REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58 (1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 31st December, 1952, and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1952.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the By-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Agents have been found adequate for the purpose of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June, 1952, was carried out by Messrs. G. R. Crooks, B. S. Billimoria and J. S. F. Gibb. The accounts for that period have been accepted and incorporated for the purpose of the accounts for the year to 31st December, 1952.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin respectively.

Without Prejudice

A CASE OF JUSTIFIABLE HOMICIDE

A BRIDGE POST-MORTEM (FROM OUR LEGAL CORRESPONDENT)

NEMO turpissimus repente fuit, which, being interpreted, in regard to Bridge inquests and post-mortems, means that before getting to the stage of exercising his extreme remedy of actually murdering his delinquent partner, a justly incensed expert passes through several phases. Not that Mr. Pillai in this particular case was guilty of murder. He was acquitted and we hasten to record the fact in full sympathy with him.

The phases or remedies open to the sufferer in his just wrath at crass partnerial incompetence are at least four in number. First, the rebuke courteous. Second, the rebuke discourteous. Third, reasonable physical chastisement. Fourth, mayhem, including in a case of inveterate and incurable stupidity, justifiable homicide.

We need not concern ourselves with the first remedy. In recent years it has fallen into disuse and may be regarded as archaic. In regard to the second phase, the rebuke discourteous, there is the well known case of the late Lord Russell of Killoway. That great judge was a bully at the Bar, a bully on the Bench and a bully in private life, and particularly in his favourite pastime, Bridge. His lordship was playing, it is said of him, at the National Liberal Club into which had strayed by some means or other a young army subaltern who was unlucky enough to cut into a rubber with Lord Russell as his partner. Lord Russell was an expert and the boy was not and soon demonstrated the fact. Time after time the judge denounced his ineptitude with savage violence and at last the victim protested, thus enraging his partner still further. "Do you know who I am?" barked the judge, and the youth replied that he did not. "I am the Lord Chief Justice of England," said Russell. "Ho!" said the worm now fully turned. "Then just remember that you're not in your potty little police court now!"

As to the third remedy the writer can record a case in his own knowledge which happened in the

station club of the place in which these notes are being written, and in which a lady, the wife of a prominent official, came in for considerable undeserved censure at the hands of a prejudiced committee, most of them non-bridge players ignorant of what disciplinary measures are permissible and, indeed, necessary in the case of a recognised expert. The lady's partner was a police officer who, so he alleged in extenuation later, only joined in the rubber to oblige as they otherwise had not a fourth, and the fact is to some extent, of course, a mitigating circumstance and should be counted in his favour. But he made mistake after mistake. Expostulations, threats, entreaties, advice were useless though all were forthcoming from his partner during and after every hand. At last she could stand no more. And the simple fact is that, after methodically adding up the score and recording the total in the book, she rose, leant across the table and soundly boxed her partner's ears. Twice, once on each ear. Reasonable chastisement administered without heat to one whose reckless negligence and incompetence were so culpable as to amount to deliberately losing the rubber so as to constitute express malice. Yet, there were not wanting some—even including members of her own sex—who claimed that it was the lady's conduct which was reprehensible and that it was she and not the delinquent who should be dealt with by the club committee. In fact, stern measures would have been justified and that brings us to the case of Mr. Pillai who received rather severe punishment at the hands of a particularly stern and unbending card room autocrat.

Mr. Pillai's undeserved misfortunes and subsequent legal predicament arose out of a game in a private house, that of a mutual friend of all the parties concerned. The precise nature of the alleged grievance which one of the players had against Mr. Pillai is not disclosed in the report before us but it must be admitted that the corrective measures which that player felt himself constrained to take were to some extent on the side of severity. What he, in fact, did was to grasp a plank of wood that was nearby, and, after wheeling it lustily aloft, to bring it down on the head of Mr. Pillai, thus terminating the game by reason of the fact that Mr. Pillai was rendered unconscious.

At about 9 o'clock at night, some three weeks later, the enforcer of card room correctitude was going from his own house to the house of his wife. He had a lighted candle in his hand. After travelling a short distance from his house, while he was walking along a paddy field the accused (Mr. Pillai) accosted him. There are two versions of what happened at this encounter to which there was no eye-witness. What is certain is that Mr. Pillai emerged out of it alive and the other gentleman, whose name does not appear in the report and who is therefore referred to hereafter as the deceased, emerged from it dying. According to both versions Mr. Pillai "used a sharp instrument and with that sharp instrument which has been produced at the trial, he dealt a blow in the region of the abdomen of the deceased which pierced the abdominal cavity and a part of the intestines protruded through that wound. In the course of the trial the police seem to have tried to improve the case by introducing another weapon... a sharp dagger." (Per Kunhi Raman C.J., and Subramania J.) Mr. Pillai accounted for his action by explaining that it had taken place after the deceased "had hit him with the lighted torch on the right side of the chest." In his dying declaration the deceased made no mention of the torch, merely stating that Mr. Pillai had stabbed him. But the High Court was satisfied that the torch had been used from "a burn of the second degree" on Mr. Pillai's chest. Now what offence, if any, had Mr. Pillai committed?

The answer is that he had committed no offence at all. The police, looking upon it as a simple case of murder, prosecuted Mr. Pillai for that offence. He was acquitted by the Sessions Judge, as being justified in causing death.

The State appealed against the acquittal to the Travancore-Cochin High Court, and we have traced their lordships' judgment with interest. They upheld the acquittal. Mr. Pillai was guiltless. The gist of the judgment which is worth reading in full is this: "When the deceased found the accused in front of him on what was evidently a dark night he could not have anticipated any friendly overture on the part of the accused in view of the fact that about 19 days previously he had dealt a severe blow with a plank of wood on the face of the accused. Therefore it is consistent with the probabilities of the case that the deceased used his torch first. If this incident had happened, then there is justification for the injury inflicted by the accused on the body of the deceased. The lighted torch was used on the chest of the deceased. If the deceased conceived the idea of causing more serious injuries to the accused he could have thrust it next on the face of the accused. That was an apprehension that the accused might have reasonably had... When there is reasonable apprehension of grievous hurt, the person labouring under the apprehension would be justified in voluntarily causing death. Therefore if it is regarded as a case in which the accused voluntarily caused the death of the victim by stabbing him... there was sufficient justification for such an act."

The appeal of the State was dismissed and the acquittal confirmed (State v. G. Pillai, A.I.R. 1952, Tra-Co. 449).

* Effect of Budget proposals.

THE CALCUTTA MONEY MARKET CREDIT SLIGHTLY TIGHTER

Wednesday, 4th March.

CONDITIONS are somewhat tighter than last week but otherwise unchanged. Jute advances are steady but further demand is reported on account of cotton and sugar in Western India. Money is fully useable in the interbank market where rates still stand at 24 percent for overnight loans and 3 percent for good money. The exchange market is quiet with few export or import bills passing. Remittance is in normal demand. Rates are unchanged at: sterling T. T. and O. D. is 5 31/32; three months sight bills is 6 1/4; four months sight bills is 6 5/16; and U.S. dollars Rs. 475. Sterling today was rather weaker at \$2.812-2.81 13/16.

A smaller sum of Rs. 1,01,75,000 was offered for Rs. 1 crore of Government of India treasury bills, tenders for which were opened on Tuesday, 3rd March. The average rate of acceptance was unchanged at Rs. 2-7-0 percent per annum; tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 99 percent. Tenders for another Rs. 1 crore of bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 27th February, treasury bills for Rs. 5,47,75,000 were sold in favour of the Reserve Bank of India.

The bullion market ruled quiet last week. Long liquidation induced by reports of a standstill in the Bombay bullion market reduced silver from the previous week's level of Rs. 167-3 to Rs. 165-7 today, and the ready rate stood at a premium of five annas. The price was unchanged at 74d. in London and at 85 cents in New York. Gold also eased in sympathy and the price fell from Rs. 90-4 to Rs. 89-6 because there was little demand. The sovereign at Rs. 59-1 showed a loss of 6 annas.

The return of the Reserve Bank of India for the week ended 27th February, discloses a fall of Rs. 154 crores in notes in circulation to Rs. 1,11,982 crores, but the total note issue at Rs. 1,140,68 crores shows a fractional rise of about Rs. 10 lakhs. Notes held in the Banking Department increased by Rs. 1,64 crores to total Rs. 20,86 crores. In the Banking Department deposits of the Government of India fell by Rs. 3,13 crores to Rs. 149,99 crores, but other Government accounts were up by Rs. 6,33 crores to Rs. 11,40 crores. Balances of commercial banks at Rs. 43,23 crores revealed a fall of Rs. 2,29 crores, indicating a better demand for funds. Government treasury bills declined from Rs. 13,97 crores to Rs. 11,73 crores. Balances held abroad also declined by Rs. 1,27 crores to Rs. 162,26 crores. The item of other loans and advances rose

from Rs. 12,27 crores to Rs. 12,33 crores, of which advances to scheduled banks against usance bills rose from Rs. 74.18 lakhs to Rs. 1.74 crores. Investments were Rs. 13 lakhs higher at Rs. 100,27 crores. Ways and means advances were shown at Rs. 3,30 crores (Rs. 3,42 crores.)

The statement of the position of Scheduled Banks for the week ended 20th February, 1953, discloses Demand and Time liabilities at Rs. 527,03 crores (Rs. 11,07 crores on account of borrowings from Banks) and Rs. 315,44 crores (Rs. 1,93 crores) compared with Rs. 526,61 crores (Rs. 11,58 crores) and Rs. 314,79 crores (Rs. 1,83 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1,39 crores and Rs. 1,38 crores to aggregate Rs. 32,92 crores and Rs. 43,22 crores, respectively. There is a rise of Rs. 24 lakhs in investments to Rs. 302,06 crores. Advances and bills discounted at Rs. 499,68 crores reveal a drop of Rs. 1 crore. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.0 percent and 59.3 percent against 9.4 percent and 59.5 percent.

The return of the Imperial Bank of India for the week ended 20th February, 1953, reveals an increase of Rs. 60 lakhs in total deposits to Rs. 208,76 crores. Investments in Government Securities and other authorised investments are up by Rs. 61 lakhs and Rs. 27 lakhs to Rs. 71,79 crores and Rs. 11,03 crores, respectively. Loans, cash credits and overdrafts have declined by Rs. 52 lakhs to aggregate Rs. 109,84 crores, while bills discounted and purchased have advanced by Rs. 33 lakhs to stand at Rs. 13,69 crores. Cash and balances are, in consequence, shown at Rs. 15,37 crores or Rs. 57 lakhs less.

The directors of the NATIONAL BANK OF INDIA LTD. have declared the second interim dividend for the year to 31st December, 1952, at 8 percent less income tax payable on 1st April.

The following is a statement of the cash balances of the Central Government on the last day of December 1952:—

	Rs.
(1) At the Reserve Bank of India	190,11,47,000
(2) At treasuries in India	1,32,43,000
(3) In England (Sterling converted at 16d. the Rupee)	3,31,08,000
Total	194,74,98,000

The provisional figures of foreign Sea and Airborne Trade of India on private and Government accounts during January 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries; Exports Rs. 4181 lakhs; re-exports Rs. 120 lakhs (transit trade Rs. 3 lakhs); Imports Rs. 4003 lakhs (transit trade Rs. 3 lakhs). Total trade Rs. 8384 lakhs. Treasury: Exports (including re-exports) of gold and of Government of India coins—negligible; of currency notes—Rs. 15 lakhs; others—nil. Imports of gold and silver—Rs. 1 lakh; of currency notes—Rs. 186 lakhs; others—nil. Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government Stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land etc. for the purpose of building factories, mills, working mines or other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railway experts. This will save you unnecessary delay and expenditure.

RESERVE BANK AGRICULTURAL LOANS

A total of Rs. 10.45 crores was advanced by the Reserve Bank of India under Section 17 of the Reserve Bank of India Act to State Co-operative Banks for seasonal agricultural operations and marketing of crops in 1952, reports Mr. B. R. Bhagat, Parliamentary Secretary to the Finance Minister. The statewide distribution of the loans was as follows:

	(In lakhs of rupees)	Name of the State	Rate of interest (1951-52)
Bombay	414.85	Bombay*	4-11/16 to 9 3/4
Madras	444.93	Madras	4 1/2 to 6 1/2
Madhya Pradesh	46.90	Uttar Pradesh*	12 to 15
Uttar Pradesh	49.25	West Bengal	12 1/2
Orissa	27.50	Madhya Pradesh	3 to 12
West Bengal	60.00	Orissa	8 1/2 to 10 1/2
Ajmer-Merwara	1.70	Bihar*	8 to 9 1/2
Total	1045.13	Hyderabad	9 1/2 to 20
		Rajasthan	7 1/2 to 25
		Delhi	9 1/2
		Mysore	5 1/2 to 9
		Ajmer-Merwara	9 to 10

The Reserve Bank's advances to State Co-operative Banks for seasonal agricultural operations and marketing of crops are made at 1 1/2%, that is, two percent below the Bank rate.

* 1950-51.

Make this important decision—to put some savings apart before you begin spending away your income. Let your savings work for you and the nation's good. Raise your standard of security with this guaranteed investment plan.

TWELVE-YEAR NATIONAL SAVINGS CERTIFICATES yield at maturity 50 per cent. more for your money, and this 50 per cent. additional benefit is tax-free and will not be taken into account in fixing the rate of income tax on total income.

TEN-YEAR TREASURY SAVINGS DEPOSITS offer excellent investment for those who wish to draw a current income. Interest at 3 1/2% per annum, which is tax-free and which will also not be taken into account in determin-

ing the rate of income tax on total income, is paid to the depositor or remitted to his address annually.

POST OFFICE SAVINGS BANK DEPOSITS are the easiest means of securing your small savings. Interest is added at 2% per annum, tax-free, on balances up to Rupees 10,000 and at 1 1/2% on balances between Rs. 10,000 and Rs. 15,000. And you can draw on your deposits to meet special calls.

INVESTMENTS THAT NEVER DEPRECIATE

For further information and/or rules governing these investments, please apply to the NATIONAL SAVINGS COMMISSIONER, GORTON CASTLE, SIMLA-3, or the PROVINCIAL NATIONAL SAVINGS OFFICER of your State.

It is a pity that the results of the Government of India's enquiry into the progress of Indianisation in foreign firms could not have been released earlier, before heat began to be generated about an issue that needs to be treated coolly. Comment on, leave alone reply to, earlier extravagant statements about the "reactionary" attitude of many foreign firms was impossible as long as details of the survey were not available. Now that they are available, reply seems to be unnecessary. The figures indicate that the Government of India and most of the affected employers share precisely the same view of the case: namely, that progressive recruitment of Indian nationals to posts formerly held by people from abroad is desirable, but cannot be hurried because regard must be had to the efficiency of business establishments. In view of the Government's apparent satisfaction with the progress so far made and its explicit assurance that it understands the difficulties of rushing the matter, one is only puzzled that all the pother arose in the first place. If the survey was designed to give the lie to that party in Parliament that wishes to discredit any connection with the Western democracies, it will be as useful as mere facts and figures ever can be against passion and propaganda. One myth that succumbs before enquiry is the widely credited story that what are loosely and mostly inaccurately called "foreign" firms Indianised precipitately just after independence but reverted to recruitment of Europeans when the friendly attitude of the Government made them feel more at home. In fact, the survey shows that the percentage of Indian nationals in all salary groups has been steadily increasing each year. While the relative percentage figures will be of interest, and satisfaction, to those who approach the question from the nationalist standpoint, much more gratifying is the fact that the absolute number of well-paid jobs open to talented Indians has been multiplied more than five-fold in the space of a few years.

I see that tea planting is one of the three reprobate industries accused of being laggard in Indianising, and after reading an article by Lieutenant-Colonel Hannagan, E. D., a well-known planter in the Darjeeling district, on the qualities required in a novice on a tea estate, I am only surprised that suitable recruits have been forthcoming at all, Indian or otherwise. "Tea Planting as a Career: Advice to the Beginner" appears in a recent number of the *Tea and Rubber Mail* and I commend it to the attention of any young man who has been toying with the idea of becoming a planter—when the present slump is over of course, for I imagine no one even toys with such notions at times like this. Lt.-Col. Hannagan does not say that tea will only grow for Public School boys (that one went out with Kipling) but he lists a series of qualities of mind and temper that even the Public Schools would hesitate to include among the advantages automatically conferred by education within their walls. Knowledge, tact, powers of rapid decision and a high sense of duty are the first four essentials for efficient supervision of a tea garden, says Lt.-Col. Hannagan, and under knowledge he places knowledge of the local language, of the people and of the profession. "Tact" is the eloquent subtitle of a section devoted mainly to an assistant's relations with his garden manager. Fair dealing with labour is stressed at some length and there is a very firm warning about "the stark loneliness of the life", which those who have ever visited a garden will appreciate. Such inventories of qualities of character necessary in entrants to this or that profession are apt to look rather embarrassing when set down in cold print, but the trials and disappointments of the planter's life in the last decade or so have been such that there is probably little exaggeration in Lt.-Col. Hannagan's essay.

A DITCHER'S DIARY

Forty-one years is considerably more than the usual period of service in India for Europeans but that is the length of time Mr. G. Euthymopolis will have spent in this country when he leaves Calcutta within a few days. When he retired from Rallis India Limited last week he had been in the firm's employ for a total of 44 years, having worked for a time in London before coming to India in October, 1912. After some years as an assistant in the jute and gunnies departments, he joined the management in 1924 and became head manager in India of Ralli Brothers Ltd. in 1939. Toward the end of his career he formed the new company of Rallis India, which took over the business of the parent company, and became its first managing director. Mr. Euthymopolis's public services to the business world, and in particular to the jute trade, date back 33 years to 1920, in which year he was chairman of the Calcutta Baled Jute Association and a member of the committee of the Licensed Measurers' Department of the Bengal Chamber. He has been closely associated with various committees of the Chamber and for the last few years has been Assocham's representative on the Export Advisory Council. Other official bodies which had the benefit of his long experience were the Export Promotion Committee headed by Mr. A. D. Ghorwala in 1949, and the Indian Central Jute Committee. He has been a popular member of almost every club in the city and has given his time to committee work for the Bengal, Calcutta, and Royal. Euthy describes himself as "an extremely bad golfer" and claims as his only sporting distinction annexure of the Carmichael Cup at Jodhpur about 1936 and victory in a Duds' Golf Tournament about the same time. He takes with him into retirement the good wishes of many friends won during a lifetime's stay in this city.

If the weather had been what it should have been at the end of February, members and guests at the centenary meeting of the Bengal Chamber of Commerce and Industry might have heard more of the proceedings last Friday afternoon, but as it was the fans seriously reduced audibility during the two principal speeches. This was the more to be regretted since they were excellent speeches, as we were able to confirm by reading them next morning. Mr. Innes's survey of the Chamber's one hundred years was witty and comprehensive, while Dr. Mookerjee, the Governor of West Bengal, spoke with that sincerity and biblical eloquence that mark all his public pronouncements. The sly reminder from Mr. J. C. Burns of Bombay that the Bengal Chamber is 17 years the junior of both the Bombay and Madras Chambers in no way detracted from the éclat of the occasion, if only because the Bengal Chamber through its near connection with the old Calcutta Chamber can claim 118 years of history. Mr. Innes was properly congratulated on his services during what must have been an especially arduous presidential year, and his successor, Mr. E. J. Pakes, took over with an experienced committee to support him throughout his.

The Upper India Chamber of Commerce also held its annual meeting last Friday, in Kanpur, and its president, Mr. G. E. Longdin, in the course of a long and authoritative review of the year's work was able to give first-hand reports on the progress of the workers' State insurance scheme which is being applied in two pilot areas in Upper India, Kanpur and Delhi. The Government had gone about the task with considerable caution and foresight, said Mr. Longdin, with the result that when the time came for the scheme to be set going, staff had been engaged and trained, the necessary forms and documents had been prepared and

administrative machinery was ready. These simple preparations may sound elementary and no special cause for congratulation, but in fact they contrast most favourably with the waste of time and effort attaching to various other welfare programmes, the employees' provident fund scheme for instance. This foresight had been amply justified, Mr. Longdin went on, and "at least to the managers of industry in Kanpur the scheme appears to be working with a fair measure of success, although workers may have complaints. The experience gained in Kanpur and Delhi may prove later to be invaluable to the working of the scheme elsewhere if Government will apply the same measure of caution as has been done in the pilot areas, and will pause before each step forward to review, in consultation with management and labour, the experience gained and the lessons learnt. We wish all success to this enlightened measure of State insurance." Less cheerful were Mr. Longdin's reflections on the effects of welfare schemes on industrial costs. The charges for the State insurance scheme will eventually amount to 4 1/2 percent of the wage bill while contributions from employers to the provident fund scheme will come to another 6 1/2 percent of wages, plus a further 3 percent of total contributions for administrative charges. These impositions are inevitably passed on to the consumer (where the competitive position of the industry concerned permits it to pass anything on to the consumer) with the result that the whole country is paying for privileges extended only to that 10 percent engaged in industry. The agricultural majority might have some opinions on this subsidisation of the industrial minority.

Sir Chintaman Deshmukh's rebuke during his budget speech to States who decline to do all they might to increase their own resources was no doubt an echo of his earlier advice to Bombay to scrap prohibition. Comparison of the undoubted economic disadvantages of prohibition with its supposed moral attractions has been made in all the State capitals in recent weeks during presentation of their budgets. (And what a forlorn lot of budgets they have been.) The results of the debates have been glaringly various. Bombay is adamant, Madras is visibly weakening, Orissa is extending the foolish experiment of "dry districts", while West Bengal—with that air of realism that often marks off Dr. Roy's Ministry from its competitors—has not only decided to go no further toward prohibition but has retraced its steps in two districts previously condemned. The split in the Madras Government has reached the point where the Labour Minister told the Press last week that many members of the Cabinet were willing to recant but Mr. Rajagopalachari persisted with the curious argument that to repeal prohibition would not eradicate illicit distillation. One would have thought it possible to eradicate illicit anything by making it legal, though no doubt the distillers who have learnt how to avoid the enforcement police will also have learnt how to dodge the revenue collector when their trade is once again permitted. Which is another argument against teaching people cunning by forcing them to do illegally what they will do anyhow.

The local organs of the daily Press have lately been giving increased attention to commercial matters on their "City" pages and, though I do not suggest that the following item is a typical sample of the new financial journalism, it did in fact appear last Thursday morning in the diary of one of our "City Editors": "In yesterday's 'City Notes' the dividend of Orissa Minerals at Rs. 1-8 was misprinted as Rs. 1-8. This should be Rs. 1-8, say, one rupee eight annas....."

trakola up to Rs. 75, but sellers were scarce. Nagasurree were reported at Rs. 112, and Oodlabari at Rs. 22.10.

The working of the BENGAL COAL COMPANY for the half-year ended 31st October, 1952, discloses the usual satisfactory results. Profits at Rs. 31,04,017, compare with the previous half-year's Rs. 42,58,066, but depreciation has been provided for at the higher rate of Rs. 10 lakhs against Rs. 7 lakhs. Allowing Rs. 11 lakhs (Rs. 20 lakhs) for taxation and cesses, transferring Rs. 74 lakhs (Rs. 10 lakhs) to general reserve, meeting other charges and bringing forward Rs. 7,25,389, there remains a distributable balance of Rs. 18,46,605. The preference dividends have been paid as usual and the ordinary have been maintained at Rs. 20 including a bonus of Rs. 10 per share, leaving Rs. 8,02,968 to be carried forward. Raisings totalled 12,05,707 tons (11,91,067 tons) and despatches 12,20,936 tons (12,59,190 tons). This is reflected in lower sales at Rs. 2.56 crores (Rs. 2.86 crores). The fall in raisings is attributed to seasonal factors. It has been reported that some of the company's collieries mining metallurgical coal and pegged output figures were announced which might limit their future raisings. The Coal Board has recently announced some relaxation of these restrictions in the case of collieries which have sandstone arrangements. Most of the coal raised by the company is non-metallurgical and the restrictions referred to are unlikely to have any serious effect on future results.

BHARAT COLLIERIES made a revenue profit of Rs. 14,61,687 for the year ended 30th June, 1952, as compared with the previous year's Rs. 14,53,498. Allowing Rs. 6.61 lakhs (Rs. 6.46 lakhs) for depreciation and adding Rs. 19,182 brought forward, there remains an available balance of Rs. 8,20,501. The usual preference dividends have been paid and the ordinary dividend has been maintained at 61 per cent to absorb Rs. 2,50,000. General reserve has been given the same sum of Rs. 50,000; so also has the taxation reserve (Rs. 3,75,000), leaving Rs. 28,813 to be carried forward.

Shareholders of SPENCER AND CO. LTD. heard an encouraging review of the year's operations from their chairman, Mr. S. W. Edwards, at the recent ordinary general meeting in Madras (a brief account of his speech appears on page 301). Although expenditure has increased and the rate of the gross profit has fallen these factors have been offset by an improvement in the turn-over. Mr. Edwards says that uncertainty and lack of confidence still exist in most markets and trading is likely to be restricted as long as international tension continues. Referring to official efforts to encourage exports, he mentions certain difficulties faced by India such as restrictions on the serving of food and alcoholic beverages; he also urges that licences be given to import good quality glassware and crockery. A further and final dividend of 10 percent free of income-tax on the ordinary shares, as recommended by the Directors, has been declared, making in all a total dividend of 15 percent free of income-tax for the year.

Recovery in the prices of woollen and cotton goods, combined with the partial removal of control on cotton textiles, helped the BANGALORE WOOLLEN, COTTON AND SILK MILLS to raise profits from Rs. 14.50 lakhs to Rs. 22.42 lakhs for the year ended 31st December, 1952, after allowing Rs. 12,71,222 (Rs. 12,80,172) for depreciation. Bringing in Rs. 2,47,495, there is an available balance of Rs. 24,69,628. Notable allocations include taxation Rs. 7 lakhs, General Reserve Rs. 1,23,628, housing reserve Rs. 1,25,000 (Rs. 1,50,000), retiring fund Rs. 37,500 (Rs. 50,000) and bonus to staff Rs. 6,10,400. The ordinary dividend has been reduced by Rs. 5 to Rs. 15 per share and absorbs Rs. 6,07,500, leaving a carry-forward of Rs. 2,49,800.

THE MADURA MILLS COMPANY made a profit of Rs. 46.28 lakhs for the year ended 31st December, 1952, which compares with the previous year's profit of Rs. 59.33 lakhs. There is therefore a distributable balance of Rs. 58,90,590 including the amount brought in. The allocation to General Reserve has been reduced by Rs. 10 lakhs to Rs. 15 lakhs. The dividend has been maintained at 20 percent, leaving Rs. 8,90,094 to be carried forward. The Replacement Reserve has been credited with Rs. 1,69,088 on account of compensation received from the Madras Government for relinquishment of water rights and Rs. 11,48,551 due to the E.P.T. refund. It has also been reported that if the said dividends are passed by the shareholders, bonuses equivalent to 3 months' basic wages would be paid, costing about Rs. 26 lakhs. Taxation absorbs Rs. 26.70 lakhs (Rs. 44.60 lakhs) and depreciation Rs. 8.70 lakhs (Rs. 8.53 lakhs).

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate: Opening Quotation—Highest for the week—Lowest for the week—Closing Quotation—Quota-

tion for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

GOVERNMENT SECURITIES

2½ % Loan (1962)—Rs. 91.3—91.3—91.3—(90.15).
3 % Loan (1986)—Rs. 82.6—82.13—82.6—(81.4).

DEBENTURE

5% Calcutta Elec. Supply—Rs. 102.8—103—102.8—103.

THE KARACHI STOCK MARKET

IN their report on the Karachi stock market for the week ended 27th February, Messrs. Merwanjee Bomanjee Dalal & Son say that demands for the 3 percent Pakistan Loan 1960 Loans were unchanged and other Central Loans were unusually dull; so also were Port and Municipal debentures. State Banks were in persistent demand, and National Banks the directors have recommended. Sellers of Ilaab hunters became active as the rate dropped unexpectedly to Rs 80 c.d.; however, a speedy recovery was expected. Muslim Commercial Karachi Electrics were offered cheaper without any were unchanged. Rawalpindi Electrics were fully steady and if the report for 1952 contains encouraging higher figures and recommendations for a expected. Valika Textiles were in keen demand and the recent fall in Colony Textiles has made them a very good investment. Investors' view of improvement that has taken place this week. They are still the cheapest amongst reliable and popular scrips. Revised interest in Valika Wool-Adamjee Jutes are rather uncertain. Eastern Federal Insurance were actively traded and rose Haydari Premier Insurance were quiet. Madi Steamships were very steady, Orient Airways were difficult to place and Spencers were readily absorbed. Orient Airways Preference had no enthusiastic buyers and Muhammad Steamship Preference were dull. Colony Textile Preference were in constant demand but were not available and Spencer Preference also were in short supply.

New Delhi

COMMISSION TO EXAMINE TAXATION STRUCTURE

DEVELOPMENT OF INDIAN SHIPPING INDUSTRY

(FROM OUR OWN CORRESPONDENT).

28th February.

THE Government of India's Taxation Enquiry Commission has Dr. John Matthai as chairman and the other members are Mr. V. L. Mehta, Dr. V. K. R. V. Rao, Mr. K. R. Menon, Mr. B. Venkatappaiah, and Dr. B. K. Madan. A senior officer from the Union Finance Ministry will be secretary. The Government will secure two foreign experts on taxation and public finance to assist with the work and the Commission will be free to co-opt additional members for short periods when considering specific specialised problems. Work is expected to start in April and should be completed in about two years.

The following terms of reference for such a commission were discussed at the last Finance Ministers' Conference: (1) to examine the economic effects of Central, State and local taxation, to ensure that the system does not adversely affect the economy of the country. To consider the effect of the present rates of income tax on the ability and incentive to save and invest, and to suggest modifications, if necessary, so that capital formation and investment in risk-bearing enterprises are not unduly hampered. (2) To consider how far the present system of taxation is able to assist the development programme of the country and to indicate whether, and in what manner, the system should be adapted to attain this end. (3) To examine the distribution of the tax burden between the different classes and to suggest changes, if necessary, to ensure that burdens are fair and equitable. (4) To examine the uses of taxation as an anti-inflationary measure.

Minor Port Development

Apart from Kandla, which is being developed as a major port there are five minor ports in Kutch—Mundra, Mandvi, Jakhau, Koteswar and Lakhpat—which are administered by the Chief Commissioner for Kutch. Because of inadequate internal communications in the State of Kutch, sea communications, using the five minor ports, have become increasingly important. Until recently very little attention was paid to these minor ports, but their importance has been enhanced by the setting up of big salt works at Mundra, Jakhau and Koteswar. The Chief Commissioner of Kutch has made proposals for the improvement of these ports, estimated to cost Rs. 13.4 lakhs over five years, and provision for this has been made in the five year plan. Revenue from these minor ports is too small to finance development work and the Central Government has had to advance long-dated loans to supplement the minor ports' funds. A loan of Rs. 2 lakhs was granted during 1951-52 and another of the same amount in 1952-53. During 1953-54, an increased provision of Rs. 3.5 lakhs will be required to finance development work in these ports.

The following principal development works are included in the programme for the current five year period:—Mandvi—Provision of a passenger shed and other works; clearing of sand dunes at the mouth of the port; and water supply arrangements. Mundra—Construction of a link road from the town to the new jetty; and water supply arrangements. Jakhau—Construction of a godown and quarters at the port; a timber jetty at Bhiti; link road from the town to the port; reclamation of the port area; and water supply arrangements. Koteswar—Construction of a road from Narayansarwar to the port; reclamation of the port area; extension of landing ground; and provision of servants' quarters, godown, etc. Certain of these projects have already been started or are completed while others are either in the course of execution, or plans and estimates are under preparation.

Acquisition of New Shipping

The Indian shipping industry has insufficient resources at present for development. A sum of Rs. 14.94 crores has been earmarked for the acquisition of additional tonnage in the five year plan. During 1951-52 two loans totalling Rs. 75 lakhs were given to two Indian shipping companies who, with this assistance, were able to add about 6,000 GRT each to the Indian coastal trade. During 1952-53 three loans amounting to about Rs. 34 lakhs have so far been sanctioned and one ship of 5,500 GRT and two smaller ships have been acquired. One or two more loans are expected to be granted before the close of the financial year. The 1953-54 Budget provision of Rs. 300 lakhs will be used to advance loans to Indian shipping companies for the purchase of fresh tonnage for both coastal and overseas trade.

Expansion of Shipping Corporation

The Government-sponsored Shipping Corporation is operating regular cargo services between India and Australia with its two vessels

s.s. West Bengal and s.s. Bombay, and a cargo-passenger service between South India and Malayan ports with a chartered vessel. The Corporation has made a profit since its inception and for the year ended 31st March, 1952, showed a net profit of Rs. 3.84 lakhs. This is carried forward to the next working year, after declaring a dividend of two percent and after providing for managing agent's commission, depreciation, taxation, etc. The Corporation has drawn up plans to expand its activities to cover the India-East and India-East Africa trades. Orders have been placed for cargo ships both in India, at the Visakhapatnam shipbuilding yard, and abroad. The Corporation is prepared to purchase any suitable second-hand cargo ships. To meet this expenditure, the Corporation proposes to increase its capital by Rs. 100 lakhs in 1953-54 and, in accordance with the Promoters' Agreement, the Government of India's commitment will be Rs. 74 lakhs, for which provision has been made in the Budget.

Shipbuilding Plans

Hindustan Shipyard Ltd, in which the Government holds two-thirds of the shares, took over the shipyard at Visakhapatnam from the Scindia Company on 1st March 1952, at a valuation of Rs. 272 lakhs. According to the agreement, two-thirds of this sum would be paid by the Government to Scindia in cash over a period of five years beginning from 1952-53. In lieu of this payment Hindustan Shipyard Ltd will issue shares in favour of the President of India in the capital of the Company. The first instalment amounting to Rs. 33.40 lakhs has already been paid to Scindia in 1952-53, and a sum of Rs. 34.16 lakhs has been provided in the budget estimates 1953-54 for the second instalment.

A plan has been drawn up to develop the shipyard as an economic unit. It provides for the manufacture of engines and boilers in the workshop at the yard and also for the expansion of shipbuilding berths. A provision of Rs. 65.84 lakhs has been made in the budget estimates for 1953-54 to meet this expenditure and this sum will probably be given to Hindustan Shipyard Ltd as a debenture loan.

Because of the higher cost of steel and machinery in India, shipbuilding costs at the Visakhapatnam shipyard are higher than in the United Kingdom. To enable the Hindustan Shipyard Ltd to sell ships to Indian shipping companies at competitive prices, the Government of India will, for a few years, bear part of the difference of the costs, as a subsidy to the shipbuilding industry. This subsidy is expected to diminish appreciably as the yard is developed and is used to full capacity. A provision of Rs. 60 lakhs has been made in the budget for this subsidy.

Industrial Housing Scheme

So far 13 States, 50 employers and 12 co-operative societies have applied for financial assistance under the Government's subsidised Industrial Housing Scheme. The total asked for and the number of tenements proposed to be constructed by the applicants are as follows:

	Loans Rs.	Subsidy Rs.	Single- storeyed	Multi- storeyed
State Governments	4,82,23,329	4,61,58,228	15,975	14,012 (640 dormitories)
Employers	1,68,52,847	1,18,72,527	8,468	5,163 (124 dormitories)
Co-operatives	25,04,693	16,88,011	2,038	
Total	6,75,80,869	5,97,18,766	26,481	19,175 (769 dormitories)

"HENLEY ISCO SERVICE FUSES embody all the essential features necessary to ensure simplicity in installation and reliability in service—the result of wide experience and scientific experiments extending over forty years. They are rated according to the maximum current which they will carry indefinitely."

EDEEN-BUTLER MISSION IN U.S.A.

TRADE RESULTS IN JANUARY
(FROM OUR OWN CORRESPONDENT)

28th February.

THE Foreign Secretary, Mr. Eden, and the Chancellor of the Exchequer, Mr. Butler, accompanied by their official advisors, left yesterday for a visit of five or six days to Washington for "informal and exploratory exchanges of view" with Mr. Dulles and other members of the new American Administration. The basis of these discussions is expected to be the economic "plan" which was evolved at the Commonwealth Economic Conference, on which a memorandum has been prepared, while the detailed points will include the need for easier access to the U.S. market; the easing of restrictions which limit dollar earnings by our merchant fleet; stabilising American purchases of sterling area raw materials, such as rubber, tin and cocoa; the future of Mutual Security aid; some minor amendment of the General Agreement on Trade and Tariffs; the desirability of a higher gold price; and American investment in the development of Commonwealth resources. The ultimate aim is the creation of some sort of organisation linking the dollar area with the rest of the free world in the maintenance of a stable balance of trade and inaugurating a more liberal system in which currencies can be made convertible—a direction in which, it is felt, the International Monetary Fund could play a more prominent part. It is not expected that when the Ministers return here about the middle of March—they both go on to New York from Washington, and Mr. Butler also pays a brief visit to Ottawa—they will have anything very definite to report with regard to American reactions, other than very general approval or disapproval of the basic plan. There will certainly not be any firm commitments.

That does not mean, however, that the visit will have been without value. Apparently Mr. Dulles and his colleagues would have preferred to have further time to study their briefs before entering into discussions of this nature, and it was only with some hesitance that they agreed to so early a visit. On the other hand, as has so often been pointed out, the final plans must be drawn up after further discussions with the O.E.E.C. and the Commonwealth. If they are to prove workable, it is essential that they should be based on at least some general idea as to the way in which the minds of the new American administrators are working. Furthermore, as the latter are now engaged in framing their future policies, it can certainly do no harm, and might well do a lot of good, that they should be informed as fully as possible of the views of their friends and allies before making up their minds finally one way or another. That they seem to have accepted this reasoning—probably due in large measure to Mr. Churchill's earlier talks with Mr. Eisenhower and his administrative officials—is a good augury for the further talks which must follow, perhaps later this year. Mr. Eden will be reporting to O.E.E.C. soon after his return, and there will undoubtedly be a further meeting of Commonwealth representatives about the time of the Coronation.

January Overseas Trade

Another reason which may have influenced the British Government in pressing for the earliest possible talks to expand and stabilise world trade may be derived from the detailed figures of this country's overseas trade in January. The outstanding features may be summarised as showing that although exports are still rising and are now spread through a wider range of manufacturing industries, they are still well below the high figures of a year ago and all the increase was in trade with the sterling area. Simultaneously, more raw materials are being imported to rebuild stocks in the consumer goods industries, and although much of these came from sterling sources there was more cotton from the United States and the Argentine and also hides and skins from the latter country. More food was also imported, but as January represented the first month of a new licensing period and many of these items are on quota, perhaps that is a less significant factor. The overall position is not discouraging, but there is still room for improvement if the obligations of the Commonwealth Conference are to be met, and the fact that for the first time in a year the "terms of trade" went against us last month—the index rose from 94 to 95, against 105 in January, 1952—is a reminder that the export market is growing more competitive every day whereas there is a tendency for raw material prices to stabilise. The most significant fall has been in the export prices of metal and engineering products.

In so far as heavy industrial taxation is hindering this country's efforts to sell more abroad and to develop overseas areas, it is possible that Mr. Butler, since the report has been made at his own request, may well give effect in his Budget to the recommendations contained in the interim report of the Royal Commission on the Taxation of Profits and Income relating to British firms trading overseas. They are three in number: (1) Removal of restrictions on unilateral relief for double taxation; (2) Subject to safeguards a trader should have the option of excluding from assessment overseas profits which are blocked under local currency regulations, until remittance becomes possible; and (3) There should be power, which should be exer-

cised as soon as possible, to make agreements with other countries for Britain to give tax credit for the overseas tax saved as the result of specified tax concessions abroad—these are known as "pioneer industries" concessions and have been introduced in West Africa, certain West Indian Colonies, the Rhodesias, South Africa, Canada and other countries. The cost of these reforms to the Exchequer, as the Commission points out, would not be of major importance.

Increased Coal Prices

The surest and most lasting way of expanding our export trade, however, is to make our prices more competitive. It is also the most difficult, for it is dependent not on official policy alone but on the fullest co-operation of each individual citizen in finding a solution to the economic problems of the country. Next Monday, for instance, the pithead price of coal goes up by 10 percent, or an average of 5s. 6d. per ton, which will not apply to export coal and foreign-going ships' bunkers. It is expected to yield an extra £43 million during 1953 and cover the anticipated rate of loss during the year, but will not cover the substantial deficit of 1952 nor the £6 million loss brought forward from previous years. As was to be expected, there have been immediate repercussions. The Iron and Steel Corporation has asked the Minister of Supply to authorise an immediate increase in maximum iron and steel prices to cover in full the additional costs to the steel industry caused by dearer coal, while the British Electricity Authority has issued a warning that the increase in the price of coal will add some £10 million to the annual cost of electricity production and increased tariffs may be expected to be announced in the matter of two or three months. Gas supplies might well be similarly affected and we must not forget that the railways are also large users of coal. Are we to see the wage-price spiral at work again, to dash our hopes of economic salvation?

Against this background the somewhat negative response of the TUC to the Minister of Labour's suggestions about double-shift working and the introduction of an "industrial code" and the outcome of its preliminary discussions as to the advice it should offer Mr. Butler with regard to his Budget—no more cuts in food subsidies, the reduction of purchase tax on household necessities, lowering of the interest rate on loans from the Public Works Loan Board, among others—do not suggest full appreciation of the gravity of the situation. Nor, for that matter, do the representations of the Federation of British Industries calling for substantial reductions in taxation both of individuals and industry. There is a great deal of truth in the case which the Federation puts forward, but it is not the whole truth, nor is there any real guarantee that the remedies it suggests would in fact achieve all the desirable consequences which the F.B.I. and other similar organisations anticipate. At this stage Mr. Butler is faced with an overall deficit of £346 million, and if past experience goes for anything this will increase still further over the next five weeks.

Civil Estimates

The appearance this week of the civil estimates, following upon those for defence published last week, indicate that the Government is doing all in its power to reduce State spending. The cuts have not been as ruthless as some sections demanded—and Mr. Butler, it will be remembered, warned that they would not be—but against the increase of £123 million to be spent on defence about £269 millions less is proposed to be spent in all other departments, making an overall saving of about £146 million. This should go a long way to ease the Chancellor's difficulties, but there are still a number of unknown factors which must be taken into account, such as the money required for the Consolidated Fund and debt charges to say nothing of Mr. Butler's anticipations of tax returns in the coming financial year. By and large, however, there does not seem to be much justification for any particularly extravagant hopes of tax remissions.

There has, however, been a crumb of comfort for one section of the community during the week. Higher guaranteed minimum prices for farm produce for the years 1954-56 have been announced by the Minister of Agriculture. They cover milk, fatstock and eggs, and in the cases of pigs, hen eggs and duck eggs there is provision for a reduction in case of a decline in feeding stuff prices. The new prices have been received by the National Farmers' Union as being more in line with current production costs. This does not, of course, on the annual price review, which are expected to open almost immediately.

Brevities

Though the merchant shipping fleets of other countries grew by 3,000,000 tons during 1952, the British merchant fleet did not expand. The volume of dry-cargo tonnage under the British flag continued to shrink, and the Chamber of Shipping, in its annual report, comments that this trend is "disturbing." By the middle of last year foreign-going tramp tonnage had fallen by 400,000 tons, though the tanker fleet expanded by 300,000 tons. New liners just launched wastage.

Government dealings in lead on the Metal Exchange ended during the week. Except for the British stockpile, the size of which is secret, the Government has now no further interest in lead. Some 100,000 tons which was held when private trading was resumed at the beginning of October has now been cleared.

West Pakistan

1953-54 BUDGET PROSPECTS

DRASTIC IMPORT CUTS
(FROM OUR OWN CORRESPONDENT)

Karachi, 1st March.

MR. MOHAMMAD ALI will present the Central Budget on the 15th March. The occasion can only be awaited with foreboding. The best that can perhaps be said is that we shall then know the worst. The fundamental weakness in Pakistan's fiscal position is that the Central Government depend to so great an extent on Customs duties, both on the import and export side. Normally, in fact, these account for about 70 percent of the revenue. It is obvious that receipts have fallen heavily short of the Budget estimate for the current financial year under this head, and that the estimate for next year must be on a reduced scale. There can be no possibility of restoring the export duty on tea or bringing the duties on jute and cotton back to their previous levels.

Income tax returns are understood to be satisfactory, for the reason that it is the pre-depression accounting years that are still being assessed. Unfortunately, income tax is a head of minor importance in Pakistan. It has never yielded more than about Rs. 15 crores out of a gross revenue of about Rs. 125 crores (excluding the revenue from Railways and Posts and Telegraphs). In his last Budget, Mr. Mohammad Ali announced income tax concessions involving an annual loss of Rs. 58 lakhs. These concessions could no doubt be withdrawn, but the financial gain would be so slight that this may not be thought worth while. Sales tax receipts for the current year are also reported to be well up to the Budget estimate. There is a possibility that Government may abolish the business profits tax which, in present circumstances when so many companies are losing money, might on the whole be an embarrassment to Government rather than a source of profit.

It may be taken as certain that many of the development projects outlined in the last Budget or approved in principle by the Planning Commission will have to be dropped. It is understood, for example, that Government have deferred consideration of the question of converting the Chalna anchorage into a permanent port with railway connections and all port facilities and that for some time to come it will continue to depend on lighterage. The greater Karachi scheme is also likely to be shelved indefinitely. The construction of a new capital is not a work on which a country in Pakistan's present financial straits can afford to undertake.

Cotton Market Steadier

One of the few more cheerful features in the situation is that the cotton market is in a healthier condition. The private barter system—as forecast for my last dispatch—has been scrapped, except for the exchange of old crop cotton in possession of the Pakistan Cotton Board against cotton yarn from abroad. The private barter experiment has at least achieved the success of disposing of this old crop cotton. The Cotton Board was originally compelled, under the support scheme, to buy about 400,000 bales, and three-fourths of this had been sold in the normal way. The remaining 100,000 bales are reported to have been disposed of under the barter arrangements. Moreover, it is now generally acknowledged that the statistical position of the new crop is far from satisfactory; in fact, about half the crop has been sold which, at this time of year, represents a satisfactory rate of disposal. Although the chapter of private barter dealing is now closed, Government are still discussing some deals on their own account. It is learned that the Spanish Government, who have already traded a cargo of sugar for cotton, have suggested a similar deal against jute. The Russians are also talking of further barter arrangements, but Government are not particularly anxious to enter into a new Russian barter deal. It is also known that the Argentine Government have made an offer of wheat against raw jute, but for various reasons this is not likely to come to anything.

New Import Policy

Visitors to Pakistan over the next few months would do well to bring most of their requirements with them, for the long (and perhaps deliberate) delay in announcing the new import licensing policy and procedure has had the effect of clearing goods out of godowns and shops with remarkable speed. Already, for example, it is impossible to get any pipe tobacco for love or money, and anyone who needs a new tyre for his car or lorry will have to search in the blackmarket, for none are to be had legitimately. Stocks of various industrial requirements, such as welding electrodes, are practically exhausted and there is no walk of life in Pakistan where shortages of this kind will not be making themselves uncomfortably felt. The only factor which is keeping the situation in hand is the general lack of money; in certain classes of goods, e.g., high-priced pharmaceutical specialties, this is making itself felt and sales are not abnormal.

The new import policy, announced today, will accentuate these shortages. No textiles of any variety will be imported into Pakistan. The new policy has made drastic cuts in imports from the dollar area, the list of items which may now be imported from this area having been slashed from 215 to 50 items. This means that there will be no further imports of American luxury cars or motor cycles and even electrical cables and other instruments may no longer be imported. Japan is

March 5, 1953.

notably affected by the new policy for as many as 214 items out of 215 are not allowed to be imported from that country. The only exception is bidi leaves. No ceilings have been announced. It is understood that the entire import trade for the rest of the calendar year will not exceed Rs. 60 crores. Licences for the dollar area will be issued for that currency area as a whole, but they will be valid for all countries in the non-sterling area except Japan.

I.L.O. Labour Survey

The report of the team of International Labour Office experts who made a complete survey of the labour situation in Pakistan in the latter half of 1952 has been completed and despatched to Geneva where it is being examined by the various departments of the I.L.O. In due course it will be returned to Karachi for the Pakistan Government's approval to publish. The publication of this report, which will be awaited with great eagerness, is thus unlikely to take place for about three months.

Fourth Tripartite Labour Conference

Meanwhile, the Pakistan tripartite labour conference has been holding its fourth session. The agenda mainly concerned the conventions and recommendations adopted at the thirty-fourth and thirty-fifth sessions of the international labour conference. These related to such matters as minimum wage-fixing machinery; equal remuneration for men and women workers; joint consultation machinery for collective agreements; arbitration in industrial disputes; minimum standards of social security; maternity protection and holidays with pay in agriculture. With regard to the last-mentioned, and also the minimum wage-fixing machinery for agriculture, it was agreed that the points of view of employers and workers should be placed before Sir Malcolm Darling who is now engaged on his general survey of the problems of agricultural labour. There appears to have been a difference of opinion between the employers' and the workers' representatives, regarding the joint negotiating machinery for collective agreements on a bipartite basis, the former having protested against a proposal that this should be effected by legislation. Of the social security convention it was agreed that the report of the two I.L.O. experts who have been examining this question should be awaited.

Dr. Malik, the Labour Minister, had to reply to criticisms that Government had been unduly slow in giving legislative effect to the recommendations in the five year programme adopted at the first meeting of this conference. He pointed out that the advice of experts before rushing into legislation and the I.L.O. experts naturally had to be given some time for the purpose. This led to the holding in abeyance of such measures as the amendment of the Payment of Wages Act, the Minimum Wages bill and the Health Insurance bill. Regarding the regulation of transport labour and plantation labour, the Central Government, he explained, were still awaiting the comments of the Provincial Governments and organisations of employers and workers who had been addressed. The proposed amendments of the Industrial Disputes Act and the Trades Union Act had given rise to "some grave controversial points" which had got to be settled before any bill could be brought before the Legislature. It was, however, agreed during the course of the conference that the Mines Act of 1923 should be amended. This was accorded only tenth place in the programme drawn up by the first Pakistan labour conference. The amendments proposed mostly relate to safety, health, payment for overtime work, notice of accidents, etc. The provisions of the Act relating to hours of work and holidays with pay are also to be brought into line with those contained in the Factories Act.

Madras

DEVELOPMENT EXPENDITURE IN MADRAS

CENTRAL BUDGET WELL RECEIVED
(FROM OUR OWN CORRESPONDENT).

2nd March.

IT appears that the Press reports that Justice Wanchoo had recommended that Madras city be the "guest capital" of Andhra State are pure speculation. The Tamil Ministers of the State Government are understood to have threatened resignation on the issue, and the President of the Tamil Nad Congress Committee said that he was opposed to the idea of a "guest capital." In his view, locating the temporary capital of the Andhra State in Madras City would, besides creating serious administrative difficulties, weaken the strength of Congress in Tamil Nad.

The Madras Legislature Congress Party Review, No. IV of 16th February, has analysed the Madras development schemes in the five year plan, and the results throw some light on the Andhra controversy. The analysis shows that the progress of development expenditure, which under the plan is about Rs. 140.84 crores, is as follows:

Expenditure in 1950-51 Rs. 30.64 crores
Expenditure in 1951-52 Rs. 27.71 crores (revised)
Expenditure in 1952-53 Rs. 30.08 crores (budget)

Besides the above total of Rs. 88.43 crores, the following amounts were spent up to the end of

1949-50 on irrigation and power projects and other development schemes included in the plan:

Irrigation Projects Rs. 15.61 crores
Power Projects Rs. 18.05 crores
Other development schemes Rs. 19.11 crores

A further analysis I have since made of development expenditure according to areas reveals the following interesting picture:

Schemes benefiting the entire State:
Total cost Rs. 119.18 crores
Total 1951-56 Rs. 93.76 crores
Balance after 1955-56 Rs. 4.05 crores
Expenditure in 1950-53 Rs. 50.20 crores

Schemes exclusively benefiting Andhra districts:

Total cost Rs. 51.81 crores
Total 1951-56 Rs. 32.32 crores
Balance after 1955-56 Rs. 5.33 crores
Expenditure in 1950-53 Rs. 19.71 crores

Schemes exclusively benefiting non-Andhra districts:

Total cost Rs. 56.35 crores
Total 1951-56 Rs. 36.31 crores
Balance after 1955-56 Rs. 5.67 crores
Expenditure in 1950-53 Rs. 19.89 crores

Schemes benefiting some Andhra and some non-Andhra districts, for which figures are given jointly:

Total cost Rs. 9.69 crores
Total 1951-56 Rs. 7.84 crores
Balance after 1955-56 Rs. 0.03 crores
Expenditure in 1950-53 Rs. 4.12 crores

The grand total of costs includes the amount spent in the pre-plan years on a number of schemes included in the plan proper. The discrepancy between the grand total of 1951-56 totals and the scheduled expenditure of Rs. 140.84 crores in the plan period is probably explained by the capital outlay on State trading schemes such as the purchase and sale of fertilisers, pump sets, etc. The foregoing analysis which is based on the figures contained in the statistical supplement to the first five year plan claims to show that the State Government has maintained some sort of parity in development expenditure between Andhra and the non-Andhra regions since 1948, although, according to the 1951 census, the Andhra population in Madras State is 2,11,00,000 out of a total of 5,70,00,000.*

Reactions to Central Budget

The Press generally welcomed Sir Chintaman Deshmukh's "status quo budget," though objection is taken to the change in postal rates. The Hindu emphasised the disturbing manner in which civil and defence expenditure continues to mount. The article concluded: "What Parliament and the country should realise is that recourse to the easy process of borrowing from the Reserve Bank against treasury bills or *ad hoc* securities does not obviate the need for making those sacrifices which are called for to secure a certain rate of capital outlay on development."

The President of the Madras Stock Exchange Association, while welcoming the tax reliefs, said that the increase in postal charges would weigh heavily on business. The conversion of the *ad valorem* duty on exports of superfine cloth into a specific duty might be favourable to the export trade, he said. Mr. C. M. Kothari thought that, on the whole, the budget would create a favourable impression on industry, but added that the rise in postal rates would add to the burden of the middle class.

The President of the Southern India Chamber of Commerce questioned the wisdom of stopping food subsidies. He said he favoured the curtailment of civil expenditure. The commercial community, in his view, had not much to enthuse about in the budget proposals. "Even the surcharges on customs and income tax revenues have not been removed, which only shows that even an emergency tax always has a tendency to stay." The President of the Andhra Chamber of Commerce regretted that there was no incentive for capital formation in the budget proposals and said that deficit financing might make the position of private industry more difficult.

The President of the Southern India Chamber of Commerce was also critical of the Railway Budget which he described as "colourless." It did not contain, he said, any bold policy intended to improve the finances of the Railways or any relief to merchants or the travelling public. He regretted that regrouping of railways had not resulted in substantial economies in administration.

*This question is examined from a different point of view by a special correspondent in a contributed article on page 294.—Ed., "Capital."

Senior officers of the American Point Four programme in South and South-East Asia—India, Pakistan, Afghanistan, Burma, Indonesia and Nepal—have assembled in Bangalore on a five-day conference to discuss means for effectively developing and administering technical co-operation programmes now in operation in the six countries.

The conference, which opened on 2nd March, follows the one held last week in Agra at which Point Four officers concerned with village development programmes in South and South-East Asia discussed technical assistance as applied to village development.

Mr. H. C. Kothari has been nominated employers' delegate to the 2nd session of the I.L.O. Committee on Work on Plantations which is to be held in Havana, Cuba, from 16th to 28th March.

Bombay

FAVOURABLE REACTION TO
CENTRAL BUDGETECONOMIC REVIEW BY
MR. D. P. KARMARKAR
(FROM OUR OWN CORRESPONDENT).

1st March.

BOMBAY'S reaction to the Central Budget has been favourable. Business men and operators in the various markets, except those in oilseeds, had been prepared for no fresh burdens and looked rather for fresh inflationary trends. Before there had been time to realise even the most superficial implications of the budget or of the Finance Minister's speech, prices jumped in the equity markets and to a lesser extent also in commodity markets. Steel and textile shares are the leading counters in the Bombay stock market and although there is little in the budget to benefit these industries, both sections showed gains. Part of the rise in prices is attributable to covering by bears who for months had been hammering prices down below the intrinsic merits of these shares. The present rise is considered to be only a temporary swing of the pendulum and it is anticipated

that after a day or two prices will return to a technically more correct position.

There is a good deal of speculation regarding Government borrowing. The response to new loans is expected to be slightly—but only slightly—better, for private savings, it is feared, will not increase immediately. There is nothing in the budget to indicate any decrease in the cost of living. There might be a slight increase in small savings if some additional inducement by way of an increased return is offered. Prof. C. N. Vakil of the University School of Economics and Sociology said he feared that the Government will have to resort to printing more and more notes as the tempo of Government spending on the five year plan increases and that as a result of prevailing ignorance on these matters in responsible quarters in the country, this would entail more dangers than is at present realised. Sir Chunilal B. Mehta, a well-known financier, has suggested that it would have been more reassuring to the commercial and industrial community and would prevent any undue rise in price levels, if a specific ceiling was announced by the Finance Minister for the maximum amount of currency notes to be issued by the Government. While popular reaction to the budget is favourable, both because of the raising of the lower limit for income tax and the absence of new tax burdens, it is nevertheless felt that prices of consumer goods may well increase.

Indian Merchants' Chamber

Business men in Bombay regard the Annual General Meeting of the Indian Merchants' Chamber as an important event. Even the Government of India considers this function sufficiently important to depute a Minister to inaugurate the meeting. This year, appropriately enough, it was Mr. D. P. Karmarkar, the Union Minister for Commerce, who inaugurated the 45th meeting last Thursday. Mr. Karmarkar echoed the sentiments expressed by the President in his address to Parliament early last month on the economic situation of the country when he observed that the country had arrived, after many vicissitudes during the last five years, at a stage where "we can look forward with a definite measure of confidence and hope" to the growth of foreign trade and industrial production. With some self-satisfaction, Mr. Karmarkar observed that there had been a "continuous consistency" in the promotion of national industries and in the satisfaction of consumer requirements, despite many difficulties created by post-war conditions and the Korean war. Coming to more specific issues, the Commerce Minister stated that the present policy of his Government was to keep imports within the limits of foreign exchange resources, to encourage exports after meeting internal requirements and to give priority to imports of capital goods necessary for industrial development. Keeping this policy in mind, the Government had taken a number of steps to reduce export duties and liberalise controls to help the export trade during the present recession in foreign markets. Foreign trade, that is imports and exports taken together, had increased from Rs. 1,101 crores in 1948-49 to Rs. 1,676 crores in 1951-52. Referring to investment of foreign capital in the country, Mr. Karmarkar said that the Government's policy provided adequate safeguards against unfair competition and that it was not likely to cause any hardship to Indian industry, provided the latter was organised on sound lines and run efficiently. He concluded his address to the Chamber by appealing to the private sector of industry to develop the cause of Swadeshi by giving their best to the consumer, by charging reasonable prices and by ensuring a supply of goods of standard quality.

Resumption of Bullion Market

After a deadlock lasting for a week, business was resumed last Thursday in the trading hall of the Bombay Bullion Association. Originally the Board of the Association had refused to allow the commencement of forward business in the Chaitra (March) settlement. It had prepared an elaborate scheme with safeguards to keep speculative activity within narrower bounds and had submitted it to the Government of Bombay for sanction. The bulls' grip on the market was so tight that further business appeared almost impossible, resulting in a deadlock over the heavy outstanding transactions. The Board, however, realised that it would take some time for the Government to examine its scheme for a revised contract and that business could not be held up, because of the need to square up business for the current settlement. It was decided to allow business in the next settlement after arranging for some kind of behind-the-scenes understanding between the bears and bulls for liquidating or carrying forward outstanding transactions. While most buyers are believed to have carried out their part of the understanding to allow the sellers to square up their business, the Board has met with some difficulty over a small part of the outstanding transactions and it is believed to have considered disciplinary steps such as the suspension from carrying on business on the floor of the exchange of certain members who were holding on to their contract. The general feeling among business circles here is that the crisis in the bullion trade has not really been resolved but only postponed and that it is bound to recur at a later stage.

Insurance Tribunal

Employees of insurance companies in Bombay State are meeting here today to ask for the setting up of an all-India tribunal for the insurance business. The President of the Insurance Employees' Federation in Bombay stated that there was a disparity in wage scales, leave schedules and the setting up of a tribunal was necessary to establish uniformity. It is proposed to hold a rally of employees of insurance companies next Tuesday, when some of the members of the State Assembly have agreed to address the gathering.

Famine Committee

The Bombay Assembly has been occupied this week mainly with questions of famine relief. There was a token cut motion by all the Opposition parties combined on a supplementary demand Rs. 1,31,25,000 for famine relief. The cut was moved to discuss official famine relief measures days. The cut motion was ultimately defeated announced the appointment of an ad hoc committee, consisting of four Secretaries to the Government, to assess the famine situation in the promptly wherever necessary in the affected areas. Mr. Harey also said that the Government had appointed another famine relief committee to tour sparsely areas, so as to keep the Secretariat in touch with local developments. He assured the Assembly that the Government would want of funds; every possible care would be exercised to ensure that money apportioned for relief was not wasted.

BURMA MAKES GRADUAL PROGRESS WITH EFFORTS
TO RESTORE ORDERDIFFICULTIES OF COMMUNICATION CONTINUE TO PARALYSE
TRADE AND INDUSTRY IN MANY DISTRICTS

At the annual general meeting of the Burma Chamber of Commerce in Rangoon recently, the chairman, Mr. R. S. Carey, presented a comprehensive review of economic developments in the past year. Authoritative information on the extent to which Burma's internal situation affects her trade, commerce and industry is not always easily available, so we reproduce below extracts from the review.

THE general background was not greatly changed from the previous year. Although steady progress was made by Government forces in several areas, pockets controlled by insurgents still exist: surface communications were perhaps less insecure than in previous years, but sabotage of the railways and attacks on trains, steamers and motor vehicles were still not infrequent. The chief obstacles to significant expansion of internal trade therefore still remain and the working of industries and estates in many of the districts was either hazardous or impossible. The reopening of so large a part of the country's entire monetary circulation in Government deposits and the fiscal operations of Government generally have not eased limitations on the volume of currency in circulation to the extent that might have been considered warranted by Burma's favourable external trade balance. The expenditures involved in Government's many plans for development have not yet reached the stage of exerting any appreciable effect on the general economy of the country.

The total quantity of rice and rice products exported during 1952 was 1,356,300 tons, which compares with 1,221,250 tons exported in 1951, and was only a little over one-third of the average annual exports before the war. The controlled prices of paddy, rice and rice products remained unchanged from the previous year. The State Agricultural Marketing Board have been more particular over quality and milling standards and cuts have been imposed frequently on millers for inferior deliveries. The system of "cultivators' licences" introduced in the previous year was continued, but it is doubtful whether cultivators have yet benefited to the full by this system. There was less difficulty for sellers in the marketing of their paddy, mainly because of the increased purchasing power of district co-operative societies, who were strongly supported by the State Agricultural Marketing Board. The State Agricultural Marketing Board organised and obtained high priority for the transfer of milled rice stocks from the districts to Rangoon and the outputs and as a result district millers received prompt payment and were able to turn round their stocks and keep their mills working more consistently than in recent years. The improvement in their position was at the expense of port millers who found it harder to buy paddy and get their milled stocks shipped by the State Agricultural Marketing Board.

The State Agricultural Marketing Board continued to be the sole exporter of all rice and rice products on f.o.b. terms and, while the majority of exports have been sold on a Government-to-Government basis, the State Agricultural Marketing Board have called for tenders for considerable quantities of rice and bran from time to time. Preference in these transactions was given to Burmese firms and companies in accordance with the declared policy of Government. It must be mentioned with regret that there has been no improvement in the documentation by the State Agricultural Marketing Board of rice shipments, the lateness of which was criticised by my predecessor two years ago. The tardy handling of documents costs the country many lakhs in interest.

The planting of cotton, groundnut and bean crops has still not reached the prewar level, partly owing to the continuing sense of insecurity in outlying areas, and the transport of produce to Rangoon is still liable to interruption. Deliveries on the whole improved during 1952 but they are still rather erratic and transport charges are heavy. India and Pakistan have been the main consumers of Burma cotton and the bulk of the year's exports has been done by Indian and Pakistani merchants. There has been some demand from the United Kingdom and the continent of Europe met by European firms, and exports to all destinations total 2,720 tons compared with 2,800 tons in 1951.

The Planting Industry

For the fifth year in succession reports from the rubber planting industry are far from encouraging. While there has been a marked falling off in the intensity of illicit tapping as a result of the fall in the price of rubber, the practice of stealing latex continues. It is becoming a common occurrence for bands of ne'er-do-wells to demand and take, without let or hindrance, the total production of estates on any day or days of their choosing. The state of law and order in the districts of Lower Burma where rubber estates are situated is such that few plantations have resident senior staff, whether Burmese or European. The prospects of large-scale replanting, so essential for the long-term life of the industry, are as remote as ever.

During 1952 the State Timber Extraction Organisation found it possible to extend slightly the area of working. As the balance of stocks of logs from work done before 1949 dwindled mills have become increasingly dependent on deliveries from recent working. Deliveries to Rangoon during 1952 are estimated to have been between 70,000 and 75,000 tons as compared with between 65,000 and 70,000 tons in 1951, and this small increase reflects the slight expansion in the area of extraction. Sufficient logs have been available in Rangoon during 1952 to keep both the State mills and many of the bazar mills operating, but the two main European-owned sawmills remained closed. The State Timber Board has commenced installation of a new sawmill.

Arrivals of teak logs in Moulmein during 1952 are estimated at 25,000 tons, a slight increase compared with 1951. These arrivals and the stocks already there have been ample for the requirements of the Moulmein mills. Many mills nevertheless remained idle as the low prices for converted timber did not justify the purchase and milling of logs. Exports in 1952 were disappointing, being less than in any postwar year except 1950. It was only towards the end of the year, when stocks abroad were becoming depleted and prices were down to a more realistic level, that trade began to revive. The forecasts for other hardwoods also show a decline although arrivals at Rangoon, amounting to 21,000 tons of round logs and 13,000 tons of conversions, were roughly on a level with those in 1951. Competition from Malaya and North Borneo was an increasing factor. During 1952 the balance of logs due to former lessees for forest assets taken over in 1949 was received by the firms concerned and the transaction is complete. Some compensation has been received by three of the five former lessees in respect of their assets taken over in 1942. The compensation due to the other two firms for assets taken over in June 1953 still remains the subject of negotiation. In general the timber industry, despite certain slight improvements, is not yet in a healthy condition. Unrest upcountry still narrowly limits forests working, prevents the buildup of stocks of logs such as would make possible the use of the available milling power and retards the full development of the country's rich resources of timber.

The Mining Industry

An event of great importance to the mining industry was Government's decision to refer certain constitutional issues to the Supreme Court for opinion as provided for in Section 151 of the Constitution.

Tin and Wolfram Mining—Mawchi. The Mawchi mine has remained throughout the year in the hands of insurgents, as has been the case now for four years.

Tin and Wolfram Mining—Tenasserim. In Tavoy district the supervisory staff of the mines have been confined to Tavoy town. Serious depredation of plant for lack of skilled technical supervision therefore continues, and tailings over unworked ground have reached a depth which will make the working of virgin ground unprofitable. The removal of pillars and timberings has rendered many tunnels and adits unsafe to use. Mine owners receive only a fraction of the ore won from their mines and illicit trafficking in ore is carried on openly. In spite of these handicaps exports from Tavoy during 1952 were some 44 percent higher than in 1951. They were however only about one-third of the average exports in the years immediately before the last war.

Oil. Crude oil production from Chauk and Lanywa oilfields amounted in 1952 to 645,088 barrels, a slight increase of 0.23 percent over production for the year 1951. The strike in November reduced annual production by about 43,000 barrels. Six new wells were drilled at Chauk, two were deepened, and new steady production was assured to balance draw-down. Due mainly to delays in delivery from abroad of various items of plant, the new refinery at Chauk is not now expected to be in operation before the second half of 1953. The improvement in trade which was shown in 1951 was generally maintained throughout 1952. Sales of petroleum products in Burma in 1952 averaged 39 lakh gallons a month, an increase of some 2 lakhs a month over 1951. Communications by road, rail and river have been more encouraging and the flow of petroleum products from both Chauk and Rangoon to distant markets has been maintained without serious interruption. During the year 24 lakh gallons of petroleum products were on average imported monthly from overseas. This is about 60 percent of Burma's requirements.

Both the beginning and the end of 1952 were marred by short strikes and several cases were referred during the year to the Industrial Court. It can be truly stated, however, that though occasionally misled by an influential few the great majority of the industry's employees are hard-working, loyal and contented. The industry has actively continued its policy of recruiting Burma nationals to administrative and executive posts. Pursuant to the minute of agreement between the Government and the oil companies, which was initiated by both parties in December 1951, Government intimated their acceptance of the oil companies' valuation of assets, after inspection had been made by a team of Government experts. Legal documents necessary for the founding of the joint oil venture company have been under examination by Government. Some related legal matters are at present the subject of a reference to the Supreme Court. The fact that the joint oil venture company itself has not yet been formed has not however impeded progress in the industry, which is proceeding fully up to the limit that is practicable.

Cement. The factory of the Burma Cement Company Limited at Thayetmyo was in production throughout the year except for the period from August to October when production had to be discontinued owing to lack of demand and storage being full. Discussions with Government about participation in the industry continue.

Match Industry. During 1952 the production of matches was well maintained at the same level as during 1951, when the highest figure for production since 1941 was achieved. Although on the whole the supply of match wood was satisfactory, insurgent activities along the River Irrawaddy continued to cause irregularities in deliveries. The nine control points established by the insurgents, which were mentioned in the review for 1951-52, are still in existence and the total toll levied by the insurgents is said to be heavier now than previously.

Electricity Supply. The demand for electricity in the Rangoon and suburban areas increased considerably during the year and was met in full by the new generating plant which has been installed at the Ahlone Power Station. Rates were reduced on 1st July. The Electricity Supply Board have advised the Rangoon Electric Tramway & Supply Co. Ltd. that they have under consideration the nationalisation of their undertaking.

Severe Import Restrictions

Only one new Open General Licence was issued during the year and this covered mainly raw materials used by local industries, apart from one item of piecegoods. For goods subject to licence there was no general issue of licences during the year, but licences on appeal were granted to a few and co-operative societies and Burmese limited companies received some new licences. Such limited issue of licences does not meet the legitimate expectations of trade in general and is apt, for a variety of reasons, to lead to irregularities. With the continuing favourable balance of trade and the huge reserve of foreign exchange, the economic justification for the retention of control of imports is not apparent. Control of this kind, and to this extent, can create artificial shortages. The substitution of sales tax at a single point for the former multiple tax was a welcome and much overdue reform, but the new Act and Rules contain a number of provisions which operate harshly and unreasonably. Only one meeting of the Imports Advisory Committee was called by Government during the year. If there must be control of imports this Committee can be of value both to Government and to business men and the fact that Government have not seen their way to make appreciable use of the Committee is regretted.

In general the market has been dull throughout the year and the main reason was the public's lack of purchasing power. Although Burma has obtained good prices for rice exported, the ostensible benefits of these prices have not mitigated this circumstance. Accordingly the unfortunate fact that the movement of imported goods from Rangoon to rural areas has been slow occasions no surprise, although it is a reversal of the normal expectation of sequel to the realisation of high export prices. The insecurity of surface communications and the risks involved in the storage of goods upcountry have added to inhibition on the distribution of imports. Against a background of steadily declining world prices the piecegoods market remained dull. The bazaar is again overstocked with cotton piecegoods. Recently the Indian Government has reduced its export duty on coarse and medium cloths from 25 percent to 10 percent and the future of world prices for raw cotton remains uncertain, so the prospects for stockholders are not encouraging. The trade in woollen goods has declined steadily in recent years, no doubt because of the cessation of the border trade with China. The hardware market was not so depressed as the textile market, mainly because of the demand for iron and steel constructional materials. The flooding of the market with all sorts of cheap machinery from Japan has affected the sales of the higher class British and Continental machinery.

Currency and Banking

The outstanding event of the year was the passing of the Union Bank of Burma Act, 1952, which was brought into force on 1st July. In the monetary field the power to issue currency has been transferred from the Burma Currency Board in London to the Union Bank in Rangoon. As backing for the currency the Act requires the Union Bank to maintain a minimum international reserve in the form of gold or assets in foreign currencies equal to 25 percent of the currency in circulation and the Bank's liability on account of deposits. The legal tie between the rupee and

sterling has been removed, and parities with sterling and other foreign currencies are now determined by Government and the Union Bank in accordance with the rules of the International Monetary Fund, of which Burma is a member. In practice there has been no change in the sterling exchange rate, which is still 1s. 6d. nor has any change taken place in the rates for other currencies. The currency system has been decimalised, the standard unit being the *kyat* with sub-units of 100 *pyas*. In the banking field the new Act enables the Union Bank for the first time to control the volume of bank credit in Burma, with facilities for alleviating credit stringency and restricting credit when necessary. The Union Bank now has powers to license and inspect banks in Burma.

There has been no relaxation of exchange control restrictions during the year. The one-way flow of foreign exchange, to which reference was made in previous reports, has not been so pronounced because, although Government still exercises destination control of exports, a larger proportion of the rice shipments has been made through ordinary trade channels. The Union Bank of Burma bank rate remained unchanged at 3 percent. Money was very tight in the first half of the year and in the absence of suitable facilities for borrowing locally most banks had to have recourse to London. In the second half of the year monetary conditions were much easier.

Insurance Activities

The improvement in conditions in certain parts of the country has brought forth a number of enquiries for the insurance of risks in the mofussil but insurers are still taking a conservative view and in most cases are confining their risks to the Rangoon area. Marine business continues to be on a very small scale and this is likely to continue whilst the country's main export is handled on a Government-to-Government basis. The volume of accident business shows a small increase. Under the Nationalisation of Insurance Companies Act, 1951, the Union Government has nationalised the life department of one of the two Burmese insurance companies. Its activities have so far been largely concerned with the compulsory life insurance of Government servants.

Port of Rangoon

The total seaborne trade of the Port during the year totalled 1,993,590 tons, exceeding the previous year's figure by 97,462 tons. There was an increase in imports from 694,333 to 775,383 tons, while exports rose from 1,206,725 tons to 1,223,207 tons. The long-term rehabilitation projects of the Port commenced in 1951 were successfully continued. Shortages from steamers or wharves continued to be at the same level as in the previous year in spite of slight dislocation in security arrangements due to wharf reconstruction. The agreement with shipping agents whereby the Commissioners make *ex gratia* contributions towards shortages in the form of specified percentages of concluded claims was extended for a further period of one year on the same terms. Cordial relations were maintained with all sections of labour and it is satisfactory to record that, during a year when delays occurred in almost every major world port due to strikes or port congestion, the Commissioners for the Port of Rangoon were able to steer clear of both evils.

The Arakan Flotilla Co. Ltd. was able to maintain passenger services between Akyab and Kyauktaw throughout 1952, although many of the voyages were hazardous owing to the presence of insurgents along the route. Similar conditions prevailed on all the river routes and, as communications throughout Arakan are entirely dependent on waterborne transport, a considerable strain was thrown on police resources by the necessity for providing increased escorts on all launch routes. In spite of difficulties it proved possible to maintain the scheduled launch services throughout the year with but few interruptions, the Burma Navy co-operating admirably at times when it appeared likely that sailing without an escort craft might prove unduly dangerous.

There was an increase (from 496 to 609) of ocean-going vessels which called at the port of Rangoon, while schooner traffic fell. The setting up of the Dock Labour Board to implement the decasualisation of dock labour was followed by a temporary disruption of the hitherto smooth working of the Port. The immediate effect was an acute shortage of gangs at the height of the rice export season and this state of affairs persisted with fluctuations for the first six months. More recently the supply of labour has been sufficient and the rate of working has recovered to within measurable distance of previous standards, though output is still apt to be erratic.

Air Transport

Passenger and cargo plane traffic to and from Rangoon during 1952 has shown an appreciable increase. It had been hoped by most international operators to introduce "tourist" services on their Eastern routes early in 1953, but for a variety of reasons this proposal is in abeyance until April 1954. "Tourist" services are expected to be introduced on the Indian and Ceylon routes during the latter half of 1953.

Labour Relations

There was no new legislation on labour matters during the year but some weaknesses in, and some differences over interpretation of, the legislation passed in the previous year came to light. A difference over interpretation of the Leave and Holidays Act led to a trade dispute: an authoritative interpretation on this point was given by the Supreme Court and it may be hoped that further dispute on this score will be avoided.

FINANCIAL PROBLEMS OF ANDHRA STATE DIVISION OF REVENUES BETWEEN UNITS

(BY A SPECIAL CORRESPONDENT).

CONSIDERABLE interest attaches to the financial prospects of the new Andhra State. Whatever political considerations are involved in the separation, it is plain that its success will depend ultimately on the financial stability of the new unit. This was recognised by the Government of India, which directed Mr. Justice Wanchoo in specific terms to investigate the "financial implications" of separation.

Madras in its present form is a deficit State, and its budget for 1953-54 is expected to show a deficit in the neighbourhood of Rs. 10 crores. The heavy expenditure of Rs. 10 crores which the State Government have had to undertake during present financial year on famine relief and assistance to drought-stricken areas is the main reason for the deficit. It is not likely that the State finances will be relieved to any substantial extent by the additional Rs. 254 crores from income-tax allocations which it will receive in the coming year under the settlement proposed by the Neogy Commission.

The financial prospects of Andhra State have to be examined against this rather bleak background. When separation takes place some time in July or August next, the new State will have to face a deficit which it will inherit from the composite State. Separation will mean that both Andhra and the residuary Madras State will be forced back on their own resources to stabilise their budgetary positions. On the one hand the new State will have to shoulder its share of the obligations of the old State, but on the other hand it will be in a position to reduce expenditure in some directions and secure additional income from certain sources.

Any endeavour to evaluate precisely the financial implications of Andhra separation is frustrated by the absence of separate and authentic figures of income and expenditure for the Andhra districts. Mr. Wanchoo met with great difficulty on this account, but he was not expected to go into details. The statistics presented to him by the Madras Government and non-official bodies and individuals on the financial position of the proposed State were approximate estimates and not wholly reliable.

Taking the preliminary estimates of income and expenditure for the 12 Andhra districts for the budget year 1951-52, the Madras Government computed their deficit at Rs. 5 crores, while the residuary State was claimed to have had a surplus of nearly Rs. 40 lakhs. The suggestion was that the entire deficit for Madras State in that year was the result of increased expenditure in the Andhra districts. But in the absence of separate statistics of revenue and expenditure for the districts, the figures attributed to the Andhra region were only estimates; if the budget for the whole State was a deficit one, one part of the State could not be held wholly responsible. Even granting that the figures were approximately correct, it would seem that in the past the Andhra districts have been neglected in that important income-yielding irrigation and electricity projects and industrial establishments had been concentrated in the residuary State.

Undoubtedly Andhra would be a deficit State to some extent; its deficit may be roughly estimated at between Rs. 3 and Rs. 4 crores at the outside. This will be so because of the heavy expenditure it will have to incur, at least in the first few years, on relief to chronically drought-stricken Rayalaseema, which will be a heavy burden on Andhra's special responsibility hereafter. This deficit can be reduced only when schemes for the development of Rayalaseema are completed. The important question is, how can the new State undertake measures for famine relief on a large scale and yet balance its budget? Further, how can it find money for the execution of schemes which would be of permanent benefit?

Abrogation of Prohibition

The first method that comes to mind is to abrogate prohibition. That would at one stroke annul the deficit and might even leave the new State with a small surplus. Though this may seem the line of least resistance, it might turn out to be the line of maximum resistance, in that prohibition, to the Government of the new State, which will most probably be a Congress one, is likely to be an article of faith which it can abandon only in the last resort. But if there is no other way to make Andhra financially self-sufficient, prohibition will have to go.

Apart from the repeal of prohibition, there are other factors which might make the deficit manageable. One of them is the revised scheme of allocation of income-tax proceeds proposed by the Finance Commission and accepted by the Government of India, under which Madras would get an additional sum of Rs. 254 crores. The Commission recommended that the allocation should be related partly to population and partly to collections; Andhra should get 38 percent of the amount on a population basis. It is possible that from this source the new State will derive about Rs. 1 crore of additional revenue. Another decision of the Finance Commission is that the Centre should give the States a percentage of the excise taxes collected by it on tobacco, vegetable oils and matches, the percentages being

calculated on a population basis, and that the States should be permitted to levy sales tax on these commodities. Andhra, in particular, has a large area—nearly 350,000 acres—under tobacco, and the levy of sales tax on tobacco and tobacco products would substantially ease its budgetary position.

Andhra will be a food surplus State, and will thereafter be free from any obligation to purchase foodgrains. Although Rayalaseema will be a liability, when the surplus Circars districts are linked to that area instead of, as at present, to the southern districts and Madras city, its needs can be supplied from their average annual surplus of 400,000 tons of foodgrains.

The principle of needs, which the Finance Commission suggested as the main criterion for the distribution of Central grants-in-aid, should help stabilise the financial position of Andhra. Though the Commission said that the present Madras State need not receive any grant-in-aid, Andhra, it is hoped, will be treated generously on the ground that it will have "to meet a special burden or obligations of national concern". It is undeniable that, as a new State, Andhra should be provided with financial assistance to execute schemes which would ultimately be of national value.

Income estimates under other heads of revenue like forests, highways, electricity schemes and so on for the Andhra districts, given to Mr. Wanchoo by the Madras Government, have been challenged because the division is not made on a population basis. For instance, the Government's figures on income from electricity schemes showed that Andhra would have to forgo a sum of Rs. 32 lakhs on the ground that electricity supply in that area has not yet begun to pay their way. In 1949-50, Madras State had a revenue reserve of nearly Rs. 33 crores. That fund has been gradually depleted during the last two years, partly to meet budget deficits, partly to meet expenditure on irrigation and other schemes. At present it is reported to stand at about Rs. 5 crores. During the last two years no major scheme has been sanctioned for the Andhra districts; the only major item of expenditure pertaining to that area has been famine relief in Rayalaseema, which cannot be considered "productive". It has thus been contended by Andhra spokesmen that the new State should be reimbursed to the extent of Rs. 32 crores to compensate for withdrawals from the reserve fund from which Andhra received no benefit. Similarly, under "irrigation", as the main irrigation system on the rivers Godavari and Krishna in the years ago and have by now more than paid back both the capital invested in them and the interest thereon.

Division of Assets and Liabilities

The issue of dividing assets and liabilities between Andhra State and the residuary State is an important matter on which different views have been expressed. The various issues of financial adjustment between them, intricate as they are, become more so when account has to be taken of transactions covering a number of decades. These transactions were undertaken without making any distinction between one area and the other and separate accounts are difficult to come by. For instance, irrigation schemes, electricity schemes, highways, buildings, public institutions in Madras city and so on had all been located in one area or the other. This fact has now become the basis for the complaint that more attention was paid under the composite régime to schemes and projects in the south, to the detriment of the Andhra area.

To decide between the claims and counter-claims put forward from the two sides can be the work only of an expert committee which could probe into provincial finance over a long period of years. Such a committee should be appointed by the Central Government as soon as possible to examine the problem and make suitable recommendations; this is the only way to avoid the suspicion that one State or the other is receiving inequitable treatment or is being deprived of its dues. Mr. Wanchoo had no data, neither separation. In the meantime, an *ad hoc* division of assets and liabilities could be made on the basis of some definite principle—population or needs—so that the new State might start its career with at least some reserves.

REDUCTION OF EXPORT DUTY ON SACKING WELCOMED

NO RUSH OF ORDERS FROM ABROAD

THE news that the export duty on sacking had been reduced in the Budget was received with satisfaction in all jute circles. There was a mild rise in the quoted prices for sacking goods immediately after the announcement but no business of importance was recorded and it is generally believed that the results of the reduction will not be apparent for some time. Theoretically, there should have been a rise of Rs. 9-8 per 100 bags in the case of B Twills on the assumption that consumers were willing buyers at the prices being quoted prior to the announcement. Actually it could not be said that there was an active demand before the reduction, so although in theory overseas buyers should be able to buy at the prices they were previously paying while the mills in India should get Rs. 9-3 per 100 bags more, it has not worked out that way, the reason being the heavy selling pressure in Calcutta. Consumers throughout the world know that mills in India are in the unusual position of having unsold stocks of manufactures in their godowns and that they have few orders for sacking on their books. They hope, therefore, that the reduction in the duty means that they will be able to purchase their requirements more cheaply. Had the reduction come some months ago when the mills were in a stronger position as regards sales it is probable that more advantage would have accrued to the mills. As things stand it looks as if it is consumers abroad, for the present, go to consumers abroad. If, however, the lowering of prices stimulates buying, that will be all to the good, and if increased purchasing by consumers results in the clearance of stocks in Calcutta the position will be strengthened.

During the past few months when there has been talk of a reduction in the export duty that very fact has acted as a deterrent to new business and to the movement of goods already bought. While there was a prospect of a reduction in the duty consumers were unlikely to enter into forward commitments, though actually they would still have got the benefit of any reduction in the duty which took place before the goods were shipped. The possibility of a reduction has also undoubtedly acted as a brake on shipments during the last two months for who would call for the shipment of goods, unless early delivery were imperative, while there was a prospect that by waiting the benefit of a reduced rate of duty would be obtained? It is possible, therefore, that there may be, in the near future, a substantial clearance of the stocks which have accumulated in the past few months.

After the announcement of the reduction in the duty raw jute sellers were unable to raise their prices. If they had been able to do so that would have defeated one of the purposes of making the reduction which was to enable mills to get a better price so that they could sell their sacking without incurring losses. It may, of course, be argued that the present price of jute is too low and that it is endangering the drive for self-sufficiency in raw jute but, if there were a rise in the prices of sacking and a corresponding rise in the price of raw jute, the same position of unbalance would be repeated at a higher level. What is needed is to get the price of sacking and the price of raw jute into an equilibrium where the mills can manufacture and market their products without loss while the growers are not discouraged by uneconomic prices from further expanding their crop.

Proposed Marketing Enquiry

Mention has again been made in Parliament of the intention to appoint a judge to conduct an enquiry into the marketing of jute manufactures and raw jute. The terms of reference have not been announced but it is pertinent to enquire what is the nature of the information that is wanted. We have already had two enquiries under the aegis of the Government of Bengal, one by the Indian Central Jute Committee and one by the Export Trade Promotion Committee. There was also a useful memorial on the futures market subscribed to by all sections of the trade and industry and submitted to Sir John Anderson when he was Governor of Bengal. Thereafter came the enquiry by Professor Todd and his two reports. No new factors of any great importance, except the partition of Bengal, have appeared to detract from the accuracy or value of these reports so, unless there is something hidden which the Government wants to discover, would it not be better simply to study all the information already available rather than start off another enquiry?

Improving the Quality of Indian Jute

It is gratifying to note that the Government of India has set up a committee to suggest measures to improve the quality of jute grown in India and to concentrate production in areas most suitable for growing jute. The committee will enquire into the possibilities of increasing the acreage in areas where superior quality jute can be grown and reducing the acreage where only inferior quality is grown. A Government note says that satisfactory progress has been made in the expansion of the area under jute but that large areas of marginal land have been brought under cultivation. This land can produce only low yields and poor quality

and, in the competitive conditions now prevailing, it is necessary to concentrate more on improvement of quality rather than on mere expansion of production. Readers of Capital will recognise that these are the essential points of the policy this paper has been advocating for some time.

In this connection it is interesting to note that the Government of Assam has expressed its intention of bringing an additional 70,000 acres under jute cultivation this year. It is stated that this will yield an additional 5,00,000 maunds of jute. That works out to 1.4 bales per acre against last year's average yield in Assam of nearly 3 bales per acre. Such a low yield would not make the crop a paying one for growers and to attempt to increase jute cultivation on this basis would be a negation of the newly announced policy of the Government of India. We hope that the figures have been wrongly stated in the Press report.

Supplies of Jute Seeds for Growers

Dr. H. K. Nandy, the jute development officer of the Government of India, has recently completed a report on jute development work in various States. He says that adequate supplies of good quality jute seeds are expected to be made available to growers during the coming sowing season. In West Bengal, the Jute Seed Multiplication Farm at Krishnagar and other areas are producing good quality seeds in quantity and these are expected to be available in the local bazars at low prices. It is reported that other growers have enough seeds from their own selected plots, but in previous years these seeds have been found unsatisfactory as they are invariably taken from the lower grades of plants which growers cannot sell.

THE JUTE MARKETS

Manufactured Goods: The reduction of the export duty on heavy goods as announced in the Budget proposals on Friday night came as no surprise to the trade in general in Calcutta, as very accurate rumours had prepared the way for it, and reactions in local markets took place almost before the announcement. The cut of Rs. 95 per ton has been made in an effort to aid the Indian sacking markets, which have been in the doldrums for some time past, and also to reduce heavy goods stocks held by Calcutta mills. It is too early yet for any effects to be felt, as it is not anticipated that overseas consumers will indulge in an orgy of buying to take advantage of the reduced rates. It remains to be seen to what extent the trade will benefit from this timely intervention on the part of the Central Government. To date the only improvement has been in the shipping position, as shipping instructions which were delayed in the hope that the duty would be cut are now being despatched to mills for shipment of goods overseas. Over the past 14 months, the export duties on hessian and sacking have been reduced twice at different times. The following table shows the export duty, the price of finished goods and the price of jute (all in rupees) since January 1952.

	Export Duty		Finished Goods prices		Jute (Ordinary)	
	Hessians	Sacking	Hessians	Sacking	per 100 yds.	per 100 yds.
					(40" 10 oz.) (B. Twills)	Assam basis).
per ton	per ton	per 100 yds.	per 100 yds.	per 100 yds.		
Jan. 1952	1,500	350	76-12	255	61	
Feb. 1952	750	350	69-0	212	53	
May 1952	275	175	46-4	137	30	
Feb. 1953	275	80	43-2	104-8	22	

It will be noted that the double cut in the export duty last year was a great help to the hessian market, which significantly showed up little alteration in the following nine months. Heavy goods, on the other hand, deteriorated rapidly over the same period and the reduction in this case was obviously out of alignment with the situation. It is to be hoped that the present reduction of about 54 percent will do for sacking goods what its predecessor did for hessians.

A cautious attitude was adopted at the opening of the goods market on Thursday of last week and in view of the Budget speculation transactions were limited. With February due date approaching, however, there was some covering in near delivery hessians and sacking goods by local shorts, but this did not have its usual effect on the heavy goods market which continued to decline. Hessians remained steady and business was done at higher rates for 40" 10 oz. delivery orders. Following the announcement on Friday of the reduction in the export duty on heavy goods, this section of the market showed an immediate upward trend, but prices soon fell back again, and settled down at slightly above the pre-Budget rates as trade circles awaited the reaction of the overseas markets. After the week-end depression overshadowed the heavy goods market and rates fell to below last week's closing level, but overseas enquiries for hessians stimulated interest in this section and rates improved slightly on buying indications. Reports from overseas regarding the cut in the export duty are slow in coming through, and it is significant that heavy goods show a fall in rates rather than a rise as on other occasions.

Opening quotations on Thursday last were down in all sections due to the general lack of interest and the apathy shown by the mills towards the finished goods markets. Hessians showed a drop of 2 annas in 40" 10 oz. which was quoted at Rs. 43-2 per 100 yards, whilst heavy goods recorded drops of 8 annas in plain heavy Cees which stood at Rs. 95-8 per 100 bags, and 14 annas in B Twills which ruled at Rs. 95 per 100 bags. On Friday, 27th February, the markets were in a state of suspense while awaiting the Budget, and only covering business was done for ready delivery goods, mainly in the hessian section, which helped to keep prices there steady at Rs. 43-2 per 100 yards. Heavy goods on the other hand recorded drops of 8 annas in both plain heavy Cees and B Twills in spite of small local covering. The session was weak throughout the day. Within an hour of the Budget news, however, unofficial quotations of B Twills had jumped by about Rs. 2 to Rs. 96-8 per 100 bags but the increase was short-lived and rates began to slide back again by late evening. On Saturday all markets were officially closed for the celebration of Holi and no quotations were available. When the markets opened after the week-end hessian quotations were unchanged and a steady undertone prevailed but heavy goods prices had dropped to Rs. 96 for plain heavy Cees and Rs. 95-12 per 100 bags of B Twills. With mills showing no interest the market was quiet. Hessians continued to rule steady on Tuesday morning and 40" 10 oz. increased by 2 annas to Rs. 43-4 on overseas enquiries, but heavy goods continued to fall and opening quotations were nearly back to the pre-Budget rates. Plain heavy Cees and B Twills both recorded a drop of 8 annas to rule at Rs. 95-8 and Rs. 95-4 per 100 bags respectively, and the lack of business tended to make prices fall even further.

At the close the heavy goods section is again showing signs of weakness and quotations are down by about 8 annas, but hessians continue steady and quotations are the same as the opening quotations at the beginning of the period. The following are the rates ruling at the opening of the market on Wednesday morning:

	Ready	March	April-June	July-Sept.
40" 8 oz.	Rs. 34-8	34-8	34-8	34-8
40" 10 oz.	Rs. 43-2	43-2	43-2	43-0
Heavy Cees (plain)	Rs. 95-0	95-8	96-8	96-8
B Twills	Rs. 94-14	95-0	96-0	96-8
Cornacks	Rs. 98-8	99-0	99-0	99-0

Raw Jute: The raw jute markets have followed the finished goods market during the week under review, and although a certain amount of business has been done the undertone has been quiet rather than steady. At the beginning of the period quotations were unchanged from last week but in the absence of business soon fell. The general feeling

INFESTATION OF PEPPER EXPORTS TO THE U.S.A.

THE detention of a number of Indian pepper consignments to the United States last year was the subject of a letter addressed recently to the Union Ministry of Commerce and Industry by the All-India Pepper Exporters' Conference Standing Committee. A letter from that Ministry was recently sent to the Government of Travancore-Cochin which suggested that to prevent further consignments being detained, fumigation plants should be erected at Cochin, Alleppey and Calicut, to be set up by the merchants and exporters. It also suggested that if exporters were not prepared to do this on a co-operative basis, there should be a levy for the purpose on each bag exported. The Ministry's letter suggested that the reason for the infestation was the mixture of mature and immature berries in consignments.

In reply the Standing Committee said that the United States has very strict laws governing the import of spices and it is provided that Indian pepper should not contain more than two percent of light berries. It was contended therefore that the cause of insect infestation could not be the mixture of berries in a consignment. It was possible that fumigation might be part of the answer to the problem, but there was no absolute certainty that it would be a sufficient remedy. It was pointed out that there had been cases where consignments had been fumigated and later detained. The Committee's letter stated further that it was possible that some consignments of Indian pepper

which had been detained might have come from intermediary ports from which the pepper had been re-exported without due regard to the standards required in the United States.

Seasonal Infestation

It has been established that insects in the pepper feed on mould, so that if the pepper can be kept absolutely dry during transit consignments should arrive in an acceptable state. Studies so far made point to the infestation being of a seasonal character, occurring during the monsoon. Post-monsoon shipments since October last have all been passed. At present the subject is under active consideration both in India and in the United States. Liaison has been established between the Standing Committee in Cochin and the A.S.T.A. who represent American pepper importers and since November last both the chairman and the treasurer of the A.S.T.A. have met the Standing Committee. The letter from the Committee to the Ministry concluded by pointing out that as current knowledge on measures to prevent infestation is limited it would hardly be proper to install costly machinery to fumigate all pepper shipments, particularly as it is not certain to what degree fumigation affects the flavour of pepper. It favoured mechanical methods of drying pepper.

LONDON TEA SALES

At the London Tea Sales during the week ended 28th February, an average price of 3s 3.94d a pound was obtained, against 3s 3.78d in the preceding week. Clean common broken pekoe was quoted at 2s 9.1d (2s 7.1d). Results of some of the companies are given below:

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN JANUARY

Indian rubber output in January was 1,992 tons, according to the Indian Rubber Board. Approximately 2 tons 20 lbs. of sole crepe were exported in January. The quantity of rubber imported during the month was 47 tons. Consumption by manufacturers was 1,621 tons of which 178 tons were imported. Stocks with estates and dealers on the last day of January totalled 7,510 tons, including 1,065 tons in transit. Stocks with manufacturers at the end of the month were 3,258 tons of which 307 tons were imported. Manufacturers also used 193 tons of reclaimed rubber, the month-end stock being 361 tons, and consumed 1 ton 1,094 lbs. of synthetic rubber, of which manufacturers held a total stock of 6 tons 1,082 lbs.

COLOMBO RUBBER PRICES

The following prices are issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers' Association: Closing prices on 20-2-53. Average prices for the week:

WHOLESALE PRICE INDEX
STEADY

THE official wholesale price index (with the year ended August 1939 as 100) advanced by 0.1 percent to 380.7 during the week ended 14th February, 1953. The index was higher by 1.2 percent compared with the corresponding week of last month but was 7.9 percent lower than that of a year ago. During the week under review, Foodstuffs declined by 0.4 percent to 359.9 because of decreases in the prices of rice and gram at Patna (-5% each), gur at Muzaffarnagar (-4%), Jowar at Amravati (-3%), dal arhar, salt and tea sold for export (-1% each) in spite of advances in gram at Hapur and tea for internal consumption (+5% each), gur at Ahmednagar (+3%) and coffee (+2%). The index for Industrial Raw Materials, on the other hand, showed a further rise of 1.1 percent to 437.9 as a result of higher prices of manganese (+9%), cottonseed (+4%), Bengal fine raw cotton in Bombay and raw skins (+3% each), raw jute, raw silk, linseed, gingelly seed and copra (+2% each), Jarilla raw cotton in Bombay, rapeseed and raw hides (+1% each), Karungani raw cotton (-4%) at Tirupur, Umra raw cotton at Amravati and raw wool (-2% each), however, registered a decline during the week under review.

The Semi-Manufactures group also moved up by 0.4 percent to 347.9 as compared with 346.6 (revised) for the previous week, on account of higher prices of tanned sheep skins (+6%), groundnut oil (+4%), linseed oil (+3%), tanned buffalo hides, tanned goat skins, castor oil, gingelly oil and anjengo superior coir yarn (+2% each), tanned cow hides, coconut oil and brass (+1% each). Coconut cake (-5%), gingelly cake (-3%) and real alapat coir yarn (-1%), on the other hand, fell down during the week. Higher prices of woollen manufactures (+2%) and dyestuffs (+1%) raised the index for Manufactures group from 367.1 to 367.3, in spite of a fall of 2 percent in paints. The index for the Miscellaneous group advanced by 0.2 percent to 602.0 because of increases in the prices of black pepper (+10%) at Cochin, turmeric (+7%) and betelnuts (+1%). Prices of cummin (-5%), black pepper in Calcutta and chillies (-3% each) were marked down during the week.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks of sugar in respect of Central Sugar Factories in India during the fortnight ended 31st January, 1953, were 584,214, 148,470, 72,375, and 660,309 tons, respectively, says the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement. The figures for the corresponding fortnight of the previous season were 399,344, 157,000, 58,165 and 498,179 tons, respectively. Figures for the current fortnight relate to 126 factories representing 90.54 percent of the total cane-crushing capacity, while the figures of the previous year relate to 129 factories representing 92.55 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 544,184 and 318,012 tons, respectively.

JANUARY CANE PRICES

On the basis of returns received from the Central Sugar Factories, the Director of Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during the month of January 1953, gives figures for—

(a) the total price of cane per maund (including cooperative society's commission, transport charges etc., but excluding cane cess) at the factory as follows:

	Maximum	Minimum	Average
Rs. a p.	Rs. a p.	Rs. a p.	Rs. a p.
Uttar Pradesh	1 8 2	1 5 0	1 6 1
Bihar	1 7 1	1 4 9	1 5 10
Madras	1 5 0	1 4 9	1 5 0
Bombay	1 10 6	1 5 0	1 7 7
Madhya Bharat	1 6 4	1 3 8	1 5 0
All India	1 10 6	1 3 0	1 6 0

(b) The portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum	Minimum	Average
Rs. a p.	Rs. a p.	Rs. a p.	Rs. a p.
Uttar Pradesh	1 3 0	1 3 3	1 4 2
Bihar	1 4 8	1 3 5	1 4 2
Madras	1 5 0	1 4 9	1 5 0
Bombay	1 5 2	1 5 0	1 5 0
Madhya Bharat	1 6 4	1 3 8	1 5 0
All India	1 8 6	1 2 10	1 4 4

INDO-BRITISH WOOL TRADE

Figures issued recently show a big increase in the two way trade between India and Britain in various wool items during 1952. India exported 17.5 million lbs. of raw wool to the U.K. as against 14 million lbs. in the previous year. In return India's imports of wool tops rose from 4.8 million lbs. in 1951 to 7.9 million lbs. in 1952, the highest figure ever recorded. India is now the largest single buyer of British wool tops. Similarly India's purchases of woollen and worsted yarn from the U.K. rose from 89,000 lbs. in 1951 to 256,000 lbs. last year. Imports of worsted tissues also increased from 89,000 sq. yds. to 335,000 sq. yds.

Engineering and Transport

LESS TONNAGE EXPECTED IN CALCUTTA PORT

ALTHOUGH both tonnage and revenue are expected to decrease in 1953-54 the Calcutta Port Commissioners do not propose either to increase port charges or to enhance the surcharge on pilot fees at present. Mr. R. Gupta, chairman, has said that although these were the only means by which the anticipated gap in the budget could be closed, it was felt that "under prevailing economic conditions any proposal for increasing port charges is likely to be viewed with disfavour and may also prove harmful to the trade passing through the port." Consideration of the question would be deferred until the working results of the first six months of 1953-54 were known, by which time it would be possible to have a more realistic estimate of the port's finances and the trend of future traffic.

Mr. Gupta said that under the prevailing depressed trade conditions it was difficult to forecast with any degree of accuracy the trend of traffic in the coming year. Making certain tentative assumptions, it is expected that the total seaborne traffic passing through the port in 1953-54 will amount to 9,300,000 tons yielding an income of Rs. 8,33,66,964. Total expenditure after providing for a contribution to the Port Pilotage Account of Rs. 11,35,000 is estimated at Rs. 8,56,53,269, leaving a gap of Rs. 22,86,315 in the revenue account.

The revised estimate of seaborne traffic passing through the port in 1952-53 is 9,605,000 tons, against the original estimate of 9,446,000 tons. Total income will be Rs. 8,64,32,313, against the Rs. 8,25,55,893 originally expected. The revised estimate of total expenditure is Rs. 8,34,49,861 or Rs. 8,45,513 more than the original. According to the revised estimates, 1952-53 is expected to close with a surplus of Rs. 29,82,452 against a deficit of Rs. 46,455 in the original estimates. Of the surplus a sum of Rs. 29,50,000 is being appropriated to the Vessels Replacement Fund. The Pilotage account is expected to close with a deficit of Rs. 10,67,990, which will have to be borne by the General Reserve Account.

Capital expenditure in 1952-53 is estimated at Rs. 72,34,665 as against the original estimate of Rs. 1,03,21,295. The year is expected to close with a debit balance of Rs. 25,68,253. As in the previous year, the capital budget for 1953-54 has been prepared on an austerity basis. About Rs. 1,05,86,043 will be spent on works already in progress and those contracted for, while expenditure on new works, mainly projects envisaged under the five year plan, is estimated at Rs. 1,64,33,000. The year is expected to close with a deficit of Rs. 46,72,296.

The original estimates for the Hooghly Pilot Service provided for a deficit of Rs. 9,15,900 but according to the revised estimates the year will end with a deficit of Rs. 10,67,990 which will be borne by the General Revenue Account. Income from the Service in 1953-54 is estimated at Rs. 19,63,000 and expenditure at Rs. 30,99,290, the deficit being Rs. 11,36,290.

OPERATIONAL TOWING TRIALS

The Joint Steamer Companies, the India General Navigation and Railway Company Limited and Rivers Steam Navigation Company Limited, have recently completed a series of operational towing trials in East Pakistan waters. This series of trials was designed to collect data on comparisons of efficiency of the various methods of towing, astern, ahead and abreast, and to investigate the possibility of applying these results to their operations in India and Pakistan. In collaboration with the Pakistan Government, suitable deep and shallow measured miles were selected, surveyed and marked, and the Pakistan Government issued invitations to member countries of the Economic Commission for Asia and the Far East to send observers. Representatives from the Governments of India, Pakistan and Siam and the ECAFE Secretariat attended as well as two senior members of the British shipbuilding firm of William Denny & Bros., who have carried out a great deal of research in shallow draught vessel design. The organisation was in the hands of the Steamer Companies' technical staffs, and data was recorded under the highest recognised trials standards. The results will be a valuable contribution to inland Water Transport design data, as the scope of the trials recently completed is, we understand, more comprehensive than anything previously attempted in any country. Developments following these trials will be of particular importance to both India and Pakistan and of general interest to all I.W.T. operators.

INDIAN BUILT CRANES FOR BOMBAY PORT TRUST

In our issue of 19th February, 1953, on page 215, we published a British Information Services release saying that an order had been received by a British company from a Calcutta firm for electrical equipment for cranes which were to be erected in Bombay. The Calcutta firm referred to, Jessop & Co. Ltd., received a contract from the Bombay Port Trust for 24 three-ton and 6 six-ton level luffing wharf cranes for Alexandra Docks in November 1951. In June 1952 they received a further contract from the same source for 4 three-ton cranes for Ballard Pier. It is for these cranes, which are being built in India, that the British firm, as sub-contractors, received orders last year to supply electrical equipment. While the electrical equipment is an important part of the contract it represents only about one quarter of the whole, the balance representing work executed entirely in India.

GOOD DEMAND MAINTAINED
AT TEA AUCTIONS

DEARER RATES FOR DUST

At Sale No. 37, held on 2nd and 3rd March there was a strong demand in the Export auction. The best liquoring Doars teas with autumnal quality were three to five annas dearer, while Clean Common and low medium Broken and Fannings were about two to three annas dearer. Best liquoring Assams and leaf grades were the weakest feature of the sale, selling at about last rates.

The Dust sale met with a very strong and general demand, most lots selling at irregularly dearer rates. Black clean exportable dusts again advanced in price, sometimes by as much as four annas per pound. Bright Doars Dusts and the commonest sorts were about two annas dearer per pound. Best liquoring C.T.C. dusts and good mediums with improving liquors were dearer by about half an anna. The remainder of the offerings were firm. The few flavoury Darjeelings on offer sold well at higher rates.

There was only a small quantity of Internal offerings; which met with a stronger demand.

STRENGTH OF FREIGHT RATES
FOR AUSTRALIAN GRAINCOAL CARGOES FIXED FROM
CALCUTTA

THE feature of last week's trading has been the strength of the Australian grain market and many fixtures have been made to various destinations. Cargoes have been arranged to India on the basis of 80s per ton and to the U.K. at 95s. The Continent has shown a further increase to 100s. Four cargoes of sugar have been arranged to Colombo, two from Santo Domingo at 85s and two from Queensland at 107s 6d for March loading and 105s for April.

A few coal cargoes have been arranged from Calcutta, Singapore paying 49s 6d for two consecutive and a small ship has been fixed to Colombo at 47s 6d. No further business has been arranged for Japan and it is understood that the demand from that country is under 200,000 tons for the first half of this year.

The time charter market remains firm and a Liberty sized vessel was fixed at \$2.15 for 12 months' trading delivery Continent March-April. Another Liberty sized vessel was taken for the trip home delivery West Coast India, re-delivery Continent at 19s 6d and a similar sized vessel obtained 15s 6d for a round trip to Indo-China with delivery Dunkirk.

SUGAR MARKET STEADY

During the week ended 4th March, stocks amounted to 80,000 bags; sales averaged about 4,000 bags a day and arrivals about 6,000 bags a day. Ex-Kantapur ready delivery prices were: ordinary grain Rs. 27-8, medium grain Rs. 28-10 and big grain Rs. 30 a maund. Ex-mill rates ranged between Rs. 27 and Rs. 29 a maund and since the futures markets in Bombay and Jamnagar were steady mills were not interested in making lower offers. The Assam markets were quiet at Rs. 31 to Rs. 32 a maund. Stocks in factories on 1st March totalled 875,000 tons, they are expected to increase steadily in coming months and some traders feel that ex-factory prices will not be maintained.

LINSEED MARKET CLOSING LOWER

General conditions were rather unsettled in the earlier part of the week but reacted immediately on the announcement of the Budget proposals, and an appreciably quieter tendency marked the close with values noticeably lower. Sellers, who had been reserved at higher prices, showed keen interest and discounted the market both for early delivery as well as for forward new crop goods. Buyers were rather cautious and bought for their immediate requirements in the only. There was a fair amount of activity in the oil section mainly in the form of speculative local enquiries for export and rates for Indian linseed oil continued to be higher than world prices. Latest quotations were as follows: Ready Rs. 20-12 per maund, March Rs. 20-4 per maund, April Rs. 19-8 per maund, May Rs. 19 per maund.

COMPANY AND PUBLIC NOTICES

THE SAMNUGGUR JUTE FACTORY COMPANY
LIMITED

IN view of continued delays in receiving final accounts from Calcutta it is not possible to hold the Annual General Meeting of the Company about this time. Notices calling this Meeting will be issued as soon as possible.

Company Meeting

SPENCER & CO., LTD.

In the course of his Speech to the Ordinary Shareholders at the Fifty-fifth Ordinary General Meeting of the Company which was held on the 27th February 1953, at the Registered Office of the Company at Madras, Mr. S. W. Edwards, the Chairman of the Company, said:—

"In welcoming you here this morning, I would firstly like to introduce you to Mr. C. H. Bhabha who recently accepted our invitation to join the Board. You will later be asked to confirm that appointment and I am sure we are fortunate in having at our disposal the advice and assistance which he is so eminently able to give us.

The Accounts have been in your hands for some days now and record a picture of sustained effort and I venture to suggest "Success"—reflecting credit on all concerned and I know you would wish to be associated with the Board in expressing its appreciation to those members of the Staff whose loyal effort has so largely contributed to these results.

Increased expenditure and reduction in the rate of gross profit has been offset by an encouraging increase in turnover. With the further cut in Import Quotas recently announced it remains to be seen if this position can be maintained but I am happy to record that the stock position has never been sounder and so far in the current year figures are most satisfactory.

Unfortunately, the general uncertainty and lack of confidence, to which I referred last year, still exists in most markets and it would seem that so long as the international tension continues, trading must be on a somewhat restricted basis. This is a fact which has to be accepted and in consequence, like most other countries, it has to be appreciated that India is more or less forced to maintain an Import and Export Policy to suit her economic requirements. Although in general there is little of which we can complain, there are occasions when we consider the Government do not give the support to which the many sections of Trade and Commerce are entitled.

"In so far as your Company is particularly affected, I would mention the Catering Section of this Company. My belief is that the Government are not giving the encouragement which the important Hotel Industry deserves. Although Hoteliers are continually being pressed to improve the standard of service and amenities to be made available to Tourists with the object of encouraging visitors to come to this country, even applications for licences to import small quantities of glassware and crockery are refused, even though the quality required is not yet available in India. There are also in many States restrictive measures regarding the types of food which can be served and, unfortunately, due to the Prohibition Policy many Hotels, Air Port Restaurants and all Railway Refreshment Rooms and Restaurant Cars are denied the privilege of serving alcoholic beverages an amenity which most foreign visitors desire and appreciate. In fact, I would go further and describe this service as an essential rather than an amenity."

During the current year this Company has been largely instrumental in forming the South India Hotels & Restaurants Association; similar organisation has been formed in Bombay, Delhi and Calcutta, and it is hoped that within the very near future a Federation of all Hotel Associations will be formed. This Federation of Hotel Associations will have its Head Office at Delhi and I think you will agree that it should prove of great value as it will be in direct contact with the Central Government."

The Accounts and Balance Sheet as at 30th June, 1952, were unanimously approved and adopted. A further and final dividend of 10% free of Income-tax on the Ordinary Shares, as recommended by the Directors, was declared, making in all a total dividend of 15% free of Income-tax for the year.

THE GOKAK MILLS, LIMITED

NOTICE is hereby given that the Thirty-fourth Annual General Meeting of Shareholders of The Gokak Mills, Limited, will be held at the Registered Office of the Company, Forbes Building, Home Street, Fort, Bombay, on Monday, the 30th March, 1953 at 5-0 p.m. (S.T.) to transact the following business:—

- (1) To adopt the Directors' Report and audited Statements of Account for the year ended 31st December, 1952.
- (2) To sanction the declaration of a Dividend.
- (3) To elect Directors in the place of those who retire from office but are eligible for re-election.
- (4) To appoint Auditors for the coming year and to fix their remuneration.

The Transfer Books of the Company will remain closed, as previously advertised, from the 6th March, 1953 to the 26th March, 1953, both days inclusive.

By Order of the Board,
FORBES FORBES CAMPBELL & CO., LTD.
Agents.

Bombay, 27th February, 1953.

NOTE.—The Dividend when sanctioned will be made payable, free of Income-tax, at the Chartered Bank of India, Australia &

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE DOUBLE TAXATION OF PROFITS AND INCOME

A STUDY IN INCENTIVES & ANOMALIES: MODEST RELIEF FOR STERLING COMPANIES

THE British Chancellor's request to the Royal Commission inquiring into the Taxation of Profits and Income in the United Kingdom for an interim report upon the basis of assessment of U.K. concerns carrying on trading operations overseas is one of several indications that any tax relief which Mr. Butler may be disposed to confer next month will be strictly related to the need to promote trade and stimulate production. In a letter which he sent to the chairman last August the Chancellor asked for the commission's views on the tax position of concerns operating overseas and the commission has now presented to him its provisional and interim views on the evidence submitted to it in reply to interrogation 4 (a) of the general list of questions addressed to intending witnesses viz., "is the taxation net drawn too widely or too narrowly in relation to the taxation of United Kingdom residents (companies or individuals) on overseas profits?" The main points of the commission's recommendations have already been reported in the news telegrams to this country, but the full text of the interim report shows that it is not only a valuable survey of a problem which has been made the more difficult by the intricacies of the British tax system, but also promises at a later stage fuller consideration of other and wider aspects of the taxation of overseas profits, by which time the commission hopes to be able to relate any further recommendations to their other proposals in regard to the taxation of business profits generally.

We may usefully recapitulate the three points upon which the commission has just made interim recommendations. In the first place it proposes that relief from U.K. taxation should be given "unilaterally" to companies operating in countries with which Britain has no double taxation agreement, but to which the British authorities now grant unilateral relief as to 75 percent of the tax paid to Commonwealth countries and 50 percent of the tax paid to foreign countries. Secondly, where the assessee can show that profits are unremittable, owing to currency restrictions, they should not be liable to tax until remittance has become possible and thirdly the commission advocates that special agreements or arrangements should be made to cover concerns trading in countries which have made special tax concessions in order to attract development capital but in which the assessee finds ultimately that the relief has been nullified by eventual taxation at the full U.K. rate. Up to now the Treasury argument has been that the limitation of unilateral relief to 75 percent or 50 percent as the case may be, retained for them a margin of revenue to sacrifice as an inducement to another country to enter into a double taxation agreement with the United Kingdom, whose bargaining position it has been contended would be the stronger if it has not already given up all its claims by granting full unilateral relief. It has been officially estimated that if double-taxation conventions could be completed with countries with which there are none at present (the short list of such countries would include India and Pakistan) the cost of such relief to the U.K. would amount to approximately £5 million per annum. "Having regard to this," says the commission "we do not think that such negotiating advantage as can still remain outweighs the unfairness to the trader in unilateral countries who is denied the benefit of a relief which the United Kingdom is in principle quite ready to concede, and we are of the opinion that the time has now come when the limitation ought to be removed."

The first of the commission's three recommendations is, of course, the most important. India and Pakistan are what the commission calls "unilateral" countries, and a number of U.K. concerns will be favourably affected if the British Chancellor incorporates the commission's proposals

into his next Finance Bill. There are others also. In South Africa the very heavy rate of taxation paid locally by gold-mining companies has meant that shareholders have largely lost the benefit of the U.K. reliefs, whilst the new procedure recommended by the commission would apply with even greater force to those concerns deriving their profits from foreign countries and for whom the limit of relief is now no more than one-half of the U.K. net rate. Of the other two of the commission's recommendations, the exclusion from assessment of unremittable profits is hardly a concession at all within the strict definition of the word; for profits can hardly be deemed to be profits until they have come to hand. In point of fact, unremittable profits have hitherto been excluded from assessment by the British Inland Revenue authorities at their option and by departmental directive or discretion. The commission considers that the assessee should be given some statutory rights and accordingly advocates "that a taxpayer should be given the option of deducting from his profits, as assessed to United Kingdom tax, such part of them as he can show to be unremittable by virtue of local legislation or executive action which bears directly on the possibility of remittance. "This part," says the commission, "would however be kept in suspense until circumstances changed so as to allow of its remittance; any part which did not become remittable would be written back to the year in which the profit arose and the original assessment revised accordingly." But the Inland Revenue should also receive certain supervisory powers and the commission would give its officers power to call for periodical information, whilst profits remaining unremittable should not be utilised for purposes outside those of the trading concern, e.g., should not be made available "to a visiting director for his personal account."

The third recommendation will mainly benefit undertakings operating within the British colonial territories, some of which have introduced special reliefs for new industrial undertakings. The commission points out that these special reliefs are frequently valueless to such concerns if they are resident in the United Kingdom; for they still bear the full U.K. tax and, indeed, not infrequently the benefit of the special concession accrues to the British exchequer which has that much less double tax relief to give. Practically never can the converse be true i.e. the case where a colonial administration increases its rate of tax to a point where the burden falls on the U.K. exchequer, though the commission point out that, in general, high United Kingdom taxation inevitably encourages overseas countries to impose heavy taxation on United Kingdom concerns. The commission urges that some means should be found of remedying the anomalies which now prevent U.K. businesses qualifying for special colonial encouragements and reliefs from receiving them, or which result in the objectives of such colonial legislation being defeated by U.K. taxation practice. It is proposed therefore that the United Kingdom should be authorised by statute to enter into agreements with other countries for the purpose of making fully effective what are described as the latter's "pioneer industries concessions," though it is considered that special taxation reliefs, thereby achieved, should not be passed on to the individual investor. The commission would like to sustain this principle, at least until they have had an opportunity of reviewing other aspects of the general question of corporate profits and their distribution.

This three-point interim report from the commission does not, of course, do very much more than scratch the surface of some of the more obvious taxation difficulties confronting the U.K. trader operating in foreign and Commonwealth countries. None of the three proposals would

seem to threaten the Treasury with heavy financial sacrifices, otherwise it is certain that we would have already begun to hear the underground rumblings of powerful opposition. As it is, it seems probable that the three subjects to which the commission has drawn attention will receive appropriate treatment in Mr. Butler's forthcoming Budget. The traditional rigour and efficiency of the British system of direct taxation have not, in fact, been an unmixed blessing and in so far as they have encouraged overseas tax authorities, modelled on the British pattern, to ever greater demands upon the assessee, British enterprise overseas has perhaps suffered more than it otherwise would. It is to her ultimate credit (but now in some measure also to the financial detriment of her subjects) that the United Kingdom first adopted the practice of taxing a resident trader—using the word resident in the technical sense—on the whole of his profits wherever made. But Britain began this method of assessment long before taxes on income or profits had become a regular feature of the tax systems of other countries, or when their incidence was still very small. In the last 40 years the balance has shifted conspicuously, and the commission's report contains the following significant observation on the present burden of double taxation:

If both the claim of the local jurisdiction to tax profits because they are made there and the claim of the jurisdiction of the maker's residence to tax them because he is resident there, are

doubly so when the principle is carried to excess. What the commission's inquiries have shown is that the present U.K. practice has almost no counterpart in other countries. "For one reason or another," they say, "profits earned abroad appear to receive a preferential treatment for purposes of tax, even in countries which still subscribe to the general principle of taxing the world income of their residents." Of the countries covered by the commission's inquiries none, except Western Germany, uniformly taxes the external profits of its residents by the same measure as it applies to profits arising within its own territory. The methods of giving a differential in favour of external profits vary from one country to another, but the fact that such a differential exists leads the commission to emphasise that the problem is not merely one of comparing one country's rate of tax with another's. The cost of the three small reforms which have been recommended will not be large in terms of lost revenue. The problem as a whole goes deeper than a loss of revenue, which might well only be temporary. The amount of U.K. taxation accruing to companies' profits from all present charges was as much as £1.151 million in 1951, and the revenue value of the changes now recommended is not more than £5 million, or £10 million at the outside. The commission promises to discuss in its final report the relevance of the present system to Britain's trading position, which is not likely to grow any easier with the passage of time. They conclude with the sombre pronouncement that any major departure from existing procedure would mean making "for the first time in the history of our tax code an absolute differentiation between home profits and overseas profits and the incidence of taxation upon them." But, pace the Treasury pundits, common-sense would seem to dictate that a tax system which was built up during a period when Britain dominated the trade of the world must needs be revised when she is fighting with her back to the wall to retain her position in world markets.

TRADE, AID AND POLITICS WHO GAINS MOST IN EAST-WEST TRADE?

BY a curious coincidence, the first prosecution under the Order whereby the British Board of Trade bans the export of strategic goods to the Soviet bloc was heard just as the eighth plenary session of the Economic Commission for Europe was beginning. From 3rd to 18th March E.C.E. is renewing its efforts to promote trade between Western and the Soviet countries. In Washington, on the other hand, a new programme to control east-west trade, within the framework of the Battle Act, is being worked out. The withdrawal of the American Navy from the waters around Formosa was, it now seems, perhaps intended not so much to encourage Chinese Nationalist incursions on the mainland as to discourage international shipping from using waters where piracy would be an ever-present risk. Britain last week agreed to restrict further trade in so-called "strategic" goods with China. It is a confusing picture. Politically, the American-European bloc has to restrict commercial intercourse with the Communist-governed countries. Economically, Europe needs such intercourse. Western Germany, and the countries of north-east Europe, including Britain, have been tending in that direction for some time. Ceylon has made the famous rubber-for-rice agreement with China, seemingly against the policy laid down at Commonwealth conferences but actually with the backing of the other Commonwealth countries, if the recent justification by the Premier of Ceylon is to be accepted. Mr. Myrdal, the executive secretary of the Economic Commission for Europe, referred at the opening of the plenary session this year to E.C.E.'s hopes of expanding east-west trade, and to the difficulty of making any progress in the past year. The Soviet countries, though declaring themselves anxious to trade through the organisations established at the Moscow economic conference, for a time showed no interest in international bodies such as E.C.E. Now they are participating again in E.C.E. But at the same time America is more reluctant to give her blessing to economic relations between the two main political regions of the world.

The problem is becoming more clearly focussed. Neither of the two most powerful units, the U.S.A. and the U.S.S.R., is vitally interested in this trade. Both are mainly, though by no means wholly, self-sufficient. East-west trade is important primarily to the "satellites"—on both sides. But it is not, at present, equally important to both groups of "satellites". The countries of the Soviet bloc need raw materials and manufactures, especially machinery and transport equipment. The countries of the Western bloc need markets.

It is the search for markets that has profoundly changed the discussion of east-west trade in the period of adjustment since the Korean boom. While the hot war has continued in Korea and the

cold war has been intensified over a wider range, the elemental facts of economic life have reasserted themselves. Trade among members of the Western bloc has been restricted; profits and employment in the countries of the bloc have contracted or become more precarious. In the U.S.A. and the U.S.S.R., however, the economic cold war has had no obvious effects. Industrial production and employment have increased further from a high level in the U.S.A. and proportionally even more from a much lower level in the U.S.S.R. China and the smaller Soviet satellites, though lacking materials and equipment, have been fully employed with ambitious capital programmes. The countries which are not so comfortably situated, in a relative sense, are those of Western Europe and the East which are associated commercially and politically with America.

If only for the sake of political stability, something must be done for these countries. They must have wider opportunities to trade. There are vast possibilities in the North American markets, and the "satellites" are ready and anxious to sell there. But it has yet to be proved that the brave talk about opening the American market to competitors, promising though it is, will be translated into practical effect. The alternative is to seek markets across the iron curtain. Not all the omens are favourable. It has been suggested in British shipping circles, for instance, that American policy in the seas around China is aimed against European shipping. The Germans, on the other hand, believe that restriction of their trade with the eastward land-mass has been motivated by a desire to exclude them from their traditional markets; and with their new freedom to follow their own policies they may make a strong trading drive towards the east.

The problem resolves itself into the question, who gains most from this east-west trade? Almost all goods—in any case all capital goods—have ultimately some strategic value. But it is questionable whether the military potential of the Soviet bloc can be much affected by restricting commercial intercourse with the rest of the world. Whereas there is little doubt that the political moral of West Europe and Asia will suffer if outlets for their engineering industries and primary producers, respectively, are deliberately restricted.

MORE OF EVERYTHING

AN analysis of a world with more of everything than there has ever been—more industry, more trade, more radios, more doctors, more people,—is presented in the latest United Nations Statistical Yearbook, published on 1st March. The 177 charts and tables, listing figures in most cases up to the end of 1951, show substantial increases over similar 1950 figures and tremendous rises from pre-war figures in many instances. Thus, world industrial production in 1951 was about 75 percent greater than it was in the pre-war peak year of 1937, and in the United States, where air cargo was non-existent 20 years ago, U.S. airlines flew 441,528 cargo ton-kilometres in 1951. But the Yearbook, in sobering figures, once again points out a fact of the greatest significance: that the world's population is growing faster than its food supply, and in some countries less food is available for each person than before World War II. The charts and rows of figures mirror trends and events which have long been under consideration and in some cases still are. Thus, one of the few industrial items which showed a decrease in 1951 production was motor vehicles, of which 10 percent less were produced than a year before. According to the Yearbook's chart, this was due directly to a drop in passenger car production in the United States. Another chart shows that world consumption of tin, which was 166,900 metric tons in 1937, dropped to 139,000 metric tons in 1951. This reflects one of the gravest developments. Recently, the U.N. Economic Commission for Asia and the Far East pointed out that demand for the region's natural raw materials—including a major supply of the world's tin ore—was dropping, partially as a result of using substi-

tutes such as aluminium and glass for containers. The situation in textiles is shown in still another group of figures. World industrial consumption of cotton was 5,865,000 metric tons in 1938-39, and rose comparatively little—to 6,160,000 metric tons—in 1951-52. For wool, the average industrial consumption for the years 1924-38 was 855,000 metric tons, which rose to 938,000 in 1951. Yet textile production did increase to a very great extent—and the increase is shown in another chart in the Yearbook: rayon yarn production in the U.S. increased from 61,000 metric tons in 1932 to 434,600 in 1951.

In tabulating the food situation, the Yearbook gives figures on supplies of foodstuffs in some 40 countries. The latest data compiled for total calories per capita per day place the countries in the following general categories: 3,000 calories or over—Ireland (Rep.), New Zealand, Australia, Switzerland, Canada, Sweden, Iceland (1948-49), Finland, United States, Argentina, Norway, Denmark, United Kingdom and Netherlands; 2,800 to 2,999 calories—Uruguay, Belgium-Luxembourg and Western Germany; 2,600 to 2,799 calories—France, Australia, Cuba (1947-48), Czechoslovakia (1948-49), Israel, Union of South Africa and Poland (1947-48); 2,400 to 2,599 calories—Greece, Turkey, Cyprus (1948-49) and Italy; 2,200 to 2,399 calories—Chile (1948-49), Brazil (1948-49), Egypt, Colombia (1948-49), Mauritius and Venezuela; 2,000 to 2,199 calories—Japan, Ceylon, Indochina (1947-48) and Pakistan (1947-48); Under 2,000 calories—Burma (1947-48) and India. A comparison of these figures with those in the 1951 Yearbook shows that Argentina, the Netherlands, Uruguay, Western Germany, South Africa, Italy and Ceylon have all gone up one category. On the other hand, the food situation seems worse in Egypt and Turkey, which fell one category. Compared with pre-war food supplies, however, there was a marked drop in calories per capita in India (compared with the prepartition area in 1934-38) and in Denmark, Western Germany, Austria and Egypt, with a more moderate decline in Italy, Burma, Poland, Greece and Japan.

The food charts also indicate that a number of changes have taken place in eating habits, which have maintained the calory figure at approximately the pre-war level. In all the 17 European countries included, except for France, Iceland and Sweden, per capita meat consumption was lower—sometimes much lower than the pre-war level. The Yearbook's tabulation of the net amount of food available to each person in the countries listed shows great differences in eating habits generally. Thus, potato consumption seems greatest in Poland (in 1948-49, 240 kgs. per person a year) while in the U.S., one of the best-fed countries in the world, it was only 50 kgs. a year. The per capita milk supply in Iceland (1948-49) was far in advance of any other country. Argentina and Uruguay appear tied for first place in meat consumption, with 114 kgs. for each person a year. In India, on the other hand, the 1950-51 figure for meat was 2 kgs. per person.

CURRENT COIN

Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a drop of 4.1 points between July and August, 1952. Contributing to the decline were falls in the production of jute, steel, pig iron, cement and paper. The consumption of electricity gained fractionally. Notes in circulation also declined because of lower business activity.

U.S.A. Holds the Peaks.—The March letter of the National City Bank of New York says that indices of business activity remained at high levels during last month and industrial production is now the highest ever reached in peacetime; according to some measures it exceeds the war peak. Most of the heavy industries are working at or close to capacity against well-filled order books, for defence and otherwise. The optimistic expectations of the automobile manufacturers and makers of other consumers' durable goods are reflected in high production schedules. Steel mill operations hold at the peak. As would be expected under such conditions, employment and personal incomes hold at post-war highs, and the soft goods industries also are busy, although retail sales, while a little below December after seasonal adjustment, were 10 percent above a year ago. February also will show gains. Predictions made towards the end of the last year of sustained activity in the construction and capital goods industries find support in the January figures. Contract awards, expenditures for new construction and new housing starts during the month were all well above a year ago, and higher, allowing for seasonal factors, than the 1952 average rate. Some of the machinery and equipment manufacturers would like to have more orders, but in the aggregate new business is still large, activity for months ahead is assured, and with some exceptions a good year is expected.

As a whole, trade and industrial reports make it clear that business is moving with good momentum. In fact, doubts as to the 1953 outlook centre on the premise that momentum may be too strong to last, and sales expectations too optimistic; if so, production through the spring months may be overdone. At present levels of output some increase in stocks seems to be occurring. During the fourth quarter of 1952 business inventories rose by half a billion dollars. While this is moderate, and the total at the end of the period was little above a year earlier, stocks usually decline during the fourth quarter. For the early future, however, these speculations have little significance. Among automobile manufacturers, home builders and others looking forward to good spring markets, the disposition is to move confidently, prepare for good business, put forth a strong selling effort, and maintain high production schedules. Staple commodity prices, whose downward trend has been of concern as possibly indicating basic weakness, declined further in the early part of the month but have since firmed appreciably. February is frequently a seasonally low month in many agricultural prices. Some of the most important of these are now at or below support levels; and on the whole the disposition is to take a more confident view of farm price prospects, at least for the months just ahead.

Lignite in Madras.—Shortage of power has been a major industrial handicap in Madras where official policies have hampered the expansion of the electricity supply industry. At present coal is among the chief sources of power but because of transportation difficulties the State gets only about two million tons a year whereas it normally needs nearly three million tons. Supplies have to be brought from West Bengal and Bihar, and freight charges are heavy. The State's interest in developing an alternative source of fuel is therefore understandable, and so is the expression of high hopes by her Minister of Industries, Dr U. Krishna Rao, at the inauguration of the pilot project for lignite mining at Neyveli, South Arcot, last Thursday. Actually lignite was discovered in this area in 1937, but not until five or six years later, when an acute shortage of fuel arose, did the Government pay much attention to it. The Geological Survey of India was asked to undertake prospecting operations and in recent years the State Government has taken a keen interest in the matter. Investigations show that lignite reserves amount to nearly 2,000 million tons and are spread over an area of 100 square miles. The deposits lie sandwiched between two water-bearing beds, and the major aim of the pilot project is to find a method of extracting lignite under these difficult conditions. Machines are being used to scoop up the first layer of earth in a quarry 550 feet square and later pits will be dug down to the lignite layer which lies at an average depth of about 180 feet. Over half a crore of rupees are being spent on the pilot project, and if it is successful it is proposed to invest Rs 25 crores in an extended scheme which will yield a million tons of lignite a year. However, for perspective it should be emphasised that the pilot project is only an experiment, not an achievement; Dr Krishna Rao tended to understate this aspect in his enthusiastic recital of potentialities last Thursday. Lignite has been successfully used in Australia and Germany to generate power, in locomotives, and to produce liquid fuel by the Fischer-Tropsch or hydrogenation processes. But in Madras the crucial factors of cost and demand remain to be investigated, and more will have to be known about the technical aspects (such as factors of slope, conditions of overburden and water handling problems), which the project has set out to examine, before potentialities can be realistically appraised.

The Ship Sale Market.—In their latest report on the ship sale and purchase market Harley, Mullion and Co., Limited, state that although values continued to decline during October and November there was a perceptible slackening in the downward trend, and two or three sales in the process of completion towards the end of the year encouraged some owners to advance slightly their asking prices for "Liberty" and "Empire" types of tonnage. Values have been maintained at current levels largely as a result of the paucity of tonnage offering at what might be termed realistic prices, as the present earning capacity of an "Empire" or "Liberty" ship scarcely justifies prices such as the reported £275,000 recently paid for the oil-burning "Empire"-type ship *Goalpara*, or the £250,000 reported to have been paid for the coal-burning *Hollybank*. Both these ships, however, it should be noted, were purchased by liner companies, who doubtless needed tonnage for their own special requirements. There are a few such buyers still operating, and whilst tonnage is not pressed on the market, values may tend to steady along present levels. If, on the other hand, a dozen "Liberty" types were to come on to the market at the same time we

might then get nearer to more realistic values for such tonnage. There is the possibility, of course, that there may be an improvement in freight markets, and at the time of writing there is a faintly discernible move in this direction, and this factor, together with the view held by many owners that in this unsettled world a ship represents an attractive tangible asset, may mean that we shall not see any pressure selling in the near future. The imponderable factor of replacement is another deterrent to selling, and with deliveries so distant there seems little likelihood of British shipbuilders at least being able to provide some incentive to replacement by returning to an era of fixed prices. It is perhaps a sign of the times that the breaking-up market has recently become very prominent, and owners of old, uneconomical vessels have found it difficult, if not impossible, to operate following the drastic fall in the freight markets; consequently, tonnage has been offering freely to the breakers. In the circumstances it is somewhat surprising that values have been fairly well maintained, although the reduced competition from foreign breakers has resulted in a lowering in the British price, which is now roughly about £10-£11 per ton gross for cargo ships.

Scientific and Industrial Research.—Relatively little attention was paid in the past to the promotion of scientific and industrial research in India because costs are high, the benefits take long to mature and whatever resources were available have had to be employed for other, more urgent needs. The exigencies of the second world war did much to emphasise the importance of research; this country became a major supply centre for the Allied forces in the eastern hemisphere, transportation difficulties meant that substitutes had to be found for goods which were previously imported and new processes had to be developed so that these substitutes could be used. The Board of Scientific and Industrial Research was set up by the Government of India in 1940 and the Council of Scientific and Industrial Research two years later. Although the emphasis was naturally on military needs, much useful work was done and processes were evolved to produce essential goods from local materials. Research has received an added impetus in recent years and for this Mr. Nehru deserves most of the credit; his interest in this subject has been shown by the fact that despite many pressing responsibilities he held the portfolio of Scientific Research for several years. Programmes have been undertaken for a scientific survey of resources, to develop improved processes and techniques, and to apply the results of research to production. New surveys and investigations have been started and such agencies as the Geological Survey strengthened. Most important of all eleven institutes and laboratories have been established; the last two of these, for electro-chemistry and leather, were formally opened two months ago and briefly discussed in Capital at that time. Next on the list, and due for completion by 1955-56, are the Radio and Electronics Research Institute; the Mechanical Engineering Research Institute, which will lay special emphasis on the problems of cottage and small scale industries; and the Central Salt Research Station. Research has so far mainly been financed by the Central Government, and the Planning Commission feels that this will have to continue, a conclusion which is understandable in view of the fact that much of the country's industrial output is accounted for by small or medium producers who cannot afford research on their own. The jute industry in eastern India and the cotton industry in western India already have their own research institutions, and industrial concerns generally have shown their interest in scientific research by contributing substantial amounts to cover the cost of the new national laboratories.

Employment in January.—The employment situation in the country did not improve during January. There was a decline in the number of vacancies and in the number of placements. Vacancies notified to employment exchanges numbered 25,912 as against 27,880 in the previous month. Placements were 20,378 in January as against 25,135 in December 1952. Fewer persons were registered for employment assistance—1,14,617 as against 1,26,745 in the previous month. Of those who were found employment during January 8,819 were placed with private employers and 11,559 with Central and State Government establishments. Under the training schemes of the Ministry of Labour, 10,292 persons (including 418 women and 2,435 displaced persons) were being trained at the end of January at various institutes and centres. Besides, 119 instructor-trainees were undergoing training at the Central Training Institute for Instructors, Koni-Bilasapur. Under the apprenticeship training scheme for displaced persons, 646 apprentice-trainees were undergoing practical training in Uttar Pradesh and West Bengal at the end of the month.

STALIN'S DEATH CAUSES UNCERTAINTY

IMPROVEMENT IN TEA SHARES CONTINUES

London, 11th March.

MARSHAL STALIN'S illness and subsequent death introduced an air of uncertainty into the Stock Markets in the past week and though no actual selling resulted, demand was checked. The slowing down in the movement of gilt-edged was also attributed to talk of fresh Government borrowing for one or another of the nationalised industries. Although there has been nothing official, it is well known that several of them are waiting to come into the market for money. However, values still showed gains over the period. The industrial market followed funds to a very large extent. First-grade issues were again in demand and this demand remained unsatisfied

despite the appearance of stock from deceased estates. There was little diminution in the demand for gold and uranium shares initially although some profit-taking towards the end of the week brought about a reduction in gains. Interest in Kaffirs was generally reduced towards the close of the period because a heavy settlement was in progress. Foreign bonds were generally neglected. Germans and Japanese deteriorated slowly and turned weak towards the closing stages. Later they steadied at the lower levels. Oils and shipping were very quiet and practically unchanged. Last week's progress in tea shares continued. Investment demand has further developed and spread this week to Ceylon producers. The recovery in shares was largely a result of the better prices obtained at the auctions and although share values have risen steadily they are still below the highs of 1952-53. Gains of up to 2s were well distributed throughout the list. Travancore was outstanding with a gain of 5s 6d over the period and Ceylon Props improved by 5s 3d. Ceylon Tea Plantations put on 4s 3d while Consolidated Tea and Lands, East India, Mombasa and Standard all improved by more than 3s.

SWISS INDUSTRIES FAIR

BASEL

11th-21st April 1953

An exhibition of Swiss industry:

17 groups distributed in 14 halls.

For information apply to:

Swiss Legation, P. O. B. 392, New Delhi.

Keeping 'tabs' on 12,05,000 daily journeys

Every day, Bombay's 260 trams and 350 buses carry an average of 12,05,000 passengers. Every day, Bombay's Electric Supply and Transport Undertaking receives—through its Hollerith installation—closely analysed returns of this vast traffic: a contribution of inestimable value to the economy of a great Corporation serving a great community. Throughout Asia, Hollerith installations in leading industrial and commercial undertakings are contributing similarly to the promotion of efficiency and reduction of costs. May we talk Hollerith with you?

● Publications of greatest interest to key executives are *THE TABULATOR*, issued periodically, and *IN BUSINESS TOO*, describing Hollerith methods. Copies can be obtained by applying to any of the offices below—on your business note-heading, please.

CP/532/15

Because of the distribution of some £30 million of Government dividends, this week started off comfortably for most dealers in the London money market—so much so that the special buyer had to take up the surplus at the end of the day. But the next day the market was disrupted by applications for £100 million for the new Exchequer loan and from then on conditions were rather tight. Credit was in short supply and borrowers were hard pressed to obtain funds. Additionally, there was heavy outside calling and the special buyer had to give the market assistance. The demand for money persisted up to the close. Applications for £240 million Treasury Bills totalled £326,865,000 of which the former amount allotted at the average rate of 48s. 0.25d. percent. This week offerings total £250 million. The Bank of England Return showed an increase around £10 million to £1,475 million in active note circulation but bankers' deposits were lower by about £24 million at £269 millions.

Black Pepper Stocks Higher

Stocks of black pepper in licensed warehouses at the end of February amounted to 3,275 bags compared with 2,169 in the previous month, according to statistics compiled by the New York Produce Exchange. February receipts totalled 1,637 and withdrawals 531 bags.

Portuguese Export Tax on Wolfram Ore

The Portuguese Minister of Economy announced that the export tax on wolfram ores is to be maintained despite the decline in the world market price in recent months. Current prices are sufficiently high to justify the tax, he said. He predicted, however, that a number of smaller mining concerns would have to be closed down because of the high cost of production. Shipments of wolfram ore in 1952 totalled 4,495 tons, against 4,223 tons in 1951.

U.S. Price Controls

The United States Government has removed price controls from further products including cocoa and cocoa products, copper, chemicals, motor cars and glycerine. Other items decontrolled in the latest order are major household appliances, bread and bakery products and X-ray electrical therapeutic apparatus.

Hong Kong Gold Market

Gold prices eased to the lowest level since October 1950 in response to the news of the death of Stalin, after opening at \$274 per tael the market receded to \$273½ within half an hour. U.S. exchanges after being quoted at \$600½ per \$100 U.S. firmed up to \$600.

The widespread feeling that Stalin's death would give the Far East at least a temporary breathing space from the existing tension was reflected on the Hong Kong Stock Exchange. Brokers said the undertone of the market was slowly improving.

U.K. Tea Imports

The International Tea Committee reports that United Kingdom imports of tea in January totalled 37,202,000 pounds including 22,797,000 from India, 2,508,000 from Pakistan, 9,148,000 from Ceylon, 1,161,000 from Indonesia, 259,000 from Kenya, Uganda and Tanganyika, 887,000 from Nyasaland and from other countries 442,000. Re-exports were 3,619,000 pounds making net imports 33,583,000 pounds. Consumption in November 1952 totalled 27,149,000 pounds against 30,016,000 in November 1951.

THE CALCUTTA MONEY MARKET

NO SUSTAINED DEMAND FOR FUNDS

Wednesday, 11th March. CONDITIONS have been very quiet in the money markets this week, after a burst of activity some days ago which very quickly dried up. Advances against sugar, grains and oilseeds have increased, against cotton have increased only slightly, and on account of other commodities have remained stationary. There is still no sustained demand for funds. Money continues fairly tight in the interbank market where rates quote 2½ percent for overnight loans and 3 percent for good money.

The bill of exchange market has been nothing more than a few small tea and miscellaneous bills; there are still very few gunny bills about. Remittance has been moderate. Sterling has remained somewhat weaker, at around \$2.81 9/16 to \$2.81 5/8, and this was reflected in the rupee dollar rate on Monday when it rose to Rs. 475-8 for \$100. Sterling rates are unchanged.

The larger amount of Rs. 1,16,50,000 was offered for Rs. 1 crore of three months' Government of India treasury bills, tenders for which were opened on Tuesday, 10th March. The average rate of acceptance was a pie lower at Rs. 2-6-11 percent per annum. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent were accepted approximately 86 percent. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 6th March, Government of India treasury bills for Rs. 6,62,00,000 were sold in favour of the Reserve Bank of India.

Bullion ruled quiet last week with activity restricted either way. After falling to Rs. 165-3 from the previous week's level of Rs. 165-7 the price rallied to Rs. 165-15 to-day and the ready rate fetched a premium of 4 annas. The price was unchanged at 74d. in London and at 85½ cents in New York.

Gold also eased in sympathy, the price declining from Rs. 89-3 to Rs. 88-14. The sovereign at Rs. 58-9 showed a loss of about 8 annas.

Sharp rises of Rs. 8.78 crores and Rs. 16.30 crores in the total note issue and notes in circulation to Rs. 1,14,94½ crores and Rs. 1,13,61.2 crores, respectively, are outstanding features of the return of the Reserve Bank of India for the week ended 6th March, 1953. The expansion in currency was covered by raising foreign securities by Rs. 10 crores to Rs. 578.15 crores through a transfer from the Banking Department which registered a fall of Rs. 6.03 crores in balances held abroad to Rs. 146.23 crores. Notes held in the Banking Department consequently diminished by Rs. 7.52 crores to stand at Rs. 13.34 crores. Deposits of the Government of India and other Government accounts declined by Rs. 10.27 crores and Rs. 92 lakhs to total Rs. 139.72 crores and Rs. 10.48 crores, respectively. Balances of commercial banks at Rs. 43.50 crores showed a small rise of Rs. 27 lakhs. Other loans and advances increased sharply from Rs. 12.33 crores to Rs. 17.54 crores, of which advances to scheduled banks against usance bills aggregated Rs. 3.24 crores against Rs. 1.74 crores, indicating increased business activity. Other changes were minor.

The statement of the position of Scheduled Banks for the week ended 27th February, 1953, discloses Demand and Time liabilities at Rs. 525.46 crores (Rs. 12.16 crores on account of borrowings from Banks) and Rs. 215.78 crores (Rs. 2.38 crores) compared with Rs. 527.03 crores (Rs. 1.07 crores) and Rs. 315.44 crores (Rs. 1.83 crores) respectively in the previous week. Cash and balances have diminished by Rs. 1.67 crores and Rs. 75 lakhs to Rs. 31.25 crores and Rs. 42.47 crores, respectively. There is a fall of Rs. 85 lakhs in investments to Rs. 301.21 crores. Advances and bills discounted at Rs. 504.83 crores reveal an increase of Rs. 5.15 crores. The ratios to total liabilities of cash and balances are, in consequence, shown at 8.8 percent and 60.0 percent against 9.0 percent and 59.3 percent.

The return of the Imperial Bank of India for the week ended 27th February, 1953, shows a fractional fall of Rs. 49 lakhs in total deposits to Rs. 208.28 crores. Investments in Government Securities are down by Rs. 55 lakhs to Rs. 71.24 crores, while other authorised investments remain unchanged at Rs. 11.03 crores. Loans, cash credits and overdrafts have declined by Rs. 2.77 crores to aggregate Rs. 107.07 crores, while other authorised investments have advanced by Rs. 4.26 crores to stand at Rs. 17.85 crores. Cash and balances are, in consequence, shown at Rs. 14.06 crores or Rs. 1.31 crores less.

During the fortnight ended 14-2-53 National Savings Certificates amounting to Rs. 23,54,600 were sold in the State of West Bengal. During the same period applications totalling Rs. 7,17,900 for subscription to the 3½ percent Treasury Savings Deposit were also received by the Treasuries and the branches of the Imperial Bank of India, West Bengal and the Public Debt Office at Calcutta.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in India during the month of November 1952, amounted to Rs. 1,235 lakhs as compared with

Rs. 2,108 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 881 lakhs as against Rs. 1,271 lakhs, export duties for Rs. 323 lakhs as against Rs. 774 lakhs and land customs and miscellaneous for Rs. 31 lakhs as against Rs. 63 lakhs. The total gross collection of Union Excise duties amounted to Rs. 461 lakhs as compared with Rs. 772 lakhs.

During the eight months, April to November 1952, the grand total of gross Customs and Union Excise Revenue realised was Rs. 17,111 lakhs as compared with Rs. 21,846 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 7,938 lakhs as against Rs. 9,324 lakhs, export duties for Rs. 3,816 lakhs as against Rs. 6,034 lakhs, land customs and miscellaneous for Rs. 272 lakhs as against Rs. 284 lakhs and Union Excise duties for Rs. 5,085 lakhs as against Rs. 6,204 lakhs.

The directors of THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA have recommended the final dividend at 7 percent actual subject to tax, making 14 percent for the year 1952 and also a special centenary dividend bonus at 2 percent actual subject to tax. Pension funds absorb £125,000, widows and orphans £100,000 and the carry-forward is £399,215. The directors also authorised the transfer of £1,000,000 from the contingencies account to the reserve fund, raising it to £5,000,000. It is also proposed to capitalise £500,000 of the reserve fund in order to distribute scrip bonus to shareholders in proportion to their present holdings, the new stock to rank *pari passu* with the existing stock.

The working of THE HONGKONG AND SHANGHAI BANKING CORPORATION for the year ended 31st December, 1952, discloses the usual good results. Profits at \$17,321,405 compare favourably with \$17,283,671 in the previous year. The available balance is \$25,396,737, after adding \$8,075,332 brought forward. Interim dividends at £2 per share (same) absorb \$5,163,025. Depreciation on bank premises is allocated \$3,000,000 (same) and the final dividend has been maintained at £3 per share to absorb \$7,444,538, leaving a carry-forward of \$9,489,174. Current deposit and other accounts fell from \$3,134,136,055 to \$2,639,318,817, but cash is up from \$374,211,486 to \$421,388,895. Advances declined to \$599,841,488 from \$803,109,047.

Results of THE MERCANTILE BANK OF INDIA LTD. for the year ended December, 1952, are satisfactory. The bank's volume of business was little affected by the recession in world prices of commodities. An increase of £6½ million in investments in Government Securities was offset by a fall of £4½ million in bills receivable and of £2 million in advances. A rise of £1 million in deposits was counterbalanced by a decline of £1 million in bills payable. Net profits at £195,168 showed a fractional fall as compared with the previous year. The final dividend has been declared at 8 percent, making 14 percent for the year.

THE WORLD SILVER MARKETS IN 1952

DECLINING TREND OF PRICES: AMPLE SUPPLIES FOR INDUSTRY

IN their annual review of the silver market for 1952, Messrs. Handy and Harman say that the pattern of recent years continued unchanged with the New York market as the dominant world influence. Trading in London and Bombay is still subject to government controls, and there appears to be no prospect of relaxation. In New York the price of silver was confined to narrow fluctuations, a condition which has been characteristic for some time. The trend for the year was downward, but there were in all only six changes in the published price. The opening quotation of 88 cents per troy ounce established the 1952 high, and the low 82½ cents was reached on 28th May. The range of just 5½ cents was the narrowest in any year since 1949.

Throughout the first four months of 1952 the price remained unchanged at 88 cents. During this period supplies for the most part were more than adequate to fill the requirements of the trade, but producers with metal available at refineries in Mexico disposed of excess stocks through sales to the Bank of Mexico and for a time were able to avoid accumulating silver. Non-producer stocks in New York were substantial and included about 3,000,000 ounces received from Japan at the end of March, as well as the unsold portion of the demonetised Cuban one-peso coins which had arrived in the previous year. Trade demand continued at a low rate into the second quarter, and it developed toward the end of April that daily offerings were regularly in excess of requirements in spite of relatively small arrivals from Mexico. The inevitable price adjustment necessary to reflect this situation took place during May.

Trade demand as a whole during June was light, as was to be expected because of the approaching July shutdown for vacations in the silverware industry. Nevertheless throughout the month the principal sellers had little difficulty in disposing of their silver. In the first place producer intakes in June were somewhat lower than in the previous month. Secondly, and more important,

in Delhi... they know that
more motorists use triple-action Mobiloil
than any other motor oil in the world!

Where Delhi now stands, no fewer than eight cities have flourished before it, capitals of most of India's rulers. It is noted for its gates, historic buildings and wise statesmen.

While previous generations perforce contented themselves with pachydermatous* and equine** transport, the statesmen of today go about the nation's business in motor vehicles — and demonstrate their wisdom by driving to the sign of the Flying Red Horse for lubrication. Like motorists all over the world, they know that Mobiloil is a Heavy-Duty oil, giving greater protection than regular or premium-type oils — also that it...

SAVES ON WEAR by preventing harmful carbon deposits in the engine;

SAVES ON REPAIRS by lubricating properly at all temperatures;

SAVES ON PETROL by preventing acids eating away the metal parts.

* Fancy word for elephant
** Ditto for horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication — the complete motor service — and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

the Bank of Mexico, in addition to absorbing virtually all of Mexico's own production, placed buying orders in the New York market, which prevented any further drop below the 82½ cents quotation.

There was only one more price change for the rest of 1952, a rise of ½ cent on 24th July. During July demand gradually increased and before long exceeded the offers available on the basis of 82½ cents. The 3,000,000 ounces of Japanese silver which arrived in March had by this time been sold, and no further offers out of the Cuban stocks had been made since the market declined in May. Reports from Mexico in June and July indicated that the Bank of Mexico had been successful in negotiating substantial contracts for coinage purposes, principally with Saudi Arabia. A price rise was clearly indicated, and the fact that it was held to only ½ cent was unexpected. The reason was that the Bank of Mexico at this time made silver available to the market out of stocks previously accumulated in New York. Even with the usual increase in trade requirements during the last four months of the year supplies remained ample. The Bank of Mexico continued to sell in the market, and the arrival at the end of October of a second lot of 3,000,000 ounces from Japan further augmented existing stocks. As demand tapered off toward the end of November producers were able to dispose of any accumulations by arranging sales to the Bank of Mexico of their refined Mexican output. Accordingly the year ended with demand and supply in close balance. Total imports into the United States are estimated in 1952 to have been about 75,500,000 ounces, a decline of nearly 33 percent from the previous year.

The official London price during 1952 was in general based on an approximate conversion of the New York quotation plus an adjustment for theoretical shipping charges from New York, as has been the case for the past several years. Accordingly, the opening rate of 77d was also the high for the year, and the low of 72½d was reached on 29th May, just one day after the New York price reached its low of 82½ cents. Following the ½ cent increase in the New York price on 24th January the London quotation was raised to 73d. From January to the end of October the demand for essential uses was met by sales from official stocks of the Bank of England at the published quotation. However, during November and December the premium on exportable silver disappeared, and some supplies were offered in the London market for essential uses. This resulted in a gradual price decline to 72½d. Evidence of some recovery developed toward the end of December, and the year closed with the quotation at 72½d.

The Indian Market
The official ban in India on silver imports and exports continued in effect through 1952. Some licensed imports were reported, but the quantities involved were negligible and probably did not exceed 100,000 ounces. Since no sales to the market were made from official stocks by the Reserve Bank of India, consumers were limited to discharging for their supplies. Consumption however was poor, mainly because of the severe slump in all commodity markets toward the close of the first quarter. According to estimates, total consumption in India did not exceed 5,000,000 ounces. Prices for prompt delivery ranged from a low of Rs. 140-12 on 6th December. On the basis of the official exchange rate these prices were the equivalent of \$1.08½ and 78 7/8 cents per ounce respectively. The closing rate in Bombay was about Rs. 152-2, the equivalent of about 65 1/8 cents in United States currency. India has announced that she expects to return her full obligation under lend-lease. The silver is to be obtained by melting the quaternary coins which were demonetised several years ago and are said to contain about 300,000,000 ounces. Under the partition agreement the total lend-lease liability of 226,000,000 ounces is shared by both Pakistan and India under an established formula, with the latter assuming the major portion.

Prospects for 1953

There have been no changes in the basic factors affecting the price of silver. The near outlook is dependent on the decisions made in Mexico and in Washington. A continuation of the policies followed in 1952 can be expected to provide the same stability which has characterised the past year. Messrs Handy and Harman believe that the Bank of Mexico will continue to be a buyer of Mexican production at or near current levels. On the other hand, the availability of United States production and Treasury free silver at prices not far above the 90 cents level provides an assurance of supplies for American industry adequate to meet any foreseeable requirements this year.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in the Colony of Hong Kong)

(The liability of members is limited to the extent and in manner prescribed by Chapter 70 of the Laws of Hong Kong)

REPORT OF THE DIRECTORS

PRESENTED to the Members at the Ordinary Yearly General Meeting held at the Head Office, Hong Kong, on Friday 27th February, 1953.

The Directors have pleasure in submitting the Balance Sheet at 31st December, 1952, together with the Profit and Loss Account for the year ended at that date.

	Hong Kong Dollars (\$)	Hong Kong Dollars (\$)
The Profit for the year, after providing for taxation on profits earned to date and after making transfers to the credit of Reserves for Contingencies, out of which Reserves provision has been made for any diminution in value of current assets, amounts to ...	17,321,465	
To this must be added the undistributed profit brought forward from the previous year ...	8,075,332	
An Interim Dividend of 42 per share, free of Hong Kong Corporation Profits Tax, was paid on the 11th August, 1952, amounting to £320,000 at 1/2-7/8 ... leaving a balance available for distribution of ...	25,396,737	
This balance the Directors recommend be appropriated as follows:—	5,163,025	
Amount to be written off Bank Premises ...	20,233,712	
A Final Dividend of 43 per share, free of Hong Kong Corporation Profits Tax, £480,000 at 1/2-7/8 ...	3,000,000	
leaving a balance to be carried forward to next year of ...	7,744,538	10,744,538

The above appropriations have been incorporated in the Accounts.

DIRECTORS: Mr. J. D. Alexander, Hon. H. J. Collar, C.B.E., and Hon. J. H. Keswick, C.M.G., retire by rotation but, being eligible, offer themselves for re-election.

AUDITORS: The Accounts have been audited by Messrs Peat, Marwick, Mitchell & Co., and Messrs. Lowe, Bingham & Matthews, who are eligible for re-appointment.

By Order of the Board

A. MORSE, Chairman.

HONG KONG, 10th February, 1953.

BALANCE SHEET AT 31st DECEMBER, 1952.

	Hong Kong Dollars (\$)	Hong Kong Dollars (\$)	Sterling Equivalent (£)

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited accounts of the London Office and with the returns received from the other offices which have been signed by the Branch Managers. We have obtained all the information and explanations we have required and in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs at 31st December, 1952, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and by the returns received from the other offices.

Hong Kong, 10th February, 1953. **PEAT, MARWICK, MITCHELL & Co.,** Chartered Accountants, **LOWE, BINGHAM & MATTHEWS,** Auditors.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1952.

	Hong Kong Dollars (\$)	Hong Kong Dollars (\$)	Hong Kong Dollars (\$)
Interim Dividend of 42 per Share, free of Hong Kong Corporation Profits Tax, paid 11th August, 1952, £320,000 at 1/2-7/8	5,163,025		
Appropriations recommended by the Directors	3,000,000		
Amount to be written off Bank Premises ...	7,744,538	10,744,538	
Final Dividend of 43 per Share, free of Hong Kong Corporation Profits Tax, £480,000 at 1/2-7/8	25,396,737		
Balance carried forward to next year ...	8,489,174		17,321,465
	25,396,737		25,396,737

Special Administrative Expenses, including Chairman's emoluments as Chief Manager, Directors' Fees and London Committee Fees amounted to HK\$704,911.

STATEMENT IN CONNECTION WITH SUBSIDIARY COMPANIES

- The Investments in Subsidiary Companies appearing in the annexed Balance Sheet represent the Issued Share Capital of three Trustee Companies and three Nominee Companies wholly owned by the Bank. No real value to the members of the Bank.
- No part of the Profits earned by the Subsidiary Companies has been dealt with in the Accounts of the Bank. The net aggregate amounts of the Subsidiaries' profits after deducting the Subsidiaries' losses are as follows:—

	Hong Kong Dollars (\$)
(i) For the year ended 31st December, 1952	5,997
(ii) For previous financial years	180,519
	186,516

LONDON INSURANCE LETTER

FLOOD COMPENSATION

By Air Mail.

THE damage to property caused by the flooding of the Thames estuary and of other parts of eastern England in early February has been officially estimated at £50 million, and the insurance liability is believed to be about half of that amount. Flood insurance is peculiarly complex. The insured themselves are not always clear what risks they have covered. When the disaster is of national proportions the insurers do not always interpret the contracts quite literally: to accept claims which they could dispute is their contribution to flood-relief.

Whereas the standard fire policy covers only fire and lightning, the comprehensive policy which is in common use covers also storm and tempest. Flood, subsidence, and landslip, however, are separate risks, which have to be covered independently. Even in the low-lying area concerned in this case, it seems, much property was not insured against flooding. (In general, the companies' objection to this type of insurance is that the risk is not properly spread. Whereas fire can occur anywhere, flooding is almost confined to low ground.)

Damage to industrial buildings has not been severe, but some machinery has suffered badly, and losses of stock have been heavy. In many cases, however, the consequential loss—loss of profits due to interruption of activities—has certainly been more serious than direct damage; and, as usual, it is found that this risk is not adequately insured.

Consequential loss policies have become much better known in the past year or two. Some firms already regard them as essentially complementary to policies covering direct damage, on the argument that it is quite illogical to cover one risk and to leave uncovered another that inevitably goes with it. However, one often hears company chairman complain that profits have suffered disastrously from the effects of fire in an important producing unit (fully covered against the fire hazard), without a hint that anything might have been done to make good the loss of profits.

Marine Problems

Serious as the flood claims are, in this country's worst disaster on land since the war, they may compare relatively favourably with marine insurance claims for this bad winter. The insured value of the major shipping losses since mid-December is already, for hulls alone, in excess of £10 million, and smaller casualties are innumerable.

At the annual meeting of the Liverpool Underwriters' Association, the chairman, Mr. C. H. Johnson, mentioned that in consequence of the flooding, heavy claims would fall on underwriters for loss of or damage to cargo while awaiting shipment, in course of trans-shipment, or after discharge. He added that this costly experience might ultimately be beneficial to the insurance interests, as it had reminded them that the extension of marine policies to cover goods for long periods after discharge involved serious additional liabilities.

Mr. Johnson's statement was particularly notable for its questioning of the three-year period which is the basic of marine accounts. Because of the long delays in presenting claims for damage, he said, substantial settlements were still being made in some cases in the fourth and even in the fifth year. The cost of repairs is the main element in settlements, and Mr. Johnson asserted, on "good authority," that the level of repair costs this year would probably be higher than last year and much higher than in 1951.

Another point on which he touched was the concentration of huge sums on a single ship. It is, of course, true that underwriters do not overreach themselves, that reinsurance effectively spreads the risk. But underwriting capacity has to be stretched to cover these highly-valued vessels. Big ships are not a novelty, but big ships at current inflated values are a relatively new problem.

Circumspect Investment

Investment policy is entering an interesting phase—or, at least, is encountering interesting conditions. The task of investment managers is more than usually difficult, because the behaviour of security prices in recent months has appeared in some respects illogical. Since the middle of last year, when it was recognised that the threatened financial crisis would be averted, prices of Government stocks have advanced by small fractions and of industrial ordinary shares more strongly. But the traditional bases for this "bull market"—a declining trend of interest-rates, a rising trend of industrial profits—have been lacking.

It is rarely safe to "take a view" with the budget approaching and the position is unusually complicated this year, because there are possibilities of profound changes in the policy of the Chancellor of the Exchequer in the matter of financing capital expenditure, yet there is no intimation of the policy to be adopted. It may be that considerably more borrowing will come through the market, depressing security values in a general rise in the long-term interest-rate. This possibility induces caution in the investment departments, where the heavy depreciation of 1951-52 will be long remembered. On the other hand, if taxation were reduced to promote saving—which is also possible—saving through life assurance would presumably increase still further and the offices would have more money to invest—

Company Meeting

THE MERCANTILE BANK OF INDIA, LIMITED

SIR KENNETH MEALING'S STATEMENT

The sixteenth annual general meeting of The Mercantile Bank of India, Ltd., will be held on March 31, in London. Extracts from the statement by the Chairman, Sir Kenneth W. Mealing are reproduced below:—

During the year Mr. C. D. Miller has been elected to the Board to fill the vacancy created by the retirement of Sir Charles Innes. Mr. Miller has wide business experience in and current knowledge of Thailand, Malaya, India and Pakistan which will be of great value to the Bank, and you will be asked to confirm his election. Sir John Hay has given his valuable services as Deputy Chairman throughout the year since I became your Chairman on the retirement of Sir Charles Innes after our last annual meeting.

The accounts indicate that there has been no falling off in the volume of business handled by the Bank and despite the recession in world prices of most commodities the balance sheet total at £24 million shows little change. On the assets side there is an increase of £61 million in our holding of Government Securities, but this has been counterbalanced by a fall of £41 million in bills receivable and a decrease of £2 million in loans and advances. On the other side the increase in deposits of £1 million has been offset by a decrease of £1 million in bills payable.

At £193,188 our net profit is very slightly lower than in the previous year, provision having had to be made for increased taxation in the form of E.P.L. Considering the difficulties we had to anticipate during a period of trade recession and anti-inflation I trust you will agree that the results of the year's working are satisfactory.

The Directors have felt justified in recommending a final dividend of 8 per cent, and if this recommendation is approved the dividend for the year will be 14 per cent, a figure which the Directors consider is justified by the progress of the Bank.

Commonwealth Conferences

Two important Commonwealth Conferences took place during 1952. The first to agree on mutual steps to check the drain on reserves which presented a dangerous threat to the entire sterling area. The second, to review the results achieved and agree on future plans to promote industry, commerce and trade for the benefit of all. There is no doubt that the fiscal policy of the U.K. during the year together with the steps taken by mutual agreement throughout the Commonwealth checked the drain on reserves and strengthened the position of sterling; no small achievement bearing in mind the burden of re-armament.

The fall in prices of many commodities which commenced in 1951 continued in 1952: wool, seeds, cotton, jute, rubber, tea all fell further in price, and while price recession is an undoubted check to inflation, it has its own dangers if it takes place too fast or goes too far. Apart from foodstuffs it would seem that the inflationary trend has been checked if not reversed and although in the case of some commodities prices have fallen too fast and too far, in general the disinflationary trend should prove healthy.

Towards the end of the year the Government of India presented its ambitious Five Year Plan, aimed at an 11 per cent. increase in national income by expenditure of over 2,000 crores of rupees (£150 million). Towards this, a sum of 150 crores (£117 million) is anticipated from foreign aid. Indeed during the year aid in the form of grants from the United States with fertilizers, steel and technical advice and from the World Bank for steel manufacture were received by India. Whether it is possible for this ambitious Five Year programme to come to full fruition I cannot judge, but one can only admire those who have high ideals and who fix high targets and have the courage to do their best to attain them.

Trade in India

On the whole, trade and industry in India had a somewhat disturbing year. The world-wide decline in commodity values brought about almost panic market conditions accompanied by the temporary closure of some commodity, stock and bullion markets. As this subsided some measure of recovery took place and production surpluses in sugar, tea, textiles and some classes of engineering products induced a cautious outlook, while Government began to remove controls over a wide front, particularly as regards cotton and textiles.

The Calcutta jute industry benefited from two successive reductions in the high rate of export duty which had partly priced this important commodity out of world markets, and these reductions together with a successful goodwill mission from the industry to the U.S.A. and U.K. have restored much of the competitive capacity and popularity in overseas markets to India's most important export.

The tea industry has had one of the most anxious years in its long history. The cessation of bulk buying months later, the re-opening of public auctions and, many not expected to result in a disastrous fall in tea values December prices for many gardens' teas had fallen, leaving severe losses on the year's working. Many companies whose working capital was adequate when tea could be made and sold profitably at 1s. per lb. before present costs, and the excessive taxation now current gives little hope for the creation of reserves from profits wherewith to replenish their working capital. This is a serious problem to many industries in many countries—including the United Kingdom—but is particularly striking in the case of the Indian tea industry.

Early in the year the cotton economy of India was in a precarious condition, but from March, when the Government reduced the export duty from Rs. 400 to Rs. 200 per bale, there was staged a steady and, under the circumstances, remarkable recovery in the raw cotton markets and the textile industry. Later in the year the Government gave further assistance by relaxing reduction to Rs. 125 per bale in the export duty on certain varieties of cotton. The liberalization of Government's export policy for textiles enabled India to make a determined effort to restore her position in the world's textile markets, which had been so unduly 1951 by restrictions on exports, and in this

she was partially successful despite keen competition from Japan and the change from sellers' to buyers' markets throughout the world.

An important development in banking and finance in India was the establishment by the Reserve Bank in January, 1952, of a Bill Market whereby Scheduled Banks are able to obtain advances from the Reserve Bank at favourable interest rates against the security of usance bills drawn by traders payable in India and supported by the Scheduled Bank's demand promissory note to cover such advances. The scheme was of great assistance during very difficult periods and is the first step towards a fully developed bill market in India. The system was responsible for providing over 81 crores of credit to commerce and industry during the year, and would have been higher but for the lower level of business activity towards the end of the year. Scheduled Banks' advances in early December, 1952, were only Rs. 429 crores against Rs. 492 crores at the same time in 1951.

Indo-Pakistan trade in general remains limited in extent. The agreement which expired during the year was replaced in August by a limited pact which unfortunately excluded some major items of trade. India's overall trade balance was heavily deficit during the first half of the year, but in the second half the gap was narrowed, more by reduction of imports than by increase in exports.

Pakistan's Difficult Year

Pakistan has been through a difficult year from almost every point of view. In the past a producer of surplus food, Pakistan imported wheat from Turkey, through American aid, and from Russia through a barter deal made with that country. Pakistan's main export commodities, cotton and jute, fell in price by 50 per cent, and in both commodities there resulted a large carry over.

With her major export crops bringing in far less foreign exchange, it followed that Pakistan's balance of trade would become adverse unless drastic import restrictions were imposed. Partial restrictions were imposed in May, but it was not until July that drastic action was taken. In order to curtail the inevitable

inflation resulting from restriction of imports, Government introduced measures to curtail credit, but the full effect of these restrictions on imports and credit has not yet been felt and its impact upon the future of the State and its people is, therefore, still to be seen.

A General Election was held in Ceylon in May, 1952, and resulted in the return of the United National Party with a good working majority over all other parties. Ceylon should, therefore, be assured of peaceful and stable political conditions during the next four years.

In the last 80 years, the population of Ceylon has risen from 34 million in 1871 to 74 million in 1951 and with an estimated increase of about 200,000 a year the population in 1962 will be some ten millions. This increasing population has necessitated the importation of large quantities of rice, flour and sugar at high prices, whilst in 1952, a decline occurred in the prices of many of Ceylon's exports. It is likely, therefore, that a trade deficit of Rs. 110 million in 1952 will replace the trade surplus of Rs. 349 million in 1951. Ceylon's balance of trade has, therefore, suffered during 1952 to the extent of approximately Rs. 459 million compared with 1951.

Conditions in Burma, which continue difficult to assess, appear to have improved somewhat during the past year. Whilst much of the country is still controlled by insurgents or ravaged by drought, the efforts by the Government in Rangoon towards the pacification of the country seem to be achieving some success, and foreigners can proceed in greater safety for greater distances from Rangoon than was the case two years ago.

Our thanks are due to Mr. Drake, our Chief Manager, to Mr. Hawkins, his Deputy, who paid a short but strenuous visit during the year to our branches in India, Pakistan and Ceylon, to the Managers in London and to all our officers and staff throughout the world. Apart from our steady progress, the increasing complications of legislation and controls in most countries where we operate impose an increasing pressure of responsibility and vigilance upon them and our gratitude is due for the hard work and loyalty which they have given.

Rs. 1,740,00,00,000 IN FORCE

SUN LIFE OF CANADA, LEADER IN WORLD-WIDE LIFE INSURANCE, REPORTS ANOTHER OUTSTANDING YEAR.

With Rs. 181 crores of new life insurance sold during 1952—a record for the year among all Canadian companies—the Sun Life Assurance Company of Canada continues to maintain its long-established leading position.

Sun Life benefits paid during 1952 exceeded Rs. 39 crores.

Sun Life benefits paid since the first policy was issued in 1871 now total Rs. 668,20,14,906.

FINANCIAL STATEMENT AS AT DECEMBER 31, 1952

Without Prejudice

THE FUNCTIONS OF AN AUDITOR

"A WATCHDOG, NOT A BLOODHOUND"

(FROM OUR LEGAL CORRESPONDENT)

THIS is a case of considerable importance to chartered and incorporated accountants, especially those of the (Indian) Chartered Accountants Act 1949 in regard to its disciplinary provisions. It relates to allegations of negligence said to have been of so gross a nature as to render the gentleman said to have been guilty of it unfit to be a member of the (Indian) Institute of Chartered Accountants. We do not propose to mention the gentleman's name. To do so would be unfair to him for not only was he guiltless of the serious professional offence the subject of the charge against him, but he has had that charge hanging over his head for no less a period than nearly nine years, which must be pretty nearly a record even in this country of inordinate delay in judicial matters.

The case concerned a chartered accountant in his capacity of an auditor, and before summarising the facts a word or two about the general duties of an auditor may be useful to the professional reader as a refresher and to the general reader as information.

An auditor is not bound to be a detective or, as has been said, to approach his work with suspicion or with a foregone conclusion that there is something wrong. He is a watchdog but not a bloodhound. He is justified in believing tried servants of the company in whom confidence is placed by the company. He is entitled to assume that they are honest and to rely upon their representations, provided he takes reasonable care. If there is anything calculated to excite suspicion he should probe it to the bottom, but in the absence of anything of that kind he is only bound to be reasonably careful and cautious. Auditors must not be made liable for not tracking out ingenious and carefully laid schemes of fraud, when there is nothing to arouse their suspicion and when those frauds were perpetrated by tried servants of the company, and are undetected for years by the directors.

Note the words "probe to the bottom." They were used first by Alverstone L.C.J. and have been constantly repeated. But they were and have since been used only as regards the duties of auditors auditing the accounts of joint stock companies. Personally the writer has always regarded them as of general application. But they are not—in India at any rate—and this case is the first in India, so far as we know, to draw a very important distinction.

Now for the facts. The respondent's firm, as chartered accountants, were entrusted by a firm

1. Per Lopes L.J., in *The London and General Bank Ltd.*

of hardware merchants with the work of auditing their accounts and preparing their income-tax returns. The complaint against the respondent was that he conducted this professional work negligently.

"It appears," said the learned Chief Justice, "from the assessment order dated 31-10-1944 that (the firm of merchants) had considerable business in the black market and maintained two sets of accounts—regular day books and ledgers for the open market transactions and a separate book for the black market transactions. While the former accounts contained entries showing daily transactions the latter contained only consolidated entries made at the end of each week, of all the transactions of that week. At the end of the financial year all the weekly entries in the separate account were totalled up and these totals were entered in the regular accounts. For the year in question 1943-44, the entries thus carried into regular account books show purchases of the value of Rs. 97,403-7-6 and sales of the value of Rs. 1,69,766-7-6. The respondent examined only the regular account books of the assessee and prepared the statement and income-tax return on the basis of those accounts. All the statements were signed by him and there was also an endorsement at the foot of the balance sheet that it was 'verified and found correct.' The profit and loss statement as drawn up by the respondent contained under the heading 'stocks' the following entry: 'Recorded in separate book Rs. 97,403-7-6' and under the heading 'Sales,' the following entry: 'Recorded in separate book Rs. 1,69,766-7-6.' The income-tax return was signed by the assessee and the respondent forwarded the same and the statements prepared by him to the Income-tax officer with a covering letter dated 11-7-1944. Therein he stated as follows:

Re: G.I. No. 510. Income tax and E.P.T. Assessment 1944-45.

We have examined the books of account of Messrs. for Samvat year 1999 ended 29-10-1943 and beg to report as under:

Books examined:

1. Rokad—cash and day book.
2. Khatavahi—ledger.
3. Jinna Noudh—purchase journal.
4. Udhari Noudh—sales journal and account books pertaining to property income purchases and sales vouchers invoices bank pass books.

The books of account are kept in the Gujarathi style in the usual course of business and the statement and schedules prepared therefrom represent in our opinion correct income of the firm.

The Income-tax officer having called upon the assessee to produce their accounts and finding discrepancies therein, the most important of which was the difference between the sales as entered in the regular accounts and the sales as shown in the statements, required the accountants to furnish an explanation of this difference. And eventually holding that the separate accounts were

2. Ibid.

3. In *re London Oil Storage Co. Ltd.*; and see Dicksee on Auditors, p. 781, 10th Edn.

inaccurate and unreliable the Income-tax officer assessed the profits made by the assessee in the black market transactions on estimate at Rs. 3,50,000 and determined the tax payable on the basis of that figure. This assessment was finally confirmed and there we may leave the assessee and consider the position of the chartered accountant.

The Income-tax Department filed a complaint against this gentleman charging him with gross negligence in the discharge of his duties as a chartered accountant and after an inquiry by the Disciplinary Committee appointed under the Chartered Accountants Act 1949 that body held that the charge of negligence was substantiated and the case therefore came before the Madras High Court under Section 21 of the Act.

Now, actionable negligence is a very different thing from negligence in the colloquial sense. There can be no negligence in the former sense unless there is a duty cast upon the person charged to do a particular act and he fails to do it. The Court therefore had to consider what the duties of the chartered accountant were as the auditor of the assessee, and it did so in an illuminating judgment which one wishes one could set out in full.

The chartered accountant contended that when an assessee engaged him for auditing his accounts and preparing his income-tax returns his duty was only to prepare the statements on the basis of the accounts produced by the assessee and that he was under no obligation to go further and enquire whether the account books maintained by the assessee were reliable. A much stricter view was taken by the Disciplinary Committee. Their view was that the chartered accountant had not discharged his duty by merely preparing the abstracts from the accounts of the assessee and that it was further his duty "to probe into the matter" and investigate whether the accounts were correct. The Court accepted the latter view but with an important and far reaching modification as a result of which the chartered accountant emerged from the proceedings completely exonerated.

Said Venkatarama J., (the Chief Justice concurring): "That such—(i.e., the Committee's view)—would have been his duty if he was auditing the accounts of a joint stock company we do not doubt. In that case the audit is intended for the protection of the shareholders and the auditor is expected to examine the accounts maintained by the directors with a view to inform the shareholders of the true financial position of the company. The directors are in the position of trustees in relation to the shareholders and in auditing the accounts maintained by the directors the auditor acts in the interests of the shareholders who are in the position of beneficiaries. The auditor is in such a case under a clear duty 'to probe into the transactions.' It was so held by Lord Alverstone L.C.J., in *re London Oil Storage Co. Ltd.* wherein he observed 'That he must exercise such reasonable care as would satisfy a man that the accounts are genuine, assuming that there is nothing to arouse his suspicion of honesty, and if he does that he fulfils his duty; if his suspicion is aroused his duty is 'to probe the thing to the bottom' and tell the directors of it and get what information he can."

That seems just plain common sense. The writer has always understood that an auditor is not expected to exercise the qualities of a Sherlock Holmes or a member of the Criminal Investigation Department. He is entitled to start his work on the assumption that the accounts supplied to him are honest accounts and that his clients are not knaves. True he may be called in where there are suspicious circumstances with specific instructions to investigate them. But that would be work outside the ordinary scope of an ordinary audit requiring special care for which he would be entitled to a special fee.

Their lordships qualified the "probe to the bottom" theory drastically. "But the question is whether there is the same duty when the auditing relates to the accounts of individuals. In those cases the auditor acts only for those individuals and it is his duty to act on their instructions and to audit the accounts produced by them and prepare statements from them. He is under an obligation to them to perform the auditing with due skill and diligence and if he does that it is difficult to see what further obligation he has in the matter and in favour of whom... He should, of course, neither suggest nor assist in the preparation of false accounts. But he is under no duty to investigate whether the accounts produced by the assessee are correct or not. That is a matter for the Income-tax Tribunals. He is under no duty to the Department."

The decision of the Disciplinary Committee was reversed and, as has been said, the chartered accountant was exonerated.

The Second Session of the I.L.O. Committee on Work on Plantations will meet at Havana, Cuba from 18th to 28th March, 1953. Complete details of the Indian Delegation to this session are as follows:—Government: Shri Prithi Singh, Second Secretary, Embassy of India, Washington, U.S.A.; Employers: Shri R. L. Harde, Calcutta; U.S.A. Madras; Workers: Shri K. P. T. Gupta; Shri H. C. Kothari, Padmanabhan, Munar, S.T. The agenda of the meeting will be as follows:—1. General report, dealing particularly with: (a) Action taken in various countries in the light of the conclusions of the First Session (b) Steps taken by the I.L.O. to follow up the studies and developments affecting work on plantations. 2. Definition of the term "Plantations". 3. Regulation of wages on Plantations. 4. Health and social services on plantations.

A DITCHER'S DIARY

died it was weeks before many Western observers could be persuaded that he really was dead, while when Talleyrand was informed that the Czar Alexander could not attend a conference because he had died he is supposed to have said: "I wonder what the real reason is". I do not suggest that this extreme scepticism be applied to the main fact of the present case, but it might be salutary in drawing conclusions from it. It was a long while after Lenin's death before Stalin's name became familiar, and many that were familiar in the meantime soon after appeared on the public prosecutor's list. Times have changed since then no doubt, but the mediocrities Stalin leaves behind might manage together no better than Lenin's more competent heirs. It is another matter whether what passes by the pompous name of "psychological warfare" will promote the possibility of dissension. The one piece of speculation which seems least well founded is the view that matters will now continue just as before, for it betrays complete ignorance of Stalin's real place in Russian history to believe that the world without him will be the same place.

"Follick's Frolics" is the name by which Mr. Martin Follick's Simplified Spelling Bill is known in some quarters, and its supporter's astonishing ingenuity in dragging it into every conceivable discussion in the Commons justifies the title. Last year he managed to make a speech in favour of simpler spelling during the debate on the Naval Estimates (a propos signalling), and lately he held forth on the same subject during discussion on the Crime Bill (a propos a supposed connection between illiteracy and criminality). I imagine no one was more surprised than Mr. Follick when his measure got a second reading in the House. As long as we are dealing with people whose native tongue is English we can assume that bad spellers are just plain dullards, and therefore the simplifiers' case remains unproven; so might it not be an idea to enquire in India where large numbers of people who are far from dull could tell us definitely whether irrational orthography does in fact make the English language harder to master? Mr. Follick might then have something to support his case; so far he has nothing.

Had the decision to postpone Sir William Slim's departure for Australia, so that he might advise the British Government in current talks on Middle East defence and particularly the Suez Canal Zone, been known a bit earlier the opening in London of the new Burma Club might have turned out to be less of an al fresco occasion. As it was, a correspondent in London tells me, it took place in a sort of super-basha near Hyde Park Corner, where in a matter of a few months the Burma Star Association hopes to have a proper club house. The Association was naturally anxious that the Field-Marshal should perform the ceremony, and as soon as his appointment as Governor-General of Australia was announced the contractors, who had just started to clear the site for the new building, were asked to make this possible in some sort of temporary structure. An emergency scheme was put into effect. The workmen managed to demolish the ruins, lay drains, install plumbing, and pour concrete foundations—all in seven days. Oriental rugs were laid on the concrete tent poles, walls were created with fireproof sacking,

and the whole topped off with a canvas roof. And Bill Slim, their wartime commander, duly inaugurated the new home of the "Burma Boys." He even found occasion to approve of the makeshift arrangements, which were not perhaps too unlike the sort of thing to which he and other members of the 14th Army were once well accustomed. "We lacked many things out there," he told his old comrades, "but we gained something of great value—unity. We were British, Indians, Pakistanis, Gurkhas, Chinese, Americans, Africans and Rhodesians, and we were one. Now we have a place to meet and renew this spirit."

There are, as Mr. Nehru said in Delhi last Saturday, many ways of measuring progress. So many ways in fact that the belief in any one thing called "progress" has been largely given up in favour of the view that nations can progress in one direction while they regress in another equally important. The Prime Minister gave an example himself when he spoke of the many advances made in this country but then went on to deplore the decay of good taste which he claimed to detect in some sectors of private and public life: "I do not understand why our tastes have gone down so much... Display of money without art is vulgarity. Only the vulgar would decline to share his concern if it indeed were shown to be true that 'living standards' were rising, while sensibilities were being blunted. But Mr. Nehru retreated from this position when he announced that his own particular yardstick for measuring progress was "employment". As I remember, several years ago the only yardstick we heard about from Delhi was "production", but less seems to have been said about that since it became clear that many industries had in fact over-produced in relation to effective demand. If "employment" is to be the new slogan, it will prove to be even more misleading than its predecessor. In the present state of Indian industry the only way to increase total employment to any considerable extent is to reduce the average wage, which would be regarded (quite properly) as undesirable. In any case, it would be wrong to import into India the highly emotional connotation the word "unemployment" has in Western countries, where it has for many years past determined much of the working people's thinking about economic matters. Unemployment means something very different on the hard pavements of Wigan or Glasgow to what it means for the marginal peasant-labourer who retires to his muck when work in the town gives out. Not that being without a job is any more pleasant in India than elsewhere, but the conditions are so different as to make it dangerous to take over ready-made slogans that have already done much harm in countries like Britain. That country is an object lesson in the fallacy of measuring progress by employment.

During debates on fiscal practice such as we lately had on the Finance Commission's report, mention is made of a supposed principle of taxation according to which the proceeds of taxes would be spent preferentially on those who pay them. It is a very doubtful principle, but it appears to have been approved by a Swedish municipality which is reported in the Press to have decided that the receipts from dog licences should henceforth be devoted to the provision of more lamp-posts in ill-lit areas.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

BETTER SUPPLIES OF IRON AND STEEL

(FROM OUR OWN CORRESPONDENT).

London, By Air Mail.

THE British Government's decision to slow down on certain kinds of rearmament activity in order to release additional supplies of iron and steel for ordinary purposes, brought a much needed element of flexibility into the industrial situation as a whole. The step had all the more initial effect as it almost synchronised with a sharp increase in the steel output both of Britain and some Continental countries. These new factors led to a considerable amount of institutional buying of Ordinary shares of the leading industrial companies which is still in evidence at the time of writing. But, temporarily, the industrial centres are suffering from recurrent bouts of what, for want of a better name, is called "influenza," which have led to staff shortages and a lack of vitality on the part of executives. Supplementary to this there has been the retarding of business by the widespread floods. It is improbable that a new industrial drive can make much headway until spring arrives or, at any rate, until there is some kind of deliverance from present enervating conditions. Meanwhile the Dundee jute industry has been given a fillip by a Government order for 4½ million sandbags to reinforce the sea walls.

The Clothing Industry

The textile trade maintains its moderate improvement, which is still based chiefly upon fairly substantial home buying. Manufacturers of yarns and fabrics complain that profit margins are small. There are, indeed, signs of price cutting in medium and lower grades of fabrics. Productivity in the clothing industry is the subject of the latest report of the British Productivity Council. (London: H. M. Stationery Office, 1s.) It is a concise document, with interest concentrated upon the practices of the prominent British clothing manufacturers, including those of Montague Burton—the largest clothing manufacturers in the world. This firm was the pioneer in Britain of the band knife, which cuts twelve patterns at a time; it is now carrying further modern methods of drilling and punching holes in the patterns. The speed of cutting is being accelerated by improved electrical hand cutters—all of these machines are of American make. Handling is mostly done by conveyor belt or pendulum. One British firm has replaced its conveyor belt system by the synchronized method, which, so it is claimed, makes possible the employment of relatively inexperienced labour. By this method the production of a coat is sub-divided into sections, each of which is made by a separate operative, who passes the item on to the next operative by means of a chute. This is, of course, so to speak, little more than an upright or, rather, downright conveyor system, instead of horizontal. Mass production methods are now responsible for by far the greater part of the output of British clothes. Nevertheless, the craft tailor, despite the apparently prohibitive prices he has had to charge, has held his ground better than had been anticipated.

Designs of Cotton Fabrics

The exhibition of woven cottons by students of the Royal College of Art, held under the auspices of the Cotton Board, provided another indication of the younger generation's obsession with "abstract" art. Most of the patterns, or figures of the furnishing fabrics were of this kind. Whether this remote decorative effect will have a commercial appeal has yet to be proved and only a few firms ventured to purchase this type of fabric for possible marketing. The dress fabrics shown were on conventional, and some will think, happier lines, minor, but appealing variations being obtained by slight modifications in construction.

Rayon on the March

The British Rayon and Synthetic Fibres Federation opened its new London Headquarters, Hamilton House, Piccadilly on 11th February, and took the opportunity of declaring 1953 to be "A Rayon Year." A special effort is being made to increase the consumption of rayon, and the advocacy of rayon hunting for Coronation flags has not been overlooked. Details of the publicity plans announced by the Federation over the next 12 months are the most ambitious and the most expensive—so far attempted by the rayon industry. Indeed, although polite reference is still heard to rayon and wool being complementary fibres (as, in fact, they often are) it is evident that a strong sense of rivalry pervades the two industries.

Fertiliser Controversy

The controversy upon whether or not fertilisers lower the vitality of plants and so make them more susceptible to diseases still continues. The battle on an allied front, namely, the allegedly dangerous toxic effect of insecticides has diminished in intensity. Sir W. G. Ogg, Director of Rothamstead Experimental Station, believes that the dangerous mistakes that have been made with regard to the use of insecticides and fungicides are few and capable of virtual elimination, as far as repetition is concerned. He has had no difficulty in giving instances of the existence of extensive plant diseases where there can be no question of fertilisers being to blame—where in fact they have not been used.

But if, as most thoughtful people will grant, civilization is guiltless in this respect, the Direc-

tor concedes that the spread of plant and animal diseases is connected with the practice of intensive agriculture, which makes more possible infection through contact. But this is no reason why there should be a discarding of what has been proved to be of value, and, of course, still more intensive cultivation is a necessity if the world's population is to be sure of an adequate sustenance. Perhaps the strongest point in Sir William's reply to critics is his statement that investigations have been made at Rothamstead on land which has received heavy dressings for fertilisers for more than a century and no deleterious effect has been found.

Atmosphere Pollution

The heavy death roll from respiratory troubles following upon the exceptionally heavy fogs of a few weeks ago has stimulated discussion upon the pollution of the atmosphere by factories and power stations. It appears, however, that advance in this matter is less easy than might have been imagined, as is also the attenuating of fogs by artificially created air currents or other means. Indeed, it has emerged that there is not agreement upon the necessity for the taking of measures of this kind. Thus, the chief chemist to the engineering section of the British Electricity Authority, Mr. R. Llewellyn Rees has argued, with much statistical data in support of his views, that the cost of washing power station flue gases would be entirely prohibitive—much greater than the damage done by the sulphur dioxide if it were allowed to go forth into the air. It will be noted that this is making comparisons in terms of finance. There are those who contend that an expenditure which would be of the nature of subsidising health should not be thus measured. But, as Mr. Rees holds that flue gases, although they cause corrosion, have no ill effect upon the health of human beings, he would not feel that a case had to be answered here. It is difficult, however, for the average individual to accept that what causes damage to metal and stone is going to behave kindly to the tender substance of which lungs are composed.

Somewhat similar differences of opinion were uttered concerning the distressing condition of the beasts at the Royal Agricultural Show, which happened to be held when the fog was at its worst. Many declared that the gasping condition of the animals was due solely to an air laden with impurities; others avowed that if modern stock raising were to allow animals more natural growth, and not turn them into huge masses of flesh, there would have been greater ability to breathe. The man-in-the-street would probably observe that something could be said on both sides—which remark might justifiably infuriate the would-be reformer. It is, in fact, obvious that the pollution of the air by industry is an evil, and so also is the compulsory malformation of the animal world. When the glorious day arrives that mankind is less occupied with taxes and politics, something will be done to safeguard the lungs of both the higher and the lower creatures.

Advance in Sizing

Technically, the most interesting news is the publication of full and revised particulars of the Shirley automatic size box, which is of great importance to the cotton industry. Preliminary information was published a year ago; but a good deal of further experimental work has been done since then, and the equipment is now regarded as being in its final form. Accurate sizing means the effecting of considerable economy in the production cost of weaving; and at various points. There are, for example, reductions in yarn end breakage, savings in capital costs of boiler apparatus, since only one storage tank is required for any number of machines, and also a reduction in the wastage of sizing ingredients. Those who have cause to be interested will find a full diagrammatic description in the current number of Platt's Bulletin.

Moisture Content of Shellac

The British Hat and Allied Feltmakers' Research Association announce that it has completed investigations into the moisture content of shellac and, as a result, can recommend two pieces of apparatus capable of giving accurate and reproducible results. The results obtained were compared with those secured from prolonged drying over phosphorus pentoxide at room temperature and found to be in good agreement.

Unsettled Commodity Prices

The commodity situation offers many contrasts at the moment, and must be said to reflect a certain amount of instability. Heavy, successive falls have occurred in the price of zinc, lead is a poor market, and another sharp cut has been made in the price of tungsten—which is controlled by the Ministry of Materials. It is probable that the Government does not regard these lower trends with disfavour, since it is always insisting on the necessity of lower prices for finished products. The Ministry of Materials, by the way, is cutting its stock piling purchases of wool by one third. Surprise has been expressed at the considerable increase in purchases of abaca (Manila) by Japan. That country was a substantial buyer before the war, but it had not been thought that sufficient resources were available to buy on the scale recently shown. In view of the strength of demand from this quarter, and also because the output of this fibre was reduced by the typhoon in the Philippines, hopes are aired that sisal will have to be bought instead, and so bring about a recovery in the price of that fibre. Some moderate observers hold that, on a long term view, sisal will be left with string and twine as its outlets, and that rope manufacturers will increasingly turn over to nylon, and, later, to Terylene as well.

ECONOMIC EVENTS IN FEBRUARY

- 1st—Madras increases power cut from 35 percent to 50 percent.
- 2nd—Eisenhower presents "State of the Union" message to Congress, announces end of neutralisation of Formosa; I.L.O. Textile Committee meets in Geneva; Khadi and Village Industries Board meets; Bombay amends Sales Tax Rules; West Bengal Assembly session begins.
- 3rd—Pakistani announcement on cotton barter deal; sterling area gold and dollar reserve figures for January published; Southern Rhodesian £10 million loan flotation fails; General Motors (India) Ltd. announcement on suspending vehicle assembly.
- 4th—G.A.T.T. committee discusses India's complaint on jute licensing fee; Assam issues notification on prohibition; Britain ends sweets rationing; Britain protests to U.S.A. against McCarran Act.
- 5th—Assam Government decides to revise Minimum Wages Act temporarily; Rubber Board criticises new Rubber Bill; New Delhi conference of Governors and Rajpramukhs concludes.
- 6th—Labour Ministers' conference begins in Delhi; Indian Central Cotton Committee meets in Bombay; E.C.A.F.E. meeting begins in Bandung, Indonesia; U.S.A. ends wage, salary and price controls.
- 7th—Egypt cuts Ashmouni cotton price; Pakistan and Indonesia sign trade pact.
- 8th—New cotton export order issued; Indian Roads Congress meets in Madras; Technical Educational Council meets in New Delhi; U.K. to barter Meteor jets for Brazilian cotton.
- 9th—Kidwai lays foundation stone of I.C.J.C. Agricultural Research Institute; Indo-U.S. and operational agreements signed; Burmese rice distribution talks begin.
- 10th—Sir Gopalaswami Ayyangar dies.
- 11th—Budget session of Parliament begins.
- 12th—Assam issues rice and jute crop forecasts; Anglo-Egyptian agreement on Sudan reached.
- 13th—Finance Commission's report presented to Parliament; Pakistan announces further import restrictions.
- 14th—Select committee's report on Tea Bill presented to Parliament; export committee set up to enquire into pharmaceutical industry.
- 15th—Khadi and handloom cess imposed on mill cloth.
- 16th—West Bengal accepts advisory committee's report on tea labour wages; West Bengal Budget presented; Bihar Budget presented; Bombay decides to set up Finance Corporation; Bank Liquidation Committee's report released.
- 17th—Bihar decides to set up Finance Corporation; Burma announces eight-year development programme.
- 18th—Railway Budget presented; five-year plan to colonise and develop Andaman Islands announced; Pakistan's January trade figures published.
- 19th—House of People passes supplementary demands for grants; Indian Central Tobacco Committee meets; Britain announces defence expenditure proposals.
- 20th—Annual general meeting of IJMA; tractor enquiry committee set up; U.S. cotton growers officially urged to restrict output; Pakistan to appoint Company Law Commission.
- 21st—Nehru opens Tilaiya Dam and Bokaro thermal station; Bombay and U.P. Budgets presented.
- 22nd—North Indian tea interests agree on output restrictions; Canada announces wheat gift to Pakistan; Russo-Finnish trade pact signed; Calcutta Port Budget presented.
- 23rd—Indian tea interests agree on output restrictions; Canada announces wheat gift to Pakistan; Russo-Finnish trade pact signed; Calcutta Port Budget presented.
- 24th—Ceylon decides to raise Rs. 100 million loan.
- 25th—Tea labour wages in Darjeeling to be amended; Bombay Bullion Association proposes amendment of byelaws; Ceylon-China January trade figures released; East Bengal Budget presented; Greece, Turkey and Yugoslavia sign pact.
- 26th—General Budget presented; Kidwai gives food stock figures; India's foreign trade figures for January announced.
- 27th—Tripartite talks on tea labour begin in Shillong.

LINSEED ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, Government of India, the all-India first estimate of linseed, 1952-53, puts the current year's area at 2,515,000 acres as against 2,547,000 acres of the adjusted first estimate for last year. This shows a decline of 32,000 acres of 1.3 percent in area. The decrease in acreage under linseed has been shared mainly by Hyderabad and Bhopal and has been attributed to lack of adequate rains from the 1st week of September to the end of November, 1952, when the crop was sown. The decrease in acreage has however, been offset considerably by increases registered mainly in Rajasthan, Vindhya Pradesh and Madhya Bharat due to favourable climatic conditions at sowing time. The information given in this estimate refers mainly to the period up to the middle of December, 1952. Till then the condition of the crop was reported to be generally satisfactory in almost all the States. This estimate does not cover the entire area sown under linseed. Past experience shows that the final estimate of acreage is about 34 percent higher than the First Estimate.

Stocks and Shares

GENERAL IMPROVEMENT IN GILT-EDGED SECURITIES

PROFIT-TAKING IN IRONS ABSORBED: JUTES QUIETER: MACNEILL AND BARRY COAL RESULTS

Wednesday Evening.

THE Calcutta share market continues to hold the new ground won since the budget and several bouts of profit-taking in the speculative counters have left the undertone fully steady. Operators in Indian Irons seem to be waiting for the arbitrator's decision on the conversion ratio of Tata Deferreds in Bombay which, it is hoped, will have bullish consequences. Meantime the rest of the market is firm. Jutes alone are quiet, with some shares showing small gains and others small losses. The absence of any aggressiveness in this section, though fully justified by the state of business in jute goods, is restraining the rest of the market which otherwise appears set for useful rises.

Bokaro and Ramgur Coal shares, which we reported last week at Rs. 8-12, have moved forward steadily on interested buying first to Rs. 10 and then to Rs. 12-8.

Securities have been very firm and discriminating rises in official selling prices for some loans lead the market to think that the ground is now being prepared for the flotation of the Centre's new issue or issues. Two possibilities that have been canvassed are a 12-year 3½ percent loan and a five-year 3 percent loan. The latter would be more acceptable to banks and insurance houses and is generally regarded as the more likely.

With the approach of the interest date (15-3-53), the Conversion Loan 1986 continued to meet with good support and improved from Rs. 82-12 to Rs. 83-12. In sympathy, 3½ Non-Terminal Paper 1896-97 rose from Rs. 82-10 to Rs. 82-14. In short-dateds, there was a steady enquiry for 3 percents 1957 and 1958 at Rs. 98-12 and Rs. 98-8, while both 2½ 1954 and 2½ 1955 were taken one anna higher to Rs. 98-13. Medium-dated loans continued to be enquired for with 4½ 1960-70 improving from Rs. 101-14 to Rs. 102-2 with little business passing. Here again the enquiry for this Loan could partly be attributed to the fact that the half-yearly interest is due for payment on 15th March. Two-and-a-half percent 1961 improved to Rs. 90-8, while 2½ percent 1960 and 1962 were asked for at Rs. 93-7 and Rs. 91-7. Three percent 1959-61 was slightly better at Rs. 96-2, while 3 percent 1963-65 and 1964 were absorbed at Rs. 92-10 and Rs. 92-9 respectively. Long-dated loans came in for more enquiry with 3½ 1968 quoted at Rs. 90-9, and 3½ 1970-75 at Rs. 86-9.

In Provincials, there were both buyers and sellers of 4½ U.P. 1964 at Rs. 100-8, and business was reported in 4½ West Bengal 1964 at Rs. 100-12. Three percent U.P. 1958 was quoted at Rs. 97.

Good Preference shares were readily absorbed. Among Jutes, Empire were quoted at Rs. 114 and Lawrence 'B' were marked at Rs. 97. In the miscellaneous group, a small lot of Alkali & Chemical changed hands at Rs. 106, British Ceylon Corporation were taken at Rs. 9-8, Calcutta Electric at Rs. 12-8, and Godfrey Phillips at Rs. 78. Indian Iron remained steady at Rs. 109, Orient Paper 2nd were marked up from Rs. 68 to Rs. 73, and Shaw Wallace were done at Rs. 81.

In the Banking section Imperial Bank Fully-Paid and Contributory were quoted at Rs. 1840 and Rs. 457. Hindustan Commercial were done at Rs. 12-8. United Commercial were steady at Rs. 36, and United Bank of India (Rs. 10 paid-up) came to hand at Rs. 4.

In the Railway section, Arrah-Sasaram were quoted at Rs. 67-4, and business was done in small lots of Bukhtiarpur-Bihar at Rs. 24, Chaparmukh-Silghat at Rs. 59-4, Howrah-Amta at Rs. 68, and Shahdara (Delhi) Saharanpur at Rs. 156-4.

In the Cotton section, Kesoram were steady at Rs. 20, Cawnpore Textiles were better at Rs. 8-7, and Elgins were done up to Rs. 17-14. New Victoria changed hands freely at around Re. 1-9. Muir Mills were marked at Rs. 216.

In coals, Burrakur fluctuated narrowly to close at Rs. 10-13. Bengal were steady at Rs. 528, and Borra were quoted at Rs. 29. Other transactions included Bharat Collieries at Rs. 6-7, Central India at Rs. 5-8, Dhemo Main at Rs. 11, and Union at Rs. 25-12. East Indian were steady at Rs. 22-8, and Equitable on good enquiry improved to Rs. 46. New Beerboom at one time improved to Rs. 21-10 and Rancegunge to Rs. 9-14 but closing quotations were below the best. South Karanpura moved up from Rs. 13-5 to Rs. 14-8. Bokaro & Ramgur on buying by interested parties spurred from Rs. 8-12 to Rs. 12-8. A large block of Karanpura Collieries changed hands during the week at Rs. 91.

In the Jute section, Howrah fluctuated between Rs. 24-5 and Rs. 25-1 to close at Rs. 24-10. A large parcel of India changed hands at Rs. 130-8 and Anglo-India at Rs. 226. The following chart shows price movements during the week:—

Opening	Highest	Closing
5-3-53	11-3-53	
Rs. As.	Rs. As.	Rs. As.
19-6	19-15	19-12

Agarpara

Barnagore	168	174	171
Champdany	166	166	164
Delta	235	235	232
India	128	132	130
National	25-10	25-12	25-12
Nuddea	48	49	47-8
Reliance	13-14	14	14
Standard	152	152	147

A little more business was reported in Electric Supply shares. Agra came to hand at Rs. 145, Benares at Rs. 17-14, and Calcutta Electric at Rs. 14. Jubbulpore were taken at Rs. 13-7 and Muttra improved from Rs. 8-8 to Rs. 10. United Provinces were marked at Rs. 145.

Sugar shares were fairly active during the week, with buyers of Champaran at Rs. 21-12, Durbhanga at Rs. 8-14, United Provinces at Rs. 16, Carew at Rs. 5-3, and Ramnugger Cane at Rs. 17-4 ex-dividend.

In the Engineering section, Indian Irons fluctuated between Rs. 25-7 and Rs. 26-2, to close at the latter rate. There were sellers of Braithwaite at Rs. 10-14 ex-dividend and Indian Galvanizing New at Rs. 13-6. Britannia Building improved from Rs. 5 to Rs. 6-4, while Jessops were easier at Rs. 23-12. Kumardhubi Engineering were done at Rs. 8-8, and Marshalls at Rs. 7. Indian Steel & Wire Products Fully-Paid Ordinary were crossed at Rs. 61-8, while National Iron & Steel were steady at Rs. 5-4.

In the miscellaneous section Shree Gopal Paper were scarce at Rs. 18, and Titagur Paper were steady at Rs. 35-10. Sone Valley Cement met with enquiry and changed hands freely at around Rs. 7-5. New Asiatic Insurance were quoted at Rs. 4-6 and several deals were recorded in India Steamship at around Rs. 6-12. Angelo Brothers

STERLING'S PROSPECTS WHEN DOLLAR AID ENDS

ADDITIONS TO GOLD AND DOLLAR RESERVES IN FEBRUARY
(FROM OUR OWN CORRESPONDENT).

7th March.

REPORTS from America on the progress of the discussions which Mr. Eden and Mr. Butler are now conducting in Washington, with their opposite numbers in the American administration, serve to emphasise the point made in last week's despatch, that they are not seeking decisions, agreements or aid but, in the formative period of new American policy, are putting forward and explaining the Commonwealth Conference plan, which is aimed to correct the division of the world into economic blocs, each barricading itself against others. As Mr. Butler explained when he and Mr. Eden lunched with the Washington Press Corps—"The dollar gap can be bridged only by generosity in granting aid or determination in freeing trade," and he gave the last four words of the sentence their full emphasis. The "aid" programme is not looked upon particularly favourably in America, so the alternative of greater American overseas investment, both private and public, and a greater chance of trading commercially with the dollar with the minimum barriers of tariffs, discrimination in shipping policy, buy-American legislation and the like were stressed by the British Chancellor of the Exchequer.

Not dissimilar conclusions have been reached by the Economic Commission for Europe, which in its latest publication *Economic Survey of Europe Since the War* expresses doubts whether the sterling area system can continue to function in its present form when American aid dollars cease to be available. They say the system "has done very little to relieve, and may indeed have aggravated" Britain's dollar problem, for overseas members of the area have taken full advantage of their right to draw freely on the central reserve without providing adequate dollars or dollar-saving commodities in return. Be that as it may—and there is room for differences of opinion as to that judgment—there are signs that this particular aspect of the sterling area's economic difficulties has undergone considerable change over the past twelve months. The Survey is concerned mainly with Western Europe, for Eastern Europe apparently is doing quite well under dictatorship and with a lower standard of living, and contains two useful estimates which serve to emphasise the

magnitude of the dollar gap which has to be bridged. The end of American aid with the completion of Western European rearmament plans will involve the loss of \$2,000 to \$2,500 million, while if it wants also to eliminate all discriminations against dollar imports and build up its reserves of gold and dollars to a safe level it must forgo or earn by extra effort some \$4,000 million a year. The E.C.E. economists are not overoptimistic about finding a solution, and least of all an easy one, but put forward some quite bold proposals for Western European integration, particularly in the matter of food production.

February Trade Surplus

Despite the obvious warnings in this survey, and in the whole outlook of the British Treasury at the present moment, the continued strengthening of the sterling area gold and dollar reserves will no doubt increase the fears of some and the hopes of others that some step towards convertibility may be taken in the near future. February, according to figures released this week, produced a surplus of \$125 million, following on the additions of \$132 million in January and of \$125 million in December before allowing for the year-end debt payments to America and Canada. The February figure includes \$33 million of U.S. defence aid and \$18 million arising from the January operations in the European Payments Union. Exclusion of these amounts leaves a current trading surplus of \$74 million, compared with a figure of only \$30 million arrived at on the same basis for January and of \$61 million in December. While it is likely that the earning of surpluses may be expected to continue for at least a time, there is some doubt as to whether they can hope to be quite so large, for seasonal factors in the matter of payments for wool and cocoa certainly played a part in the February total, and it is only reasonable to expect less favourable results from E.P.U. The provisional figure for February shows a surplus of £9.9 million, against the £9.2 million in January. But only £1½ million of the tranche which is settled 70 percent in gold remains, after which only 50 percent of future surpluses will be so settled. At all events, the reserves are now standing at \$2,103 million, against the low level of last April of \$1,662 million. Nevertheless, they are still a long way short of the mid-1951 total of \$3,867 million, and although the recovery has been fairly steady of late it is also comparatively slow.

New Zealand Loans

The refusal of the Treasury to permit the floating of a New Zealand loan on the London market for £4½ million to finance the building of a bridge across Auckland harbour is undoubtedly in line with the decision of the Commonwealth Conference that "development should be concentrated on projects which directly or indirectly

contribute to the improvement of the area's balance of payments with the rest of the world," even though it adds to the difficulties of our exporters, for it was the tender of two British firms which was accepted in competition with others from Germany and America. The fact must be faced, however, that there is already a long queue of Commonwealth borrowers wishing to raise money on the London market—New Zealand herself is considering a £10 million loan for her Murupara newsprint development scheme, which would undoubtedly qualify for priority—and it would be unfair to permit Auckland to get in ahead for what is a long-term project, highly desirable in itself no doubt, but which would add nothing immediately to help balance the sterling area's accounts. On the other hand, this decision illustrates the scarcity of savings in this country and the need for their expansion to cover the £300 million which is regarded as the amount we should contribute to Commonwealth development over and above the need for internal investment.

Raw Cotton Commission

The outcome of the recent discussion at the Board of Trade on the future of raw cotton supplies for the mills of Lancashire was announced by the President of the Board of Trade in the House of Commons late this week. In effect, the Hopkins Committee, representing both sides of the industry, is to be reconstituted more or less to complete the task which it began with its report a year ago suggesting a scheme under which spinners were able to "contract out" of the Raw Cotton Commission as a buying agency while still being provided with "cover" by it. At the same time, the Government has decided that cover should be made available to the industry as a whole in the 1953-54 buying season on terms broadly similar to, though not necessarily identical with, those provided this season by the Raw Cotton Commission. It seems likely that by May or June there will be many more spinners than the present one-third in the industry buying their supplies on private account, and if the number represented a majority it would make the continuation of the Commission on its present basis well-nigh impossible without the danger of incurring considerable loss. On the other hand, with the present need to conserve dollars, it would be impossible to open the Liverpool Exchange without the risk of buyers and sellers from all parts of the world taking advantage of its facilities. That is why, perhaps, a further measure of limited freedom is being considered with the cover scheme operating essentially as an insurance operation which, though it may incur loss to the Commission, may also yield a profit in certain circumstances. The Commission did in fact make a profit, taking all its operations together, in the year 1950-51. The new inquiry committee is expected to report its conclusions by June.

Wool Tops Futures Market

Wool, on the other hand, is a lot less trammelled, and it is expected that dealings will start in the Wool Tops futures market on 29th April. An announcement from the London Produce Clearing House invites parties interested in the new futures market to apply to them at 22, Bishopsgate, London F.C.2, for the rules and membership application forms. Trading will be in Plantation House, Mining Lane, but not on any of the existing market floors. As already announced, the basis of the contract is 64s. B tops ex-store Bradford, where the market will also have offices. It is expected that to facilitate arbitrage the minimum contract will be as near as possible to existing arrangements in the wool top markets of New York and Antwerp, which would mean a minimum contract of 5,000 lb. The Yorkshire trade is still divided as to the necessity for the new market, but it is understood some 70 currency permits have been granted for hedging operations in the New York and Antwerp markets. These facilities are not to be withdrawn immediately, but the London Produce Clearing House hopes that the home trade will ultimately provide the bulk of the new market's business, and it is thought that some Australian and New Zealand merchants may also wish to use it.

Retail Tea Prices

Quite a remarkable change has come over the tea trade here in recent months. It is now believed that higher retail prices are inevitable within the course of about a month. This view is engendered by the fact that accumulated stocks of cheap teas are now being exhausted and will shortly have to be replaced at the higher prices which are now prevailing. The rise is likely only in lower-priced packet teas. It is thought that the present 2s. 8d. per lb. tea will disappear, while the quality may rise by something like 4d. per lb. It is unlikely that the more expensive grades will be affected. The difference in the outlook has been occasioned, of course, by the fact that common broken pekoe, which was selling at 1s. 6½d. per lb. in mid-November is now fetching around 3s. Most of the cheap tea, which formed the bulk of the stocks, has now been consumed. Meantime, estates have more often than not reduced their output to offset the uneconomic prices which are just about meeting the demand and no more. Both wholesale and retail dealers, on the other hand, have now run through the heavy stocks they built up against de-rating—taking rather longer about this than was originally expected.

Whisky Exports

A record total of 11,520,564 proof gallons of Scotch whisky were exported last year—more than half of it to the U.S.A.—and earned Britain £23 million, an increase of almost £3½ million over 1951.

Bombay

SECOND THOUGHTS ON THE CENTRAL BUDGET

A BANKER'S WARNING ON DEFICIT FINANCING
(FROM OUR OWN CORRESPONDENT)

8th March.

AT the Annual General Meeting of the Bank of India Ltd., Sir Cowaji Jehangir, Chairman, gave the first reaction of the banking world to the Central budget and to its main feature, deficit financing. Sir Cowaji said he hoped that the optimism and confidence displayed by the stock exchanges at Bombay and Calcutta, which responded to the budget with heavy advances in the prices of more popular shares, would not prove to be misplaced. He considered this word of caution necessary because the Finance Minister had made it plain that the country was embarking on a career of deficit financing and that such a policy might continue indefinitely. If money could not be borrowed from abroad and if Indian Government loans were not adequately subscribed to, there was bound to be a new twist to the inflationary spiral. The present Finance Minister, who was known for conservative and thrifty ways, Sir Cowaji said, might not let such a policy get out of hand, but this did not mean that his successor would be equally cautious, and the limits for deficit financing laid down by the Planning Commission might be disregarded at any time in the future. He confessed that he had read about this feature of the budget with consternation and said that taking into consideration the speculative tendencies of many people in the country, he considered it necessary to give this warning. Sir Cowaji was not very optimistic about the future even though there was no new taxation, and he emphasised that it would be wise for the Bank to be cautious. He said: "We should all remember that, to a very great extent, the stability of the Bank is bound up with the credit and stability of the Government itself."

Indian Merchants' Chamber on the Budget

A statement by the Indian Merchants' Chamber has expressed satisfaction with the Central budget and observed that if the development programme outlined in the five year plan was to be completed within the specified period, deficit financing was inevitable. However, since deficit financing on the scale envisaged in the plan is likely to involve great inflationary pressure, the chamber suggested that it might be preferable to extend the period of the plan and to spread out the large-scale expansion of currency over a longer period. Instead of merely giving an assurance that the Government would keep a careful watch and apply corrective measures when necessary, it would have been better, said the statement, if the Finance Minister had given a clear indication of the steps which he proposed to take to check inflation. The Chamber welcomed the relief in income tax for the lower middle class and the lowering of the export duty on jute sacking, but suggested that similar export duty concessions should have been given to stimulate exports of certain other items. In common with others, the Chamber suggested that the proposal not to allow speculative losses to be set off against income should be dropped. The Chamber has suggested that the Taxation Enquiry Commission, besides reviewing the tax structure, should also be asked to examine the present scale of Government expenditure.

State Assets and Liabilities

Replying to the general debate on his budget in the Assembly last Thursday, Dr. Jivraj Mehta, State Finance Minister, gave an analysis of the assets and liabilities of the Government to show that the State was not heading towards bankruptcy as was suggested by some Opposition members. According to Dr. Mehta, the liabilities amounted to Rs. 120 crores, Rs. 60 crores of which represented long-term loans, Rs. 10 crores unfunded debt (most of which related to the State Provident Fund) and Rs. 46 crores representing interest-free obligations. Against these liabilities the Government held Rs. 27.52 crores in assets earning interest, Rs. 26.42 crores in a sinking fund invested in interest-bearing securities, and investments of about Rs. 5 crores in commercial and Government concerns. The total interest-earning assets amounted to Rs. 89.11 crores, while the State had to pay interest on obligations amounting to Rs. 74.21 crores. Replying to the accusation by some members that the State's Development Fund, built up during the war years, had been rapidly dwindling, Dr. Mehta said that this was bound to happen as the fund had been gradually used for the purpose for which it was intended, i.e. capital works of a productive nature.

Amendment to Income Tax Act

Forward markets in Bombay are disturbed at the proposed amendment of the Income tax Act, under which losses incurred in speculation are not to be set off against income from sources other than speculation. The Share Bazar authorities here have been the first to register their protest against this proposal and in a statement issued last week the Committee of the local exchange asked the Finance Minister either to drop this proposal or to exclude gains from speculation also from assessable income in the same manner as losses from this source. The statement goes on to say that it is wrong in principle that income from

a specific source should be included in the total income for purposes of assessment, but that losses from the same source should be excluded from consideration and not allowed to be set off against total income. It stresses that the proposed amendment will prove harmful and even dangerous to the working of stock exchanges as it would stop the flow of money into the capital market, depriving new industrial enterprises of necessary finance. While admitting the existence of the malpractice of buying up losses by speculators, it is argued that with the return of normal conditions, this practice is now on the decline and is confined to a small number of dishonest business men; therefore the proposed amendment is inopportune and excessively drastic.

Reaction to Stalin's Death

Market reaction to the first news of M. Stalin's illness was generally bearish in anticipation of an easing of tension in international affairs. This proved to be only short-lived and practically all speculative markets, including the Stock Exchange, have since been forging ahead in spite of the news of M. Stalin's death. This does not mean that this latter event is held to have bullish implications by the business community here, but it does show the force of the bullish fervour that has arisen since the Central budget was presented. Even on second thoughts and after further study, investors and speculative operators have not found anything in the budget to kill their earlier enthusiasm.

Uttar Pradesh

UNREST IN SCARCITY AREAS OF U.P.

"SECOND TELANGANA" THREAT ALLEGED
(BY A SPECIAL CORRESPONDENT).

Lucknow, 6th March.

SOON after the mass resignation of patwaris in Uttar Pradesh, primary school teachers in the State have launched a campaign for the payment of their salary arrears and the implementation of the Local Bodies Pay Committee's recommendations. The teachers, who came to Lucknow from many districts, planned to stage a hunger strike in front of Council House in batches, but the first few groups were dispersed to their homes or to hospitals by the police and the Education Minister has warned that striking teachers will be summarily dismissed. A Socialist attempt to raise the issue in the Assembly failed and resulted only in the removal by force of the Opposition leader from the House on the orders of the Speaker. The discontented teachers and patwaris, according to some observers, are bound to constitute a disturbing element in the countryside and reports have been prominently published of attempts to stage something like a "second Telangana" in certain scarcity areas of the State. It is stated that the core of the agitation is the Krishak Raksha party whose membership includes a large number of ex-P. R. D. men and demobilised soldiers. The Home Minister, Mr. Sampurnanand, made a reference to this situation in the Assembly when he charged the Opposition with contributing to insecurity in the State. He said: "People are being instigated to cut standing crops in fields owned by higher castes and to seize their holdings. In an attempt to create 'mass consciousness' hundreds of people are travelling without tickets."

Burdens on U.P. Industry

The president of the U.P. Merchants' Chamber, Mr. Purushottamdas Singhania, has in the course of a statement generally welcomed the U.P. Budget for 1953-54 but expressed his doubts about the wisdom of further raising the sales tax at a time when consumer resistance is stiffening. "We still

indulge in thinking," he says, "in terms of being capable of bringing in additional revenues from a buyers' market....." Mr. G. E. Longdin, in his presidential address to the 66th Annual General Meeting of the Upper India Chamber of Commerce, Kanpur, made special reference to the state of industry in Uttar Pradesh when he said, "Dearness allowance in Kanpur is among the highest in India and contributions under the Provident Fund Scheme are related to consolidated wages which include dearness allowance. In addition to these and other disadvantages the State Government have recently seen fit to impose a duty at the rate of up to 25 percent on electricity consumed within the State. The full effect of all these increases on manufacturing costs at a time when industry is re-entering a period of increasingly fierce competition has still to make itself felt. It may be that the burden imposed already on industry in this State is greater than it can bear with safety."

Government Housing Loan

The Home Minister, Mr. Sampurnanand, who is also in charge of labour, has disclosed that a week ago the Centre agreed to give the State Government a sum of Rs. 1.35 crores, part loan and part grant, for the construction of workers' houses. A few hours after he made this announcement in the Assembly, he received news of another allotment by the Centre of Rs. 95 lakhs. These sums will be spent mostly on housing for Kanpur labour but will also be available for other industrial towns like Agra and Ferozabad. He expressed satisfaction with the work already done in Kanpur with an earlier allotment of Rs. 75 lakhs and said that the houses built from this allotment will be ready by the end of this month.

Prohibition Enquiry

The U.P. Government have decided to hold an inquiry into the working of prohibition in the "dry" districts of the State. The Excise Department has accordingly issued a questionnaire to survey the position by random sampling and two persons per thousand will be asked for their reactions. It is also proposed to collect replies from addicts who are being asked to make suggestions of their own if, in their opinion, the present scheme is unsatisfactory.

Stud Ram Centre

A Stud Ram centre to supply rams for breeding purposes to shepherds in the hill districts of Uttar Pradesh will soon be opened at Rishikesh. This was announced by Sri Chaudhari Charan Singh, the Minister for Agriculture and Animal Husbandry U.P., at a sheep show recently held in Rishikesh. He said that 250 stud rams would be kept at the Rishikesh centre for distribution to shepherds. Arrangements are being made to buy stud rams of suitable breeds from overseas and from other areas in India.

It has also been announced that the Government of U.P. has sanctioned a scheme to develop the woollen industry in the district of Almora. Under this scheme six spinning centres will be opened at important towns in the district. These will be in addition to the two training centres which are producing woollen fabrics.

"Tractor-Elephant"

Tractors pulled by elephants have ceased to be a novelty in Uttar Pradesh, but the Government have declared that they do not plan to go on using elephants for this purpose. According to official statistics, a "tractor-elephant" costs Rs. 10 a day and on an average an elephant doing two hours work could break about an acre of new land.

Rationing and Supply Staff

From July this year rationing and supply staffs in the districts will, it is announced, be partially disbanded as they have become virtually unemployed since the relaxation of controls.

STRUCTURAL *
STEEL WORK

The Steel-framed superstructure for the new Cossipore Generating Station covers a total plan area of approximately 57,000 sq. ft., made up of a bunker bay 24 ft. wide, a boiler house bay 57 ft. wide, a pump and auxiliary bay 23 ft. wide, and a turbine house bay 63 ft. 6 inches wide, all being 330 ft. long.

Ceylon

INFLATIONARY FINANCE IN CEYLON

FOOD SUBSIDIES CRITICISED
(FROM OUR OWN CORRESPONDENT).

Colombo, By Air Mail.

AN issue of treasury bills up to a maximum of Rs. 100 million over and above the Rs. 100 million which the law now permits the State to borrow against treasury bills is contemplated by the Ceylon Government to meet the financial crisis with which it is faced. The amount already outstanding on treasury bills is about Rs. 100 million. In addition the Government has borrowed approximately Rs. 92 million from the Central Bank of Ceylon under the provisions of the Monetary Law Act. The Government has had to pay out large sums for rice at enhanced rates and also (as the sole exporter of sheet rubber to China under the trade agreement) for sheet rubber which is obtained direct from producers and from shippers.

These expenses, not anticipated when the budget was prepared last year, have placed the Government in a precarious financial position. One useful step to increase revenue has been reduction in the price of arrack to encourage consumption, which is expected to bring in an extra Rs. 10 million. But a reduction in expenditure will have to be made. There is the food subsidy scheme for which the Government has set aside Rs. 160 million and on which it will probably spend much more before the financial year is out. The scheme has proved a boon to the people as it enables rationed rice (one measure a week per person) to be purchased at 25 cents per measure, whereas in the open market the price is over Re. 1 per measure.

The continuance of food subsidies at a time of financial stringency has been condemned repeatedly by the Central Bank and the idea is gaining ground that if the Government were to reduce this burden, the saving could be put to better use in other directions. Expenditure on development schemes—the foundation of the Island's economic freedom—cannot be reduced, but official circles think that funds set aside for this purpose could be better utilised if there was more effective supervision. There are also the social service schemes, but it is felt that except in extreme circumstances these should be left alone. Methods of increasing revenue include higher taxation, described by a Cabinet Minister as "killing the goose that lays the golden eggs," and higher import tariffs on luxury and semi-luxury items. The budget will have to be pruned again, and expenditure on every non-essential item, it is felt, should be drastically curtailed. The question of reducing the food subsidy, it is learned, is being considered by the Cabinet.

Tea Propaganda

The joint tea promotion campaign in the United States which delegates from Ceylon, India and Indonesia agreed to at the New York conference summoned by American tea interests, has not yet been ratified by the Ceylon Government. There have been a number of top level conferences, however, and at the time of writing the Prime Minister is considering a memorandum submitted to him by the Minister of Commerce and Trade. It is confidently expected in the city that the Government will ratify the agreement. India's ready acceptance of the joint propaganda proposals is considered here to be an indication of her willingness to co-operate with Ceylon and Indonesia in tea propaganda generally and it is hoped that a joint scheme will be agreed to by the producer countries to cover the United Kingdom and other important tea consuming countries. Ceylon will now have a controlling interest in the International Tea Market. The tea promotion in the United Kingdom particularly. For this purpose the services of world tea propaganda for the last 18 years, have been secured by the Ceylon Tea Propaganda Board. He came to Ceylon in mid-February and spent a week in discussions with the authorities and helped draw up plans which, it is hoped, will be ready by the end of March. Mr. Huxley is Vice-Chairman of the International Tea Market Expansion Board and was Chief Commissioner of the Ceylon Tea Propaganda Board as far back as 1933.

Copra Central Sales Room

The reopening of the Central Sales Room for copra has been under discussion. Members of the Ceylon Coconut Board and the Low Country Producers Association who are seeking its re-establishment have met the Minister of Commerce and Trade to give him their views, as did certain persons who are vigorously opposed to the move. A few days later the Minister expressed his disapproval of central sales in a communication to the Ceylon Coconut Board. He indicated however that he had no objection to the setting up of a voluntary sales room. Voluntary sales have been ruled out by both the L.C.P.A. and the Coconut Board as impracticable. The L.C.P.A. has since reiterated its earlier view that a central sales room for copra was essential for the future well being of the coconut industry.

The recent review of the import policy by the Government of India for the period January-June 1953 has resulted in an increase of quota percentages for certain items. In consequence, established importers who obtained their quota licences for such items in accordance with the original provisions may, it is understood, now apply for an additional licence for the balance value for which they have become eligible. Those who have not yet received their licences are advised to submit only the Treasury Receipt for the extra import licence will be issued to them. On their doing so, the for which no quotas were announced originally, importers are asked to apply in the prescribed form and manner to the licensing authorities not later than 15th April, 1953.

CONFLICTING ECONOMIC TENDENCIES AT WORK IN ASIA

PROGRESS WITH DEVELOPMENT PLANS IN 1952

STRONGLY conflicting tendencies have marked economic developments in the Asian region during the last year. Production has continued to increase, although the per capita volume has remained below the pre-war level. Raw material production has expanded and industrial production has benefited from the supply of new equipment. However, the advance was uneven and there were signs of a slowing down of the pace in India and Japan. Foreign trade has been adversely affected by a decline in demand, and the drop in export prices has made deep inroads into export earnings.

One of the outstanding facts brought into focus by the Economic Survey of Asia and the Far East for 1952, published as background to the recent series of conferences at Bandung, is the sharp worsening in the terms of trade of all but the rice-producing countries. Progress in production has thus failed to bring about a corresponding increase in real income. The decline in export incomes has affected purchasing power, which has not kept pace with the increase in home supplies. Inflationary pressures have been greatly neutralised and have finally given way to a tendency for prices to weaken. A general turn towards deflation is now noticeable in most Asian countries.

It is not without interest and value to examine the situation in greater detail, and the introduction to the Survey provides a useful summary. On the one hand, it gives ample evidence of an advance in the physical volume of production if one takes the region as a whole. Output of food-stuffs was somewhat higher in 1951-52 than in the preceding year, in spite of the 1951 drought in important areas in India, and there is reason to believe that this increase will continue in 1952-53 under the stimulus of higher prices and of intensified development in the field of food production. Similarly, the production of raw materials has expanded, though there has been an incipient decline in the case of a few commodities (particularly rubber). Industrial expansion made headway, helped by the provision of new equipment and by more ample supplies of basic materials. True, this advance was uneven and there were signs of a slowing down of the pace in two of the main centres of manufacturing (Japan and India). Yet, as far as physical output is concerned, on balance the factors making for growth have predominated. They were supported by the continuing inflow of foreign aid funds and loans and by technical assistance.

Fall in Export Prices

On the other hand, depressive influences originating in foreign trade have had a retarding effect more recently. Since the spring of 1951 there has been a decline in demand for the principal export commodities of most countries of the region. The consequent drop in export prices (which on the whole was more significant than the fall in the volume of exports) made deep inroads into export earnings and introduced a contractionist element of varying strength into the economy of many countries. Two main developments converged to bring about this crisis in exports. The one was the collapse of the raw material boom of 1950-51, the other the world wide inventory cycle which affected the primary producers of the area (except the rice exporters) as well as the industrial countries. The mainland of China, however, was not exposed to this disturbance in international markets and there has been a large expansion of economic activity in that country.

Owing chiefly to the setback in exports, the increase in physical output was unevenly distributed among countries and in some countries was not associated with a corresponding increase in real income. One of the outstanding facts in the period under review was the sharp worsening in the terms of trade of all but the rice exporting countries. In consequence, the region's productive effort for export now gives a much lower return in terms of imported goods and services than the same effort gave a year or two ago. This change was part of the process of adjustment from the abnormal Korean war boom, but it is worth noting that in some countries the terms of trade in mid-1952 dropped below the pre-Korean war level. Countries that depend heavily both on raw material exports and on food imports have suffered the greatest loss because of the scissor movement of falling prices of exports and rising prices of imports. In some of these countries real income has fallen, although the physical volume of production has been well maintained or has expanded.

Bigger Supplies in Home Markets

The fall of export receipts has affected the relationship between supply and demand in domestic markets of the region. During 1951, and for the greater part of 1952, industries serving home markets generally turned out more goods, and in some cases there has also been an increase in the volume of imports, at least during part of the period. Home supplies therefore generally expanded. But as money income from exports declined, buying power did not keep pace with the increase in home supplies. The liquidation of commodity stocks, which occurred when prices and price

expectations took a downward turn in international markets, accentuated this change, particularly in India where, moreover, monetary policy acted strongly as a check in investment in inventories. In consequence, and as a result also of other influences, inflationary pressures were gradually neutralised and finally gave way to a tendency for prices to weaken. Thus there was a general turn towards deflation, except in the war areas and in the rice surplus countries. It is true that the dividing line between inflation and deflation became rather blurred by strong sectional price increases, especially in the food deficit countries where import prices have risen. Yet this very increase in import prices relative to money income has tended to reduce effective demand, except to the extent that subsidies were paid to offset the higher cost of imports.

Two financial aspects of the recent developments are worth noting. One is the loss in revenues which governments have begun to suffer since the export boom collapsed. In spite of the efforts of governments to tap new sources of income and to prune expenditures (other than on defence and development) the tendency in many countries of the region has been for revenues to fall faster than could be made up by such counter measures. At the same time there has been a decline in foreign exchange reserves, and in some cases gains in reserves, which were made during the boom, have been practically wiped out. These changes were very rapid, and testify to the great instability which has characterised the payment position of the region, particularly of countries heavily dependent on the export of a few commodities. The vulnerability of these countries to international economic disturbances is, of course, an aspect of under-development, but even Japan is now faced with a problem of re-development—or, at any rate, with a large problem of industrial adjustment—in view of the fact that a high proportion of its exports (textiles and other light goods) is no longer in the main stream of international demand.

Difficulties in Financing Imports

On account of the trade recession, the financing of imports has again become an acute problem. From the outbreak of the Korean war until well into 1951 the limits on importation had been mainly physical. Most primary producing countries had rapidly gained foreign exchange, a large part of which they could usefully have spent on goods essential to economic development. In some cases, they found that these goods were difficult to obtain; in other cases, development plans were not ready, and there were deficiencies in economic organisation which put a relatively low ceiling on what they could absorb. In any event, foreign exchange was not then the most important limiting factor. The situation has now changed with the decline in export earnings, and what calls for emphasis is that at least a part of this decline has been due to factors which are likely to have a certain degree of permanency. For one thing, the decline reflects to no small extent the subsiding of the abnormal demands which during the Korean war boom had pushed raw material prices to quite untenable levels. At the peak prices were far beyond anything needed to induce expansion.

Perhaps equally important has been the gradual growth in the world supply of raw materials, a factor which may assume increasing significance in the future as a restraint on prices. It will be recalled that after the war the world was confronted with an acute shortage of food and raw materials. While world manufacturing had expanded (because of the increase in U.S. industrial production), the output of primary products had lagged, partly because of the destructive effects of the war and partly because of the virtual cessation during the thirties of foreign investment in primary producing countries. As a result, the prices of most primary products had risen in terms of manufactures, if one compares, say, the second half of the forties with an average for the thirties. Now in recent years there has been an increasing number of commodities, notably industrial materials, where the output-stimulating effect of high prices has begun to make itself felt. By 1951, when demand took a sudden turn downwards, the world supply of raw materials had increased quite substantially. It had increased partly through the development of new or substitute materials in industrial countries, a phenomenon of long standing, but of particular importance to various producers in the ECAFE region to whom it meant a reduction in the demand for their products. The price decline in international markets since 1951 does not seem to have arrested this tendency. There is some evidence of a change in the composition of primary production, with expansion continuing in the case of many commodities—not only food—the prices of which are still attractive to producing countries. Moreover, the present supply potential for some commodities is larger than output.

External Finance the Limiting Factor

In the raw material boom of 1950-51 it was prices more than sales volume that pushed up the export receipts of the countries of the region. The benefits from these price gains were rather dubious the rocketing of prices, followed as it was by an almost equally rapid decline, became a source of instability which did much damage, though in the case of at least one commodity (tin) recent agreements have introduced an element of stability. Signs have appeared towards the end of 1952 that the inventory cycle which was started off by the Korean war has worked itself out, and it seems that consumer purchases and industrial demands are now more closely related to current requirements than they were during the boom and in the period of inventory liquidation that followed. World industry, which earlier in the year had suffered a check, particularly in the consumption trades, is expanding again, and if the upturn in United States production and imports continues, a new general advance may follow. Primary producing countries, as a group, will gain from this expansion, but it may well be that the price-restraining influences mentioned above will confine these gains within narrower limits than in the recent past. In the meantime import requirements of the developing countries are growing, and they are likely to press heavily against availabilities of foreign exchange. The implication is that consumption and development will compete strongly for import-finance, whereas in the past, for a short period, competition was mainly for what was physically available. In the one case, as in the other, the problem is one of deciding between different claims on resources; but the size of the foreign exchange reserves and of current export earnings becomes an especially important element in the decision when external finance is the limiting factor. The allocation of expenditures on imports, therefore, is crucial in development planning.

IMPROVED MARKETING OF
OILSEEDS

THE multiplication and distribution of improved varieties of mustard in Assam and of groundnut, castor and til in Mysore are among the new schemes which will be discussed at the sixth annual general meeting of the Indian Central Oilseeds Committee to be held in New Delhi on 14th March, 1953. The draft five year plan of the Committee for the production of oilseeds, development of the village oil-crushing industry and improvement of marketing of oilseeds and oils will also be discussed. After considering the State Governments' comments, the Committee will finalise the plan.

Schemes for research on the tung-oil tree in the Kangra Hills of the East Punjab and on the physiology and cytology of groundnuts in Madras are also on the agenda of the meeting. The Committee will consider a number of schemes for technological research on oilseeds and oils, including an investigation on the reclamation of rancid food fats at the University College of Science and Technology, Calcutta, and the effects of different kinds of storage of oilseeds and oils, received from the various State Governments and research institutions.

The Committee will examine reports on the schemes sanctioned by it for the development of the village oil-crushing industry and will consider various suggestions for solving the industry's present difficulties, such as the reduction or abolition of export duties on oilseeds and oils, allotment of quotas for the export of groundnut and castor cakes, better facilities for the movement of oilseeds and oils by rail and exemption of edible oils from the purview of sales tax.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (with the year ended August 1939 as 100) witnessed a further rise of 0.3 percent to 361.7 during the week ended 21st February, 1953. The index was also higher by 1.1 percent compared to the corresponding week of last month but was 6.3 percent lower than that of a year ago. During the week under review, Foodstuffs advanced by 0.3 percent to 361.0 as a result of higher prices of gram (+7%), wheat at Jabalpur (+4%), tea (+6%), gur at Ahmednagar (+3%), coffee and salt (+2% each). Prices of rice at Patna (-5%) and gur at Muzaffarnagar (-6%), however, moved down. Industrial Raw Materials also recorded a further rise of 1.4 percent to 443.9 because of increases in the prices of raw cotton, raw silk and copra (+3% each), castorseed (+10%), linseed (+6%), raw wool (+2%), wet salted buffalo hides at Kanpur, groundnuts and gingellyseed (+4% each) in spite of lower prices of manganese ore (-16%), wet salted cow hides (-6%) at Kanpur and lac (-4%).

The index for Semi-Manufactures, however, declined by 0.5 percent to 346.2 during the week under review. Items which registered significant variations were: Timber (-19%), gingelly oil (+7%), coconut cake (+6%), groundnut oil (+5%), zinc (-3%), tanned sheep skins, coconut oil, linseed oil and gingelly cake (+3% each), cotton yarn (-2%) at Bangalore, tanned buffalo hides and tanned goat skins (+2% each). The Manufactures group moved up by 0.3 percent to 368.5 as a result of advances in Jute manufactures and dyestuffs (+1% each) and tafetta koro art silk fabric (+3%). The index for the Miscellaneous group, on the other hand, showed a fall of 2.5 percent to 586.8 because of lower prices of cashewnuts (-14%), tobacco-leaf (-6%), black pepper in Calcutta, chilies, bricks and tiles (-2% each). Black pepper at Cochin and turmeric (+7%

each) and betelnuts (+6%), however, advanced during the week under review.

SACKING PRICES FALL, STOCKS RISE
DESPITE DUTY CUT

THE trend of the market in heavy sacking since the reduction of the export duty must have disappointed those who expected that the lowering of the cost to foreign buyers would produce an immediate revival of demand. It is probable that those who have the higher direction of policy were not in that category, and that they realised that time must elapse before the effects, if any, of the reduction become apparent. On the other hand, the speculative element, who have such a powerful influence in Calcutta markets, when they found that there was no quick response from abroad, decided that it was a good time to do some bear selling and so, in spite of some evidence of a broadening of interest in markets overseas, quotations are lower than they were before the budget. Another factor which has influenced local operators is the further increase in the stocks of heavy sacking during February. That was, of course, to be expected and should not have been treated as a bear factor for it was natural that exporters would delay shipment of goods when it was confidently expected that the export duty would be reduced. It is now reported that shipping instructions are coming in greater volume.

These circumstances have, of course, little bearing on the real problem which is to discover whether the lack of demand for heavy sacking is due to price or to other factors. It is generally believed that users of sacking bought large stocks at high prices when, because of controls, quotas and other restrictions, there was a fear that they might not be able to obtain supplies when they required them. These stocks must now have been considerably reduced and their influence on the buying policy of consumers must have dwindled if it has not altogether been eliminated. With the export duty as a factor in the price reduced to a level where no further reduction can be expected, and the overstocking factor becoming less and less important, it should soon be possible to determine the extent to which price or other circumstances are the main influence on demand.

The principal use of heavy sacking is in the movement of agricultural produce. Crops in the past year have, with some exceptions, been reported to be larger than those of the previous year and wool clips have also been bigger. It would be reasonable, therefore, to look for an increase in the demand for sacking, but there is no sign of it. One reason may be that there is possibly less international trade in grain. In a recent issue we pointed out, for instance, that before the war Burma used to export over three million tons of rice while last year she exported only 1.1 million tons. India has been a large importer of wheat and maize but is making strenuous efforts to do without imports by increasing internal production. Other countries are also trying to increase their home production of food-grains and, though bags may be needed for the internal trade in grain, the reduction of the international trade means reduced use of jute bags.

Bulk handling is one of the chief competitors of jute bags but there have been no recent reports of any large increase in these facilities so that may be disregarded as a reason for the present lack of demand for sacking.

Another factor which must be considered is alternative sources of supply. Bag factories are now in operation in Cuba, the Philippines, and Africa using jute or local fibres. Though these are small their influence is cumulative and is likely to grow.

Then, again, as we have pointed out in these columns before, the main Far Eastern markets are in a state of political and financial chaos so that, even if they need bags, it is not easy for them to buy. Crops in these countries are also in some cases smaller because of the unsettled conditions and their need for bags is less.

Taking all these factors into consideration it would appear that heavy sacking is being produced in excess of consumption and that price is not the factor which is determining the demand. Whether this is a temporary condition which will be relieved when conditions become more settled is a matter for conjecture; that is a long-term question and the present problem is whether any steps should be taken now to adjust supply to demand.

THE JUTE MARKETS

Manufactured Goods: As far as the Indian mills are concerned, the only encouraging result of the reduction of the export duty on sacking so far has been the increase in shipping instructions to mills over the past week. This was only to be expected, however, as shippers were naturally holding back their goods to take advantage of the anticipated reduction. It is reported from mills in general that shippings for the first ten days in March are in some cases better than the individual totals of the first two months of the year. This may have far-reaching effects on the finished goods market, and may help to instil some life into it. It will help to reduce the present abnormally large stocks which have been accumulating over the past three months in mills' godowns, and thus give the market a boost, as invariably reports that mills' stocks have increased have a detrimental effect on prices.

Continental manufacturers did not greet the recent reduction of the export duty enthusiastically as this has greatly reduced the price advantage they formerly held over Indian mills. In spite of this they were able to underquote Calcutta rates, and it is reported from America that preference has been given to Continental manufacturers as they have been quoting below the Indian rates. However, the volume of business transacted with overseas consumers has not been large, and it is mainly because of this that rates in the Calcutta goods market have slumped over the past few days. This has been most pronounced in the sacking section, which does not seem to have derived any benefit by the relief in export duty. It has been losing ground daily, except for a short time near the week-end, when speculative activity and local covering coupled with Marshal Stalin's death afforded temporarily steady conditions. Overseas buyers appear to be waiting for even lower prices for sacking manufactures, but it is not likely that Indian manufacturers will quote less for these standard constructions because heavy losses have been experienced lately at present-day levels. It is reported that mills are very poorly sold for their forward positions and the possibility of such transactions at a profit is very remote.

Hessian goods have had mixed fortunes over the week and business has been concluded with America, but here again Continental mills have been underquoting Calcutta by 2 to 3 percent. Business therefore has not been as brisk as it might have been. Over the week hessian rates have dropped about Re. 1-4, and towards the close it looked as if the drop would continue since overseas demand was practically negligible.

At the opening of the goods markets last Thursday heavy losses were recorded in all sections because of very poor foreign interest and lack of local demand. Hessians suddenly dropped 8 annas, and 40" 10 oz. Hessians opened at Rs. 42-10 per 100 yds. which was the quotation at the beginning of the New

Year. Heavy goods fell away by Rs. 1-10 in plain heavy Cees which were quoted at Rs. 93-6 per 100 bags, and Rs. 1-14 in B Twills which ruled at Rs. 93 per 100 bags, these quotations being Rs. 4 per 100 bags lower than on 2nd January. On Friday the fall continued and another 6 annas came off Hessians and B Twills, whilst plain heavy Cees dropped 2 annas. Towards evening there was a temporary revival because of overseas enquiries, local covering in B Twills and speculative activity on Marshal Stalin's death. Previous losses were made up, but the markets opened on Saturday morning slightly lower than Friday's highest rates. 40" 10 oz. Hessians had recovered 6 annas of the Re. 1 drop over the two days and were quoted at the opening at Rs. 42-8 per 100 yards, whilst plain heavy Cees were up by 12 annas to Rs. 94-4 per 100 bags. The biggest improvement was in B Twills, which jumped Rs. 1-4 to be quoted at Rs. 93-12 per 100 yards. There was very little change in these figures over the week-end and in Hessians the advance was held. There was no change in the opening quotations on Monday morning, although a quieter tendency prevailed following small business with Britain and America. Heavy goods were not so consistent and with the lack of interest at home and abroad quotations for both plain heavy Cees and B Twills dropped 4 annas. On Tuesday it was the turn of the hessian section to show weakness and 10" 10 oz. fell by 10 annas to Rs. 41-14 per 100 yds, whilst plain heavy Cees and B Twills both dropped by 8 annas to Rs. 93-8 and Rs. 93 per 100 bags.

At the close the undertone of the market is slightly better as official stock figures for February indicate that the increase in mills' stocks has not been as large as the bazaar made out, and there was very little change in opening quotations on Wednesday morning which were as follows:—

	March	April-June	July-Sept.	F.A.S.-F.O.R.
40" 8 oz.	Rs. 33-12	33-10	33-10	
40" 10 oz.	Rs. 41-14	41-14	42	
Heavy Cees	Rs. 93-8	94-8	94-8	
B Twills	Rs. 92-14	92-12	94-4	
Cornacks	Rs. 97-12	97-12	97-4	

Raw Jute: There has been no improvement of conditions in the raw jute market over the last week, and a general downward tendency in quotations has been noted, with one or two mills forcing prices down still further by continual indications at well below the market rates. Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Sacks
made from
Tubular Cloth

WARP STOP MOTION.—Immediately a warp thread breaks the individual compensator is pulled upwards by the action of its spring and brought into contact with the control bar, automatically stopping the loom.

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
LEEDS, ENGLAND.

In a weak state the majority of mills do not need to purchase jute, and the business has been more or less confined to one or two buyers. The death of Marshal Stalin at the end of last week was an opportunity for speculators to swing the market, which they did to no little effect, and in common with other sections of the trade raw jute rates sagged and quieter conditions prevailed. Before Marshal Stalin's death the market was rife with rumour. The finished goods market responded with its usual alacrity, and rates were depressed, these conditions being faithfully reproduced in raw jute prices. The rumour that has persisted all week and which has caused the market, especially the Pakistan section, to be inactive is the reported possible withdrawal of the licensing fee on the shipment of Pakistan jute to India. Although this is a distinct possibility, it is rather premature to regard as a foregone conclusion, and in some quarters is regarded as a foregone conclusion, and in some quarters is regarded as a foregone conclusion, and in some quarters is regarded as a foregone conclusion.

The week opened on Thursday last with jute rates showing a drop of 8 annas, Ordinary Assam jute being quoted at Rs. 22 per md. basis Bottoms for March-April shipment. The rumour that has persisted all week and which has caused the market, especially the Pakistan section, to be inactive is the reported possible withdrawal of the licensing fee on the shipment of Pakistan jute to India. Although this is a distinct possibility, it is rather premature to regard as a foregone conclusion, and in some quarters is regarded as a foregone conclusion, and in some quarters is regarded as a foregone conclusion.

During the week a fair amount of business was transacted and the following sales were reported:—

Pakistan Jute:
Pakistan Jat Jute:—Rs. 25-8 per md. basis Bottoms for March-April shipment.
Pakistan District:—Rs. 21-8 per md. basis Bottoms for March-April shipment.

Indian Jute:
Dhubri:—Rs. 20 to 21 per md. basis Bottoms for one month's shipment.
Assam:—Rs. 24 to 25 per md. for Middles only for ready bills of lading and one month's shipment.
Rs. 19 to 21-8 per md. basis Bottoms for one month's shipment.
Rs. 20 to 21 per md. basis Bottoms for ready bills of lading.
Kasba Tossa:—Rs. 23-8 per md. for Middles only for March-April shipment.
Karimnagar Tossa:—Rs. 21-8 per md. basis Bottoms for one month's shipment.
Bongalor Tossa:—Rs. 20 and 20-8 per md. basis Bottoms for one month's shipment.
Murshidabad Tossa:—Rs. 22 for Middles only for March-April shipment.
Rs. 19 per md. basis Bottoms for one month's shipment.
Sahibganj:—Rs. 19-8 for Bottoms and Rs. 17-8 for B Bottoms for ready delivery.
Local:—Rs. 17-8 per md. for X Bottoms guaranteed free from jungle for one month's delivery.
Jungli Jute:—Rs. 14-8 to 15 for X Bottoms for one month's delivery.
Daisee:—Rs. 20-8 to 21-8 per md. basis Bottoms for one month's delivery.
Bimbi:—Rs. 14-8 to 15-8 per md. for F.A.Q. for March shipment.
N. C. Cuttings:—Rs. 65 to 67 per bale for one month's shipment.
Northern Cuttings:—Rs. 65 to 67 per bale for one month's shipment.
Mesta Cuttings:—Rs. 58 per bale for ready delivery.

At the close the market is unchanged but business is going on at below the quoted rates. Opening quotations on Wednesday morning were as follows:—

	March-April:	Landed at Mill:
Jat	25-8	per md. basis Bottoms
District	21-8	"
Northern	24-8	"
Indian Jute:		
Lower Assam	21	"
Upper Assam	20	"
Northern Bengal	21	"
Murshidabad White	18	"
Bihar	17-8	"
Daisee	21-8	"
Bimbi	15	per md. for F.A.Q.
Mill Reds	160	per bale
Mill Firsts	130	"
Mill Lightnings	120	"
Mill Hearts	110	"
Dundee Daisee (Short Group)	130	"
Dundee Daisee (Long Group)	120	"
Pakistan Cuttings	63	"
Indian Cuttings	60	"

Tossa is quoted at Rs. 1 to Rs. 2 per maund above the rates for white jute.

Nofussil: Conditions in the upcountry markets in India are far from satisfactory, and great concern is being shown by sellers and growers alike at the depressed state of the market. Sellers are holding very large stocks which they have been accumulating over the past few months and which were all purchased at very much higher rates than those ruling today. If present conditions continue it is certain that very heavy losses will be sustained. Cultivators are taking a very close interest in the present situation and it is likely that there will be a very large drop in next year's acreage unless a big improvement in the next few weeks prevents growers from turning to more remunerative crops. The present low prices may have very far-reaching effects, and many cause an upheaval of prices at this time next year if there is a scarcity of jute because of reduced sowings this year. There is practically no business going on at the present moment and imports are negligible. Quotations are slightly lower than last week but in the absence of any business they can be regarded as nominal. Dhubri is quoted

locally at Rs. 18 per maund basis Bottoms with ordinary Assam and Northern Bengal jute at a discount of Re. 1 per maund, but these prices are well above the parity of the rates quoted to Calcutta mills. In the local Cossipore market a trickle of wagons is coming into the sidings as the withdrawal of the suspension of booking begins to take effect. The jute arriving is mainly of low quality, enough of which is already available in overcrowded godowns and for which there is little or no demand. Quotations have fallen by about Rs. 2 per maund over the week due to the lack of business and selling pressure on behalf of stockists, and Kishengunge jute is quoted at Rs. 20 per maund for garsat quality.

In Pakistan the markets are quiet because of a lack of interest for all grades and districts of jute and over the week prices have come down by about 8 annas. Very little business has been transacted for loose jute, but inter-baler dealings are still going on at varying rates. Imports into Narayanganj have dropped to about 15,000 maunds per day, of which, about 40 percent is tossa, for which premium prices are still being paid. Latest quotations in Narayanganj (in Pakistani rupees) are as follows:—Jat Bales' Bottoms (white)—Rs. 14 per md. Tossa—Rs. 17 per md. District Bottoms (white)—Rs. 13 per maund, Tossa—Rs. 16-8 per md.

Stocks of Manufactured Goods
Stocks of manufactured goods held by mills reporting to the I.J.M.A. at the end of February 1953 showed an increase of 7,900 tons over the preceding month. Total stocks amounted to 1,36,300 tons, of which 38,600 tons or 28.3 percent were hessians, 93,300 tons or 68.9 percent sacking and 2,400 tons miscellaneous manufactures. Hessian stocks have increased by 1,400 tons, sacking stocks by 8,800 tons whilst miscellaneous manufactures have shown a small drop of 300 tons. This increase in the stock position was not unexpected and was almost entirely because overseas buyers held up shipment of their goods until the budget. The distribution of hessian sacking has shown very little alteration, sacking having increased by less than 1 percent, with a corresponding decrease of hessian goods. Total stocks held a year ago, in February 1952, amounted to 1,05,100 tons, of which 43,300 tons or 41.2 percent were hessians, 60,200 tons or 57.3 percent sacking and 1,600 tons miscellaneous manufactures.

PAKISTAN CROP PROGRESS REPORT

In their first crop report for the current season which covers the week ended 7th March, Messrs. Sinclair Murray (Pakistan) Ltd. say that there has been rainfall and ploughing of lowlands and midlands is progressing. More rain is now required to enable cultivators to continue work for this time of the year. It is reported that the Government is issuing licences strictly in accordance with their programme of reduced sowings. According to first reports the crop this year will not be more than -8/- as against -16/- last season.

NARAYANGANJ:—Weather has been favourable with timely rainfall. Sowings have commenced and preparation of both low and midlands will soon be completed. Sowings to date amount to -7/3 as compared to -7/6 at this time last year. The river level is about the same as last year.

DACC:—The weather has been mainly dry, except for a few favourable showers of rain. Ploughing of lowlands is nearing completion and is going on in the midlands. Sowings to date have been negligible and more rain is now required. The river level is about the same as last year at this time.

CHANDPUR:—Weather has mainly been favourable and cultivators have been able to prepare their land. Sowings to date amount to -7/6, as compared to -7/1 at this time last year. The river level is about the same as last year at this time.

HAJIGANJ:—Report not yet received.
AKHURA:—The weather has been favourable with alternate rain and sunshine, which has enabled the cultivator to commence sowings in the lowlands. Ploughing has been completed in the lowlands and midlands. Sowings to date amount to -7/6 as compared with last year's sowings of -7/3. The river level is normal for this time of the year.

ASHUGANJ:—The weather has been favourable and ploughing has been carried out in the lowlands. Sowings have not yet commenced. The river level is about 1" higher than last year at this time.

NIKLIDAMPARA:—Favourable weather has been experienced and preparation of the lowlands and midlands has been completed. Further rainfall is required before sowings can be commenced. The river level is normal for this time of the year.

SARISHABARI:—Weather has been very favourable and ploughing has started in the low and midlands. Sowings have not yet commenced. The river is 2" higher than last year at this time.

SERAJGANJ:—Good rainfall has been experienced and ploughing of the lowland area has been more or less completed. Sowings up to date are nil. The river is rising and is about normal for this time of the year.

NAKALIA:—The weather was hot and dry with good rainfall. Preparation of the land is going on and sowings have commenced on some lowland areas. The river level is steady and is about the same as last year at this time.

BHANGORA:—The weather has been favourable with good showers of rain, and ploughing and preparation of land is being carried on. About -7/3 sowings have been sown on the lowlands up to now. The river level is steady and is about 1" higher than on the corresponding date last year.

JUTE IMPROVEMENT COMMITTEE MEMBERS

The chairman of the committee set up by the Government of India to suggest measures to improve the quality of jute grown in this country will be Mr. K. R. Damsle, President of the Indian Central Jute Committee and Additional Secretary to the Ministry of Food and Agriculture. The following will be its members: Mr. I. G. Kennedy, Nandi, Director of the I.C.J.C., Calcutta; Dr. H. K. J. S. Patel, Director of Agriculture, West Bengal; Dr. B. C. Kundu, Director of Agriculture, Bihar; and Agricultural Research Institute, Calcutta. Mr. K. C. Basak, Director of Economic Research, I.C.J.C., will be member-secretary.

I.J.M.A. FEBRUARY PRODUCTION FIGURES

The Indian Jute Mills Association announces that the total reported production of manufactured goods in February 1953 exclusive of all government order is as follows:—

Description	Quantity
1. Twist and Yarn	
(a) For sale	1,152 Tons
(b) All other including that used in sewing	708 "
2. Canvas	119 "
3. Gunny Bags (Tonnage exclude sewing twist)	2.9 lakh yds.
(a) Hessian	1,037 Tons
	41.5 lakh yds.
(b) Sacking	250 " Nos.
	35,061 Tons
	859.0 lakh yds.
	357.0 " Nos.
4. Gunny Cloth	
(a) Hessian	25,899 Tons
	1,057.5 lakh yds.
(b) Sacking	1,918 Tons
	43.9 lakh yds.
5. Other manufactures (including ropes)	410 Tons
6. Total production (above figures combined)	
(a) All kinds	66,244 Tons
(b) Hessian (both bags and cloth)	1,099.0 lakh yds.
(c) Sacking (" ")	902.9 " "
(d) Canvas (" ")	29 " "
(B) Total reported production of goods manufactured on Government account.	

Description	Quantity
7. Sandbags	Nil
8. Seim Cloth	Nil
9. Hessian Bags and Cloth and Canvas	2,155 Tons
	83.5 lakh yds.
10. Sacking Bags and Cloth	192 Tons
	4.8 lakh yds.
11. Ropes and Twine etc.	14 Tons

Summary		Hessian	
	(00,000 yds.)		(000 Tons)
Civil	11,02	February	13,40
Government	84	1,71	2,1
			4,6
Sacking	11,86	15,11	20,1
Civil	9,03	10,92	37,0
Government	5	44	0,2
			1,8
Other manufactures	9,08	11,36	37,2
Civil			2,3
Government			0,0
			0,0
Grand Total	68,6		88,6

*Based on production figures from July 1946 to April 1949 (full working months) excepting March with full complement working 48 hours a week.

N.B.—The above figures include the returns of Gaganbhai Jute Mills and of all members of the Association with the exception of one mill whose production figures for February have been estimated.

THE FOREIGN JUTE MARKETS COMPETITION FROM SUBSTITUTES (FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.

There appears to be too much competition for jute business, the volume of which has undoubtedly shrunk compared with former days. The raising of prices to the prohibitive levels of 1950-51 has certainly done the trade much harm, and to this can be attributed to a large extent the present fight to make use of substitutes, which were more easily obtained and cheaper than jute, and many will now considered to be reasonable for jute cloth and shown. Expectations are that demand will be on a larger scale in the course of the next few months when stocks in the hands of those who bought largely for stock-piling become depleted.

Pakistan is making no change in the minimum fixed rates for raw jute, but occasionally there are shippers who are willing to accept cheaper rates. Business has been done with the Jute Control in Dundee at £85 for Mill Firsts, at from £72 to £76 for Mill Lightnings, the higher price being the minimum, an at £81 for crack Daisee-2/3, all c. and f. U.K. The quality of the jute arriving is still good and few complaints are heard.

Jute yarns are busy and the same difficulty in placing further orders continues. Indeed, some spinners are desirous of buying yarns instead of selling, to help them out of their rate position. Deliveries are steadily falling behind through illness amongst the workers. Prices are naturally very firm on the basis of 14,400 per lb. for common 8 lb. cops and 8 lb. spools.

Demand for jute cloth continues quiet and there is only a limited inquiry now being made. Manufacturers are comfortably placed, however, and prices remain very firm at 1243d per yard for 10 oz. 40 in. and 1018d for 8 oz.

Plantation Topics

OUTPUT RESTRICTIONS HELP TEA PRICE RECOVERY

MANY ESTATES STILL INCURRING LOSSES

THE welcome recovery in tea prices in recent weeks has to a large extent been induced by the prospect of supply and demand being in better balance as a result of the Indian industry's decision to restrict output and to adopt more selective plucking practices. However, as Mr. Hutchison told the meeting of the Indian Tea Association yesterday, "we are still a long way from making good the gap between costs and selling prices. Indeed, despite the recent increase in prices, our sale proceeds on teas disposed of in North-East India alone are still eight crores of rupees, or six million pounds sterling, down on the corresponding period of 1951-52. It will be many seasons before this loss can be made good. I would warn all concerned, especially Governments and labour, to guard against the unwarranted assumption that because the market has risen an anna or two, the crisis is over." On 17th November last year, common broken pekoe was sold in the Calcutta auctions for 11 annas but its price this week was Rs 1-8. On 9th December, 1952, the same grade of tea was auctioned in London for 1s. 6d. but last week's quotation was between 3s and 3s 1d. The Financial Times points out that this is the highest level since March 1952 and in the interim the price has been down to 1s. 6d., a "low" reached early last October. It adds: "On the assumption that the London landed cost amounts to 2s 9d a pound, the Indian industry, taken as a whole, is back to a profitable working basis. Production costs are higher in Ceylon, but Ceylon teas command the best prices and growers in this area should be well satisfied with the recent turn of events. Except that it served the purpose of ridding the market of unwanted teas, the fall to 1s 6d a pound was never justified. The question now arising is whether the subsequent recovery has been excessive. It is possible that a technical and temporary reaction in Mincing Lane is due, or even overdue, but on the longer view the prospect favours still higher prices."

Consumption of tea within India is usually calculated by deducting exports from production; the scope for error is therefore considerable and some observers feel that one reason for the recovery in prices may be that domestic consumption has been greater than it seemed. Also, in London the improvement in coffee prices has had some influence on the tea market. Brokers there believe that prospects are improving because supply is achieving a closer approximation to demand and that the glut of inferior teas which brought about a sharp fall in prices since the last season will not be repeated. But producers' worries are not yet over and many are finding it difficult to work at a profit. Some Cachar and Sylhet estates, for instance, have been sending to the market well plucked and attractively made teas, but have not been able to get prices high enough to cover their production costs. Efforts are being made to reduce the latter and in West Bengal and Assam steps have been taken to alleviate the burden of supplying food to tea garden labour at concessional rates. Some estates, in Cachar for instance, have reopened but even now not all those that are working are able to do so economically. They are probably losing less than they were some months ago, but it is important to remember that no garden can afford to go on incurring a loss, however small, without having to close down ultimately.

CALCUTTA TEA SALES IN FEBRUARY

STRONG GENERAL DEMAND

IN the first three sales of the month there was a strong general demand particularly for commonest kinds, medium and common broken and fannings at generally dearer rates, according to the monthly market review of Carritt Moran & Co., Ltd. Bright liquoring and autumnal teas from all districts sold readily at enhanced prices but poor liquoring medium B.O.P.s and Orange Fannings were a weak feature. In the last sale of the month interest was even more widespread and there was some good bidding, local buyers often competing strongly with the main exporters. Fannings were a very strong feature and advanced by about three to five annas per pound with stylish Orange Fannings and ordinary black leaf sorts sometimes selling up to six annas above valuations. The only weak feature was whole leaf grades which were about steady.

The quality of the Darjeeling offerings was useful and several invoices with attractive autumnal flavour were included. Offerings from Assam included a number of teas which were dull and plain in cup and showed evidence of faulty firing. Cup quality was generally brighter in character and some useful autumnals were available from the Doom Dooma district. Leaf appearance was above average for time of the year. Leaf appearance of offerings from the Dooraas showed a seasonal decline but a general improvement in cup quality was noticeable and there were a number of coloury invoices showing autumnal character. Leaf appearance of the Cachar offerings was satisfactory for the time of the year but most liquors were plain in character.

	1952-53	1951-52
	Rs. As. P.	Rs. As. P.
Sale No. 33 Clean Common B.P.	1 0 3	1 6 6 (Nominal)
Sale No. 34 " " " "	1 0 6	1 6 6 (Nominal)
Sale No. 35 " " " "	1 1 9	1 6 6 (Nominal)
Sale No. 36 " " " "	1 4 0	1 6 0 (Nominal)

Internal Market

The very small amount of leaf offerings sold at slightly dearer rates. Black leafy types of dust suitable for export were a strong feature and sold at enhanced prices. Good liquoring Assams and flavoury Darjeelings also sold well, but there was a weaker tendency for all others in the first three sales of the month. In the last sale there was an active demand following the trend of the export sale and all types showed appreciable advances, black leafy kinds again being the strongest feature.

	1952-53	1951-52
	Rs. As. P.	Rs. As. P.
Sale No. 33 Clean Common Dust	1 6 0	1 4 6
Sale No. 34 " " " "	1 5 6	1 9 0
Sale No. 35 " " " "	1 5 6	1 9 3
Sale No. 36 " " " "	1 6 3	1 9 3

Export sales up to and including Sale No. 56 totalled 1,497,756 chests at an average price of Rs. 1-5-11 compared with 1,667,467 chests at an average price of Rs. 1-13-11 a year ago. Internal sales at 25,693 chests of leaf and 512,467 chests of dust (Rs. 1-0-0 and Rs. 1-5-3 go against 75,871 and 467,233 chests (Rs. 1-5-1 and Rs. 1-11-11) in the corresponding period last year.

The price of the export quota has fluctuated between 2 and 2 1/2 pies per pound throughout the month.

Arrivals (in chests) in Calcutta warehouses during the period 24th January to 23rd February with the amount in the corresponding period last year in parentheses were as follows: by steamer 269,318 (389,867); by rail 66,564 (35,693); by air 9,359 (15,865). Since the beginning of the season, 1st April and up to 23rd February, 1953, arrivals have been 3,062,596 (3,364,782) by steamer 906,998 (728,135) by rail and 124,064 (219,738) by air; making a total of 4,093,658 (4,312,655) chests.

INCREASED CONSUMPTION OF TEA IN U.S. FORECAST

One of America's foremost experts on tea says that in "15 years America is going to be a country of tea drinkers and tea will be the most popular

American drink." The prediction was made by Charles F. Hutchinson, chief U.S. tea examiner who retired on 28th February after 40 years of sampling every shipment of tea that has come into the United States through the port of New York. The port handles 70 percent of all U.S. tea imports—and that total was nearly 100 million pounds in 1952.

The reason Mr. Hutchinson gave for his prediction was that "in the last couple of years I have noticed the beginnings of a great change." He added: "The figures for last year show that retail sales of tea have gone up eight percent and imports into the United States from tea producing countries shot up 12 percent. It is a too-little recognised fact that in the United States, iced tea has already become the most popular mealtime beverage during the summer months."

Mr. Hutchinson had just attended his last meeting of the Board of Tea Experts, which meets once a year in February to examine, smell, feel and taste hundreds of samples of tea. They thus set the standards for all tea permitted into the United States for the next 12 months.

The U.S. Board of Tea Experts runs an industry-government co-operative programme for the protection of the consumer. In the 1890's the tea industry asked the Government to establish strict standards for tea imported into America. The 100 million pounds of tea imported in 1952 came chiefly from India, Ceylon and Indonesia. There has been an embargo on tea from Communist China since 1950.

Food stores sale of tea in the United States reached an all time high in 1952 and so far in 1953. This news was the highlight of the second annual mid-year meeting of the Tea Association of the United States held here last week. The meeting

was the first industry-wide meeting since 15th January, when U.S. trade representatives and officials of the three major tea producing countries—India, Ceylon, and Indonesia—announced that they would pool funds to promote increased consumption of tea in the United States.

Of the Indian tea consumed in the United States, 75 percent is sold through retail stores, and the remaining 25 percent goes to restaurants, institutions, hotels, and the armed services. Total net consumption last year amounted to 95 million pounds, up sharply from the 1951 total of 84 million pounds.

LONDON TEA SALES

The quality of 12,092 packages of Ceylon teas on offer on 2nd March generally showed a decline and buying was selective with price movements inclined to be irregular. Best low grown teas and useful colour mediums were irregularly dearer with broken pekoes gaining about 2d. per lb., while good quality high grown kinds advanced 1d. to 4d. a lb. Indifferent liquoring medium and low medium descriptions however, were irregularly easier. Clean common broken pekoe was quoted 3s. 1d. per lb. against 2s. 11d. last week, while other grades were mostly unchanged. 7,354 packages of Southern Indian growths also offered met good demand for lower priced broken pekoes and plain fannings which advanced two to three pence per lb. Around 3s. 5d. per lb., however, there was irregularity with weakness specially for broken Orange pekoes and broken Orange pekoe fannings in which withdrawals were frequent.

On Tuesday, 3rd March, bidding was keen and general for the balance of non-Indian, Pakistani and other growths amounting to 27,254 packages offered. Prices were stronger than on Monday especially for Assam broken pekoes between 2s. 11d. and 3s. 3d. per lb., which rose one to two pence per lb. on previous levels. Good export enquiry was reported mainly on Continental account with the United States also participating.

Export demand generally was focussed on broken pekoe Souchong. Clean common broken pekoe, free from stalk, was indicated at 3s. against 2s. 11d. previously, while low Assam fannings and low Assam broken pekoes were indicated at 3s., good medium Assam fannings at 3s. 2d. and good medium Assam broken pekoes at 3s. 1d.

Results secured by some of the companies are given below—

NORTH INDIAN TEA CROP

The following summary of telegrams has been received from different districts for the month of February 1953.

Upper Assam.—Weather seasonable but abnormally cold in North Lakhimpur.

Central Assam.—Weather generally seasonable but abnormally dry in Jorhat.

Lower Assam.—Weather very dry and rain badly needed in Nowgong.

North Cachar.—Weather dry and rain badly needed; red spider blight prevalent in North Cachar.

South Cachar.—Weather dry; good rain has fallen generally and prospects are now brighter; red spider blight severe in Hailakandi.

Eastern Doora.—Immediate prospects fair; unless rain falls shortly leaf prospects will generally be poor.

Western Doora.—Unless rain falls shortly leaf prospects will generally be poor.

Darjeeling.—Weather seasonable.

Teral.—Weather dry.

BOMBAY PORT TRUST BUDGET ESTIMATES

PILOTAGE AND TRANSPORTING SURCHARGE

THE Bombay Port Trust budget for 1953-54 has placed total revenue from general account at Rs. 5.83 crores and total expenditure at Rs. 5.82 crores leaving a nominal surplus of Rs. 87,900. Mr. L. T. Gholap, chairman, said that this margin was so small that any minor development might tip the scales and turn the small surplus into a deficit. The revised estimates for the current year show disappointing results. There is a drop of Rs. 31 lakhs in the original estimate for general revenue while on the expenditure side these estimates show an increase of Rs. 15 lakhs. The financial position of the Port Trust as revealed in the budget is not at all reassuring and though the Board of Trustees have not accepted the chairman's recommendation to double the surcharge on all the rates and charges from 33.3 percent to 66.6 percent, they have sanctioned a surcharge of 20 percent on pilotage and transporting fees from next month. The present financial position is attributed to the heavy fall in imports and an even larger one is anticipated in 1953-54. Apart from lower imports of fuel oil, machinery, piecgoods and stationery, a reduction of half a million tons during the first eight months of the current year over the figures for the same period in 1951-52 is attributable mainly to smaller imports of foodgrains and cotton.

On the capital side, the general development programme of the Port Trust will require Rs. 9.74 crores up to the end of 1955-56. Rs. 2.5 crores of this amount will come in the form of a loan from the Central Government as provided for in the five year plan and about Rs. 3 crores will be available from the accumulated reserves of the Port Trust. This will leave the Port with a deficit of Rs. 4.24 crores which the Government has asked the Board of Trustees to raise by any means they can. The requirements for capital works do not include expenditure on the construction of the Marine Oil Terminal and Butcher Island, near Bombay, to aid the working of the oil refinery projects, for which a special loan is being given by the Centre. Work on the terminal is to begin next October and will be completed by April 1955. The scheme includes, apart from the construction of berths and the deepening of the channel to accommodate large oil tankers, the laying of a two-mile long pipeline in the bed of the sea to link the island with Trombay where the oil refineries are to be located.

MICROWAVE RADIO COMMUNICATION

Many large American companies, faced with the need for better and quicker communications between the head office and factories and branch offices in different parts of the country, are starting to use a new method of communication—microwave radio. It is possible that this type of communication will soon be put into use by companies who operate on a world-wide basis, to keep in close touch with their offices and representatives in other countries.

The growing use of microwave radio is due to several factors. The most important is its ability to provide multiple-channel communications over long distances with greater reliability and at a lower cost than has yet been accomplished by other means.

One of the microwave systems best known in the United States is the one operated by the American Telephone and Telegraph Company. This system provides for transmission of television programmes and telephone messages from one side of the country to the other. It consists of strategically placed radio relay towers, spaced from 25 to 50 miles apart, which automatically transmit the radio signals from one to another. High frequency microwave radio waves can carry messages clearly through electrical storms, thus overcoming the garbling of messages or television pictures by static. In addition to carrying telephone messages and television pictures, they can be used to carry tele-type messages and also radio waves that will start and stop industrial equipment installed at remote places.

Pioneering in the development of microwave relay systems was done by scientists and engineers of the Radio Corporation of America more than 25 years ago. "This work has continued without interruption to open the way for the greatest possible use of the higher radio frequencies," Dr. C. B. Jolliffe, Vice President and Technical Director of RCA, said recently. Today, many railways, public utilities and oil and gas pipeline companies are using this method of communication, he added.

Development of new and improved types of electron tubes, new antennae, transmitters and receiving equipment, all of different design, has been the outstanding contribution of the radio industry to this form of communication. A single microwave circuit, now available commercially, provides as many facilities as a 24 channel wire communication system. These channels can be used simultaneously and may carry voice communication or other types of messages. Microwaves travel through the air, thus eliminating the need for poles to carry transmission wires. To install a microwave system, it is only necessary to set up repeater stations at selected points. It is entirely possible to set up systems that can encircle the entire globe.

BUSINESS EFFICIENCY EXHIBITION

The Business Efficiency Exhibition, sponsored by the Stationery and Office Equipment Association of India, is the first of its kind to be held in Calcutta. At the Ranji Stadium there are about 45 stands covering every range of office equipment from carpets to adding and addressing machines. The exhibition is laid out with plenty of space between stalls, unlike so many exhibitions of this type where the atmosphere is oppressive. A souvenir magazine of 125 pages, and containing 25 articles contributed by exhibitors, gives a brief outline of some of the products on display.

SOIL-BORING MACHINE

A soil-boring machine which can be mounted on a lorry or trailer has been developed at the Road Research Laboratory of Britain's Department of Scientific and Industrial Research. The machine, a complete unit powered by its own engine, will drill clean bore-holes up to 10 in. in diameter and 16 ft deep in most soils. It will bore vertical or inclined holes in a wide range of soils at a rate of about one foot a minute.

The machine's air-cooled, twin-cylinder Diesel engine develops 7 h.p. at 1,200 r.p.m. The chief feature of the machine is a hollow lattice mast 9 in. square which can be raised from its sloping travelling position to a vertical position by means of a pair of feed screws controlled by a friction clutch. The main pivot is formed by trunnions mounted on the outside of a gearbox attached at the lower end of the mast.

The boring bar is rotated by passing it through a central square hole in a gear wheel controlled by a second clutch. The bar is able to slide through this gear wheel, and is steadied at its upper end by a bearing mounted in a raising which is free to slide inside the mast. The normal speed of rotation of the boring tool is between 50 and 100 r.p.m. and the average lifting speed is approximately 3 ft per second.

VERSATILE GRINDER

The "Servicemaster" is believed to be the first and only machine that will grind a point dead concentric with another portion and still maintain a predetermined angle to within a minute of a degree. This machine has been designed to grind all types of laps used in rectifying fuel injection equipment, and on the standard model the seating angles can be made to vary between 52° and 68°.

For rectifying large nozzles with extra-large needles, or needles having one or two seating angles, such as marine types, a wider range of angle adjustment is required. Additional equipment can be supplied to cover all angles encountered in service. As many as 90 laps or needles per hour can be ground on the "Servicemaster". While one operator is grinding laps, a second operator on the same machine can be lapping in seatings with laps or needles. In a matter of minutes, it is stated, the machine can be converted into a general-purpose grinder.

ALL INDIA MEETING OF CAN-MAKERS

A meeting of can-makers, convened from all over India by the Metal Box Company of India Ltd., and Metal Press Works Ltd., was held at 103, Park Street, Calcutta, on Friday, 6th March, 1953. Following a suggestion made by Mr. T. T. Krishna-machari, it was decided to form the association of Indian can-makers to represent to Government the views of the industry and provide a forum for the discussion of common problems. The members present elected Mr. H. K. S. Lindsay of Metal Box as Chairman, Mr. T. Sharda of Zenith Tin Works, Bombay, as Vice-Chairman, and Mr. R. N. Dutt of Metal Press Works as Secretary. An ad hoc Committee of six members (Dhar Tin Factory, Baigopaladas Iron & Steel Company Ltd., Syamnagar Tin Factory, Lipon Ltd., and National Tobacco Co., of India Ltd.) was also set up to draft a constitution and proposals for the betterment of the trade.

THE WORLD'S LARGEST TURBINE PLANT

To help meet the demand for more power, the world's largest turbine plant was completed in 1949 at Schenectady at a cost of about 15 crores of Rupees. This plant is producing turbine-generators ranging in size from 20,000 kilowatts to 200,000 kilowatts, and has an annual capacity of over 4,000,000 kilowatts. The plant covers 20 acres, with 1,000,000 sq. ft. of floor space and employs 5,000 workers.

In 1886 in a small shop at Schenectady near the Mohawk River General Electric had a modest beginning. Today the Schenectady Works cover more than 600 acres with 240 buildings and the production facilities of General Electric consist of 122 plants in the United States containing 57,300,000 sq. ft. of floor space and a total staff of 210,000 workers.

General Electric's products, which are distributed all over the world, have done much to lighten the burden of man and improve his standard of living. G-E's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

This is G-E's 50th Anniversary of Service in India

CRITICAL MACHINERY

What do we mean by 'planned lubrication' in industry?

Just this:

ANALYSIS of the lubrication requirements of industrial plant, engines and machines.

RECOMMENDATIONS of proper lubricants together with specific instructions as to when and how they should be used. **SCHEDULED CHECK-UPS** for all critical and unusual factory machinery.

THIS ADVICE is given free and without obligation on your part by our Industrial Lubrication experts. They will be very pleased to give all the assistance they can on any lubrication problem you may be tackling. If you give them half a chance they will be very useful in your factory life and become part of it!

BURMAH-SHELL...

IN INDIA'S LIFE AND PART OF IT

BEFORE THE RAILWAY RATES TRIBUNAL AT MADRAS.

(Public Notice under Rule 17 of the Railway Rates Tribunal Rules, 1949.)

Complaint No. 1 of 1953

Sri Rajnaraj Jute Mills Ltd., Applicant

vs. Respondents:
1. The Eastern Railway, Calcutta
2. The Southern Railway, Madras
3. The Union of India owning and representing the respondents 1 & 2 Railways

WHEREAS the applicant abovenamed has complained that his request for concessional rates for Jute from certain stations in the Cuttack area, Shalimar and Anakapalle to Guntur which were previously in force, had been unreasonably refused and that the respondents have unjustifiably enhanced the classification for Jute from Class 2 to Class 7 and 8, and that this change has resulted in undue and unreasonable prejudice and disadvantage to the Applicant's industry and has prayed for quotation of station to station rates that were previously in force to Guntur or in the alternative to fix new reasonable station to station rates and to declare that the enhancement of classification for Jute from Class 2 is unreasonable.

And whereas it is thought that there are numerous persons who are not on record but have the same interest in the proceedings as the applicant or respondents abovenamed;

This public notice is, therefore, given under Rule 17 of the Railway Rates Tribunal Rules, 1949, so that any person who so desires may petition to the Tribunal for leave to intervene on the side of the applicant or the respondent in the said case, prior to, or at the time it is called for hearing, setting forth the grounds for the application and the position and the interest of the petitioner in the proceedings.

To any decision given by the Tribunal after this Public Notice, explanation (vi) to Section 11 of the Code of Civil Procedure, 1908, shall apply.

Given under my hand and the seal of the Tribunal, this 3rd day of March, 1953 at "Adyar House", Adyar, Madras.

Sd. J. B. RAO,

Secretary,

Railway Rates Tribunal.

CHRESTIEN MICA INDUSTRIES LTD.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Monthly Index of Indian Industrial Activity (Base: 1935) has now been brought up to August, 1952. Compared with the preceding month there were decreases in Jute Manufactures (10.4 points), Steel Ingots (2.2 points), Pig Iron (5.2

points), Cement (10.1 points), Paper (2.5 points) and Wagons Loaded (0.4 points), while the production of Electricity increased by 2.2 points. The Indices for Cheque Clearances and Notes in Circulation showed drops of 1.2 points and 4.7

points, respectively.

Correlating all the factors the Capital Index of Indian Industrial Activity declined by 4.1 points during August, 1952.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts close" column indicate the months of the calendar year in which accounts are closed. For Manager's Agents refer to the Key (last page) under the numbers indicated.

1 Liquid Assets

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other Funds	Increase under Tea	Outturn and Average Price per lb realised for crop				Estimate	NAMES	Accounts closed	Managing Agents	Net profits including Taxation	Dividends per cent.			Paid-up Share	Latest Market Quotations as available until

COAL PRODUCTION COSTS AND SELLING PRICES

FINANCE FOR STOWING AND BENEFICIATION: EXPORT MARKETS IN JEOPARDY

THERE is probably more politics in the coal industry than in any other, with the result that it is sometimes difficult to know what the truth is in the debates that periodically divide various sections of producers and consumers. The basic importance of coal to an industrialising economy that has no oil and little hydro-electric power explains part of the heat engendered on the subject, but there are also the complicating factors introduced by the cleavage of producers according to the quality of their output, and the fact that the Government is both a substantial producer and consumer of coal. Thus, questions that should be matters of fact, to be dealt with at the technical level, such as the grading of Indian coals or estimates of reserves, have been the subject of animated public controversy in which the facts of the case have been obscured by prejudice and propaganda. The circumstance that the coal industry is the most controlled of all the components in India's mixed economy complicates the situation further, for the free forces of the market have had no opportunity in years to decide disputed issues by the final arbitration of comparative costs and consumer preferences. As often happens when controls ossify, when costs become rigid and artificial and when consumers are bound by multifarious regulations, precipitate return to decontrol and free competition is the last thing that even the most efficient producers want, for it would reduce the industry to chaos. The upshot is that the confused situation is perpetuated, and the truth about coal is no nearer being agreed upon.

Even under these conditions, however, some myths can be discredited and some views vindicated. Mr W. H. S. Michelmore demonstrated that much in his chairman's address to the Indian Mining Association in Calcutta last Thursday. He referred to instances "of interested propaganda by those who are trying to force on the consumer supplies of inferior coal which he does not want", and there can be no doubt that campaigns of this kind have been responsible for much of the fog that has surrounded discussion of conservation policy, controls and railway transport in the past few years. Conservation of metallurgical coal has been the major preoccupation of the industry and the departments of Government concerned for some time, and Mr Michelmore was able to report that many of the destructive intentions concealed in this policy have been successfully curbed. It was frequently argued in this newspaper during the controversy that the imposition of drastic reductions on the output of the collieries producing first-class metallurgical coal would waste more coal than it would conserve because to truncate the revenues of companies exploiting seams of good coal would only ensure that their coal went to waste in the ground. The Government of India nevertheless framed maximum output schedules for the coming four years and it was only when it was realised that the enforcement of this programme would dislocate the coal industry and cause extensive loss and unemployment, that modifications were agreed to. For last year, maximum output was set at rather more than the 1950 production, and for the current year an overall ceiling of 7.4 million tons of selected A and B grade coals has been announced. A technical advisory committee has been appointed to consider cases where rigid enforcement of these ceilings would entail hardship for producers, and to date there have been no instances of drastic retrenchment or loss—such as would certainly have followed implementation of the Government's first plan.

More important: than this mitigation of the severity of restrictionist policy are the signs that official thinking is freeing itself from the influence of interested advice and is coming around to the view that coal is best conserved not by blanket restrictions on raisings but by encouraging the use of economical mining and beneficiation techniques. Sand stowing, washing and blending are the most suitable ways of ensuring that India's coal reserves

are not squandered and it is satisfactory that the Government has decided to lend positive assistance to sand stowing for conservation, in addition to stowing for safety which has long been practised in this country. The realisation that mere restrictionism is by comparison negative and destructive is shown in the decision to exempt from some of the rigours of restrictionist policy those collieries that use sand stowing methods for conservation. Furthermore, a committee has been set up by the Government to consider the economics of coal washing, and Mr Michelmore had some interesting suggestions to make on the subject in his address, which that committee will no doubt consider.

It would appear then that out of the prolonged and passionate dispute about India's reserves of coking coal, more reasonable views are beginning to emerge and the attempt by a section of producers to cripple their competitors in the name of national interests has been checked. This is just as well, since the plans now being taken in hand to increase steel production would have been frustrated if earlier restrictionist schemes had been pressed into effect. Even if, by means of a tendentious definition of "essential," it were shown that output of metallurgical coal in the last few years has been in excess of essential requirements, it is now clear that requirements will be much greater as industrialisation plans are brought nearer fruition, and it is

THE BILL ON LONDON

MORE BUSINESS FOR BRITISH DISCOUNT HOUSES

A SADLY neglected part of London's monetary mechanism has been attracting attention recently. For the first time since the war, American banks have been buying commercial bills in the London discount market. The business is on a small scale, but it is a symbol of the revival of confidence in Britain's finances and of the gradual restoration of the pre-war monetary function of the City of London. External funds have, of course, been invested continuously and on a substantial scale in the London discount market, but these funds have been mostly the sterling balances held in London, either voluntarily or compulsorily, on behalf of British and foreign countries. The investment of American money through the London market is a different matter entirely. There is an obvious incentive for American institutions to send money to London, or at least to refrain from repatriating funds which have accumulated in the normal course of business. Since the bank rate in London was raised to 4 percent about a year ago, the rate on three months' commercial bills has been around 3 percent, whereas the rate for comparable paper in New York has been only about 2 percent. But there has been no American demand for London bills until recently, because the sterling-dollar rate was not assured and forward sterling was quoted at a discount, so that there was no extra profit in transactions through London after these transactions had been covered forward.

Sterling has shown some fluctuations in recent weeks, but they have been due to variations in commercial demand rather than to variations in confidence. It is not possible, of course, to forecast accurately for months ahead, but it is evident that the stability of sterling has lately been more firmly based than in any previous period since the war. And with a stable currency it is possible to resume the transfer of money between London and foreign centres in response to short-term interest rates. This foreign investment in London bills is only one of several interesting developments relating to the London discount market. The market is being already, or may be soon, used for financing transactions which for many years have been outside its scope. While the Treasury has enormously increased its use of the market's facilities, compared with pre-war years, the local authorities have been entirely excluded from the market, and commercial firms' borrowing through this medium has been until recently on a much reduced scale. But the London County Council has lately raised the question whether the municipalities (now encouraged to borrow on long term through the new issue market, instead of through the central government) should be allowed access to the bill market for strictly short-term financing. And there are already signs this year of a recovery in the volume of commercial bills from the very low levels reached last year. The bill of exchange is coming into its own again. It is no longer regarded as merely a means to enable the Treasury to run a renewable debt of thousands of millions of pounds at low interest.

It is not suggested that the bill on London will become again the dominant financial instrument that it was in past generations. In the 19th century it was the common form of financing Britain's domestic trade, a function now largely performed by bank loans. Until the slump of the early 1930's, with its accompanying financial troubles, the bill on London was used as a matter of routine for financing international trade. The mere passing of time makes it difficult to get the machinery working again as easily and as extensively as before. That a London discount house has this year produced a guide to the bill of exchange, explaining its varied functions in detail, is enough evidence that the very people—manufacturers and traders, even in Britain—who in former time, would have used this medium regularly are now quite unfamiliar with it.

The uses of the bill of exchange are, indeed, various. Treasury bills, it must be admitted, are no longer self-liquidating, as bill finance should be, but are that main element in the floating debt, which, though somewhat reduced by the present British Government, has become permanently a considerable element in the whole national debt. Municipal bills were before the war compulsorily related to prospective revenue; their purpose was to finance administration and short-term projects in slack periods between big inflows of revenue. Commercial bills, even if discarded for internal trade, are as valuable as ever for external trade; they can finance the import of raw materials by the manufacturer, the import of goods by the merchant, the export of goods from Britain, and commercial transactions between one overseas market and another.

The need for finance varies, of course, with variations in trading activity and in prices. It was partly the decline in prices which caused a reduction in the volume of commercial bills handled in the London market last year. Compared with pre-war years the same volume means much less

in real terms, at inflated prices. But it is encouraging to learn from the estimate of another London discount firm that in the year to March 1952 the volume of commercial bills handled in Britain was around the 1929-30 level of £575 million, compared with £245 million in 1933-34 and only £42 million in 1944-45.

CURRENT COIN

Practice and Precept.—Two announcements within the same week from two Commonwealth countries raise the question whether the decisions taken at Commonwealth economic conferences have any significance at all or whether they are just lip service to principles which the individual members can flout as they please. A week before India declared that it was her policy to be "self-sufficient in automobiles" by the end of the five year plan period, Australia gave notice of steep rises in customs tariffs on all classes of internal combustion engines. While we are familiar with the political, nationalist, security and sentimental arguments commonly adduced in support of such policies, the fact remains that they are economically indefensible. Few people in Australia or India really believe that these countries will ever be able to make motor engines as well or as cheaply as the countries that have supplied them in the past, Britain and the USA. But of more interest is the plain contradiction between this line of economic action and the "joint decisions" taken last December in London at the Commonwealth Economic Conference. The official communiqué issued after that meeting on behalf of all the participants said: "Throughout the Commonwealth there is wide scope for expanding the production of the essential supplies which the whole world needs—food and agriculture products, mineral and engineering products.... This development of the basic essentials has on occasion been impeded by other development of a less sound and permanent kind.... The Conference agreed that in sterling area countries development should be concentrated on projects which directly or indirectly contribute to the improvement of the area's balance of payments with rest of the world." No doubt, even the most earnest conclave of Commonwealth Ministers cannot be regarded as a sort of super-State whose rulings are binding on the democracies therein united, and individual members are entitled to pursue their own policies as they wish. But is there really any point in sending Ministers thousands of miles to London to phrase solemn declarations of economic policy which those most concerned have no intention of adhering to when they get home? Worse, is there any point in sending deputations after the conference to Washington to urge the Americans to break down their tariff barriers while Commonwealth countries raise their own higher, not only against the dollar area but against themselves?

"Safe" Inflation.—Mr. Parshotamdas Singhanian said in his presidential address to the U.P. Merchants' Chamber in Kanpur on Saturday that although the five year plan "appears to be the only intrinsically sound proposition at present for the economic progress of India as a whole," the Planning Commission had been rather optimistic in its forecast of budgetary trends. The revenue and capital receipts of the Central Government and Part A and Part B States amounted to about Rs. 921 crores in 1950-51. They increased to Rs. 1,063 crores in the following year but "the pendulum swung back" to Rs. 933 crores in 1952-53. Current economic trends and the Central Budget did not warrant any optimism for the coming fiscal year, and the Railway Budget showed that while earnings had contracted working expenses had increased or remained unchanged. Mr. Singhanian felt that "both the Central and States' revenue and capital resources have little capacity for further expansion," but there was "no cause for much alarm" because "deficit financing, as an instrument to aid in the balancing of present sacrifices and future development, still offers considerable scope for obviating our difficulties." Deficit financing should be used cautiously, but since it would only "create the necessary instruments of production and will thus account as having been fully capitalised, any great danger of inflation need not be unduly apprehended." This is very dubious doctrine. A little later Mr. Singhanian said, with more realism than consistency, that "the high taxes of Governments and other autonomous public bodies, combined with deficit financing, if resorted to, will stimulate inflation and induce runaway prices perpetuating themselves everywhere." He rightly wondered whether, after Rs. 2,069 crores had been raised for the public sector, private enterprise would be able to find the Rs. 538 crores necessary for its own expansion. Since small investors would never be able to provide this sum, industries would have to raise it themselves; Mr. Singhanian urged that they be "assured of a continuous supply of raw materials as cheaply as possible and allowed to capitalise their surpluses for some time to come." Taxes should be reduced because with the return of a buyers' market industry was faced with the problem of lowering costs. More liberal depreciation allowances should be permitted and the Income

Tax Act amended to exempt the sale proceeds of plant and machinery from tax if they were used for replacement. Mr. Singhanian thought that the provision in the Indian Companies Act under which 60 percent of the profits had to be distributed should be relaxed; also the State's industrial and trading activities should be subject to the same tax liabilities as those of private enterprise.

Oilseeds Production.—Since the Central budget there has been a considerable increase in prices of oilseeds and oil, especially in groundnuts and oil. The expected shortfall in the 1952-53 groundnut crop is partly responsible for the price increases for it appears likely that domestic demand will not be able to be met. Apart from banning exports, which has in any case only a temporary effect, the way to bring prices down permanently is to increase production of oilseeds. At the annual general meeting of the Indian Central Oilseeds Committee in New Delhi last Friday Mr. Damle, Vice-President of the Indian Council of Agricultural Research and Additional Secretary of the Union Ministry of Food and Agriculture, stressed the need for specific measures to raise output. The need for an increase has long been felt but such measures as have been taken have met with little success and since the era of high prices resulting from the Korean war has passed, the position has deteriorated. The Planning Commission suggested that by 1955-56 the production of oilseeds should be increased by 400,000 tons, an increase of eight percent over the average annual production for the three-year period ending 1950-51. It was assumed at the time that this increase would be achieved as a natural result of high prices, but prices have since fallen and not only was there hardly any increase in production in 1951-52 but the figures for the area sown with oilseed crops in 1952-53 are not encouraging and it is estimated that the groundnut crop will have declined from 2,000,000 tons to 1,450,000 tons. Mr. Damle said that a comprehensive five year plan for the production of oilseeds, the development of the oilseed crushing industry and the marketing of oilseeds and oils had been prepared, and would be considered by the meeting. It would, he said, be difficult to achieve the target for increased production proposed in the plan unless the Committee made more liberal grants to the State Governments. The financial resources of the State Governments had already been taken into account in the five year plan and there was no specific allotment for measures to increase the production of oilseeds. Mr. Damle emphasised the importance of the village oil industry stressing that financial assistance had been offered to the State Governments to organise co-operative societies to provide storage and marketing facilities for oilseeds and oil. It would be a pity he said "if the schemes calculated to bring improvement in this industry suffer for want of support. The village oil-crushing industry has been included in the list of cottage industries to be promoted in the community projects, and efforts are being made to organise oil crushing by *ghanis* in the community project areas."

Improving India's Fisheries.—The people of Norway, whose Government has already guaranteed 10 million kroner for technical assistance to India, are soon to be asked to contribute an equal sum in a nation-wide public subscription campaign. The drive will be launched just after Easter by the Norwegian Foundation for Assistance to Under-developed Countries, an organisation created by the Norwegian Parliament last year to co-operate with the United Nations in providing technical aid of a type Norway is best qualified to supply, notably in the realms of fisheries, forestry, electric power development, etc. It will be recalled that a tripartite agreement, under which Norway undertook to provide technical help to India in response to that country's request to the U.N. Technical Assistance Administration, was signed last October by Norway, India and the U.N. (The scheme was discussed in *Capital* on 29th January, 1953.) It is now announced that initially the aid given under this agreement will concentrate on building up fisheries in the Indian State of Travancore, and on related projects designed to improve the living conditions of the fishermen and their families. The chief of the Norwegian Mission, Dr. Diderich Lund, will establish headquarters near the two small fishing villages of Sakthigulangara and Puthanturay, about eight miles north of the town of Quilon. He will be joined in the near future by five other Norwegian experts—an engineer, a doctor, a nurse, a specialist on social welfare and an administrative secretary. One of the first actions to be taken is an attempt to modernise the traditional boats used by the Travancore fishermen. These craft, which are designed for sailing, or propulsion by hand, are simply constructed of wood, bound with thongs which tighten when wet. Two typical boats have already been sent to Oslo, where marine specialists will conduct a series of experiments to determine how their design and construction can be modified to make possible the installation of small engines, thus greatly extending their range and enabling the fishermen to reach

more distant waters. Once a suitable type of engine has been developed, it is estimated that at least 12,000 craft will have power units installed. In addition to the work being done on the fishing boats, a number of plans proposed by the Norwegians are now being reviewed by the Indian Government, with whom the final decision as to the type of technical assistance rests. These include: the construction of a pipe line which will bring water to the fishing villages from a nearby lake, the establishment of a small model hospital, the erection of an ice factory on the coast, the setting up of a series of cold storage depots and the supply of refrigerator trucks to transport the catch. It is also anticipated that some educational projects will be carried out in the area. Raising the food intake of the inhabitants of the Travancore-Cochin State was the consideration which largely dictated the decision to concentrate the technical aid programme at first on the fishing industry. The main diet of the State at present is tapioca, which has a relatively low calorie content. The coastal waters, however, abound in fish which, if caught in sufficient numbers and processed by a well-organised industry, could make a substantial addition to the people's nourishment, both in quantity and quality. It is also hoped that the fishing industry, once developed, will be able to supply food not only to the people of Travancore, but to other States.

Pakistan's Budget Surplus.—The budget for 1953-54 presented by the Pakistan Finance Minister, Mr. Mohammed Ali, on Saturday is notable for its attempt to reconcile development needs with the fact that resources have been seriously eroded by the recession in commodity prices. One of its outstanding features is that revenue and capital expenditure on defence is to be reduced by Rs. 15 crores to Rs. 80 crores. The proposals for new or additional taxation are expected to yield Rs. 5.88 crores; as a result, with gross revenue amounting to Rs. 144.85 crores and gross expenditure to Rs. 144.71 crores there will be a small revenue surplus of Rs. 14 lakhs. A loan of Rs. 20 crores is to be raised to finance development projects. Food shortage is one of Pakistan's most serious problems and Mr. Mohammed Ali suggested that it might remain acute this year. The provision for agricultural development is Rs. 456 crores more than in the last budget and an increase of Rs. 6.59 crores is proposed in the programme of capital expenditure. Provinces and States will get Rs. 8 crores for development schemes and Rs. 7 crores for irrigation and hydro-electric projects. The provision for industrial development has been raised to Rs. 12.41 crores, as against Rs. 6.85 crores in the revised estimates for 1952-53. Mr. Mohammed Ali said it would be wrong to devalue the Pakistan rupee and announced that price controls would be introduced for essential goods. The most noteworthy Customs provisions are that tea will be exempt from export duty until 31st March, 1954, and the export duties on jute bags and hessian have been abolished. Taxation on luxuries such as whisky, gin, brandy and cigarettes is being increased; so also are the duties on foreign and home-produced sugar and some cloth. An import duty of 30 percent has been reimposed on jute manufactures; on used gunny bags and jute cloth the rate will be 45 percent. A variety of concessions are being given to encourage investment in approved industrial undertakings and to encourage small and medium investors to buy Government securities and postal savings certificates. Other concessions relate to the profits of new industrial undertakings, income from house property, and depreciation on buildings, plant and machinery.

Western Germany's Progress.—Western Germany continues to make steady economic progress and the Rheinisch-Westfälische Bank says that the gross value of her production rose by DM 11,500 million to DM 125,000 million in 1952 and the national income from DM 90,200 million to DM 99,000 million. A recession in the first half of 1952 was offset by an improvement in the second half, and production of coal, iron and steel was higher than in 1951. Conditions in the consumer goods industries improved in the autumn months after a seasonal decline, though fewer orders were received by the manufacturing industries. Production in the capital goods industries also declined but showed a tendency to recover in November and December. The general index of industrial production (base year 1936 equals 100) rose between

Jute Since Devaluation.—The following table of vegetable fibre prices over the last 3½ years was prepared by Wigglesworth and Co. Ltd. of London. It shows the extent to which jute has suffered a decline in value while most other fibres have increased substantially.

	1st Sept. 1949 (Before Sterling devaluation)	June 1950 (before out- break Korean War)	Peak 1951	End January 1953	Rise or Fall Sept. 1949— end Jan. 1953 %

(Prices shown per ton of 2,240 lbs.)

July and November last year from 138 to 167, which compares with the increase from 131 to 153 during the same period of 1951. The Bank deutscher Lander lowered the discount rate from 5 percent to 4½ percent and later to 4 percent. During the second half of 1952 gold and dollar balances increased, the former by \$47.5 million to \$139.8 and the latter from \$354.8 million to \$472.2 million. Western Germany's foreign trade in 1952 showed a surplus for the first time since the war. Imports were worth about DM 16,000 million and exports about DM 16,600 million. The comparative 1951 figures were DM 14,700 million and DM 14,600 million. The volume of foreign trade increased by about 13 percent over the previous year. After May 1952 the price of German exports tended to decline; raw materials and partly finished goods were particularly affected and industrial finished goods to a lesser extent. The trade balance with the United States was unfavourable but was covered by receipts from other countries and by the dollar payments of the American authorities in Germany. Official German statistics showed trade with India at a slightly higher level during the first eleven months of 1952 than in the corresponding period of 1951. Western Germany had an export surplus of DM 89.4 million in this trade and her main imports from India were manganese, cotton and leather while her chief exports to India were machinery, electrical goods, steam locomotives and aniline dyes.

Manila Conference on Trade Promotion.—The most successful international gathering ever held to discuss problems of trade promotion. That was the summing up of the Philippines Minister of Commerce and Industry at the conclusion of the recent Trade Promotion Conference, the second of its kind, at Manila. Others may prefer to await the results before passing judgment, but we are told that "an atmosphere of cordiality" prevailed, and seeing that the meeting attracted a record attendance of nearly 150 delegates and observers from 37 Asian and non-Asian countries and territories and that besides representatives from Asia and the Far East—only Hongkong, Ceylon and Nepal of the ECAFE countries were unrepresented—there were large delegations from the United Kingdom, United States of America and Soviet Russia, and observers from Belgium, Canada, Costa Rica, Czechoslovakia, Denmark, the Dominican Republic, Israel, Norway, Poland, Sweden, the Union of South Africa, Yugoslavia, Finland, Hungary and Italy, and that they were in fact provided with opportunities for full and free discussion on international trade problems and informal talks between businessmen, Mr. Balmaceda's words may well represent an accurate assessment. The outstanding feature was the keen desire of all countries represented to expand trade. Asian countries expressed considerable concern over the effects of excessive price fluctuations in world commodity markets, and the delegates urged national and international action aimed at the stabilisation of raw material prices. The conference noted the stabilising effects which resulted from certain United Kingdom and United States long-term purchase contracts made with the region. In connection with stabilising prices, the representative of France announced his Government's readiness to sell specified manufactured goods at prices which would remain firm for 12 to 18 months. He added that France would also agree to buy raw materials at prices with specific upper and lower limits. The U.S.S.R. representative claimed that price fluctuations might be reduced substantially through trade development between Asian countries and the Soviet Union and between the People's Republic of China and Eastern European countries. There were differing views on the relative value of barter agreements. Such arrangements, according to a recommendation approved by the Conference, should not be ruled out altogether. The possibility of resorting to barter agreements, the recommendation said, might be examined by the interested governments. The Conference approved a series of recommendations aimed at expanding exports and improving marketing procedures. Better standards for industrial equipment, improved information on credit sources, and better credit facilities for long-term capital investment were among the recommendations made. Other proposals included: improved arbitration procedures, reduced freight rates and better commercial intelligence.

MR. V. A. GRANTHAM'S REVIEW

Extracts from the statement by the Chairman, Mr. Vincent Alpe Grantham, on the Report and Accounts for the year ended 31st December, 1952.

As forecast in my statement a year ago, when I suggested that we might look for lower figures, the total of the Bank's Balance Sheet shows a fall of some £5,000,000 from the record figures of last year.

It is, perhaps, wrong to attach too much importance to the total of the Balance Sheet, for it merely represents the sum of the position as at the end of the year in all the eighteen separate areas in which the Bank operates, and our experience in these areas has been far from uniform. In general terms, however, it is safe to say that, while the reduction is due in large measure to the almost universal fall which has taken place in commodity prices over the past year or more, it also reflects some decrease in the volume of the foreign trade of the United Kingdom and other Dominions and territories of the Commonwealth within our sphere of operations, caused by restrictive measures upon imports designed to improve the Commonwealth's balance of payments, especially with "hard" currency countries.

Considered as a whole, I submit that the Balance Sheet reveals a position of enhanced strength and a sound balance between the conflicting demands of liquidity and earning capacity.

The Net Profits for the year amount to £698,782, an increase over those of last year of £1,685. When commenting upon the record results achieved last year, I stated that it would be foolhardy, in the face of the continued recession we were then experiencing (and which has reduced ever since) not to be prepared for some deteriorating conditions throughout practically all the territories in which the Bank operates, accompanied by constantly rising costs, including taxation, which in all countries takes heavy toll upon our earnings, our results can only be considered very satisfactory.

We paid a dividend in October last of 7½, less that, out of the balance now available, a final dividend of 7½, less Income Tax, should be paid costing £110,250, and this being a special centenary year, it is further proposed that a special centenary bonus dividend of 2½, making the total distribution for the year 16½. At the same time, bearing in mind the great services rendered to us by our staffs everywhere, we have decided to pay a special Centenary Bonus of 10% of their salaries to all members of the Staff throughout this country and abroad who will still be serving us on the 1st

April, 1953. These Centenary Bonuses are special ones which will not be repeated.

It is common knowledge that four in five of India's 356 million inhabitants till the land and maintain a precarious existence by the use of time-honoured agricultural methods largely inadequate to the urgent necessities of the modern era. With an annual population increase of some 4.5 millions, India's immediate economic problem is the vital necessity for an end to the Five-Year Development Plan was first drawn up in 1951, constituting in the financial sphere 70% of the Colombo Plan. But whereas in the other countries, the aim is to broaden the base of their economies and to render them less dependent upon the vicissitudes of a relatively narrow range of commodities, in India the emphasis is very reasonably laid upon agricultural development by such means as irrigation and improved methods of cultivation. Indeed, agriculture, community development, irrigation and power projects, transport and communications, account for 68% of the aggregate investment proposed under the Indian Plan.

The Plan is designed to expand India's national income by 10% over the period 1951-56, but it is estimated that almost half this increment will be automatically absorbed by the ever-increasing population. Thus there is little scope for any spectacular improvement in the general standard of living, but it should be remembered that, with a population more than seven times greater than that of Great Britain, India has a national income less than two-thirds as large. Obviously the most vital feature of the Plan is the question of the wherewithal to finance it, for without adequate capital even the most enlightened and efficient administration will be powerless to assure the eventual success of this great scheme.

Early in the year when the fall in the world values of the country's staple exports moved the terms of trade against India, there were fears of a considerable trade deficit, but a steady diminution of imports has since caused a marked improvement in the balance of trade. In the particular expansion of raw jute and cotton production, by rendering India less dependent on Pakistan for these commodities has contributed substantially to the contraction of the adverse trade gap. This improvement has been reflected in the balance of payments, and the rate of drawing on the sterling balances has been much reduced. The authorities have taken heart from this encouraging trend and have decided that they can safely pursue a more liberal policy towards imports during the first half of 1953, although, naturally, essential materials will still receive priority.

The situation of the export industries is less favourable, but despite a number of concessions the Government has tended to resist reduction or removal of export duties. Conditions in the tea industry deteriorated to such an extent, however, that emergency

measures, such as the exemption of tea waste from export duty, were introduced in November, but these were not sufficient to avert widespread closing of tea gardens at the end of the year. Apart from its losses on the current crop the industry has been faced with the problem of financing production in the new season. The Government has rendered assistance by offering a limited guarantee in respect of the 1953 crop to banks concerned with the financing of tea estates, but the measure has not been deemed adequate in all the circumstances, and the Tea Industry's difficulties remain largely unsolved. The Indian Tea Industry has voluntarily agreed to reduce production by some 8½% during the present year, and meanwhile world, and in particular British, demand has shown some improvement since the turn of the year.

India's economic achievements since the country gained its independence have been considerable, and it is to be hoped that conditions in the export industries will now become more stable as a further recession might well involve the Government in difficulties over the financing of the public sector of the vital Five-Year Plan, from which so much is expected and hoped.

Pakistan

Pakistan has had a difficult year, but after many anxious months it seems that the worst may now be over. Last year I emphasised the vulnerability of Pakistan's economy owing to its extreme dependence on exports of raw cotton and jute, which accounted for more than four-fifths of the country's earnings of foreign exchange. The fall in world commodity prices for more than four months of 1952 was therefore a serious ordeal, and it was not surprising that the Government came under heavy pressure to reduce or remove the export duties which were pricing the country's potentially remunerative staples out of world markets. The Government's dilemma was unenviable, for while it was anxious to do all in its power to get exports moving, it was reluctant to sacrifice such a useful source of revenue as the export duties. Customs duties, import and export, contribute more than two-thirds of Pakistan's revenues at a time when, apart from the burden of defence expenditure, the Government has considerable financial commitments under the Six-Year Development Plan.

I have never changed my view, which I have so often expressed, that the economies of Pakistan and India remain largely complementary, and it is my conviction that the severity of the slump affecting the inability of the two countries to agree upon an agreement was signed in August, 1952. Even so, it is to be hoped that the Pakistan Government willing to forego the discriminatory premium levied on India's purchases of Pakistani raw jute, India would be able to absorb a substantial proportion of the heavy stocks so that the benefit of such a course would be mutual.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT VERY TIGHT

Wednesday, 18th March.

MONEY conditions have become more stringent this week, possibly on account of income tax payments. There is no great increase in trade demand for funds locally, but upcountry sugar, grains and cotton accounts have risen somewhat. The rate for overnight loans has hardened slightly to 2½-3½ percent, and call money quotes 3 percent.

The bill of exchange market is still quiet, though a few gunny, tea and coal bills are reported. There has been very little demand for remittance. Sterling rates are unchanged. The pound, after weakening further, has strengthened and the New York market is reported firm. The rupee-dollar rate, after rising in sympathy with a weaker pound, has now returned to last week's figure of Rs. 47s.8.

Although a smaller amount, Rs. 1,08,75,000, was offered for Rs. 1 crore of three months' Government of India treasury bills, tenders for which were opened on Tuesday, 17th March, the average rate of acceptance was a pie higher at Rs. 2-7-0 percent per annum. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 93 percent. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 13th March, Government of India treasury bills for Rs. 3,51,75,000 were sold in favour of the Reserve Bank of India.

Bullion was quiet last week on selling pressure combined with the absence of enquiry. The price of silver fell from Rs. 165-14 to Rs. 161-4 quoted today and the ready rate fetched a premium of 8 annas. There was, however, no change in the London quotation at 74d. and that of New York at 85½ cents.

Gold also eased because of larger arrivals. Sentiment deteriorated on disappointment over the rise in the international price of gold. The price declined from Rs. 88-14 to Rs. 86-12. The sovereign at Rs. 56-8 showed a loss of about Rs. 2. The European price of gold also dropped from Rs. 37-25 to Rs. 37-10 per oz.

There is a further rise of Rs. 1.89 crores in notes circulation to Rs. 1,138.01 crores according to the return of the Reserve Bank of India for the week ended 13th March, 1953, but the total note issue at Rs. 1,142.27 crores shows a fall of about Rs. 19 lakhs. Notes held in the Banking Department consequently decreased by Rs. 2.07 crores to total Rs. 11,26 crores. In the Banking Department deposits of the Government of India were up by Rs. 7.79 crores to Rs. 147.51 crores because of good tax collections, while other Government accounts diminished by Rs. 9.04 crores to stand at Rs. 1.44 crores. Balances of commercial banks at Rs. 43.44 crores disclosed a fractional decline of Rs. 6 lakhs. Government Treasury bills fell from Rs. 10.54 crores to Rs. 9.31 crores. Balances held abroad were about Rs. 58 lakhs higher at Rs. 146.81 crores. Other loans and advances rose from Rs. 17.54 crores to Rs. 18.37 crores, of which advances to scheduled banks increased further from Rs. 3.24 crores to Rs. 4.24 crores. Investments were about Rs. 10 lakhs down to Rs. 100.20 crores. Ways and means advances were shown at Rs. 3.30 crores (Rs. 3.55 crores).

The Statement of the position of Scheduled Banks for the week ended 6th March, 1953, discloses Demand and Time liabilities at Rs. 526.43 crores (Rs. 11.91 crores on account of borrowings from Banks) and Rs. 314.81 crores (Rs. 2.01 crores) compared with Rs. 525.46 crores (Rs. 12.16 crores) and Rs. 315.78 crores (Rs. 2.36 crores) respectively in the previous week. Cash advanced by Rs. 2.10 crores to aggregate Rs. 33.35 crores, while balances with the Reserve Bank declined by Rs. 85 lakhs to Rs. 41.62 crores. There is a drop of Rs. 31 lakhs in investments to Rs. 300.90 crores. Advances and bills discounted at Rs. 510.84 crores revealed an increase of Rs. 6.01 crores. The ratios to total liabilities of cash and balances and of advances and discounts were, in consequence, shown at 8.9 percent and 60.7 percent against 8.8 percent and 60.0 percent.

The return of the Imperial Bank of India for the week ended 6th March, 1953, shows a rise of Rs. 1.61 crores in total deposits to Rs. 209.89 crores. Investments in Government Securities are down by Rs. 1.16 crores to Rs. 70.08 crores while other authorised investments are up by Rs. 13 lakhs to Rs. 11.16 crores. Loans, cash credits and overdrafts have decreased by Rs. 1.30 crores to aggregate Rs. 105.77 crores, while bills discounted and purchased have increased by Rs. 3.38 crores to stand at Rs. 21.33 crores. Cash and balances are, in consequence shown at Rs. 15.31 crores or Rs. 1.25 crores higher.

The Reserve Bank of India bought sterling worth £8,600,000 in January, 1953 at an average rate of 1s. 6d. and sold £320,000 at an average rate of 1s. 5 8/16d. as compared with £4,865,000 and £25,500,000 respectively in the corresponding period of the previous year.

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

WARP STOP MOTION.—Immediately a warp thread breaks the individual compensator is pulled upwards by the action of its spring and brought into contact with the control bar, automatically stopping the loom.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railway experts. This will save you unnecessary delay and expenditure.

A DITCHER'S DIARY

connected with that fact; it surely explains in part the lively recollection the Press will retain of his forceful personality after his departure this week.

I suppose the views of English-language newspapers on the future of the English language in India are suspect, while the opinions of professors of English on the same subject are hardly less so. We might all be accused of what in industry are called restrictive practices. But it would be difficult to answer the weighty arguments put forward by the conference of English teachers in Delhi this week for the compulsory retention of that language in the curriculum of secondary schools. A firm statement of the sort they put out was necessary, for the main danger as I see it is that English will be retained in fact and because it has to be, but with a bad grace amid prophecies of the coming supremacy of Hindi or some regional language. The only result of that would be a fall in the standard of mastery of English, which, as long as that tongue remained the official medium of instruction, would inevitably lead to a decay of academic standards generally. There has already been a tendency in that direction here in Bengal. As long as the universities are under fire for ploughing too high a percentage of examinees, some might see in the academic language agitation a disguised demand for a general lowering of standards and a cheapening of degrees.

The failure of the negotiations between Mr. Nehru and Mr. J. P. Narain for a coalition of the Congress with the Praja Socialist Party will not be regretted by those who prefer political parties to stand for some identifiable set of principles. The days of the Congress as a mass movement representing all shades of national opinion are past, and the tendency of the governing party to take a stand on particular issues which cannot necessarily be shared by all other parties may have lost it some voting support but has also brought a new air of realism into Indian politics. India needs a conservative party not because the Right is never wrong but because something less amorphous than a patchwork of anti-Communists is required to meet the challenge from the Left. With the sectarians of the extreme Right pursuing a foolish policy over Jammu and with the Communists persisting in subservience to their new and unknown masters, it is only the Congress and the Praja Socialists who can provide the opposition of reasonable alternatives needed for the functioning of democracy. If they had been fused there would have been no thinkable choice for the mass of voters who reject the extremists. Rather than concealing divergencies in the affectation of unity, the two centre parties would clear the air if they now uncompromisingly set out the differences that divided them to such an extent as to make a coalition impossible.

It is natural for business men to believe that they can handle their own problems without interference from the outsider, and in these days, when there are so many official outsiders ready to interfere with private enterprise, all experts who offer their services without having a stake in the business are apt to be included in the category of presumptuous nuisances. The "business efficiency

expert" is usually bracketed with these interlopers; his claim to be a jack of all trades and his reliance on American experience for the value of his techniques do not commend him to management in this country. But Dr. Cover, who is Professor of Business Policy and the Director of the Bureau of Business and Economic Research at the University of Maryland, put up a convincing case for wider use of the business efficiency expert's talents in an address he gave last Friday evening to the Bureau of Industrial Statistics in Calcutta. The results achieved in the United States undoubtedly show that the efficiency expert can work wonders with plant and offices which had seemed to the people on the spot to be well enough organised; and since rationalisation and cost-paring will be so important in maintaining output in India's high-cost economy, he will have some contribution to make here in the future. Before accepting the view that the efficiency expert would be a novelty in India, I would like to see it argued how far the peculiar system of managing agency evolved in this country has in the past performed much the same functions, among its other obligations. The molecular structure of much Indian industry, where administration and expertise are centralised, might need less assistance from the efficiency expert than the small units familiar elsewhere. In any case, it would certainly be true that if efficiency experts were to be called in to promote the rationalisation of Indian industry, the managing agency system would offer a convenient and economical way of making use of their services. I thought one of Dr. Cover's questions had a strong point when he asked where India was to get the experts from, since there was no recognised form of training in business efficiency in this part of the world. But Dr. Cover had a short answer to that. There are at least six top-notch Indian experts now on the teaching staffs of business institutions in the United States, men who are probably only awaiting an offer of employment with prospects, to return home.

The debate about just what constitutes an advertisement—of which we heard something last year when the Calcutta Corporation began charging licence fees on signs and name-plates—will probably be revived when more is known of the new draft rules on the taxation of advertising signs now being prepared by the Municipality. First reports say that licence fees will be payable on fly-posters, hand posters, illuminated signs, "to let" notices and ice cream carts—which random selection suggests that once again the net is being cast very wide. The first official schedule of charges was inconsistent and unfair, but agreement was reached last year on a more rational system of levies, some of which have been collected for some time and others not. The new rules are evidently intended to tighten up the position, and it is hoped that they will stick fairly closely to the basis agreed upon twelve months ago. One ticklish problem which came up during the discussion (with what result I do not know) was whether a firm whose name was painted on a vehicle should be charged for the whole area of the bodywork, including the bonnet and the roof, on the grounds that all painted areas were "back-ground" to the sign.

* A motor horse-box carrying a live horse can travel at 30 m.p.h. If the horse dies in transit the vehicle immediately becomes a carrier of horseflesh and by law must reduce speed to 20 m.p.h.—Daily Mail.

Chairman's Speech

THE INDIAN MINING ASSOCIATION

MR. W.H.S. MICHELMORE ON ECONOMICS OF MINING: PROFITS NOT MORE THAN 2½% OF WORKING FUNDS

ADDRESSING the Annual General Meeting of the Indian Mining Association which was held on the 12th March, 1953, at the Banzal Chamber of Commerce and Industry, Calcutta, the Chairman Mr. W. H. S. Michelmores, M.B.E., said:—

Gentlemen,

It has been the practice hitherto for the Chairman to devote the greater part of his speech to a review of the past year's events. On this occasion, as I shall be vacating the Chair at the end of this meeting, and as we have so many and pressing problems still ahead of us, it may perhaps be appropriate if I address myself rather more to the future than to the past. The Committee's Report, which is before you, deals very fully with all the problems which have beset us during the year, but perhaps some of you have not yet had the opportunity to study it as closely as you would wish and in any event there are one or two items to which I cannot but make special reference.

Our biggest preoccupation has undoubtedly been the conservation of metallurgical coal; this is a subject with which I personally have been intimately concerned for several years past, having served on the Conservation Committee which started work no less than four years ago. Ever since the cry of Conservation was raised it has been my constant endeavour to curb what I regard as the destructive aim of the Conservationists, by which I mean the proposal that a drastic reduction in present output should be arbitrarily imposed on collieries which are producing first-class metallurgical coal. It has always been my view that a far greater measure of conservation could be achieved by sand-stowing, washing and blending than by severe restriction. During the past year the Conservationists have reached a compromise, namely the Government's announcement of its decision to reduce the output of Selected 'A' and 'B' grades of coking coal from 7.9 million tons in 1950 to 5.5 million tons by 1956, but later modified by a reversal of this policy, thanks to the Association's representations, to one of pegging the output of these coals to a maximum based on a 1½% over the 1950 output.

The whole subject has received the most constant consideration of the Committee during the past year, and I think it is only right that attention should be focused on the compromise proposals we suggested a year ago, the details of which are fully described in the Report. In these proposals, it was conceded that output should be pegged at around present levels, but we also pressed that lower grades should additionally be included, and in particular the Government collieries producing metallurgical coal. At the time the Government refused to agree to this, but it is satisfactory that this important point of policy has since been admitted, and all collieries producing coking coal to as low a grade as Grade II, including both the Government collieries and the "private" collieries of the Steel Works are now to be included in the pegging scheme.

For 1952 then, we agreed rather reluctantly that output should be pegged on the basis of 7.9 million tons of Selected 'A' and 'B' grades, but at the same time we made it clear that if the Government rigidly applied there would be cases of individual hardship, for a number of instances where retrenchment of labour would be inevitable. As a result of our representations, the Government agreed that special consideration should be given to difficult cases, and a Technical Advisory Committee (Mining) which includes two non-Government mining engineers is now in session to consider such cases. For 1952 increased individual targets were granted where these seemed necessary, and to report they have been given so far of any drastic retrenchment or loss owing to the Conservation policy.

In respect of the current year fresh targets have been issued to collieries based on an overall output of 7.1 million tons, but here again hardship cases are to be specially considered, and it is to be hoped that more discretion will be allowed. Meanwhile, Government are understood to be carrying out a fresh re-appraisal of the whole position in the light of the proposed expansion of India's steel industry, and it seems likely that the probable demand for metallurgical coal in five or six years' time will be found to be not far short of the present production. If that be the case it would be manifestly unwise to dislocate production in order to save a few million tons in the intervening years, and the sensible policy is to allow production to continue at its present level which appears appropriate to the near future, plus a cushion to allow for inevitable seasonal and other fluctuations.

Sand-stowing Problems

Attention is rightly being given to the extended use of sand-stowing in the metallurgical collieries, and it is satisfactory that Government assistance has now been extended to covering for Conservation in addition to stowing for safety, to which it was limited previously. I should like, if I may, to stress here two points in connection with sand-stowing. The first is that stowing inevitably involves a sharp rise in the cost of production; Government assistance in any event limited to 75% of the actual cost of stowing, and it is open to question whether the economics of the industry can bear any such increase as would be involved by a wide extension of stowing operations. I am inclined to the view that an upward revision of the controlled selling price of coking coal is inevitable. Secondly, I feel I must raise once again the doubt which has long been in my mind whether adequate supplies of sand will continue to be available after the completion of the Damodar Valley project; as I understand it, two of

the main objectives of the project are the prevention of flood and the avoidance of soil erosion; these are praiseworthy objects indeed, with which no one can quarrel, but in their wake they give rise to problem of where the sand, which is the direct product of erosion and flood, will in future be found for the needs of the Coal Industry. I have grave doubts as to its future availability, and although alternative materials have been tried, I believe the general opinion of mining engineers in this country is that nothing else will quite take its place. This is a problem which should engage the serious attention of Government.

An allied subject of importance is coal washing. Much research has been carried out on this, and the Tata Iron and Steel Co. Ltd. have earned the gratitude of the country for their pioneer work in washing. It is difficult to see how the washability of Indian coals has been set at rest. It now remains to decide which coals should be washed and what the economics of washing will be. All of this is receiving the attention of a committee appointed by Government for the purpose, but it may be helpful if I make a few observations on the subject as seen from the viewpoint of the colliery owner. It is well that we should first get clear in our minds what the purpose of coal washing is. As I see it there are several advantages to be gained by washing: first we can beneficiate the inferior coals of which there are such large reserves to a degree which cannot be achieved by manual or other means, and make them fit for metallurgical and other uses; secondly we can improve the better coals also so as to enable them to be despatched at a higher and more consistent quality, eliminating the variations in specification which occur even under the best of existing methods of screening and preparation; in achieving this we can assure to the consumer a better and more suitable fuel of guaranteed quality, and lastly we can provide for the Steel Works a consistent blend of coking coal which is something of such great value to the blast furnace operator as can hardly be measured in terms of actual money.

In this context and that of the present capacity of the industry, what is the correct washing policy to be adopted? I believe some persons hold the view that a start should be made with washing the inferior coals, but here we should bear in mind that as I have already said the output of good metallurgical coal today is already in excess of the current needs of the steel industry and the coke ovens, so that to make available more of that quality by washing the lower coals would only increase this excess still further. It seems to me that the first priority would be to make a start with washing of the better coking coals, which will give us valuable experience and would undoubtedly be of benefit to consumers generally and the steel industry in particular, but with the proviso that encouragement should be given to the mixing in and blending of some of the lower grades at the same time. I would also like to see some brave pioneer start in on the washing of some of the less good non-metallurgical coals, say the Jambud/Kajoras or the Karanpura.

The Cost of Coal Washing

Let us now turn to the economic aspect, and here I think it needs to be emphasised that if coal washing is to expand to the extent that it should for the long-term benefit of the country—it must be made attractive to the colliery owner. A coal washery is an expensive plant, and the figures quoted by the Conservation Committee show that a 100 ton per hour plant would cost around Rs. 15 lakhs and a 200 ton plant Rs. 24 lakhs. These are big figures, and the steel industry is such that colliery owners have little hope of finding such sums within their own resources; moreover the present absence of capital formation throughout the country makes it very difficult to raise such finance from the market. It is imperative, therefore, that coal washing should be given a high place in the list of priorities for which finance will be provided by the Industrial Finance Corporation. Even then the servicing and amortisation of the capital involved will be an appreciable element in the true cost of washing. As regards what might be termed the operating economics of the subject, the actual cost of operation, maintenance and supervision can be determined fairly accurately in advance, and it is well established that the cost of operation is inversely proportional to the size of the plant. But the crux of the whole matter is the yield. A washery can be made to turn out clean coal to almost any specification, but obviously the economics of it must depend on two factors, the price to be paid by the consumer for the clean coal, and the percentage of clean coal recovered to raw coal put in. This subject, as I say, is now engaging the attention of the committee, but I am sure they will find that to make washing attractive it will be necessary to pay a bonus of something like Rs. 2/- or Rs. 3/- per ton above the present controlled prices. Another possibility is to revise the controlled price structure in such a way as to reflect more correctly the relative fuel values of the various grades; that is to say the selling price of the better grades should be appreciably increased, and those of the lower grades reduced; this reform indeed is long overdue.

There is one aspect of washed coal prices which raises a difficult problem, and that is the nature of the raw coal from which the washed coal is to be produced. If the desired quality of clean coal were 15% ash it might take, say, 120 tons of good quality raw coal to produce 100 tons of washed coal of this quality, whereas if inferior coal were being washed it might need, say, even 140 tons of raw coal to yield this tonnage. Now the cost of mining the raw unwashed coal varies little, other things being equal, as between the better and the inferior grades, so paradoxically to secure an adequate return to the

colliery owner a higher price should in theory be paid to him for washed coal produced from inferior seams than for similar coal arising from the better seams. But the value to the consumer is identical. I am not attempting to give you the answer to this enigma, but I think it will serve to illustrate what a very complicated economic problem this is.

Transport and wagon supply is always a matter of vital interest to the coal industry. Speaking on this subject a year ago I congratulated the Railways on a year of exceptional service to the industry. Since then, even the previous year's record has been surpassed, and during 1952 the average coal loadings for Bengal and Bihar were no less than 3.163 wagons daily, or 130 wagons a day better than the previous year. This we must regard as a signal achievement, and we have been encouraged to learn lately that the Railways are planning for an even greater movement of coal during 1953. During the past year the regrouping of railways was consummated, and while this was a subject on which we had grave doubts at the time, and while there are various disturbing rumours circulating about cracks and creaks in the railway administration, the proof of the pudding is in the despatches, and it would be difficult to argue from the figures I have quoted that the regrouping has had any adverse effect on the Coal Industry. On the contrary, I may however be permitted to introduce here a note of interrogation, and that is whether the regrouping has in fact been as complete as we have been led to believe. Collieries suffered for many years from the restriction that B.N.R. collieries could only despatch to B.N.R. destinations, and E.I.R. to E.I.R.; many of us thought that when both of these were integrated into the Eastern Railway these restrictions would disappear. However, they still seem to exist, and colliery owners feel that either regrouping has not been fully achieved, or else the facility of despatch in all directions which should have been possible has not been extended to collieries.

Chronic Wagon Shortage

Looking to the future, and viewing it in the mirror of the performance of the past, the coal industry cannot but have in mind a chronic shortage of wagons for coal loading. This we have experienced for years, but let me say at once that I fully appreciate that the absence of wagons is the sliding of a colliery that wants to despatch coal is not necessarily due to a physical deficiency of wagons on the railway system; it may well be due to a shortage of locos, staff, water, crossing stations, or any one of the many other items which go to make up the complicated structure of an efficient transportation system. But the shortage of wagons in his siding is what hits the colliery owner, and he cannot be content until it is eliminated. The output of coal, and the general traffic of the railways must be conditioned by climate, seasons and other factors, and this very nature must be subject to wide seasonal variations. It is my considered opinion, however, that the forward progress of the country will always be limited if the transport system is only geared to the average traffic throughout the year; that is needed, for real progress, is that the transportation system should be designed to carry the maximum traffic of the year—whether it be grain, coal or other merchandise—so that no market need be starved of its immediate seasonal demands, and the full requirements of an expanding economy can be met throughout the year.

The rationalisation of coal transport is a subject which has been receiving a good deal of attention lately, and the laudable aim is to have a consumer should draw his coal from the nearest source of supply. Now this must *prima facie* achieve considerable economy of transport, but a word of warning should be sounded against the over-simplification of this issue. If the existing coalfields be extensively developed to supply the consumer, previously supplied by Bengal and Bihar, there will be these latter coalfields if they are deprived arbitrarily of the markets which they have served for half a century. Again, there are many consumers who for technical reasons require special types of fuel which may not be available from the coalfields nearest to them, and therefore need to be supplied. The subject then is one which cannot be rushed, and must be carefully examined in all its implications before any arbitrary directions are imposed.

Doubts are sometimes expressed about the adequacy of the country's reserves of good quality non-metallurgical coal. As far as I know the doubters have not brought forward any figures to substantiate the theory that these reserves are inadequate, and it propagates by those who are trying to force on the consumer supplies of inferior coal which he does not want. Possibly this impression is the result of ignorance, and may be based on a lack of genuine knowledge of the subject. It so happens that I am in the small section of which I am connected has held North and South Karanpura licences over the last period has spent many lakhs of rupees in prospecting, drilling and detailed surveying of the coal reserves which I have referred lately to two official publications. The first is Dr Fox in 1932 in his 'Memoir on the Lower Gondwana Coalfields of India', who quotes 750 million tons of available coal for South Karanpura; the second is Dr Gee, who records as recently as 1945, 750 million tons for both North and South Karanpura, described as "all good quality coal". Against our own detailed prospecting operations to which I have referred have established that there are at least 1,000 million tons in South Karanpura, and over 3,000 million tons in North Karanpura, a grand total well proved and estimated to a depth not greater than 1,500 feet. Now this is but a single instance within my own personal knowledge, but I hope it will serve to substantiate the Association's opinion that there is no shortage whatever in this country of good quality non-metallurgical coal.

Since the close of the year we have submitted a lengthy memorandum to the Government on the present condition and future prospects of our industry. There is no need for me to recapitulate here all that we have said, but I should like to make it quite clear that your Committee have been and are very gravely concerned at recent trends. I think we can

say without fear of contradiction that we are the most controlled industry in India today. We have standards statutorily imposed on us by Government relating to wages, housing, pithead baths, canteens, bonuses, provident fund, free food, cheap food and a host of other privileges accorded to our labour. Now, as I said to you a year ago, I don't quarrel for a moment with the Government's policy of ensuring fair treatment and equitable wages and conditions of service for the miner in his difficult and hazardous employment. But it is essential that such conditions be within the capacity of the industry to pay. And it should be remembered that not a single wagon-load of our production can be despatched without a sanction from the Coal Control, nor are we allowed to sell a ton of coal except at the controlled prices laid down by Government. At the same time increasing burdens are laid on us by the Union and State Governments—in the former case often by Ministries which are not directly responsible for our prosperity—but any attempt to have our controlled selling prices increased to compensate for the added burdens always meets with the strongest opposition. Since the present wage and price structure was imposed in 1947, many additional burdens have fallen on the industry which have substantially increased the cost of production. The most serious of these has been the steep rise in the price of foodgrains which I have quoted; but the regrouping and partly at concessional prices to colliery labour; this has cost the industry crores of rupees a year which under the present control cannot be recovered from either the labour or the coal consumer. New and enhanced standards of housing have been imposed on the industry, and the financing of which cannot but cause grave concern; a small subsidy is indeed available from the Coal Mines Welfare Fund for approved housing but the bulk of the heavy cost falls on the colliery owner, and if the Government progress in re-housing is slow, we might remind them that coal is one of the few industries in India which accepts the liability for housing the whole of its labour force—there are many which provide not a single house. A big increase has lately been imposed by the Government of Bihar (the biggest coal-producing State in the country) in the local cesses payable by collieries on despatches of coal, and which are not recoverable from the consumer. The Union Government are planning to bring the coal industry's Provident Fund into line with the Funds of other industries, by basing employers' contributions on basic wages plus dearness allowance and the cash value of food concessions, instead of on basic wages only as hitherto. Meanwhile there is constant pressure by the labour for the reopening of the Conciliation Board Award and for fresh wage and other concessions. I have enumerated a few of the many items which have resulted in an ever-rising cost of production and it would be rational to expect that our controlled selling prices would have been steadily increased to compensate for them. Unfortunately has not been the case, but the sad story of the nine and a half years of 1949 has been told so often that I do not need to repeat it now, and it will suffice if I remind you that that emergency measure which was imposed for a limited period of year is still in force nearly three and a half years later, long after the emergency has passed.

Depletion Allowances

There are aspects of the economics of mining which are apt to be overlooked. One is that the mining of any mineral is by its nature a very hazardous industry, and the risk is always there that the workings may be overwhelmed by fire, flood, collapse or other calamity. Furthermore, when a vein or seam is opened out it can never be more than a wasting asset, with a life limited by its physical occurrence, and drawing inevitably to its close within a certain period of years. It is not like a mill or a factory which, subject to adequate maintenance and renewals, can go on almost indefinitely, buying its raw materials, processing them, and selling its finished products. To attract money to mining ventures, then, there are essential prerequisites; the first is a better than average return on the sum invested, in order to attract capital to what is essentially a risk venture; the second is some special type of tax concession in the shape of an amortisation allowance, designed to allow the company to write off the value of its property within its working life. Such a system is already in existence in the U.S.A., Australia and other countries of granting what are known as percentage depletion allowances. Briefly, these are a percentage of a mining company's gross receipts, less income tax, and are taken as being equivalent to the exhaustion of its mineral resources and which is treated as being free of tax. In some countries percentage depletion allowances amount to as much as one-third of a mining company's income, and I would strongly commend such a system to the consideration of the Government of India.

It is sometimes argued that the dividends paid by some coal companies are so high that it cannot possibly be contended that the industry is in any condition but one of extreme prosperity. I am afraid that these arguments are based on very wrong premises indeed. It may well be that a few dividends paid appear high when expressed as a percentage on the original capital of the Company; but it is often forgotten that some of these companies are a hundred years or so old, they have for many years been ploughing back their profits into the business instead of wantonly distributing them, and therefore the original capital bears no relation whatever to the sums actually employed in the business today. We recently made an analysis of the balance sheets of 51 coal companies with an ordinary paid-up capital of approximately Rs. 81 crores. We found that, owing partly to the enormous rise in working costs during recent years, the total working fund was just under Rs. 29½ crores; in other words the capital needed to finance the activities was over three times their share capital. As I have indicated some part of this consists of undistributed profits ploughed back into the industry, but the salient point is that it is quite misleading to think of the dividends in terms of the original paid-up capital of the companies. The correct yardstick is the total working funds actually employed in the business, and on this basis the profits of these 51 companies—and I mean the total profits, not merely those distributed to shareholders—amounted to no more than 2½% of the total working funds.

A return as low as this cannot but be regarded as uneconomic, and I repeat that the future of the industry gives rise to very grave concern indeed, and

it is my considered opinion that unless urgent remedial action is taken by the Government—I hope I have made it clear that it is only they who are in a position to do anything—this vital industry is likely to decline rapidly into a state of collapse. What then can be done to improve matters? The first and easiest step is obviously the restoration of the nine annas price cut. The second step should deal with food; all colliery owners and managers would breathe a sigh of relief if they could be absolved of the responsibility of feeding their labour, which was only introduced as a war emergency measure; if this be impracticable it should surely be possible with the improved food position in the country to assure to the industry supplies of cheap indigenous rice, rather than the extremely costly and often unsuitable imported grains which we have been compelled reluctantly to buy in the past. Next, measures should be adopted to ensure that the concessions enjoyed by the labour are actually earned by them by dint of work and not just paid out as a reward for past work. In mind is that the so-called production bonus (which is in fact an attendance bonus) should be based on annual results, which was the original verdict of the Conciliation Board, instead of being paid quarterly; and secondly that the food concessions to which the labour are entitled should be linked to production, whereby the labourer becomes entitled to his free food and cheap food just by signing on at the colliery in the morning, and quite regardless of the work which he actually does. Lastly, I think that the additional burdens on cost of production of the industry should be examined with a view to compensating colliery owners with an increased selling price. At the risk of repeating myself I would say once again that early action is imperative if disaster is to be avoided, for many collieries are now running at a loss, and that cannot be allowed to continue.

Growth of I.M.A.

I made reference a year ago to the lack of any commercial representation on the Coal Board and in the general control and administration by Government of the industry. I repeat that as long as the bulk of the industry remains in private ownership and not nationalised it is not only desirable but essential that commercial interests should be ascertained by the Board. The current policy in regard to Conservation, the introduction of coal washing, the extension of sand-stowing, all of these raise a host of economic and business problems with which the public servants are not accustomed to deal. The public servants have always hoped that there would be commercial representation on the Board, as envisaged by the Mahindra Committee of 1946, and I am very doubtful of the administration working smoothly and efficiently, or of its securing the concurrence of the industry, unless some such representation is provided. I still regret the passing of the old Coal Mines Stowing Board, in which members of the industry had direct responsibility for the most important administration of sand-stowing, and while it is a satisfactory that the Stowing Advisory Committee I would have said, this Committee is purely advisory and not executive, and secondly that although it is eighteen months since the Stowing Board was abolished not a single meeting of the Advisory Committee has yet been held.

I think many of you are aware that last year the Association celebrated its diamond jubilee. I feel that the passage of sixty years calls for some special commemorative action. When the Association was first started in 1892 it had thirteen members, and the total coal production of India was only four million tons a year; since then the growth and importance of both the Association and the industry have gone along hand in hand, until today we have a membership of 129 companies, and the country's total production is 36 million tons. Of this total our members produce 70% of the output which is raised by non-Government collieries.

The Indian Mining Association can be justifiably proud of the position which it holds in this important industry. The aim of our members has always been, and still is, to provide the optimum service to the consumer in the shape of supplies of the coal most suited to his needs, and at the lowest price consistent with the proper discharge of our obligations to the labour we employ, and a fair and reasonable margin of profit.

And here I should like to say that the member collieries of our Association have always been to the fore in voluntarily introducing improved amenities for the labour force, besides ready co-operation with the Government in attempting to implement any amelioration in conditions which they have thought fit to impose. There are other minor but vocal sections of the industry who make little serious attempt to comply with the accepted standards of employers' obligations, and yet it is these latter who are most insistent in demanding from Government an increase of share of transport, or anything else which they think likely to give them a sheltered market. Before granting them any special concessions of this nature I suggest that Government should satisfy themselves that these interests have in fact merited special consideration by complying with the Government's accepted standards of employment, housing, quality of despatches and so on. It seems only reasonable that employers who are found defective of these standards should be given special assistance from Government in other directions.

I repeat that it is the aim of the Association, as well as of our members, to do all that we can to betterment in the industry, and I think it is a tribute to this attitude of ours that the Government have always been ready to listen to us and to ascertain our views on any matter of policy vitally affecting the industry. On occasions when we have been differed of the industry, we have always told them from the Government's point of view, and even when our representations have been over-ruled it has never been our policy to obstruct; on the contrary we recognise the importance to the country of the smooth running of her basic industries. In short, I feel that we may congratulate both the Government and ourselves on the fact that so strict a control has on the whole worked so harmoniously, and I am sure that you, Gentlemen, will support me when I declare the wholehearted co-operation of the Association and its Members with the Government in its ambitious plans for the development of this great country.

Company Meetings

BENGAL COAL COMPANY LIMITED

MR. C. A. INNES CRITICISES UNNECESSARY RESTRICTIONS ON PRODUCTION AND EXPORT

Speech by the Chairman, Mr. C. A. Innes, at the Half-yearly General Meeting of the Shareholders of the Bengal Coal Co., Ltd., on 17th March, 1953, at 12-00 noon.

Gentlemen,

The accounts are in the form which has been familiar to you for several years, and I do not think there is anything in them which needs special mention. You will see that raisings are down as compared to the previous half-year, and that the Company has made less profits, but we have less tax to provide, and your Directors have therefore been able to maintain the dividend at its previous level. I must however point out that this dividend is by no means a measure of the prosperity of the industry as a whole; rather, it is the result of the wisdom of your, and my, predecessors. Your company is now 110 years old, and no company formed to exploit a wasting asset such as coal can maintain its existence throughout this length of time, unless those responsible for the conduct of its operations continually look to the future, and consistently, with the consent of the shareholders, plough back sufficient money into the company to provide for the development of new collieries to take the place of those in which the coal seams have been worked out. I would refer you to the remarks of the Chairman of the Indian Mining Association at their annual general meeting last week, that it is misleading to look at dividends in terms of capital, the correct way being to view them in relation to the total working funds actually employed in the business; and the dividend which your company has paid is really a return of the money which has throughout the years been put back into the company. The future of the coal industry must at many times in your company's history have looked as obscure to our predecessors as it does to us today, but they were not deterred from building for the future, and we have cause to be grateful to them for the strong position in which the company now finds itself.

This policy is still the policy of your Board. You will be interested to hear that in the last six years our additions to Block total Rs. 2.15 crores, and that development on this large scale has only been made possible because in that time we have placed no less than Rs. 1.74 crores to depreciation and reserves. As a result we now have two new collieries—Girimint and Chinakuri—each capable of raising, when in full production, over 50,000 tons of coal a month. Girimint, which mines the well-known Poniatzi seam, is at present raising about 16,000 tons a month, and as output is steadily increasing as development proceeds, it can without difficulty replace the falling production at Old Bankisula colliery, which also works the Poniatzi seam. Girimint is highly mechanised underground, and has a most modern and efficient surface layout, and when I inspected it a fortnight ago, I was very greatly impressed with all I saw. Chinakuri has only one shaft, and is actually in the Dishergarh seam, but its two other shafts should strike the seam in a few months' time, one of which, at about 1,950 ft., will be the deepest colliery shaft in India; and meanwhile the colliery is raising, from one shaft and two inclines, about 16,000 tons a month. This colliery will also be mechanised, and in addition has a most ingenious scheme for sandstowing at a low cost, for which the greatest credit must go to the Company's technical staff. I believe—and I have had this opinion recently confirmed by a visit to the Company's technical staff—that the sandstowing arrangements in collieries in Eastern India are far ahead of anything in the world, and it has been fascinating to me, watching the development of sandstowing at our collieries almost since its inception, to see how the ingenuity and resource of our technical staff have resulted in a steady improvement in technique and design which is now culminating in the arrangements at Chinakuri.

On my recent tour of your collieries, I saw abundant evidence on every hand of the skill and enthusiasm of the Company's staff, and I would like to pay a very warm tribute to our Chief Mining Engineer, Mr. Rosser, who is here with us today, and to all his staff for all that they have done and are doing for you.

Raisings during the half-year amounted to about 10½ lakhs of tons, and though this is appreciably less than the figure for the previous half-year, it constitutes a record so far as the October half-year is concerned. Raisings during the current half-year are also very good, but to continue on our present scale is not without its problems and it seems to me that we are very near, if indeed not already, to the stage of over-production of coal in India.

Rigid Controls

As you are aware, the coal industry is today operating under a very rigid system of controls. Our export sales controlled, our internal sales controlled, our wages and to grant certain concessions to our labour.

The price structure was fixed in 1947 in relation to costs as they then were, and selling prices were actually reduced in 1949 on assurances from Government that certain reliefs as regards costs would be given. These assurances have never been implemented, and yet the price cut remains. Meanwhile our costs, particularly as regards labour, have been steadily increasing. It must surely be clear to anyone who has any knowledge of the trend of costs in India during the past five years, that maximum selling prices based on 1947 costs and subsequently reduced, are obviously due for reconsideration; the point is so essential and so simple that I do not see what more need, or can, be said about it, and I feel that there can be little doubt that Government are now considering the matter.

Further, on the distribution side, there is no longer the need for complete control over every wagon of coal which is despatched. I spoke on this subject at some length at our meeting a year ago and do not wish to go over the same ground again, but I would like to tell you that control over distribution is in fact more onerous now than it was, as it is now apparently more difficult to get coal out of the country of production of coal which necessitates control over distribution, but the inadequacy of the Railways to carry it, and a system of rationalisation of coal transport has been introduced. We know that a great effort is being made under the Five Year Plan to expand the country's railway system, and this of course should in time be of great help to us; but from the short term point of view I must say that if the railway ways cannot at present carry all the coal that the country wants, it seems absurd that they should be forced to waste capacity as they are now doing by carrying inferior coal containing a large proportion of useless matter when there is plenty of good coal available. The time has come when the consumer should be allowed to buy the quality of coal he desires. There was no control over distribution before the War, and when wagons were short, as always happened in the early months of the year, the situation was met by a simple system of priorities which should not cause any difficulties, it would increase the efficiency of industry throughout the country, and would save the taxpayer the expense of maintaining an elaborate, and no longer necessary, organisation.

Exports Handicapped

I mentioned last year the question of exports, and I make no apology for referring to it again since it is a most important part of your Company's business and, as I forecast last year, there has been considerable deterioration during the past few months. The export trade is still handicapped by export surcharges allowed to ship, and by the unpopularity among ship-owners of the port of Calcutta, and since we now have to compete in a buyers' market, we cannot carry these handicaps. Already Australian coal is being imported into Hongkong, and indeed into Chittagong, way freights and ambitious development projects in the mines of South Africa will shortly mean increased competition from that country. The great jute industry was recently brought to the verge of ruin by too heavy export duties, and while the coal industry is not as dependent on exports as is the jute industry, nonetheless it would be a pity for India's export trade in coal also to be prejudiced by the refusal of Government to remove these duties in time.

Important though this is, it is not so serious as the extraordinary regulation by which we are forced to export bad coal when plenty of good coal is available. I cannot see any sense in this at all; on a buyers' market, and competing with other coals of a quality as good as the best Indian coal or better, it is a economic suicide. I can only conclude that the matter has still not been properly examined by Government since it seems to me inconceivable that Government would after careful consideration be willing to continue a policy which obviously is so opposed to the country's overall policy of stimulating exports.

Even if it is urged that we should not send our best coals abroad, where is the sense in shipping inferior coals to ports in India? Coal in Madras, for instance, is expensive because the Railways cannot carry sufficient quantities from Calcutta by steamer; and it seems nonsense that in these unfortunate circumstances the cost to Madras coal users should be made even greater by the supply of poor quality coal containing a large amount of waste matter.

Port Congestion

As regards the port of Calcutta, this has never of late, shortage of pilots and harbour masters, seen a state of affairs in the port, the like of which I have never known in my 22 years' connection with the coal industry. In May last year the connection with the docks, was reduced to 200 a day as against the previous average of 450. This restriction of course immediately affected the turn of steamer and set in motion a process which eventually culminated in such a congestion of ships in the port that steamers had to wait for as much as 30 days, and on occasions more, before they could even get a loading berth. At one time the number of steamers waiting for coal berths was 32, and something like Rs. 2,500 a day, a long waiting period is a serious deterrent both to owners and charterers. It took six weeks and many urgent representations both from the Bengal Chamber and from the Indian Mining Association before the authorities realised the seriousness of the position, and it was not till the end of 1952 that normality in the docks was achieved. Meanwhile we were for a period debarred from our business has greatly suffered and is indeed suffering. When I tell you that there are at present over 100 collieries loading in the Calcutta docks, and naturally no collieries waiting for a berth, you will find nine months ago and just today with the position damage which has been done to our export trade.

I have heard it said that the control over coal distribution, and the requirement by which a proportion of inferior coal has to be exported along with superior coal, are maintained as a means of protecting small collieries mining inferior coal which otherwise would not be able to compete with their bigger rivals. I do not believe that this can in fact be the case, but let there should be any loose thinking on this subject, it may be as well to state exactly what your company is. The ordinary shares are held by 15,72 shareholders, of whom 1,414 are resident and holding of the ordinary shares is therefore under 32 at our present rate of dividend holding of 32 shares. This body of shareholders, which constitutes the bulk of the company, is Rs. 1,280 a year. Bengtson & Co., Ltd., in the past six years processes as against Rs. 1.91 crores paid out in dividends; and it has, as I have already told you, spent Rs. 2.15 crores in development for the future, and in order to do this, has ploughed back Rs. 1.74 crores into the Company. You will see therefore that while your company in India, and may thus be regarded as a very important, whose annual return on their investment is not great, but who are playing an important part in the country's economy by their contribution to the country's revenues and even more so by such both in the present and for the future. Surely which Government can give it.

There are many other matters of importance which are now under active consideration by the industry, such as the conservation of metallurgical coal, the washing of coal, and labour legislation; but these have been most adequately dealt with by the Chairman of the Indian Mining Association, Mr. Michelmores, in his speech a few days ago, and there is nothing which I can add to supplement his remarks.

Before I close however, I would like to tell you that we have recently had the privilege of visits to your collieries from the Hon'ble Mr. K. C. Reddy, Minister for Production, and the Hon'ble Mr. V. V. Giri, Minister for Labour. We also had the pleasure, last October, of taking our new Coal Commissioner dhyani, and Chairman of the Coal Board, Mr. R. K. Ramachandran, I.C.S., underground, and also showing him over our sandstowing installations at Sealapore come Mr. Ramadhyani to his responsible and important post.

We are glad also to welcome Mr. K. C. Neogy, back to the Board. You will remember that Mr. Neogy resigned from the Board in November 1951, when he became Chairman of the Finance Commission, and now that duty is finished, he has kindly consented to rejoin us, and we are delighted to have his advice and knowledge of the industry, which he has gained back many years, at our disposal.

Finally, gentlemen, this is the last time that I shall address you, as I am shortly retiring. I have been connected with your Company almost since I first joined your managing agents, and from my intimate knowledge of it I can tell you that on the production side we can face the future with confidence. Our new collieries will I believe be the best in the East, and these two alone will, in full production, be capable of raising over a lakh of tons a month of Dishergarh/Poniatzi Coal, which, as you know, are the best high volatile seams in India, for big raising units with a long life ahead of them, and above all, we have on the coalfields a most able, efficient, and enthusiastic staff to whom our present strong position is largely due.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

Presiding over the Sixteenth Annual General Meeting of the Alkali & Chemical Corporation of India, Ltd., held in Calcutta on the 12th March, 1953, Mr. N. D. Harris, the Chairman, said:—

You have received copies of the Report and Accounts for the year ended 30th September, 1952, which have been sent to all Members, and with your permission I propose to take them as read.

The Calcutta (Rishra) Chlorine/Caustic Soda and Hydrochloric Acid Plants had another good year but there has been some reduction in the demand for Hydrochloric Acid since the end of the year as a result of supplies of Sulphur being again freely available for Sulphuric Acid manufacture. We encountered severe competition in our "Gammexane" Benzene Hexachloride (B.H.C.) Dust and Water Dispersible Powder formulations and owing to accumulation of stocks, production was curtailed for part of the year. The Technical Benzene Hexachloride Plant started commercial production towards the end of the year and produced a satisfactory product. The Plant could not be run at full output owing to the demand for Rishra Chlorine from your Company's regular customers. Experimental work continues on the Plant and ample supplies of Chlorine should become available later in the year.

Work on the Caustic Soda/Chlorine extensions has proceeded steadily and the final stage of plant installation has now been reached. It is hoped that the additional Plant will begin production before the end of the current year.

As forecast by me last year, the Paints manufacturing unit at Rishra, producing "Duco," "Dulux" and "Nocol" Paints, reached its full rated output by the end of 1952. The Works Management are to be congratulated on this achievement.

The Khewra Works had a satisfactory year and maintained a high rate of production. Although with your approval we entered into a contract for the sale of Khewra last year, the latter does not become effective until the formal written consent of the Pakistan Government has been obtained. It has been given in principle. Everything possible is being done to enable the sale to be completed without further delay. Meanwhile all profits made in Pakistan continue to accrue to us and those earned up to 30th September, 1951 have been remitted to India with the exception of a small balance.

You will observe that the Company made a net profit for the year of Rs. 26,64,063 which, including the balance brought forward from the previous year and provision for taxes no longer required gives a total of Rs. 32,18,795 available profits. Of this the Directors have allocated Rs. 3,07,000 to Reserve for Deferred Income Tax Liabilities due to Initial Allowances, Rs. 3,00,000 to General Reserve, raising it to Rs. 23,00,000, and Rs. 7,50,000 to Dividend Equalization Reserve. Our reason for making the latter transfer is as follows. At present Khewra contributes a considerable proportion of our profits. When its sale is completed, we shall be left with the Rishra Plants only. The Paints and B.H.C. Plants are still in the early stages of production and their products have to be sold in very competitive markets. The Chlorine/Caustic Soda extensions have not yet been completed. For the next year, or two, after the sale of Khewra goes through, your Company's earnings are likely to be reduced. Your Directors therefore considered it prudent to put aside the sum of Rs. 7,50,000 in order to strengthen our resources with the object of maintaining the present rate of dividend.

The Preference Dividends for the year have been paid and the Directors recommend payment of a dividend of 6% free of Income Tax on the Ordinary Shares, absorbing Rs. 3,72,000 and leaving a carry forward to next year of Rs. 2,51,870.

The Report and Accounts were adopted. Mr. N. D. Harris and Sir Birendra Nath Mookerjee were reappointed Directors. The Auditors, Messrs. Lovelock and Lewes, were reappointed.

Our City Cable

BUSINESS WITHSTANDS ADVERSE FACTORS

LEADING INDUSTRIALS FIRM

London, 18th March.

DESPITE the week-end coinciding with the end-of-account and the end of the Stock Exchange financial year, share values finished with a very steady to firm undertone. Considering also some of the adverse items of news which reached the market, business over the whole period has been quiet good. Most telling was the uncertain international situation which followed the shooting down of British and American aircraft over Germany. This immediately checked investment and speculation but at the same time did not induce any large scale selling. Quite naturally foreign bonds were most sensitive to this situation and dealers appeared hesitant. However, by the close other factors helped to regain most of the losses. Japanese buyers continue to be active in the Japanese Government were helped by the news that the Japanese Cabinet had approved requirements for a sinking fund and interest payment on external loans.

Industrial shares moved more or less in step with funds and leading issues, hardly changed. Once more, speculators were active in take-over shares. Activity in minings slowed down and like most other sections net movements were smaller. Dealers are generally awaiting the outcome of the South African general election. Coppers were well supported on the news that a large Rhodesian company has been granted a change of domicile, while diamonds hardened on Continental support. The marked upward tendency in teas was also checked, though many thought this was only a period of consolidation. After touching 2½ 3d. Assams fell steadily to 2½ 3d. while Assam Frontiers lost ½d to 3d. Assam Consolidated, however, finished with a ½d gain at 12½ 6d.

Loan conditions on the London's money market during the past week were generally patchy but became more comfortable towards the close. A small amount of official assistance was required on most days but at the end of the period outside calling was initially lighter and a fair return on funds later in the day enabled books to be balanced without difficulty. The Bank of England Return shows an increase of £6.3 million in active note circulation to £1,481 million. Applications for £25½ million Treasury Bills totalled £356,395,000 of which the former amount was allotted at an average rate of 4½ 11.74d percent. This week offerings total £60 million.

Singapore Rubber

The Singapore rubber market fell by one to 1½ Straits cents per pound towards the week-end under a fresh burst of selling pressure. Number one ribbed smoked sheet at 7½ cents per pound closed at the lowest since April 1950. Offers were well absorbed by the trade, however, and the market had a steadier appearance at the close. Last Saturday's decline followed several days of easing prices which merchants attributed partly to poor demand from consumer countries. One broker said growers were looking well ahead and getting rid of stocks because they foresaw a shrinking world market. He said growers were concerned over restrictions being imposed by Britain and America on trading with communist countries. The fall in prices at Singapore brought the London values down sharply by half penny per pound to the lowest since April 1950. There were very few offers at the lower levels and the market soon responded to buying orders from the trade taking the opportunity to cover short positions. The market turned steady with some of the early loss regained. No. 1 RSS on spot was traded at 21½d per pound with further buyers at that price compared with 21½d bid at the opening and 21½d at the close last week.

Wall Street Foreign Bonds

Speculative interests on Wall Street in iron-curtain-country bonds ebbed considerably following the bullish flurry prior to and after Stalin's death. Chinese Government Railway bonds of 51 were sold at the 1952-53 peak of 87½ on 9th March but there were no further transactions. Several Polish issues eased, while no business was done in Estonians or Czechs. Danish, Italians, Japanese and Norwegians, however, advanced fractions but some eventually gave up a part of the gains. Serbs, Croats and Slovenes lost about two points. The latest figures show that holders of \$43,400,000, or more than 60 percent of the Japanese bonds traded on the Exchange, have approved Japan's offer to settle her dollar bond debt. In South American dealings were slow but Brazilians, Chileans and Peruvians generally managed to improve fractionally. United States Governments in the medium and long-dated range were a trifle soft in a thin and mostly professional market but shorts were steady. Quality Corporates were neglected and mostly unchanged. Rails were mixed in sluggish dealings.

American Rosin Prices

The decontrol of gum, turpentine and rosin prices is not expected to influence the New York market as both these items have been selling below established ceilings for many months. Demand

for naval stores this week showed a moderate improvement and fair inquiry was noted for hot rosin, largely used by makers of synthetic resins and paper sizing. Movements of prices, however, were confined within narrow limits. The volume of turpentine sales was about average for this time of the year. Business should pick up in the weeks ahead as distributors and wholesalers lay in stocks to obtain replacements for the painting season. The export trade remained in the doldrums. Foreign buyers continue to be reluctant to pay for rosin unable to operate because of lack of dollars and import licences. On F.A.S. Southern port basis rosin was sold at 80½ to 809 cents per hundred lbs in drums and turpentine moved at 69 to 70 cents per gallon, steel galvanised drums included.

Produce Market

The London produce market was generally steady. Straits coconut oil was still scarce but there were small sellers at around £124, while Ceylon oil sold at £123½ and £124 per ton, c.i.f. Business was also done in Bombay castor oil seconds at £153 and Indian linseed oil and groundnut oil at £121 and £142 per ton respectively. Canadian linseed was bought on French account at U.S. \$147.60 per ton, while Belgian Congo palm kernels were sold at 9.150 Belgian francs and British West African Kernels at £68.

Tanned Hides

The East Indian tanned hide market continues to be uncertain. Prices are currently showing a slightly higher tendency after declines of a penny or two earlier in the period. A fair amount of business was done at lower rates but buyers have lost interest since the rise. Buffalo calf moved in a small volume at firm prices. Cow calf quotations are also firm with moderate offer. Tanned skins remain extremely firm mainly because of the re-entry of Japan into the market.

Sulphur Prices

Mr. Jefferson, president of the Lake Sulphur Company, has predicted that sulphur prices will rise when prices are decontrolled. However, he declined to speculate how much of improvement may develop from the average domestic ceiling price of \$22 per ton.

Market Newsletter

The Investor's Chronicle market newsletter states: London Stock Exchange prospects seem reasonably set fair for the time being with edged firm and more public interest, but a period of consolidation seems likely with the budget looming ahead. The recent strong demand for tea shares emphasises the improved outlook.

Cair Yarns

The market for Indian cair yarns in Rotterdam held firmly to previous rates throughout the week ended 14th March. Only limited business was done as shippers were not inclined to consider counter bids. In Ceylon, Coconut fibres and the supply of mattress fibres continued scarce, while in bristle fibres small business was done at firm rates.

Jakarta Tea Sales

Demand improved again for most descriptions. Good liquor broken teas were mostly 20 to 30 cents up on last week, while good medium, medium, low medium and common broken pekoes were between 10 to 20 cents higher. Clean black pekoe fannings and dusts continued to be supported. Offerings were 4,800 packages.

EUROPE'S BIGGEST TURBO-ALTERNATOR SET BEING CONSTRUCTED

The biggest turbo-alternator set so far manufactured in Europe is under construction. In August, 1952, the Rheinisch-Westfälische Electric Supply Co., Essen, placed an order with Brown Boveri, Mannheim, for a 150,000 kilowatts, i.e., 187,000 kVA, turbo-alternator set to run at a speed of 3,000 r.p.m. This set is intended for the new power station at Weisweiler near Aachen. This set will be the biggest single shaft set to be manufactured in Europe. Up to now such big outputs were possible only with two shaft arrangements. The turbine will be designed for a live steam condition of 1,570 lbs per square inch at 977°F and will have a tri-flow low pressure part. The steam turbine and the stator will be manufactured according to Baden design. The rotor of the alternator is the most difficult part of the set and will be manufactured at Baden. The rotor has a length of approximately 35 feet and the total length of alternator, including exciter, will be about 45 feet. The length of the stator alone will be about 28 feet and the maximum width 16½ feet. The weight of the alternator will be 240 tons and of the rotor alone 50 tons. The overall length of the set will be 92 feet. The boiler plant will be equipped with 300 tons per hour Sulzer Monotube Boilers designed for a pressure of 1640 lbs. per sq. in. g. At the power station of Goldenberg near Koeln of the same supply company 100,000 kilowatts, i.e., 143,000 kVA, set is under erection. The turbine and condensing plant have been manufactured in Mannheim and the hydrogen cooled alternator in Baden. The turbine is of the three-cylinder type. There are 91 Brown Boveri turbo sets with a combined capacity of 180,000 kilowatts installed in India and Pakistan.

TEA-CHESTS?

I have enough troubles on my mind nowadays without adding fancy tea-chests to them. I always specify ALBION PLYWOOD Panels for my tea-chests, because I know from experience that they are the best.

ALBION PLYWOOD
Manufactured to I.S.I. specifications
from high quality timber.
Durable construction in
standard sizes. Manufactured under
expert supervision.

Note the words "malice aforethought". This implies an intent preceding the act intended. But malice will be implied where knowledge exists that the act is likely to kill or do grievous bodily harm to an individual, and the act is intended, and committed and death results. That is the law in England. In the Indian Penal Code the definitions of murder are so drawn as to limit considerably the doctrine of implied malice and to lay more emphasis on the necessity to prove actual intention. And without setting up as an expert the writer suggests that this particular

* * * *

The reader will now imagine himself on the jury in the following circumstances: In the dock is a young husband, or, rather, widower, by name Chinnathambi, charged with the murder of his wife Pappal. The young couple were happily married with one cause of occasional dissension between them. Pappal was overgenerous to her paternal relations. There had been a heated domestic row over a silver bangle which she had given away to one of her female relations. That passed over and the husband lavished further gifts upon her. But she repeated the offence on a visit to her parents' house when she again parted with valuable ornaments given to her by her husband. On her return home the husband found out about those gifts. One word

VISCOSE PULP

Scandinavian viscose pulp manufacturers are to make no change in the export price of their produce during the second quarter of this year. They will continue to charge £66 per long ton c.i.f. for viscose pulp of normal quality for delivery to Britain and the equivalent price in Swedish crowns for delivery to the Continent. Scandinavian producers are expecting an improvement in business now that activity in rayon and wool industries in Britain and elsewhere has recovered from the low level of a year ago. Their viscose pulp stocks should also go down. So should their surplus of bleached paper sulphite pulp which has arisen as a result of the number of producers switching from textile pulp products to more easily saleable paper pulp. The are understood to have decreased by about 50,000 tons during the past month but they are still above the normal.

Although very few transactions were recorded in Preference shares, there was good enquiry for selected issues. Among Jute, Anglo-India were taken at Rs. 117-8, while Auckland 5½ percent and Northbrook were, in each case, marked down

at Rs. 11-2, and Baratee Coko were enquired for at Rs. 14. Britannia Biscuits were sold down to Rs. 1-2 and British India Corporation were represented on several occasions at Rs. 9. Dunlop Rubber were steady at Rs. 2-3-8 exclusive of duty were Rubber-vent Investments at Rs. 3-3. There was a sustained enquiry for Glycerine at Rs. 1-10. There was a steady enquiry from Rangoon for Rubber at Rs. 1-10. Even at the latter rate the Aluminium buyers, but few declared sellers. Indian Aluminium were recorded at Rs. 11, and Aluminium were recorded at Rs. 11, and improved to Rs. 20-6. Metal bus were offered steady at Rs. 2-4, while Rajis were steady at Rs. 7. Shawwal were Wallace were cross-sold at Rs. 1-8 and Textile Mash-i-nery were in demand at Rs. 5-3. Airways India-

NEW SALES TAX BILL TO REPLACE ORDINANCE

BULLION ASSOCIATION BYE-LAWS TO BE REVIEWED

(FROM OUR OWN CORRESPONDENT)

15th March. THE Bombay Sales Tax Act has again been discussed in the State Legislature, interrupting the general debate on the budget last week. Four days were taken up as a fresh Bill had to be rushed through all three readings in time to get the President's assent before the Sales Tax Ordinance expires on the 29th of this month. The ordinance replaced the multi-point sales tax Act of 1952 which was declared void and beyond the competence of the State Legislature by the Bombay High Court. The new Bill, which consolidates and amends the law governing the levy of sales tax on the sale and purchase of goods in the State, was passed on Friday after a heated debate. But this will not be the last time that the House will be engaged in passing legislation on this controversial subject for the new Bill is only a stop-gap arrangement until the Supreme Court reaches its decision on the appeal from the judgment of the Bombay High Court filed by the Government. Another comprehensive Act, including modifications which may be necessitated by the Supreme Court's decision, will have to be introduced in the Assembly either in this session or the monsoon session at Poona.

Bullion Exchange

The Bullion Exchange is once again undergoing a minor upheaval. The bye-laws of the

Association relating to forward trading, which were drastically revised only a little while ago, should, it is proposed, once again be reviewed. The Board of the Bullion Association has called an extraordinary general meeting, with the sanction of the High Court, to ascertain members' views on the proposed changes regarding the imposition of margins, delivery of ready goods on the termination of each contract and the methods to be adopted at the clearing. The meeting is scheduled for next Wednesday after which the new bye-laws will again be submitted to the Government of Bombay for their final approval, provided they first receive majority support from the members. Brisk canvassing is going on by various groups and the meeting is expected to be long and stormy as the new bye-laws will have a far-reaching influence on forward trading in bullion.

Deep-Sea Fishing Development

Deep-sea fishing, it seems, is to be the latest industry to be developed by Tatas. According to Mr. A. D. Shroff, a director of the company, negotiations are progressing with the Taiyo Fishing Company of Japan for the joint promotion of a deep-sea fishing project along the west coast. Mr. Shroff, who returned last week to Bombay from a five-week tour of Japan and South-East Asian countries, disclosed at a Press conference that an agreement might soon be reached between these two companies to work this project on an experimental basis for one year. The Japanese company carried out fishing operations successfully in the Arabian sea under a temporary licence granted by the Government of India last year. One of the conditions for extending this licence for a further period is that the Japanese concern should establish a company in India in partnership with some Indian firm.

Mr. Shroff said that the American bombing and the destruction of cities had proved a blessing

in disguise to Japan and that as a result she had rebuilt her cities on modern lines and had rehabilitated most of her industries. He thought that the popular belief that Japan did not produce quality goods and was interested in exporting cheap goods was not true. As a matter of fact all industries, he said, accepted rigid quality control as they depended mostly on export markets and he suggested that unless India modernised her methods, cloth exports from India were bound to fall. He further elaborated his suggestion made in Rangoon about the creation of an economic Commonwealth in the East; this could be brought about if all the countries in the Far East and South-East Asia pooled their resources and industrial techniques. But before this could be done it was necessary to have a very detailed survey of the resources of the countries involved. It would, he said, be necessary for Japan and India to take a lead. He cleared up a possible misunderstanding by adding that the creation of such a Commonwealth would not entail neglecting trade relations with the Western world. Mr. Shroff also stressed the need for strengthening the commercial sections both in the External Affairs Ministry at New Delhi and at various Embassies in Asia.

Exhibition of Commercial Art

The Commercial Artists Guild have organised their fourth annual exhibition at the Jehangir Art Gallery. Mr. Pranlal Devkaran Nanjee, President of the Indian Banks' Association, opening the exhibition, said that commercial artists could successfully "sell" the five-year plan to the masses. He remarked that the various projects under the plan would require wide publicity to secure public co-operation and that in an overwhelmingly illiterate country, the meaning and significance of these plans and projects would have to be conveyed visually to the people. Mr. Nanjee said he had been ignored by the Indian business community. Mr. S. Das Gupta, chairman of the Guild, in requesting Mr. Nanjee to declare the exhibition open, observed that it was not confined to the works of artists from Bombay only but was of a representative character and included exhibits from various other States.

Labour and Welfare Officers' Conference

Mr. Shantilal Shah, the State Labour Minister, announced at a Press conference last week that Mr. V. V. Giri, the Central Labour Minister, had agreed to inaugurate the first all-India Labour and Welfare Officers' Conference in Bombay on 3rd April. The Conference has been jointly organised by the Indian Conference of Social Work, the Indian Institute of Personnel Management, the National Institute of Labour Management, the Industrial Welfare Association (India) and the Tata Institute of Social Sciences and is expected to last four days. It will be attended by about 400 delegates from all over the country. According to Mr. Shah, the Conference is being convened to counteract the present tendency to overemphasise the strictly legal aspects of industrial relations which increase labour litigation and diverted the energy and attention of both employers and employees from truly constructive activities. It is intended that the Conference, after the plenary session at the beginning, will divide itself into four sections to study the theories of labour welfare, prevailing practices, training of labour welfare personnel, and the future scope and activities of such conferences, presided over respectively by Mr. M. R. Masani, Mr. R. G. Gokhale, Mr. D. K. Sanyal, and Dr. U. Krishna Rao.

KANPUR COST OF LIVING INDEX

The Kanpur working class cost of living index (Base, August 1939=100) for February, 1953 has risen by 5 points to 459 as compared with the previous month. This figure is, however, higher than the index number for the corresponding month of the last year by 18 points. The table given below shows the comparative group indices for the months of January and February, 1953.

Sl. No.	Groups	Jan. 1953	Feb. 1953
i	Food	502	508
ii	Fuel & Light	396	378
iii	Clothing	456	476
iv	House Rent	214	214
v	Miscellaneous	458	463
	Cost of Living Index Number	454	459

The Food group index has registered a rise of 6 points to 508 as the increase in the prices of wheat, birra, gram, dal arhar and mustard oil predominated over the decreases in the prices of meat mutton, sugar ghee and potatoes. The index for Fuel & Light group has fallen by 20 points to 376 because of a steep fall in the price of firewood. As the old varieties of dhotees and sarees so far utilised have been substituted in their place, the index for Clothing group has shown a significant rise of 20 points to 476. A rise in the price of sunari has been responsible for a rise of 5 points to 463 in the index for Miscellaneous group. The index for House Rent remained stationary.

F. B. I. APPOINTMENT

Mr. S. Garvin, who spent 10 years in the Indian Civil Service before becoming Secretary of the International Tea Market Expansion Bureau in 1948, has just been appointed to take charge of the General Division of the Federation of British Industries Overseas Department.

London

TRADE GAP NARROWED TO £39 MILLION IN FEBRUARY

STEEL PRICES INCREASE

(FROM OUR OWN CORRESPONDENT)

14th March. FEBRUARY, being a short working month, is not a good one for assessing trade trends, but the provisional figures of United Kingdom overseas trade just released have one useful short-term factor of interest, namely, that the trade gap, at £39 million, was, apart from October, the smallest experienced since the end of 1950. As was to be expected, both exports and imports recorded decreases. The former, including re-exports, at £204 million, compared with £228 million in the month previous and £244 million in February, 1952. On a daily rate basis, however, last month's exports worked out at £3.12 million, against only £2.06 million in January of this year, though they were about £1 million a day less than those for February of last year. The drop in imports was much more significant. At £253 million—the smallest total, except for last September, for well over two years—they compared with £290 million in January and £297 million in February, 1952. The adverse trade gap has been reduced to the £39 million mentioned above from £62 million in January and almost £63 million in February, 1952. At first sight the drop in exports to North America, which totalled £22.6 million against £25 million in January, is disappointing, but this is the time of the year when Canadian purchases usually fall. U.S. purchases were fairly well maintained.

These figures help to confirm that this country is in fact playing its part in implementing the decisions of the Commonwealth Conference. This has not proved exactly easy, and the struggle is of course continuing, but it is apparent from the recent speeches of the chairmen of the Far Eastern exchange banks, including the Hongkong and Shanghai, the Chartered and the Mercantile, that the other members of the Commonwealth are finding their tasks even more difficult to discharge, and especially the question of living within their incomes. The main cause of this has been the steady fall in commodity prices throughout 1952, rendering trading conditions particularly difficult and resulting in the position in the Far East deteriorating both economically and financially. It is to the greater credit of the Asian countries, in these circumstances, that they have gone ahead with the meeting of their obligations to the sterling area as a whole, with the imposition of import restrictions over a wide field, and it is in no sense to depreciate this credit to point out that such a policy is also likely to prove of the greatest value to their own long-term economic plans. At the moment it would seem that India and Pakistan have succeeded in striking a balance in their dealings with the rest of the world, but as *The Manchester Guardian's* City editor points out, "only after their foreign exchange reserves have been depleted." In Ceylon, however, the problem remains unsolved. Pakistan's overseas reserves fell by about £160 million during 1952. In India the reserves were stabilised last autumn, and since then have increased considerably, but are still below the level of 12 months ago and the value of the country's exports continues to drop. There is one point to which all the bank chairmen draw attention, as a possible source of added danger to the economies of these countries. It is what Sir Kenneth Mealing refers to as "economic nationalism," restrictions upon foreign enterprise which even those most anxious to co-operate find difficult to justify, and of which Sir Arthur Morse adds: "The principle will in the main be acceptable so long as adequate time is allowed for trading, and the final proposals are reasonable and not discriminatory." It would surely be most unfortunate if these friendly warnings were dismissed as no more than special pleading.

Parliamentary Proceedings

It has, on the whole, been a strenuous week in Parliament, though a sober one, with the House of Lords unusually fully occupied. There was ample scope for excitement in the threatened "revolt" of the Conservative back-benchers, who are concerned about the Government's failure to ensure the co-ordination of policies with regard to fuel, power and transport—under the overlordship of Lord Leathers—and have made this concern known in a series of proposals for an inquiry into the affairs of London Transport, the rejection of the Breadalbane project of the North of Scotland Hydro-Electric Board and for an inquiry into the working of the National Coal Board as a sequel to the recent increase in the price of coal. This pressure has hitherto been firmly met by the Government, and in fact has not produced quite the fireworks which the Opposition no doubt expected to enjoy. On the other hand, it cannot simply be brushed aside—even though the avoidance of industrial unrest in prevailing circumstances must figure high in the list of priorities—and its future is no doubt linked closely with the economic situation as it is outlined by Mr. Butler in his Budget. The danger of tampering with the National Coal Board at this stage has been emphasised by the National Union of Mineworkers, simultaneously with the announcement of the decision of the miners, by a five to one vote, to continue working the voluntary Saturday shift.

Meantime, however, as a result of the higher cost of coal, the price of steel goes up by an average of slightly more than 10s a ton from today. The effect of this increase is certain to be reflected soon in higher production costs in the defence, export

and home consumption industries, with the inevitable repercussions on the country's economy as a whole. Remembering this, the Budget recommendations which the T.U.C. Economic Committee are to make to Mr. Butler on his return from Canada this week-end take on an added significance. The details are not officially disclosed, but it is understood there is a warning against the danger of a new wages-prices spiral if measures are not proposed in the Budget to check cost-of-living increases, while specific recommendations include reductions in indirect taxation, such as purchase tax; no more cuts in food subsidies; repeal of the excess profits levy; a review of profits tax; statutory limitation of dividends; capital gains tax with an administrative "mean"; and repayment of income-tax post-war credits at an earlier age. No doubt the T.U.C. committee has also indicated that these proposals will balance themselves out financially, for otherwise it is difficult to know where the money is to come from. With little more than three weeks to go, the Exchequer still had an overall deficit last Saturday of £308 million. That was £21 million less than the week before, and there may be more surprises of this nature, but even so the hopes of Mr. Butler achieving his anticipations for this financial year are far from bright.

Cotton Textile Exports

Two interesting sidelights on the position in the cotton piecegoods and film industries have come to light this week. According to the Cotton Board, among the four leading countries exporting cotton piecegoods figures now available of exports during 1952 show that the U.S.A. has taken the leading place from Japan, with the United Kingdom standing third and India fourth, as in the preceding year. Other than for the United Kingdom the figures are provisional, but they are regarded as being more or less accurate. They are:

	(Million square yards)	1952	1951
United States	...	761	809
Japan	...	753	1,082
United Kingdom	...	711	865
India	...	617	775

It will be remembered that at the Buxton Conference, Lancashire indicated that it hoped to achieve exports of 1,350 million yards, which means virtually the doubling of last year's figures, and that all the other countries concerned also expected figures much higher than either their actual exports in 1952 or even those for 1951. It is now explained that these increases were expected over the next few years and not necessarily immediately. Lancashire, for instance, anticipates favourable results from the negotiations now in progress

which aim at stimulating exports to African markets by standard lines allowing long "runs" and consequent economies. Textile exports recently have certainly showed a most welcome improvement, and employment in the industry is also rising.

The Eady Plan

The film industry, on the other hand, has had occasion to breathe a sigh of relief at the announcement by the President of the Board of Trade giving an assurance that the Eady Plan for helping British film production would be continued when it expires in August, 1954. He thought the scheme should be extended for at least three years, if possible by voluntary agreement in the industry, but the Government was prepared to seek statutory powers if necessary. "Without the Eady Plan," as Sir Michael Balcon, speaking for the producers, said, "we should simply go out of business." Assured of a continuance, which means an agreed share of entertainment tax rebate, they can now buy stories, rent studios, put artists and directors under contract and plan for the future.

Labour's Election Programme

Although the final programme of the Labour Party for the next election is not expected to make its appearance until May, talks within the Party are continuing regularly, as well as discussions with the T.U.C. and other associated bodies. A wide extension of nationalisation, which the Bevanites contend was the policy laid down at Morecambe and which represents their main difference with the right wing of the party, appears to be losing favour. Instead, a scheme which has emanated from the Fabian Society, appears to be attracting quite a lot of support. It is that as an alternative to outright nationalisation in some cases, the State should acquire a majority of capital in certain key industries. This, it is contended, would be in line with earlier schemes for "mixed" public and private control of industry. The idea is hardly a new one—it is, for instance, one which Mr. Nehru has often advocated and which the Indian Government is in fact applying in quite a wide field—but it has the great advantage from the point of view of the British Labour Party that it is likely to appeal more strongly to the trade unions, than that of wholesale nationalisation. It is believed also that Party leaders have dropped any idea of taking over the whole of the engineering industry, but they are still looking at aircraft and some sections of heavy engineering, and on the list of "possibles" textile machinery still finds inclusion. Meantime, a "hands off" warning has been given by the Co-operative Union executive so far as co-operative trading is concerned.

IN MADRAS BUDGET

(FROM OUR OWN CORRESPONDENT).

16th March.

THE State budget for 1953-54 shows a nominal revenue surplus of Rs. 20,400. The summary of the financial position from 1951-52 (Accounts) to 1953-54 (Budget) reveals the following picture:—

Year	Revenue	Expenditure on	Surplus
	in Rs. crores	Revenue Account or	Deficit
1951-52 (Accounts)	59.43	64.44	-5.01 crores
1952-53 (Budget)	61.76	65.35	-3.59 "
1953-53 (Revised)	63.33	68.75	-5.40 "
1953-54 (Budget)	65.75	65.75	+0.2 lakh

The Government could not get their taxation proposals through in entirety in the current year and thus got only Rs. 68 lakhs as against the Rs. 2.7 crores originally estimated. Famine and cyclone relief and land revenue remissions account for the heavy deficit in the current year. The budget contains no new tax proposals—only the revival of sales tax on tobacco and the enhancement of court fees are contemplated.

The cash balance position also reveals the following unsatisfactory picture.

Closing cash balance (1951-52 Accounts)	Rs.	- 3.62 crores
" (1952-53 Revised)	Rs.	- 9.19 "
" (1953-54 Budget)	Rs.	- 13.35 "

The large minus cash balance is not so alarming when considered in the light of assets and liabilities. As the result of new assets acquired during the last three years, the excess of assets over liab-

ilities at the end of the budget year will be Rs. 40.73 crores as against the Rs. 29.07 at the end of 1950-51. A heartening feature is that assets producing revenue will amount to about Rs. 147.90 crores at the end of the budget year against Rs. 89.62 crores at the end of 1950-51.

With the 1952-53 (Revised) and 1953-54 (Budget) figures now known, it is possible to give an overall picture of Madras development expenditure which amounts to about Rs. 140.84 crores for the plan period 1951-56. The progress of this expenditure is as follows:—

Actual Expenditure in 1951-52	Rs. 27.71 crores
Expenditure in 1952-53 (Revised)	Rs. 28.82 "
Expenditure in 1953-54 (Budget)	Rs. 24.99 "
Balance of expenditure to be incurred in 1954-53 and 1953-56	Rs. 59.32 "

It might be concluded from these figures that in spite of its financial difficulties, Madras State projects included in its five-year plan. But taking into consideration the fact that the Revenue Reserve Fund, which amounted to Rs. 23.32 crores at the beginning of 1951-52, has now completely run out and that the Government of India's contribution by way of loans for the period 1951-54 amounts to Rs. 23.42 crores, it might be inferred that the State has been able to get from its own current resources only Rs. 34.78 crores for the first three years of the plan. About Rs. 10 crores of the latter amount is accounted for by open market loans.

The Finance Department has issued a bulky volume giving a distribution of the Budget Estimate for 1953-54 of receipts and expenditure relating to the State of Madras as a whole, between the Telugu Districts and other Districts. The distribution on these lines has been made purely for the purpose of exhibiting the separate figures on a tentative basis and does not, it is stated, anticipate the Government of India's decision in the matter. The separate Revenue Budget figures are:—

	Telugu Districts (in Rs. crores)	Other Districts (in Rs. crores)
Revenue	20.77	44.08
Expenditure on Revenue Account	22.80	42.95
Revenue Deficit or Surplus	- 2.03	+ 2.03

Recoveries of loans and advances and capital expenditure outside the Revenue Account are as follows:—

Recoveries of loans and advances	1.74	2.72
Disbursements of loans and advances	1.93	2.76
Capital expenditure outside Revenue Account	7.27	7.42

A breakdown of revenue under the principal tax heads reveals the following interesting picture:—

Land Revenue	3.61	3.74
Stamps	1.87	3.61
Motor vehicles taxes	1.43	3.47
General sales tax	3.29	10.71
Entertainments tax	0.41	0.79
Betting tax	0.00	0.24
Electricity duties	0.02	0.10
Tobacco duties	0.26	0.46
Petrol tax	0.44	1.41
State excise duties	0.10	0.32
Others	0.29	0.75
Union excise duties	1.01	1.88
Union income tax	3.13	5.82
Total Revenue Total	13.86	33.30
Total Non-Tax Revenue	4.91	11.60

Lignite Quarrying Project

The pilot lignite quarrying project has just been inaugurated in the South Arcot District of Tamil Nad and is the first project of its kind in India. Quarrying operations are to be by the open cut method with the aid of machinery which has already reached the site. The project will be completed by the end of this year, yielding about 16,000 tons of lignite. Quarrying difficulties have arisen because of sub-artesian water, found on top of the lignite seam, which has to be pumped out. The cost of the project is estimated at Rs. 79 lakhs.

All-India Textile Conference

At the tenth all-India Textile Conference held at Coimbatore, reference was made to the scheme to set up a Textile Research Institute in that city. No concrete steps appear to have yet been taken to implement it. It was stated at the Conference that although the South Indian mills were equipped with fairly up-to-date machinery, they faced recurrent hardships from power cuts which recently have been increased to 66-2/3 percent.

Parker Pen Factory

Mr. Kenneth Parker, chairman of the Parker Company, U.S.A., who was here recently, revealed that the company has acquired land in Madras to build a factory for the manufacture of ink, and later writing instruments. He said that Parker pens manufactured in India might not be of the luxury type but that they would be cheaper. T. A. Taylor & Co. (Madras) Ltd., are associated with the Parker factory in Madras, which is expected to go into production by the middle of this year.

March 19, 1953.

West Pakistan

PAKISTAN ASSOCIATED
CHAMBERS' MEETINGECONOMY SOUND BENEATH PRESENT
CRISIS

(FROM OUR OWN CORRESPONDENT)

Karachi, 14th March

THE Governor-General once again honoured the Associated Chambers of Commerce of Pakistan by attending their annual conference and replying to the President's speech. In regard to the broad facts of the economic situation there was a large measure of agreement between His Excellency and Mr. Graham, the President. While neither made any attempt to minimise the gravity of the present economic crisis, both were agreed that the economy of the country was basically sound.

Of the specific points made by Mr. Graham, perhaps the most important was his reference to a somewhat undesirable feature of the purchase procedure of the Pakistan Government. During the last two years purchase officers have increasingly tended to resort to negotiations after tenders have been submitted, and the inherent evils of this are obvious. As soon as tenders have been opened each tenderer knows his competitors' prices and the "Dutch auction" system is surely most undesirable. As Mr. Graham pointed out, it may save Government money in the short run, but the ultimate result is that tenderers are likely to include a "cushion" in their original figures to allow the necessary margin for the bargaining which they must expect to ensue. The only sound procedure is that tenders should be at once adjudicated on their merits. Firms would then know just where they stand in their dealings with the Government and would, from the outset, quote their most competitive figure. The Governor-General stated that the point was fully appreciated, but reserved the Government's right to open negotiations when the scope of purchase at competitive rates is limited or where a choice has to be made between reasonably priced imported goods and high quotations from indigenous manufacturers. The business community are, however, likely to remain unconvinced that there is any justification for this practice.

Tea Industry

Tea growing interests will have been glad to note the Governor-General's references to the tea industry. "Government," he said, "appreciate the patience and the courage with which the tea industry in Pakistan is facing the present depression and share its anxieties." Although the prospects of the tea industry have taken a slight turn for the better, the future trend of prices both at the London and at the Chittagong auctions is still uncertain. The Governor-General, incidentally, also had a word of praise for the industry for the steps it has taken to reduce production costs; he was no doubt mainly referring to the recent reductions in the variable dearness allowances of labour, and the industry will be glad to feel that this step, which it took with considerable reluctance and hesitation, has received official commendation. Reports from the tea gardens show that the labour has loyally appreciated the necessity of this and other measures of economy and continues to co-operate with the management.

Chittagong Port

A mixed bag of resolutions, ten in number, came up at the conference. One of the most important related to the Chittagong port administration and advocated that an autonomous port trust should be established. Mr. Graham had already expressed the same view in his speech, and indeed the commercial community has been pressing for this reform for several years. The Government, for some reason, remains adamant on this question and has decided that, because of the heavy development work in hand, the present system of administration should continue. The resolution also urged that dredging in the port should be accorded top priority and that immediate attention should be paid to the improvement of the existing conditions of mooring and berthing of vessels. Mr. Graham, referring to a press report on the subject, had welcomed the undertaking of river training work on the Karnafull, designed to divert the main flow of water over to the side of the jetties. But it appears that there is still some doubt whether it is necessary or desirable to construct a spur on the left bank for this purpose. The matter is still under consideration by the Government. I understand that the Punjab irrigation engineers who were deputed to survey the scheme were in favour of an early start being made, but other experts had come to the conclusion that only a temporary advantage would be secured and that in the circumstances the cost would not be justified. It appears that in the view of these experts the main flow of the river is in any case setting towards the side of the jetties.

Capital Issues Control

The Chairman of the Dacca-Narayanganj Chamber of Commerce moved an interesting resolution on the subject of capital issues control. He urged that the limit of capital which might be issued

by a private limited company without reference to the Controller should be raised from Rs. 1 lakh to Rs. 5 lakhs, that an office of the Controller should be set up in Dacca with powers to decide applications from East Pakistan (except for those industries over which the Central Government desire to retain control) and that the Government should publish a clear statement of the procedure and policy governing the capital issues control. In moving this resolution he also urged that conditions and restrictions of a petty nature should be avoided by the Controller in dealing with applications.

Cotton Outlook

The recent sharp upward movement in cotton prices in the Karachi market has done much to generate more hopeful sentiments on the subject of the economic outlook. Even before this it had become clear that the statistical position of the crop was satisfactory for out of an exportable surplus of about 1,700,000 bales (including last season's carry-over) 900,000 bales had already been sold; that is to say, more than half the crop had been disposed of when more than half the season was still to run. All that was required to complete the happier picture was an improvement in prices and this duly began about a week ago. Foreign buyers, particularly from the Far East, were following the rise at the start but were naturally temporarily deferred when the price jumped by about Rs. 7. Considering that the Pakistan price is still one of the lowest in the world and that this is sterling cotton, it will be surprising if buyers do not hasten to make their purchases before it is too late.

Import Policy Correction

To our correspondent's references in his last despatch from West Pakistan to Pakistan's import

policy was added a later PTI report which said that "Japan is notably affected by the new policy for as many as 214 items out of 215 are not allowed to be imported from that country. The only exception is bidi leaves." This news agency message, which was not from our correspondent in Karachi but which was published throughout the Indian Press, was quite mistaken. The true position is that 214 items are allowed to be imported and bidi leaves are the only item for which applications are not invited.

SELF-ERECTING PILE DRIVING PLANT

An interesting recent innovation in pile driving equipment is a self-erecting, readily transportable pile driving plant developed by a British firm. The outstanding feature of this equipment is that the pile frame need not be dismantled into sections or the winch removed from the frame base for transport from one site to another. The plant has been so designed that it can be moved as a complete unit on a low loading vehicle, the super-structure folding back over the base during transport.

Upon arrival on the site it can be quickly re-erected by power applied to the raking screws from a diesel engine-driven winch which is part of the complete unit. In this way the 50 foot frame, which can be raked back to 1 in 3 or forward to 1 in 10, is ready for action within a matter of a few hours after arrival, thereby saving valuable time as well as the cost of laborious assembly. The plant is equipped with a 2½-ton drop hammer and is suitable for piles up to 45 feet long and six tons in weight.

Leadership — Our Ancient Heritage

If Hippalus is blowing

By the 4th century A.D. when the Guptas set their capital at ancient Pataliputra, India was already a great maritime power.

As early as 275 B.C. when Asoka reigned, her seamen voyaged 60 days or more, in ever widening spheres of contact, and Indian merchandise was seen in the markets of Persia, Antioch and Alexandria.

In South India, the Port of Cranganore welcomed Arab and Roman merchants. Pliny speaks of a 40-day voyage to this port "If the wind Hippalus is blowing". These monsoon winds, discovered by Hippalus in A.D. 45 wafted trading fleets from the west to "Barygaza" "Soppara" and other ports in India.

Eastwards too, the seaways were alive with Indian trading fleets. As her influence spread, she enriched the neighbouring lands with her ancient wisdom and culture.

Today, Indian ships are once again on the high seas,

carrying her merchandise to the markets of the world.

In this Indian Renaissance, Tata Steel plays a vital part.

Reliable Performance

Marion Power Shovels are known for reliable performance under all conditions. Their smooth, rapid operation results from extra power applied through the most modern and easy to operate of control systems.

MARION experience goes back to their first shovel in 1884. They built the first full circle swing, the first Railroad Ditcher, the first Striping Shovel, and, more recently, the first 45 cubic yard shovel in service.

These, and many other pioneering developments form the tremendous body of experience behind every piece of MARION SHOVEL equipment. The next time you need a power shovel, dragline, clamshell or crane, be sure you get a

Commodity Markets

SPICES INQUIRY COMMITTEE

THE Spices Inquiry Committee of the Indian Council of Agricultural Research, set up by the Government of India towards the end of 1951 to go into the problems of production and marketing of cash crops such as pepper, ginger, cardamom, turmeric, cashewnut and lemongrass oil on the west coast of India, has concluded its investigations. Mr. K. R. Damle, Additional Secretary of the Union Ministry of Food and Agriculture, is chairman of the Committee. Travancore-Cochin is the principal trading centre for these spices, with Cochin as the main port of export. Most of these cash crops are exported to foreign markets from this port, the main importers being the U.S., the U.K., and a few European countries.

The Committee is at present scrutinising the mass of evidence gathered and the memoranda submitted to it by the various growers, traders and other interests concerned during its tours, and will submit its recommendations to the Government of India shortly. It carried out its inquiries, collecting on-the-spot evidence from interested persons, in three stages. The Travancore-Cochin region was taken up first and the tour of this area was taken up first and the tour of this area was completed in May 1952. The main dollar-earning crops of this State are pepper, cardamom, cashewnut and lemongrass oil, but ginger and turmeric are also grown on a commercial scale. Coorg and Mysore were the next to be covered and inquiries in these States ended in December 1952. These States grow mainly cardamom, though pepper is also cultivated as an inter-crop. The other producing areas in the districts of Malabar and South Kanara in Madras State were visited by the Committee in the

latter half of January last. This area produces considerable quantities of pepper and cashewnuts and ginger. Although Madras State is not known for growing cardamom, most of the produce from Travancore-Cochin and Coorg moves through this State during the process of marketing.

At all the centres visited, the Committee met representatives of growers, merchants, trade associations and Government officials and discussed with them the various problems connected with the production and marketing of these commodities. The evidence given indicated that very little research work had so far been done on the spices crops on the west coast. Proper remedial measures for the control of pests and diseases had not been taken nor any adequate attention paid to the manuring of crops.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stock of sugar of Central Sugar Factories in India during the fortnight ended 15th February 1953, were 661,644, 143,148, 66,969 and 737,793 tons respectively, says the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement. The figures for the corresponding fortnight of the previous season were 473,492, 140,433, 42,693 and 571,252 tons respectively. Figures for the current fortnight relate to 127 factories representing 90.86 percent of the total cane-crushing capacity, while the figures of the previous year relate to 123 factories representing 85.59 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 605,480 and 390,443 tons respectively, as against the corresponding figures of 766,278 and 393,795 tons during the previous season.

WHOLESALE PRICE INDEX ADVANCES

The official wholesale price index (with the year ended August, 1939, as 100) advanced by 0.4 percent to 383.1 during the week ended 28th February, 1953. The index increased by 0.7 percent compared to the corresponding week of last month but was 2.7 percent lower than that of a year ago. The average for February, 1953, was 381.5 as compared with 377.5 for the previous month and 418.8 for February, 1952. During the week, Foodstuffs advanced a further 0.8 percent to 363.9 because of a sharp increase in the prices of tea (+13%), supported by higher prices of gur at Muzaffarnagar (+5%), bajra (+4%) and jowar (+3%). The prices of gram (-5%), gur at Ahmednagar (-3%) and salt (-8%), however declined. The index for Industrial Raw Materials also maintained its upward trend with a rise of 0.3 percent to 445.3 during the period under review. Items which recorded noticeable changes were: Umra raw cotton at Amravati (+10%), castorseed (-7%), Karungani raw cotton at Tirpur (-3%), gingellyseed (+3%), Bengal fine raw cotton in Bombay, raw silk, raw wool, rapeseed, manganese ore and raw skins (+2% each), raw jute, copra and lac (-2% each).

The Semi-Manufactures group rose by 0.4 percent to 347.7 as a result of slight advances in sheep yarn and coir yarn, although prices of zinc (-5%), gingelly oil (-4%) and buffalo hides (-3%) declined during the week. A fall of 1 percent in jute manufactures brought down the index for Manufactures to 368.1 from 368.6 (revised) for previous week. The Miscellaneous group index prices advanced by 0.8 percent to 591.6 because of higher prices of vanapatti (+6%), chillies (+9%), betelnuts (+4%), turmeric (+2%) and cashewnuts (+1%) in spite of decreases in cummin (-8%) and black pepper (-1%).

Jute

PROSPECTS FOR JUTE-COAL DEAL BETWEEN INDIA AND PAKISTAN

POSTWAR CONTRACTION OF SACKING MARKETS

WHILE it is understood that the trade talks between India and Pakistan now taking place in Delhi had their origin in G.A.T.T.'s instructions to the parties to get together to discuss India's complaint against Pakistan concerning the licence fee levied on Pakistani jute exported to India and Pakistan's complaint about India's surcharge on coal exported to Pakistan, it is generally believed that Pakistan is now more willing to discuss terms than she was when the last truncated trade agreement was being negotiated. At that time Pakistan was in no mood even to discuss the licence fee and India was adamant in her attitude that the withdrawal of the licence fee was essential before negotiations began. It is now thought that circumstances have softened Pakistan's attitude. Her Cabinet Ministers may point to the export of 36 lakh bales of jute up to the end of February and claim that their scheme to support the market by fixing minimum prices prevented a more serious fall but they cannot blink the fact that there is serious distress in the jute districts. The Jute Board still holds stocks bought at about Rs. 10 per maund above the current prices. Early in the season the official minimum prices had to be substantially reduced and business goes on openly and unchecked at prices much below the reduced minima. The lowest qualities have been dealt in at Rs. 7 and Rs. 6 per maund in large quantities. How much does the grower get out of that when transport has been paid for and the bepari, the dalal and the arathdar have had their cut? That is Pakistan's problem and the pressing need for relief may make the present negotiations easier.

India must look at the matter from a different angle. She has gone a long way on the road to self-sufficiency. The present level of prices is, however, so low as to jeopardise any further progress in that direction for, though Indian growers sold most of their crop before prices fell and it is the middlemen who are taking the knock, current prices do not encourage the sowing of a crop as large as in 1952. India must, therefore, be chary of making conditions so easy for the import of Pakistani jute that a further fall in prices is initiated. Then there is the question of quality. In Pakistan, because of a poor quality crop, good quality is scarce and easily marketable. The problem is to dispose of the low grade jute. But what India needs from Pakistan is good quality, there being in India probably enough low quality to meet the mills' needs. These are some of the points which will have to be considered by the delegates and it will be no easy matter to reconcile the conflicting interests.

Reduction in Sacking Output

Representatives of the I.J.M.A. have gone to Delhi no doubt so that they may be at hand for consultation while the talks are in progress but the market gives some evidence to rumours that they will also have discussions with the Government of India regarding curtailment of production of jute manufactures. There is a growing feeling in all sections of the industry that, however unwelcome such a step may be, it is necessary that production should be adjusted to demand. There is a limit to the stocks which can be piled up and financed by mills and the bazar, and these stocks have themselves a weakening influence on the market. Mills have individually made such adjustments as they could by reducing the output of sacking and increasing that of hessian, the percentage of sacking produced being reduced from 69 to 58 in twelve months. There is, however, a limit to such adjustment for a stage comes when mills cannot use up in sacking all the cuttings and other low grade jute thrown out from the manufacture of hessian. There is also the possibility of overproducing hessian.

It would seem desirable, therefore, that there should be some investigation regarding conditions in the main markets for heavy sacking and their potentialities as buyers. In the table below we give figures for the export of sacking bags (in thousands) to Far Eastern markets in 1938-1939 and 1951-1952 (during the twelve months ended 31st March) as these appear to be the main markets where demand has fallen off.

	1951-52	1938-39
Burma	1000 bags	1000 bags
Malaya	34,832	60,979
Thailand	2,135	4,659
Indo-China	25,695	23,187
Hongkong	2,772	22,701
China	909	2,171
	19,622	2,863
	85,905	116,560

The high figure for China for 1952 compared with 1939 is worthy of note. The explanation must be that exports to Manchuria are now included in the figures for China in 1938-1939, 56,236,000 bags were exported to Manchuria which does not appear at all in the returns for 1951-1952. Another item of interest is that in 1938-1939 the Dutch East Indies took 28,473,000 bags while Indonesia does not even appear in the

list for 1951-1952, so presumably the exports to that destination were so small that they were lumped in with "other countries". If we add the figures for the Dutch East Indies and Manchuria to the total of other Far Eastern countries for 1938-39 we get a total of 201,328,000 bags. If we also assume that exports to Indonesia and Manchuria were so small in 1951-52 as not to merit separate listing, then we have a figure for 1951-52 of, say, 86 million bags against 201 million bags in 1938-39. The figures for the whole of the Far East are, in any case, significant enough to merit special enquiry either by a touring commission or through consular agencies to discover the cause for the decline in the demand for heavy sacking and the prospects of its revival.

THE JUTE MARKETS

U.S. HESSIAN CONSUMPTION IN FEBRUARY DISAPPOINTING

Manufactured Goods: Conditions in the finished goods market have been extremely depressed over the past week, and the revival that was anticipated following the cut in the export duty on sacking goods still has not materialised. This is almost entirely because no interest is being shown by overseas buyers in the Calcutta markets, and the reason for this perhaps is that Continental manufacturers are still under-quoting Indian rates. It is not thought likely, however, that the Continent will be able to continue to do so, considering the very low rates ruling towards the close, as it would then become uneconomical even for them. In the absence of foreign interest operators have again used rumours to try and instil life into the market, but more often than not these have only succeeded in depressing it still further. Everything from the removal of the licensing fee on the export of jute to India, the possibility of Pakistan devaluing her currency and a report that the I.J.M.A. is considering sealing five percent of all hessian looms were tried at various times, all to no avail, and the market continued on its daily downward trend. The report that the consumption of hessian in America during February had fallen by 150 lakh yards, and that stocks of hessian in the U.S.A. had increased by 10 lakh yards over the previous month caused quieter conditions to rule in the local markets. This, coupled with the eagerness of mills to sell for forward positions, caused a complete collapse of rates towards evening on Tuesday. As last week, the only encouraging feature has been the continued improvement in mill shipping positions, which should go a long way towards reducing the heavy stocks held by them. But unless they can sell some of the backlog of the past two or three months the position may not improve a great deal, as in most cases they are still manufacturing for stock, this being especially true in the case of sacking. Some business was put through just before the week-end in combined heavy Cess and cornsacks, but this was thought to have mostly found its way into the local market in covering business and speculative buying rather than to have been shipped business. In view of the generally depressed conditions the trade is adopting a cautious attitude and towards the close mills were unable to find buyers for any constructions in the forward positions for which, on the whole, they were showing selling pressure.

Quotations at the opening of the goods market on Thursday show very little change from the previous day. Hessians were down 4 annas and 40" 10 oz. was quoted at Rs. 41-10 per 100 yards, but plain heavy Cees were unchanged at Rs. 93-8 per 100 bags whilst

B Twills showed a slight improvement of 2 annas to Rs. 93 per 100 bags. The following day there was a general downward tendency and Hessians and plain heavy Cees both fell 8 annas, but B Twills showed no change as a certain amount of covering business had strengthened their position. On Saturday the market opened on a steady note, some business was done in both sacking and Hessians and quotations improved slightly. 40" 10 oz. Hessians opened at Rs. 41-6 per 100 yards, an increase of 2 annas over the previous day, whilst plain heavy Cees improved by 8 annas to Rs. 93-8 per 100 bags, and B Twills by 4 annas to Rs. 93-4 per 100 bags. This improvement was short-lived however, and as a result of mills' selling pressure prices fell away and an easier tendency prevailed. At the opening on Monday Hessians were down 4 annas to Rs. 41-2 per 100 yards for 40" 10 oz. and B Twills lost 8 annas to Rs. 92-12 per 100 yards, only plain heavy Cees resisting the fall to rule unchanged. Mills were still eager to sell for the forward positions, which caused rates to sag further. On Tuesday prices were down 4 annas in Hessians and 8 annas in heavy goods. During the day these prices were slashed still further because of poor foreign enquiries and selling pressure by mills. By evening Hessians were down to Rs. 40-2 which was a drop of 10 annas from the morning quotations, and B Twills collapsed to Rs. 90-12, or Rs. 1-8 down from the earlier rate.

At the close prices weakened still further as mills were keen for business for forward and near delivery and opening quotations on Wednesday morning were as follows:-

	March	April-June	July-Sept.	F.A.S. F.O.R.
40" 8 oz.	Rs. 32-6	32-6	32-4	
40" 10 oz.	Rs. 40	40-2	40-2	
Heavy Cees	Rs. 91-8	91-12	91-12	
B Twills	Rs. 90-4	91	91	
Cornsacks	Rs. 94	94-8	94-8	

Raw Jute: Mills in general took more interest in the jute markets this week. Fairly good business was done by both small and large mill groups, and it is estimated that up to the week-end about 4 to 41 lakh maunds of jute was purchased. Rates at which this business was done varied a great deal, but in nearly every case contracts were finalised at prices below the market quotations then ruling. This gives an idea of the anxiety with which sellers are viewing the market as mills' counter-bids are being met with very little difficulty. Although the business done is the largest for several weeks it has not alleviated the sellers' stock position to any great extent; it is reported that stocks of jute in the local Cossipore and Hathihola markets are about 29 lakhs maunds. As a result of heavy selling pressure by these holders this business, which hitherto would have pushed quotations up, has had very little effect on the market, and rates actually declined as sellers underquoted each other in an attempt to secure orders. The jute market has received no help from the finished goods market, which has shown a declining tendency in the absence of any large foreign or local interest. After the week-end, mills withdrew almost completely from the market and no business of any size was reported, although buyers were keeping a careful watch on developments and were liable to come in to purchase at any time in what is purely a buyers' market. There were no reports of any Pakistan jute being transacted as business in this category is at a standstill pending the results of the current Indo-Pakistan trade talks in New Delhi.

Quotations at the beginning of the week opened at Rs. 19-8 to Rs. 20 per maund basis Bottoms for March-April shipment of Ordinary Assam jute, this being more or less unchanged from last Wednesday's closing rates. In spite of the large amount of enquiries from mills and business being transacted daily, there was very little alteration in these rates although the feeling was easier and business was done at below the quoted levels. Late on Thursday a large mill group came into the market and purchased about 1,20,000 maunds of jute, but quotations were unaltered and on Friday and Saturday a further 2 lakh maunds was purchased, this being split up between two or three buyers. Over the week-end, as a result of constant selling pressure on the part of stockists quotations fell by 8 annas, but mills showed very little interest on Monday and Tuesday. Sellers began indicating even lower rates, but only small business resulted. On Tuesday afternoon, with the gunny market falling

rapidly, mills ceased to take further interest in jute and withdrew completely.

Business reported during the week was as follows:

Indian Jute:
Dhobri and/or N. Bengal.—Rs. 23-8 and Rs. 24 per md. for Middles only for March-April shipment.
Rs. 2-8 per md. basis Bottoms for one month's shipment, with option of delivery ex local godown.
Assam.—Rs. 22-8 to Rs. 23 per md. for Middles only for one month's shipment.
Rs. 19-8 to Rs. 20 per md. for ready bills of lading and one month's shipment.
Rs. 14 per md. for X Bottoms for one month's delivery.
Northern Bengal.—Rs. 23-8 per md. for Middles only for one month's delivery.
Rs. 19-8 to Rs. 20 per md. basis Bottoms for one month and March-April shipment.
Murshidabad Tossa.—Rs. 22-8 per md. for Middles only for one month's shipment.
Rs. 19 to Rs. 19-8 per md. basis Bottoms only for one month's shipment.
Agartala Tossa.—Rs. 20 per md. basis Bottoms for one month's shipment.
Dhulian Tossa.—Rs. 18 per md. basis Bottoms for one month's shipment.
Local Packing.—Rs. 18 per md. basis Bottoms for one month's shipment.
Daisee.—Rs. 21 to Rs. 21-8 per md. basis Bottoms for one month's delivery.
Mesta.—Rs. 16-8 per md. basis Bottoms for one month's delivery.
Bimili.—Rs. 14-8 to Rs. 15 per md. for R.A.Q. for one month's shipment.
Pakistan Cuttings.—(Special) Rs. 70 per bale for ready delivery.

At the close the market is weaker in sympathy with a falling goods market, and sellers are keen for business. Quotations were down 8 annas and at the opening on Wednesday morning were as follows:—

Jute	March-April		Landed at Mill.
	Rs.	per md. basis Bottoms	
District	23-8	"	"
Northern	23-8	"	"

Tossa is quoted at Re. 1 to Rs. 2 per maund above the rates for white jute.

Mofussil: Upcountry markets in India are following a pattern similar to the local Calcutta markets and depressed conditions prevail. Prices have dropped about Re. 1 per maund over the week because of the lack of enquiries and the almost complete absence of imports, and sellers are eager to do business even at the lower rates. Very little business has been reported, however, and the stock position remains as acute as ever, with holders getting nervous and anxious to reduce their holdings. The present situation is not encouraging from the cultivators' point of view and many appeals have been made to the Government by local and mofussil interests to help a recovery in prices and thus give cultivators more incentive to grow jute. Quotations in upcountry markets are based on Dhobri jute at Rs. 17 per maund basis Bottoms and Ordinary Assam and Northern Bengal jute at Rs. 16-8 per maund basis Bottoms. In Calcutta, the local Cossipore markets remain depressed and although a certain amount of business was done during the week full delivery ex local godown, prices continued to sag. Imports have fallen off to about half of last week and about 20 to 30 wagons are arriving daily, mostly low quality jute. Mills have been enquiring for good quality jute of Middle standard, but demand greatly exceeds supply and good prices are being offered for this type of jute. Sellers are keen for business and are willing to cut their rates but mills are showing no further interest at the present levels. Over the week prices have fallen by 8 annas to Re. 1 per maund, and at the close were based on Kishoreganj jute at Rs. 19-8 per maund for garsat quality. There has not been a great deal of demand for Daisee but in spite of this the Sheoraphuli Daisee markets have a steadier tendency because of a decline in imports. Quotations in Sheoraphuli are based on Rs. 21 per maund for garsat quality.

In Pakistan the jute markets have steadied up slightly after a quiet opening and more enquiries are being received, but business has been almost entirely confined to inter-baler transactions. There are no reports of any business with India, but this is understandable in the light of the Indo-Pakistan trade talks. Imports in Narayanganj are steady at last week's level of 15,000 maunds daily, but the greater proportion of this still consists of the lower grades of fibre. Latest quotations in Narayanganj (in Pakistani rupees) are:—Jat Balers' Bottoms (white)—Rs. 14 per maund, Tossa—Rs. 17 to Rs. 18 per maund, District Bottoms (white)—Rs. 15 per maund, Tossa Rs. 16 per maund. Crop reports from Pakistan indicate that the weather has been favourable in all areas, and sowings are in most places on a par with those at the same time last year. Final sowings however are expected to be only about half of last year's figure as cultivators are not anxious to exceed the figures laid down by the Government. Ploughing of the lowlands is nearly completed, and river levels are normal for the time of year.

Raw Jute Arrivals: Arrivals of raw jute in Calcutta and at mill stations during February 1953 amounted to 4,10,821 bales as compared with the revised figure of 5,29,880 bales in January 1953. Total arrivals for the period July 1952 to February 1953 are

now 33,58,260 bales, of which 28,07,858 bales (72.7 per cent) came from India, and 10,50,402 bales (27.3 per cent) from Pakistan. Of the arrivals in February, 3,29,768 bales (80.2 per cent) came from India and 81,033 bales (19.8 per cent) were of Pakistani origin. Arrivals of jute from Pakistan were down in February 1953 by 7 per cent over the January figure, and nearly 20 per cent down on the February 1952 total. In the period July 1951 to February 1952 total arrivals were 38,42,211 bales of which 22,96,027 bales (59 per cent) came from India and 15,46,184 bales (41 per cent) came from Pakistan. During the current season imports from Pakistan are thus down by about 13 per cent compared with the same period of the 1951-52 season.

PAKISTAN CROP PROGRESS REPORT

In their second crop report for the current season which covers the week ended 14th March, Messrs Sinclair Murray (Pakistan) say that favourable weather has been experienced in all districts and sufficient rainfall has allowed cultivators to get ahead with their general crop routine. The ploughing of lowlands has been completed and has commenced in midlands and highlands. Seed germination is reported to be satisfactory and river levels generally are normal for this time of the year. It would appear that cultivators will not exceed Government licensed sowings.

NARAYANGANJ:—Weather conditions have been favourable with occasional showers. Preparation of low and midlands is almost completed. Sowings to date amount to -1/16 as compared with last year's sowings at the same date of -1/16. The river is normal for this time of the year.

DACC:—Weather has been favourable with alternate rain and sunshine. Ploughing of lowland has been completed and is going on in midlands. Sowings to date amount to -1/16 as against -1/16 at this time last year. Germination is reported to be satisfactory. The river level is the same as last year.

CHANDPUR:—Weather has been favourable with one good shower of rain which enabled cultivators to proceed with sowings. Ploughing to date amount to -3/8 as compared to nil last year at this time. The river level is normal.

HAJIGANJ:—Weather has been hot and favourable with a good shower. Sowings to date are -1/16 as compared to -1/16 last year. The river level is normal.

ASHUGANJ:—Report not yet received.

AKHIAURA:—The weather has been mainly wet and a spell of dry weather is required to enable cultivators to resume sowings. Sowings to date amount to -1/16 as compared to -1/16 at this time last year. The river level is normal.

NIKILAMPARA:—Weather has been favourable with good rainfall and a spell of dry weather is now required. Sowings to date amount to -1/16 compared to -1/16 last year.

SARISHABARI:—Crop Report not yet received.

SIRAJGANJ:—Crop Report not yet received.

NAKALIA:—The weather has been favourable with occasional showers. Sowings to date are -2/16 as compared to -1/16 at this time last year. Germination in all areas is good. In early sown areas the plants are about 6" high. The river is about 1' higher than last year.

BHANGORA:—The weather has been favourable. Sowings to date amount to -1/16 as compared to -2/16 at this time last year. Germination is reported as satisfactory. The river is about 1' lower than the corresponding date last year.

ASHUGANJ:—Weather has been favourable with good rainfall. Sowings are expected to commence shortly. Sowings at this time last year were -1/16. The river is 1' lower than last year.

SIRAJGANJ:—The weather has been cloudy and wet and a spell of sunshine would be beneficial. Sowings in low-lying churlands amount to -1/16 as compared to -1/16 last year. The river is rising slowly and is 3' higher than last year.

Rainfall	For the Week		Total from Rainfall 1st January over the weekend.

CONTINENT STILL UNDERCUTTING CALCUTTA GOODS

DUNDEE FULLY EMPLOYED

Dundee, 12th March.

THE weakness displayed by prices for Calcutta goods is not helping the jute industry. On the contrary, this seems to be causing consumers to hold off in the hope of a still lower level of values. In spite of the fact that Continental manufacturers have been able to attract business by undercutting the Indian jute mills, they are still in need of further orders. Low as the prices quoted by the Indian mills are, Belgian manufacturers are quoting as much as 6 per cent less, and other countries are simply keeping just under Calcutta to make their goods more attractive. Demand from consuming centres may be expected to improve in due course, but the tendency seems to be to run down stocks rather than make fresh purchases, even though prices are considered to be down to quite reasonable levels. There is certainly not now the former difficulty about securing requirements.

The Dundee trade continues in a healthy condition. Though there is much less demand being made for cloth and bags, manufacturers are well booked up and working overtime in many cases. Consumers of jute yarns are making urgent inquiries for further supplies, but spinners are not prepared to sell. They are already well behind with deliveries and some manufacturers and carpet makers fear that they may have to curtail their output unless deliveries are maintained. Labour is still a problem in Dundee, but there has been a tendency recently for workers in other industries to enter the jute mills and factories, especially where the system of incentive bonuses is in vogue. At the annual general meeting of Jute Industries Ltd. held on Monday last, Mr. W. G. N. Walker, chairman, said that although the group trading surplus was down last year by £392,072, the directors consider that the results have been satisfactory having regard to all the circumstances and the difficult tradit conditions prevailing throughout the year. Mr. Walker mentioned that the firm now employed more than 5,250 people.

Prices for all yarns and cloth remain firm and unchanged at the maxima. Common 8 lb. cops and 8 lb. snools at 14.40d per lb. and 10 oz. 40 in. hessian at 12.43d per yard. Calcutta quotations today are 75s 8d for 10 oz. 40 in. hessians and 56s 3d for 7 1/2 oz. per 100 yards. f.o.b., with "B" twills at 156s 0d. March shipment, f.o.b. Succulitive sellers are offering 10' 40 at 74s 3d and "B" twills at 152s 3d. April-June. f.o.b. for A/B group.

A disastrous fire occurred on board the City of Colchester while discharging a cargo of 31,200 bales of raw jute in Dundee harbour last Sunday. Even though the fire is still smouldering, it is estimated that at least 15,000 bales have been damaged in holds 1 and 2. Hold No. 3 has not yet been opened. Still on board are about 8,000 bales for Antwerp.

Plantation Topics

COFFEE BOARD CHAIRMAN CRITICISES NEW BILL GREATER ATTENTION TO INTERESTS OF HOME MARKET URGED

IN a speech delivered at a special meeting of the Indian Coffee Board in Bangalore on 10th March, the Chairman strongly criticised official policies in regard to the coffee industry, and referring particularly to the Indian Coffee Market Expansion Bill said that "if the Coffee Board had enjoyed the deserved full confidence of Government, I cannot believe that the new Bill designed to amend the Coffee Marketing Expansion Act so radically would have been published without Government consulting a single member of the Board. Undoubtedly there is still a feeling in Delhi that the Board exists primarily for promoting the interests of the planting community at the expense of the consumer, although planters are in a minority on the Board. There is no justification for such a feeling being held. The Board's actions have been consistently designed to protect the interests of the consumer, whereas for a period of years the policy of the Central Government has been to maximise exports of coffee even—and I quote from a letter from Delhi—"at the expense of the internal market." We were also advised by our Joint Secretary from Delhi only three years ago to export the maximum quantity of coffee even if it meant some hardship for the home consumer.

"We have consistently opposed this advice but this pressure exerted by Government on the Board to export coffee has tended to vitiate our relations with both the public and the Press. With the short supply of coffee in India resulting from this policy, there has naturally been a scramble by merchants to obtain it, hence the recurring coffee price crises. Now the accent has at last been taken off exports and placed on the interests of the Indian consumer. We welcome this, but not the interference in marketing methods which has accompanied it. But we do not know how long this more reasonable policy will be persisted in, for changes in the personnel of our Department in Delhi appear to be invariably accompanied by changes in coffee policies.

Operations of Coffee Pool

"In July 1951 soon after you appointed me as your Chairman, I sent a letter to Delhi regarding the working of the coffee pool, particularly in relation to the effect of excessive exports on home prices. I will take the liberty of reading you an extract from this letter: The principles behind the operations of the Coffee Pool are very simple, namely to keep a reserve of coffee in hand and if prices in India tend to rise to an undesirably high figure, then coffee should be released on the market, until dealers are satisfied and prices fall again. There is no real alternative to this policy. One further method of controlling prices exists and that is by releasing coffee through our own propaganda units and through the co-operative societies. With our propaganda units we are fairly safe from abuse, but with co-operative societies there is less security though many of them are of real assistance to a large number of people.

"I am in favour of using societies to assist us to control prices, but there are many places where we cannot use them, and therefore we have to come back in the end to our first principles, namely to control prices by the volume of coffee which we release, and to secure the availability of stocks to carry out this policy we must be cautious in our export policy and export only that coffee which is really surplus to India's needs. Pressure has been put on the Board twice in recent years to export more coffee than the Board considered wise if prices were to be maintained at a proper level in India. The reason was that the Government of India required foreign exchange most urgently and were prepared to take a risk in the home market of a rise in the price of a commodity like coffee which is not a necessity. My recommendation for exports is, therefore, quite clear that unless coffee forms part of some critical trade negotiations, no further quantities should be allowed out of the country until the 1951-52 crop is available in February-March, 1952 (at that time 1,200 tons of coffee allotted for export still remained with us).

Home Market Starved

"Little heed was taken of the caution then expressed and in March 1952 although the current season's crop was only an average one the Board were informed that 'as regards exports it has been decided that 3,000 tons should be released for export from the 1951-52 crop.' We were not consulted about that decision, but by means of a personal deputation to Delhi we finally persuaded the Government to reduce the coffee allotted for export to 2,000 tons. Just before this decision was reached, prices for coffee were completely in our hands. Following the decision to export an excessive quantity, the market immediately rose and as the stock situation was marginal, the Board gradually lost control over internal prices. The position was made worse by a further enquiry in August relating to an increase in exports. The history of the coffee market since then is well known to you.

"The Government wisely came to the decision to cancel all exports from the 1952-53 crop until such time as the market was completely in hand,

but the method of bringing the market into hand was taken away from the Board with the consequence that in December only 900 tons of coffee was released and in January only 600 tons and as a result of this deficit a new artificial shortage was created and prices immediately tended to rise again. The whole system of operating the coffee pool is such a simple one provided artificial shortages are not created by the adoption of complicated and devious routes of introducing coffee to the consumer as at present demanded by the Central Government. We have sufficient coffee in hand to flood the market at every auction. We can put a floor under coffee prices to assure the grower that he receives a reasonable return, but we can also supply coffee through the normal trade channels in such quantity that profits will be marginal and it will be completely impossible for any merchant or group of merchants to attempt to corner coffee.

Too Many Dealers

"The historic and natural way of marketing is the simplest way. When a list of approved wholesalers was first prepared in 1944 the number was less than 100. During the two periods of short crops in India when, as a temporary expedient, we had to resort to supplying coffee through licensed dealers as we had insufficient coffee for the market, the number gradually rose. Today we have no fewer than 405 large wholesalers and to this have now to be added 1,700 licensed small dealers. In other words, the coffee industry has now collected 2,105 pensioners. Few of the small dealers have any proper selling organisation and many of them cash in on the privilege of purchasing coffee at small auctions and pass it straightaway to larger dealers, whilst co-operative societies are often unable to take their proper share of the lower grades of coffee.

"In the new Bill it is proposed that every member of the Board will be a Government nominee. It is not understood why Government have so little faith in a democratic method of electing representatives that they wish to remove from the Board those leaders of the industry whom their fellow planters have willingly chosen. We do not believe that any good or any real development can come to our industry by turning it into what will virtually be a Government department. The distance from Delhi acts as a double handicap. We appreciate it is a handicap to Government for they cannot keep in touch with our wants and needs, but it is an additional handicap to the industry for the seats reserved for Government members on our Board are more often empty than

otherwise. It must be better to ensure that the present seats reserved for Government are filled than to double the number as is proposed in the new Bill.

"The lack of personal contact leads to a corresponding lack of liaison which cannot be overcome even by sending our Chief Coffee Marketing Officer to Delhi from time to time. I would most earnestly request Government to have a little more trust in the good faith of the Board, to have a little more trust in the knowledge and experience of our industry which is represented on the Board and to confine themselves to broader outlines of policies and to leave the method of carrying out these policies to the Board's committees.

Budget Cuts

"Many of the directives we receive from Delhi are exasperating in the extreme. Our budget, which was submitted to Government in May 1952, was finally sanctioned in December of the same year. The only alteration in it, after a delay of six months, was a cut in the Propaganda Department's budget of Rs. 30,000. This cut was distributed in petty sums down to Rs. 200 or Rs. 300 over 15 different propaganda units. Nobody at Delhi has the time to go into the real needs of any one of our propaganda units. If it was thought essential to make a reduction in our propaganda budget, there is only one proper way to do this and that is by means of a general figure which the Propaganda Committee themselves could apportion as considered most proper by them. Meantime even the reduced expenditure on our Coffee Houses has had to be held up with the result that many of them are in a deplorable and disgraceful condition.

"We have previously been instructed to use the wholesale trade for distributing the majority of our coffee. We are now told to rely mainly on local auctions, propaganda units, co-operative societies and so on. We have been told to close down most of our propaganda units, and we are now told to use them all as fair price depots. The failure to come to a decision about coffee releases in December and January has resulted in a short supply of coffee by 1,500 tons during these two months. led to a rise in wholesale and retail prices, and by depriving the Board of the proceeds of these sales, we are now able to pay the growers only half the amount due on their coffee, as the board are short of funds, and have reached their overdraft limits with the bank. All these administrative details could with profit be left to the Board. Our industry is too complicated to be run by those who have not the time either to study it or to attend our meetings.

"The purpose for which this meeting is being convened is, as you well know, to consider the request from Government to reduce the basic price for coffee. This approach to the problem is not appreciated by the Board. We would like to see some larger thinking about our planting industry and its development as related to the monsoon hilly tract of South India. We understand that a cost accountant is being sent to examine our cost of production. This is a correct procedure, but is it fair to try and anticipate his answer?

"We maintain in our office statistics regarding the cost of producing coffee and these have recently been brought up to date. They show that costs have risen in the case of parchment coffee to Rs. 195-8-8 a cwt. exclusive of the Central excise duty of Rs. 21 per cwt. and the Board's administrative charge of Rs. 9-4. The main items of increase are of course our wages, our amenities and the cost of food. In very many cases estates are now running at a loss and it is only possible in such cases for a reduction in prices to be achieved at the expense of salaries, labour and amenities. We are convinced that a fair examination of the position will demonstrate that our calculations are correct, in fact for the season 1952-53 there will be heavier losses still on most estates in Mysore and Madras.

"The vision of the Board was no little one. We had hoped to play our part in developing a flourishing coffee industry throughout the monsoon hills of the South. In pursuance of that ambition we had arranged to build up a team of research experts and extension workers, but no one can persuade an individual to invest money at a guaranteed loss, and this is what an arbitrary reduction in prices would infallibly mean. More than that, many if not the majority of coffee planters are already in debt and if they are no longer "good risks", both banks and other lenders are bound to reduce their own liabilities by either calling in their debts or in increasing their interest charges. This position has already risen in the case of many planters as a result of this threat to prices.

"In conclusion I can only hope that within the next few weeks or months there will be a change of sentiment in Delhi regarding our Board. If we are again entrusted with our legitimate duties, I know that we can discharge them to the satisfaction of all those who genuinely have our interests at heart, and in the long run this includes not merely the planter, his staff and labour who depend for their existence on a thriving coffee industry, but also the consumer who enjoys the

fruits of our labour, the traders who are responsible for bringing our produce to the consumer and above all we shall be able to satisfy Government in a way which will leave them free to concentrate on the major problems which surround us today."

The Coffee Board has decided to release 2,000 tons of coffee a month to ensure an adequate supply and to bring down prices. Though the cost of production has now risen to Rs. 2-1-2 a point, it is continuing to release coffee at a Rs. 2-4 valuation. A deputation of five was recently appointed to go to Delhi and explain its views on the Indian Coffee Market Expansion Bill to the Commerce Minister and to Parliament. The Board has also asked the Government to increase its borrowing power from Rs. 14 crores to Rs. 2 crores.

COLOMBO RUBBER PRICES

The following prices are issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers Association: Closing prices on 6-3-53. Average prices for this week: (Rupees per lb.)

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

COCHIN TEA SALES

At Internal Sale No. "E" held on 10th March, 1953, about 3,68,000 lbs. of dusts came to auction. Demand was fair but very irregular and prices were generally 2 annas per lb. below last rates. Milled dusts received fair support at the market drop and certain selected types sold well but most teas were sold after the auction at current prices.

In the Export Quota business still remains at 2 p.c. Dust Sale No. "F" will be held on 24th March, 1953.

LONDON TEA SALES

At the London Tea Sale on 16th March teas priced up to 43d per pound were strongly competed for, especially those in the 3rd to 38d category, which advanced by one to 11d per pound. Over 43d some irregularity was noticeable with prices occasionally lower following quality. Stronger emphasis in lower priced teas was attributed to blenders and distributors seeking teas to enable them to maintain adequate supplies of cheaper blends for the public. Offerings totalled 23,675 packages of North Indian, Pakistan and others. Clean common broken pekoe, free from stalk, was quoted at 35d against 37d in the previous week.

At the tea sales during the week ended 14th March, the average price obtained was 3s 5.82d a pound, against 3s 4.39d in the preceding week. Clean common broken pekoe was quoted at 3s 11d-3s 14d, against 3s-3s 9d previously.

Results of some of the companies are given below:—

	No. of packages	Av. per lb.
Amalgamated	1,249	3/5½

Calcutta Markets

SMALLER GENERAL DEMAND IN TEA EXPORT AUCTION

EXPORTABLE DUSTS APPRECIATE

At Sale No. 39 held on 16th and 17th March, there was a smaller general demand in the export sale than last week. Common and low medium broken and fannings were the strongest features and were all dearer by half to one anna per pound, though they were irregular. Leaf grades were firm to a dealer especially the cheaper sorts which were strong. Medium Assam B.O.P.'s were about steady but medium fannings were a little easier, particularly the better liquoring sorts which were generally half an anna easier. The small quantity of best liquoring Assams on offer were weaker by about 2 annas.

There was a good general demand for the dusts on offer, but most descriptions sold at half an anna below last rates. The exceptions were black leafy exportable dusts which appreciated in price and the best C.T.C. types which were up to 2 annas per pound dearer. Good mediums were fully firm. The few internal teas offered sold at rates a little below those of the last sale.

RENEWAL OF COAL ACTIVITY IN FREIGHT MARKETS

FAIR TIME CHARTER BUSINESS

THERE was a renewal of activity in the Calcutta coal market and four cargoes at three monthly intervals were arranged for Hong Kong at 55s with local Owners. Three vessels are reported fixed to Japan, one each in April, May and June at 62s and tonnage is understood to be on the point of fixing for Penang. An enquiry is also circulating for consecutive voyages to Colombo. The result of the Indo-Pakistan trade talks is keenly awaited by local coal shippers who are confident that shipments will recommence despite the enquiry circulating for tonnage to carry 200,000 tons of Chinese coal from Chinwangtao to Chittagong.

In the grain markets North China-Continental has put on 2s 6d at 102s 6d for May loading whilst further cargoes were arranged from the Pacific Coast and Australia to India at unchanged rates.

The higher rate of 90s was paid by scrap shippers for a Liberty size Calcutta and Vizagapatam-Genoa, although a 9,000 ton vessel accepted £32,000 lump-sum f.i.o. for scrap from Bombay to two ports Japan.

The time charter market continued to show fair activity and a 10,000 ton diesel obtained 20s 3d for the trip out to the Persian Gulf with delivery London and a Liberty size oil burner secured 17s for the voyage out, delivery U.K. redelivery Hong Kong. Another Liberty size oil burner was fixed at 15s 6d for 6 months American trading and the higher rate of 21s 6d was conceded for a 10,700 ton oil burner delivery Karachi redelivery Japan.

SUGAR MARKET QUIET

The sugar market was quiet during the week ended 17th March, with sales averaging 5,000 bags a day, arrivals about 4,000 bags a day, and stocks amounting to 110,000 bags. Prices for ready exportable deliveries were: ordinary grain Rs. 27-12, medium grain Rs. 28-4, and big grain Rs. 29-12 a maund. Ex-mill rates ranged between Rs. 26-6 and Rs. 28-8 a maund.

LINSEED

The market was steady and activity was reported on a fair scale. Arrivals were rather poor and ready goods were placed at a premium, although there were few buyers for spot. Crushers showed increased interest in forward delivery and there was a good daily turnover. In the oil section forward enquiries were received from local buyers and some business was reported. Export enquiries however were at a standstill. There was some uncertainty in the market over the Government policy in regard to export duties. Latest quotations were as follows: Ready Rs. 20/8 per maund; April Rs. 19/4 per maund; May Rs. 18/12 per maund.

HIDES AND SKINS

The market was steady and fluctuations were narrow. Stocks were higher than in the previous week.

Bazar Sales.

(Between 10th and 16th March, 1953.)

Cowhides:—Wet salted (Ord) 13,200 pcs. on the basis of Rs. 9-8 to Rs. 11-12; Wet salted (Ord) 6,000 pcs. on the basis of Annas 9-9 to Annas 11-3; Wet salted (Slaughtered) 7,580 pcs. on the basis of Rs. 13-4 to Rs. 25.

Goatskins:—Wet salted (Daisee, Killed) 42,600 pcs. on the basis of Rs. 265 to Rs. 425; Assam-Dinajpur-Murshidabad 3,700 pcs. on the basis of Rs. 260 to Rs. 285; Purneah-Kissanganj 8,830 pcs. on the basis of Rs. 270 to Rs. 280. Pakur-Muzafferpore-Darbhanga-Samastipur 18,100 pcs. on the basis of Rs. 240 to Rs. 250.

Bazar Stocks.

(16th March, 1953)

Cowhides:—Wet salted 1,68,500 pcs; Assam-Dinajpur salted 3,000 pcs.

Goatskins:—Wet salted (Daisee, Killed) 60,000 pcs; Assam-Dinajpur-Murshidabad 93,500 pcs; Muzafferpore-Patna-Pakur-Kissanganj-Darbhanga 1,01,000 pcs.

WEEKLY SHELLAC MARKET REVIEW

During the week ending 17th March, the market was quiet and inactive throughout with little business passing. The range of quotations was as follows:—

INDIA'S METRE GAUGE RAILWAYS

There are 53 transhipment points on the Indian Railways—31 in Northern India and 22 in Southern India. Among such points mention may be made of Mokameh Ghat, Benares, Agra East Bank, Sabarmati (Ahmedabad), Ghorpuri (Poona), Bangalore City and Guntakal. These points are a "bottleneck" in the railway traffic and a source of friction, which results in dissatisfaction among the users of railways. The proposed link will provide an alternative through metre gauge line from Bhatinda, beyond Delhi, in the north, to Tiruvandrum and Tuticorin in the south, eliminating the need for transhipment at a large number of places to great extent. Further, there will be an alternative metre gauge route to Madras Port, on the east coast. Although this is somewhat circuitous it could, however, be reduced in length by a further metre gauge link from Renigutta to Madras Port, which is suggested in the proposals, and once, and kept in abeyance on account of financial stringency in the 'thirties. Now that Madras Port has to be improved and proposals are under way to increase its capacity to about 2 million tons of cargo a year, in place of the present 2 million tons, it is desirable to take in hand the completion of the proposed metre gauge line to Tuticorin. The operating advantages of the proposed line from Khandwa to Hingoli are considerable.

AIR NAVIGATION IN ASIA AND THE PACIFIC

Reports presented to the regional meeting indicated that the lighting of aerodromes to facilitate operation at night has become the rule in the Far East and Western Pacific, rather than the exception as it was five years ago. Approving this, the delegates recommended that nine principal aerodromes in the region install high-intensity approach lighting systems which ICAO has made standard for night landings and operations in foggy weather. They also revised the old plan for the number and kind of dome to meet the need of increased traffic, new routes and new types of aircraft.

Turning to the vital issue of plane-ground communication, the meeting recommended an interim plan which allows for more voice communication by radio-telephone—long supported by ICAO—rather than communication by wireles-

code. Ultimately, a newly-adopted and detailed plan for more efficient plane-ground communication was to be put into effect. The meeting also proposed that the flight information services be set up on the Cocos Islands (in the Indian Ocean south-west of Indonesia), on Blak (an island off the New Guinea Coast) and on Formosa. Delegates also recommended that the boundaries of the existing flight information regions be adjusted to take care of long-term needs. Lastly, the meeting made final arrangements for allocating the high frequencies already assigned for aviation use by the International Telecommunication Union, and made a time table for putting them into effect.

HYDRAULIC BENDING MACHINE

1) A compact hydraulic bending machine has been designed by a London firm, especially to meet the demands of artisans engaged in the manipulation of the smaller sizes of steam and gas tubes and electrical conduit. An interesting feature of the machine is the folding wing-head, which enables it to be packed in a small container when out of use. It can be carried by one person. A steel strip is supplied, linking the two end former pins together in the folded position and crossing over the handle, thus enabling this to be used for lifting purposes.

The range of this machine is 3 inch, 4 inch, 5 inch, 6 inch, 8 inch, 10 inch, 12 inch, and 14 inch steam and gas pipes, or 1 inch, 1 inch and 1½ inch electrical conduit, separate former sets being available for each type of tube. Power is provided by a single-stage hydraulic pump, having ample power with reserve for all classes of steam and gas tubes. Provision is made for the fitting of an extension piece to the handle. Formers are cast in high-quality malleable iron, the grooves being integrally cast but providing for the use of a sand tube. Bulk production has already begun, and quantities will shortly be available. A lockable metal container can be provided for safe and easy storage of this machine and formers at extra cost.

SWISS INDUSTRIES FAIR

The 37th Industries Fair will be held in Basel from the 11th to 21st April, 1953. More than 2,200 exhibitors cover an exhibition area of over 1,000,000 sq. feet and is rightfully considered one of the finest displays of the kind in Europe. The Fair will be a compact exhibit by 17 industrial groups in 14 different halls and will present a panorama suggestive of the abundance and variety of Swiss industrial production, the key note of which is highly specialised precision engineering.

CAPITAL

THE KARACHI STOCK MARKET

IN their report on the Karachi stock market for the week ended 13th March, Messrs. Merwanjee Bomanjee Dalal & Son say that business in Government securities was on a limited scale. Long-dated maturities were on offer but did not attract buyers. Medium-dated loans met with some response and there were a few enquiries for short-dated loans. Amongst the following securities, only any but small quantities of the 1925-26 Municipalities were inactive. The share market recorded the previous week's gains. Investors waited for the budget so the volume of business was limited. State Banks declined slightly after a sharp rise but were free from selling pressure. National Banks fluctuated within a narrow range. Habib Bank rose but business was not brisk. Commercial banks were dull. MUHAMMADI Steamship Lines was maintained with a firm undertone. Haydari Constructions were relatively steady and Orient Airways were unchanged. Spencers recorded very substantial business at the quotation rate. Prolonged buying in Adamjee Jutes made them dearer and they were in persistent demand. Textiles and Valmiki Mills were firm and Colonial Jute of full vigour. Habib Insurance, Eastern Federal Insurance and Premier Insurance were comparatively quiet. Rawalpindi Electricity continued to attract investors. Trading in Quetta Electricity was very difficult because there were no sellers. Karachi Electricity were offered at a low rate. Orient Airways, Premier Insurance and Habib Insurance, Colonial Textile Preference were in demand. Buyers were prepared to pay more for MUHAMMADI Steamship Preference.

JUTE PRODUCTION IN 1952-53

The total production of jute in India during 1952-53 was 4,695,000 bales of 400 lb each, the acreage under jute being 1,834,000, according to a written reply in the House of the People given by the Food Minister, Mr. Kidwai. He said that State Governments had indicated that they hoped to increase the area in 1953 by 94,000 acres; this figure could be taken "to be a target in the proper sense of the word" as much would depend on weather conditions and prices. The plan was to reach an acreage of 2,000,000 by 1955-56.

USE OUR EXPERIENCE...

It has long been appreciated by industrialists that the cost of paint per gallon is by no means the best guide to the economics of painting. Production and maintenance costs merit careful study by all who aim to improve quality and efficiency.

I. C. I. have always advocated a realistic approach to this problem and in furthering this aim have recently produced two booklets entitled "*Improving Paintshop Productivity*" and "*Better Housekeeping in the Paintshop*"

Interested executives may obtain copies of these publications from the sole selling agents.

COAL COMPANIES

O, P, F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE INDO-PAKISTANI AGREEMENT ON JUTE AND COAL

FREER TRADE OPENS WAY FOR INDUSTRIAL CO-OPERATION

THE talks between India and Pakistan that concluded in Delhi last week had been intended, it was thought, merely to settle the question of discriminatory imposts on trade in accordance with the advice offered the two countries by GATT. Agreement on this matter was rightly held to be preliminary to discussion of a long-term trade pact, but the pleasant surprise of the meeting was that a three-year pact was actually drawn up and signed immediately a compromise was attained on discriminatory duties. Though it is true that the text of the pact refers only to jute, coal and border trade, despatches from observers make it clear that the delegates had the whole issue of Indo-Pakistan trade in mind. Thus, India has informally agreed to supply fertiliser required for the Pakistan rice crop, Pakistan was willing at least to discuss the grades of cotton she could supply to Indian mills, and a minor problem concerning export of Indian films was settled as soon as it was brought before the conference. Quite apart from the fact that jute and coal are the most important items entering into Indo-Pakistani trade, these accessory agreements indicate that the two nations are now ready to approach the entire subject of their commercial dealings in a new frame of mind. This augurs well for the next round of trade talks, due later in the summer, which will probably issue in a long-term pact dealing with trade in general.

This sudden and extensive relaxation of tension over trade matters confirms us in the opinion that Indo-Pakistani relations have not deteriorated as far as some political speeches would suggest, and that once common sense is brought to bear on the narrow field of sharp disagreement the tangle of other problems will very soon fall into order. Perhaps it is not too optimistic to apply this lesson to the Indo-Pakistani connection as a whole. Although relations appear to be embittered over a wide range of complex issues, only a few of these in fact are matters of vital concern to both countries and if the spirit of compromise can govern negotiations on those subjects, the others will readily admit of solutions. The recent revival of the suggestion that India and Pakistan undertake common defence must have appeared to many people quite unrealistic, bearing in mind the long list of disputes still outstanding between these apparently unfriendly neighbours. But the proposal is by no means as utopian as it seems and in reality few. No doubt they are considerable obstacles, but then could anything have looked more intractable than the blank contradiction between the jute policies being pursued by India and Pakistan over the past eighteen months? We shall be proved for under-estimating the seriousness of the political differences between Delhi and Karachi, and for presuming to place the epic tussle over Kashmir on the same level as mere trade squabbles. But are the former really so very different, or for that matter so much more important? However weighty they might be, no effort should be spared to extend the new realism about trade to the political sphere if it promises some relief from the grievous burden of defence spending which is now crippling these twin economies.

Jute was by far the most important topic before last week's conference. This is not to say that India's heavy surcharge on coal exports to Pakistan was any less objectionable than that country's impositions on raw jute; it was in fact just as discriminatory—and was meant to be. But the Indo-Pakistani jute trade is vital to both countries whereas their dealings in coal are not. The levy on coal was a pinprick and, though it may have disturbed Pakistan's fuel policy, it did not represent a planned attempt to refashion the

whole pattern of subcontinental trade in a most important commodity. Pakistan's direction of her jute exports did have that aim, and in the past few years it had succeeded in disrupting and falsifying the natural economy of Bengal to a degree that could have had disastrous consequences. The liberal theory of the division of labour between nations is unpopular nowadays, but the spectacle of India diverting land from rice to inferior substitute fibres while Pakistan put jute acreage under rice and sent her jute to India's competitors must have affronted the most "modern" of economic doctrines.

Both these policies failed of their purpose. India's competitors could not relieve Pakistan of all her jute output, or anything like it, and the East Bengali ryot who was forbidden to grow jute could not take up rice cultivation. India could not grow all the grades of jute her mills required, at least not by the methods so far followed, and had on her hands discontented peasants who wanted boom prices for indifferent fibre and discontented consumers who wanted fine jute cloth made from inferior raw material. This dual failure explains the readiness of the two parties to talk business when GATT recommended a conference, but for future reference it is not the relative failure in each country that should be remembered but the relative success in the other. India may not have grown adequate quantities of good jute, but she did manage to increase her total output of fibre far beyond doubters' expectations; furthermore she has lately begun to appreciate the need to concentrate jute cultivation in the best areas and has laid plans to increase the production of quality jute as distinct from mesta and bimli. Pakistan, on the other hand, may not have disposed of all her jute, but she did manage to subsidise the Continental mills so that they have been undercutting Calcutta even when the Indian mills have pared their profits to the bone. The recollection that when trade relations broke down, the other partner made shifts to assure her independence should be as salutary a warning against a repetition of deadlock as the realisation that domestic adjustments were not altogether happy.

Not all the decisions taken before this latest trade pact will now be recanted. India will persist in her efforts to grow jute, and with an assurance of easier supplies will presumably concentrate on producing the best jute she can. Pakistan will persist in her plans to industrialise in East Bengal and will erect as many jute mills as she can afford. Even if the new accord works infinitely more smoothly than previous agreements, there will be no question of reverting to the status quo when East Bengal grew the jute and West Bengal processed it. No one expected so much, and

looking at the matter from each nation's point of view it is understandable that India should continue to grow much more jute than before partition and that Pakistan should go ahead with her mills. Does this mean that the best agreement we can hope for is partial and temporary, and that the suspicions born of the last few years' bitterness must remain? Not necessarily. Last week's pact was arrived at because both countries realised that the future of the jute industry was as important to one as to the other. They have now given up the attempt to supplant each other and have agreed to divide their functions, so they are still close partners in this great industry. Co-operation is as possible and as desirable now as it was when, units within undivided India, the two Bengals were complementary.

The jute industry is today facing a serious struggle in consuming markets and the effort India has undertaken to ensure success in that struggle would be greatly assisted by support from Pakistan. If all the raw jute grown in India and Pakistan is to be profitably absorbed in manufactures, and if all the manufactures turned out by the present Calcutta mills and by the new and projected mills in East Bengal are to find markets, the two countries will need to join forces to maintain jute goods as the world's principal packaging medium. The field for co-operation thus opened up is immense and covers everything from propaganda aimed at consumers to research on new uses and techniques. India has long been associated with an international organisation of this sort for the sake of her tea industry, and although she lately withdrew from it she promptly realised that international co-operation was vital and joined a new organisation with the same objectives. The case of the jute industry is different no doubt, but there is more to be gained in this direction than from a series of armistices with Pakistan behind which each country continues the attempt eventually to supplant the other.

The agreement on coal benefits Pakistan primarily but is nonetheless welcome to India who has already lost quite enough export markets, thanks in part to the surcharges of which the most substantial has now been abolished. The extraordinary system of imposing a differential surcharge on coal exports to various countries in accordance with what the Government of India thinks each market will bear has seriously limited India's earnings on coal account and the withdrawal of the duty of Rs. 12-10 per ton on exports to Pakistan should be taken as the opportunity to abolish the duty as far as other markets are concerned also. Pakistan's requirements of Indian coal are estimated at between one and one and a half million tons a year, and this amount would be a welcome reduction in the heavy stocks now being carried at Indian pileheads. It will absolve Pakistan of the necessity to bring coal from the far ends of the earth—not all of it suitable coal either to judge from her experience with the Australians and the Poles. The main difficulty will be with transport; India is herself short of wagons but has agreed that Pakistan need supply only 1,000 wagons against the 1,500 previously lent for this trade. Since Cal

The Company has no mortgages, debentures or other loan capital outstanding but has an arrangement with the National Bank of India Ltd., for overdraft facilities, as and when required, on the security of a hypothecation of stocks, to which the charge securing the Debentures will be subject. As at the 13th March, 1953, there was a credit balance of Rs. 1,44,750 on the Company's account with the Bank.

ISSUE OF

DEBENTURES TO THE NOMINAL VALUE OF Rs. 25,00,000 CONSISTING OF 2,500 DEBENTURES (5½% REGISTERED) 1968 OF Rs. 1,000 EACH AT PAR PAYABLE IN FULL ON APPLICATION.

The Company is advised that the Debentures are "Approved Investments" within Section 27A of the Insurance Act, 1938.

DIRECTORS:

1. DAVID CHARLES BETHUNE PILKINGTON, Chartered Bank Buildings, Calcutta (Chairman).
2. RAMESHWAR LALL JATIA, Khurja City.

SOLICITORS:

ORR, DIGNAM & CO., 29, Netaji Subhas Road, Calcutta.

AUDITORS:

LOVELOCK & LEWES, Chartered Accountants, 4, Lyons Range, Calcutta.

The Debentures were created by a Resolution of the Board of Directors of the Company passed on the 31st January, 1953, and will be secured by a Trust Deed in favour of the Cockwood Trustee Company Ltd., and Dalhousie Holdings Limited, as Trustees for the Debenture-holders. The Trust Deed will confer a general floating charge on the whole of the undertaking and assets of the Company, subject, as to stocks of jute, raw and in process of manufacture and all articles manufactured therefrom stored in the Company's godowns or other place or places where the same may be stored, to the hypothecation in favour of the National Bank of India Ltd., referred to above, and, subject to the general floating charge, will also confer a fixed charge on the immovable property of the Company. Interest will run from the date of allotment of the Debentures and the first payment will be made on the 30th September, 1953, in respect of the period from the date of allotment up to that date. Subsequent payments of interest will be made half-yearly on every 31st March and 30th September, in each year in respect of the half-yearly periods ending on those days.

The Trust Deed will contain (inter alia) provisions to the following effect:—

1. All Debentures not previously redeemed will mature for repayment on the 31st March, 1968, but the Company will have an option

to redeem all or any of the same (to be selected by drawings) on payment of a premium of 1½% at any time after the 31st March, 1963, and of a premium of 1% at any time after the 31st March, 1965.

2. The floating charge will leave the Company free to deal with its assets in the ordinary course of business.
3. A Sinking Fund will be created, to which contributions of a minimum of Rs. 1 Lakh per annum (any excess contribution in any year may be applied in reduction of the obligation for any later years) will commence after 3 years from the date of issue, and the fund may be utilised in the redemption of Debentures by purchase in the market or may be invested in trustee securities or deposited with a bank until required for the purposes of redemption under the provisions referred to above.

4. The Debentures are Registered Debentures ranking pari passu and without any preference or priority one over another.
5. Debenture-holders will be entitled to their Debentures free from equities or cross-claims by the Company against the original or any intermediate holder.
6. The rights of Debenture-holders may be modified or compromised by an Extraordi-

nary Resolution passed at a Meeting of Debenture-holders in accordance with the Trust Deed.

PARTICULARS

It is proposed to expend the proceeds of the issue upon the installation of modern slip draft preparing and spinning machinery in the Company's mill at Titagur and the electrification of the mill. From experience gained at other group mills it is expected that this will result in increased efficiency and substantial savings in production costs.

The slip draft preparing and spinning machinery will be purchased from James Mackie & Sons Ltd., of Belfast, Northern Ireland, and the cost of this is estimated at Rs. 27,20,097/-.

The necessary plant and equipment required for the electrification of the mill will be purchased from leading manufacturers of this type of equipment in India and in the United Kingdom, but a decision cannot be made until tenders for the same have been received. The cost is estimated at Rs. 9,48,000/-.

Such part of the total cost of the machinery and electrification as is not provided for by the issue will be provided out of the Company's existing surplus working capital.

No contracts have as yet been entered into for the proposed purchases.

AUDITORS' REPORT.

The following is a copy of the report by the Company's Auditors, Messrs. Lovelock & Lewes, Chartered Accountants.

The Directors,
The Standard Jute Co. Ltd.,
Calcutta.

3rd March, 1953.

We have audited the Accounts of your Company for the three and a half years ended 30th September, 1952, and in accordance with the provisions of Section 93 (1A) of the Indian Companies Act, 1913, we report that the profits or losses for those periods were as set out below.

The profits or losses have been arrived at after charging all expenses of working and management and after making such adjustments as are, in our opinion, appropriate.

	YEAR ENDED.		HALF-YEAR ENDED.	
	31st March, 1950	31st March, 1951	31st March, 1952	30th September, 1952
	Rs.	Rs.	Rs.	Rs.
Income:—				
Sales	1,42,90,829	1,43,52,776	2,42,92,365	88,71,747
Closing Stocks of Gunnies	14,90,214	24,02,594	27,62,563	18,01,734
Interest and Dividends on Investments	25,730	16,277	32,290	31,694
Other Interest		27,745	30,613	1,856
Miscellaneous Income		16,530	169	7,684
	1,58,06,773	1,68,15,922	2,71,18,000	1,07,14,715
Expenditure:—				
Opening Stocks of Gunnies	16,44,977	14,90,214	24,02,594	27,62,563
Manufacturing Expenses	1,07,99,796	1,10,53,639	1,99,02,658	64,83,752*
Salaries and Wages	27,15,900	27,08,169	28,38,879	14,80,826

Profit or Loss before providing for Taxation	2,98,389	11,53,054	14,58,187	1,80,226
Provision for Taxation	1,20,000	5,45,000	6,30,000	
Profit or Loss before Transfers to Reserves	1,78,389	6,08,054	8,28,187	1,80,226
Transfer to General Reserve		2,09,600	2,75,000	
Transfer to Reserve for Roof Repairs			1,00,000	
Balance of Profit or Loss	1,78,389	3,98,454	4,53,187	1,80,226

*After Charging Rs. 72,188 to reduce the value of Raw Jute Stock as at 30th September, 1952, from estimated realisable value to replacement cost.

We further report that the Dividends paid by the Company in respect of the three and a half years ended 30th September, 1952, on its issued Share Capital were as follows:—

	YEAR ENDED.		HALF-YEAR ENDED.	
	31st March, 1950	31st March, 1951	31st March, 1952	30th September, 1952
On 9,000 6% Cumulative Preference Shares of Rs. 100 each, without any deduction in respect of tax paid by the Company.	At the rate of 6% per annum.	At the rate of 6% per annum.	At the rate of 6% per annum.	At the rate of 6% per annum.
On Ordinary Shares without any deduction of tax paid by the Company	At the rate of 4% per annum.	At the rate of 15% per annum.	At the rate of 16% per annum.	At the rate of 2% per annum.
	(1% on 25,137 Shares for the half-year to 30th September, 1949, 3% on 25,142 Shares for the half-year to 31st March, 1950.)	(6% on 25,144 Shares for the half-year to 30th September, 1950, 9% on 25,148 Shares for the half-year to 31st March, 1951.)	(8% on 25,153 Shares for the half-year to 30th September, 1951, 8% on 25,155 Shares for the half-year to 31st March, 1952.)	(1% on 25,156 Shares.)

The above Dividends were paid out of current profits with the exception of the dividend for the half-year ended 30th September, 1952, which was paid out of previous accumulated profits.

No Accounts of the Company have been made up for any period subsequent to 30th September, 1952.

We are, Gentlemen,
Yours faithfully,
LOVELOCK & LEWES.

STATUTORY AND OTHER INFORMATION

DIVIDEND AND CAPITAL

The 6% Cumulative Preference Shares (hereafter called "the Preference Shares") confer the right in priority to all other shares of the Company: (a) to a fixed cumulative preferential dividend at the rate of 6 per cent per annum on the capital paid up thereon; and (b) to rank both as regards dividends and capital in priority to the Ordinary Shares.

The Company has not issued any shares or debentures within a period of two years preceding the date of this Prospectus.

VOTING

Subject to any special rights or restrictions as to voting upon which any shares may be held, on a show of hands every member present in person or by general proxy and being a holder of Ordinary Shares has one vote and upon a poll every member present in person or by proxy has one vote for every Ordinary Share held by him. The Preference Shares do not entitle the holders to vote but confer the right to be present at any General Meeting of the Company.

No person may without the consent of the Directors vote in person or as a proxy or upon a poll or be reckoned in a quorum if there remains unpaid any call or other sum due on any of his shares or in respect of any shares that he has acquired by transfer unless he shall have been possessed of such shares in respect of which he claims to vote for at least three months previously to the time of holding the meeting at which he proposes to vote. A proxy must be a member of the Company and entitled to vote but an Attorney duly constituted under a General or Special Power-of-Attorney need not be a member of the Company.

TRANSFER

The articles contain no restriction on the free transfer of fully paid shares but the Directors may refuse to register any transfer of shares which are not fully paid or on which the Company has a lien.

VARIATION OF RIGHTS

The special rights attaching to any class of shares may be modified, altered or abrogated by

agreement between the Company and any person purporting to contract on behalf of that class, provided that such an agreement is (a) ratified in writing by the holders of at least three-fourths of the issued shares of that class, or (b) confirmed by an Extraordinary Resolution passed at a separate General Meeting of the holders of shares of that class, subject to the special provisions as to quorum contained in the Articles of Association.

BORROWING POWERS

The Directors may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and uncalled capital and to issue debentures, debenture-stock and other securities.

MANAGING AGENTS

The Company is under the Managing Agency of Bird & Co. Limited, by virtue of an agreement terminating on the 29th December, 1968. The business of the Company is carried on by the Managing Agents subject to the direction and control of the Directors. The Managing Agents receive by way of remuneration for their services a fixed allowance of Rs. 1,500/- per mensem and a commission of 7½% on the net half-yearly profits of the Company, "net profit" being defined in accordance with Section 87C(3) of the Indian Companies Act.

The Managing Agents are entitled to charge and be paid for by the Company the actual cost of all establishment provided by them for the Company.

The Managing Agents may also perform such other duties for the Company as may be decided by the Directors and receive additional remuneration therefor. The Managing Agents are also entitled to commissions received from Insurance Companies by way of commission on account of any insurance of goods, properties or otherwise effected by the Managing Agents on behalf of the Company.

EX-OFFICIO DIRECTORS

The Articles of Association provide that the number of Directors shall not be less than three nor more than five. The Managing Agents are entitled to appoint one Director, to remove from

office any person so appointed and to appoint any other person in his place. Such Director is an ex-officio Director.

INTEREST OF DIRECTORS

Mr. D. C. B. Pilkington is a Managing Director of Bird & Co. Limited, the Managing Agents of the Company. Mr. J. L. Esplan is a Partner in the firm of Messrs. Place, Siddons & Gough, Brokers to the Company. Mr. H. D. Kitching is a Partner in the firm of Messrs. Orr, Dignam & Co., Solicitors to the Company. Mr. Kitching is also a Director of Dalhousie Holdings Limited and is a Partner to Mr. A. D. Vickers, who is a Director both of the Cockwood Trustee Company, Limited, and Dalhousie Holdings Limited, Trustees for the Debenture-holders. No sums have been or agreed to be paid to any Director in cash or shares or otherwise to induce him to become or to qualify him as a Director of the Company.

DIRECTORS' QUALIFICATION AND REMUNERATION

The qualification of a Director, other than an ex-officio Director, is the holding in his own name or jointly with any person whether beneficially or as a trustee for any company or person or otherwise of 50 Ordinary Shares in the Company.

Each Director is paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 1,200/- per annum and by way of further remuneration is entitled to receive a sum or commission to be equally divided between the Directors equal to 1 per cent of all dividends declared in each financial half-year of the Company.

ROTATION OF DIRECTORS

At the Ordinary General Meeting held each year, one-third of the Directors for the time being, or if their number is not three or a multiple of three then the number nearest to one-third, retire from office. An ex-officio Director is not liable to retirement by rotation.

INDEMNITY

Every Director, Managing Agent, Manager or Officer of the Company, or any person (whether an Officer of the Company or not) employed by the Company as Auditor is entitled to be indemnified out of the funds of the Company against all

Our City Cable

END-ACCOUNT DULLNESS
SUPPORT FOR OIL AND SHIPPING

London, 24th March.

TAKING into consideration the end of a long account and the start of the unpopular three-week account with the Budget to follow, the stock market behaved satisfactorily in the past week. Investors were eager to buy and a statement by the Chancellor of the Exchequer later in the week gave added stimulus. Today's settlement caused the period to end on a dull note but there was little selling pressure and little business passing. Though institutions were not very active, there was sufficient demand to keep gilt-edged active and moving in an upward direction. Activity in industrials increased but was inclined to be more selective and it was well known that several large bundles of shares changed hands. The oil market also returned to popularity with leading issues moving higher and among shippings there were some supporting orders for liner issues and plenty of speculative support. Foreign bonds also had a more comfortable week although Germans were occasionally below the best. They managed to shake off the effects of the aircraft incidents.

Money was in plentiful supply on the short loan market during the past week and though conditions turned patchy near the close there was no trouble in balancing the books. Early distribution of Education Money together with good buying of bills by banks made for an easy start. This was later supplemented by a disbursement of Milk Money, and on one occasion, it was necessary for the special buyer to operate. Money also flowed in freely from outside sources. Application for £260 million Treasury Bills totalled £351,030,000 of which the former amount was allotted at an average rate of 47s. 11.78d. percent. The Bank of England Return showed that active note circulation increased by less than £1 million to £1,482 million, while bankers' deposits were practically unchanged around £282 million. This week's offerings amount to £250 million.

Tea Sales

There was a strong demand for 23,732 packages of North Indian, Pakistan and other teas offered

this Monday especially for common and low medium and medium descriptions. Common and low medium kinds rose by 1d to 1d and mediums by one to 1-1/2. The improved quality of Tanganyikan was reflected in the higher prices paid, with broken orange pekoe fetching 4s. Some of the buying was reported to be on export account mainly Continental with broken pekoe Souchongs in keen demand.

Offerings of 15,032 packages of Ceylon tea met rather quiet demand except for teas up to 46d. per lb. which were sold at firm to dearer rates, especially broken pekoes. Others, particularly lighter liquoring high grows in the region of 52 to 60 d. per lb. were irregularly easier by about 2 d. Clean common broken pekoe was quoted at 41d against 39d last week, while low and medium B.O.P.'s and B.O.P. fannings were unchanged. High B.O.P.'s and B.O.P. fannings were 2d cheaper. Among Southern Indian growths, teas up to 48d per lb. were strongly competed for at a general advance of about 2d. Offerings were 8,057 packages.

Tramp Shipping Rates

Although business done in the tramp shipping market during February was generally on steady lines, the United Kingdom Chamber of Shipping's index shows a further fall to 92.3 from 96 in January. It is felt that the chief factor in the decline was the initial chartering this year of grain from the St. Lawrence to the U.K. at 10s. per quarter compared with the last season's closing rate of 12s. The regularly active North American coal and grain trades recovered after early easiness and in some cases registered improvements on the month. Grain from the Gulf advanced from 77s. 6d. to 81s. 3d. per ton, while coal rates from Hampton Road to Antwerp or Rotterdam moved from 32s. 9d. a ton. The Cuban sugar market was about unchanged on the month but an almost total absence of demand enabled tonnage to be fixed from the River Plate to India at 80s. against 82s. 6d. in January. The only weakness noted in the Far East market was for barley from South Australia to the United Kingdom which declined 10s. per ton but this was because of booking well forward which discount is nearly always paid. Good demand for mixed cereal from North China to North Europe resulted in a 2s. 6d.

per ton rise, while a steady trade was noted for ore from Dungum to Japan at unchanged rates. Quiet but generally steady conditions prevailed in the Mediterranean ore trade and similarly in the North European outward market.

U.S. Sulphur Prices

The Freeport Sulphur Company has announced increases in its sulphur prices following the decontrolling of prices of this product by the U.S. Government. The price of f.o.b. Hoskins Mound Texas is raised to \$251 per ton from \$22. The price of Port Sulphur Texas is raised to \$271 from \$231 and the export price is raised to \$301 from \$261 per ton. Since customers are under contracts, however, they will not feel the effects of the price increases for about 60 days.

Cloth Exports to India

Local exporters believe that Lancashire's trade with India might increase despite the trebling to 65 percent of British preferential tariff on some cloth to India. A ten percent quota, they believe, will enable them to sell high grade specialties not manufactured in India in which quality and style are more important than the price factor. Hitherto licences had been available only for a few types, such as Sateens, Umbrella cloths and velvets, and the total trade had been very small. Some exporters complain of the unfairness of the duties and criticise the British Government for not protesting on behalf of the Lancashire industry. "It is unjust that India should impose these penal tariffs while their merchants are allowed to send their goods into this country free of duty and without quota or licensing restrictions," said one exporter. Others think that under the ten percent quota there will be a somewhat increased demand for superior cloths.

Tanned Hides

The second series of public auctions of tanned East Indian goatskins commenced here last week. There were good attendances of buyers and the prices rose an average of 1s. to 1s. 6d. per pound above January rates. Progress became more difficult later in the day, however, and some parcels were only partly sold. The catalogue comprised 254,000 goatskins against 325,000 in January and 289,000 in December.

March 26, 1953.

Company Meeting

EASTERN BANK LIMITED

SIR EVAN JENKINS' COMPREHENSIVE REVIEW OF A
YEAR'S PROGRESS

The 43rd Annual General Meeting of the Shareholders of the Eastern Bank Limited, will be held in London on 8th April. The following is an extract from the statement by the Chairman, Sir Evan Meredith Jenkins, G.C.I.E., K.C.S.I., which has been circulated with the report and accounts:

The Balance Sheet total at £31,329,045 is higher by £2,003,381 than that of 1951. Current, Deposit and Other Accounts show an increase of £2,069,252; on the other side Cash and Bills Receivable are up by £482,332 and investments by £140,455 while Advances show a decrease of £754,985. The increase of £111,880 under Premises which now stand (after the appropriation of £30,000) at £363,288 reflects the progress made with our building programme, to which I have referred in previous statements. Information about works under construction or contemplated will be found later in this statement.

The published profit is £120,722 against £124,763 for 1951. The appropriations from profits are £50,000 to Reserve Fund, which is now shown in the Balance Sheet at the increased figure of £1,250,000; £30,000 to Premises; and £23,625 to the Final Dividend which your Directors propose to be raised from 3s. 6d. to 4s. 6d. per share. The carry forward is increased by £9,972 to £102,597. I must explain that the increase in dividend relates to the year as a whole, and is in the opinion of your Directors justified by the results achieved over a period of years, and by the fact that when dividend restraint was officially requested a very conservative policy was already being followed.

The Bank made satisfactory progress in 1952, though trading conditions were more difficult than in 1951.

In general, the increase in trading activity which was so marked from the second half of 1950 to the end of 1951 continued well into 1952; but the fall in the prices of agricultural commodities which occurred in the first quarter of the year led, after a very short interval, to a trade recession of some severity in the countries which depend largely on commodity exports. The effect of this recession on United Kingdom exporters was no doubt intensified by increasing competition in the Eastern Trade by the Continent of Europe, and Japan.

As far as can now be foreseen, our prospects for the next few years at least are quite good. There are, of course, risks of a political nature in the East as in most other parts of the world; they are, perhaps, no greater in the countries which we serve than they are elsewhere.

During the year we obtained permission from the appropriate authorities to open branches at Al Khobar on the coast of Saudi Arabia near the Dhahran Oil Field, and at Cochon on the West Coast of India. Managers have been designated, and we hope to have these branches working within a few months.

The following paragraphs give the usual brief summary of conditions in the countries in which our overseas branches are established.

IRAQ

The Government of Sayid Nuri-as-Said resigned in July, making room for a "caretaker" Government under Sayid Mustafa-al-Umari, whose main task was to be to conduct the General Election. Party differences concerning the electoral law led, however, to serious disturbances in November, and a New Government was formed under General Nur-ul-Din Mahmood as Prime Minister. The disturbances were dealt with by the imposition of martial law, and the General Election was duly held in January 1953. Sayid Nuri-as-Said's supporters secured a substantial majority, and at the end of January 1953 Sayid Jamil-al-Madfa'i formed a Government in which Sayid Nuri-as-Said is Defence Minister.

The wheat and barley harvest of 1952 were up to average, with some failure of yields in northern districts. Rather over 300,000 tons of barley were exported up to the end of November, and exports for the full year totalled approximately 340,000 tons. Exports were suspended from 15th December, but were permitted again early in 1953.

The date crop was average in quantity, but of poorer quality than was expected. Foreign demand was weaker, partly owing to a large carry-over of stocks of the 1951 crop. The newly constituted Iraq Dates Trading Company Ltd. will carry on the export business for the 1953 season. This is one of three organizations set up with official countenance to manage the date trade. The other two deal respectively with "Central Area" dates from the Euphrates and with date manufacturers.

The plans for increasing the production of oil, in accordance with the agreement between the Iraq Government and the Oil Companies operating in Iraq, to which I referred in my statement for 1951, have made good progress. The Kirkuk-Banias pipeline was completed in April, ahead of programme, and was formally inaugurated on 18th November by H. M. King Faisal II at an impressive ceremony at Kirkuk. The Basra Petroleum Company made rapid progress in drilling, and an additional pipeline from Zubair to Fao is being laid. Additional storage tanks and two new tanker jetties are being built.

The Development Board has called for tenders for many projects, and contracts have been awarded in connection with the Wadi Tharthar Flood Control, and Irrigation Scheme, the Ramadi Barrage, a factory for the utilisation of waste gas products at Kirkuk, date fumigation plants at Basra, and oil refinery at Baghdad and other works. A large programme of roads and bridges is contemplated. It has been suggested in some newspaper articles in this country that advanced opinion in Iraq is impatient of delay, and that the Development Board's operations will do little to

abate criticism of Government. While it is true that any large public work takes several years to complete, and that irrigation projects, in particular, do not reach maturity until some years after completion, the benefit to the country in terms of employment and pride in a great national undertaking begins as soon as construction is well started. The next few years should see some remarkable changes.

Our business in Iraq in 1952 has been satisfactory. The new financial agreement between Iraq and the United Kingdom, negotiated in the second half of the year, enabled Iraq Authorities to use their Sterling resources more freely; also certain import and export duties were lowered towards the end of the year. Prices on the whole tended to fall, but trade was quite well maintained. During the year the Iraq Government redeemed for cash at maturity the 3% 1947/52 Government Loan, and also for cash the outstanding balance of the 5% Municipalities Loan which was repayable by half-yearly instalments up to 1956. This was a matter of some interest to the Banks operating in Iraq which are required to employ a fixed proportion of their local resources within the country.

We have completed the purchase of the site for our new premises at Baghdad. The architects' drawings are now awaiting approval of the Municipal Authorities. The site has been cleared and it is hoped to begin building by June, 1953.

BAHRAIN AND THE PERSIAN GULF

The most important event of the year at Bahrain was the conclusion in December of a revised oil agreement between the Bahrain Petroleum Company Ltd. and His Highness the Ruler, on the now familiar "fifty-fifty" basis. His Highness's Government have continued their steady work on the improvement of the social services, and on development. Bahrain has excellent roads and public buildings, and fresh progress is made every year.

Trade was well maintained during the year, with prices on the whole satisfactory. The production of oil and refinery throughout were well up to previous standards. The pearl catch, once an important source of income locally, was considerably lower than in 1951 both at Bahrain and in the Qatar peninsula, and is now of little importance in Sheikhdoms with a large revenue from oil and with ample opportunities for employment in the oil companies.

Our Doha Branch continues to make progress in conditions not very favourable to commercial banking. Oil production is increasing, according to planning. Oil production is increasing, according to planning. Work has begun on the jetty, and electric power station, and water supply, and His Excellency the Ruler has assembled a staff to advise him on the development of his territory.

ADEN

The importance of Aden is likely to be maintained and perhaps to increase with the establishment there of a refinery by the Anglo-Iranian Oil Company. Work on this project has already begun.

Our Branch has made satisfactory progress, despite a general setback in trade during the second half of the year. On the easing of Indian export restrictions, merchants engaged in the entrepot trade in textiles bought heavily; and some were caught by a sharp decrease in demand and the resultant fall in prices.

Work on our new premises in Crater has begun, and we hope to occupy them by the end of 1953.

INDIA AND PAKISTAN

The unsolved problem of Kashmir is still a cause of friction between the two countries, and the introduction, with effect from 15th October, of a passport system for Pakistan and Indian nationals travelling between Pakistan and India caused some temporary uneasiness which quickly disappeared. The new trade agreement unfortunately omits jute and coal, but, as agreement on these commodities does not seem unduly difficult, in 1951, trade relations do not seem unduly difficult. In Western Pakistan towards the end of the year fears were expressed that India's irrigation policy might deny the Pakistan canals their fair supply of water. Even before 1947, the distribution of the waters of the Indus river system was the subject of intractable inter-provincial disputes; the partition of the Punjab and the special position of Kashmir have created new controversies. In view of the size and extreme importance of the irrigated areas in the two Punjab, and Sind, it is to be hoped that a reasonable settlement will be reached. Experts have been at work on the problem for some time under the auspices of the International Bank for Reconstruction and Development.

INDIA

The new Governments formed as a result of the first General Election under India's Constitution took office during the year both at the Centre and in the States. There were no startling internal developments. The Congress Party retains its authority throughout the Country.

The adverse swing of trade which began in the second quarter of 1951 continued into 1952; but there was a sharp break in commodity prices. This led directly to considerable reductions in the export duties on jute goods, and to relaxation of export control on cotton textiles. On the whole, however, export markets had a poor year; the prices for jute and jute goods fell; and an initial encouraging demand for cotton textiles in various places including parts of Africa and Malaya dwindled as the year went on. On the other hand the prices of hides and skins improved

in the second half of the year. The tea industry was the subject of much public discussion, and it seems that the difficulties of the producers now have more chance of general recognition. The losses incurred in 1951 and 1952 caused some of the less prosperous gardens to close, and though prospects now seem rather better, it seems clear that the industry must be permitted to adjust its cost of production to changes in prices and demand even though the adjustment may involve the decrease in the labour force and some diminution in wages and amenities. Exports of tobacco were again satisfactory.

In January the Reserve Bank introduced export facilities, available to the scheduled banks, for re-discounting commercial bills maturing within 90 days. It is likely that this arrangement will be made permanent.

In spite of local scarcities early in the year the food situation had been generally satisfactory. Substantial imports are, of course, still necessary.

The new All India Tribunal (Bank Disputes) was still sitting at the end of the year.

PAKISTAN

Political interest in Pakistan centred mainly on the new Constitution the basic principles of which are under discussion.

The sharp fall in commodity prices early in the year hit the country very hard, and the Authorities took energetic action to minimize the effect of this temporary setback. Exceedingly drastic restrictions on imports were found necessary. Minimum cash margins of 75% for imports under Open General Licence and of 50% for imports under specific licence were for a time fixed by the Authorities for the openers of the credits, and later the Open General Licence was withdrawn. The import duty on piecegoods was increased. The volume of imports is now very small indeed, but some markets are still overstocked—particularly the piecegoods market—and off-take is poor.

On the export side jute and cotton had a bad year with a heavy carry-over from the previous season. A curtailment of jute sowings is likely, and the movement of cotton may be accelerated by some recently proposed barter deals.

As in India, the tea industry went through a difficult time, with costs of production averaging about five annas per lb. above sale proceeds. Drastic action is being taken to reduce costs, and it is hoped that the industry is over the worst of this difficult period.

The new port at Chalna in East Pakistan is growing in importance. The main anchorage has not yet been decided upon.

At Chittagong the completion of the seven new jetties, which are under construction, was delayed owing to the slow deliveries of steel, but complaints of congestion are less frequent, and the Port Authorities are doing all they can to improve conditions in the river.

Our Chittagong Branch is now installed in its new premises.

Contracts have been made for the construction of our new building in McLeod Road, Karachi, and work is in progress.

CEYLON

Mr. D. S. Senanayake, the first Prime Minister of Ceylon, died in March as a result of a riding accident. He was a remarkable man, of great ability, and Ceylon owes much to his patriotism and statesmanship. Those who knew him personally will not forget the humour and tolerance which made so effective as a politician and as an administrator. He was succeeded as Prime Minister by his son, Mr. Dudley Senanayake, who received early encouragement from the result of the General Election in May, at which the United National Party won a sweeping victory.

Being largely dependent upon commodity exports, Ceylon encountered difficult trading conditions during the year, and the trade balance was heavily adverse. Exchange control on remittances was tightened up; import duties on luxury and less essential goods were increased and imports from non-sterling countries were further restricted. In addition certain measures were taken to reduce an expected budget deficit, including a 10% surcharge on Income Tax.

The course of tea prices, especially for low grown teas, has caused some concern, but the industry has suffered no crisis comparable to that reported from India and Pakistan. The withdrawal of Egypt from the market towards the end of the year owing to shortage of sterling to finance purchases from Ceylon caused a serious setback to the prices of fannings and dust. This Egyptian difficulty will no doubt pass, and on a long view the prospects are not unfavourable.

Rubber prices moved downwards in line with world demand, but had recovered somewhat by the end of the year. Sales to China (about 34,000 tons shipped in 1952) have helped to maintain prices of sheet rubber at slightly above world price.

Copra prices showed marked improvement as the year went on, owing probably to damage in other producing areas by cyclones and other causes.

The Mission from the International Bank for Reconstruction and Development, to which I referred in my statement for 1951, reported in September. The Mission's views are being considered. In the meantime projects already in hand, including the important multi-purpose Gal Oya project, have made good progress.

MALAYA

Though the emergency is by no means over, there has been a marked improvement in the law and order situation.

In other respects the year was a disappointing one, particularly for producers and exporters of rubber and for importers of textiles. Rubber prices continued to fall, but had rallied slightly by the end of the year. There were further decreases in the production and export of rubber. Tin, on the other hand, had a comparatively good year with prices fairly steady and little change in the volume of production and exports.

There was a general shrinking of trade, exports falling by about \$2,200 million and imports by about \$870 million. On the import side, stocks of most goods were high—particularly stocks of textiles—and the off-take was moderate. The entrepot trade of Singapore suffered from further exchange restrictions in Indonesia, and there was a slackening of demand for Malayan produce from other Eastern countries with trade balance difficulties of their own. It seems unlikely that these trends will be reversed in 1953.

THE STANDARD JUTE COMPANY LIMITED

(Incorporated under the Indian Companies Act, 1913.)

ISSUE OF

Debentures to the Nominal Value of Rs. 25,00,000 consisting of 2,500 Debentures (51% Registered) 1968 of Rs. 1,000 each.

FORM OF APPLICATION

THE STANDARD JUTE COMPANY LIMITED.

In case of joint application ALL joint applicants must sign above.

A Company should affix its Common Seal or sign by attorney and attach the Power of Attorney.

A Lady should state whether Spinster, Married Woman or Widow.

INSTRUCTIONS.

This Form should be completed and lodged with The Standard Jute Company Limited at Chartered Bank Buildings, Calcutta, together with a remittance for the full amount due on application not later than the 30th April, 1953. The application lists may however be closed at any time after opening at 10 a.m. on the 18th March, 1953.

Cheques/drafts should be made payable to The Standard Jute Company Limited or Order and crossed "not negotiable." A separate cheque/draft is required in respect of each separate application. Cheques/drafts drawn on Calcutta and presented in Calcutta need include no allowance for collection charges. All other cheques/drafts must include Bankers' commission for collection, the amount of which may be ascertained by the applicant from his Bankers.

No receipt will be issued, but an acknowledgment will be made in due course by despatch to you of an Allotment Letter in respect of all or part of the Debentures applied for and/or by return of the application monies for any excess payment. If no allotment is made, application monies received will be returned in full.

(Continued from last Page)

liabilities incurred by him as such Director, Managing Agent, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal in which judgment is given in his favour, or in which he is acquitted, or in connection with any application under Section 281 of the Indian Companies Act in which relief is granted to him by the Court.

CONTRACTS

No contracts (apart from contracts entered into in the ordinary course of business) have been entered into by the Company during the two years preceding the date hereof.

EXPENSES

The expenses of this issue payable by the Company inclusive of brokerage, stamp duty, printing charges, legal charges, and registration fees, are estimated at Rs. 50,000.

UNDERWRITING

The issue is not being underwritten.

BROKERAGE

Brokerage will be paid at Re. 1/- per cent on acceptance made in respect of applications from the public bearing the stamp of a recognised Banker or Stock-Broker or other authorised Agents.

APPLICATION FOR DEBENTURES

Application should be made on the accompanying form and sent to the Company at its Registered Office together with the whole amount payable.

Cheques/Drafts should be crossed "not negotiable" and made payable to "The Standard Jute Company Limited or Order." If you do not have an account with any Bank in Calcutta, you are requested to obtain a draft from your local banker drawn on this centre. Cheques/Drafts drawn on Calcutta Banks and presented with acceptances in Calcutta need include no allowance for collection charges. All other cheques/drafts must include Bankers' commission for collection, the amount of which may be ascertained by the applicant from his Bankers.

If no allotment is made, the amount received on application will be returned in full and if allotment is made for a lesser number of debentures than the number applied for, the balance of the application monies received will be refunded to the applicant. Debenture certificates will be ready within 3 months from the date of allotment of the debentures at the Registered Office of the Company in exchange for Letters of Allotment.

INSPECTION

Copies of the Memorandum and Articles of Association of the Company, the draft Trust Deed (subject to modifications), the Consent Order of the Controller of Capital Issues and the original report of Messrs. Lovelock & Lewis as set out herein may be inspected at the Registered Office of the Company during usual business hours (excluding Saturdays) until the subscription list has been closed.

Copies of this Prospectus and Forms of Application can be obtained from the Registered Office of the Company and from the Company's Bankers and Brokers.

Dated, the 16th day of March, 1953.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December, 1952 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 65 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that:—

- (a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
- (b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;
- (c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
- (d) In our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
- (e) Such Profit and Loss Account shows a true balance of profit for the year;
- (f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank; and
- (g) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Companies Act, 1932.

Manager

THE UNITED COMMERCIAL BANK LIMITED.

(Incorporated on 6th January, 1943)

TENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit & Loss Account for the year ended, 31st December, 1952.

The net profit for the year, including Rs. 1,70,952-7-9 brought forward from the previous account, after providing for all known and anticipated charges and expenses of operating branches, amounts to ...

The Directors have made the following appropriations out of the net profit:

1. Transfer to Reserve Funds	Rs. 7,50,000 0 0
2. Provision for Taxes	10,00,000 0 0
3. Disbursed as Ex-gratia payment to staff	3,73,614 5 4
4. Balance	9,01,119 2 0
	30,24,733 7 4

Out of the balance of Rs. 9,01,119-2-0 the Directors recommend to the shareholders payment of Dividend at Rs. 2/- per share, free of income-tax, which will absorb Rs. 8,00,000/- leaving Rs. 1,01,119-2-0 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 7,216/- as contributions for charitable, benevolent and public purposes.

During the year under report your Bank acquired the following properties:

- (1) Plot of land at Parliament Street, New Delhi for constructing Bank's building.
- (2) Two flats in Bombay.

Payments have been made for the same and the title deeds will be obtained in due course.

Looking to the difficult monetary and credit conditions in 1952, your Directors consider the business and profit for the last year as satisfactory. The Bank's investments appear in the Balance Sheet at below market value.

During the year, the Bank opened a branch at Hongkong and closed its office at Pawai in India. Arrangements are in hand to open a branch of the Bank in London.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the work done by your General Manager, Mr. B. T. Thakur, and the staff of the Bank and thank them for their ceaseless efforts in the interests of the Bank and for devotion to duty.

Under Article 95 of the Bank's Articles of Association, four of your Directors,

Shri G. D. Birla

Shri G. L. Bangur

Shri M. L. Dahanukar

Shri P. D. Himatsingka

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

Calcutta, 25th February, 1953.

By Order of the Board,

G. D. Birla,

Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1952.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

INCREASED DEMAND IN OTHER CENTRES

Wednesday, 25th March.

THE demand for money has strengthened this week after being rather easier up to Monday. The origin of this renewed demand for funds lies outside Calcutta, where there is still only moderate activity: there has been some increase in borrowing in Bombay and Madras. Money is now quite tight and in the interbank market the rate for overnight money has definitely settled at the higher figure of 2½ percent. Call money quotes 3 percent.

The bill of exchange market has been quiet, with a few moderate tea and coal bills passing. Gunny bills have been scarce since prices firmed up in the local market. There has been a fair amount of remittance. Sterling rates are unchanged and the dollar rate stands at Rs. 475-8.

The smaller amount of Rs. 1,01,50,000 was offered for Rs. 1 crore of three-month Government of India treasury bills this week. Tenders at Rs. 99-6-3 percent were accepted and the average rate of acceptance was maintained at Rs. 2-7-0 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to the close of business on Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 20th March, treasury bills for Rs. 7,80,00,000 were sold in favour of the Reserve Bank of India.

Bullion was very quiet last week and prices fell sharply. Weaker advices from Bombay combined with larger arrivals, followed by the absence of demand undermined sentiment. Silver fell from Rs. 161-4 to Rs. 150-12 and the ready rate was quoted at a premium of 4 annas. The price was, however, unchanged at 74d. in London and at 8½ cents in New York.

Gold also moved lower and the price declined from Rs. 86-12 to Rs. 84-14. The sovereign at Rs. 56-2 showed a loss of 6 annas.

Prices of gold and silver fell so sharply in Bombay that bears were asked to pay automatic margins. There continued to prevail uncertain-

ties in regard to the amendment of the by-laws of the Bombay Bullion Association. The Government of Bombay had not so far approved of the proposed amendments to the by-laws. It was reported to have asked the Board of the Bullion Association to place the amended by-laws before the general body of the Association to obtain the consensus of opinion of the members before giving its approval. An extraordinary general meeting of the members was accordingly convened last week but the meeting had to be postponed in the absence of a quorum.

A fall of Rs. 5 crores in notes in circulation to Rs. 1,133.01 crores is the outstanding feature of the return of the Reserve Bank of India for the week ended 20th March, 1953, but the total note issue increased by Rs. 47 lakhs to Rs. 1,149.74 crores. Notes held in the Banking Department consequently increased by Rs. 5.47 crores to total Rs. 16.73 crores. There was a sharp decline of Rs. 24.97 crores in deposits of the Government of India to Rs. 122.54 crores due to a transfer to State Accounts, which rose from Rs. 1.44 crores to Rs. 29.10 crores. Balances of commercial banks at Rs. 43.08 crores were about Rs. 36 lakhs less than in the last return. Government Treasury bills fell by Rs. 1.86 crores to Rs. 7.45 crores as did balances held abroad by Rs. 19 lakhs to stand at Rs. 146.62 crores. Other loans and advances increased from Rs. 18.37 crores to Rs. 22.89 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 4.24 crores. Investments were reduced from Rs. 100.20 crores to Rs. 96.12 crores. Ways and means advances were shown at Rs. 3.46 crores (Rs. 3.55 crores).

The return of the Imperial Bank of India for the week ended 13th March, 1953, shows a fall of Rs. 1.02 crores in total deposits to Rs. 208.87 crores. Investments in Government Securities and other authorised investments remain unchanged at Rs. 70.08 crores and Rs. 11.16 crores, respectively. Loans, cash credits and overdrafts have advanced by Rs. 31 lakhs to aggregate Rs. 108.08 crores, while bills discounted and purchased have declined by Rs. 8 lakhs to stand at Rs. 21.25 crores. Cash and balances are, in consequence, shown at Rs. 16.19 crores or Rs. 38 lakhs higher.

The working of the CENTRAL BANK OF INDIA for the year ended December, 1952, shows the usual satisfactory results. Higher interest paid on de-

posits explains the fall of Rs. 25 lakhs in profits to Rs. 1 crore, as compared with the previous year. Bringing in Rs. 17,65,628 there is a balance of Rs. 1,18,26,609. Interim dividends at 6 percent (same) absorbed Rs. 18,87,255. Investments have been allocated Rs. 35 lakhs (Rs. 50 lakhs), taxation Rs. 10 lakhs (same) and bonus to staff Rs. 12 lakhs (Rs. 22.25 lakhs). The final dividend has been maintained at 8 percent, making 14 percent (same) for the year, leaving a carry-forward of Rs. 17,23,014. Deposits are Rs. 2.27 crores lower at Rs. 123.21 crores. Cash also fell by Rs. 1.01 crores to Rs. 16.28 crores, but investments were up by Rs. 1.72 crores to total Rs. 63.98 crores. Advances at Rs. 55.36 crores disclosed a decline of Rs. 5.81 crores over the preceding year.

The balance sheet and profit and loss account of the United Commercial Bank for the year ended 31st December, 1952, disclose a profit of Rs. 24.80 lakhs and this compared with the previous year's Rs. 35.03 lakhs, because of larger interests paid on deposits. Adding Rs. 1,70,952 brought in and making other adjustments there is a balance of Rs. 30,24,733. Reserve receives the same sum of Rs. 71 lakhs. Taxation absorbs Rs. 10 lakhs (Rs. 8 lakhs). Ex-gratia payment to staff is shown at Rs. 3.74 lakhs. The dividend has been maintained at Rs. 2 per share to absorb Rs. 8 lakhs, leaving Rs. 1,01,119 to be carried forward. Deposits at Rs. 30.88 crores are about Rs. 1.30 crores higher than in the previous year. The fall of Rs. 3.74 crores in advances to Rs. 14.18 crores has been more than offset by rises of Rs. 1.59 crores and Rs. 2.28 crores in cash and investments to Rs. 6.63 crores and Rs. 14.81 crores respectively. The investments of the bank have been valued at below market quotations. The bank started a branch in Hongkong during the period under review, and it proposes to open a branch in London at an early date.

The provisional figures of foreign Sea and Airborne Trade of India on private and Government accounts during February, 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 3,735 lakhs; re-exports Rs. 54 lakhs (transit trade Rs. 4 lakhs); imports Rs. 3,952 lakhs; (transit trade Rs. 1 lakh). Total trade Rs. 7,771 lakhs. Treasury Exports (including re-exports of currency notes) Rs. 12 lakhs; of others nil; imports of gold and silver Rs. 1 lakh; of others nil; currency notes Rs. 238 lakhs; imports of others nil. Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of government Stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 197 lakhs.

LONDON FINANCIAL LETTER

FOOD SUBSIDY CUTS MAY OFFER SCOPE FOR LOWER TAXATION

London, By Air Mail.

DESPITE the disappointing outcome of 1952-53, the possibility of tax reductions next month is not ruled out. The expenditure estimates for 1953-54 are only slightly above the original estimates for 1952-53 and are fully £200 million below the figure of £4,440 million to which this year's estimate was raised by supplementaries. These supplementaries are a regular feature of the national accounting, and some allowance must therefore be made for them in advance. On the other hand, revenue, on the existing basis of taxation, should be raised automatically by the increase in taxation imposed in March last year, which took effect only partly in 1952-53. The essence of the matter is that the Chancellor is reducing the food subsidies more than he is increasing expenditure on rearmament. So, despite a considerable increase

in the cost of the national debt because of the rise in interest rates, the growth of total expenditure is checked. But there is no room for manoeuvre on the conventional basis. The people who believe that taxes will be lowered are arguing on the assumption that Mr Butler will no longer consider it necessary, in a situation where external deflation has so far countered the effects of internal inflation, to cover all of the Government's capital spending out of current revenue.

Policy for Saving

An eminent economist of the University of London, Professor F. W. Paish, has discussed in the District Bank Review the amount of saving needed in this country to implement the Commonwealth development plan. He points out that in 6½ years since the end of the war Britain has exported nearly £1,000 million of long-term capital to the outside sterling area, but has been enabled to do so only by receiving loans and aid of nearly twice that amount from the U.S.A. and Canada. The task now, without such special assistance, is to export genuine savings at the same time as sterling balances are repaid, the gold reserve is built up, and British industrial investment at home is selectively increased. The professor calculates that the favourable balance of payments needed to perform these multiple tasks is of the order of £300 million a year. He has no illusion that it can be achieved without sacrifice. Primarily, the housing programme has to be curtailed. Secondly, taxes on consumption have to be raised and the rest of the food subsidies have to go.

Concern Over Banks' Liquidity Ratios

The banks' liquidity ratios are being watched again with some concern. They reach a seasonal low point in February as a result of the heavy inflow of taxes, which enables the Treasury to run down the floating debt and so reduces the banks' holdings of Treasury bills. Yet the figures for February this year showed the average liquidity ratio of the 11 London clearing banks at 33 percent, compared with less than 32 percent a year earlier, and appreciably above the conventional minimum of 30 percent to which the authorities attempted in November, 1951 to restrict the banks' credit base. The authorities do not seem to be perturbed by the easing of monetary stringency, which they have themselves caused through the financing of the position presented itself at the end of February, when the Treasury announced, unexpectedly, a new issue of stock, to redeem National War Bonds which holders did not convert last October; but the Treasury covered only the immediate need, without attempting to fund the floating debt. The banks are not obviously taking advantage of the relative abundance of liquid resources, but it does appear that their lending policy is not quite so strict as in the earlier phase of the new monetary policy. The authorities' easy-going confidence regarding the budgetary position could well be taken as a hint that the banks need not be too severe in dealing with applications for advances which are a little less than essential.

TREASURY BILL MATURITIES

CALCUTTA this week loses two distinguished leaders of the British business community each of whom has served as President of the Bengal Chamber of Commerce and Industry. The loss is the more notable because both men have given generously of their energies in public life and will be missed from a wider sphere than the major firms they have headed. Both Mr Charles Innes, Chairman of Andrew Yule and Co. Ltd., and Sir Paul Benthall, Managing Director of Bird and Co. Ltd. and F. W. Heilgers and Co. Ltd., represent families whose names are familiar in Indian affairs: Sir Paul's elder brother, Sir Edward Benthall, was member of the Council of State and of the Governor-General's Executive Council, while Mr. Innes's father was Governor of Burma and his grandfather General of the Madras Army.

Sir Paul came to India more than 28 years ago as a jute mills assistant and spent some time in Naraingunj before joining head office in 1927. He became Partners' Secretary in 1933 and was admitted to partnership in the following year; when Sir George Morton retired in 1946 Sir Paul became Senior Resident Partner and was appointed managing director of Birds and Heilgers when the two firms were converted into private limited companies in 1948. After serving as President of the Bengal Chamber in 1948, he was called upon to do another year when Mr. A. L. Cameron was murdered in 1950. The list of his services in commerce, among his community and in Indian public life is a long one and has in any case been set out by the daily Press, which leaves me space to say how greatly we have all benefited from his tireless devotion to the many causes that have sought his advice and assistance. Whether in the United Kingdom Citizens' Association, in the many business organisations on which he has worked, or in the causes of education, religion or the learned societies Sir Paul has laboured with that singular capacity for concentration which is illustrated by his achievement in completing the research that went into the making of his book on the trees of Calcutta and its neighbourhood during the strenuous years of the war. He is a keen ornithologist as well as a botanist; he counts his fellowship of the Linnean Society among the chief of his attainments.

Mr. Innes was born in Madras, and to that city he returned in 1922 to begin his Indian business career. It was there that he acquired his considerable reputation as a sportsman for in addition to being a tennis player of note, he played Rugby for Madras from 1923 to 1930, and was captain of the XV from 1926 to 1930. He joined Andrew Yule and Co. Ltd. in Calcutta in 1931 and became director in 1940, deputy chairman in 1945 and chairman in 1950. The industrial associations on which he has served include the Indian Mining Association, the Indian Engineering Association and the Hydraulic Press Association. He was a member of the Bengal Chamber's Committee and various sub-committees before becoming President in its centenary year, an office he laid down only last month. Coal has been his special interest and he was a member of the Indian Coalfields Committee in 1948. During the war he was a pillar of the special constabulary in Calcutta, and eventually became Assistant Commandant, while his charitable work included vice-chairmanship of the District Charitable Society and of the East India Charitable Trust. The most friendly and courteous of men, Charles Innes is also a lucid and effective speaker with a dry wit that has always been appreciated whether in his addresses to shareholders' meetings or to a wider

A DITCHER'S DIARY

public. Finally perhaps a journalist may mention that these two leaders of the commercial community in Calcutta have had connections with the newspaper world, Mr Innes as chairman of *The Statesman* and Sir Paul as chairman of *Capital*. To both, the many Indians and Britons who have known them in this city will extend good wishes upon their departure.

The whirlwind visit to Calcutta last week-end of members of the International Monetary Fund mission of fiscal experts gave business men the opportunity to meet the men who will advise the Government of India on the extent to which deficit financing will assist implementation of the five year plan. Mr. E. M. Bernstein, the leader of the mission, cannot be suspected of any partiality to inflationary methods of financing for he is known in the United States as a consistent advocate of sound money and only last year presented to the Fund an outspoken paper on "Inflation in relation to economic development" in which he demolished in advance many of the arguments in favour of over-spending which he must have heard since he has been in India. Just before he came to Calcutta, he gave a lecture in Delhi after which he was asked to indicate precisely what was the optimum degree of inflation a developing country could afford; his reply was brief: "Zero". Mr. Bernstein is Director of Research for the Fund and has been Assistant to the Secretary of the U.S. Treasury and adviser to the Mutual Security Administration on U.S. trade policy. His record and his public statements in India will reassure those who feared that the report his mission had been invited to make to the Fund was intended to secure international approval for the more disquieting views on "inflation without tears" that have been put out from Delhi this year.

Another economic expert who made a brief visit to Calcutta last week was Professor Ernest Phelps Brown who has been on loan from the chair of Labour Economics at the London School of Economics as visiting professor to the Delhi School of Economics. Having completed his term's lectures there he is now making a tour through India studying labour conditions, and is particularly interested in the reasons for the slow growth of responsible trade unionism in this country. A suggestion he has been discussing with employers and workers is that independent unofficial persons be called in on labour-management disputes not as arbitrators who might hand down a judgement equally unwelcome to both sides, but as third parties who would cast their vote with whichever side convinced them of the justice of its case. This system works well elsewhere but I understand that the unanimous response here has been to point out that informed and independent persons are too hard to find. If and independent persons are too hard to find, a true, this would be a curious state of affairs in a country where actually very many fewer people are connected with the labour-management nexus than in more industrialised countries.

The oddest thing about the feud between *The Times* of India and Mr. Morarji Desai is the complete frankness with which the Bombay Premier declares that he is boycotting the Bennett Coleman newspapers because he does not like what

they say about him. Governments often practise (or attempt to practise) this sort of patronage-and-pressure game with the Press by means of rationing advertising orders, but they are seldom so foolish as to confess publicly that they are using the taxpayers' money for political purposes. Mr. Desai has been so foolish, and that alone suggests that on this occasion he has bitten off more than he can chew. The Chief Minister argues that circulation alone is not the criterion for allocating advertising, but that tone and style must be considered too. Supposing we accept this view (and as columnist in a paper with a much smaller circulation than *The Times* of India, I am only too anxious to accept it), surely the main point still stands, namely that a politician in power is the last person in the world to set himself up as judge of the tone and style of a newspaper. A private advertiser can shift his advertising about as he wishes if he does not like what the editor says (though he would be an unwise advertiser if he restricted his advertisements for cheap gin to the *Church Times* because he approved of its high tone) but Mr. Desai is not a private advertiser. Unfortunately for himself (and perhaps for others) he is in politics and as long as he remains there his views on newspapers' policies do not count for tuppence.

Although, as I remarked here last week, there are no recognised institutions to train business efficiency experts in India—such as university courses or a counterpart of the Administrative Staff College at Henley—it appears that the establishment of such a college has been discussed by the All-India Council for Technical Education. The needs of modern business houses in this direction are amply met in the United States, and in Britain several training institutions have come into being since the war. But if India lags on the academic side, it seems that she is much better provided for at the commercial level, which after all is more important to the business man. The result is that there are many more experienced business consultants in India than Dr. Cover of Maryland assumed in his recent lecture, and the product of further research into their activities in this country is summarised elsewhere in an editorial note entitled "Business Consultancy East of Suez". As you may read there, we are not as backward as our visitor and his audience thought.

Having seen a photograph of the wire contraption that won the prize in the international sculpture contest, I sympathise heartily with the irate Hungarian who disturbed the cloistered calm of the Tate by smashing it up. Not that I approve. Just sympathise. The case is complicated by the title of the exhibit—"Unknown Political Prisoner"—which imports a political element into an artistic matter. Perhaps I should say it is even more complicated by the title of the exhibition—"sculpture"—which imports an artistic element into the old wire and scrap business. The irony of the thing is that the whole blessed competition was held explicitly to express through art "the high ideals of personal liberty". I think it is thoroughly typical of our age that a project that sets out to serve the ideals of liberty ends up in a court case in which a wretched refugee is prosecuted for taking too personal a liberty with an incomprehensible piece of "art"—and is charged under the Aliens Act, into the bargain, for not filling in his forms properly.

REVIEW OF TECHNICAL ASSISTANCE

Sharing Skills. (Published by the United Nations. 35 cents; 49 pages.) Mr. David Owen, Executive Chairman of the United Nations Technical Assistance Board, wrote this review after an 8,000-mile journey in 1952. He visited Lebanon, India, Ceylon, Burma and Thailand and says in his introduction, "I was looking at a world in which many of the human skills and social customs that (Marco Polo) described 700 years ago have barely changed at all." This point is amplified further by comparisons of Asian and American death rates, birth rates and the general standard of nutrition, social services etc. However critical one is of the United Nations in general it is indisputable that in the field of health and technical assistance it has achieved much. Reviewing the scope and problems of the technical assistance programme being carried out by the United Nations and its specialised agencies, the book carries illustrations of over a dozen types of assistance that are being given today. Mr. Owen shows how the programme is essentially a joint pooling of skills rather than a one-way flow from a small group of advanced countries to other less developed. He stresses the need to assess the results of technical assistance in its proper perspective: in the early stages "one's criteria of success tend to be of an administrative interest, and to deal in such mechanical terms as the number of experts supplied and the countries aided." In any important sense, however, "one can only estimate success in this work . . . by looking at the lives of the people involved, by estimating and checking the hopes and prospects of the Asian child of tomorrow as compared with today." This latter, he points out, it is yet too soon to do.

Empire Cotton Growing Corporation. (Compiled by the Secretary to the Corporation, 12, Chantry House, Eccleston Street, London, 16 pages.)—A well produced publication containing a short account of the formation and objects by the Empire Cotton Growing Corporation and recording the progress made since it was established under Royal Charter in 1921. The ultimate aim of the Corporation is to increase the yield of cotton, whilst retaining the lint quality unchanged where it already meets the market demand, and improving quality where it does not do so. Although the aim can thus be stated quite simply and shortly, the work involved is extremely complex, embracing trials and research on all aspects of cotton growing from the preparation of the land before sowing to the testing of the lint after harvesting. Thus, as well as agricultural scientists the Corporation has to employ specialists in insects, diseases and soils, all working together towards the common objects of yield and quality. A few general notes on this work are given here, particular facets being illustrated in an excellent photographic section at the end.

The Indian Journal of Power and River Valley Development describes itself as "a monthly devoted to the development of power and water resources in India; we have recently received its Damodar Valley Corporation number, which is well produced and contains a wealth of information on many aspects of the Corporation's work. Dr B. C. Guha gives an outline of the Damodar Valley Project and other articles deal with the Bokaro power station, land reclamation, the industrial prospects of the Subarnarekha basin, malaria control in the Tiliya and Konar reservoirs, and the DVC power system. At the end of the magazine is an editorial on "India and the TVA method." Some interesting maps and photographs are published, and the price of the issue is Rs. 3.

Railways and Engineering Industries. (Published by the Engineering Association of India. 23-B Netaji Subhas Road, Calcutta, 150 pages. Price, Rs. 5.)—The Engineering Association of India has brought out an informative brochure on the occasion of the Indian Railway Centenary. The first section deals with railways in general and underlines their importance to the economy. In addition to giving the historical development of railway systems in India, six articles are published reviewing their present position. The second section records the contribution made by the engineering industries to railway development; and the third section lists the activities of some factories which manufacture railway stores.

The Press and the Welfare State. By R. J. Venkatesan (Published by the author. Price Re. 1; 20 pages.) After a brief analysis of the rôle of the Indian Press up to the time of Independence, the author discusses the rôle the Press can play in the future with special reference to educating the people. He describes the Press as "the People's Parliament, always in session" and maintains that the standard of journalism in India is high. He warns against the wholesale acceptance of statistics by the Press, who, he says, should attempt to analyse them for the reader; he adds a plea for accuracy, though he is not quite accurate himself when he says that Capital has been in existence for 63 years. We are in fact in our 65th year.

The Wealth of India. Raw Materials Vol. 3. D—E. (Council of Scientific and Industrial Research. Rs. 18; 236 pages.) Like the two preceding volumes, volume three maintains a high standard both in editing and production. At first glance the work appears rather formidable, for in the case of bota-

nical subjects the Linnean name forms the title to each article. There is, however, an adequate index where one learns for example that *Eriobotrya japonica* is a Japanese Medlar tree. The dictionary has received high praise from interested specialists. Binding and printing excellent.

A Critical Survey of First Five Year Plan. (Final Version.) By B. M. Bhatia. (Published by Ram Lal Puri. Re. 1, 45 pages.) The author is both constructive and critical in his approach to the five year plan, his main contention being that the plan has failed to give a high priority to industry. "The plan is dry and uninspiring," Mr. Bhatia maintains that if full employment is to be achieved, greater reliance will have to be placed on small scale and cottage industries, for even large-scale industrialisation will not absorb all the surplus population now engaged in agriculture. He complains also that targets of production and consumption are low, though there are doubts whether even these will be achieved.

The Indian Concrete Journal. (Published by the Concrete Association of India.) The January issue celebrates the silver jubilee of the Concrete Association of India and includes many interesting articles on the history of the use of concrete in diverse fields. Each article is accompanied by photographs and plans; there are also two large scale plans, one showing the detailed construction of a dam and the other a shell-roofed building. A comprehensive and enterprising production.

Engineering and Transport

PAKISTAN FERTILISER PLANT

CONSUMPTION of a \$16 million ammonium sulphate plant, with a yearly capacity of 50,000 metric tons—which may be doubled in the future—will shortly be started at Daud Khel, Pakistan, by the Pakistan Industrial Development Corporation, under the technical supervision of Union Chimique Belge, Belgium, Engineering Division. Union Chimique Belge has extensive experience in the chemical engineering and production fields, and is to act as consultant engineer for construction and installation works, train Pakistani personnel and be responsible for starting factory operations. Negotiations began months ago when U.C.B. submitted a project in the face of strong foreign competition. Preliminary studies took representatives of the various interested parties from Brussels, Belgium, to London, Washington D.C., New York and Karachi. The final agreement was signed in Karachi on 2nd November, 1952. The project will put into operation: an installation for the gasification of coal under pressure; plant facilities for the conversion of carbon monoxide into carbon dioxide, and hydrogen extraction from the gas; from the atmospheric air; a plant to synthesise nitrogen and hydrogen into ammonia; facilities for carbonating ammonia with carbon dioxide and sulfating it by gypsum; an electric power plant with a 9,000-kilowatt output and 100 per cent steam per hour at a pressure of 45 atmospheres and a temperature of 540°F.; a water purification plant with an hourly capacity of 35,000 cubic feet; and storage facilities for several months' production of ammonium sulphate. Apart from the factory, a residential town will be built for several thousands of European and Pakistani per-

sonnel with their families. Daud Khel is situated in an isolated agricultural area of north Punjab, so truck- and railroads will be built to link the plant to the main railway line and to the town of Multan. The Daud Khel project is part of the Government programme to achieve self-sufficiency in fertilisers.

WRITING BY TELEPHONE

"Writing by telephone wire." That is the new business facility offered by the Desk-Fax, now being produced by Creed & Company Ltd., a Croydon firm of telegraph engineers. With this remarkable new instrument of communication, handwritten or typed messages, signatures, diagrams and like material can rapidly be sent and received between offices connected by an ordinary telephone wire. Designed for easy operation, the Desk-Fax makes no demand on the services of a skilled operator as the sender simply places his message around a drum and presses a button. Two minutes later a permanent facsimile of his message is reproduced at the distant point, whether it be in the same building or several miles distant. Messages are written on 6½" x 4½" blanks of ordinary white or buff paper (which accommodate as many as 150 typed words) and are reproduced on a dry electro-sensitive recording paper known as Teletel. This handles like ordinary paper, requires no processing of any description, and is unaffected by light, temperature or humidity conditions.

For any organisation occupying several floors in a building or having scattered personnel, departments, branches, etc., the Desk-Fax provides that which is vital to efficient modern management. Complicated data can be sent and written replies received to queries in a fraction of the time taken by the old method of messenger pick-up and delivery service. Errors in transmission are impossible and the permanent written record at both sending and receiving points fixes responsibility and does away entirely with the misunderstanding or forgotten instructions all too commonly experienced with telephonic communication.

Attractively designed for the user's desk and requiring less space than an ordinary office typewriter, the Desk-Fax promises to find almost unlimited application in the service of commerce and industry. It will undoubtedly be of special interest in those countries where non-European alphabets are used. With few exceptions, such countries have been denied the advantages of written inter-communication, as teleprinters are subject to mechanical limitations which prevent the use of figure symbols. Now they will be able to communicate in their own languages, for the Desk-Fax reproduces handwriting exactly as the originator wrote it—no matter how intricate or individual the character.

ELECTRICITY OUTPUT

Public utility power stations in India generated 529.7 million kWh units of electricity during November, 1952, and sold 436.4 million kWh to ultimate consumers. These figures include data relating to six additional undertakings in Port Blair (Andamans), Amarnagar, Virpur and Vadia (Saurashtra). There was a decrease of 18.5 million kWh in production as compared to October 1952. The November 1951 were 491.7 million kWh and 409.8 million kWh and for November 1939, 216.6 million kWh and 181.5 million kWh respectively.

EXPORTS FROM U. K. OIL REFINERY BEGIN

First products of the Anglo-Iranian Oil Company's new Kent refinery on the Isle of Grain, in the Thames estuary, are on the high seas on their way to the Middle East, Asia, South Africa, Mediterranean, and Scandinavia. Deliveries to start within a month of February's flood waters being cleared from the refinery site. Jetties at the Isle of Grain have been busy since last October, when the 28,000-ton tanker British Skill arrived from Kuwait with the first cargo of crude oil. Since then many ships have pumped oil into the refinery's storage tanks. Now a new phase has begun in which the jetties will be busy with ships taking refined products out.

LIMITED RESOURCES SLOWING RESEARCH IN U.K.

A warning that long-range scientific research is being affected by severely limited resources is given by the Advisory Council of the Department of Scientific and Industrial Research, in its annual report for 1951-52, issued last week. In its report Council expressed considerable anxiety at the delay in giving effect to the D.S.I.R.'s postwar plans. "Nothing has since occurred to mitigate our anxiety," it now states. "In fact, we find ourselves reviewing the relation between our scientific needs and our scientific resources with steadily deepening concern."

The Advisory Council states that it is of the utmost importance that existing information should be widely disseminated and used to the full, but the inquiries put to the D.S.I.R. establishment inevitably disclosed deficiencies in knowledge that had to be made good before a fully of them. As industry advances and becomes more conscious of the help to be gained from science, serious, unless the reservoir of scientific knowledge from which answers are derived is enlarged by further research."

Stocks and Shares

STOCK MARKET DULL BUT STEADY

REDUCTION IN TURNOVER: ACTIVE TRADING IN TEA

SHARES: IRONS RECOVER FROM BEAR RAID

Wednesday Evening.

TURNOVER on the Calcutta stock exchange has been reduced in the past week and the market is dull but steady. Indian Irons suffered sustained bear hammering which took them back to Rs. 25 at which level they appear to have touched bottom; they are now moving around Rs. 25-9 with the bulls evidently waiting for an excuse to push them higher. The Indo-Pakistan trade pact had surprisingly little influence on the market, which was at the time of the announcement from Delhi in the control of the bears.

Selected shares are slightly better or steady at last rates. Tea has been the most active section of the market, which is a good sign since tea shares are usually bought only by investors. Jute shares are neglected and have not yet responded to rumours of restricted working by the mills.

Gilt-edged have been quieter and some loans are available at prices below the official selling prices: money has been tight in the past few days. Not a great deal of business has been put through in this section, though there has been some buying of the 1959-61 and 1963-65 loans at the official selling rates. There is steady demand for State and municipal issues, and the 1964 4 percent State loans all stand above par.

Further details of the week's trading appear below.

The gilt-edged market turned slightly easier during the week. The 3½ Conversion Loan 1960 had sellers and in the absence of any real support the price drifted from Rs. 83 to Rs. 82-14. In contrast, 3½ non-terminable Paper was steady at Rs. 83-2 with few sellers. With the exception of 3½ 1959-61 which was marked up by one anna to Rs. 96-4, there were no quotable changes in terminable loans. Most medium-dated issues rose ½ with investment enquiry. Both 3½ 1957 and 3½ 1958 turned sellers at their previous levels of Rs. 102-2. Rs. 98-12 and Rs. 98-8 as did 4½ 1950-70 at Rs. 102-2.

Among State Loans, 4½ Madras 1961 met with good enquiry to improve to Rs. 101, but both 4½ U.P. and West Bengal 1964 were on offer at Rs. 100-0 and Rs. 100-12 respectively. No business was reported in other Provincial Loans.

Less business was done this week in preference shares. There were sellers of a select few like Anglo-India, Howrah, National and Fort Gloster. Auckland 5½ were done at Rs. 95, and Northbrook and Lawrence 5½ were also offered at the same rate. A small lot of Reliance was placed at Rs. 120. Amongst miscellaneous preference shares, there was a strong enquiry for Alkali & Chemical at Rs. 120, Allahabad Bank at Rs. 131, Burn 7½ at Rs. 127 and 6½ at Rs. 114. Burrakur first had buyers at Rs. 118 and Dunlop first at Rs. 121. Indian Iron were done up to Rs. 109-8 but later turned sellers at Rs. 109. Indian Standard Wagon were crossed at Rs. 126 and Kesoram Cotton were wanted at Rs. 121-8. Business was reported in Kettiewell Bullers. First at Rs. 64 against a previous quotation of Rs. 76. There were buyers of National Tobacco 1st and 2nd at Rs. 79 and Rs. 65.

Imperial Bank Fully-Paid and Contributory continued to be enquired for on Bombay account at Rs. 1,832 and Rs. 456 respectively. Hindustan Mercantile were sold at Rs. 10-12 and United Commercial were crossed at Rs. 36.

Railway shares carrying a Government guarantee were snapped up at around the current level of prices. There was a particular enquiry for Arrah Sasaram, Howrah-Amta, Howrah-Sheakhala, Kalighat-Falta and Shadara (Delhi).

With the exception of Elgins which were turned over up to Rs. 17-8, dull conditions prevailed in textile shares. Bengal-Nagpur were a shade easier at Rs. 15, Benares were done at Rs. 2-11 against Rs. 3-6 and Kesoram were taken at Rs. 21. Cawnpore Textiles were unchanged at Rs. 8-3 and New Victoria fluctuated narrowly around Rs. 1-9.

The news of a new 3-year trade pact between India and Pakistan caused a ripple of activity in the coal section. Bengal at one time were done up to Rs. 545, Burrakur at Rs. 11-4, Borra at Rs. 31, East Indian at Rs. 2-4 and New Beerbhoom at Rs. 22-14. Closing quotations, however, were slightly below the best except in the case of New Beerbhoom, Karanpura Collieries were Rs. 4 better at Rs. 95.

The trade pact brought no change to the neglected jute section where prices continued to lose ground because of weakness in the gunny market. Business completed was of a limited nature and most transactions were in small lots of shares. Agartara eased from Rs. 20-2 to Rs. 19-12 and Andamania from Rs. 22-0 to Rs. 22-5. Bally were lower at Rs. 153-8 and Champdany at Rs. 161-8. Howrah fluctuated between Rs. 2-6 and Rs. 23-14 to close at Rs. 23-15. Contrary to the general trend, Empire and Kelvin were steady at Rs. 21-2

and Rs. 221. Kinnison were taken at Rs. 200 and there were buyers of National at Rs. 25-12.

In the Electric Supply section, Calcutta Electric met with investment support at Rs. 14. There were buyers of Agra at Rs. 145, Benares at Rs. 17-14, Jubbulpore at Rs. 13-4 and U.P. at Rs. 147.

Steady conditions prevailed in the Sugar section. Carew were taken at Rs. 5-7, Cawnpore improved to Rs. 29-8, U.P. to Rs. 16-14 and Darbhanga to Rs. 9-14. There was a good demand for Belund, Ramnagar and Samastipur at Rs. 8, Rs. 17-4 and Rs. 13-12.

A successful bear raid brought down the price of Indian Irons on Saturday last to Rs. 25-1, but as the week progressed, the shares recovered to Rs. 25-9 which is tonight's closing rate. Bridge & Roof were crossed at Rs. 36-12, while Orient Paper buyers at Rs. 19. Braithwaite were better at Rs. 11-9 as were Hooghly Docking at Rs. 82. Jessors found buyers at improved level of Rs. 25-2 while Indian Galvanizing and Kumardhubi weakened on selling pressure to Rs. 12-14 and Rs. 8-5.

Paper shares once again provided the outstanding feature in the miscellaneous section. Shree Gopal after being done up to Rs. 20-4, eased on profit taking to Rs. 19. Titaghar Paper, however, were fully steady at Rs. 36-12, while Orient Paper were the turn lower at Rs. 36-2. Benal were on offer at Rs. 44-8, Sone Valley were steady at Rs. 7-7 and Dalmia Cement were quoted at Rs. 6-4. India General Navigation met with good enquiry and improved to Rs. 82-8. There were buyers of Bengal Assam Steamship at Rs. 142 xd and Calcutta Landing and Shipping at Rs. 10-4 with sellers reserved. Amongst other shares, Alkali & Chemical were wanted at Rs. 14. Barare Coke at Rs. 18-8, Dunlop Rubber at Rs. 28-14, Indian Cables at Rs. 18-8, Jardine Henderson at Rs. 127, Shaw Wallace at Rs. 13-4 and Textile Machinery at Rs. 5-7. Good business was reported in Indian National Airways ordinary at Rs. 4-2, Martin Burn around Rs. 19-3 xd and F. & C. Oser at Rs. 6. Airways (India) were steady around Rs. 11-9 while British India Corporation eased to Rs. 8-12.

There is no change to report in mining shares with Burma Mines, Non-Ferrous Metals, Indian Copper and Orissa Minerals being quoted at Rs. 1-4, As. 12, Rs. 3-3 and As. 24 respectively.

Once again there was a good enquiry for tea shares over the past week and it can be said that this was the most active section of the market which is a pleasant change from the dull conditions which existed in months gone by. Apart from certain selected scrips, there has been further enquiry for small priced shares but here too sellers have been reserved. There were some marked improvements in prices, particularly Borokhuri from Rs. 14-8 to Rs. 15-6, Dessai Parbutia from Rs. 205 to Rs. 215, Dimakuri from Rs. 27 to Rs. 28-8 and Patrakola from Rs. 92 to Rs. 102. Bashmari were also better at Rs. 10-4, Betjan at Rs. 23-6 and Julibari at Rs. 10-6. Tenggani were marked up to Rs. 18-8 and Nagasore to Rs. 119. Hantapara were steady at the higher level of Rs. 188. Jaybirpara at Rs. 19 and Oodlabari at Rs. 23. On the other hand a parcel of Rungamtee was crossed at lower rate of Rs. 65 and Birpara at Rs. 50.

The Air Corporations Bill had no effect on airways shares.

We have received the reports of the AGARPARA (Mg. agents: B. N. Elias & Co. Ltd.), NATIONAL and BURGE-BUDGE jute mills (Mg. agents, Andrew Yule & Co. Ltd.), and their working can be considered satisfactory in view of the prevailing difficulties of the Indian jute industry.

After allowing Rs. 1.12 lakhs (Rs. 1.24 lakhs) for depreciation, profits of AGARPARA declined from Rs. 26,54,070 to Rs. 21,32,122 for the half-year ended 30th September, 1952. Gunny sales fell by Rs. 40 lakhs to Rs. 1.62 crores as did manufacturing expenses from Rs. 1.24 crores to Rs. 96.13 lakhs chiefly due to lower prices of commodities. Bringing in Rs. 3,11,245, there is a balance of Rs. 24,43,368. Taxation absorbs Rs. 8.25 lakhs (Rs. 10.55 lakhs). Reserve for doubtful debts and General Reserve have been allocated Rs. 14 lakhs and Rs. 5 lakhs (same). The ordinary dividend has been maintained at 10 percent leaving a carry-forward of Rs. 3,33,368. The yield is about 10.1 percent on this present price of Rs. 19-12 per share.

Sales and manufacturing expenses of NATIONAL for the half-year ended 31st October, 1952, were reduced from Rs. 1.17 crores and Rs. 96.99 lakhs to Rs. 80.77 lakhs and Rs. 48.15 lakhs, respectively. Profits consequently rose from Rs. 97,955 to Rs. 7,94 lakhs after allowing Rs. 27,000 (same) for depreciation. Taxation absorbs Rs. 3.60 lakhs against Rs. 32,000. The dividend has been maintained at 10 percent and absorbs Rs. 3,50,000. This gives a yield of about 7.8 percent on the present price of Rs. 25-8 per share. The carry-forward is increased from Rs. 5,264 to Rs. 49,732.

OIL

AND THE

EGG

Oil in an incubator helps to hatch eggs. Oil on the bark of a tree can destroy harmful fungi. To-day oil serves mankind in more ways than any other mineral.

We all make use of oil in one way or another every day of our lives.

Burmah-Shell bring to India a complete range of oil products and distribute and market them through a wide national network of agents and dealers. To make petroleum products easily available in towns and villages we employ 16,000 people, control 793 Depots, have 21 Divisional Offices, 995 Kerosine Agencies and 2106 petrol dealerships.

on the valuation of their assets after making due allowance for all liabilities. The assets will be valued with reference to the cost which each company incurred when it acquired a particular asset and provision for depreciation, made somewhat on the lines followed in the Indian Income Tax Act, 1922. There are minor variations with respect to certain items of assets such as aircraft, aeroplanes, etc. In the absence of agreement, the assessment of compensation will be made by a tribunal, for the constitution of which provision is made in the Bill. The tribunal will consist of three members appointed by the Central Government, one of whom will be a high court judge.

To ascertain the liabilities of the two corporations, the Bill requires the present air companies to furnish particulars of all their liabilities and obligations within a specified time. Power is given to the two corporations to challenge before the tribunal any particular transaction involving a liability if the transaction has not been entered into in good faith or if it is considered imprudent. Once the undertakings of existing air companies vest in the two corporations, the operation of scheduled air transport services will become their monopoly. It shall be the duty of each corporation to provide safe, efficient, adequate, economical and properly co-ordinated air transport services at reasonable charges. The Bill contains provisions for the exercise of control by the Central Government over their activities. It also provides for certain incidental matters like the setting up of an Air Transport Council to which may be referred matters of common interest to the two corporations,

and a Labour Relations Committee to promote good relations between employers and employees.

Under the Bill, the Central Government's non-recurring expenditure is estimated at not more than Rs. 400 lakhs. Of this, about 10 percent is proposed to be paid in cash, and for the balance the corporations will issue bonds bearing interest at 3½ percent per annum and redeemable at par at the end of five years. Both the interest and the redemption of bonds will be guaranteed by the Central Government. The administration of the Air Corporation Act, tribunal etc. and provision for unforeseen requirements are expected to cost Rs. 50 lakhs. After the corporations come into being, it may be necessary for the Central Government to advance loans to finance any approved schemes of re-equipment or other capital outlay. These will be submitted to Parliament in the normal course as budget demands. The recurring expenditure on the Air Transport Council and staff, roughly estimated at Rs. 1 lakh a year, will be met by the Central Government. During the initial period, it may be found necessary for the Central Government to assist the Corporations by means of repayable advances to cover the excess of expenditure over income.

Rice Mission to Burma

The Government of India is sending a trade mission to Rangoon to negotiate a rice agreement with Burma, it is learned. India has a five-year agreement with Burma under which she receives 200,000 tons of rice on a Government-to-Government basis and 120,000 tons are purchased from the trade. The agreement is due to expire next year. It is now proposed to negotiate an agreement on a barter basis for 500,000 tons of rice per year. Mr. D. P. Karmarkar is likely to head the mission.

Dearness Allowances and Basic Pay

Parliament has been busy voting demands for grants. The Finance Minister announced the Government's decision on the Gadgil Committee's report relating to dearness allowances. The main recommendation of the Committee was that 50 percent of the dearness allowance now granted to Government servants in the various pay groups up to Rs. 750 a month should be merged with their basic pay for the purposes of retirement benefits, travelling allowance, compensatory allowance, house rent allowance and recovery of rent from employees who are in occupation of Government quarters. This recommendation has been accepted and will involve an additional expenditure of Rs. 4.2 crores a year. The other recommendations which have been accepted will cost about Rs. 1.8 crores. It has also been decided to discontinue the payment of dearness allowance to employees in the pay groups between Rs. 750 and Rs. 2,400 a month.

The Central Government's total outlay on dearness allowance at present is Rs. 60 crores a year. Beneficiaries number 1.5 million. Not many employees are in the salary scale of Rs. 750 to Rs. 2,000, and the abolition of their dearness allowance is not expected to save more than Rs. 50 lakhs a year. These decisions will apply initially to civilian employees only, but are being considered by the Defence Ministry, whose decision may be expected shortly. The Government has also enhanced the age of retirement from 55 to 58.

Taxation Enquiry

The first meeting of the Taxation Enquiry Commission will be held here on 6th April, it is learned.

DETAILS OF INDO-PAKISTAN TRADE AGREEMENT

The following joint Press Communiqué was released by the leaders of the Pakistan and Indian Trade Delegations after the talks in Delhi last week:

"Following discussions between the representatives of the Governments of India and Pakistan, agreement has been reached on the following points:—(a) To enable Pakistan to plan her production of raw jute, India has indicated that, according to the best estimates, she will need at least 1,800,000 bales per year from Pakistan. The Government of India has agreed to give import licences for this amount in each of the three jute years commencing 1st July, 1953. Should, however, larger quantities be required by India, Pakistan will facilitate the export of raw jute up to 2,500,000 bales in a year. The trade will be through normal channels; (b) India will provide improved facilities for the export of coal to Pakistan and the movement of coal by rail to West Pakistan will be increased; (c) The problem of trade between the inhabitants of the areas adjoining the Indo-Pakistan border between East Bengal on the one hand, and West Bengal, Assam and Tripura on the other, was recognised as needing special treatment. Certain principles to regulate such trade have been formulated and on approval by the respective Governments, there will be a further conference before the end of April to translate them into practice; (d) It was agreed that at a later date, there should be further discussions between the two Governments with a view to widening the scope and expanding the volume of trade between the two countries."

Following on the retirement of Captain H. S. Allan, his successor as Commander of the P & O fleet is Captain S. W. S. Dickson, now commanding the Himalayas. Captain Dickson was appointed to the Maudslayi in February, 1941, and joined the P & O in March, 1943. He was promoted to Third Officer in March, 1945, and served subsequently in the Ardour, Syria, Delta and Nankin. His promotion to Second Officer came in October, 1951, while commanding the Delta. He was appointed Chief Officer of the Ile de France in January, 1951, and three years later he became her commander. When the Stratheden completed her first voyage in 1951, he was promoted to the rank of Captain. In 1952, he took over the Himalayas from the Stratheden, which is employed in the Australian trade.

London

EDEN AND BUTLER VAGUE ABOUT U.S. VISIT

NEXT STEPS IN RETURN TO STERLING CONVERTIBILITY

(FROM OUR OWN CORRESPONDENT.)

20th March.

IT is difficult to understand exactly what information the Opposition expected from Mr. Eden and Mr. Butler when the Foreign Secretary and Chancellor of the Exchequer appeared in the House of Commons after returning from their visit to America. Mr. Eden made a general statement, which was more or less of a formal nature. Mr. Butler refused to be drawn by Labour questioners. This led to what has recently become a rare development, an unseemly demonstration by the Labour backbenchers, and rarer still, a loss of patience on the part of Mr. Eden to the extent of emphasising some of his remarks by thumping the despatch box. Nevertheless, it is a safe presumption that the first stage in what must be a long process of planning and negotiation towards a more stable world trade conditions has been a success. Useful contacts have been established. The Commonwealth's views have been presented to the framers of the new American Administration's policies, and there is at least justification for believing that these views will receive careful consideration even if they are not, indeed, looked upon with a measure of sympathy. No more than that was expected.

The next stage, and it might prove even more difficult, is to secure the co-operation of the O.E.E.C. countries, which will be attempted at the opening meeting next Monday. It is almost inevitable that Britain will come under strong pressure to take immediate steps to liberalise trade with Europe. France, in particular, was so badly affected by the restrictions on imports imposed in November, 1951, that she is seriously considering the early introduction of drastic cuts on her imports of industrial equipment, manufactured goods, wool, jute, tin, rubber and oil from sterling area countries. The interests of support for the long-term economic plan, is limited by the fact that even continuation of the last six months' surpluses with E.P.U., at the same rate, would take a couple of years to wipe out the cumulative debt of £300 million. The budget, expected to be presented on 14th April, will disclose what risks the Chancellor is prepared to take.

Two further stages remain after that, another Commonwealth conference, for reassessment of the outlook and the plan, after the Coronation in June; and finally a further discussion with America, probably some time in September, with on this occasion better prospects of securing some commitments and a definite move towards a return to convertibility of sterling.

Budget Outlook

With less than a fortnight of the financial year to run, and last week's ordinary expenditure exceeding revenue by £25,700,000, Mr. Butler's budget estimate of a small overall surplus of £4,000,000 looks like being something around £350 million too optimistic, with the result that his room for manoeuvre threatens to be extremely restricted. Expenditure is increased by heavy supplementary estimates of about £200 million, and there is an equivalent short-fall on the revenue side which the returns of the remaining two weeks are unlikely to offset if the normal pattern of financial movements at this time of the year is maintained. Despite the rather bleak outlook, the City still appears to expect some tax reliefs to judge by the steadiness of the stock markets.

Iron and Steel Bill

In other directions, however, the Government is making satisfactory progress. This is particularly noticeable in the legislative field. The Iron and Steel bill secured a third reading in the House of Commons during the week by 304 votes to 271. For the Opposition, Mr. Strauss repeated the threat to restore the industry to public ownership at the first opportunity, but otherwise the debate was quiet and amicable. Not fewer than 82 amendments have been made to the original bill, of which nine originated with the Opposition and 29 were introduced to meet their complaints. As a result there have been some important changes, though there has been no departure from basic principles. It is expected that the bill will complete all stages in the House of Lords in the first week of May. Apart from steel for shipbuilding, supplies are now so much better that considerable modification of the allocation system is expected within the next few weeks, though price control will remain. This freedom will help towards the disposal of the nationalised units, and the reactions of industry are understood to be favourable. As Mr. Sandy, the Minister of Supply, pointed out in his final speech on the bill, the renationalisation threat is a strong incentive to the industry to make denationalisation work successfully.

Shipping Problems

The shipping industry, which is facing many other difficulties, was affected by what was perhaps the only definite commitment resulting from Mr. Eden's Washington talks. It was given effect to by an Order immediately on his return, and in consequence all British ships sailing for China or North Korea must from the end of this month have a special licence, which will be issued only

if the vessel carries no strategic goods. The latter are defined in a list of prohibited cargoes under the six headings: arms and ammunition; electrical and electronic equipment; machinery and industrial equipment; metals; oil, rubber and chemicals; transport and marine equipment. The list appears to be the same, or substantially the same, as that published in June, 1951, which the then President of the Board of Trade, Sir Hartley Shawcross, explained did not involve a major intensification of the measures progressively adopted by the U.K. since Korean hostilities began. While specific items may still be covered by export licences, in general, carriage of strategic cargoes to China will constitute a breach either of the order or of the ship's licence. The master and the person having management of the ship would, in that case, be liable to prosecution. The maximum penalty for an offence will be £500 or two years' imprisonment, or both. Ships operated from the United Kingdom will be licensed from London, but those operating from Hongkong, Singapore, or Malaya will be licensed locally. Licence application forms may be obtained from the Commercial Services Division (Room 4003), Ministry of Transport, Berkeley Square House, London, W.1.

There is probably no simple solution to the shipowners' problems, ranging as they do over a wide field covering heavy taxation, rising operating and replacement costs, turn-round delays and a host of others. The 1952 report of the Liverpool Steam Ship Owners' Association invites special attention, however, to the adverse effect of this country's continued inability to export more than a fraction of the coal sent abroad before the war. Figures show that against the 64.4 million tons exported in 1929 and the 38.2 million tons in 1933, the best post-war figure was 16.2 million tons in 1950 while the 1952 total was only 13.7 million tons. The report points out that in the seventh year following the First World War 54,000,000 tons of coal were exported; in the seventh year following the Second World War under 14,000,000 tons were exported. If the latter had approximated to the former, the report says, coal exports would have gone a long way towards paying for the whole of the year's imports of oil. As it was, we paid £335 millions for foreign fuel oil and received £20 million for our coal exports. "The absence in the post-war years of the coal exports of pre-war has thus contributed largely and directly to the adverse overseas trading results of those years." It is a telling point, but the report then considers the indirect consequences of the shortages of coal exports. First, coal is no longer the staple cargo of the tramp ship on her outward voyage: home-ward, her staple cargoes are still foodstuffs and raw materials in bulk, but they must inevitably cost more if they have to bear not only the cost of their homeward carriage but also of an outward ballast voyage. Secondly, the absence of outward coal cargoes has contributed to the Association's opinion, to the present diminution of the tramp fleet in comparison with pre-war. Thirdly, the high cost of domestic coal, by adding materially to the production costs of export goods, makes them less competitive at a time when price is becoming more and more the test of our ability to maintain and increase our export trade.

Industrial Productivity

It is true, of course, that domestic consumption has risen very considerably and consequently there has been less coal available for export, but the figures quoted above certainly indicate the need for greater industrial productivity in this country. The importance attached to this subject is apparent from the fact that Mr. Butler is departing from precedent in addressing the British Productivity Council just before making his budget speech, though normally the Chancellor maintains a strict public speech blackout for a month before. The figures also lend support to the move by the Conservative backbenchers to try and secure some inquiry into the working of the National Coal Board. Despite the refusal of the Minister of Fuel and Power to agree to this, contending that it would interfere unnecessarily with the present efforts of the Board and the National Union of Mineworkers to increase production in the industry, the matter is still being pressed, by every possible means.

Sir George Schuster on the Five Year Plan

The choice of Sir George Schuster to go out to India, study the country's development and advise the Indian industrialists was an intriguing one. It is almost two decades since Sir George was Finance Minister to the Government of India, though he has always held a high place in the City both as financier and economic expert. He has recently completed his visit to India, and this week gave the East India Association what proved to be a most interesting survey of the Indian scene, with some graphic contrasts of the country he knew and as he found it to-day. He was obviously impressed favourably with most of the changes which have taken place. Of the five year development plan he thought it did not go far enough in the matter of industrialisation. The annual increase in India's population is four and a half million and very few of these extra persons can profitably be employed in agriculture. Under the five year plan about 400,000 new places will be created in industry each year. Sir George thinks that there should eventually be at least 800,000. To achieve this will mean promoting a much larger flow of foreign capital into India than is at present provided for. It will be especially needed in the early years of development, while India is still able to invest only five percent of its national income annually. Sir George did

not criticise the five-year plan for devoting so much of its effort to improving agriculture. His regards the increase of its output as the essential preliminary to industrialisation. He commends India for planning to leave most of the new industry to private enterprise, but he thinks that this enterprise, if it is to survive, will have to improve very much its methods of management. In deciding whether to fit themselves wholeheartedly into the five-year plan the Indian industrialists are on trial. Sir George would like to see the Indian Government help them by setting up institutions like the Anglo-American Council on Productivity, the British Institute of Management, and the Administrative Staff College.

Brevities

Sir Sarvepalli Radhakrishnan, formerly High Commissioner for India in London and Spalding Professor of Eastern Religions and Ethics at Oxford from 1936 to 1952, has been elected an honorary Fellow of All Souls College, Oxford. His election is only the fourth honorary fellowship conferred by the college.

The cost of living in Britain has now reached its highest point since the new retail price-index was started in June, 1947. It rose by one point, after remaining steady for several months, between January and February, and now stands at 139 (June, 1947=100). Last February it was 133. According to the Ministry of Labour, the rise was mainly due to dearer vegetables.

The Orion Insurance Company, a new concern in which Ralli Brothers have a large interest, is to start underwriting aviation insurance business in the United Kingdom for the New India Assurance Company of Bombay.

Messrs. Whiteaway, Laidlaw and Company have just moved their offices and packing rooms to Epworth House, 25-35 City Road, London, E.C.1.

ANNUAL MEETING OF BOMBAY CHAMBER OF COMMERCE

ELECTRIC POWER PROSPECTS
(FROM OUR OWN CORRESPONDENT)

22nd March. MR. G. S. Bajpai, the Governor, addressed members of the Bombay Chamber of Commerce at their annual general meeting last Wednesday and appealed to them to give their unstinted support and co-operation in the implementation of the five year plan. He assured foreign firms in India, especially the British business community, that there was a fund of goodwill and friendship for them and that they should, therefore, try to assist the Government in its efforts to make the plan a success. Of the staggering of electric power supplies he said, "As re-

gards the suggestion that the firm of Tatas should be given all possible assistance in the construction of a thermal plant in Trombay with a normal rating of 100,000 kilowatts, I am happy to give you the assurance that, so far as my Government is concerned, it will certainly do so. I would also add that, with the inclusion of the Koyana Project in the five year plan, this State can look forward to an augmentation of its supply of electric power by an additional 240,000 kilowatts."

Mr. J. C. Burns, in laying down his office as President of the Chamber, reviewed important economic aspects of the year's activity. He welcomed the appointment of the Taxation Enquiry Commission as it would give an opportunity to review the vexed question of Central and State taxes and to adjust them where they overlapped. He hoped that the Commission would achieve this and that the Centre would be able to get the States to fall into line with the recommendations of the Commission. Speaking about the Budget, Mr. Burns, while welcoming the relief measures, was critical of the increase in import duties ranging from 33 to 100 percent, and even more in one

or two instances. He also questioned the propriety of retaining export duties for purely revenue purposes or to absorb legitimate trade profits.

The new official approach to labour problems since the arrival of Mr. Giri in the Labour Ministry was also welcomed. Defining the Chamber's attitude on this subject Mr. Burns said that, as long as it was necessary to maintain machinery for compulsory adjudication, it should be kept well in the background and brought into use only in the last resort when all efforts at voluntary negotiation had failed and that as long as there were Industrial Courts, the Appellate Tribunals should also be retained.

Mr. Burns added: "In the Bombay Government's budget for the coming year no new taxation was proposed. For that we must be duly grateful, but let us not in our gratitude forget the additional levies on the trade and industry of this State imposed less than eight months ago—multi-point sales tax, increased tax on petrol and greatly increased motor vehicles tax. A large amount of the increased revenues of the State is being expended on education, medical and other measures to improve the lot of the mass of the population. That is all to the good, but it is time to point out to the Government of this State that there is a law of diminishing returns, and there should be no further delay in closely investigating the possibilities of economies under other heads of expenditure."

Mr. E. L. C. Gwilt, who has been elected President for 1953-54, also addressed the Chamber and spoke mainly of the problems created by the shortage of electric power in the State. He drew attention also to the manufacture of spurious drugs and said that "Since the passing of the Resolution (Associated Chambers of Commerce meeting, December, 1951) and its reference to the Government of India, nothing has happened so far as I am aware, in amendment of the Act, so that the lot of the Drugs Licensing Authorities is none the less difficult and the profits to be made from the sale of spurious drugs make the risk of incurring the penalties under the Act well worth while."

The Costs of Nationalisation

Sir Purshotamdas Thakurdas, Chairman of the Board of Directors of the Oriental Government Security Life Assurance Co., Ltd., performed the opening ceremony of the company's new building at Ahmedabad last Tuesday. He commented on the hint dropped some time ago by the Prime Minister of the possible nationalisation of banking and insurance. Sir Purshotamdas advised the Government not to interfere with insurance for the present. He did not consider insurance a business suitable for nationalisation and bureaucratic management. He suggested that the Government should profit by the sad experience of the British Government in nationalising the coal industry where since nationalisation output per man had decreased in the mines and the cost of raising had increased. He concluded with an appeal to Ministers "to be consistent in their policy declarations bearing in mind the great harm that will be done to the country's economy by inconsistent pronouncements of policy."

Congress-Praja Socialist Talks

The break-down of negotiations for a coalition Government between the Congress and Praja Socialist parties was well received by the business community. Business men displayed some nervousness in the earlier part of last week when reports from the capital suggested that a new though set-up was not very far off. Even now, a lurking fear among banking and insurance circles that the whole project might be revived at a later date. Some business men in Western India think that the reopening of this issue will depend largely on the attitude which they themselves adopt. If commerce and industry were to show that they had a definite contribution to make to the building up of the country's economy, it is argued, there might be no need for the Congress Party to seek moral and material support from the Socialists. They believe that business men themselves were responsible for pushing Congress into the arms of the Socialists "by their over-concentration on the profit motive and refusal to co-operate whenever this motive was not strong enough."

Dry Battery Industry

The Tariff Commission opened its enquiry at the beginning of last week on the continuance of protection and assistance to the dry battery industry. Dr. B. V. Narayanaswamy Naidu emphasised the important place which this industry occupied to the industrial economy of the country, both from the point of view of civil requirements and the needs of the defence services. Like many of the industries which had originated during the last war and which had to switch over to catering mostly for civilian markets after 1945, this industry was given protection in 1947 by way of an ad valorem duty of 30 percent. Apart from this, the industry had obtained additional assistance from the Government's having imposed rigid control over the import of almost all varieties of dry batteries. Dr. Naidu said that there were widely varying estimates of probable future requirements of cells and the Commission would have to estimate this demand carefully to arrive at agreed estimates of demand. At present there was an exportable surplus of dry batteries but actual exports so far had been limited because of the keen competition in this market. The Commission will also examine this matter while considering the question of protection and assistance.

Uttar Pradesh

FOOD TO BE DERATIONED IN ANOTHER 28 TOWNS

SUBSIDIES ABOLISHED

(FROM OUR OWN CORRESPONDENT)

Lucknow, 21st March.

THE State Government has announced that of the 62 rationed towns in Uttar Pradesh 28, which have a population of less than 100,000 each, will be derationed as the rabi crop comes into the market. The Government's rationing commitments have come down gradually from 50,211 tons a month in the period between 1st July, 1952, and 15th November, 1952, to 33,341 tons a month at present. The derationing of 28 towns will reduce these commitments by a further 8,200 tons a month. The Food Minister, Mr. C. B. Gupta, has also announced that the distribution of foodgrains in the State will not be subsidised. The grains will be sold at an "economic price", so that neither a loss nor a profit is made. There has been comment in the legislature and in the Press that the present "economic" price of 2 seers 2 chhataks of wheat per rupee is the highest controlled price on record. Mr. Gupta admitted this, but said that it had been impossible to administer controls effectively "owing to the statements made by certain Central Ministers." The incidental charges on procured grain in U. P. were estimated at Rs. 3-2-7 per maund and it was expected last July when the policy of progressive decontrol was adopted that the consumer might even be able to get his requirements at a smaller price. These hopes have not been fulfilled but it is now stated that if the rabi crop is as good as it is expected to be, the "economic" price should tend to be less than at present.

"Go Slow" on Prohibition

The Excise Minister of Uttar Pradesh, Mr. Ali Zauher, has declared that the State Government proposes to "go slow" with the extension of prohibition. U. P. has been trying out prohibition in some selected districts and bootlegging and illicit trade in liquor is stated to be on the increase. Moving the excise demand in the Assembly, the Minister said: "Our big headache at the moment is Nepal with the result that sales in licensed shops have slumped sharply."

Mixing Power Alcohol with Petrol

As regards the power alcohol industry, Mr. Ali Zauher said the experts were now agreed that a 20 percent admixture of power alcohol with petrol did not harm engines. The State's power alcohol plant have a maximum capacity of 1,80,00,000 bulk gallons but at present produced only 52,34,000 bulk gallons. According to the Minister, the Government depends on foreign companies for the installation of mixing plant and this, he said, was limiting progress in the power alcohol drive.

Rationalising Octroi Levies

The State Government is considering methods of rationalising the levy of octroi by municipalities. About 20 municipalities charge both terminal tax and terminal toll; 29 levy only terminal toll, and 47 impose octroi. Addressing the annual conference of the U. P. Vyapar Mandal in Allahabad, Mr. Mohanlal Gautam, Minister for Local Self-Government, said that these levies sometimes hindered trade and the movement of goods. "The cost of collection is high and therefore the incidence of the tax is high. The system of assessment and refund tend themselves to practices which are vexatious and sometimes corrupt and demoralising." Before 1935, the Government favoured the substitution of octroi by terminal tax and terminal toll, but this policy received a setback as a result of the reallocation of resources between the Centre and the States under the Government of India Act, 1935, which made terminal tax a Central levy. "The present constitution," Mr. Gautam declared, "has adopted the same position as far as this particular tax is concerned. The result is not only that the terminal tax cannot be levied in those towns which rely on octroi, but also its scope or incidence cannot be varied where it is now in force."

BUSINESS CONCERNS IN THE U.S.

The number of businesses in operation in the United States in 1952 was 4,043,000, the highest on record and a gain of 35,000 from 1951, according to the U. S. Department of Commerce. The department also noted that there are nearly 1,000,000 more concerns in business today than a decade ago. During 1952, 350,000 new enterprises were started, and it is estimated that ownership of another 400,000 changed hands. According to the New York Journal of Commerce, daily financial newspaper, these figures show that large, medium and small businesses can survive and prosper in the United States. Each type of concern helps to sustain the others while competing with them, the Journal notes. This coexistence of big and little business in very large numbers is one of the main sources of strength for the U.S. economy, according to the paper. As the Journal points out, the free American economic system is not stagnant, but highly dynamic in character.

A recent study by the Brookings Institution, private research organisation, lends further support to this picture of a strong and dynamic American economy. The study reveals that concentra-

tion of business control has appreciably receded during the past half century of tremendous industrial and agricultural development. Smaller businesses have been gaining a larger share of the national income, while the share of the largest corporations has been declining. The study also shows that the gains of American industry have been broadly distributed throughout the national community. Profits before taxes of the 100 largest corporations in the United States, according to the Brookings study, declined from 3.7 to 3.3 percent of the national income between 1929 and 1948. On the other hand, profits of medium-sized corporations rose from 4.8 to 7.0 percent, and those of the smallest corporations rose from 0.6 to 1.5 percent, during the same period. Moreover, the largest part of the national income produced by American corporations was received by rank-and-file employees in the form of wages and salaries. These payments, according to Brookings, rose from 34.6 percent of the total national income in 1929 to 37.3 percent in 1948. This sharing of productivity gains among all segments of the economy has contributed to the higher living standards of the American people and the strength of the American system.

U. S. IMPORTS FROM FAR EAST

The value of United States imports from the Far East declined 16 percent, or \$400 million, during 1952, according to a survey by the U.S. Department of Commerce. This reduction was due largely to lower prices for rubber and wool. On the average, 1952 prices of these two products were 30 percent and 50 percent, respectively, below 1951 levels. The result was a decline in total import value despite the fact that imports in terms of quantity showed substantial increases. Price declines also held down the value of pulp imports, despite an expansion of 35 percent import volume. Copra imports on the other hand, declined in both quantity and value.

A rise of 138 percent in the value of U.S. tin imports from the Far East partially offset the declines noted in other commodities. But here, too, the effect of falling prices was felt, as the increase in the quantity of tin imports was 164 percent. American industry expects to consume record quantities of rubber in 1953 and the years to follow. Natural rubber consumption has shown a steadily rising trend in recent months. So far this year, the United States has consumed natural rubber at an annual rate of about 560,000 long tons.

NEW ZEALAND

The Polynesian Maori of New Zealand came, like the later English settlers, from over the sea to this lovely land with its variety of scenery ranging from alpine to tropical. Brave, intelligent and industrious, the Maori is held in much esteem by his fellow New Zealanders. His country is not large, but its healthy, temperate climate and its growing agricultural and pastoral wealth enables its inhabitants to play an increasingly influential part in world affairs. New Zealand is a country of the future, and as such, owes a debt to the Caltex organisation. With its fund of technical advice on fuel and lubrication problems and its efficient system of distribution, the Caltex organisation ably serves the people of New Zealand.

CEYLON TEA EXPORT DUTY HIGHER

THE sliding-scale export duty on tea shipped from Ceylon this week rises to 62 cents (11.2d) a pound. This is the highest level since the sliding scale was introduced and compares with 55 cents last week according to a report in the *Financial Times*. It is the result of last week's high overall auction average value, but this has already eased this week. With the season of flush production and lower quality coming near, a substantial fall in the auction averages may be expected. Shippers are thus likely to incur considerably less duty if they avoid shipping during the next few weeks.

Because there is a go-slow strike at the Colombo docks, however, any additional artificial hold-up in the flow of tea shipments could have serious effects. Towards the end of this month and the beginning of next heavier auction quantities may be expected. Last year in some weeks the offering reached 7 million lbs. This year it has been agreed to regulate the weekly quantity to not more than 6 million lbs. Even so there could be difficulty in dealing with the physical quantities of tea coming forward.

U. S. TEA IMPORTS

United States tea imports from Africa decreased 71 percent in 1952 compared with 1951, but an increase of 14 percent in imports from Asia compensated for African decrease. Asia supplied 94.7 percent of tea imported into the United States. Retail prices of coffee have advanced three to five cents a pound following decontrol of coffee and coffee concentrates. The *Journal of Commerce* said retail prices may advance another three cents a pound next month, but the rise is expected to be limited due to fears of consumer resistance. Cocoa futures strengthened on the news.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN FEBRUARY

Indian rubber output in February was 390 tons, according to the Indian Rubber Board. No rubber was expected in February. The quantity of rubber imported during the month was 50 tons. Consumption by manufacturers was 1,637 tons of which 148 tons were imported. Stocks with estates and dealers on the last day of February totalled 6,965 tons, including 1,715 tons in transit. Stocks with manufacturers at the end of the month were 2,605 tons of which 209 tons were imported. Manufacturers also used 171 tons of reclaimed rubber, the month-end stock being 341 tons, and consumed 1 ton 1,901 lbs. of synthetic rubber, of which manufacturers held a total stock of 6 tons 292 lbs.

TEA PRODUCING COMPANIES

Compiled by de Zoete & Gorton for private circulation only, *Tea Producing Companies*, 1952.

after some brief introductory notes on the 1952 season and the statistical outlook for tea, is given over primarily to particulars of tea companies. Profits and dividends over the past ten years, particulars of estates, production and finance are included in each section. A list is also given of tea company directors and companies that have gone into liquidation since 1939.

LONDON TEA SALES

An average price of 3s. 6.50d. a pound, an increase of 0.68d., was obtained for the 68,045 packages on offer at London tea sales last week. Clean common broken pekoe is quoted at 3s. 21d.-3s. 3d. (3s. 11d.-3s. 11d.).

Results secured by some of the companies are given below:—

	No. of packages	Aver. per lb.
Amalgamated	811	3/5 1/2
Anglo-Ceylon	366	4/
Assam Company	1,996	3/8
Assam Frontier	1,624	3/9

COCHIN TEA SALES

At Sale No. 6 held on 17th March, 1953, there was a little over 9,18,000 lbs. of tea printed for auction. Quality was fully equal to last offerings and the standard generally was good. Demand was strong throughout with commons, low mediums and mediums selling at an irregular in-

crease of 1 to 2 annas per lb. The best liquoring medium types however were fully firm and occasionally dearer. High grown teas showed a further decline in value of 4 to 6 annas per lb. but buyers followed quality closely. O. P.'s were strong and increased rates were paid for black well twisted types with flavoury liquors while others received more support than recently. Fannings grades were about steady at last rates.

Quotations	Rs. as. ps.	Last Sale
Low Grown Travancore B. O. P. ...	1 12 0	1 9 6
Medium " " B. O. P. ...	2 2 0	2 1 0
Annamalai " " B. O. P. ...	2 6 0	2 5 0
Best liquoring Nilgiri B. O. P. ...	3 15 0	4 1 0
Black well made " " O. P. ...	2 3 0	2 2 0

In the Export Quota this week the market remained at 12 pacs. Forward business in 1953-54 quota has been transacted at 12 pacs.

Sale No. 7 will be held on Tuesday 31st March, 1953.

At Dust Sale 'E' held on 14th March, there was approximately 3,62,000 lbs. There was only a fair demand and prices were generally two annas easier. There were a number of withdrawals but the majority of these have been taken up since the sale.

WORLD RUBBER CONSUMPTION

World consumption of natural and synthetic rubber totalled 210,000 long tons in January 1953. The U.S. Department of Commerce announced last week. This represents a gain of 12,500 tons over the January 1952 use. The United States increased its consumption in January 1953 to a near-record 120,404 long tons from 116,425 tons in December 1952 and 107,410 tons in January 1952. Included in the U.S. consumption total for January 1953 were 47,456 long tons of natural rubber. This was the highest U.S. monthly consumption in more than two years, and continued the recent trend toward increased natural rubber use. U.S. natural rubber consumption in December 1952 was 44,790 tons, while consumption in January 1953 was 36,989 tons, according to the department. Consumption in other countries, excluding the Soviet Union and China, dropped from 85,000 long tons in January 1952 to 79,000 tons in January 1953.

World production of natural rubber was placed at 160,000 long tons in January 1953, and world consumption at 130,000 tons. In January 1952, production was estimated at 162,500 tons and consumption at 122,500 tons. World production of synthetic rubber in January 1953, excluding the Soviet Union, was estimated at 75,500 long tons, and consumption at 75,000 tons. U.S. consumption of synthetic rubber in January 1953 came to 72,938 long tons, according to the department. U.S. synthetic consumption totalled 71,615 tons in December 1952 and 70,330 tons in January 1953. Revised estimates for 1952 operations place world production of natural rubber at 1,772,500 long tons and consumption at 885,000 tons.

Jute

LONG-TERM AGREEMENT ON JUTE IMPORTS FROM EAST BENGAL

THERE is general satisfaction that, at long last, India and Pakistan have reached a long-term agreement on jute. The agreement covers a period of three years and, under its terms, India will be able to import from Pakistan a quantity of raw jute which, it is estimated, will meet the deficiency between India's consumption and the quantity she can produce herself. On the Indian side there will, therefore, be freedom from anxiety on the matter of raw jute supplies while Pakistan will have an assured market for a substantial portion of her jute crop. For both sides there is the further advantage that they can plan ahead for a reasonable time. India will also be able to obtain supplies of good quality jute to enable her to keep her jute products up to standards which will not suffer by comparison with those of other producing centres.

Apart from the technical details of the agreement, the best feature of it, and one that, perhaps, augurs better for the future than anything else about it, is the spirit in which it has been negotiated. For the first time since partition and devaluation the two sides have faced the problem with frank recognition that their jute economies are complementary and that the pursuit of a policy of self-sufficiency in raw jute in India and a policy of expansion of manufacture on a large scale in Pakistan means disaster for both. The world need for jute manufactures is limited and many people in the industry believe that, because of the inroads of substitutes and new methods of handling goods, the limits may be contracting and will continue to do so unless new uses for jute and jute goods are evolved. If both sides recognise these facts there is hope of prosperity for the industry.

The Far East Markets

In drawing attention last week to the post-war decline in exports of heavy sacking to Far Eastern countries compared with the exports in the last pre-war year, we gave the actual figures taken from official sources. Comparison of these figures with the I.J.M.A. output statistics reveals an even more disturbing position. In 1938-39 the mills were working 54 hours per week while, in 1951-52, with the exception of 31 months, they worked only 42 1/2 hours per week. In 1938-39 the mills' output of sacking bags was 602 million of which the Far East took 201 million or over 33 1/2 percent. In 1951-52 the output was 491 million bags of which the Far East took 86 million or 17 1/2 percent.

One comment on the figures given last week was that, as the Far East had taken so much less, other countries must have taken more. But if we work back from the production figures, we find that with the reduced output in 1951-52 the quantity left for other countries, after deducting exports to the Far East, was roughly the same as in 1938-39. Actually exports to other countries in 1951-52 must have been rather more but the extra quantities came out of stock because in 1951-52 stocks held by mills decreased by 18,800 tons. The fact that stocks have been increasing steadily since July, 1952, seems to indicate that ground is now being lost in these other markets also.

RUMOURS OF RESTRICTED WORKING BY MILLS

On Thursday of last week the Indo-Pakistani trade talks which had been going on since the previous Monday culminated in the two countries signing a long-term trade agreement in which raw jute featured prominently. Under the agreement Pakistan has with effect from 25th March removed the licence fee of Rs. 2-8 per maund on exports of raw jute to India, and also reduced the export duty on loose jute by 12 annas per maund to Rs. 3 per maund. India has reciprocated by agreeing to take 18 lakh bales of Pakistani jute per year for the next three years out of a total amount of 26 lakh bales per year that Pakistan had provided for, an excess of 7 lakh bales being taken entirely at India's discretion. In addition to this, India, has abolished the surcharge on coal exports to Pakistan and will also step up coal exports to that country to meet her increased demands. The main items of this agreement, which fully satisfied both parties, was last year made the subject of a protest to GATT, who referred it to a sub-committee which in turn called for further particulars from both Governments, coupled with an appeal that they should discuss and settle their differences. It is gratifying to see that these recommendations were carried out so promptly and that the talks proceeded with full accord on both sides.

Effect of Reductions

The reduction of the licence fee and export duty, which in Indian currency amounts to approximately Rs. 4-11 per maund, will enable Indian mills to obtain Pakistani good quality jute at much lower rates and put them in a better position to compete with Continental manufacturers, who, it is understood, are underquoting Calcutta even with the present low prices. This refers mainly to hessian goods as it is here that the majority of Pakistani jute will find its way, India being able to supply her needs of low quality jute for sacking from within her own

borders. Overseas demand, however, for both hessian and sacking goods, is still very poor, and one reason put forward for this is that consumers are holding fairly large stocks which were built up when goods were scarce and prices high. They are anxious to reduce these stocks before entering into any further commitments. There is now a glut of jute goods of all descriptions, and the consumer is in no hurry to buy. He knows that he can pick up his needs at any time at very low prices, and is not likely to buy much because on a market such as exists today this is liable to encourage a rise in prices.

Move to Cut Production

In spite of all the help that the Indian jute industry has received over the past month in the way of a lower export duty on jute goods and the recent reduction in the price of Pakistani jute, it still does not seem to be able to attract business from overseas consumers in any large way, even though finished goods are cheaper than for a very long period. This prompts one to the conclusion that the price factor is no longer the decisive influence and that production, especially of heavy goods, is fast outpacing, if indeed it has not already outpaced, world consumption. If this be the case some sort of curtailment of production of heavy goods will be necessary to bring the industry back to its former ground, and it is understood that this position has been discussed in committee by the I.J.M.A.

Manufactured Goods: As a result of these developments, the finished goods market has been far from stable during the week and prices have fluctuated in accordance with the current rumours. On the whole mills have still been keen sellers, especially for heavy goods, and this has tended to keep prices down, but in the absence of any shipper enquiries of great magnitude very little business has been done. However, with conditions as they are, even the smallest business appears to have large repercussions, and by judicious buying and selling operators managed to counteract many of the price drops that occurred during the week. By Tuesday evening the price of heavy goods was back to last Thursday's opening levels, having seen many fluctuations meanwhile.

Hessian goods, on the other hand, in the absence of any enquiries, have shown a small but steady decline. The majority of mills continue to report favourably on their shipping position as a result of overseas buyers taking up their goods, and this augurs well for the final stock position at the end of the month, which normally has a very great influence on rates.

The goods market opened slightly better on Thursday of last week and as a result of covering business against overseas orders, rates in all sections improved and the decline was temporarily arrested. Hessians were up 4 annas and 40" 10 oz. was quoted at Rs. 40-4 per 100 yards, whilst plain heavy Cees improved by 8 annas to Rs. 92 per 100 bags and B Twills by 4 annas to Rs. 90-8 per 100 bags. On Friday, jute goods continued to rule steady, partly because the Indo-Pakistani trade agreement was announced, and partly because of an unconfirmed rumour of a 20,000 tons inter-Government Argentine hessian order. Consequently hessian rates were unchanged, as were plain heavy Cees, the only alteration being a 6-anna advance in B Twills. The Argentine rumour persisted until Saturday and for the second day running 40" 10 oz. rates were unaltered, but it was a different story in the heavy goods section where the absence of foreign buying support caused rates to fall away. Plain heavy Cees dropped Re. 1 per 100 bags and B Twills 10 annas per 100 bags. Over the week-end unofficial rates fluctuated rapidly on selling pressure from bears and rates showed a tendency to decline still further. On Monday morning opening quotations showed a drop of 8 annas on 40" 10 oz. Hessians which ruled at Rs. 39-12 per 100 yards and B Twills lost Re. 1 to Rs. 89-4 per 100 bags. Plain heavy Cees were unchanged at Rs. 91 per 100 bags. On Tuesday morning the market was in a state of depression and prices were forced down by further bear sales and the lack of overseas enquiries. Hessians dropped 6 annas and B Twills 8 annas, whilst plain heavy Cees collapsed by Rs. 1-8 to Rs. 89-8 per 100 bags. As the day advanced rumours began circulating that the I.J.M.A. committee had discussed the curtailment of heavy goods production at their meeting and prices immediately began to improve. By evening B Twills had advanced Rs. 1-4 from the morning quotations and were back to Rs. 90-8 per 100 bags.

At the opening of the market on Wednesday morning prices in all sections had revived and opening quotations were well above those on the previous day, being back at the same level, and even higher in some cases, than they were at the beginning of the week. This was entirely because

Corn sacks	93-0	93-8	93-0

Raw Jute: As a contrast to last week's spate of buying, mills have in general displayed only a limited interest in jute, and although a large variety has been purchased the quantities involved have not been great. Mills have preferred to sit out and await development, and they showed no inclination to come into the market even when rates were discounted considerably following the announcement of the Indo-Pakistani trade agreement. Rather they have taken to hand-to-mouth buying and have purchased sparingly in hand-picked lots mostly for quick delivery, avoiding where possible delivery from local godowns. Sellers are very keen for business and are prepared to meet mills' offers in an attempt to reduce their stocks. Jute for local delivery is not popular with buyers just now, as recent deliveries from this source have been far from satisfactory. Mills are once again indicating their preference for ready bills of lading and quick shipment jute ex agency.

The reduction of the licence fee and export duty on Pakistani jute has considerably altered the rates for this fibre in the Calcutta markets, and after the week-end quotations were Rs. 2 to Rs. 3 lower than the pre-trade talk rates. In spite of this mills have not shown much enthusiasm to take up offers and at one stage ready bills of lading were being quoted at Rs. 20-8 to Rs. 21 per maund, but there were no buyers. There is an increasing tendency for mills to treat jute marked "Narayanganj" with suspicion as not being real Jat jute, and in many cases fibre from this

station is not getting the premium formerly paid for Jat jute. Other stations in the Jat area are being favoured and sellers are being left with Narayanganj fibre on their hands.

Market quotations at the opening last Thursday recorded a drop of 8 annas to Rs. 19 per maund basis Bottoms for March-April shipment of Ordinary Assam jute. This rate was really only an indication of the price, as on the whole sellers were willing to do business at below this level, and small lots changed hands at varying rates. Quotations were unchanged, however, until after the week-end when they dropped another 8 annas at the opening on Monday and again on Tuesday. Prices were now down to Rs. 18 per maund for Ordinary Assam jute, but mills were indicating even below this rate and once again their counter-offers were met. Towards the close on Tuesday they withdrew from the market completely as rumours that they might curtail production were circulated, and the market was easier.

Business reported during the week was as follows:—

Dhuhri and/or Northern:	Rs. 19-8 to 20-8 per md. basis Bottoms for one month's shipment.
Assam:	Rs. 21 per md. for Middles only for one month's shipment.
Rs. 19-8 per md. basis Bottoms for one month's shipment.	
Rs. 18 to 18-8 per md. basis Bottoms for ready bills of lading and one month's shipment.	
Assam Tossa:	Rs. 19 per md. for ready bills of lading.
Agartala Tossa:	Rs. 20 per md. basis Bottoms for one month's shipment.
Rs. 14-8 per md. for X Bottoms only for one month's shipment.	
Agartala White:	Rs. 14 per md. for X Bottoms only for one month's shipment.
Murshidabad Tossa:	Rs. 18 per md. basis Bottoms for one month's shipment.

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

FAIRBAIRN LAWSON COMBE BARDOUR LTD.
LEEDS, ENGLAND.

WARP STOP MOTION.—Immediately a warp thread breaks the individual compensator is pulled upwards by the action of its spring and brought into contact with the control bar, automatically stopping the loom.

Rs. 14 to 14-8 per md. for X Bottoms only for one month's shipment.	
Baidyanathdham Mesta:	Rs. 21 per md. basis Bottoms for one month's shipment.
Assam Mesta:	Rs. 16-8 per md. basis Bottoms for ready bills of lading.
Rs. 17 per md. basis Bottoms for one month's shipment.	
Cossimbazar Tossa:	Rs. 22 per md. for Middles only for one month's shipment.
Rs. 19 per md. basis Bottoms for one month's shipment.	
Local Packing:	Rs. 13 per md. for X Bottoms only for one month's delivery.
Bimili:	Rs. 14 to 14-8 per md. for FAQ for one month's shipment.
Daisee:	Rs. 18 to 18-8 per md. basis Bottoms for one month's delivery.

At the close the jute market is steadier in sympathy with the finished goods market and quotations have advanced by 8 annas. Opening quotations on Wednesday morning were as follows:—

	March-April	Landed at Mill
Pakistani Jute:		
Jat	22-8	per md. basis Bottoms

Tossa is quoted at Re. 1 to Rs. 2 per maund above the rates for white jute.

Mofussil: Following the announcement of the Indo-Pakistani trade agreement there was much speculation in Indian upcountry markets as to what effect this would have on indigenous jute. Fears were expressed that the mills would prefer the Pakistani fibre and markets were depressed on this account. When it was realised, however, that the jute supplied by Pakistan would all be superior in quality to Indian jute, the markets recovered slightly, and mills gave an assurance that they would still need to buy the entire indigenous production of jute. Very little business has been transacted over the week and prices have fallen by about Re. 1. Imports are still negligible, but sellers are holding very large stocks which they are anxious to reduce. Local quotations are on the basis of Rs. 16-8 per md. basis Bottoms for Dhuhri jute, and Rs. 15-8 per md. for ordinary Assam jute, but these rates are nominal and subject to counter-bids. The local Cossimbazar markets are very quiet and quotations have declined because mills have shown very little interest in jute ex local godowns. Imports are still small but more than last week, about 50 to 60 wagons arriving daily. Sellers are keen for business and are cutting their rates almost hourly in an attempt to induce mills to buy, with no result. Quotations for Kishengunge jute are on the basis of Rs. 18-8 per md. for garsat quality which is Re. 1 lower than last week. The Daisee markets have been neglected this week and very little business has been reported. Imports are still small and quotations in Sheorahuli are down to Rs. 18-8 per md. for garsat quality, which is about Rs. 1-8 less than last week.

Pact Has Little Effect in Pakistan

In Pakistan the recent trade agreement with India has made very little difference to the markets and there has been no violent change in quotations. Only small business is going on, mostly for overseas export, but it is anticipated that business with India will start to flow again in the near future when Indian mills begin taking up their quotas from the 18 lakh bales. Imports into Narayanganj are unchanged and about 15,000 to 18,000 maunds are arriving daily. Quotations (in Pakistani rupees) are: Jat Balers' Bottoms (white) Rs. 14 per md. Tossa Rs. 17 to Rs. 18 per md. District Bottoms (white) Rs. 13 per md. Tossa Rs. 16 per md.

PAKISTAN CROP PROGRESS REPORT

In their third crop report for the current season which covers the week ended 21st March, Messrs. Sinclair Murray (Pakistan) Ltd say that the weather has been mainly hot and dry but this has not been unfavourable as it has helped the germination of early sowings. Further rainfall is now required in most districts to enable cultivators to proceed with sowing. The river levels vary from normal to slightly higher than at this time last year.

NARAYANGANJ:—The weather has been mainly dry but favourable. More rainfall is now necessary to enable cultivators to proceed with sowings and for the benefit of the young plants. Sowings to date amount to -2/- as against -1/6 at this time last year. The river is normal for this time of the year.

DACCA:—Weather has been hot and dry but favourable for sowings and young plants. Sowings to date amount to -2/- as against -1/6 at this time last year. Seedlings are in good condition. The river level is about the same as at this time last year.

CHANDPUR:—The weather has been dry without any rainfall. Further rainfall is now required to help the growth of the young plants and to allow further sowings. Sowings to date amount to -4/6 as compared to -5/6 at this time last year. Conditions of young plants are healthy and range in height up to 6". The river level is slightly higher than normal.

HATIGANJ:—The weather has been dry but favourable for sowings. Sowings to date amount to -1/3 as against -1/6 at this time last year. The river is 1'3" higher than last year at this date.

AKHAURA:—The weather has been hot and dry and this has enabled the cultivators to resume sowings. Sowings to date amount to -2/- as compared to -4/- at this time last year. The river level is normal.

NIKULAMPARA:—The weather has been favourable with plenty of sun and showers of rain. Sowings to date amount to -1/6 as compared to -3/6 at this time last year. The river is about 1ft. higher than at this time last year.

ASHUGANJ:—Not received.

SARISHABARI:—The weather has been dull and cloudy with occasional rain showers of rain. Sowings to date are -2/- compared to -3/6 at this time last year. The river is about 2'6" higher than last year.

SIRAJGANJ:—The weather has been hot and dry with no rainfall. Sowings to date amount to -3/6 as compared to -2/6 at this time last year. The river is about 2ft. above last year's level at this date.

NAKALIA:—The weather has been hot and dry and further rainfall is now required. Sowings to date amount to -2/6 as compared to -3/6 at this time last year. The river is about 2ft. higher than last year.

BHANGORA:—The weather has been hot and dry but this has been favourable. Lowlands are reported to be water-logged and this has held up sowings. Sowings to date amount to -1/- as compared to -3/6 at this time last year. The river is 1ft. higher than last year.

INDIAN CROP REPORT

In their first crop report for the current season which covers the week ended 21st March, Messrs. Sinclair Murray Ltd. & Co. Ltd. (India) say that favourable weather has been experienced in Assam and this has allowed cultivators to proceed with sowings. The condition of young plants there are reported to be satisfactory. Further rainfall is required in West Bengal and Orissa.

DANPUR: (Orissa) Report not received.

JAIPUR ROAD: (Orissa) Weather has been very hot and dry in this area and cultivators will be unable to commence the preparation of land until there is further rainfall.

RANAGHAT: (West Bengal) Weather has been hot and dry and further rainfall is required to assist cultivators to proceed with ploughing. Negligible sowings have taken place. The river level is normal.

COSIMBAZAR: (West Bengal) A start has been made in preparing the land for sowings but it is still too early yet for sowings to have commenced in this area.

NOWGONG: (Assam) The weather has been favourable for sowings with alternate rain and sunshine. Lowland ploughing has been completed and is going on freely in the midlands. Sowings to date amount to -5/6 as compared to -3/6 at this time last year. Seed germination is satisfactory. The river is slightly higher than last year.

CAUHATI: (Assam) The weather has been favourable with regular rain and sunshine. Sowings to date amount to -2/- as compared to -1/- at this time last year. The river level is normal.

DHUBRI: (Assam) Weather has been dry and this has been favourable. Sowings to date amount to -8/6 as compared with -6/6 at this time last year. Condition of the lowland crop is satisfactory and range in height from seedlings to 5".

KHARUPETIA: (Assam) The weather has been hot and dry with light showers in the early part of the week. Sowings to date in the lowland area are -3/6 compared with -3/6 at this time last year. Preparation of the midland is well in hand. Seed germination is satisfactory. The river level is normal.

THE FOREIGN JUTE MARKETS

PRICING OF JUTE GOODS

(FROM OUR OWN CORRESPONDENT.)
Dundee, By Air Mail.

THE depression prevailing in the Indian jute markets is undoubtedly having an adverse effect on trade the world over. The steady decline in prices for Calcutta hessians and sackings, said to be due to speculators depressing the market, is only causing buyers to refrain from purchasing until they can see the lowest points. It is reported that Continental manufacturers are now even unwilling to under-cut the low and apparently uneconomical rates quoted for both hessians and heavy goods. Sellers here are quoting as low as 14/8 6d for "B" twills and 71/8 6d for 10 oz. 40 in. hessians April/June shipment.

Unless jute goods were advantageously priced in relation to other textiles or substitutes, the future of jute would be one of diminishing importance. This point, says *The Financial Times*, was made by Mr. C. J. J. Renny, chairman, at the annual joint meeting of the constituent associations of the British Jute Trade Federal Council in Dundee recently. It was a future which neither this country, India, Pakistan, nor any other country engaged in the jute trade could view with anything but disquiet, he added. Referring to demand for jute, Mr. Renny said that at this time last year demand had already fallen away to a marked extent and there was unemployment in the industry.

Mounting Stocks:
An extreme lack of confidence was engendered in the minds of consumers, who became convinced that a fall in price must come about. This was

abundantly proved to be the case, and the ensuing six months were the worst that the jute trade of the U.K. had experienced for at least 15 years. After referring to the reduction in export duties by both India and Pakistan, Mr. Renny continued: "There is no substitute for jute at the price, but let us all remember those fateful six months of 1952, and in particular let the Indians and Pakistanis remember. They chose to take a short-term cash advantage in a sellers' market, but what will the ultimate cost be to them and to other countries engaged in the manufacture of jute in the long term of markets lost and of world confidence undermined?"

"Mounting stocks in Calcutta today appear to be a pointer to the harvest which is to be reaped from the ill-judged seeds that were sown."

Future Outlook

As to the future, Mr. Renny said that he hesitated to sound too optimistic, but he thought that short of anything quite unforeseen, the level of activity in the industry was likely to remain about the next six to nine months. Assuming the general level of trade in the country did not alter substantially, the further outlook was propitious. Mr. Louis M. Hill, a director of Low and Bonar, has been appointed chairman, and Mr. James Strachan, a director of Jute Industries, vice-chairman of the Council for the ensuing year.

THE AMERICAN MARKETS

PRICES NEAR JULY 1952 LEVEL.

(FROM OUR OWN CORRESPONDENT.)

Boston, By Air Mail.

PRICES for spots and afloats in the domestic market have reached just about the same levels as were established last July when free market prices were about their lowest since 1941. It seems evident that there has been some recent distress selling; and while probably this has not involved very large quantities, in a market such as presently exists its effect has been magnified. Continental goods, in standard constructions, are now selling at about par with Calcutta. Odd constructions, however, are 20 to 30 points lower than Calcutta. India's Consul-General in New York, Mr. A. S. Lal, has issued a statement, based on a cable from New Delhi, that "the Government of India definitely has no intention of making any change in the hessian (burlap) and making any change in the near future." This confirms the general opinion that the Government of India, not having reduced the export duty on burlap when the reduction in the sacking duty

was made on 27th February, would make no further change. U.S. consumption fell sharply in February, being about 20 percent below January although slightly above February a year ago. The estimated 58 million yards includes 600,000 yards delivered to the armed forces. U.S. stocks were little changed from January, the estimated 194 million yards including 131 million yards spots and 63 million yards afloats. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated Consumption and Stocks for the entire industry:

Commodity Markets

COMMONWEALTH'S SHARE IN
WORLD GRAIN OUTPUTPRODUCTION HIGHER IN 1951
THAN PREWAR

WORLD production of grain has not kept pace with the increase in population since before the war. This is revealed in a summary of statistics just published by the Commonwealth Economic Committee in London. Recovering quickly after the war, world grain output reached a peak in 1948 of four percent above the 1937-39 average. Since then it has fallen off and production in the 1951-52 season was only three percent above the pre-war average. The increase in population over the same period was about 10 percent. (Figures cited in the summary exclude the Soviet Union and China, for which recent statistics are not available.)

Production in the Commonwealth of each of the grains dealt with in the survey—wheat, maize, oats, barley, rye and rice—was higher in 1951 than before the war; that of wheat had increased by 21 percent over pre-war and represented over one-quarter of total production. Barley and oats before the war each represented about one-sixth of total world production and increased output in the Commonwealth raised the figure to over one-fifth in 1951. The Commonwealth is not a large producer of maize and although production in 1951 was much the same as before the war, the total accounted for some five percent only of world production. Rye is still of relatively small importance in Commonwealth countries.

Rice Production

The production of rice in the Commonwealth—mainly in India and Pakistan—has been in many years higher than that of wheat and represents a much higher proportion of world production. In 1949 nearly one-half of total rice production outside China was in the Commonwealth, although that percentage fell with smaller Indian crops in 1950 and 1951. In 1951 the Commonwealth accounted for 46.3 percent of world rice production compared with the 1937-39 average of 44.5 percent. Corresponding figures for 1951 and the 1937-39 average respectively for the other grains were: wheat, 28.4 percent and 24.2 percent; maize, 4.7 percent and 5 percent; oats, 23.6 percent and 17.1 percent; barley, 26.6 percent and 16.4 percent; rye, 2.5 percent and 1.3 percent.

The summary, in the section dealing with rice, records that of the 98,600,000 acres under rice in the Commonwealth in 1951-52, India accounted for 73,595,000 acres, Pakistan 22,481,000 acres and Ceylon 1,073,000 acres. The leading country was Indonesia (15,565,000 acres) followed by Thailand (14,468,000 acres) and Burma (9,098,000 acres). Of the 29,400,000 tons of milled rice produced in Commonwealth countries in 1951-52 India accounted for 20,767,000 tons, Pakistan for 7,745,000 tons, and Ceylon for 341,000 tons. The leading foreign countries were Japan, who produced 7,946,000 tons, Indonesia 6,210,000 tons, Thailand 4,752,000 tons, and Burma an estimated 3,400,000 tons. In its comment on rice production, the survey says that world production of rice (excluding China) which was on the whole well maintained during the war, seems to have shown relatively little change during the past 10 or 12 years, although there may have been some reduction in China.

Indian Output

India and Pakistan, which together account for an overwhelming proportion of the Commonwealth output, have been able to maintain production, in the aggregate, at appreciably above the pre-war level; in the former country there was a marked expansion in output after partition, although this was checked by unfavourable weather after 1949-50. The 1951 figure for Pakistan also shows some reduction on earlier years. In Malaya the reduction experienced during the war years was quickly made good after the war and a further considerable increase was attained after 1948-49 although in 1951-52 the reduction in area led to a decline. In Ceylon, despite the extension of acreage, production in recent years has been very little above the pre-war level.

There have been considerable changes in the non-Commonwealth producing countries of Asia. In Japan the pre-war level had been regained by 1948-49 but since then output had been on a smaller scale. Production in Thailand, also low at the end of the war, had recovered very rapidly and was greater than the corresponding figure for Burma, formerly much the more important producer. Even in 1951-52 Burmese output was about 1,000,000 tons smaller than before the war. Estimates for Indo-China put total production in recent years at well below pre-war levels. On the other hand, in Indonesia the pre-war level had almost been regained by 1951-52. Figures for both the Philippines and Formosa have in recent years been larger than before the war. In the Western Hemisphere both Brazil and the United States reported record production in 1951-52 at about twice the pre-war level. Production was rising, too, in a number of other countries in South and Central America. In Africa the figures for Egypt were in post-war years considerably larger than before the war, though there was a heavy fall in 1951-52, while in Madagascar output is still increasing. Production in Italy has shown considerable recovery in recent years and in 1951 was little below the pre-war level.

Increasing Yield

The survey says that rice, grown under all kinds of conditions ranging from primitive peasant farming to scientific agriculture, showed a wider range of yields per acre than almost any other crop. In the large producing countries of South-East Asia the yield per acre was low. In India yields per acre (5.8 cwt) are lower than before the war (average yield per acre for 1934-38, 7.2 cwt). Efforts are being made there to develop a more intensive system of cultivation and the potentialities of new hybrid strains are also being studied. Ceylon, which has an exceptionally low yield per acre of rice (3.7 cwt), is endeavouring to popularise cultivation by transplanting. In Italy, Japan and Australia—where Japonica type of rice is grown—careful control of water supply and heavy application of fertiliser give yields of milled rice of more than 20 cwt per acre.

With an output of about 10,000,000 tons India had been in most pre-war years much the largest wheat producer in the Commonwealth, but lost that position to Canada in 1939. Production was much lower in post-war years but since partition there has been some recovery and in 1950 and 1951 the combined production of India and Pakistan recovered to about the pre-war average. Of a Commonwealth wheat production of 33,000,000 tons in 1951 Canada accounted for 14,838,000 tons, India for 6,590,000 tons, Pakistan for 3,953,000 tons, and Australia 4,322,000 tons.

BRITAIN'S 15-YEAR COAL PLAN
BEHIND SCHEDULE

NEED FOR INCREASED PRODUCTION

TROUBLES in the British coal trade mounted to a crisis in February this year. Something had to be done, and the National Coal Board acted boldly, if late. A further increase of wages was granted to the miners in excess of any figure that the N.C.B. has previously been willing even to discuss; and the pithead price of coal to home consumers was promptly raised by 10 percent an average of 5s. 6d. a ton, the biggest single rise ever put into effect. The purpose of this dual operation is to raise more coal, to compel the home consumer to economise its use, and to enable the Coal Board to operate without financial losses—though it will not be able to work off past losses of more than £10 million. But the real task of restoring health to Britain's coal-mining, the basis of the country's industry and transport and an exporter of great potential value, is still ahead. It must be faced this year.

The British mines produced 314.4 million tons in 1952, compared with 211.9 million tons in 1951, and opencast workings brought the total up to 224.9 million tons, compared with 222.3 million tons. The increase in output was much less than in 1951, although in the moderately deflationary conditions of last year the attraction of labour from the mines into industry ceased, and mining manpower, the loss of which had threatened the direct consequences, gradually recovered. Furthermore, mechanisation had been proceeding apace. So last year's performance was not very impressive. What is needed this year, the chairman of the National Coal Board, Sir Hubert Houldsworth, has stated recently, is an increase of production of at least seven million tons during the period of working. Last year miners received extra pay in lieu of a second week of holiday, but this year they are to have the two weeks of holiday, and the extra week will cost about 3½ million tons of coal. A holiday on Coronation day will probably cost another one million tons. An increase of ½ million tons in home consumption is envisaged, and export commitments will be at least two million tons more than was exported last year. Unless output per man-shift increases as a result of the rise in wages, the crisis will not have been overcome but merely deferred until next winter.

This is the short-term problem. There is a long-term problem fundamentally more serious. The National Coal Board is working to a 15 year plan designed to provide enough—or nearly

enough—coal for all requirements in the 1960's. Mr. E. H. Browne, director-general of Production of the N.C.B., has made recently to colliery managers a vigorous statement on this plan. He says quite frankly—as the chairman of the N.C.B. and the Minister of Fuel and Power have also acknowledged—that the plan is not on schedule. Capital expenditure on collieries has increased from £25 million in 1950 to £27 million in 1951 and to £40 million in 1952, and a further increase in 1953 is anticipated. But current expenditure is well below the rate envisaged in the plan, and Mr. Browne says that the estimated capital expenditure on collieries for the whole 15-year period, £520 million reckoned at mid-1949 prices, under—rather than over—states the need.

Shortages

Colliery investment is part of the capital spending that has unbalanced the budget this year, but finance is not the main problem. There is a shortage of men qualified to draw up the schemes and to put them into effect. There is a shortage of equipment: not enough shaft-sinking is undertaken regularly to ensure that plenty of sinking plant is available, and there are long delays in delivery of sinking winches. New collieries opened and old collieries reconstructed have not always fulfilled hopes, because the new methods and new machinery employed are partly experimental, and modifications are necessary.

The National Coal Board cannot be criticised for lack of initiative, for it has made fundamental changes in the working, as well as the organisation, of the mines. Continental practice has been studied, and tested in British conditions—both "horizon mining", which gives such good results in the Ruhr and elsewhere, has not generally replaced the traditional British "single-seam mining", as the average density of coal in British seams is not high enough. Machines have been imported from America and elsewhere—there is special interest in the American Marietta Miner, now under test here, as it may entirely supersede explosives for driving roads in mines. British makers of mining machinery have been asked to co-operate in close detail with their main customer, and with their help the cutting and loading and conveying of coal have been largely mechanised.

It is disappointing that, for all these efforts, exports of coal last year fell considerably short of the modest objective of 15½ million tons, that stocks have fallen again to barely adequate levels, that it is now necessary to impose this 10 percent increase in price, thus raising the whole cost-structure of the British economy—beginning with railway transport and with steel. The 15 year plan must be brought quickly up to schedule, but there are more immediate tasks. Paramount are labour relationships, which have bedevilled British mining for generations and are not yet harmonious. The miners can be criticised for failing to respond to the real improvement in their conditions, the Coal Board for the bureaucratic attitude which still characterises its administration.

WORKING CLASS COST OF LIVING
INDEX FALLS IN JANUARY

The Working Class cost of living index (base: 1941=100) for January 1953, issued by the Labour Bureau, shows a general and definite decline. Only in one town mentioned has the index number risen, Merzara. (Base July-December 1948=100) where the index now stands at 111, an increase of four points. This is primarily attributable to higher quotations in the food group. In Jharia a fall of 11 points in the past three years. Both the food and clothing groups recorded the advent of the new rice pur a fall of 10 points to 147 was registered, the improved position. The downward trend has been maintained in Silchar, nine points to 121, the lighting groups in this town both receded 10 points. Small declines were recorded in other towns and in many the index is at its lowest level for several years.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to February, 1953. As compared with January, the February Index for Food shows a drop of 4 points, while those of Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 239, 479 and 266, respectively.

Groups	Weights	GROUP INDICES

LANCASHIRE'S VIEW OF
EXPORT PROSPECTSHIGHER TARIFF BARRIERS IN
MANY MARKETS

NEW moves to restrict imports of British textiles—in Europe, India, Australia—have presented a new challenge to the industries on which Britain's export trade was formerly based. Even Nigeria, where British exporters can take advantage of restrictions on Japanese goods, has lately imposed new import duties, but for revenue, not for protection. The justification of India's increased duties, that they are needed as compensation for the reduction of export duties on jute and other goods, is not taken very seriously in Britain, as they will evidently keep out goods so effectively that they will provide little revenue. The Australian duties on furnishing fabrics are frankly and unashamedly protective. In the dollar markets British goods have to surmount a formidable tariff barrier, and also, in the United States, a deliberately-generated prejudice against textiles made by lower-paid workers.

The slump of 1951-52 was common to most of the world's textile industries, but the recovery has not been so general. The recovery began in Britain about the middle of last year and it has progressed further in Britain than in many other countries, notably America. But it has been based on the home trade, while export business has continued with difficulty. Even so, the British cotton-textile industry showed a remarkable confidence in presenting to the international cotton-textile conference last autumn of piecegoods to 1,350 million square yards. (It achieved only 711 million square yards in 1952.) And the wool-textile trade has reason to be satisfied with its performance in the dollar markets, which accounted last year for a quarter of all its export earnings, with an increase of more than a fifth in the yardage of woollen and worsted cloths sold in the United States and Canada.

"Long Runs" for Export Markets

Both the cotton and the rayon industries in Britain have turned their attention seriously to "long runs" for the export markets, primarily the colonies; whereas the traditional British practice is to supply local needs on a more individual basis. There are two schools of thought on this matter, and neither is necessarily wrong. Britain's special prestige was based on her manufacturers' willingness to suit the markets individually, but that policy is less applicable now that most of the industries' production is for the home trade. Even though the home market is much smaller for British than for American producers, the economies to be gained from mass-production are not inconsiderable.

Other changes are taking place behind the facade of revival. Most significant is the growth of pure synthetics, seemingly destined to become of equal importance to rayon, at present the only mass-scale man-made fibre. Some people believe that world capacity for producing rayon has already been overexpanded. However that may be, the British industry, which curtailed production drastically in the second quarter of 1952, is turning out more than ever before in the first quarter of 1953. It is not foreseen that the newer synthetics—nylon is the most solidly established, but terylene and other—are claimed to be for various uses superior to it—will oust rayon. Wool is the fibre that seems to be most threatened by these scientific advances. A big American wool-textile group is planning to use only synthetic fibres in the coming years. The wool-textile industry in Britain, already using rayon staple on a large scale, is so adaptable technically that it can use the new fibres as they come into mass-production.

Mixtures, indeed, are an outstanding development of the textile industries generally—not new but much increased in variety and range. This Coronation year, as a special extravaganza, at least one British firm is interweaving threads of real gold or silver with silk, to designs of sheer beauty. All sections of the British textile industries have specially exerted themselves this special year. Their textures are more subtle, their colours bolder, their designs more imaginative. The British rayon industry can be excused for claiming that this is "rayon year", yet cotton is playing a bigger part in British fashion than for many years past, and large sections of the public still show a preference for wool—for which, we have been told in many languages, there is no substitute. It cannot be overlooked, however, that nylon has established itself as a fashion material in its own right, or that a comprehensive display of terylene fabrics and goods was presented for the first time some months ago.

Diminishing World Market.

If the British consumer trades, led for generations by textiles, are giving place to capital goods, the textile industries are certainly a long time a-dying. Their markets may be discriminating in favour of local products; but can the economic industries of some "never" textile countries permanently replace the skill and experience of the British, using—for all that is said in its disparagement—some of the best equipment in the world? Even the "down and out" cotton-spinners of Lancashire, relatively to the size of their industry, have since the war invested in new machinery more than any other cotton-spinners in the world. New techniques employed

by the British hosiery industry have raised it to a new level in the international scale. New machinery is constantly evolving, including a system for drafting any fibre, natural or synthetic. Yet the British textile industries are living for this year—doubtless a very prosperous one—and apprehensive for the future. For their world market is still diminishing.

FREE EXPORT OF CLOTH

In January 1953, the Government of India announced that exports of all varieties of cloth will be licensed freely valid for shipment to the end of June 1953. On further reviewing the situation the Government has now decided to allow such exports valid for shipment to the end of September 1953.

WHOLESALE PRICE INDEX FIRM

The official wholesale price index (with the year ended August 1939 as 100) fell by 0.1 percent to 382.9 during the week ended 7th March, 1953, as compared with 383.2 (revised) for the previous week. In comparison with the corresponding weeks of last month and a year ago, the index was higher by 0.7 and 2.2 percent respectively. During the week under review, Foodstuffs declined by 0.2 percent to 363.4 against 364.3 (revised) for the previous week, because of decreases in the prices of gram (−10%) and tea for internal consumption (−12%) in spite of higher prices of wheat at Hapur (+6%), gur (+4%) and tea sold for export (+11%). The index for Industrial Raw Materials also moved down by 0.6 percent to 442.6 because of a sharp fall in the export price of manganese ore (−29%) together with the lower prices of raw hides, linseed and castorseed (−3% each), raw jute, raw silk, raw wool and rapeseed (−2% each). Prices of groundnuts (+4%), cottonseed (+3%), raw cotton and lac (+2% each), however, advanced during the week.

Increases in the prices of groundnut and gingelly oils (+4% each), tanned buffalo hides and zinc (+3% each), sheep skins (+2%) and coir yarn (+1%) were almost offset by the lower prices of gingelly cake (−6%), coconut cake and prices of gingelly oil (−5%) and castor oil (−2%) and linseed oil (−5%). The index for Semi-Manufactures stood at 348.0 as compared with 347.8 (revised) for the previous week. The index for Manufactures rose by 0.2 percent to 368.8 as a

result of increases in the prices of woollen manufactures (+5%), taffeta Koro art silk (+6%) and glass (+1%). Jute manufactures (−2%) and liquors (−3%), however, moved down during the week. The Miscellaneous group advanced by 0.6 percent to 593.4 from 589.9 (revised) for the previous week, increases in the prices because of black pepper (+6%), turmeric (+5%) and betelnuts (+1%) in spite of a fall of 2 percent in the prices of cashewnuts.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

Calcutta Markets

RESTRICTED DEMAND IN TEA EXPORT AUCTION

MEDIUM ASSAM BROKENS DEARER

At Sale No. 40, held on 23rd and 24th March, there was less general demand in the Export auction. Good liquoring Assams with bright liquors were fully firm to dearer, but the plain liquoring sorts were at times easier. The strongest feature of the sale was Medium Assam brokens with brighter liquors. These were half to one anna dearer, while low medium and common brokens were fully firm. Better liquoring fannings were up to one anna easier, but low medium and common fannings were a little dearer. There was less demand for leaf grades and these were half an anna easier.

There was also rather less demand in the Dust sale and C.T.C. sorts were generally one anna easier. Best C.T.C. sorts were firm and when they had Autumnal liquors they were a little dearer. Autumnal dusts with bright liquors were fully firm while the few exportable Black dusts offered were in good demand.

There was a fair demand at rather lower rates for the few internal leaf teas on offer.

Quotations.	1953	1952
Clean Black Pekoe	1-7-0	1-2-0 (Nom.)
Clean Common Broken Pekoe	1-9-0	1-1-6

Export	53,500 Pkgs.	42,700 Pkgs.
Internal	1,430 "	3,200 "
Dust	20,100 "	22,600 "

LITTLE PROSPECT OF BETTER FREIGHT RATES

U.S. COAL CHARTERING BRIGHTEST FEATURE OF THE WEEK

THERE is little prospect of any early improvement in freight rates and despite the demand for ore and scrap from India, the many ships due here over the next three months are likely to be faced with ballast passages for their next employment.

Last week's market feature was the renewal in American coal chartering and because of the scarcity of early tonnage rates hardened considerably. Three April shipments secured 67s 6d to Japan, an increase of 10s and an August loader the good rate of 64s. A freight contract for 30,000 tons in parcels to Hamburg was arranged at 36s while numerous single voyages were fixed to the Continent. On the other hand Australian grain shippers have reduced values for forward positions to most destinations and a decline of 2s 6d was noted for June-July shipment to U.K. and 1s 3d to India. The reaction to this was a reduction in ideas by Far Eastern shippers, which, being resisted by owners, resulted in a suspension of business.

Further activity was marked in the Calcutta coal trade and a 7,000 tonner was fixed for three consecutive to Colombo at 47s 6d with Charterers still open for further tonnage at the same rate. Ore moved off freely to various destinations from India, the rate being \$10.50 from Vizagapatam or Mormugao to U.S.N.H. and 62s from Mormugao to the Continent.

Britain's decision to tighten up controls on the shipment of strategic materials to China did not affect freight markets. The only vessels likely to be affected were probably those registered in Hong Kong and it is significant that a number of these ships have recently appeared in Indian waters. The Chamber of Shipping Index of tramp freight rates in February shows a further decline attributable mainly to local seasonal factors.

SUGAR MARKET QUIET

During the week ended 24th March, the sugar market was quiet with rates for ready ex-Kanapur delivery as follows: ordinary grain Rs. 27-10, medium grain Rs. 26-2, and big grain Rs. 29-10 a maund. Ex-mill delivery prices ranged between Rs. 25-4 and Rs. 28-8 a maund. A quota of 10 lakh bags was released; sales averaged about 5,000 bags a day and arrivals 2,000 bags a day. Stocks amounted to 100,000 bags.

LINSEED

Although steady conditions were observed during the early part of last week, a slight weakness was apparent towards the close and prices moved to lower levels. There was no appreciable improvement in arrivals and supplies of ready goods were scarce. Enquiries from crushers were keen on the whole, mainly for forward delivery, and a small turnover was reported daily. In the oil section a small demand from local buyers was responsible for an improvement in prices, but the lack of genuine buying support towards the close

caused a reaction and a quieter tendency prevailed. There were no fresh enquiries for export. Latest quotations were as follows: Ready Rs. 20/- per maund; April, Rs. 19/8 per maund; May, Rs. 19/- per maund.

HIDES AND SKINS

The market continued steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 17th and 23rd March, 1953.)
Cowhides:—Wet salted (Ord) 7,000 pcs. on the basis of Rs. 10 to Rs. 11; Wet salted (Slaughtered) 10,700 pcs. on the basis of Rs. 14-4 to Rs. 25; Assam-Salted 400 pcs. on the basis of Rs. 18; Nepal (Ord) 550 pcs. on the basis of Rs. 17.
Goatskins:—Wet salted (Daisee, Killed) 50,460 pcs. on the basis of Rs. 280 to Rs. 425; Assam-Dinajpur-Murshidabad 25,900 pcs. on the basis of Rs. 260 to Rs. 300; Purneah-Kissenganj 12,000 pcs. on the basis of Rs. 270 to Rs. 280; Patna (Ord) 16,000 pcs.; Muzaffarpore-Darbhanga-Pakur 16,120 pcs. on the basis of Rs. 245 to Rs. 260.

Bazar Stocks

(23rd March, 1953.)
Cowhides:—Wet salted 1,44,000 pcs.
Goatskins:—Wet salted (Daisee, Killed) 97,000 pcs.; Assam-Dinajpur 71,000 pcs.; Muzaffarpore-Pakur-Patna-Purneah-Kissenganj 70,000 pcs.

WEEKLY SHELLAC MARKET REPORT

During the week ended 24th March the market was dull and inactive and a small business passed. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 88 to Rs. 90 value.
Pure Buttonlac	Rs. 85 buyers.
Lemon No. 1 Shellac	Rs. 85 buyers.
Lemon No. 2 Shellac	Rs. 80 buyers.
F. O. St. I. Shellac	Rs. 72 to Rs. 73 done & buyers.
Pure T.N. Shellac	Rs. 68 to Rs. 70 basis done & buyers.
4% I.T.N. Shellac	Rs. 63 done & buyers
No. 1 Kusmi Seedlac	3% Rs. 82 value.
No. 2 Kusmi Seedlac	3% Rs. 73 value.
Fine Bysaky Seedlac (Manbhum)	3% Rs. 66 to Rs. 70 buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs. 64 to Rs. 66 buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 60 to Rs. 61 done & buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 56 done & buyers.
Kireelac	Rs. 27-8 buyers.

Shipments during March until the 21st were 23,783 packages.

COMPANY AND PUBLIC NOTICES

THE ATTOCK OIL COMPANY LIMITED
(Incorporated in England)

AT a Board Meeting today (19th March, 1953) the Directors declared an Interim Dividend for 1952 at the rate of 5% less Income Tax at U.K. Standard Rate, payable on 14th May, 1953 to Stockholders on the Register at 7th April, 1953.

This payment does not necessarily imply an increase in the total payment for the year.

A. & S. HENRY & CO. LTD.

NOTICE is hereby given that with effect from 1st April, 1953 the activities carried on by the Calcutta Branch will be conducted by a new Subsidiary Company which will operate with the full financial support of A. & S. Henry & Co. Ltd., Manchester.

The name of the new Subsidiary will be:—
A. & S. Henry & Co. (Dundee) Ltd.,

and the business will continue to be carried on at the address of the Calcutta Branch, viz.—

Grosvenor House,

21, Old Court House Street,
Calcutta.

The management and personnel will remain unchanged.

Per Pro A. & S. HENRY & CO. LTD.,

ALFRED B. G. PATON,
Manager.

CALCUTTA DINNER

THE 38th Calcutta Dinner will be held at the Connaught Rooms, London W.C.2, on Thursday 28th May 1953. Mr. C. A. Innes will preside and the guest of the evening will be His Excellency Mr. B. G. Kher, For tickets price £2.50 each (including wines as per menu) apply to G. H. Davis, Honorary Secretary, C/o. National Bank of India Ltd., 26, Bishopsgate, London, E.C.2.

GOVERNMENT OF INDIA

MINISTRY OF RAILWAYS (RAILWAY BOARD)

NOTICE

Cast Iron Sleeper Plates for Railways
Tenders are invited for the supply of Cast Iron Sleeper Plates up to total tonnages of—
(a) 500 tons
(b) 1000 tons
(c) 2000 tons
(d) 3000 tons
(e) 4000 tons
to be supplied in the period ending 31st March, 1954.

Tenders who prefer to do so can indicate in their tenders, special rates for the supply of 80,000 tons distributed over two years ending 31-3-1955.
3. Applications for copies of tender documents should be made to the Director, Civil Engineering, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract will be supplied at Rs. 10/- per set and will be available for sale from 1st April, 1953 except on Sundays and holidays.
4. Tenders will be received up to 13-00 hours on Monday the 22nd April, 1953 and opened in the office of the Railway Board, New Delhi, at 10-00 hrs. on 22nd April, 1953.

H. K. L. Sethi
Director, Civil Engineering,
Railway Board.
NEW DELHI
Dated 21st March, 1953.

PRELIMINARY ESTIMATES FOR 1952-53
BYSAKHI LAC CROP

According to the preliminary estimates given by the Indian Lac Cess Committee the Byssakhi lac crop in India (excluding Assam) for 1953 is expected to be 4,76,000 maunds as compared with the final estimates of 8,75,000 maunds for this crop for the previous year. The normal yield of this crop in India, calculated on the basis of an average for the years preceding 1939 is 6,48,000. Expectations of a poorer yield this year result from a severe brood shortage throughout the country. In addition climatic conditions were unfavourable in western parts of Madhya Pradesh during January-February. The following figures issued by the Indian Lac Cess Committee are the estimates for the 1953 crop.

State	Preliminary 1953 (Maunds)	Final 1952 (Maunds)	Final 1951 (Maunds)	Normal yield (Average of final estimates for 10 years preceding 1939) (Maunds)
1. West Bengal	55,000	60,000	50,000	56,000
2. Bihar	2,90,000	5,69,000	5,33,000	4,17,000
3. Madhya Pradesh	91,500	1,82,000	2,18,000	1,14,000
4. Uttar Pradesh	5,000	10,000	7,000	4,000
5. Vindhya Pradesh	25,000	37,000	42,500	28,000
6. Bombay	5,000	10,000	12,000	8,000
7. Orissa	2,000	2,000	5,000	5,000
8. Other Indian States (excluding Assam)	2,500	5,000	13,000	16,000
Total Production of Indian Union	4,76,000	8,75,000	8,81,400	6,48,000

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Monthly Index of Indian Industrial Activity (Base: 1935) has now been brought up to September, 1952. Compared with the preceding month there were increases in Jute Manufactures (1.4 points), Steel Ingots (9.7 points), Pig Iron (7.2

points), Cement (0.8 point) and Electricity (2.5 points), while decreases occurred in Cotton Consumption (2.3 points), Paper (4.6 points), Coal (12.5 points) and Wagons Loaded (4.1 points).

The Indices for Cheque Clearances and Notes in

Circulation disclosed falls of 12.0 points and 0.3 points.

Combining all the factors the Capital Index of Indian Industrial Activity declined by 4.1 points during September, 1952.

(1A) Redeemable at par between the years 1924 and 1942 in instalments of not less than Rs. 1,00,000 per annum by drawings to be held on 31st December 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585,

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. (For reference see notes below.) Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 100's	Rate per cent	Paid-up per Share	Market Quotations	Year of Issue	NAMES	Amount Issued in 100's	Rate per cent	Paid-up per Share	Market Quotations

COAL COMPANIES

O. Po. F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXX No. 3252

THE IMPACT OF DEARER MONEY ON INDIAN BANKING

COMPETITION FOR DEPOSITS AND THE DECLINE IN ADVANCES

THE transition to dearer money and deflationary policies that began in November 1951 was completed during 1952 when its implications were worked out in the commercial banking system. That the process was not an easy one is testified by the chairman of two leading Indian banks, whose speeches we publish in this issue of Capital, Sir Homi Mody of the Central Bank of India, and Mr G. D. Birla of the United Commercial Bank. The most important consequences of tighter money and slacker business activity, as far as the commercial banks are concerned, were a scramble for deposits and a net repayment of advances. In other words, the banks had to pay more money to secure lendable funds and at the same time they found fewer borrowers ready to pay them more money for the use of those funds. Banking profits, caught between the blades of this scissor movement, were cut; and though bankers might be expected to approve generally of sounder money policies, they cannot be expected to welcome developments that reduce their earnings when many Indian banks are still at the stage of building up reserves. Looking at the matter from the point of view of the banks' customers and of the national economy there does not seem to be much to regret in the changes that took place in Indian banking last year. In a word, banking became more competitive, and since it is one of the aims of a higher bank rate to sharpen useful competition, that was no bad thing. Cheap money and inflation mitigate competition in banking no less than in other spheres of commerce and industry, and during 1952 the Indian banks had to say good-bye to the relatively easy conditions of trading that had characterised the Indian economy during the boom.

Increased competitiveness took the form of what we have called the scramble for deposits. The rates of interest offered by the banks on deposit money were raised sharply and, though some may think they were raised too sharply, this had the beneficial effect of slowing down the long post-war decline in deposits held by Indian banks. Deposits ended the year at Rs. 848 crores, which was indeed Rs. 21 crores lower than the total of Rs. 869 crores at the end of 1951, but we would agree with Sir Homi Mody that this fall was "not very significant" in comparison either with the decline in deposits in earlier post-war years or with the fall in advances during 1952. Dissaving was reduced and the accumulation in new savings was made more attractive than in any year since the war. Admittedly this was accompanied by a development that was more awkward for the banks and less significant for the economy—the transfer of depositors' funds from demand liabilities (on which little or no interest is paid) to time liabilities (on which higher rates of interest were paid last year). In fact Sir Homi says that the reduction of Rs. 21 crores in total deposits was wholly on account of demand deposits, time deposits having actually shown an increase.

It has been argued that the rates at which banks in India borrow were raised unduly high because the exchange banks entered the field with great vigour when the Bank of England's rate was raised a second time. Being then unable to obtain funds from the United Kingdom, these banks were especially anxious to attract Indian deposit money. Actually, the high rates quoted in this connection as having been offered by the exchange banks refer to Bombay only, for the rates offering in Eastern India on loans to or exchange banks have been no higher than, or even below, the rates offered by domestic institutions. After the Indian bank rate was raised the rate for call money in the Calcutta interbank market was about 2½ percent, and when in March 1952 the Bank of England rate went up from 2½ to 4 percent, the interbank rate in

Calcutta moved up only to 3 percent; that is the rate we quote today. It would appear then that the change in the Bank of England's rate did not have as much to do with the rise in Indian rates as is sometimes thought. In any event, those who accept the view that a better return on savings is no disaster for an economy that hopes to multiply its capital resources will not tarry to decide who is to blame for higher deposit rates.

The greater expense of securing lendable funds would not have worried the banks so much if advances had not declined so sharply during the year, and it is to this side of the scissors movement that most attention is due. From the end of 1951 to the end of 1952 advances and loans declined by Rs. 69 crores, from Rs. 554 crores to Rs. 485 crores. The banks' liquidity first fell to a record low and then rose sharply. The ratio of advances and bills to deposits, says Mr G. D. Birla, stood at 64 percent at the end of 1951, rose as high as 71.5 percent in March 1952 and then fell to 53.4 percent in November. There had been some improvement at the end of the year when this ratio was 56.4 percent. Some part of this fall was no doubt due to the decline in the price level, but much of it was also the outcome of the increased caution of business men in view of the uncertain prospects after the 1952 slump.

Before one could judge how far this credit squeeze has been salutary for the economy generally, one would need to see the break-down of advances before and after the fall. Such an analysis is not readily available for India, but we have to hand the latest quarterly classification of advances compiled by the British Bankers' Association which illustrates our point well enough. Between November 1951 and February 1953 the total of bank advances in the United Kingdom had fallen from £2,016 million to £1,869 million (roughly proportional to the decline that took place in India) but within that total fall are concealed 47 percent rises in advances to the iron and steel, engineering and shipbuilding industries. The substantial falls affected "personal and professional" advances, and advances to the entertainment and miscellaneous industries. Thus, dearer money, which is usually condemned by socialists as an indiscriminating weapon, had effected a transfer of resources from less essential to more essential uses as efficiently as any system of controls would do. Of course the weakness of the British experiment has been that borrowing by public utilities has increased much too much, from £94 million to £140 million, in the same period. One could conclude that the squeeze in Britain, far from being too severe, has not gone far enough. The corresponding figures for India would be of interest and would permit of more valid judgment on the effects of last year's credit squeeze.

The speeches of Sir Homi Mody and Mr Birla, and the balance sheets of their banks, make it clear that the Indian banking structure is well able to cope with the stresses and strains of this transitional period, and it is an encouraging sign that both these bankers in their speeches devote as much space to the challenge of the five year plan as to the embarrassments of the recent past. Mr Birla outlines the programme of extensive industrialisation with which his enterprising family is associated, and Sir Homi calculates the credit requirements of the economic expansion forecast in India over the next few years. Considering the central position of banking in economic development both men are justified in underlining the trading difficulties put in their way by rising costs and tribunal awards. Mr Birla comments: "Banking is the only industry in which the pre-war rates for services still continue to operate in spite of substantial increases in interest rates on deposits and working costs." The era of high profits encouraged the Tribunals to make excessively liberal awards, but that era is now past and the banks "are unable to bear the increasingly onerous burden of expenses imposed on them by earlier awards... They must have freedom to regulate their expenses according to their earnings." Sir Homi points out that because of the increase in salaries, it cost his bank more to pay a two-months' bonus last year than to pay a 41-months' bonus in 1946—and profits were higher in the earlier year.

Neither Sir Homi nor Mr Birla take a gloomy view of the reduction in business activity that took place last year and which is so clearly reflected in the working of their banks. Sir Homi feels that the reduced outtake and accumulation of stocks reported in 1952 are "not very serious", while Mr Birla says that provided economic forces are not artificially interfered with, "there is no reason why India's industries should not continue to expand". This qualified optimism is perhaps justified by the better sentiment in evidence since the Budget but there have been signs lately that Indian industry has not altogether recovered from the setback it received in 1952. When producers encountered smaller sales and restricted profits in 1952, the Government of India replied by pointing to the rising curve of production, which it held to be sufficient guarantee that nothing serious was wrong with private enterprise. It was several times pointed out on this page at the time that the production schedules that were then bearing fruit had been laid during the boom and unless industry was assisted in lowering its costs there was no certainty that last year's output levels would be maintained.

FREER TRADE WITH WEST EUROPE LIBERALISATION PREFERRED TO CONVERTIBILITY

BRITAIN'S gesture at the meeting of the Council of Ministers of the Organisation for European Economic Co-operation on 23rd March, in easing her trade and payments with Continental Europe may have averted a widespread recession of international trade. Though it could not transform the payments position of any European country (France and Italy were the countries which Britain intended to assist), the relaxation of restrictions on imports and on British tourists' spending immediately improved the atmosphere in OEEC. The tendency to balance accounts by restricting purchases has been checked, if not finally halted.

There is, however, another side to this episode. It has emphasised some of Britain's most serious difficulties and predicaments in her laborious recovery. Doubtless the British housewife and the British tourist felt that "things were getting better" when they read that many goods—textiles, furniture, matches, cheese, fruit, vegetable products, glassware, and others—were to be obtainable more freely from the Continent, and that the tourist's allocation of foreign currency was increased from £25 to £40 a year. But in sober truth Britain cannot afford this liberality, costing (the official estimate is largely guesswork, and the actual figure may be more) about £40 million in the year. In the nature of the case, these relaxations were unnecessary, in the sense that the restrictions now relaxed were on unessential spending. The restrictions have undoubtedly helped to correct a dangerous unbalance in the overseas payments position but it is an essential failing of this kind of corrective policy that it shifts the problem elsewhere, in this case mainly to France and Italy. But the recovery of the sterling area's position is not nearly well enough advanced to justify spending £40 million a year more, mostly on luxuries. When the decision was made the British authorities were acutely aware that the country's debt to the European Payments Union was of the order of £200 million, additional to a gold payment of £100 million which must somehow be won back, and that the trend of European payments with the sterling area would normally be adverse to the latter in the coming months, even without the extra spending envisaged.

Britain had to make a choice, on various planes at once. She knew that her export trade was threatened if she maintained restrictions on more than half of her private imports from Western Europe. Her plan for restoring the equilibrium of her overseas payments had been based, in the first place, on restrictions of imports, but its fulfilment depended on expansion of exports. In the event, exports were doomed to contract unless imports were re-expanded. Either way the overseas payments position was liable to deteriorate; and expansion of trade was riskier than contraction. But it may be that the British Government has had to make an equally serious decision on a different plane. It has felt it to be necessary, temporarily at least, to give preference to Europe before the Commonwealth. This new liberalism is good for Europe, but it is bad for the sterling area. Just as the restriction of non-sterling expenditure by the outside sterling countries was helpful to Britain, so the liberalisation of non-sterling expenditure by Britain is harmful to the outside sterling countries—unless the continuance of import restrictions by Britain would have caused new restrictions on sterling area imports into Europe.

It would be a mistake to read too much high policy into Britain's unexpectedly sympathetic attitude towards the troubles of Europe. British economic policy is tentative, and must remain so until American economic policy is clarified. There is no suggestion that Britain is turning away from the Commonwealth, in the direction of Europe or anywhere else. But these recent developments are evidence that trade with Europe is really taken seriously in London. Europe's interest in Britain is in a potentially prosperous market for the regional specialities of Europe, such as processed meats, cheeses, wines, textiles, all of which are more or less luxuries. Europe's interest in the sterling area is in an expanding market for capital goods and such industrial materials as chemicals, and, on the other hand, in an important source of varied raw materials. Britain needs the Commonwealth market, and the Commonwealth's materials. She is a permanent competitor with the industrialised countries of Europe, in the sterling area and outside it. But Europe has much to contribute to the British standard of living—as soon as Britain can afford a higher standard of living.

Europe is interested also in convertibility of sterling. To sell luxuries to Britain and buy necessities from the dollar area in exchange

would be the ideal arrangement for many European countries. Under such an arrangement they would have little interest in the European Payments Union; and, indeed, EPU would have little further use if sterling were convertible. Britain, however, is in no position to bear the burden of the dollar shortage of all Western Europe. She has no desire to make sterling convertible until the other European currencies can be made convertible too. Extension of EPU for a further year shows that convertibility is not envisaged for the near future. Meantime, the British have indicated that they regard freer trade without convertibility as preferable to convertibility supported by trade restrictions.

CURRENT COIN

Critical Phase for Shellac.—The shellac industry is passing through a critical phase. Like most other raw material prices, those of shellac rose during the Korean boom, later to fall as world demand decreased. It is now over a year since prices started to tumble and they now stand about 45 per cent below those prevailing at the end of 1951; many factories have had to close down and there is a measure of unemployment in Bihar. The boom brought with it increasing competition from synthetics and it will be some time before the natural product will be able to regain the ground lost during the period of high prices. Refined shellac suffered most; while shellac exports have fallen, exports of seedlac have risen steeply—from 92,591 cwt. in 1951 to 220,390 cwt. in 1952. This is attributable to declining competition from Siam, and Mr J. P. Young, in his presidential address to the Calcutta Shellac Trade Association in Calcutta last week, pointed out that had Siamese seedlac exporters taken their usual share of United States business last year, "the crisis in the Indian shellac trade, bad as it is, would have been much worse." In the past Siam was able to annex a large part of world markets for seedlac, in spite of the inferior quality of Siamese lac, because she was able to undercut Indian prices. Indian prices are now competitive, but Mr Young said there are reports that with the advent of their winter crop Siamese traders have adjusted to the lower price level and further competition may be experienced from that quarter. "The most serious aspect of this slump, to the manufacturer, is that because of the reduced demand for shellac, competition is too intense, underquoting is frequent, and there is no possible margin of profit at present prices ruling for raw materials in relation to shellac," said Mr. Young. A complaint by importers in the U.S.A.—India's biggest market—is that prices have been too unstable; more rigid control over quality and stabler prices would help restore confidence among foreign importers. Mr Young remarked: "Every effort should be made to develop and increase the use of shellac in this country, and the Government could be of assistance to us in this connection by encouraging the use of shellac in railway coaches, in shipbuilding and other activities which they control." Trade practices in the industry have not been all that could be desired and Mr. Young said that if the Association were to fulfil its functions properly, a higher standard of business practice would be of great value.

Competition in Textiles.—Reports from Bombay indicate that India's cotton textile exports this year are moving slowly because of keen competition from the Japanese, though there has been an improvement over last year. Mr. C. P. Parikh's presidential address at the annual meeting of the Ahmedabad Millowners' Association last week included a review of the textile export trade during 1952 in which he pointed out that the industry had not only to face a world-wide recession but had also to combat increasing international competition, particularly from Japan. The effect on Indian mills was serious but the Government of India took prompt steps to relieve the position. Control over distribution was relaxed from 1st April, 1952, and as a result of further relaxations in control, the industry was able to attain a record monthly production of about 400 million yards from July onwards. In October, because of the plentiful supply of textiles, price controls over most varieties were removed. Mr. Parikh suggested that costs could be reduced by ensuring that the industry, both power and handloom, received adequate supplies of raw material at reasonable prices, and that some system of voluntary quality control be introduced. The Buxton Conference, he thought, had helped to bring about a better understanding of the problems of the textile industry in different countries and "provided the Government of India takes necessary steps to augment export trade in textiles, as is done by Japanese and Continental Governments, the target of exporting 800 to 1,000 million yards would be fulfilled." Mr. Parikh denied that the mill industry was in any way to blame for the difficulties experienced by the handloom industry last year. He criticised the order restricting the output of dhories and the dyeing of sarees not so much on principle as because it was introduced too hastily. He suggested that the handloom industry be run on a co-operative basis and organisational guidance be provided to ensure manufacture of marketable varieties of standard quality.

Lowering Industrial Costs.—Mr. P. L. Saraogi's presidential address at the meeting of the Bharat Chamber of Commerce in Calcutta on Saturday was notable for its emphasis on the need for industry to lower costs, improve quality and buyers' market. He declared that although deficit financing was not wrong in itself, particularly if new money were invested in productive enterprise, price trends must be watched carefully. Rationalisation would raise the problem of surplus labour; and cottage and small-scale industries should be built up as complementary to the larger industries and "the area of conflict" between the two gradually reduced. Mr. Saraogi criticised the policy of bolstering one section of an industry at the cost of another as had been done by imposing a handloom cess on millmade cotton cloth. The five year plan expected private enterprise to find Rs. 150 crores for the replacement and modernisation of machinery and Rs. 233 crores for industrial expansion, but Mr. Saraogi felt that it would be difficult to raise these sums "unless the taxation structure is overhauled." He was glad that local taxation had been included in the terms of reference of the Taxation Enquiry Commission, but thought that since the report might take some time to prepare, interim measures were necessary. Referring to the levy of sales tax, he said that "the procedure varies from State to State, and the climax is reached when a firm in Calcutta is served with notice by the Governments of Bihar, U.P., Travancore-Cochin, Bombay and other States to register itself with each of the Governments and to produce books of account for levy of sales tax in those States." The last Central Budget, Mr. Saraogi declared, was disappointing in that it did not liberalise depreciation allowances or reduce taxation on undistributed profits. The specific rate of excise duty on cotton textiles, which had been substituted for the *ad valorem* levy, had increased the burden on the industry although the Finance Minister said that it would not; for certain types of fine cloth this increase amounted to 100 per cent.

Marine Insurance.—The development of British marine insurance (cargo business) abroad was the subject of an interesting lecture to the Insurance Institute of London recently by Mr. C. E. P. Taylor, the underwriter for the Atlas Assurance Company Limited. Dealing with the subject historically, he mentioned that the British first commenced underwriting abroad a century ago through the medium of duly appointed marine representatives, and suggested that the development which followed arose out of the need to afford an efficient insurance service to merchants who had established themselves in wide areas overseas. The British method was so adaptable as to weave itself into the general pattern of commerce in every territory, and there had been no attempt to foist current methods in Britain on to countries where such methods would be strange to the local mercantile community. He placed great value upon the services which had been rendered by those who had journeyed to these countries in order to consolidate the business of underwriting abroad, expressing the view that when there was a close degree of relativity in rates it was the personal touch which turned the scale. Mr. Taylor also referred to discriminatory insurance practices of certain foreign governments, restrictive legislation, disturbed currencies, and economic nationalism which presented problems to be solved by the British insurance market, although they were not necessarily always peculiar to insurance. It marine underwriters should establish themselves in every practicable overseas territory by reason of the nationalistic legislation which had become an accomplished fact in recent years, and he instanced Argentina, where all imports must be insured with an Argentine company; Colombia, where all imports must be insured with a company, foreign included, already established in Colombia; and Pakistan, in which country 10 per cent of all marine business must be ceded to that Government. In referring to the younger members of the insurance world and those entering insurance offices, Mr. Taylor said the occupation of insurance offered adventure, enterprise and the satisfaction which came from engagement in work which served a fundamental human and social service, remarking that such men became manufacturers of invisible exports.

T. A. A. Success Story.—The value of "know-how" has recently been demonstrated in remarkable fashion by a Scotsman named John Bruce, who hails from Paisley. He is a foundry expert, and is on loan to Pakistan under an agreement with the United Nations Technical Assistance Administration. His task is to offer advice, but because of a scarcity of local technicians to carry

out the improvements he recommended, he took personal control of a foundry in Karachi for two weeks, and taught the techniques he advised. So great was his success that requests for his aid have poured in from the 250 other foundries in the country. Although it will not be possible for Mr. Bruce to comply with all these requests during his one year assignment, by the time he leaves, others will have been trained in the techniques he demonstrates and it is hoped will themselves be able to act as instructors. Mr. Bruce began his work by surveying the production methods of the Karachi foundry, the largest in the country. The firm, which has some 265 employees, turns out cast iron pipes, cisterns, sanitary wares, etc. Within three days, he came to the conclusion that, although difficulty in obtaining high-grade raw materials was one major reason for the relatively poor quality of the finished products, a vast improvement could be effected by the introduction of certain modern techniques. He made detailed recommendations along these lines, which were received by the foundry owners, but they were unable to find the technicians to carry them out. It was then that Mr. Bruce decided that the only way out of the difficulty was to take personal control of the foundry for a period of two weeks. This he did, and at the same time he established a school within the foundry. Working himself at each phase of the production process, he taught, by example, the techniques necessary to improve the quality of the castings. Then he let the local foundrymen carry on. The success of his efforts may be judged by the fact that whereas before he took over an average of 47 per cent of all castings produced had to be rejected as unusable, afterwards rejects were cut down to 10 per cent. The owner-manager of the foundry expressed his appreciation in a letter to the Pakistan Government's Director-General of Supply and Development. "We have to thank Mr. Bruce for all advice given," the letter declared. "He has greatly encouraged us, and made us confident that we can cast as well as any other country."

Raw Material Supplies.—Expansion of raw material supplies has been a matter of increasing concern in the United States ever since the Paley Commission predicted last year that by 1975 U.S. industry would need 60 per cent more raw materials than in 1950. The latest edition of an Information Paper on the world supply of raw materials issued by the Royal Institute of International Affairs is much wider in scope and estimates that although manufacturing capacity all over the world was 40 per cent greater in 1950 than in the five years preceding the war, raw material output was only 10 per cent higher. Outlining the factors which have hindered the growth of primary production it says that "since 1945 every time increased demand forced prices up to new heights producers considered it a temporary phenomenon that would soon be corrected by the inevitable post-war slump." Capital equipment has been difficult to obtain, costs have risen because of inflation and transport facilities are inadequate in Africa, Australia and South America. The Korean war encouraged large-scale investment in primary production, and particularly the search for strategic materials. New resources are now being developed in the Commonwealth and elsewhere. Outside Canada, Americans have not invested much, except in oil, and the money provided by their Government has been used largely for ancillary services like water supply and communications. In America itself, new deposits of copper, lead, zinc, tungsten, chrome ore, sulphur and uranium are being worked, but such sources are usually expensive to exploit because most of the high-grade minerals have already been extracted. Although substitutes are being found, new development must proceed if supply is to keep pace with the current trend in consumption. Primary producing countries will find encouragement in the conclusion that "this trend might well provide a long-term solution to the dollar problem provided that world production of raw materials expands to meet this increased American consumption." But the warning is appended that "in the immediate future the fact that the United States is expanding its domestic output of primary products to meet the needs of its defence programme might well intensify the dollar shortage for other countries when rearmament ends, unless the high-cost projects are closed down."

Planning More Food.—Food production in Asia in 1951 was 1 per cent below the prewar level while population was 11 per cent above prewar. Political and Economic Planning have just issued a broadsheet outlining courses to be followed and some which ought to be avoided by political leaders and technical experts in seeking to solve the problem set by these figures. First and foremost it is emphasised that piecemeal attempts invariably lead to muddle and delay. Before land clearance is started projects must be complete for organising settlement, providing schools and clinics, avoiding erosion and maintaining soil fertility. Planning on the widest possible scale is

essential. Another major consideration is the psychological approach to the conservative and often suspicious peasant. Innovators must always be ready to overcome scepticism of modern techniques by patient demonstration. There are serious disadvantages in training local people abroad, for faulty co-ordination too often makes them jobless when they return home. (Unfortunately there still seems little evidence that training facilities are being built up rapidly enough in the under-developed countries themselves.) The authors of the P.E.P. booklet favour the statutory development corporation. They also make the sound suggestion that, to allay the fears of foreign investors, an agreed code of law might be introduced which would both protect under-developed countries from exploitation and safeguard the foreign investor.

Industrial Disputes in January.—Provisional statistics of industrial disputes for January 1953 released by the Labour Bureau show a deterioration from the previous month. There were 82 disputes involving 40,244 workers and resulting in a time-loss of 239,159 man-days, as against 80 disputes involving 27,401 workers and a time-loss of 153,717 man-days in December 1952. Ten of the disputes resulted in lock-outs, affected 13,272 workers and accounted for a time-loss of 77,418 man-days. Five of these were in West Bengal, two in Bombay and one each in Bihar, Madras and Uttar Pradesh. There were four work-stoppages not connected with industrial disputes. Sixty-nine disputes ended during January, of which 42 had lasted for five days or less. In only two cases was the duration more than a month. Wages, allowances and bonus were the main issues in 30 disputes and successful or partially successful in 25 cases, but unsuccessful in 32. Most disputes relating to wages, allowances and bonus ended in complete or partial success for the workers, while in most of those relating to personnel they were unsuccessful. Bombay and West Bengal together accounted for over 58 per cent of the total time-loss. Compared to the previous month, the time-loss in Bombay increased considerably but in West Bengal there was a slight fall. More time was lost because of industrial disputes in Bihar and Madhya Pradesh, which together accounted for 33 per cent of the total time-loss. Amongst industries, the greatest deterioration occurred in coal mining, where 55,849 man-days were lost in January as against 13,769 in the previous month. Cotton textiles showed a loss of 53,261 man-days as against the previous 19,942; other industries in which the situation worsened were jute, food drink, and tobacco, wood, stone and glass and the miscellaneous group.

CORRESPONDENCE

NO PAR VALUE SHARES
TO THE EDITOR OF "CAPITAL"

Sir, With reference to The Ditcher's comments on rates of dividends and no par value shares in his Diary in your issue dated 19th March, 1953, his strictures on this unfortunately prevalent malaise do not relating dividends to real capital are devoid of the only or correct one. The adoption of no par value shares will perhaps rectify some of the shortcomings he cites, but the inherent defects and the abuses to which these shares are prone are too well founded to be dismissed without discussion; the remedy, in fact, may effect a cure, but concurrently be the source of many greater ills.

The fault (and, of course, its remedy) lies squarely with boards of directors who will not relate the rates of dividends paid, which are normally stated merely as percentages of the issued capital, also to the total shareholders' funds invested in the business. The fact is that if equity shareholders, who are entitled to all the distributable profits, decide to take only a portion as dividends and plough back the rest into the business as reserves (which is equivalent to subscribing additional capital), they are entitled to reap the benefit accruing from the growth and expansion which they have been instrumental in creating. Dividends must therefore be directly related not only to the issued capital, but also to the total shareholders' funds which include issued capital, capital and revenue reserves, surplus, etc.

Most of the misconception on the part of the public is due to genuine ignorance and lack of perception of these facts, and is susceptible to exploitation by the negligible but vocal minority whose business it is deliberately to distort and exaggerate "high" dividend announcements with-out reference to their context. Boards of directors today have a grave responsibility to discharge in this respect and they will neglect it at the peril of discrediting and undermining the whole structure, and indeed the continued existence, of capital and capital formation.

Yours faithfully,
H. A. BENNETT.

Calcutta, 26th March.

COMMODITY SHARES WEAKER
ON NEWS OF KOREAN TALKS
3 PERCENT DEFENCE BONDS
CONVERSION OFFER

London, 1st April.
THE past week coincided with the middle of the unpopular three-week account and for this reason conditions were dull over most of the period. However, Korean peace overtures late in the week increased activity considerably and in the closing stages some sharp and varied movements were noted. Even so, business remained on a small scale. Reflecting a possible Korean armistice all commodity shares lost ground with copper providing the weakest feature, although they started a downward movement following the lower British price for copper earlier in the week. Tins and rubbers were also marked down but losses were not too severe when compared with coppers. Gold shares were unmoved by the peace news, and for the most part were held quietly firm. Teas remained very quiet—this invariably is the case just before the budget—and any price changes were small.

Among foreign bonds Japanese lost considerable ground on the news of the forthcoming peace talks and reports concerning that country's economic position. Chinese on the other hand improved, while Germans held relatively steady. Naturally, dollar stocks turned weak following the late week performance of Wall Street, but on the domestic side gilt-edged continued to make small headway, as a result of small public demand. Industrials were inclined narrowly irregular with movements based on individual considerations—operations here generally awaiting the budget. Oil shares also moved in an irregular fashion with the closing tone barley steady, and shippings recorded hardly any movement.

Credit Conditions Easy

After a comfortable start with credits just about adequate, credit conditions on London's money market became very easy for the greater part of the week. On two days the authorities worked in reverse to mop up surplus money by sales of special bills, both direct and indirect.

Towards the close, however, conditions became patchy and less comfortable because of heavy tax payments at the end of the fiscal year. Calling was lighter than anticipated and with a small amount of indirect assistance, credits proved just about adequate. The overall credit position was comfortable at the close. Applications for £260 million of Treasury Bills totalled £334,610,000 of which the former amount was allotted at an average rate of 48s. 0.20d. percent. This week £230 millions will be offered. The Bank of England Return showed fiduciary issue increased by £50 million to £1,550 millions. Active note circulation increased by £7 million to £1,488 millions.

The Treasury announces that a conversion offer will be made to holders of 3 percent Defence Bonds purchased between 19th July, 1943, and 31st December, 1943, and maturing between 1st July, 1953, and 31st December, 1953. These holders will be invited to continue their bonds until 1st January, 1954. On that date they will be paid a full six months' interest at the rate of 3 percent per annum and the maturity premium of £1 percent and their bonds will be exchanged into the same amount of 34 percent Defence Bonds (Conversion Issue). Acceptance of the offer of conversion will not entail a break in the holder's encashment rights. If the offer is not accepted, interest on the maturing bonds will cease on the tenth anniversary of the date of purchase.

The Price of Gold

The South African Finance Minister said at an election rally that the British Chancellor of the Exchequer had pressed the claim for a higher gold price during the recent discussions with the U.S. leaders in Washington. There was growing conviction that this was no longer a selfish South African question, but one with which financial and economic interests of a very large area of the world are closely concerned, the Minister said. Leaders of the new United States administration have been told that the greatest importance is attached to the question of readjusting the price of gold. The Union Corporation estimates the world's gold production in 1952 at 26,400,000 ounces against 26,018,000 in 1951, of which the British Commonwealth totals 19,100,000 against 18,604,000. The Commonwealth total is 72.3 percent compared with 71.5 percent. The Union Corporation remarks that three quarters of the world increase

came from South Africa. These estimates are published in Samuel Montagu's annual *Bullion Review* which believed that the idea of a change in the dollar price of gold which is growing in intensity over a large part of the world, will intrude increasingly often in coming months and years though it must remain unacceptable until there is a change of heart in the United States.

Hong Kong Gold

Hong Kong gold slumped to its lowest since the outbreak of the Korean war last week with principal bearish factors the sharp dip in American dollars. Lower international prices and unconfirmed reports of further arrivals of Philippine gold depressed values further. The market recovered slightly latterly in sympathy with the recovery in international values and the dollar rate. Trading officially listed was 9,680 taels, while 22,000 taels were privately transacted. Arrivals were nil. Unofficial exports are estimated at 8,000 taels. Forward contracts were nil though sellers were quoting 40.23 dollars, c.i.f. Macao.

Australian Trade Prospects

Prospects for Australian trade, with enormous potential markets of the fast developing countries of the Far-East, are very bright according to Sir Percy Mills, Chairman of the British Export Credits Guarantee Department, who arrived at Sydney on 30th March for a fortnight's study of Australia-British trade. He said that though Britain looked to Australia as one of its most valuable markets and suppliers of primary products, Australia should also develop her secondary industries. Sir Percy Mills will also visit New Zealand and the United States.

Rubber Market

On the London rubber market trading has been very slow during the past week with the volume of business disappointingly small. With incentive lacking and outside and professional interests largely in abeyance, orders from manufacturers were confined to mainly small necessary replacements and mainly of offgrades. Despite the paucity of business the undertone was fairly steady and price changes were within narrow limits. Limited offers of sole crepe were sufficient for the moderate current requirements.

Ceylon Quality Teas

British tea market interests in London are reported to have made representations to Ceylon against the ceilings placed on the amount of quality teas that may be shipped from Colombo to London auctions. The official policy in Colombo is said to be to restrict shipment of these teas to London with a view to helping Colombo become the world's main quality tea centre.

Tea Sales

Of the 42,650 packages of North Indian, and Indonesian teas advertised for sale this week, 27,761 packages were brought forward on Monday. Consumption was brisk and general, especially for a pound, and low medium and medium kinds which advanced half penny to one penny per pound. Well-made Nyasaland teas were in strong demand. Stalky undesirable sorts were difficult to sell. Clean Common Broken Pekoe, stalkfree were quoted at 41 d. per lb. against 40d. to 40-1d. previously.

Tanned Hides

Auctions of tanned East Indian sheep skins were resumed last Monday. Demand was active and no further change in average quotations was reported.

THE CALCUTTA MONEY MARKET
CREDIT IN BETTER DEMAND

Wednesday, 1st April.

THERE has been better demand for money this past week, though trading conditions in Calcutta are still only moderately active. Money is tight in the interbank market where rates quote 2½ percent for overnight loans and 3 percent for call money.

Little business has been done in the bill of exchange market, and what bills have been passing have been on tea account. Tea appears to be the only export trade in which there is any notable activity these days. Remittance has been normal. All exchange rates are unchanged.

A still smaller amount, Rs. 1,01,00,000, was offered for Rs. 1 crore of three-month Government of India treasury bills this week. Tenders at Rs. 99-63 percent were accepted, the average rate of acceptance being unchanged at Rs. 2-7-0 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 27th March, treasury bills for Rs. 3 crores were sold in favour of the Reserve Bank of India.

The local bullion market rallied towards the close after initial weakness. Bear-covering increased by suggestions that death duties would begin to be collected soon helped to brighten up sentiment. Silver recovered to Rs. 157-12 from Rs. 156 and the ready rate was done at a premium of 4 annas. There was also a rise in the London quotation from 74d to 74½d, but the New York price was unchanged at 85½ cents. Gold followed silver in sympathy and the price gained from Rs. 84-14 to Rs. 85-8. The sovereign at Rs. 57 showed an increase of about 14 annas.

The statement of the Reserve Bank of India for the week ended 27th March, 1953 shows rises of Rs. 41 lakhs and Rs. 11 lakhs in the total note issue and notes in circulation to Rs. 1,150.15 crores and Rs. 1,133.12 crores, respectively. Notes held in the Banking Department consequently rose by Rs. 30 lakhs to total Rs. 17.03 crores. Deposits of the Government of India were up by Rs. 13.24 crores to Rs. 135.78 crores because of good tax collections, but other Government accounts diminished by Rs. 9.25 crores to stand at Rs. 19.85 crores. Easier money conditions explained the rise of Rs. 3.44 crores in balances of commercial banks to Rs. 45.52 crores. Government Treasury bills rose from Rs. 7.45 crores to Rs. 8.58 crores. Balances held abroad at Rs. 145.53 crores were about Rs. 1.09 crores less than in the previous week. Other loans and advances increased from Rs. 22.89 crores to Rs. 26.95 crores, of which advances to scheduled banks against usance bills rose from Rs. 4.24 crores to Rs. 5.24 crores. Ways and means advances were shown at Rs. 3.30 crores (Rs. 3.45 crores).

The return of the Imperial Bank of India for the week ended 20th March, 1953, shows a rise of Rs. 1.18 crores in total deposits to Rs. 210.05 crores. Investments in Government Securities are up by Rs. 93 lakhs to Rs. 71.01 crores, while other authorised investments remain unchanged at Rs. 11.16 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 57 lakhs and Rs. 2.11 crores to aggregate Rs. 106.65 crores and Rs. 23.36 crores, respectively. Cash and balances are, in consequence, shown at Rs. 17.49 crores or Rs. 1.30 crores higher.

INCOME-TAX STATISTICS FOR
1951-52MARKED INCREASE IN NUMBER OF
ASSEESSES

ALTHOUGH India has a total population of about 36 crores, the number of assessee on the register of the Income-tax Department of the Government of India on 31st March, 1952, was only 8,85,399, compared to 5,40,000 immediately after partition. This is shown by the income-tax revenue statistics for the financial year 1951-52 which have been compiled by the Central Board of Revenue on an all-India basis and which also give the assessments made in particular States.

The total number of assessments, including those brought forward from earlier years, completed in 1951-52 was 11,59,616 as against 8,56,209 in 1950-51. Assessments resulting in demands numbered 6,47,376 compared to 4,72,419 in 1950-51, but the difference between the two sets of figures does not necessarily indicate the number of infructuous cases. Part of the difference is covered by cases (i) where an adequate amount of tax had been deducted at source; or (ii) where the assessment was on a registered firm and the tax assessed was payable by the partners; or (iii) where the assessment resulted in a refund. Besides, there were a considerable number of cases where the total income assessed was below the minimum taxable limit or where there was a loss.

In 1951-52, there were only 4,737 assesseees with incomes of over Rs. 1,00,000; although only .0013 percent of the total population, they accounted for nearly 63.5 percent of the gross demand of

Rs. 195.8 crores. Assesseees with incomes ranging between Rs. 25,000 and Rs. 1,00,000 made up 21.5 percent of the total demand and those with incomes of between Rs. 10,000 and Rs. 25,000 about 9.5 percent of the demand. The largest number of persons assessed (5,10,412) fell in the category with incomes below Rs. 10,000 and accounted for only 5.5 percent of the demand. Of the 6,47,376 persons assessed to a positive demand, 5,47,539 were individuals, 65,750 Hindu undivided families, 23,326 unregistered firms and other associations of persons and 10,761 companies and other concerns assessable at the company rate. In 1950-51, the number of persons assessed was 4,72,419 of whom 3,95,017 were individuals, 52,401 Hindu undivided families, 16,482 unregistered firms and 3,519 companies. The total income assessed in 1951-52 was Rs. 782.9 crores as against Rs. 574.6 crores in the preceding year, the share of the different categories of assesseees being as follows (in crores of rupees):

	1951-52	1950-51
Individuals	475.5	342.3
Hindu Undivided Families	80.3	64.4
Unregistered Firms	27.2	22.0
Companies and Other Concerns	199.9	145.9
Total	782.9	574.6

Classes of Income Assessed

The number of persons with income from salaries assessed went up from 2,11,508 in 1950-51 to 2,80,288 in the subsequent year. Government and non-Government employees numbered 98,018 and 1,82,270 respectively, as against 84,059 and 1,27,443 in 1950-51. The total salary income brought under assessment in 1951-52 was Rs. 178.4 crores compared to Rs. 125.9 crores in the previous year. In 1951-52, there were 1,87,443 persons with income from property amounting to Rs. 30.2 crores, on which Rs. 6.1 crores were demanded as tax. The corresponding figures for the preceding year were 1,41,221 persons with an income of Rs. 22.8 crores, on which the demand was Rs. 4.9 crores. Of the persons assessed, 3,68,868 had income from business and the professions as against 2,52,779 in 1950-51. The income assessed was Rs. 455.9 and 337.7 crores and the tax demand Rs. 132.6 and 104.9 crores respectively. Only 23,348 persons were engaged in the professions, while the rest were in business. The number of persons with income from dividends rose from 95,951 in 1950-51 to 1,18,507. Income from dividends included in the assessments for 1951-52 amounted to Rs. 52.3 crores as against Rs. 38.2 crores in the preceding year. Income-tax taken to have been paid on behalf of the shareholders was Rs. 13.4 crores in 1951-52 as against Rs. 10.1 crores in 1950-51. Income accruing or arising abroad brought under assessment in 1951-52 totalled Rs. 29.3 crores, of which a sum of Rs. 6 crores was assessed on a remittance basis. The income-tax demand on this class of income was Rs. 3.7 and super-tax demand Rs. 3.4 crores.

The total demand levied in assessment, including tax on capital gains, penalties and demand on account of minor rectifications of assessments amounted (in crores of rupees) to:

	Income-tax	Super-tax
1951-52	130.2	85.3
1950-51	102.9	63.2

From these the following reductions were allowed:

	1951-52	1950-51
Refunds or Rebates	17.8	16.2
Tax Deducted or Exempted Income	30.0	23.2
	0.6	0.8
	48.4	41.2
	19.7	15.6

resulting in a net demand of

	Income-tax	Super-tax
1951-52	81.8	65.6
1950-51	61.7	47.6

Refunds and Rebates

The principal items on which refunds and rebates were allowed pertain to double taxation relief, losses, reduction in demand, income accruing or arising in Pakistan, undistributed profits, provident fund, insurance premia and donations to charities. Relief granted in respect of income on which tax had also been paid in the United Kingdom, Burma, Ceylon, Aden and other Dominions amounted (in lakhs of rupees) to:

	Income-tax	Super-tax
1951-52	331	7
1950-51	496	5

Of this, relief in respect of income which had been taxed in the U.K. alone amounted to Rs. 246 and Rs. 414 lakhs respectively.

The amount of loss carried forward from the preceding years and set off in the assessment for 1951-52 was Rs. 755 lakhs. A similar set-off allowed in the assessment for 1950-51 amounted to Rs. 581 lakhs. As a result, the income-tax liability was reduced by Rs. 121 lakhs (Rs. 116 lakhs) and the super-tax liability by Rs. 78 lakhs (Rs. 67 lakhs); the figures in parentheses refer to 1950-51. Reduction in demand on account of revisions as a result of appellate decisions, rectification of assessments and other refunds amounted to Rs. 477 lakhs of income-tax and Rs. 242 lakhs of super-tax. Corresponding figures for 1950-51 were Rs. 439 lakhs and Rs. 233 lakhs.

double taxation, abatement of tax was allowed in 1951-52 in 2,395 cases on income totalling Rs. 200 lakhs. In 1950-51, similar abatement was given in 1,463 cases on incomes aggregating Rs. 130 lakhs. The effect of this rebate in terms of tax was Rs. 102 lakhs in 1951-52 and Rs. 50 lakhs in 1950-51. In respect of undistributed profits, 4,664 Indian companies were granted an income-tax rebate of Rs. 135 lakhs. In 1950-51, a similar rebate granted to 3,075 companies amounted to Rs. 139 lakhs. In the assessments for 1951-52, rebate on contributions to provident funds to which the Provident Fund Act of 1925 applied as also to provident funds recognised under the Income-tax Act was granted to 20,074 persons. The amount of their contribution was Rs. 174 lakhs and of income-tax foregone Rs. 16 lakhs. In 1950-51, 14,075 persons were given rebate on income aggregating Rs. 103 lakhs, the amount of income-tax foregone being Rs. 10 lakhs. In addition, 28,420 persons got rebates amounting to Rs. 519 lakhs in the assessments for 1951-52 on account of contributions to provident and superannuation funds of business organisations recognised under the provisions of the Income-tax Act. The reduction in income-tax payable by them amounted to Rs. 47 lakhs. In the 1950-51 assessments, similar concessions had been granted to 22,587 persons on an income of Rs. 402 lakhs, the income-tax on which amounted to Rs. 44 lakhs.

In the 1951-52 assessments, 1,30,672 persons claimed rebate on total insurance premia of Rs. 1,565 lakhs, the income-tax on which amounted to Rs. 165 lakhs. In 1950-51, this rebate was given to 1,03,224 persons on premia of Rs. 1,222 lakhs, the income-tax on which came to Rs. 137 lakhs.

In 1951-52, having donated Rs. 94 lakhs to approved charitable institutions or funds, 2,123 persons got rebates of Rs. 23 lakhs in income-tax and Rs. 4 lakhs in super-tax in their assessments. In 1950-51, this concession was granted to 2,223 persons who donated Rs. 123 lakhs and got rebates of Rs. 32 lakhs and Rs. 6 lakhs respectively.

The amount deducted or paid at source considered in the assessments for 1951-52 came to Rs. 2,999 lakhs as income-tax and Rs. 353 lakhs as super-tax as against Rs. 2,319 lakhs and Rs. 275 lakhs respectively in the previous year. Private salaries assessed in 1951-52 amounted to nearly twice as much as all Government salaries. To fall of tax on exempted income may sound strange, but some of these incomes are included in the total income for determining the rates of tax and a rebate thereon is given at the average rate. The total of such income included in the assessments made in 1951-52 was Rs. 237 lakhs, of which dividends accounted for Rs. 128 lakhs and interest on securities Rs. 104 lakhs. In all, a total rebate of Rs. 58 lakhs was given, compared to Rs. 85 lakhs in 1950-51.

COMING soon after the news that the Government does not favour the jute mills' plan to restrict the output of sacking, the announcement that a delegation from the Indian Jute Mills Association is to visit Australia will provide the friends of this industry with heartening evidence that restrictionism is by no means the only weapon in its armoury. Australia is an important market for Indian heavy jute goods and the falling away of Australian purchases since the stockpiling of 1950-51 has been an important factor in the anxiety that has been felt about this line of the mills' production. The route to Australia runs through several other heavy goods markets which have lately reduced their buying, and so useful enquiries might be made along the way. The delegation is to consist of Mr. J. G. Walton, Deputy Chairman, Mr. D. P. Goenka, Vice-Chairman, and an official of the Government of India. Delhi has been asked to lend an official for the purpose though no decision has yet been taken as to who it will be. These gentlemen will be leaving India about the middle of this month. Their tour of Australia will not have quite the same object as the successful North American mission last year, being more concerned with investigating the cause of the decline in Australian purchases than with publicising jute goods to consumers who have gone over to substitutes. So far as is known, the Australians have not taken to using other forms of packaging, but the progress made by bulk handling might explain part of the decline. To the extent that it does, the process might be irreversible for I have heard it said that the advantage of bulk handling in countries where labour is expensive and not over-energetic, as is notoriously the case in Australia, is the saving in wages, alongside which the greater or less cost of packaging materials is an unimportant factor. However these are matters on which the delegation will be able to tell us more after their tour, which will be another step toward bringing the jute industry into closer contact with its consumer markets.

Dealings with Communist States since 1947 have made us chary of accepting conciliatory approaches at their face value, especially when the overture is restricted to an expression of willingness to discuss this question or the other. The Communists have already shown what use they can make of time spent in discussions. A month or two of détente is probably what the Russians need most now that Stalin is dead, while his successors are settling down in Moscow and (much more important) confirming their hegemony over the satellites. A show of compromise in Germany and even some small concession in Korea would purchase just the space of time they require before turning on the heat again. The shooting down of British and American planes in Europe soon after Stalin's death was taken as a sign that the first movement of Soviet policy would be in the opposite direction, but it now seems clear that those events were misinterpreted. What had probably happened was that Soviet border forces were alerted against the possibility of the West using the momentary confusion that followed Stalin's death to launch an attack; with sentinels at the Iron Curtain jump and suspicious, the least transgression of air space was bound to lead to incidents. The present phase of friendliness is perhaps a truer reflection of immediate Russian needs, but it would be excessively sanguine to conclude that from here on the tension will continue to decline.

The amalgamation of Tollygunge Municipality with the Calcutta Corporation, which took effect yesterday, might result in some improvement in

A DITCHER'S DIARY

that much neglected area—not that the Corporation has such a brilliant record but any change in the administration of Tollygunge could only be for the better. A depressing combination of rural primitiveness with urban squalor has frustrated efforts to make Tollygunge what it so easily could be, the most attractive suburb of Calcutta. The first concern of the new administrators will no doubt be for the large number of refugees who have settled there, and for the pitiful condition of the roads. A good part of the sixteen lakhs of rupees set aside for road repair and construction could be devoted to the main entrance road to Tollygunge, not for the convenience of the members of the two clubs that lie at its nether end but because until the main artery of the district is in better shape Tollygunge will not be an integral part of the city. It may seem wrong to worry about the periphery as long as the centre of Calcutta is so deplorable a slum, but if healthier and more accessible suburbs were laid out some of the congestion of the town might be drained off. Until there is somewhere to move to, it will be impossible to do much about the filth and overcrowding of the nearer wards. That is another reason why it is a pity that the State Government has chosen to put up living quarters for Ministers in the grounds of Government House. Apart from the damage to the surroundings of Rai Bhavan, we will miss the opportunity to test an old axiom of local government, that when aldermen or ministers take up residence in a suburb there is an immediate improvement in civic amenities in their neighbourhood.

The death duties Bill has upset the stock markets more than one would have expected, seeing that it was known that the duties were to be introduced and seeing that we do not yet know what the rates will be. The exemption limit of Rs. 50,000 recommended by the select committee might indeed be lower than was hoped, but we cannot tell how serious that is until the rate imposed on estates of half a lakh is announced. The exemption limit is even lower in the United Kingdom—£2,000—but the rate levied on such small estates is nominal. If the Indian rates are roughly equivalent to the British, the duty payable on an estate of Rs. 50,000 will be Rs. 500, which does not seem much to get upset about. Naturally the rates on bigger estates will be heavier, and that brings me to ask whether something should be done in India to establish a counterpart to "Edith," the new company launched in London last month. The Estate Duties Investment Trust Company Limited, to give Edith her less familiar name, has been formed by insurance companies and investment trusts to assist private firms which have to sell shares or raid assets to pay death duties on the estate of a big shareholder. Though such shares may be excellent investments, they have neither a price nor a market and so buyers are sometimes hard to find. Edith will buy and hold them, having the facilities to assess their value and the prospects of the firm. The trust will hold shares simply as an investment; it will not undertake issues and there will be no intervention with management and no obligation to make a public issue. Thus there will be, for the first time, a definite market for shares in family businesses, a facility which will no doubt help arrest the annihilation of this form of enterprise by death duties. Organisation of a similar body in India would of course be much more difficult than in London, but since the Indian Government is willing to imitate other countries with a death duty Bill,

Indian private enterprise should be capable of imitating other countries with a defence against it.

I was rather rude last week about the winning entry in the international sculpture contest but now that many of my readers have also seen a photograph of the object (in the last issue of the *Illustrated Weekly*), I may revert to the subject. Like most laymen, I have been thoroughly intimidated by the browbeating tactics of modern art criticism and it is only with the greatest hesitation that I venture to declare anything the avant-garde is raving about to be junk, for fear that I be written off instantly as a reactionary lowbrow or whatever is the latest epithet for simpletons who like works of art to look like something. I am heartened therefore to have the moral support of Epstein, who has caused enough astonishment in the past to escape condemnation as a vulgarian. It appears that someone asked Sir Herbert Read what he thought about this latest product of abstract art, and he defended it saying that "this fuss is Epstein all over again". Someone else then incautiously asked Epstein, who thundered "It's Herbert Read all over again". The critics have at last seen the absurdity of all this abstract rubbish". Mr. Epstein then went on to propound the theory that the £16,000 prize money for the competition came from the Ford Foundation and this was why it went to a contraption of steel wire misnamed sculpture. "Engineers' money for engineers", he remarked acidly. Having thus decided that the whole thing is just another capitalist conspiracy, I suppose we can relax with our artistic consciences intact. It only remains to demonstrate that the Hungarian gentleman who smashed the exhibit in the Tate was an anti-capitalist enemy agent, and this little episode is complete.

Speaking of enemy agents, I suppose they have all noted the article in a recent issue of the *Financial Times* on the sales of children's comics. It included the passage: "It is believed that one or two of the children's comics have a circulation of over two millions. Nor are they read entirely by children. One national distributor claims that sales of comics are an accurate indication of troop movements."

The best book title I have seen so far this year (though I have not yet seen the book) is *The Black Market Yearbook for 1953*. It has been produced by one Mr. Franz Pick of New York and I gather from reviews that it is a comprehensive compendium of techniques of financial and commercial law-breaking, described in the foreword as "an unfortunate chronicle of thirteen years of illegal trading of currencies, gold, non-ferrous metals and steel castings". It must be very difficult to obtain reliable statistics on black market operations but Mr. Pick boldly ventures the estimate that in 1952, which was a record year for crooked dealing, the total volume of black market transactions in the goods mentioned above was \$12 billion. He has discovered several new varieties of off-colour sterling and takes the total to 69, of which, he says, 60 are "mostly legal", five are just plain legal, two are "mostly illegal" and two quite distinctly illegal. Some of these types of black pounds have interesting names: "diamond sterling", "hand-payments sterling", "satchel sterling" are samples. This singular Year Book is dedicated "to the legislators of sixty countries who, in order to maintain the fictional values of paper money, government bonds and gold, are the real promoters of black markets."

Company Meetings

THE CENTRAL BANK OF INDIA LIMITED

SIR HOMI MODY ON THE ROLE OF SCHEDULED BANKS UNDER THE FIVE YEAR PLAN

Speech delivered by Sir Homi Mody, Chairman, at the Forty-second Ordinary General Meeting of the Bank on Thursday the 26th March, 1953.

Gentlemen,

The year under review closed on a somewhat hopeful note. The danger of the Cold War developing into a clash of arms seemed to have receded and the financial outlook in most countries became a little more reassuring. Owing to the Presidential election, there was no major change in American economic policy which largely governs business and industrial trends in the world of today. The countries of Western Europe and the British Commonwealth were able, on the whole, to reduce the gap between their receipts and payments on international account, but this, it must be said, was achieved largely by restricting imports and not by any far-reaching changes of a permanent character.

Economic conditions in India during the year showed on the whole a greater improvement than at any time in the postwar period, notwithstanding the persistence of a rather weak undertone in commodity prices. There was a sizeable increase in the stocks of foodgrains available with Government, the rising trend of industrial production was well maintained and the inflationary forces which bedeviled the economy for a long period were at last brought under control. On the food front, the apprehensions created by measures of decontrol were found to be exaggerated and some progress was made towards the restoration of normal conditions.

Production in all the major industries, including textiles—which were adversely affected for some time because of shortages of raw cotton and jute—recorded a notable increase during the year. The Engineering and Tea industries, alone among major producers, showed a fall in their output. Some of the industries were faced with a new problem in the shape of reduced off-take and accumulation of stocks towards the end of the year, but it was not very serious.

The operations of the scheduled banks, because of the new monetary policy adopted by the Reserve Bank in November 1951, when the Bank Rate was raised and open market operations stopped, were on a restricted scale. The position may be summarized by comparing the main data at the end of 1952 with those of the corresponding period of the preceding year:

	Dec. 28, 1951	Dec. 26, 1952
(In crores of rupees)		
Deposits ...	869	848
Advances, loans, etc. ...	554	485
(% of deposits) ...	63.8	57.2
Investments ...	307	323
(% of deposits) ...	35.4	38.1

The most significant change was the reduction of Rs. 69 crores in the volume of loans and advances. By comparison, a fall of 21 crores in deposits may be regarded as significant. It may be noted that this reduction took place wholly in demand liabilities, time liabilities actually showing an increase. From the relative position of bank loans to deposits, it appears that it was not so much the position of liquid resources, as the prospects of utilising them profitably in loans to trade and industry, which was the main problem of banks during the year. The improvement in investments was almost wholly due to Treasury Bills which were not on offer in 1951.

Demand for Credit

In the busy season following the introduction of the new monetary policy in November 1951, the chief problem of the banks was the procurement of resources for meeting the demands of credit-worthy borrowers. Thanks to the efforts made by the Reserve Bank for developing a bill market, scheduled banks were, however, able to meet this demand comfortably. In the present busy season, the demand for credit seems to have considerably weakened. Compared with an increase of about 100 crores in bank credit in 1951-52, the increase over the slack period which has taken place during the current season, which is not yet over, is only of the order of 46 crores.

The Five-Year Plan which was published towards the end of the year should have a vital bearing on the operations of scheduled banks and their policies in the years immediately ahead. If the programme of development involving an overall expenditure of Rs. 2,669 crores in the public sector is executed, according to schedule, there should be a substantial increase in general economic activity such as would create opportunities for a large volume of business by the banks. The Planning Commission does not make any estimate of the total increase in short-term credit which the rising tempo of economic activity would need, but the requirements of the private sector of industry have been placed at Rs. 150 crores. This is the additional working capital which industry would need by the end of the Plan, and it would be mainly the responsibility of scheduled banks to provide it.

The Planning Commission recognizes the important role which the banking system of the country must have to play in the provision of short-term credit. It is, however, apprehensive that banks, if they are guided by the profit motive, may not be able to extend credit facilities for those schemes to which the highest priority has been accorded in the Five-Year Plan, and the Commission goes on to say that:

"The process of economic development, once started, will make new demands on the banking

system, and this may necessitate changes in organization and structure... The proper discharge of its functions by the banking system will necessitate its operations more and more in the light of the priorities for development indicated in the Plan and less and less in terms of returns on capital. The banking system—and in fact the whole mechanism of finance including insurance, the Stock Exchanges and other institutions concerned with investment will thus have to be fitted increasingly into the scheme of development visualised for the economy as a whole."

With a view to ensuring that lack of short-term credit will not hamper the development programmes set out in the Plan, the Planning Commission desires that the Reserve Bank should exercise a direct control over its operations. What the nature of this control is to be is not, however, indicated. Taking into consideration the fact that scheduled banks in India have so far fully responded to the directions they have received from the Reserve Bank and have actively co-operated in carrying out its general policy regarding credit, there does not appear to be any need for the Reserve Bank to exercise any additional control over securing the flow of credit necessary for the execution of the Plan.

Future developments in this connection will be watched with a great deal of interest, and not a little anxiety, in view of the unfortunate utterances of some of the Ministers of Government when the Plan was debated in Parliament. They appeared to suggest that substantial changes were necessary in the structure and organization of Banking and that they had a more positive policy in view than what the Planning Commission had recommended. Such statements raise doubts about the measure of acceptance by Government of the role of private enterprise in the execution of the Five-Year Plan, and considering the way in which the banking system has been serving the country, talk of intensified control can only be characterised as unfortunate and uncalled-for.

Budget Proposals

Before I close this review, I would like to say a few words about the Budget presented to Parliament a few days ago. The proposals this year seem to be generally in consonance with the emphasis placed on the formation of capital in the Five-Year Plan, and there has not been any material change in the range or level of different taxes. If the country is to be in a position to develop anything like the full extent of its resources, it is obvious that conditions have to be provided for savings in every sector of its economy. To create a position in which the nation is reduced to living on past savings, would be to stunt its growth and incapacitate it from attaining a higher standard of life, which can come about only through greater productivity and the ability to save and invest. A feature of our economy which has not received the attention it deserves is the pace at which Governmental spending is mounting. It is a factor which may not be peculiar to India; the essential difference lies, however, in the stage of industrial development reached by this country, compared with the conditions obtaining amongst the nations of the West.

One of the important proposals made by the Finance Minister in his speech relates to the appointment of the Taxation Enquiry Commission, under the Presidency of Dr. John Mathai, to make a thorough investigation of the present system of taxation at all levels and to make recommendations for the future. It may be hoped the Commission will be able to evolve proposals calculated to increase the volume of savings and capital formation and to sustain the basic incentives for increased production.

Turning to the Directors' Report and Statement of Accounts, I shall first deal with the special factors which prevailed in 1952 and which generally affected the business and profits of Banking institutions.

The dearer money conditions resulting from the raising of the Bank Rate in November 1951 and the disparity between Indian and British interest rates, coupled with the policy pursued by foreign banks of financing their business with local funds to a greater extent than before, led to mounting pressure on available funds. This resulted in a general rise in deposit rates and consequent increase in the cost of working capital. For call and short-term deposits, the rate went up to as much as 3½ resulting in a material change in the pattern of deposits as compared with previous years. Call deposits, so to speak, became the order of the day. The rising deposit rates, in the case of some of the larger banks was reflected in an appreciable increase in the interest paid on deposits, although the aggregate total of the deposits stood at a lower figure, as compared with the previous year. To make the position worse, the sharp and precipitous fall in the prices of commodities in March 1952 caused such hesitation and nervousness on the part of business men as to prevent them from launching out into fresh commitments. In consequence there was an appreciable drop in the Advances and Bills business of banks. The lower level of activity, at times, meant the nursing of capital borrowed at higher cost.

On the investment side the set-back was of a more serious nature. On the working funds locked up in Government Securities the Bank had to pay at times a higher rate of interest than what the Securities earned. The case of banks with large investment portfolios—which it was not possible to reduce on account of the prevailing unfavourable rates—narrowing of margin even to a small extent was enough to make a substantial difference in the final ward trend in the banks and materially affected the figures of net profits.

From the Statement of Accounts presented to you, you will see that the result of the Bank's working during the year yielded a net profit of a little over Rs. 1 crore which, when compared with the figure of the previous year, shows a drop of about Rs. 2½ lakhs, though the gross earnings during the year showed an increase of Rs. 6½ lakhs.

By reason of the deposit rates being higher during the year, the amount paid by way of interest on our deposits and borrowings was higher by Rs. 17 lakhs, though the total deposits and borrowings dropped by over Rs. 7½ crores.

The Advances and Bill business of the Bank showed a decrease of Rs. 5,81,00,000 as compared with 1951.

Establishment charges went up by a further Rs. 13,62,000 during the year under review. An idea of the enormous increase under this head can be had from the fact that during the last three years there has been a rise of as much as Rs. 58 lakhs due to the implementation of the Sec. Award, and even after it was set aside, on account of our having to continue the salaries and allowances as required by the provisions of the Industrial Disputes Act of 1951.

As you may be aware, another Tribunal was appointed last year, to which scales of pay and allowances and other such matters were referred by Government. The Tribunal had prolonged sittings and their Award is now awaited.

This is an appropriate place in which to refer to the question of Bonus paid to the staff. The payment of Bonus depends on the available surplus left over out of the net profits of the year, after making provision for taxation, dividends to shareholders, depreciation in Securities and other contingencies. After the Directors was not sufficient to enable them to sanction a higher amount than one month's salary, to two months' salary as Bonus. The Management hearing on the subject from the published statements of the last ten years. This helped to allay the misapprehensions which had been aroused and there was a greater disposition on the part of the staff to accept the inevitable.

In determining the quantum of Bonus to be paid out of the available surplus, an important factor is to be taken into consideration, and that is the total charges, there has been a substantial increase in the amount required for paying Bonus. In previous years, not only were the profits higher but the salary bill stood at a lower figure. The position in the way of Bonus has been that a larger amount was paid by equivalent of 4½ months' salary was paid to the staff.

In the Chairman's Speech last year, reference was made to the fall of Rs. 3,15,00,000 in the market value of our holdings. At the end of 1952, the difference between the book and the market value widened still further, and after providing for Rs. 35 lakhs out of the Rs. 3,54,00,000. As pointed out at the figure of the year, on the maturity of the Securities in our Portfolio, the difference would not only be wiped off, but according to our reckoning, there would be a surplus of Rs. 1,00,00,000 in our investments of over a crore of rupees. In the meantime, we are keeping a close watch on the position and everything we can to reduce our commitments whenever an opportunity offers itself.

A Branch in London

Shareholders will be interested to know that we decided to open a Branch of the Bank in London. We have been successful in securing premises at Fenchurch Street, which is one of the most prominent localities from the banker's point of view. Vacant possession is expected to be given in the month of June, when the Branch will begin to function. We have appointed Sir Cecil Trevor, Retired Deputy in London, and we have every hope he will be able to develop whatever possibilities there are of business in the London market.

The times are difficult and a heavy and ever increasing burden is thrown upon those in charge of the affairs of the Bank. To Mr. Captain who, apart from his normal responsibilities, is bearing the burden of the representation of the Bank's case before the Tribunals appointed from time to time, to Mr. Karanjia, our Manager of Branches, to Mr. Cooper, our Secretary and to our Local Committees at the various centres, I would like to convey our sincere thanks for the sterling work they have been doing for the Bank. I would also like to extend to all members of our Staff at the Head Office and at the Branches that, in time to come, there will be a more active realization of the close identity of interests between all who are working to advance the interests of this institution.

I shall conclude on a personal note. It is due to the generous gesture of Mr. Dinshaw Romer that I find myself back in my place. He had been serving as your Chairman for over three years with wholehearted devotion and there was no reason for any change in the direction at the top, but he insisted on my getting back into the position I occupied before I left to assume other responsibilities, and as I can say, I hope I may be able to justify the confidence placed in me by him and other members of the Board. I am sure I am voicing your feelings in conveying to Mr. Romer our warm appreciation of his services to the Bank.

I have now pleasure in moving the adoption of the Report and Audited Statement of Accounts.

The Government of India has decided to continue for the quarter April-June 1953 the controlled varieties of cloth and for all varieties of yarn the controlled varieties of cloth to be respective varieties during the quarter January-March 1953.

THE UNITED COMMERCIAL BANK LIMITED

MR. G.D. BIRLA'S NINE FUNDAMENTAL POINTS FOR PROSPERITY

REPLACEMENT COSTS AND DEPRECIATION ALLOWANCES

Speech delivered by Shri G. D. Birla, Chairman of The United Commercial Bank Ltd., at the Tenth Ordinary General Meeting of the Bank held on 26th March, 1953.

Gentlemen,

I have great pleasure in welcoming you to our Tenth Annual General Meeting. The Balance Sheet and Profit & Loss Account of the Bank have been in your hands for some time.

The deposits of the Bank at the close of 1952 stand at Rs. 30.88 crores as compared to Rs. 29.58 crores at the end of 1951 showing a small increase of Rs. 1.30 crores. You will be glad to know that although there is a small recession in deposits of scheduled banks, your Bank records some improvement.

Cash in hand and balances with banks stand at Rs. 6.83 crores. This gives a ratio of over 21% to deposits, against 17% at the close of 1951, showing considerable increase.

Investments

Investments of the Bank stand at Rs. 14.81 crores as compared to Rs. 12.13 crores at the end of 1951. The ratio of investments less amounts borrowed thereagainst is 45.8% against 33.5% at the close of 1951. Cash, balances with banks and unencumbered investments in the aggregate amount to Rs. 20.79 crores as against Rs. 14.66 crores at the end of the previous year. The ratio of these assets to deposits has improved from 50.6% to nearly 67%. The Bank's investments appear in the Balance Sheet at or below market value at the end of December 1952. The policy of your Board in the matter of investments continues to be to put the Bank's funds in government securities having low risk.

The amount of bills purchased and discounted has gone up from Rs. 421 crores at the end of 1951 to Rs. 507 crores at the end of December last. These assets form 16.4% of the Bank's total deposits. You will notice that the Bank's business in bills has been continuously expanding.

Foreign Exchange Business

Foreign Exchange business continues to form a prominent part of your Bank's business. The amount of foreign bills, acceptable stands at Rs. 2.75 crores against Rs. 2.46 crores at the end of 1951. The amount of letters of credit opened and guarantees given on behalf of Bank's customers has, however gone down from Rs. 10.15 crores at the end of 1951 to Rs. 5.91 crores at the end of 1952. India's restriction policy in the matter of imports has led to a pressing need for purchase of foreign cotton and lower values are responsible for fall in this figure. Your Bank, however, continues to get a fair share of the available business.

Your Bank has global arrangements to handle directly, speedily, efficiently and cheaply foreign exchange business with all parts of the world. I invite Government, merchants, industrialists, exporters and students increasingly avail themselves of your Bank's service in the matter of remittances to foreign countries, opening of Letters of Credit and financing of imports and exports.

Advances of the Bank show a substantial fall, from Rs. 13.70 crores at the end of 1951 to Rs. 9.11 crores at the end of 1952, the reduction being of the order of Rs. 3.59 crores. The ratio of advances to deposits has come down from 46.3% to less than 30%. The combined total of advances and bills has fallen from Rs. 17.92 crores to Rs. 14.18 crores, a fall of Rs. 3.74 crores or nearly 21%. The percentage of advances and bills to deposits has come down from 60.6% at the end of 1951 to 49% at the end of 1952. The primary reason for such a sharp fall in the value of the Bank's lendings is fall in the values of India's commodities and exports and diminished demand for credit from trade and industry. The diminution in your Bank's lendings, to such a large extent, however, exemplifies in a tangible manner the selfliquidating nature of your advances. But shrinkage in such assets of the Bank has adverse effect on earnings.

High Liquidity

The liquidity of the Bank's business continues to be very high. The total of the liquid assets viz. cash, bank balances, unencumbered investments and bills purchased and discounted comes to Rs. 25.85 crores which is nearly 113% of the Bank's demand liabilities as represented by current and savings bank deposits and bills payable amounting in the aggregate to Rs. 22.88 crores. The ratio of these liquid assets to total deposits and bills payable, amounting to Rs. 32.62 crores, is 79.2%. In both these respects the Bank's liquidity is far greater than what it was last year and is actually much more than what is necessary. But during uncertain and difficult periods of business, prudent Directors think it prudent to follow an extremely cautious policy of giving primary importance to safety and liquidity of Bank's money and to assign secondary place to lendings or higher income available therefrom.

The profit of the Bank for the year 1952 is Rs. 28.54 lacs. This is lower than the previous year's profit. Principal reasons for fall in profits are: (1) shrinkage in the Bank's lendings principally due to fall in prices to which I have already referred; (2) increase in the rates of interest on deposits with little or no corresponding increase in the rates of interest earned on Bank's advances and investments, the latter having been bought during periods of low yield on Govt. obligations; and (3) increase in establishment expenses due to tribunal awards and absence of freedom to retrench staff or to close down unremunerative branches of working. We are trying to overcome the first factor by encouraging new acceptable business. Lowering the rates of interest on deposits, however, requires greater co-operation among banks. In this connection I may mention that these rates are greatly disturbed by foreign banks offering higher rates than are warranted by their

available on domestic bank loans and investments. By way of illustration I may mention that before Bank of England raised its rate of interest foreign banks in India for years continuously used to pay a maximum of 1% p.a. on call loans, but after increase in the British Bank rate, they offer 3% p.a. for call loans and call deposits. This has not only led to substantial all round increase in rates of interest on deposits in India, but even diverted large sums from interest free or very cheap current deposits to costly call deposits. In the formulation of their policy on rates of interest on deposits these foreign banks are perhaps influenced by the fact that bringing in funds from their parent offices for employment in this country costs them now more, because interest rates have gone up in their countries of origin. But obviously foreign banks cannot be allowed to disturb domestic monetary conditions. Some of the big exchange banks have also entered the field of savings bank deposits offering higher interests than the big Indian banks can give. This competition is keenly felt by small banks. The Reserve Bank as a custodian of national financial policy should look into this question and if necessary use its wide powers under law to enforce necessary correctives. With regard to the last factor, the establishment expenses, the matter is under investigation by the Industrial Tribunal for bank disputes. Banks are unable to bear the increasingly onerous burden of expenses imposed upon them by earlier awards. The general fall in bank profits must convince the Tribunal that the era of high profits, which induced excessively liberal awards, has come to an end and that banks cannot afford to continue them. Banks have a very important role to play in the expansion of the country's economy. They are unable to do under the present conditions. They must have freedom to regulate their expenses according to their earnings.

Diminished earnings of banks also call for co-operative action on the part of banks to study and jointly take decisions as to how to improve the position of profits. Banking is the only industry in which the pre-war rates for services still continue to operate in spite of substantial increases in interest rates on

MONEY MARKET

deposits and working costs. No branch of economy has to face greater brunt of monetary and economic crisis as banking. It is therefore imperative for banks to maintain their earnings in a very healthy condition, so as to absorb the effect of such crises and of weaknesses in borrowers and investment markets resulting therefrom, without endangering their safety and services. This question of adequate earnings is of much greater importance in the case of small banks and small branches of big banks, which are vital to the introduction of banking in the countryside, a fresh and expanding field of new savings, so necessary for the development of our economy and the fulfilment of the Five Year Plan. The Reserve Bank as the custodian of banking safety and banking growth can also take initiative in this matter.

Appropriation of Profits

Including the amount brought forward from 1951 the amount of profit available for 1952-53 is Rs. 30,24,74,000. Out of this, the Directors have already disbursed Rs. 3,73,614-5-4 as ex-gratia payment to staff, appropriated Rs. 7½ lacs to the Reserve Fund, which is of the same order as last year, and provided Rs. 10 lacs for taxes. The balance available after these appropriations, is Rs. 9,01,11,92-0-0. The Directors have already recommended to you in their Report to sanction payment of dividend at Rs. 2 per share, same

as last year, leaving Rs. 1,01,119-2-0 to be carried forward to the next year's account.

During the year 1952, the Bank opened its branch at Hongkong. During the same period, we closed our office at Palwal near Delhi. Sanction of the Reserve Bank of India, as required by law, has been received to open a branch of the Bank in London. Arrangements for opening the London Branch have been taken up in hand. Premises have been leased in Fenchurch Street in the heart of the Banking area of the City of London. It is hoped that this branch will start functioning within the coming few months.

In connection with opening of new branches by banks in India or abroad I wish to suggest that there should as far as possible be avoidance of duplication of efforts. It happens at times that when a bank has successfully established its branch in any place, another bank tries to rush to the same place and take advantage of the pioneering spade work of the earlier bank. The Reserve Bank should discourage such attempts by effectively using its powers and refusing permission in such cases. This should be particularly observed in the case of the Imperial Bank which on the basis of its privileged position enjoys unduly great competitive power. It is true that as a result of the recommendations of the Rural Banking Enquiry Committee, it is required to open many new branches, but these need be only at such places as lack reliable and sufficient banking facilities. Unless ordinary commercial banks can be sure of being safe from such unwarranted and privileged competition, they cannot afford to venture in small places which have just sufficient field for one bank and no more.

Bank Completes Ten Years

During this first decade of its history, the Bank has built up large volume of banking business, total working as disclosed in the last balance sheet being of the order of Rs. 45 crores. The Bank has a network of 90 branches spread in seven different countries. It has arrangements with over 55 leading foreign banks in all the continents of the world for exchange business to its foreign branches. We have over 1,00,000 accounts on our books. The Bank's customers consist of several governments, including our own, many public bodies like Municipal Corporations, Improvement Trusts, Port Trusts, Government Corporations, Universities and a large number of industrialists, merchants, exporters and importers and the general public. Such a varied list of clients from the biggest to the smallest, some of whom are highly discerning and selective in choosing their bankers, speaks volumes for the great confidence your Bank enjoys. I take this opportunity to convey to every one of the Bank's customers, our sincerest gratitude for their trust and patronage.

Your Bank's contributions to the national economies and employment of the countries in which we work are substantial. The Bank's total net earnings on its exchange business, commission and miscellaneous receipts from inception to the end of the tenth year, December 1952, amount to Rs. 782 lacs. Out of this the Bank has paid Rs. 342 lacs to our employees by way of salary, allowances, contribution to Provident Fund, bonus and ex-gratia payments. This accounts for 42% of its net earnings. The number of people in the Bank's employment exceeds 2,200. Other expenditure has accounted for Rs. 190 lacs, total expenses for working the Bank during these ten years, thus coming to Rs. 532 lacs or 68% of the total net earnings. Out of the balance of Rs. 249 lacs, we have built up a Reserve Fund of Rs. 75 lacs, paid Rs. 78 lacs by way of taxes, provided Rs. 50 lacs for depreciation on investments, written off bad and doubtful debts amounting to Rs. 2 lacs and paid as or provided for, dividends to shareholders Rs. 43 lacs. The balance of Rs. 1 lac is undistributed profit carried forward to the eleventh year's account.

These ten years have not been free from difficulties. There was partition of the country necessitating closing down of many branches of banks. Pakistan involving heavy losses. There has been heavy drop in the price of securities and investments. Last year prices of goods and commodities suddenly came down involving businessmen in appreciable losses. Your Bank has come out unscathed from all these big crises. Due to the foresight of your Board and management, adequate precautions were taken to protect the Bank from the adverse effects of such catastrophic happenings, which brought about collapse of many a small and medium sized bank, crippled several banks and involved even some old and bigger banks in huge losses, in some cases equaling their reserve funds. Throughout this period your Bank has been considerably expanding its activities both in India and abroad. Today it ranks amongst the first big five banks of the country out of a total of over 500 banks registered in India with Nuncer One status among Indian Banks in the field of international banking.

New Features in Service

We have introduced additional important features in the field of banking service. We are the only commercial bank in the country which has a regular and well equipped economic and statistical section engaged in the work of studying economic and financial questions. The Quarterly Review published by this division of the Bank is in demand from banking, financial and public institutions all over the world. Special studies conducted by your Bank on commodities like jute, tea, mica, etc., long felt need for knowledge and systematised information of economists, businessmen and bankers. Again your Bank is the only institution of its kind in the East which has a staff training centre of its own. These activities as well as a programme of expansion of branches involve large expenditure, which is met from current revenue. But they are good long term investments, results of which should increasingly accrue to us in the future.

Looking to the size and range of our Bank's developments, we have every reason to be gratified and proud of our phenomenal progress in a short period of first ten years. This is a unique and unsurpassed record not only in the banking history of India but even in the banking history of many other countries.

For the splendid performance and progress of the Bank, I must specially congratulate your General Manager Mr. B. T. Thakur who has ceaselessly worked, without a 'single day's leave or holiday' for the last ten years to build up this bank. His is an example of an extraordinarily high sense of duty and devotion to work and singleness of purpose. His one aim in

Life has been to build up a first-rate international bank for the country. In him we have one of the ablest bankers of the country enjoying great international reputation. In the task of building up your Bank he is ably assisted by his colleagues, Mr. S. T. Sadashiv, Deputy General Manager and Mr. R. B. Shah, Chief Accountant of the Bank. The Regional Manager for South East Asia Mr. J. P. Sen Gupta has done splendid work for the Bank in the territory under his charge. From this year another post of Regional Manager of Western India has been created and Mr. O. H. Gheewala, Mr. Bombay Manager has been promoted to this post. As your Bank grows in size and work, your General Manager suggests to your Board the creation of more regions for quicker disposal of work and adequate service to your Bank's clients. To our General Manager, his associates and all other employees of the Bank, I convey our sincere thanks for their untiring efforts in building up the Bank.

Money Conditions

Although the year 1952 started with difficult monetary conditions which persisted for several months during which even seasonal credit requirements could only be met by the Indian banking system by resorting to large scale borrowing from the Reserve Bank, things greatly improved by the mid-year and this improvement was maintained right up to the year-end. The ratio of advances and bills to deposits which stood at 64.1% at the end of 1951 went up as high as

cause its economy mainly depends upon the production and export of rice and on account of the world shortage the price of rice instead of coming down actually went up to over £80 a ton, which brought that country badly needed more money for the strengthening of its defences and to rehabilitate its war-torn economy.

The food situation in the country was much easier which induced the Government to allow relaxation in food controls. Productions of cotton and jute, essential raw materials for India's fabricating industry, which play such important role in the country's export trade, show substantial improvements bringing India nearer to self-sufficiency. Production of manufactured goods such as, cotton textiles, jute goods, sugar, cement, coal, paper, iron and steel and chemical shows appreciable increase. The index number of general industrial production improved from 117.2 at the end of 1951 to 128.7 at the end of October 1952.

Future Outlook of Production

There is some apprehension as to how far these improvements would be maintained, particularly in view of the lower purchasing power due to fall in prices, and the increased competition for exports in the overseas markets. If economic forces are not artificially interfered with by law, and wages, taxes and other elements which make up cost of production are allowed to adjust themselves to the price which buyers can pay, there is no reason why India's industries

Crone=10 million. (a) of scheduled banks. (b) of scheduled banks : excluding foreign bills. (c) including "Borrowing from Banks". (d) October 1952.

71.5% in March 1952. This ratio came down to 55.4% on 28th November and reached 50.4% at the end of 1952. Unlike 1951 there was no absorption of advances but on the contrary there was much larger repayment due to substantial realization of debt made by banks in 1951. But in spite of such great shrinkage in banks' lendings the scheduled bank deposits show relatively very little fall. Such behaviour of deposits and advances probably indicates diminution in the absorptive power for hoarding money in the country.

Investment Trends

The statements and graphs attached to this speech will show the changes that have occurred in the financial system. After many years of continuous fall in price, Government of India securities show a fractional improvement, the index number rising from 92.0 at the end of 1951 to 92.3 at the end of 1952. But index numbers of other investments whether paying fixed or variable dividend still continue to fall, the former coming down from 94.1 to 90.6 and the latter from 121.5 to 104.9. The slight betterment in the value of Government bonds is due to fall in loans of commercial banks and consequent increase in their investible funds, large investments of insurance companies which by law are required to have 60% of their funds mostly in Government loans, and to demands of investment by many provident funds which industries are now required by law to introduce for the benefit of their employees. Excluding these special classes of investors tied to investment in Government bonds, there seems to be diminution in demand for investments. The index number of ordinary shares is now very much below the pre-war figure, in spite of very large increase in the replacement cost of industrial machinery, plant and building.

Capital for Replacement

At the last Annual Meeting I also referred to this question of capital formation and discussed factors which militate against expansion of savings. There is no need to refer to them again except to remind you that with the annual wear and tear of industrial facilities installed at low pre-war costs, the question of replacements at present high costs, and absence of savings with which to buy new equipment, the depreciation funds built up on the basis of original cost being grossly inadequate, we are fast approaching a situation where solution of this fundamental and basic problem can no longer be delayed without serious risk to our national economy. According to the Employers' Association, Calcutta, the total amount of money needed by the Indian industries over and above the regular depreciation allowance and the requirements of new plants installed in postwar years, for the purpose of renewal and replacement, will be at a minimum of Rs. 600 crores. This has to be found somehow, if our industrial production has to continue unchecked.

The year 1952 is notable for convertence a sellers' market into a buyers' market. The break in prices first occurred in February when the index number of wholesale prices which stood at 431.1 in December 1951 fell to 415.8 and further came down to 367.1 in the month of May. Since then it has fluctuated within a narrow range standing at 372.7 at the end of December last. The index number of raw materials is also 25% lower. This phenomenon of falling prices is not peculiar to India alone but common to most of the eastern countries which mainly subsist on agricultural economy. It is a very serious matter for them, and creates many economic and political problems. The cost of living index number has however increased having gone up during the first ten months of the year from 314 to 329. This is mainly due to food prices which enter to the extent of about 50% in the preparation of the index, when on account of world shortages have gone up and also partly due to time lag in lower adjustments of retail prices. It is hoped that this trend will be reversed this year.

Burma's Economy Better

Burma where your Bank has large flourishing business is an exception to this general statement be-

ECONOMIC TRENDS

should not continue to expand. The only factor which can interfere with cost and volume of industrial production is inability to replace worn out machinery due to lack of funds increasing unemployment, increasing competition for our products in external markets and increasing buyer resistance due to falling incomes in the home market, are fast leading to a situation where, it is hoped, inescapable necessity will compel Government, industrialists and workers to solve all outstanding economic problems in a spirit of commonsense and realism, so that through hard and efficient work we may lower production costs to what the buyer can pay, without reducing wages.

Five Year Plan

The most important economic event for this country which took final shape last year is India's Five Year Plan. I welcome the Plan because it is a document which gives a concrete shape to the earnestness and determination to grapple with the problem of Indian poverty. There could be no stability in a democracy if its people do not have sufficient to eat and to clothe themselves and have houses to live in. It is a challenge to everyone of us; and it invites each and every member of society to put his shoulders to the wheel of progress, and to strive hard to translate the programmes of the plan into actual achievements.

Out of Rs. 2,069 crores, the estimated cost of the Plan, Rs. 630 crores have already been spent and only Rs. 1,438 crores are still to be spent in the remaining three years, i.e. upto March 1956. I do not attach much importance to the ways and means by

which this money is proposed to be raised. People may criticise the details and express doubts about the availability of finance from this or that source. But this is all meaningless. Whether the money is to be found from external assistance or from revenue or by raising loans or by deficit financing is immaterial. What is material is that the nation has decided to spend this much money through the public sector and therefore it must be found. Instead of wasting our time over the Plan's minor details we should look to its fundamental importance and do everything possible to make it a success.

Not a Plan

I do not call this document a Plan, because Rs. 2,000 and odd crores to be spent on the Plan is nothing more than the capital budget of the Government up to 1956. A substantial portion of this expenditure is proposed to be devoted to agriculture and irrigation which will absorb just a little less than 50 per cent of this total proposed budget. Another 25 per cent is allocated to transport and communications and the rest towards social services and industries. It is thus clear that this is not an all-embracing plan comprising all the total schemes which the Government will undertake on its own account during this period of five years and the size of its capital budget for the same period.

I am glad the Government have confined their task to the undertaking of a few economic programmes of basic and public character. No democratic Government, however powerful, can do the entire work of economic growth, requiring the all-out effort of the whole nation. All that a Government can do is to draw its own budget and for the rest draw the attention of the people to the urgency of the problem and ask them fully to mobilise their energies and resources for the completion of other programmes not undertaken by the Government. Government should also create the necessary congenial climate and conditions so that the total objective of economic growth may be achieved. In the final analysis it is the people who can build up economic prosperity whether through a Government plan or private programmes.

When the Plan is fully implemented, it will create enough food in the country and make us free from hunger and famines. It will improve transport and communications. The Plan will, in short, lay the foundation on which the upper storey of our economic edifice can be built. But we must make no mistake and think that the Plan represents the finality of our economic efforts. Much greater effort and work will be needed as soon as the foundation is ready. The Plan must be a never ending process. Although many have criticised the Plan as being too ambitious, I consider it as a modest beginning. This modesty does not weaken the Plan in any way, on the contrary it is the Plan's greatest strength.

Role of Private Enterprise

Excepting the three branches of economic activity, agriculture, irrigation and transport, reserved by the Government for its own work, it has left the entire field of economic enterprise to private effort. And this is a right thing that they have done. Government obviously cannot cover the whole field. It is the people who can undertake such a task. It is the people to the private sector—not just to the big industries but to the big, the small and the cottage industries—to plan for themselves in other branches, and show and prove by actual achievement their importance and usefulness. It will be a great misfortune if we just continue to criticise Government and punish holes in their Plan, and rest content with such criticism. Private enterprise owes a duty to itself, to the country and to the individual masses, to make the fullest contribution to the development of the branches of India's economy not covered by the Plan.

We often say that politicians have not enough experience of production and distribution. And we claim to have greater knowledge in this respect, it is simply clear—and the Prime Minister more so—that they seek co-operation of the private sector. He has country towards the Welfare State. In other countries private enterprise has delivered the goods. In this country too if we have to justify our position, we must follow suit.

When I talk of private sector, I have in mind all types of business and industrial undertakings from the smallest shopkeepers to the largest industrial producer. But in the context of my suggestion of planning by private sector, I may remark that at the present stage the preliminary work of study, survey and planning should be undertaken by the leaders of large-scale industry. They should sit down, examine the import list, and determine what categories of goods imported by India could be produced within the country. They should then estimate the quantities needed during them in the country. Once they have begun studying in this manner, they will find that there is considerable degree of interdependence in production; and that these interdependent functions in industry are taken up collectively, it will not be for instance, in heavy chemicals if we want to produce just one thing alone, say, Z, we cannot do so economically. We must produce along with it, if it has Y, Z, W, etc. depending upon its by-products for their these additional goods like Y, Z, W, etc. and therefore, the problem of utilization of by-products remains unsolved, making it impossible to manufacture even X, for which there is good demand. We come back where additional goods are due to absence of purchasing power, the means to buy are lacking. But once the task of production gather momentum, we shall find that new money for new things will automatically spring up. Money with which to buy, and many things that are needed today shall be needed tomorrow. It is not when and what should be done, how it should be done, what help we want from Government, and what sort of monetary and fiscal policies should be adopted to achieve the purpose of further and newer productions.

Mixed Economy

In considering these questions of productions by private sector, I must emphatically refer to one significant development in the economic relationship. The days of laissez faire are gone for ever. There is

no such things now as undiluted capitalism in the world; nor is there such a thing as undiluted socialism, excepting perhaps in totalitarian countries. It is something compounded of these two systems which we may call for the sake of convenience "mixed economy." The Socialist leaders in England have realised that they must not go too far or too quickly on the road of nationalization. Politicians in this country too have come to the same conclusion, through a process of trial and error. And if they have not realised it fully as yet, it is because the private sector, in spite of its making a great contribution to the economic growth through fresh investments of something like Rs. 500 crores, during the last five years, has not quickly fallen in alignment with the development of this new concept in national economy. We must so shape our policy and plan our actions that the people are fully convinced of our ability to "deliver the goods" even under new social concepts and conditions.

The days of criticism should now come to an end. Mutual recriminations should now be replaced by mutual understanding and mutual co-operation. Our one and only aim should be to create prosperity in the country on the widest possible scale. I hope that the business community will rise equal to the occasion and successfully take up the challenge to its ability and intentions.

In connection with the fore-going, I should like to place before the country and specially before the Government, industry and labour a few basic and essential truths for their consideration and acceptance. We must always keep these fundamental requirements before us and never lose sight of them even for a moment, if we are to achieve real advancement in our prosperity and diminution in our poverty. They are:

1. Prosperity of the people is the vital necessity and fundamental condition for the stability of a democratic society. There can be no difference of opinion on this point.

2. Hard work, as put forth by Japan and Germany in the post-war period, is the only way to prosperity. Slogans and speeches do not lead us anywhere. Reward is the greatest incentive force which will move men to work efficiently and hard. Reward does not mean reward to a few men; it must be broad-based, everyone participating in it according to his capacity and contribution. These principles of hard work, incentive and reward must be accepted by the Government, capital and labour. Labour and capital must work in harmony and realise that to a great extent they have an identity of interest. Capital must know that in accepting a Welfare State as the goal, they are not weakening but on the contrary are strengthening their own position. In a State where purchasing power is high, business prospers. Satisfied labour and contented society greatly enlarge scope and field for our work. It is enlightened self-interest to accept the change in social concept. Labour must also realise that without increased production their future is bleak.

3. Capital is only a synonym for resources and hard work. The harder one works to develop production, the greater is the capital formed. In this context, monetary system and discipline play very important parts. With all the resources and hard work, we may not achieve our economic purpose and production, because we lack the monetary discipline. The monetary policy, therefore, should be such as will promote "capital" viz. hard work and economic development. Those who talk of lack of capital in India seem to be insufficiently aware of how modern financial technique, sound financial discipline can work wonders. India, in my opinion, does not suffer from want of capital. It suffers because there is absence of conditions which will impel men to work. We must create such conditions and social climate in which all in their own self interest will work hard. But financial set up being an integral part of productive machinery, it is necessary to revise our ideas about finance, its structural organisation, and the mechanism of its working. The business community can assist in the tasks of improving financial organisations, whereby deficiency of capital will not be insurmountable.

4. The economic growth in a democracy, or for the matter of that even in a totalitarian regime, is not the responsibility of just a few men at the top in Government, but of every section of the society—the politician, the administrator, the labourer and the owner of capital. Without the fullest co-operation of all these people, extending over all fields of work, even the most cherished objectives become incapable of achievement. A crusade against poverty in which everyone joins and everyone does his bit, particularly those in charge of private enterprise, must be lessy launched if the objectives of prosperity and welfare state are to be achieved.

5. Economy largely based on agriculture, with population so large and continuously growing and individual holdings of land so small, as we have, can never provide full employment or create prosperity in the true sense in any country. The only way we can accomplish this is to shift 30 to 40 per cent of population from the farm to secondary and tertiary occupations. In other words, we can create full employment only if we build industries of all sizes—large, small, medium and big—in large numbers so as to create scope for new secondary and tertiary employment, which can absorb about 10 crores of our population, thereby making room for fuller employment of the remaining rural population presently insufficiently employed. Mr. Bovan, the Socialist leader, rightly remarked recently, "If India succeeds in changing over her economy to closer approximation to a modern industrial community under the aegis of democratic institutions, she will achieve what no other nation in the world has achieved."

6. If, for the sake of hypothesis, we estimate the existing industrial investment to be of the order of Rs. 2,000 crores with secondary and tertiary occupations already absorbing nearly 6 crores of the population, we must aim at investing another Rs. 8,000 crores in industry—some in the coming 10 or 15 years— which even with labour saving devices should give occupations to nearly half of the working population in secondary and tertiary jobs. We shall then get manufactured goods four times or more of the present quantity of production. To increase production to this level, Government too will have to increase its investments in the public sector.

7. We can provide capital on such a large scale and what is still more important, we can get deliveries of capital goods and tools to such a large extent, only if we produce these capital goods within the country. If we have to import capital goods of say, Rs. 4,000

crores (half of the new Rs. 8,000 crores investment will probably be the value of capital goods needed for such expansion) from abroad, obviously, we have no means to pay for them. Payment will be needed in foreign currencies, in which we are indeed poor. And so the ambition will remain unfulfilled. On the other hand, if we produce these goods ourselves within the country, we create simultaneously, along with the increase in wealth, new experience—and new employment even in the production stage.

8. It is true that for the accomplishment of such a large industrial task, both in the consumer and capital goods sections, we require know-how. We are bound to have difficulties in producing them without necessary technical knowledge and skill. But we should not exaggerate these difficulties. We can start by buying foreign experience and know-how in the early stages. India has already started producing complicated machinery by using foreign models and designs. At least 75% of the required capital goods can be produced in this country provided we have enough steel.

9. Steel being basic to all machine tools we must instal new plants to produce 2 million tons more of steel. This is the most urgent necessity. We must increase production in steel to this extent before 1957. Thereafter all steel plants, major portions thereof at any rate, should be manufactured within the country. To do this, we also need to instal capital goods producing factories. This is equally urgent.

I have tried to scan the horizon of our industrial needs and production so as to locate the goal that we have to reach, and reach within the shortest possible period. It is not correct to say that "time is gliding fast away." Time stands. It is we who glide fast away. Events do not wait for us. Therefore, we must start individually to work hard, and so march onward, quickly and steadily, to reach our goal. But in looking round and scanning the vast economic horizon, I do not do so as a visionary or a doctrinaire. No hard-headed businessman, even in his sixties, can suddenly become a dreamer even if he wanted to be one. When I say something big can be done, I say so on the basis of experience derived from production of different varieties of goods, and this too against obstacles and hindrances in the pre-industrial days, extending over four decades. If only the nation decides to work it shall move.

And after all what individuals like me can accomplish has its limits; much more can be accomplished by the whole people who are bigger and more powerful than individuals. This should indeed be easier now that we are in charge of our own destiny. But the first essential is that we must work with one voice and with united determination. We must once for all make up our mind to achieve really big things. It is only when a nation as a whole decides to march forward unflinchingly that it makes progress. If India is determined wholeheartedly to move forward, she shall move forward and nothing can stop her progress. But it is self-confidence, determination, single-mindedness of purpose and real hard work which alone can ensure this.

"WHAT IS YOUR CHEST MEASUREMENT?"

The wise planter measures value in terms of quality and rupees and always asks for ALBION TEA-CHEST PANELS because he knows that they have a good name in the trade.

ALBION PLYWOOD Manufactured to I. S. I. specifications from high quality timber. Durable construction in standard sizes. Manufactured under expert supervision.

West Pakistan

PAKISTAN GOVERNMENT'S
BALANCES SHRINKING
OUTLAY ON DEVELOPMENT SCHEMES
MAINTAINED(FROM OUR OWN CORRESPONDENT)
Karachi, 27th March.

THE general reaction to the Pakistan budget was that Mr. Mohammad Ali had made the best of a bad job. No one would pretend that there are many encouraging features in the situation facing the country during the coming financial year, but a pleasant surprise was at least afforded by the revised estimates for 1952-53: it is remarkable that, with so pronounced a fall in Customs revenue, the revised estimates fell short of the original revenue estimate by only Rs. 27 lakhs and that the year is expected to close with a small surplus. This was attributable mainly to an unexpectedly large contribution from the railways, which showed a surplus of Rs. 4.74 crores as compared with the originally estimated surplus of only Rs. 74 lakhs, and also to improved receipts under taxes on income and Central excise.

For the year 1953-54, Mr. Mohammad Ali had to face a contraction of revenue amounting to nearly 30 percent as compared with the previous year. It was no small achievement, in the circumstances, to have been able to budget once more for a nominal surplus, with the inclusion of new taxation proposals expected to yield no more than Rs. 5.88 crores. That the balance should have been achieved speaks well for the economy measures enforced by the Finance Ministry. The main economy, it has been observed with general satisfaction, comes under the head of "Defence Services" where expenditure will be reduced by over Rs. 7 crores. The "Miscellaneous" head of expenditure also shows a reduction of over Rs. 7 crores. Expenditure under "Civil Administration" is to be reduced by about Rs. 3 crores.

There is, however, a serious element of deficit financing in the capital budget, and it would seem that the "Ways and Means" position is going to cause considerable anxiety to the Government within the next two or three years. Capital expenditure is of course left uncovered by revenue and is defrayed from the cash balances inherited by Pakistan at partition, from foreign aid in its various forms, and from Government loans. There is, indeed, to be some reduction in capital expenditure in 1953-54, but the Government has nailed the flag of industrial development to the mast. At all costs, it seems, it is determined to press on with its programme, and, despite the critical financial situation, the provision on this account has been raised from Rs. 6.85 crores to Rs. 12.41 crores. There is some debate as to whether this represents an act of courage or a want of prudence. Most observers, however, agree that provided the capital outlay is incurred only on schemes of direct benefit and not on unremunerative projects which may be of economic benefit only in the long run, this bold approach is to be welcomed. It would have been a thousand pities if Mr. Mohammad Ali had felt bound to call a halt to the transition from an agricultural to a semi-industrialised economy, and the expenditure incurred now may well serve to reduce foreign exchange outgoings in a few years' time.

Nevertheless, the "Ways and Means" position, as a result of this policy, raises a difficult question for the future. Year by year the cash balances have been drawn down and the current year is expected to close with a balance of only Rs. 32.64 crores. The coming year will close with a cash balance of only Rs. 19.67 crores and this after taking credit for a fresh loan of Rs. 20 crores, which the Government hopes to raise, for foreign loans amounting to Rs. 7.69 crores, and foreign aid amounting to Rs. 8 crores. In other words, the inherited cash balance has virtually disappeared. What happens in 1954-55? The opening balance of Rs. 19 crores odd will hardly suffice even for capital expenditure on Defence Services. How is the Government going to continue to finance the industrial development plans, the hydro-electric and irrigation projects, etc., on which it will have started? No doubt a certain amount of foreign aid can be expected, but large development loans cannot be raised every year. Even if the difficulties of that year are successfully surmounted, what happens in the following year? It would be interesting to know the answers to these questions. No doubt the various concessions intended to stimulate savings and investments announced by Mr. Mohammad Ali will serve to swell investments in Government securities and savings certificates, but this can hardly be sufficient to solve the "Ways and Means" problem.

Foreign Exchange Reserves

The other main weakness in the economic situation of Pakistan, as revealed in the budget, lies in the sphere of foreign exchange. The gold and sterling reserves were reduced from Rs. 148.17 crores to Rs. 60.61 crores during 1952, and the Finance Minister did not attempt to disguise his feeling that this was a disturbing feature of the country's economy. There has no doubt been an improvement of just over Rs. 5 crores in January and February 1953, but this is not very impressive having regard to the fact that imports had been

nearly brought to a standstill in those months and that the cold weather months are the peak season for exports of jute and cotton. The balance in the payments position could no doubt be maintained, through the machinery of import control, during the forthcoming year, were it not for the fact that the Government will probably have to import nearly 1½ million tons of wheat. It is plain that Pakistan simply will not have sufficient foreign exchange resources to bear this burden and that foreign aid must be secured. The Canadian Government has already agreed to the utilisation of five million dollars' worth of Colombo Plan aid for this purpose, and the Pakistan Government has appealed to the Government of the United States for assistance. It should, however, be remembered that if assistance on these lines is forthcoming, there will presumably be at least a partial reduction in the assistance which would have been forthcoming for development projects.

Hydro-Electric Projects

In some respects the budget speech could, against this background, be criticised for want of realism. For example, it contained a reference to the three large hydro-electric projects—Warsak, Mianwali and Karnafull—which implied that Government intends to proceed with them. The blueprints for the three projects had, we were told, been prepared and the projects were estimated to involve an expenditure of the order of Rs. 64 crores over a period of six to seven years. Considerable preliminary work has of course been done in the Warsak and Karnafull schemes and we may sympathise with the Government's reluctance to abandon or postpone them. In regard to Mianwali, however, the prudent course would surely be to abandon it, at any rate for the present. Reference was also made in the budget speech to the plans for the construction of a barrage on the Indus at Taunsa, but it would be surprising if these come to fruition in the foreseeable future. The important Ganges-Kobadak scheme in East Pakistan is on a somewhat different footing as it is being sponsored by the Food and Agriculture Organisation and it may not be necessary for the Government to find any foreign exchange for the requirements of this scheme. The budget speech also contains a reference to the Pakistan Industrial Development Corporation scheme for the establishment of a shipbuilding yard at Karachi. The general belief in the commercial community is that this project will be thoroughly uneconomic and that it should be postponed until the economic situation improves sufficiently to allow the Pakistan Government to embark on such ambitious projects.

Bombay

NEW SALES TAX ACT
IN FORCEMR. KIDWAI FORECASTS RICE
SELF-SUFFICIENCY

(FROM OUR OWN CORRESPONDENT).

29th March.

THE new Sales Tax Act, which replaces the earlier Ordinance, came into force last Wednesday after receiving the President's assent. It is valid for one year only and will expire automatically on 31st March, 1954. The provisions of the new Act are practically the same as those of the Ordinance which was passed after the High Court of Bombay declared the original Act to be beyond the competence of the State Legislature. The only alteration in the new Act is that resulting from the Finance Commission's recommendations relating to the compensation to be paid to certain States by the Centre for not levying any tax on tobacco and tobacco preparations. As Bombay State is not to receive any compensation under this head it is free to tax tobacco, cigars, cigarettes, etc. Under the new Act there is a tax of a quarter of an anna at every stage of sale for tobacco and in addition to this a special tax of nine pies in the rupee on cigars, pipe tobacco and cheroots.

Rice Procurement

When Mr. Kidwai, Union Minister for Food and Agriculture, visited Bombay last week, he contradicted a current rumour that he was here to carry on the negotiations with Mr. Jai Prakash Narain, leader of the Praja Socialist Party, which had been interrupted in New Delhi a week before. Speaking about food for Bombay State, Mr. Kidwai said that he had not placed any limit on the supply of foodgrains to the State Governments and that there was no shortage of foodgrains in the country. What was lacking was purchasing power in certain famine and scarcity areas. Mr. Kidwai said that the country would be self-sufficient in rice by the end of this year, that the wheat and gram crops in the next season would be abundant and that soon the food problem in India would be a thing of the past. Of food control he said that where it had been introduced it had worked satisfactorily. Though complete decontrol of foodgrains throughout the country was not possible immediately, because of the Government's policy of a controlled economy under the five year plan, he remained optimistic, particularly about rice, and hoped that he would be able to procure about a million tons within the country during 1953, which amount would be five

times the quantity procured in previous years, and as a result of which it would not be necessary for him to import any rice this year.

Central Bank Chairman's Speech

Sir H. P. Mody, who on the completion of his term as Governor of U. P. has resumed his duties as President of the Central Bank of India, had some interesting observations to make on the economic condition of the country and the five year plan, at the annual general meeting of the bank last week. Taking exception to repeated threats to nationalise banking, Sir Homi said that vague pronouncements by those in authority on the future of the banks in the country had caused confusion and anxiety. He said that there was no need for the Reserve Bank to exercise additional control on the scheduled banks to guarantee the necessary short-term credit for the execution of the plan, as they were already co-operating and following the directives of the Reserve Bank. On the whole Sir Homi thought that 1952 had witnessed remarkable improvements in the economic position of the country, in spite of a rather weak undertone in commodity prices, both with regard to food supplies and industrial production. Along with this the inflationary forces which had bedevilled the economy for long year had at last been brought under control. Sir Homi welcomed the Central budget as generally in consonance with the emphasis placed on the formation of capital in the five year plan and because there were no material changes in the range or level of the various taxes. At the same time he criticised the pace at which governmental spending was rising.

Family Planning

An interesting discussion was held here last week on "Health problems in relation to human production" at a meeting organised by the Family Planning Association of India. Dr. Karl Evang, Director-General of Public Health in Norway, who was the main speaker at this meeting, stated that checking the birth-rate was as urgent a world problem to-day as some other national calamities such as famines and that it had to be tackled with the same determination. Dr. Evang stated that the F. A. O. had emphasised the need to reduce the birth-rate and announced that the world population conference which is to be organised by U. N. O. in 1954 will discuss this problem on a world basis. He praised the efforts of those in this country who were engaged in experiment and research to reduce the birth-rate and observed that the results of these experiments in India would not only benefit this country but the whole world. One of the encouraging signs discussed this problem on a technical basis, which, he said, was not the case in many other countries he had visited.

Central Assistance

According to Dr. K. N. Katju, Central Home and States Minister, who was on a visit to Saurashtra last week, the Government of India intends to institute an enquiry on the application of Central assistance to backward States.

Dr. Katju was visiting Saurashtra to perform the opening ceremony of the extension plant of the Digvijay Cement Works near Jamnagar. In the course of his visit he also addressed the Saurashtra Legislative Assembly and the Nawanagar Chamber of Commerce when he appealed to the business community to play their part in the industrial development of the State.

U. S. ECONOMIC ASSISTANCE
FOR PAKISTAN

Pakistan will get Rs. 4 crores of economic assistance from the United States in the current year under an agreement signed in Karachi last Friday. The Pakistan Government announcement said the agreement, which is under the Technical Assistance Programme of the U.S.A., makes provision for the supply of capital goods as well as technical assistance.

COST OF LIVING IN DELHI

The Labour Bureau working class cost of living index number (base: 1944=100) for Delhi for February, 1953, compared to the index number for the preceding month, appreciated by one point to 136 thus reversing the downward trend noticed since November, 1952. The food index recorded a rise of one point because of a slight increase in the prices of pulses, milk, ghee, gur and spices. The index number for the fuel and lighting group advanced by four points mainly attributable to an increase in the price of charcoal. An appreciation in the price of long cloth caused the index number for the clothing group to move up by two points. The miscellaneous group index number also registered a rise of three points, resulting from an increase in the entertainment charges. The estimated cost of living index number for Delhi on base August, 1939=100 was 355 for the month of February, 1953.

EXPORT OF WOOL WASTE

In a Press Note dated 8th November, 1952, the Government of India announced that exports of wool waste, whether obtained from Indian or foreign wool, would be licensed freely, for shipment up to March 31, 1953. As a result of a further review, the Government of India has decided to extend the free licensing of wool waste for shipment up to 30th September, 1953.

Madras

ANDHRA REACTION TO CENTRAL
GOVERNMENT'S DECISIONSMALL DEFICIT IN MYSORE STATE
BUDGET

(FROM OUR OWN CORRESPONDENT)

30th March.

THE decision of the Government of India not to make Madras City the guest capital of the proposed Andhra State has not come as a surprise to Andhra leaders and public opinion in Andhra appears to be reconciled to the "loss" of the City. Most political parties do not want to have the High Court even for a temporary period in Madras and this has been the subject of discussions recently with the Prime Minister. The inclusion of the Tungabhadra Project in Mysore territory is however a real disappointment to the Andhras and it is thought that the proposed splitting up of Bellary District is not a good idea. The Wanchoo Report is now being studied by the State Government, and the machinery for dealing with the financial aspects of partition is being prepared. In view of the impending separation a vote on Account was taken in the Assembly on the Budget grants. The Consolidated Fund (Withdrawal of Moneys) Bill was passed, which provides for the withdrawal of a sum not exceeding Rs. 86.76 crores to meet the grants voted by the Assembly and the expenditure charged on the Fund for a part of the financial year 1953-54.

The State Assembly also voted supplementary grants totalling Rs. 21 crores to meet further expenditure incurred in 1952-53 by way of additional provisions for schemes already undertaken or new services undertaken in the course of the year. The additional expenditure was incurred because of widespread drought, the opening of a large number of minor irrigation works, commencement of work on community projects and the purchase of foodgrains. Most of the increased expenditure on Revenue and Capital Accounts has been allowed for in the Revised Estimates for 1952-53. The Chief Minister referred to the acute distress in the drought affected southern districts and said that unless the Centre came to the State's assistance, they would not be able to cope with the problem.

Mysore State Budget

The revenue deficit estimated in the Mysore State Budget for 1953-54 is Rs. 1.57 crores. A small increase in the tax on petrol and increases in the Education and Health cesses are intended to cover only part of the deficit. As a result cash balances which amounted to Rs. 4.81 crores at the end of 1951-52 will decline to Rs. 1.39 crores by the end of 1953-54. As for capital expenditure, the Finance Minister has admitted that the State is falling behind schedule on the execution of the projects included in its five year plan because of lack of funds from taxation and loans. In the first two years of the plan the State has received Rs. 41 crores out of the Rs. 8 crores promised by the Centre for the five year period. During the same two years the State's expenditure on schemes included in the plan has fallen short of the Planning Commission's estimates by about Rs. 4 crores. It is stated that unless the Centre extends assistance by way of larger loans, work on the Lakkavalli and Tungabhadra projects will be delayed. However, the Centre's agreeing to finance the expansion of the Iron and Steel Works at Bhadravati entirely from its own funds is a welcome relief to the Mysore Government.

Travancore-Cochin Budget

The Travancore-Cochin Budget for 1953-54 estimates revenue at Rs. 17.14 crores and expenditure at Rs. 17.28 crores. Capital expenditure provided for is Rs. 5.29 crores, a little more than half of which will be spent on electricity schemes. The only new tax proposal is for a betterment levy on the lands benefitting by the irrigation projects. The Government has decided to set up an industrial finance corporation with 50 percent of the capital provided by the State. 40 percent collected from the public and 10 percent subscribed by the Reserve Bank of India.

Tobacco Tax

The Finance Minister indicated in the Assembly that the Government intended to have the proposed sales tax on tobacco, if possible, at one point on cigarettes, cigars and other superior varieties of manufactured tobacco, which were largely purchased by the upper middle-class people. Poor beedi dealers or manufacturers would not be affected, he said. Commercial interests have expressed the view that the revival of the Tobacco (Taxation of Sales and Licensing) Act would mean double taxation as tobacco was already subject to Central Excise Duty. Under the Madras Act, sales tax would become payable by the tobacco trade at four points, they said.

Gujarathi and Marwari Accounts

The Hindusthan Chamber of Commerce has made a representation to the Minister for Commercial Taxes on the difficulties that might be experienced by Gujarathi and Marwari business men in Madras State as a result of the withdrawal of the concession to keep accounts in the Gujarathi and Marwari languages. About 40,000 dealers, it was stated, would be affected by the withdrawal of the concession. Most of them only knew their mother-tongue and could not maintain accounts in English or Hindusthani or in the provincial languages in accordance with the appropriate section of the Sales Tax Act.

London

U.K. EASES RESTRICTIONS ON
EUROPEAN TRADE

BUTLER'S SIX-POINT PLAN

(FROM OUR OWN CORRESPONDENT)

27th March.

IN an effort, presumably, to secure European co-operation in furthering the long-term plans of the Commonwealth Economic Conference, Mr. Butler went some way towards anticipating his Budget proposals—or at all events some of them—in a useful contribution towards liberalising this country's trade with European countries. Imports from Western Europe, mainly foodstuffs and manufactures, including unrationed cheese, textile yarns and piecegoods, footwear, carpets, plate and sheet glass and cork, will be permitted on an open general licence system, while the quotas at present allowed for such imports as edible nuts, essential oils, grapes, canned fish, canned tomatoes, glassware and drugs are to be increased. The combined effect of these relaxations, which were announced to the O.E.E.C. meeting by Mr. Butler in the House of Commons by the Secretary to the Board of Trade, is that Britain will increase her imports from Western Europe by some £32 million and raise from 44 to 58 the percentage of these on private account that are free from quantitative restrictions. The latter figures compare with the 75 percent minimum laid down by O.E.E.C. for countries which are not in payments difficulties and the 90 percent which Britain had reached before November, 1951, when the cuts were introduced. In addition, travel allowances are being increased by some £8 million, with the personal allowance rising from £25 to £40, the children's allowance from £15 to £30, the car allowance from £15 to £20 and the motor-cycle allowance from £5 to £10. All these concessions are now in force, and have been well received both here and in Europe, though Mr. Gaitskill expressed some fears as to whether the move would meet with the reciprocity which was anticipated.

Just what is it that the Chancellor of the Exchequer expects Europe to do in the long-term drive for greater freedom of trade? He outlined this six-point plan: 1. All countries must follow sound domestic policies; 2. Trade restrictions must be eased as and when exchange controls are removed—Britain has no wish to strengthen the £ by cutting imports from other countries; 3. The U.S. should take more imports; 4. We must deal with the problem of inadequate gold and dollar reserves; 5. More investment and right investment policies are wanted, and 6. Greater use must be made of existing international institutions. The goal of making the £ and other currencies of Europe convertible into dollars is still obviously a very long-term aim.

Commonwealth Finance Company

Plans to set up a special corporation to finance developments in the Commonwealth, envisaged by the conference of Commonwealth Prime Ministers in December, are now maturing. The new institution is being incorporated under the name of the Commonwealth Development Finance Company and expects to be ready to accept business right away. The chairman, Sir Frederick Godber, chairman of Shell Petroleum and Shell Transport and Trading Company. The other members of the board are Sir Geoffrey Heyworth, Sir Ernest Oppenheimer, Sir Edward Peacock, Sir Robert Sinclair, Mr. I. A. R. Steedford, Mr. R. E. Fleming, and Mr. H. C. Myrns. Money for this new project is being supplied by the Bank of England and by leading industrial, commercial, mining, shipping, and financial interests. The authorised capital of the company is £15,000,000, divided into 8,250,000 A ordinary shares of £1 each and 6,750,000 B ordinary shares of £1 each. The B shares are to be subscribed by the Bank of England and the A shares by the City, commerce, and industry. In the initial stages, however, only 10 percent of the authorised capital will be called upon. The company will have power to borrow up to £30,000,000.

Insurance companies, which have some of the largest funds for investment in the country, are not involved in the new scheme, but it is hoped that they will take over some of the projects financed by the company at a later date when they will better suit their investment policies. It is clear that for some time the new company's contribution to Commonwealth development will be a modest one. But its efforts should not be judged by the financial results alone. The financial, commercial, and industrial experience at its command will enable it to act in an advisory capacity and it will, of course, supplement the work of other organisations in the same field. In particular, the new company is expected to work in close co-operation with the World Bank and in this way it is hoped to interest private American investors in the possibilities of direct investment in the Commonwealth. That will be a slow process.

February Overseas Trade

The detailed figures of U.K. overseas trade in February are now available, and disclose two favourable features. The first is that textile exports are on the increase, and in view of the fact that imports of both wool and cotton show quite significant increases, it would seem that the textile industries take a more hopeful view of the future even after allowing for the fact that stocks may have been allowed to run down during the recession. Even more important, however, is the fact that imports are becoming cheaper. Raw

material prices have fallen by 20 percent in the past year while the manufactured goods we purchase from overseas are over one-seventh cheaper. The maintenance of this trend may give rise to further difficulties in export markets, while the countries producing the raw commodities we buy may well find themselves unable to keep up their purchases from us. For the present, however, export prices are remaining steady, with the result that the terms of trade have moved further in our favour after the slight setback in January. On our part after 1952=100, the prices of imports in February fell to 91, from 93 in January, whereas those for exports were unchanged at 93. The ratio between the two improved from 95 to 93. This is a useful contribution towards closing the trade gap, and especially welcome at a time when export prospects are so uncertain.

This latter situation is well exemplified by a comparison of the Board of Trade figures. Taking January and February together and reaching a monthly average, to avoid the effect of the short working months, the main groups of exports show the following variations from the monthly average in the fourth quarter of 1952:

	£ million	4th Qtr., 1952	Jan.-Feb., 1953
Food, drink, tobacco	...	14	12
Raw materials	...	10	10
Metals	...	25	24
Engineering Products	...	83	82
Textiles	...	30	31
Other manufactures	...	42	41

Indications from the textile industries suggest that the improvement there is being continued, while reports from the motor industry (January figures showed both car production and exports on the upgrade) might well mean that the fall in engineering products may also be halted.

Agricultural Price Awards

The annual price review for farmers, the result of which was announced by Sir Thomas Dugdale, Minister of Agriculture, awards them an extra £15,450,000. Higher prices are to be paid for fat cattle, sheep and pigs, a halfpenny a gallon more for milk, 3s. 4d. a ton for sugar beet and 5s. a ton for potatoes. As these increases have all been taken into account in the Ministry of Food estimates there should be no increases in retail prices in the shops, unless Budget policy leads to the decision to pass these increases on to the consumer instead of absorbing them into the food subsidies. In that case the retail price index, or cost of living, would rise by one-fifth of a point, or two-fifths of a point in the index of food prices only. This award to the farmers applies, of course, only to fixed price items, in respect of which the agreed figure for extra costs of production is £17,130,090, so the farmers must bear the difference by increasing their efficiency. Production costs for cereals and eggs, which are being freed from control and for which only a minimum price is now guaranteed, will be up by £5,030,000 and those for the other products not covered by the Agriculture Act are placed at £4,250,000. These figures together give a total of £26,410,000, so the farmers' must find ways and means of reducing their costs by some £11,000,000 if the consumer is not to be penalised. The Government seems to be confident this can be done, and that the present increase in agricultural production at 51 percent over the pre-war figure can be raised to the target figure of a 60 percent rise by 1956. The farmers themselves are not so sure, for whereas efficient farms can certainly get by with, and perhaps even profit from, the new prices, not all farms are efficient. It is that which makes the consumer apprehensive of the effect of these rises and the gradual return to a free market.

Plan to Raise Steel Production

The steel industry, the first stage of whose post-war expansion plan—not the nationalisation of the industry, as the Labour propagandists would have us believe—has produced such excellent results, is now awaiting Government approval to take things a stage further. This is disclosed in the annual report of the British Iron and Steel Federation. An outline of the plan was submitted to the Ministry of Supply in November. The first post-war plan was virtually completed last year, some time before the scheduled date. It was based on the construction of new blast furnaces and a steadily increasing use of pig iron. Between 1946 and 1952 the productivity of labour in steel melting and rolling increased by 25 percent, and this contributed greatly to the raising of output from 12.7 million tons in 1946 to over 16 million tons in 1952.

The second five year plan, for which approval is now awaited, is to increase home steel production to almost 20.5 million ingot tons a year. The increase is intended to be based entirely on larger pig iron output: no imports of scrap or pig iron have been assumed. The total cost of the second plan is estimated at about £250 million at prices ruling in early 1952 and development is to be mainly concentrated at the new sites and plant units established under the first plan. As the proposals have been thoroughly discussed they are likely to be authorised by the Government without substantial changes.

More Civil Estimates

Two more batches of Civil Estimates covering trade, materials, supply, transport, fuel and power have been published, showing a net saving on the figures for 1952-53 of £92,200,000, all but £500,000 of which is to be saved on the trade, materials and supply group.

Calcutta Markets

ACTIVE DEMAND IN TEA
EXPORT AUCTION

NEXT SALE CANCELLED

BECAUSE there is insufficient tea on offer, there will be no export sale next week. Export Sale No. 43 will be held on Monday 13th April. There will however be a Dust Sale No. 42 next Tuesday.

At Sale No. 41, held on 30th & 31st March, there was a very strong and active demand and good competition for all grades in the export auction. Common and low medium broken and fannings were the strongest features and sold at 2 annas and sometimes more above last rates. Leaf grades were also dearer by one to two annas per pound. Best liquoring sorts remained fully firm.

The Dust market also met with a strong demand, the best liquoring C.T.C. dusts being the strongest feature and these were from one to one and a half annas dearer. Clean Commons and good liquoring mediums were also dearer by 1/2 to 1 anna per pound. The poorer types of dust were in more demand than they had been for several sales and these generally sold well.

The internal offerings which were small were firm to dearer.

	Quotations 1953	1952
Clean Black Pekoe	1-8-6 to 1-9-0	1-3-0
Clean Common Broken Pekoe	1-11-0	Not quotable
Medium Assam Broken Pekoe	1-12-0	1-5-0 to 1-6-0
Good Assam Broken Pekoe	2-0-0	2-1-0 to 2-3-0
Medium Doars Dust	1-7-6	1-6-0 (Nom.)
Medium Assam Grains		
Dust	1-9-0 to 1-9-6	
Best Assam C.T.C. Dust	2-1-0	
Approximate Quantity Offered		
Export	50,870 Pkgs.	44,562 Pkgs.
Internal	1,500 "	2,590 "
Dust	10,990 "	22,300 "

REVIVAL OF GRAIN FIXTURES
IN FREIGHT MARKET

MARKET GENERALLY DULL

OVER the past week the market has remained generally steady but an interesting feature was the fixture of two motor vessels with June laydays from Argentina with wheat to India at 90s., an advance of 10s. on the previous rates. A further vessel was also fixed with wheat from

Argentina at \$9 for Italy and the revival of this grain export trade is a welcome sight after a long period of droughts and crop failures. There was considerable movement of grain from the North American section; St. Lawrence to Karachi paid 79s. 3d. for two April loaders and coal rates from Hampton Roads to the Continent were maintained, 35s. being paid for Antwerp or Rotterdam discharge and 34s. 6d. for voyages from April to the end of the year.

In the Australian market there was considerable activity, 90s. being paid for wheat in bulk ex silo from West Australia to Italy for June, while fixtures were recorded for India at the previous rate of 70s. for May loading and at 68s. 9d. for more forward loadings. Rice from Whampoa to Colombo for May-June loading was done at 53s. 9d.

The Calcutta market remained dull and no fixtures are reported except that of an oil burner at 16s. on Time Charter for six months trading.

The recent agreement between Pakistan and China involving the exchange of 10,000 metric tons of Pakistan cotton for 200,000 tons of Chinese coal has so far produced no fixtures and it is learnt that an agreement is shortly to be signed between Australia and Japan for the sale of 200,000 tons of coal to the latter country by the former.

SUGAR MARKET QUIET BUT STEADY

The sugar market was quiet but steady during the week ended 31st March. Business was done in small quantities and there was a good enquiry for lower grade new sugar from south India. Ex-mill delivery rates ranged between Rs. 26-4 and Rs. 28-4 a maund but buyers were hesitant to enter into long commitments. The crop is expected to yield 12,50,000 to 12,75,000 tons. Arrivals averaged about 5,000 bags a day and sales about 3,500 bags a day, while stocks amounted to 110,000 bags. Rates for new sugar ex-Kantapur delivery were Rs. 28 a maund for medium grain and Rs. 30-4 a maund for big grain.

LINSEED

Generally easier conditions prevailed last week and trading was reported on an increased scale at declining prices. With lower trends prevailing up-country, sellers predominated and there was a fairly large daily turnover for new crop forward delivery at lower levels. Ready goods were offered more freely but buyers showed little interest. In general, crushers were rather cautious and bought for immediate requirements only. Bazar buyers were however, fairly active on short-covering. The oil market continued dull with no interest from overseas and very feeble enquiries from local buyers. Latest quotations were as follows: Ready Rs. 19 per maund, April Rs. 18-12 per maund, and May Rs. 18-4 per maund.

HIDES AND SKINS

The market in skins ruled firm, while that of hides was steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 24th and 30th March, 1953.)

Cowhides:—Wet salted (Ord) 5,000 pcs. on the basis of Annas 9 to Annas 11-3; Wet salted (Slaughtered) 7,900 pcs. on the basis of Rs. 14-8 to Rs. 24-8; Assam-salted 500 pcs. on the basis of Rs. 9.

Goatskins:—Wet salted (Daisee, Killed) 50,840 pcs. on the basis of Rs. 275 to Rs. 425; Assam-Dinajpur-Murshidabad 29,300 pcs. on the basis of Rs. 235 to Rs. 280; Purneah-Kissenganj 38,250 pcs. on the basis of Rs. 270 to Rs. 285; Patna (Ord) 12,600 pcs. on the basis of Rs. 150 to Rs. 235; Muzafferpore-Darbhanga-Pakur 8,100 pcs. on the basis of Rs. 240 to Rs. 265.

Bazar Stocks

(30th March, 1953)

Cowhides:—Wet salted 1,45,500 pcs.

Goatskins:—Wet salted (Daisee, Killed) 53,200 pcs.; Assam-Dinajpur 63,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,12,000 pcs.

WEEKLY SHELLAC MARKET REPORT

During the week ended 31st March the market ruled firm and moderate business passed. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 90 value.
Pure Buttonlac	Rs. 83 to Rs. 85 done & buyers.
Lemon No. 1 Shellac	Rs. 83 to 85 buyers.
Lemon No. 2 Shellac	Rs. 78 done & buyers.
F. O. Std. 1 Shellac	Rs. 72 to Rs. 75 done & buyers.
Pure T.N. Shellac	Rs. 67 to Rs. 71 basis done & buyers.
4 1/2 % I.T.N. Shellac	Rs. 59 to Rs. 60 done.
No. 1 Kusmi Seedlac	Rs. 80 to Rs. 83 value.
No. 2 Kusmi Seedlac	Rs. 73 done.
Fine Bysaki (Manbhumi)	Rs. 68 to Rs. 70 done & buyers according to quality.
Fine Bysaki (C.P.)	Rs. 62 to Rs. 66 done & buyers.
Ordinary Bysaki Seedlac (C.P.) under	Rs. 59 to Rs. 61 buyers.
Ordinary Bysaki Seedlac (C.P.)	Rs. 56 to Rs. 57 done & buyers.
Kireelac	Rs. 27 to Rs. 27-8 done & buyers.

Shipments during March until the 28th were 34,261 packages.

Jute

NO RESTRICTION OF SACKING OUTPUT

SHARP DECLINE IN PRICE OF JUTE GOODS

IT is understood that the Central and State Governments have informed the mills that they cannot agree to the proposal for curtailment of sacking production. The Government's opinion is that the time which has elapsed since the reduction of the export duty on sacking has not been sufficient to enable the effects to be seen; it is recalled that several months passed before the hessian markets began to be influenced by the reduction in the export duty on hessian. It is also pointed out that shipments of heavy goods in March were good and that if stocks do not show an actual reduction, there will, anyhow, be no material increase. No doubt the reason for the good shipments in March was that shipments in previous months were delayed in expectation of a reduction in the sacking duty. The goods shipped in March were purchased by consumers abroad several months earlier, and these shipments are no indication of a revival of demand. In fact, the delay in shipping the goods indicates that the buyers were in no hurry to get them and could afford to wait to get the advantage of the reduction in duty. In order to show that there had been an improvement in demand, the shipments in March should have been so big that not only was March production taken away but a large part of the accumulation of the preceding months.

Concern has been expressed about the price of jute in the event of curtailment of manufacture by mills. Experience shows, however, that when mills have curtailed their working, the price of raw jute has improved also. That may be paradoxical but it is what has happened. Even in the past week there has been evidence of it for when it was generally believed that there would be curtailment in some form or other, the price of sacking rose and there was an improvement in raw jute prices or at least the decline was arrested. If prices of manufactures fall now because of the

The I.J.M.A. decision to send a delegation to Australia is discussed in Ditcher's Diary on page 439

decision against curtailment it is probable that jute prices will also be reduced because mills will not be able to afford to pay even current prices.

The Raw Jute Problem

The fall of raw jute prices to levels which are uneconomic to the growers is attracting a lot of attention and there has been much uninformed criticism of the buying policies of the jute mills. Many critics do not appear to be able to grasp the simple fact that the two real reasons for the fall in jute prices are that the supply is much in excess of demand and that the demand for jute manufactures has contracted at the same time. Speakers in the Legislature have blamed the present low prices for the fall in the price of Indian jute. They did not stop to consider that Pakistani jute costs the mills, even after the removal of licence fee and the reduction in the Pakistani export duty, more than Indian jute. Surely they do not imagine that mills pay these higher prices to favour Pakistan. They pay these prices because they have to pay them to get the quality they need.

Nor is all the anxiety about the fall in prices disinterested. At a meeting held recently where there was much talk about the losses suffered by the growers and the danger of the present low prices to the campaign for self-sufficiency in jute-growing, it was noticeable that many of the speakers were merchants who are holding large stocks of jute. As we have pointed out before in these columns growers in India have not done too badly out of the 1952 crop for, in the districts where better class jute is grown, they had sold most of their produce before prices fell. It is the merchants who are carrying most of the losses. This is not an argument that the present prices will not affect the extent of sowings for the 1953 crop; they will, but it is desirable that it should be realised that much of the pleading for the support of prices for the sake of the growers is done for the self-interest of the traders.

It has been suggested that, in order to support prices, the Government should relax the prohibition on the export of jute. It would be inadvisable to do so while India still has to import jute from Pakistan. It might, however, be worth considering whether the export of bimli should be allowed. Pre-war, most of the bimli was exported, chiefly to Germany. The mills in Calcutta do not like it because of its poor spinning qualities and, even at the current low prices, it is doubtful if the whole crop will be bought. To allow it to be exported would help the growers without doing any appreciable harm and might aid in the maintenance of jute prices.

Honouring of Contracts

At the annual meeting of the Jute Fabric Shippers' Association, Mr. H. L. Robertson, the Chairman, had a good deal to say about the alarming deterioration of commercial morality which has taken place in recent years in all sections of

the trade. He referred to the great number of disputes in many of which one of the contracting parties has failed to fulfil his contractual obligations simply because it has not suited him to do so—in other words, because he would have suffered a loss had he honoured his contract. Unfortunately this attitude is common in the raw jute trade as well as in the gunny trade, and it is quite usual for all sorts of legal quibbles to be resorted to in order to evade contract liabilities. In the last three or four years there have probably been more arbitrations and court cases in both gunnies and jute than during any similar period in the history of the industry. Some attribute this to the large influx of "get-rich-quick newcomers" who found their way into the trade when controls were in force. Others think that it is the result of the unprecedentedly rapid and extensive price fluctuations which took place after decontrol when fortunes could be lost almost overnight. It is difficult, however, to see what remedy there is except that these dishonest gentry must in the end be eliminated by the refusal of honest people to deal with them.

At the meeting Mr. Robertson also had something to say on the subject of fatka as a hedging market, and pointed out that if such a market were used by the whole of the trade and industry, speculators would have a comparatively small influence. That is a view which has been expressed before but it has never been possible to overcome the suspicion with which the genuine merchant and shipper has regarded the fatka market.

THE JUTE MARKETS

Manufactured Goods: The news that mills would not restrict production caused B Twills, which are the barometer of the sacking markets, to fall by about Rs. 4 per 100 bags over the following two days and further falls seemed likely. There was very little prospect of overseas buyers being attracted by the low rate prevailing and it is an established fact, especially as far as the U.S.A. is concerned, that they rarely buy on a falling market. This lack of interest on the part of overseas buyers is causing no little concern to manufacturers as in many cases the greater part of their finance, which is urgently required for the purchase of jute, is blocked or tied up by the large stocks of finished goods they are carrying. The finished goods market showed signs of reviving in the early period, mainly because of the proposed reduction in sacking production, and although prices fluctuated a great deal the movement was again being met with little difficulty, but the majority of the business done was for small lots for quick delivery ex agency, or if delivery was to be made from local godowns, buyers requested that the jute be inspected before purchase. Mills are taking this precaution because most of the jute in the local Cossipore markets is of inferior quality, and with sellers losing money heavily on their stocks any offers of good quality jute are subject to suspicion. Small lots of high quality jute are changing hands in this manner daily, but the demand, which appears to be for light-rooted good-coloured Northern fibre, far exceeds supply and the prices paid for it bear no relationship to the current market rates. After the week-end, when it became known that the request for permission to curtail production had been rejected, raw jute rates steadied up slightly and sellers were inclined to be reserved

lows. The week thus presented the widest fluctuations that have been seen for some time and Hessians, after improving 10 annas, showed a fall of Rs. 1-8 per 100 yards from the peak by Tuesday evening. In heavy goods the variations were even more pronounced. B Twills rose to about Rs. 93 per 100 bags but when the collapse came they fell to Rs. 88-14, a drop of Rs. 4-2 per 100 bags or Rs. 40 per ton, which was Rs. 1-2 per 100 yards lower than the week's opening quotations.

Actual quotations at the opening of the market on Thursday last were on the basis of Rs. 40-2 per 100 yards of 40" 10 oz. Hessians, Rs. 91 per 100 bags of B Twills and Rs. 91-8 per 100 bags of plain heavy Cees. However, these rates soon showed an improvement, especially heavy goods, which showed an increase of Rs. 1-8 by Friday morning. Hessians followed in sympathy and rose by 4 annas per 100 yards. Bear covering and speculative buying continued in the sacking section and by Saturday morning B Twills were ruling at Rs. 93 per 100 bags, which was 12 annas up over Friday's rates, and plain heavy Cees showed a rise of Rs. 1 to Rs. 94 per 100 bags. Hessians again responded to the increased activity in the heavy goods market and improved by 5 annas to Rs. 45-11 per 100 yards. During the week-end prices fluctuated within narrow limits, but at the opening on Monday morning B Twills dropped by Rs. 2-4 to Rs. 90-12 and plain heavy Cees by Rs. 2-8 to Rs. 91-8. Hessians lost the five annas they had put on before the week-end and were back at Rs. 40-6 per 100 yards. Prices continued to drop throughout the day as it became evident that there was to be no cut in sacking production, and on Tuesday morning B Twills were down a further 12 annas and Hessians 6 annas. Prices continued to deteriorate as the day wore on and by evening B Twills had fallen to Rs. 88-14 per 100 bags and 40" 10 oz. Hessians to Rs. 39-6 per 100 yards, a decline of Rs. 1-2 and 10 annas respectively.

At the close prices again receded when it was rumoured that the Government had not agreed to any form of curtailment of production on the grounds that the trade had not waited long enough for the effect of the reduction of the export duty to show. Opening quotations were down in all sections and were as follows:

	Ready	April	May-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	32-4	32-0	31-14	31-12
40" 10 oz.	39-4	39-6	39-8	39-8
Heavy C's	89-4	90-0	90-8	91-0
(Plain)				
B Twills	88-8	89-0	89-8	90-0
Cornacks	91-0	91-8	92-0	92-0

Raw Jute: Mills' interest in the purchase of raw jute this week has been largely governed by their ability to sell their finished products, and with overseas buyers staying completely out of the market business in this section has of necessity been limited. Also with the possibility of a curtailment of production in the offing, carrying with it a drop in requirements of raw jute, buyers have been delaying as long as possible before entering into any firm commitments in the hope of a decision being reached which would bring about an automatic drop in jute rates. As a result of this lack of interest, rates for raw jute were easier at the beginning of the week and sellers were keen for business, being anxious to reduce their large holdings before prices fell too low. Mills' counter-offers were again being met with little difficulty, but the majority of the business done was for small lots for quick delivery ex agency, or if delivery was to be made from local godowns, buyers requested that the jute be inspected before purchase. Mills are taking this precaution because most of the jute in the local Cossipore markets is of inferior quality, and with sellers losing money heavily on their stocks any offers of good quality jute are subject to suspicion. Small lots of high quality jute are changing hands in this manner daily, but the demand, which appears to be for light-rooted good-coloured Northern fibre, far exceeds supply and the prices paid for it bear no relationship to the current market rates. After the week-end, when it became known that the request for permission to curtail production had been rejected, raw jute rates steadied up slightly and sellers were inclined to be reserved

In spite of the slump in the finished goods prices. However with mills persisting in their policy of keeping out of the market except for small lots, and the continued decline of gunny rates, sellers revised their ideas and once again became keen for business, especially in local delivery jute which was being offered at cut rates. Only small business resulted and this left the market in a very depressed state.

At the opening of the market on Thursday last raw jute prices were unchanged and Rs. 18 per maund was being quoted for Assam Bottoms for April-May shipment. There were no reports of any large business being done at these rates, but this quotation remained constant until the week-end when sellers added 8 annas to their indications on the strength of a firmer finished goods market. Their eagerness to do business, however, prevented them from carrying out their intentions to the full, and although quotations after the week-end were still unchanged small business was done at below this rate. On Tuesday the feeling was easier in sympathy with the finished goods market and by evening the 8 annas came off and sellers were looking for buyers at even lower levels. Mills held off because of the weak state of the goods market, and ceased even to give any indication of the prices at which they would consider buying jute.

Over the week the following business was reported:

Indian Jute:

Dhuhri: Rs. 22-8 per md. for Middles only 15 days' delivery. Rs. 19 to 19-8 per md. basis Bottoms for one month's shipment. Rs. 18-8 per md. basis Bottoms for ready bills of lading.
Dhuhri and/or Northern: Rs. 18-8 to 19 per md. basis Bottoms for one month's shipment.
Assam: Rs. 18-8 per md. basis Bottoms for ready bills of lading. Rs. 19 per md. basis Bottoms for one month's shipment.
Assam Tossa: Rs. 19 per md. basis Bottoms for one month's shipment.
Bihar: Rs. 16-8 per md. basis Bottoms for one month's shipment.
Assam Mesta: Rs. 16-8 per md. basis Bottoms for ready bills of lading and one month's shipment.

Baidyanathdham Mesta: Rs. 21 per md. basis Bottoms for one month's shipment.
Daisee: Rs. 18 to 19 per md. basis Bottoms for one month's delivery.
Bimili: Rs. 14 to 14-8 per md. for F.A.Q. for one month's shipment.
Salvage H J: Rs. 15 to 16 per md. for ready delivery.

New Crop:

Assam: Rs. 19-9-3 to 19-11-3 per md. for August-September shipment.

At the close raw jute rates were quoted 8 annas down in sympathy with a weaker goods market, and sellers were keen for business even at the lower rates prevailing. Opening quotations on Wednesday morning were as follows:

Pakistani Jute:

	April-May	Landed at Mill
Jat	22	per md. basis Bottoms
District	22	"
Northern	22	"
Indian Jute:		
Lower Assam	19	"
Upper Assam	18	"
Northern Bengal	19	"
Murshidabad White	16-8	"
Bihar	15-8	"
Daisee	19	per md. for F.A.Q.
Bimili	14-8	"
Mill Reds	160	per bale
Mill Firsts	120	"
Mill Lightnings	105	"
Mill Hearts	95	"
Dundee Daisee (Short Group)	130	"
Dundee Daisee (Long Group)	105	"
Pakistan Cuttings (ex Agency)	58	"
Indian Cuttings	54	"

Tossa is quoted at Re. 1 to Rs. 2 per maund above the rates for white jute.

Mofussil: The upcountry markets in India are ruling easier in the absence of business. Reports from all stations indicate that imports are negligible and

practically no business is being transacted, as a result of which quotations are down by 8 to 12 annas per maund. In contrast to their anxiety last week to reduce their stocks, sellers are showing no interest or eagerness to sell at the lower rates this week which are on a par with the lower rates for Dhuhri Bottoms and Rs. 15 per maund for Assam Bottoms. The only section that has aroused interest is Northern Bengal jute where demand has pushed quotations up to about Rs. 17-8 per maund basis Bottoms. But even here the quantities have been small. In the local Cossipore markets sellers' ideas are contrary to those prevailing upcountry and in general they are keen for business at even below the quoted rates. Mills' interest, however, has not been large and sellers have found little opportunity to reduce their heavy stock holdings on which they are losing heavily. Quotations have remained fairly steady in spite of this selling pressure and Kishengunge jute remains at Rs. 18-8 per maund for garat quality. Because of heavy stocks and the scarcity of storage space imports have fallen off considerably over the past week and only about 30 to 40 wagons are arriving each day in the Cossipore sidings, but as most of these contain low quality jute the stock position is only aggravated. Reports from the Daisee centres indicate that imports are now practically nil, little business is beginning to get scarce. Very inclined to be reserved as rates decline. Latest quotations in Sheoraphuli are on the basis of Rs. 17 per maund for garat quality.

It is reported from Pakistan that the Pakistani authorities have reduced the minimum EPC rates at shipment of jute to India. This has been done in accordance with the recent Delhi agreement, and it is understood that the new rates are approximately Rs. 5 in Pakistan are unchanged but a steeper feeling is shown for overseas exports or for shipment to India, but in about 15,000 maunds per day of which about 30 per cent is tossed. Latest quotations (in Pakistan rupees) for 17 per maund for Jat Tossa Bottoms, with district jute at Re. 1 per maund less in each case.

INDIAN CROP REPORT

In their second crop report for the current season which covers the week ended 28th March Messrs. Sinclair Murray & Co. Ltd. (India) say that the weather in Assam has been rather wet and a spell of dry weather is now necessary to allow cultivators to carry on with sowings and to help the growth of the standing crop. The weather has been hot and dry in West Bengal and Orissa and rainfall is required to allow preparation of the land and to allow sowing to be started.

DANPUR: (Orissa) The weather has been hot and dry and the preparation of land cannot be commenced until rainfall has been experienced.

JAIPUR ROAD: (Orissa) The weather has been hot and dry and the preparation of land cannot be commenced until rainfall has been experienced.

RANAGHAT: (W. Bengal). The weather has been very hot and dry and negligible sowings have taken place on the banks of the Jumna river but no further sowings will be possible until rainfall is experienced. The river level is slightly below normal.

COSSIMBAZAR: (West Bengal). Weather has been very hot and dry and rainfall is necessary before preparation of land can be commenced.

NOWGONG: (Assam). The weather has been very wet and this has interfered with sowings. Strong sunshine is required for the standing crop as well as for other sowings. Young plants range in height from seedlings to 3". Sowings to date amount to -5/6 as against -7/7- at this time last year. The river is rising rapidly and is higher than last year at this time.

GAUHATI: (Assam). Weather has been mostly cloudy and showery. This has interrupted sowing and a spell of dry weather is now necessary. Seed germination has been quite satisfactory and plants range from seedlings to 3". Sowings to date amount to -4/7- risen 4" during the week and now slightly higher than at the corresponding period last year.

DHUBRI: (Assam). Weather has been unfavourable due to excessive rainfall. A spell of bright sun-sowing preparations to continue. Condition of the low land crop is reported to be unsatisfactory. Sowings to date amount to -7/7- as compared to -9/9- last year.

KHARUPETIA: (Assam). Not received.
DAISEE DISTRICTS: Weather has been hot and dry and rain is required to allow cultivators to start preparation of their lands. It is too early for sowing of Daisee crop in this area but very small sowings of White jute are being done where possible.

PAKISTAN CROP REPORT

In their fourth crop report for the current season Messrs. Sinclair Murray (Pakistan) Ltd. say that the weather has been mainly hot and dry with light showers experienced in some districts. This has not been unfavourable but further rainfall is now required to allow cultivators to continue sowings and to promote the growth of young plants. Lowland sowings are reported to be completed in most districts and appear to be well down compared to completed lowland sowings last year. This is particularly evident in Western areas. First weeding on lowlands are now in progress. The condition of young plants is good. The river levels are generally normal.

NARAYANGANJ: The weather has been hot and dry with strong winds which has so far been favourable. Rain is very urgently required as no further -2/6 as compared to -2/2- last year, lowland sowings are completed at -2/2- as compared to last year's -4/4-. Young plants are healthy and range in height up to 8". First weeding on lowlands is in progress. The river level is 6" higher at this time last year.

DACCA: The weather has been hot and dry except for a light shower earlier in the week. Rain is

now required to help the growth of young plants and to allow further sowings. Sowings to date are -3/3- compared to -3/3- at this time last year. The river level is about the same as this time last year.

CHANDPUR: The weather has continued hot and dry. Sowings to date amount to -5/6 as compared to -9/9- last year, lowland sowings being completed at -4/4- as against -6/6- last year. Young plants are healthy and range in height to 1". The river level is about the same as at the corresponding date last year.

HAJIGANJ: The weather has been favourable with light rainfall. Sowings to date amount to -1/13 as against -3/3- at this time last year. The river level is 3" lower than at the corresponding date last year.

AKHAIURA: The weather has been mainly hot and dry which has been beneficial for the standing crop. Sowings to date amount to -5/5- as compared to -3/3- last year. Lowland sowings have been completed at -1/6 as compared to completed lowland sowings of -3/3- last year. The river level is normal for this time of the year.

ASHUGANJ: Weather conditions continued to be favourable. Sowings to date amount to -2/2- as compared to -3/3- last year. The river has fallen during the week and the level is 2" 5" lower than at this date last year.

NIKILDAMPARA: Weather has been favourable with showers and sun. Sowings to date amount to -4/4- as compared to -5/5 at this time last year. The river level is normal.

SARISHABARI: The weather has been almost continuously cloudy but no rainfall has been experienced. Sowings have progressed slowly and it has been reported that some cultivators have not yet received jute growing licences. Sowings to date amount to -2/6 as against -3/6 at this time last year. The river level has risen slowly during the week.

SERAJGANJ: The weather has been hot and dry but this has not been unfavourable. Further rainfall would be very beneficial to assist the growth of growing plants which range in height up to 1' 6" in the lowlands. Sowings to date amount to -4/6 as compared to -7/7- at this time last year. Lowland sowings have been completed at -1/6 as compared to -4/4- last year. The river has risen during the week and is 3" 5" higher than last year at this date.

NAKALIA: Hot and dry weather prevailed during the week under review with light rainfall. Young plants are healthy and range in height to 1' 6". Sowings to date amount to -3/3- as compared to -4/4- last year and lowland sowings have been completed at -2/6 as compared to completed lowland sowings at -4/4- at this time last year. The river level has fallen but is still about 1' 6" higher than last year at this time.

BIHANGORA: Weather has been favourable. Sowings to date amount to -2/2- as compared to -4/4- at this time last year. Lowland sowings have been completed at -2/2- as compared to lowland sowings at -6/6- last year. The river has been falling slowly but is about 6" higher than the corresponding date last year.

JUTE FABRICS SHIPPERS ASSOCIATION MEETS

THE following are extracts of the speech made by the Chairman, Mr. H. L. Robertson, at the annual general meeting of the Calcutta Jute Fabrics Shippers Association, held in Calcutta on 30th March.

"This is the fourth occasion since 1940 that I have had the honour of being Chairman of your Association and I am sure that some of those older members who have been in the habit of attending our Annual General Meetings must be getting a little tired of listening to the speeches which I make on these occasions. For several reasons, I have decided to devote considerably less time than usual to a review of events during my term of office. My note on the market, which is already included in the Annual Report, covers the main events of the past twelve months in considerable detail and I see no need to cover the same ground again except in a very general way. In any case, the history of this past year is one which must be remembered. The first half of 1952 witnessed the biggest slump in the history of the jute goods trade and there must be very few mills, shippers, middlemen or brokers who have not been adversely affected. During that period, efforts were made by the mills to stem the fall in prices by reducing working hours from 48 to 42 hours from 1st April and Government abolished export quotas on 21st March in the hope of stimulating overseas trade. In both cases, the desired effect was only very temporary and business has been on an abnormally low scale throughout the year. In the search for overseas business, it soon became evident to shippers that most markets had succeeded in building up large supplies during the period when continuity of supply was uncertain and that they were quite prepared to eat into those stocks without replenishing them so long as Calcutta prices continued to decline.

"As a result of strong representations from the trade, Government reduced the hessian export duty to Rs. 750 on 18th February last year and the hessian and sacking duties to Rs. 275 and Rs. 175 respectively on 6th May. These reductions were universally welcomed but, unfortunately, they failed to have the desired stimulating effect on consumers who were discouraged from buying by the prevailing depression in almost all commodities.

Improved Hessian Demand

"As far as Hessians were concerned, demand improved during the second half of last year. An improvement in American consumption figures reversed the downward trend in values and the placing of an Argentine Government order towards the end of September for a total of 40,000 tons for delivery between October 1952 and June 1953 had a further tonic effect on prices. Ready 11 Porter Hessians became very scarce temporarily and a strong squeeze developed towards the end of November. Full advantage of this shortage was taken

by the bull speculators in fatka, the result of their operations being that the ready price of 40" 10-oz. was Rs.53 on the November date while that for December was no less than Rs. 6-8 lower. The result of these largely speculative manipulations came to the attention of the West Bengal Government which imposed a ban on futures trading on the 19th December, their action being fully justified in so far as fatka was concerned. Unfortunately, the relative Ordinance was ambiguously worded and consequently the transaction of all business for forward deliveries was suspended until an Amending Ordinance clarifying the position was issued several days later.

"In spite of the shortage of ready 11 Porters at the end of November, hessian rates in the forward positions weakened towards the end of the year and this downward trend in prices has continued during these last three months. The same downward trend has marked the heavy goods market and a further substantial reduction in the sacking export duty from Rs. 175 to Rs. 80 per ton on 27th February has failed to stimulate demand. It is true that there has been spasmodic buying of Heavy Goods by such markets as Australia, the U.K., New Zealand, Java, and Africa during the last two or three months but on an insufficient scale to arrest the steadily mounting stocks in mills godowns. Government orders for B Twills dried up at the end of last year and most of the Far East Heavy Goods markets have been buying very little in recent months partly due to financial stringency.

"During this past week, there has been some revival in prices, particularly for heavy goods, on reports that the mills intend to curtail production. Mills stocks of both Hessians and heavy goods have been rising and uninterrupted during the past six months and there can be no justification for continuing to produce more goods than the world can consume. In the circumstances, I feel that all responsible interests in the trade must approve of a form of curtailment which will create a more stable market provided it is not of an extent to cause an unhealthy rise in values. If mills do succeed in regulating production to the level which would meet requirements, then I feel that we can look forward with some confidence to healthier conditions during the coming months particularly as Pakistan's determination to restrict this year's jute acreage should assist in reducing the present superabundance of the raw material.

Trade Practices

"A matter which I would like to raise at this meeting is that of the deterioration in commercial morality which began to show itself at the beginning of World War II and which has since developed with alarming rapidity in all sections of the trade. Up to 1939, contracts were held in the highest possible respect by all members of the trade and it was very rare indeed for firms or individuals to fail to implement their commitments within the contract time unless it was due to circumstances completely beyond their control. Unfortunately, there has been a vast change in the intervening years and this last year has seen a record number of disputes in which, in many cases, one of the parties to the contract has deliberately failed to fulfil his contract simply because it has not suited him to do so. All sections of the trade have been infected to a greater or lesser extent and the guilty parties include mills, shippers and middlemen. Some of these parties have been prepared to go to almost any lengths to avoid paying the penalties for which they should be liable under the terms of their sale or purchase contracts. Mills have been known to secure false evidence that high priced goods were placed alongside by due date when, in fact, they had never left the mills godown, while shippers and middlemen have found means to prevent the alongside registration of goods which were actually alongside on the contract due date. These are just two examples of the many forms of dishonesty which are being practised by certain disreputable members of the trade and it seems to me that our own Association,

the Jute Mills Association and the Gunny Trades Association, should get together in an earnest attempt to restore the morals which existed in the years prior to 1940.

Restrictions on Buying and Selling

"Mr. Ramsunder Kanoria of the Gunny Trades Association has recently recommended to our Association and to the Indian Jute Mills Association that members should confine their buying and selling on this market exclusively to parties who are members of one or more of these three Associations. This recommendation has received the unanimous approval of your Committee and also of the Committee of the Indian Jute Mills Association but, in my opinion, it can only partially solve the problem as there are undoubtedly dishonest elements within these three Associations. It is very much in the interests of the trade for these elements to be eliminated or to be converted to respect the sanctity of a contract and I most strongly recommend that the new Committee of our Association consider this question in consultation with the other two Associations.

Fatka Market

"A most controversial question which I want to put before you before concluding my remarks is the desirability or otherwise of the maintenance of a fatka market in Hessians and B. Twills. It is a question which has been hotly debated over very many years and Professor Todd wrote at great length and with great erudition on the subject in his report which was published by the Bengal Government Press in 1944. There were so many problems to be considered during that particular period of the war that I cannot help feeling that Professor Todd's report received less consideration than it would otherwise have merited and I feel that it now deserves serious study by our own Association. The Mills Association and the Gunny Trades Association. We have now been without a fatka market since the 19th December when the West Bengal Government quite rightly closed it down with the purpose of restricting the unhealthy speculation which was rampant. Syndicates of bulls and bears were at that time indulging in a speculators tug-of-war with prices fluctuating wildly to the detriment of the legitimate trade and, in the circumstances, the action of the West Bengal Government was amply justified. Nevertheless, it by no means follows that a properly constituted and controlled fatka market could not and should not operate to the great benefit of the trade as a whole. In my view, the reason that fatka has come under so much adverse criticism in the past is that far too many speculators and far too few legitimate traders have utilised it for the purpose of their day to day business. Fatka can and should be used not for the purpose of pure speculation but as a medium—in fact as a hedge—to reduce the speculative element in legitimate trading.

"If a properly regulated and controlled fatka market were widely used by mills, shippers and other legitimate traders, speculators would comprise only a small percentage of those operating and consequently they would have a comparatively small influence on price movements. It would then be of great value to the trade; mills could use it when their policy was to sell forward instead of selling direct to bazaar parties many of whom have become greatly weakened financially during the past twelve months. Shippers could use it to their great advantage as a hedge against sales to overseas markets because we all know from experience that mills are frequently completely out of the market when the consuming centres in various parts of the world are anxious to purchase their forward requirements. Middlemen could also use it to their own benefit in their normal inter bazaar business and the relatively small speculative element in such a fatka market would provide a lively stimulant although of insufficient strength to swing prices to any marked or undesirable degree."

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lin2say & Robertson Orchar Ltd., Dundee, Scotland.

WARP STOP MOTION.—Immediately a warp thread breaks the individual compensator is pulled upwards by the action of its spring and brought into contact with the control bar, automatically stopping the loom.

Engineering and Transport

ANNUAL MEETING OF INDIAN ENGINEERING ASSOCIATION

RETENTION OF THE APPELLATE TRIBUNAL URGED

THE following are extracts of the speech by Mr. H. Gibson, Chairman, at the Annual Meeting of the Indian Engineering Association on 27th March in Calcutta.

"On the whole, it has been quite a good year as far as labour is concerned, for, although we have all had our labour troubles and disputes, about which I will have more to say in a minute or two, such labour agitation as has existed has been conducted on relatively peaceable lines and there have not been any really large-scale or prolonged strikes or disputes affecting the engineering industry as a whole. Indeed, although I am not in a position to quote exact figures, I should think that in the number of man-hours lost through industrial discontent or strikes the year 1952 is probably one of the best we have had in the engineering industry for quite a long time. In my opinion that relatively favourable situation reflects the fact that there is a wide and genuine measure of contentment among the labour force, that they are enjoying substantial benefits, privileges and amenities which are well in advance of the conditions under which they worked only a few years ago, and that during the past few years most large and reputable employers have made active and sincere endeavours to establish good relations with their workers and to extend to them in the fullest measure such benefits as are warranted by the economic circumstances of their respective industries.

"Unfortunately, however pleasant and gratifying that general picture may be, I am afraid that it does not tell the full story. In particular, it leaves out of account all the trouble and harassment in which managements are involved by reason of the activities of irresponsible labour unions, the expense and the wearisome labour involved in the process of compulsory conciliation and adjudication and the burdens, many of them uneconomic and most unfair, which are imposed from time to time by the awards of industrial tribunals. In fact, I would go as far as to say that the relatively peaceful industrial conditions which have just been mentioned are to a certain extent illusory inasmuch as they reflect, not a genuine peacefulness, but the fact that Government have set their face against strikes and stoppages at all costs and have achieved peace by the simple expedient of referring union demands to compulsory adjudication whenever it seemed that there might be a breakdown in negotiations or indeed whenever employers were not prepared to make concessions on the first asking. A good many of our members have been involved in industrial tribunals during the year and, in my opinion, many of the disputes which were thus affected were not the result of any genuine discontent on the part of the workers who were most closely concerned but were the outcome of irresponsible and self-interested agitation on the part of professional labour leaders and were given an artificial existence and importance through the operation of the compulsory conciliation and adjudication machinery.

Voluntary Negotiation

"Your Committee's advocacy of voluntary negotiation in place of the system of compulsion seemed to coincide with the views of the new Labour Minister, Mr. V. V. Giri; and it is encouraging to reflect that in Mr. Giri we have a Minister who is both experienced and realistic in labour and economic matters. As far as can be gathered from present indications however, it seems unlikely that the system of compulsory conciliation and adjudication will be totally abandoned and the main question now appears to be at what stage and under what circumstances Government will invoke compulsion. If they do decide to emphasise once more—as your Association have already done on many occasions—the need for retaining the Appellate Tribunal and also the need for revising those intolerable provisions—Section 33 in the Industrial Disputes Act and Section 22 in the Appellate Tribunal Act—which prohibit changes in conditions of service during the pendency of tribunal proceedings. The Appellate Tribunal is essential to maintain uniformity and economic realism in the awards of a multiplicity of tribunals whose principles of work and whose capacities are very uneven; and a revision of the offending sections of the Industrial Disputes legislation is equally necessary if efficiency and discipline are to be preserved in factories and if the adjudication system is not to degenerate into an instrument for deliberately tying the hands of the factory managements.

New Subscription System

"Let me revert now, if I may, to what are more properly the Association's domestic affairs. As you are aware, the Committee have had to give a great deal of thought during the past year to the Association's financial position and, with mounting expenses, it has been necessary to introduce a new system of membership subscriptions which will enable us to cover our current expenditure. I will not go into the details of that subject, for it was discussed as recently as last October at a Special General Meeting. We have now evolved a subscription system which I hope will prove to be relatively stable and which will enable us to meet our expenses without further increases. I would take this opportunity however of repeating that one of the Association's greatest needs, not only from the financial aspect but also from the point of view of

enhancing its representative character, is to extend the range of its membership. I intend to mention in a minute or two the developments which I have seen taking place in the Indian engineering industry during the past generation and I would remark here that those developments, the considerable increase in engineering products not hitherto manufactured in India and the advent of new companies to manufacture them, present at once a challenge and an opportunity to the Association. If we wish the Indian Engineering Association to remain a representative organ of the engineering industry, then we must try to bring these new ventures within the scope of our membership. The time has also come, I think, to devise some closer means of collaboration, or even amalgamation, with our sister organisation, the Engineering Association of India; and I would commend that subject to the careful consideration of your new Committee.

"The inclusion of a wide range of engineering interests is one aspect of the Association's work; the corollary is the service which the Association provides for its members. As things are, I think that we do provide many most useful services, but I have no doubt at all that it is possible to extend those services even further and to enhance the Association's usefulness yet more, particularly in the matters, apart from labour, which are specifically the concern of an organisation devoted to the engineering industry. I am sure that, as in the past, your Committee will be very receptive to suggestions for improving the Association's services and there is one proposal which I myself would like to make here and, again, would put forward for consideration by the incoming Committee.

"There is a tendency, partly due to the voting system which has been adopted, for the same or very nearly the same firms to be represented on the Committee each year. While this is not necessarily a disadvantage, it must tend in some degree at least to make those firms who are not directly represented feel that they are rather debarred from taking part in the working of the Association. I would, therefore, like to suggest that Calcutta be divided into areas and that each area be placed in the charge of a Member of the Committee, preferably one whose interests lie in that area. It would be the duty of each Member of the Committee then to contact the member firms in his district and, if necessary, arrange local meetings and it would give the smaller firms a approach for information as to the Committee's views on matters of importance to them and who could represent their interests to the Committee if necessary. Something of this kind is already in vogue among the shipbuilding firms and I think such a system could be advantageously extended to include all the Members of the Association. Such action would, I feel, not only increase the active contact between the Association and its Members, but would also tend to encourage firms to join the Association.

Changing Labour Relations

"When I first came to Calcutta in 1919, there was very little control of working conditions or of employment and many of the smaller factories were far from satisfactory, not only in conditions of employment but also in sanitation, etc. Men were discharged or taken on very freely by most employers, this being possible largely because at that time the majority of the labour, both skilled and unskilled, maintained its contact with the ancestral village. A very large proportion of the labour indeed took leave without pay for a couple of months at least every year in order to go home to their villages. In fact, so marked was this exodus that at the Howrah Ironworks we regularly closed the wagon erecting shop from the end of March until the latter half of May. Since that time, there has been a gradual urbanisation of labour and with each succeeding generation brought up in the town, their connection with the village has become more and more remote, thus making the worker increasingly dependent on his employment in the city. Along with this, there has been a great change in the nature of skilled employment. In 1919 high speed tools were far from common and the carbide tipped tool was unknown. Machines were generally belt-driven and comparatively low-powered and no very startling changes had taken place for a good many years. A rough system of unofficial apprenticeship existed in many shops where the father brought his son to learn the trade without expecting payment and without the present restrictions on the employment of children and adolescents. So long as the conditions of life and service remained substantially steady, the system worked; but the changed conditions of today have resulted in many places in an almost complete absence of training for skilled workers, and have necessarily led to the setting up of training courses for trade apprentices.

"A further factor which has and is affecting matters very seriously is that many of the older men are almost frightened of the power of many of the modern machine tools and it is only with the greatest difficulty that they can be persuaded to operate machines to anything like their full capacity, thus setting a low standard of output not up to modern requirements. Along with these changes in the conditions of working, there has been a big change in the attitude of labour—a change brought about partly by the action of Government and partly, and perhaps mainly, by the growing urbanisation of the labour force. This changed attitude has led to steadily increasing demands, not only for better amenities and increased pay, but also for security of tenure in a form unknown, so far as I am aware, in any other country—so that employers find themselves compelled to continue the employment of redundant labour even when there is every evidence that

labour is not only redundant but inefficient. The constant insistence on annual increments and the promotion of lower grade men to higher grades also tends to reduce proficiency and increase the cost of the product.

New Branches of Industry

"Side by side with the gradually changing conditions of employment, there has been a fairly constant pressure from Government to increase the proportion of work carried out in India, and it is astonishing the large amount of work now carried out which was utterly unthought of 30 years ago. Production of steel castings, springs, high tensile steels, etc., all date from periods subsequent to 1918 and now the proportion of imported articles for general engineering work is very much lower than it was. There has not, however, been quite the same advance in many of the trades upon which the engineering industry grinds wheels in particular has by no means kept pace, either in quantity or quality, with the demand. Indeed, up to the 1939 war very little effort was made to produce these articles, although their availability is a sine qua non for the development of a really balanced engineering industry. Since 1947 the production of these articles has been pressed increasingly and restrictions placed on imports which have sometimes proved embarrassing to the poor quality of the articles produced by local makers. At the same time it has to be recognised that these factories must inevitably, sooner or later, take on at least a proportion of the burden, balanced industry which does not produce at least a very fair proportion of the basic requirements of industry.

"It must be anticipated that this development of new branches of industry will continue in the future and it will be necessary for Associations such as ours to adapt themselves more and more to changed conditions. One aspect of that subject active part in such matters as the compilation of many specifications do require modifications to but them as useful as they should be for India. Standards Institution to produce specifications from those in use in the U.K. or America. It is these her own specifications, but a multiplication of trouble, especially in connection with imports of machinery, etc., manufactured in other countries. India well, and I feel that, as far as possible, their terms should be incorporated in the specifications issued by the Indian Standards Institution with as little alteration as can possibly be managed."

U. K. YARD TO BUILD WORLD'S FIRST ALL-GAS-TURBINE TANKER

The first order ever to be given for a tanker propelled exclusively by gas turbines has been placed with a Birkenhead (England) firm by the operators of an oil tanker fleet. A single-screw vessel of 18,000 deadweight tons, she is scheduled to be completed in 1958. She will be one of the "general purpose" class of tankers, which 50 are either on order or under construction for the fleet. As the others will be powered by either steam-turbine or electric machinery or by geared turbines, a direct comparison of the operating and maintenance of the three forms of propulsion will be obtained. In common with all gas-turbine ships will be of the most modern design, incorporating newly invented equipment to insure the safe handling of highly volatile cargoes and quick turnarounds in port.

WORK STARTS ON BURMAH-SHELL PIPE-TRACK

The hand-overs of waste and arable land comprising a total of 256 acres within the Burmah Shell refinery site at Bombay has now been completed. Another 200 acres comprising Government land and built-up areas remain to be handed over. Eight thousand feet of 12-inch initial line-pipe have been delivered on site. This initial consignment is to be used in the diversion of the Port Trust tanker discharge pipelines. Before the diversion can be taken in hand, a new earth bund 100 feet wide and 4,000 feet long has to be constructed on the south and west boundaries of the refinery below the high-water mark. This bund will provide a new elevated pipe-track and inspection road for the Port Trust. After first constructing a temporary earth barrier for protection from the sea and digging a de-watering trench, work on the formation of the bund was commenced. About 130,000 cubic yards of earth and rock fill will need to be transported in all. With four scrapers carrying more than 1,000 cubic yards per day, the work should be completed before the monsoon.

COCHIN PORT RECORD

A new record in the volume of trade passing through the port of Cochin was established in 1951-52, according to the administration report. Total volume of trade was 1,580,847 tons, representing an increase of 17 percent over 1950-51. The working of the port during 1951-52 resulted in a surplus of Rs. 16.96 lakhs compared with the surplus of Rs. 4.62 lakhs during the previous year. The surplus was arrived at after making an allocation of Rs. 3 lakhs to capital account.

Commodity Markets

WORLD WOOL CONSUMPTION IN 1952

THE Commonwealth Economic Committee have recently released figures of consumption of wool and other fibres in 1952. These show, says the World Wool Digest, that total world consumption of virgin wool last year was nearly 2,800 million lb., two percent higher than the 1951 figure, but 14 percent below the 1950 peak. The higher figure was mainly the result of substantial increases in Japan, Italy, France, Canada, the Netherlands and Germany. In Japan, the improvement has been particularly striking; although figures for the fourth quarter are not yet available, it seems certain that their inclusion will bring consumption for 1952 as a whole to some 50-60 percent above 1951. Not all the major consuming countries, however, showed increases over the previous year. In both the United Kingdom and the United States there was a slight fall in consumption and in Belgium the decline was even greater. The sharpest reduction was in Australia, where it amounted to approximately 30 percent.

Consumption in countries other than the eleven listed in the table is estimated to have declined slightly in 1952 compared with 1951—from 690 to 679 million lb. The figures for these countries are provisional and are based either on the output of wool textiles or, where such figures are not available, on the estimated supply of wool available for consumption. Consumption is estimated to have declined in Australia, Switzerland, Norway, Denmark, Finland and Argentina, but to have risen in Spain and Uruguay—quite sharply in the latter. Aggregate consumption in the group of countries formed by the Soviet Union, China and Eastern Europe is not at 200 million lb., against 295 million lb. in 1951 and 1950. It is thought that this decline in the volume of wool imported from outside the group has been virtually offset by an increase in consumption of domestic wool.

The increase in total consumption of virgin wool was particularly marked in the fourth quarter. The sharpest increases in this quarter compared with the previous quarter occurred in the United Kingdom, where the rise was 23 percent, in Belgium 20 percent and in France 17 percent. Consumption in the United States is estimated to have increased by 9 percent, though this figure is based on partial returns. There appears to have been a particularly sharp improvement in consumption in the U.S. carpet industry.

It should be noted that the third-quarter total for the eleven major consuming countries has been revised upwards substantially in comparison with the provisional figures published earlier. This was due mainly to sharp upward revisions to the French, Italian and German figures.

PACKING CHARGES FOR CEMENT LOWERED

According to a Press Note, the Government of India has informed all State Governments that packing charges for cement during the quarter beginning on 1st April, 1953, will be Rs. 12-4 per ton. This maximum charge is applicable to cement packed in new bags only. Packing charges for cement packed in old bags can be settled by the buyer and the seller subject to the maximum indicated above. Last November, it was announced that packing charges for cement would be fixed every quarter on the basis of the average market price for packing material ruling on the first day of each month during the preceding nine months, plus Rs. 1-4 per ton to cover incidental charges. On this basis, the packing charges of Rs. 14-11 per ton were in force up to the end of March.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (base: year ended August 38=100) advanced by 0.8 percent to 386.0 during the week ended March 14th, 1953. Compared to the corresponding weeks of last month and a year ago, the index was higher by 1.4 and 5.8 percent respectively. During the week under review, Foodstuffs registered a rise of 1.7 percent to 368.6 as compared with 362.6 (revised) for the previous week, because of higher prices of bajra at Hyderabad and tea (+9% each), rice at Vijayavada (+10%) and jowar at Amravati (+1%) in spite of decreases in wheat at Jabalpur (-6%), sugar and gram (-1% each). The index for Industrial Raw Materials advanced by 2.1 percent to 453.8 against 444.4 (revised) for the previous week. Items which recorded noticeable variations were: Manganese ore (+18%), wet salted raw buffalo hides in Calcutta (+10%), rapeseed in Bombay (+8%) wet salted raw cow hides at Kanpur (-7%), rapeseed in Calcutta (-6%), raw cotton and groundnuts (+5% each), joria raw white wool in Bombay (+4%), lac and Tibetan raw wool at Kalimpong (-4% each), linseed and castorseed (+3% each), cottonseed and gingellyseed (+2% each) and raw jute (-2%).

The Semi-Manufactures group rose by 0.3 percent to 349.0 from 348.1 (revised) for the preceding week on account of increases in the prices of gingelly oil (+7%), sheep skins and groundnut oil (+4% each), linseed oil and gingelly cake (-3% each) and goat skins (+2%) although zinc (-3%) and mustard oil (-2%) were marked down during the week under review. A fall of 2 percent in paints brought down the index for Manufactures to 368.5 from 368.8 for the previous week. The index for the Miscellaneous group showed a fall of 2.4 percent to 579.2 because of lower prices of tobacco-leaf (-6%), betelnuts at Bangalore

(-3%), and black pepper in Calcutta (-2%), in spite of increases in black pepper at Cochin (+6%), betelnuts in Calcutta (+3%) and turmeric (+2%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August '39=100.)

Groups and Sub-Groups	14-3-53	7-3-53	14-2-53	15-3-52

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks of sugar in respect of Central Sugar Factories in India during the fortnight ended 28th February, 1953, were 744,512, 125,684, 67,580 and 602,576 tons respectively, says the Director of the Indian Institute of Sugar Technology, Kanpur.

The figures for the corresponding fortnight of the previous season were 568,316, 129,213, 44,734 and 652,795 tons respectively. Figures for the

current fortnight relate to 126 factories representing 91.10 percent of the total cane-crushing capacity, while figures of the previous year relate to 123 factories representing 87.68 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 834,351 and 464,190 tons respectively, as against the corresponding figures of 908,478 and 354,971 tons during the previous season.

COMPANY AND PUBLIC NOTICES

MARSHALL, SONS & CO. (INDIA) LTD.

NOTICE is hereby given that the Thirtieth Ordinary General Meeting of Marshall, Sons & Co. (India) Limited, will be held at the Registered Office of the Company, No. 33-1, Netaji Subhas Road, Calcutta, on Friday, the 17th day of April, 1953, at 11 o'clock in the forenoon, for the purpose of passing the Balance Sheet and the Profit and Loss Account, receiving the Report of the Directors and of the Auditors for the year ended 30th June, 1952, declaring a Dividend, electing Directors, appointing Auditors and transacting any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will remain closed from the 9th to the 17th day of April, 1953, both days inclusive.

As Dividend Warrants are sent only to registered shareholders or to their mandates, shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,
MARSHALLS (DIRECTION) LIMITED,
Managing Agents.

33-1, Netaji Subhas Road,
Calcutta, 28th March, 1953.

The Dividend, when sanctioned, will be payable on and after Friday, the 1st May, 1953, to those Shareholders whose names stand on the Register on 9th April, 1953.

Warrants for the amount of Dividend due will be posted to Shareholders in the Indian Union at their registered address.

To the Shareholders of Marshall, Sons & Co. (India) Limited and in particular to:

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to February, 1953. Compared with January the February Index for Preference Shares reveals a rise of 1.4 points, while that of Government Securities shows a drop of 0.1 point.

There were increases in Bank (1.6 points), Cotton (10.7 points), Coal (8.1 points), Jute (3.2 points), Cement (3.0 points), Engineering (2.7 points), Tea (10.6 points), Paper (31.8 points), Sugar (15.4 points) and Miscellaneous (10.3 points), while

Mining and Oil decreased by 4.0 points. Correlating all the factors the Capital variable yield securities index shows that the Index for stock prices in the above classes of shares advanced by 6.3 points during February, 1953.

COAL COMPANIES

O, P, F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CALCUTTA.THE BRITISH ECONOMIC SURVEY
FOR 1953AN ANALYSIS OF STERLING AREA PROSPECTS:
SOLVENCY BEFORE CONVERTIBILITY

THE Economic Survey for 1953—the British Government's official review of economic conditions in the recent past, the present and the immediate future—makes more cheerful reading than any such document for quite some time. How near to catastrophe the United Kingdom and the sterling area came in the disastrous second half of 1951 is shown from the fact that in the three calendar quarters beginning in the middle of that year, £780 millions was lost from the gold and dollar reserves, which stood at £1,381 millions on 30th June 1951 and had declined to £606 millions by 31st March 1952. Up to 31st December 1952 the reserves had only recovered to £659 millions though, as the Survey points out, nearly £75 millions were paid out in interest and amortisation on the U.S. and Canadian loans in the closing days of last year. Thus from the nadir of £606 millions at the end of the first quarter of 1952 there was a net improvement of £57 millions by the end of the year and, carrying the story forward with a quotation from the Survey itself, by "the end of February 1953 the reserves were about £120 millions higher than just before last year's Budget".

Very wisely, the present British Government shows no inclination to use the annual Survey as an instrument of party propaganda, as was the habit of its Socialist predecessor. For on this occasion any disposition to undue rejoicing must have been considerably qualified by the much depleted surplus disclosed in the Treasury's final revenue returns, published a few days after the Economic Survey. The originally estimated surplus was fixed by the British Chancellor at £510 millions, but later reduced to £231 millions after provision had been made for supplementary estimates mostly relating to defence. In the result, the year 1952-3 ends with an ordinary Budget surplus of only £88 millions, revenue expectations having fallen short of the estimates by £222 millions, mainly because of lower receipts from income tax and profits tax and kindred items related to the general level of business activity. This shortfall may be regarded as a sign and a portent. There is not, as yet, any evidence of slump, but industry in Britain and elsewhere is feeling the slackening of world trade which began to show itself in 1952.

Caveats and qualifications notwithstanding, the Churchill administration is entitled to claim that in the past year its immediate and short-term aims have been attained. Sterling has been strengthened and as the Survey points out, even without taking aid into the account, the sterling area achieved in the second half of 1952 a surplus with the non-sterling world, whilst the United Kingdom was also in current surplus with the non-sterling world during the same period. The three main agencies in bringing about this better state of affairs have been a sharp improvement in the U.K.'s terms of trade by reason of the widespread fall in commodity prices, the checking of inflation in Britain itself and the restrictions on imports. Two of these conditions cannot be regarded as established for ever. Except for the Government's own expenditure, Mr Butler has got the inflationary situation reasonably well under control and it may be hoped that the vanished 1952-53 Budgetary surplus will encourage him to greater vigilance over the spending departments. But import restrictions cannot, as a matter of policy for a country almost wholly dependent upon international trade, be prolonged indefinitely and already some small easements have been made as a concession to Western European feeling on the subject. The trend of the terms of trade is only partly under Britain's own control. In any case what is gained on the swings is not infrequently lost on the roundabouts; for primary producers who suffer a decline in the price of their products have that much less power to purchase the manufactured goods upon the sale of which the British economy

so largely depends. By the same token any reduction in the prices of such commodities as tin and rubber affects the sterling area's dollar earnings. In the context of the British economy (and to a large extent this is true of India also) only in the case of foodstuffs can a heavy fall in primary prices be regarded as an absolute and unqualified boon; in all other commodities, including industrial fibres, there must be added a cautionary rider.

More favourable terms of trade and quantitative restrictions combined to bring about a substantial reduction in Britain's import bill in 1952. Of the reduction of £423 millions in the value of import arrivals in 1952, as compared with 1951, the Survey says that about three-quarters was on account of volume and only one-quarter on account of price. Prices of raw material imports were considerably lower than in 1951 but this was to some extent offset by the continuing high prices of food imports though these also began to fall somewhat towards the end of the year. As a whole import prices in 1952 were on an average of 2 percent lower than in 1951, whereas the volume of imports in 1952 was 8 or 9 percent less than in 1951. The reduction in food imports in the second half of 1952 was deliberately imposed whilst the smaller imports of raw materials were the result of lower industrial consumption, particularly of textile and paper-making materials, timber, rubber, zinc and lead. Industrial consumption of some imported raw materials appears to have declined rather more rapidly than imports.

The Economic Survey does not, of course, go beyond the end of 1952 to the present moment when the prospects of ending the war in Korea, and some lessening of international tension generally, would seem to presage a further weakening of commodity prices. Some reaction has already taken place in such things as rubber, tin, copper and cocoa and if the current armistice talks go well it is to be expected that other commodities will follow suit. The Survey is cautious about export prospects. The total volume of British exports shipped in 1952 was lower than in the previous year, in spite of the fact that over 1952 as a whole export prices averaged 5 percent higher than in 1951. This was because there was an increase of 1 percent in volume, compared with a 6 percent reduction in value. Most of the deterioration seems to have been concentrated in the second half of 1952. Overseas demand for most types of heavy equipment remained strong throughout the year, but during the last six months of 1952 demand for certain engineering products fell away. The biggest absolute falls, however, were in exports of textiles, clothing and motor cars. In fact, all types of consumer goods suffered, and the Survey says there was very little evidence that their export was hampered by excessive home demand. Export earnings were only £88 millions higher than in 1951, whilst there was

a fall of £85 millions in invisibles which earned £261 millions net in 1952 against £346 millions in 1951, the difference being mainly attributable to the loss of the refinery at Abadan and lower dividend receipts from Malaya, together with higher interest payments on sterling balances. Despite the losses in the gold reserve in the first half of the year, there was a gratifying reduction in the United Kingdom's short-term indebtedness. Though EPU liabilities rose by £53 millions, there was a fall of £410 millions in sterling liabilities both inside and outside the sterling area.

Such is the broad picture of the recent past. What of the immediate future? The fact that the increase in the sterling area's gold and dollar reserves in March (£83 millions) was only half of the corresponding figure for February may, or may not, be a warning to expect some slowing down of the monthly increments

to create economic conditions which will encourage the expansion of production for export, and for any new practical contribution to this laudable objective we shall presumably have to wait for Mr. Butler's Budget in a few days time.

Nowhere in the Survey does the word convertibility appear, and having regard to all the facts it is on the whole a good thing that some recent and rather foolish talk about sterling convertibility should receive no encouragement from a policy statement which is notable—at least on this occasion—for its restraint and objectivity. In an admirable review of international economic problems which appeared in a recent issue of *Lloyds Bank Review*, Professor Lionel Robbins declared that while the goal of convertibility should not be abandoned there are very real grounds for proceeding with caution. He asserted that he had no desire to throw cold water upon hopes with which he is fully in sympathy. "But," he added, "I should hold it an unjustifiable risk if we were to proceed much further towards convertibility until our reserves were very much greater than they are at present". After the brief but disastrous Daltonian experiment in convertibility in 1947 most people will agree that another such failure would discredit convertibility for a generation. Despite the energetic measures which Mr. Butler has taken, full monetary discipline has not yet been restored to the British economy. In that country, and indeed nearer home, the increase in money incomes in recent years has consistently exceeded increases in productivity. From which it would seem that nations, like individuals, too often elect to learn the lessons of life by the hard way.

PROCEEDINGS OF THE EIGHTH INSURANCE CONFERENCE

LIFE POLICIES AND THE ESTATE DUTY BILL

(BY A CORRESPONDENT).

THE Eighth Insurance Conference was held in Delhi last week-end as part of the Silver Jubilee Celebrations of the Indian Life Assurance Offices Association. After being inaugurated on Saturday by Dr. Radhakrishnan, the Vice-President, the conference held its business session, at which a number of papers on various aspects of life insurance were presented and debated by leading insurance executives. There were four papers on estate duty in relation to life insurance; with one exception they were rather poor. They dealt with the liability of life policies for estate duty under the Estate Duty Bill 1952 and its effect on Sections 38 and 39 of the Insurance Act, which are concerned with nominations and assignments of policies. Gifts made two years or more prior to death are exempt from duty provided the possession and enjoyment thereof was immediately assumed by the donee and thenceforward retained to the entire exclusion of the donor; life policies assigned to another by way of gift without valuable consideration come under this provision and if they are assigned two or more years prior to death the proceeds are exempt from duty. There is, however, another provision in the Bill treating a life policy absolutely and irrevocably nominated from its commencement as an estate by itself. It is evidently illogical that a policy under which a person parts with his interest from the very beginning is treated as an estate by itself, whereas if he parts with his interest subsequently but two years prior to his death the policy is totally exempt from duty. Under Sections 38 and 39 of the Insurance Act, a policyholder can transfer the interest in a policy to an assignee or nominee in such a way that in the event of the assignee or nominee predeceasing the policyholder, or the policyholder surviving to the maturing date of the policy, the rights and interests in the policy would revert to the policyholder. Gifts of policies made in this way are very popular but in view of the different requirements for favourable treatment in regard to estate duty, the extremely useful rights conferred on policyholders and claimants by the Insurance Act, in the form of conditional assignments and nominations, will be considerably whittled down. In the recently published Select Committee's report on the Estate Duty Bill, life policies have been given a special place. Firstly, policies taken out specifically to make provision for paying estate duty, or assigned to the Government for that purpose, are proposed to be exempted from duty to the extent of the duty payable. Further, policies up to Rs. 5,000 previously taken out by the deceased on his life are exempt from duty.

There were five papers on the extremely important and complicated subject of lapses. The authors included a general manager, an actuary, an agency manager and a branch manager, so the topic was considered from all angles. The extent of agreement among them, as to causes and remedies, is surprisingly large. According to one speaker lapses are estimated at a third of new business; including surrendered policies and reduction in sums insured by reason of policies becoming paid-up, the total amount going off the books of companies in India, other than by way of deaths or maturities, is placed at about one-half of new business. This

would appear to be a serious underestimate, for the extent of lapses may be as much as three-fourths of new business; the matter was discussed in considerable detail in *Capital* on 21st February last year. In another paper it was stated that in the United Kingdom the proportion of lapses to new business might not exceed 5 percent, while in the U.S.A. it might be about 16 percent. The Indian business of British companies shows a lapse rate of 15 percent. In Japan, lapses in 1950 were 77 percent of new business completed that year. Among the major causes of lapses are: the craze to complete business without adequate consideration of costs; the part-time or casual agent who is not properly equipped to render service to the policyholders; the disparity in remuneration allowed in the form of commission on first-year premiums and renewal premiums; and the practice of assessing the value of salaried field workers and branch managers only on the basis of new business procured by them. Among the remedies suggested were the training of insurance agents, improvement of their professional status and the elimination of part-time agents; the despatch of lapse notices in vernacular languages since a large proportion of policyholders do not know English; and the provision of facilities to make the revival of lapsed policies easy and convenient. One speaker mentioned the American system of agency remuneration which is designed to reduce lapses, particularly the "life-time" plan of the Mutual Life Office of America under which only 40 percent of the agent's annual income arises from first-year commissions, thus emphasising the importance of renewal premium income.

One paper compared legislation affecting life insurance in the U.S.A., Canada, the U.K. and India, the countries which have the largest amounts of insurance in force. In Canada and India the law requires a minimum proportion of policyholders' directors on the boards of insurance companies. In Canada only participating policyholders have the right to vote, and they may also vote with shareholders at general meetings of the Company. In the U.K., Canada and India composite companies have to keep their life funds separate from all other funds; the life funds are as absolutely the security of the life policyholders as they would be if they belonged to companies transacting only life business. In Canada and India there is the further stipulation that the assets of the life fund must be kept separate from all other assets. In Canada there is an unusual provision that accounts of participating and non-participating business must be kept separate and distinct. In New York State, loan values have to be shown in the policy and when a policy loan with accumulated interest exceeds the loan value, the policy, subject to 30 days' notice, becomes void. In India, on the other hand, in *Darbhanga and Another vs. National Insurance Co. Ltd.*, of Calcutta the Madras High Court ruled that foreclosure of a policy when the policy loan with interest exceeds the cash value of the policy is a limitation on the equity of redemption, and therefore unenforceable. In New York State, Canada and India, investments of life funds are restricted to those specified in the respective Acts. In Canada assets representing domestic policy liabilities have to be retained in the country and two-thirds of such assets have to be in the form of investments in or loans upon Canadian securities. In India domestic policy liabilities, with certain deductions, have to be matched to the extent of 25 percent by Government securities and to a similar extent by Government or approved securities. State control in the U.K. is practically non-existent but in the other three countries the activities of insurance companies are severely restricted and subject to continuous review or investigation. There is however, a fundamental distinction between the powers vested in the supervisory authorities in India and elsewhere. In Canada and the U.S.A., judicial review of Governmental actions or rulings under the insurance laws is always provided, whereas in India it is not; here the Controller of Insurance is the final authority.

Some interest attaches to a paper on life underwriting by the numerical rating system which is widely practised in America and the Scandinavian countries but is not popular in U.K. or India. When a life proposal comes up for assessment, credits and debits are allotted to the favourable and unfavourable features according to a schedule of rates, and the premium rate at which the proposal can be entertained is made to depend upon the amount of excess of debits over credits. The system has the advantage of being simple, of achieving uniformity in assessment and of enabling assistants of limited experience to rate life proposals. Numerical rating however has some well-known disadvantages. It does not take into account the incidence of extra risks in a particular case; it depends only on the estimated amount of extra risk. Some underwriters also feel that assessment of life proposals should be based on an overall survey of the medical and other information available, and that numerical rating, however comprehensive, cannot be all-embracing.

The last three papers read at the conference were concerned with the use of punched card equip-

ment in life premium accounting. The greater part of the income of an insurance company is from premiums paid by policyholders, and premium accounting is therefore a major element in the work of the company. The large number of entries and the manifold sortings and groupings required in connection with the preparation of accounts and statistics render insurance accounting specially adaptable to punched card techniques. Data is recorded on cards by means of punched holes. The "interpreter" translates the punched information and prints it on the top of the same card to make visual reading possible. The "reproducer" prepares a duplicate set of cards from an existing one or punches common information on a group of cards. The "collator" inserts cards in their correct positions in a pack of cards, compares two packs of cards and amalgamates those which agree or replaces new cards in a pack and simultaneously removes the old ones. The "sorter" arranges cards in any desired order. The "tabulator" is the principal machine of the punched card equipment; it prints in any desired form either details or totals or both contained in the punched cards.

CURRENT COIN

U.S.A. Still in Top Gear.—The April monthly letter of the National City Bank of New York says that U.S. trade and industrial reports have made another strong showing during March. The principal manufacturing industries, with a few exceptions where over-capacity is chronic, are producing all they can and shipping all they make. Many are operating against large unfilled orders, while others take an optimistic view of spring prospects and are stocking their distributors accordingly. In the aggregate, the country could hardly be busier than it now is, for in a good many areas production is up against the ceiling of the labour supply or of plant capacity, and a few industrial materials are still scarce. The pressure on the steel mills is unabated. Some significant increases in new orders, as for machine tools, have been reported, and for the industries as a whole incoming business, together with backlogs, assures a high production rate for a considerable time to come. Retail sales continue good. In the present circumstances, people look forward to abundant supplies and probably—in some things—lower prices. Thus good retail sales are attributable to high employment, high personal incomes, and willingness to buy and, if necessary, to borrow to finance major purchases. The conditions which influence the willingness of people to spend, and also to borrow for the purpose of spending, at any given time may include the level of income received and in prospect, holdings of liquid savings, and expectations as to employment and prices. A survey made for the Board of Governors of the Federal Reserve System, whose findings were published during the month, indicates that the current outlook is favourable in all these respects. It shows, for example, that 48 percent of the spending units surveyed are receiving higher incomes than a year ago, and that 36 percent expect to have further increases during the next twelve months. More expect to buy new cars and major household goods this year than did a year or two years ago, and slightly more expect to purchase new or existing houses. Those who feel that times are good for making major purchases of durable goods total 33 percent compared with 22 percent last year. If these attitudes hold over the coming months, and are translated into equivalent buying, business in consumer items will continue active.

Coal Conservation.—Strong words were used at the annual general meeting of the Indian Colliery Owners' Association in Dhanbad last week to criticise what the President, Mr. B. L. Agarwalla, described as "indecisive, hesitant and arbitrary policy" on coal conservation. Mr. Agarwalla seemed particularly dismayed by the fact that more metallurgical coal was produced in 1952 than in 1951; he thought that the official ceiling should have been fixed at a much lower level. He did not mention, however, that some of the targets fixed for collieries individually have proved most oppressive and have seriously affected their working. If there has been some fresh thinking on this subject in official circles in recent months, it has been induced by the entirely healthy realisation, shared by Mr. Agarwalla, that conservation is "a very complicated subject"; it cannot readily be solved by the simple restriction of output. Restriction is wasteful and in any case is inappropriate when ambitious plans for economic development are likely to increase the demand for coal, metallurgical included. Mr. Agarwalla thought the Government had "lacked courage" in deciding that pegging should not lead to large-scale retrenchment of labour or render any colliery uneconomic, but it is hard to understand why the interests of labour, industry and consumers must go by the board when the same aim of conservation can be achieved more rationally by such methods as beneficiation and sand-stowing. Mr. Agarwalla admitted that

"our first and immediate aim in national reconstruction should be to create conditions for an increase in coal production by at least 50 to 100 percent, if not more," but did not say whether the planned expansion of iron and steel production which is to be an essential part of this "national reconstruction" calls for the reduced output of metallurgical coal. He emphasised that transport difficulties were hampering coal production but there had been a "remarkable improvement in wagon supply" during the past year. As the president of an Association which represents many low-grade and medium coal producers, he was understandably critical of the Coal Board's decision to conserve Grade II coal by restricting its output. Less justified, however, was a vitriolic attack on the Fuel Research Institute. The Institute is an official national research organisation which knows more about the technical aspects of conservation than some of the interested parties whose opinion the Government has sought in the past. Admittedly its scientific enquiries led it to urge conservation by sand-stowing rather than by restricting output; this scarcely constitutes grounds for the accusation that its activities "are being directed into less useful and sometimes anti-national channels."

Bank Costs and Tribunal Awards.—Tardy progress was made by the Bank Disputes Tribunal last year in hearing disputes between banks and their employees largely because the latter insisted on raising a host of secondary issues; however, its award is expected to be announced soon and is awaited with more than usual interest because, as recent bank balance-sheets show, the past year has been a period of declining profits. At last week's annual general meeting of the Indian Banks Association in Bombay the chairman, Mr. Pranlal Devkaran Nanjee, pointed out that "the total net profits of 18 of our member-banks were over Rs. 50 lakhs less in 1952 than in 1951," but "establishment charges have been mounting." He added that "banks can meet the demands of their employees only according to their capacity to pay." If they are made to pay more, "the result would be that the banks would be compelled to increase the charges to their clients and, if that does not prove to be a practical proposition, reduce or restrict their sphere of activity." Banking has become more competitive and it is in the institutions' own interests, as well as in the interests of the economy generally, that attempts to inflate operating costs be firmly resisted. It is true that savings could be more fully mobilised if banks could open branches in smaller towns and villages, but Mr. Nanjee said that "the mounting costs of establishment charges are making it almost prohibitive for banks these days to open new branches in such places." Another deterrent to expansion is talk of the nationalisation of banking and insurance, a slogan that has recently been bandied about with more fervour than realism especially by the Praja Socialist Party. Few outside it believe that the Government has either the resources or the experience to undertake such a project but irresponsible slogan-mongering on this subject induces hesitancy which can only affect the working of financial institutions adversely.

Tonnage Values Vulnerable.—In their report for the quarter ended 31st March 1953, Messrs. Harley Mullion & Co., Ltd., say that the general trend in the secondhand ship sale market has shown some improvement. This statement is based on the current prices paid for secondhand Liberty ships, sales of which are usually a fair indication of the rest of the market. The better tone of the market is in direct contrast to the recent fall in freight rates. Although changes in ship values are usually a few months behind any fluctuation in freight rates, the present discrepancy is probably attributable more to international events than to economic considerations—it is generally felt that the present price of Liberty tonnage cannot be justified by its earning capacity. But since the value of secondhand shipping has in the past eventually followed the trend of freights, it is a fair assumption that the present situation in which freight rates are falling and secondhand prices are rising will be rectified by a sharp drop in the latter. During the last three months the price paid for a Liberty ship has risen from £260,000 to about £280,000 (£600,000 a year ago). Greek shipowners, particularly in New York and London, are reluctant to sell but some British companies have been quietly releasing their "stopgap" tonnage. A further factor that will affect the secondhand value of shipping is the renewed hope of a peace settlement in Korea. The Korean war has had the effect of artificially swelling activity in the Pacific trades, and therefore the secondhand ship market might be due for a sharp fall; a fall that may even exceed that of freight rates.

Banks on Wheels.—Mobile banks are not a novelty in India; the Bank of Patiala has had an office on wheels functioning for the past two and a half years—so successfully that last week it started

another one, and will soon have a third installed in a bullet-proof van costing Rs. 90,000 and fitted with new safety devices. Some years ago the Reserve Bank considered the prospects for mobile banks but did not arrive at very encouraging conclusions; indeed the belief is still widespread that in the rural areas—the proper field of operation for mobile banks—people are at best chary of entrusting their savings to others, more so to a bank which is "not physically and constantly situated in their midst." Mr. P. S. Rau, Adviser to the PEPSU Government, inaugurating the Bank of Patiala's second mobile office last week claimed that one reason for its success is that the bank makes a "very practical and realistic" approach to the villagers; pass-books, forms and advices are issued in the local script and accounts opened for illiterate people. Widows, orphans, and infirm and blind persons are given a high rate of interest (6 percent) on their deposits under certain conditions. The mobile bank which began to function last week will serve the hilly areas, such as Dharampur, Dagshai, Sabathu, Barog, Taradevi, Salogra, Sanjauli, Mashobra and Chail. Facilities will be provided for savings, current and fixed deposit accounts, advances will be made against securities, and drafts, discount bills and hundis issued. Articles will also be accepted for safe custody and delivered to the same place when they are wanted. The problem of mobilising villagers' savings is one of the most intractable in rural finance; as Mr. Rau pointed out, the Land Alienation Act, the Moneylenders' Act and other agrarian reforms "have completely disorganised rural credit in this area and the void has not yet been filled to any appreciable extent. The co-operative movement, if and when properly organised and developed, should no doubt be able to fill the gap to a considerable extent but so far this movement has not touched even the fringe of the problem." Nor, one suspects, has the mobile bank. It is nevertheless an experiment worth developing and extending but with a sharp eye on costs.

February Coal Statistics.—According to the Chief Inspector of Mines, 826 collieries and eight coke plants worked during February. On an average 356,530 persons were employed daily and 8,218,958 man-shifts were worked. The overall percentage of absenteeism was 13.01. The output per man-shift for miners and loaders was 1.03 tons, for all persons employed in underground and open-workings 0.57, and for all persons employed 0.37. During the month 3,061,067 tons of coal were produced; 105,919 tons of soft coke, 165,379 tons of hard coke and 12,370 tons of other kinds of coke were also manufactured. Despatches were 2,355,032 tons of coal, 87,698 tons of soft coke, 34,135 tons of hard coke and 4,095 tons of other kinds of coke. Coal stocks at collieries on the last day of the month were reported to be 3,368,523 tons.

Business Investment in the U.S.A.—The U.S. Securities and Exchange Commission and the Commerce Department report on the basis of a recent survey that American business firms plan to spend a record \$26,991 million on new plant and equipment this year—\$536 million more than the actual capital outlay in 1952. A similar survey last October showed that at that time American business men planned to spend less in 1953 than they did last year and the increase in spending proposals suggests that greater confidence now prevails at a primary level. Railroads and the durable goods industries are the only major industrial groups that expect to expand less this year than in 1952. The former will invest 7 percent less than last year's figure of \$1,391 million, while the latter propose to spend \$5,523 million as against \$5,784 million in 1952. Mainly responsible for the fall in durable goods are primary iron and steel (\$188 million), non-ferrous metals (\$86 million), and stone, clay and glass products (\$48 million). Manufacturers of electrical machinery plan to spend \$68 million more and non-electrical machinery \$50 million more. Outlay by soft goods industries will rise from \$6,210 million to \$6,516 million, the main contributors to the increase being petroleum, chemical, paper and beverage companies. Textile mills will reduce their investments from \$400 million last year to \$314 million this year. Public utility companies plan to spend \$4,368 million, the increase of 14 percent being proportionately the largest for any industrial group. Mining companies will raise their investment by 3 percent to \$910 million and non-rail transportation firms by 1 percent to \$1,380 million, but commercial investment will remain at about last year's total of just under \$7,000 million. Capital goods prices at present are only a little above the average for last year, so that spending on this scale will mean a record addition to productive facilities. The survey indicates that outlays will drop from an annual rate of \$27,500 million in the first half of the year to a rate of \$26,200 million in the last six months, but the probable explanation for the decline is that programmes for the more distant period have been understated.

in London... they know that
more motorists use
triple-action Mobiloil
than any other motor oil in the world!

The London taxi-driver, second in fame only to his fellow-citizen the policeman, plies his venerable vehicle around the clock, come wind come weather. He knows the way (some say the longest way) to any address you can name; and his powers of description are known only to the rash traveller who withholds a 'tip'.

Like wise drivers all over the world, he makes straight for the sign of the Flying Red Horse when he needs lubrication. His tip for smoother running, of course, is to use Triple-Action Mobiloil - the Heavy-Duty motor oil that...

SAVES ON WEAR by lubricating properly at all temperatures;

SAVES ON REPAIRS by preventing harmful carbon deposits in the engine;

SAVES ON PETROL by preventing acids eating away the metal parts, which causes loss of power.

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication - the complete motor service - and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

THE CALCUTTA MONEY MARKET

HEAVY CENTRAL GOVERNMENT DISBURSEMENTS

Wednesday, 8th April.

THERE appears to be more money about than there was, probably on account of the heavy disbursements at the beginning of the month by the Government of India, which have brought down its deposits with the Reserve Bank from Rs. 135.78 crores to Rs. 87.29 crores. Nevertheless rates are unchanged in the interbank market at 2½ percent for overnight loans and 3 percent for good money. Though there have been big lenders at times, most banks report that conditions are still fairly tight. Trade advances have been steady, with only a slight rise on sugar account as we approach the end of the normal crushing season.

In the exchange market, business has been very dull since the holidays. Remittance is moderate. Sterling rates are unchanged. The rupee-dollar rate has been up eight annas but has now come back to last week's figure of Rs. 475-8. Sterling is stronger today though there has been no change in the rate.

The statement of the Reserve Bank of India for the week ended 3rd April, 1953, was marked by several interesting features. The total note issue and notes in circulation rose sharply by Rs. 9.43 crores and Rs. 16.54 crores to Rs. 1,159.58 crores and Rs. 1,149.66 crores, respectively. The expansion in currency was duly adjusted by raising foreign securities and rupee coin by Rs. 5 crores and Rs. 4.43 crores to Rs. 583.15 crores and Rs. 86.55 crores. Notes held in the Banking Department consequently fell by Rs. 7.11 crores to total Rs. 9.92 crores. Deposits of the Government of India fell sharply by Rs. 48.49 crores to Rs. 87.29 crores, while other Government accounts rose from Rs. 19.57 crores to Rs. 39.42 crores, presumably due to a transfer from the Centre. Balances of commercial banks at Rs. 53.25 crores disclosed a rise of Rs. 5.73 crores on the previous week. Balances held abroad were about Rs. 2.06 crores lower at Rs. 143.47 crores, following a transfer to the Issue Department. Other loans and advances fell from Rs. 26.95 crores to Rs. 25.44 crores, of which advances to scheduled banks against usance bills fell from Rs. 5.24 crores to Rs. 74.18 lakhs. Investments declined by Rs. 9.80 crores to stand at Rs. 86.32 crores. Ways and means advances were shown at Rs. 3.60 crores (Rs. 3.30 crores).

The larger amount of Rs. 1,35,00,000 was offered for Rs. 1 crore of three-month Government of India treasury bills this week. Tenders at Rs. 99-6-3 percent were accepted, the average rate of acceptance being unchanged at Rs. 2-7-0 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 3rd April, treasury bills for Rs. 7,66,75,000 were sold in favour of the Reserve Bank of India.

Silver ruled easier last week on liquidation, induced by peace moves in Korea. The weakness in commodities was also regarded as a damper. The price fell from the previous week's level of Rs. 157-12 to Rs. 152-14 quoted to-day. The ready rate was done at a premium of 5 annas. The price also declined from 74½d. to 74d. in London, but there was no change in the New York quotation at 85½ cents.

Gold, however, moved to higher levels in contrast with silver because of reduced arrivals and good offtake. The price rose from Rs. 84-7 to Rs. 86-4. The sovereign at Rs. 57-15 showed a rise of more than one rupee.

The return of the Imperial Bank of India for the week ended 27th March, 1953, shows a rise of Rs. 4.10 crores in total deposits to Rs. 214.15 crores. Investment in Government Securities are up by Rs. 5 lakhs to Rs. 71.06 crores, while other authorised investments remain unchanged at Rs. 11.16 crores. Loans, cash credits and overdrafts have increased by Rs. 3.76 crores to aggregate Rs. 110.41 crores, while bills discounted and purchased have decreased by Rs. 6 lakhs to stand at Rs. 23.30 crores. Cash and balances are, in consequence, shown at Rs. 18.43 crores or Rs. 94 lakhs higher.

TREASURY BILL MATURITIES

Details of 3 months' Bills outstanding with the public on 10-4-53.

Issue Date	Maturity Date	Amount	Average Acceptance Rate
(000's of Rs.)			
10-4-53	10-7-53	1,00,00	Rs. 2 7 0%
2-4-53	2-7-53	1,00,00	Rs. 2 7 0%

18-1-53	18-4-53	1,00,00	Rs. 2 6 9%

Monthly Maturities (000's omitted)	
April, 1953	3,00,00
May, 1953	4,00,00
June, 1953	4,00,00
July, 1953	2,00,00
Total	13,00,00

The statement of the position of Scheduled Banks for the week ended 27th March, 1953, discloses Demand and Time liabilities at Rs. 534.05 crores (Rs. 11.91 crores on account of borrowings from Banks) and Rs. 311.83 crores (Rs. 1.86 crores) compared with Rs. 531.22 crores (Rs. 11.84 crores) and Rs. 312.45 crores (Rs. 2.06 crores) respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 54 lakhs and Rs. 96 lakhs to aggregate Rs. 32.49 crores and Rs. 42.70 crores, respectively. There is a rise of Rs. 18 lakhs in investments to Rs. 303.31 crores. Advances and bills discounted at Rs. 528.53 crores reveal an increase of Rs. 8.23 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.9 percent and 62.5 percent against 8.7 percent and 61.7 percent.

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
LEEDS, ENGLAND.

WARP STOP MOTION.—Immediately a warp thread breaks the individual compensator is pulled upwards by the action of its spring and brought into contact with the control bar, automatically stopping the loom.

WHILE attention is focussed on the first spring blossoms of peace that are diffidently showing their heads in Korea and Germany, the buds of amity between India and Pakistan are burgeoning more surely at home. The recent successful talks on coal and jute in Delhi have demonstrated that not only are solutions of old problems possible, but that even the most intractable can be resolved if both parties are anxious enough about it. And there are good reasons why India and Pakistan should be particularly anxious now to reach an overall settlement of their differences. If the first gift of world peace is to be an economic blizzard, as a class of speculators would have us believe, it would be as well for the nations of this subcontinent to huddle a little closer together—and to withdraw some of their strength from the snows of Kashmir. I think the speculators exaggerate the degree to which India's economy depends on the continuance of a war in Korea (provided the transition to near-peace conditions is handled circumspectly in the United States) but there is no doubt of the degree to which it would benefit from a restoration of friendly relations with Pakistan. Since the devaluation of the Indian rupee and the non-devaluation of the Pakistani rupee caused so much trouble after 1949, it might be especially important to reach an intimate understanding on all economic questions before the next devaluation of sterling comes. I see Colin Clark is now prophesying that eventually for the next year or two, while *The Economist* agrees that it would be a prime necessity if America slumps during the changover at the end of rearmament.

The departure from Calcutta on Tuesday of Mr. W. J. B. Walker, manager of *The Statesman* since 1936, has deprived us of the company and counsel of a cheerful and vigorous figure, who was as well liked as he was widely known in Calcutta and in the Indian newspaper world generally. Willie Walker came to India 26 years ago to join our Chowringhee Square contemporary and in the many changes that have occurred in the Indian Press since then, he acquired something of the status of an elder statesman and played a leading part in the reorganisation of the news services that cater for English language readers in this country. His services to the local Scots community and to the newspaper industry have been mentioned elsewhere, so I may recall three characteristics for which he will be most readily remembered hereabouts: the staunchness of his religious convictions, the most infectious laugh I have ever heard, and a quite extraordinary knowledge of trains. Trains were more than a hobby with him, and the repleteness of his erudition concerning their models, mechanisms and timings has astonished engineers in more than one shunting yard in India and Britain. Perhaps it is especially the many younger men in the newspaper and advertising business who owe him so much, that will wish him well in his new career at home.

When I wrote in this column in January that perhaps one day the plotting Russian doctors would be found to have been framed, and their framers framed in turn, I scarcely expected to be confirmed so soon, for it is customary in these cases to let the accused be executed before their innocence is discovered. As long as there was only one plot, one could believe that it was being staged as a morale booster, but if there are plots within plots it is surely plain that there are factions within the Russian hierarchy and that their manoeuvring had something to do with the expectation of Stalin's death. The release of the supposed conspirators, together with the various other internal concessions, can only have the effect

A DITCHER'S DIARY

of discrediting the memory of Stalin, under whose régime the injustices now being rectified were perpetrated. This sudden let-down for the leader who was buried last month amid fawning adulation is presumably intended to weaken the position of some sort of Stalin party, which is now opposed by a new group whose true character is not yet clear. I shall be suspected of excessive optimism in trying to read signs of disunity into recent news from Moscow, but in fact I draw from all this the quite mournful conclusion that the current peace offensive cannot lead to very substantial concessions. An administration that is using these tactics to consolidate itself at home is hardly in a position to make concessions abroad that might be interpreted as weakness. If only the new rulers of Russia were not being so conciliatory on both fronts at once one might accept their new mood of sweet reasonableness at nearer its face value: only a régime that wished to commit political suicide would relax tyranny at home at the same time as it genuinely softened its approach to rival Powers.

The meeting of the All-India Film Federation in Calcutta on Tuesday seems to have been a curious affair. According to reports, one of the main points discussed there was the "mobilising of public opinion in favour of the industry." The president of the Federation, Mr. B. N. Sircar, announced that the organisation intended to appoint a Public Relations Officer whose task it would be "to bring home to the public, through the medium of the Press, the difficulties and achievements of the industry." If an industry whose products are constantly before the public, and which monopolises the most powerful medium of mass communication known to mankind, still has to worry about its "public relations," it is a poor look-out for the dumb producers of steel and coal. It is flattering to learn that the Press is to be called upon to help publicise the achievements of an industry whose achievements can be seen for four annas in almost every street in India, but I am afraid that no amount of "public relations work" (to use that abhorrent euphemism for self-advertisement) will do much good unless the quality of the films offered the public is improved. "Achievement" in an art-industry like the cinema consists simply of technical and literary quality and if Indian films do not possess it, it will be no use getting the papers to say they do. If this disquiet about public relations indicates that the film industry is in financial straits, that might be doubly unfortunate since the signs are that the cinema is on the verge of a revolution little less important than the one that followed the introduction of talking films. I refer of course to 3-D—otherwise known as "the deepies". Sir Michael Balcon said recently that third dimensional films would not bring any vast advance in the artistic sense, but that will not prevent producers spending lavishly on this innovation. Indeed they have already begun to do so and several 3-D movies are now showing in London. The Indian film industry should have made enough money in the past decade pandering to the poorest of popular taste to be able to face this revolution with more confidence.

Sterling with its 69 different varieties beats Messrs Heinz by 12, but I imagine that the French franc beats them both easily, mainly because of the curious regulations governing what are called capital francs which are convertible within one

foreign country but not between two foreign countries. The matter is complicated, but the interesting thing is that it is by amending the regulations concerning British capital francs that the French authorities have enabled the tourist from the United Kingdom to obtain a more favourable rate of exchange when he buys his holiday funds. That, combined with the increase in the British travel allowance from £25 to £40, means that the tourist who crossed the Channel last month with a maximum of 24,700 francs now descends on Paris with the princely sum of 46,000 francs. Even with current French prices, one can have a fairly comfortable short holiday in France on that allowance, provided one keeps one's wife out of the Rue St. Honoré. Many Britons did not think so a few years ago, when the travel allowance was £100 and a holiday on the Continent seemed an extravagant luxury, but the £25 régime has convinced holiday makers of more modest means that crossing the water is not for the rich only. The result has been that three million more passports have been issued in the last few years and about half the people going abroad nowadays have never done so before. To complete the statistics, one-third of British tourists on the Continent today are weekly-paid clerks or industrial workers, one-third of them are under 30, and half of them earn less than £10 a week. Obviously for folk like this the restriction on travel allowances has not discouraged holidaying abroad, but must have positively encouraged it. This seems to be a good thing, though how the French view it I cannot say; it must mean many more *pauvres Anglais* going up the Eiffel Tower and many less dining at the four-star restaurants.

To the ignorant traveller across India's fields and jungles it would seem that grass and bamboo should belong to that class of primitive commodities that are never disturbed by the complex currents of inflation and deflation which bedevil transactions in scarcer economic goods. Indeed if our traveller wandered into some of the less comfortable parts of the Indian countryside he might wonder if grass and bamboo are ever scarce enough to be classified as economic goods in the textbook sense at all. It is surprising then to learn that the price of these common species of vegetation has increased fivefold in the last decade or so, and if you were to suspect that this rise has been artificially induced, you would be quite correct. Mr. C. I. Turcan, chairman of the Indian Paper Makers Association, told its annual meeting yesterday afternoon that the rise in prices has been caused by exorbitant railway freights and by unreasonable royalties on forest leases charged by State Governments. The paper industry's offence is that it uses grass and bamboo to make paper, which it then sells at prices much below the cost of imported paper. For this piece of brazen resourcefulness it is punished by being batted upon by State Governments which, said Mr. Turcan, are "interested only in extracting the highest possible revenue from their bamboo forests heedless of what the effect may be on the paper industry or on the forests". The industry manages to find a use for 300,000 tons of bamboos each year and if it increases its production of paper by 70,000 tons, as it is bidden to do in the five year plan, it can use a lot more. It should not be asking too much to ensure that the price of this plentiful raw material is not inflated by short-sighted and unreasonable State policies.

The Marquis of Salisbury offered the following damaging retort to what he regarded as inconsistent criticism of the Government's Transport Bill in the House of Lords recently: "What the noble Lords opposite seem to want is to have their grouse and eat it".

STERLING AREA'S GOLD AND DOLLAR RESERVES RISE

£436 MILLION U.K. BUDGET DEFICIT

THE sterling area during March had a gold and dollar surplus of \$63,000,000, raising reserves at 31st March to \$2,166,000,000. The United Kingdom in March had a surplus with the European Payments Union provisionally estimated at £7½ million. The sterling area's gold and dollar surplus of \$63,000,000 arose after allowing for \$29 million as United States defence aid and \$19 million from E. P. U., representing part of the February surplus, which was settled in gold or dollars. The sterling area's gold and dollar surplus compares with \$125 million in February, while the United Kingdom's E.P.U. surplus compares with £9,900,000 in February.

The United Kingdom had an overall budget deficit in the financial year ending 31st March of £4,36,000,000, the Treasury announced. This compares with the overall deficit in the 1951-52 financial year of £150,000,000. In the original budget estimate for the year just ended it was thought that the total revenue and expenditure for the period would be about in balance.

Stock Exchange

The opening of the "Peace Offensive" caused a good deal of disturbance in the markets during the past week. The trend was mostly downwards and was particularly marked in commodity backed shares. Conditions were steadier before the Easter Holidays but the sharp break on Wall

Street following these holidays caused further eases on the London Stock Exchange. Coppers, already nervous because of fears connected with the freeing of the metal, bore the brunt of the attack and despite some attempted bolstering of prices by Continental dealers, at times most of the shares were unsaleable. Diamonds, tins and other base metals also came under pressure. Apart from this the general tendency was to rearrange investment buying. This did not get far as it was realised that it might be months before anything definite resulted from present political moves.

Only gilt-edged really resisted the downward trend and they continued to move slowly higher. Industrials were generally lower although actual activity was confined to selected issues. Among overseas issues interest mainly centred on the foreign bonds of countries behind the Iron Curtain. Widespread speculation occurred in Chinese, Hungarian and Rumanian. Japanese suffered severely at one time but came back into favour on the realisation that peace in Korea could lead to full-scale trading with China.

Gold shares were very quiet and inclined irregular but the undertone continued to hold firm. Rubber shares were generally easier on the week. Teas were not subjected to quite the same amount of selling pressure but prices were generally lower where changed.

There was a return of more difficult conditions on the money market at the start of the week because of some fairly heavy calling by certain of the larger clearing banks. Calling continued and conditions deteriorated as the week progressed. Despite continual help from authorities several market houses had to enter the central bank for

loans on a number of occasions. Shortage of credit kept the bill business at a low level. Applications for £230 million Treasury Bills amounted to £322,755,000 of which the former amount was allotted at an average rate of 48s 3.93d percent. This week's offerings are £250 millions. The Bank of England return shows active note circulation £20 million higher at £1,500 million, reflecting Easter demand, while bankers' deposits were about £10 million lower at £269 millions.

Tea Stocks

Stocks of tea in the United Kingdom bonded warehouses totalled 115,755,780 pounds on 27th March, compared with 118,204,590 in the week previously. 7,544,670 pounds were landed during the week.

Commodity Markets

Fresh progress towards peace in Korea and the usual post-holiday apathy brought a very cautious tone to the London commodity markets early on Tuesday morning. Rubber, a strategic material, was particularly affected and prices declined about 1d. per lb. following eases in Singapore. Sellers are not pressing, since they cleared the books before the holiday and are awaiting the establishment of new levels. Buyers on the other hand are willing to operate at lower prices but manufacturers are not expected to enter the market so soon after the recess and new developments in Korea are likely to delay purchases further. The cocoa market eased only fractionally as the approaching clearance of the main crop supplies remains the supporting factor of this commodity. Shellac is unaffected by brighter peace prospects and contrary to the general trend of commodities registered a limited advance, partly reflecting steadier Calcutta advices.

Portuguese Rosin and Turpentine

The Portuguese Government has decided to fix minimum export prices for rosin and turpentine. This measure is designed to prevent the continued fall in prices resulting in part from competition among exporters. The Government has also decided to reduce the present export taxes to 0.07 escudos per kilo for rosin and 0.08 escudos per kilo for turpentine. The Portuguese naval stores industry is undergoing a severe depression following the sharp reduction in shipments from 66,800 tons in 1951 to 27,000 in 1952, which left exporters with large stocks when world prices and demand were declining.

Hong Kong Gold

In the shortened week's trading Hong Kong gold sagged to \$265½, the lowest level since before the Korean war when it was quoted at around \$265. Opening at \$270 the price declined to the week's lowest level of \$265½ following Peking's proposal to break the deadlock over the issue of prisoners of war. Lower international prices and the higher trend of New York transferable sterling were also bearish factors. The market recovered slightly to close at \$267. Trading officially totalled 8,250 tael, while 16,000 tael was privately transacted. There were no arrivals from Macao. Unofficial exports are estimated at about 10,000 tael. Seizures last week totalled 1,430 tael valued at about \$400,000. Forward contracts were not tight though sellers offered \$40.05 per ounce c.i.f. Macao.

U.S. Non-Ferrous Metal

Sluggish demand continued in New York for April imported copper and the scrap copper movement gained further momentum. Lead demand slackened, primarily reflecting the Korean peace talks. Lead consumption in January was 94,365 short tons and in December 93,151, according to the Bureau of Mines. Zinc was in fair demand. Domestic production of zinc in February was 48,899 short tons and in January 53,731 (revised), according to the Bureau of Mines. Tin was dull but unchanged in view of holidays abroad. R.F.C. tin sales last week were only 12½ tons grade "A."

Oil Prices

Recent international developments and prospects of a resumption of the full scale Korean peace talks caused a sharp reaction in coconut oil, Ceylon produce being offered at £128 per ton, c.i.f. against £134 previously. Indian linseed oil was also lower at £112, while business was done in Indian groundnut oil, afloat at £148-1/2. Seeds remained quiet but palm kernels sold at 9,100 Belgian francs for Belgian Congo and 68,000 French francs for French East Africa. Sudanese groundnuts were marked down to £62.

Stock Market Newsletter

The Investors' Chronicle market newsletter states: The stock exchange is likely to be rather uncertain in face of the British budget on 4th April and the South African general election on 15th April, which could make a big difference to the South African market. The market must also be influenced by the Korean peace moves. There are hopes of British tax concessions but the big deficit for the past year makes it difficult to see what can be done, although the excess profits levy spending should help gilt-edged and leading industrial but some commodities will become easier although the Korean hostilities have largely ceased to be an important influence.

Hides and Skins

A paucity of offerings is reported from the East Indian hides and skins market. Last offerings of tanned goat skins, 11 to 12 pounds average, were about 145 cents per pound c and f New York, with best bids at 130 cents per pound. In dried salted goatskins buyers are not willing to pay more than 975 cents per dozen, c and f New York.

Stocks and Shares

SHARE PRICES SHADED AS BUSINESS CONTRACTS

HEAVY BEAR ACCOUNT IN IRONS: TEA SHARES OFF THE BOIL

Wednesday Evening.

IN a week interrupted by holidays, there has been very little business done on the Calcutta stock exchange, with operators confused and hesitant in the face of accumulating peace news. The spectacular drop of values on Wall Street, weakness on sundry commodity markets, sharp losses in silver and a continued decline in raw jute and jute goods prices combined to make the tone in all sections easier. However, there has not been any heavy selling and the market is not actually weak. Outside enquiry has quite dried up.

Indian Iron shares have fluctuated around Rs. 24-4 for some days and although they broke below Rs. 24 this morning, by this afternoon they had staged a mild rally to Rs. 24-5. There is nothing to suggest that a further collapse of prices is inevitable, but if the jute industry's prospects grow any darker as peace hopes grow stronger, the bears can be relied upon to make the best of the situation.

Details of business transacted on the trading floor of the period under review are given below.

The gilt-edged market ruled dull throughout, with little business passing. The 3% Conversion Loan 1946 drifted further to close at Rs. 82-4 and the enquiry for 3% Non-terminable Paper having been satisfied, the price eased to Rs. 83. Among short-dated loans, 3% 1957 had small buyers at Rs. 98-12, but 3% 1958 continued on offer at Rs. 98-7, as did both 2½% 1954 and 2½% 1955 at Rs. 98-4. In the medium-dated group, 2½% 1960 met with good enquiry at Rs. 93-8, but both 3% 1959-61 and 4% 1960-70 turned sellers at their previous levels of Rs. 96-4 and Rs. 102-2 respectively, while 3% 1963-65 was again marked down, to close at Rs. 92-8. Long-dated issues were neglected and the prices of 3% 1966-69 and 3% 1970-75 were the turn lower at Rs. 90-5 and Rs. 86-9. Little interest was taken in provincial Loans and there were no quotable changes.

First-class Preference shares which came on offer were readily absorbed. In the absence of any large offerings, however, the actual amount of business transacted was small. Anglo-India Jute were done at Rs. 118-8, a small lot of Budge-Budge was sold at Rs. 116-8, Lawrence 5½% were a shade easier at Rs. 95 and a parcel of Soorah Jute was placed at Rs. 101. Union Jute were on offer at Rs. 117-8. Among miscellaneous Preference shares, there were buyers of Burrakur 1st and 2nd at Rs. 118-8 and Rs. 8-8, and Dunlop 1st and 2nd at Rs. 129 and Rs. 110. There were buyers of Alkali & Chemical at Rs. 104-8 ex-dividend. Bengal Paper 7% at Rs. 130, Burn 7% at Rs. 128, British India Corporation at Rs. 139, Indian Rubber Manufacturers at Rs. 98, and Shaw Wallace at Rs. 82. A small lot of Gillanders was taken at Rs. 72-4. Indian Irons were a shade easier at Rs. 107-8, at which price there were many buyers. India Steamship improved to Rs. 88, with buyers over. Indo-Burma Petroleum were readily saleable at Rs. 88-8, small parcels of Martin Burn came to hand at Rs. 101, and a small lot of Muir Mills changed hands at Rs. 108. Orient Paper 2nd, which at one time were in demand at Rs. 78, were on offer at the close at Rs. 76, as were Calcutta Electric at Rs. 12-4.

On weaker Bombay advices, Imperial Bank Fully-Paid and Contributory eased to Rs. 1,820 and Rs. 440. Punjab National Bank were quoted nominally at Rs. 21 and United Commercial were unchanged at Rs. 35-8.

The only transaction reported in Railway shares was in Barasat-Basirhat at Rs. 18, at which price small lots could be obtained. Arrah-Sasaram, Howrah-Amra, Howrah-Sheakhala, and Shadara (Delhi) Saharanpur were all scarce and buyers were prepared to pay one to three rupees higher than last quotations to obtain their requirements.

In sympathy with the general trend, prices of Cotton shares were marked down by a few annas. Cawnpore Textiles were quoted at Rs. 8, Delhi Cloth Mills at Rs. 26-8 and Elgins eased to Rs. 16-12. New Victoria were offered at Rs. 1-7.

Quiet conditions prevailed in the Coal section and prices were marked down on a broad front. Bengal eased to Rs. 525, Burrakur to Rs. 10-7 and East Indian to Rs. 22-12. There was a satisfactory turnover in Central India and Western Bengal at about Rs. 5-2 and Rs. 4-10. Amalgamated and Pench Valley were on offer at Rs. 19-12 and Rs. 20, without attracting buyers. A few transactions were recorded in Equitable at the lower level of Rs. 42-8 and New Beerboom at Rs. 21-12. Standard were marked at Rs. 17-14. The Jute section experienced one of its duller sessions in recent months, and in most cases selling orders were difficult to execute. For example, no business was reported on the 2nd and 7th instant in Howrah Jute shares which have always been regarded as one of the leading speculative counters in the market. Unwilling buyers were bidding Rs. 5 to Rs. 10 below previous prices in the case of Rs. 100 paid-up shares, and then too were only prepared to purchase small lots. Agarpura were done between

Rs. 18-6 and Rs. 18-1, Barnagore declined to Rs. 153, Champdany to Rs. 153, and Ganges to Rs. 71. Kamarhatty Ordinary and "B" Ordinary were marked today at Rs. 188 x.d. and Rs. 174 x.d. while Kanknarrah Ordinary and "B" Ordinary reported business at Rs. 141 x.d. and Rs. 130 x.d. Empir and Kelvin, however, maintained their previous prices of Rs. 21 and Rs. 219. Other transactions included Naihati at Rs. 127, National at Rs. 24-1, Orient at Rs. 173, Reliance at Rs. 12-4, and Union at Rs. 159.

The recent enquiry for Electric Supply shares which was in evidence last week has petered out. Calcutta Electric eased from Rs. 14-4 to Rs. 14, Patna from Rs. 10-12 to Rs. 10-8, and Shahjahanpur from Rs. 6 to Rs. 5-8. Deals were recorded in Jubbulpore and Muzaffarpore at Rs. 14-5 and Rs. 6-1.

Sugar shares followed the general downward trend of the market. Carew and Darbhanga, which were features last week, eased to Rs. 5-6 and Rs. 9-4 on profit-taking. Belsund were steady at Rs. 8-1, and Bharat came to hand at the improved price of Rs. 15-4. Champaran were marked at Rs. 21, with further sellers, while Cawnpore were quoted at Rs. 28.

In the Engineering section, there was a large turnover in Indian Iron & Steel shares and it is reported that a big bear account has been built up following the Korean peace talks, and the presentation to Parliament of the Select Committee report on the Estate Duty Bill. At one time Indian Irons declined to Rs. 23-14 to recover at the close to Rs. 24-5. In sympathy, other engineering issues lost ground with Braithwaite being marked down to Rs. 11, Burn & Company to Rs. 255, Indian Galvanizing New to Rs. 12-8, and Kumardubi Engineering to Rs. 8. Britannia Building and National Iron & Steel were, however, unaffected at Rs. 6-2 and Rs. 6-1. The announcement of the reduction in the dividend on Marshall Sons from 25 percent to 5 percent was received with disappointment and the shares reacted sharply from Rs. 5-13 cum-dividend to Rs. 5-5 ex-dividend but subsequently recovered to Rs. 5-10 x.d.

The Miscellaneous section provided no features. Even paper shares which hitherto have kept fairly steady, were subject to profit-taking with Orient easing to Rs. 32-12, Shree Gopal to Rs. 18-4, and Titagur to Rs. 36-4. Sone Valley were marked lower at Rs. 7-2, while Dalmia Cement fully-paid Ordinary were steady at Rs. 6-1. Hercules and Triton Insurance were taken at the previous quotations of Rs. 29 and Rs. 156. New Asiatic, however, were lower at Rs. 4-2. India General Navigation turned sellers at Rs. 80, and India Steamship at Rs. 6-3. Alkali & Chemical came to hand at Rs. 17-12, Rs. 13-8, Angelo Saws were lower at Rs. 6-4. Bista and Assam Saws were lower at Rs. 6-4. Bista Stone changed hands at Rs. 29-4, and a parcel of Cherra Chhatrak Ropeway was placed at Rs. 8-2. Dunlop Rubber, Eastern Investments, F. & C. Osler, Ganges Rope, Indian Wood Products, National Insulated Cables, Orissa Minerals and Rallis were among the few shares which were unaffected by the general quietness in the market.

"The effect of sacking prices on Indian jute is very marked because we produce large Bottoms, Cross Bottoms and jute substitutes like bimili and mesta. The lower quality jute goes more to the sacking part of the jute industry than to the hessian side. The question has been raised about price support for jute, both in order to reduce stocks and to encourage the production of jute next year. Assuming that the Government is prepared to accept the risks that go with an scheme of price support, it might well lead to losses in terms of crores of rupees. Even then the price that could be fixed would only be at a very low level. If we fix a price for bottoms at Rs. 17-8 maund delivered at a railway station, so as to work out at Rs. 10 in Calcutta, it might not be a very satisfactory thing for people concerned. But my view is that we cannot give in view of the fact that the price has ultimately to depend on the prices obtained for manufactured goods. I do not agree that the price of manufactured goods is low. We can afford on the basis of outside competition to sell our hessian at Rs. 48 per 100 yards. The depression that has come is largely because of the operation of the fatka market in Calcutta, but spite of the measures we have taken prices have not gone up because of the lack of vitality in the trade. We cannot be too cautious in the matter of price support, even though the risks of not affording price support in regard to future cultivation of jute are perhaps obvious."

Bombay

MINISTER'S ADVICE ON INDUSTRIAL DISPUTES

POSTAL WORKERS' GRIEVANCES
(FROM OUR OWN CORRESPONDENT).

5th April.

LAST Thursday, Mr. V. V. Giri, Union Labour Minister, inaugurated the National Institute of Labour Management. He told a gathering of employers, workers and trade unionists that it was the policy of the Government to lay emphasis on conciliation, voluntary arbitration and settlement by collective bargaining rather than on adjudication. Mr. Giri said that his line of approach would be to discourage the litigious spirit among workers and employers and to encourage conciliation; he deplored the fact that very little had been done in the past to encourage collective bargaining or settlement through conciliation boards. To representatives of labour he said that labour agitators would succeed as negotiators only if they honoured their word and were prepared, when necessary, to tell "unpleasant truths" to workers. They should never close the door against further negotiations. Mr. Giri announced that he would probably introduce his new Industrial Relations Bill in Parliament in the next session and said that the whole spirit underlying his Bill would be to discourage any resort to industrial tribunals by either employers or employees. He gave an assurance that he would not hesitate to make necessary revisions if any provisions in the Bill were found, on experience, to be injurious to either side. Mr. Giri said that the solution of labour problems rested as much on the human element as on the economic and that the basis for industrial peace was a proper understanding of human relations. His advice was that at the slightest sign of strife or discord the best way to avoid trouble was for the workers and employers to get together and frankly state their difficulties. This was sure to eliminate bitterness and strife.

Mr. N. H. Tata, presiding over the ceremony, spoke in praise of what he called "the Giri approach" to labour problems and recommended that in this difficult field there should be a minimum of legislation. The aim of the Institute of Labour Management, according to Mr. Tata, was to maintain industrial peace and to focus attention on the forgotten human factor. He hoped that the Institute would enhance the status of welfare officers.

Bombay Postal Workers' Demands

Various demands were put forward by the Bombay State Postal and Lower Grade (R.M.S.) Staff Union, at the 16th Annual General Meeting of the Union here during the week-end. Mr. H. R. Gokhale, President of the Union, complained that on the one hand Mr. V. V. Giri, Union Labour Minister, pleaded for closer collaboration between workers and management, and on the other that this principle was ignored by the Post and Telegraph Department of the Central Government. He opposed, as a retrograde step, the abolition of the Post and Telegraph Appellate Tribunal unless an adequate substitute was provided. The Conference was inaugurated by Mr. V. C. Dalvi, Secretary of the All-India Post Men's Union, who asked the Government to appoint an Appellate Tribunal to settle the points in dispute between the postmen and the Government. One of the demands he put forward on behalf of the postal staff was the immediate application of the revised pay scale recommended by the Pay Commission. He informed the Bombay Union that Mr. Jagjivan Ram, Minister for Communications, had been sympathetic to the grievances of post and telegraph staff when these were presented to him last month by a deputation and had accepted some of the demands and promised to refer others to the Finance Ministry for sanction. Mr. Dalvi expressed satisfaction with the Gadgil Report which recommended the merger of 50 percent of the dearness allowance with basic pay and the raising of the age limit for retirement from 55 to 58. He said that the increasing number

of thefts was probably attributable to the system introduced by the Department of taking new recruits through the Employment Exchanges instead of direct recruitment from relatives of postmen with long services and asked for a reversion to the old practice in the interests of both the public and the postal staff.

Textile Controls

Because of the holiday no reactions are yet available to the recommendations of the Working Party for the Textile Industry whose report was published last week. It is believed that the individual mills both here and in Ahmedabad, as well as the two Millowners' Associations are studying the report carefully and that they will soon issue statements embodying their views on the various points raised in the report. What has evoked more than a passing interest in the textile circles is the view of the Committee that continued control over the industry is necessary, and its suggestion that this control, especially the regulation of output by individual mills and of unwanted cloth or cloth of inferior quality, should be undertaken by the industry itself. It is felt that if this suggestion is successfully and sincerely implemented by the respective Millowners' Association it might solve a number of problems arising from detailed official and technical control over the industry. It is understood that the industry agrees with the Committee on the need to secure a higher degree of technical efficiency in the manufacture of textile machinery in India. The industry has also welcomed the Working Party's suggestion that there should be a proper system of inspection of machinery produced locally and a competent and adequate inspectorate organised by the Government to certify that the quality of the products is up to standard. Another constructive suggestion by the Working Party which is likely to meet with approval is that relating to the creation of a Central Fund for the bulk purchase of cotton and stores, which would enable individual mills to indent for stocks of raw material and pay for them when they are being consumed. Difficulties experienced last year by the mills over the purchase of imported and Indian cotton confirms the Working Party's view that banks cannot always finance heavy purchases.

Indian Banks' Association

At the Annual General Meeting of the Indian Banks' Association, Mr. Pranlal Devkar, President, deplored the recent loose talk of nationalising the banks. He regretted such talk all the more at the present time, when the country had to implement the five year plan with the enthusiastic participation and co-operation of all sectors, and appealed to responsible leaders not to encourage such utterances. Mr. Nanjee advised members to increase their participation in foreign exchange business and expressed his satisfaction that some had already done so; he urged the public, the Government and the Reserve Bank to help such efforts. The bill market scheme of the Reserve Bank, he said, was assisting the banking system and through it India's commerce. He revealed that the Association had suggested that rediscounting facilities should be made available to all scheduled banks, and that this suggestion was being considered by the Reserve Bank authorities.

As the various demands of the employees were being examined by the Tribunal, Mr. Nanjee confined himself to the hope that the award might prove welcome not only to the employees and the banks but also to the banks' clients, because any part of the burden which the banks could not meet from present revenues would have to be passed on to their clients by way of increased charges. Mr. Nanjee was re-elected President of the Association for the ensuing year.

Cotton Excise Duty

The local Mill Owners' Association has submitted a memorandum to the Central Ministry of Finance requesting it to reconsider its proposal to change the basis of the excise duty on fine cotton from an ad valorem duty of 5 percent to a flat rate of 15 pias per yard. The Association points out that one of the reasons for the present downward

trend of prices is consumers' resistance and that by increasing the tax per yard, the Government is making cloth used by the middle class dearer. The Association also questions the Finance Minister's observation that the change in the basis of this duty would not bring about any decrease or increase in revenue and that it was meant only to make the task of assessment and collection easier. The memorandum points out that this is not the case and that the specific duty at 15 pias per yard now proposed works out to an increase of at least 114 percent in the case of fine cloth and up to 233 percent on certain other varieties.

FOREIGN INVESTMENT IN PAKISTAN

The total amount of investment in business and industrial enterprises made in Pakistan from 1st January 1948 up to the first half of the financial year 1952-53 was Rs. 2.92 crores by the nationals of the U. K. Rs. 15 lakhs by the nationals of the U.S.A. and Rs. 30 lakhs by nationals of other countries, said the Hon'ble Mr. Ghayasuddin Pathan, Minister of State for Finance, in reply to a question by Mr. Nur Ahmad in Parliament.

"ECONOMIC SURVEY FOR 1952" PUBLISHED

PROSPECTS FOR INCENTIVE BUDGET

(FROM OUR OWN CORRESPONDENT)

2nd April.

THE "Economic Survey for 1952," published as a White Paper this week as a prelude to the Chancellor of the Exchequer's Budget on 14th April, and which will provide much of the material on which the subsequent debate will be based, displays an interesting contrast between the basic approaches of the Labour and Conservative parties to the economic situation. The Labour Government, working when it was in office under what were undoubtedly less difficult economic conditions, was anxious to look ahead and set targets, and so long as it was carried along on the crest of the wave of the post-war boom it derived no little kudos by this means. When the pendulum swung the other way, as it had to do ultimately, the targets became unattainable, resources had to be drawn upon, and when disaster became inevitable there was no alternative to a change. The new thinking was not ineffective. In spite of the disastrous start, with the gold reserves fast draining away, the full year closed with a surplus of £291 million on the balance of payments. That represents an improvement of £689 million compared with 1951. The Government guess is that about one-half of this was the result of falling prices. The balance was due to import cuts and to reduced demand. For the rest, an improvement in export earnings was almost completely offset by a fall in receipts from "invisibles." Virtually the whole of this improvement was with non-sterling countries. Imports from them were nearly one-quarter lower than in 1951, whereas imports from sterling countries were only slightly down. As a result of these changes the outflow of capital considerably narrowed last year, as confidence in sterling revived. We were able also to reduce our sterling liabilities by the huge sum of £410 million. About £289 million of these debts were held outside the sterling area.

Not unnaturally, the "Survey" looks with satisfaction on the achievements of 1952, which have had one other unexpected result, namely, that of leaving British industry in a healthier competitive position, faced with less financial stringency than was anticipated and indeed with something like £300 million more in the "kitty" despite a small drop in trading profits and higher taxation. Unlike its predecessors, however, it is sparing with predictions for the future. It emphasises the difficult times ahead and qualifies every item of good news—mainly of increased supplies—by explaining that things may soon be worse again unless a sustained effort is made. Nevertheless, in its references to the success of disinflation, it claims that exports are no longer hampered by "excessive home demand" and in other ways it helps to create the impression that no fresh budgetary pressure is required to keep the economy in balance.

Final Treasury Returns

This is not an exhaustive review of the "Survey"—which would really call for separate treatment—but enough has been said to show that it at least implies the prospect of a mild Budget, which is what the City has anticipated all along. On the other hand, the full extent of the financial problem which is now facing Mr. Butler is available in the final Treasury returns for the year which ended last Tuesday. These show an overall deficit of £435,894,451, contributed to quite substantially by a shortfall in estimated revenues of £223 million. On ordinary revenue and expenditure account there was a surplus of £88,124,000 with revenue at £4,438,715,000 and expenditure at £4,350,591,000. As net expenditure "below the line" of a capital nature was £524,018,000, an overall shortfall is shown. Income tax brought in £1,736,223,000, against an estimate of £1,804,225,000. Profits tax receipts were £376,100,000, which was £76 million below the estimate. Against an estimate of £175 million death duty receipts were only £151,850,000. Surtax on the other hand yielded £131,200,000, or £8,200,000 above the estimate. Combined receipts from Customs and Excise at £1,763,591,000 fell short of the estimate by £52 million.

Total expenditure worked out at £4,350,591,000, an increase of nearly £300 million on the preceding year, but nearly £20 million less than Mr. Butler's revised estimate. This included nearly £200 million of supplementaries. Total outlays on defence reached £1,403,730,000, about £27,500,000 under the revised estimate. Interest and management of the National Debt, reflecting the Government's harder money policy, cost £576,411,000, compared with an estimate of £540 million. Success of the housing drive is reflected in a rise in loans to local authorities to £411,600,000. The Chancellor's estimate last March was £360 million.

Budget Anticipations

Mr. Butler's scope for manoeuvre is obviously very limited, but it is still felt that he will favour an "incentive" Budget. Though it is obviously dangerous to anticipate, the importance of higher production at the same, or lower, cost to industry and the increasing need for measures to encourage the drive for export markets are believed to call for a financial policy which will encourage industrial investment at one end and greater output at the other. Some reduction in taxation is therefore

looked for, and the priorities, according to this reasoning, are: 1.—Reduced taxation on undistributed profits and restoration of the initial depreciation allowances which were suspended last year. 2.—An increase in the earned income allowance to relieve another section of the working population either from income tax altogether or from tax at the full rate.

Mr. Butler is not expected to cut food subsidies sharply once more. He will, however, try to plans down further the level of the subsidies. To offset the increase which may thus be caused in the cost of living, he may reduce or relieve of purchase tax a range of household goods. Another move may be a cut in the petrol tax, which would reduce costs throughout industry and offset the higher price of coal. It would help the motor industry, whose hopes of a cut in car purchase tax are thought likely to be disappointed. If an increase in private savings can be achieved it seems probable that Mr. Butler will budget for no more than a small surplus on the revenue-expenditure account and therefore another overall deficit.

Freeing the Grain Trade

Further moves in the process of returning the grain trade to private hands are due in the next few weeks. It is now expected that three separate sets of Open Individual Licences will be issued entitling traders to import bread grains, cereal feeding stuffs and non-cereal feeding stuffs. The dates from which they will be allowed to start importing may be different in each group. For cereal feeding stuffs an early start can now be expected. The new maximum prices announced give the clue to this. The price increases of rather more than £2 a ton on such commodities as maize and barley are designed to leave a sufficient margin to enable traders to accumulate a stock. Discussions are still proceeding as to the precise form which import licences will take, but the use of Open Individual Licences is expected because that form gives traders a maximum of latitude while still requiring individual returns. Trade circles anticipate that licences will allow merchants to buy grain with little or no restriction as to countries of origin.

Indian Students' Hostel

Mr. Ralph Tubbs, architect of the Dome of Discovery at the South Bank Exhibition in London, is responsible for a building at the corner of Fitzroy Square in this city which achieves a modern idiom without offending what remains of the Adam façades and has a special interest to India. It is the new Indian students' hostel. By maintaining the same level of coping and by using

a stone-faced flank wall on the north side of the building, nearest to the Portland stone of the existing buildings, the architect has avoided incongruity without imitation. An oriental note is suggested by the prayer room, which breaks the skyline, rising dome-shaped from the roof. This room is striking from inside—it is for the use of people of all religions and so has no symbols of any kind. The hostel, where over fifty students will live, contains more rooms than would be thought possible from outside. Mr. Tubbs has achieved an impression of great spaciousness, breaking up the usual lines of perspective by placing walls out of parallel. He has used varying levels, so that one is never sure which floor one is on, but certain only that this is a strangely light and pleasant building and contains, in addition to the bedrooms, lounges and dining-rooms, a library and television room, games room, and garden room and offices, all on a restricted site. Below, in what in a conventional building would be the second basement but here seems the focal point, is the Mahatma Gandhi assembly hall, and on the foundation stone outside the door of the hall are inscribed some words of Gandhi's: "I do not want my house to be walled in on all sides nor my windows to be shut. I want the culture of all lands to blow about my house as freely as possible, but I refuse to be blown off my feet by any of them."

Brevities

The index of production for February is expected to be 117-118 (1948=100). The January figure is estimated provisionally at 116, compared with 111 for December. In February, 1952, the figure was 120, in January 118, and in December, 1951, 113.

The International Tin Study Group ended its meeting in London the other day and announced the appointment of a working party to consider international action on tin. It is to report to the Steering Committee of the United Nations at the Geneva Conference whether, in its view, conditions exist for the resumption of that Conference at a suitable date.

The total of 420 persons killed in Britain last year at mines as defined by the Coal Mines Act, 1911, was the lowest on record. It was 67 less than in 1951, according to Ministry of Fuel and Power figures of fatal accidents just published. There were nine deaths at metalliferous mines, compared with seven in 1951, and 53 at quarries, against 62. Total deaths at pits and quarries were 482. The 1951 figure was 556. Among mines covered by the Act are coal, stratified ironstone, shale and fireclay.

For more than 100 years, beers by Allsopp have been enjoyed for their quality. Today Allsopp's lager, brewed in Britain, is the finest beer you can drink.

PRECISION INSTRUMENTS FACTORY

AGRICULTURAL INCOME TAX
(FROM OUR OWN CORRESPONDENT)

Lucknow, 4th April.
THE visit to Lucknow of the Union Industries Minister, Mr. K. C. Reddy, towards the end of last month has been connected with the future of the Precision Instruments Factory here which, of late has not been doing too well. The Central Government's interest arises from their desire to encourage the manufacture of indigenous precision instruments. There is a growing feeling that only if it is taken over by the Centre can the factory be prevented from becoming a commercial failure. To make production economic the factory should produce at least 10,000 water meters a year and the State Government has decided to invest another Rs. 1,50,000 in power driven machines to produce the meters. The assembling of radio sets has now been stopped in the factory. It has been decided to stick to the programme for production of microscopes, at least 500 of which, it is estimated, should be marketed a year to make production economic.

The factory was started in 1949 with the help of a team of eight German technicians. The services of seven of them have since been terminated following the recommendations of the Precision Instruments Committee which was appointed at the instance of Sir Homi Modji, then Governor of the State. Increased supervision is now being exercised by this Committee which meets in the factory twice a month. With a few exceptions, the State's experience of foreign experts has perhaps not been happy.

Agricultural Income Tax Limits

The State Legislature adjourned this week after passing a number of measures including the Agricultural Income Tax (Amendment) Bill which lowers the taxable limit of land holdings from 50 to 30 acres. According to the Minister for Agriculture, however, the taxable limit of income will remain at Rs. 3,000 a year. The opposition demanded that the limit should be raised to Rs. 4,200, the same as for Central income tax, but the Minister argued that a rural income of Rs. 3,000 was equal to an urban income of Rs. 4,200, if not more. The option which an agricultural income tax payer now has of being assessed on his actual income or on his assumed income will remain. The assumed income was arrived at on the basis of one-fifth of the produce value of the land, but the proportion has now been raised to correspond to the increased prices of agricultural produce.

Wheat Research Scheme

It has been decided to continue the wheat research scheme which has been in force in the State by another five years. Since partition, Uttar Pradesh has become the biggest wheat producer in the Indian Union, with nearly three times the acreage and two times the production of the Punjab. Thirty-three percent of the acreage in the State is under wheat, but the yield per acre is on the low side, being 8.49 maunds compared to 10.02 maunds for the Punjab. Among the notable results achieved by research is the cultural mitigation of stem rust damage by early varieties and early sowings. The all-India annual loss attributable to stem rust is estimated at Rs. 6 crores annually.

Sheep Breeding

An inter-State plan, to include the Governments of U.P., Himachal Pradesh, Kashmir and PERSU, has been advocated by the U.P.'s Minister for Agriculture to develop sheep breeding and the wool industry in the Himalayan region. To stimulate interest in the Himalayan region. To stimulate interest in a Sheep Show was organised last month by the Animal Husbandry Department of the State at Rishikesh, in which over 2,500 sheep and goats participated. The total number of sheep in the State is in the neighbourhood of two million, producing about 3.8 million lbs. of coarse wool and 1.2 million lbs. of fine wool, valued at Rs. 30 lakhs. In importance, the State's wool industry ranks next only to that of Rajasthan.

Civil Service Promotion

Acting on the recommendations of the Disciplinary Proceedings Committee, the U.P. Government has decided that the principle of merit will be the sole basis for the promotion of Government servants. Hitherto, seniority has been the determining factor for promotion within a service, and the merit test was applied only in promotion from one service to another. There will be no right of appeal, but in cases where the appointing authorities require the sanction of the Public Service Commission, the Commission will be supplied with character rolls and personal records of all those eligible to ensure that no officer is left out without adequate justification. The experiment which is a novel venture in public administration in India will be keenly watched for it will obviate favouritism.

Wheat Prices Fall

A distinctly bearish sentiment has been reported from the principal grain markets in the State because of expectations of an excellent rabi harvest. There has been a general fall in quotations for grains as well as cereals. In Lucknow this week wheat was sold in the open market at considerably less than even the controlled rates.

CHITTAGONG-TEA SALES

At Sale No. 19 held on 25th March, 1953, leaf offerings consisted of 4,879 chests; dust offerings amounted to 2,042 chests and there was a Supplement of 190 chests.

Leaf: In this, the last sale of the 1952-53 season, there was once again lustrous bidding from all quarters for all grades and the biggest all-round rise in prices of the past year took place. As in other primary markets, commonest sorts made the greatest advances, frequently rising by four annas per lb. above last rates. Competition for all B.P.S. and Fannings was especially keen and these grades sold at up to three annas per lb. above last sale prices.

Dust: There was a very active demand and prices rose irregularly by three to four annas. Clean Common Dust may be quoted at Rs. 1-7-6 to Rs. 1-8-6, with Churamoni types at about Rs. 1-2-0. Best liquoring lots were fully steady at previous rates, averaging Rs. 1-14-0 to Rs. 2-1-0.

	Quotations	
OP	Rs. 1-7-6 to 1-8-0 nominal	Rs. 1-5-6 to 1-6-0
PEK	Rs. 1-4-9	Rs. 1-2-6 nominal
BOP	Rs. 1-7-0 to 1-8-0	Rs. 1-5-6
BOP	Rs. 1-7-0 to 1-8-0	Rs. 1-5-6
BP	Rs. 1-5-0 to 1-5-6	Rs. 1-2-6 to 1-3-0
BPS	Rs. 1-5-6 to 1-6-0	Rs. 1-3-0
OF	Rs. 1-8-0 to 1-8-6	Rs. 1-5-0 to 1-5-6
FF	Rs. 8-6-0 to 1-6-6	Rs. 1-3-6

Depending on arrivals in the Warehouses, Sale No. 1 of the new season will be held on either 3rd or 10th June—probably the latter.

PAKISTAN TEA EXPORTS

The Pakistan Ministry of Commerce has announced an export allotment of 40 million lbs. (avoirdupois) of tea for the year April, 1953, to March, 1954. The Pakistan Tea Licensing Committee, Sylhet, will allot quotas to the individual tea estates which will carry export rights without restriction as to destination.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (year ended August 1939 as 100) rose by 0.2 percent to 366.8 during the week ended 21st March, 1953. Compared to the corresponding weeks of last month and a year ago, the index was higher by 1.3 and 2.7 percent respectively. During the week under review, Foodstuffs declined by 0.5 percent to 366.6.

The index for the Semi-Manufactures group rose by 0.8 percent to 351.8. Higher prices of glass (+9%), soap (+7%) and tafetta Koro art silk (+3%) raised the Manufactures group index by 0.2 percent to 369.2 during the week under review.

U.S. Production of primary aluminium in 1952 set a new record of 1,874,642,692 pounds—34,000,000 lbs. above the previous record set in 1942.

Jute

SHARP SLUMP IN JUTE AND JUTE GOODS PRICES

MARCH STOCK FIGURES SHOW INCREASE DESPITE GOOD SHIPMENTS

THE trade in jute manufactures is so full of paradoxes and contradictions that it would be a bold man who would dogmatise on the correctness or otherwise of the Government's decision against curtailment of production at this stage. From the long-term point of view the Government may be right but the decisions made by it in past crises do not encourage optimism. For the near future it would seem that the latest decision is likely to make users of jute bags delay their purchases as long as possible, and reports from abroad indicate that this is the policy they intend to follow. For the present it has caused a slump in the prices of both manufactures and raw jute—so sharp indeed that the decision against restriction might have to be reconsidered sooner than was expected.

Meantime it appears that the decision has caused some anxiety among foreign manufacturers. It is said that they were previously finding difficulty in competing with the prices at which manufactures were being offered from Calcutta and that contracts already entered into were showing very little profit, and in some cases losses. The further decline in the prices of Calcutta goods since the Government's decision has made their position worse. It could never, of course, be part of India's policy to curtail production so that foreign manufacturers should be helped, though it may unavoidably happen that they too would benefit from curtailment, but the position, as reported, provides further evidence that jute manufactures are being produced in excess of requirements.

In commenting last week on the Government's decision against curtailment of production we pointed out that, if the result were a fall in the price of manufactures, it would be accompanied by a fall in the price of raw jute. That may not appear to be logical. It might be thought that as there is to be no reduction in the consumption of raw jute its price would remain unchanged. The fall in the price of manufactures resulting from the Government's decision, however, forces buyers to endeavour to get cheaper raw material and, as the supplies of the latter are excessive, a fall in price is the natural result. The Government has of late been worried about the fall in jute prices and pressure was put on it in Parliament to adopt measures to support jute prices. It has refused to be jockeyed into fixing minimum prices or adopting a Government purchase scheme, either of which would have led only to blackmarketing. But unfortunately it was not realised that rejection of the scheme to curtail production would bring down the price of raw jute. It is a factor which should be kept in mind when the matter is reconsidered.

Another point which should not be forgotten is the influence of raw jute prices on the demand for gunnies. It has been known for at least nine months that there is a glut of raw jute. Buyers of jute manufactures have, therefore, delayed purchases as long as possible in the belief that the excessive supply of raw jute must result in a fall in the price of jute manufactures. Events have shown that their judgment was right. It follows that any further weakening of raw jute prices must encourage them in this waiting policy. Curtailment of manufactures would, on the other hand, paradoxical though it may seem, through helping to maintain the price of raw jute, give additional support to the price of goods.

THE JUTE MARKETS

SOWINGS DECLINE IN BOTH INDIA AND PAKISTAN

The following table compares the prices (in rupees) of sacking goods, hessian goods and raw jute on 2nd January this year with those prevailing at the close on 7th April.

	Sacking (B Twills)	Hessian (40" 10 oz.)	Raw Jute (Ordinary Assam)
January 1953	94-8	42-10	24
April 1953	85-8	38-10	17-9
A fall of	9	4	6-8
or Rs. 80 per ton	Rs. 143 per ton	Rs. 182 per ton	

The price of jute has fallen to a much greater extent than those of either hessian or sacking goods, and on today's finished goods prices with jute at Rs. 17-8 per maund, mills could cover themselves by doing combined sacking and hessian business, if buyers were available. This was not possible at the beginning of the year when combined business resulted in a loss of over Rs. 200 per ton. Unfortunately a large proportion of the goods which mills were manufacturing three months ago at a loss are still lying unsold on their hands and the loss on these stocks is increasing steadily. It is estimated that nearly 1,00,000 tons of heavy goods are lying in mills' godowns which represent about 25 months' production. This amply demonstrates that mills have been overproducing heavy goods in the past few months to a very great extent.

former levels. The volume of business done in these transactions was not heavy as mills were not willing to sell large quantities at the present levels, nor were buyers interested in anything but small amounts, and the business had little effect on quotations. It is reported that shipping instructions to mills remain satisfactory and that in March they had their best month for a long time.

At the opening of the market on Thursday of last week quotations were considerably reduced from the previous day and hessians fell back 10 annas to Rs. 38-10 per 100 yards of 40" 10 oz., plain heavy Cees dropped 12 annas to Rs. 88-8 per 100 bags, and B Twills sank to Rs. 86-12 per 100 bags, a drop of Rs. 1-12. As a result of covering activity and some small overseas hessian business the market staged a temporary recovery and at the opening after the Easter recess 40" 10 oz. hessians were up to Rs. 39-12, which was a rise of Rs. 1-2. The upward tendency was not nearly so pronounced in the heavy goods section and plain heavy Cees were unchanged whilst B Twills improved 8 annas to Rs. 87-4 per 100 bags. This rise was short-lived as the gains were all wiped off by Tuesday morning and hessians dropped 12 annas and heavy goods 8 annas. During the day on account of some heavy selling by speculators rates continued to fall and at the close on Tuesday 40" 10 oz. hessians were quoted at Rs. 38-10 per 100 yards and B Twills at Rs. 85-8 per 100 bags. At this stage hessians were exactly the same rate as at the opening on Thursday last but heavy goods had lost about 12 annas per 100 bags.

At the close the market is again down in both hessian and heavy goods section and there are no buyers for Mills stocks at any price. Opening quotations on Wednesday morning were as follows:—

	Ready	April	May-June	July-Sept.
40" 8 oz.	31-4	31-2	30-14	30-12
40" 10 oz.	38	38-2	38-4	38-6
Heavy Cees (Plain)	87	87-8	88	88
B Twills	85-8	86	86-8	87
Cornacks	88-8	88-8	89	89

Raw Jute: In sympathy with a falling finished goods market, raw jute rates were easier at the opening on Thursday last. Mills' lack of interest and the impending Easter holidays caused rates to sag. At this stage mills seemed interested only in good quality high-coloured jute of which there is an acute shortage against a fairly good demand. Premium rates are being paid for jute of this nature but the business has been confined to small lots. However it is doubtful whether mills will continue to require such high-grade jute in the near future as the demand for high grade special hessian is falling off and they are no longer getting the premium for these articles that they formerly did, and are no longer finding it profitable to continue the manufacture of this fabric. It is possible therefore that when the

PROGRESS ON oiled WHEELS

The Locomotive Works of the Government at Chittaranjan and of Tata at Tatanagar, move, as might be expected, with the times.

Both have installed Hollerith machines. At Chittaranjan they handle analysis of wages and stores. At Tatanagar, they handle every aspect of Cost and Stores Accounting. (There are some 12,000 items of stores.) These are but two typical Hollerith installations in a vital industry. All over Asia, in industries heavy and light, in commerce, in Government Departments—Hollerith installations are at work, oiling the wheels of progress.

● Publications of greatest interest to key executives are THE TABULATOR, issued periodically, and IN BUSINESS, TOO... describing Hollerith methods. Copies can be obtained by applying to any of the offices below—on your business note-heading, please.

present orders are completed mills will no longer be interested in this speciality and the market for high-grade jute will be gone. Up to the start of the Easter holidays very little business had been conducted, but after the closure mills displayed some interest. On Monday a fair quantity of jute of all grades was purchased. This had very little effect on quotations which had opened easier in the morning but towards the close many sellers withdrew from the market and were not offering at previous rates so a steadier feeling prevailed. This was not carried over into Tuesday, and in sympathy with the finished goods market jute rates were easier and sellers again became keen for business but no interest was displayed by mills and prices gradually deteriorated.

Over the week the general tendency in jute quotations has been downwards, and ordinary Assam Jute after opening at Rs. 18 per md. basis Bottoms for April-May shipment on Thursday of last week gradually declined. By the close on Tuesday 8 annas per maund had been taken off and general quotations stood at Rs. 17-8 per maund but indications were being given below this rate. Sellers have been keen for business throughout the period, but except for some small activity on Monday very little business was done. Stockists and holders were always willing to cut their rates to meet mills' requirements.

During the week the following business was transacted.

Pakistani Jute.—Rs. 22 per md. for ready delivery ex local godown.
Dhuhri and/or Northern.—Rs. 18 per md. basis Bottoms for one month's shipment.
Dhuhri.—Rs. 20-8 per md. for Middles only for 15 days' delivery ex local godown.
Northern Bengal.—Rs. 18 per md. basis Bottoms for delivery ex local godown.
Assam.—Rs. 17 to 17-8 per md. basis Bottoms for one month's shipment.
Assam Tossa.—Rs. 13 per md. for X Bottoms for one month's delivery.
Agartalla Tossa.—Rs. 19-8 per md. basis Bottoms for one month's delivery.
Agartalla White.—Rs. 18-8 per md. basis Bottoms for one month's shipment.
Cossimbazar Tossa.—Rs. 19 per md. basis Bottoms for one month's shipment.
Daisee.—Rs. 18 to 18-8 per md. basis Bottoms for one month's delivery.
Rs. 21-8 per md. for Middles only for one month's delivery.
Rs. 27 per md. for Middles only guaranteed free from Samla for one month's delivery.
Mill Reds.—Rs. 153 to 159 per bale for ready delivery and one month's delivery.
Short Grown Dundee Daisee.—Rs. 125 per bale for April-May delivery.

At the close the market is easier and sellers keen, but mills are taking no interest because of the weak state of the finished goods market. Opening quotations on Wednesday morning were as follows:—

	April-May	Rs.	Landed at Mill.
Pakistani Jute:			
Jat	22-8	per md. basis Bottoms	
District	21-8	"	
Northern	21-8	"	
Indian Jute:			
Lower Assam	18	"	
Upper Assam	17	"	
Northern Bengal	18	"	
Murshidabad White	15-8	"	
Bihar	15	"	
Daisee	18	"	
Bimbi	14	per md. for F.A.Q.	
Mill Reds	155	per bale	
Mill Fines	120	"	
Mill Lightnings	105	"	
Mill Hearts	95	"	
Dundee Daisee (Short Group)	120	"	
Dundee Daisee (Long Group)	105	"	
Pakistan Cuttings (ex Agency)	58	"	

Tossa is offered at Rs. 1 to Rs. 2 per maund above the rates for white jute.

Mofussil: Conditions in the upcountry markets in India have deteriorated over the week rather more rapidly than the Calcutta quotations would indicate, but as markets here are not so closely related to the finished goods market this is understandable. Imports in all areas have practically stopped but sellers still have large stocks on their hands on which they are showing heavy losses. In many cases they are anxious to cut their losses and are offering at reduced rates. Local quotations are much lower than last week but very little business is passing, except for good quality Northern jute, and even this is limited. Dhuhri is ruling at Rs. 14-8 per maund basis Bottoms and ordinary Assam jute Rs. 13-8 per maund basis Bottoms, with Northern Bengal at Rs. 15 per maund. In Cossimbazar very little business is going on and imports have again dropped to about 25 wagons per day. Here also heavy stocks are being held, most of which were purchased at much higher rates than those ruling today, and sellers are undercutting rates in an attempt to find buyers. Kishengunge jute is quoted at Rs. 18 per maund for garsat quality which is 8 annas lower than last week. Imports of Daisee into the Sheoraphuli and other markets have now practically stopped and the markets are quiet with little or no business passing. Quotations have shown very little alteration and at the close were unchanged from last week, being on the basis of Rs. 17 per maund for garsat quality.

In Pakistan there is very little alteration in the quoted rates of jute, and only small activity has gone on in the jute markets, which are quiet. Imports have fallen off considerably and are about 10,000 maunds daily in Narayanganj. Tossa has come in for a great deal of interest this week and demand has greatly exceeded supply with the result that the premium has jumped up to Rs. 4 or Rs. 5 and in the case

of good Jat tossa has even gone as high as Rs. 6 per maund. Apart from this there are no buyers and the latest quotations in Narayanganj (in Pakistani rupees) are as follows:—Jat Bottoms (white) Rs. 13 per maund, Tossa Rs. 16 to Rs. 18 per maund. District Bottoms (white) Rs. 12 per maund, Tossa Rs. 15 to Rs. 16 per maund.

GOODS STOCKS INCREASE IN MARCH

The Indian Jute Mills Association announces that the total reported stocks of manufactured goods exclusive of Government orders at the end of March were as follows:

Description	28th February 1953		31st March 1953	
	(Lakh Yds.)	(Tons)	(Lakh Yds.)	(Tons)
Hessian Cloth & Bags	14.44	37,786	15.73	40,613

INDIAN CROP REPORT

In their third crop report for the current season which covers the week ended 4th April, Messrs. Sinclair Murray & Co. Ltd. (India) say that the weather in Assam has been hot and dry and this has been favourable for sowings and the standing crop. Weather has also been hot and dry in West Bengal and Orissa and preparation of land will be expected to commence until rainfall has been experienced.

DANPUR: (Orissa).—Weather has been hot and dry and rain is required to enable cultivators to prepare their land.

JAIPUR ROAD: (Orissa).—The weather has been hot and dry and the preparation of land has not been started.

RAVAGHAT: (W. Bengal).—The weather has been very hot and dry. Negligible sowings of White jute have taken place on lowlands. An improvement in the growth of young plants can only be expected if rainfall is experienced immediately. Preparation of land has been suspended and will recommence only after rainfall is experienced. The river level is about 2' below normal.

COSSIMBAZAR: (W. Bengal).—The weather has been very hot and dry and preparation of land cannot commence until there is rainfall.

NOWGONG: (Assam).—The weather has been dry with strong sunbaking and this is beneficial for the standing crop as well as for sowings. Sowings have been completed on lowlands at -1/4- as compared to completed lowland sowings of -1/4- last year. Total sowings to date amount to -1/9- as compared to -1/8- at this time last year. Condition of young plants is satisfactory and they range in height from seedlings to 9". The river level is normal.

GAUHATI: (Assam).—The weather has been dry and not unfavourable for sowings. Lowland sowings have been completed at -1/4- as compared to -1/4- lowland sowings last year. Total sowings to date amount to -1/6- as compared to -1/7- at this time last year. Condition of young plants is satisfactory and they range in height from seedlings to 9". The river level is normal.

DHUBRI: (Assam).—Weather conditions have been fairly good for both land preparation and sowings. Lowland sowings are completed at -1/5- as compared to -1/5- completed lowland sowings last year. Total sowings amount to -1/9- as compared to -1/11- at this time last year. Condition of young plants appears to be good and they range in height from seedlings to 1' in the lowlands. Weeding operations are being carried out freely.

KHARUPETIA: (Assam).—The weather has been hot and dry and this has been beneficial for both sowings and the standing crop. Sowings to date are -1/6- compared to -1/8- sowings last year at this time. Condition of the young plants is satisfactory and they range in height up to 6". The river level is normal.

DAISEE DISTRICTS:—Hot and dry weather has continued and rain is required to allow cultivators to make final preparation of land and to commence sowing. Negligible sowings of Westa and White jute have taken place but the condition of young plants is not healthy and rain is needed for seed germination and for the standing plants.

PAKISTAN CROP REPORT

In their fifth crop report for the current season which covers the week ended 4th April Messrs. Sinclair Murray (Pakistan) Ltd., say that the weather has been hot and dry with no rainfall. In most districts further rainfall is very essential both for further sowings and for the benefit of the standing crop. Plants are still reported to be healthy. Lowland sowings are now completed in all districts and on the Eastern side the average is about -1/2- as against -1/4- last year, and on the Western side about -1/16- as against -1/5- last year. River levels are slightly higher compared to last year at this time. It is reported the price of jute seed is now Rs. 2/8- per maund compared to Rs. 75/- to Rs. 80/- per maund last year and that Paddy seed is Rs. 35/- to Rs. 45/- this year as against Rs. 10/- to Rs. 15/- last year.

NARAYANGANJ: The weather has been hot and dry. Good general rainfall is badly needed both for further sowings and for the benefit of the standing crop. No sowings took place during the week. Sowings to date amount to -1/26- as compared to -1/8- last year. Plants are still healthy and range in height from seedlings to 1'. The river level is normal.

Dacca: The weather has been hot and dry and rainfall is essential to allow further sowings. Sowings to date amount to -1/6- as against -1/13- at this time last year. The river level is normal. It is reported that the price of jute seed is now Rs. 2/8- per maund compared to Rs. 75/- to Rs. 80/- per maund last year and that Paddy seed is Rs. 35/- to Rs. 45/- this year as against Rs. 10/- to Rs. 15/- last year.

CHANDPUR: The weather has been hot and dry and rainfall is essential to allow further sowings. Sowings to date amount to -1/6- as against -1/13- at this time last year. The river level is normal.

HAJIGANJ: The weather has been hot and dry but not unfavourable so far for sowings. Further rainfall is now essential to enable cultivators to proceed with sowings and for the benefit of young plants. Sowings to date amount to -1/8- as compared to -1/6- at this time last year. Plants range in height from seedlings to 4". Weeding operations are in progress in the lowland areas. The river is 1' 7" higher than last year at this date.

AKHURA: The weather has been hot and dry although this has not been unfavourable but further rainfall is required. Sowings to date amount to -1/6- as compared to -1/7- at this time last year. The condition of plants is satisfactory but more rain is needed to promote the growth of the crop. The river level is normal for this time of the year.

ASHUGANJ: The weather has been hot and dry but this has been favourable for crop operations. Sowings to date amount to -1/6- as compared to -1/8- at this time last year. Condition of young plants is satisfactory and range in height from seedlings to 6". Germination is good. The river has risen during the week and is now 1' 11" higher than at this date last year.

NIKILDAMPARA: The weather has been hot and dry. Sowings to date amount to -1/5- as compared to -1/10- at this time last year. Seed germination has been good and young plants range in height to 2". The river level is about 2' higher than last year at this date.

SARISHABARI: The weather has been hot and dry. In view of the heavy rainfall earlier in the season this has not been unfavourable. Sowings to date amount to -1/3- as compared to -1/10- at this time last year. The river level is higher than at this time last year.

SERAJGANJ: The weather has been hot and dry and rainfall is essential to allow sowings to be resumed and to benefit the young plants. Sowings have been suspended for lack of rain and are unchanged from the previous week at -1/4- as compared to -1/10- at this time last year. The condition of young plants is generally satisfactory and range in height from seedlings to 2' in Midlands from and is now higher than last year at this date.

NAKALIA: The weather has been hot and dry and further rainfall is essential to allow progress of sowings. Sowings to date amount to -1/3- as compared to -1/5- at this time last year. Plants are healthy and range in height up to 1' 9". The river level is falling slowly but is still 1 1/2' higher than at this time last year.

BHANGORA: The weather has been hot and dry. Sowings to date amount to -1/3- as compared to -1/6- at this time last year. Condition of young plants is satisfactory. The river level is steady and slightly higher than at this time last year.

THE FOREIGN JUTE MARKETS

(FROM OUR OWN CORRESPONDENT.)

Dundee, By Air Mail.

DISAPPOINTMENT is felt throughout the jute industry over the Indian Government's rejection of the proposal of the Indian jute mills to seal in prices for Calcutta goods this week is bound to have a depressing influence on the whole trade. Sellers have been offering goods to the U.K. at as low as 68s 0d for 10 oz. 40 in. Hessians and 142s 6d for "B" twills, April-June shipment, f.o.b. Calcutta. Reports from Continental countries, principally Belgium and Western Germany, say that there has been an improvement in trade and production has increased during the past month or two, but the profit, Western Germany has increased exports to going to that country. Like other Continental producers, manufacturers in Germany are keen to sell to America for the sake of the dollars they receive.

Engineering and Transport

GROWTH OF THE INDIAN RAILWAYS IN THE PAST HUNDRED YEARS

A STORY OF UNEVEN PROGRESS: STEADY RECOVERY FROM THE EFFECTS OF WAR AND PARTITION

ON 7th March, the Prime Minister inaugurated in New Delhi the Railways Centenary Exhibition which depicts the progress and development of Indian railways during the last one hundred years. It was on 16th April, 1853, that the first train ran from Bombay to Thana, a distance of 22 miles. Lord Dalhousie can be said to have laid the foundations of the railway system, although what he had in mind was mainly its strategic and administrative value rather than its contribution to economic development. The earliest attempts at rail construction were made by the East Indian and Great Indian Peninsula Railway Companies, which were formed in Britain in 1845. The first was licensed to construct a line from Calcutta to Ranigunj (120 miles) and the second from Bombay to Kalyan (32 miles). A third private concern, the Madras Railway Company, was permitted to connect Madras with Arkonam (38 miles). However, it was soon found that the free grant of land alone was not sufficient to induce British investors to sink capital, and Lord Dalhousie then decided to persuade the authorities in Britain that private agencies working under State supervision would be best suited to organise construction work. But as "no one can safely say whether railways in this country will pay or not" it was essential that the State guarantee a return on the capital invested.

This policy having been accepted, several companies were floated in Britain to build railways in India. Under the terms of the contract, the State guaranteed an interest of 5 percent for 99 years and gave several other concessions, including the grant of land. In return it held the power to supervise and regulate the company's operations and could, if it wished, take over the line after 25 or 55 years. By the end of 1859 the Secretary of State had entered into contracts with eight companies—the East Indian, the Great Indian Peninsula, the Bombay, Baroda and Central India, the Eastern Bengal, the Indian Branch, later called the Oudh and Rohilkhand State Railway; Sindh, Punjab and Delhi, later merged in the North Western Railway; the Madras Guaranteed; and the Great Southern of India, subsequently the South Indian. These companies were to construct 5,000 miles of railways with a guaranteed capital of £52 million.

End of "Guaranteed" Construction

The period of "guaranteed" construction lasted until 1869 by which year over 4,000 miles of railways had been completed. Despite its success, there were several inherent defects in the policy. Strong criticisms were heard from several eminent persons, including Lord Canning. They said that there was no incentive to economise; there was no active and energetic management because of control by "absentee" companies and much expenditure was wasteful. Construction had been at a disproportionately high cost, because "it was immaterial to him (the investor) whether the funds that he lent were thrown into the Hooghly or converted into brick and mortar" as long as the State guaranteed a return. Subsequent efforts to economise failed and it was finally decided to entrust rail building to a State agency. Lord Lawrence was the chief architect of the new policy and he also successfully advocated metre gauge construction on the ground that it was cheaper and better suited to the needs of the country. Until then all construction had been broad gauge (five feet six inches) because of the impression that it could resist cyclones better.

Progress in the 1870s

In the decade after 1869, the State took up the construction of the Indus Valley, Punjab Northern, Rajputana, Malwa, Northern Bengal, Rangoon and Irrawaddy and Tirhoot lines. As a result the open line mileage rose to 8,996 by the end of 1880. The policy of State construction was a great success and all lines proved profitable to work. The "Panjdeh" incident, however, led the Government into a course of action that proved a heavy financial burden on its resources. The Sind and Punjab lines were first converted to broad gauge and then Quetta was connected with the main trunk line at enormous expense. With the Afghan War and famines in the 1870s, accompanied by a fall in the exchange rate, little funds were left to expand the railways. But the need to improve communications was pressing, the Government again turned to private enterprise and launched on a new policy of construction and administration.

During the first phase, the State gradually took over company lines; the East Indian, Eastern Bengal, Sind, Punjab and Delhi, Oudh and Rohilkhand, South Indian and Great Indian Peninsula railways were acquired between 1880 and 1891. Private companies were invited to build on guarantee terms which were more favourable to the State. The Bengal Central Railway Company, formed in 1881, and the Bengal and North Western and Rohilkhand and Kumaon railway companies, established a year later, entered the field with no guarantee of interest. The first of these was a failure from the very beginning and the Government had to purchase and merge it with the Eastern Bengal Railway in 1905. Similarly the Southern

Mahratta Railway Company registered in 1882, the Indian Midland in 1885 and the Bengal Nagpur in 1887 commenced work under the new terms of contract. During this period, a number of princely States offered guarantees to companies which built lines in their territories. An important change of policy occurred in 1893 when the Government, unwilling to increase its sterling liabilities, decided to entrust the construction of feeder or branch lines to companies with rupee capital. The guarantee terms were substituted by a rebate calculated on the earnings from main line traffic and a further liberalisation of terms later greatly encouraged feeder railway construction.

Working At A Profit

The route mileage increased from 838 in 1860 to 24,752 in 1900. During the 1890s the mileage was almost doubled and doubts regarding the ability of the railways to attract traffic and pay their way gradually faded. However, despite their contribution to economic development, the Government was reluctant to sanction money for further extensions. The reason was that it had suffered a heavy loss of £51 million on railway account by 1899. A couple of years later, however, the whole picture was completely changed. With the turn of the century the railways began to earn profits and continued to do so until the great depression of the 1930s. In accordance with the recommendations of the Robertson Report, a Railway Board consisting of a chairman and two members was constituted in March 1905.

With the enormous increase in traffic it became necessary to enlarge the carrying capacity of open lines and the Government gave first priority to this programme rather than to the extension of the system. This policy was strongly criticised and the Committee presided over by Sir J. Mackay in 1907 felt that larger allotments should be made for new railway equipment. It set a target of 100,000 miles, to be completed by incurring an

expenditure of Rs. 18.75 crores annually. Actual construction between 1900 and 1914, however, did not exceed 10,000 miles. During the first world war the construction programme virtually came to a standstill and expenditure in 1916-17 was as little as Rs. 4.5 crores. The strains of war seriously affected the working of the railways and they suffered from the heavy depreciation of rolling stock. Attempts at rail construction were resumed when peace returned but competition from road transport stiffened with the increasing use of the internal combustion engine. The development of branch lines was rendered uneconomical and except for long-distance traffic on main lines the railways lost considerable ground.

The Acworth Committee Reports

As the management of railways became more complex the Government had to rely increasingly on expert committees for advice. The earliest of these had been the Parliamentary Committee of 1879 and the Select Committee of the House of Commons of 1884. However, the largest number were appointed in the inter-war years and the recommendations of one headed by Sir William Acworth and formed on 1st November, 1920, exercised an enormous influence on policy and administration. The impending political changes had strengthened the demand for State management of the railways and this was the principal question referred to the Committee. By a majority vote it favoured the acquisition of company-managed lines when their contracts expired. It also recommended the separation of railway finance from general finance, changes in the constitution and functions of the Railway Board, establishment of a rates tribunal and of central and local advisory committees. While the Government spent two years considering these recommendations, two more reports arrived—from the Hailey (Railway Finance) Committee and the Incheape (Retrenchment) Committee. The former suggested the formation of a Depreciation Fund and the latter added that a Reserve Fund should also be started.

The Government issued a resolution on 20th September, 1924, outlining the new policy. The East Indian and the Great Indian Peninsula railways were transferred to State management bringing the number of such lines to four (the other two being the Eastern Bengal and the North Western). The O.R.R., a State line, was merged in the East Indian Railway, and in 1929 the Burma Railways came under State management. Thereafter the economic depression interrupted progress and the remaining lines—the A.B., B.B. & C.I., B. & N.W., R. & K., M. and S.M., S.I., and B.N.

you have been

WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

railways continued to be managed by companies. The large sterling credit accumulated during the second world war enabled the Government to complete nationalisation, the last railway to come under State ownership being the B.N.R., in 1944. Several changes were made in the internal organisation to increase efficiency. The Railway Board was reorganised and the divisional system established on the N.W., E.I., G.I.P. and E.B. railways. The Clearing Accounts Office and Rates Advisory Committee were set up and the Government decided to obtain railway requirements as far as possible from within the country.

Separation Convention

Under the Separation Convention, a Depreciation Fund was set up and the contribution to general revenues was fixed at one percent of capital-at-charge plus one-fifth of the surplus left over. The rest of the surplus was to be transferred to a Reserve Fund, but if the sum exceeded Rs. 3 crores one-third was to be added to the contribution. The advantage of this arrangement was that it insulated the railway against fluctuations in general revenues. Because of a severe fall in earnings during the depression years, the railways could not pay their contributions and these were stopped from 1931-32. Interest charges were met by large withdrawals from the Depreciation Fund and on the recommendations of the Retrenchment Sub-Committee and the Pope Committee the Government took steps to reduce expenditure. In 1936 the Public Accounts Committee emphasised the need to overhaul the financial structure and in the same year a committee under Sir Ralph Wedgwood was appointed to suggest ways of increasing net earnings. Cancellation of the entire liability of Rs. 61 crores on account of loans from the Depreciation Fund and the accrued contribution—later known as the "clean slate" policy—was strongly criticised by the Committee and by the public. While stressing the need for economy,

the Committee urged the railways to improve the standard of their services in order to meet road competition. It advocated the creation of a reserve of at least Rs. 50 crores and the amalgamation of the existing lines into more economical units, but before any action could be taken by the Government the second world war had begun.

Railway Rates Policy

The railway rates policy in the early days lacked consistency; individual companies tried to earn maximum revenue from minimum traffic with the result that the development of the railways and the country was retarded. The rate structure generally encouraged the movement of traffic to and from the principal ports at the cost of internal trade centres. Progress towards rationalisation was slow but the revisions made in October 1948 were designed to serve economic needs better. The setting up of the Railway Rates Tribunal was another notable reform.

The second world war inaugurated an era of great stress and strain for the railways which even in previous years had not been operated at the required standards. Despite difficulties and handicaps, however, their contribution to the war effort was great. With the enormous increase in military and civilian traffic, earnings soared and when the war came to an end the railways had to make up heavy arrears of replacement and renewal, but unlike the past both the Depreciation and the Reserve Funds were substantial. Rehabilitation difficulties arose mainly from the shortage of supplies. Post-war development plans were hampered by partition, when some 7,000 miles of railway together with rolling stock etc., went to Pakistan. In addition, nearly four million refugees had to be carried across the borders at short notice.

Post-War Rehabilitation

Since then, great efforts have been made to overhaul and re-equip the system. Replacement arrears have been made up and efficiency increased. The total capital outlay since August 1947 on renewals etc. exceeds Rs. 300 crores. The Assam Rail Link, built in record time, has re-established the connection between Assam and rest of India. The Chittaranjan Locomotive Works will be manufacturing 120 locomotives a year after 1954. There is less overcrowding in trains and third class passengers receive more attention. Large sums are spent every year on amenities for passengers. About 7,500 miles of railways owned by the former princely states have been taken over and the entire railway system regrouped into six zones.

In the financial sphere, the Separation Convention was revised in 1949. Under the Convention Resolution which came into force from 1st April, 1950, the separation of railway from general finances was extended for another five years and railways are required to contribute an annual dividend of 4 percent on the total capital investment. The Railway Reserve Fund has been renamed the Revenue Reserve Fund and is to be utilised for maintaining agreed payments to general revenues and making up the deficit. A minimum contribution of Rs. 15 crores has to be made to the Depreciation Fund for five years. In accordance with the Resolution a Development Fund to finance expenditure on passenger amenities, labour welfare and unremunerative railway projects has been constituted and the Standing Finance Committee for Railways has been given powers to scrutinise annual expenditure. In recent years three committees—the Indian Railway Enquiry Committee under Mr. H. N. Kunzru, the Railway Stores Enquiry Committee under Mr. A. D. Shroff, and the Railway Fuel Economy Enquiry Committee under Mr. D. C. Driver—have recommended measures to improve administrative, operational and technical efficiency. The railway development programme which is a part of the five year plan provides for an expenditure of Rs. 400 crores. The railways are likely to contribute Rs. 320 crores themselves and the balance of Rs. 80 crores will be found from the Central revenue. First priority is given to rehabilitation and the rolling stock programme includes the replacement of 1,444 locomotives, 6,166 passenger coaches and 52,662 wagons during the five year period. The plan also provides for new lines and several other measures to improve efficiency.

MACHINING CAPACITY AVAILABLE

Come to us for quick and accurate milling and hobbing of gears, light, medium and heavy turning and boring. Heavy and medium planing. Also castings in iron or carbon steel.

Calcutta Markets

PEACE TALKS EASE FREIGHT RATES TO KOREA AND CHINA

TIME CHARTERING ACTIVE

THE undertone of the market over the past week has remained firm in most trades but fluctuations have occurred in Eastern trades. It is interesting to note that Hongkong, Greece and France have followed the lead of the United States and the United Kingdom in placing restrictions on their tonnage trading with China and North Korea. This has had the effect of increasing the freight rates to and from these two countries as the tonnage available to handle these trades in considerably reduced and the price paid for cereals from North China to the Continent rose accordingly, likewise rice from Whampoa to Colombo. This, however, has been offset to some extent in the past few days by the re-opening of the talks at Panmunjon and the rates quoted have become easier.

The activity reported last week in the South Australian section continues with four ships being fixed to carry barley in bags to South Korea at rates of \$15.50 and \$16.25. A similar cargo to the U.K. was fixed at 122s. 6d. for June loading while Queensland-U.K. paid 130s. for sugar in bags. Flour in bags to Ceylon was arranged at 85s.

A further fixture of Argentine wheat to India is reported at the previous rate of 90s. and considerable chartering from the St. Lawrence with grain was arranged to various Continental destinations while two further fixtures to Karachi were done at the same rate of 79s. 3d. Coal from Hampton Roads to Antwerp or Rotterdam was fixed at 35s. and two cargoes to Yugoslavia paid \$7 and subsequently a further two paid \$7.25.

Manganese ore from Mormugao to the Northern Range paid \$10.50 for a prompt vessel and iron ore for an April loader to Japan was fixed at 57s. Ore Dungun-Japan paid 35s. 6d. In the Calcutta section 85s. was paid for a May loader for scrap to Genoa with the option of Rotterdam discharge at 85s. and a Japanese vessel accepted 120s. for a part cargo of scrap of Kobe.

Time chartering was on an active scale, several fixtures being reported. A motor vessel accepted 21s. for one Far Eastern round voyage delivery Havre-Hamburg and oil-burner was fixed at 16s. 3d. for one West Indies round voyage with prompt delivery Hull. For two months trading Persian Gulf 17s. was paid for an oil-burner and a similar vessel accepted \$2.40 for nine to 12 months trading.

DUST TEA SALE EASIER

Dust Sale No. 42 was held on 7th April, 1953. This sale was a little easier at the start but became dearer as the sale progressed. Commons and low mediums were in good demand at about last rates while mediums were a little dearer. The best liquoring C. T. C. Assams met with an irregular demand and showed no quotable change. The few Black dusts suitable for Export were again in good demand and were at times dearer. The Internal leaf teas offered sold at about last rates.

Quotations	1953	1952
Medium Doars Dust	176	
Medium Assam		
Grainy Dust	156	
Best Assam C.T.C. Dust	200 to 210	
Approximate Quantity Offered		
Internal	1,200 Pkgs.	4,300 Pkgs.
Dust	19,900 Pkgs.	22,900 Pkgs.

WEEKLY SHELLAC MARKET REPORT

During the week ended 7th April the market remained steady throughout and moderate business was done. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 90 value.
Pure Buttonlac	Rs. 85 done.
Lemon No. 1 Shellac	Rs. 84 to 85 done.
Lemon No. 2 Shellac	Rs. 80 buyers.
F. O. Sid. 1 Shellac	Rs. 73 to Rs. 75 done & buyers.
Pure T. N. Shellac	Rs. 70 to Rs. 71 basis done & buyers.
4% I. T. N. Shellac	Rs. 62 buyers.
No. 1 Kusmi Seedlac	Rs. 82 buyers.
No. 2 Kusmi Seedlac	Rs. 75 done & buyers.
Fine Bysaky Seedlac (Manbhum)	3% Rs. 68 to Rs. 71 done & buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs. 65 done.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 59 to Rs. 60 done & buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 55 to Rs. 56 done & buyers.
Kirelac	Rs. 27-8 done and buyers.

Shipments on the 1st April were 231 packages.

COMPANY AND PUBLIC NOTICES

THE WESTERN INDIA MATCH COMPANY, LIMITED. NOTICE.

NOTICE is hereby given that the Thirtieth Ordinary General Meeting of the Shareholders of the above-named Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay at 3 p.m. (S.T.) on Wednesday the 29th day of April, 1953 to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1952.
2. To declare a dividend and a bonus.
3. To elect two Directors in place of those who retire by rotation but are eligible for re-election and offer themselves accordingly.
4. To appoint Auditors and to fix their remuneration for the ensuing year.

The Transfer Books of the Company will be closed from the 18th day of April, 1953 to the 7th day of May, 1953, both days inclusive.

By Order of the Board,
T. RYDIN,
Managing Director.

30th March, 1953,
Indian Mercantile Chambers,
Nicol Road, Ballard Estate,
BOMBAY.

The dividend and bonus when declared will be payable at the Central Bank of India Ltd., Bombay and Calcutta on and after the 8th day of May, 1953 to those shareholders whose names stand on the Register on the 7th day of May, 1953 and warrants will be posted in due course to each shareholder at his registered address.

UPPER JUNNA VALLEY ELECTRICITY SUPPLY CO. LTD.

NOTICE is hereby given that the Forty-fifth Ordinary General Meeting of the above-named Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday the 24th April, 1953 at 11.0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th September, 1952 and the Balance Sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 18th April, 1953 to the 24th April, 1953, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta,
The 7th April, 1953.

THE INDIAN IRON AND STEEL COMPANY LIMITED.

NOTICE is hereby given that the Board of Directors has sanctioned payment of Preference Dividend for six months to those who are entitled as original Preference Shareholders of the Company and for three months to those who have been allotted Preference Shares of the Company under the Iron & Steel Companies Amalgamation Act 1952 for the period ending 31st March, 1953 due on the 1st May, 1953.

The Preference Share Registers will be closed from the 21st to 30th April, 1953, both days inclusive. Payment will be made on or after the 1st May, 1953 to those Preference Shareholders whose names are on the Company's Register on the 30th April, 1953 or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. LESLIE MARTIN,
Director,
Managing Agents.

12, Mission Row,
Calcutta, 8th April, 1953.

MACNEILL & BARRY, LIMITED

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per cent per annum for the half-year ended 31st March, 1953.

Payment will be made on 1st May, 1953 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,
A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta, 8th April, 1953.

HIDES AND SKINS

The market was almost unchanged. Stocks were higher than in the previous week.

Goatskins—Wet salted (Daisee, Killed) 1.01.100 pcs. on the basis of Rs. 235 to Rs. 400: Assam-Dinajpur-Murshidabad 27.900 pcs. on the basis of Rs. 265 to Rs. 315: Kisenanganj-Purneah 12.800 pcs. on the basis of Rs. 270 to Rs. 280: Patna (Ord) 4.200 pcs. on the basis of Rs. 145 to Rs. 240: Mozaf-ferpore-Samastipur-Pakur 23.100 pcs. on the basis of Rs. 245 to Rs. 260.

THE LAKSHMI COTTON MANUFACTURING COMPANY LIMITED

NOTICE is hereby given that the Fifty-eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Thursday, the 30th April, 1953, at 4.30 p.m. (Standard Time) for the purpose of transacting the following business:—

- (1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1952.
- (2) To sanction the declaration of a dividend.
- (3) To confirm the appointment of Mr. R. E. Forrester as Director.
- (4) To elect Directors in place of Mr. Pratapsinh Mathuradas and Mr. D. M. Khatau, who retire by rotation but being eligible offer themselves for re-election. Mr. Pratapsinh Mathuradas is interested as a partner in the firm of cotton buyers to the Company.
- (5) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
OF THE LAKSHMI COTTON MFG. CO. LTD.,
FOR THE BOMBAY COMPANY LIMITED,
L. F. H. GOODWIN,
Managing Director,
Secretaries, Treasurers & Agents.
Bombay, 31st March, 1953.

THE VISHNU COTTON MILL LIMITED

NOTICE is hereby given that the Forty-sixth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Wednesday, the 29th April, 1953, at 4.30 p.m. (Standard Time) for the purpose of transacting the following business:—

- (1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1952.
- (2) To sanction the declaration of a dividend.
- (3) To confirm the appointment of Mr. J. F. Parry as Director.
- (4) To elect Directors in place of Mr. Pratapsinh Mathuradas and Mr. C. M. Khatau, who retire by rotation but being eligible offer themselves for re-election. Mr. Pratapsinh Mathuradas is interested as a partner in the firm of cotton buyers to the Company.
- (5) To appoint Auditors for the current year and to fix their remuneration.

IMPROVED OUTLOOK FOR THE INDIAN TEA INDUSTRY

RE-ADJUSTMENT AT LOWER LEVEL OF ACTIVITY: THE SCARS OF THE SLUMP

SOME people must be wondering what happened to the tea slump. Throughout the second half of last year the newspapers were full of it; a climax was attained during the cold weather when hundreds of gardens were closed, many workers were unemployed and a general atmosphere of crisis obtained. The Government of India, stoically unflinching, persisted in its "enquiries", made a few pious gestures, offered several formal bows in the direction of economic necessity and did nothing substantial. Followed a period of silence. Then prices at the tea auctions both in Calcutta and London began to improve, and a mild boom in tea shares in London was initiated in Calcutta with greater vigour. Most of the gardens that had closed down re-opened, and officials confided to the Press that the tea slump was all over. It would appear that the Government's policy of masterly inactivity had succeeded, no substantial sacrifice had been made, the storm had blown itself out and we were back to where we were. But are we? The industry and its labour know that the outlook is now much better than it was late last year and that the truly critical phase has passed; but they also know that the transition was not as painless as the recital above suggests and that the slump—far from being as imagined or engineered—has left scars which the Indian tea industry will bear for many years. There has in fact been a re-adjustment at a lower level of activity. Such a re-adjustment was in any case necessary, but it could have been effected with greater ease and with less damage to the industry's future prospects if more notable assistance had been forthcoming from Government along the lines suggested during last year's discussions.

The Government of India, despite its sceptical attitude to the tea slump, must know that too. One of its main interests in the tea industry is the foreign exchange earnings of tea exports, and the following figures from the United Kingdom's Trade and Navigation Accounts show what has happened to sterling receipts on tea account in the last twelve months:

VALUE OF BRITISH TEA IMPORTS FROM INDIA
£(000)
Feb 1952 Feb 1953 Jan-Feb 1952 Jan-Feb 1953
6,556 3,936 13,956 6,882

The figures for 1953 include, which the 1952 figures do not, tea imported into the United Kingdom for eventual re-export to the Continent and North America, so the decline is even more marked than at first appears. This is enough to dispose of the view that the tea slump was never really as bad as all that, or that the Government somehow showed preternatural cleverness in refusing to believe that anything was seriously wrong.

The improvement that has occurred this year has been due to three things. Firstly, the psychological effect of the producers' decision to restrict output in 1953. Next, the running down of those little stockpiles of tea that lay in tins on the shelves of British kitchens for a month or so after derationing. Lastly, the agreement of tea estate labour (and management) in many districts to accept lower pay. These factors, and especially the last, enabled producers to put before their financiers a more optimistic forecast of costs and sales for the 1953 crop and thereby to obtain adequate credit on more favourable terms. With finance assured for the season, with lower wages to pay and less worry about food supplies, the estates could face the next agricultural campaign with more confidence. This is not to say that they face it with carefree cheerfulness, for the fact is that they have just finished a season in which many estates scored heavy losses or greatly reduced profits. The rise in auction prices for 1952 tea that began at the turn of the year came too late to make much difference to that; export sale averages in Calcutta for last season were Re. 1-6-5 per pound compared with Re. 1-12-11 the year before.

The three factors we single out as having contributed to the recovery deserve closer inspection. The decision to regulate output had an immediate tonic effect on markets, although, of course it concerns the tea crop to be plucked in coming months and there has so far been no actual reduction. Nor need there ever be any, if prospects later in the year justify the marketing of more tea; the regulation scheme provides for the restoration of the cut if required. But the psychological consequences of the cut have been so beneficial that its restoration should only be undertaken if it is very certain that markets will stand it. The revival of demand for tea in the United Kingdom has probably now gone as far as it is likely to go, though the results of retailers' realising that they had underestimated demand might make themselves felt for some little time yet. Further improvement on the demand side can only be expected as a long-term development, and with the whole question of tea propaganda outside North America still quite obscure, nothing spectacular can be looked for there.

The reduction in wages paid to estate labour applied to all areas except the Assam Valley, and since the fall in sale prices has been more severe for tea grown in Cachar, Terai and the Dooars than in Assam, it was effective where it was most needed. Food concessions have been abolished in Cachar and the concessional supply of foodstuffs other than rice has been stopped in the Dooars, where grain is still being supplied to labour at well below controlled rates. There has been no change in the Assam Valley, where all attempts to find an agreed cash conversion ratio for the value of concessional foodstuffs have failed. Although almost all the gardens that closed down are now working again, they have re-opened with smaller labour forces and throughout the tea industry generally there has been a measure of retrenchment. Unemployed labour in areas where retrenchment has been greatest are being offered work in other districts. This is the full measure of labour's sacrifice in defence of the industry that provides its livelihood. Though it is clearly limited, especially in the principal tea growing area of the Assam Valley, it cannot be belittled and deserves to be ranked with the economies of management and the depreciation of capital as among the chief consequences of the tea slump. The good offices of the State Governments and their willingness to help out with food supplies played their part in the process.

The contribution of the Central Government, which is of course one of the principal beneficiaries of the tea industry, stands in contrast. First came the withdrawal from the International Tea Market Expansion Board. What had that to do with the tea slump? Nothing as far as anyone could see, but it was the most substantial evidence of activity forthcoming from Delhi during the slump, so presumably it should be mentioned.

The ITMEB had many faults—which could have been put right by the main contributor to its funds—but there seemed to be very little point in wrecking the instrument of tea sales promotion in the middle of a most difficult period. The new arrangement with the American tea trade fills part of the gap thus created, on no better terms than before, but the rest of the field remains to be dealt with.

Among the Central Government's gestures at this stage was the offer to guarantee some part of bank loans to gardens—when they were made against documents which would have taken months to prepare where they existed at all. Most tea estates were excluded from this offer, which merely served the purpose of giving an appearance of activity. The delayed payment of excise was another boon which amounted to very little in practice, though it made an interesting newspaper story for a day or so about what the Centre was doing to assist the tea industry. Various official inquiries should not be forgotten, even though the most important of them was apparently so unsatisfactory that it has to be repeated by another team of experts some time in the future. There was no noticeable improvement in rail services to the tea growing areas. Requests for reduction or abolition of the export duty were turned down—in the case of the Rajaram Rao report for reasons that cannot yet be fathomed. This does not add up to very much, but, with the addition of a thoroughly objectionable Tea Bill, it is, we think, a fairly comprehensive account of what the Government of India did about tea during the slump. Meantime much was said and written in Delhi about the planned increase of output under the five year plan, the necessity to increase employment, the urgency of earning more foreign exchange and the development of India's export industries.

satisfy some people that private enterprise ever needs any help. But the facts of the tea industry's nascent recovery should sober these Micawbers. The Indian tea plantations are emerging from a trying period as an industry that employs fewer people, spends less money, uses less acreage for production, intends to make less tea, contributes less to Government revenues, pays lower wages, earns less foreign exchange, cultivates older tea bushes and uses less efficient machinery. Apart from that everything is fine. The industry is returning to an economic condition, in the sense that it hopes that its revenues during 1953 will cover its costs, so it cannot be described as facing a crisis. But there is more in economics than crises and prosperity; there are bigger industries and smaller, well-equipped industries and inefficient ones. The objective of India's industrial development is to have more of the first and fewer of the second, but in the last twelve months the country's second largest export industry has been allowed to slip in the other direction. It would have slipped further if labour had not consented to bear some of the burden and if management had not taken such energetic countermeasures. It would not have slipped so far if the Government of India had granted the reliefs requested of it.

CAN THE FREE GOLD PREMIUM LAST?

PERSISTENT OPTIMISM ABOUT HIGHER OFFICIAL PRICE

THE annual review published by Samuel Montagu and Co., the London bullion firm, is especially interesting this year because it is just 100 years since Mr Edwin Samuel of Liverpool and Mr Samuel Montagu of London established their bullion and foreign banking office in London, with the name of Samuel and Montagu. This year's review of gold is also particularly opportune because the prices of gold, both official and free, are the subject of unusually keen discussion. One fact that stands out in Samuel Montagu's review is that the world is not losing faith in gold. Many people in our civilised world will agree with the judgment of Lord Keynes a generation ago that gold is a relic of barbarism; but our world is not, unfortunately, civilised enough to dispense with that relic as a precaution against war and against the vagaries of currencies. Says the review: "So long as the world political situation remains as it is, and so long as the present economic situation maintains a system of currencies that are in part blocked, frozen, bilateral and inconvertible, the twin spectres of war and devaluation will remain." Gold at the present price "is reckoned a small insurance premium to pay."

On this reasoning, the free gold markets may be expected to thrive. These are very variable markets, where the premium over the official price of \$35 an ounce fluctuates widely over a period of years; but for some months past there has been no material change in free prices—disregarding such temporary movements as the French Government's troubles with the Bank of France caused recently. Since the supply of gold to the free markets has been increasing, this stability is significant. However, the supply is still tending to increase. The gold-hoarders' faith in the metal and their ability to exercise that faith may soon be severely tested. An estimate by Union Corporation puts production of gold in the non-Soviet world last year at 24,400,000 ounces—382,000 ounces more than in 1951, but 179,000 ounces less than in 1950. Most of last year's increase is attributable to South Africa, which accounts for nearly a half of the gold produced in the non-Soviet world, with Canada second and the United States third. (The Soviet Union probably ranks ahead of the United States, but no figures of Soviet production are available.)

It is estimated that the free markets absorbed more than 12,000,000 ounces last year, compared with about 9,500,000 ounces in 1951. While output was increasing a large proportion of it went into the free markets instead of the Treasuries. About 10,000,000 ounces of the free-market supply last year came from current production, although the South African Government, unlike the governments of other producing countries, still requires that free sales shall not exceed 40 percent of output.

The question arises, what will happen to prices if South Africa relaxes this limit? There can be no doubt that if all, or a more substantial part, of the production of the principal producer were available for the free markets the premium—recently somewhat above \$2—over the official price of \$35 would disappear. Even the normal increase in supplies, due particularly to the exploitation of new goldfields in the Orange Free State and elsewhere, may be sufficient to reduce the premium to a very small figure. However, the official price itself may yet be changed. While the dispute on this question continues gold has a continuing speculative interest, as the whole basis of its value in terms of the dollar and other currencies may be enhanced.

In the non-Soviet world, the United States holds about two-thirds of the gold stock and the British

Commonwealth produces about three-quarters of the current output of gold. The Americans' is the deciding voice in price-policy; the British Commonwealth (mainly the sterling area, primarily South Africa) has most to gain from a rise in the price, in terms of current earnings. South Africa's Finance Minister, the persistent Mr Havenga, professes to see growing support for his country's demands for a higher price: demands which are recognised, he says, as being concerned no longer only with South Africa's self-interest. Samuel Montagu's review confirms that this discussion of price has "passed out of the purely academic stage," with "greater cohesion of opinion in the producing countries" and "the change in the Administration of the United States."

However, the various changes of policy which were expected to result from that change of Administration are maturing slowly, if at all. It may be that only a major recession of business, needing the counteraction of some such inflationary stimulant as revaluation of the gold stock, would finally convert official American opinion to the idea of raising the gold price. Samuel Montagu believes that "the idea of a change, growing as it is in intensity over large parts of the world, will obtrude itself with increasing frequency in the coming months and years." But that reference to the coming "years" does not suggest that this authority envisages the change as imminent.

FIVE YEARS OF TRADE WITH BRITAIN

INDO-British trade since 1948 has fluctuated from year to year but has nevertheless always remained at a high level: total value increased from £193 million in 1948 to £216 million in 1949, dropped to £195 million in 1950, rose to a record £268 million in 1951 and fell back to £227 million last year. The balance was in Britain's favour in 1948 and also in 1949, the year in which both sterling and the Indian rupee were devalued; but this country had a surplus of £1 million in 1950, £38 million in 1951 and £3 million in 1952. One of the most important features of this trade from India's point of view has been the large proportion of capital goods she has imported; about one-third of her total imports from Britain has been machinery and there have been many items of capital goods in the classes of imports which are next in importance—vehicles and electrical goods. In the last two years India has been the second largest purchaser of British machinery and in 1952 took 8.5 percent of that country's machinery exports—1,036,000 tons worth £422 million. In a period of worldwide shortages of capital goods, Britain's supplies have been of crucial importance to India's plans for economic development. Some fields have benefited particularly from this trade, the largest individual machinery import items being electrical machinery, mechanical handling equipment, machine tools, internal combustion engines and textile machinery. Tea is by far the most important of India's exports to Britain, and constituted 42 percent of the total last year. Britain in the last two years bought 60 percent of her tea from this country and paid £35 million for it in 1950, £44 million in 1951 and £49 million in 1952. The increase has been a direct result of the resumption of the London auctions, and the gradual removal of restrictions on consumption last year. Jute manufactures are India's next most important export to Britain but the value has fluctuated widely in recent years; they were worth only £6 million in 1950 and rose to £25 million in 1951, but fell to £13 million last year. Exports of leather and manufactures rose steadily from £7 million in 1948 to £20 million in 1951 but a sharp decline to £9 million took place last year; even so India remained by far the biggest supplier. Tobacco exports were about the same in 1952 as in the previous year but exports of non-ferrous metalliferous ores and scrap (mainly manganese ore) were one and a half times the 1950 figure.

The latest figures of Indo-British trade during the first two months of this year show disturbing trends in comparison with the corresponding figures for 1952. According to the U.K. Trade and Navigation Accounts, India's exports have dropped from nearly £28 million to £15.9 million, mainly because the value of tea sent to Britain was little more than half of last year (£6.9 million as against £13.6 million). Although 49.4 million lbs. or nearly 63 percent of Britain's total tea imports, came from India the decline in value has been sharp. No less disturbing was the decline in jute goods exports from nearly £4.5 million to £360,000. Exports of manufactured oils, fats and resins were running at one-fourth of the 1952 rate, which supports the complaint that heavy export duties are although the British tariff favours this country. Leather and manufactures were the most important item whose exports rose, others being raw and waste cotton and coir products. As in the case of exports, India's imports from Britain also declined but by a much smaller amount—from £20.3 million in the first two months of 1952 to £18

million in the corresponding period of this year. Chiefly responsible for this fall were chemicals, dyes, drugs and colours (from £2.46 million to £1.16 million), vehicles (from £3.3 million to £2.4 million) and machinery (from £6.45 million to £6.19 million). The most notable increases were in electrical goods (from £1.76 million to £2.15 million) and ferrous and non-ferrous metals and manufactures.

CURRENT COIN

Insurers and Industrial Investment.—The middle class has traditionally been one of the major supporters of new industrial enterprise but inflation and taxation have combined to eliminate the small investor, so that he has with much justification been described as "the corpse in the capital market." In this country, not enough attention has been devoted to the problem of putting life back into this corpse (though that will properly be among the major preoccupations of the Taxation Enquiry Commission). However, the pressing needs of the five year plan have stimulated the search for alternative sources of investment and a statement by the Finance Minister, Sir Chintaman Deshmukh, in Parliament last week suggests that official eyes are turning in the direction of the insurance companies. Not that the idiosyncrasies of the Praja Socialist party are spreading—the idea of nationalising insurance has been wisely rejected—but official circles have been considering the proposal that more insurance funds should be allowed to be invested in industry and that the Government should to some extent regulate and direct such investment. Insurance companies, as Mr. N. M. Medora emphasised in his presidential address at the annual general meeting of the Indian Insurance Companies' Association last Thursday, cannot by their very nature provide risk capital freely; however, "it is now generally recognised that the aim of their investment policy should be not only to invest wisely in the manner of a trustee taking in a prudent measure industrial capital in appropriate forms to suit the requirements of national development." Mr. Medora quoted figures to show that insurers' investment in the shares of Indian companies rose steadily after 1946 but fell in 1950; Insurance (Amendment) Act in that year which imposed restrictions with "the general effect.... dividends for about five to seven years before insurance company." In relation to rising costs, investments have been lagging in recent years and they are understandably anxious to earn higher returns. One way to do this is to allow them to invest larger sums in industrial equities but, as Mr. Medora pointed out, this means that the law will have to be amended.

The trend of current official thinking on this subject is of some importance. Referring to the need to stimulate investment Sir Chintaman Deshmukh has said that "something perhaps should be done by a greater supervision of the objects for which the investible funds of insurance companies are devoted after they have invested in what are called approved securities, and there are certain inchoate proposals that are under examination with a view to finding out whether something should be done to direct investment a little more positively. We have not, I confess, gone very far in this direction. Minister, Mr. T. T. Krishnamachari, which was published in *The Hindu* recently, has created much interest and will perhaps be pressed with some force when these "inchoate proposals" are hammered into more definite form. Mr. Krishnamachari feels that if the Government wishes to stimulate private investment for industrial development it "should provide guarantees both in regard to the reasonable return at least in certain important industries." He says that some portion of the life funds can be diverted into industry if the rigid provisions of Sections 27 and 27-A of the Insurance Act are suitably amended. "But this will also result in Government having to create a body which would be in charge of diverting investment of the life fund into equity investment. To the extent that a statutory body takes up the responsibility of investing the life fund, to that extent the interest of the people who control insurance companies by holding blocks of shares would diminish. It seems to me that the people concerned will have to think on these lines before long so as to make life insurance more attractive to the policyholder and also to make life insurance a means of stimulating national saving which could be canalised for economic development."

Company Law Reform.—The chief interest of the stimulating address delivered by Mr. E. H. Marker, former Under-Secretary to the U.K. Board of Trade who has recently been advising the Indian Government on company law reform, before a joint meeting of various chambers of commerce in Calcutta last Thursday was his emphasis on the

need for the Government to have very extensive powers of investigation into malpractices, in company administration. That there have been serious abuses in the running of sundry joint stock enterprises in recent years is not denied; they were investigated by the Bhabha Committee and a number of recommendations evolved by it just over a year ago were intended to prevent their resources. Mr. Marker was fulsome in his praise of the Committee's efforts: "I am quite certain that it would be most unwise to whittle away" any of its main recommendations. Of fundamental importance, he said, was the proposal to set up a strong Central authority on the lines of those existing in Britain and the United States, though adapted to Indian conditions. No Companies Act could be worked unless there was at the Centre an efficient and able administration which could not only grant alleviations, but also had the power to investigate complaints, remove difficulties and take strong action. A powerful Central department was necessary, and it should be guided by a commission maintaining the closest touch with commerce, industry and finance. Mr. Marker stressed that the complex organisation of companies made undesirable practices "most difficult to detect.... Therefore, it is necessary to ensure that an inspector who is appointed whether as a result of a bona fide complaint, whether by the court or by the Central department acting in accord with the powers conferred upon it, is not thwarted in his investigation, which will in any case be extremely intricate." He agreed with the Bhabha Committee that under suitable safeguards it should be possible to apply to the court to redress abuses when they occur and said that "there is a complete safeguard for the business community in that these powers can only be exercised subject to the court and they would be exercised only in the last resort." Mr. Marker felt that the Bhabha Committee's proposals would be "useful in any economy, especially where there are groups of companies or companies associated under managing agents." They "should cause little or no trouble to those concerns which are well and honestly run, while those which are not up to the standard will find that compliance is neither as difficult nor as irksome as they might suppose."

Commonwealth Finance Company.—Further details are available of the new Commonwealth Development Finance Company Ltd., projected in principle by the Commonwealth Prime Ministers at their London conference in December. Its purpose, as defined in the final communiqué from that conference, is to further development schemes in the Commonwealth. The chairman of the company will be Sir Frederick Godber, chairman of the Shell Transport and Trading Company Ltd., and the following have consented to serve with him as first directors: Mr. R. E. Fleming, merchant banker, of Robert Fleming and Company; Sir Geoffrey Heyworth, chairman of Lever Bros; Mr. H.C.B. Mynors, a director of the Bank of England; Sir Ernest Oppenheimer, South African magnate; Sir Edward Peacock, chairman of Baring Bros; Sir Robert Sinclair, chairman of the Imperial Tobacco Company; Mr. I. A. R. Stedford, chairman of Tube Investments Ltd. The authorised capital of the company is £15,000,000, of which 45 percent is to be subscribed by the Bank of England and the rest by leading industrial, commercial, mining, shipping and financial interests. The Board intends to call up only 10 percent of the capital in the first instance. Under its articles of Association, the company has power to borrow up to an amount equal to twice its issued capital, and it is intended at present that its operations should be financed mainly through the exercise of these borrowing powers.

More Aluminium.—Production of aluminium in 1952 is believed to have exceeded for the first time the total world output of the older non-ferrous metals, copper, lead and zinc. Although the shortage of aluminium, which existed soon after the outbreak of the Korean war has now been overcome and demand from most of the main consuming countries, with the exception of the United States, satiated, producers are continuing to plan ahead for an expanding market. Mr. K. C. Mahindra, chairman of the Indian Aluminium Co., Ltd., says in his address to the forthcoming annual general meeting of that company: "In spite of the slump in the aluminium market which started in March 1952, sales for the fifteen months.... were at a higher average monthly rate than in any previous year. This was largely because aluminium powder and paste were sold by us for the first time during 1952." In Britain the position is rather different. Aluminium sold by the Ministry of Materials has been reduced in price from the first of this month, not so much because of a decline in demand as because of the strength of sterling in relation to the Canadian dollar, from which country Britain buys most of her aluminium requirements. As a result of the slowing down of the rearmament drive in the U. K., there has been some falling off in demand for aluminium, but this is likely to be only a temporary phase. In any case, in anticipation of lower prices, British firms have been drawing on their stocks of aluminium and these will soon

have to be replenished. Demand in America, however, continues to grow; 50,000 tons of the 250,000 tons of Canadian metal consigned for Britain have been diverted to the United States. With the abundant supply of aluminium now available prices are bound to ease though a further expansion of demand is confidently expected.

Coconut Production.—Before World War I internal demand for coconuts was limited and India exported both copra and coconut oil. Between the wars internal consumption expanded to such an extent that when in 1939 supplies from abroad were cut off, India faced an acute shortage of these two commodities although she ranks second to the Philippines in the production of coconuts. Inaugurating the seventeenth meeting of the Indian Central Coconut Committee at Ernakulam last week, Mr. P. R. Deshmukh, Union Minister for Agriculture, stressed the urgency of further increasing output. "Industries consuming coconut oil, particularly those connected with the manufacture of soap and toilet articles, have been growing in India at a fast rate and a large demand for coconut oil, estimated at 198,000 tons, has developed in the country itself, whereas production is estimated at 113,000 tons." Not only has this gap to be bridged but production will have to increase to keep pace with ever-expanding demand. Mr. Deshmukh said that production could best be stepped up by improved methods of cultivation, and by co-ordinating and extending research. The Committee already provides an information service for farmers through the Press and radio but there is still plenty of scope for publicising the results of research, particularly in regional languages in order to encourage growers to follow the technical advice and guidance of the Coconut Committee. Regular cultivation practices, manuring and the control of pests and diseases can increase production by between 25 and 50 percent. It is estimated that for the country to be self-sufficient in copra and coconut oil, production will have to be increased by approximately 677.3 million nuts or 20 percent of existing output.

Finance Bill Amendments.—Inaugurating the debate on the Finance Bill in Parliament on Tuesday, Sir Chintaman Deshmukh, Finance Minister, said that he now proposed to increase the supertax rebate admissible on dividends received by a foreign company from its wholly Indian subsidiary from one anna in the rupee to one and a half annas. Foreign companies, he declared, apparently preferred to do business in India either through a branch or a foreign subsidiary as the income-tax payable in either case was invariably less than the aggregate income-tax (including supertax) payable by the foreign parent company on the dividends received payable if the business were carried on through a wholly Indian subsidiary. The present pattern of taxation did not encourage the formation of Indian subsidiaries, so it was necessary to reduce the disparity by lowering from one anna to six pices in the rupee the supertax rebate admissible to a foreign company on its Indian income other than income from dividends received from the wholly subsidiary company. "It has now been urged that the confining of the rebate of one anna to dividends of a wholly subsidiary company would deter a foreign company from allowing Indians to hold any shares in the subsidiary companies", so "it is proposed to relax the condition of 'wholly subsidiary' and to allow a supertax rebate of one anna on dividends received from the subsidiary company. This would enable a foreign company to allot or transfer some shares of their Indian subsidiary companies to Indian shareholders without reducing the supertax rebate admissible to the parent company. But the reduction in rebate from one anna to six pices does not reduce the disparity to a sufficient extent. I, therefore, intend to increase the rebate admissible on dividends received by a foreign company from its Indian subsidiary from one anna to one and a half annas. By doing so, the existing disparity will be halved and then perhaps at another stage we can remove it completely." Referring to the taxation of speculative gains, Sir Chintaman said: "It has always been the intention that speculative transactions in different commodities and in different markets would be regarded as one business and the profit and loss determined by combining all these transactions." Under the Bill, it was proposed to prevent the buying of losses in order to escape heavier taxation; he would move an amendment, suggested by business interests, under which the transactions of brokers in recognised stock exchanges and forward markets who had to enter into jobbing and arbitrage contracts in the normal course of their business would not be considered speculative. The Department would not be too particular about the quantities and timing involved in hedge trading, provided it was satisfied that such transactions constituted genuine hedging. Another amendment related to exemption from supertax of dividends received by a company from an Indian company engaged in specified basic industries; this concession is now proposed to be applied to new companies formed after 31st March, 1952, instead of 28th February, 1953.

MR. BUTLER'S BUDGET PROPOSALS

BOOST TO PRODUCTION AND INTERNAL CONSUMPTION

London, 15th April. Mr. Butler's budget proposals clearly reflect the intention of the British Government to create the incentive for increased production. The Chancellor estimated that the coming year's expenditure would be £4,259 million and the total revenue £4,538. Defence expenditure, it is estimated, will increase by £120 million to £1,497 million. Tax reliefs announced include the reduction of 100 percent purchase tax to 75 percent, that at 66 2/3 percent has been reduced to 50 percent and that at 33 1/3 percent has been reduced to 25 percent; income tax has been reduced by 6d in the pound. The excess profits levy is to be discontinued from 1st January 1954. Also included in the proposals are one or two minor alterations in income tax allowances. The Chancellor announced early in his speech that it is intended to end sugar rationing, although the date is not yet fixed. Underlying the budget is Mr. Butler's diagnosis that demand is running below production.

Prices on the Stock Exchange, particularly Industrials, were buoyant on the news of the budget. Gold shares have been very quiet because of the pending elections in South Africa but they came in for some support late in the week and closed slightly higher.

Conditions on the London money market in the past week were irregular. The period opened with very difficult conditions resulting largely from the big Easter movement of funds and both clearing and outside banks called on a substantial scale. Later, there was a return to more comfortable conditions with considerably reduced calling. Towards the close, however, there was a marked deterioration and an expected improvement failed to materialise. On several occasions the authorities undertook a modest amount of smoothing out. Applications for £250 million of Treasury Bills totalled £357,565,000 of which the former amount was allotted at an average rate of 48s. 4 1/2d percent. This week £230 million will be offered. The Bank of England Return showed active note cir-

ulation increased by £8.3 million to £1,517 millions. Bankers' deposits increased by £11 million to £280 millions.

Cereal Imports

The import of cereals and animal feeding stuffs is to be returned to private trade as from 1st May. The Board of Trade announced that importers will receive open individual licences allowing them to import wheat and flour, feed grains and certain miscellaneous animal feeding stuffs and fertilisers from any country. Licences will be valid from 1st May and the present issue of licences will cover imports up to the end of June next year. The announcement added that imports from outside the sterling area would be kept under review in order to safeguard the balance of payments.

Belgian Iron and Steel

Belgian iron and steel exporters have raised their price for merchant steel to dollar area destinations to \$84 per metric ton from \$82 previously. For destinations outside the dollar area the price is \$90 or 4,500 Belgian francs against \$86 or 4,300 previously. The increases are effective from 8th April.

Fibre Markets

Contrary to expectations, prices on the Indian coir yarn market were maintained at the previous week's levels as shippers were not inclined to consider counter bids. Buyers, however, were not willing to pay current prices asked and prefer to wait for more favourable terms. Business in Ceylon coconut fibre was negligible with buyers showing little confidence in the market. Mattress fibres seemed to be more abundant as regular quantities were offered but prices asked were about 15 to 20 percent higher than last January.

Copper Price Control

August is expected to be the starting point for free copper dealings in London. Support for this conclusion is given by the Ministry of Supply's decision to abolish price control of secondary copper and copper scrap.

Tea Sales

In brisk competition, prices showed little change from pre-Easter values. 25,949 packages of North Indian, Pakistan, Nyasaland, Kenya, Uganda, British Malayan, Portuguese, East African and Indonesian teas were offered. Good liquoring and Commons generally were firm but light liquoring

Mediums were sold in buyers favour. Clean Common Broken Pekoes, free from stalk, was quoted unchanged at 40 1/2 to 41d per pound.

Tea Imports

United Kingdom tea imports in February totalled 41,077,000 compared with 56,882,000 pounds in February last year. They comprised from India 26,606,000, Ceylon 10,767,000, Pakistan 1,525,000, Nyasaland 1,192,000, Indonesia 462,000, Kenya, Uganda and Tanganyika 295,000, other countries 230,000. Re-exports amounted to 4,095,000 pounds leaving net imports at 36,982,000 pounds.

Oilseed Markets

There was little change in the general situation of oil and seed markets, although Canadian linseed was reduced to £55 1/2 per ton, c.i.f. from £58 1/2. Some other seeds improved slightly, however, including Indian nigerseed 3 1/2 which is £1 higher at £60 1/2 c.i.f. Business was recorded in palm kernels at 9,000 Belgian francs for Belgian Congo and £172 for Liberian produce both c.i.f. Coconut oil remained quiet and castor oil was dull. There was a better tendency in some American oils with crude cotton-oil three dollars higher at \$35 1/2 and soyabean oil \$2 up at \$34 1/2, both f.o.b.

Steel Production

United Kingdom production of steel ingots and castings in March was at the annual rate of 18,272,000 tons compared with 18,315,000 in February and 16,648,000 in March last year, the British Iron and Steel Federation announced. Actual production during the first quarter of 1953 reached a new quarterly high of 4,552,000 compared with 4,261,000 in the fourth quarter of last year and 3,998,000 in the first quarter of 1952. The output of pig iron in March was at the annual rate of 11,216,000 tons against 11,104,000 tons in February and 10,490,000 tons in March last year.

COAL BLENDS AND THEIR COKES

RESEARCH REPORT PUBLISHED

THE second report of the Coal Blending and Coking Research Sub-Committee of the Council of Scientific and Industrial Research has just been published. The first report, "Blending of Coals for Coking", published in 1948, reviewed the investigations carried out by the Coal Blending and Coking Research Sub-Committee, Jamshedpur, since its inception in 1940 up to 1947. The second report deals with the investigations carried out between 1947 and 1951. Many of the earlier results were based on laboratory tests. During recent years, the installation of the Simor-Carves experimental oven has afforded opportunities for carbonising larger samples under conditions which are more comparable with full-size industrial coking practice.

The present annual supplies of coking coal are adequate to meet the requirements of the existing iron and steel industry and possibly also the requirements of the projected Government iron and steel plants, provided coking coal is exclusively used for metallurgical purposes. However, when planning will be desirable from the point of view of economic transport, in addition to the basic consideration of conservation.

The coals tested came from the Jharia, Raniganj and Madhya Pradesh fields, also from the Surguja State (mostly semi-coking and non-coking) and the East Bokaro field (coking). Investigations included pilot and full-scale coking tests, making metallurgical coke from non-coking coals by the two-step carbonisation process, and methods of determination of apparent specific index of coke and of the determination of caking index of coal. In addition, coal samples of varying caking characteristics were obtained from the United Kingdom and tested for comparison with Indian coals.

The general procedure in testing the coals included proximate analysis, determination of caking index, swelling properties, sulphur and phosphorus; screen analyses and determination of bulk density. Proximate analyses and screen analyses were also done in the various blends of coal used. The pilot-scale coking tests were carried out in tests were done in full-scale ovens. The resulting Shatter, Breslau and Haven tests. The apparent porosity calculated. The analytical and test results are given in detail in the Report. The publication, priced Rs. 5, is available from the Council of Scientific and Industrial Research, Old Mill Road, New Delhi-2.

FOREIGN TRADE IN WOOL

According to latest available statistics, India's imports of raw wool and wool tops during 1952 increased by 9 percent compared to the previous year. Due to the fall in prices the value of these imports was reduced from 80 million rupees in 1951 to about 48 million rupees in 1952. Imports of woollen and worsted piecegoods and mixed wool goods increased from 684,218 sq. yds in 1951 to 2,347,688 sq. yds in 1952. Exports of raw wool rose from 18.7 million lbs. in 1951 to 38 million lbs. in 1952. This was due to removal of quantitative restrictions on exports during 1952. Exports of carpets, however, were reduced from 13 million lbs. in 1951 to 6.5 million lbs. in 1952.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CONDITIONS STILL QUIET

Wednesday, 15th April. CONDITIONS are quiet in Calcutta and there has been no improvement in trade demand for funds. Most classes of advances are steady. Though there is more money about, credit is still fairly tight in the interbank market where rates quote 2 1/2 percent for overnight loans and 3 percent for good money. The fall in the call money rate in Bombay reported before the week-end was temporary; the rate is now back to 3 percent.

There was some business in gunny bills in the exchange market last Saturday but practically nothing has been doing since then. Remittance is small and exchange rates are unchanged from last week. Sterling is reported steady in New York.

Offers for Rs. 1 crore of three-month Government of India treasury bills declined to Rs. 1,20,50,000 this week, but the average rate of acceptance was unchanged at Rs. 2-7-0 percent per annum. Tenders at Rs. 99-6-3 percent and above having been accepted. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 10th April, treasury bills for Rs. 6,34,00,000 were sold in favour of the Reserve Bank of India.

Bullion was firm last week and prices rose sharply. Silver met active support, followed by nervous bear-covering on keen upcountry off-takes because of good crops and the price gained from the previous week's level of Rs. 152-14 to Rs. 157-8 quoted today. The ready rate was done at a premium of 8 annas on the scarcity of stocks. Silver continued steady and unchanged at 74d. in London and at 85 1/2 cents in New York.

Gold also improved in sympathy and due to the drying up of the smuggled metal. The price rose from Rs. 84-4 to Rs. 88-4. The sovereign at Rs. 59 showed a gain of Re. 1-1 over the week.

A Press communiqué issued last week said that the whole of the 3 percent loan, 1953-54 (Fourth Defence Loan) issued in terms of the Government of India notification No. D3392-B-43 of 26th June, 1943, will be repaid at par on 15th July, 1953, with all interest due up to date. Interest will not accrue on the loan from and after 15th July, 1953.

Sharp rises of Rs. 14.89 crores and Rs. 16.57 crores in the total note issue and notes in circulation to Rs. 1,174.47 crores and Rs. 1,166.23 crores, respectively, marked the return of the Reserve Bank of India for the week ended 10th April, 1953. The expansion in currency was duly adjusted by raising foreign securities by Rs. 15 crores to Rs. 598.15 crores by a transfer from the Banking Department. Balances held abroad consequently fell by Rs. 15.79 crores to Rs. 127.68 crores. Notes held were lower from Rs. 9.92 crores to Rs. 8.25 crores. Deposits of the Government of India were up by Rs. 11.06 crores to Rs. 96.35 crores, while other Government accounts diminished by 17.71 crores to stand at Rs. 21.71 crores. Balances of commercial banks also declined by Rs. 9.56 crores to Rs. 42.69 crores due to better money demands. Other loans and advances declined from Rs. 25.44 crores to Rs. 23.28 crores, of which advances to scheduled banks against usance bills rose from Rs. 74.18 lakhs to Rs. 99.18 lakhs. Investments at Rs. 86.33 crores disclose a fractional rise of Rs. 1 lakh. Ways and means advances stood at Rs. 3.77 crores (Rs. 3.60 crores).

The statement of the position of Scheduled Banks for the week ended 3rd April, 1953, discloses Demand and Time liabilities at Rs. 542.04 crores (Rs. 14.49 crores on account of borrowing from Banks) and Rs. 311.81 crores (Rs. 2.21 crores) compared with Rs. 534.05 crores (Rs. 11.91 crores) and Rs. 311.53 crores (Rs. 1.86 crores) respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 1.10 crores and Rs. 8.44 crores to aggregate Rs. 33.59 crores and Rs. 51.14 crores respectively. There is a drop of Rs. 2.06 crores in investments to Rs. 301.25 crores. Advances and bills discounted at Rs. 531.77 crores reveal an increase of Rs. 3.24 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.9 percent and 62.3 percent against 8.9 percent and 62.5 percent.

The return of the Imperial Bank of India for the week ended 3rd April, 1953, shows a rise of Rs. 7 crores in total deposits to Rs. 221.15 crores. Investments in Government Securities are up by Rs. 1 lakh to Rs. 71.07 crores, while other authorised investments remain unchanged at Rs. 11.16 crores. Loans, cash credit and overdrafts have decreased by Rs. 1.42 crores to aggregate Rs. 108.99 crores, while bills discounted and purchased have increased by Rs. 1.78 crores to stand at Rs. 25.08 crores. Cash and balances are, in consequence, shown at Rs. 21.22 crores or Rs. 2.79 crores higher.

According to the land customs trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade by land with Pakistan, Afghanistan, Iran and Burma during the month of

February 1953, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	23	(25)
Western Pakistan	11	1
Other countries	17	26
Total	51	(103)

The figure for imports from Eastern Pakistan is exclusive of the value of 65,705 bales of raw jute awaiting adjustment and is therefore incomplete. Total trade amounted to Rs. 154 lakhs (incomplete). Re-exports were nil, and trade in treasure nil. The balance of trade cannot be calculated exactly because the data is incomplete.

Messrs. Mocatta and Goldsmid's quarterly review says: After much discussion, opinion now seems fairly general that there is no prospect of an alteration of the American gold price in the near future. French demand is not sufficient to absorb the very large amounts now regularly offered from producers. Free gold may decline further during the summer. Consumption of silver seems to be outstripping production but a substantial amount of Cuban silver is still available in New York and the Japanese Government may sell some of its accumulated stocks. Thus a shortage is unlikely to appear for some time. New York offtake of silver continues good, particularly for the engineering industry.

Details of 3 months' Bills outstanding with the public on 17-4-53.

BRITISH INDUSTRIES FAIR

Banking Facilities

Lloyds Bank is providing comprehensive facilities at each section of the British Industries Fair, which is being held in London and Birmingham from 27th April to 8th May 1953. Customers of the Bank who wish to bring their products to the notice of overseas buyers will find a number of invaluable services at their disposal:-

Introduction to foreign importers and agents
Local reports on overseas market conditions
Confidential reports on the credit standing of overseas buyers
Interviews arranged with trade consultants from certain overseas countries
Advice on all problems connected with the export trade

These temporary offices and the numerous other branches in London and Birmingham and throughout England and Wales will be pleased to do all they can to help visitors who call on them.

JAPAN

The Japanese live in a land of earthquakes and volcanoes, their history being made up of successive epochs of isolationism and cosmopolitanism. With such a past and environment it is no wonder that they have a dualism of temperament. They combine fatalism with efficiency, artistic refinement and simplicity with a great concern for ceremony and convention. The most technologically advanced people in Asia, they are yet lovers of flowers and landscape gardening, children and poetry. Japan, like other industrial countries, relies increasingly on petroleum products.

The Caltex organisation assists the nation through its advisory service and efficient distribution of high quality fuels and lubricants, thus smoothing the path of Japanese industry.

CONSULT CALTEX ABOUT LUBRICATION AND FUEL PROBLEMS—CALTEX WORLDWIDE EXPERIENCE IS AT YOUR SERVICE.

A DITCHER'S DIARY

among the officials with whom the leaders of the jute industry must deal, have stood the mills in good stead during a difficult period, and it is pleasant to learn that his knowledge and talents may not be lost to them even after his retirement.

Mr. Nehru's considered opinion of the Russian and Chinese peace moves was awaited with some interest, not only here but, I imagine, in chancelleries around the world. It is a pity therefore that he chose to deliver it at a mass meeting in an unprepared speech that went on for almost two hours. I admit that in a country where an ordinary film is likely to last up to two hours or more, an orator who brings thousands and thousands of people out on to a maidan cannot in fairness send them home without a marathon performance of rhetoric. But this hardly seems the best way to handle the delicate problems of international affairs, or to present an expectant world with India's individual stand on those questions. I have some admiration for the Prime Minister's oratorical talents, but no one can talk sound sense on complex subjects for two full hours before a sea of faces that stretches away to the dusty horizon. For example although I expected Mr. Nehru's views on the Kenya unrest to be roughly as he stated them at the meeting in Delhi on Monday, I suggest that the misleading simplicity of his portrayal of the Mau Mau as an innocent bunch of oppressed nationalists had something to do with the time and place of his reflections. India's opinions on international problems, especially those that have a racial element, are too important and too valuable to risk being put forward in the half-baked and vulgar style of the mass rally. A carefully phrased interpellation of a few hundred words from Mr. Nehru would have as much impact on world opinion as an oversimplified harangue to a crowd who, if the truth be told, do not care two pence for the distant problems of diplomacy.

Even in the bare telegraphic outlines, which are all I have so far seen, one can see that Mr. Butler has done a handsome piece of work in his incentive budget. The Economic Survey which appeared a few weeks ago gave a broad but definite hint that the budget would contain some plums for industry and trade when it said that in the economy's present delicate state, the assessments of business men of the future of commercial confidence were especially important. The sixpence off income tax, the end of EPL and the reductions in purchase taxes should provide just the fillip confidence needs. With last year's heavy budget deficit of £436 millions fresh in memory, it is plain that a budget that makes concessions on the revenue side is taking a risk of renewing inflation. But the outstanding feature of the conditions under which Mr. Butler drew up his budget is that everyone agrees that it is next to impossible to forecast what the tempo of economic activity will be in six months' time. In these circumstances a bold policy was probably the best, provided it included positive incentives to stimulate higher production. It must not be forgotten that the present Chancellor, unlike his predecessors since the war, has up his sleeve the instrument of interest rates to rescue a situation that threatens to get out of hand between budgets. (The calculated risk on inflation implied in the latest tax cuts, incidentally, should put an end to speculation on a lower bank rate that has spread from Britain to India in the past month.) Not that Mr. Butler

has been so bold, really. Reuter says his tax cuts will cost him £169 million, but then the tax changes he made last year and which will not bear fruit until the current fiscal year will bring him in an extra £100 million between now and next April, while some of the concessions announced on Tuesday will not hit revenue until next year. Nevertheless the effect on confidence should be immediate, and as the Economic Survey said, that is particularly important when markets are suffering from peace jitters.

The exporters of foodgrains have had things their own way long enough and it is encouraging to see both Britain and India digging their toes in before the attempt to maintain cereal prices when most other commodities have been taking a header. Mr. Kidwai's statement that India will be exporting rice herself within two years might not bear very close examination, but it is an excellent salvo to precede his visit to Burma to talk about rice prices. As I have remarked here before today, Mr. Kidwai is one Central Minister who realises that you do not get bargain prices when you tell the world how hungry you are before you sit down to discuss a food deal. If he can manage to maintain this distant attitude in Rangoon, he might be able to get some Burmese rice at rates below the near-famine prices of recent years. The new International Wheat Agreement has been drawn up with the higher maximum price of 14s 8d, but as long as Britain does not sign it, it may not be workable—and the Australians have already indicated that they will supply Britain with wheat even outside the pact. I am all in favour of high food prices when food is scarce, as it has been throughout the world since the war, but not of artificial prices which subsidise wheat farmers without promoting the expansion of production.

Discussion of United Nations affairs is going to be impossible unless we all agree on how to pronounce the name of the new Secretary-General, Dag Hammarskjöld. Five years of M. Lie have spoilt us. I understand that he himself suggests Hammarskjöld, which seems acceptable and is probably a lot better than he would get if we were left to ourselves. His name settled, there remains his personality. That was brilliantly described by Alistair Cooke in the Manchester Guardian when he said that "M. Hammarskjöld is 'the sort of man who reads the New Statesman and Nation from the back and is reliably reported never to get to the front'". For all his impeccable neutrality, he is what Senators McCarthy and McCarran call a "McLiberal", and as a member of that honourable clan he can be expected to attract the suspicions of such American legislators as think that the U.N. is just another Communist front organisation. May he resist them as strongly as I hope the BBC is now resisting the presumption of two of Senator McCarthy's roving snoopers who want to "inspect its overseas broadcasting services". These two gentlemen, Messrs Shine and Cohn, have just been in Germany investigating U.S. information services there and they announced last week-end their intention of dropping in at Broadcasting House. Quite possibly their purpose is to go home and use the BBC as a stick to beat VOA, by saying how much better its performance is than the American service; but even if their intentions are so innocent, it would be a pity to provide more ammunition for these fanatical opponents of American liberalism.

Company Meeting

THE EAST INDIA DISTILLERIES & SUGAR FACTORIES LTD.

PROCEEDINGS OF THE FIFTY-FIFTH ANNUAL GENERAL MEETING

The Fifty-fifth Annual General Meeting of The East India Distilleries & Sugar Factories Ltd. was held at the Head Office of the Company in India, "Dare House," Madras, on Tuesday, the 7th April, 1953. Mr. H. I. Woner, Chairman of the Company, presided and addressed the meeting as follows:—

The Directors' Report on the Company's accounts for the year ended the 30th September 1952, together with the Auditors' Report thereon, have been in your hands for a longer period than is required by the Statute and with your permission, I propose to take them as read.

I will refer first to the Company's main activity which is the manufacture of white sugar from sugarcane. During the crushing season 1951/52, covered by these accounts, the Nellikuppam factory worked 180 days, it crushed 3,25,000 tons of cane and produced 28,461 tons of sugar. The factory recovery—i.e. the relation of white sugar to sugarcane—was 8.7%, a reduction of .4% on the recovery for the previous season.

Shareholders are well aware that for several years now, we, and other sugar manufacturers in India, have been pressing the Central Government and the Government of Madras for an alteration to the basis under which we are nowadays forced to pay for the sugarcane which comes to the factory. At present, we have to pay by weight alone and this means that the agriculturalist is given no incentive whatever to produce good sucrose yielding cane. His natural inclination is to produce as much sugarcane as he can, irrespective of quality and the relatively low price of the last few years has borne out my contention that this is exactly what is happening. I have said before—and I repeat now—that from everybody's point of view—the country's, the agriculturalist's, the factory's and the consumer's—what really matters is the quantity of sugar (not sugarcane) produced from every acre of planted land. I noticed that the Honourable Minister for Food & Agriculture stated in a recent speech, that India cannot hope to produce sugar at a competitive world price until the cost of the raw material has been considerably reduced. This is a fundamental truth which everybody interested in the future of the sugar industry should take to heart and I suggest that the best—and I believe the only—way to achieve this object is to improve the quality of the sugarcane. I am sure that the only way to obtain this improvement is to make payment to the grower dependent on the quantity of sugar in the cane which he sells to the factory.

The quantity of sugar produced all over India in 1951/52 was 14,78,000 tons, an increase of over 34 lakhs tons compared with the previous year. Production for the present (1952/53) season is estimated at about 13 lakhs tons and it must be presumed that, with the general recession in trade, consumption is unlikely to increase immediately. There was a heavy carry-over of sugar stocks from the 1951/52 to the 1952/53 season and from the production figures given above, it appears likely that the overall surplus in India is still about the same. In the circumstances, I suggest that the Government of India should seriously consider the possibility of exporting some of this surplus. If the industry is worked efficiently and to maximum production (which it should be) I am confident that we can continue with an exportable surplus in spite of increasing consumption. Generally speaking, factory efficiency in India is high but so are costs—entirely I believe, because of the very high price we have to pay for cane. I believe that in sugar, we have a very valuable potential export which can be fostered to the country's advantage—but only if we can get our cost down to something like world parity and the way to do this is to stimulate the growth of good quality cane. In addition to altering the basis of payment for sugarcane, I believe that the Government of India should employ an acknowledged cane expert to advise on the cultivation of those varieties of sugarcane best suited to the climate in India.

The Company's confectionery factory at Nellikuppam continued in full production during the year of account but profits were very much lower than for the previous year on account of extremely intensive competition. Even so, our confectionery business continues to be a valuable asset and I believe that

it will continue to develop. On account of the extreme heat in Indian railway wagons—particularly during the summer months—it is practically impossible to transport confectionery from our Nellikuppam factory to northern Indian markets for a great part of the year and if the undoubted goodwill which attaches to the name of our confectionery is to bear proper fruit, it will certainly be necessary for us eventually to establish our own manufacturing capacity in the North. For this reason and because our confectionery business generally has become so large and important that it would in many ways develop more satisfactorily as a separate unit, the Board have lately been considering the establishment of a separate confectionery company, which would take over all our existing confectionery business assets. The idea is that all the ordinary "B" shareholders would receive shares in the new company and that it would pay the parent company over a period of years for the assets to be purchased. The scheme is receiving the active consideration of your Board and its advisers and it is hoped that it will be possible to make a recommendation to shareholders in the not too far distant future.

The Chemical Works and Pottery factories at Ranipet in North Arcot District, continue to be valuable revenue earning units although here again, profits are considerably down against the figures shown for the previous year. Turning now to the accounts, you will have noticed that the balance at the credit of Profit & Loss Account shows a considerable reduction from the figure at the close of the previous year. We are, I believe, now getting away from the heavy inflation of post-war years and arriving at a basis of more realistic earnings. That the profit earned by the Company for 1951/52 is satisfactory cannot, I think, be denied. The dividend to ordinary shareholders remains the same as before and we have been able to place £65,000 to our Plant & Machinery Replacement Reserve.

The Balance Sheet reflects the Company's intrinsically strong financial position and again shows an improvement in the balance of liquid assets over liquid liabilities. Stocks are high—mainly on account of the Government control policy with regard to sugar stocks—but they are all "good" stocks in every sense of the word and are turning over satisfactorily. Since the year 1947/48, the Company has financed capital expenditure out of its own resources, to the extent of £513,000 and this extra earning capacity is reflected in the satisfactory profits now being earned.

As usual, I give you the disposal of the Company's gross income for the year 1951/52. Figures are as follows:—

- 73.2 per cent was spent on raw materials, fuel and maintenance of plant.
- 10.0 per cent was spent on wages, salaries, dearness allowance, bonus to labour, Provident Fund, pensions and other staff benefits.
- 5.0 per cent was used in defraying overheads, including depreciation.
- 6.9 per cent went in taxation.
- 2.7 per cent represents the profit retained in the business and
- 2.2 per cent is the amount of dividend proposed to the ordinary shareholders.

These figures show some alterations from those of the previous year and reflect an increased cost of raw materials and a further rise in the cost of staff and labour. The return received by the shareholders, the proprietors of the business, however, remains at a relatively low level.

On this occasion, I should like to tell you something about the prospects for the Company's current financial year but I know the shareholders will understand the difficulty of doing this—particularly under current constantly changing conditions of trade. All I can say at present is that up to date this year, the Company has been able to realise reasonably satisfactory prices for the sugar which is now being manufactured at Nellikuppam.

I know you will wish me on your behalf, to thank our executive staff and labour for their continued co-operation and satisfactory work."

The Directors' Report and the Accounts for the year ended 30th September 1952 were unanimously adopted and dividends of 10 per cent on the 'A' Shares Tax were declared. The Directors retiring by rotation, Mr. C. R. Srinivasan and Mr. T. C. Armstrong were re-elected. The Auditors, Messrs. Lovelock & Lewes, Chartered Accountants, Madras, continue in office.

ECONOMIC EVENTS IN MARCH

- 1st—Jute improvement Committee appointed; Madras increases power supply cut to 66 2/3 per cent; Pakistan announces new import policy.
- 2nd—Price of imported wheat cut; Madras and Bombay decide to levy sales tax on tobacco; Commonwealth Advisory Committee on Defence Science meets; Orissa budget presented.
- 3rd—Restrictions on repatriating foreign capital relaxed; sterling area gold and dollar reserves for February announced; Hyderabad budget presented.
- 4th—Pakistan's October-December, 1952, payments balance figures released.
- 5th—Marshal Stalin dead; U.S.A. lifts many price controls.
- 6th—East Bengal Jute Regulation (Amendment) Bill passed; new Russian Ministers appointed.
- 7th—Annual session of Federation of Indian Chambers of Commerce and Industry; Indian Central Jute Committee meets; import policy announcement issued; Indian Railways Centenary Exhibition inaugurated; Saurashtra budget presented; Pakistan-Japanese trade talks begin; Anglo-American talks end in Washington.
- 9th—Jute production figures for 1952-53 announced; ammonium sulphate price cut; Travancore-Cochin budget presented; Madhya Bharat budget presented.
- 10th—Employees' provident fund scheme exemption terms liberalised; Assam budget presented; Mysore budget presented; Egypt decides to set up steel plant.
- 11th—Annual meeting of Indian Tea Association; India signs agreement with U.N. on technical assistance; Ceylon cuts personal remittances to India.
- 12th—Indian Mining Association meets; meeting of Pakistan Associated Chambers of Commerce.
- 13th—Bombay Multi-point Sales Tax Bill passed; artificial silk-yarn import quota announced; import quota for watches raised.
- 14th—Pakistan budget presented; Madras budget presented.
- 15th—Campaign for rice cultivation by Japanese methods begins; Madras State allows municipalities to raise loans.
- 16th—Indo-Pakistan trade talks begin; Himachal Pradesh budget presented; Pakistan introduces newspaper control; Tito arrives in Britain.
- 17th—U.S.A. abolishes all price controls; Rajasthan budget presented; Bhopal budget presented.
- 18th—Government accepts Gadgil Committee's recommendation on dearness allowance for employees; work of Backward Classes Commission inaugurated.
- 19th—Budget estimates for D.V.C. presented.
- 20th—India and Pakistan sign three-year trade pact; free licensing of cloth exports extended; figures of foreign investments in Pakistan published.
- 21st—Air Corporation Bill introduced; India's trade figures for February published; Russia announces retail price cuts.
- 22nd—Bihar State Cane-Growers' Co-operative Association meets.
- 23rd—Bysakhilac crop estimate issued.
- 24th—Canberra jet bomber climbs to over 60,000 feet.
- 25th—Andhra inauguration on 1st October announced; Burma complains to U.N. about K.M.T. aggression; Russia and Hungary sign trade pact.
- 26th—Public Accounts Committee reports on Hirakud project.
- 27th—Vanaspatti removed from O.G.L.
- 28th—Agreement on Visakhapatnam oil refinery signed with Calcutta; French-U.S. talks conclude in Washington.
- 29th—Income-tax revenue statistics for 1951-52 published.
- 30th—Figures of foreign investment in India released; British Economic Survey for 1953 published.
- 31st—Select Committee reports on Estate Duty Bill; free export licensing of raw wool extended.

Stocks and Shares

SHARES QUIET AND STEADY IN WEEK OF RESTRICTED TRADING

GILT-EDGED DULL, TEA SHARES EASIER, LESS BUSINESS IN INDIAN IRONS

Wednesday Evening.

THE Calcutta Stock Exchange was open for trading only on four days during the period covered by these notes, Monday and Tuesday being holidays. Business continued to be on a restricted scale and outside investment support was conspicuous by its absence. Today there has been a slight improvement in the speculative shares, but the market as a whole is quietly steady.

There has been no improvement in the tone of the gilt-edged market since last week, and business continued to be on a rather restricted scale. The 3% Conversion Loan 1986 lost ground steadily, to close at Rs. 81.12, without showing any signs of stabilising. In short-dateds, 3% 1957 turned slightly easier at Rs. 98.11, while 3% 1958 continued on offer at Rs. 98.7. There was, however, some support for 2 1/2% 1954 and 2 1/2% 1955 at Rs. 98.4 and Rs. 98.3 respectively. Selling pressure in medium-dateds appears to have abated, and with the exception of 3% 1959-61, which was one anna lower at Rs. 96.3, there were no other price changes in this section. Four percent 1960-70 again found buyers, to improve to Rs. 102.3, while 3% 1963-65 was steady at Rs. 92.8. In long-dateds, there was some enquiry earlier in the week for 3% 1970-75 at Rs. 86.9, due to the approach of the interest date, but 3% 1966-68 was offered at around Rs. 90.5. Amongst Provincials 3% Bombay 1962 and 3% 1962 were asked for at Rs. 93 and Rs. 98.4 respectively, without attracting sellers. Four percent U.P. 1964 was quoted at Rs. 100.8, but 4% Madras 1964 turned easier with sellers at Rs. 100.12.

There were buyers of good-class Preference shares throughout the period under review, but sellers were reluctant to part with their holdings. In Jute, Gouropore were a shade easier at Rs. 102.8, as were Kamarhatti and Soorah at Rs. 107 and Rs. 100. A small odd lot of Hukumchand was crossed at Rs. 110. Amongst miscellaneous issues, Alkali & Chemical changed hands at around the previous quotation of Rs. 103.8. Dalmia Cement Fully-Paid were taken at Rs. 75 as were Dishetgathi Power at Rs. 104, Orient Paper at Rs. 73.4, Rohas 'B' at Rs. 54.12 and Tirrinhanah Tea at Rs. 11.12. A small odd lot of Indian Iron & Steel changed hands at Rs. 107.8 and India Steamship were crossed at Rs. 93.8.

In the Banking section, Imperial Fully-Paid and Contributory met with strong enquiry from Bombay and prices improved to Rs. 1,840 and Rs. 446. United Bank of India Rs. 10 paid-up were dealt in at Rs. 4.2 and United Commercial Bank at around Rs. 35.4.

No transactions were reported in Railway shares.

Only two transactions were recorded in Cotton shares during the week, namely in Basanti at Rs. 3.10 and Cawnpore Textiles at Rs. 8.

Cool shares were quiet, and the turnover small. Central India changed hands at Rs. 5.3 and Equitable at the previous level of Rs. 42.12. Standard improved to Rs. 18.4, whilst quite a few transactions were noted in Western Bengal at around Rs. 4.12. New Beelbloom improved today from Rs. 21.6 to Rs. 21.13.

Jute shares continued dull and business was extremely difficult to execute because of the almost complete absence of buying enquiry. Agartara were marked at Rs. 18.4 and Champdany at Rs. 155. Ganges were easier at Rs. 72. Contrary to the general trend Kamarhatti and Kankarrah were slightly better today at Rs. 194 and Rs. 143. Howrah fluctuated narrowly between Rs. 23.4 and Rs. 23.14, to close at Rs. 23.8. Nuddea were slightly easier at Rs. 42.8, while Presidency and Reliance maintained their previous levels of Rs. 4.12 and Rs. 12.8 respectively.

Amongst Electric Supply shares, Bareilly were better at Rs. 13.12, while Benares and Calcutta were unchanged at Rs. 17.14 and Rs. 14.2. Patna changed hands at Rs. 10.12 and Upper Ganges at Rs. 18.6.

There was little change in the Sugar section and a nominal amount of business was put through. Belsund were done at Rs. 8.10, Carew at Rs. 5.8, Durbhanga at Rs. 9.12, and Dyer Meakin Breweries at Rs. 5.6.

Less business was recorded in Indian Iron & Steel shares during the week. After opening at Rs. 23.8 they receded at one time to Rs. 24.4, to close at Rs. 24.12. Braithwaite were no better at Rs. 11, as were Jessop at Rs. 24.7, and Marshalls at Rs. 5.10. Saran Engineering were slightly easier at Rs. 10.

There were no features in the Miscellaneous section, and trading was very dull with no noticeable price movements. Among Paper shares, Bengal were slightly easier at Rs. 44, while Shree Gopal and Titaghat were unchanged at Rs. 18.4 and Rs. 36. A few transactions were reported in Sone Valley at around Rs. 7.4, while Dalmia Cement Fully-Paid Ordinary were steady at Rs. 6.

The outstanding point of interest in the address delivered by Mr. H. I. Woner, chairman, at the annual general meeting of The East India Distilleries and Sugar Factories Ltd. in Madras on 7th April (reported in detail on page 508) is the suggestion that the firm might establish a separate confectionery company to take over the present company's entire confectionery business assets: all the ordinary "B" shareholders would receive shares in the new company, which would pay the parent company over a period of years for the assets it buys. A great improvement in the supply of its major raw material, sugar, has enabled the confectionery industry to expand production during the past year but competition has increased greatly and East India's profits, although satisfactory, are very much lower than in the previous year. However optimism is the keynote of Mr. Woner's address. Business "will continue to develop" and expansion is foreseen: the extreme heat in railway wagons makes it practically impossible to transport confectionery from the Nellikuppam factory to North India, so "it will be necessary to set up eventually to establish our own manufacturing capacity in the North." One of the major reasons for the high price of Indian sugar is the poor quality of cane and Mr. Woner placed welcome emphasis on the need to provide the farmer with an incentive to improve it. The suggestion that payment for cane should be made to depend on its sucrose content deserves more attention than it has received, and had Mr. Woner been speaking in North India he would not doubt also have enquired why such State Governments as U.P. and Bihar insisted on misusing the cane cess they collected by spending it on purposes other than cane improvement.

The East India Distilleries and Sugar Factories Ltd. made a profit of £237,562 for the year ended 30th September, 1952, which compares unfavourably with the preceding year's total of £422,261. Providing £43,734 (£113,707) for taxation, net profits totalled £188,421 including £55,705 brought in. Machinery replacement reserve has been allocated £65,000 (£50,000). The dividends have been maintained at 10 percent on "A" shares and at 15 percent on "B" shares, leaving a carry-forward of £57,421.

Profits of the ORIENT PAPER MILLS, LTD. rose from Rs. 23.12 lakhs to Rs. 26.19 lakhs for the half-year ended 30th September, 1952, despite a fall in sales from Rs. 1.88 crores to Rs. 1.54 crores resulting from lower manufacturing expenses. Taxation absorbs Rs. 10 lakhs (Rs. 7 lakhs) and depreciation Rs. 5 lakhs (same). Transferring Rs. 5 lakhs (Rs. 9 lakhs) to general reserve, Rs. 15 lakhs (Rs. 6 lakhs) to repairs reserve and bringing forward Rs. 168,018, there is an available balance of Rs. 7,87,508. The ordinary dividend has been maintained at ten percent to absorb Rs. 4,19,500, leaving Rs. 1,91,320 to be carried forward.

The working of the New DEERBHOOM COAL COMPANY for the half-year ended 31st October, 1952, has produced good results. Profits rose from Rs. 84,418 to Rs. 2,09 lakhs as did sales from Rs. 35,40 lakhs to Rs. 96,80 lakhs. Allowing Rs. 1½ lakhs (same) for depreciation, Rs. 36,800 (Rs. 13,000) for cesses, transferring Rs. 75,000 to developing reserve and bringing in Rs. 39,911, there remains an available balance of Rs. 1,55,421. The ordinary dividend has been declared at 5 percent after a long interval leaving Rs. 55,799 to be carried forward. Raisings were 2,46,202 tons (2,53,976 tons) and despatches 2,91,745 tons (2,18,785 tons).

The SEEPOR COAL COMPANY earned a profit of Rs. 1,76 lakhs for the half-year ended 31st December, 1952, as compared with the previous half-year's Rs. 1,90 lakhs, although sales rose from Rs. 11,34 lakhs to Rs. 14,61 lakhs. Providing Rs. 1,05 lakhs (Rs. 85,000) for depreciation, Rs. 1,01 lakhs (Rs. 96,500) to general reserve and adding Rs. 26,724 brought in, there is a balance of Rs. 50,584, of which the ordinary dividend has been maintained at Rs. 1 per share to absorb Rs. 40,000, leaving Rs. 30,584 to be carried forward. Raisings totalled 73,523 tons (78,731 tons) and despatches 88,132 tons (67,665 tons).

The BURMA MINES LIMITED made a net profit of £189 subject to taxation, for the eighteen months ended 31st December, 1952. The company however, did not trade and made neither a profit nor a loss during the period prior to 1st July, 1951. Shareholders have been reminded by the directors that apart from an aggregate of about £150,000 in cash and British Government Securities, the company's main asset is the holding of 3,150,730 fully paid "B" shares of £10 each in Burma Corporation (1951) Limited, representing one half of the issued capital of that Corporation, and that the period covered was for the Corporation inevitably one of limited production, continuous plant rehabilitation and staff and labour recruitment.

The lower average sale price at 155.98 cents, as against 200.15 cents, per lb. of the PREMIER TEA COMPANY reduced profits from Rs. 9.84 lakhs in 1951 to Rs. 3,12,093 for the year ended December, 1952. Bringing forward Rs. 3,72,856 and meeting other charges, there is an available balance of Rs. 5,75,940. The dividend has been reduced from 52½ percent to 25 percent. Retirement fund receives Rs. 12,500, leaving a carry-forward of Rs. 2,44,699. The yield is about 6.7 percent on the prevailing price of Rs. 37.8 per share. The crop totalled 18,24,467 lbs. (19,34,298 lbs.).

Profits of the PORA SHIPPING COMPANY rose from Rs. 1,90 lakhs to Rs. 2,63,150 for the half-year ended 31st December, 1952, because of higher freights at Rs. 16.80 lakhs against Rs. 14.16 lakhs. Providing Rs. 12,391 (Rs. 12,703) for depreciation, Rs. 75,000 (Rs. 11,000) for taxation, transferring Rs. 44,500 to reserve for bad debts, Rs. 1 lakh (Rs. 2 lakhs) to reserve for repairs and bringing forward Rs. 50,580, there remains an available balance of Rs. 1,30,190. The dividend has been maintained at 5 percent leaving Rs. 70,411 to be carried forward. The shares yield about 8.2 percent at the current price of Rs. 12.1.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate: Opening Quotation—Highest for the week—Lowest for the week—Closing Quotation—Quotation for the corresponding closing date of a year ago, the last named being shown in parenthesis and will not be given where such a quotation is not available.)

GOVERNMENT SECURITIES

3½% Loan (1946)—Rs. 82-82-4-81-13-81-15 (80-13),
3½% Loan (1963-65)—Rs. 92-8-92-8-92-8-92-5 (92-5),
3½% Loan (1964)—Rs. 92-9-92-9-92-9-92-9 (92-7),

New Delhi

OFFICIAL PLANS TO INFLUENCE FLOW OF INVESTMENT

NEW BILL TO AMEND INDUSTRIES ACT INTRODUCED

(FROM OUR OWN CORRESPONDENT)

11th April.

PARLIAMENT concluded its discussion on the various Ministries' demands for grants this week. The Commerce Minister, Mr. T. T. Krishnamachari, replying to the debate on the demands for his Ministry, said that the Government proposed during the year to explore the possibilities of making investment in approved fields more attractive. Clarifying the rôle of foreign capital, he said the nature and ownership of capital investments was less important than the scope they offered for increased productivity and employment. "Our own capital resources are very limited and although our preference is in favour of Indian capital, we must be prepared to use foreign capital in developing industrial production. The wheels of industry, no matter who owns them, must be kept moving." The scheme is still in a tentative stage. However, it appears certain that industries which are so approved will have to submit to governmental control to ensure efficient management and will also have to give top priority to national interests.

Mr. Krishnamachari announced that a survey would be made of the country's industrial potential in order to ensure the maximum utilisation of plant and machinery. He regretted that there had been no attempt to develop subsidiary industries to manufacture components on a large scale. Paradoxically India had considerable manufacturing capacity lying idle but continued to import goods which could be produced by the existing undertakings and also extra plant and machinery to make these goods. "If this form of national waste is to be avoided, we must, as a first step, make a survey of the existing capacity to discover what possible uses it can be put to. I propose for this purpose to get together a high-level body of experts to make a detailed survey of the available capacity and to indicate the uses to which it can be economically put. We expect that as a result of this survey India will be able to produce a considerable quantity of machinery for the manufacture of cement, paper, jute goods, textiles, sugar etc., which is imported at present." According to lobby reports, the Commerce Minister proposes to invite foreign experts to assist in the survey. The Commerce Secretary, Mr. H. V. R. Iengar, who will visit London early next month to discuss the marketing of tea, is expected to look around for suitable persons. As indicated last month, the scheme is still somewhat nebulous and it will be some months before it takes definite shape.

The Finance Minister, Sir Chintaman Deshmukh, declared that with the present conditions in India neither Communism nor Socialism nor any variant of these systems would work. As far as nationalisation was concerned it required not only leadership but large resources in men and administrative machinery, which India lacked at present. Replying to suggestions to nationalise banking, he said that control over banking was already as thoroughgoing as one could hope to find in any democratic country. The Finance Minister denied allegations that the rich were being pampered. In the case of import duties, for example, nearly one-third of the revenue of Rs. 120 crores came from levies on luxury goods. On a rough estimate the per capita incidence of import duties on the rich was Rs. 56-3 per year as against Rs. 2-9 on the poor. The ratio of direct to indirect taxation in India, he said, compared well with the ratio in other countries.

Amending the Industries Development Act Mr. T. T. Krishnamachari, Commerce and Industry Minister, introduced in the House of the People on Friday a Bill seeking to remove "some of the difficulties" experienced in the working of the Industries (Development and Regulation) Act. He withdrew a similar Bill introduced during the last session of Parliament and explained that the new Bill covered a wider field—it included all the amendments envisaged by the first and a few more. It seeks to extend the period of six months allowed under the Act for the registration of undertakings as, according to the Statement of Objects and Reasons, this period has been found inadequate in actual practice. The relevant amendment proposes to vest in the Central Government the power to fix the period for registration by notification in the Gazette with respect to industrial undertakings generally or with respect to any class of them. The Bill gives the Central Government power to revoke the registration of any industrial undertaking if it is satisfied that the registration has been obtained "by misrepresentation as to an essential fact" or "by reason of any exemption granted under the Act becoming applicable thereto or that for any other reason the registration has become useless or ineffective and therefore requires to be revoked."

In the Act, as it exists, powers are available to revoke licences in certain cases, but no such powers are available to revoke registration.

Provisions relating to licensing are sought to be extended to make them applicable to:

(a) Industrial undertakings which, though required to be registered, are not registered within the time specified for the purpose;

(b) Industrial undertakings which, though not registrable at the commencement of the Act, become registrable subsequently by reason of the difficulties in the Act becoming applicable thereto;

(c) Industrial undertakings proposing to change their location; and

(d) Industrial undertakings proposing to take up the manufacture of goods of new brands and types within the same scheduled industry or of goods pertaining to any other scheduled industry, without any additional plant and machinery or factory buildings.

The term "substantial expansion" occurring in the provisions relating to licensing is explained as "the expansion of an existing industrial undertaking which substantially increases the productive capacity of the undertaking, or which is of such a nature as to amount virtually to a new industrial undertaking, but does not include any such expansion as is normal to the undertaking having regard to its nature and the circumstances relating to such expansion." A new chapter has been included dealing with the power of the Central Government to assume management or control of an industrial undertaking in certain cases. The difficulties sought to be removed by this chapter are stated to be: (a) inability of the Government to take over management of any industrial undertaking, even in a situation calling for emergency action, without first issuing directions to it and waiting to see whether or not they are obeyed; (b) want of details in the law with regard to the consequences of Government taking the management of an undertaking. The new chapter seeks to vest in the Central Government power to assume management and control over industrial undertakings to which directions have been issued but which have failed to comply with those directions, and also over those in respect of which investigations have shown that they are being managed in a manner "highly detrimental to the scheduled industry concerned or to the public interest."

Another chapter is proposed to be added to the Act under which power will be assumed to control the distribution and prices of goods produced in scheduled industries and of similar goods even though they may be imported. At present, the power to control prices and distribution of various goods under the Act is confined to industrial undertakings registered or licensed under the Act. In all other cases recourse is had to the Essential Supplies (Temporary Powers) Act and the Supply and Prices of Goods Act. Both these enactments are temporary and it is therefore proposed to add the new chapter.

The Bill also seeks to delete section 4, which says that nothing in the Act shall apply to industrial undertakings where the capital invested does not exceed Rs. 1 lakh. This is done, it is explained, because difficulties might arise in the application of other sections and also because of the difficulty in defining "capital invested." The Bill, however, seeks to enable the Government to grant exemptions, wherever necessary, to any undertakings or scheduled industries in exercise of powers vested in it by another section. Under an amendment, another six industries are sought to be added to the First Schedule of the Act—silk, artificial silk, dyestuffs, soap, plywood and ferro-manganese.

Compensation for Refugees

A Cabinet sub-committee has been formed to make recommendations on the problems of compensation for displaced persons from West Pakistan. The Committee consists of the Education Minister, Maulana Azad, the Finance Minister, Sir Chintaman Deshmukh, the Home and States Minister, Dr. K. J. Somasunderam, the Works Minister, Sardar Swaran Singh, and the Rehabilitation Minister, Mr. A. J. Prasad Jain. The Ministries of Finance and Rehabilitation have not been able to reconcile their differences on this issue. The latter says that the Government promised to pay compensation to displaced persons from West Pakistan and on that assumption has prepared a plan for compensation. The scales of compensation, and the financial implications of urban claims, have been calculated on the basis of 300,000 claims of an assessed value of about Rs. 460 crores. The value of evacuee property of the corresponding type is estimated at Rs. 100 crores. A margin of ten percent is kept for price fluctuations, leaving the net value of the property at Rs. 90 crores. On this basis, each claimant would receive compensation equivalent to 20 percent of his claim. According to the proposals of the Rehabilitation Ministry, the total compensation would work out to Rs. 155.7 crores, leaving a gap of Rs. 65.7 crores.

There are 240,000 claimants for rural houses and the Rehabilitation Ministry is not yet in a position to state the precise amount which would need to be paid as cash compensation on this account. On a rough estimate, it has placed the total amount of compensation at Rs. 43 crores of which Rs. 30 crores will have to be provided by the Government. No rough estimates even are available for the amount of the Government contribution that would be required to compensate the claimants for agricultural land. In short, omitting the problem of compensation for agricultural land, and after utilising evacuee property, the amount needed for compensation is placed at Rs. 97 crores, which the Rehabilitation Ministry feels should be

BATTERY SPRAYERS

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railway experts. This will save you unnecessary delay and expenditure.

Issued

IN THE INTEREST OF TRADE AND COMMERCE

by the

PUBLIC RELATIONS OFFICER, CALCUTTA.

Machines of comparable power perform with near equal efficiency when new. Yet there is a big difference... a difference that creates a world-wide preference for "Caterpillar" products. This difference lies in:

1. THE RUGGED DURABILITY OF "CATERPILLAR" EQUIPMENT. The first "Caterpillar" Diesel track-type Tractor is still at work, after more than 20 years of profitable operation.

2. THE BACKING OF YOUR DEALER. We furnish genuine "Caterpillar" parts and prompt repair service. Our mechanics are thoroughly trained to make needed repairs quickly and accurately and at reasonable cost.

3. OUR COMPLETE PARTS REBUILDING FACILITIES. Many worn parts can be rebuilt in our shops and made practically as good as new.

4. THE TECHNICAL ADVICE THAT WE CAN PROVIDE. We can help you choose the right equipment to do your work, help you apply it and back it with our service facilities. Look ahead of the performance of new machines today. Look to the time when thousands of work-hours have been recorded. That's when it will pay you to be a "Caterpillar" owner... that's when it'll pay to have the backing of your "Caterpillar" Dealer. Call on us for the best in equipment... the best in service!

from East Pakistan and Rs. 13,31,02,139 has been advanced to them as loans, making a total of Rs. 29,40,09,432.

The Ministry of Finance has challenged the very principle of compensation, to which it claims the Central Government is not committed by any public declaration. The only commitment of the Central Government, it asserts, is to make such contributions as are warranted by its financial resources at a particular time after pooling together the value of the property left in India by persons who had migrated to Pakistan plus the amount which might be received from Pakistan as compensation. It may be noted here that the available assets for distribution are not for one group of displaced persons but for all of them. The issue, therefore, is whether evacuee property can be distributed only to displaced persons from West Pakistan. This decision, moreover, is based on the Rehabilitation Ministry's assurance that no liability will be incurred by the Government because evacuee property will fetch prices high enough to meet all claims. It was therefore agreed that if the evacuee property fetched a lower price the Government would probably contribute the difference. These are some of the issues on which the Cabinet sub-committee will be called upon to make recommendations.

Talks on Iron Ore for Japan

Mr. Y. Kubota, President of the Nippon Development Co., and Mr. M. Watanabe, Chief Secretary, Overseas Raw Material Research Committee of the Japanese Iron and Steel Federation, and Mr. T. Nishiyama, Japanese Ambassador in New Delhi, met Mr. A. K. Chandra, Secretary to the Indian Production Ministry, last Monday. It is understood that they discussed the export of iron ore to Japan. Mr. F. C. Badhwar, Chairman of the Railway Board was also present. The Japanese are believed to require about 8 million tons of iron ore annually. If a long-term agreement can be reached which would justify the development of transport and port facilities, and some financial adjustments are made for this purpose, the Government of India is understood to be willing to undertake the supply of iron ore. It is learnt that the Japanese Ambassador, approached the Government of India with a view to making some arrangements on a long-term basis. The Government of India, it is understood, was willing to consider the proposal; this week's preliminary discussions are expected to be followed by more when a negotiating team from Japan arrives.

Optimism Over Jute Exports

The export market for jute goods is looking up, it is felt here. Export licenses for jute goods granted by the Government in March amounted to 74,800 tons as against 34,000 tons in February and 43,000 tons in January. Exports in March were a record for the last six months. The Government has deputed Mr. L. K. Jha, Joint Secretary to the Commerce Ministry, to accompany the I.J.M.A. mission to Australia.

Official Study of Plantations

The Joint Secretary to the Commerce Ministry, Mr. S. Boothalingam, will leave for South India on 19th April to study the situation in the plantation trades and industries, particularly coffee. He will be away for a week.

The Commerce Secretary, Mr. H. V. R. Iengar, left New Delhi on Thursday on a week's tour of Assam to study the present condition of the tea industry.

No Change in Retirement Age

The Government of India has rejected the proposal to raise the age of retirement of its employees from 55 to 58. The proposal caused much resentment and might have led to inefficiency and stagnation, it is stated here.

BALANCE OF PAYMENTS WHITE PAPER

ECONOMISTS' FORECASTS FOR 1953
(FROM OUR OWN CORRESPONDENT)

10th April.

ALTHOUGH the "Economic Survey" anticipated the main features of the "Balance of Payments" White Paper, released this week, the latter adds to our information as to the reasons for the recent strength of sterling in the world's financial markets and the changes which have occurred in the position of the sterling balances. Without counting defence aid, a current deficit of £402 million in 1951 was transformed into a surplus of £170 million in 1952. Including defence aid, the change was from a deficit of £398 million in 1951 to a surplus of £251 million in 1952. The fall in the cost of imports was mainly responsible for this, accounting for half the saving, with the balance coming from the cuts in volume. Significant was the fact that merchandise trade was responsible, for net income from "invisible" items was actually lower. The export trend was interesting. They rose to a marked extent in the first half of the year, but fell heavily in the second half, when the trade restrictions in the sterling area became really effective. Dollar exports in the latter period, however, showed some improvement. In the first six months of 1952 Britain's current deficit with the dollar area, which for the whole of 1951 had reached £428 million, was cut to £143 million. In the second half of the year, with the aid of £63 million of defence aid, it fell to as little as £19 million, in spite of the heavy interest payment on the American and Canadian loans.

As regards the sterling balances: in the year 1951, with a deficit of £398 million on current account the United Kingdom nevertheless invested overseas £335 million and had to draw down the reserves by £244 million. In the first half of 1952 investment abroad almost ceased and though the reserves again were drawn down by £232 million we repaid short-term sterling balances by £344 million. In the second half of 1952, with a growing surplus on current account and some resumption of overseas investment, there was little further change in short-term debt and a small addition to the reserves. As a result of these movements, total sterling balances were reduced in 1952 by £385 million and this figure hides some unexpected movements. Thus Americans have rebuilt their sterling holdings in the second half of last year to £34 million. South America has virtually no sterling balances left, the O.E.E.C. region and other non-sterling countries (such as Japan) used much of their sterling reserve. The sterling Dominions used up £222 million of sterling last year while the Colonies again added £100 million to their holdings, bringing them up to £1,065 million at the end of December, 1952. In the second half of 1952, however, the Dominions ceased to draw down balances and even increased them to £1,603 million while the increase in Colonial balances slowed down considerably. Altogether, the sterling balances held by other countries in the United Kingdom still amount to nearly £4,000 million, but in many cases they will be needed as continuing currency or trading reserves and the risk of a ruinous run on these deposits, such as happened in 1951, is much reduced.

Preview of 1953

What the "Economic Survey" failed to do, except in very general terms, namely, look into 1953, has been attempted by the Royal Statistical Society in seeking the views, as they did last year, of a number of economists, both academic and those engaged in industry, on what may be expected to happen to exports, production, consumption, prices and unemployment. Fourteen in the former category and forty-five in the latter replied. The majority think that British industry will turn out more this year than last, that more will be sold abroad, that the public will spend more at home, that retail prices will go on rising, and that there will be fewer out of work than last year. The academic economists, however, are again more pessimistic than their colleagues working in industry. This is what they all see ahead.

What May Happen in 1953 (Average forecasts)

	(Percentage change, 1953, compared with 1952)	Academic Industrial economists	Industrial economists
Industrial output	... + 1.3	+ 2.7	
Volume of export	... + 0.6	+ 3.5	
Personal expenditure (at 1948 prices)	... + 0.8	+ 0.8	
Retail prices	... + 3.2	+ 2.9	
Unemployment as percentage of insured population	2.2	2.0	

Two of these forecasts will be scrutinized more closely than the others—those of exports and production. Both industrial output and exports fell away last year and it is encouraging that only eleven of all those asked expect the export volume to fall this year and only eight industrial production to be lower. But not one of the academic economists thinks that we will export as much as we did in the post-war peak year of 1951. It should be remembered, however, that these forecasts were all made before the recent change in the international atmosphere, which has already had some surprising repercussions on all markets, though the initial setback is now showing signs of levelling off.

Possibility of Tax Relief

The Budget will no longer be a topic for speculation by the time this despatch appears in print, but with Parliament in recess and the City just settling down again into the normal routine after the Eastern holidays—and somewhat obsessed with the possible repercussions on the prices of both commodities and stocks of the more hopeful signs of truce prospects in Korea—it is hardly surprising that it continues to feature not only in the discussions of the host of conferences that are common at this time of the year but also in the comments of the economic scribes. The financial results of the year just past, and the wide variations from Mr. Butler's estimated figures furnish the basis of both the hopes and fears, as was pointed out earlier. These, however, as the City Editor of *The Manchester Guardian* points out, are less important than Mr. Butler's estimates for the current year, for it is on the latter that his policy and proposals will be based. Many devices have been suggested for affording tax relief and an "incentive" Budget. One interesting one, though not perhaps the sort of chance the Treasury would take, is made by Mr. I. M. Horrabin, Conservative M.P. for Oldham East, and it is that the Government should issue a medium-term loan on attractive terms to the investing public, aimed at bringing in £150 million, and in order to promote the additional savings out of which such a loan would have to be subscribed the Chancellor should cut income tax by 1s. in the pound.

Presuming that Mr. Butler gives way to the widespread demand for tax relief and new incentives, and that he can scrape together the necessary £100 to £200 million by further cuts in current expenditure or capital outlay, and that the present revived production figure can be maintained for the year, the paper feels some such amount may well be passed on in tax remission. It concludes: "Income tax would probably stand high on the list, though a rise in the earned income allowance might have priority over a cut in the standard rate. Some cuts in purchase tax and possibly in Excise might then be made in order to relieve the low-income groups. A reduction or removal of the tax on undistributed profits looks probable. The Excess Profits Levy is too new to be withdrawn, but some announcement about its termination may be expected. There is much talk of a restoration of the initial allowances, possibly for selected industries. That is about as far as the Chancellor could go on the strength of a fairly high estimate of production and of the view that private capital investment at home will be balanced

by savings without the aid of a 'disinflationary' Budget."

Sterling Area Gold and Dollar Surplus

It was hardly to be expected that the surprisingly good figures for January and February in connection with the sterling area's gold and dollar reserves would be maintained, for they were undoubtedly influenced by seasonal factors. The recovery slowed down considerably in March, but what is perhaps more important is the fact that it is still being maintained. During March the sterling area had a gold and dollar surplus of \$63 million, after receiving \$29 million defence aid, compared with one of \$125 million in February, when defence aid contributed \$33 million. At the end of March the reserves stood at \$2,166 million, compared with \$2,103 million at the end of February. In transactions with the European Payments Union the scope for earning back gold is lessening. During March \$19 million worth of gold was received from the Union, representing part settlement of the February surplus of £9.9 million. In March, a surplus of only £7.5 million was earned, and only £40 million of this falls to be settled in gold about the middle of this month.

Ocean Enterprises Ltd.

The days of the merchant adventurer are apparently not yet completely past. Mr. Daniel Evans, a motor mechanic, and Mr. Kenneth Charles, a commercial traveller, both of Gledwood Crescent, Hayes, Middlesex, we are informed, plan to set sail in an 80-foot yawl for the Cocos Islands in search of treasure. With others, they have formed a company, Ocean Enterprises, Ltd., with a nominal capital of £2,000, to promote the search. "I have done a lot of research and have read a lot about old naval engagements, and I believe that much treasure has been buried but not found," said Mr. Evans. "We advertised recently for a crew to sail to the Cocos Islands in search of buried treasure, and a number of interested people have come forward." The company will "equip and dispatch expeditions to explore and seek treasure." It will also survey properties which may contain precious or useful stores, coal, gold, etc. The yawl has been bought and is now at Hull.

The British Government has decided to recommend to Colonial Governments certain limited relaxations on their present restrictions on imports and entrepôt trade of Japanese goods. This is the outcome of the Anglo-Japanese payment talks held in Tokyo at the request of the Japanese Government. The action is directed towards the maintenance of Japan's purchases from the sterling area.

TEXTILE MILL WORKERS'
D.A. INCREASEDTHE LATE MR. WALCHAND
HIRACHAND

(FROM OUR OWN CORRESPONDENT).

12th April.

A FRESH burden has been placed on the textile industry in the city by an award of the Full Bench of the Industrial Court last Friday, under which mill workers are to receive an increase in dearness allowance ranging from Rs. 6 to Rs. 7 per month. The Rashtriya Mill Mazdoor Sangh (I.N.T.U.C.) had applied to the Tribunal for an increase in basic wages and dearness allowance and the amalgamation of the two at the level of the working class cost of living index for Bombay which stands at 315. The Industrial Court refused to entertain the plea for an increase in minimum wages, partly because of an earlier decision by the Court and partly because it was feared that any such increase would lead to a wave of industrial agitation and litigation. The Court also refused the demand for the amalgamation of the dearness allowance with basic wages on the ground that it would not be of any material advantage to workers. The Industrial Court's ruling on the dearness allowance was that whenever the cost of living index number exceeded 325, the dearness allowance should be increased by 10 percent and, being convinced that the industry was capable of carrying this additional burden, it directed that the dearness allowance as from the payment due in June, 1953, should be increased by 10 percent. The Court observed in giving this award that this

would neutralise the deduction under the Provident Funds Scheme from the wages of the lowest paid workers. It is likely that this award will lead to a demand for an increase in dearness allowance by other industries in the city.

Mr. W. Hirachand

The death of Mr. Walchand Hirachand has been keenly felt by the business community in Bombay. A great industrialist, he was connected with at least a dozen industries of which shipping was the most important. Mr. Walchand rose rapidly to fame and prosperity after World War I, and his intimate association with shipping gave him international status. Politically, though not formally associated with the Indian National Congress, he was always in close touch with its leaders and had their full sympathy and support in his struggle on the industrial front.

A little over three years ago, ill health compelled him to retire from practically all his business activities. But the mere mention of his name commanded the respect and admiration of Bombay business men. His funeral was attended by all the political and industrial leaders including several Ministers of the State Government. The Municipal Corporation and the local Stock Exchange adjourned in honour of the departed leader and many important business organisations, including the Indian Merchants' Chamber, closed their offices for the day.

Unemployment Insurance Scheme Mooted

Rapidly increasing unemployment, especially among the educated classes, in the State is being watched with increasing anxiety. The problem has been further accentuated this year by famine and scarcity conditions in many parts of Maharashtra and Gujarat, which have thrown a large number of agricultural workers out of work. The State Legislative Council considered this problem late last week, when a resolution was moved by an Opposition member asking the Government to appoint a Committee, to consist of members of the legislature and non-official experts, to examine the problem and to suggest ways and means to deal with it promptly. Suggestions made during the discussion on the resolution included the starting of an unemployment insurance scheme and jobs. The same plea was made earlier in the week at Poona at a mass rally of workers led by the Socialist Party which also asked for the immediate suspension of retrenchment in factories and business concerns. One resolution at this rally, which was presided over by Mr. Asoka Mehta, a Socialist leader, asked for the appointment of a tripartite Board of Trustees, to consist of representatives of workers, the Government and employers, which would administer the proposed unemployment insurance scheme and supervise the working of employment exchanges. Mr. Mehta said that more than a quarter of a million men and women were studying in the universities and asked: "What will be their fate when they come out for employment?" In the course of the debate in the Legislative Council a member said that when the five year plan was implemented half a million persons every year. The same member also complained that some of the labour laws actually prevented more people getting employment. Others were inclined to blame the educationists for the growing unemployment amongst the educated classes.

Inspection of Cotton Textile Exports

The provision for a test inspection of 1 percent of cotton textile exports before shipment, which is being considered in a scheme for encouraging textile exports by the Textile Fund Committee. It is feared that such inspection would lead to de-lays and make it difficult to effect deliveries before the last date stipulated in contracts. It is also urged that stray inspections are not likely to remove the cause of complaints by foreign buyers cause the buyers' market has ensured that mills maintain their quality. It has been suggested that, instead, the trade and the textile industry should jointly evolve a minimum quality mark for representative lines of grey cloth to begin with, and that if this experiment were successful, it could be extended to other varieties later.

Promotion of International Trade

That Bombay is getting more export-minded was demonstrated last Thursday at a discussion group inaugurated by the newly formed Council for the Promotion of International Trade at which trade. The group met under Sir C. B. Mehta who expressed his general satisfaction with the Government's policy for the promotion of foreign trade. Curiously enough the discussion of foreign dealing with ways of expanding tangible exports and imports dwelt more on the expansion of India's foreign trade for the national mercantile fleet. Two shipping experts, Mr. M. A. Master and Mr. H. N. Haji, spoke on this point and tried to give a quantity of the country's foreign trade was carried in Indian bottoms.

Compensation for Landlords

The State Legislative Assembly last week passed an amending Bill which will enable the Government to pay compensation to landlords proposals to end land tenure. Payment will be in transferable Government bonds carrying interest at 4 percent and repayable after 12 years.

WIDER INVESTMENT SCOPE
FOR PAKISTANI INSURERS

TRADE TALKS WITH JAPAN

(FROM OUR OWN CORRESPONDENT).

Karachi, 10th April.

THE four-week budget session of the Pakistan Constituent Assembly, which has just concluded, was not in the event a very lively one. Mr. Mohammad Ali's budget proposals for 1953-54 have been discussed previously in this column, and it only remains to be recorded that he had little difficulty in piloting the Finance Bill through its various stages: it was passed by the House, and received the assent of the Governor-General on 31st March. For the rest, the Assembly considered and passed eighteen bills, of which there were only three (excluding the Finance Bill) which were of any particular interest to the business community. The last two days of the session were devoted to non-official business.

Probably the most important of the amending bills passed is the Insurance (Amendment) Bill. This has the effect of widening the scope of approved investments (which will be notified by Government in the Gazette) in order to give to insurers a larger range of choice for spreading their investments profitably. It also provides that in computing the assets required to be held by an insurer, a sum equal to the amount of his liabilities to non-citizens of Pakistan in respect of life insurance policies issued to them in Pakistan, but expressed in a foreign currency may be taken into account, if such sum is invested in securities of the Government of the country in whose currency such policies are expressed. The Imports and Exports (Control) Amendment Bill simply extends the life of the existing Act by three years.

The introduction of the Taxation Tribunal (Undisclosed Wealth) Bill caused a minor flutter, and a lengthy debate ensued. The Bill was opposed on the ground that the Income Tax Act was considered to be sufficiently far-reaching to bring within its orbit all such cases of untold or unaccounted wealth. The Finance Minister, piloting the Bill, gave a clear statement of its aims and objects. He said that the Tribunal, which will consist of a High Court Judge and an income tax expert, will examine only voluntary declarations of previously undisclosed wealth with a view to deciding to what extent the wealth is liable to, or exempt from, income tax. The finding of the Tribunal will be binding on the income tax authorities, and there is a provision of immunity to the persons concerned from penalisation or prosecution for concealment. It had always been felt that there was a considerable degree of undisclosed wealth in the country, and the aim of this Bill to set up a tribunal is to encourage, by the assurance of fair treatment, the money to be brought to the surface so that it may be invested in industry and be of some use in the development of the country. This appears to be sound and fair reasoning but whether it will in the end amount to anything substantial remains to be seen.

There were some interesting replies to questions in the House. It was disclosed that 78 percent of the total of the current import budget has been reserved for capital goods, industrial and agricultural requirements, building and railway requirements, and other development needs. It was also stated that Government has decided to assist in purchasing machinery for 11 textile mills of 25,000 spindles each; that seven jute mills have been established with a total capacity of 6,000 looms, all of which will be in full production by the end of 1955; and that up to the end of 1952 approved capital issues amounted to (a) Rs. 608,056,220 for 279 industrial companies, (b) Rs. 180,001,630 for 188 commercial companies, and (c) Rs. 59,965,370 for 29 financial companies. The Commerce Minister told the House that 27 barter deals were effected with old crop cotton against cotton yarn worth Rs. 2,60 crores. In addition, there were two barter deals of new crop cotton against Rs. 25 lakhs worth of art silk yarn from Italy and 15,000 tons of sugar from Spain. Jute was also exchanged for a further 15,000 tons of sugar from Spain.

Pakistani-Japanese Trade Talks

The Japanese have again been receiving a lot of publicity on the commercial front. A three-man Pakistan trade delegation left Karachi for Tokyo early in March to negotiate a new trade agreement and the subject has received considerable press coverage. It was announced today that a one year pact has been finalised and will be signed shortly. Japan is to purchase from Pakistan cotton and jute, in return for which Pakistan will import yarn, cloth, machinery, iron, and steel from Japan. While these talks were proceeding in Tokyo, an eight-man Japanese mission arrived in Karachi to discuss the supply of railway and other industrial equipment to Pakistan. The leader of the mission stated that Japan had already supplied to Pakistan 25 locomotives and a considerable number of coaches and wagons, and added that Japan was in a position to meet all the requirements of the Pakistan railways. The prices of the locomotives

and coaches would, he maintained, be competitive, but disclosed that Japan was not so favourably placed in the case of wagons and tankers. These required a good deal of steel in their manufacture, the price of which is at present very high in Japan.

And now we have a Japanese agricultural mission. This consists of ten Japanese officials and is expected to stay in the country for about a month. The object of the mission's visit is to explore ways and means of building up close relations between Japan and Pakistan for the purpose of agricultural development and increased food production. The mission aims particularly at the introduction into this country of advanced Japanese methods of rice cultivation which, in the last 50 years, had produced a 100 percent increase in rice production in Japan. During the course of their visit the mission will travel widely throughout Pakistan.

Soil Mechanics and Hydraulics Project

Work is expected to start in Karachi shortly on the construction of a Soil Mechanics and Hydraulics Laboratory. This is an important project and is a joint venture between Pakistan and the Technical Co-operation Administration of the United States. The total estimated cost to the Pakistan Government is Rs. 362,000 while the T.C.A.'s share will be \$100,000. The Soil Mechanics section of the laboratory will provide facilities for the testing and analysis of soil, cement, concrete, rocks, etc. while the Hydraulics section is intended to provide facilities for model tests for river works, canals and canal works, conduits, pipes and spillways, etc., the analysis of the mechanics of sediment transportation, the testing and rating of current meters and the chemical analysis of water and sediment samples. It will operate under the direct control of the Central Government.

Madras

MADRAS TRAMWAYS CEASE
OPERATION

POWER CUTS AND RETRENCHMENT

(FROM OUR OWN CORRESPONDENT).

13th April

THE 60-year-old Madras Electric Tramways Co., Ltd., has ceased operations and a Receiver has taken over the property and assets of the Company on behalf of the trustees of the debenture holders. Mr. P. G. Brookes, the Receiver, has stated that he does not intend to run the tram service unless he can do so on an economic basis. It may be recalled that the Company was the first to run electric tramways in the East. With a rolling stock of 103 single-deck cars, it served 161 miles of road, the daily car mileage was 7,000 miles and the number of passengers carried daily amounted to nearly 125,000. The closing down of the tram service has thrown 1,650 workers out of employment. Neither the City Corporation nor the State Government are willing to run the service themselves, while both the Tramway workers' unions—one Communist-controlled and the other Congress-controlled—demand that the Company be taken over by the Government. The President of the Congress-sponsored Union, Mr. R. Venkataraman, M.P., has suggested payment of compensation for the scrap value of the assets only. The Chief Minister is away at the moment, and the Cabinet is expected to take a decision in the matter before the end of the week.

Mr. J. B. Beardsell, Commercial Manager of the Tramways, has explained the circumstances which led to the closure of the service. He said that the Company had been working at a loss since 1948, and had recently been incurring a deficit of Rs. 40,000 to Rs. 50,000 a month. The Company's programme of overhauls had resulted in a surplus of workers and except in the traffic department retrenchment was necessary. The Industrial Tribunal admitted the need for retrenchment, but only granted permission for the retrenchment of 134 workers under the category "last come, first go." The Company's case for retrenching some 360 men in all was not accepted. The wage bill absorbed two-thirds of the revenue, and the revenue could only be increased by raising fares. As the increase in fares in 1950 led to an immediate drop in the number of passengers carried, the Company decided against any general increase in fares.

Increased Unemployment

It is learnt that the power cut of 66-2/3 percent at present in force will be increased to 70 percent because of the falling water level in the reservoirs on which the hydroelectric system of Madras State is based. Already cement production is reported to have fallen considerably leading to a shortage of this commodity.

The assembly factory of the Ashok Motors, Ltd., near Madras City has been closed. The management decided last week to close down the factory because of the low output and uneconomic working of the factory which is the result of the deliberate go-slow policy adopted by the

hourly-rated workers." About 300 such workers were affected. The spare parts and sales sections continue to function.

Retrenchment has been resorted to in some Madras film-studios of which there are 15 in the city. Some are likely to close down this year, leaving hundreds of technical and skilled men unemployed and already employer-employee tension has become apparent. According to a survey of the Cine Technicians' Association of South India "the feeling that they are woefully under-paid is widely prevalent among practically all categories of technical and skilled employees." They also resent the fact that while their technical work largely determines the standard of a picture, stars are paid fabulous wages.

Partition Committee

The Government of Madras has set up a Partition Committee in connection with the formation of the Andhra State. The Committee, consisting of four civilians, is to consider the adjustments that are necessary between the Andhra State and the residuary State of Madras relating to public services and other questions. The Committee will do its work largely on the basis of principles and directions laid down by the Government. Its conclusions will be considered by a Cabinet sub-committee in the first instance and later by the full Cabinet before being forwarded to the Government of India. Meanwhile political talks on the formation of a stable Government in the new State are under way. Already the K.L.P. members, numbering 16, have joined the Andhra Legislature Congress Party as associate members.

Tobacco Tax

The State Legislature has passed the Bill for the levy of a tax on the sales of high-priced cigars, cigarettes and pipe tobacco and for the registration of dealers in tobacco. The levy is a graded one ranging from 10 percent on lower-priced cigarettes to 30 percent in the case of the costlier varieties. The rate of levy on cigars, pipe tobacco and cigarette tobacco will be 30 percent. The tax is at a single point only, and beedies, low-priced cheroots and chewing tobacco are exempted from the levy.

Accounts Irregularities

The Report of the Public Accounts Committee on the Accounts of 1948-49 was considered by the Assembly. It revealed grave irregularities in the maintenance of accounts connected with the State's trading schemes and showed a number of instances of laxity in accounting, writing off of huge amounts and losses totalling about Rs. 15 crores up to the year of account. The Finance Minister, in reply to the Opposition's demand for a committee to fix the responsibility for the mismanagement, said that the losses were inevitable when the Government dealt with lakhs of tons of foodgrains. No useful purpose, he continued, would be served by the appointment of a committee to go into the accounts of 1948-49 as there was at present insufficient evidence to fix the responsibility.

Economic Enquiries

The Economic Adviser to the Government of Madras and his department are at present engaged in the study of the socio-economic effects of prohibition in the State; they are also completing an enquiry into middle-class family budgets with the object of constructing and maintaining a special series of cost of living index numbers, an enquiry into the agricultural wages, an assessment of social services in the State and a survey of cottage industries. In a symposium on the five year plan, the Economic Adviser said that labour would have to restrain its demands in the period of the plan if it were to be successfully implemented. The Research Officer of the Tamil Nadu Congress Committee appealed to the salaried middle-class to exercise restraint in current consumption expenditure and to save a little by way of insurance policies or the purchase of national savings certificates. He pointed out that, according to a limited middle-class enquiry of his in the City, only 20 percent of the salaried employees of the Rs. 100-200 income group had taken out insurance policies.

The Kanpur Working Class Cost of Living Index Number (Base, August 1949=100) for the month of March, 1953 has declined by 11 points to 448 as against the previous month. This figure is, however, lower than the index number for the corresponding month of the last year by 26 points. The table given below shows the comparative group indices for the months of February and March, 1953:

Sl. No.	Group	February, 1953	March, 1953
1	Food	508	459
ii	Fuel & Light	376	367
iii	House Rent	214	214
iv	House rent	214	214
v	Miscellaneous	463	463

COST OF LIVING INDEX NUMBER 459 448

The index for "Food" group has receded 10 points to 449 because of a fall in the prices of wheat, gram, rice, dal, arhar, sugar and rhee. The prices of meat mutton and mustard oil slightly increased. A rise in the price of saffron has been responsible for a rise of 11 points to 467 in the index for "Clothing" group. The price of choities for males, however, has gone down. The group indices for House Rent and Miscellaneous remained stationary.

CALCUTTA TEA SALES IN MARCH
STEADY IMPROVEMENT IN EXPORT PRICES

THE market has been strong throughout the month and commonest teas have registered advances each week, according to the monthly market review of Carritt Moran & Co., Ltd. Clean commons were the strongest feature and have advanced about seven annas per pound. Best sorts have declined slightly because of a falling away in appearance and cup quality. The last sale of the month produced very keen competition; U.K. buyers as well as local blenders, all of whom appear to have over-estimated their stock position, are now having to make up their deficiencies. There has been a slight decline in demand for whole leaf grades since the cessation of Turkish orders, but in Sale 41 fresh demand was in evidence and prices showed some recovery.

Comparatively little tea was available from Darjeeling and, apart from one or two lines with quite attractive appearance and flavour, quality was ordinary. A few invoices from Assam with fair autumnal flavour were offered but quality generally showed a decline. Much of the tea from this district was dullish in cup with rough, end-of-season appearance. Offerings from the Doorgas also showed a seasonal decline and apart from a few bright liquoring invoices, cup quality was of an ordinary description. Cachar offerings were average both in respect of leaf and liquor.

	1952-53	1951-52		Rs. a. p.	Rs. a. p.

Sale No. 40	...	1 9 0	Not Quotable
Sale No. 41	...	1 11 0	Not Quotable

Internal Market

Leaf offerings consisted almost entirely of inferior stalky residues and part damaged chests and these sold at slightly declining rates except in Sale 41, when better demand was in evidence and prices accordingly advanced. Throughout the month black leafy types of dust suitable for export continued to be the strongest feature of this section and suitable lines, although without liquor, often realised high prices. There was reduced demand in Sale 41 and prices were occasionally easier. Other types, particularly bright liquoring mediums, were in good demand and prices showed a steady advance except for brown powdery types and excessively fibrous residues which tended easier.

	1952-53	1951-52		Rs. a. p.	Rs. a. p.
Clean Common Dust—

Sale No. 38	...	1 6 6	1 5 6		
Sale No. 39	...	1 5 9	1 6 6		
Sale No. 40	...	1 5 3	1 6 6		
Sale No. 41	...	1 6 3	1 6 6		

Export sales up to and including Sale No. 40 totalled 1,718,088 chests at an average price of Rs. 1-6-3 compared with 1,828,094 chests at an average price of Rs. 1-13-5 a year ago. Internal sales at 30,846 chests of leaf and 592,849 chests of dust (Rs. 1-0-5 and Rs. 1-5-7) go against 86,661 and 533,201 chests (Rs. 1-4-1 and Rs. 1-11-3) in the corresponding period last year.

The price of 1952-53 export quota fluctuated between 1½ and 2½ pies per pound, last transactions being 1½ pies. Advance dealings in the 1953 Export Quota started at 15 pies per pound but the

price later dropped to 12 pies at which price there were strong buyers but sellers were scarce.

Arrivals (in chests) in Calcutta warehouses during the period 24th February to 23rd March, 1953, with the corresponding period of last year in parentheses, were as follows: by steamer 222,866 (213,272); by rail 14,744 (10,176); by air 4,744 (6,784). Since the beginning of the season, 1st April, 1952, and up to 23rd March, 1953, arrivals have been 3,309,190 (3,590,533) by steamer, 921,742 (730,311) by rail and 128,808 (226,522) by air; making a total of 4,359,740 (4,555,366) chests.

NORTH INDIAN TEA CROP

The following summary of telegrams has been received from different districts for March 1953.

Upper Assam.—Weather abnormally wet and too cold in North Lakhimpur; hailstorms causing little damage reported in Panitola and Doom Dooma, tipping and limited manufacture started in Dibrugarh.

Central Assam.—Weather abnormally wet; immediate prospects fair but bad in Jorhat; Moran Road except in dry weather.

Lower Assam.—Weather seasonable but rainfall abnormal in Bishnauth and Tezpur; immediate prospects fair to good.

North Cachar.—Weather favourable; severe hailstorms causing considerable damage to crops reported in Lakhimpur resulting in little damage; red spider lifting in North Cachar where immediate prospects bad.

South Cachar.—Weather favourable; good rain has fallen generally and prospects are now brighter; severe spider lifting in Hailakandi; manufacture has commenced in Hailakandi and Longlai.

Sylhet.—Lungia reports: outturn last month good; weather favourable; immediate prospects good.

Eastern Doorgas.—The outturn to date is slightly under last year; weather seasonable; immediate prospects fair; red slug prevalent.

Western Doorgas.—Outturn last month about normal; immediate prospects good; weather favourable; good rain has fallen generally and prospects are now brighter; the season will probably be an early one; manufacture has commenced; crop prospects generally favourable.

Darjeeling.—Immediate prospects fair; severe hailstorms are reported and considerable damage has resulted to crops; red spider blight prevalent in some districts.

Terai.—Manufacture has commenced; some rain fallen; red spider is in evidence; crop prospects generally favourable.

TOBACCO ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India first estimate of tobacco, 1952-53 puts the current year's acreage at 735,000 acres as against 727,000 acres of the adjusted first estimate of last year. This shows an increase of 8,000 acres or 1.1 percent in acreage. The acreage has increased mainly in Bombay due to favourable climatic conditions at sowing time this year as compared with last year. There has been a decrease in parts of Madras especially in the Ciercars due to inadequate rainfall at sowing time.

The information given in this estimate relates to the period up to the end of December, 1952. Until then the condition of the crop was reported to be generally satisfactory except in Madras, Uttar Pradesh and Mysore. The estimate does not perceive shows that the acreage at the supplement (final) estimate stage is about 11 percent higher than at the first estimate stage.

COCHIN TEA SALES

As Sale No. 7 held on 31st March 1953, there were 9,62,000 lbs. printed for sale. Quality showed a seasonal falling off, particularly among high and fairly general for all types. Medium and low medium Travancore teas sold readily at about 1½ and a few teas from this district, with flavour, received keen competition. Anamallai offerings were inferior and with prices following quality in value. Nilgiri teas with flavour received fair and there were some withdrawals. Leaf grades, particularly stylish P. P. and B. P. S's and Fannings, were in good demand and a general advance in value was recorded.

	Rs. a. p.	Last Sale	Rs. a. p.
Low Grown Travancore B.O.P.	1 13 0	1 12 0	
Medium Grown Travancore			
B.O.P.	2 2 0	2 2 0	
Anamallai	2 3 0		
Best liquoring Nilgiri	2 5 6	2 6 0	
Black well made	3 13 0	3 15 0	
O.P.	2 4 6	2 3 0	

Business in current export quota has been done at 1½ pies. Some business in the new season's quota has been done at 11 pies but there are large sellers at 12 pies.

Sale No. 8 has been postponed to 15th April as Vishu falls on the 14th.

WORLD COFFEE PRODUCTION UP

World coffee production in 1952-53 is now estimated at 40 million bags of 132.3 pounds each, according to the Foreign Agricultural Service of the U.S. Department of Agriculture. The total is an increase of 4.5 percent over 1951-52, but still 3.8 percent below the 1935-39 pre-war average. Production increases are expected in each of the principal producing areas of the world except Africa.

Jute

THE ROLE OF MIDDLEMEN IN JUTE MARKETING

LIMITATIONS OF GROWERS' CO-OPERATIVE SOCIETIES

INAUGURATING the All-India Jute Growers' Association at New Delhi, Mr. A. C. Guha,

Deputy Minister of Finance in the Government of India, urged growers to organise themselves into co-operative societies to provide cheap credit facilities so that they would not be victimised by "usurious middlemen." He promised that the Government would help such bodies. There are two points in this statement on which it would be interesting to have some enlightenment from Mr. Guha. The first is who are the "usurious middlemen"? It has become fashionable in the past few decades to refer to everyone who is not a primary producer, a manufacturer or a consumer as something of a useless parasite. People like Mr. Guha who talk in this way do not stop to think how crops would be moved from the producer to the consumer without the so-called middlemen. Take away the middleman and this is to fill the gap between the producer and the consumer? Who is to undertake collection and distribution? Mr. Guha appears to think that the produce will move automatically. Even if co-operative societies are formed for the collective marketing of the produce it still has to be moved from the collecting and marketing centres to the consuming centres.

At present all these services are provided by the maligned middlemen who furnish the finance, the credit, and the organisation and who carry the market risks. Are those who undertake this not entitled to any remuneration? If they do happen to make profits does that justify the description of them as "usurious"? What would have happened in the current season if the marketing of the crop had been in the hands of co-operative societies? Would the Government have provided the financial resources to enable the losses of the middlemen? It may be argued that this resulted from their wrong judgment of market conditions and prospects. Even so, it is they who have borne the losses which would otherwise have been suffered by the growers, for the great bulk of the Indian crop passed from the hands of the growers into the hands of middlemen at prices which gave the growers a substantial profit on their crop. For this service to the growers is it fair that a responsible Minister should apply the term "usurious" to the middlemen?

The second point is whether Mr. Guha is aware of the history of the Government-sponsored co-operative jute societies in Bengal. That experiment cost the Government of Bengal many lakhs of rupees. These losses were partly the result of mismanagement, corruption and ignorance of commercial practices but they were mainly caused by a lack of comprehension of the true spirit of co-operative marketing. The true spirit of co-operation did not exist and it is doubtful if it exists today. The Government should therefore proceed cautiously if it does not want to repeat the previous disaster.

Mr. Guha is reported also to have said that the Government was considering the appointment of a committee to go into the cost structure and marketing of jute. As we have pointed out before there have already been several enquiries of this nature and the information required is already available in the pigeon-holes of Government offices should anyone care to look for it. No action has ever been taken on any of the previous reports and one may be permitted to doubt if the fate of a new enquiry would be any different.

THE JUTE MARKETS

U.S. SANDBAG ORDER

Manufactured Goods: Once again the subject of reducing mills' production of sacking goods has been the main talking point in the market, and various rumours are circulating to the effect that the Government might change its mind and permit some form of closure. This is not exactly what the mills are pressing for, as any form of closure would automatically carry with it the curtailment of hessian production which at the present moment is not desirable especially since an order for sandbags has been received from the U.S. Army. Then again, any form of closure will put the mills in a difficult position with the labour. In former years a ten-day holiday has sometimes been decided upon but this year mills have gone in for scattered holidays and in nearly all cases a great number of workers have already had their "ten-day" holiday with pay. This would mean that if a ten-day closure is again decided upon some workers would have a double holiday which would be most unacceptable to those who have not yet had their holiday. Complete closure is not the answer to the present problem of low prices in the sacking and raw jute markets; any form of curtailment of production should not embrace the hessian section, which at present is more than holding its own.

The prospect of a curtailment of production had a stimulating effect on the heavy goods

market this week, and although very little business was done rates improved by about Re. 1 per 100 bags until the week-end. The hessian section was also partly responsible for this upward trend as, following good business with the U.S.A. and the placing of an order for 10 million sandbags by the U.S. Army, prices advanced at the beginning of the week and a steadier tendency developed. The rise, however, was only temporary as far as Hessians were concerned; interest soon faded because enquiries stopped and this section yielded ground reluctantly. However, quotations on Monday were still 10 annas above last Thursday's opening prices. Towards evening on Monday rates again showed an improvement on account of inter-bazaar covering business in Hessians, but mills were inclined to be reserved and little real business was put through. Heavy goods responded to the activity in the hessian section and ruled steady in sympathy without any business passing. Tuesday was a holiday and all markets were officially closed.

There was a steadier feeling in the heavy goods section at the opening last Thursday and B Twills were 4 annas up on the previous day being quoted at Rs. 85-12 per 100 bags whilst plain heavy Cees remained constant at Rs. 87 per 100 bags. The hessian section in the absence of business opened quietly at Rs. 87-12 per 100 yards, which was a drop of 4 annas. As the day progressed, it showed signs of revival and the business of a covering nature took place. By the opening on Friday 40" 10 Oz. had reached Rs. 38-4 per 100 yards. This was 8 annas up and prices ruled steady on the receipt of good business from the U.S.A. and the confirmation of the sandbag order. Heavy goods ruled steady in sympathy and also on account of rumours of mills' curtailing production, but the advance was more pronounced in this section. B Twills rising 12 annas to Rs. 86-12 and plain heavy Cees by 4 annas to Rs. 87-12 per 100 bags. On Saturday Hessians were again steady and increased 4 annas, as did plain heavy Cees, but B Twills showed no change. As enquiries slackened the sentiment of the market became weaker and prices fluctuated within narrow limits. At the close they were 2 to 4 annas down in all fabrics. The decline continued after the week-end and 40" 10 Oz. hessian opened on Monday morning at Rs. 38-6 per 100 yards, 2 annas less than on Saturday; B Twills ruled at Rs. 86-8 per 100 bags, which was 4 annas down, but plain heavy Cees were unchanged at Rs. 88 per 100 bags. In the course of the day some local covering demand developed for hessian goods and a fair amount of business was put through, mainly in 11 porter fabrics which pushed hessian prices up by about 6 annas. Heavy goods followed to a lesser degree in sympathy and B Twills improved by 2 annas per 100 bags.

At the close the market is steady and a further general increase in rates was apparent as America announced an increase in her consumption of hessian. At the opening on Wednesday morning quotations were as follows:—

	April	May-June	July-Sept.
40" 8 Oz.	31-10	31-10	31-10
40" 10 Oz.	38-12	39	39
Heavy Cees (Plain)	88	89	89
B Twills	87	87-8	88
Cornsacks	90	90	90

Raw Jute: A fair amount of activity has been evident in the raw jute markets this week, and it is estimated that not less than 2,00,000 maunds of jute of all grades and varieties have been purchased. Mills took advantage of the rise in the finished goods market to sell various fabrics and in most cases covered their sales in jute at favourable rates. Sellers, who had cut prices, were inclined to be reserved by the end as a large proportion of the business done over the period carried an option to deliver the jute at the end of the month, and it is anticipated that in the majority of cases this option will be exercised. Having considera-

bly reduced their stocks by these sales, sellers were not inclined to sell further at these levels and withdrew in anticipation of higher prices. However, it is not thought that this attitude will be maintained if mills again come into the market, as in each case of buying reported over the week it was indicated that there were sellers over for double the amount of business that was transacted. In spite of this selling pressure on behalf of stockists the price of jute advanced by Re. 1 per maund, but mills resisted the rise strongly and towards the close their indication were 8 annas or more below sellers' ideas. On the whole this has been the most successful week as far as business done is concerned for some considerable time, and may be an indication that at last the bottom has been reached.

Opening prices of raw jute on Thursday last were on the basis of Rs. 17 per maund basis Bottoms for Ordinary Assam jute, but subsequent rises of 8 annas per maund on each of the two days, when the largest amount of business was put through, saw the price rise to Rs. 18 per maund at which rate the majority of sellers withdrew from the market. Their indications over this rate were not looked upon with approval by mills in spite of an improved goods market, and they in turn soon lost interest in the proceedings.

During the week the following business was reported:—

European Packing (ex Local)—Rs. 24 per md. basis Bottoms for one month's delivery.

Dhubri—Rs. 18 per md basis Bottoms for one month's shipment.

Dhubri and/or Northern (ex agency)—Rs. 18 per md. basis Bottoms for one month's shipment.

Dhubri and/or Northern (ex Local)—Rs. 21 per maund for Middles only for one month's delivery.

Rs. 18 per maund basis Bottoms for one month's delivery.

Assam—Rs. 20 per maund for Middles only for one month's delivery.

Rs. 18 per maund basis Bottoms for ready bills of lading.

Rs. 17 per maund basis Bottoms for one month's shipment.

Cuttack (White)—Rs. 16-8 per maund basis Bottoms for one month's shipment.

Cuttack (Tassa)—Rs. 17 per maund basis Bottoms for one month's shipment.

Daisee—Rs. 17 to 18 per md. basis Bottoms for one month's shipment.

Rs. 14 per md. for X Bottoms only for one month's shipment.

Bimili—Rs. 13-8 to 14 per md. for F.A.Q. for one month's shipment.

Haji Jabi—Rs. 14 per maund for one month's delivery.

At the close the raw jute markets are steady. Sellers are very reserved and are offering only small lots at increased rates. Opening quotations on Wednesday morning were as follows:—

	April	May	Rs.	Loaded at MILL.
Pakistani Jute:				
Jat	22-8			per md. basis Bottoms
District	21-8			" "
Northern	21-8			" "
Indian Jute:				
Lower Assam	19-8			" "
Upper Assam	19-8			" "
Northern Bengal	19-8			" "
Murshidabad White	16-8			" "
Bihari	14			" "
Daisee	19			" "
Bimili	15			for F.A.Q.
Mil. Beds	170			per bale
Mil. Firsts	120			" "
Mil. Lightnings	115			" "
Mil. Hearts	105			" "
Dundee Daisee (Short Group)	130			" "
Dundee Daisee (Long Group)	115			" "
Indian Cuttings	60			" "
Pakistan Cuttings	50			" "

Tossa is offered at Re. 1 to Rs. 2 per md. above the rates for white jute.

Mofussil: Upcountry markets in India have steadied up over the past week and a fair amount of business has been transacted. Imports have not improved and the majority of business done was for jute that had been in stock for some time. There is a growing demand for Northern jute of good quality suitable for the manufacture of hessian and quata-

Industrial Progress
in India

One of the amenities which make a 'civilized' township is the availability to all its citizens of a convenient and adequate supply of water. Some urban areas are fortunate in having a suitable source on their doorsteps; others obtain much of their water from wells; still others have to have water brought from a distant reservoir.

The Romans were the first to achieve fame as builders of aqueducts, the oldest being that of Appius Claudius which was built well over two thousand years ago. An interesting recent example of a water supply system is the series of huge concrete catchment areas built on the eastern slopes of Gibraltar to provide "the Rock" with this necessity of life.

In Northern India waterworks were built in many thriving centres towards the end of the last century. In 1892, with past experience of pipelaying contracts and the installation of the Allahabad Waterworks scheme, Acquin Martin and Rajendra Nath Mookerjee formed a partnership in the name of Martin & Co. and soon secured contracts for installations at Lucknow, Banaras, Meerut and Naini Tal; in fact, at one time every major waterworks scheme between Calcutta and Peshawar had been built and equipped by Martin & Co.

Today Martin Burn Ltd. are as much in the forefront of India's industrial and civic development as Martin & Co. were at the turn of the century.

tions for this have risen sharply as there is very little available. Local quotations are up by Re. 1 to Re. 1-8 over last week's rates and are on the basis of Rs. 15 per maund basis Bottoms for Dhubri jute, and Rs. 15 per maund basis Bottoms for ordinary Assam jute. Northern jute has gone up to about Rs. 17-8 per maund basis Bottoms for good quality. Imports into the local Cossipore markets show a slight improvement over last week and are up to about 40 wagons daily. This centre has seen its most active week for a considerable time and most sellers have been able to reduce their stocks by selling to mills, and are now content again to sit out and wait for higher prices. Quotations are up over last week and Kishanganj is quoted at Rs. 19-8 to Rs. 20 per maund for garsat quality. Here also there are free buyers for good quality Northern jute and premium prices are being paid. There has been an improvement in demand for Daisee this week and the Sheoraphuli local Daisee markets have responded by an increase of Re. 1-8 per maund. Latest quotations in Sheoraphuli are based on Rs. 18-8 per maund for garsat quality.

In Pakistan also markets are showing a firmer tendency although there are reports of only small business passing, mainly for overseas shipment. Tossa is still in demand, especially Jat Tossa, but there is very little of this available. Imports are steady at about 10,000 to 12,000 maunds daily and the latest quotations in Narayanjan (in Pakistani rupees) are as follows: Jat (White)—Rs. 15-8 to Rs. 16 per md. Tossa—Rs. 19 to Rs. 20 per md. District (White)—Rs. 14-8 to Rs. 15 per md. basis Bottoms. Tossa—Rs. 17 to Rs. 18 per md. basis Bottoms.

OBJECT OF I.J.M.A. DELEGATION'S VISIT TO AUSTRALIA

The following Press Note was issued by the I.J.M.A. yesterday:

"A Trade Delegation from the Indian Jute Mills Association is leaving Calcutta on 16th April for a three-week visit to Australia and New Zealand. The delegation consists of Mr. J. G. Walton, the Deputy Chairman of the Association, and Mr. D. P. Goenka, the Vice-Chairman; and it will also be accompanied by Mr. L. K. Jha, Joint Secretary to the Ministry of Commerce and Industry, Government of India. While the mission will be primarily one on behalf of private industry, Mr. Jha's attendance is a welcome indication of the Government of India's interest in the retention and expansion of the jute industry's markets.

"As one of the world's main producers of primary agricultural commodities, and in particular of wheat and wool, Australia naturally makes a large use of jute goods for packing and distribution purposes and, with an annual offtake of gunnies amounting in normal years to between 80,000 and 90,000 tons, it constitutes one of the Indian jute industry's most important individual markets, particularly for sacking. New Zealand, being also a substantial primary producer, especially of wool, also consumes jute goods on a considerable scale and, although owing to its much smaller size and production it is of less importance than Australia, it nevertheless counts as a valuable market for gunnies.

"It will be the object of the I.J.M.A. delegation to make a first-hand examination of the present state of the Australian and New Zealand markets and of the factors affecting the demand for, and consumption of gunnies, and to try to estimate future trends on both a long and a short term basis. The delegation will, of course, have important talks with trade circles in the countries visited and will therefore also serve to establish useful personal contacts between the manufacturing industry and its customers. Coming as it does on top of the goodwill mission which the I.J.M.A. sent to the United States in October last year, and the publicity campaign which is at present being conducted in that country, the Australian and New Zealand mission represents a further extension of the Association's post-war policy of maintaining close touch with overseas markets, studying the needs and problems of individual consumers and providing a service to users of packaging materials which will enable jute goods to maintain and extend their long established primacy in this field."

CALCUTTA HYDRAULIC PRESS ASSOCIATION MEETS

MR. JACOB ON DIFFICULTIES OF BALING INDUSTRY

MR. J. R. Jacob, chairman, told the Calcutta Hydraulic Press Association at its annual general meeting on 9th April that "the last year

has by no means been one that we can look back on with any satisfaction. The Government of India continued to ban the export of jute from India for the fourth consecutive year and this has left us in a desperate situation. During the year, four leading balers have had to close down their baling completely whilst several others have greatly reduced their work. I am sorry to remark that the future of the baling industry is indeed very dark, and I see no ray of sunshine unless the Government decides to save the industry. Our Association, in conjunction with the Calcutta Baled Jute Association and Jute Balers' Association, has approached the Indian Jute Mills Association to help the balers and presshouses to tide over their difficult economic situation by buying at least 25 percent of their requirements of jute in pucca bales from balers established in the trade but the Association has so far received no reply to their representation. Our only salvation now lies in a direct approach to the Government.

"Members of the Association have invested over Rs. 4 crores in the presshouse industry i.e. in machinery, plant and building, to say nothing of what balers have put into their business over the past 60 years in order to build up their export trade and goodwill. It will be recalled that balers had also played a vital rôle in supplying jute to mills during the control period when jute was in short supply. It is therefore in the interest of the mills to see that balers are not eliminated from the jute trade as, apart from the fact that they have been in this line for so long, they are useful to the mills in securing jute both in India and from Pakistan.

Jute Export Ban

"The Government of India has banned the export of jute from India since 1949 in order to conserve Indian jute for the mills here. But now almost all of the Indian jute mills' requirements of raw jute at the present working of 42½ hours per week with 12½ percent looms sealed are being grown in India (the production of raw jute, bimbi and mesta for 1952-53 being more than 53 lakh bales) whereas the ban on export still continues. There is only one buyer for Indian jute, i.e. the Indian jute mills. The jute mills, however, do not buy pucca bales, and the few that did, have now reverted to buying loose jute. This policy on the part of the mills has a crippling effect on presshouses and balers. How are the balers to sell their products if the only buyer refuses to buy their goods? How are the presshouse owners to exist, when they are entirely dependent on the balers for their income? What are the balers and presshouses to do with over 7,000 workmen employed by them? These are the problems facing the jute baling and pressing industry.

Indo-Pakistan Trade Pact

"Much has been said in the newspapers about the trade agreement in jute with Pakistan so I do not propose to comment on this. But it is abundantly clear from the way prices of raw jute in India have fallen during the past three months, that there is an excess of supply over demand. The Government of India has on more than one occasion stated that its primary objective is to make India self-sufficient in jute and unless this is first achieved exports of jute from India will not be allowed. Well, the time has now come when the Government of India finds itself on the two horns of a dilemma. On the one hand, it is for the Government to decide whether it wishes to continue with its drive for increased production of indigenous jute in which case it is essential that an export market should immediately be opened in order to assure the cultivators that mills in India are not their only buyers and as such they can be assured of a reasonable return for their labour. I do not suggest that all the Indian jute should be allowed for export, but the time has certainly come when the Government of India should realise that there is an exportable surplus of jute in India and consequently fix a quota for six months at a time. On the other hand, should the Government decide to continue the ban on the export of jute then I am afraid that the cultivation and what is more, may divert their land to India will thus not only be deprived of earning surplus jute but her economy will be affected of jute for the mills. It is therefore for your seriously with the Government.

"The baling up till the end of February 1953 in member presshouses totalled 615,000 bales. In view of the ban on exports and reluctance of mills to buy pucca bales, I do not think that the total jute for the year will exceed 7,50,000 bales which you will no doubt agree is by no means satisfactory. As you know, members have been permitted to install kutchas presses in their presshouses during the current season and the kutchas baling so far is a little over a lakh of bales."

INDIAN CROP REPORT

In their fourth crop report of the current season which covers the week ended 11th April, Messrs Sinclair Murray & Co. Ltd. (India) say that the weather in Assam has been favourable with alternate rain and hot and dry and this has delayed preparation of land. Dhanpur: (Orissa) The weather has been hot and dry, but a moderate shower was experienced over the

Jajpur Road: (Orissa) The weather has been very hot and dry with one moderate shower at the weekend. Further rainfall is required to enable cultivators to commence ploughing fields.

RANAGHAT: (West Bengal) The weather has been very hot and dry and this has held up normal agricultural preparation. Negligible sowings of Mesta and White Jute have taken place in the lowlands but due to lack of rainfall the condition of the young plants are not healthy.

COSSIMBAZAR: (West Bengal) The weather was extremely hot and dry and rainfall is necessary to enable cultivators to prepare the land.

NOWGONG: (Assam) The weather has been mainly hot and dry with the exception of two small showers which were beneficial to the crop. Sowings to date amount to -10/- as compared to -9/- at this time last year. Condition of young plants are healthy. The river level is normal.

GAUHATI: (Assam) Alternate rain and sunshine has been experienced and this has proved fairly favourable for sowings, germination and the standing crop. Sowings to date amount to -8/- as compared to -10/- at this time last year. Condition of plants is very satisfactory and they range from seedlings in the midland to 1' 3" in the lowland. Weeding is going on slowly and satisfactorily.

DHUBRI: (Assam) The weather has been mainly favourable but a hailstorm is reported to have caused some damage to young plants in the midland area. Sowings to date amount to -8/- as compared to -12/6 at this time last year. The general condition of low and midland plants is satisfactory and they range in height from seedlings in the midland to 1' 3" in the lowlands. Weeding of the lowland has been completed. The river is slightly higher than normal.

KHARUPETIA: (Assam) Weather conditions have been favourable with alternate rain and sunshine. Sowings to date amount to -8/- as compared to -11/- sown last year at this date. Condition of young plants is satisfactory and range in height from seedlings in the midlands to 1' 9" in the lowlands.

DAISEE DISTRICTS: Hot and dry weather has prevailed and rainfall is required to allow cultivators to finalise preparations of their land for the next sowings. A small quantity of White Jute and Mesta has been sown, but the condition of the young plants is not healthy due to lack of rain.

Rainfall	for the week	Total from 1st January	Rainfall over the weekend

Nowgong	0.60"	8.50"	1.35"
Gauhati	1.24"	8.87"	1.18"
Dhubri	0.81"	7.69"	—
Kharupetia	0.37"	8.01"	—

PAKISTAN CROP REPORT

In their fifth crop report for the current season which covers the week ended 11th April, Messrs Sinclair Murray (Pakistan) Ltd., say that the weather has continued to be hot and dry. Due to lack of rain sowings have been held up and there are reports from some districts that the condition of those plants which are now urgently required to allow sowings to be carried on and to assist the growth of young plants. River levels are normal on the Eastern side and slightly higher than last year on the Western side. (Telegraphic advice has since been received of fairly general rainfall over the weekend).

NARAYANGANJ: Hot and dry weather has been experienced and this has been detrimental to the standing Midland crop. No further sowings have taken place during the week under review and sowings will not be resumed until there is good general rainfall. The Lowland crop is making satisfactory progress and plants are healthy and range in height up to 1' 3". Sowings to date amount to -2/6 as compared to -1/2 at this time last year. The river level is about 6" higher than at this date last year.

DACCA: The weather has been hot and dry and rain is very urgently required to allow sowings to be resumed and for the benefit of the young plants. Sowings to date amount to -3/- as against -9/- at this time last year. Young plants are healthy and range in height up to 1'. Weeding is going on where necessary. The river is about the same as at this time last year.

CHANDPUR: The weather has continued hot and dry and a good shower of rain is urgently necessary to promote the growth of young plants and to allow further sowings. It is reported that the condition of the latterly sown young crop is disappointing and the plants are stunted and drooping. Sowings to date amount to -6/- as compared to -14/- at this time last year. The river level has continued steady during the week and is approximately 1' lower than the corresponding period last year.

HAIJIGANJ: The weather has been hot and dry and rainfall is most essential for the standing crop and also for further sowings. Sowings to date amount to -4/3 as compared to -10/- at this time last year. The river has risen slightly during the week and is now 8" higher than last year at this date.

AKHAURA: The weather has been hot and dry and a good shower of rain is now necessary to promote the growth of the standing crop. Condition of young plants is satisfactory and they range in height from seedlings to 6". Sowings to date amount to -6/- as compared to -8/- at this time last year. The river level is normal.

ASHUGANJ: Weather continued to be hot and dry. Young plants range in height from seedlings to 9". Seed germination and condition is quite satisfactory. First weeding has commenced on lowlands and are going on as required. Midland sowings have been completed and highland sowings will not be commenced until a good shower of rain is experienced. Sowings to date amount to -7/- as compared to -9/- at this time last year. The river is steady and about the same level as at this date last year.

SARISHABARI: The weather has continued very hot and dry and further rainfall is very urgently required. Young plants of the earlier germination are doing fairly well, and have attained a height up to 1'. Plants of later germination are backward for want of rain and fresh germination of latter sowings is reported to be very slow. Sowings to date amount to -4/- as compared to -13/- at this time last year. The

river has risen and is now about 4' higher than at this time last year.

SERAJGANJ: The weather has been very hot and dry and further rainfall is urgently required to allow sowings to be resumed and for the benefit of young plants. Condition of young plants are reported to be fairly satisfactory and range from 1' 6" to 2' 6" in the lowlands and 6" to 1' in the midlands. Weeding operations continue very steadily. Sowings to date amount to -4/6 as compared to -11/- at this time last year. The river has risen during the week and the present level is about 4' higher than last year at this date.

NIKILIDAMPARA: The weather has been hot and dry. Sowings to date amount to -5/9 as compared to -14/3 at this time last year. The river level is normal.

NAKALIA: The weather has been hot and dry and unfavourable for sowings. Plant condition is fairly satisfactory but continued drought may have a bad effect on the standing crop. Sowings to date amount to -3/- as compared to -6/- at this time last year. The river level is steady and is about 1' 6" higher than last year at this time.

BHANGOORA: The weather has been hot and dry. Condition of young plants is reported to be satisfactory. Sowings to date amount to -4/- as compared to -8/- last year. The river is rising and is about 9" higher than the corresponding date last year.

MARCH PRODUCTION FIGURES

The Indian Jute Mills Association reports the total production of manufactured goods during March as follows:

(A) Total reported production of manufactured goods exclusive of all Government orders.

Description	Quantity
1. Twist and Yarn	
(a) For sale	1,270 Tons
(b) All other including that used in sewing	727 "
2. Canvas	238 "
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	1,425 Tons
	62.9 lakh yds.
	33.3 Nos.
(b) Sacking	37.0 Tons
	305.5 lakh yds.
	37.9 Nos.
4. Gunny Cloth	
(a) Hessian	28,128 Tons
	11,248 Yds.
(b) Sacking	2,130 Tons
	47.5 lakh yds.
5. Other manufactures (including ropes)	511 Tons
6. Total production (above figures combined)	
All kinds	71,855 Tons
(b) Hessian (both bags and cloth)	11,936 lakh yds.
(c) Sacking (" ")	9,510 " "
(d) Canvas (" ")	59 " "

(B) Total reported production of goods manufactured on Government account.

Description	Quantity
7. Sandbags	Nil
8. Scrim Cloth	Nil
9. Hessian Bags and Cloth and Canvas	2,082 Tons
	74.8 lakh yds.
10. Sacking Bags and Cloth	489 Tons
	12.2 lakh yds.
11. Ropes and Twine, etc.	Nil

Civil	2.5	2.4
Government	0.0	0.0
	2.5	2.4
Grand Total	74.4	88.8

*Based on production figures from July, 1948 to April, 1949 (full working months) excepting March with full complement working 48 hours a week.

N.B.—The above figures include returns of the Gagalbhai Jute Mills and of all members of the Association with the exception of one mill whose production figure for March have been estimated.

THE FOREIGN JUTE MARKETS

NO INCREASE OF BUSINESS

(FROM OUR OWN CORRESPONDENT.)

Dundee, By Air Mail.

THERE is nothing on the horizon to indicate any pending improvement in the jute industry. Values of practically all other commodities have fallen since the peace moves in Korea were started and no doubt this is accountable for the prevailing impression that prices for jute trade commodities will be lower still. Though the rates quoted for Calcutta goods have been reduced to uneconomical levels, business has not increased. It is reported from Pakistan that there is a quiet steady business being done in raw jute, and no doubt so long as this is the case, there may be no change in the fixed minimum prices. Pakistan is virtually holding a monopoly crop and the authorities probably see the futility of reducing their terms, being fully aware that prospective buyers are unable to satisfy their requirements elsewhere. Good quality fibre is being maintained at £85 for Mill Firsts and £76 for Mill Lightnings, £61 for good Daisee—2/3 and £95 for good Tossa—2/3, c. and f. U.K. It is only in the case of the lower grades that the minimum rates are being shaded by a few pounds per ton.

The weakness in prices for Calcutta goods is undoubtedly adversely affecting the whole jute industry. Consumers in the U.K. are now purchasing only their immediate needs and orders are being placed for only trifling lots of cloth and bags. Manufacturers are generally unable to give delivery reasonably early and some widths and weights of hessians are very scarce, even from stocks of imported goods. Prices are naturally all very firm and 12.43d. per yard is lowest for 10 oz. 40 in. hessians and 9.55d. for 7½ oz. 40 in. less the usual 3% discount for cash. Dundee manufacturers are in the fortunate position of being well booked up with orders for delivery over the next three to four months and there are no suspensions of deliveries of goods on order, such as happened at this time last year when trade was very depressed on account of the expectations of lower prices. Yarns are still in brisk demand and spinners are unable to meet buyers, who are very concerned over the situation. Even small quantities are difficult to pick up.

Some sellers of Calcutta goods have been offering to sell here at 68s. 0d. for 10 oz. 40 in. hessians and 139s. 0d. for "B" twill, April-June, A-B group, f.o.b. Calcutta. These are 2s. 0d. cheaper for hessians and 4-5s. lower for sackings than the generally quoted rates ruling in Calcutta for f.o.b.

PAKISTANI-WEST GERMAN BARTER DEAL

The Barter Committee appointed by the Government of Pakistan has concluded a deal with M/s. Bickenbach & Co. of West Germany for the purchase of 25,000 tons of Argentine wheat by way of barter against jute. The quantity of wheat may be increased to 50,000 tons. A contract to this effect was signed by the Ministry of Commerce with the German firm. This will enable Pakistan to export between 35-70 thousand bales of jute to West Germany.

PLASTIC LINED BAG

A Canadian firm is now using a 4-ply kraft paper bag lined with a single 0.005-inch polythene layer for packing nitrate fertilisers according to the Financial Times. Previously a heavy two-layer asphalt lining had been used, which added more than twice the weight to the bag than does the single polythene lining. The thin polythene layer has, it is claimed, proved completely effective in preventing the fertiliser, which is extremely hygroscopic, from picking up moisture during transport.

The new bag is said to give better protection against moisture, chemical attack and grease, and to be stronger, while it costs less than a third of the price of the comparable jute-asphalt-paper bag previously used. Other uses include the packaging of sugar, quicklime, detergents, ion-exchange resins and many other substances which habitually soaked up moisture.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stock of sugar in respect of Central Sugar Factories in India during the fortnight ended 15th March, 1953 were 800,389, 126,275, 63,507 and 863,157 tons respectively, reports the Director of the Indian Institute of Sugar Technology, Kanpur, on the basis of returns received under the Sugar Production Rules, 1935. The figures for the corresponding fortnight of the previous season were 678,781, 114,031, 58,366 and 734,446 tons respectively. Figures for the current fortnight relate to 127 factories representing 92.04 percent of the total cane-crushing capacity, while the figures of the previous year relate to 126 factories representing 91.27 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 980,930 and 540,130 tons respectively, as against the corresponding figures of 1,035,825 and 418,934 tons during the previous season.

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

WARP STOP MOTION.—Immediately a warp thread breaks the individual compensator is pulled upwards by the action of its spring and brought into contact with the control bar, automatically stopping the loom.

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
LEEDS, ENGLAND.

Calcutta Markets

SOME GOOD FIXTURES IN
FREIGHT MARKET
TIME CHARTERING BRIGHT

THE more favourable outlook in the Far East has resulted in a slight easing of rates in Eastern trades; shippers of ore from Dungun were able to obtain the lower rate of 66s. 3d. for U.K. May loading and ore from Vizagapatam to the U.S.N.H. was fixed at the reduced level of \$10. Ore Mormugoa-Calais paid 65s. and an interesting fixture was that of a prompt vessel for iron ore from Tolo Harbour (Hong Kong) to Yawata at 22s. 6d. No fixtures are reported from Whampoa to Colombo but 102s. 6d. was accepted for mixed cereals from one Port North China to one Port discharge Antwerp-Hamburg range.

There was a resurgence of activity in the Calcutta market for both scrap and coal. A small prompt ship accepted 107s. 6d. for scrap Calcutta-Ghent and tonnage is reported to be actively treating for scrap for both Japan and Continental discharge. For coals Calcutta-Japan 62s. was repeated and Calcutta-Pusan or Yosu paid \$10.25. Fixtures were also reported for Singapore at the previous rate of 49s. 6d. and Rangoon paid 47s. 6d. for an April loader. Coal from Durban to Aden was done at 40s.

There has been a fair demand for Australian grain though Chartering has been quiet with two fixtures being made from South Australia to South Korea with bagged barley at \$14.50 and \$14.25. Sugar in bags from Queensland to U.K. was fixed at 130s. and 129s. 6d. and a subsequent fixture was done at the lower rate of 127s. 6d. for a more forward loader.

The South American market continued active and a further two fixtures of grain from the Argentine to India are reported at the same rate of 90s. The North American coal section remained steady, 35s. 9d. and 35s. 6d. being paid Hampton Roads-Antwerp or Rotterdam and coals to Rio Janeiro was done at \$6. A fixture to Japan was recorded at \$9.50.

There was continued interest in the Time Chartering Section, 16s. 6d. being accepted by an oil burner for six months trading delivery re-delivery U.K. and 17s. 6d. was paid for a similar vessel for delivery Antwerp re-delivery Far East voyage out. A small motor ship was paid 60s. for six months Far East trading and an oil burner was fixed at 17s. 9d. delivery Calcutta re-delivery Hongkong voyage across.

TEA EXPORT PRICES FIRM
INTERNAL SALES CANCELLED

At Sale No. 43, held on 13th April, 1953, there was less demand for Export teas than in the last sale, but there was no quotable change for Common and Low Medium Broken. Fannings and the best liquoring Broken Orange Pekoes on offer were fully firm while Leaf grades were in good demand and were generally half an anna dearer. Commonest stalky types were in less demand and residue grades were virtually neglected.

It was decided by the Calcutta Tea Traders Association to postpone the Dust Internal and Supplement sales which were to have been held yesterday, pending clarification of the new export regulations.

Approximate Quantity Offered.	
Export	... 47,200 Pkgs

LINSEED

The market was more or less unchanged last week and trading was reported on a fair scale with the undertone firm. Sellers were more in evidence for new crop forward delivery, and there was a fairly large daily turnover with local mills showing a keen interest. Buyers, however, were uninterested for ready delivery. The oil market was dull and local enquiries were very scarce. Overseas buyers continued uninterested. Latest quotation was as follows: April-May Rs. 13 per maund.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

BAZAR SALES

(Between 31st March and 6th April, 1953)

Cowhides:—Wet salted (Ord) 2,000 pcs. on the basis of Annas 9.9 to Annas 10.6; Wet salted (Ord) 1,500 pcs. on the basis of Rs. 10 to Rs. 11; Wet salted (Slaughtered) 9,300 pcs. on the basis of Rs. 13 to Rs. 24.

Goatskins:—Wet salted (Daisee, Killed) 30,900 pcs. on the basis of Rs. 220 to Rs. 400; Assam-Dinajpur-Murshidabad 30,030 pcs. on the basis of

Rs. 260 to Rs. 325; Purneah-Kissenganj 11,560 pcs. on the basis of Rs. 270 to Rs. 290; Muzafferpore-Samastipur-Darbhanga-Pakur 28,100 pcs. on the basis of Rs. 260 to Rs. 290.

Bazar Stocks

(13th April, 1953)

Cowhides:—Wet salted 1,59,000 pcs.
Goatskins:—Wet salted (Daisee, Killed) 58,500 pcs.; Assam-Dinajpur-Murshidabad 54,000 pcs.; Muzafferpore-Samastipur-Patna-Pakur-Purneah-Kissenganj 1,16,500 pcs.

SUGAR MARKET REVIEW

During the week ended 14th April, ex-Kantapur ready delivery rates for new sugar were Rs. 28-9 a maund for ordinary grain and Rs. 30-12 a maund for big grain. The price of old sugar ordinary grain ranged between Rs. 27-8 and Rs. 28 a maund. Stocks amounted to 90,000 bags and arrivals were 4,000 bags daily. Sales averaged 3,000 bags in the local market and 12,000 bags were sold during the week to South India. Ex-mill delivery rates were Rs. 27 to Rs. 28-8 a maund and the tone of the market was strong. There has been a good demand from South India for ready and May delivery.

WEEKLY SHELLAC MARKET REPORT

During the week ended 13th April the market remained quiet throughout the week and a small business passed. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 88 to Rs. 90 value.
Pure Buttonlac	Rs. 83 done & buyers.
Lemon No. 1 Shellac	Rs. 82 to Rs. 83 done & buyers.
Lemon No. 2 Shellac	Rs. 77 to Rs. 78 done & buyers.
F. O. Std. 1 Shellac	Rs. 73 done & buyers.
Pure TN Shellac	Rs. 68 to Rs. 70 basis done & buyers.
4% T.N. Shellac	Rs. 60 value.
No. 1 Kusmi Seedlac	Rs. 80 to Rs. 82 value.
No. 2 Kusmi Seedlac	Rs. 73 to Rs. 75 value.
Fine Bysaky Seedlac (Manghum)	Rs. 70 done.
Fine Bysaky Seedlac (C.P.)	Rs. 62 to Rs. 63 done & buyers.
Ordinary Bysaky Seedlac (C.P.) under	Rs. 58 to Rs. 60 done & buyers.
Kireelac	Rs. 27-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 54 to Rs. 55 done & buyers.

Shipments during April until the 10th were 4618 packages

Commodity Markets

THE TREND OF COMMODITY
PRICES

PEACE TALKS LOWER VALUES

DURING the past fortnight most commodity prices in markets throughout the world have declined. Although there had been signs already this year of declining values—there was a slight pick-up early in March—the movement has been accentuated by the brighter prospects of peace in Korea. Practically all commodities have been affected by a reduction in business and the consequent fall in prices, though the decline has been most noticeable in the prices of base metals and rubber. During the past few days there have been signs of a slight recovery in world commodity markets. This results, in all probability, from the fact that the immediate reaction to the improved international situation was unduly pessimistic.

Since the end of March the price of tin in London has fallen from £942 to £800 per ton, lead has shed nearly £8 to £85-17-6 per ton and zinc has lost nearly £4 to £74-15 per ton. In the same period rubber has lost 1d per lb to 1s 8d. The heavy fall in the price of tin compared with other base metals can be ascribed partly to the fact that whereas the prices of lead and zinc had already fallen below pre-Korean levels, tin was still about £350 above the pre-Korean price. Added to this, the news that the American Reconstruction Finance Corporation, which has been absorbing much of the world's output, is to go out of business has had a depressing effect on the market.

Responsible for the fall in prices of base metals generally is the knowledge that U.S. stockpiling is bound to be reduced since that country already has a sufficient supply of these metals to face a war emergency without fear. Yet, as the Financial Times points out, despite the slowing down of stockpiling, consumption of lead and zinc is likely to increase in the long term, and in particular, U.S. demand for zinc may improve this year compared to 1952, when it was adversely affected by the steel strike. At present copper prices in the United Kingdom have not reflected the recent trends in the international sphere since the metal is under control, though they may be expected to do so when controls are relaxed. Copper prices in the U.S. have eased slightly and the Government has announced that it will make no new purchases for the national stockpile at present.

The decline in rubber prices in the last fortnight reflects the impact of the Korean talks on a market that was already weakening because of the cessation of U.S. stockpiling. Although there has been no official announcement to this effect, market circles believe that already the U.S. has stopped stockpiling rubber, except for the purpose of rotating stocks. This will leave an estimated 100,000 tons overhanging the market in 1953; not an excessively large amount when compared to the present world consumption of approximately 1.6 million tons. At the present price of about 1s 8d per lb natural rubber is very competitive with the synthetic product.

FIBRES RELATIVELY STEADY

Among other commodities, industrial and apparel fibres have been little affected by the improved international situation. Wool remains firm at the highest level since 1951. Cotton, which is already close to the U.S. support price, has been only slightly affected by the decline in the commodity markets in general. Prices of the industrial fibres—sisal and jute—have fallen but this is attributable to factors other than the international situation. The general tendency in oils and fats has been easier. Most prices are now back to pre-Korean levels though corn is dearer now than it was then. Most foodstuffs have been slightly affected.

Commodity prices in India have followed the general pattern of other world markets. The Calcutta metals market was affected both by the international situation and the steep fall of prices in London: prices of lead, zinc and copper were quoted lower. The cotton market in Bombay was affected initially although there have since been signs of a recovery. To judge from the present trend of tea auctions there is not likely to be any easing in prices, particularly with the recent renewal of demand. After initial gains despite the peace news, the shellac market has now returned to the level of about three weeks ago.

INDIAN AND PAKISTANI WOOL
SALES AT LIVERPOOL

The second series of Auctions for the year was held at Liverpool from the 10th to 12th March, 1953, with a total offering of 11,012 bales (9,129 bales from India, 1,883 bales from Pakistan). Of these 5,894 bales (4,991 bales from India, 903 bales from Pakistan) have been sold to date, leaving 5,118 bales held over. Of the quantity sold it is estimated that the British Manufacturers secured 4,859 bales and the Continent 1,055 bales. 262 bales in stock in Liverpool were not offered. During the week prior to the Auctions, 162 bales were sold of which the Continent secured 56 bales.

There was a good attendance of British and Continental buyers and, while America, showed some interest, their ideas were below market level.

WHOLESALE PRICE INDEX
RISIN IN 1952-53

The official wholesale price index (year ended August 1939 as 100) recorded a fall of 0.4 percent to 385.0 during the week ended 28th March, 1953, as compared with 386.6 (revised) for the previous week. Compared to the corresponding weeks of last month and a year ago the index was higher by 0.5 and 1.8 percent respectively. The average for March 1953 stood at 385.2 as compared with 381.5 for the previous month and 377.5 for March, 1952. The financial year average for 1952-53 came to 380.6 as compared with 434.6 for 1951-52.

During the week under review, Foodstuffs declined to 0.8 percent to 362.6 (revised) for the previous week, because of decreases in the prices of gram (+1.3%) and jowar (+1.1%). The index for Industrial Raw Materials also fell by 0.6 percent to 455.7 against 458.3 (revised) for the previous week, as a result of lower prices of mustard seed at Kanpur (-12%), linseed (-7%), castorseed (-6%), Umra cotton at Amravati (-4%), cotton seed (-3%), copra and groundnuts (-2% each). Prices of Karungani cotton at Tirupur (-6%), manganese ore and raw hides (+3% each) and rapeseed in Calcutta (+2%), however, advanced during the week.

The index for the Semi-Manufactures group moved down by 0.4 percent to 350.5. Items noticeably varying during the week were: mustard oil at Kanpur (-10%), in Calcutta (-4%) and at Patna (+4%), gingelly cake (-6%), linseed oil (-4%), real Alapat coir yarn (+2%) and coconut cake (-3%). In spite of a fall of 6 percent in the prices of tyres and tubes, the index for Manufactures recorded a slight rise from 369.2 to 369.4 as a result of advances in jute manufactures and glass (+1% each). Increases in the prices of black pepper (+5%), cashewnuts (+3%) and turmeric (+2%), raised the Miscellaneous group index to 185.5 as compared with 184.2 (revised) for the previous week. Prices of chilies, however, fell by 5 percent during the period under review.

LONDON INSURANCE LETTER
BETTER TERMS: HIGHER DIVIDENDS

By Air Mail

INSURANCE company chairmen have pointed out this year that uncommonly favourable terms can now be offered on life policies. Favourable mortality experience is one reason; but the rise in the rate of interest on funds invested since the new monetary policy took effect late in 1951, and the rise in industrial dividends which has been observable more recently, have also played a part. Some of the biggest offices are also raising their dividends this year. Notably, the Prudential and the Pearl have shared between policyholders and shareholders the benefits of favourable conditions.

It is now possible to see a general picture of the insurance year, though not all results are available, and though experiences seem to have varied more widely than usual. New life business was, on the whole, larger than in 1951. Premiums, incomes of life and accident departments were increased; but so, too, were claims in these departments. The marine departments benefited from higher rates; but, again, they had to face heavy marine losses. Even the benefits of the increase in investment income were nullified until recently by the depreciation of investment portfolios.

Capital for Overseas

Insurance funds are invested mostly in the higher-yielding Government securities and in industrial prior-charges and ordinary shares. They are an essential and an increasingly important element in the nation's capital, valuable in these times of inadequate saving both to the Government and to developing industry. British insurance funds are not normally so conspicuous in the development of resources overseas.

Special interest is attached to the new British Newfoundland Corporation Ltd., formed to explore and exploit the resources of Newfoundland and Labrador. The foundation members of the syndicate which backs it include two leading assurance companies, Prudential and Alliance, together with merchant banking houses and industrial and trading companies. The aggregate resources of the members of the syndicate must be larger than any that have backed any comparable venture in the past. The Corporation's declared commitments are not burdensome, but it is obvious that an enterprise of this character can involve large-scale investment when it tackles the task of actual development. It is interesting to speculate whether the insurance companies, whose free resources are probably the largest in the group (and other insurance companies may join later), will commit themselves deeply in such a venture, whose purpose is to open up undeveloped territory.

Another creation—bigger and broader—of the past month is the Commonwealth Development Finance Company. The insurance companies are not subscribing to its initial capital, but it is intended to attract their resources for specific projects in the Commonwealth. The problem of making British capital available for Commonwealth development may thus be easier than it has hitherto appeared. But the insurance companies' investment policies will have to undergo further modification if a substantial part of their resources is to be invested in primary-producing activities.

The Rise in Hull Rates

Lloyd's underwriters and the marine insurance companies imposed in March a surcharge of 10 percent on all hull insurance rates on vessels in regular commission, excepting inland watercraft, trawlers (even if members of a fleet), and yachts. For the first time since the war, an addition of 10 percent was made two years ago, but the cost of claims continued to rise, and the exceptionally heavy losses of the past few months turned the scale in favour of a further increase in rates. It might appear from the pessimistic forecasts of costs this year that yet a further increase would have to be anticipated, but the market believes that rates have now reached their peak for this era. The main elements in costs, the price of labour and the price of steel, are now settling; and the decline of freight rates, though it does not affect the level of repair costs, does indirectly affect losses, insofar as the less seaworthy ships, brought back into service to take advantage of the boom, are withdrawn and laid up again.

Flood Losses

Compensation is being made available, both by the Government and through the special relief fund, to individual sufferers from the great floods of February. But the Home Secretary has stated it as the Government's view that private limited-liability companies should not be compensated for losses which could have been covered by insurance. "If they did not insure," he said, "they were taking a calculated commercial risk, and they must bear responsibility for their decision." The Home Secretary suggested that the figure of £20 million for losses covered by insurance, which was mentioned in insurance circles, was an overestimate.

The question was raised whether storm or tempest had been decided as the cause of the catastrophe. The Home Secretary replied that the insurers had accepted liability in many cases, and that in cases of dispute such matters could be decided under the arbitration clause of the policy or be taken to court. The Government was satisfied that the insurance interests had acted and would act in this matter "in accordance with their high reputation and tradition."

It has long been appreciated by industrialists that the cost of paint per gallon is by no means the best guide to the economics of painting. Production and maintenance costs merit careful study by all who aim to improve quality and efficiency.

I. C. I. have always advocated a realistic approach to this problem and in furthering this aim have recently produced two booklets entitled "Improving Paintshop Productivity" and "Better Housekeeping in the Paintshop"

SALES TAX ON SUPPLY OF CLUB REFRESHMENTS

MORE TROUBLE WITH THE DEFINITION OF "SALE"

(FROM OUR LEGAL CORRESPONDENT)

HERE is a question of considerable interest to club secretaries and managements. Is a levy of sales tax on supply of refreshments by the club to members illegal?

The Cosmopolitan Club, Madras, is a club run rather on the same lines as the famous Eccentric Club, London, and its Articles and Memorandum of Association are said to be based on those of the latter club, and are those of a social or members' club not conducted for gain or profit but with the objective of providing amenities to its members for meeting in the club premises, for recreative and social activities "varying", as Mack J., dryly put it later in the Madras High Court, "from strenuous games to pastimes of less vigorous character, for social intercourse, for interchange of ideas on a variety of topics serious and light, ranging from ethics and philosophy to the prattle of idle gossip. I can take judicial notice of the necessity to sustain and refresh members of a club indulging in these generally wholesome and recreative activities by a supply of refreshments both liquid and solid."

The sales tax authorities also took official notice of these necessary and wholesome refreshments by demanding sales tax on what they termed the sales thereof. The club for some time—from 1939 in fact—paid the tax without demur. But in 1951 when its membership had reached a total of about 1,200 the sales tax had grown from an insignificant levy of a few rupees to a considerable sum and the committee considered the matter and took legal advice

as to whether the tax was legally in order; and being advised that it was not, the club, by its Honorary Secretary, applied for a writ of mandamus to direct the authorities to forbear from levying and collecting the tax in future, claiming that liquids and solids were supplied to members as an amenity and not on any commercial basis.

The simple point for determination was whether the supply of refreshments by the club to its members, charging a fixed rate, constituted in law a sale.

The club had been registered under Section 26 of the Companies Act, though it did not require such registration. Section 26 makes special provision for associations such as a club of this kind, formed for promoting commerce, art, science, religion, charity or any other useful object, which club applies its profits in promoting its objects, being registered under the Companies Act. Such registration can only be ordered if the Central Government is satisfied that the club is an association formed not for profit. The club once so registered has the privilege of limited liability without the addition of the word "limited" to its name; and registration under Section 26 is *prima facie* proof that the club is not an association for profit. The Cosmopolitan Club, as has been stated, was so registered.

Now let us consider some of the aspects of such a club as this, the prototype of many another throughout India. "It is", said Mack J., in the Madras High Court, "a society of persons each of whom contributes funds out of which the club expenses are met. Such contribution is made by means of entrance fees or monthly or annual subscriptions and other charges paid by members. It is not recognised as having any legal existence apart from the members of which it is composed. All the members... are on an equal footing with an equal interest in the club and in its property."

The President, Honorary Secretary, Treasurer and so on are all unpaid officers, nor would, in effect, a paid full-time Secretary divest such a club of its distinctive features of a non-profit-making members' club. Each member has an equal legal interest not only in the club property but also in the service of club servants. The club, of course, its cooks. It purchases on behalf of the club and for the consumption of its members commodities which are converted and cooked into edible food and supplied to members when required. If a club has, say, 500 members, each member would have a 1/500th share in the service of the club cook, waiters and other servants. When he is supplied cigarettes, tennis balls and so on as he needs them, for use he is charged on his bill a fixed rate determined by the cost thereof including sales tax already paid, cost of establishment and so on. The question of profit does not enter into the question of supply.

Bearing in mind the above very instructive observations, we can now consider the position as refreshments served to members of such a club as articles already paid.

There seems little doubt that the intention of the legislature in enacting the (Madras) Sales Tax Act was to make such a levy legal; and indeed the his way to try to make it clear that clubs come under which every dealer has to pay for each year 2(b) defines a "dealer" as "any person who carries on the business of buying or selling goods", with the following explanation which, at first sight, possibly the reason why this particular club, from accepted the position that it was liable and paid important explanation says in so many words that a co-operative society, a club, a firm or any association which sells goods to its members is a dealer within the meaning of this clause.

Apart from its practical importance, this case should interest the reader who prides himself on his knowledge of the meaning of words and phrases in the English language; and, if he applies his knowledge, bearing in mind that this was a club and not a shop, he may come to the right conclusion. The words and phrases which he will consider are "sale", "transfer of property" and "business".

The word "sale" is actually defined in the Act [Section 2(h)], so we need not concern ourselves with its dictionary meaning. "Sale with all its grammatical variations and cognate expressions means every transfer of property in goods by one person to another in the course of trade or business for cash or for deferred payment or other valuable consideration." No doubt in the colloquial free and easy way in which we make use of everyday words, if I am supplied with a bottle of beer in my secretary the amount charged on the bill, there has been a sale to me of that bottle of beer.

But consider the seventy-year-old case, *Graff v. Evans*, one of several English decisions on which the Madras High Court relied. In the year 1882 the manager of a *bona fide* members' club was prosecuted for selling by retail intoxicating liquors without a licence. The Court held that the transaction was not a sale because the club member, Mr. Foster, to whom the manager, Mr. Graff, supplied the liquor was an owner of the property and was entitled to obtain the goods on payment of the fixed price. Presumably, my particular club share of the bottle of beer supplied to me. The involved in Graff's case further held that a sale could not in any event have been made for the price of goods sold and delivered. In another similar English case *Lush J.* held: "If there was a club whose members owned the liquors consumed, there was distribution as opposed to sale of those liquors no matter how the club was conducted."

Applying similar reasoning to the Sales Tax Act and the Cosmopolitan Club Mack J. said: "A sale of property in goods... I hold that the supply of refreshments in a members' club such as this, registered under Section 26 of the Companies Act, purchased out of club funds, is not a transfer of property from the club as such to a member."

"The second and more important and also, as it appears to me, a mandatory requirement is that the transfer of property must be in the course of trade or business. A members' club... does not do any trade or business in purchasing from outside the requirements of members and supplying the levy of sales tax on such supplies of refreshments by clubs to members must be held to be illegal." Judgment for the club. (*Cosmopolitan Club v. Deputy Commercial Tax Officer*).

Executive secretaries of chambers of foreign commerce in a number of countries have revived a pre-war organisation designed to foster trade between their countries and the United States. It was announced recently that the Foreign Commerce—was originally incorporated in 1920 but has been inactive since 1929. Incorporated in 1950 are 200 firms from chambers dealing with trade of the British Commonwealth, Austria, Italy, Indonesia, France,

Engineering and Transport

STANDARD VACUUM'S REFINERY PROJECT

THE progress of work on the Standard-Vacuum refinery under construction at Trombay is on schedule and India's first modern oil refinery should go into production as planned in 1954. Clearing and grading of the site was started in December of last year. An area of 280 acres, formerly covered with dense undergrowth and large trees, has been cleared and the area graded where the refinery process units are to be located. A number of the major foundations for the refinery units, which will have a crude capacity of 25,000 barrels per day, have been poured. This work has been accomplished in record time by employing modern earth moving machinery and over one thousand labourers. It is expected that the surface drainage ditches, roads and all underground work will be completed prior to the monsoon, thus permitting erection of vessels, towers, buildings, etc., to proceed during the rains.

A great deal of equipment such as pipe, reinforcing steel, erection machinery, etc., has already been delivered to the site and a warehouse is nearing completion for the storage of materials. A concrete batch plant dominates the skyline. It is equipped with conveyors, hoists and power-driven mixers capable of delivering 720 cu. yds. of concrete every twenty-four hours. This equipment will ensure uniform quality of the concrete required for the massive foundations. Work is already under way in the harbour determining rock formations on the harbour bottom for the installation of the salt water pump-house and 30 inch intake lines to the refinery area. This refinery consisting of the most modern processing equipment known to the industry will require over 24 million gallons of sea water for cooling each day. This volume is roughly equivalent to the fresh water requirements of a city of over one half a million people. It will be recalled that Standard-Vacuum was the first oil company to conclude an agreement with the Government of India for the erection of a modern refinery in India.

NEW BRITISH DIESEL ENGINE

The latest addition to the range of diesel engines produced by F. Perkins Ltd. of Peterborough, the R-6, will be shown in public for the first time at the Amsterdam Commercial Vehicle Exhibition on 23rd April. It will also be demonstrated at the Canadian International Trade Fair in Toronto in June and at other exhibitions at home and overseas during 1953. Announcing this on the occasion of his company's 21st anniversary, Mr. F. Perkins, Chairman, said the R-6 had been thoroughly tested over the last two years both at home and abroad and that it had emerged from these tests "most successfully."

The R-6, a six-cylinder unit with 41 in. stroke and 4 in. bore, has a 340 cubic inch piston displacement. The engine incorporates the Perkins patented "Aeroflow" system of combustion, as do the "P" and "L" series engines. The main and big end bearings are pre-finished and are replaceable in service without carrying out boring or scraping operations.

Instantaneous Starting

Press-button cold starting is instantaneous by means of two series-connected 12-volt batteries, and for exceptionally cold conditions, heaters are incorporated in the induction manifolds. Wherever possible aluminium die castings are used. Particular attention has been paid to cleanliness in respect of air, lubricating oil and fuel. Perkins' new factory at Peterborough, formally opened in 1947, produced its 100,000th multi-cylinder diesel engine last September. Over 70 percent of the output has been exported.

DUTCH ROAD ROLLING MACHINE

A company at Tilburg (Holland) manufactures a road rolling machine with two instead of one roller in front. As the distance between these rollers is variable, the distribution of the pressure of the rollers can be regulated exactly as required. One of the advantages is the promotion of creeping of the material to be compacted from high and firm to low and soft patches. Waving of the road carpet is, moreover, impossible. The working capacity of this rolling machine is very high: about 200 sq. m. (240 sq. yds.) per hour for asphaltic bitumen and about 100 sq. m. (120 sq. yds.) for porphyry and chippings and fines (with or without loam). The machine can also be used for clinker paving (capacity 100-150 sq. m. = 120-180 sq. yds. per hour).

A special construction enables the two front rollers always to follow precisely the bend of the road, irrespective of the position of the front rollers in relation to each other. In addition, for rolling a road carpet with a round camber the rear wheels can be so adjusted as not to leave traces in the surface. This obviates the necessity of zigzag and crosswise rolling. This 10-ton rolling machine not only rolls more smoothly, but also exerts a greater pressure than a traditional type of machine of the same weight, because, with the maximum distance between the two rollers, 75 percent of the total weight can be brought to bear on the second roller. The total load can be increased to about 13 tons by using water ballast in the tank. The new rolling machine, which has already been exported to Brazil, has been patented in many countries.

CLOSURE OF OOREGUM POSTPONED

John Taylor & Sons (India) Ltd., the Managers of the Ooregum Gold Mining Co. of India (KGF) Ltd., announce that as a result of the marked falling off in the output of gold from the Mine since August, 1952, and the decline in the price of gold, losses are being incurred by the Ooregum KGF Company. In consequence the Directors have regretfully decided to stop working the Ooregum Mine.

It was proposed to close the Mine on 23rd March, 1953. As, however, the closure will affect about 3,600 employees and their families, the Government of Mysore and the Government of India have advised the Directors that a Committee is being appointed in this connection and have suggested that the Mine may be kept working to allow time for the Committee to meet and make its recommendations. In deference to this advice the Directors have agreed to postpone the date of closure to 31st May, 1953, and in response to an invitation they have nominated a representative to the Committee.

T.W.A. RECORD REVENUE

Trans World Airlines Inc., last year duplicated its 1951 adjusted net earnings of \$2.30 per share while achieving the highest gross revenue in TWA history, a total of \$160,702,790 or 13 percent greater than the previous year. Chairman Warren Lee Pierson and President Ralph S. Damon announced

in their annual report to stockholders. TWA showed its biggest gain in Sky Tourist passengers, a field in which it leads all other airlines. Total Sky Tourist passengers increased 125 percent in 1952 to 420,480. Although international Sky Tourist service did not become available until 1st May, 1952, more than 38,000 passengers took advantage of this low cost over-ocean transportation. In scheduled air cargo service, TWA increased its domestic ton mileage 4.3 percent and international 7.5 percent.

What the Tariff Board says:-

"... We are satisfied that the quality of the indigenous product does not compare unfavourably with the imported ones...."

MR. BUTLER'S CALCULATED RISK

THE DANGERS OF A BUDGET THAT EVERYBODY LIKES

THE British budget concludes a series of statements on the economic position, and, customarily, it outlines the Government's financial policy for the coming year. The Economic Survey, the White Paper on the national income and expenditure, and the White Paper on the balance of payments, had prepared the way for a "soft" budget. They had shown a recovery in the national fortunes such as no one could have reasonably predicted a year ago. The "soft" budget duly materialised. Curiously, financial opinion in London is unsatisfied. It is difficult to find fault with a budget which relieves the burden of taxation under which the community, in particular the business community, has been groaning since the war; a budget which deliberately stimulates the consumer trades, in particular the products of electrical and mechanical engineering, whose depression has been causing anxiety; a budget which encourages industrial investment, in particular to plan ahead for new machinery. Yet there is necessarily something wrong with a budget that almost everybody likes. The economists were not unanimous about the need for continuing austerity, but they offered no two opinions on the need to put exports first. Mr. Butler verbally emphasised the paramount importance of increasing exports, but his budget did nothing to promote the increase directly.

It is impossible to guess whether Mr. Butler was influenced at the last by the conciliatory attitude of Moscow and Peking and by Wall Street's apprehensions of peace. It does appear that the latest British budget is more lenient than circumstances warrant, because fear of a slump has gripped the heart of the politicians—especially those, the Republicans in America and the Conservatives in Britain, who were popularly blamed for the depressions between the great wars. Mr. Butler's budget for 1952-53 attempted to achieve an approximate balance of total income and expenditure, including expenditure on capital items. In the event, only a small proportion of the capital spending was covered by revenue, and the resulting overall deficit was as much as £436 million. For many months, as the deficit visibly grew, the City was warning that inflation would reassert itself in the economy. But the forces of deflation were too strong. The Chancellor must afterwards have thought with dread of the depression that might have occurred if the excess of governmental spending had not checked it.

This time Mr. Butler has not even attempted to balance his accounts, including capital items. To meet a prospective capital deficit of some £550 million he shows an ordinary surplus of only about £110 million. Many people have urged that the Government's capital spending should no longer be financed out of current revenue: the practice is comparatively recent and may be regarded as temporary. Yet this bold deficit has caused some concern in London. It was mainly the decline in commodity prices and in industrial activity that released enough capital last year to balance, in the private sector of the economy, the overspending of the public sector. It may be that prices are destined to decline further; but if primary prices continue to fall it will be necessary to reassess the whole financial position of the sterling area, whose dollar earnings will be in jeopardy. Further, the budget deliberately stimulates trade and investment, thus, it might be assumed, eliminating the surplus of saving over investment which has hitherto held inflation in check.

There is certainly an argument for stimulating home trade. Industrial production has been for a considerable time below the levels of a year previously. Industry can probably assert itself in the export markets more successfully if it is prospering and vigorous than if it is depressed. But, in the international setting, home trade can never be a substitute for export trade. The lowering of income tax may be well justified by the oppor-

tunities that it provides for industry to save more for investment; but the motive behind the lowering of purchase tax—to provide more home orders because home and export business together was not keeping industry fully employed—is more questionable. The constant reiteration of the need to export more is wearisome, and it is to be feared that many business men in Britain have ceased to heed it; they will be less interested now if they can garner a richer harvest in the home market. But increased exporting is in very truth essential, not only to the continuance of recovery but also to the maintenance of the recovery already achieved.

It is alarming to think what will happen if this easy-going policy makes the international exchange markets pause and question whether the foundations of sterling are as strong as they were. A substantial part of the impressive recovery in Britain's payments position last year was due simply to acceleration of payment of sums due, because the debtors believed that sterling was becoming dearer. A sharp relapse is possible if sterling debtors get the idea that by waiting a few months they will be able to buy sterling on more favourable terms. Such dangers must be constantly in the Chancellor's mind; and he has his credit policy at hand to combat them. Still, it is understandable that the City is a little apprehensive.

In a strictly financial sense, the budget's essential is the calculated overall deficit of £440 million. It has been the general (though not invariable) practice since the war to cover the capital spending of the public sector out of current revenue from taxes. Last year Mr. Butler attempted to maintain that policy—and, in the event, almost completely failed. This year he abandoned the attempt. Most of the Government's capital requirements will be financed by other means. The true deficit may be larger—by £100 million or more—in consequence of withdrawal of savings through governmental media. Last year's deficit was partly covered from such sources as the Exchange Act, which had £300 million available from sales of gold and dollars; but such special sources will not be available this year if the nation's financial position is consolidated. It may therefore be necessary to borrow much more this year than last year to cover a total deficit that is in itself rather smaller than that realised last year. Whereas about £200 million extra could be raised in the discount market last year without inflating a credit position that had turned deflationary on ordinary commercial account, the credit position will have to be watched more carefully in the current financial year if the stimulus that the budget has so far given to business is maintained.

It is assumed, therefore, that the Treasury will be raising capital in the long-term capital market on a substantial scale before long. Since the cost of the national debt has already increased disturbingly as a result of the rise in interest rates, the

market will doubtless be carefully "nursed" for the occasion. New borrowing will mean lower gilt-edged prices unless savings are forthcoming on a much larger scale than hitherto. It may even be necessary to raise interest rates and to restrict credit deliberately, to counteract the inflationary effects of deficit financing. Everything turns on the use to which industry and the public put the money which the Chancellor has left in their hands, money which is not really available for additional spending. Even conscientious investment of profits in new plant, however desirable for the health of British industry, may divert too much of the capital industries' output away from the export markets. On the consumers' side, the lowering of income tax and of purchase tax can be very damaging if it means merely more buying, more demand for imports and less surplus for exports. The most serious criticism of the budget is that it did what was entirely desirable, lightened the crushing burden of taxation, without doing what was really needed for the purpose, reduce expenditure substantially. It will inevitably weaken the payments position, and therefore, sterling, unless it increases production and puts new life into the export trade.

Eyebrows were raised in the City when the Economic Survey showed net company savings in 1952 at approximately £800 million; despite increased taxation, the increase on 1951 was as much as £640 million. It was suggested that personal saving had also increased last year. These factors certainly influenced the Chancellor in shaping his budget. One of the fundamental problems of the British economy, the inadequacy of saving, seemed already to have been under control last year. The elements, however, have not been clearly analysed. The decline in industrial production—despite recovery, production was still running about 2 1/2 percent below last year's levels in the early months of 1953—must have contributed substantially to statistical savings, while stocks cost less to finance.

It was evident from the Survey that the new monetary policy, though modified by the Government's failure to keep expenditure in line with revenue, was effective in 1952. What is significant is that the financial improvement did not really get a hold until the second rise in bank rate, in March last year, took effect. The contraction of the credit base by

that "sixpence off" will bring the improvement required in the short space of time the experiment may have to run before a renewal of inflation and a deterioration of the balance of payments alter the picture beyond recognition. However, to dwell on the risks of a gamble does not show that it was not worth making. It was, and Mr. Butler has brought the first breath of vigorous hope the British economy has felt since the war.

TEXTILE PRODUCTION CONTROLS

NOT ENOUGH DHOTIS, TOO MUCH LONG CLOTH

ONE of the textile industry's major complaints for some years has been that the Government asks it to produce certain varieties of cloth without being able to offer any assurance that they can be sold. As long as there was a serious shortage of cloth (that is, until last year) such directives were not oppressive because although the pattern of production was distorted, mills were fairly sure of being able to sell what they had been forced to produce. But last year an improvement in raw cotton supplies and labour relations enabled them to manufacture a record 4,600 million yards of cloth, with the result that supplies are now comparatively plentiful and markets are becoming increasingly competitive. Official controls over distribution have in the past year or so been rendered superfluous and have been steadily withdrawn. Not so the controls over production: official policies in the last six months have undermined the industry's efforts to face the problems of increasing competition by producing cloth of the sort the consumer needs and at a price he can afford to pay. Among the most serious was the decision to restrict, from December 1952, the mills' output of dhotis to 60 percent of their average for 1951-52; the decision was taken in response to a vigorous plea by the Madras Chief Minister, Mr. Rajagopalachari, that the Central Government assist handloom weavers by weakening the competitive capacity of mills. An additional excise duty of three pices per yard has also been imposed on all mill-made cloth, collections from which will be put into a fund to aid handloom weavers.

The Government has found it difficult to be consistent about dhoti production. Nearly three years ago it told mills and powerlooms to cut their output of dhotis, but the result was an acute shortage of supplies and high prices. The directive had to be accorded an unceremonious burial; the Government gradually passed from restriction to encouragement, and in July 1951 mills were ordered to reserve at least 50 percent of all looms of specified dimensions for the manufacture of dhotis and sarees, not less than 30 percent being for dhotis. Production recovered and in April last year the reservation of looms was relaxed from 50 percent to 40 percent; this minimum was abolished six months later. Thus, having spent most of 1952 ensuring that mills produced enough dhotis, by the end of the year the Government had allowed itself to be persuaded that restrictionism was necessary: mills must produce less so that the handloom weavers might sell more.
