether it would provide, for certification of incapacity, a form similar to E.D.652 which was drawn up during the last war by the Ministry of Labour for use in the case of persons who requested evidence for presentation to their employers of their incapacity for work. If the Ministry was not willing to reissue such a form it was suggested that it be asked to allow the Association to do so.

CHANGE OF GENERAL PRACTITIONER

When a general practitioner in the Health Service dies, goes away, or withdraws from the medical list, his patients are free to transfer to the list of another doctor—that is, they have the right to make an immediate transfer. The Minister of Health considers that this right should not be for an indefinite period. He will consider in due course making regulations limiting the period in which an immediate transfer is allowed. In the meantime, so that the practice in different areas may be uniform, he has asked executive councils to inform patients that, if they wish to choose a doctor other than the one named in the notice sent out under these circumstances, they should do so within 14 days of the date given in the notice.

This change is presumably made in consequence of regulations, which came into force on October 1, designed to limit the frequency of transfer (*Supplement*, September 23, p. 137).

TEMPORARY RESIDENTS

The Minister of Health has decided, after consultation with the General Medical Services Committee of the B.M.A., that payment of fees in respect of temporary residents should be restricted to cases in which treatment has actually been given. The wording of Form E.C. 19 will be amended accordingly.

Heard at Headquarters

A Question of Environment

The Hunterian Society staged a lively debate at the Apothecaries Hall on the question whether heredity was more fateful than environment, and the vote of the meeting decided that it was. One of the speakers on the side of environment as being more important than heredity was Professor J. B. S. Haldane, and the obvious weapon of the debaters who favoured heredity was to point to the Haldane family itself and the many people of high distinction in statesmanship, law, science, and philosophy who have borne the name of Haldane. But Professor Haldane, when he spoke, said that there were two sides to every pedigree. He recalled the exploits of Burke and Hare in Edinburgh, who inveigled travellers to a lodging-house, made them drunk, suffocated them, and sold the bodies to the anatomists. One of the bodies, which was recognized on the dissecting table by one of the students, was that of a Miss Haldane. He preferred to draw a veil.

B.M.A. LIBRARY

The following books have been added to the Library:

Correspondence

Hospital Threatened

SIR,—Dr. Stark Murray's extraordinary outburst (*Supplement*, December 9, p. 242) can be explained only by political bias and antagonism to G.P. hospitals. He implies that the scheme to alter the status of the Kingston Victoria Hospital and to close it down as a general hospital staffed by general practitioners and consultants is resisted only by a group of "die-hards." He omits to tell you that the Group Medical Advisory Committee voted against the scheme; that the Group Management Committee consistently voted against it; that twice the Group Advisory Committee voted for general-practitioner representation in the Group Hospital Management Committee, and no notice was taken. He omits to tell you that the proposed scheme does not mean an overall increase of beds, but is at the expense of "general" beds and beds for the aged sick. He says the Press were admitted at all the meetings, but omits to mention that they were excluded at private sessions when the matter was first brought up. He also omits to mention that the town councils of Kingston and Malden, and other public bodies, including the Surrey Executive Council, have appealed against the proposed scheme.

Admittedly, there are two sides to the question, but Dr. Murray's distorted version of the position will not help to a calm and considered review of the whole project and its implications. Indeed, I agree that "much thinking is needed on this subject"—particularly by Dr. Murray himself and by the regional board.

It is not a political question and never has been. It is entirely one of what is best for the community in this area: whether the loss of the general beds in the Kingston Victoria Hospital, and the effect on general practice, outweighs any gains made by altering the status of the hospital. And Dr. Murray's sneers at the staff of the Kingston Victoria Hospital and others will not "get him anywhere." The scheme will cause a serious rift in the medical profession in this area, as by far the greater majority of the doctors are emphatically on the side of the Kingston Victoria Hospital staff, for they bitterly resent the high-handed treatment of general-practitioner hospitals which is going on generally throughout the country.

A good general-practitioner service is as necessary for the community as any other part of the Health Service, and should be an integral part of it, and should be co-ordinated so far as possible with the hospital and other branches of the public health service as a whole. It has long been recognized, and recently been given expression to by eminent members of the profession, that a better standard of general-practitioner work can be obtained if the general practitioner can by some means have access to some hospital work. Lord Webb-Johnson, president of the Royal Society of Medicine, said on November 22 last: "All engaged in the practice of medicine will deplore the present tendency whereby general practitioners are deprived of opportunities which should be theirs at the local hospitals."

But we do not want the general-practitioner hospital as visualized by Dr. Murray. We want to retain the type of general-practitioner hospital as exemplified by the Kingston Victoria and Surbiton Hospitals, where the general practitioner works in conjunction with a consultant and specialist staff, and is able to learn what advances are being made, to see procedures carried out, and to discuss his cases with them—in short, a hospital which will prevent him from being left in medical isolation and help to keep up his standard of medicine and make him a more competent general practitioner to the community.

This so-called "revolt at Kingston" has aroused the interest of general practitioners all over the country, because they know the Kingston Victoria Hospital is fighting for an ideal, and they are all waiting to see whether the Minister of Health is going to stand by his recommendations on the matter of general-practitioner hospitals which he issued last year to regional boards, or whether he will continue to stand aside and let the matter be settled by "planners" who have no knowledge of general practitioners.—I am, etc.,

RALPH G. SMITH,
Chairman, Kingston Division,
British Medical Association.

Economy in the Health Service

SIR,—I have read with interest your leading article (*Journal*, December 2, p. 1262) and the letter from Dr. J. O. M. Rees (*Journal*, December 9, p. 1328): both are deserving of close attention. It appears that each writer is concerned to save the N.H.S. from bankruptcy, yet its early decease might conceivably lead to the rebirth of a far better service, founded on the basic principles laid down by the B.M.A. in 1945, and ensuring freedom and independence for doctor and patient alike.

With regard to some of the economies suggested, one point which often seems to be overlooked is the therapeutic value of a payment made by the patient. To the psychotherapist, or to any doctor trying to deal with a "recurring" complaint, this value is obvious, and it is readily grasped by the intelligent patient. It appears to have been overlooked by the Minister of Health. In a new and better service this aid to recovery could be retained if the patient were required to make a token payment (say, one shilling) for each service received and by providing a grant-in-aid to enable those to contract out who wish to do so.

Further, it seems that our administrators—those who sit on regional boards as well as those at the Ministry—have not recognized that a full use of the general-practitioner service, with freedom for the individual doctor to use all his skill and experience, would greatly reduce the burden on the far more expensive hospital service. The present employment of general practitioners as feeders of hospitals is sheer extravagance. Where the G.P. can admit his patients to his own hospital beds, he will almost certainly make the very best use of the available accommodation.

In this connexion, why does Dr. Stark Murray, in his letter about the Kingston Hospital (*Supplement*, December 9, p. 242), ask whether the G.P. is "still to make his own decision" regarding the admission of patients to hospitals? Is the G.P. unable to make a wise decision? In doubtful cases is he incapable of referring to a consultant for advice? Even a consultant may make a mistake, as the G.P. has reason to know.

As for the responsibility of the regional board, surely it is not beyond the ability of our administrators to devise a liaison between the G.P. serving his own hospital and the regional board of the area. It might be possible for the board to pay the G.P. a small fee for his services. I have even heard that this is done in some cases. Would that satisfy Dr. Stark Murray?

The free hotel service now given to hospital patients is, of course, a scandal: why free food in hospital and not if you are sick at home? Presumably the State wishes to encourage competition for the hospital bed.

Recently a patient of mine sustained a fractured skull at work. He was taken to hospital, where, after *x*-ray examination and dressing, they sent him home, as they had no free bed. Did the bountiful State grant him free food? Oh, no—not even free nursing: his wife had to give up her (paid) work in order to look after him, so they suffered a double loss. Such is the care of the State for the individual. And what a grand free hospital service it is—for vote-catching.

Mark, too, what a curious hybrid is the G.P. Dr. Stark Murray seems scandalized at the idea of a G.P. making "his own decision" in matters affecting his patients' admission to hospital, yet that same G.P. is counted fit to accept responsibility for a fractured skull, with no hospital equipment in case of need and no nurse on the spot to observe danger signs. How many consultants would care to accept this kind of responsibility—or the remuneration of 3½d. per week in return for their services?—I am, etc.,

Stanmore, Middlesex. H. B. WOODHOUSE.

Unestablished Doctors

SIR,—As intimated in my letter (*Supplement*, November 18, p. 207), an open meeting of assistants and other unestablished general practitioners was held on November 29 (*Supplement*, December 9, p. 239). The meeting was very well attended, and I believe that your readers may be interested to know the salient features which emerged.

(1) The meeting condemned the new transfer regulation, and numerous complaints of individual hardship since its inception were expressed from the floor.

(2) There was general support for the reduction of maximum lists to 3,000 patients to ensure better conditions for patients and doctors. It was stressed, however, that remuneration should be adjusted so that no loss of income results to practitioners who at present have maximum lists.

(3) The growing number of permanent assistantships was to be deprecated, and principals should be allowed a sufficient, but limited, time in which to find a suitable partner.

(4) The assistants and other unestablished practitioners were not adequately represented, and it was therefore decided by a large majority to apply to the Council of the British Medical Association for a special group to be formed for this section of the profession.—I am, etc.,

London, E.5. H. REZLER.

Service Pay

SIR,—I wish to express through our *Journal*, if I may, my views on the new rates of pay for medical and dental officers in His Majesty's Forces.

First, I feel sure that Mr. Emanuel Shinwell's announcement on November 29 that the increases in pay did not apply to National Service doctors and dentists until they have completed 18 months' full-time service must have struck a chill into the hearts of such officers. Surely none of us expected any discrimination between National Service and short-service or permanent officers in the medical and dental branches. These branches have always been different in many ways—one, for example, being the mode of entry—from any other branch of the Services. Why, then, as fully trained men and women when we enter, are we treated in regard to pay in the same way as other National Service men and officers?

It was stated in a signal issued by the Ministries concerned at the end of last August, when the general rises in pay were announced, that "medical and dental officers are being considered separately and will be notified later." Why, then, was it not even stated at that time that this would not apply to National Service officers, and only after three months' deliberation by the Government could they decide to make such an abrupt and distasteful discrimination?

A doctor who is conscripted into the Services and who does not wish to do more than the National Service period is given less remuneration than he could obtain in a civilian hospital, his cost of living is far more, and in many cases the experience he gains in medicine and surgery is far less.

Any non-National-Service officer of equivalent rank in any branch outside the medical and dental branches is receiving a salary insignificantly less (aircrew, actually more) than fully trained professional men in these branches, and yet we are supposed to be entitled to professional pay.

I believe it was put forward that one of the reasons why other National Service personnel were not getting the increased rates of pay until they had completed 18 months' service was that it was only at about this time they were really fully trained and of substantial benefit to the Services. Surely, then, does the Government's decision on November 29 imply that doctors and dentists are in this category too? If this is simply a method to encourage our professions to stay in the Services, I think the Government has made a most fallacious step. Such an attitude is far removed from being a virtuous incentive.

We have truly been given a raw deal. Why is it only we who are penalized for having to give up our civilian status as doctors and dentists to do our due share in serving our King and country? To those of us who are serving National Service medical and dental officers, I say the Government has got us where it wants us.

I am very anxious and would be very grateful to hear the views of other serving doctors on this matter of discrimination in relation to pay between National Service and others in the medical branches.—I am, etc.,

Meetings of Branches and Divisions

WESTMINSTER AND HOLBORN DIVISION

A successful dinner-meeting was held on November 30, with Dr. Arnold Harbour in the chair. An instructive and entertaining lecture was given by Dr. R. Forbes, secretary of the Medical Defence Union, on "Medico-Legal Hazards in General Practice." Dr. J. Arthur Gorsky proposed the vote of thanks to the lecturer.

H.M. Forces Appointments

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Colonel Sir H. W. B. Cairns, K.B.E., has relinquished the appointment as Honorary Colonel of a T.A. unit on transfer of the unit to the Supplementary Reserve.

Lieutenant-Colonels (acting Colonels) J. W. Hirst, O.B.E., T.D., W. W. Crawford, T.D., and G. Rigby-Jones, M.C., to be Colonels.

Major (acting Colonel) D. P. Holmes to be Colonel.

Majors (acting Lieutenant-Colonels) R. A. Read, D. W. E. Lloyd, M.C., B. C. Jennings, C. Berens, C. J. Wells, M.B.E., A. McQuiston, and D. T. Rowlands, to be Lieutenant-Colonels.

Captains (acting Lieutenant-Colonels) I. W. Buirski, C. S. McKendrick, and J. R. MacIntyre to be Lieutenant-Colonels.

Captain D. R. Urquhart to be acting Major.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 30 1950

PUBLIC HEALTH SALARIES

SOME COMPARISONS

The following table summarizes for easy reference comparisons between salaries at present paid in the public health service, salaries claimed by the medical officers, those offered in response by the local authorities, and those now awarded by the Industrial Court.

Category	Pay at Present	Pay Claimed	Pay Offered by L.A.s	Pay Awarded
Assistant M.O...	£735 × £25 p.a. to £935	£960 × £60 p.a. to £1,680	Grade I.—£750 × £50 p.a. to £950 Grade II.—£900 × £50 p.a. to £1,100	£850 × £50 p.a. to £1,150
Senior M.O. ..	£1,035–£1,435 at L.A.'s discretion × £50 biennially to £1,222–£1,435 depending on minimum	£1,680–£2,040 depending on population × £120 p.a. to £2,160–£2,520 depending on population	Grade I.—£1,150 × £50 to £1,350 Grade II.—£1,300 × £50 to £1,500 Grade III.—£1,450 × £50 to £1,650	£1,250 × £50 p.a. to £1,650
Deputy M.O.H.	£708–£1,410 depending on population and other factors. Increments and maximum discretionary	£1,780–£2,140 depending on population × £120 p.a. to £2,260–£2,620 depending on population	—	To be determined by negotiation
M.O.H. ..	£1,100–£2,310 depending on population and type of authority. Increments and maximum discretionary	£1,800–£3,120 depending on population × £120 p.a. to £2,280–£3,600 depending on population	£1,250–£2,700 depending on population × various increments to £1,650–£3,000 depending on population. Salary at discretion where population over 600,000. In Scotland where population under 60,000: £1,050–£1,450 × £50 (4) to £1,250–£1,650	£1,450–£2,700 depending on population × various increments to £1,650–£3,000 depending on population. Salary at discretion where population over 600,000

AWARD OF INDUSTRIAL COURT

The Industrial Court has now made its award on the terms of service of medical officers in the Public Health Service. Some of the claims made on behalf of public health medical officers have already been agreed, and were therefore excluded from the case presented to the Industrial Court. They will be embodied in the final agreement reached by the staff and management sides of Whitley Council Committee "C." The Industrial Court's award follows in an abridged form.

Parties.—Staff side of the Whitley Councils for the Health Services (Great Britain) Medical Council "C" and management side of the Whitley Councils for the Health Services (Great Britain) Medical Council "C."

Terms of Reference.—"To determine a difference between the management and staff sides of Committee 'C' of the Medical Council of the Whitley Councils for the Health Services (Great Britain) arising out of the staff side's proposals for revised salary scales and conditions of service for medical officers employed by local authorities."

1. The matter was referred to the Industrial Court for settlement in accordance with the provisions of the Industrial Courts Act, 1919.

The parties were heard in London on October 9, 10, 13, and 19, 1950.

2. The claim concerns approximately 2,000 medical officers employed by local authorities.

3. The present salary structure for the medical officers concerned had its origin in recommendations agreed to at conferences held in 1929 under the chairmanship of Lord Askwith at which representatives of the County Councils Association, the Association of Municipal Corporations, the Urban District Councils Association, the Rural District Councils Association, the London County Council, the Association of Education Committees, the Mental Hospitals Association, the Metropolitan Borough Standing Joint Committee, and the British Medical Association were present.

4. During the war period the scales were augmented by war bonus which amounted to £60 per annum.

5. An agreement was reached in March, 1946, between representatives of the British Medical Association on the one hand and representatives of local authorities on the other, for an interim revision of the Askwith Agreement.

6. The Askwith scales were again amended by agreement as from July 1, 1947.

7. The salaries paid at present are not uniform throughout the country owing to the operation of the discretionary clauses contained in the Askwith Agreement which were perpetuated in the amendments of 1946 and 1947, but the following table shows the present salary scales as amended in July, 1947:

	Minimum	Increments	Maximum
I. Medical officers employed in departments (having at least 3 years' experience subsequent to qualification, but without responsibility for the work of other medical officers)	£735	£25 p.a.	£935
II. Senior medical officers (in charge of services or departments)	From £1,035 but not exceeding £1,435, at local authority's discretion	£50 (biennially)	From £1,222 but not exceeding £1,435 depending on minimum
III. Deputy medical officers of health	From £708 to £1,410 depending on population, etc., but subject to application of Section I scale where duties include those of M.O. in department and that scale would be to the deputy's advantage	Increments and maximum discretionary	
IV. Medical officers of health	From £1,100 to £2,310 depending on population and type of authority	Increments and maximum discretionary	

NOTE.—The maxima were liable to be exceeded in particular cases at the discretion of the employing authority.

8. During negotiations the management side offered revised salary scales and conditions of service.

9. The scales claimed, set out briefly, are as follows:

Assistant medical officers:
£960 by annual increments of £60 to £1,680.

Senior medical officers:
Minimum from £1,680 to £2,040 depending on population.
Increments of £120 per annum.
Maximum from £2,160 to £2,520 depending on population.

Deputy medical officers of health:
Minimum from £1,780 to £2,140 depending on population.
Increments of £120 per annum.
Maximum from £2,260 to £2,620 depending on population.

Acting deputy medical officers of health:
Addition of £100 per annum to salary as senior or departmental medical officer.

Medical officers of health:
Minimum of £1,800 to £3,120 depending on population.
Increments of £120 per annum.
Maximum of £2,280 to £3,600 depending on population.
The maxima may be exceeded in particular cases at the discretion of the employing authority.

10. The scales offered, set out briefly, are as follows:

Assistant medical officers:
Grade I .. .. £750 by £50 to £950
Grade II .. .. £900 by £50 to £1,100

Senior medical officers:
Grade I .. .. £1,150 by £50 to £1,350
Grade II .. .. £1,300 by £50 to £1,500
Grade III .. .. £1,450 by £50 to £1,650

Medical officers of health:

In Scotland, population not exceeding 60,000
Minimum from £1,050 to £1,450
Increments of £50 (4)
Maximum from £1,250 to £1,650

In England, Wales, and Scotland, population not exceeding

75,000	Minimum between £1,250 and £1,650 Increments of £50 (4) Maximum between £1,450 and £1,850
100,000	Minimum between £1,350 and £1,850 Increments of £50 (5) Maximum between £1,600 and £2,100
150,000	Minimum between £1,550 and £2,050 Increments of £50 (5) Maximum between £1,800 and £2,300
250,000	Minimum between £1,750 and £2,250 Increments 2 at £100, 1 at £50 Maximum between £2,000 and £2,500
400,000	Minimum between £2,000 and £2,500 Increments 2 at £100, 1 at £50 Maximum between £2,250 and £2,750
600,000	Minimum between £2,100 and £2,700 Increments of £100 (3) Maximum between £2,400 and £3,000
Over 600,000	At discretion.

11. At the hearing it was stated that although the claim concerned both salary scales and conditions of service the main issue related to the salary scales. It was contended on behalf of the staff side that the salaries of public health medical officers should reflect parity of status with the other two branches of the medical profession—namely, the general practitioners and the hospital doctors and consultants. The management side maintained that public health medical officers formed part of the hierarchy of the local authority service and their salaries should be related to those of the local authority officers carrying comparable responsibilities.

12. In support of the claim it was submitted on behalf of the staff side that whereas public health medical officers are mainly concerned with preventive medicine, while general practitioners and the hospital doctors and consultants were concerned principally with curative medicine, preventive medicine is at least as important in its functions and responsibilities and the contribution which it can make to the general health of the community as a whole as the two curative branches. The public health medical officers are entitled to parity of status with the other branches of the profession, first, because the qualifications and education which they require are either the same as or similar to those of the other two branches (the public health officer wishing to become a medical officer of health has to spend one more year at least acquiring the Diploma of Public Health); secondly, because of their many and important functions and responsibilities; and, thirdly, because if suitable new entrants are to be attracted to this branch of the profession it must be made reasonably comparable with the other two—at present there is great difficulty in obtaining public health medical officers because the financial opportunities of general practitioners and the salaries of hospital doctors and consultants are much more favourable. The claim was designed to give the public health medical officer appropriate remuneration having regard to his functions and responsibilities and the value of his services and was based on the remuneration paid in the curative branches of the profession which derived from the Spens Report.

13. In explanation of the salaries claimed it was submitted that if it were possible to fix appropriate salaries for the lowest rank—viz., medical officers in departments (or assistant medical officers, the nomenclature used in the management side's offer) —and the highest rank—viz., medical officers of health—the scales for the other three ranks could be fixed between these limits, and the proposals for these three ranks had in fact been arrived at on that basis. The two typical examples of medical officers in departments are the school doctor who inspects and treats school-children and the doctor concerned with the maternity and child-welfare services. Both are employed on actual clinical work. Before entering the service of a local authority they must have had at least three years' experience in the practice of their profession, and in general they average 27 years of age on entering the public health service. The remuneration claimed was a minimum of £960 and a maximum of £1,680 which would be reached by annual increments of £60 on attaining 39 years of age. In the hospital field a junior registrar who enters at 25 or 26 years of age receives £670 on entry and after one year in that capacity may be appointed a registrar at £775 in his first and £890 in his second year. Subsequently he may become a senior registrar at £1,000 in the first year, £1,100 in the second year, £1,200 in the third, and £1,300 in the fourth and successive years. Then there is an intermediate grade of senior hospital medical officer who is higher than the registrar, being senior and older, but who has not attained consultant status and who gets a minimum of £1,300 with increments of £50, rising to a maximum of £1,750. In the field of general practice, a trainee assistant would receive a salary between £600 and £700 with the prospect of a partnership or an individual practice. While it was true that the work of the general practitioner was generally more arduous than that of the assistant medical officer employed by a local authority evidence showed that the average remuneration of the general practitioner under the National Health Scheme was £1,626 per annum with further emoluments from private practice and other medical appointments. It was pointed out that some assistant medical officers preferred the clinical work of these posts to the administrative work of the higher posts in the local authority service, and it was in the interests of the service that suitable officers should continue to do the clinical work. It was necessary to ensure that the salary scale would make this an attractive career. It was contended that the functions and responsibilities of the assistant medical officer were at least as great as those of the general practitioner. It would be quite wrong to suggest that the importance of the preventive work and to some extent the curative work which is done by the assistant medical officer in respect of the treatment of school-children or in respect of maternity and child welfare is less important than the work of the general practitioner. Although the claim is for parity of status between the different branches of the profession it is not a claim for equal pay, the *maximum* claimed after 12 years' service for the assistant medical officer being roughly equivalent to the *average* earnings of the general practitioner. The staff side regarded the management side's offer to assistant medical officers as totally inadequate and there was no justification for grading them or the senior medical officers.

14. As to the claim in respect of medical officers of health the minimum of £1,800 to £3,120 compares with the consultant's minimum of £1,700 and the maximum of £3,600 compares with the consultant's maximum of £2,700, leaving out of account the additional £500, £1,500, or £2,500 paid to 20%, 10%, and 4% of the consultants as distinction awards. As against the offer of the management side it was contended that when fixing the scales for medical officers of health it was quite unjustifiable to give the individual local authorities discretion to the extent of £400 or £500 when deciding the minimum of the scales which should apply to their officers.

Reference was made to the fact that there had been an upward revision of the scales of pay applicable to medical officers in the Colonial Service; that a committee was at present sitting to consider the scales of pay for medical officers in the service of the Government at home; and that it had been stated during a recent debate in the House of Lords that consideration would be given to scales of pay applicable to officers with medical qualifications in the armed Forces of the Crown.

15. Evidence was put before the Court as to the functions and responsibilities of medical officers of health and other public health service officers by reference to the numerous statutes relating to public health which contain provisions imposing duties upon them. Representative officers also gave evidence as to their duties and responsibilities. It was pointed out also that the position of the hospital doctors and general practitioners had improved relative to that of the public health service doctors by the acceptance of the recommendations of the Spens Report and the introduction of the National Health Service.

In the light of the evidence given it was argued that man for man the public health medical officers have functions and responsibilities not less important than those of general practitioners and consultants; that the national interest requires that the public health branch of the medical profession should have its fair share of the good men and its fair share of the best men in the profession; that the salary scales and conditions of service should be such as to attract to this branch its fair shares of the good men and the best men; that it follows as a matter of course that the Spens standard—i.e., the standard of medical remuneration established by the Spens Reports—and its implementation should be suitably applied to the public health branch; that for this purpose the salary scales proposed by the management side are not adequate and those claimed by the staff side are not more than adequate.

16. As to the calculation of the remuneration of part-time medical officers of health it was submitted that the method proposed in the claim—i.e., on the basis of the number of half-days occupied—was to be preferred to the method proposed in the offer—i.e., on the hours occupied. The method proposed in the claim followed that adopted in the Spens Consultants Report except that in that case a maximum of nine and a half elevenths was provided and the staff side were prepared to accept a similar limit in the case of the part-time medical officers of health. The offer in respect of deputy medical officers of health was wholly unacceptable, as it involved an indefinite delay in fixing their remuneration and proposed that it would be eventually decided by some other negotiating body on which the particular officers were not represented. With regard to the senior medical officers, the staff side agreed that such appointments should be made only where the local authority covered a population exceeding 250,000, but the staff side objected to the management side's proposal to divide senior medical officers into three grades notwithstanding their offer to give a right of appeal, because the proposal again gave discretion to the local authorities. In the staff side's view their proposal based on population was more appropriate and reasonable. With regard to the question of remuneration for mixed appointments—i.e., where two appointments are undertaken by the same officer—it was contended that the management side's offer was inadequate; such appointments involved a multiplicity of duties which warranted payment to the officer concerned of a salary appropriate to a higher post. Similarly, with regard to divisional medical officers acting as county district medical officers of health, it was submitted that the staff side's proposal was a fair one having regard to the officer's additional responsibilities. As to combined appointments, the staff side did not regard the management side's offer as adequate and maintained their claim for an extra £120. As to assimilation, the staff side objected to the management side's offer, for, whereas under the staff side's claim an officer on assimilation to the new scales proposed would be credited with his years of service in the post, under the management side's proposals there would be no such guarantee, it being within the absolute discretion of the employing authority to fix the point of entry into any new scales above the minima. As to the date of operation of any new scales resulting from the award, while the staff side did not object to the management side's proposals for giving effect to any increases they did contend that such increases should be retrospective to July 5, 1948, the date upon which new scales of payment had been introduced in the other branches of the Health Service, and not from October 1, 1950, as proposed by the management side. The staff side objected also to the management side's proposal that any new scales awarded should be maxima, and contended that the discretion hitherto given to local authorities in respect of increments and maxima should be continued. In respect of transfers, the staff side objected to the discretion allowed to the employing authority in fixing the commencing salary. It was submitted that if the local authority consented to an officer undertaking teaching duties he should be entitled to retain any fees paid in respect of such duties. In relation to sick pay, the staff side contended that the scheme to be applied should be that applicable to the hospital service in England, Wales, and Scotland.

17. As against the claim and in support of the management side's offer it was contended on behalf of the management side of the council that the public health medical service is a wholly distinctive service, different from the other two branches of the profession, which hitherto had quite properly been integrated with the rest of the local authority service, and there was now no more justification than formerly to align the remuneration of its officers with that of the general practitioners or the hospital doctors. Evidence in support of this contention was put before the Court, and it was submitted that for the purpose of fixing the appropriate scales of salary attaching to posts in the public health service regard should be had to the scales prevailing in the local authority hierarchy. This was the basis of the offer made by the management side.

18. In the view of the management side the scales claimed were not justified by the duties and responsibilities of the posts. In particular, it was submitted that the work of a general practitioner was far more arduous than that of an assistant medical officer, and it was pointed out that the *average* remuneration of the general practitioners (said to be £1,626) which was claimed as a maximum for the assistant medical officer required to be reduced by approximately £120 and by a further 2½%, representing respectively the Exchequer contribution to pension and the value of the sickness benefit to which the assistant medical officer in the local authority service was entitled. Even, therefore, on the basis of comparability with the general practitioner the maximum of the scale claimed for the assistant medical officer, it was contended, should not exceed £1,470. It was submitted that there was no real comparability between the work of the consultant and the medical officer of health, the one being a specialist doing clinical work demanding a very high degree of skill, the other being an administrator doing administrative work demanding a knowledge of medicine. In support of the offer, reference was made to the *Memorandum of Recommendations of the Joint Negotiating Committee for Chief Officers of Local Authorities*, and to the *National Scales of Salaries of the Administrative, Professional and Technical Divisions of the Local Authority Service*. It was explained that the management side considered that the duties and responsibilities of medical officers of health warrant parity with other chief officers of the local authorities with professional qualifications—viz., accountants and treasurers, and surveyors, chief education officers, and architects.

19. With regard to the claim made for remuneration based on parity of the duties and responsibilities of the public health medical officers with those of the general practitioners, it was pointed out that when making their recommendations in relation to the remuneration of general practitioners the Spens Committee had in mind the relative responsibilities and duties of all sections of the medical profession, and it was not to be assumed that, having proposed increases in remuneration of the general practitioner based on the arduous nature of his calling and the measure of his individual responsibility, the remuneration of all other members of the medical profession should be made comparable with that of the general practitioner. Unlike the general practitioner, whose services are required at all hours and who is called upon to deal with every

type of disease and casualty, the assistant medical officer works office hours of 38 per week in a limited field such as attendance upon school-children or maternity and child-welfare work.

20. As against the claim of the staff side and in support of the offer by the management side, it was pointed out that local authorities with the same population may have varying functions and in consequence their medical officers of health may have differing degrees of responsibility. It is most desirable, therefore, to have a comparatively wide range of salaries related to population. This was a feature of the agreed recommendations in respect of the chief officers of local authorities, and it was contended that the management side's offer giving the local authorities discretion within certain limits when fixing the scales of the medical officer of health provided the necessary flexibility and was to be preferred to the claim of the staff side for a fixed scale according to population without regard to the other local factors. Similar considerations applied in the case of assistant medical officers and senior medical officers and in the view of the management side justified their proposal for grading these officers. It was pointed out that in respect of these officers the management side would welcome the application of the same rights of appeal as in other branches of the Whitley machinery.

21. Where a medical officer acts as medical officer of health to more than one authority the management side agreed that his scale of salary shall be fixed according to the total population of the combined districts, but they could not agree to the staff side's proposal that he should receive in addition to this scale £120 per annum. As regards part-time medical officers of health, it was contended that their remuneration should be computed on an hourly basis, the Spens formula set out in the staff side's claim being inappropriate for public health medical officers. As to the claim that any new scales awarded should be made operative from July 5, 1948, it was pointed out that this was the operative date for the National Health Service, which was an entirely new service, and the considerations which justified the application of scales of salary for that service from that date do not apply in the case of the public health service, which was already then established. It was contended that any new scales for the public health service should operate from the date agreed for other local authority chief officers. The management side could not accept the proposal of the staff side that local authorities should have discretion to exceed the scales laid down. As to assimilation, the management side intended that the public health doctors should be dealt with in the same manner as other chief local authority officers. With regard to the claim in respect of the commencing salary of officers transferred from one local authority to another, it was submitted that the staff side's proposal might not be in the best interests either of the authority or of the doctors themselves. As to the claim for London weighting, it was submitted that in other industries and services it had been applied only to the lower-income groups generally and was not appropriate in the case of the officers now under consideration.

It was submitted that in respect of fees for teaching duties undertaken by officers in the public health service such officers should be treated on the same basis as other local authority chief officers. It was pointed out that the only difference between the staff side's claim and the management side's offer in regard to sickness payment was in respect of the scheme to be applied in Scotland. The staff side's claim was for a scheme to be applied universally in England, Wales, and Scotland, but it was pointed out on behalf of the management side that the sick-pay scheme applicable to local authority employees in Scotland differs from that applicable to those in England and Wales, and it was contended that it was desirable that all local authority staff within a particular area should be subject to a common scale of sickness payments.

22. At the hearing the parties agreed to the deletion of certain parts of the staff side's claim and the management side's offer.

23. At the conclusion of the hearing the Court requested the parties to furnish certain additional information, and on October 27 and on subsequent dates statements showing the numbers of public health officers employed by each local authority together with particulars of their salaries on entering their present posts and their current remuneration were sent to the Court. On November 7 and 8 further information, including an estimate of the cost of the staff side's proposals, was furnished to the Court.

The Award

24. The Court have given very careful consideration to the evidence and statements made on behalf of the parties and in the light of the situation as it exists at present award as follows:

The scales of salary for medical officers employed in the public health service in England, Wales, and Scotland shall be

Assistant medical officers or medical officers in departments, £850 per annum rising by annual increments of £50 to £1,150 per annum.

Senior medical officers, £1,250 per annum, rising by annual increments of £50 to £1,650 per annum.

Medical officers of health

Local Authority Population Not Exceeding	Minimum of Salary Scale Between	Annual Increments
75,000	£1,450 and £1,650	4 of £50
100,000	£1,550 and £1,850	5 of £50
150,000	£1,750 and £2,050	5 of £50
250,000	£1,950 and £2,250	2 of £100 1 of £50
400,000	£2,200 and £2,500	2 of £100 1 of £50
600,000	£2,300 and £2,700	3 of £100
Over 600,000	At discretion.	At discretion.

The salary scales for deputy medical officers of health, divisional or area medical officers, and for officers holding mixed appointments shall be determined by joint negotiation and agreement between the parties, and in the event of failure to reach agreement on this matter within a period of two months from the date hereof either party shall be at liberty to report such failure to the Court, and the Court will after hearing the parties determine the matter in dispute.

Part-time medical officers of health shall be remunerated in accordance with the Spens formula in respect of the consultants.

Medical officers of health holding combined appointments shall receive £100 per annum above the appropriate salary scale indicated by the total population of the combined districts for which they are medical officers of health.

Officers at present in post shall be assimilated to the new salary scales on the "corresponding points" principle—that is to say, each officer will be placed on the point in the new scale which he would have reached had the scale been operative at the date of his appointment to his present post. In addition, if a local authority in the exercise of the discretion permitted under the Askwith Agreements appointed a particular officer at a salary in excess of the minimum then current, the local authority shall in assimilating that officer to the scale now awarded fix his starting point at a similar amount above the new minimum, so, however, that the maximum of the new scale shall not be exceeded in such cases except at the discretion of the local authority.

The operation of the scales herein awarded shall not in any circumstances result in reducing the salary of any officer in post.

Sick pay shall be in accordance with the terms of the scheme set out in Appendix G[1] except that in Scotland officers shall be conditioned to the scheme in operation in Scotland for other local authority officers.

[1]Appendix G, not printed here, includes the following provisions for sick pay:

During the first year of service: one month's full pay and (after completing four months' service) two months' half pay. During second year of service: two months' full pay and two months' half pay. During the third year of local-government service: three months' full pay and three months' half pay. During the fourth to sixth year of local-government service: four months' full pay and four months' half pay. During the seventh to tenth year of local-government service: five months' full pay and five months' half pay. After completing ten years of local-government service: six months' full pay and six months' half pay. The council shall have discretion to extend the application of the foregoing scale in an exceptional case.

Medical officers may undertake teaching duties with the consent of the local authority upon such conditions, including conditions as to the retention of any part of the fees received therefor, as the authority may determine.

Where a medical officer transfers from one local authority to an appointment in the same grade with another local authority, service with the former authority in that grade may in the discretion of the new authority be credited in fixing the appropriate commencing salary.

This award shall operate from and including October 1, 1950, and the scales awarded shall with effect from October 1, 1950, be applied in accordance with the formula contained in the Third Schedule of Appendix G (ii), (iii), (iv), and (v),[2] adapted to comply with the assimilation terms of this award.

Except as provided herein the Court find against the claim by the staff side and the offer by the management side and award accordingly.

25. This award is the unanimous decision of the Court. The President's sudden illness precludes him from appending his signature hereto.

(Signed): G. MAURICE HANN.
WM. E. C. LAZENBY.
N. W. COLEMAN, *Secretary*.

[2]Appendix G includes the following paragraphs on operative dates (some examples omitted):

(ii) Where a local authority are at present paying a chief officer a salary less than the salary at the point of entry fixed by the local authority under the last recommendation, the local authority shall with effect from October 1, 1950, pay to the chief officer a salary which is half-way between his present salary and such point of entry and shall with effect from October 1, 1951, pay to the chief officer a salary commencing at the said point of entry. Provided that if an authority wish to defer the payment of the increase which becomes effective on October 1, 1950, until the financial year 1951–2 they may, at their discretion, add the amount of the increase due from October 1, 1950, to March 31, 1951, to the salary payable from April, 1951.

(iii) Any annual increments payable in accordance with the scale so fixed shall first commence to be paid on April 1, 1952, and shall be paid thereafter on April 1 in each year.

(iv) If after the scale and point of entry have been fixed . . . no immediate increase in salary is payable to the chief officer, but increments fall to be paid . . . then the first increment shall be paid on April 1, 1952, and subsequent increments on the anniversary of that day.

(v) If a chief officer was on April 1, 1949, within five years of pensionable age or if he reaches an age within five years of pensionable age on any day thereafter not later than October 1, 1951, the First Schedule [of salary and increments] shall operate in his case as from April 1, 1949, or the day when he reaches the age within five years of pensionable age, whichever is the later, so that he shall receive as from that day a salary . . . with increments . . . on the first and subsequent anniversaries of that day.

GENERAL MEDICAL SERVICES COMMITTEE

WITHHOLDING OF CERTIFICATES

Although it sat for seven hours on December 14 the General Medical Services Committee, with three major issues before it, was able to deal only with a small proportion of the agenda, and arranged to meet again on December 21. Its time was occupied with two or three important matters. Under the chairmanship of Dr. WAND it discussed at length the measures to be taken should the dispute with the Ministry eventuate in a withdrawal of service. In particular it discussed, as a necessary weapon in such a struggle, the withholding of such certificates as might be used for obtaining sickness benefit under the National Insurance and other Acts.

Several members gave their "constituency impressions" of the reaction to this proposal, and the very general report was that the withholding of such certificates was a necessary corollary to withdrawal.

The Committee decided to report to Council and to local medical committees.

The Committee addressed itself to a matter on which some confusion has arisen—namely, the class of certificates which would be withheld. A need for closer definition was felt. It was realized that this matter was not as easy as it might appear. There were, for example, the cases of pensioners and people to whom a certificate was essential if they were to continue to receive certain allowances and benefits, and there were, of course, death certificates and the like, which a registered medical practitioner is bound to give, and which would continue to be issued. A definition was agreed as to the material certificates for the purposes of the dispute—namely, those which might be employed for the purpose of obtaining sickness or other benefits under the National Insurance Act, 1946, and other relevant Acts.

Co-operation between the M.P.U. and the Committee

A deputation from the Medical Practitioners' Union attended with a view to reopening discussions on the representation of that body on the Whitley Council. Its spokesman was Dr. BRUCE CARDEW, general secretary. He said that the Union had felt that as a national organization it should be represented on the new machinery which was set up to negotiate on remuneration. The Union now wished to suggest that they be given representation on the General Medical Services Committee, where policy was determined, and that they should take their chance of representation on Whitley.

It appeared on further examination, said Dr. Cardew, that there was some constitutional difficulty over the manner in which membership of the Committee could be effected. He suggested as a temporary arrangement, until the matter was regularized by the Annual Representative Meeting and the Conference of Local Medical Committees, that representation should be by co-option. This would afford both sides a probationary period to see how the matter worked out. Numerical strength was not important. All that was desired was to have perhaps three representatives on the Committee to voice the Union's point of view. In the past there had been considerable hostility between his organization and other medical bodies, but the Union was now anxious to break this down and to work with all other organizations for the good of the profession.

Dr. Cardew answered a number of questions from the chair and from members. A full report of this discussion will appear in a subsequent issue.

After the deputation had withdrawn, the Committee considered the matter, and, three members dissenting, agreed to invite two members of the Union to attend future meetings of the Committee as observers, the arrangement to continue until the Representative Body of the Association and the Conference of Local Medical Committees have approved the Committee's action and decided whether to regularize the position by an appropriate amendment to the Committee's constitution.

"Unestablished" General Practitioners

The Committee received a deputation of five members representing about one hundred practitioners in the Greater London area who have forwarded an application to the Council for the formation of a Special Group of the Association "to comprise principals in general practice with inadequate lists of patients, assistants, and other unestablished general practitioners."

Dr. H. REZLER, the spokesman of the group, said that such a group was required in the Association because, in the first place, "unestablished" general practitioners were at present inadequately represented and were faced by serious problems which had been caused or accentuated by the National Health Service. They were aware that there was an Assistants and Young Practitioners Subcommittee of the General Medical Services Committee, but this, almost inevitably, was not a representative body, and its members could state only their individual opinions. Moreover, the term "young practitioners" was objected to; some of the practitioners in this petitioning group were middle-aged or even elderly. The speaker laid stress on the difficulties of entry into general practice, and on the swelling of the ranks of general practice by the continual entrance of more doctors from the medical schools, the Forces, and the ranks of "displaced" hospital registrars. It seemed quite possible that within the next year or two there might be serious unemployment in the medical profession.

The Council of the Association determines the creation of special groups, and the Committee's report on this application will be before the Council at its meeting on January 17.

REGISTRARS' GROUP

MANCHESTER MEETING

A General Meeeting of the Manchester Region Registrars' Group was held at the Manchester Royal Infirmary on December 1. Dr. R. M. FORRESTER was in the chair, and 103 members were present. The main item on the agenda was the motion: "This meeting welcomes the Minister's attempt to form a proper consultant–registrar ratio, but deplores the method by which this is to be achieved."

The CHAIRMAN said that one of the main objects that the Registrars' Group had pressed for was the formation of a proper consultant–registrar ratio, and the Minister's attempt at arriving at such a ratio was welcomed on this account. It was with its manner of achievement that registrars disagreed. The serious effect of the Minister's scheme on hospital manpower and the disastrous effects on hospital services consequent on dismissal of registrars were pointed out. Replacement of registrars by general-practitioner assistants could not be contemplated by hospitals, registrars, or general practitioners themselves. As to the alternative employment offered, neither the armed Forces nor the Colonial Medical Service was attractive, since many registrars had already served in the Forces and many now had family responsibilities. Entry into general practice was extremely difficult for registrars.

Three Proposals

The CHAIRMAN put forward three proposals which might help to solve the registrars' problem:

(1) *Expansion of Consultant Services.*—This had been officially envisaged. It was agreed that this could not be maximal at once, but even such expansion as was possible and necessary at the present time had not been effected, and dismissal of so many more senior registrars would make subsequent expansion more difficult inasmuch as that these trained men would have been lost to the service.

(2) *Improvement in Conditions in General Practice.*—It was agreed that there must inevitably be some wastage of registrars on the ladder to consultantship, and it was felt that the main outlet for them must be into general practice. Therefore, measures for improving conditions in general practice must be fully supported, and easier means of entry for registrars into general practice must be found.

(3) *Extension of Period of Tenure of Senior Registrar Appointments.*—This involved an entirely new principle—namely, the extension of tenure of senior registrar appointments for a limited period over and above the three years laid down by the Minister. Thus an increase in tenure of one year, making four years in all, and at the same time allowing the same number of entrants into the senior registrar grade as would otherwise obtain, would allow a 33% increase (over the Minister's figure) in the number of senior registrars employed at any one time. An increase of two years would provide a 66% increase, and of three years 100%. The actual figure of 1, 2, or 3 years could be decided when the full extent of expansion of consultant services was known. In any case it could be a variable figure, adjustable to the needs of expansion of the consultant service. As long as a definite maximum tenure was laid down there would be no blocking of new entrants, a feature which was of vital importance.

Dr. T. F. REDMAN pointed out one objection to the proposal to increase the tenure of senior registrar appointments—namely, that such an extension would prolong the period of insecurity before the registrar knew whether or not he was to get a consultant post. He put forward, as an alternative, the creation of junior consultant posts. This proposal was criticized by some members on the ground that they would have the effect of giving the Minister the services of fully trained consultants at less than a consultant's pay.

After further discussion of the Chairman's proposals by various members, during which the importance of registrars in hospital services, and the ill effect that their dismissal would have on the public, were stressed, Dr. ROSE proposed that "the present emergency can be met as far as is possible by extending the consultant services and by the creation, if necessary, of junior consultant appointments."

The motion was seconded by Dr. F. BRUN. The following amendments to the motion were made: (1) A "junior consultant" should be defined as a doctor paid at a salary intermediate between senior registrar and consultant, and with full clinical responsibility. (2) The term "junior consultant" should carry with it the right to promotion to full consultant in due course. The motion and the amendments were carried by 60 votes to 22.

Dr. E. FEINMANN then proposed: "The Chairman's statement of policy to be taken as the basis for future discussion and action." Dr. C. J. DEWHURST seconded the motion, which was carried unanimously.

The Chairman promised to present the registrars' case and their proposals at all levels with the utmost vigour.

CENTRAL ETHICAL COMMITTEE

The Central Ethical Committee at its meeting on December 12 started bringing up to date the statement of the Association's policy on indirect methods of advertising. The existing statement was drawn up in 1925. The Committee will prepare for the approval of Council a statement for the guidance of those members of the profession who speak and write for the public on medical or semi-medical matters. The part of the statement on such subjects as press interviews and television appearances will require long consideration.

A report was received that the Ministry of Health had issued a circular to hospital authorities calling attention to the necessity of obtaining the written consent of the patient prior to the loan of case papers to the Ministry of Pensions. The Ministry had also agreed to bring the contents of the circular to the notice of members of hospital staffs.

SUPPLEMENTARY OPHTHALMIC SERVICES

A circular from the Ministry of Health emphasizes that medical practitioners in the whole-time service of regional hospital boards, boards of governors, or hospital management committees cannot take part in the Supplementary Ophthalmic Services. Ophthalmic medical practitioners on ophthalmic services committees' lists may not claim fees under the Supplementary Ophthalmic Services for sight tests performed at hospitals where they are under contract as part-time officers.

Heard at Headquarters

Inquiry from France

The International Medical Visitors Bureau, whose director is Dr. H. A. Sandiford, at B.M.A. House, has heard from a French doctor who would like his daughter, aged 18, to spend the winter in London, preferably *au pair*, either to teach French or to look after children. Any doctor interested in making some arrangement with the French doctor may obtain particulars from Dr. Sandiford. Two members of the B.M.A. arranged holiday exchanges through the Bureau with French doctors during the summer, and the visits were a great success. Dr. Sandiford will provide information about arranging visits, and those interested should write to him well before the proposed time.

The Village Doctor

Rural practice, the disadvantages of which are sometimes stressed, has its compensations. Dr. W. N. Pickles gave a pleasant picture of it in an address to the Medical Officers of Schools Association the other day. He told how on a lovely evening in early summer he climbed to the top of one of the noble hills in his part of Yorkshire. One by one he made out the villages below him, each with its thin pall of smoke, and watched the evening train creep up the valley; and the curious thought occurred to him that there was hardly a man, woman, or child in any of those villages whose Christian name he did not know and with whom he was not on terms of intimate friendship. He confessed that he owed a great deal to his patients—the folk of the Yorkshire dales with their great friendliness and kindness of heart. They were just the people to help the doctor in such epidemiological investigations as had interested him. Matters like heredity and consanguinity had to be approached with care, but he had generally found co-operation and they were not quick to take offence. He had known the grandparents of most of his present patients and had been able to trace characteristics through generations.

Standing Order

The discussion in the council was on the setting up of a new medical advisory committee. It was objected that the gentlemen selected were old and set in their ways, but to this it was pointed out that they must be people of standing. "People of standing!" said the surgeon who had raised the objection, "Why, they've got one foot in the grave and the other in a roller skate."

Film Library Accessions

The B.M.A. Film Library is growing apace. Lately it has been enriched by some two dozen medical films, nearly all of them presented by Imperial Chemical Industries, which has agreed to give two copies of all its medical films to the Association. Nearly half the films in this latest acquisition are concerned with anaesthetic technique.

Thanking You

A novel attempt to save the doctor's time in his surgery is suggested by the following letter, which a general practitioner recently received from a patient: "Dear Sir,—I am wondering if you would be so kind as to call in on me and give me an order for more insulin and needles, also some codeine tablets. I have not had any tablets for a long time now and I feel I want some more. I thought perhaps this would save you time in your surgery hours. Thanking you. . . ."

Questions Answered

Basic Salary and Income-tax

Q.—*I am receiving the annual payment of £300 basic salary from the National Health Service. Is this grant assessable for income-tax? If it is, is it correct to include it with my other fees?*

A.—The salary can be included in the miscellaneous earnings assessable under Schedule D.

THE B.M.A. WAR MEMORIAL

The committee appointed by the Council in 1947 to consider the question of a war memorial to members of the medical profession who fell in the 1939–45 war has sought the advice of experts on the form the memorial should take, and, as previously reported, it has recommended to the Council that it should be a visible memorial located at B.M.A. House, London, fitting to the memory of the fallen and in keeping with the general architecture of the building. A fountain in the Court of Honour of B.M.A. House was considered the most suitable form of memorial, and a limited competition was instituted among three prominent sculptors. The design of Mr. James Woodford, R.A., R.S.B.S., was chosen. It consists in a memorial fountain surrounded by a group of figures sculptured in classic style in Portland stone, symbolizing the ever-developing range of medical research, service, and sacrifice. This model was exhibited at the Annual Meeting in Southport and Liverpool last July, and a photograph and description appeared in the *Supplement* of September 16 (p. 131).

Many members of the Association have expressed the view that scholarships for the children of the fallen would be a more appropriate form of memorial, and it was agreed that these should also be instituted.

In response to the appeal issued by the Chairman of Council to every member of the Association last July, £8,127 1s. has been received so far from 4,145 subscribers. Of this total, £313 15s. from 110 subscribers has been set aside for scholarships and other purposes. (The names of subscribers will be published in this *Journal*.) Sufficient funds are now available to start on the work, which it is expected will take 18 months to complete.

The cost of the memorial in the courtyard will be £6,500. There will, in addition, be certain expenses in connexion with its erection. These will be less than originally estimated, since it is necessary in any case to re-lay the Court of Honour because of subsidence during the war. The cost of this will not come out of the War Memorial Fund.

All subscriptions received from now on can be devoted entirely to the scholarship section of the War Memorial Fund, and members are invited to subscribe generously. This can be done at the time of renewing the annual subscription, and a space is provided for the purpose on the form. Those who have already asked that their subscriptions should be devoted entirely to scholarships will have their wishes met.

The War Memorial Fund can now be recognized as a charity, and it will be possible to accept covenants for this purpose. Those who might wish to take advantage of this opportunity over a period of more than seven years are invited to communicate with the Secretary, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

Correspondence

General Practitioners and Hospitals

SIR,—Dr. W. N. Leak's letter (*Supplement*, December 9, p. 241) regarding the payment of general practitioners and consulting surgeons raises several points of interest, but consideration of these will tend to deflect attention from the danger which, perhaps unrecognized, threatens him and his G.P. colleagues at Winsford. I do not know the geography or the resources of the Winsford district, but I dare to forecast that in a few years' time no operations will be performed in his hospital by G.P.s.

The process of development in our hospital has been as follows. Ten years ago a visiting general surgeon and an E.N.T. surgeon came down from time to time to do special cases. The rest of the surgery, including most emergencies, was done by G.P.s. Gradually our two consultants were joined by a gynaecologist, an orthopaedic surgeon, and, most recently, by a genito-urinary surgeon. During this process we G.P.s shared in the advantages by increased opportunities for consultation and for discussion while assisting at operations or giving anaesthetics. But now the natural and easily foreseeable sequence has taken place. The specialist anaesthetist and the resident house-surgeon have made the G.P. unnecessary for the efficient treatment of the patient in hospital.

General practitioners are being discouraged from working in hospitals, and consultants are degenerating into mere specialists. Our enthusiasm and our efficiency are thereby lessened. The payment from the staff fund merely adds to our degradation, as the only possible excuse for it seems to me to prevent anyone belonging to the "doctor class" from being associated with voluntary work.

But this question of payment should not be allowed to divert us from the real problem. What must be decided is at what stage of development is the increased efficiency of any particular G.P. hospital bought at too great a cost in the consequent lowering of the standard of general practice in the neighbourhood. Unfortunately the standard of general practice is not recognized by the hospital service authorities as being their responsibility, and there, I think, lies the cause of our present decline and imminent fall.—I am, etc.,

Forest Row, Sussex. E. G. SIBLEY.

Hospital Threatened

SIR,—Dr. Stark Murray's letter (*Supplement*, December 9, p. 242) shows little sympathy with the G.P. It seems to me grossly unfair that the Victoria Hospital, Kingston (a comparatively up-to-date building), should be annexed by the board for specialist services, especially without suitable alternative accommodation being provided for immediate use. This is in contravention of the Minister of Health's circular on G.P. beds.

As a G.P. of over 30 years' standing I am convinced from personal experience that these beds are "vital to the standard of medicine," sufficient numbers cannot be provided in the foreseeable future, and therefore it is all-important that part-time registrar and clinical assistantships should be made available without delay.

I have every sympathy with the hospital registrars who are being dismissed, but believe that many of them would find a fuller life if a combination of general practice and hospital employment was made available to them. This can be achieved only by the reorganization of general practice as well as hospital staffing. During the past 30 years many branches of medicine and surgery have been removed from the G.P.'s sphere, and he is not the good all-round man his grandfather was. Something must be done to restore the balance.—I am, etc.,

London, W.14. C. WATNEY ROE.

Public Relations

SIR,—It appears to me that both Drs. Guy Dain and W. Edwards (*Supplement*, December 9, p. 242) have, unwittingly I am sure, attributed to me a suggestion which I had no intention of making. I did not suggest that our P.R. Department should misrepresent facts. Even if my words could, by taking one sentence out of its context, be made to mean this, I think it was sufficiently obvious to most intelligent readers that this was not my intention. The gist of my remarks was, I maintain, quite clear—that it is the duty of any P.R. department to make its employers appear in the best light possible.

As a member of the Association I must say I resent the assumption of your correspondents that the P.R. Department is sacrosanct and must not be criticized. The integrity of the P.R.O. is not in dispute, although for some reason both your correspondents refer to it in their replies to my letter. I would be the last to question it. In fact, I am not concerned with the reputation of the P.R.O. But what causes me considerable concern is the reputation of the medical profession.

In my view the P.R. Department should pay more attention to matters which are likely to enhance our reputation. I have been told by an experienced journalist on a national daily that rarely does the P.R. Department hand out stories about what doctors, individually or collectively, are doing for the public (e.g., how 90-odd % of those engaged in National Health Service practice are conscientiously doing their utmost to make the Service a success, or about some new discovery to ease the sufferings of mankind), but concentrates on the medico-political side of B.M.A. activities. In my view this is a mistake and contributes to the deterioration of our reputation.

After all, the letters P.R. stand for Public Relations, not Political Relations. If we build up a picture in the public eye of ourselves as we really are—working constantly for the public good and not particularly obsessed with thoughts of money—then, I think, when it does become necessary for our finances to become publicly in dispute, we shall have the solid backing of the public.—I am, etc.,

Hatfield, Herts. KENNETH C. HUTCHIN.

Negotiations Through Whitley Machinery

SIR,—Though I feel that for the sake of unity in a reasonable cause the movement to withdraw from the Health Service (unless a satisfactory settlement on remuneration is arrived at) should be supported, I greatly regret that payment should be the subject of the stand. At the Conference of Local Medical Committees last June a resolution was passed regretting the Minister of Health's failure to give an unqualified assurance that negotiations on general-practitioner remuneration will always be conducted through Whitley machinery, and instructions for preparations for withdrawal were, first, "in the event of the Minister failing to give the necessary assurance."

To my surprise nothing of this was mentioned in the circular letter sent to all G.P.s explaining the probable actions of the British Medical Guild. Can it be that the Guild does not think the matter of such importance as the amount of our pay; or does it think us less likely to be concerned about a matter of principle than about the state of our pockets?

It is a matter of importance to all citizens at a time when more and more of us are directly employed by the State that our employer should not be also the arbitrator of our disputes, and by taking a stand on this point we should be fighting for the liberty of every citizen (and I think the public could understand this) rather than, with however great justification, for our personal future as doctors.—I am, etc.,

London, E.11. SIDNEY ABRAHAMS.

Difficulty of Entering General Practice

SIR,—Having been through the difficult and anxious process of finding and settling into a practice since the war, I have the greatest sympathy for those who are now experiencing frustration and anxiety in finding a suitable opening with reasonable prospects. Conditions appear to be much worse than they were, and something should be done without delay to facilitate the smooth and easy absorption of these doctors, who are in any case badly needed to help with the mass of work falling on the general practitioner.

It is inevitable that they should feel some resentment of those who are already settled in practice with large lists, but many doctors who work appallingly long hours and seldom get away from their practices would gladly take a partner with whom to share the work and responsibility, but with remuneration on its present basis this is impossible. The obvious solution is to have a higher rate of capitation fee for the first 1,500, and a lower rate of capitation fee for the next 2,500, unless a partner is taken, in which case the new partner would also be entitled to the higher rate of capitation for his first 1,500 patients.

The problem of these unplaced doctors should have more urgent attention than the claims of those of us who are already settled in practice, just and pressing though our own claims undoubtedly are.—I am, etc.,

Sixpenny Handley, Wilts. PAUL HARRIS.

Withholding Certificates

SIR,—The original Guild schedule issued to doctors created as much stir as a damp squib, the reason being that the general practitioners were asked to fight with their hands tied behind their backs. When the Conference of Local Medical Committees, and later the G.M.S. Committee, both with overwhelming majorities, reversed their decision not to withhold certificates, the hopes of the G.P.s rose once again. Dr. Wand points out that this reversal was a result of the wave of feeling at the periphery. That is, some 20,000 G.P.s all over Great Britain were very sore with the feeble Guild policy.

The case was next considered by Council. There was much support, but various members opposed the new decision. I wonder how many of the latter are not G.P.s. The Public Health Committee chairman would give sympathy and support, but we must not withhold private certificates. The report (*Supplement*, November 25, p. 209) of his actual committee meeting was that private certificates should not be withheld from private patients. What exactly is meant? Patients who are private from choice, or the millions who become suddenly private in the event of withdrawal? How Aneurin Bevin would welcome those certificates in lieu of official forms. That Celt would not enjoy fighting such simpletons. He would think of the doctors of the Netherlands, who went to the extreme of withholding even death certificates, and so subdued the Nazi occupation forces in a day or two. A short fight and victory instead of a long-drawn-out disastrous struggle.

In Council some speakers repeated ethics, ethics, as an argument against. Now let us look at this certificate question from another angle. From time immemorial private certificates have been paid for by the patient. Do these ethical doctors agree to withholding official health certificates and charging for the alternative ones? That would place us in a worse position than Dr. Gregg envisages. We become spivs and racketeers, screwing extra "bobs" out of the individuals. Shame!

Last week a Guild meeting of our ward was called to organize groups, etc., and, of the twelve doctors who were not G.P.s invited, only one turned up. He described himself as an unemployed registrar—a true story that should ring a bell for all doctors under the yoke of the Ministry of Health.

Council now asks that the decision be referred back to the periphery. I appeal to all general practitioners to attend their meetings and support the decision of their local medical committees. Doctors outside general practice should also participate in Guild meetings before the Ministerial axe falls on them as it did on the registrars.—I am, etc.,

Birmingham. THOMAS J. CRONIN.

Distinction Awards for Part-time Specialists

SIR,—The reputation of our profession surely reached its nadir with Lord Moran's recent speech in the House of Lords on October 18 in justification of the specialist awards (*Journal*, October 28, p. 1005). Stripped of non-essentials, his argument appeared to be that no whole-time specialist could be expected to do his best, once his maximum salary was reached, without special awards as a prize for endeavour.

This, if true, is lamentable. But what is the justification for the large awards recently made to part-time specialists? Do they need an incentive? Already they earn in private practice two or three times the income of a general practitioner; a grateful Government has rightly allowed them to earn a salary up to £2,350 a year for work which they previously did for love of humanity; they can make another 800 guineas for domiciliary consultations; and now in addition they have the prospect of further Grade A, B, and C awards.

What incentive has the general practitioner to stir him to further effort or reward him for work well done? Merit will not help; proximity to a bus route, or a rising industrial suburb, is the index to his income. The better-class practice is ruined; the busy industrial doctor with 4,000 patients is perhaps reaping some financial benefit at the cost of his health or his conscience. He must work for a fixed income until retirement or, more probably, death claims him.

I know there is an official explanation for all this—the Spens report covers a multitude of sins. But, although a practitioner of 40 years' experience, and now too old to be much affected by these changes, I am tempted to forget the calm of maturity and to say, in the vigorous if vulgar idiom of a younger generation, Sir, it stinks.—I am, etc.,

Cardiff. C. W. SHEPHERD.

Merit Awards

SIR,—A letter has just been received at the offices of this association from a well-known consultant which begins, "I have been informed, from a source that I have no reason to believe is unreliable, that every member of the staff of the teaching hospitals above the age of 40 years has received a merit award. . . ."

The teaching-hospital consultants are said to be some 20% of all consultants; merit awards were to be distributed to 34% of all consultants.—I am, etc.,

NIGEL CRIDLAND,
Honorary Secretary.

Regional Hospitals' Consultants and Specialists Association (Non-Undergraduate Teaching Hospitals).

N.H.S. and Politics

SIR,—The curse on the N.H.S. is that instead of starting as a genuine health measure agreed between Parliament (both Government and Opposition) and the profession it was forced into being by an omnibus Act primarily to implement the politically inspired National Insurance scheme. The Act gave dictatorial powers to the Minister of Health, and this position was then given to a politician who cheerfully boasted his "abysmal ignorance" of medicine. As regards these powers it should be noted that although he professes to have no power to *improve* conditions of remuneration, etc., yet he has overnight by a stroke of the pen *cut* the pay of the chemists and dentists.

Only a childless cynic could be other than appalled at the housing position, which is not only, as any general practitioner can testify, producing an immense amount of avoidable physical and mental stress and disease, besides limiting the birth rate, but is also seriously interfering with the convalescence and aftercare of hospital patients. How can a heavily plastered elderly leg be properly nursed in a council house containing two families totalling perhaps ten members? Yet the overstrained hospital accommodation must be kept fluid or be overwhelmed. Now we have the crazy cutting down of hospital staffs. The whole Service totters.

Most assuredly we should approach every member of Parliament, but it should not be a haphazard affair left to local committees and divisions but a forceful, factual, and concise statement from H.Q. Local comment and examples can be added. Every M.P. is personally responsible to *all* in his constituency, and, although the Minister must take the ultimate and major blame, the M.P., if obstructive or inactive after briefing, cannot escape his share.

It is painfully obvious that the B.M.A. public relations service is as yet deplorably weak and ineffectual. If the public were properly apprised of the facts, the Minister, even this one, would be forced by public opinion to improve matters. We wrung out of him the right of open criticism. Let us use it.

Medicine should be above politics, but the present regime has made this ideal for the time unattainable, and it is therefore our duty not only to ourselves but to our patients—the nation—to ventilate the facts.—I am, etc.,

Newton Ferrers, Devon. W. F. BENSTED-SMITH.

Expensive Life

SIR,—Dr. Adair Girby (*Supplement*, December 9, p. 243) should consider that as he becomes older things that happen to many of us may happen to him.

He may find a girl willing to marry him. He may have four or five or more children. He may decide, or be forced, to go into general practice. He may have to buy a house, the only available one costing a lot of money and expensive to keep up. He will have to buy a car. If he is a success in practice he may find himself driving 50 miles a day throughout the year. He may have to have a second car in reserve—though probably not a Daimler. He may have to pay large sums in income-tax. He may even wonder how he came to write such a letter to the *Journal*.—I am, etc.,

Kidderminster, Worcs. PHILIP GRIFFITHS.

Obstetrics Forbidden to Assistants

SIR,—May I add my voice to those of the ever-growing multitude of dissentients which this Welfare State is producing?

I am informed that an assistant in general practice may not practise obstetrics, but that when he becomes a principal he may submit his name for possible inclusion in the Obstetric List. By that time, of course, he will not have practised obstetrics for so long that he will be refused.

It seems to me that the subject of obstetrics should be removed from the final examination and that a postgraduate diploma of proficiency should be granted after a suitable period of training. To carry this to its logical conclusion, all subjects should be removed from the final examination and diplomas should be given as appropriate to postgraduate training. The final examination could be replaced by a certificate of attendance at a recognized teaching hospital.

Now all this will mean that the G.P. as such will disappear, as no one will have the time or the inclination to gather all the necessary diplomas, and he will be replaced by various pseudo-specialists. The man who gets only his attendance certificate will, I suppose, be the descendant of the old-time G.P. As

obviously he cannot be called a general practitioner, may I suggest as an alternative title either "coryza control officer," or possibly "coryza certification officer"?

All this will be rather difficult in practice, but it should prove an administrator's paradise, which I suppose is all that matters.

Incidentally, when one has been licensed by the General Medical Council to practise obstetrics, can this be legally revoked some years later without adequate reason?—I am, etc.,

Normandy, Surrey. ROBERT P. HARWOOD.

*** The Secretary of the B.M.A. states that this matter is being discussed with the Ministry of Health.

Tuberculosis and the N.H.S.

SIR,—In one day this month my time-table was as follows: 2 a.m., out on maternity case; 10 a.m., visit and perform B.S.R. on a case of open pulmonary tuberculosis; 4 p.m., interview with regional medical officer, who informed me that my prescribing cost was 40% above the average, and if I did not come down to the average cost over the next three months I should know the reason why. These seemingly disconnected jottings emphasize the plight of the tuberculous patient for whom there is no sanatorium bed to-day.

It is, to my mind, unfair that the G.P., with his resistance lowered by the present conditions of overwork, should have to treat these unfortunate people (dare I add for 16s. a year?), with no hope of compensation should he contract the disease himself. He is even more handicapped by the present Ministry attitude on prescribing. If all prescriptions must be of "average" cost, long courses of P.A.S. and streptomycin are not encouraged.

The solution surely is to increase the number, pay, and status of the tuberculosis officers, who can usually spend their nights in bed and keep their resistance high; to hand over the treatment of all sufferers from tuberculosis to them; to encourage domiciliary visits for the purpose of A.P.s, B.S.R.s, and health education; and allow them to give the necessary drugs without the worry of running up their "average" cost of prescriptions for the quarter.—I am, etc.,

Caterham, Surrey. D. S. PORTER.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Major J. Shields to be Lieutenant-Colonel.

Major M. F. X. Slattery has retired on retired pay on account of disability.

Short Service Commission, Type "B."—Major A. A. Grace has retired, receiving a gratuity.

Short Service (Specialist) Commission.—Captain (War Substantive Major) A. O. McClay to be Major.

Short Service Commission.—Captain D. Gregory to be Major.

Women's Forces Employed with the R.A.M.C.—Captain I. M. Pinkerton has relinquished her commission and has been granted the honorary rank of Major.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Major (Honorary Lieutenant-Colonel) J. F. A. Forster, M.B.E., formerly I.M.S., to be Major.

Majors R. L. Sadler, A. M. Murray, and H. D. K. Wright have ceased to belong to the Reserve of Officers.

Captain (Honorary Major) J. R. E. Sansom has ceased to belong to the Reserve of Officers.

SUPPLEMENTARY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Colonel R. A. Lennie, T.D., has been appointed Honorary Colonel of a Supplementary Reserve unit.

Captain J. C. Knox, C.B.E., has been appointed Honorary Colonel of a Supplementary Reserve Unit.

TERRITORIAL ARMY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS

Lieutenant-Colonel F. A. E. Crew, T.D., having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O., and has been granted the honorary rank of Brigadier.

Lieutenant-Colonels W. Bowater, M.C., T.D., H. V. Walsh, T.D., and J. S. M. Connell, having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O., and have been restored to the rank of Brevet-Colonel.

Major (Honorary Colonel) A. Angus, T.D., having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O.

Majors (Honorary Lieutenant-Colonels) J. M. F. Whitby, T.D., P. Lloyd-Williams, O.B.E., T.D., L. P. Marshall, M.C., T.D., and G. E. O'Riordan, T.D., having exceeded the age limit of liability to recall, have ceased to belong to the T.A.R.O.

Major (Honorary Lieutenant-Colonel) J. S. Miller has ceased to belong to the T.A.R.O.

Majors J. Burns, M.C., T.D., J. F. Bereen, D. S. Valentine, T.D., and S. G. Cowper, from Active List, to be Majors.

Majors J. L. Cowan and A. S. H. Walford have ceased to belong to the T.A.R.O.

Major H. Wilson, M.C., having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O. (Substituted for the notification in a *Supplement* to the *London Gazette* dated August 18.)

Captain H. R. R. Mavor, having exceeded the age limit of liability to recall, has ceased to belong to the T.A.R.O., and has been granted the honorary rank of Major.

Captains (Honorary Majors) J. H. B. Beal and D. Arnott, T.D., have ceased to belong to the T.A.R.O.

Captain C. J. Goodall, from Active List, to be Captain, and has been granted the honorary rank of Major.

COLONIAL MEDICAL SERVICE

The following appointments have been announced: J. A. H. Andre, M.B.E., M.R.C.S., L.R.C.P., Deputy Director of Medical Services, Mauritius; C. E. S. Bailey, M.B., D.P.H., Assistant Director of Medical Services, British Guiana; J. K. Hunter, M.B., D.P.H., Assistant Director of Medical Services, Uganda; G. de B. Mitford-Barberton, B.M., Medical Officer, Uganda; E. J. Kirwan, M.Ch., Special Grade Medical Officer, Nyasaland; K. G. Lupprian, M.B., Medical Officer, Federation of Malaya; J. S. Oakey, M.B., Medical Officer, Tanganyika; J. J. O'Dea, M.B., Medical Officer, Northern Rhodesia; J. R. R. Wray, M.R.C.S., Medical Officer, Kenya; H. W. Conran, M.D., D.P.H., Medical Officer, Fiji; G. O. Hallman, M.D., Medical Officer, Fiji and South Pacific Health Service; G. Hollitscher, M.D., Lady Medical Officer, Federation of Malaya; O. James, M.B., Medical Officer (temporary), Barbados; B. Kalinsky, M.B., Medical Officer, British Guiana; B. Madhoo, L.R.C.S., Medical Officer, Mauritius; G. E. Stoker, M.R.C.S., Medical Officer (temporary). General Hospital, Barbados; A. Szeley, M.D., Medical Officer (temporary), Falkland Islands.

Association Notices

AREA OF LEEWARD ISLANDS BRANCH

Notice is hereby given by the Council to all concerned that it is proposed to exclude the Island of Dominica and the Island of Eustatius from the area of the Leeward Islands Branch. Any member affected by this proposal and objecting thereto should write to the Secretary of the Association not later than January 30, 1951.

A. MACRAE,
Secretary.

Diary of Central Meetings

JANUARY

2	Tues.	Organization Committee, 2 p.m.
9	Tues.	Amending Acts Committee, 2 p.m.
10	Wed.	Film Catalogue Subcommittee, 4 p.m.
12	Fri.	Ophthalmic Group Committee, 2 p.m.
17	Wed.	**Council**, 10 a.m.
24	Wed.	Consulting Pathologists Group Committee, 2.15 p.m.
31	Wed.	Amending Acts Committee, 2 p.m.

Branch and Division Meetings to be Held

CAMBERWELL DIVISION.—At Dulwich Hospital, East Dulwich Grove, London, S.E., Tuesday, January 2, 8.30 p.m., B.M.A. Lecture by Dr. Keith Simpson: "Crime and the Doctor." To be illustrated by lantern slides. All medical practitioners in the area of the Division are invited.

HAMPSTEAD DIVISION.—At Hampstead General and North-west London Hospital, Haverstock Hill, London, N.W., Wednesday, January 3, 8.30 p.m., lecture by Dr. Denis Williams: "A Physician's View of the Prolapsed Intervertebral Disk."

INDEX TO VOLUME II FOR 1950

Names of contributors are printed in capitals. Subject entries for original articles, leading articles, annotations, and correspondence are indicated by the use of the symbols (O), (L), (A), and (C), respectively. Some subjects dealt with under various main headings in the *Journal*—e.g., "Annotations," "Any Questions?", "Leading Articles," etc.—are also set out under these headings.

Diphtheria immunization and poliomyelitis, 1013
Drugs, dangerous, issued to nurses; regulations, 121
Dwarfism, treatment of, 1291
Eclampsia; incidence and methods of treatment, 1071
Eczema, infantile, familial risk of, 1127
Encephalitis, post-vaccinal, 738
Encephalopathy, hypertensive; treatment and prophylaxis, 1235
Eosinopenia in cortisone and A.C.T.H. therapy, 1235
Ephedrine; effect on the bladder, 793
Epilepsy, inheritance of, 1404
— Residential epileptic schools, 310
Epispadias, treatment of, 1506
Faecal incontinence in childhood; cause and treatment, 1346

ANY QUESTIONS (*continued*):
Family history, practical value of, 637
Fat absorption, defective; treatment, 470
Fats, faecal, in pancreatic disease and sprue, 794
Fingertips, cracked and painful; treatment, 178
Foreskin, retraction of, in infants, 1235
Gammexane poisoning, symptoms and signs of, 1014
Gas gangrene antiserum, value of, 121
Gastro-enteritis, tropical, in children, 1291
Gin and Benedict's solution, 232
Gingivitis, infective, aetiology and treatment of, 901
Glandular fever, 1455
"Golf elbow," 177; correspondence, 310, 378
Growth, stimulation of, by thymus extract, 122
Guaiacol, 1506
Guanidine in myasthenia gravis, 178
Gums, bleeding, treatment of, 960
Haemospermia; causes and treatment, 377
Halitosis, 1236
Harvesters' lung, 1184
Hay-fever, treatment of, 60
Heart: Minor degrees of toxic carditis, detection of, 60
Heparin and hyaluronidase; indications for, 1072
Herpes simplex, recurrent; treatment, 1184
— zoster, aetiology of, 1236
Hormones: Male hormone assay, 309
Hymen, origin of, 959
Hyperpiesis and albuminuria; investigation and treatment, 377
Ileostomy, prolapse of; prevention and treatment, 178
Immunization of allergic children, 848
Infant mortality; reduction in Chicago, 177
Infant, premature, prevention of intracranial injury in, 423
Insecticides: Toxicity of "P.M.4," 1127
Instruments subject to damage by moist heat, sterilization of, 1128
Insulin ointment, 378
Iodine, thyroid, and aspirin preparation, 584
Iritis, treatment of, 122
— palatable prescription of, 1291
— intravenous; indications, contraindications, dosage and technique of administration, 469
Jaundice, continued, management of, 737
— homologous serum, transmitted by syringe, 469
Kerato-conjunctivitis, aetiology of, 1403
Kidney, horseshoe, treatment of, 794
Kimmelstiel–Wilson syndrome, 1072
Knee, chronic synovitis of, 637
Kraurosis vulvae, treatment of, 121
Lactation, falling of hair during, 1184
Leeches, indications for use of, 59
Lemon juice, effect on calcium absorption, 378
Leucoderma, treatment and effect of pregnancy on, 1404
Leucopenia, treatment of, 960
Leucotomy, prefrontal; indications and prognosis, 959
Libido, excessive, reduction of, 848
Lichen planus, treatment of, 690
Lip: Peribuccal pigmentation, 638
Liver, function tests in infancy, 793
Magnesium sulphate, local action of, 310
Malformations, congenital, risk of, 793
Marrow, vegetable, diuretic effect of, 1014
Meat and chicken soups, nutritive value of, 1404
Methyl bromide and ethylene oxide poisoning, 848
Micturition, inhibition in males, 469
Midge-bites, treatment of delayed reaction to, 377
Milk; value of pasteurization, 1345
Mongolism, familial incidence of, 959
Morphine substitutes, 737; 794 (C)
Muscle: spasm in paraplegics, 793
Naevus, treatment of, 122
Nail biting, treatment of, 1071
Oestrogen therapy, prolonged, 1456
Paget's disease of bone, hereditary influences in, 738
Pancreas, fibrocystic disease of, familial, 959
Pancreatitis, chronic, and carcinoma, 378
Paraldehyde, sterilization of, 1235
Parkinson's disease, control of tremor in, 60
— — "myanesin" in, 121
Parthenogenesis, artificial, 470
P.A.S., dispensing of, 901; correspondence, 1072
Peanuts and vitamins, 310
Pelvis, diameters of, 737
Penicillin: Desensitization to penicillin, 1236
— dosage, 309
— in chronic sinusitis, 424
Penis, erection, post-operative, prevention of, 1127
Perspiration, red, 1072; correspondence, 1184
Poliomyelitis and physical activity, 231
Polycythaemia vera; treatment with radioactive isotopes, 1127
Pregnenolone, 902
Pressure cooking; effect on vitamins, 1183
Prickly heat, treatment of, 847; correspondence, 1292
Procaine, intravenous, 1506
— — in asthma, 469
Prostatitis and vesiculitis, tuberculous, diagnosis and treatment, 178
Pseudomonas pyocyanea infection of middle ear, treatment of, 423
Punch-drunkenness, 793; correspondence, 1292
Pyelitis, chronic, due to *Bact. coli*; treatment, 583
Quinidine therapy, prolonged, 1456

ANY QUESTIONS (*continued*):
Radium for uterine cancer; indications and results, 637
Raynaud's disease, treatment of, 738; correspondence, 1128
Rectum: Prolapse for 40 years, treatment of, 1184; correspondence, 1346
Rheumatoid arthritis and cortisone, 1455
— — effect of sulphur in, 794
— — incidence according to climate, 378
Rhinitis, allergic; diagnosis and treatment, 1292
Ringworm of nails, treatment of, 1291
Saccharin as carcinogen, 1184
Salicylates, intravenous, efficacy of, 232
Scalp, neurodermatitis of, 584
Schizophrenia, stress as causal factor in, 1072
Smallpox; Treatment, 583
— Vaccination; storage of vaccine lymph, 1455
Spina bifida, inheritance of, 122, 793
Spinal cord; subacute combined degeneration; liver therapy, 377
Splenomegaly in thrombocytopenic purpura, 793; 960 (C)
Spondylitis, ankylosing; aetiology, diagnosis and treatment, 689
Sterilization of the male; effects of vasotomy, 689
Sterilization test-papers, 738
Stilboestrol and cancer of breast, 638
— effect on retention due to prostatic enlargement, 584
Streptomycin; Local application, 738
— resistance to, by tubercle bacillus, 902
Sunlight and pulmonary tuberculosis, 1345
Syphilis, primary, prognosis of, 122
— prophylaxis, 231; correspondence, 470
Tachycardia, sinus, in psychoneurotic, 794
Teeth: Repair of worn incisors, 1292
Teething, infant ailments ascribed to, 1013; correspondence, 1281, 1335, 1391
Tetanus antitoxin; indications, 1128; correspondence, 1236
Thiopentone, rectal, for minor surgery, 690
Thrombophlebitis migrans, prognosis and treatment of, 901
Thrush in myasthenia gravis; treatment, 470
Tobacco smoking, cure for, 1235
Tongue; unilateral recurrent irritation, 232
Trachoma; treatment, 309
Trauma and tuberculous meningitis, 1345
Trichlorethylene for dental operations, 690
Tuberculin testing by general practitioner, 177
Tuberculosis and marriage, 309
— pulmonary; effect of East African climate, 1072
— — in relation to occupation; mortality rates, 178
— spinal, small temperature swings in, 1403
— treatment of, domiciliary, with antibiotics, 470
Twins and their finger-prints, 1456
—uniovular, diagnosis of, 1128
Ulcer, peptic; familial and hereditary factors, 1345
Ultra-violet light, value of, to children, 1404
Urethra: Post-operative paralysis of compressor urethrae, 1456
Urethritis, mycotic, treatment of, 1127
Uterus, cervix: Treatment of erosion, 1183
Vaccination, local reaction to; dangers of subsequent inoculation, 1128
— reactions in, 1013
— Sensitization to calf lymph, 424
— with negative results, 690
Vaginal examination in virgins without anaesthetic, 1291
Vagotomy; technique and effects, 1346
Varicose ulcers; method of treatment with rubber sponge, 1456
— vein injections, unpleasant sequelae of, 689
Visual acuity testing in small surgery, 847
Vitamin B_{12} in disseminated sclerosis, 59
Vomiting during menstruation, 177
Warts, treatment of, with wart-weed and spurge, 584; 729 (C)
Water-divining, 59
Weil–Felix reaction in Q fever, 309
Whitlows, treatment of, 231
Whooping-cough: Reactions to pertussis vaccine, 231
— — vaccine, value of, 60

Aorta, coarctation of, 642
— dissecting aneurysm of, precipitated by oesophageal foreign body (E. H. Hadfield), 1477
Apparatus: Liability of manufacturers for injuries to patients from defective apparatus (W. M. Levitt) (Medico-legal note), 1122
Appendicectomy, 1351
— intussusception following, 298
Appendicitis (Sir Cecil Wakeley and Peter Childs), 1347 (O); 1375 (A)
— acute, pathology in, 1349
— chronic, pathology in, 1350
— diagnosis of, 1351
— mode of infection in, 1351
— mortality before advent of sulphonamide and penicillin therapy, 1352
— — rate, 1347; 1375 (A)
— Situs inversus and perforated appendix, 892
Appendix, anatomy and embryology of, 1347
Appointments, 120, 176, 230, 308, 376, 468, 636, 688, 736, 792, 901, 958, 1013, 1125, 1182, 1234, 1344, 1402, 1504

ARCHER, G. T. L.: Infection by syringe, 837
ARDEN, G. P., and WALLEY, G. J.: Treatment of intertrochanteric fractures of femur by internal fixation, 1094 (O); correspondence, 1225
Argentine: First Argentine Congress of Pathology, 176
Arm pain; diagnosis and treatment (M. J. McArdle), 354

ARMED FORCES:
Appointments and retirements, 465, 734, 897
Awards and Decorations, 55, 226, 465, 897, 1179, 1400, 1502
Doctors for the Forces; man-power, pay, and isolation (parliamentary note), 1005
Industrial health in Services, 1168
Mentions in Despatches, 1179
Pay in the Services, 372, 1065
— increases, 1266 (A)

BRITISH MEDICAL ASSOCIATION: ANNUAL MEETING, 1950: PROCEEDINGS OF SECTIONS:
Section of Anaesthetics:
Anaesthesia: Abdominal operations (Stuart C. Cullen), 276
Anaesthesia in the newborn (T. N. P. Wilton and others), 292
Section of Anatomy and Physiology:
Lymphatic system (J. M. Yoffey), 284
Section of Child Health:
Breast-feeding (F. Charlotte Naish and others), 350
General care of the physically handicapped child (C. D. S. Agassiz), 272
Clinical demonstration, 286
Epidemiology in relation to child health (S. G. Graham), 361
Section of Dermatology:
Chemotherapy of venereal diseases (Robert Lees and others), 351
Sections of Dermatology and Tropical Medicine:
Parasitology in relation to dermatology (R. M. B. MacKenna and others), 287
Section of Diseases of the Chest and Tuberculosis:
Resection of lung for pulmonary tuberculosis (O. F. Thomas and others), 288
Sections of Diseases of the Chest and Tuberculosis and of Preventive Medicine:
Care of the tuberculous patient in the home (F. R. G. Heaf and others), 352
Section of Geriatrics:
Activity in advancing years (Marjory W. Warren and others), 353
Hospital and general practitioner (C. T. Andrews), 363
Section of Medical Genetics:
Genetics and medical practice (L. S. Penrose and others), 354
Section of Medicine:
Cardiac failure (E. P. Sharpey-Schafer and others), 268
Pharmacology of antihistamine compounds (J. H. Burn and others), 347
Sections of Medicine and Pathology and Bacteriology:
Atypical pneumonia (C. H. Stuart-Harris and others), 282
Sections of Medicine and Surgery:
Ulcerative colitis (T. L. Hardy and others), 278
Section of Neurology:
Diagnosis and treatment of pain in the upper limb (M. J. McArdle and others), 354
Treatment of Parkinsonism (Hugh Garland), 363
Section of Obstetrics and Gynaecology:
Tuberculosis and pregnancy (J. A. Stallworthy and others), 270
Uterus, prolapse; prevention and treatment (R. A. Lennie and others), 279
Section of Occupational Health:
Insecticides, dangers of (P. Lesley Bidstrup and others), 273
Medical examination in industry (Leslie G. Norman and others), 289
Section of Ophthalmology:
Radiation, light, and illumination (J. N. Aldington), 277
Section of Orthopaedics:
Treatment of short leg (Goronwy E. Thomas and others), 358
Tuberculous arthritis of the hip-joint (H. B. Seddon), 293
Section of Oto-rhino-laryngology:
Deafness in children (R. R. Simpson and others), 364
Sections of Oto-rhino-laryngology and Radiology:
Carcinoma of the larynx (M. Lederman and others), 356, 638
Section of Pathology and Bacteriology:
Microscopy; new methods (R. Barer and others), 272
Section of Preventive Medicine:
Social medicine (J. M. Mackintosh and others), 274
Social medicine from the point of view of the M.O.H. (C. Fraser Brockington and others), 290
BRITISH MEDICAL ASSOCIATION (*continued*):
Section of Psychiatry:
Psychological involvements of child-bearing (Edward Glover and others), 275; 526 (C)
Role of the psychiatric social worker (J. B. S. Lewis and others), 291
Section of Radiology:
Some aspects of bronchiectasis (J. C. H. Mackenzie and others), 356
Section of Surgery:
Burns (Rowland P. Osborne and others), 360
Varicose ulceration (Gunnar Bauer and others), 269
Sections of Surgery and of Pathology and Bacteriology:
Renal failure (Ralph Shackman and others), 348
Section of Tropical Medicine:
Intestinal parasites of man in Great Britain (J. J. C. Buckley and others), 357; correction, 470

UTERUS:
Cancer; treatment with radium, indications and results, 637
Cervix, cancer of, 769 (L)
— cauterization for chronic cervicitis, 788
— Observations on symptomatology and treatment of erosion (Jean R. W. Ross), 647 (O); 788 (C), 1003 (C), 1119 (C)
— Spontaneous amputation (Ian F. MacMath), 498; 1061 (C)
— Treatment of erosion, *1183*
Inversion (J. M. B. Donaldson), 331
Pregnancy in rudimentary horn of bicornuate uterus (Douglas Latto and Richard Norman), 926 (O); correspondence, 1119
Prolapse; prevention and treatment (R. A. Lennie and others), 279
Retroversion associated with abortion, 126
rupture of, unrecognized, 1117
Sepsis from unabsorbable sutures (John Howkins), 659; 949 (C), 1279 (C)
Technique of ventrosuspension, 1448
Vaginal hysterectomy for complete rupture during labour (A. H. C. Walker), 1205
Utidjian, Haigouni Dikran Absalom, obituary of 1395

V

VACCINATION:
Certificates required by foreign governments, 215, 416, 530, 682
local reaction to; dangers of subsequent inoculation, 1128
Post-vaccinal encephalitis, 738
Reactions, 1013
Sensitization to calf lymph, 424
Smallpox in the unvaccinated, 107, 220, 300, 463
Vaccine lymph, bacterial contamination of, effects of *penicillin and streptomycin* on (*V.* - N. Krishnamurthy), 1035 (O)
— — storage of, 1455
with negative results, 690
Vaginal examination in virgins, without anaesthetic, 1291
Vagotomy, gastric ulcer as sequel to (D. M. Morrissey), 651 (O); 893 (C), 950 (C)
— technique and effects, 1346
VAHRMAN, J.: Neurological complication after combined diphtheria and pertussis immunization, 608
— *See* RAMSAY, A. Melvin, 367
Van Meter Prize Award, 1069
VANNIASINGHAM, T. W.: Pethidine in anaesthesia, 1334
Varicose ulceration (Gunnar Bauer and others), *269*
— — method of treatment with rubber sponge, 1456
— — so-called: treatment by division of popliteal vein (Gunnar Bauer), 318 (O); 338 (A); 529 (C)
— veins, injections, unpleasant sequelae of, 689
— — methods of marking, 1446
— — treatment (Reginald T. Payne), 1323
VARTAN, Keith: Chorion carcinoma after ectopic gestation, 871
Vasomotor collapse after chloramphenicol, 1334
Vasotomy, effects of, 689
VAUGHAN, B. D.: Early rising for puerperal women, 890
VAUGHAN-JACKSON, O. J.: Distinction awards, 835
Vein, *popliteal; division in treatment of so-called* varicose ulceration (Gunnar Bauer), 318 (O); 338 (A); 529 (C)
Veins: *Primer of Venous Pressure* (G. E. Burch), 1370
— varicose. *See* Varicose veins
VELLACOTT, W. N.: Aid to intubation, 1113
Vellore Hospital and Medical College; Golden Jubilee celebrations, 844, *1123*
Vena cava, inferior; syndrome of obstruction in childhood (Harry Engelman, E. G. Hall, and R. Spencer), 752 (O)
Venereal diseases; chemotherapy, 351
— — *Textbook of Venereal Diseases* (R. R. Willcox), 989
VENNING, G. R.: Displaced registrars, *1329*
VERE-HODGE, E. H.: Treatment of intestinal helminths, 358; correction, 470
Vernix caseosa contaminating caesarean wounds (Percy Malpas), 763
Vertex presentation, malpositions of; management (Hector R. MacLennan), 800 (O); correspondence, *1172*
Vertigo epidemica, 1493
Vesiculitis, tuberculous; diagnosis and treatment, 178
Vibration, mechanical, therapeutic value of, 415
VICKERS, H. E.: Inflammability of ethyl chloride, 625
VIDEBAEK, Aage. *See* MOJBECH, Johannes, 390, 1059
Vincent, Clive Rowland Bishop, obituary of, 531, 734
Vincent, Jean Hyacinthe, obituary of, 1393
Vincent Memorial Laboratory: *The Cytologic Diagnosis of Cancer*, 820
VINTER, F. Jean: Care and management of laboratory animals, 1176
Virus proteins, 1241
VISCHER, A. L.: Post-mortem findings in the aged, 363
Vision, loss of, 1482 (L)
— Some aspects of colour-blindness (E. N. Willmer), 1141 (O)
— Some effects of polarized light on vision, 50
Visual acuity testing in *small* surgery, 847
— aids in teaching; some mechanical aids to instruction (Robert Ollerenshaw and Peter Hansell), 488 (O); 678 (C), 784 (C)
— education: The medical teaching film, 519
VITALI, M., and KOHN, J.: Treatment of painful amputation stumps, 415
Vital Statistics, weekly table: *56, 118, 174, 228, 305,* 375, 421, 466, 533, 580, 634, 686, 734, 790, 843, 897, 955, 1010, 1067, 1126, 1182, 1231, 1287, 1341, 1403, 1455, 1505
Vitamin A deficiency; effect on foetus, 576, 730
— — deprivation in man, 932 (L)
— — Effects of hypervitaminosis A on foetal mouse bones cultivated *in vitro* (Honor B. Fell and Sir Edward Mellanby), 535 (O); 565 (L)
— — in bird plasma, 537
— B_{12}: absorption in pernicious anaemia (C. C. Unley), 905 (O), 908 (O), 915 (O); (with G. A. Childs), 911 (O); 933 (L); correction, 1014
— — content of liver extracts, 1357
— — effect on neuropathy in pernicious anaemia treated with folic acid (H. Fuld), 147 (O); 417 (C), 527 (C)
— — in disseminated sclerosis, 59
— — in pernicious anaemia, 585, 671; correction, *960*
— — present knowledge of, 348
— C; influence of ascorbic acid on healing of corneal ulcers in man (T. A. S. Boyd and F. W. Campbell), 1145 (O)
Vitamins and peanuts, 310
Vivisection (parliamentary note), 1178
— Protection of laboratory animals, 724, 888, 951, 1114, 1389
VOGT, Marthe: Regulation of secretion of cortical hormones, 1242 (O)
VOIGT, Mary: Mosquito bites, 178
Volvulus, acute, of stomach (P. Quinet), 1259
— of sigmoid causing intestinal obstruction during late pregnancy (D. W. James), 24
— of small intestine, 1392; 399 (A. J. Hobson)
— of transverse colon complicating labour (Archie G. Murray), 659
Vomiting during menstruation, 177
— treatment of, 719 (A); 836
Vulva, kraurosis of; treatment, 121
Vulvovaginitis in child due to Shigella flexneri (W. J. McGinness and R. C. Telling), 1424

W

WADE, Phyllis: Radiation in the shoe shop, 730
WAINWRIGHT, D.: Femoral lengthening in leg equalization, 1216
WAKELEY, Sir Cecil: Inaugural address, Westminster Medical School, *885*
— presented with Honorary Medal of Royal College of Surgeons, 956
— and CHILDS, Peter: Appendicitis, 1347 (O); 1375 (A)

INDEX TO SUPPLEMENT FOR VOLUME II, 1950

A

ABRAHAMS, Sidney: Negotiations through Whitley machinery, 262
Accident, road; failure to treat, 120, 135, 141, 168
Accidents and professional secrecy, 138
Africa, East and Central: Colonial Medical Service salaries, 31, 166, 264
Aftercare, 111, 185
Ambulance services; report of Select Committee on Estimates, 92
Amending Acts Committee, 156, 178
Anaesthetics, fees for administration of, 110
— Dental anaesthetic fees, 40
— given by trainee assistants, fees for, 30, 110
— in midwifery, 102
— — — fees for, 48
Anaesthetists Group Committee, 158
ANTHONY, E.: Whitley machinery, 32
— Financial difficulty in Essex, 190
Appliances approved for prescription, 108, 155
Arbitration: Independent court of arbitration, 84, 92, 97, 98, 124

ARMED FORCES:
Armed Forces Committee, 151, 156
Army: Appointments and retirements, 12, 164, 233, 249
Regular Army Reserve of Officers: Appointments and retirements, 75, 138, 249
R.A.M.C.: Appointments and retirements, 12, 63, 75, 89, 98, 138, 142, 164, 201, 233, 264
Emergency Commissions; Appointments and retirements, 12, 142, 233, 249, 264
Short-service commissions, 240
Supplementary Reserve of Officers: R.A.M.C.: Appointments and retirements, 233, 264
Territorial Army: R.A.M.C.; Appointments and retirements, 63, 89, 98, 164, 249, 254
Territorial Army Reserve of Officers: R.A.M.C.; Appointments and retirements, 63, 98, 138, 249, 264
Arrangements for future mobilization of medical officers, 126, 169
Conscription, 200, 243
Extended service of doctors, 152
Eye examinations of recruits, 128
Indian Medical Service: Appointments and retirements, 63, 98, 233
Irish doctors and military service, 212
National service for doctors in medical grades III and IV, 247
— — medical officers, disadvantages of, 135, 170
— — part-time, 227
Pay; deputation to Ministers, 29; further representation, 155
— increases, 125, 172, 228, 231, 254
Professional secrecy, 125
Promotion, 199
Protection of practices on call-up, 139
Reinstatement of demobilized service personnel in doctors' lists, 110
Royal Air Force: Appointments and retirements, 63, 98, 233
R.A.F.V.R.: Appointments and retirements, 63, 98, 233
Royal Canadian Navy: Appointments and retirements, 75
Royal Navy: Appointments and retirements, 12, 75, 138, 201, 249
R.N.V.R.: Appointments and retirements, 12, 75, 138, 201, 249
Service in relation to house-officer appointments, 247
Temporary release from the Forces, 110
Ashridge: Week-end discussion group, 247
Assistants: 3, 109, 122, 200
— and unestablished doctors; special group asked for, 239
— maximum numbers of patients allowed for, 30
— not permitted to practice obstetrics, 263
— permanent, definition of, 109
— — pay in general practice, 137
— poor prospects in general practice, 172, 200, 207, 219, 243, 254
— superannuation payments of, 109
— trainee, 109
— — abolition proposed, 179
Assistants and Young Practitioners subcommittee, 83, 212

ASSOCIATION: *See*
British Medical Association
Executive Councils' Association
Irish Medical Association
National Ophthalmic Treatment Board Association
Socialist Medical Association
ATKINSON, E. C.: More scientific opportunities, 73
— Terms of slavery, 232
Australia: Health Service; free medicine scheme, 125
— To Brisbane and back (Angus Macrae), 27
Australian branches: Election of members of Council to represent the South Australian, Tasmanian, Victorian, and Western Australian branches for the period 1950–2, 142
Autonomous bodies, 33, 34

B

Babies, registration of, in National Health Service, 111
