A PESSIMISTIC ANALYSIS OF THE INDIAN NATIONAL PLAN

AN ECONOMIST ON THE DANGERS OF INFLATION

"ARE economists human?" asked the London Economist in the title of a recent editorial. Carlyle, when he dubbed their specialism "the dismal science", evidently did not think so, but after some necessary reservations the journal that bears the name of the tribe decided that they were. However, Dr. V. K. R. V. Rao, who is their most eminent theoretical representative in this country, has thrown the whole matter into doubt in a speech he made before the Indian Commerce Conference, an annual conclave of economists held under the auspices of the Delhi School of Economics, on 30th December—as dismal a speech as ever quenched the natural human optimism that finds expression in the dawning of a new year. Speaking from the mantle of gloom that the popular imagination associates with professional economists, Dr. Rao discussed the probable fate of the five year plan, and the accent of pessimism that ran throughout his discourse contrasted darkly with the cheerful optimism that characterised the speech of the Prime Minister over AIR on New Year's Eve. Mr. Nehru would readily admit that by no definition of the term could he be classed with the economists and his radio talk was an excellent example of the imaginative eloquence that marks all his prepared speeches. He described the five year plan as "a great liberating force for the energies of the nation" that would lead eventually to "a new social order free from exploitation and poverty and unemployment and social injustice". Dr. Rao on the other hand forecast in effect that the plan would come to a bad end, and that to the extent that progress was made towards its realisation it would issue in the formation of a society different from what the planners have led us to expect.

Even granting that Dr. Rao is a distinguished economist, it might be asked, are his melancholy opinions of such great importance? However inhuman in their tendency to take the miserable view of a situation, economists are notoriously human in their readiness to disagree with one another, and a powerful antidote to their pessimism has been an observation concerning the most famous of them in modern times: "Any six economists have seven different opinions, and two of them are Keynes's". But the reason that Dr. Rao's gloomy excursus is worth pondering is just that he accepts many if not most of the assumptions of the five-year-planners and subscribes to the whole ideology of national planning in a way that believers in the virtues of the free market could not. He accepts the planners' estimates of what is to be done and agrees generally with them on the ways to go about doing it—but finds it difficult to believe that it will be possible to reach their goals in the time allowed without fundamentally revising the whole structure of Indian society. The revisions he thinks necessary are all in the direction of totalitarian centralisation, more controls and more government intervention, more discipline and more austerity—a word, less freedom. This prospect does not seem to dismay Dr. Rao particularly but there will be many people (including perhaps some of the planners themselves) who will feel that if his forecasts are right then some fundamental reconsideration of aims and ambitions is called for.

Dr. Rao begins by assuming that the one unalterable plank in the five year plan is that Rs. 2,069 crores have to be spent in certain ways by 31st March, 1956. At the outset this basic assumption, in which his whole case depends, might be questioned for neither Dr. Rao or the planners have considered whether it would be possible to spend so much money even supposing that it could be raised, at least to spend it in the ways prescribed by the plan. Spending very large sums of money (at which admittedly Governments in general are rather expert) on specified classes of goods presupposes that those goods will be available and that the administrative expertise required to supervise spending operations will also be available. In so far as the goods in question are to be supplied from abroad and the administrators are to fulfil certain standards of competency, these are very

large assumptions, especially in a backward country situated in a world of unrest and economic dislocation. Further, it has been hinted in Delhi that the planners themselves do not attach complete sanctity to the figure of Rs. 2,069 crores because it includes expenditure on projects whose inclusion in the plan was demanded by States whom it would have been impolitic to offend by rejecting their pet schemes. But waiving these reservations, let us accept Dr. Rao's view that the problem is to spend all this money before March 1956 and then follow his arguments about the chances of raising it.

The sources of development expenditure, according to the plan, are: Rs. 160 crores from Central Government surpluses; Rs. 408 crores from State Government surpluses; Rs. 170 crores from railway surpluses; Rs. 115 crores from public loans; Rs. 270 crores from small savings and the like; Rs. 135 crores from deposits, funds and other miscellaneous sources; Rs. 156 crores from foreign aid; Rs. 290 crores from deficit financing; and Rs. 365 crores at present uncovered. Grand total Rs. 2,069 crores. The only explanation these figures require is that the Rs. 156 crores credited to foreign aid has already been received and the Rs. 365 crores described as uncovered will, it is hoped, be provided by further foreign aid to come.

Taking these figures seriatim, Dr. Rao says that the Rs. 160 crores to come from Central surpluses has in fact largely been raised thanks to the Korean war, the trade boom and the fat yield from export duties so there is no need to worry about that head. But the possibility of the States achieving their allotted surpluses is remote and after discussing the matter Dr. Rao concludes: "I am convinced that the State Governments will not be in a position to find the Rs. 408 crores which they are expected to do as public savings from revenues, and I venture the estimate that there will be a shortfall of not less than Rs. 100 crores, probably more". With the loan market as good as dead Dr. Rao sees no chance of raising all the Rs. 115 crores to be sought in this quarter and he feels that the target for small savings is also too high. He predicts a shortfall of "Rs. 50 crores, probably more".

The expectation that future foreign aid (in addition to the Rs. 156 crores already in hand) will amount to anything like Rs. 365 crores Dr. Rao regards as quite illusory and for this state of affairs he seems to blame Mr. Nehru's foreign policy which, combined with the change of Government in the United States, minimises the chances of obtaining assistance on the required scale from the principal source of investment finance in the modern world. He apparently excludes the possibility of India adjusting her foreign policy in order to make the negotiation of foreign loans any easier and puts the ceiling on this source of income at Rs. 150 crores.

Totting up his deficits therefore, Dr. Rao finds that the total revenue that can be confidently expected for development purposes between now and 1956 is Rs. 1,414 crores—against projected outlays of Rs. 2,069 crores, leaving a gap to be met by deficit financing not of Rs. 290 crores but of Rs. 655 crores. This staggering total will appal those who were already uneasy about the wisdom of letting loose inflationary forces to the extent of the mere Rs. 290 crores mentioned in the official plan. But Dr. Rao, with the gloomy logic of the dismal science, puts his alternative plainly: either the Government of India is prepared to take the immense risk of putting into circulation Rs. 655 crores of inflationary credit or "the plan will have to be cut and trimmed" because "it is crystal clear that the national effort involved in achieving the required capital formation may well prove beyond the capacity of the country".

Any suggestion at this stage that the plan be "trimmed and cut" would of course be unseasonable and in most discussions so far the complaint has been that sights have not been set high enough; far from excisions being made from the plan, pressure is still being put on the Planning

Commission to include projects previously rejected. Dr. Rao accordingly does not dwell on this side of the case but goes straight ahead to show what will be entailed by deficit financing to the extent he argues is necessary. One clarification is called for before the rôle of inflation in the five year plan can be intelligently discussed: that is, that even if income exactly matched expenditure the plan would still be in the short run highly inflationary because investment would be channelled into large schemes that would not yield goods to absorb the purchasing power generated as wages paid during their construction. There has been a tendency to suppose that only what is clearly labelled "deficit financing", whether the sum be Rs. 290 crores or Rs. 655 crores, is the full measure of the inflationary effect of the plan; but this is far from true. What is explicitly described as deficit financing is in fact the extra inflationary force super-added to that excess of purchasing power over consumable goods which is inseparable from any extensive long-term capital investment. The full risks of deficit financing can now be better imagined.

The danger is graphically described by Dr. Rao in these terms: "If nothing is done to counter or otherwise neutralise the inflationary effects of deficit financing, prices will rise and with them costs will rise in turn; the rise in costs will increase the financial requirements of the plan and that will mean a greater volume of deficit financing. This in its turn will lead to a further rise in prices and therefore in costs. And so the process will continue *ad infinitum* till inflation destroys the very basis of planning". To meet this danger Dr. Rao prescribes a system of controls and administrative interventions which he admits few more experienced Governments have been able to undertake successfully. Money and credit controls will need to be enforced, including quality control over bank lending; more rigid capital issues control will have to be introduced; fiscal controls will need to be increased and import controls stringently exercised; exchange controls will have to be continued, presumably regardless of the views of the rest of the sterling area; and more vigorous physical controls will be inevitable.

Apart from this return to a system of controls that the country is now glad to have been partly relieved of, Dr. Rao goes on to call for an extension of the State sector in industry and commerce in order to drain off the surpluses created there at the point of origin; this includes State farms and the compulsory levy of foodgrains to feed urban labour. It also extends to State trading, beginning "with the important articles of exports and imports", and to State ventures into commercial banking, if necessary by taking over existing banks. It involves an increase in taxation which must be accompanied by Spartan reform of the civil service, a substantial rise in interest rates and energetic support of the co-operative movement. At this stage most people will have recognised that what Dr. Rao is in fact saying is that if the plan as it stands is to be realised, India will have to undertake a rigid socialisation of her economy more extensive than anything yet accepted by a democracy and which in many respects differs little from frank Stalinism. It is notable that he sees "Anglo-Saxon style democracy" as a positive obstacle to this process—"our task in India is all the more difficult because (of) the self-imposed experiment in parliamentary democracy"—and though of course he nowhere suggests that the experiment be abrogated he on several occasions returns to the theme of the disabilities imposed by political liberalism on full-scale planning. This implied opposition of "wealth or freedom" we believe to be a false dichotomy, for it is exactly free societies (where freedom includes largely free markets) that generate most wealth, and it will be the function of private enterprise in India during the five year plan to demonstrate that truth, even to the planners who doubt it. But if Dr. Rao is wrong in implying that the plan puts before India the choice: either inflation plus rigid controls, or freedom and limited achievement, he has nonetheless done a service in showing that many of the facile assumptions with which the plan is now received are questionable and that its execution will put the country under the necessity of facing up to problems whose magnitude is not yet suspected. Even the most dismal economists have their uses.

BRITAIN'S YEAR OF TRANSITION

PROGRESS TOWARD SOLVENCY

EVEN the critics of the British Government—of all shades of political opinion—admit that Britain and the sterling area made remarkable progress in 1952. The financial situation seemed almost desperate in the later months of 1951, but it was at least stabilised a year later. The question undecided at the end of the year was whether the recovery was fundamental or due to fortuitous and temporary causes. The struggle in 1952 was to achieve solvency, and it was, indeed, achieved, but only by a drastic reduction of the import bill. The value of imports in the 11 months to November was £3,218 million, compared with £3,603 million in the same period of 1951. Britain seriously disturbed the export trade of various European countries, especially France and Italy, in the process of balancing her payments. But an important element in this economy of imports was the lowering of import prices. The benefit to Britain of the improvement in the terms of trade—for export prices in general were steady while import prices were declining—has not always been sufficiently stressed. Just as the preceding crisis was aggravated by the rise in import prices—without a corresponding rise in export prices—so the recovery has been assisted by price movements which are not directly influenced by British policy.

The task for 1953 is to achieve a substantial surplus on external account. The objective for the year mid-1953 to mid-1954 is a surplus of £300 million to £350 million, to be achieved not by reducing imports but by expanding exports outside of the sterling area. If the trend of the terms of trade continues in Britain's favour the task may be easier than it looks, for the required surplus can be realised with only a moderate expansion of exports. But some authorities believe that the high rate of industrial activity in the United States will raise prices of raw materials and foods above the comparatively low levels which many of them have lately reached—with consequent benefit to the outside sterling area's dollar earnings but inconvenient effects for the United Kingdom. The principal uncertainty, even anxiety, for 1953 is the ability of Britain's export industries to hold and extend their markets. Official policy has shifted since the outbreak of war in Korea, first in favour of exporting consumer goods (because material shortages and the growing needs of rearmament would reduce the export surpluses of the engineering industries), then in favour of exporting capital goods (because it was evident that the export markets, having recovered from the fear of general scarcity, were not assured buyers of consumer goods). Metals and metal-based goods (mainly capital equipment) will soon make up a half of Britain's export trade, compared with not much more than a third before the war, when the total volume of the export trade was much smaller. British industry has made a real effort in 1952 to adapt itself to the export markets' needs, knowing that competition will be keener in 1953. But keen competition implies a lowering of many prices; and at reduced prices it will be more difficult to expand the total earnings of the export trades. Moreover, much of the equipment that Britain will have to export to attain the financial objectives is equipment that British industry itself needs. The surplus to be made available for capital export must be a real surplus, otherwise industry will run into serious difficulties later by failing to maintain its physical assets in an efficient and competitive state.

The new monetary policy, which raised the cost of credit and more firmly controlled its use, was already taking effect at the beginning of 1952. It has certainly helped to restrict capital expenditure at home, but the long-term effects of that restriction are not all beneficial. The new policy has not so far provided more capital by promoting saving. In this sense, particularly, 1952 was transitional: it checked the deterioration of the country's economic position, but it did not consolidate the basis of recovery. In 1953 the Government will have to grasp the problem of internal finance, otherwise the problem of external finance will have been solved only temporarily. The new monetary policy has been partly frustrated by the Government's own failure to balance its income and expenditure. There were murmurs of criticism among economists when the Chancellor of the Exchequer refused last March to budget for a deflationary surplus; and what has in fact appeared is a huge inflationary deficit. Well on the way to £1,000 million before the end of the calendar year, it left no hope that a balance could be achieved in the final quarter of the Government's financial year. It will be in framing the next budget that the Government, pressed to make concessions to individuals and businesses whose prosperity has suffered in the period of adjustment, will need all its moral courage. Governmental spending will have to be drastically reduced; personal spending will have to be discouraged; saving, by companies and by individuals, will have to be promoted, with the aid of taxation

policies which cannot be generally popular. Only by sound finance can the country raise production, which during most of 1952 was lower than a year earlier, and reduce costs to truly competitive levels. Only by rigid economy can conditions be created for convertibility of sterling. Higher living standards are still some distance in the future.

CURRENT COIN

I.C.C. in Asia.—The extension of the International Chamber of Commerce's activities to Asia and the Far East is an event of major importance, for this organisation has done much solid work at the unofficial level in Europe and the Americas, and its emphasis on private initiative among business men and friendly co-operation among enterprises in various countries will be a refreshing spirit in India where appeals to Government always precede attempts at unofficial settlement of difficulties. Mr. S. P. Jain's opening address struck just the right note for he succeeded in describing the position of Indian industry without raising political or controversial issues, and if this approach can be maintained useful results should follow. The International Chamber's appearance in the East will bring it up against questions of inequalities between Asian and European industries, discrimination real and alleged, and so on, the like of which are less often encountered in Europe. It is by leaving the arguing to governments and concentrating on co-operation over strictly practical measures that most progress will be made. Mr. Jain properly mentioned several such: arbitration, the rights of foreigners (which is of interest to Indian business men in Ceylon, Burma and Indo-China as much as to Europeans in Asia), standard commercial and navigation treaties, the terms of foreign investment (where the I.C.C. can lend valuable advice when investment takes the form of joint Indo-European ventures, as is increasingly the case) and intra-regional trade. Mr. Jain did not allow his references to inequalities between Asia and the West to obscure the point that the first item on the agenda is co-operative action within Asia itself and here the International Chamber can provide a model for the new Commission on Asian and Far Eastern Affairs—a model big brother, not a Santa Claus.

Cloth Export Duty Reduced.—The Government of India's decision on Sunday to reduce the export duty on cloth from 25 percent to 10 percent ad valorem will provide great encouragement to the industry, which has set itself the formidable task of trying to export 1,000 million yards in 1953. The reduction is the result of recent enquiries conducted by the Ministers of Finance, and Commerce and Industry in Bombay, in fulfilment of a promise made by the latter in his inaugural address to the Export Advisory Council in New Delhi early last month. Perhaps it is ungracious to recall that in the same address Mr. Krishnamachari described the advocates of duty reduction as selfish, unscrupulous and unpatriotic; the fact that he has decided to accept their suggestion within five weeks might remind him of the folly of irate and ill-considered judgments. Reactions to the duty cut have, according to expectations, been generally favourable and prices have risen slightly in some centres, but the industry has no reason to feel over-enthusiastic. The reaction of other exporting countries, particularly Japan, will be awaited with keen interest and India's competitive advantage depends on whether they propose to take similar measures. Meanwhile, controls over production and proposals for new fiscal burdens in the form of a handloom cess and multipoint sales tax continue to handicap the industry. It has been reliably estimated that present imposts, excluding income tax and corporation tax, amount to between 13 and 14 percent of the retail sale value of Indian cloth.

Coal Transport Shortage.—With the return of more competitive conditions, industry is looking about for ways to reduce costs of production by rationalisation, but a Press Note issued by the Ministry of Commerce and Industry last week shows that many such plans will be handicapped if they involve the use of cheaper fuel by the shortage of wagons to transport coal. The Note says that industrial units proposing to change manufacturing processes so that their requirements of coal might increase should first ask the Coal Commissioner whether they will be able to get all the coal they need. It is evident that as long as the present acute shortage of wagons continues—and it does not seem likely to ease in the near future—the Coal Commissioner will in many cases be obliged to oppose change and will decline to make allotments. On the one hand rationalisation to accumulate at pitheads immobilising capital that might usefully be employed elsewhere. If, as seems likely, the continued consumption of furnace oil as against coal is to be encouraged, a peculiar distortion will be taking place because the former

is more expensive and less easily available. Plainly the Railway Ministry's efforts to alleviate the wagon shortage have been inadequate; only 5,000 wagons are produced each year in India and most of these serve merely as replacements. It has been suggested that if there is no prospect of manufacturing capacity being increased in the near future more wagons should be imported. Industry cannot afford a return of the conditions which prevailed during the middle of last year when a large number of units faced closure because coal could not be sent them. Exports also had to be drastically cut at the time; although they have picked up since, the Government no doubt remembers the waste of Rs. 50 lakhs paid as demurrage charges in foreign exchange because ships had to wait weeks in Calcutta for coal to arrive from upcountry.

Plantations in Travancore.—That tea plantations in the South are headed for the same serious difficulties as now confront some areas in the North is evident from the speech of Mr. P. Kurian John at the annual general meeting of the Association of Planters of Travancore in Kottayam. Others besides Mr. John have been unable to understand the reasoning which led the Rajaram Rao team to oppose reduction of the tea excise and export duties on the ground that only consumers would benefit. The financial concessions they did recommend—deferred payment of duties and relaxation of rules requiring the advance payment of income tax—have proved inadequate, but quite the most perverse of official actions has been the exemption of tea waste from excise duty. "This so-called concession", Mr. John said, would undermine the efforts of producers to improve the quality of tea and to reduce output by fine plucking; it would also "be misused by unscrupulous persons and more and more tea will come out of factories under the name of waste tea with the result that the market will be flooded with low grade teas at the cost of Government revenue and low prices for honest producers." The cost of labour has been increased with the help of unrealistic legislation and Mr. John quoted a U.P.A.S.I. calculation to show that if the Plantation Labour Act is implemented only estates with very high output could continue to function. As it is, most marginal estates will cease production if prices do not improve in the near future. Mr. John declared: "There seems to be a very wrong impression among some people that South Indian estates are not so badly affected by the fall in tea prices and the increased cost of production. I should like to point out that about 40 percent of the tea acreage in South India produces only common teas which do not get a good price in the present market. Such estates are already facing a grave financial situation." Rubber production costs have also risen as a result of such labour legislation as the Travancore-Cochin Minimum Wages Act, and in October last year the Government had to agree to raise maximum prices by Rs. 10 to Rs. 138 per 100 lbs for Grade 1 rubber. Mr. John estimated that the increase in costs was about one and a half times the increase in price, and the latter should have been granted in May 1952.

Mr. John added that "the plantation industry is the most heavily taxed industry in the State." When sales tax was first introduced plantation products were taxed at only two points, but after the recent changes they have been subject to multipoint taxation. Many intermediate traders have been forced to retire from business while others avoid the intermediate sale of their produce by sending it direct to Fort Cochin, which is outside the State's jurisdiction and where sales tax cannot be levied. Mr. John pointed out that in Madras all agricultural produce is exempt from sales tax on the first sale by primary producers, but in Travancore-Cochin rubber, coffee, cinchona and cardamom are excluded from the category of agricultural produce by a special definition in the Act.

Cotton Textile Markets.—At the fourth annual general meeting of the Madhya Pradesh Mill-owners' Association in Nagpur last month there was strong criticism of the introduction of the new cess on mill-made cloth and continuance of the rate of export duty on textiles—which has course since been reduced from 25 to 10 percent. Seth Hanumanprasad Navatia, chairman, and Mr. G. D. Somani, chairman of the Millowners' Association of Bombay, emphasised that rising costs of production, occurring at a time when world demand was falling, greatly increased the industry's difficulties. The present system of controls was criticised, in particular the way in which some varieties of cloth had been decontrolled while others had not, both as regards price and production. The main reason for the slow offtake of Indian cloth, it was suggested, was the general recession in world textile trade and the restrictions on the import of cloth into certain countries, including Pakistan and Indonesia. Seth Navatia said that unless action were taken quickly to remove all controls from the textile industry and to reduce the export duty on cloth, many mills might have to curtail production, not only by reducing shifts but even by closing down some units. The suggested abolition of the Appellate Tribunal was op-

posed on the grounds that experience of Industrial Tribunals had shown that there was a need of "dispassionate and independent authority able to dispense justice to both industry and labour". Mr. Somani said that the Government could assist the handloom industry best in an indirect way by encouraging exports of mill-made cloth, which would reduce the weight of stocks and thus leave room for handloom cloth, help the mills find a market abroad at economic prices and narrow the gap in the country's foreign exchange budget. Of the future neither speaker was optimistic; both stressed the increased importance of the domestic market. Because of the growth of indigenous industries abroad international trade in cotton textiles was falling in volume every year and outlet for higher production was not so much in overseas trade as in home sales. The only way to increase Indian demand for cloth was to lower production costs.

January-June Import Policy.—The import policy for the half-year January to June, 1953, which was announced from New Delhi last week has received a welcome to which the Ministry of Commerce and Industry has not been accustomed in recent years. One of the main reasons is that some sort of stability is at last being achieved; in regard to 70 percent of the items the policy remains unaltered and imports are to be maintained at the same level as in July-December, 1952. A slight improvement in the balance of payments—because imports of food, cotton and jute have been below mid-1952 expectations—has enabled restrictions to be relaxed on over 100 industrial and consumer goods such as twist trills and reamers, power-driven pumps, garage tools, belt cement, condensed and powdered milk, drugs and medicines, raw silk and silk yarn, woollen fabrics, razor blades, sewing machines, radios and radio parts. An unusual feature of the new policy is that small licences will be issued for a few items whose import has been banned for more than a year: these include confectionery, perfumed spirits, fireworks, translucent porcelainware, playing cards, games and sports requisites, smokers' requisites and vulcanised fibre suitcases. The intention is to remind indigenous producers of the need to improve quality and also to allow the consumer what the Industry Minister has described as "small pleasures." Local manufacturers will approve of the decision to reduce the import quotas for certain goods which have been more easily available in recent months, such as iron and steel structures, bolts, nuts, rivets, wire netting, wire mesh, leather belting, pruning knives, textile and jute machinery parts, leather cloth, aluminium tea chest linings, umbrella fittings, torch bulbs and brake fluid. In the case of a few items such as ball bearings, diesel engines, flashlight cases, betel nuts, cycles and parts, tea chests, caustic soda and soda ash, fibre board and art silk yarn, the new policy is expected to be announced some time this month. Procedure for the issue of import licences will for the most part remain unaltered although greater stress is likely to be laid on simplicity and speed. Refugees are expected to benefit from one notable change—that established importers will no longer be asked to prove a second year's import before being given licences. Actual users will be able to import a larger variety of goods and newcomers can get licences for about 50 items including fluorescent tubes, electrical instruments, milk foods, knitting wool, motor cycle and motor vehicle spares, arms and ammunition, drugs, medicines and chemicals. One must commend an import policy that attempts to give something to everybody. It is unfortunate that the Government continues to ignore one of the trade's most persistent complaints—lack of correlation between the Import Trade Control Schedule and the Customs Tariff. Mr. Mukherji, former Director-General of Commercial Intelligence and Statistics, who is at present investigating revision of the former, is reported to have said in Bombay recently that the Customs Tariff is completely outside his terms of reference and he is concerned only with the Import Trade Control Schedule.

Statistics for Business Men.—Wherever Indian industrialists meet, reference is made to the want of reliable statistics and Sir M. Visvesvaraya, president, returned to this theme in an address to the Central Committee of the All-India Manufacturers' Organisation in Bombay recently. Collection of statistics in a country of India's size will always be a formidable task and the difficulties are increased by the fact that by the time information is properly classified and assimilated much of it may well be out of date. This has encouraged the use of the random sampling technique, which for all its deficiencies seems best suited to Indian conditions, particularly in regard to agriculture. In industry somewhat more exact methods can perhaps be followed and Sir M. Visvesvaraya suggested that progress would be made, if the collection of statistics were completely decentralised. In formulating working plans for such a scheme, the A.I.M.O. has divided industries into two classes: those situated in cities and towns are considered heavy and large-scale industries, and those practised in villages and rural areas, small-scale or minor industries. Plainly

the distinction is inexact but, as Sir M. Visvesvaraya went on to say, it enables the annual results of the working of an industry in a district to be obtained in the form of a statement showing the number of industrial establishments, capital invested, number of workers, salaries and wages, cost of materials used, gross value of output, total population and per capita value of output. Regional data of this sort enhance awareness of the industrial conditions and potentialities in each district. The real rôle of statistics in business was pointed out by Dr. H. Sinha this week in his presidential address to the Statistical Section of the Indian Science Congress in Lucknow, namely to assist the judgment of business executives. Charts and diagrams are wasteful if they do not meet this very practical need. Excessive complexity and precious refinements in the collection and interpretation of statistical data are not demanded by business men. Dr. Sinha made the interesting proposal of compiling index numbers of qualitative changes, in addition to the more familiar ones of prices and quantities. There will be full agreement with his view that Government departments should follow a uniform statistical methodology; differences in method have, for instance, been responsible for many conflicting estimates of food production put out by official agencies in recent years.

Biri Exports to Pakistan.—The Indo-Pakistan trade agreement of last August considerably inconvenienced Indian manufacturers and exporters of biris. Pakistan has always provided their biggest market but, since the new agreement, the import duty into Pakistan has been raised from 10 to 50 percent and at the same time the Pakistan Government has reduced the excise duty on home-grown tobacco, thus encouraging the indigenous cultivation of this cash crop. Mr. N. M. Dalal, in his presidential address to the Calcutta Biri Tobacco Merchants' Association last month, reported

period of the previous trade agreement were worth about Rs. 8 crores, while the new agreement covered only Rs. 2 crores. Mr. Dalal told the meeting that the "export trade in biris, biri tobacco and biri leaves has been totally suspended for the last four months, from August 1952." One suggestion put forward for the relief of the industry was reduction in the present high rate of Indian excise duty on biri tobacco. The president also said that a flat rate of excise duty should be imposed, in consultation with various trade associations, in order to lessen the administrative work now involved.

November Coal Statistics.—Eight coke plants and 811 collieries were reported to have worked during the month of November 1952, according to the Chief Inspector of Mines in India. On an average 323,482 persons were employed daily and 7,655,905 man-shifts were worked. The overall percentage of absenteeism was 12.85. The output per man-shift for miners and loaders was 1.12 tons, for all persons employed in underground and open-workings 0.59 and for all persons employed 0.36. About 2,884,300 tons of coal were produced during the month; 111,131 tons of soft coke, 178,801 tons of hard coke and 13,335 tons of other kinds of coke were also manufactured. In all 2,684,362 tons of coal, 107,068 tons of soft coke, 43,663 tons of hard coke and 3,720 tons of other kinds of coke were despatched. Coal stocks at the collieries on the last day of the month were reported to be 2,976,253 tons.

"Capital's" Market Reports.—The practice of reporting in Capital's Stocks and Shares section only the previous day's transactions on the Calcutta Stock Exchange was adopted several years ago because of exigencies of production. It is now possible to revert to the former system of reporting for each share and security dealt in throughout the week and four quotations—the opening, closing, highest and lowest prices of the previous seven days and the lowest price one year ago. The expanded list of transactions appears as from this issue. Full details from the latest available balance sheet of the company continue to be found in the Stock Sheets at the back of the paper and this is now the only such complete list available weekly in connection with shares dealt in on the Calcutta Stock Exchange. From this issue also reports of various Calcutta commodity markets will be grouped in a separate section of the paper, which includes freights, tea, linseed, hides and skins, and shellac.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and in old, sometimes working alongside flat looms; in the highly developed industries of Scotland, France and Italy; in the more recently established mills of South Africa and the Belgian Congo, where only unskilled labour is available.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Saint Frères Circular Looms installed in
Jute Industries Ltd. factory, DUNDEE

REPLACING A COP.—Immediately one of the cops runs out the loom stops automatically. All the shuttles emerge from the shed and lie on the warp threads. New cops are placed in each shuttle and the loom is restarted. By replenishing all the shuttles at once much time is saved. The butt-ends of the cops left over are, of course, not wasted.

QUEEN ELIZABETH'S first New Year's honours list contained few names and no surprises of direct interest to the British community in this country. Mr. Lockhart's knighthood recalls his energetic and eventful year as President of the Associated Chambers of Commerce in 1951-52, and Mr. Roe's CBE his excellent work as Chairman of the Council of the East India Charitable Trust. Although Mr. Justice Ellis's knighthood appeared in the Pakistan list it is of equal interest in India for he was a familiar figure in the Calcutta legal world up to the time of partition. The full list of those honoured by the Queen is a reminder that allegiance to and service of the Crown are high ideals in many far-flung corners of the earth for it includes such dissimilar figures as an Assam tea planter, a Ceylonese diplomat and a Canadian neurosurgeon. A baronetcy for the chairman of the Dunlop Rubber Company, Sir Clive Baillieu, is one of the very few peerages that has been bestowed on an Australian; Lord Bruce of Melbourn is the only other case I can call to mind. The truncated list conveyed by the news agencies that serve the local Press did not bother to mention, presumably on the theory that we are all illiterate at here, the award of the Companionship of Honour to Mr. E. M. Forster who, since the publication of *A Passage to India* 28 years ago, has been as respected in this country as anywhere where English is spoken. Nor did it include what no weekly columnist can overlook, a knighthood for Mr. Harold Nicolson, the greatest weekly columnist of them all whose last "Marginal Comment" in *The Spectator* appeared at the end of last month, as urbane and witty as the first 14 years ago. A knighthood for Herbert Read "for services to literature" is of more than literary interest for it raises the question, was ever an anarchist knighted before? A State honour for one who has written books telling us how we would be better off without a State at all, coming shortly after the elevation to the editorship of *Punch* (scarcely a less distinction in the British order of values) of a former ardent Communist, surely carries with it a gentle lesson in the art of conciliating critics—a lesson that might be noted by one of our allies, who has lately charged with perjury a university professor who discovered before his Government that Chiang Kai-shek was a waste of money.

Sir George Schuster's reflections on the Indian economy as contained in his several public speeches and, one may suppose, in his talks with the enterprising business men who have sponsored his present visit, have been mostly concerned with the responsibilities of industrialists toward Government and labour. And, though it obviously does not cover the whole case, that is very proper for there would be no purpose in any of these three parties inviting distinguished guests from abroad to lecture the other two. It has the advantage of making the advice proffered more strictly practical, since it is solicited and received where it will do most good, unlike much of the gratuitous advice exchanged in public life which is discredited by its very point of origin. Certainly, Sir George's opinions on the place of private enterprise under a socialist-minded administration have been very much to the point—incidentally, he has had experience of this sort of mission before in such widely different places as Central Europe, East Africa and Malta. One of his strongest points was the need of important sections of Indian business to restore itself to favour with officials and consumers who for various reasons (in part simple ill will) have come to look on private enterprise as a species of piracy—the outcome of what Dr. V. K. R. V. Rao in a

A DITCHER'S DIARY

recent speech in Delhi called "the systematic calumny and condemnation to which the whole body of private enterprise has been exposed in recent years in this country without any distinction being made between the deserving and the non-deserving". This can be repaired to some extent by educative propaganda but mainly by what Sir George called "straight-forward, honest, creative work" for which the five year plan, whatever its other defects, does leave considerable scope. Another of his practical pieces of advice that struck me, apart from the sincere and welcome generalities, was the reference to the relation of small-scale business to the larger industrial units. Progress toward industrialisation in India has tended to mean the establishment of a giant plant that covers the whole process of manufacture of an article, without thought of the lower strata of ancillary crafts and industries that support ventures of this sort elsewhere. The visitor to the English Midlands and, I am told, to the great American industrial centres is impressed not merely by the large and famous factories but by the dozens of smaller workshops that supply many of the parts required for the complete product. It may be replied that if the more heavily capitalised units now find it difficult to meet the fiscal and labour burdens imposed on them in India, there is precious little chance of smaller fry flourishing. That is true, but an approach to Government to create conditions for the growth of healthy ancillary industries might be better received than the petitions of the familiar giants. I presume it is by taking up such causes that Sir George requested the established industrial associations to take a wider view of their functions in advising Government. The fruits of such a visit as this, as Sir George no doubt well realises, do not mature until long after the guest's return home when the ideas he threw out are recalled and discussed by those he met; when that time comes I am sure it will be acknowledged that Sir George Schuster's tour has been a sound investment for his sponsors and a valuable increment to the fund of goodwill existing between India and Britain.

The Labour Bureau is conducting a curious statistical experiment which deserves to be watched with interest, not to say with frank suspicion, by employers and labour unions alike. An attempt is being made to construct "an all-India series of working class cost of living index numbers" by the extraordinary method of combining the indices at present maintained by various authorities in 24 cities in different parts of the country. A Press Note issued last week lays bare with disarming innocence the singular way in which this is to be done and the most moderate judgment one can pass on it is that it is scientifically preposterous and that its results will be very nearly meaningless. The one point not touched on in the hand-out is what use is to be made of the "index" thus achieved. If any form of money payment is to depend on its movements, either now or at some later date when age has given it the repute of respectability, it might be as well for interested parties to indicate from the outset that its foundations are too shaky to permit of any confidence. If only propagandist use is to be made of it, that will be less harmful but still misleading. It will be remembered that whenever the cost of living was discussed in Parliament during the last session, Ministers would refer to the official wholesale price index, which has its own value but tells us very little about the cost of living,

and the new statistical confection may be intended to repair that deficiency. The want of reliable statistics on this and other matters is indeed a serious defect in India's economic equipment, but there is no point in inventing figures to fill the gaps. To do the Labour Bureau justice, it does admit that "there is little doubt that there is considerable scope for revision and improvement in this index" and it confesses that the proper way of going about the business would be to conduct new surveys all over the country to devise a unified national index. Having granted so much, it is strange that it should press ahead with the ramshackle concoction now being launched. In any event, I doubt whether any amount of surveys or statistical juggling would ever lead to an "Indian cost of living index," for the simple reason that there is no one cost of living in a large country with few markets and poor communications; the process of striking averages between widely separated centres might be amusing but is largely pointless.

Evidence that the Bombay Ministry would retreat from the more puritanical extremes of reformist fervour has been awaited ever since its Chief Minister's chastening experience at the elections, and the first sign of a more reasonable attitude to human frailties is seen in its decision not to ban horse-racing and, further, to remove the threat of an imminent ban contained in the one-year licensing system by issuing the Royal Western India Turf Club a licence for four years. The concession, it appears, is offered at a price—control over the Club's membership strength and the appointment of two Government nominees as stewards. Why Mr. Morarji Desai should now want to take an active part in what he has hitherto regarded as a vice is difficult to see, but the major decision is a sensible one and will no doubt be accepted gladly enough by Bombay's put-upon population. There remains one other principal concession Mr. Desai could make to what he considers the baser side of human nature, and having got himself into trouble with his multi-point sales tax and his tax on motor vehicles his thoughts must be returning to it more often. One sometimes gets the impression that Madras and Bombay are watching each other to see who will be the first to do the sensible thing by the State revenues by recanting on prohibition but if, as is rumoured, influential sections of the administrations in both States are now convinced that prohibition has been more costly than it is worth, provincial pride should not delay a decision.

"Cross my heart and hope to die," says Harold Wincott, "but this is a true story": The company was being made public. The directors were a progressive lot. They thought it would be a good idea to reserve part of the issue for the workpeople—at the general offered price of 7s 6d a share. A few months later, the price of the shares fell to 4s 6d. A deputation of workers waited on the Board. "You're a lot of so-and-so swindlers," said the workpeople. "We want our money back." "O.K.," said the Board, in effect, and wearily, "We'll take you out at 7s 6d, with our own money." Two or three years later the shares were 22s 6d. A deputation of workers waited on the Board. "You're a lot of so-and-so swindlers," said the workpeople. "There," said the Board, "is the door."

Company Meetings

INDIA STEAMSHIP COMPANY, LIMITED

SIR A. RAMASWAMI MUDALIAR'S REVIEW OF PROGRESS

ADDRESSING the Annual General meeting of the shareholders of the India Steamship Co. Ltd., held on Dec. 30, 1952, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman of the Company, said:

Gentlemen, the audited Accounts and the Directors' Report for the period ending March 31, 1952, have been in your possession for some time. With your permission, I shall take them as read.

In my last annual address I referred to the progress that the Company had made in getting admission to regular full membership of some of the Conferences. I emphasized the importance of membership of these Conferences and pointed out that owing to the nature of the working of these Conferences, a non-member is affected adversely in several ways. I expressed the hope then that the right and privilege of becoming members of the Colombo-Continental Conference and the Colombo-U.K. Conference would be recognized by the other Lines very shortly. I pointed out that it was most anomalous that Indian vessels starting from Calcutta should not be able to carry freight from Colombo to the U.K. ports and the Continent, having regard to the naturally close, geographical and other relationship between India and Ceylon and the fact that the Ceylon ports were part of the Colombo Conference ports in the past. I regret I am unable to report any progress in the direction of our admission to any progress before the last War, they were carrying trade with these ports. I shall refer to this extremely unsatisfactory aspect of international shipping a little later.

I am glad to be able to report that the Company has progressively increased the amount of cargo that has been carried in spite of various difficulties and freight earnings have also tended to show an increase. The Directors' Report shows that the freight earnings for the year under review amounted to Rs. 384 lakhs, an increase of more than a crore over the earnings of the previous year. It is true that conditions during the year were comparatively favourable partly owing to the increase in freight rates and result of the Korean situation. It must, however, be pointed out that delays and detentions at ports both in India and foreign, were longer than even in the previous year, with the result that, a round voyage or was the case in the previous year. These delays are becoming an increasingly serious problem for all shipping companies and particularly for the Indian shipping companies which have as yet a very limited number of ships plying in the overseas trade.

In spite of the difficulties mentioned above, I am in the happy position to state that the financial results of the year under review have been fairly satisfactory and the hope that I expressed last year that the Company had turned the corner has now proved fairly accurate. It must be a source of gratification to you as indeed it is to me as Chairman and to my fellow-Directors, that the Company is in a position to pay a dividend this year for the first time after setting apart various sums of money for depreciation and reserves and wiping out the losses of previous years. The cash resources of the Company are being quite satisfactory your Board has decided to reduce the entire series of the mortgage debentures of the face value of Rs. 25 lakhs and notice has already been given that they will all be paid on 1st March, 1953.

Coastal Trade

Your Company, while mainly concerned with overseas trade, has not neglected the importance of the coastal trade which is now the sole concern of Indian-owned Shipping Companies. During the last few months, one of the ocean-going vessels, the "Indian Importer," has been put on the coastal trade engaged in overseas trade, diminishing the number of vessels engaged in overseas trade and hopes to play a more active part in the near future in the coastal trade.

The facilities afforded according to modern ideas to Shipping Companies in the various Indian ports, and particularly in Calcutta, has been the subject of comment for some years. Calcutta is the main port of India, catering for nearly 50% of the freight to and from India. Owing to the lack of finance in the past, the modernization of this port, which will continue to play a leading part, has been considerably delayed. It is a matter of gratification therefore that the Planning Commission has specifically referred to the need for improvement, modernization and development of the major ports and has, in its Five Year Plan, set apart a fair sum for the purpose. I hope that, with this finance and with what the port authorities are expected to find out of their reserves and resources, the implementation of the proposals for the modernization and proper equipment at these ports will be effected speedily. While I recognize that the authorities at the various ports have expert knowledge and are qualified to suggest methods of improvement and while the Port Trust in each port is composed of unofficial advisers connected with commerce, industry and shipping, I would suggest that before these plans for modernization are finally accepted, an opportunity may be given for the representatives of Shipping Companies to discuss such plans and to suggest the directions of improvement to meet their special needs.

I referred earlier to the delays that occur in ports both in India and abroad. Confining myself to these delays in Indian ports, I would like to point out that the policy adopted by some of the Labour Union leaders, particularly some of those connected with stevedore labour and port labour, is not conducive to the proper working of the Port and severely militates against the interests of Shipping Companies and business generally. The delays of some of these ports can be largely ascribed to the policy of "go slow" that some of this labour has adopted, unfortunately under wrong leadership. I made it clear, in my last Speech, that any reasonable proposal for improvement in such labourers will be readily recognized by Shipping Companies and by stevedore agents but that the reason for such "go slow" tactics

is not to get increased amenities but for different objects altogether.

It is indeed unfortunate that some leaders of labour, desiring to keep as many workers as possible on the employment roll in industry, have steadily advised their members to resort to such tactics without regard to the consequences. That this feature is not peculiar to the shipping industry but that it is to be found in some of the other industries where such kind of labour leaders have gained dominance makes it all the more necessary that the note of this fact and should provide measures whereby, while labour is kept contented, the work-load of the labourer is fair and adequate. I understand that experts on production problems in the country are now examining the problem and trying to ascertain the proper work-load which, under given conditions, a worker can undertake. Knowing the interest which the Minister of Labour has taken in this aspect of the question and the advice that has been given from time to time ever since he assumed office, I feel confident that a remedy may be found for the grave state of affairs that now exists in many industries all over the country.

As a result of the recent Elections, a new Minister is in charge of transport in the Central Government. Transport includes shipping and I feel confident—in fact the experience of the last few months proves—that the problems of shipping are attention both from the Minister and from the Secretariat of the Ministry. There have been two meetings of the Consultative Committee on shipping and the views of the representatives of Indian shipping companies have been freely expressed and I have made every effort to understand the point of view of the Shipping Companies.

Loan for Development

The Planning Commission has stated that the total gross registered tonnage of Indian Shipping should be about 600,000 tons by 1955-56. When it is remembered that the present tonnage is a little over 400,000 the increase proposed is extremely modest. We must be thankful to the Government that at long last a decision has been arrived at regarding the policy of granting loans and the terms and conditions under which such loans may be granted to Indian Shipping Companies who wish to augment their fleet by the purchase of second hand ships or by ordering new ships both for the Coastal and Overseas trade. The loan is to be granted for a portion of the cost price at concessional rates. This request for loans at concessional rates of interest has been pending before the Government for the last few years; and, without looking back on the past and reflecting on the great good that such a loan, if it had been granted a couple of years earlier, could have done, the Indian Companies must still be thankful that ultimately this decision has been arrived at. Your Company proposes to take advantage of the offer of the Government and proposals for augmenting the fleet are under consideration before your Board. The details of how the tonnage should be acquired and how soon that tonnage will be available if the benefit of the loan from the Government is availed of, are matters which are receiving the earnest consideration of your Board.

The prospects for the current year are hopeful. Though it has been noticed that there has been some shrinkage of trade and restriction in the movement of cargo, it is the general impression that this is only a temporary phase because fundamentally the demand for goods is still unabated. Your Company operation side every effort is being made to check and control the high cost of operations, but in some of these items beyond its control. I would, however, like to emphasize that the difficulties which are experiencing in the Overseas trade are not the increase instead of diminishing. These difficulties are specially accentuated in a period when freight rates are not freely offering, when charges for bunkering do not show much decrease and delays in the turn-around of ships and port and times of competition that Indian Shipping, with its small number of ships, finds itself at a disadvantage. The infrequency of services of Indian Shipping at particular ports, the time taken for destination and the number of ports at which ultimate ships call are all factors which are utilized for adverse propaganda against Indian Shipping.

Your Company and the Scindia Steam Navigation Company are the two Shipping Companies that are engaged in the India-U.K.-Continental trade. With a view to overcome some of this propaganda and to give better service to shippers at certain of the Continental ports where competition is most keen, the managements of the two Companies have come to an understanding whereby an integrated and more frequent service of ships of the two Companies to call at such ports has been arrived at. As Chairman of your Company, I have tried to foster the idea of friendly understanding and help-co-operation between the two Indian Shipping Companies engaged in the overseas trade. It is a standing matter of personal satisfaction to me that this understanding has been arrived at and I would offer my congratulations to the management of both the Companies on their wise and arriving at such an understanding and trust that this will be the precursor of even greater co-operation between the two Companies.

I have referred only to one kind of propaganda regarding the frequency of service or delays in delivery of goods at destination. There are various other methods which are frequently resorted to by some of the Lines engaged in this competitive trade, which are not calculated to further the healthy development of Indian Shipping. I must refer particularly to accusations of flag discrimination which are frequently made either at meetings of International Chambers of Commerce or of the International Shipping Federations where a majority of well established

Shipping Companies show extreme concern at what they regard as flag discrimination. I should like to be quite frank on this subject as it is time that the views held by the 'have-nots' in the shipping world should be as clear as those constantly expressed by the 'haves'. The prejudice against a new-comer into the shipping world is formidable and cannot be lightly regarded. It is sometimes pointed out that Shipping Companies which have thereby fostered international trade and commerce should be treated with grateful respect and that new-comers must have due regard to the many services that such old and well-established Companies have rendered in the past. In fact, the new-comers are thought to be unreasonable, if they claim that they should have opportunities of a fair share in such trade.

It may be true that well-established old Shipping Companies have promoted international trade but the exact nature of the truth depends very much on the angle of vision which one brings to bear on such questions. Another view is possible and may express the truth equally clearly. That is, that old and well-established Companies, having had a monopoly in the past of all the international trade of the country concerned, should now gracefully yield some place at least to new-comers who have a right as Shipping Companies of maritime countries or of the world to have a fair amount of export and import trade to participate in. I have had opportunities of attending more than one Conference and I must confess sometimes to the depressing feeling that the status quo is too often desired by some at least of the well-established old Shipping Companies and the need and wisdom of providing a small niche in the shipping world for new entrants is often ignored.

New Approach Needed

The world has changed enormously, not merely between the two World Wars but more so after the second World War. Kingdoms have disappeared, Empires have disintegrated, colonial possessions have shrunk. A new international economic understanding and policy is being advocated by those who have the vision to see the trends of the future clearly and in particular the problem of the undeveloped and under-developed countries is rising more prominently on the horizon of the international world. It is somewhat disheartening to find on occasions the echo of the voice that "as things were they should continue to be." To make comparisons of pre-war tonnage of well established Shipping Companies with their present tonnage and to express dissatisfaction that the present tonnage has not yet come up to the pre-war standard or, if it has come to that standard, to take umbrage at the fact that the percentage of freight carried is not as much as it was before the second World War, is to ignore the realities of the situation and naively to challenge the position of new-comers into the shipping world. I feel certain that the large body of shipowners of the international shipping world recognize that changes stay and must be necessary to accommodate. But it is the few irreconcilables that constitute the biggest obstacle to fraternal co-operation in international shipping.

I have struck this note not by way of criticism or complaint of any Shipping Company or any member of any Conference but by way of an appeal to all concerned for reasonable understanding and a new approach to be problems of international shipping all over the world. The policy of 'live and let live' enunciated many years ago seems to be still the correct and indeed the wisest policy. Indications are not wanting where a short-sighted approach to this problem making it difficult for the nascent industry to develop, have resulted in some at least of the Governments concerned taking more active part in the protection of their shipping and in nullifying thereby the policy which Conferences wish to adopt of commercial agreements alone functioning in this sphere of mutual adjustment.

Business restrictive practices do not always come to the surface, their meandering ways being often difficult to expose. But Governmental interventions on the other hand are open and must be easily discernible thanks particularly to the democratic forms of Government and free publicity in legislatures. But discrimination through restrictive business practices are far from effective, particularly where a business community through years of experience, has become strongly unified and completely integrated.

As Chairman of your Company, I share the feeling that as far as possible, international shipping should be allowed to develop on the basis of its own devoted service and that satisfactory arrangements at a commercial level should be arrived at in a fair and equitable manner. I feel, however, that State intervention will be inevitable in many countries, if instead of such helpful and understanding agreements nascent shipping comes against a dead wall or is judged either artificially created or prevalent or almost as a habit among certain communities. If the chances of fair treatment are not bright, a state of affairs would arise which could only lead to the antidote of direct Governmental intervention.

I have already referred to the increased attention which the Ministry of Shipping is paying to the problems of Indian Shipping, Coastal and Overseas. The Director General of Shipping and his Office have maintained their interest during the year and the Company has availed itself of the very generous and helpful advice that the Director General and his staff have given from time to time. I should also refer to the co-operation that has been extended to us by the staff at various ports and particularly in Calcutta and the advice and assistance which the Chairman of the Calcutta Port Trust has in particular rendered to us. I would like to congratulate the Chairman of the Calcutta Port Trust on his well deserved promotion to the responsible office he will hold in the new year. The Shipping Industry will have in him a well-equipped and understanding official.

If the results of the working of your Company during the last year have been satisfactory, the credit goes to the shippers who have patronized us and on land and to your representatives abroad, General Agents and Port Agents. All of them have shown even greater interest in your Company's affairs and I would like to record the thanks of your Directorate to all of them who have so consistently safeguarded and promoted the interest of your Company.

I shall now be pleased to answer any questions that Shareholders may be pleased to ask regarding the Accounts.

THE ASSAM RAILWAYS AND TRADING COMPANY LIMITED

IMPROVED TRADING RESULTS

GROUNDS FOR SOBER OPTIMISM

The second-ordinary general meeting of the Assam Railways and Trading Company, Ltd., was held on December 19 in London. Col. C. F. Birney, D.S.O. (the chairman), presided and said:—

You will see from the general revenue account that the general results show a trading balance of £283,986—some £40,281 better than last year. Most of this increase is derived from the sale of tea chests, though the colliery side of the business also contributed an increased revenue. The company's investments in other companies again produced a satisfactory return, namely a dividend of 25 per cent. from the Namdang Company, 30 per cent. from the Lakshmi Company and 6 per cent. from the Rivers Steam Navigation Company.

On the other side of the account the figure for taxation, including taxation on dividends received from the subsidiary and other companies, has risen from £135,950 to £143,000. Part of this is due to increased profits but there is for the first time an item "excess profits levy" which is applicable to three months of the financial year in question.

Other figures do not call for comment at this stage. The net profit for the year was £100,529, against £81,444 last year. To this must be added the sum of £10,000 which the auditors consider was over-provided to meet taxation in prior years.

This has been dealt with as set out in the directors' report. Your directors feel justified in recommending the payment of a dividend on the "B" stock; but they consider it prudent to add substantially to the reserves, which will now stand at £200,000 in the general reserve and £180,000 in the reserve for development and replacement of fixed assets.

Balance-sheet Features

Turning to the balance-sheet, the figure for additions to fixed assets since 1945 now stands at £381,499, against £313,873 last year. The increase represents expenditure on machinery, equipment and buildings, both in the collieries and veneer mills, all of which is essential to maintain or extend your business.

Under the heading Current Assets you will have seen that the first two items—namely, sundry stocks and sundry debtors—amounted to £483,702, an increase of some £90,000. There are two main causes responsible for this large figure. First, the uncertainties connected with transport in Assam, especially at so great a distance from the world's markets, coupled with long delay in the execution of certain orders, have made it necessary for us to hold greater stocks of stores and materials than would otherwise be necessary. Second, the increased volume of production and sales involves an increase, not only in stocks of stores, but also in customers' accounts.

The Current Year

You would no doubt wish me to give you more up to date information about progress. Results for the first six months of 1952-53 are reasonably satisfactory. Production of tea chests is still expanding, but coal shows a slight falling off, partly due to the weather conditions, and partly to the shortage of explosives. This shortage was the result of floods interrupting goods traffic communications with Calcutta for some three months.

Expenditure, both on materials and labour, is still rising. Various Government regulations, such as that introducing a compulsory bonus scheme, impose heavier burdens, often without corresponding benefit.

I referred last year to the difficulty we were experiencing in obtaining supplies of certain coal leases. In April I flew out, with Mr. Gavthrop, with the specific object of discussing the whole problem with the Government of Assam. We were received by the Hon. Revenue Minister in a most friendly atmosphere, and as a result we made certain proposals designed to simplify the payment of royalties and to improve the position under which we operate our long-term projects. These proposals are still under consideration by Government.

On the timber side, production of tea chests is still increasing and your company is now benefiting from the installation of the second Coe drier which I mentioned a year ago. We are now turning out over 500,000 chests in a year.

Taxation

It is difficult to refrain from complaining once more against the effects of taxation. This may be as tedious as a twice-told tale but I hope it does not vex the dull ear of a drowsy Chancellor. Our case shows that this company is particularly hard hit. A figure of over £156,000 paid in taxation overshadows the modest £29,000 which it is proposed to distribute to shareholders for the past year. And in the current year we shall feel the full effects of the Excess Profits Levy—which may mean something like £15,000 more on the tax figure—and this at a time when we have to finance new developments and the replacement at an increased cost of many capital items. It is stated at the time that Excess Profits Levy was introduced that it was intended to remove the profit derived from the armaments programme.

It is difficult to see any connection whatever between the profits of armament firms and industry in Assam.

With this burden of taxation and with rising labour costs, which we are powerless to prevent, it will be realised that no one can prophesy a period of quiet prosperity. Nevertheless, there are grounds for sober optimism, and looking back over the last five years during which I have been your chairman, and with knowledge of the day-to-day work of your company, I think that shareholders may feel some satisfaction that, in spite of the troubled waters we have been through, the ship is riding on a fairly steady keel, with an efficient and hardworking crew. It would be rash to prophesy calm water ahead but we are at any rate in a stronger position now than a few years ago.

The report and accounts were adopted and the dividend, as recommended, was approved.

DALMIA CEMENT LIMITED.

HIGH PRIORITY FOR CEMENT IN FIVE YEAR PLAN

Speech delivered by Shri J. Dalmia, Chairman of the Board of Directors of Dalmia Cement Ltd., at the Fourteenth Annual General Meeting of the Company at Dalmiapuram on 31st December, 1952.

Gentlemen,

I welcome you to the Fourteenth Annual General Meeting of your Company. The Balance Sheet and Profit & Loss Account with the Report of your Directors for the year ending 1951 are in your hands. You will agree that the working results for the year under review have been quite satisfactory.

The Five Year Plan recently presented to the country has placed the cement industry high in the order of priorities. It anticipates an additional demand for basic commodities like cement as a result of the general development during the five year period. Emphasis has been laid generally on the fuller utilisation of existing capacities and in respect of the cement industry, expansion of the capacity is also planned. The rated capacity of the Planning Commission is already registered at 50.16 lakhs tons and actual production of 45.50 lakhs tons, involving an estimated investment of Rs. 15.4 crores. The cement industry has already registered a substantial increase in the production capacity and the rated capacity at present is approximately 40.25 lakhs tons. Together with the rise in consumption of cement inside the country, it is estimated by the Planning Commission that the exports of cement will also increase from 30 lakhs tons to 3 lakhs tons a year.

Under the Five Year Plan, the initiative and responsibility for securing the necessary expansion over the bulk of the field of industry rests with private enterprise. The total capital investment needs for industrial expansion in private sector have been estimated at Rs.233 crores besides Rs.150 crores required for replacement and modernisation of the existing plant capacity. The major question in this context is the availability of finance needed for development in the private sector.

The Plan appears to have overlooked to provide facility for capital formation. The recommendations of the Plan placing restrictions on distribution of profits and issue of bonus shares, will further aggravate the difficulties of securing fresh capital. Such a policy is likely to make investment shy. Even the expectations of the Plan that new capital to the extent of Rs. 90 crores would be available, may not materialise in the absence of a more constructive and positive attitude towards investment.

The main source of undistributed profits of Corporate industry, which are estimated, exclusive of depreciation reserve, at Rs. 200 crores. The quantum of undistributed profits is expected to increase by exercise of restraint in dividend policies and by enforcing agreed price increases in selected lines. Considering the depression which has overcome the market and the increasing competitions which the industry is facing, it is unsafe to expect that the industries will earn such profits that these may be accumulated and ploughed back in adequate measure in expansion schemes.

Labour Welfare Schemes.

Labour welfare Schemes are good and they should be enforced but the enormity of these schemes in such a short spell of time coupled with labour tribunals is giving a trying period to the industry. This strain on the industry can be substantially reduced if the labour determines to improve efficiency and productivity. Otherwise in the long run both the labour and the capital are bound to suffer. The Plan accepts that the rate of progress has to be determined not only by the needs of workers but also by the limitations of the country's resources and that too, rapid changes or changes on a wide scale may result in financial administrative and other difficulties which endanger new reforms and retard further development. It is therefore, hoped that Government will exercise care and caution and defer for at least the period any new schemes likely to burden the industries with further expenditure.

As already stated by me, the Plan has recommended agreed price increase in selected lines, as a means to increase the undistributed profits. While the recommendation is welcome and will be helpful, it may be pointed out that such increases can only be effected in respect of commodities which are under price control. There are also certain limitations upon the extent to which these increases can be sustained without affecting the consumption, which also has to be secured if the increased production is to be maintained.

Recent reduction in the controlled selling price of cement in India due to fall in prices of packing materials, has been inopportune and resulted in loss to the industry because of the large stocks of high priced packing material held. The industry has represented Government regarding the increases in the production cost resulting from increased labour costs, compulsory statutory amenities, increase in raw material cost and transport freight, etc. The newly set up units and factories situated in the South are particularly hard hit. The Tariff Commission has now been entrusted with the fixation of fair selling price and all the cost increasing elements will be examined in detail by it. The industry is also placing before the Tariff Commission the need for making adequate reserves for replacement and modernisation of the old plant and equipment which has been subjected to heavy utilisation. In this connection the PLAN has failed to envisage and has not made any recommendation for revision of the existing practice of allowing depreciation on the basis of original cost of the plant and equipment, even though the PLAN has taken note of the high prices at which replacements have to be obtained, prices four times the original cost of the equipment. Thus the industry is being taxed on the reserves needed for replacement which is against accepted principles of taxation besides being inequitable.

It has also recommended the standardisation of wages in as large field as possible. These measures, I am sure, will be conducive to the attainment of an industrial truce which is necessary for achieving the targets of production.

The Plan has also taken notice of the imperative need to reduce costs by rationalising industrial processes. A major difficulty in the way of increased production is the large surplus of labour which is on the pay roll of industries. Assistance should be forthcoming in implementing schemes of rationalisation. Recently we were compelled to discharge about 125 workers at Dalmiapuram factory, who had been taken in temporary employment for hand-packing of cement. They were employed on the clear understanding that they will be discharged as soon as the packing machine was installed. Now, even though the machine is ready to function, the workers oppose the discharge of these temporary workers and even resorted to a stay-in-strike without any notice. If the Workers' Unions are to serve the cause of labour in a sincere manner, they should assist rather than oppose any scheme of rationalisation. The Five Year Plan has drawn pointed attention to the need for higher level of productivity and the responsibility of labour in achieving it. The Plan expects the labour to accept greater regularity in attendance, disciplined behaviour and meticulous discharge of duties. I hope the workers of the country will act upto this advice and conduct themselves in a more responsible manner.

The Right of Appeal.

There is general agreement that it is desirable to ensure avoidance of disputes by internal settlement, failing which voluntary arbitration may be adopted. The recommendation of the plan regarding the recruitment and training of personnel of tribunals and the provision of technical help to them is welcome. Experience has shown that the existing tribunals manned by retired judicial personnel have been guided more by political thought than by the merits of the dispute in the adjudication proceedings. The personnel to be recruited and trained for the tribunals should be persons with sufficient insight into the problems of both the labour and the capital. If there are competent persons constituting the tribunals and they are kept free from executive interference and dependence on the recommendation of the plan limiting the right of appeals to exceptional cases, would be justified.

Before I close my address, I would like to say that it is easy to find fault with any plan but we must realize that with all its limitations it is the first planned effort towards the development of the country's resources and towards increasing the standard of living of our people and we must all strive hard and contribute our maximum effort towards the success of the plan. It is the effort of each one of us which is needed to make our Five Year Plan a success. This plan is country's revolution. It is our ambition; the outside world is going to judge us by our achievement in this sphere. Country's reputation and prestige is involved in it and so is our welfare and prosperity.

In the end I would like to express the Company's sincere appreciation of the services rendered by our Workers and staff in different factories and offices.

I now, move that the Balance Sheet and Profit & Loss Account and the Directors' Report for the year ending 31st December 1951, be approved and adopted by you.

LONDON INSURANCE LETTER

LIFE ASSURANCE PROGRESS

By Air Mail.

MAIN interest for weeks to come will be the reports of new life assurance business transacted in 1952. In the later months of the year activity slackened somewhat, but it can be assumed that the total figures for the year will show a further considerable advance. The expansion of life assurance has continued with no significant interruption for about two centuries, despite wars and recurring crises; and every estimate of trends over the coming decades suggests that the rate of progress will continue. Partly, the reason for a virility which has no parallel in other of the financial institutions of this country is the broadening of the scope and the adaptability of the form of insurance. The offices have been singularly successful in evolving new policies to meet the special needs of individuals and in extending the principle from individual to group business.

At the same time the character of life assurance has been changing. There is still scope for an increase in insurance for the purpose for which it was originally conceived—for protection against the hazards of life. But it is rather as a form of saving that the business is thriving now. Personal saving in this country in other forms is now almost negligible—about £2 per person per year. But saving through life assurance makes good a substantial part—not, indeed, all—of the deficiency. The economic and social consequences of this concentration on one form of saving are seriously considered in the insurance business, as outside of it. The offices have new responsibilities in providing capital which a generation ago would be made available through other media; and this medium is not ideal for all purposes. The fact remains that it is primarily through insurance that the public chooses to save. The new task for the insurance business is to adapt its operations to distribute savings, as it has adapted its policies to the needs of individuals and groups.

Marine Insurance and Losses

The past few months have been an interesting period in the marine insurance market, since the liner fleets of various nations are insured from the beginning of January, and the insurances are negotiated in the preceding quarter. The Canadian Pacific fleet is the most important one concerned in this period, for the majority of the big British fleets are insured about three months later. Insurance of various European liner fleets has also been renegotiated recently, and of British and foreign cargo fleets. Insurance rates in this market have not, generally, been reduced as might have been expected in view of the fall in the value of secondhand ships resulting from the decline in freight rates. The rise in shipbuilding costs has been checked, but it has not been definitely reversed; and ships of recent construction covered on the basis of construction costs could certainly not be replaced more cheaply. Underwriting results of the past year cannot be estimated with any accuracy, if only because the market works on a three-year time-scale. Late in the year one of the year's most serious casualties occurred—the loss of the French "Champollion" near Beirut. She was insured for the franc equivalent of £1,166,000, and much of the loss, through reinsurance, falls on the London market.

Air Accident Compensation

A long-disputed claim by an aircraft passenger against British Overseas Airways Corporation having ended unsatisfactorily for the claimant, the latter has lately made some important suggestions for amending a serious fault in the liability for accidents in air travel. It was fortunate that the suffering passenger was a person of some note, Mr. T. L. Horabin, former Member of Parliament. Writing at some length to *The Times* as a disinterested party (the case being already concluded), he was able to bring informed opinion to his side. The bare facts are that, nearly four years ago, a plane in which Mr. Horabin was destined for Lagos wandered for many hours over France, exhausted its petrol, crash-landed in Southern England, and badly injured this particular passenger—some others were killed. The pecuniary loss is not in dispute: BOAC agreed his loss of income at a compounded figure of £10,000, plus approximately £1,300 for medical expenses, apart from physical suffering. However, by a curious mistake, the Carriage by Air Act, 1932, virtually limits the claim to damages for death or injury by air travel to £3,000. Whether or not this figure was reasonable in 1932, it is certainly unreasonable two decades later, when the value of money is much less. In any case, according to Mr. Horabin's statement, the Act of 1932 failed to give effect to the Warsaw Convention of 1929, as intended. To obtain damages in excess of that limit, a passenger must prove wilful misconduct on the part of the crew, not merely negligence or incompetence. But the Convention was written in French; and the French word "dol," meaning primarily "fraud," but also the equivalent of "gross negligence," was given in translation the restricted meaning, "wilful misconduct." This restriction of liability—whatever the figure—is inappropriate to a fast-developing mode of travel, when very liberal damages are allowed for accidents by road or rail. While the anomaly persists the value of personal accident insurance is all the more obvious. That a passenger is recompensed by insurance does not in any way affect his right to claim damages from the airline involved.

Stocks and Shares

NEW YEAR OPENS ON QUIET NOTE

LIMITED TRADING IN ALL SECTIONS

Wednesday Evening.

THE stock exchange began the New Year more subdued than ever and the week since the holidays has been the dulllest for some time. The only consolation is that most sections are standing up particularly well, in view of the very limited volume of transactions, and any tendency to sag has been confined to Central Government securities. The appearance of sellers throughout the list of gilt-edged may be related to the end of bank window-dressing after the close of the year, and the rather tighter money conditions reported in Calcutta and Bombay.

The 3 percent Conversion Loan 1946-86 hovered around Rs. 82.13, at which price there were sellers at the close. In sympathy 3 percent non-terminable Loan 1986-7 was marked down to Rs. 83.6. Among short-dated issues 3 percent 1953-55 was steady at Rs. 100.3 but 2½ percent 1954 and 2½ percent 1955 met with some selling pressure and eased to Rs. 98.2 and Rs. 98.1 respectively. Among medium-dated Loans 3 percent 1963-65 was marked down to Rs. 92.6 at which rate there were small buyers while 3 percent 1964 was a shade better at Rs. 92.7. In long-dated 3 percent 1963-68 shed one anna to close at Rs. 90.7 while 3 percent 1970-75 fell sharply from Rs. 86.14 to Rs. 86.9 at which price there were further offerings.

Demand for the 4 percent Provincial Loans continued and owing to shortage of scrip prices hardened further as will be seen from the following table:—

	Opening	Closing
	26-12-52	7-1-53
4% West Bengal 1964	Rs. 100.2	Rs. 100.4
4% Bombay 1964	100.4	100.5
4% U.P. 1964	100.0	100.4
4% Madras 1964	100.2	100.5
Small lots of 3 percent U.P. 1961-66 changed hands at Rs. 90.4.		

There was sustained demand for selected jute and miscellaneous preference shares at around previous quotations. Among Jutes, Birla were wanted at Rs. 100. Hooghly changed hands at Rs. 14.4 and Northbrook at Rs. 100. On the announcement that the Rameshwara Jute Company had again passed the preference dividend for the half-year ended 31st March 1952, the price receded from Rs. 8.8 to Rs. 7.8. In the Miscellaneous group, small lots of Bathnates were crossed at Rs. 24.8. Calcutta Electric Supply were steady at Rs. 12.4. Dunlop Rubber 1st were quoted at Rs. 126 and the 2nd at Rs. 100. Indian Irons were steady at Rs. 107 as were Indian Standard Wagon at Rs. 126. Shree Gopal Paper were marked at Rs. 114 and New Victoria Cotton at Rs. 3-12.

In the banking section, Imperial Fully-paid and Contributory were steady at Rs. 1762 cum-dividend and Rs. 433 cum-dividend. United Bank of India (Rs. 10 paid up) were quoted at Rs. 3-14 and business was reported in United Commercial Bank at Rs. 34-8.

Among Railways, small lots of Chaparmukh Silghat were marked at Rs. 52, Futwa-Islampur at Rs. 53, Howrah Amta at Rs. 67 and Burdwan-Cutwa at Rs. 63-8. After a long interval Baraset Basirhat came to business at Rs. 10 against a previous nominal quotation of Rs. 20.

With the exception of Elgin Mills which improved from Rs. 14-14 to Rs. 15-8 very little interest was displayed in cotton shares. Bengal Nagour changed hands at Rs. 13-4. Howrah were marked at Rs. 112 and Dunbar at Rs. 127. New Victoria were easier at Rs. 1-5.

Coal shares were neglected and a minimum of business was completed. Burrakur were quoted at the opening of the period under review at Rs. 10-10 but steadily receded to close at Rs. 10. Bengal were unchanged at Rs. 508 while East Indian were easier at Rs. 20-11 as were New Beerboom at Rs. 18-2. South Karanpura came to hand at Rs. 13-12 and Raneeunge at Rs. 7-2. Among the small priced shares Central India and Western Bengal were quiet at Rs. 4.4 and Rs. 3-14 as were Talcher at Rs. 2-12.

Business in jute shares was reduced to a minimum and prices were marked down over a broad front. Howrah fluctuated within 10 annas to close at Rs. 23-14. Anglo India were transacted at Rs. 226, Auckland at Rs. 130 and Champdany at Rs. 168. Among the other few transactions recorded were Chitavalah at Rs. 28-8, Delta at Rs. 238, Kinnison at Rs. 205, Meena at Rs. 107-8, National at Rs. 25-7, Nuddea at Rs. 45 and Union at Rs. 189.

In Electrics, Agra were reported at Rs. 143, Benares at Rs. 18 and Calcutta Electric at Rs. 12-11. Jubbulpore were offered at Rs. 13 and Patna easier at Rs. 10-4. U.P. changed hands at Rs. 143.

No interest was shown in Sugar shares. Belsund were neglected at Rs. 6-4 and Champaran at Rs. 17. Dyer Meakin Breweries were sold at Rs. 5 and Ramnugger at Rs. 15. In contrast, Samastipur and U.P. were fairly steady at Rs. 11-10 and Rs. 13.

Following the visit to Korea of Russia's C-in-C in the Far East it was suggested that Russian and Chinese forces were being massed in North China and Korea in anticipation of a feared U.N. offensive. This gave market speculators fresh hopes of price rises and Indian Iron and Steel shares at one time improved to Rs. 24-5. As the session progressed, however, the price receded steadily to close at Rs. 23-9. Braithwaites were wanted at Rs. 9-14 and Burn were taken at Rs. 247. There was a small enquiry for Indian Galvanizing new at Rs. 13 and Indian Standard Wagon at Rs. 77-8. Kumardhobi Engineering were quoted at Rs. 7-8 and Marshalls were lower at Rs. 6-3.

In the Miscellaneous group, Shree Gopal Paper were steady at Rs. 16-3 and there was some demand for India Paper Pulp at Rs. 150. Titaghar Paper were sold at Rs. 34 and Sone Valley were fairly steady at Rs. 6-8. India Steamship changed hands at the lower level of Rs. 6-5. The announcement that Angelo Brothers had reduced the dividend from 25 percent to 12½ percent was received with disappointment and the shares were neglected at Rs. 20-14 cum-dividend. Indian Cables provided a bright spot with the price improving from Rs. 17 to Rs. 18-8. Balmer Lawrie came to hand at Rs. 200. British Ceylon Corporation at Rs. 14-4 and British India Corporation at Rs. 9-5. Chhatak Rubber Roneaw were marked at Rs. 126-8 and Ganges Rone at Rs. 367 cum-divid. Indian Wood Products were scarce at Rs. 48 while Jardine Henderson slipped back to Rs. 123. Martin Burn were steady at Rs. 18-10 and business was reported in Metal Box at Rs. 19-8. Indian National Airways were slightly easier at Rs. 3-9 but Airways India suffered from Rs. 7 to Rs. 8. Railis were quoted at Rs. 74-8 and F. & C. Osler improved from Rs. 3-8 to Rs. 4.

In the Mining section Indian Copper changed hands freely at around Rs. 3-3. Burma Mines were done at As. 14 and Non Ferrous Metals at As. 11.

Although business in the tea section continued on an extremely restricted scale a few bargain hunters were attracted by the low levels at which certain shares stood. Bishnauth were taken at Rs. 20-2. Bopukhuri at Rs. 13-8 and Brooke Bond at Rs. 10-4. Jullibari were a shade better at Rs. 8-6. On the other hand Bachmani were easier at Rs. 7-8 and Raigarh at Rs. 17-4. A few transactions were recorded in Pantanara at Rs. 101 while a parcel of Javhara changed hands at Rs. 17-8. Tukwar were asked for and taken at Rs. 5-4 and Syston at Rs. 1-12. Baitakhal changed hands at Rs. 3-6.

Addressing the annual general meeting of the INDIA STEAMSHIP CO., LTD., Sir A. Ramaswami Mudaliar, chairman, told shareholders that no further progress had yet been made in getting the company full membership of two of the most important conferences so that the anomalous position remained that Indian vessels starting from Calcutta could not freely carry freight from Colombo to U.K. ports and the Continent. Freight earnings for the year ended 31st March, 1952, amounted to Rs. 384 lakhs, an increase of more than Rs. 1 crore over the preceding year. Trading conditions during the year were reasonably good with increased freight rates and a shortage of shipping space. These benefits were however partially offset by serious delays both in Indian and foreign ports. While the company is primarily concerned with overseas trade, the importance of coastal trading has not been overlooked. To this end an ocean-going vessel has been diverted to ply on coastal routes. The chairman referred to the Planning Commission's estimate of the increase in Indian shipping tonnage during the period of the plan as "extremely modest." The present total in Indian shipping tonnage is about 400,000 tons and gross tonnage registered is about 200,000 tons by the plan envisages a rise of about 200,000 tons by 1955-56. The grant of loans to shipping companies at concessional rates to assist them in purchasing new vessels was welcomed. Sir Ramaswami said that the company intended to take advantage of these facilities and plans were already being considered by the Board. For the year under review a dividend of five percent has been paid, the first since the company was registered in 1928. Cash resources are good and the Directors have decided to redeem the entire series of mortgage debentures of the face value of Rs. 25 lakhs. A fuller account of the meeting appears on page eight of this issue.

Speaking at the annual meeting of DALMIA CEMENT LTD., Mr. J. Dalmia, chairman, told shareholders that the five year plan envisaged considerable expansion of the cement industry and had placed cement high in the order of priorities of industrial development. Already, he said, sales of cement and production capacity in India had risen and the Planning Commission estimated that exports of cement would rise from about 30,000 tons to 300,000 tons a year. Referring to the recent reduction in the controlled selling price of cement because of the fall in prices of packing material, he said that what the Government had failed to realise was that manufacturers were placed in a difficult position because of the stocks of high

Pakistan

Fall in Wheat Acreage—New Import Policy and Demand for Price Controls—Sind Irrigation Scheme—Registration of Importers and Exporters.

(FROM OUR OWN CORRESPONDENT)

Karachi, 2nd January.

THE revelation by Mr. Daultana, the Chief Minister of the Punjab, that the area under wheat in his province showed a decline of 30 percent as compared with the previous year made very disturbing reading. It was not as if the last year's harvest was a big one; on the contrary, the acreage shown to wheat in that year was six percent smaller than in 1950-51, and the yield was down by about 23 percent. Against this background Mr. Daultana's figure is even more depressing. It means all too plainly that the end of the food-grains shortage is nowhere near in sight, and that the Government will have to import perhaps a million tons of wheat during 1952-53. Distressing as this is for the economy of the country, it does at least help to make one thing clear: that Government will do their utmost to hold out against devaluation till this huge import programme is complete. The maintenance of the rupee at what most people would describe as an artificially high level will continue to serve as a useful device for keeping prices down and enabling Pakistan to get her requirements from overseas cheaply.

Meanwhile, however, it is the new import policy which is temporarily causing prices to rise. The Government has succeeded in bringing its balance of payments into a precarious equilibrium by what might almost be called the temporary abolition of imports, but the consumer is beginning to count the cost. The position is not nearly as unsatisfactory as a recent press report would have had us believe. It was to the effect that enquiries conducted by the Government had revealed an average price rise of 35 percent or more. No confirmation was available for this: the Ministry of Economic Affairs had been making an experimental enquiry of its own and had found that the prices of standard lines of consumer goods, such as popular brands of toilet articles, had in fact moved very little. The origin of the press report therefore remains something of a mystery. That prices will rise, and rise sharply, unless the Commerce Ministry does something pretty quickly about getting out fresh import licences, admits of no doubt whatever.

The circumstances are such as to make a demand for the reimposition of price controls inevitable. Past experience of this form of official control has admittedly left most persons with a hearty distaste for it, but it is thought that where the Government went wrong in the early years of Pakistan was in trying to spread its net too wide. It is now being suggested that careful discrimination should be exercised in choosing the articles to come under control. A start would no doubt be made with drugs and medicines (the profiteering merchant's favourite line). As other types of goods begin to disappear under the counter they should be dealt with in a similar manner: electrical fittings and sanitary equipment, for example, are already ripe for such treatment, for prices of these goods, for which the big building programme has created an extensive demand, have shot up by about 30 percent in the last few weeks—to the dismay of the many Government servants who are building their own houses with the help of the Government employees' co-operative society. The mere threat of price control will often be sufficient to check the activities of the profiteers.

Self-sufficiency in foodgrains should be restored in 1954, and as the big irrigation schemes get under way the country will move on to exportable surpluses. The Lower Sind Barrage, the headworks of most of the main canals of which should be completed in that year, will alone command an area of 2.8 million acres, of which 1.7 million will be virgin land. The project will ultimately produce 750,000 tons of foodstuffs. The Sind Government, incidentally, intends to devote a substantial acreage to sugarcane production, and to establish a large sugar mill in the area. Pakistan now spends many crores annually on imports of sugar, and it is wholly unnecessary that this drain of foreign exchanges should continue. A minor scheme which is worth notice—only because the Americans are taking an interest in it and are likely to contribute equipment for its execution—is the reclamation of 100,000 acres of land in the Nawabshah district. This is Government land. Water is available, and clearance of jungle is the main job that requires to be done: for this American equipment is considered by the Sind P.W.D. authorities to be the best.

The rules for the registration of importers and exporters have provided further problems for foreign business houses in Pakistan. The main right type to make up the prescribed percentage have already been much in demand during the past few years and it is feared that the educational standards of most young graduates—as the Government itself has noted in connection with recruitment to the public services—are nowadays distinctly below the mark.

London

1952 in Retrospect—Prospective Budget Deficit—Need for Export Surplus Stressed—Rubber Study Group—Barsi Light Railway—Colombo Freight Surcharge Suspended.

(FROM OUR OWN CORRESPONDENT).

3rd January.

THE perils of 1952 have been surmounted—the uncertainties of 1953 lie ahead. As is not unusual at this period, there is a general tendency to look back, with varying degrees of satisfaction, on achievements, near achievements and even failures, as well as to try and pierce the future that lies ahead. On the whole, the New Year messages of the various political leaders were reassuring. Mr. Churchill, for instance, said, "We can look back over the year just ended with pride in a job well started" and "The new year presents new and hopeful opportunities," though he tempers his optimism with the proviso "let us face the coming year with a resolute determination to carry out the task before us no matter how hard or unpleasant." Mr. Attlee, on the other hand, condemned the "unnecessary disunity" of the past year and added "During the coming year we must resolve to close our ranks, remembering that the cause for which we stand is far greater than any individual differences." Mr. Clement Davies, in his message to the Liberals, said he saw no future for the country in the face of the destructive party warfare of the recent past, but set great store by the hope of electoral reform. Coming nearer home, Sir Patrick Hannon, President of the National Union of Manufacturers, saw signs of a brighter future for industry appearing over the horizon and urged manufacturers to strengthen and enlarge their efforts, while Mr. Charles Connell, President of the Shipbuilding Conference, was equally optimistic, given adequacy of steel supplies during 1953.

The consensus of opinion seems to be that we can look back upon 1952 with a certain measure of satisfaction, at least in the economic sphere. It produced three outstanding achievements, which the *Financial Times* lists as first, that the country was retrieved from disaster; second, that there has been a significant change in economic method, with the application of monetary control and the introduction of an increasing freedom over a wide range of commodities so that the price mechanism has been allowed to work; and third, that the Commonwealth Conference reached a new assessment of the task ahead so that the early stages of the return to convertibility have been brought into the reach of practical politics. That represents a good beginning, but no more. To consolidate the progress already made it will be necessary for the Government to advance further along the path it has already mapped out by extending the range over which the price mechanism works without cushioning its effects more than is absolutely necessary, there must be a rise in real savings, either by greatly increased production at home or from restraint in consumption, and there must be reductions in Government expenditure to match those being imposed upon the private sector of the economy.

The signs and portents for the immediate future are, to say the least, contradictory. It is true that steel production is rising, that coal stocks are fairly adequate though costs of production are proving uneconomic, and that electricity supplies are at a peak figure ahead of programme extension, while there ought to be considerable advantage both to production as well as to the export drive by the recent decision to grant equal priority to jet aircraft production for civil needs as has been accorded to military planes. It is also possible that much good may come from Mr. Churchill's decision to visit New York and Washington en route for a fortnight's holiday in Jamaica so as to have unofficial discussions with General Eisenhower and Mr. Truman. The talks are regarded as preliminary to the official discussions which will follow with the new American administration later in the year, when the Prime Minister, supported by Messrs. Eden and Butler, will be representing not only the United Kingdom but all the countries of the Commonwealth, to whose representatives they will presumably report when the latter gather here after the Coronation.

On the other hand, it is hardly reassuring to learn from the Exchequer returns for the first nine months of the current Budget year, that the Chancellor's estimates last April have gone badly astray. The deficit at £950 million compares with a deficit of £806 million a year ago, and less than half of it is due to larger defence expenditure. A year ago there was a "swing" of £450 million in the final three months of the Budget year. It is probable that this year the comparable figure will be somewhat higher but even so it is generally accepted that the final deficit will be so large that the Government will have to tighten the financial reins much more strongly to carry out its general policies and that the chances of big tax reliefs are slight. There is much scope for reductions in Government expenditure, and the estimates of the Ministries are now under strict scrutiny. There is also evidence that the rise in expenditure on rearmament is beginning to slow down as a result of the application of the Government's new policy in this respect, but it is extremely unlikely, unless entirely unforeseen events occur, that Mr. Butler will have much scope for manoeuvre in his promise to provide incentives for greater production and expanded exports.

The views of the Government and of both sides of industry on this question of exports was made clear in an amicable exchange of views before Christmas, when Mr. Butler, supported by other Ministers, held the first of his series of discussions with all sections of industry and commerce on the export problems created by the keenly competitive conditions in world markets. Mr. Butler stressed the need for an export surplus—which would call for a 20 percent rise in volume over 1951 figures or a doubling of the pre-war volume—not only to ensure a reasonable standard of living at home but to cover requirements of the policy of building up reserves and investing overseas. The industrialists who attended, drew attention to their credit difficulties in export markets, the problems of bilateral negotiation, the long-term dangers of barter deals and the disincentive of high taxation. The trade union leaders, for their part, emphasised the need for more efficient techniques as aids towards higher productivity. Both sides of industry indicated their anxiety to co-operate, but suggested that the Government should offer greater incentives to employers and workers, make the provision of capital equipment easier, and take more effective steps to bring the gravity of the export and economic situation home to the public.

The unqualified co-operation of labour would go a long way towards achieving the targets which Mr. Butler sets, for although the worker himself is fully deserving of the many encomiums that have come his way of late, particularly the miner, the politicians lose no opportunity of bedevilling the issue. Recent statistics, for instance, make nonsense of the charge that a Conservative Government's policy must increase unemployment. In point of fact, the overall increase in unemployment in 1952 was negligible. At the same time, that year promises, to judge by the figures of the first eleven months, to rank as the second highest year for the amount of wage increases paid and the number of workers involved. Already over 11 million workers have received aggregate weekly increases of £4,282,200. In the twelve months of 1951 the respective figures were 12,239,500 and £6,546,700—an all-time high.

The working party of the International Rubber Study Group, which discussed market regulation without reaching any final conclusions in August last, meets again in London next Monday. About twenty countries, including both producers and consumers, will be represented, and the talks are expected to last about three weeks and will be private. It is presumed that another attempt will be made to work out a draft proposal for measures to prevent heavy surpluses or shortages of rubber. The Malayan representative, it is reported, will propose the establishment of a buffer stock. The idea has long been favoured by producing countries, and it attracted the interest of the recent Commonwealth Economic Conference. Traders, however, are opposed to any such scheme on the ground that it would give Governments too much power to interfere in the market, while it is extremely doubtful whether the United States, particularly with a new administration in the offing, will be any more sympathetic to the idea than it has been in the past.

Notification by the Government of India of its intention to exercise the option under the contracts of taking over the Barsi Light Railway on 1st January, 1954, was received by the company on Christmas eve. It involves the payment to the Company in England, in sterling, of an amount equal to the capital expended with its authority, subject to an allowance for depreciation. Registered in 1895, the company has an issued capital of £760,000, made up of £29,680 in 6½ percent Preference and £770,320 in ordinary stock, on which

the last distribution was 4 percent. The stock has appreciated on the London market since, but it is firmly held. Needless to say, the last balance sheet has been carefully studied to reach a probable "break-up" value. There are estimates varying between 155 and 142 for the ordinary stock, before and after depreciation, on the basis of the figures available, and a figure somewhere between the two is regarded as being probable. It is understood that the Company will shortly be issuing a circular to shareholders, which will help to clarify the position, but dealings are just possible between 114-119.

The U.K.-Colombo Conference Lines announced recently that they had decided to suspend the application of the freight surcharge of 10 percent on cargo shipped by vessels commencing to load at each individual United Kingdom port on or after 1st January, 1953. Similar action has been taken by the Lines in the Outward Continental-Colombo Conference. The Lines' decision was taken in the general interest of the trade of Ceylon, as they were satisfied that all possible efforts will continue to be made by the Port Commission to improve the rate of discharge in Colombo. The Lines emphasised that the surcharge is suspended and not cancelled, and that it may be necessary to reimpose it if conditions in the port of Colombo again deteriorate.

Mr. George H. Middleton, who was Counsellor at the British Embassy at Teheran until Persia broke off diplomatic relations with Britain last October, has been seconded from the Foreign Service to the Commonwealth Relations Office to take over at the end of March the post of Deputy High Commissioner for the U.K. in India. He will succeed Mr. J. S. Garner, who returns to the Commonwealth Relations Office in April as Deputy Under-Secretary.

Sir Harry Greenfield has been elected a Director of the Chartered Bank of India, Australia and China in succession to Mr. Archibald Rose, who has retired. Sir Harry is a Director of Tobacco Securities Trust.

For the first time in the history of the Army Rifle Association, Gurkhas, drawn from the Coronation contingent of the Gurkha Brigade, will compete at the central meeting of the Association at Bisley next June.

Considerable interest has been aroused by the news that Steel Bros. and Co., of London, are planning to prospect for oil in the Widnes area of Lancashire, where oil was recently discovered in the course of drilling operations undertaken by the National Coal Board.

If it is decided to drill, the most likely site is at Cranton. Such a well would be comparatively shallow, as the oil show occurred at a depth of only about 1,650 ft. Until actual drilling has been done, however, it is impossible to know whether or not oil is present in commercial quantities.

The first coffee auctions to be held in London since the war will be held next Friday. This follows the resumption of free trading in coffee which took place on 20th August, when the import of coffee was handed back to private traders.

The auctions will be conducted by the Ministry of Food, Coffee Selling Section, which is composed of recognised coffee brokers, who are members of the Coffee Brokers' Association, and will be held in the sale room at Plantation House in Mincing Lane. The auction begins at 10.30 a.m.

For the attention of Far-sighted Industrialists HAVING LABOUR TROUBLE?

When you find you are having continuous labour trouble in one of your plants, you are not likely to put all of it down to subversive influences, within or without. You realise that these influences make their presence most felt where there is already an undercurrent of dissatisfaction based on genuine grievances. If you are satisfied with the personal qualities of your management, you next ask yourself if your Labour Department is organised to act effectively in dealing with complaints from the Labour Union, and whether its service records are

adequate to prevent nepotism and anomalies arising out of increments and promotions. Then you study your wage structure to see if each job is being paid at its true relative worth, and that sufficient channels of promotion are open to the ambitious. If any incentive schemes are in use, you review their working, as you realise that haphazard schemes can cause very serious trouble. Only when you have seen to the removal of weaknesses in the administration of your plant, can you honestly blame any remaining unrest on others.

Food Scarcity in Maharashtra—Multi-Point Sales Tax—Civil Disobedience in Saurashtra—New Import Policy—Revival of Swadeshi—Statistical Quality Control—Co-operative Movement.

(FROM OUR OWN CORRESPONDENT)

4th January.

BUSINESS during the past fortnight has naturally been slack because of the Christmas and New Year holidays, but the authorities have a number of problems to contend with. Famine conditions in parts of Maharashtra deteriorated further because of the absence of winter rains and the partial failure of the rabi crops. Conditions are reported to be so serious that the Central Government has been moved to send a team of investigators to suggest permanent remedies to prevent recurrence of famine in this area. The State Government has opened relief works at various places to provide employment for agricultural labour and small agriculturists. The Centre has offered all generous help, agreeing to bear 50 percent of all expenditure on relief, and the provision of subsidised wheat for sale in these areas. While the Government will be able to tide over the foodgrains crisis, the main difficulty is likely to be experienced with the supply of fodder for cattle and water for the people of Maharashtra.

This situation is likely to complicate the budgetary position of the State Government which is already none too happy. A lot of money will be required for famine relief, while the liberal remissions that are being given in land revenue will also reduce the income of the Government substantially. It is unlikely, therefore, that any relaxation in the attitude of the Government towards the multi-point sales tax can be expected. This tax has now been revived by a new ordinance which corrects the position regarding inter-State and foreign trade which led the High Court to declare the Act void. In most other respects the multi-point sales tax under this ordinance remains as it was. Since doubts were raised about the legality of the tax as levied before 1st November when the new sales tax Act came into operation, the Government had taken care to validate the old sales tax Act of 1946 by another ordinance, because assessments for the period prior to this are still to be made. In any case with the revisions that the Government has been compelled to make by the High Court judgment, the revenue from this source during the current financial year as well as in 1953-54 is bound to be adversely affected. It is feared that the State Government will have to resort to additional measures of taxation even though Bombay's taxes are already the highest in the country.

In Saurashtra the difficulties of the Government over taxation have increased considerably with the agitation against the sales tax increasing and receiving more popular support. The position in Bombay is confined to occasional strikes by trade organisations and protests by leaders of the business community. It has assumed the form of civil disobedience in Saurashtra, with daily conflicts between the authorities and the public, accompanied by defiance of Government's orders. There have been cases of lathi charges, the use of tear gas and even of shooting, leading to a further stiffening of popular agitation. Mr. U. N. Dhebar, the Chief Minister of Saurashtra, who had been convalescing in a nature-cure clinic near Poona for the last two months, has suddenly returned to Rajkot, the State capital. He has adopted a more conciliatory attitude to this movement than his colleagues and it is expected that his presence will bring about a rapprochement between the business community and the Government.

On the whole, the new import policy for January-June 1953 has been well received by the

business community in Western India. While there might be grievances in respect of some commodities and also at the absence of any announcement with regard to certain important items, the general feeling among importers is that the Government has tried, within the limits of its foreign exchange resources to liberalise its policy both in the interests of trade and consumers. Industries, too, have experienced some relief at protection that this policy grants to some of them in an indirect manner.

Following up the suggestion made by Mr. Pranlal Devkar Nanjee, at the last quarterly meeting of the Indian Merchants' Chamber, for the formation of a non-official body to revive the spirit of swadeshi, there was an informal meeting of the prominent business men in Bombay last Monday to consider this question. Mr. Nanjee, elaborating his suggestion at this meeting, regretted that the spirit of swadeshi had languished after the advent of independence and said that though the country had won freedom in the political sphere, it had still to win it in the economic field. At the same time he emphasised that to foster this spirit, it was necessary that Indian manufacturers produce quality goods and distribute them at reasonable prices. He proposed the formation of a swadeshi league and this move having received unanimous support, it was resolved to form a body to promote the use of Indian goods and services. A 31-man provisional council of management was appointed with Mr. Nanjee as President.

Mr. Morarji R. Desai, Chief Minister of the State, inaugurated early last week the training course of statistical quality control sponsored by the Government of India under the United Nations Technical Assistance Administration at the University Convocation Hall. In the course of his address to the trainees, the Chief Minister, welcoming the idea of starting such a course for experts, said that uniformity and efficiency in the production of manufactured goods were essential if India was to meet foreign competition. A team of five U.N.T.A.A. experts led by Prof. Ellis R. Ott, co-ordinator, will direct the course in which 40 students and 15 instructors are participating. According to Prof. Ott, quality control did not require the best equipment; in fact, its primary function was to improve the performance of existing equipment, workers and supervisors using the same raw material. Explaining this point, he observed that statistical quality control was a collection of simple and practical techniques based on sound statistical theory, which was being applied with great economic advantage to many phases of industry.

In the course of a talk to members of the Bijapur District Central Co-operative Bank, Mr. M. P. Patil, Minister for Local Government and Co-operation in Bombay State had already reached the target for 1953-54 and was fast developing, not only in urban areas, but in rural areas also. Mr. Patil stated that co-operative societies had been established in 60 percent of the villages in the State and 30 percent of the rural population was deriving benefits from these societies. He said that the total capital resources of the co-operative bodies in the State exceeded Rs 90 crores and that by providing the necessary funds, the co-operatives were in a position to assist agricultural development. While the statistical data on which the authorities based their claims of having assisted progress and development may be technically correct, the general belief of those prominent in the movement is that the progress made has been only quantitative and that actually quality has declined.

Ceylon

Senanayake on Commonwealth Talks—Trade Pact with China—Egypt Stops Buying Tea—Limited Despatches to Mining Lane—Quality Control on Exports.

(FROM OUR OWN CORRESPONDENT)

Colombo, By Air Mail.

THE importance of the Commonwealth move towards an international agreement to stabilise commodity prices was emphasised recently by Ceylon's Prime Minister, Mr. Dudley Senanayake, on his return from the London conference. He spoke of the damage caused by violent fluctuations in commodity prices and said it was almost impossible to draw up long-term plans in such circumstances. Ceylon was willing to support efforts to strengthen sterling and achieve convertibility provided they did not impede her own progress. He opposed the idea of removing all trade barriers; India and Pakistan had also pointed out that under-developed countries must impose restrictive measures to foster their industries, and the conference accepted this point of view. Referring to the Development Finance Corporation, Mr. Senanayake said it would be particularly useful to countries like Ceylon which needed capital, but could not say whether she would borrow from it. Ceylon would need more capital if the Government decided to implement the recommendations of the World Bank mission; whether funds should be borrowed from the Corporation would be decided later. The Premier was satisfied with the outcome of the talks, and expects to be in London again for the Coronation and the subsequent Prime Ministers conference.

Ceylon and China signed a five-year trade agreement in Peking on 18th December under which China will supply 270,000 tons of rice in the first year at \$34 a ton and buy 50,000 tons of sheet rubber at 32d a lb. It is expected that China will be able to supply an equal quantity of rice in the remaining four years also, but the price will be negotiated annually, depending presumably on changes in world sheet rubber prices. China has agreed to pay more than the world price for rubber, whatever it might be. Ceylon is already receiving Chinese rice, 80,000 tons of which were contracted for by the first trade mission to China.

The Government of Ceylon has set up machinery to handle the entire export of 50,000 tons of rubber to be sold annually to China under the agreement. The trade was originally to have been restricted to Ceylonese nationals, but the Premier has agreed to reconsider this decision as a result of protests from British shippers. China will buy specified proportions of Grades 1, 2 and 3 sheet, making up a total annual export of 50,000 tons, at 32d a lb. If Ceylon is in a position to increase the quantity of Grade 1 sheet, China will pay an extra premium, China has also agreed to buy Grade 4 and 5 sheet within the 50,000 tons and to pay a price in excess of Singapore quotations.

Ceylon will credit moneys due for rice in China to the Chinese Government's account with the Bank of Ceylon in rupees. The Bank of China will debit the account of the Government of Ceylon in the Bank of China by the amount of the credit. The reverse procedure will apply in the case of rubber. Under the agreement China guarantees Ceylon 270,000 tons of rice annually, 70,000 tons more than was originally offered. The price of \$34 sterling f.o.b. is £2 less than the price mentioned during the October negotiations. The agreement came into operation on 1st January.

Egypt has stopped buying tea in Ceylon because she finds it difficult to pay in sterling. Trade circles have been worried during the last few weeks and help was sought from the Government. At first the idea was to approach another country, say Japan or the United Kingdom, with a view to negotiating an agreement whereby the third party could purchase Egyptian cotton for sterling, and that money could be utilised by Egypt to purchase Ceylon tea. Japan seemed the ideal choice as she has surplus sterling and needs cotton, but the idea was temporarily shelved. The Prime Minister spent two days in Cairo on his way back from Neguib, the Egyptian Premier. No immediate solution has been found but Mr. Senanayake has returned with certain proposals which are now being considered by the Cabinet. One proposal is that Ceylon should increase her imports from Egypt so that the latter can purchase tea.

Ceylon's policy with regard to the shipment of teas for sale in London has been radically changed. Since the London auctions were resumed the Ceylon Government has allowed a maximum of 100 million lbs. of tea to be sold in London each year. There have been no specifications as regards quality. This year however the Government has decided that there should be upper limits for all varieties of high and medium grown teas. Therefore in 1953 no more than 30 million lbs. of high grown and 30 million lbs. of medium grown teas can be sold in London. No limit has been placed on the sale of low grown teas. Retention of most of the quality output for sale in Ceylon is intended to increase Colombo's importance as a world tea centre. It is also pointed out that recently prices in Colombo for most varieties of tea have been higher than in London. Although producers exported less than the 100 million lbs. allowed them U.K. interests had urged the Government to increase the allocation.

Legal provision is shortly to be made by the Government to check the quality of all exports. The new regulations are expected to be enforced in the case of papain first.

Madras

Madras City and Andhra—Social Workers Meet—All-India Economic Conference—Rare Earths—Factory—Coffee Prices.

(FROM OUR OWN CORRESPONDENT)

4th January.

THREE years ago it looked as though a separate Andhra State was all but formed, but somehow it did not materialise. Since then the procrastination of the Government has strengthened the forces of violence and communism in that area. Belated though Mr. Nehru's declaration was, it soon brought the acts of violence, that were spreading through Andhradesa and causing large-scale destruction of public property, under control. The situation is still not free from anxiety, for important sections of the Andhra community have yet to reconcile themselves to the possibility that Madras City may be excluded from Andhra State.

Meanwhile both the Tamils and the Andhras are preparing memoranda for submission to Justice Wanchoo, who has been appointed by the Government of India to enquire into financial and other aspects of the formation of the Andhra State. A meeting of representative citizens of the Tamil Nad, Malabar and Karnatak areas, has demanded the appointment of a Boundary Commission to determine the borders of the new State. The meeting resolved that Madras City should form part of the residuary Madras State; that the capital of Andhradesa should not be located even temporarily in Madras City; that there should be a separate High Court for Andhra State located within the Andhra area and that there should be a separate Governor for the new State. The City Corporation Council has passed, with 51 members voting for and three against, a resolution expressing its "firm opinion that the capital of the Andhra State should be located in the undisputed Andhra area simultaneously with the separation." Although the Praja-Socialist leader, Mr. Prakasam, is uncompromising in his demand that Madras City and its environs be constituted into a separate Chief Commissioner's Province, the Congress leader, Mr. Sanjeeva Reddy, is making a plea for Madras City as the temporary capital of the new State.

There is every possibility of a coalition Government of non-Communist parties being formed in the Andhra State, but Communists and Communist-sponsored Independents will number 48 in a House of 140 members, if there is to be no immediate general election. It is also possible that the notorious rivalry and bickering among Andhra leaders might undermine the stability of the coalition. Communists may be expected to whip up their stock campaign for "Bisala Andhra" which would mean the disintegration of Hyderabad—a prospect which will be most embarrassing to the Nehru Government. The financial consequences of such a partition cannot be contemplated with equanimity.

The International Conference of Social Work, in which American delegates played a leading role, was held here in the middle of last month. The American Ambassador, Mr. Chester Bowles, who addressed the Conference, recalled Arnold Toynbee's prophecy that "300 years from today, the last half of the 20th Century will be remembered not as the age of world conflict, but as the first period in history when mankind dared to believe that the benefits of modern science could be made available to all people everywhere." Mr. Bowles emphasised that an economic programme for an underdeveloped country like India must be ambitious, for time was short; that her economic goals must be reached in a way that would increase the confidence of the people in their own ability and that social workers would soon have to carry the heavy responsibility of developing social services in the wake of economic development. The Conference divided itself into ten discussion groups and four commissions, the deliberations continuing for three days. Their reports were presented to the plenary session of the Conference.

At the All-India Economic Conference held at Trivandrum, Prof. P. A. Wadia, President, said that planning for a better life in terms of economic standards would be a disastrous failure if it was not accompanied by planning in terms of a fuller and richer life for the individual. If the mixed economy of the five year plan could not have even such limited success as the Labour Government in Great Britain had had, he continued, the blame could not rest on those responsible for the plan so much as on the socio-economic environment in which the planners had to deal. The Conference took the view that the controls on foodgrains should be retained in the period of the five year plan.

The Prime Minister, Mr. Nehru, opened the Indian Rare Earths Factory at Alwaye, Travancore-Cochin State, on 24th December. The factory, a joint venture of the Government of India and the State, with 55 percent and 45 percent shares respectively in a capital of Rs. 1 crore, is intended to exploit and process the monazite sands deposited in large quantities along the coasts of Travancore-Cochin. The factory has been designed to process 1,500 tons of monazite annually, with capacity for doubling the output

if required. The Prime Minister disclosed that the Union Government had approved the plan drawn up by the Atomic Energy Commission for the development of atomic energy in India during the next four years. This plan provided for the setting up of a medium-sized reactor in the next three years. Mr. Nehru also inaugurated the construction work on the 96-mile Ernakulam-Quilon metre gauge railway link, the estimated cost of which is Rs. 5½ crores.

Mr. H. Marquand, former Health Minister in the British Labour Government, told a Press Conference here that any plan of development could be inflationary if it proposed to increase the volume of currency in circulation, but that there would be a reasonable balance in the Indian plan so long as, by agreement with the United Kingdom, steps were taken to see that the withdrawal of sterling balances did not outstrip the facilities of the United Kingdom to make good the balances. He said that Britain's ability to export capital goods was clearly better now than before. If the British plan and the Indian plan were co-ordinated, he continued, it should be to the benefit of both countries.

Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, said here that the policy of the Government was to see that coffee prices came down. It is noteworthy that there is already a downward trend in prices in the principal coffee markets. Production, Mr. Krishnamachari said, depended on the internal off-take and if the rise in prices had continued for another year, there would have been a considerable fall in internal consumption. The Minister thought that the system of auctions might have to be replaced by some alternative system which would impose a price ceiling. He gave a warning that if the Coffee Board did not take steps to give relief to consumers, he would be obliged to go his own way to bring about a reduction in prices. Mr. Krishnamachari also revealed that he had asked the Board to release more stocks through co-operative societies and that the Board would be reconstituted to give adequate representation to consumers' interests.

The Southern India Chamber of Commerce heard the views of Mr. B. R. Natesan and three British experts on the scope and implications of the Employees' State Insurance Scheme. The Vice-President of the Chamber pleaded that the minimum number of workers for the application of the Act be raised to 100. Mr. Natesan appealed

to employers to hasten, in their own interest, the implementation of the scheme.

The Southern India Millowners' Association, in a recent memorandum to the Madras Chief Minister, recommended the export of high priced yarn made of costly American cotton and of uncontrolled varieties of Indian cotton. They assured him that such exports would not affect the supplies of yarn for the handloom industry.

The Madras Piecegoods Merchants' Association has urged the Government of India to abolish the excise duty on mill cloth and to issue instructions to the State Governments to restrict the levy of sales tax on cloth to a single point. The Association took the view that high prices limit domestic demand for mill cloth.

The Budget Estimates of the Madras Corporation for 1953-54 place receipts at Rs. 224.81 lakhs and expenditure at Rs. 226.68 lakhs. There is nothing spectacular in the Budget, which provides only for the continuance of existing services. The Governor of Madras has described the city as the cleanest in India.

The State Government has imposed a further cut of 10 percent in power consumption in the hydro-electric areas of the State with effect from 5th January, thus bringing the total cut to 35 percent. The low storage in the reservoirs is responsible for this action. A further fall in industrial production may therefore be expected.

There are now three exhibitions running in the city. The biggest is the Swadeshi Exhibition in the Congress grounds. A feature of the exhibition this year is that the stringent conditions governing the Swadeshi goods displayed have been considerably liberalized. A number of high quality consumer goods, far superior to similar ones manufactured in India, adorn the decorated stalls in the exhibition. Rallis (India) Ltd., are participating with a display of their new tractors and agricultural machinery.

The Government of India have released a further quantity of 1,04,000 tons of sugar from the controlled stocks of the 1951-52 season's production. The quantity released will be sold by factories to buyers of their own choice at the reduced ex-factory controlled prices.

Coal supplies to Pakistan are to continue on the existing terms and conditions (90,000 tons a month with an additional charge of Rs. 12-10 a ton) during January 1953 also, but the position will be reviewed again this month.

Commodity Markets

FREE WHEAT TRADING AND
CONVERTIBILITY
INTERNATIONAL WHEAT AGREEMENT
PROSPECTS

AN international economic dilemma is at present focussed on wheat. Canada has a huge crop and almost a correspondingly large export surplus; but Canada is a dollar country. Australia is planning to increase her production; and Australia is a sterling country. But there are plans afoot to make sterling convertible with dollars; and in a convertible economy the hard distinction between dollar and sterling wheat would disappear. The United Kingdom Government is discussing with agricultural and trading interests the best means of returning the grain trade (at present in the hands of the Ministry of Food) to private enterprise; and implicit in the plan to free grain is the right, effective as soon as possible, to buy grain wherever it is cheapest. As if this situation were not confusing enough, no one knows the fate of the International Wheat Agreement in 1953.

On the question of wheat production in the sterling area the Commonwealth economic conference was unequivocal: it was definitely decided that more wheat should be grown in the sterling area—meaning primarily Australia—to economise expenditure of dollars. The Australian five-year plan envisaged an acreage of 13.65 million by 1957-8 or earlier; which is more than the pre-war average, a little less than the acreage of 1947-8, and considerably more than the present acreage. Whether the problems of the sterling area in general and of Australia in particular would have been much easier in the past few years if Australia had maintained her acreage at the highest post-war levels is a matter of historical interest. What matters now is whether Australia or Canada is to be regarded as the British Commonwealth's main source of wheat.

Dollar Area's Surplus Wheat

The essential fact is that most of the world's surplus wheat is in the dollar area. So huge is the United States crop, as increased this year by about 30 percent, that the USA's estimated surplus, about 600 million bushels, is not much less than Canada's whole crop of 688 million bushels and far larger than Australia's estimated crop this season of 161 million bushels—of which about 77 million bushels should be available for export. Argentina will evidently have about 120 million bushels to export from a crop of 250 million bushels; but she is a very erratic supplier. A remarkable fact is that, despite the huge American crop, American exports of wheat have slumped heavily, by nearly two-thirds compared with last season so far, and the whole season's total is expected to be roughly a third less than last season's total. Canadian shipments have increased this season, but it is evident that the North American total will show the effect of the world's shortage of dollars, not the effect of bumper harvests.

Another reason for the decline of demand for dollar wheat is the growth of home-grown supplies in the importing countries. This is a factor which all the exporting countries have to take into account, for a marginal reduction of importers' demands could have a marked effect on prices in a free market. At present any reduction of demand tends to affect mainly dollar wheat, but if currency obstructions were removed it would affect non-dollar wheat also, at a time when demand for dollar wheat could express itself freely again. It must be said, however, that the whole trend of world economy is towards shortage of food in relation to population, even more so in relation to manufactured goods. Despite the present appearance of the international grain trade, it seems unlikely that any country, no matter what its monetary area, which produces wheat competitively will, in the long run, have cause to regret devoting its energies to the task.

At present, the principle of the price mechanism is in abeyance in the wheat trade. United States output is inflated by price-support, Australian output is deflated by the artificially low internal price. Consumption in Britain (where bread and flour were rationed for only a brief period) is inflated by a subsidy which keeps bread and flour artificially cheap. While the International Wheat Agreement has been in force the international price relevant to most of the main exporters and importers has been in effect fixed, at its upper limit; which has still been appreciably lower than the free international price. Renegotiation of the International Wheat Agreement seems more than usually difficult. There have been signs that the Americans will oppose renewal. The British Go-

vernment's moves to free the grain trade seem to envisage complete freedom of the international wheat trade—and withdrawal of the price subsidy. The decisions of the Commonwealth conference have been interpreted as being incompatible with such international commitments as are embodied in the agreement.

But true freedom of trade in wheat, more than in most other goods, requires that restrictions be removed not only from buying and selling the commodity but also from exchanging one currency for another. It may appear at first sight that the Commonwealth conference was at cross-purposes with itself in deciding that more wheat should be produced in the sterling area and in confirming at the same time that convertibility of sterling into dollars was a permanent objective. Yet it may be necessary to prepare to economise expenditure of dollars if convertibility is to be permitted without grave risk.

GOOD SUPPLY OF LINSEED OIL.

PRICE trends in the world market for vegetable oils are still somewhat conflicting. The "hard" edible oils like coconut oil, used largely in margarine manufacture, remain strong, and "soft" edible oils like soybean oil and cottonseed oil have shown little change, though in some U.S. oils, such as cottonseed oil, there has been a recent improvement. On the other hand, international markets for technical oils like linseed oil and tung oil are weak.

The position of linseed oil, used in large quantities by the paint and linoleum industries, is interesting. U.K. official stocks are taking a long time to liquidate and the selling price of £180 a ton is far above the levels to which world prices have now sagged.

Although bulk buying of linseed oil has ended, the U.K. trade's freedom remains largely academic so long as it is forced to take a high proportion of its needs from dear official stocks. Current free market price levels are between £115 and £120 a ton.

South American Crops

Argentina expects a good linseed crop and, in view of her urgent need to earn foreign exchange, should be prepared to meet the market. Uruguay, too, is having a good crop. From the point of view of the increased world supplies available this season outside the dollar area, the change-over to private buying by the U.K., has been well timed. But as in the case of other commodities where this change has taken place, the question of heavy and expensive official stocks poses serious problems.

In the U.S. domestic market the expected high level of building activity next year should mean a good demand for paint, and so also for linseed oil. Prices of the latter are competitive with alternative paint materials. Nevertheless there is a prospect of a surplus in the United States.

U.K. WOOL TEXTILE RECOVERY

The first half of the Australian wool selling season closed on a very strong note while South African wools were extremely firm and New Zealand crossbreds, after showing an easier trend a few weeks ago, are now back to the strong opening levels of early November. Against such firm raw material background, the Bradford market for tops and yarns is one of the strongest seen this season and displays a progressive price trend against buyers. Yorkshire has led the wool buyers during the past four months, with good Continental and Japanese support and the market has shown generally firm and stable conditions even though U.S. buying influence has been less powerful than in recent seasons. The wool textile business in Britain is staging a progressive though unsensational recovery, for mill output is sold for several months ahead. This is not exceptional under reasonably normal conditions but indicates the gradual return of seasonal buying after the temporary absence of such activity during recent subnormal trade.

The best feature of the trade situation in the U.K. is that practically all wool so far bought by Yorkshire in Dominion markets is already sold in partly or fully manufactured form and mills are recruiting labour as quickly as possible to keep pace delivery requirements. Yorkshire wool buying is not speculative but is against actual orders for manufactured goods and present conditions here hold promise of steady continuity of U.K. wool buying in the second half of the season. Official figures released show commercially held wool stocks in the U.K. to be smaller at October last than a year earlier though this position should henceforth be gradually remedied as Dominion shipments are now arriving steadily from

Australia and South Africa. New season shipments from New Zealand cannot arrive before February but home grown and South American wools are helping to relieve the temporary cross-bred shortage.

WHOLESALE PRICE INDEX FIRM

The official wholesale price index (Base: year ended August 1939 as 100) advanced by 0.2 percent to 372.7 during the week ended 20th December, 1952. Compared to the corresponding weeks of the previous month and a year ago, the index was lower by 2.5 and 14.0 percent respectively. During the week under review, Foodstuffs showed a rise of 0.7 percent to 344.5 owing to higher prices of wheat at Jabalpur (+4.4%), gur (+8.8%) and jawar (+2.2%) in spite of decreases in gram at Patna (-5.5%), coffee (-2.2%), tea and salt (-1.5% each). The index for Industrial Raw Materials moved up by 1.0 percent to 424.0 as a result of an all round rise in the prices of oilseeds (+2.7%) supported by higher prices of lac (+3.3%), raw jute (+2.2%) and raw silk (+1.4%). Prices of manganese ore (-11.1%) and raw wool (-1.1%) moved down during the week.

The Semi-Manufactures group declined further by 0.6 percent to 341.2, variations being recorded in sheep skins (-7.7%), goat skins (-6.7%), zinc (+6.6%), coconut oil and groundnut cake (+5.5% each), gingelly cake (-3.3%), coconut cake, mustard oil and castor oil (+3.3% each), cotton yarn (-2.5%), cow hides and copper (-1.5% each). A fall of 7 percent in the prices of rayon and silk manufactures was responsible for a decline of 0.4 percent in the index for Manufactures which stood at 366.7 during the week. Despite a decline in cashewnuts (-2.5%) and bricks and tiles (-1.1%), the index for Miscellaneous rose by 0.2 percent to 626.9 owing to an increase of 2 percent in spices. INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August '39=100.)

U.S. COTTON CROP TARGET

In announcing the 1953 crop goals Mr. C. F. Brannan, the U.S. Agricultural Secretary, said recently that if they are attained and livestock output is as large as expected, total agricultural production next year will equal or perhaps exceed the 1952 output, which was second only to 1948. They call for smaller production of cotton, wheat and oilseeds because of anticipated large carryovers and lower export demand for these commodities. The result, Mr. Brannan said, would be a "sound balance" in the crop production pattern.

Total crop land use under the 1953 goals programme would be about the same as the nearly 360 million acres of this year, the secretary said. The 1953 crop production goals for some important crops, with the 1953 planted acreage goals (both in thousands), are as follows:—

	Production, Bales, 1953	Production, Bushels, 1953
Cotton	13,000	22,800
Maize	3,350,000	85,000
Oats	1,335,000	43,000
Soy beans	277,000	13,500
Flaxseed	27,000	3,000

No change is proposed in the 1953 national wheat goal of 72 million acres which was announced late last summer.

The United States 1952 cotton crop will probably total 15,038,000 bales, according to the U.S. Crop Reporting Board of the Department of Agriculture. The latest estimate is 133,000 bales, or nearly one percent above the forecast of 1st November, and compares with the 1951 crop of 15,144,000 bales, and 10 years average of 11,775,000 bales. Approximately 90 percent of the United States crop was ginned up to 1st December, the highest since 1943. The forecast of 15,038,000 bales of 500-pound gross-weight is equivalent to 14,895,000 running bales, based on estimated bale weights, by states, for the 1952 crop.

From this week, the freight market report will appear in the new section on "Calcutta Markets"

Jute

JUTE MARKETS QUIET AFTER HOLIDAYS

THE confusion that arose from ambiguity in the phrasing of the ban on futures trading has been cleared up since our last issue, following representations made to Government by various branches of the trade, and mills have since been free to enter into forward contracts without the danger of having them labelled future contracts. But by the time mills were willing to sell the market was unfavourable and there were no buyers, whereas before the market had been favourable and there had been many enquiries for business. With prices steadily declining mills adopted a wait-and-see policy, during which time hessian fell by Rs. 1-8 per 100 yards and heavy goods by nearly Rs. 4 per 100 bags. During the same period raw jute prices fell only by about half the equivalent tonnage, and so there was no hope of business being done for standard constructions at the levels ruling, although a little was done in special goods.

After the New Year holidays there was some improvement in the finished goods market, and prices rose daily until the previous losses had been made up. Mills continued to sit out however in the hope of seeing prices rise further though it is suggested that if prices do rise much further there is the possibility that the Continent may step in and underquote Calcutta rates.

The raw jute market is also quiet since the mills are very long in jute at the present moment, and have not covered their last purchases by sales. As a general rule, manufacturers do not like to be in this position, so it is possible that not much more jute will be purchased until more sales are put on the books. It is estimated that on an average mills' stocks are equal to about eight weeks' consumption.

Kenaf in New Guinea

The following account of Australian interest in jute substitutes has appeared in a Sydney newspaper: The Minister for Territories, Mr. Paul Hasluck, has said that experiments carried out by the Government in New Guinea proved that kenaf, a jute substitute, could be grown successfully there. He was speaking at a demonstration of the use of kenaf products of Goldsbrough Mort and Co. Ltd.'s wool store in Sydney. Kenaf is made from the fibres of the kenaf plant. It can be woven into woolpacks, bags, or made into yarn and twine. Mr. Hasluck said the Government would continue with its experiments, but it was now a matter for private industry to process and market the kenaf products. The manager director of C. Olyer Watson (New Guinea) Ltd., Mr. R. A. Colyer, said his firm had pioneered kenaf growing in New Guinea. "I believe that it will eventually become a £80 million industry in Australia," he said. "It will grow in New Guinea, and it is now a matter of teeing up its manufacture into various articles, such as woolpacks, potato-bags, sugarbags, twine, and the like. Kenaf is an annual crop which can be planted and harvested by machinery, and the fibres stripped from the plant within a few hours of harvesting. We could produce all the kenaf fibre we want in New Guinea. Within a few years the area planted to kenaf will expand to about 10,000 acres, and we can get about one ton of dry fibre per acre." The kenaf wool bales which were on show in the store had been made in New Zealand. Wool industry observers said the bales appeared to be as good as the normal jute bales but needed to be further tested.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Tuesday 23rd December, prices showed increases all round, 40" 10 Oz. hessians improving by 1 annas in the ready position to rule at Rs. 44 per 100 yards, whilst plain heavy Cees and B Twills rose by Rs. 2 and Rs. 2-8 to be quoted at Rs. 97-4 and Rs. 96-12 per 100 bags. After the Christmas holidays the improvement was not maintained and on 26th December hessians fell by 6 annas and B Twills by 12 annas. Of all the fabrics plain heavy Cees alone showed an improvement, but this was only for the ready position due to small covering business for December shipment. From 27th December until the end of the year rates declined daily, hessians by 4 annas per day and heavy goods by about Re. 1 per day; on 30th December quotations were: 40" 10 Oz. Rs. 42-8 per 100 yds.; plain heavy Cees Rs. 95 per 100 bags; and B Twills Rs. 93 per 100 bags. At the opening of the goods markets in the New Year there was an immediate improvement and rates were Rs. 42-10 for 40" 10 Oz. hessians, Rs. 96 for plain heavy Cees and Rs. 94-8 for B Twills. On account of the New Year holidays there was very little enquiry from overseas, but local demand, especially in heavy goods stabilised the market and prices rose on 3rd January by 14 annas in hessians, Re. 1-8 in plain heavy Cees and Rs. 2-8 in B Twills. Thus in two days the losses of the previous fortnight had been made up at least as far as the heavy goods section was concerned, hessian prices were not very far behind the opening quotations of two weeks back. Mills, however, continued to sit out of the market; rates again rose on Tuesday and the market ruled very steady, but no business passed. At the close the market is unchanged with only B Twills showing a slight increase because of local demand for ready shipment. Opening quotations on Wednesday morning were as follows:—

	Ready January	Feb/ March	Apr/ June	F.A.S./ F.O.R.
40" 8 oz	Rs. 35	35	35	34-12
40" 10 oz.	Rs. 43-2	43-4	43-4	43
Heavy Cees (Plain)	Rs. 96	96	96	96
B Twills	Rs. 97	97-8	98	96-8
	Rs. 101	101	100	100

USED CLOTHING

EXMOUTH CLOTHING CO., LTD.

23, EXMOUTH STREET · LONDON · E.I. Cables EXMO London.

Daisee:—Rs. 26 to Rs. 27 per md. basis Bottoms for one month's delivery.
 Rs. 23 to Rs. 25 per md. basis Bottoms for ready delivery (jetty purchases).
 Bimil:—Rs. 17 to Rs. 19 per md. for F.A.Q. for one month's shipment.
 Salvage H.J.:—Rs. 22 per md. for one month's delivery ex local godown.
 The only pucca bale business reported this week is a small lot of Pakistani N. C. Cuttings at Rs. 69 per bale for one month's shipment.

At the close the market is unchanged with sellers reserved and mills still taking very little interest. Opening quotations on Wednesday morning were as follows:—

Pakistan Jute:	January/February	Landed at Mill
Jat	Rs. 29 per md.	basis Bottoms
District	Rs. 29	" "
Northern	Rs. 27	" "
India Jute:		
Lower Assam	Rs. 25	" "
Upper Assam	Rs. 24	" "
Northern Bengal	Rs. 25	" "
Murshidabad		
White	Rs. 21-8	" "
Bihar	Rs. 20	" "
Daisee	Rs. 26	" "
Bimil	Rs. 19	" "
Mill Reds	Rs. 180 per bale	for F.A.Q. for one month's shipment.
Mill Firsts	Rs. 160	" "
Mill Lightnings	Rs. 145	" "
Mill Hearts	Rs. 125	" "
Dundee Daisee (Short Group)	Rs. 160	" "
Dundee Daisee (Long Group)	Rs. 145	" "
Pakistan Cuttings	Rs. 70	" "
Indian Cuttings	Rs. 65	" "

Tossa is offered at Rs. 1 to Rs. 2 above the rates for white jute.

Mofussil: Imports into upcountry markets in India have fallen to a very low level as a result of which the markets are ruling very steady. The little jute that is coming in is not being put on sale but is going to stock, and it is estimated that over the past few weeks about 200,000 maunds of jute of all descriptions has gone underground in anticipation of a rise in prices. Northern Bengal jute is in great demand as these districts are showing a better yield in quality than other areas, and quotations have risen by about Rs. 1-8 per md. over the past week to Rs. 22 per md. but no business has been reported at this level. Quotations in other areas show very little change from last week. Dhubri is being quoted locally at Rs. 22 per maund and ordinary Assam jute at Rs. 20-8 per md. basis Bottoms, but here again no business is being transacted. The steady-

ness in the upcountry markets has been reflected in the local Cossipore market, and it is also reported from here that very large stocks of jute are being held, which is causing an apparent shortage of supplies. Imports are still very small and only about 60 to 80 wagons are arriving per day, of which about 50 percent are low quality jute and Bimil. Quotations have increased by about Rs. 1-8 per maund over the week and Kishengunge jute is now quoted at Rs. 24-8 per maund for garsat quality, but little or no business is being done. Daisee imports have slackened considerably. Prices paid by mills over the jetty vary from Rs. 23 to Rs. 25 per maund which compares favourably with the Sheoraphuli price of Rs. 25-8 per md. for garsat quality.

Reports from Pakistan indicate that the market for good quality balers' jute is very firm, following further overseas business, and high prices are being paid. Lower quality jute has been completely neglected as there has been very little business with India; fibre of this quality is Rs. 2 to Rs. 3 per md. cheaper than jute for overseas export, but there are still no buyers. Imports into Narayanguge are unchanged at about 20,000 maunds daily, about 25 percent being Tossa. Latest quotations in Narayanguge in Pakistani rupees are as follows: Jat Balers' Bottoms (white) Rs. 16 per md. District Bottoms (white) Rs. 15 per md., Tossa Rs. 17-8 per md.

Raw Jute Arrivals: Arrivals of raw jute in Calcutta and at mill stations during November 1952 amounted to 7,00,062 bales as compared with the revised figure of 6,26,414 bales in October. Total arrivals for the period July to November, 1952, are now 22,90,064 bales of which 16,81,958 bales were from India and 6,08,106 bales from Pakistan. Of the arrivals in November, 2,62,086 bales (37.5 percent) came from Pakistan and 4,37,976 bales (62.5 percent) came from India. From these figures it will be seen that the improvement in arrivals of raw jute from Pakistan, pointed out in the October report, has continued. The proportion from Pakistan has increased from 34 percent in October to 37.5 percent in November, this figure being three times greater than the average percentage for the first three months of the current season. It also compares favourably with last season when 34 percent of total arrivals were from Pakistan. Actual figures for November 1951 were 6,28,471 bales, of which 2,14,153 bales or 34 percent were from Pakistan and 4,14,318 bales or 66 percent from India. In the period July to November, 1951, total arrivals were 23,79,551 bales, of which 12,16,416 bales came from India and 11,63,135 bales from Pakistan.

THE FOREIGN JUTE MARKETS

SHORTAGE OF GOOD QUALITY JUTE

(FROM OUR OWN CORRESPONDENT).

Dundee, 29th December, 1952.

BUSINESS in being interrupted by the holidays and this probably accounts for the quieter markets. With the turn of the year it is expected

that buyers will again become more prominent, as there should be more stability in the Calcutta goods market now that speculation has been eliminated. For some time past, there has been a tendency for consumers of jute goods to withhold their further orders because of the uncertainty prevailing and the anxiety shown by some sellers to offer at cheap rates. There is no apparent weakness in the raw jute market in Pakistan; indeed, shippers generally have shown a disposition to ask higher prices for the better grades of material. Mill Firsts, for instance, are lowest at £86 per ton, c. and f., 20s 0d above the minimum fixed rate, and there are not many offers being made. It is apparently very difficult to obtain decent quality jute and it is unfortunate that such a large crop this season should yield a high percentage of poor quality. Dundee spinners and manufacturers are still working overtime to cope with orders for both yarns and cloth.

Imports of jute cloth into the U.K. for November last were nil, against 22,350,000 square yards (£3,179,694) from India in November last year, and 6,723,000 square yards (£849,125) from other countries. Total imports from 1st January to 30th November this year were 102,538,000 square yards (£3,072,896), against 225,911,000 square yards (£20,519,345) last year from India and 20,557,000 square yards (£1,854,621) and 53,801,000 square yards (£4,206,081) respectively from other countries. Total imports of jute sacks and bags to 30th November this year were 452,063 cwt. (£5,893,444) compared with 413,431 cwt. (£5,526,012) same eleven months last year. The U.K. imported 491,175 bales of raw jute from Pakistan this year, costing £12,788,307 compared with 592,035 bales (£15,599,166) to 30th November last year.

REGISTRATION OF FIRMS FOR INCOME-TAX

The Central Board of Revenue has prescribed new time limits governing applications for the registration of firms and for the renewal of such registration. The position in regard to registration is that a firm which has not been registered for the purpose of the Income-Tax Act is liable to be taxed on its aggregate income, just as in the case of any individual. But if the firm is registered, the share of income of all the partners is separately worked out and tax is recovered from each partner only in respect of his share of income at the rate applicable to his total income. Under the law an application for the registration of the firm for income-tax purposes for an assessment year has to be made to the income-tax officer assessing the firm. A firm once registered should also apply each year for renewal of registration. Under the revised procedure, where a firm has not so far been registered under the Income-Tax Act, and registration is sought for the first time for 1952-53 assessment year or any earlier year, application should be made by 28th February 1953. All existing firms which desire registration should therefore, make the necessary application to the Income-Tax Officer before that date. If initial registration of a firm is sought in 1953-54 or any subsequent assessment year, an application therefore has to be made before the close of the firm's accounting period or within six months of the formation of the firm, whichever is earlier. A firm which is registered with the Registrar of Firms or where the Partnership Deed has been registered with the Sub-Registrar, is permitted to make the application at any time before the close of the firm's accounting year. In respect of any assessment year for which renewal of registration of the firm is sought, an application has to be made by 30th June of the assessment year concerned.

INFLUENCE OF CHEAPER TEA ON BEVERAGE SALES

COFFEE AND COCOA MARKETS LIKELY TO REMAIN FIRM

TEA, coffee and cocoa are to some extent competitive beverages so that variations in the price and output of one tend to influence the market for the others. The tea trade has in recent months been preoccupied with the problem of disposing of the surplus of inferior teas carried over from last season even though prices have declined. In the case of coffee also, present annual production for international trade exceeds consumption by about 1.5 million bags, although the surplus is much smaller than before the war because production has declined, largely as a result of Brazil having had a succession of poor crops. The extent to which derationing of tea has affected coffee consumption in Britain is still somewhat indefinite, but the indications are that no extensive change has occurred; there has perhaps been a slight rise in purchases of coffee recently. But cheaper tea might begin to compete with the soluble coffees which have become increasingly popular in Britain since the war. The latter contain only a proportion of coffee, which in most brands probably does not exceed 50 percent.

In the case of cocoa, prices have risen rapidly in London in the past few weeks, from 227s. 6d. per 50 kilos c.i.f. Europe to about 262s. 6d. In London and in New York a considerable short position in the market had been built up. In the first two weeks of December, the figure for purchases of Gold Coast Farmers' cocoa by the official marketing body showed a decline. This has led to some expectations that the crop, besides being good, will also be early. Broadly speaking, however, earlier hopes of cheap cocoa (for instance at or under £200 a ton) have again been postponed, despite the good world crop.

Coffee prices, as *The Financial Times* points out, are still at a remarkably high level. Indeed, apart from the record prices paid by German importers when they were first given freedom to buy, sterling values are at their peak level. At recent Kenya auctions, sellers have been receiving over £500 a ton for the best coffees. Buyers are anxious to secure early delivery of Kenya coffee because of the Mau Mau troubles. There has been some intimidation of pickers on a few estates, yet on the whole the coffee crop has been coming forward well. It is believed that a number of speculative buyers have secured Kenya coffee with the idea of reselling at a profit to Germany (a country which buys only the finest quality coffee). The general prospect for world coffee prices seems, however, fairly firm for the rest of the current season. U.S. buyers have been purchasing on a hand-to-mouth basis and, to encourage them to import more freely, Brazil recently changed her floor price from a cruzeiro to a dollar basis (to offset fears of devaluation). At the same time it was announced that small increases in the floor price would take effect on 1st March and again on 1st May next year. This action indicates that Brazil expects something of a squeeze in coffee supplies, and that her own carryover at the end of this season will be small.

U.S. Coffee Consumption

Coffee, as a result of lower production, is, therefore, like rice, one of the few commodities to have escaped the decline in prices in the last year or so. As with rice, the reason is that the high prices which have prevailed were not the result of the Korean war but of the changed statistical position which first began to manifest itself in 1949. For with lowered production there has also been an increased consumption of coffee—noticeably in the United States, where it has risen from 14 million bags to 20 million bags in the last 10 years. Local consumption in practically every coffee-producing country has increased. Cuba, for instance, which formerly exported about 500,000 bags a year is now not only consuming all its own production but has actually become a net importer. Increased consumption is similarly noticeable in practically every South American country—including Brazil and Colombia, the two chief coffee producers. India, too, is now consuming practically the whole of her coffee output. For these developments, a higher standard of living is the main reason.

Small Annual Surplus

Present annual production for international trade may be assessed at about 32 million bags, compared with a world consumption of around 30.5 million bags. The consequent surplus is very small compared with a surplus of five or eight million bags before the war. What is more, the present statistical balance has only been maintained because most European countries, except the U.K., are consuming less than they did before the war, simply because Government action imposes artificial limits on the demand. In view of the increased demand and of the lower output, any falling away from present price levels seems unlikely. But as the commodity is already so dear in relation to others it seems equally unlikely that there will be any great rise in world prices. In the last two months there was, in fact, a tendency for prices to decline and they fell about four percent below the U.S. ceiling price fixed in February 1951, which they had touched at their peak. This, however, was largely the result of over-purchasing when a long-shoremen's strike was anticipated which did not, in fact, materialise. While the extra purchases then made were being used up, U.S. buying was small, but there is now already a movement towards recovery.

In the U.K., coffee prices to the consumer have just been increased for the better grades. Since price control was abolished in August and the trade was given the power to import the coffee necessary to supplement that already coming in under Ministry of Food contracts, about half the coffee consumed is having to be bought at world prices. These are substantially above the prices existing under the Ministry of Food's contract with colonial planters, and it is this development that accounts for the rise in the price of the better types sold to the public. Even so, however, because of the averaging of lower-priced colonial coffees with those bought at world prices, U.K. coffee drinkers have the advantage of prices which are lower than those prevailing in the rest of the world. For a coffee costing 5s. 6d. a pound roasted in Britain, the world price level would be perhaps 7s.

SPICE MARKET PROSPECTS

FOR several weeks now price movements in spices have been narrow in range and with no decided upward or downward tendency. This steadiness is welcome after the earlier severe price decline from last year's peaks. Ginger, for instance, is now fairly steady at approximately £115-£120 a ton for Jamaican material and around £100 for African. At one time the former was as high as £500 a ton and the latter £300. The spice markets are at the moment largely inactive under holiday influences and values are in many cases nominal. Generally speaking, however, there is ground for hope that 1953 will be a better year for the trade than 1952. Large consumer stocks were built up after the Korean outbreak. By now, however, these are believed to have been largely run down.

For white pepper the statistical position is regarded as strong. The main producing area now is Sarawak, where the crop comes forward in September and October. By now the major proportion of this crop is understood to have been shipped. It will not be until May or June that forecasts can be made about the size of the next crop. In the meantime market supplies are unlikely to be abundant.

In the case of black pepper the Malabar crop in India, now much the largest producer of pepper, is starting to be marketed. In general the trade expects an easing in prices. But everything depends on the extent of U.S. demand. Production of black pepper in Sumatra is largely an unknown quantity, though the indications are that it is on a very restricted scale, being hindered by lack of security and transport problems. Sarawak, although still specialising in white pepper, has produced more black pepper this year and it is said that the quality now shows a considerable improvement.

Recently white and black pepper have been close together in price. In consequence traders feel there is scope for an upward movement in white and an easing in black. Perhaps a premium of 25 percent for white over black would be normal under post-war conditions. A divergent trend in prices of black and white pepper appears indicated by the statistical position. But since the U.S. is the great market for black pepper and U.S. demand is extremely changeable this indication could easily be falsified.

Cloves, which were strong while other spices were weak, are now slightly easier for forward delivery, though spot material is still firm.

TABACCO PRICES AND EXPORTS

The prices of Bidi tobacco were generally lower in November than during the previous month, according to the Tobacco Bulletin issued by the Indian Central Tobacco Committee. The prices of Hookah, Cigar and Cheroot tobacco however remained practically unchanged. During November 1952, 10.9 million lbs of tobacco worth Rs. 150 lakhs were exported. Japan which is one of the most important outlets for Indian tobacco ranked first amongst the purchasing countries, accounting for about 5.7 million lbs of unmanufactured tobacco worth about Rs. 70 lakhs. The United Kingdom ranked second during the month and imported 2.5 million lbs of Indian unmanufactured tobacco worth about 39 lakhs. Other important markets included Egypt, Indonesia, Belgium, Hong Kong, Ceylon and the Netherlands. Imports of both manufactured and unmanufactured tobacco during October, amounted to about 0.1 million lbs valued at approximately Rs. 4.7 lakhs. Most of the imports came from the United States. The market for all varieties of tobacco was dull throughout the month.

I.L.O. COMMITTEE ON WORK ON PLANTATIONS

The second session of the International Labour Organisation Committee on Work on Plantations will be held at Havana (Cuba) from March 16th to 28th, 1953. The agenda will consist of:—(a) General Report, dealing particularly with: (a) Action taken in the various countries in the light of the conclusions of the first Session; (b) Steps taken by the International Labour Office to follow up the studies and enquiries proposed by the Committee; and (c) Recent events and developments affecting work on plantations. 2. Definition of the term "plantation." 3. Regulation of wages on plantations. 4. Health and social services on plantations. Employer's and worker's organisations connected with the plantations industry and desirous of nominating representatives are requested to submit their recommendations to the Secretary, Ministry of Labour, Government of India, not later than 15th January, 1953.

COLOMBO RUBBER PRICES

The following prices are issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers Association. Closing prices on 19-12-52:— Average prices for this week:—

(Rupees per lb.)	(Rupees per lb.)
Sheet No. 1	1.34
Sheet No. 2	1.31
Sheet No. 3	1.28
Sheet No. 4	1.00
Sheet No. 5	cts.55
Sheet Cuts No. 1	cts.94
do. No. 2	cts.90
Crepe 1	1.50
R.M.A. IX	1.43/45
R.M.A.1	1.46
Crepe 2	1.40
Crepe 3	1.30

Scrap Crepe:—
 Sc. Crepe 1 1.00 Nom. 1.02
 Sc. Crepe 2 cts.94/98 " cts.98
 Flat Bark " 85/90 " " 91
 To arrive at f.o.b. Colombo prices add 20 cents per lb to the above market prices.

CEYLON LATEX FOR BRITAIN

The first bulk shipment of rubber latex from Ceylon (73,000 gallons) arrived at Liverpool recently in the Blue Funnel tanker *Clytonus*. The tanker was off-loaded in the presence of officials of the Dunlop Rubber Company and the Blue Funnel Line. Two years ago the Latex Corporation of Ceylon was formed to augment the supplies of latex to the Dunlop Rubber Company. A factory was built at Kalutara, in Ceylon, offices taken in Colombo, and recently the first stage of a bulk installation there was erected. Last May drum shipments were begun in a small way and these have been increased gradually until final drum shipment was made last August. An official of the Dunlop Rubber said: "This expansion of shipments has followed technical approval from Dunlop factories and the extension of purchasing in Ceylon. The field latex comes from a considerable number of rubber estates in the Kalutara area and it is hoped to increase the present supply with rubber from estates in the Kelani Valley."

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN NOVEMBER

Indian rubber output in November was 2,450 tons, according to the Indian Rubber Board. There were net exports of rubber in November. The quantity of rubber imported during the month was 342 tons. Consumption by manufacturers was 1,686 tons off which 379 tons were imported. Stocks with estates and dealers on the last day of November totalled 6,817 tons, including 1,650 tons in transit. Stocks with manufacturers at the end of the month were 2,619 tons of which 594 tons were imported. Manufacturers also used 176 tons of reclaimed rubber, the month-end stock being 463 tons. Also consumed were 2,131 lbs. of synthetic rubber, of which manufacturers held a total stock of 7 tons, 2,096 lbs.

MOVEMENT OF RAW RUBBER

The Government of India has decided to lift, with immediate effect, the control exercised under the Supply and Prices of Goods Act, 1950, on the movement of raw rubber from the State of Travancore-Cochin and the district of Malabar in the State of Madras. A notification giving effect to this decision is being published in the Gazette of India.

EASTERN RAILWAY TENDERS

Tender No. CS26/52/K9/57/1 is invited by the Controller of Stores, Garden Reach, Calcutta-23 for the purchase of 30 condemned Standard Typewriters and 2 Metal covers available for disposal at the Railway's Stores Depot at Shalimar. Tender form is obtainable from his office (0.2 Section) on remittance of Rs. 3/- by Money Order in case of Mofussil firms and on production of Cash Receipt from the Asstt. Chief Cashier, Garden Reach by local firms. Money not refundable. Closing date 16-1-53 at 12 noon.

Engineering and Transport

DEVELOPMENT OF INDIAN PORTS ANNUAL SESSION OF NATIONAL HARBOUR BOARD

A NUMBER of recommendations relating to the forthcoming development schemes for Indian ports of all categories were made by the National Harbour Board last month at its third annual session presided over by Shri Lal Bahadur Shastri, Union Minister for Transport and Railways.

The meeting recommended a change from the present classification of ports to a threefold classification, namely, major, intermediate and minor. The main reason for the proposal to create an intermediate category of ports is to focus attention on some of the more important and larger minor ports and help them towards their development as useful distributing centres. The following ports would come under this new category: Mandvi in Kutch; Navlakhi, Bedi, Porbandar, Veraval and Bhavnagar in Saurashtra; Okha, Broach, Ratnagiri and Karwar in Bombay; Mangalore, Kozhikode, Tuticorin, Nagapatnam, Cuddalore, Masulipatnam, Kakinada in Madras and Alleppey in Travancore-Cochin.

The necessity to grant some concessions to coastal shipping and trade in regard to the levy of port charges was accepted in principle and recommended to the Government. The Board further recommended that the Government of India should collect information relating to facilities available for the salvage of vessels and prepare a scheme for setting up machinery to undertake the salvage of wrecked vessels or of those which run aground near the coast.

Request to Planning Commission

The Board considered the development schemes of major ports for the period of the first five year plan and noted the recommendations of the Planning Commission that the Government should give financial assistance amounting to Rs. 12 crores to major port authorities for carrying out their development programmes. The

Board, however, expressed its strong conviction that the sum of Rs. 12 crores was inadequate because of the size of the schemes and the financial resources of the port authorities, strongly recommending that the Planning Commission should again be requested to increase the allotment. The sanctioning of Rs. 12 crores for improvements to Calcutta port were also recommended. The main purpose of the granting being to prevent the silting up of the Hooghly, pending the construction of the barrage across the Ganga at Farakka.

Several matters connected with the development of minor ports were considered and it was recommended that a sub-committee should scrutinize State Government schemes for the development of minor ports and draw up a list of priorities in the light of the total financial resources available for the purpose.

The question of creating a Port Development Fund by levying a special charge not exceeding four annas per ton on all goods handled by all ports, which was recommended by the Board to the Government at its first meeting held in November 1951, was discussed again. At that meeting the Board had recommended that 50 percent of the cost of improvements to minor ports should be met by the State Governments and that the balance should be met, 25 percent by allocations from the fund and 25 percent from free terms to be made by the Central Government. It was explained, on behalf of the Government of India, that it would not be possible to make a free grant to minor ports but that the Centre would be prepared to give loans to minor ports up to a sum not exceeding the proceeds of the proposed special surcharge imposed by the major port authorities on goods handled by them. To that extent the amount provided for loans to major port authorities would be reduced.

The implications of these proposals were discussed exhaustively by the Board and it finally recommended that it would be simpler to deduct, straight away from allocation to major ports, a certain sum of money which the Government of India would be prepared to give as loan to minor ports, leaving the question of levy of special surcharge to be decided by each port. This would mean that out of about Rs. 25 crores, which was the estimated cost of improvements suggested in the Nanjundiah Report on Intermediate and Minor Ports, about Rs. 120 lakhs would be met from the provision made by the State Government in the five year plan or by allocations from their Minor Ports Fund. This would be supplemented by Central Government loans amounting to about Rs. 60 lakhs spread over a period of three years and representing the total estimated proceeds of special surcharge on the traffic handled in all the ports. With this it would be possible to carry out a substantial part of improvements suggested by Shri Nanjundiah, particularly in the intermediate ports.

Intermediate Ports

The Board approved a scheme of technical assistance by major ports to groups of intermediate ports. Under this scheme the intermediate ports of Navlakhi, Bedi, Porbandar, Virawal Bhavnagar and Mandvi would be assisted by Kandla Port; the ports of Okha, Broach, Ratnagiri and Karwar by Bombay port; Mangalore, Kozhikode and Alleppey by Cochin port; Tuticorin, Nagapatnam and Cuddalore by Madras port; and Masulipatnam and Kakinada by Visakhapatnam. Each major port would set up a small advisory committee consisting of the Chief Engineer, the Dock Manager and Deputy Conservator. The committee would give technical advice on engineering, traffic and marine problems, scrutinize proposals for port works and assist in the conduct and supervision of investigation and surveys. The Board appointed a sub-committee consisting of a representative of a major port, shipping trade and State Governments and the Finance Ministry, to consider details of statistics that should be collected and submitted to Government by all ports, major and minor, and make a report before 30th June, 1953. The Board again strongly pressed for the construction of a dry dock at Visakhapatnam. It also recommended that part of the allotment for development of shipping already included in the five year plan should be earmarked for assistance to the country-craft industry.

Model Experiments Explained

Shri Joglekar, Director of River Research Station, Kadakvasla, explained to the Board the progress so far made by the model experiments of the ports of Cochin, Madras and Mangalore and of the river Hooghly. He added that: "The Central Government very much appreciated the magnitude and importance of the various problems successfully tackled by the Station and therefore took it over from the Provincial Government in 1937. In 1947 they further expanded the activities of the Station. New branches of research connected with navigation, soils and soil mechanics, statistics, mathematics and physics were added. Most of these wings have now been equipped with modern equipment."

"The Station was at present engaged in carrying out model experiments for the Madras harbour and the Cochin harbour and the improvement of the navigability of the Hooghly estuary and the Mangalore port. Government have just sanctioned the estimates for conducting experiments for the Kandla port and the model construction will be soon taken in hand."

While discussing the question of obtaining technical assistance from abroad, the Board was informed that the Government of Bombay have

already set up a marine survey unit of their own. At their request the Government of India secured the services of an expert, Mr. Henry Kraus, through the United Nations Technical Assistance Administration, for advising them on the hydrographic survey of minor ports.

MODERNISATION OF PAKISTAN'S RAILWAYS

An integrated programme to rehabilitate, improve and modernise Pakistan's Railways is being executed and has very high priority in her development plans. Already 23 diesel electric locomotives, 25 oil-burning locomotives, 45 modern carriages and 1,666 wagons have arrived in the country. Orders have been placed for 19 broad-gauge and 40 metre-gauge diesel electric locomotives, 235 modern carriages and about 6,000 wagons. In the financial year 1951-52, Rs. 4,65,59,000 was sanctioned for the rehabilitation of track and bridges on the North Western Railway and the Eastern Bengal Railway. Intensive use of the railways, and lack of labour and material during the war period were responsible for the renewal of rails and sleepers having fallen in heavy arrears. Much of the usual maintenance had not been carried out for years. After partition, renewal of track became an immediate necessity and had to be given high priority in the rehabilitation programme. On the North Western Railway (route mileage over 5,000), Rs. 3,02,55,000 were earmarked for the rehabilitation of track and Rs. 11,54,000 for the maintenance of bridges. The Eastern Bengal Railway (route mileage of about 1,700), was given Rs. 1,41,34,000 for track and Rs. 10,16,000 for bridges. During the five years ended March 1952, the railways have spent about Rs. 110 million on the rehabilitation of track and bridges. In 1947-48, the figure was Rs. 52,33,000; in 1948-49, Rs. 1,19,95,000; in 1949-50, Rs. 1,72,60,000; in 1950-51, Rs. 2,73,32,000; and in 1951-52, Rs. 4,65,59,000.

INCREASED TRADE THROUGH KARACHI

There was a slight increase in the merchandise which passed through the Port of Karachi in the first six months of the current financial year (1952-53) compared to the corresponding period of the previous year, according to figures compiled by the Ministry of Communications. During the period April-September, 1952, Karachi Port handled 17,86,624 tons of cargo; imports 13,73,170 tons, exports 4,13,454 tons. Monthly figures are April 3,24,063 tons; May 3,38,374 tons; June 2,51,679 tons; July 2,74,849 tons; August 3,22,708 tons; September 2,74,951 tons. The port handled 17,21,597 tons of cargo during the period April-September, 1951: imports 11,67,964 tons, exports 5,54,033 tons. Cotton, wool, salt and foodgrains were the main exports. During the period under review, 4,20,191 bales of cotton, 37,429 bales of wool, 1,74,521 tons of foodgrains and 26,162 tons of salt were sent out from Karachi Port to various destinations including East Pakistan. Of imports wheat accounted for 63,907 tons, sugar 92,797 tons, coal 1,78,764 tons, petrol 1,49,73,172 gallons and motor cars 1,229.

NEW ADMINISTRATION FOR CHITTAGONG PORT

Chittagong port now has a unified and independent administration. From 23rd December, the control of jetties, warehouses, railway sidings, etc. which had been under the control of Eastern Bengal Railway was placed under a newly-created administration to be called the General Manager, Chittagong Port. Mr. M. A. Bary has been appointed to the post and he will work directly under the Railway Division of the Central Ministry of Communications. Mr. Bary comes from East Pakistan. He joined the Indian Railway Service of Engineers in 1927. Until 1933, he was working on the G.I.P. Railway when he was transferred to the old Bengal-Assam Railway. On partition he was posted on the Eastern Bengal Railway where he served as the Chief Engineer, General Manager, Chittagong Port. The office of the port is in the office building of the Port Commissioners, Saddarghat Road, Chittagong.

NEW TWA SERVICE

Trans World Airlines is prepared to begin service to Tokyo and other cities in the Far East, as soon as permission has been granted by the Civil Aeronautics Board to add the Bombay Tokyo link to its certificated route, said TWA Board Chairman Warren Lee Pierson, on his return from a round the world route survey flight. It is hoped that the new service may start by July 1953. At present there is no direct airline service between Tokyo and Bombay.

BUSES FOR HYDERABAD

The last consignment of an order for 46 Leyland Comet "90" passenger bus chassis for use in Hyderabad (Dn) has been shipped to Bombay from Liverpool. In Hyderabad they will join a fleet of more than 100 similar buses. Specially designed to serve as full-fronted passenger vehicles, these chassis are fitted with the standard 0.350 Diesel engine. Shipped in a completely-knocked-down condition, the chassis on arrival will be assembled in Madras. Another nine heavy-duty Leyland Diesel dump trucks have been ordered for use on the phosphate-producing islands of Ocean and Neuvi in the Pacific and Christmas Island in the Indian Ocean. They will join a fleet of 21 similar machines which have been operated there by the British Phosphate Commissioners for over 18 months. Like those in service, the trucks will be used by the Commission for carrying phosphate from field workings to crushing and desliming plants.

Calcutta Markets

GOOD GENERAL DEMAND IN EXPORT SALE

FANNINGS STRONGEST FEATURE

At Sale No. 29 held on 5th and 6th January, 1953, there was a good general demand in the export sale and prices for almost all types showed irregular rises over previous rates. Fannings grades were the strongest feature on the return of general U.K. buying, while low medium and black leaf Fannings types suitable for Egypt were about two to four annas per pound dearer. Common and low medium broken except the very stalkiest types were one to two annas higher. Very few good liquoring teas were on offer but these shared in the general rise while Darjeelings sold well, frequently at higher rates. Leaf grades were well supported though only the most stylish advanced substantially.

Dust.—Demand was strong in the Dust auction though it eased towards the close of the sale and most sorts sold at enhanced rates. Leafy Fannings types and clean grainy Dusts were often two to three annas dearer while the few Darjeelings with flavour sold at high prices. Upper Assam C.T.C. grades were irregularly one anna dearer while good medium and mediums showed advances of up to two annas per pound.

CALCUTTA MARKET REPORTS.

Linseed.

The undertone was quiet, although trading continued on a small scale. Sellers appeared to be keener on the whole, especially for forward delivery, but a very limited interest was shown by the local mills and small quantities changed hands at somewhat lower prices. Trading in the daily oil section was exceedingly small and was confined to the limited requirements of local buyers. Overseas buyers showed no interest at current prices. Latest quotations were as follows: Ready Rs. 20 per maund.

Hides and Skins

The market ruled steady. Stocks were higher than in the previous week.

Bazars Sales

(Between 23rd December, 1952 and 5th January, 1953.)

Bazar Stocks

(5th January, 1953)
Cowhides.—Wet salted 98,500 pcs.

FREIGHT MARKETS SLACK

Little business has been done in the past two weeks owing to holidays. The recent increase in coal rates from Hampton Roads to Japan has not been maintained and a January fixture has been concluded at the lower rate of \$8.50. A local ship was fixed for coal from Calcutta to Japan at 65s for January loading and scrap operators chartered the Choko Maru 8000 tons capacity at £28,000 lump-sum f.i.o. for the same destination in February. In the grain markets South Africa with maize from Northern Range to South Africa was arranged at 61s 3d per ton whilst another fixture was arranged from River Plate to India at 80s for March and a similarly positioned vessel obtained 82s 6d from Pacific to India. Rice was fixed from Shanghai or Whampoa to Colombo at 53s 3d or 52s 6d respectively.

In the time charter section an oilburner, 10,000 d.w., was fixed at 13s for a round trip to South Africa with delivery and re-delivery Continent, Africa with similar vessel accepted 14s for the trip out whilst a similar vessel with delivery London.

OFFICIAL SHELLAC MARKET REPORT

The Calcutta market was firm again yesterday and moderate business was done.

"CAPITAL" STOCKS AND SHARES INDEX*

The "Capital" Stocks and Shares Index (Base 1939) has now been brought up to November, 1952. Compared with October, the November Indices for Government Securities and Preference Shares reveal rises of 0.4 points and 0.1 point, respectively.

There were decreases in Bank (0.3 points), Cotton (2.9 points), Coal (5.6 points), Jute (11.1 points), Mining and Oil (5.2 points), Cement (3.9 points), Engineering (5.8 points), Tea (15.7 points), Paper (21.2 points), Sugar (5.6 points) and Miscellaneous (0.5 points).

Combining all the factors the "Capital" variable yield securities index shows that the Index for stock prices in the above classes of shares declined by 5.9 points during November, 1952.

[illegible]

H—Held by the Commissioners.
+ New Howrah Bridge Loans.
D—This is a Domestic Loan, not subscribed
for by the Public.
A—Held by Govt. of India.
E—Held by Govt. of Madras.

R—Interest reduced from 6% to 3% from 1-6-44.
Y—Interest reduced from 6½% to 4% from 1-4-35.
Z—Interest reduced from 4½% to 3% with effect
from 1-7-38.
N—Nominal.
*Loans held by Govt. are not shown here.

*Free of Income-tax.
†Loans held by Govt. are not shown here.
‡Free of Cochin Govt. Income-tax.
§Free of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. (For reference see notes below.) Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 000's	Rate per cent	Paid-up per Share	Market Quotations	Year of Issue	NAMES	Amount Issued in 000's	Rate per cent	Paid-up per Share	Market Quotations

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INTERNATIONAL TRADE AND THE PRICE OF GOLD

AMERICAN OBJECTIONS TO DEVALUATION OF THE DOLLAR: THE STERLING AREA'S CASE

THE campaign for a higher price for gold has been pressed with varying degrees of vigour ever since the war and in that time the advocates of a rise from the figure of \$35 an ounce fixed by President Roosevelt in 1934 have gained support in one quarter after another—but the one citadel they must take, the United States Treasury, has remained as adamant as ever. Their campaign has reached a climax in recent weeks because of the imminent changes within that citadel, which have given rise to the hope, unsupported so far as we know by a scrap of solid evidence, that the new American administration will lend a more patient ear to the plea for devaluation of the dollar. Perhaps saying No got to be a habit with Messrs. Truman and Snyder but that does not mean that the new occupants of their offices will have to look far for what they will regard as conclusive reasons against a change in the gold price. In any case, no change can be made without the sanction of Congress and that body will prove no easier to persuade than the Republican bankers Mr. Eisenhower has chosen to guide him in these matters. A new administration and new Congressmen, all anxious to assert their anti-Communist valour, will hesitate to begin their term by awarding Soviet Russia a gift in hard currencies by revaluing a commodity of which Russia is a major producer and of which she possesses ample stocks. Inasmuch as dearer gold is associated in the minds of politicians with inflation—though there is actually no fatal connection between the two—America's new legislators will be chary of it, and indeed Mr. Eisenhower's advisers are believed to incline rather toward deflationary policies. On these grounds alone, we can prophesy that the gold producers will meet with no more success this year than in the past.

The free gold market evidently does not agree, for a premium of almost \$3 has ruled since the end of last month and Kaffirs have been buoyant in London. It was admitted after the last Commonwealth Ministers' Conference that the gold price had been discussed and it was hinted that South Africa, joined earlier in the year by Australia, had managed to convince the other participants that a higher gold price was essential for sterling's recovery. The British Treasury, which had hitherto been noticeably cold to this suggestion, has been rather warmer of late and it was even rumoured that this was one of the things Mr. Churchill discussed in Washington and New York on his way to Jamaica. Again, it has been suggested that when the team of British Ministers journeys to the United States shortly they will carry a definite proposal for an increase in the price of gold. It is this series of guesses that has supported the free market since Christmas but until it is shown that the recently converted British Treasury has thought up arguments powerful enough to overcome the stock American objections plus the two new obstacles mentioned above, the hopes of the speculators seem rather dim.

But even if the immediate odds do not presage success, it might be argued that the case for dearer gold is a good one nonetheless. Of course it is, from the point of view of the gold producers, the largest of whom happen to be within the sterling area. But the claim is added that dearer gold, quite apart from its benefits to producers, can make a useful contribution to wider interests to the sterling area as a whole and in fact to world trade in general. It is this claim that is considered in the USA to be more doubtful and the National City Bank of New York (an institution incidentally that has just provided Mr. Eisenhower with advisers) devotes most of its latest monthly letter to an authoritative American reply to it. It examines first the international liquidity argument in favour of dearer gold, which is to the effect that the central monetary reserves of the principal

trading countries were up-valued in terms of present commodity prices there would be fewer crises brought on by one or other party running short of gold. Some people affect to find this argument difficult to follow but anyone who has ever played poker for matches knows that if all the players are given more sticks (even if the biggest holder gets most of the new distribution) the game is likely to go on longer, since the weakest player has more chance to stay in until he strikes a better run of luck. Against this, the National City Bank brings the curious argument that the increased value represented by dearer gold will not go to the most deserving parties, but as reference to the matchstick analogy shows, deserts have little to do with the case; the point is simply to reduce the value of the stakes (that is, commodity prices) in terms of the counters (that is, gold) in order to keep the game (that is, international trade) going.

If gold were revalued to \$52 an ounce, the Bank shows, the total increment in the value of gold stocks held outside the United States would be \$5.4 billion, which is admittedly only a fraction of what the U.S. Government has supplied in loans and grants since the war. If the people of the United States would prefer the tax burden of foreign loans to the inflationary dangers of dearer gold, that is their business but the recipients might prefer to earn their dollars (even if "earning" meant obtaining a higher gold price) to accepting American aid and gifts. More important, the Bank's comparison of loans with the benefits of dearer gold overlooks the fact that American lending is being reduced and the Republicans have already begun to look for ways to bring down President Truman's estimates of grants to foreign countries. So even if a higher gold price brings in less than American aid has done, it might still be needed by the sterling area which produces 60 per cent of the world's gold.

The liquidity argument therefore has some force, despite American scepticism, though it must be admitted that this is true only so far as monetary reserves are in fact held in gold. To a very large extent they are held in dollars (just as under large standard many years ago they were in the gold largely in sterling) and the only effect of dearer gold on this part of the reserve would be to shake confidence in what is now the world's chief standard of value, the dollar. The National City Bank rather overdoes this argument by insisting that a standard must be standard to be of use, that is to say, it must be unalterable. Surely any weakening of confidence abroad in the dollar caused by its devaluation would very quickly be remedied, and the most sacrosanct of standards must change their value when circumstances require—provided they do not require it too often.

LANCASHIRE REACTIONS TO
INDIAN CLOTH DUTY CUTSHIPPING LINES WITHDRAW FROM
IMPORTANT CONFERENCE

London, 14th January.

CONCERN was expressed by Manchester merchants at the possible effects on the Lancashire cotton industry, of India's decision to reduce her export duty on cotton cloth from 25 percent to ten. It is reported that the reduction would enable India to sell her cloth in the United Kingdom at 17½ percent below the ruling Japanese prices. Japanese cloth brought to this country is subject to import duty and must be re-exported after finishing; Indian cloth is admitted duty free and can be re-exported duty free. Mr. K. O. Broadman, director of several textile companies said that unless something was done to control shipments, India could virtually bring the industry in Burnley, Lancashire—which makes cloth of a comparable quality—to a standstill. Mr. F. S. Winterbottom, Chairman of the Cotton and Rayon Merchants Association, said, however, that he thought traders' fears were exaggerated. Indian cloth might be cheaper than Lancashire's but the quality of cotton and yarn and the standard of manufacture was lower. Indian cloth had always been available on the home market.

Shipping circles are watching with great interest developments in the dispute among members

of the North Atlantic West Bound Freight Conference. Four major shipping lines are now reported to have left the conference and shippers believe that their action may have repercussions among other shipping conferences. The four lines are:—The Holland-American Line, American Black Diamond, Compagnie Maritimes Belgo and Norwegian Cosmopolitan. The Netherlands agency A.N.P., reports that these lines will in future fix their rates independently, though mutually consulting one another. This independent fixing of freight rates would only affect traffic on the west-bound Europe-North America route. A Holland-America Line spokesman confirmed that his company has left the conference. The American Black Diamonds walk-out was announced by its Rotterdam agents. No confirmation is available from the other two lines but the report has not been denied. The four companies met informally in Antwerp on 23rd December and reports say they resolved to break away from the conference and cut freight rates because of heavy competition from some lines outside the conference. Shipping circles forecast a 20 percent drop in freight rates as the beginning of a freight "war" and further reductions are expected.

The start of dealings in the new Anglo-Iranian five percent debentures provided the week's market feature. Turnover during the first day was estimated at between £7 and £10 million of stock—between a third and a half of the entire issue. It must be a long time since a new non-Government stock was dealt in so heavily on the first day. Despite the heavy turnover the market was orderly throughout and price movements remained relatively narrow. Starting at a two and one-eighth percent premium over the issue price of £98-10s, it moved ahead steadily to two and nine-sixteenths before profit-taking brought it back to two and

three-eighths. Fresh support, however, carried it higher again to close at a two and a half percent premium. One of main reasons for the active conditions in this market was the favouring of small applicants in the allotment. Many of the institutions received less stock than they required for their portfolios and this demand, together with that from permanent investors, proved greater than the selling by a relatively small number of stag operators.

Applications for the £20 million of stock totalled some £275½ million which took up a lot of money before the allotment. This was seen as one of the causes of the recent quietness in the markets. At one time there was some heavy liquidation in gilt-edged, to raise money for the oil issue, but the trend was reversed on covering of short positions and investment support was attracted at the lower levels. The only noteworthy industrial movement was a lower trend in textiles on the news of lower wholesale textile prices and growing Japanese competition. In the shipping section—recently the scene of considerable speculation—dealers ceased operating in Stag Line shares which had improved from 30s to 7½s in recent weeks. They awaited news from the company of a projected take-over. When reports reached the market that negotiations had fallen through, dealings recommenced around 50s. Elsewhere, particularly among mining issues, markets have been generally very quiet. The extent of the damage caused by flooding in No. 2 shaft of Free State Geduld Mines is not yet known. Teas began the period well, helped by higher auction prices, but they later drifted and became irregular because of lack of support; they closed firm.

The new Anglo-Iranian £20 million debenture issue caused little disruption to the credit situation in the money market during the past week, but conditions remained easy throughout the period. There was some difficulty at one period near the close, but with most banks good buyers of bills, or ready lenders of money at low rates, this was soon overcome. Several days ago the authorities stepped in to mop up surplus cash. Applications for £180 million Treasury Bills totalled £264,230,000. Allotments were £180 million at an average rate of 47½ 7/8d percent. Next week £200 million will be offered. The Bank of England return showed a decrease of £23 million in active note circulation to £1,502 million. The fiduciary issue was also sharply lower by £50 million to £1,525 million.

Britain produced 224,939,000 tons coal in 1952 from deep mined and open-cast workings, according to provisional statistics issued by the Ministry of Fuel and Power. This compared with 222,256,500 tons in 1951. Although at first sight the 1952 effort was a success, a closer examination of the figure may give rise to some misgivings. An overall output of 226 million tons was hoped for earlier in 1952, but production was over one million tons short of expectations. Deep mined output at 212,800 tons was disappointing, compared with 211,270,700 in 1951. The open-cast sites, however, exceeded earlier estimates and produced 12,108,500 tons against 10,985,800 tons. The export figure for the year is not yet to hand, but in the first 51 weeks of 1952, 11,524,000 tons were shipped abroad compared with 8,816,000 in the same period in 1951. This indicates a total export figure under the year of about 11,750,000 tons at the most—under the target of 12 million tons aimed at earlier and well below the revised target of over 15,500,000 tons.

Stocks of tea in London and Provincial bonded warehouses, excluding teas imported by the Government and those imported under the Rex licence on 2nd January, amounted to 129,264,660 lbs. compared with 124,202,885 lbs. on 24th December. The amount landed during the week ended 2nd January was 12,399,975 lbs. and the amount delivered during the same week was 7,438,200 lbs. according to the Tea Brokers Association of London.

The Investors' Chronicle newsletter states: The London Stock Exchange is likely to continue relatively quiet with activity mainly confined to speculative "special situations," which are dangerous for uninformed outsiders. No material fall is likely. Commodities, except possibly copper, seem reasonably stable. Lead and zinc shares may prove attractive as zinc has not fallen very much in the re-opened free market and, like lead, it may now slowly recover. The United States trading policy has created sterling difficulties. For example, since 1937 consumption of natural rubber outside the United States has risen from 540,000 to 1,000,000 tons, while United States consumption has fallen from 543,000 to 465,000. Some modification in the United States synthetic rubber policy would help the sterling area without heeding Mr. Churchill's representations, it could make a big difference to many commodities and to the outlook on London Stock Exchange.

In order to encourage business on the Amsterdam rubber futures market, the regulations are to be altered slightly to permit delivery of slightly lower quality rubber against contracts. From 15th January R.M.A. 2 (good fair average quality ribbed smoke sheet) will be tenderable up to now only delivery of R.M.A. 1 (standard quality R.S.S.) has been allowed.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

A BELATED BUSY SEASON

Wednesday, 14th January.

EARLIER expectations that we would get through the cold weather without any real busy season appear to have been falsified by the persistent increase in the demand for credit during the past week or so. Banks report a steady decline in cash, not just a temporary drop such as has occurred several times before, but a growing demand that implies that the busy season has at last begun in earnest. The demand for cotton finance in Western India, already strong, has intensified as the Broach cotton crop begins to move; there has been an increase in sugar advances with the mills now at the peak of crushing activity; and some increase in jute finance, perhaps as much to finance accumulating stocks of goods as to purchase more raw materials, has been reported.

In the interbank market, credit is about as tight as it can get, with the rate for overnight money advancing to 2½ percent and the rate for call money hardening to 2½-3 percent, which brings Calcutta almost into line with Bombay where the rate for good money has been 3 percent for some time.

The exchange market has continued quiet with very few bills passing and most of those small. Sterling maintains the fine fettle with which it began the new year and an interesting point is that not only is the official rate standing up well, but the same applies to the various markets for cheap sterling, of which latter there seems to be less on offer nowadays. The rupee-dollar rate is at Rs. 47-6-8. Sterling rates are unchanged at: T.T. and O.D. 1s 5 31/32d; three months' sight bills 1s 6½d; and four months' sight bills 1s 6 5/16d.

The tender for Rs. 1 crore of three-month Government of India treasury bills was rather lower this week, Rs. 1,21,50,000 being offered against almost Rs. 1½ crores last week. Successful tenders obtained yet a higher average rate, Rs. 2-6-9 percent per annum. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 79 percent.

Tenders for Rs. 1 crore of treasury bills will be received up to Wednesday, 21st January, at Bombay, Calcutta, Madras, Kanpur and Delhi.

During the week ended 9th January, 1953, Government of India treasury bills for Rs. 1,55,00,000 were sold in favour of the Reserve Bank of India.

The bullion market ruled firm and prices rose sharply because of keen buying, followed by nervous short-covering. Contributing to the better sentiment, were suggestions of a rise in the official price of gold. Rumours of the re-export of gold to Indo-China from Pondicherry also helped bullish enthusiasm. After rising to Rs. 90 to-day from the previous week's level of Rs. 85-12, gold closed a shade quiet at Rs. 89-14 on realising. The sovereign at Rs. 60-2 disclosed a gain of more than Rs. 1-8.

Silver rose from Rs. 151-6 to Rs. 154-5, and the ready rate fetched a premium of about 5 annas. The price, however, continued unchanged at 73d. in London and at 83½ cents in New York.

Sharp rises of Rs. 18.91 crores and Rs. 17.31 crores in the total note issue and notes in circulation to Rs. 113,63 crores and Rs. 111,61 crores, respectively, are the outstanding features of the return of the Reserve Bank of India for the week ended 9th January, 1953. The expansion in currency has been duly covered by raising foreign securities from Rs. 538.15 crores to Rs. 558.15 crores, and this also presumably explains the fall of Rs. 16.18 crores in balances held abroad to Rs. 156.42 crores. Notes held in the Banking Department consequently increased by Rs. 1.59 crores to total Rs. 15.22 crores. Deposits in the Banking Department disclosed an all-round fall. Deposits of the Government of India and other Government accounts fell by Rs. 2.33 crores and Rs. 2.04 crores to aggregate Rs. 173.74 crores and Rs. 1.50 crores respectively. Balances of commercial banks also declined by Rs. 4.67 crores to Rs. 43.18 crores because of better demand for money. Government treasury bills rose sharply from Rs. 8.84 crores to Rs. 17.92 crores. The item of other loans and advances fell from Rs. 19.47 crores to Rs. 16.94 crores, of which advances to scheduled banks against usance bills stood at Rs. 98.76 lakhs. Investments declined by Rs. 15 lakhs to Rs. 99.30 crores.

The statement of the position of Scheduled Banks for the week ended 2nd January, 1953, discloses Demand and Time liabilities at Rs. 531.23 crores (Rs. 12.64 crores on account of borrowings from Banks) and Rs. 313.96 crores (Rs. 1.94 crores) compared with Rs. 530.46 crores (Rs. 13.01 crores) and Rs. 317.06 crores (Rs. 3.79 crores) respectively in the previous week. Cash and balance with the Reserve Bank have increased by Rs. 42 lakhs and Rs. 2.49 crores to aggregate Rs. 35.37 crores and Rs. 46.07 crores, respectively. There is a drop of Rs. 2.84 crores in investments to Rs. 320.36 crores. Advances and bills discounted at Rs. 475.88 crores reveal an increase of Rs. 7.55 crores. The ratios to total liabilities of cash and balances, and of

advances and discounts are, in consequence, shown at 9.6 percent and 56.3 percent against 9.0 percent and 53.6 percent.

The return of the Imperial Bank of India for the week ended 2nd January, 1953, shows a rise of Rs. 75 lakhs in total deposits to Rs. 206.91 crores. Investments in Government Securities are up by Rs. 2 lakhs to Rs. 83.52 crores, while other authorised investments are down by Rs. 1 lakh to Rs. 13.74 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 2.34 crores and Rs. 75 lakhs to aggregate Rs. 107.05 crores and Rs. 7.54 crores, respectively. Cash and balances are, in consequence, shown at Rs. 18.14 crores or Rs. 1.01 crores higher.

Profits of the Imperial Bank of India totalled Rs. 1,09,68,100 including Rs. 46,40,600 brought forward for the half-year ended 31st December, 1952. Dividends at 8 percent absorb Rs. 45,00,000, pension funds Rs. 2,60,700 and bonus to staff Rs. 20,00,000, leaving a carry-forward of Rs. 42,07,400.

The Hongkong and Shanghai Banking Corporation has declared final dividends at £3 per share for the year ended last December. Depreciation absorbs HK \$3,000,000 and the carry-forward is shown at approximately HK \$9,489,000.

The Bank of India Limited earned a profit of Rs. 83,11,553-4-6 including Rs. 5,60,616 brought in for the year ended 31st December, 1952. Income tax has been allocated Rs. 31,00,000-0-0. Interim dividends at the rate of 6½ percent absorbed Rs. 15,00,000-0-0, leaving an available balance of Rs. 37,11,553-4-5. The Directors have proposed to pay a final dividend at the rate of 8½ percent, making 14½ percent for the year to absorb Rs. 20,00,000-0-0, leaving a carry-forward of Rs. 17,11,553-4-6.

According to the land customs trade return received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of November 1952, were as follows:

	Exports to	Imports from
E. Pakistan	Rs. 43 lakhs	Rs. 341 lakhs
W. Pakistan	Rs. 16 lakhs	Rs. 2 lakhs
Other Countries	Rs. 12 lakhs	Rs. 57 lakhs
Total	Rs. 71 lakhs	Rs. 400 lakhs

The total value of trade was Rs. 471 lakhs. re-exports were nil and trade in treasure negligible. The balance of trade was adverse by Rs. 329 lakhs.

The following is a statement of the cash balances of the Central Government on the last day of September 1952:—

	Rs.
(1) At the Reserve Bank of India in India	148,28,56,000
(2) At treasuries in India	1,58,40,000
(3) In England (Sterling converted at 18d the Rupee)	2,74,72,000
Total	152,61,68,000

The value of exports of domestic produce from Ceylon declined by Rs. 2.7 million to Rs. 95.3 million in November, 1952 as compared with the previous month and re-exports by Rs. 207,000 to Rs. 6.2 million. The value of imports, on the other hand, increased by Rs. 18.9 million to Rs. 130.5 million. The visible balance of trade in merchandise was unfavourable by Rs. 28.6 million as compared with the unfavourable balance of Rs. 6.8 million in October 1952 and the credit balance of Rs. 42.8 million in November, 1951.

For the first 11 months of 1952 the value of Ceylon exports and re-exports amounted to Rs. 1,386.8 million, a reduction of Rs. 378.6 million below the corresponding period of 1951. Imports, on the other hand, aggregated Rs. 1,521.3 million, recording an increase of Rs. 94.1 over the same period of 1951. The unfavourable balance of trade in merchandise during the first 11 months of 1952 was Rs. 134.5 million as against the credit balance of Rs. 338.2 million during the same period of last year.

TREASURY BILL MATURITIES

Details of 3 months' bills outstanding with the public on 15-1-53.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
16-1-53	16-4-53	1,00,000	Rs. 2 6 9½
9-1-53	9-4-53	1,00,000	Rs. 2 8 5½
19-12-52	19-3-53	2,00,000	Rs. 2 5 11½
12-12-52	12-3-53	2,00,000	Rs. 2 5 11½
5-12-52	5-3-53	2,00,000	Rs. 2 3 0½
28-11-52	28-2-53	2,00,000	Rs. 2 1 6½
21-11-52	21-2-53	2,00,000	Rs. 2 1 11½
14-11-52	14-2-53	2,00,000	Rs. 2 2 0½

oils and oilseeds. Reduction of the export duty on cotton cloth will further reduce the yield in the coming months.

The railways' passenger earnings also declined from Rs. 47.76 lakhs in the five months ended August 1951 to Rs. 42.67 lakhs in the corresponding period of 1952. Gross earnings however rose by Rs. 146 lakhs to Rs. 1,16.99 lakhs.

Trade Agreements

India has bilateral trade arrangements with ten countries—Austria, Afghanistan, Burma, Egypt, Finland, Hungary, Norway, Pakistan, Syria and Western Germany. The treaty of trade and commerce with Afghanistan is in force from 24th March, 1952, to 23rd March, 1955. The treaty of friendship and commerce with Syria is also for three years from 5th December, 1952, to 4th December, 1955. The trade agreement with Austria is operative for two years from 1st July, 1952; with Burma for five years up to 31st December, 1955; with Pakistan up to the end of June 1953; with Egypt up to 1st March 1953. Trade letters have been exchanged which govern India's trade with Finland, Norway and Hungary until 31st December, 1953. The trade agreement with Western Germany is from 1st November, 1951, to 31st October, 1953. Trade arrangements with Sweden and Italy (an exchange of letters) and with Poland and Ceylon (trade agreements) expired at the end of 1952. Negotiations to renew trade arrangements with Sweden and Czechoslovakia are already under way. An Indonesian delegation is expected here

about the middle of this month for talks on a fresh agreement.

Electrical Equipment Manufacture

The Government has decided to invite representatives of the Westinghouse Electrical International Company, Associated Electrical Industries (India) and the International General Electric Company of U.S.A. to bring up to date their project reports on the manufacture of heavy electrical machinery, with particular reference to the cost, and the extent of their technical and financial participation in the undertaking. The Planning Commission has included the project in the five year plan.

Transport Conferences

The Transport Ministry has planned three meetings to discuss some important problems facing road transport and the railways. The two-day meeting of the Central Board of Transport will commence here on 22nd January to discuss motor taxation and amendments to the Motor Vehicles Act. The Central Government is expected to sponsor a number of Bills relating to road transport during the Budget session of Parliament. The Central Board of Transport will meet here on 24th January to discuss plans for the construction of new railway lines. On the same day representatives of State Governments will meet here to discuss the tourist traffic plan.

New Housing Bill

The Ministry of Works, Housing and Supply is drafting the Housing Bill, which it proposes to

sponsor during the Budget session of Parliament. The Bill seeks to set up a statutory autonomous Central Housing Board, which will: (1) administer the Central Housing Fund; (2) activate the housing programme; (3) administer such housing projects as are directly entrusted to it by the Central Government; (4) lay down principles for the guidance of Regional Boards regarding selection and development of sites for housing schemes and fixation of priorities in the allotment of tenements; (5) advise on rationalisation in building legislation and prepare model building by-laws for adoption by regional and local authorities; (6) suggest action in regard to slum clearance and improvement in environmental conditions of housing; (7) recommend from time to time any legislation or amendment of existing legislation which has a bearing on the problems of housing, town and village planning, fixation of rents and allied subjects. The Bill will also incorporate amendments to the Land Acquisition Act of 1894 regarding the acquisition of slum areas and lands which are needed for housing schemes. It is explained that at present the cost of acquiring slum areas is prohibitive not only because of their market value but also because an additional compensation of 15 percent has to be paid in consideration of the compulsory nature of acquisition. It is felt that compensation should be on the basis of the issue of a preliminary notification and no additional compensation should be admissible for acquiring schemes for industrial workers and low income groups. The Act may also be amended to provide for speedy proceedings to take possession of lands on which housing projects are contemplated or where slum areas are to be cleared.

Auditing in Central P.W.D.

The Ministry of Works, Housing and Supply, proposes to introduce from the next financial year the system of administrative audit in the Central Public Works Department on the same lines as in the Military Engineering Service. Organisational details are being worked out in consultation with the Defence and Finance Ministries. To start with, expenditure on the organisation will be Rs. 1 lakh for the Chief Technical Examiner and Rs. 2 lakhs for the Chief Surveyor of Works. The administrative audit system implies an independent inspection agency for the technical examination of expenditure on the Central Public Works Department. The functions of the Chief Technical Examiner will be: (1) to examine technically after payment and, in exceptional cases, before payment, final bills of contractors, including site checks where necessary; (2) to give independent advice to audit officers on technical points and act as liaison between the audit and executive; and (3) to examine certain miscellaneous duties such as pointing out errors in contracts. The duties of the Chief Surveyor of Works will be mainly (1) to prepare estimates, specifications and other contract documents before construction; (2) to supervise measurements for works services and examine technically a percentage of contractors' bills before payment; (3) to check payments for deviations, special rates and contractors' claims; (4) to advise executive officers on contracts and payments generally. The proposal to set up such an organisation of quantity surveyors in the Central Public Works Department was mooted as early as 1917, and was examined by a departmental committee in 1948, but could not be proceeded with earlier because of financial stringency. In Britain the functions of engineers and quantity surveyors were separated more than a hundred years ago. The Military Engineering Service in India established the organisation in 1934.

M.P.s to visit Andamans

A Parliamentary delegation is leaving for the Andamans on 12th January and will return on or about 27th January. It will consist of Messrs. Vishambhar Dayal Tripathi, Satish Chandra Samanta, N. Kesava Iyengar, Shrimati Savitri Devi Nigam and Dr. Satyanarain Sinha. It is expected to study economic and other conditions prevailing in the Islands and make its report to Parliament.

Amending Patents and Designs Act

The Commerce Ministry proposes to introduce comprehensive legislation during the Budget session of Parliament to amend the Patents and Designs Act. Provision will also be made to elicit information on the royalties paid by India on foreign patents and designs. Another bill will seek to regularise the Steel Prices Equalisation Fund.

WORLD TIN OUTPUT INCREASE

There was a further sharp rise in world production of tin metal during October to an estimated level of 15,400 tons, reports the Tin Study Group. It was the highest until that time last year. The principal producers were, Malaysia, 5,352 tons; U.S.A. 3,364; U.K., 2,525; Netherlands, 2,200 (estimated). The increase followed a rise in September to 14,900 tons, against 13,000 tons in August. This advance was mainly due to the Texas City smelter in the U.S.A. producing 2,450 tons after being stopped for three months.

World stocks at August 31 were 112,200 tons, against 117,300 tons in July 31. The U.S.A. held 46,348 tons, the U.K. 9,300 tons, while Malaysian stocks were 6,900 tons. Consumption of tin in September is estimated at 10,100 tons against 9,900 in August.

Tinplate output during September was 506,000 tons or 40,000 less than in August. U.S. production fell to 367,915 tons, compared with 427,424 in August.

London

DOLLAR SURPLUS WITH E.P.U. WELL MAINTAINED

ENCOURAGING BANK STATEMENTS (FROM OUR OWN CORRESPONDENT).

FROM the point of view of the weekly recorder of events, this early period of the year is probably its worst, for rightly or wrongly the holiday season, whose influence is usually extended by the advent of the January sales, appears to leave almost everybody and everything in a state of suspended animation. We are back at the normal daily round, but are not as yet part of it, and not likely to be for another week or ten days, by which time, of course, Parliament will have reassembled—a constant reminder of the stress and strain of events—the fog, rain, sleet or snow which has been our climatic ration more or less constantly since Christmas may perhaps show signs of easing up a bit, and we will once again be back where we were before the holidays came along to disrupt the normal routine and leave a legacy of lethargy and even laziness.

The City has been particularly affected by this general slowing down of the usual pace and has been encouraged by several favourable developments to put future problems to one side for just a bit longer. Its confidence that the improvement in Britain's balance of payments situation would be maintained was justified by the publication of the December gold and dollar statement. True, the statement recorded a deficit of \$49 million, as compared with the surplus of \$128 million in November, but that took account of the payment of \$181 for the service of the American and Canadian lines of credit. But for this, the central reserves would have shown the biggest increase in any month of this fiscal year. It is apparent that the sterling area is continuing to hold the trade improvement so necessary to its rehabilitation and, what is even more important, is bridging the dollar gap. This last fact is particularly significant, for defence aid from America is shown to be playing a less prominent part than was anticipated by the Chancellor. Last July he mentioned that in the second half of 1952 we might hope to get \$322 million from this source. In point of fact, only \$189 million has been received.

On the other hand, the surplus with E. P. U. is being extraordinarily well maintained, and will produce a further \$58 million when the December settlement is made this month. The position has been rather obscure over the last few months owing to the provision of dollars by the Bank of England for the short-lived commodity arbitrage scheme. Details of this, which have now been released, show that about £61 million's worth of business has been done by British merchants in supplying grain, coal, tobacco, oils and fats to the Continent. In August the dollar outgoings on these deals amounted to only \$5 million, but in September they rose to \$20 million, in October to \$40 million and in November to \$65 million. Last month they were back at \$40 million. The scheme has undoubtedly played an important part in righting the sterling area's position vis-a-vis Europe, but it is apparent that of even greater importance now is the maintenance of the actual dollar surplus, and it is interesting to find that the tailing off of the arbitrage scheme resulted in disclosing a small surplus of £7 million in transactions with the dollar world during December.

National Provincial Raises Dividend

Further encouragement to the business world arises from the evidence that banking has taken a turn for the better. All the statements published so far, and especially those of the "Big Five," suggest that the increases in net current earnings have been large enough to cover not only increased expenditure but also the calls upon inner reserves necessitated by the fall in the market value of gilt-edged stocks—both developments emanating from the Government's dearer money policy. This overall improvement is expected to be maintained, for no general reversal in Government policy is possible at the moment, but bank stockholders are by now inured to seeing their dividends frozen whatever the actual results may show. It was all the more surprising, therefore, that the National Provincial should have decided to pass on a very small proportion of its higher profit to its stockholders in the form of an increase of 1 percent in the dividend, which has stood at 15 percent for some twenty years after having been at 18 percent earlier than that. This created a small boom in bank shares, and produced "I told you so" yelps of delight from the Labour Press, but is unlikely to turn the banking fraternity away from their normal conservative approach to the matter.

In the insurance field, also, figures are impressive. The Life Offices' Association has announced, on the basis of the first fifty results issued by assurance companies, that total net sums assured in 1952 exceeded £673 million, compared with £651 million the year before. It is clear that public savings through ordinary life assurance policies increased further last year, which is all to the good in view of the fact that direct savings as recorded by the National Savings Movement recorded a measure of dissaving of even larger proportions. What is remarkable is that in a year when many people were out of work and many others working short time, new business should have risen in this way. Industrial life assurance business is not, of course, included in these figures, but even here it would seem that there has been a sufficient improvement over the country as a whole to offset the unfavourable results arising from the setback in the textile areas.

Finally, there have been further developments towards restoring greater freedom to the markets. The first coffee auctions to be held since December, 1941, opened yesterday, not in what were known before the war as the London Commercial Sale Rooms in Mincing Lane, their traditional home, but in Plantation House, to which they were transferred in May, 1941, when the former premises were destroyed by enemy action, until full control was introduced at the end of the year. The Ministry of Food was the main seller, but some coffee merchants took the opportunity of offering limited amounts of privately imported coffee. As Continental buyers are free to take part in the auctions and they will now be held regularly, with the next one due on 30th January, it is hoped that London will again become a world centre for the sale of raw coffee.

So far as copper is concerned, conditions under which it would be returned to private trading have been agreed between the Ministry of Materials and the London Metal Exchange, with the Government reserving the right to decide whether they have been fulfilled. The two conditions are: Supplies must be adequate to meet demand in Britain, and there must be reasonable freedom in trading. There will be a time lag, for the Government must give six months' notice to its principal suppliers, while copper is still subject to allocation by the International Materials Conference, though that may end as a result of the review to be made in Washington at the end of this month. Nevertheless, the London Metal Exchange is confident that it will soon have regained all its four pre-war trading metals.

Improved Demand for Tea

The improved demand and better prices which marked the closing tea auctions of 1952 have persisted into the opening ones of the current year, and the outlook generally is regarded as being a lot more hopeful than it was only a couple of months ago. Further alleviation of the position is expected from the conference which is being held in New York next week between delegates from the leading tea producing countries, namely, from the leading tea producing countries, namely, India, Ceylon and Indonesia, and the American Tea Trade with the object of planning a new propaganda campaign to replace the former activities of the International Tea Market Expansion Board, from which both India and Indonesia recently withdrew. The maintenance of American demand is an important factor to the tea growing industry.

Hitherto Ceylon has suffered a lot less than have India and Pakistan in the matter of securing economic prices for tea exports. Her position is likely to be further strengthened by the recent decision of the Ceylon Government to reduce wages by 20 percent for low-country estates and 10 percent for mid-country estates. There will be no reduction for up-country estates. High wages and other compulsory benefits to their labour forces have been the main causes of the heavy rises in production costs of Indian and Pakistan tea companies. The Chairman of Central Province Ceylon, referring to the tea reductions in his address to the shareholders the other day, said it was not the shareholders the other day, said it was not the reduction in their cost per pound of tea since the company had several estates that were definitely low-country estates and would therefore benefit from the maximum reduction.

New Nationalisation Plans

Britain's coal industry—despite nationalisation—is facing what is probably its biggest crisis. That was responsible for the T. U. C. General Council refusing to commit itself to supporting in full the draft five-year nationalisation projects, which includes the National Executive drawn up recently by the Labour Party. The two bodies Committee of Thursday, and the outcome was that the appropriate committees "refused representation on the four working parties which the Government proposes to examine the prospects of nationalising the aircraft and heavy engineering industries. Their chemical and textile machinery industries. Their objections, voiced by Mr. Lincoln Evans, were: (1) The need to overhaul existing State industries; (2) Many industries are getting along quite first; (3) It is doubtful whether it would win a single vote at the next election. This is a setback for the political side of the party, and particularly the Bevanites, for the plan was to have been made public in about six weeks' time. It is understood that it proposes a big expansion of capital investment in basic and metal-using industries. It aims at increasing steel output from 16,000,000 tons to 25,000,000, and visualises progress towards a coal output of 226 million tons against the present figure of 226 million. It would mean a five-year programme of even greater austerity. An increase in consumption of only 2 percent per annum is envisaged, and only limited increases in real wages. Nationalisation is urged as a means to increased production. Without full support from the T. U. C. and any such programme would be unrealistic, and unless it can be secured it looks as though the National Executive will have to think again.

Coalminers' Wage Demands

Meantime, the coal problem will undoubtedly come to a head within the next week or two. The National Coal Board was to have met the Executive Committee of the National Union of Mine workers yesterday for an assessment of the 1952 results and the 1953 prospects, with the latter's claim for immediate wage increases to a large section of the industry as the background. The meeting was postponed, but Sir Hubert Houldsworth, Chairman of the Board, had had an earlier discussion with three leading officials of the union.

Bombay

EXPORT TRADE AFFECTED BY BOMBAY SALES TAX SHIPPERS TRANSFER BUSINESS TO OTHER PORTS

(FROM OUR OWN CORRESPONDENT).

11th January. IT is believed here that the State budget will show a large deficit at the end of the fiscal year. Already a good deal of export business has passed from Bombay to other States because of the State's multi-point sales tax policy under which, unless the manufacturer or the producer himself undertakes export, all subsequent sales in the course of foreign trade, except at the last stage, are subject to heavy tax. Few manufacturers or agricultural producers are in a position to undertake exports directly and the export business is the speciality of those who have set up the necessary machinery and established contacts abroad. Shippers are gradually losing business or are transferring their trade to other ports outside the State, where the same produce can be shipped at a lower price.

For instance, the sugar factories in Bombay are all located in rural areas hundreds of miles from the port and they do not have the organisation in Bombay to export sugar abroad. But if a merchant buys sugar from the factories for export, even under a specific release order, he is required to pay a sales tax of about Re. 1-4-0 per bag. No shipper in Bombay could hope to compete on these terms with a shipper in Madras or Calcutta who could obtain his sugar without the sales tax. This applies more or less to most other commodities; it looks as though the textile export trade is likely to be channelled to other ports outside the State to the detriment of Bombay. There is resentment in business circles that the Government should be jeopardising trade and industry in the State without any net gain to the exchequer. Consumers are equally dissatisfied because with every extra stage in the handling of the goods—and many are inevitable under the present arrangement of trade—the final cost to the consumer increases. Sugar which is selling at As. 6 per lb. in Calcutta is unobtainable even at As. 7 per lb. in the city of Bombay and at As. 8 per lb. in district centres.

This line of criticism of the Government, which is increasing as the economic situation deteriorates, has been noted by some of the leaders of the Congress party, who are showing concern at these developments. For instance, Mr. S. K. Patil, President of the Bombay Pradesh Congress Committee, addressing the Democratic Group in Bombay last Wednesday, condemned the taxation policies of the Government in no uncertain terms. Mr. Patil stated that if there was no strong and combined opposition to the party in power, that party was certain to become idle and complacent. As an instance in point he said: "I honestly believe that if the democratic two-party formula had existed in this State, there would not have been the taxation of which you are complaining." It is thought likely here that Mr. Patil would replace Mr. Morarji Desai as Chief Minister, if and when the latter is drafted to the Union Cabinet.

In Saurashtra, agitation against the sales tax has continued. The leadership has passed from the hands of the Communists to the business community and important leaders of this community have come forward to take part in the civil disobedience which has become a daily routine for the last six weeks. The number of arrests has been increasing and the work of the authorities has become more complicated because women and students are participating. The improvement that was expected to result from the return of the Chief Minister to the State has not materialised so far, in spite of his earnest and sincere efforts. Economic activity in such an atmosphere of high tension has been limited and trade and industry have remained almost at a standstill. The Government has now yielded and revised the tax structure, which may end the struggle. Fortunately for the Saurashtra Government there are not many scarcity areas in the State this year, so in that respect their anxieties are much less than those of the Bombay Government, who are called upon to direct much of their resources of men and money in this direction.

Promotion of International Trade

In my last despatch I referred to the formation of the Swadeshi League to encourage the purchase of Indian goods and to awaken a sense of responsibility among manufacturers to improve quality and to lower prices. This week a group of prominent industrialists and business men met to form what is called the Indian Council for the Promotion of International Trade. Mr. Morarji J. Vaidya of the A. I. M. O., explained the functions of the new body, saying that it would study the pattern of India's international trade, collect statistical information and make suitable representations to national and international authorities on matters affecting trade.

A provisional committee was appointed, with Mr. Baidya as President, to make the necessary preparations for the launching of the Council.

I. L. O. Team for Textile Industry

The I. L. O. have sent a team of experts to Bombay to advise the Centre on its plan to conduct combined projects on systems of payment by results and productivity studies in the textile and engineering industries. Some units of the textile industry in this State have been selected for these studies.

SWISS INDUSTRIES FAIR

BASEL

11th-21st April 1953

An exhibition of Swiss industry:

17 groups distributed in 14 halls.

For information apply to:

Swiss Legation, P. O. B. 392, New Delhi.
Swiss Consulate General, Bombay 1.
Swiss Consulate, P. O. B. 47, Calcutta.
Swiss Trade Commissioner, P. O. B. 102, Bombay 1.

SWEDISH HARDBOARD

Imported Swedish Hardboard Specially Tempered in sheets size 9' x 4'. Thickness 1/8".

BRITISH GALVANISED WIRE NETTING

Imported British Galvanised Wire Netting available in rolls of 50 yds. Size 1/2" mesh x 20 gauge x 3 ft wide. Guaranteed galvanised after manufacture.

JAMES WARREN & CO., LTD.,

31, Chowringhee Road, Calcutta-16.

MAY EASE

51

236/39

month's shipment, and superior Pakistan Cuttings at Rs. 90 per bale for one month's shipment.

At the close the feeling in the market is easier but quotations are unchanged, and they opened on Wednesday morning as follows:

Pakistan Jute:	January-February	Landed at Mill	Rs.
Jat	28 per md. basis	Bottoms	
District	27	"	"
Northern	26	"	"
Indian Jute:			
Lower Assam	24	"	"
Upper Assam	23	"	"
Northern Bengal	24	"	"
Murshidabad White	20	"	"
Bihar	19	"	"
Daisee	25	"	"
Bimili	18	"	"
Mill Reds	165	per bale	"
Mill Firsts	145	"	"
Mill Lightnings	130	"	"
Mill Hearts	120	"	"
Dundee Daisee	145	"	"
(Short Group)			
Dundee Daisee	130	"	"
(Long Group)			
Pakistan Cuttings	67	"	"
Indian Cuttings	62	"	"

Tossa is offered at Re. 1 to Rs. 2 per maund above the rates for white jute.

Mofussil: Reports from upcountry markets in India indicate that imports are practically negligible, and that no business is being transacted at all. In the absence of activity, markets in general are slightly easier, and sellers are growing anxious because a large number of them are holding very heavy stocks, which they have been building up over the past month in anticipation of a rise in prices. Present indications are that high values are now a long way off, and stockists are wondering whether to hold on or to release their stocks at a considerable loss. Quotations locally are all down by about Rs. 1-8 per maund, Dhurli being at Rs. 20-8 and ordinary Assam jute at Rs. 19 per maund. The demand for Northern Bengal jute has subsided and its quotation has dropped by Rs. 2 to Rs. 20 per md. basis Bottoms. In spite of the fall in prices, the rates quoted are still about Re. 1 above the parity of the quotations for Calcutta mills, and no business is being transacted at these levels.

In Cossipore the local markets are at a standstill and no quotations are available because of a strike by jute sellers in protest against the railway company on the question of demurrage on railway wagons. The sellers, it is understood, say that the railway company does not give them enough time to unload wagons placed before they start charging demurrage, and to bring the matter to a head are refusing to unload wagons. Transport workers are in sympathy with them and a complete stoppage of work has resulted. For the last three days wagons have been accumulating in all sidings and so far there appears to be no solution to the deadlock. The Sheoraphuli markets are slightly easier, quotations having declined by 8 annas from last week to Rs. 25 per md. for garat quality. Imports are falling off and only small business is being transacted.

In Pakistan the markets are easier despite there still being a demand for good quality balers' jute. Imports are steady at between 18,000 and 20,000 maunds daily in Narayanganj. The majority of this, however, is of B Bottoms and X Bottoms quality, for which there is no demand as most balers have large stocks of this quality jute. Being unable to get their requirements in white jute, pucca balers are turning to tossa. But as only about 25 percent of the present imports are tossa, demand far exceeds supply and the premium paid has risen to as much as Rs. 4 per maund in some areas. Only small business has been done at this last rate but general business is going on at about Rs. 3 per maund over white jute. Out of the total crop for the 1952-53 season of both white jute and tossa it is estimated that there is still 4 to 6 annas left in the interior. Latest quotations in Narayanganj (in Pakistani rupees) are as follows: Jat, Bales Bottoms (White) Rs. 14-8 to 15 per md., Tossa Rs. 18 per md., District Bottoms (White) Rs. 13-8 per md., Tossa Rs. 16-8 per md.

Stocks of Manufactured Goods

At the end of December, stocks of manufactured goods held by mills reporting to the I. J. M. A. showed a sharp increase, and were reported at 1,15,500 tons of which 77,800 tons or 67.4 percent was sacking, 35,200 tons or 30.5 percent were hessian and the balance 2,500 tons (2.1 percent) miscellaneous manufactures. This figure is the highest recorded since May 1949. Sacking stocks have increased by 6,100 tons, hessian stocks by 4,800 tons and miscellaneous manufactures by 200 tons, the overall increase being 11,100 tons, but the percentage of sacking to hessian remains unaltered. Total stocks held by mills in December 1951 amounted to 84,000 tons, of which 53,300 tons or 63.4 percent were sacking, 28,700 tons or 34.2 percent hessian and 2,000 tons or 2.4 percent miscellaneous manufactures.

I. J. M. A. Production and Consumption

In December 1952, the production of mills reporting to the I. J. M. A. amounted to 78,800 tons as compared with 72,200 tons in November. The increase of 6,600 tons is made up of an increase of 5,100 tons in hessian, an increase of 1,600 tons in sacking and a drop of 100 tons in miscellaneous manufactures. Of the total output in December, hessian amounted to 32,000 tons or 40.5 percent, which is an increase of 3.2 percent over the November figure. Sacking production amounted to 43,600

tons or 55.3 percent, this being 2.9 percent less than the percentage recorded in November. During December, 1952, mills reporting to the I. J. M. A. consumed 4,70,000 bales of raw jute, making a total for July-December, 1952, of 27,20,000 bales. In December 1951, the consumption of raw jute was 5,03,000 bales and the total for the corresponding period in 1951 was 26,79,000 bales.

DECEMBER PRODUCTION FIGURES

The Indian Jute Mills Association announces that the total reported production of manufactured goods, exclusive of all Government orders is as follows:

Description	Quantity
1. Twist and Yarn	
(a) For sale	1,853 tons
(b) All other including that used in sewing	862 "
2. Canvas	81 "
	1.7 Lakh Yds.
3. Gunny Bags (Tonnage exclusive sewing twist)	
(a) Hessian	579 tons
	21.4 Lakh Yds.
	11.1 " Nos.
(b) Sacking	42,180 tons
	10,28.8 Lakh Yds.
	4,23.3 " Nos.
4. Gunny Cloth	28,446 tons
(a) Hessian	11,65.4 Lakh Yds.
(b) Sacking	1,087 tons
	28.2 Lakh Yds.
5. Other Manufactures (including ropes)	531 tons
6. Total Production (above figures combined)	
(a) All kinds	75,610 tons
(b) Hessian (both as bags and cloth)	11,26.9 Lakh Yds.
(c) Sacking (both as bags and cloth)	10,50.0 " "
(d) Canvas (both as bags and cloth)	1.7 " "

(B) Total reported production of goods manufactured on Government A/C.

Description	Quantity
7. Sandbags	99 tons
8. Serim Cloth	5.0 Lakh Yds.
9. Hessian Bags and Cloth and Canvas	Nil
10. Sacking Bags and Cloth	2,757 tons
	106.9 Lakh Yds.
11. Ropes and Twine, etc.	277 tons
	6.6 Lakh Yds.
	47 tons
Summary

*Based on production figures from July 1948 to April 1949 (full working months) excepting March with full employment working 48 hours a week.

THE FOREIGN JUTE MARKETS

GOOD DEMAND MAINTAINED

(FROM OUR OWN CORRESPONDENT).

Dundee, 5th January. Dundee jute spinners and manufacturers are going forward to the new year with every confidence. Order books for delivery of jute yarns and cloth over the next four to five months are very satisfactory and demand continues good, even for despatch to the end of June. To obviate any risk in selling so far ahead, contracts are stipulating that the price will be that ruling at a date not later than four weeks prior to the date of delivery. This guards against any advance in prices for raw jute, or any raising of the maximum rates ruling for yarns and cloth as the result of an advance in wages, which is being spoken about. Certainly, the raw jute market is very firm and shippers are inclined to ask for higher terms, especially for good quality. The rate generally quoted for Mill Firsts is £86 and even good Daisee 2/3 is rarely offered now from Pakistan. Some sellers are quoting up to £85 for short group Daisee-2/3, against the minimum fixed rate of £81. Good quality is still very difficult to obtain and arrivals now are not so good as those coming earlier. Mill Firsts are now the most popular jute in demand by Dundee spinners and fortunately they are in more or less plentiful supply, ex-warehouse. Good Tossa-2/3 and fours are rather scarce, but it is understood that shipments are now on the way.

At this time last year Dundee spinners and manufacturers were also well booked up with orders, but in a few weeks the world recession of trade began to take effect and buyers did not take up their contracts. The position on this occasion, however, is somewhat different. The carpet industry, one of the main outlets for yarns, is extremely busy and arrangements are being made for the purchase from India and the Continent of their requirements for April-June after it has been ascertained what quantity Dundee spinners cannot supply for that period. Numerous orders have been placed with manufacturers for 9½ oz. 40 in. hessians, which are said to be as good as and sometimes better than imported 10 oz. 40 in. Jute Industries Ltd. will open a new factory in a few weeks which Mr. W. G. N. Walker, the chairman, states will be engaged on the production of specialities which are in urgent demand for the dollar markets. The factory will employ 150 new workers.

I.J.M.A. STOCK FIGURES

Statistics issued by the Indian Jute Mills Association show that stocks of jute goods exclusive of Government orders at the end of December were as follows:—

	30th November, 1952		31st December, 1952	
Description,	(Lakh Yds.)	(Tons)	(Lakh Yds.)	(Tons)
Hessian Cloth and Bags	10.88	29.801	12.55	34.594
Standard Hessian (included in above)	8.22	22.932	9.69	26.670
*Sacking Cloth and Bags	16.44	67.274	18.08	73.630
Standard Sacking (included in above)	12.33	50.294	13.24	53.942
Rope, Rope, Twine, etc.	—	2.288	—	2.475
Total reported stocks of manufactured goods held on Govt. account.				
Sandbags	2	50	7	149
Serim Cloth	2	58	2	38

N.B.—December stock figures include actual return of Gagalbhal and member mills with the exception of Kedernath and Kathihar in respect of which estimates have been included. Against these are shown actual returns for November of Gagalbhal and of all members.

EAST AFRICAN JUTE CONTROL

It was revealed by Uganda's Financial Secretary, Mr. C. C. Spencer, in the Legislative Council, Kampala recently, that East Africa's control of jute imports may be lifted. Mr. Spencer said that "importation of jute products is at present controlled inter-territorially. This Government intends to propose to the other Governments that the control should be lifted as soon as satisfactory arrangements can be made for the disposal of stocks on hand. Pending the receipt of the views of the other Governments no further indent for jute products will be placed." Mr. Spencer said that Government stocks of jute products on 30th November were valued at £580,000. These stocks plus 3,000 bales on order would cover the Protectorate's needs until early 1954.

CALCUTTA TEA SALES IN DECEMBER

RESTRICTED OFFERINGS

IN spite of the restricted offerings little interest was shown during the first sale of the month and withdrawals were again heavy. There was a slightly improved tone in Sale 27 though fannings grades were still difficult to dispose of. Demand was stronger in Sale 28 and was more general than for many weeks past according to the monthly market review of Carritt Moran & Co., Ltd. Common broken and fannings, on the whole, were the strongest feature, in spite of the fact that such offerings were available in large quantities. The small amount of better liquoring tea offered received a fair demand while stylish leaf grades were dearer. Darjeelings with flavour were well supported at dearer rates.

The quality of offerings from the Darjeeling district showed a slight seasonal improvement and included a few invoices of fair flavour. Good liquoring Assam teas were again in short supply and the offerings from this area were generally plain and uninteresting. Leaf and liquor from the Doars continued to be typical of rains manufacture. Offerings from Cachar were considerable and included a few invoices of plain in character. Though liquors were generally plain in character.

	1952-53	1951-52

Sale No. 26 Clean Common B.P.	0 11 9	1 8 0
Sale No. 27 " " " B.P.	0 12 0	1 7 9
Sale No. 28 " " " B.P.	0 13 0	1 8 6

Internal Market

Leaf offerings were again very small and of poor quality. There was a better demand for dust throughout the month, particularly in the last sale when prices showed substantial advances.

	1952-53	1951-52
	Rs. As. P.	Rs. As. P.
Sale No. 26 Clean Common Dust	1 2 0	1 9 0
Sale No. 27 " " " Dust	1 2 6	No Sale
Sale No. 28 " " " Dust	1 2 6	1 9 0

Export sales up to and including Sale No. 28 totalled 1,045,783 chests at an average price of Rs. 1-6-0 compared with 1,264,863 chests at an average price of Rs. 1-15-3 a year ago. Internal sales at 14,042 chests of leaf and 351,495 chests of dust (Rs. 0-15-3 and Rs. 1-4-9) go against 54,245 and 306,316 chests (Rs. 1-6-6 and Rs. 1-13-1) in the corresponding period last year.

The price of the export quota declined further during the month and business has been transacted at 2½ piers per pound.

Crop Increase

The estimated North Indian crop at the end of November was 498,464,403 pounds as compared with 494,354,414 to the same date last year. The increase over the previous year was thus further reduced during November by 14.7 million pounds to slightly over four million pounds.

Arrivals (in chests) in Calcutta warehouses during the period 24th November to 23rd December with the amounts in the corresponding period of last year in parentheses were as follows: by steamer 423,209 (338,207); by rail 134,154 (115,750); by air 10,594 (17,604). Since the beginning of the season, 1st April and up to 23rd December, 1952, arrivals have been 2,336,899 (2,544,085) by steamer; 745,012 (592,202) by rail and 107,088 (188,692) by air; making a total of 3,188,998 (3,324,979) chests.

NORTH INDIAN TEA CROP REPORTS

The following summary of telegrams has been received from the different districts for the month of December 1952.

Upper Assam—Weather seasonable; season closed; blister blight prevalent in some areas in Doom Dooma.

Central Assam—Weather seasonable; season closed.

Lower Assam—Weather seasonable; season closed.

North Cachar—Weather generally seasonable; season closed.

South Cachar—Weather seasonable but very cold and dry in Chutla Bheel; season closed; helopeltis prevalent in Chutla Bheel.

Sylhet—Weather seasonable; season closed.

Eastern Doar—Outturn to date is considerably under last year; cold weather has set in and the season has closed; blister blights sight.

Darjeeling—Weather seasonable.

Tera—Weather seasonable the season has closed; helopeltis and blister blight noticeable.

LONDON TEA SALES.

At the London Tea auctions held on 5th January, the prices for Indian teas rose by between 2 and 4d per lb above the rates at the previous sale three weeks before. There was a strong demand and against 18d previously. It is understood that the higher prices reflect the announcement that the Indian crop for 1953-54 will be restricted by eight percent. In the interval since the mid-December auction, Indian teas have been fetching 2d to 6d per lb more in the private market, but it is explained that the private market often runs a little ahead of the open sale.

COCHIN TEA SALES

At Sale No. 1 held on 6th January, 1953, the quality generally showed a considerable improvement. The market opened strongly with all buyers bidding keenly for their requirements. As the sale progressed however demand became rather irregular but despite this the increased price level was maintained for most teas. Best liquoring Nilgiri types sold readily at about 2 to 3 annas per lb above valuations with prices following quality closely. Medium teas were very irregular and fetched prices at anything from 1 to 4 annas above last. Low mediums were very strong and although most of these showed improved quality and were therefore valued somewhat higher, prices paid were sometimes as much as 5 annas above the enhanced values. Fannings grades of all descriptions were the strongest feature of the sale but whole leaf grades particularly F. Ps. were rather difficult to sell.

	Rs. as ps.	Last Sale Rs. as ps.
Low Grown Travancore	B. O. P. 1-2-0	0-13-0
Medium "	B. O. P. 1-8-0	1-4-0

Black well made	O. P. 2-1-0 2-2-0 1-14-0	

CHITTAGONG TEA SALES

At Sale No. 14 leaf offerings consisted of 9083 chests, of which 224 chests were Green Tea. Dust offerings amounted to 3,850 chests. There was a Supplement of 60 chests.

Leaf: There was very keen competition for all grades—particularly for Broken Pekoe, B.P.S. and Fannings—and the market advanced irregularly from two to four annas. Demand for commonest sorts and the few whole leaf offerings was especially strong. There were no withdrawals.

Green Teas: The two invoices on offer were withdrawn without making sellers limits.

Dusts: The 3,850 chests on offer met a good demand and were sold without any difficulty at six piers to two annas advanced. Clean Common Dust may be quoted at As 0-14-6 with Churamoni at around As 0-13-5.

CANE PRICES IN NOVEMBER

On the basis of returns received from the Central Sugar Factories, the Director, Indian Institute of Sugar Technology, Kanpur, reports the following figures for:—

(a) The total price of cane per maund (including Co-operative Society's Commission, transport charges, etc.) at the factory.

	Maximum	Minimum	Average
Rs. a p.	Rs. a p.	Rs. a p.	Rs. a p.
Uttar Pradesh	1 8 6	1 5 10	1 6 10
Bihar	1 6 4	1 5 2	1 5 6
Madras	1 5 0	1 5 0	1 5 0
Bombay	1 11 4	1 5 0	1 7 6
All India	1 11 4	1 3 0	1 6 3

(b) The portion of the total price per maund of cane actually received (cash or deferred or both) by the grower.

	Maximum	Minimum	Average

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stock of sugar in respect of Central Sugar Factories in India during the fortnight ended 30th November, 1952, were 423,966, 16,044, 24,848 and 415,162 tons respectively, reports the Director of the Indian Institute of Sugar Technology, Kanpur, on the basis of returns received under the Sugar Production Rules, 1935.

The figures for the corresponding fortnight of the previous season were 152,065, 39,513, 30,760 and 160,818 tons respectively. Figures for the current fortnight relate to 130 factories representing 90.01 percent of the total cane-crushing capacity, while the figures of the previous year relate to 129 factories representing 92.59 percent of the total cane-crushing capacity. The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 43,018 and 84,256 tons respectively, as against the corresponding figures of 66,959 and 61,697 tons during the previous season.

WORLD WOOL CONSUMPTION IMPROVES

MORE VIRGIN WOOL USED

WORLD demand for wool showed a gradual but progressive improvement during 1952 and, at the most recent date for which figures are yet available, consumption was running at an annual rate of 2,260 million lb (clean), compared with a rate of 2,050 million lb at the low point reached in the third quarter of 1951. The recession from which the world wool textile industry is now steadily recovering, began its most notable phase in the second quarter of 1951 when a heavy fall in the price of the raw material, coupled with the existence of large stocks of manufactured goods, temporarily reduced demand in all sections of the industry. The final months of 1951 saw world wool consumption at one of the lowest levels since the war, as public confidence in prices of final products had been badly shaken by the fall in wool prices and manufacturers were cautious in their approach to wool markets until they saw signs of an improved demand for their goods. This happily began to show itself in the early stages of 1952 and the year has seen an unsensational but gratifying return to more normal trading conditions in many important manufacturing countries.

World statistics provided by the International Wool Study Group reveal that wool consumption in 11 of the chief manufacturing countries touched the lowest point of the recession in the third quarter of 1951, when it was 338 million lb (clean), since when it rose progressively to 380 million lb in the third quarter of 1952. At that point, world consumption was officially estimated at 16 percent below the peak year of 1950 but nearly 10 percent more than the annual average for five years before the war. Moreover, demand was within a narrow margin of balancing world wool production for 1951-52; a margin which might easily be bridged by any further improvement in consumption shown in the fourth quarter of 1952 for which final figures are yet awaited.

U.S. World's Largest User

On the latest available figures, the U.S.A. remains the world's largest user of wool, with an estimated consumption of 117 million lb (clean) per quarter. The United Kingdom taking second place with 92 million lb; and France third with 47 million lb. For the next three places there is close competition between Japan, 29.5 million lb; German Republic, 28.7 million lb; and Italy, 26.5 million lb; the rise in the case of Japan being sensationally rapid as she has nearly doubled her wool consumption since early 1951. Belgium occupies seventh place with 13.6 million lb per quarter, and others in the eleven largest users are Australia, with 8.6 million lb; Netherlands, 6.

Three Series Second Series Second Series Redeemable on three months' notice after a period of ten years Subject to Tax Two Series Three Series Issued 1937, 38, 40 Convnt. into Pref. Shares									

Option of Redemption.	(H) Do to and including the year 1943, holders may at any time convert into fully paid up shares of Rs 10 for every £1 of the stock.	(R) Option of repayment within 5 years from the date of issue on one month's notice.
(A) 2 months notice, (B) 1 month's notice (W) Any int. दर.	(I) Ordinary Shares thus converted will rank for dividend pari passu with the shares of Rs 10.	(S) Conversion of Debentures into shares may be exercised by giving notice for 3 months, expiring on or after 31st December 1943.
(A) 6 months' notice, (Y) 3 months' notice, (Z) 12 months' notice.	(J) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(T) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(A) Redeemable at par between the years 1924 and 1943 in instalments of not less than Rs 1,000 every annum by payments of not less than Rs 1,000 every annum.	(K) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(U) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(B) -not before 31st December 1960. Also redeemable out of a cumulative sinking fund of not less than par or by annual drawings at par.	(L) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(V) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(C) -not before 31st December 1960. Also redeemable out of a cumulative sinking fund of not less than par or by annual drawings at par.	(M) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(W) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(D) -not before 31st December 1960. Also redeemable out of a cumulative sinking fund of not less than par or by annual drawings at par.	(N) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(X) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(E) -not before 31st December 1960. Also redeemable out of a cumulative sinking fund of not less than par or by annual drawings at par.	(O) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(Y) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(F) -not before 31st December 1960. Also redeemable out of a cumulative sinking fund of not less than par or by annual drawings at par.	(P) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(Z) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.
(G) -not before 31st December 1960. Also redeemable out of a cumulative sinking fund of not less than par or by annual drawings at par.	(Q) The conversion of the shares of Rs 10 into shares of Rs 100 will rank for dividend pari passu with the shares of Rs 100.	(AA) Repayment after 30th September 1953. Any time on or after 30th September 1953, the Debentures may be repaid at Rs 400 int. 25 Ordinary Shares to take effect on 1st January 1954.

COAL COMPANIES

O, P, F and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FRAMING A CONSTITUTION IN PAKISTAN

PROVINCIALISM AND NATIONAL UNITY: MINORITIES IN AN ISLAMIC STATE

THE drawing up of a Constitution, as India discovered, is an exceedingly difficult and complicated task at best, but the Pakistan Government does not appear to have made matters easier for itself by letting the first report of the Basic Principles Committee go off at half-cock and allowing two years to elapse before the presentation of the revised final report. The troublesome thing about nettles is that they have a habit of growing; if you do not grasp them firmly when they are young, you may be sure that two years later they will prove far more difficult to handle. The Pakistan Government, having flinched when mildly stung towards the end of 1950, is now finding out the truth of this, for in the intervening period the various conflicting interests affected by the Constitutional proposals have had ample time to harden. In the first year or two after Pakistan came into existence, the enthusiasm for new-found nationhood and the sense of unity in common endeavour was such that the Government—had it but had time to pay attention to anything but the most urgent matters—could have carried through almost any proposals without serious opposition. At the end of three years, when the interim report was presented, the situation was admittedly much more difficult; but still, Mr. Liaquat Ali Khan was firmly in the saddle and the Muslim League was a great deal more popular and respected than it is today. It does therefore seem a pity that the Government did not insist on the report being properly debated and decisions reached on it at that time. As things stand, it is plain that it will have a hard struggle to get an agreed Constitutional outline passed by the Constituent Assembly.

East Pakistan's main objections to the interim report were, firstly, that the proposed Upper House of the Central Legislature was so designed as to nullify the advantage accruing to the province in the Lower House by reason of its preponderance in population, and secondly, that Urdu was to be the State language. The opposition developed in the province during the intervening period seems to have served to put West Pakistan on its guard, with the result that although the revised proposals are in some respects less favourable to the eastern wing, it is the western wing which is now raising the louder outcry of protest. It is to be feared that provincialism has steadily gained ground as the chief disruptionist factor in the country. At the same time the clash between the mediaevalists and the modernists has also become more open, and the mullahs have taken advantage of the breathing space in order to work up an agitation and to announce that nothing short of a fully Islamic Constitution will satisfy their ideas of what is proper to an Islamic State. The unfortunate Basic Principles Committee, meeting in this atmosphere, seems to have reached a compromise between the two wings of the country and between the mullahs and the modernists which satisfies no one. Perhaps the minority communities, who are to some extent in the position of a *tertius gaudens*, have had the most satisfactory deal—not indeed ideologically but from a realistic standpoint—from the Committee.

It is the proposals regarding parity between the eastern and western wings in the Central Legislature which have provoked the most acute controversy. The original recommendations of the Committee contemplated that both the Upper and Lower House of the Central Legislature would exercise equal powers, and parity of representation for all the units in the Upper House was evidently designed to correct the preponderance secured to East Pakistan in the Lower House. The revised recommendations will have the effect of reducing the eastern representation in the Lower House to 50 percent (which will include

the seats reserved for the Hindus and other minorities) and giving it parity with Western Pakistan in the Upper House. As, however, the Upper House has been deprived of all real authority, it is East Pakistan that is expected to make the major sacrifice. The fact that in these circumstances the main opposition to the revised composition of the Legislature comes from the Punjab seems to indicate that it is prestige rather than power which is at stake. The Punjab regards itself as the heart of Pakistan, as it is the sword-arm, and pretends to be insulted by the proposal that it should have only 27 seats in the Upper House as compared with 60 seats reserved for East Pakistan. There appears to have been a good deal of plain speaking on the subject, and it is possible that the Constituent Assembly will ultimately decide to adopt the proposals made in the interim report.

It is difficult for non-Pakistanis to comment on this matter without incurring the charge of presumption, but many well-wishers of Pakistan must have felt that, ideally speaking, the personal view of Mr. Daultana, the Chief Minister of the Punjab, that what Pakistan needs is a unitary government, had much to commend it. For one thing the maintenance of fully-fledged provincial Governments is an expensive business, for another thing the provincial Legislatures will surely tend to encourage a parochial point of view and perpetuate the evil of provincialism. However, there has been little support for Mr. Daultana and it seems that his suggestion must be written off as unpractical. In the circumstances the proposal that the eastern and western wings should have parity of representation seems to be the least objectionable compromise, for it does at any rate have the virtue of recognising the inescapable fact that Pakistan consists of two separate halves whose interests by no means coincide at all points. There has also been some talk of a confederation between East and West as an even better solution. This would be a logical way out of the tangle. The two wings would be independent units of equal status, joined together only in respect of foreign affairs, defence, currency and perhaps communications. The Government, however, has made it clear that it will have none of this. "Confederation," said the Prime Minister in Lahore, "would be the end of Pakistan."

If we take a lesson from history, there is a great deal to be said for the Pakistan Government's determination to maintain, as far as practicable, the unity of the country and to avoid the virtual admission that the interests of the two wings must be mutually antagonistic. Admittedly Karachi is as distant from Dacca as London is

from Moscow, but mere distance is of minor importance in an age of air travel and telecommunications. For all practical purposes the two capitals are closer than London and Edinburgh were at the time of the union between Scotland and England. That union has been splendidly successful despite such difficulties and despite the antipathy which existed between the English and the Scots at the beginning of the eighteenth century. It was certainly no less than the lack of cohesion which is now found in the relations of East and West Pakistan, and there seems no reason why a firmly pursued policy of unification should not in time be equally successful.

The comparison is apt in more ways than one: for example, the English tended to regard the Scots as a backward race, and some parts of Scotland as hardly civilised at all, just as the Punjabi tends to regard the East Bengali. Yet the Scots, even at that time, had a priceless asset in their passion for education, and this is also noticeable among the East Pakistanis. Those whose business it is to supply textbooks to the schools and colleges of Pakistan have found that the books supplied for the degree classes in West Pakistan serve for the matriculation classes in the East. Here, therefore, is the answer to the West's assumption of superiority, and unless it improves its own educational standards it may find that East Pakistan will forge ahead more quickly in the march of progress. On the economic side it can well be argued that the two wings are largely complementary and that the divergence of interests which has, not unnaturally, obtruded itself on the notice of the world during the early years of the country, is no more than superficial.

★

We have already mentioned the position of the minorities in the new constitutional set-up. Separate electorates will guarantee that they receive representation in the House of the People, though it would hardly be sufficient for them to make their voice effectively heard. Out of a House of 400, they will have only 53 seats. The Scheduled Caste Hindus have been separated from the Caste Hindus and will in fact form the largest minority community with 26 seats. Christians have only three seats altogether, one from East Pakistan and two from the Punjab, though to fill the latter Christians of other areas in West Pakistan are to be entitled to vote. The Parsees will have only one seat, a provision which clearly pays inadequate consideration to the very important part played by this community in the life of Karachi.

The minorities are not, or should not be, affected by the directive principles of State policy which prohibit drinking, gambling and usury because these prohibitions fall under the steps to be taken "to enable the Muslims to order their lives individually and collectively in accordance with the Holy Quran and the Sunna." They will, however, obviously be affected by the recommendation of the Basic Principles Committee that steps should be taken to bring existing laws in conformity with Islamic principles and for the codification of such injunctions of the Islamic scriptures as can be given legislative effect. Members of the minority communities also find themselves disqualified from holding the position of Head of the State. In practice, of course, this is of no importance, for they could hardly aspire to such a position in an Islamic State; nevertheless, the psychological effect of this provision must be regarded as discouraging, for it to some extent relegates the Hindus, Christians and the Parsees to the status of second-grade citizens. Indeed, it is an inevitable consequence of the setting up of a fully Islamic State that non-Muslims must find it difficult to regard themselves as true Pakistanis. Considering that there are about ten million Hindus in East Pakistan, the consequence of this undermining of their patriotic sentiment towards the country in which they live and have their being must be rather serious.

Another highly controversial section of the Basic Principles Committee's report is that which prescribes a procedure for preventing legislation repugnant to the Quran and the Sunna. It contemplates that both at the Centre and in the Units boards of persons well versed in Islamic law should be set up to advise the Governments regarding "repugnancy." Admittedly these boards will have no powers of veto and it is only when they are unanimous that legislative measures must be returned to the Legislature for further consideration; but even so, intelligent public

opinion in Pakistan appears to have reacted very sharply against these proposals. They are regarded as constituting a surrender to the mullahs and to the forces of obscurantism, and on the practical plane, it is feared that the existence of these provisions will enable obstreperous Muslim members of the Legislature to delay Bills and obstruct the conduct of business in the House. So many prominent persons have expressed their distaste for these particular proposals that it seems possible that they will be rejected by the Constituent Assembly.

SAMPLING INDIAN CONSUMER EXPENDITURE

OFFICIAL SURVEY SUGGESTS NEW LINES OF ENQUIRY

THE valuable statistical apparatus with which the Government of India has been equipping itself in the last few years, largely under the enlightened direction of Mr. Nehru, has not yet attracted all the attention it deserves from business men, some of whose work it will materially assist when it gets beyond its present formative stage and begins to produce exact and helpful answers to the questions producers and traders must ask about their markets. The formative stage is rapidly being completed and, since much statistical enquiry is aimed at elucidating trends rather than at furnishing absolute figures, future reports of the National Income Unit and the National Sample Survey will be of considerable interest. Business houses and associations will still need to conduct their own statistical enquiries, and much more intensively than they have done so far, because the global surveys undertaken by governments necessarily move at a higher level of generalisation than business men find useful. Official work will not replace industry's own market research, but it does show the way by providing a "total" background and by perfecting techniques of enquiry suited to Indian conditions. This is especially true of official study of consumer expenditure, regional differences in family budgets and the output of cash crops. What the producer wants to know is how much people spend on his class of product, how tastes vary from year to year and from region to region, and how much of his raw material is being produced within India. The first report of the National Sample Survey, which was released last week, already contains interesting pointers on these subjects for at least some sections of industry and commerce.

The Survey sampled budgets in 1,189 villages chosen at random in various parts of India and then grouped its findings according to geographical divisions, as well as striking a national average. It found (what we already knew) that most of the Indian family's budget goes on food but it also found that there are considerable variations in the proportions of consumer expenditure devoted to foodstuffs in different regions. For example 71 percent went on food in East India (from Bihar to Assam) but only 54 percent in West India (Bombay and Saurashtra), showing that people in the latter area have more to spend on other things than people in Bengal and neighbouring States. This wide range, and the even wider regional variation of expenditures on particular items of food, lend point to criticism of "all-India cost of living indices" since, to take an example mentioned in the Survey, a rise in the price of milk would be important in North-West India where 19 percent of total consumer spending is on this commodity, but negligible in East India where only 3 percent goes on milk.

The Sample Survey showed that average expenditure on headgear in North-West India was Rs. 3.99 per person but only Rs. 0.06 per person in East India, which might seem a useless scrap of information since everybody knows that more turbans are worn in the Punjab than in Bengal. But the concordance of the Survey's finding with common knowledge inspires confidence in another piece of information which is far from commonly known: that more than twice as much per person is spent on medicines and medical services in East India as in North India or Central India, although there is no great difference in total consumer expenditure in these areas. Again, the Survey contains more exact figures than hitherto available on the preference for mill-made cloth over handloom and other textiles. Although 84 percent of cloth bought in North India comes from the mills, as little as 55 percent does in South India; only 8 percent of textiles worn in Bombay is handloom cloth but 44 percent in Madras. Information of this order is most definitely of interest to manufacturers and traders and if there is not more of it in the results of the first Sample Survey, at least useful lines of enquiry have been suggested to those more directly concerned.

Since two-thirds of the average Indian family's budget goes on food, the most fruitful section of the Survey's report is that dealing with the consumption and production of grains. The astonishing

conclusion is reached that the Government of India has been out by between 12 million and 16 million tons in its guesses of Indian foodgrain production—that is, the official statistics have been under-estimates by as much as 20 or 25 percent. When one recalls the heated discussion on controls and rationing policy in Parliament last year and the acute differences of opinion within the Government itself on the trends of food output, it would appear that the politicians were arguing in the dark and the Government arranging imports and deciding allocations with only the foggiest notion of what the facts really were. It will also be recalled that the five year plan set out as the objective for 1955-56 the production of 61.6 million tons of foodgrains, which it was thought would be a 14 percent increase over the 1950-51 figure; but now the National Sample Survey says that Indian food output was already about 60 million tons in 1949-50. It would seem that the "target" had very nearly been achieved before the plan began. This lends some support to a view often put forward before, that the Indian food shortage is actually a transport shortage and if the country's communications were improved and free markets left to attract supplies from one region to another the food deficit would probably disappear.

The National Sample Survey has plainly opened up a promising line of enquiry and further instalments of its report will be awaited with interest. It is in the nature of such investigations that their value increases in geometrical progression; further work does not simply add more facts, but reveals trends and permits the reliability of the results to be verified with growing accuracy. As more of the details of the Indian economic picture are filled in, there will be more to interest business men in the products of this research, which has already indicated directions in which private enquiry might usefully be pursued further. The official Survey has so far concentrated on rural areas but private investigations would find it both easier and perhaps more profitable to apply similar techniques to a study of urban budgets.

BRITAIN'S EXPORT TASK

BRITAIN'S experience in overseas trade was not nearly as unfavourable last year as in 1951. Yet no one who surveys the trend, and the circumstances in which it is intended to achieve a substantial credit balance on external account, takes a hopeful view of the prospect. Superficially, the situation is favourable enough. The visible deficit was much less in the second half of 1952 than in the first half—a monthly average of £53 million, compared with a monthly average of £79 million. In the first half-year, according to the official estimate, net invisible earnings counterbalanced the visible deficit and left an overall surplus of £24 million for the period. So there was probably a quite appreciable overall surplus in the second half-year, even though at the end of the year the service of the U.S. and Canadian loans had to be met. Taking the year as a whole, the reduction of the adverse visible balance from £1,197 million in 1951 to £768 million in 1952 is a significant improvement.

A closer look at the figures is not so reassuring. It reveals that the contraction of the visible deficit was due to a fall in the value of imports (from £3,904 million to £3,481 million), not to a rise in the value of exports, which indeed declined from £2,707 million to £2,694 million. This is not a very gratifying result in itself; furthermore, it is an achievement—if that is the right word—which cannot be repeated. The Government never pretended that the payments problem could be solved at the former level of imports, and in fact the decline of imports by 11 percent is only a little more than was intended—due partly to the unexpectedly favourable movement of import prices. But curtailment of imports was intended as temporary, and it will certainly not be meekly accepted as permanent by suppliers in continental Europe and in the dollar area who have suffered from the reduction. The improvement in the payments position itself, and particularly in the position of the U.K. in the European Payments Union (where other countries have been running into difficulty), makes an irresistible argument for relaxing import restrictions. The contraction of exports, moreover, was certainly not envisaged. On the contrary, the Chancellor of the Exchequer estimated that exports would increase by about £50 million. It was thus only by chance—the unexpectedly sharp fall in import prices—that the result of the year's trade was more or less as expected.

The next phase of the task is obvious. An overall payments surplus has to be achieved in the next year or two, to refoat sterling as a free currency: a surplus reckoned not in tens but in hundreds of millions of pounds a year. Expansion of exports is the only means of achieving such a surplus. It is a disturbing fact that in the last two months of 1952 exports were not increasing at all but were slightly diminishing. So the trend was not even in the right direction at the beginning of 1953. The recent monthly export rate has

been between £210 million and £220 million. To achieve an annual rate £300-350 million higher than in 1951—which seems to be the Chancellor's latest objective—means a monthly average increase of roughly £25-30 million. This is a substantial proportional increase; and it must be concentrated on a few areas—particularly the dollar area—and on a relatively narrow range of goods—almost exclusively capital goods and armaments. Demand for the right goods of the right quality at the right prices certainly exists. But no serious effort is being made at present to achieve maximum output in the industries mainly concerned. The budget may give a positive lead; but by April more than a quarter of the year will have gone, and such incentives and deterrents as the budget introduces cannot reasonably be effective until late in the year.

Because exports are lagging behind schedule, it cannot be truthfully said that the country's recovery is proceeding according to plan, even if the payments position as such is as satisfactory as the authorities anticipated. And the programme for sterling, which everyone hopes will regain convertibility this year, is conditional on the general plan for recovery. It is not expected that sterling will be made fully convertible at one stroke. It was, however, hoped that each stage towards convertibility would be completed rapidly, smoothly and safely. This hope must now be modified. And if convertibility of sterling is delayed the whole programme for postwar normalcy, on an international scale, will be delayed also. The British Government has now to bear a heavy responsibility. On the whole, it enjoys the confidence of the electorate, even though its parliamentary majority is small. But the electorate judges recovery by improvement in living standards; and the kind of action needed now will certainly not, in the short run, raise living standards. To divert resources to the export industries means to withdraw resources from industries supplying the person and the home; and deflationary action ought to counter the inflation of the export drive.

CURRENT COIN

Congress mem. con.—An Indian Correspondent writes: At the conclusion of the fifty-eighth session of the Congress Party its sixth-term President, Mr. Nehru, complained that "the trouble here is that we have too many critics and whatever we do is criticised." That can scarcely have been the trouble at the session itself where at least once the speakers had laid it on so thick that Mr. Nehru confessed to being "bashful." One result of this absence of any real opposition within the party was that the session was brief and cost no more than the reported Rs. 20 lakhs; another that the proceedings tended to be rather dull, except when the question of linguistic States came up. It is not easy to see how the monotony of agreement could have been avoided. The Party is in power, and the head of the Government is also the head of the Party, and it is only in a Walt Disney cartoon that a man can play tennis with himself. Nobody had expected controversy over such routine resolutions as those on the status of Indians in Ceylon and South Africa, the evils of communalism and the desirability of world peace. But that no delegate should have considered it worth while to look a little more closely into the real threats to peace or into the details of the five year plan is indicative either of an unusual degree of unanimity or widespread indifference. Mr. S. K. Patil of Bombay is on record with the view that the session lacked enthusiasm, although the evocation of enthusiasm was perhaps the only definite purpose of Mr. Nehru's presidential address which was otherwise uninformative, iterating familiar generalisations in familiar phraseology. A wide field was covered, more extensively than intensively, and if little that is precise emerged from the presidential oration the reason may be the underlying assumption of what Mr. Nehru was later to condemn in others, an attitude of self-righteousness. He was distressed at the "menacing lack of equilibrium" in the world today, and concerned that hasty redistribution of the country according to language might upset "the present equilibrium," which is presumed to exist in India. At least Mr. Hanumanthaiya of Mysore was not disposed to accept the latter as quite so obvious and after accusing the Congress Working Committee of procrastination and evasion demanded that "either we say that certain linguistic States are to be formed or we say definitely that these should not be formed." Mr. Nehru's reaction was characteristic. He said he had not the slightest objection to the reorganisation of the States of India, but there was this, that and the other to be considered and, finally, wasn't the five year plan there to be thought of first? Mr. Hanumanthaiya failed to see the relevance of the plan to the question of linguistic States (though in fact it is very relevant), deplored what he called the policy of Liniethrow and Wavell, and pleaded for the "Mountbatten psychology." Indecision was again painfully apparent when the session was enlivened by unconfirmed, and later denied,

reports of an invitation to Pakistan by Britain and the U.S.A. to join the Middle East Defence Organisation. The inadequate authentication of the reports did not prevent Mr. Nehru making two references to the matter. Friendship and firmness, he had said earlier, summed up his policy towards Pakistan. To this he now added a negative factor, non-interference. Unfortunately, there was no Aneurin Bevan at Nanalnagar to point out that a party without a policy dies of inanition, that problems shelved are not problems solved, that Communism is not defeated by dissertations on democracy, and that "it is the verb that matters, not the noun." Nor, one might add, the adjective, which still dominates the grammar of Congress politics.

U.S. Tea Council.—More information is now available about the new Tea Council formed in New York to promote sales of tea in the United States. Newsagency reports say no more than that the campaign's fund is set at \$1½ million of which the producing countries will contribute \$1 million and the American tea trade the rest, with equal voting rights for producers and importers. The New York correspondent of *The Hindu*, however, adds that the Tea Council will have 12 directors, six of whom will represent American importers, three India, two Ceylon and one Indonesia, it being provided that other producing countries can join later if they wish. An Indian Government official in New York told *The Hindu's* correspondent that it was proposed to include representation of the tea growers in India's quota of directors, thus enabling actual producers to establish contact with consumer opinion at the expert level. Although it was one of India's complaints against the International Tea Market Expansion Board that it did not associate Indian nationals with promotional campaigns as much as Delhi would like, it appears that the new organisation is to take over the staff of the ITMEB's Tea Bureau in New York, including an executive director on a salary of \$27,000 and assistants from the old Bureau on salaries of \$10,000 to \$15,000. Mr. Smallwood, chairman of the recent conference, has said that the trade is willing to accept tea promotion from the producing countries to study tea has been "and merchandising techniques; this offer has been made before but advantage has not so far been taken of it by India. The figure of \$1½ million mentioned for the new campaign compares with the "upwards of \$1½ million" spent annually by the old Tea Bureau run by the ITMEB and the American trade, and India's contribution to the new campaign, at about \$500,000, is no less and perhaps a little more than she subscribed indirectly through the Tea Bureau. Financially and politically, therefore, there does not seem to be much to choose between the old dispensation and the new, but of course organisations of this sort must be judged only on results. Even if in this respect, sudden in-out to be far superior in the respect, sudden increases in U.S. absorption campaign bears fruit since the best propaganda campaign bears fruit only slowly; if and when higher U.S. consumption is achieved there is no guarantee that Indian tea will benefit markedly because market evidence from the United States in recent years indicates that Americans share the Australian preference for Ceylon over Indian leaf. The most important thing perhaps is that some kind of propaganda campaign has been resumed for the American importers took a very sullen view of India's withdrawal from the then only existing promotion body last year.

Balance in Indo-British Trade.—Judging by the latest figures published in the U.K. Trade and Navigation Accounts, there was a considerable change in the pattern of Indo-British trade and the substantial surplus which India had and the substantial devaluation is not likely to be repeated in 1952. These figures cover only the first months of last year but no special developments took place in November and December to suggest that the close approximation between Britain's imports from (£95.89 million) and exports to (£95.04 million) this country will be disturbed. Tea has been India's chief export to the United Kingdom and its relative importance has increased; in the first eleven months of last year 268.4 million lbs. (worth £43.57 million) were sent, as against 236.4 million lbs. (£37.78 million) in the corresponding period of 1951 and 210.8 million lbs. (£30.4 million) in the first eleven months of 1950. In the eleven months ended November 1952 India sent eleven months of jute sacks and bags valued at Britain 20,250 tons of 55 million square yards of over £5 million and 102.5 million square yards of piecegoods worth more than £8 million. Britain also bought most of her leather and manufactures from this country, at a cost of £7.79 million. Her other purchases included 35.6 million lbs. of tobacco (£6,565,000), 6,330 tons of shellac, sticklac and seedlac (£1,774,000), 15.46 million lbs. of raw wool and waste (£2.92 million) and about £1.99 million worth of raw cotton and waste. Machinery continued to head the list of British exports to 1952 country. During the first eleven months of 1952 India was the second largest customer and importer of the leading buyer of textile machinery (18,015 tons valued at £7.94 million) and internal com-

bustion engines (253,104 b.h.p. worth nearly £3.6 million); and she also purchased more than £5 million worth of electrical machinery and £1,147,000 worth of machine tools. India spent over £15.5 million on imports of British vehicles—a term which covers anything from locomotives to bicycles; and £9.48 million on chemicals, dyes, drugs and colours. Britain sent India nearly 70,000 tons of iron and steel and their manufactures (£27 million), electrical goods and apparatus (£10.19 million), cotton yarn and manufactures (£3.1 million), non-ferrous metals and manufactures (nearly £2.17 million) and woollen and worsted yarns and manufactures (£4.62 million).

Universities, Industry and the Jobless.—A recent enquiry into the number of educated persons registered with employment exchanges in India has brought out the disquieting fact that there has been an increase of 10,632 to 126,498 between May and October, 1952. To some extent this has been a result of the slump in economic activity, but it seems that no long-term improvement is likely as long as universities in India produce more educated persons than can readily be absorbed, and as long as the latter cling to false notions of dignity in declining to enter any but the traditional avenues of employment. Between May and October the total number of unemployed graduates rose from 14,828 to 16,055; it may be that these figures would have been considerably smaller if a serious effort had been made to co-ordinate the output of the universities with the needs of industry. In underdeveloped economies problems of this nature are not usually given high priority because of other, more urgent needs, but they are nevertheless of importance in all countries which hope to build a cadre of managers and technicians to run commercial and industrial enterprises in years to come. The subject has received increasing attention in recent times both here and in the industrially advanced Western countries, notably Britain. The Federation of British Industries last year organised a conference, attended by 140 industrialists and university representatives, to discuss the problem of "securing the best men for industry." In a valuable contribution to the discussion Sir Ewart Smith, of Imperial Chemical Industries, asserted that the long-term progress of any organisation depended primarily upon the ability, energy and leadership of its management; if managements were to be improved, industry must attract a much larger proportion of those who possessed high intellectual ability and a good personality. Such potential leaders of industry must be educated up to the university level and improved to meet changing conditions. Finally, industry must provide the continued training, the experience and the opportunity to carry responsibility, which alone can develop the full potentiality of its recruits. Educationalists in India could well take note of one particular bit of advice that Sir Ewart addressed to their British counterparts: industry "needs men who have been trained to think, to understand, to be critical and to have initiative, rather than those who have been crammed with knowledge which, in many cases, must soon be out of date."

Pakistan's Trade Surplus.—Pakistan ran into serious trading difficulties during 1952 when there was a decline in the demand for her principal exports, jute and cotton. Energetic action was taken in the middle of the year to remedy the adverse trade balance which developed, followed by the suspension during November of Open General Licence 14, as a result of which no goods could be imported without a licence. This is partly responsible for the sharp decline in imports which has enabled Pakistan to increase her surplus on seaborne trade on private account to Rs. 7.24 crores in December from Rs. 6.22 crores in November and Rs. 2.48 crores in October. An official Note points out that "this is the third consecutive month in which Pakistan has had a considerable surplus trade balance" and indeed the result is in the short run satisfactory. Closer examination shows that there is less room for complacency. Much foreign exchange has been squandered in recent years on the import of inessential and luxury items, but the restrictions imposed recently may prove too drastic. Shortages have begun to develop and prices have been rising; there has also been evidence of the growth of malpractices associated with strict import control, and the Government might soon have to consider whether it would not be wiser to relax restrictions. The Note describes exports as "going up" to Rs. 13.11 crores, but the increase cannot have been much for the preliminary estimate of exports in November was Rs. 13.49 crores. There are still large unsold stocks of cotton and jute, and to a great extent these accumulations are the result of the unrealistic trade policies Pakistan has chosen to follow with her best customer, India. The rate of seaborne exports in December does not promise an early clearance of stocks—346,161 bales of jute, worth Rs. 4.34 crores, and 157,216 bales of cotton, worth Rs. 7.59 crores. Other important exports were wool (Rs. 39 lakhs), tea (Rs. 26 lakhs) and hides and skins (Rs. 21 lakhs).

PROMISING OUTLOOK FOR BURLAP

IMPROVED DEMAND FOR DOMESTIC ISSUES

London, 21st January.

THE Vice-President of the Burlap Council declared over the week-end that the burlap industry enters 1953 with the most promising outlook in any year since the end of the war. Speaking at the annual meeting of the Canadian Used Textile Bag Dealers' Association, he said that the return of burlap prices to economically competitive levels and the great improvement in the amount and dependability of burlap supplies, augur well for a further increase in consumption in the months ahead. The Vice-President claimed that many burlap consumers who have been forced to use substitutes in recent years are gradually resuming use of burlap for packing and other purposes. He said that United States consumption will show an estimated 54 percent gain last year over 1951. Encouragement of a second-hand market for used products has become an accepted principle of modern merchandising, he said, and added that the trade is counting on the service of second-hand bag dealers to make a market for used bags and thereby keep the net cost of new bags down.

The Stock Exchange

During the past week the main feature of the London Stock Market has been the switching of interest from overseas to domestic issues. In the case of gilt-edged, which show good gains on the period, switching was engendered by a further improvement in sterling against foreign currencies, particularly the dollar. Industrials also moved higher, in some cases quite sharply, on the improved tone of funds and the opinion that there will be some tax relaxation announced in the forthcoming budget. All groups in this section benefited, but owing to stock shortages, demand could not always be met and this helped to accelerate rises. Shipping and oil shares lost much of their recent vigour and settled down to more routine business; however, in the former, liners continued to come in for investment support. Oils held about unchanged. Outstanding among otherwise very quiet mining issues was Mawchi, which

rose sharply on the news that the Burmese Government had launched an offensive to clear the company's property of rebel forces; the shares gained nearly 1s 6d to 5s. Among foreign bonds, the week's political activity in Germany unsettled that country's issues and they lost substantial ground before staging a partial recovery. Japanese also lost ground latterly on the news of difficulties in Japanese export trading. Elsewhere, Rumanians were marked down late in the week. Tea opened the week irregular, with the strong tone at auctions being offset by end account influences. Prices soon picked up as selective buyers entered the markets, only to turn irregular with the reduction in the Southern Indian interim dividend. During the period, however, values were unchanged to slightly higher. The best move occurred in Consolidated Estates which gained 1s 3d to reach 28s 3d.

Short term loan conditions were difficult throughout the week on London's money market. The period began with heavy calling by the banks concerned in returning excess of Anglo-Iranian money, and later in the week the tax gathering season had its first real squeeze on the credit system. The market had to rely on the authorities to see it through. The week closed with conditions patchy and credits in short supply and, with no assistance from the authorities, a certain amount of privilege money had to be taken to bring books into balance. Applications for £200 millions Treasury Bills totalled £293,560,000. Allotments were £190 millions at an average rate of 47s. 11.44d. percent. This week £190 millions will be offered. The Bank of England return showed a decrease of around £29 million in active note circulation to 1,473 million. The fiduciary issue also showed a further decrease of £25 million to £1,500 million.

Rain-grown Cotton Schedule

After a period of several months the Raw Cotton Commission has issued a buying schedule for United States rain-grown cotton. This covers strict low middling to good middling grades of Memphis cotton of 1½ to 1¼ inch staple and for lower grades and staples of Orleans-Texas. The delivery periods specified are 15th to 25th February, 1st to 10th March and 15th to 25th March. Offers are to be based on March and/or May, New York or New Orleans futures. Some indication of the Commission's prolonged lack of interest in American cotton is shown by its import statistics which for the season 1st August to 15th

January totalled only 81,000 bales compared with 395,000. But apart from Peruvian, West African and Argentine, all growths have suffered from the R.C.C.'s buying caution. Imports of Peruvian at 125,000 bales compared with 74,000, Argentina 75,000 against less than 1,000 and West African 70,000 against 59,000 bales.

U.K. Bids for Cocoa Denied

Reports from New York that British Marketing Companies were ready to accept bids of 30 cents per pound for cocoa were emphatically denied in London. Sources operating for Marketing Boards said that numerous bids of 30 cents from New York were refused, both for small and large parcels up to 500 tons, as the Boards were not prepared to accept this price for any quantities. New York bids of 30 cents are still below the world parity. On the Continent and in London, business is being done at £250 per ton which is equivalent to just over 31 cents per pound. Some quarters consider that the reports from New York indicate wishful thinking on the part of dealers there, who had been unable to purchase West African cocoa at the New York price level. It has been suggested that while Marketing Boards are unable to sell cocoa at the higher levels it is unlikely that they will be willing to accept lower bids emanating from New York.

Iron Prices in W. Germany

The West German Economics Minister has temporarily postponed his decision on whether to free iron prices, though industry representatives had urged him to abolish price restrictions. The present iron prices will remain in effect for the time being. The Minister said the postponement of the decision was partly influenced by the strike threat by West German miners. Another reason given was that the Minister wanted to await the outcome of the Ministers' Council of Schuman plan countries. At a recent meeting with the Minister, the industrial leaders varied in their estimates of the effects on the German iron industry of a common market of Schuman plan countries. But they agreed that the best thing for West Germany to do was to free iron prices.

Outlook for Hides and Skins

Confidence in the immediate outlook for hides and skins has improved. East Indian tanned hides were fairly active and prices show no tendency to drop. Business has not been large and the main enquiry is for particular lines. Buyers generally are willing to pay prices asked, where offers are around the previous level. Buffaloes, buffalo calf and cow calf were very quiet and occasionally weaker. Moderate business is passing in tanned skins at prices slightly below the level of last week. Meanwhile, the first auction of the year starting on 26th January is awaited with interest. Price trends are considered too obscure to make an accurate forecast, but reports say that stocks are not large and no excessive weakness is expected.

Acquisition by Middle Wits

Middle Witwatersrand (Western Areas) propose to acquire the entire assets of the American Anglo-Transvaal Investment Corporation, it is announced here. It is proposed to be done on the basis of allotting one fully paid share for every three fully paid American Anglo-Transvaal and one fully paid share for every 12 partly paid American Anglo shares. The total number of shares to be issued pursuant to this scheme will be 1,763,552.

Liverpool Cotton Market

Members of the Liverpool Cotton Association are to hold a special meeting on 29th January which, it is thought, may lead to an earlier reopening of the Liverpool cotton market. The meeting will be in private and a statement will be issued afterwards. Plans for the reopening of the exchange as quickly as possible are being made. Members have been informed of a scheme which has been drawn up for daily settlements and the establishment of a clearing association. Final plans cannot yet be made however as trading conditions may differ from those now ruling when the time comes to put the scheme into operation.

Imports of Edible Tallow

Government buying of edible tallow and technical tallow from overseas is to end and private imports will be resumed shortly, the Ministry of Food announced. The Ministry has been the sole importer of these commodities since 1939. Arrangements under which private imports may be resumed will be explained to the trade as soon as possible. Prospective importers should not enter into commitments to purchase until a further announcement has been made by the Board of Trade, the Ministry added.

U.K. Tea Imports

United Kingdom tea imports in November totalled 41,330,000 lbs against 49,730,000 lbs in November 1951. Imports comprised, from India 29,423,000, Pakistan 3,906,000, Kenya, Uganda and Tanganyika 29,000 and other countries 1,702,000 lbs. Re-exports totalled 3,607,000 leaving net imports for the month 37,723,000 against 48,657,000 in the same month of 1951.

French bullion dealers raised the domestic price of silver by 100 francs to 9,800 buyers, and 10,500 sellers, per kilos. The rise reflected higher prices in world markets.

The Investors' Chronicle market newsletter says that the tremendous success of the Anglo-Iranian debenture issue shows there is still plenty of money for an attractive issue. The Stock Exchange generally is unlikely to fall or to have a sustained advance.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT STILL VERY TIGHT

Wednesday, 21st January.

MONEY is still very tight in Calcutta, though there may have been some slight easing of the tension reported last week. Grains have begun to move uncourtly and there has been some outgoing of funds on that account; cotton and sugar advances have increased slightly, but there has been little change in regard to jute. Credit is tight in the interbank market where rates continue to quote 2½ percent for overnight money and 2-3 percent for call money.

The bill of exchange market has had yet another very dull week; a few small tea and gunny bills were reported toward the end of last week, since when there has been little doing. Remittance has been scanty. Sterling rates are unchanged at T.T. and O.D. 1s 5½d; three months' sight bills 1s 6½d; and four months' sight bills 1s 6½d. Sterling has been strong against the dollar and the cross rate has been as high as \$2.81; the rupee-dollar rate has accordingly been revised to its lowest figure for some time, Rs. 47s.

Gold ruled firm last week and the price gained further to Rs. 90-4 from Rs. 89-14. The sovereign at Rs. 60-5 showed a gain of about 3 annas. Contributing to the rise were good support, scanty arrivals and the lack of smuggled gold. The Commission of French India was reported to have given permission to the Banque De L'Indo-Chine of Pondicherry for re-export of 1,107,083 ozs. of fine gold imported earlier into the settlement. Further, the French India Government announced that, in future, it would not allow any foreign exchange for the import of gold. It was also reported that bulls in Bombay were obliged to pay margins, and an automatic clearing was ordered following the spectacular rise in gold.

Silver also improved in sympathy with gold and on reports of a rise in the New York quotation from 83½ cents to 85½ cents. The price rose from Rs. 154-5 to Rs. 154-7, and the ready rate fetched a premium of about 5 annas. The London price also gained fractionally by 1d. to close at 74d.

Tenders for Rs. 1 crore of three-months Government of India treasury bills were opened on Wednesday, 21st January. The total amount offered was Rs. 1,23,25,000. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 81 percent. The average rate of accepted tenders was Rs. 2-7-0 percent per annum.

Tenders for Rs. 1 crore of treasury bills will be received on Tuesday, 27th January at Bombay, Calcutta, Madras, Kanpur and Delhi. During the week ended 16th January treasury bills for Rs. 1,05,00,000 were sold in favour of the Reserve Bank of India.

The return of the Reserve Bank of India for the week ended 16th January, 1953, shows declines of Rs. 16 lakhs and Rs. 1.26 crores in the total note issue and notes in circulation to Rs. 1,131.67 crores and Rs. 1,115.35 crores, respectively. Notes held in the Banking Department have consequently risen by Rs. 1.11 crores to total Rs. 16.33 crores. In the Banking Department, deposits of the Government of India dropped by Rs. 3.52 crores to Rs. 170.22 crores, while other Government accounts rose by Rs. 87 lakhs to Rs. 2.37 crores. Balances of commercial banks at Rs. 47.03 crores disclose a rise of Rs. 3.85 crores. Government Treasury Bills increased from Rs. 17.92 crores to Rs. 19.59 crores. Balances held abroad are up by Rs. 2.80 crores at Rs. 59.22 crores. Other loans and advances diminished from Rs. 16.94 crores to Rs. 14.14 crores, of which advances to scheduled banks against usance bills totalled Rs. 98.93 lakhs against Rs. 98.76 lakhs. Ways and means advances to Governments rose by Rs. 53 lakhs to aggregate Rs. 4.52 crores.

The statement of the position of Scheduled Banks for the week ended 9th January, 1953, discloses Demand and Time liabilities at Rs. 521.40 crores (Rs. 11.70 crores on account of borrowings from Banks) and Rs. 515.24 crores (Rs. 1.87 crores) compared with Rs. 531.23 crores (Rs. 1.26 crores) and Rs. 513.96 crores (Rs. 1.04 crores), respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 1.49 crores and Rs. 3.05 crores to aggregate Rs. 33.88 crores and Rs. 43.02 crores, respectively. There is a fall of Rs. 4.39 crores in investments to Rs. 315.97 crores. Advances and bills discounted at Rs. 482.86 crores reveal an increase of Rs. 6.98 crores. The ratios to total liabilities of cash and balances are, in consequence, shown at 9.2 percent and 57.7 percent against 9.6 percent and 56.3 percent.

The return of the Imperial Bank of India for the week ended 9th January, 1953, shows a fall of Rs. 82 lakhs in total deposits to Rs. 206.09 crores. Investments in Government Securities and other authorised investments are down by Rs. 4.06 crores and Rs. 9 lakhs to Rs. 79.46 crores and Rs. 13.65 crores, respectively. Loans, cash credits and overdrafts have increased by Rs. 2.16 crores to aggregate Rs. 109.22 crores, while bills discounted and purchased have decreased by Rs. 50 lakhs to stand at Rs. 7.04 crores. Cash and balances are, in consequence, shown at Rs. 15.80 crores or Rs. 2.34 crores less.

Profits of the Bank of Baroda Ltd. total Rs. 27,23,382-5-5 including Rs. 2,14,790-8-6 brought

forward for the year ended 31st December, 1952. An ad-interim dividend absorbed Rs. 5,00,000. Provision for taxation absorbs Rs. 3,00,000, investment account Rs. 4,50,000 and bonus to staff Rs. 5,35,000. The Directors propose to pay a final dividend at 10 percent per annum and a bonus of Re. 1 per share, leaving a carry-forward Rs. 2,38,382-5-5.

The U.S. Federal Reserve Board's bank rate was raised from 1½ percent to 2 percent on 16th January. The higher rate is not expected to have any particular effect since it is being imposed at a time when there is usually a decline in loan activity. It is probable that adequate funds will still be available for essential business purposes. The increase will bring the rate more closely into line with the commercial rate which now stands at 3 percent. The action marks the continuation of the Board's policy to ensure firm monetary stabilisation. The move is expected to meet with the approval of the new Administration which is committed to reliance on fiscal and monetary techniques.

The following is a statement of the cash balances of the Central Government on the last day of October 1952:—

	Rs.
(1) At the Reserve Bank of India in India	150,51,28,000
(2) At treasuries in India	1,86,82,000
(3) In England (Sterling converted at 18d. the Rupee)	3,71,41,000
Total	156,09,51,000

Net profits of the Indian Overseas Bank Ltd. amount to Rs. 15,09,439-7-4 including the sum brought in for the year ended 31st December, 1952. After allocating a sum of Rs. 6,75,000 for income tax, Rs. 3,50,000 for reserve fund, the Directors have recommended dividends at the rate of 8 percent per annum, to absorb Rs. 2,94,522-0-0, leaving a balance of Rs. 1,89,917-7-4 to be carried forward.

The "Annual Statement of the Foreign Seaborne Trade of India" for the five years ending 31st March, 1950, Vol. I, just published by the

A THOUGHT FOR 1953

Open a banking account with Lloyds Bank—that is a practical way of increasing your freedom from financial care. It helps you to avoid careless spending and your account will provide you with an accurate record of your monetary transactions.

The Bank is able and happy to place advisory services at the disposal of customers who may need advice and experienced counsel regarding financial matters.

Let LLOYDS BANK
look after your interests

For the attention of Far-sighted Industrialists

RAW MATERIALS CONTROL

With every prospect of a buyers' market ahead, you are concerned to keep your manufacturing costs to a minimum. The raw materials cost of a product forms a high proportion of the total factory cost in paper and textiles, and a serious item of expense in engineering and chemicals. You may be wondering whether your staff are linking the provisioning of raw materials with sufficient closeness to your manufacturing programme. Then you want to be sure that you are

actually receiving the materials you have paid for and, finally, that the minimum wastage and quality loss occur in the manufacturing processes. You are not prepared to accept only verbal assurances at your plants that nothing further remains to be done along these lines. You have heard that impartial analyses and subsequent statistical control figures, (that is, quality control), have achieved further worthwhile economies in coal, timber, and steel, and in cotton and jute fibres.

Department of Commercial Intelligence and Statistics, Calcutta, gives full details of India's foreign, sea and air-borne trade with the Commonwealth and foreign countries. Copies of the publication are available from the Manager of Publications, Civil Lines, Delhi, or from authorised agents of Government of India publications. The volume contains a detailed commodity-wise breakdown of the import and export trade together with statistics showing the share of the principal countries. Also included are several abstract tables which furnish statistics of total trade with almost all the countries in the world, and an analysis of imports, exports and re-exports according to certain economic classes such as Food, Drink and Tobacco, Raw Materials and Manufactured Articles. The period covered by the volume was marked by important events like the termination of the World War, the partition of the country and devaluation which have influenced the course of International trade profoundly. The statistics given in the volume, therefore, will be of great use to those interested in analysing and judging the effects of these important events on India's foreign trade.

National Savings Certificates amounting to Rs. 16,36,905 were sold in the State of West Bengal for the fortnight ended 15th December.

Saint Frères Circular Looms installed in Jute Industries Ltd. factory, DYNDEE

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and in old, sometimes working alongside flat looms; in the highly developed industries of Scotland, France and Italy; in the more recently established mills of South Africa and the Belgian Congo, where only unskilled labour is available.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Sacks made from Tubular Cloth are stronger

They cost less to make

UNTIL the terms of reference of the proposed enquiry into the jute industry are made public it is difficult to judge the import of Mr. Krishnamachari's brief announcement in Hyderabad last Friday, though it is understood that there are to be two enquiries, not one. The first committee will be appointed by the Central Ministry of Agriculture and will concern itself with ways of improving the quality of raw jute grown in India, especially in the marginal areas brought under jute in response to boom prices in the past few years. As long as there is the danger of India growing more of some varieties of fibre than her mills can economically consume while still remaining dependent on Pakistan for other grades of jute, an enquiry of this sort is wanted, especially since cultivators' difficulties tend to be blamed on the mills without further consideration of all the facts. The other committee is to be set up by Mr. Krishnamachari's own Ministry and advice from Delhi is to the effect that it will look into the marketing of both jute and jute goods. The Government, it is reported, is not satisfied that closure of the futures market is all that is required to set the trade in order and is anxious to find ways of "putting the marketing system on a stable basis." No doubt there is plenty of room for enquiry in this direction and the only matter for regret is that the various sections of the trade themselves have not done more to meet justified criticism of their methods before this. Government intervention may be inevitable to secure a working agreement on sound trading practices, but every ditcher should know the Bengali proverb about inviting the crocodile into the house for protection. Meantime the association of a high court judge with the investigation suggests that it will be a full-dress enquiry not dealing only with the commercial technicalities of futures trading which were in any case fully covered by the Todd enquiry some years ago.

Mr. Eisenhower's inaugural speech as President was couched in the flowery generalisations that befit such occasions and it is probably vain to try to read into his ghost-writer's purple eloquence firm signs of the new administration's views on matters of concern to Indians and Britons. There was a clear reference to expecting from those who received U.S. assistance that they should assume "their full and just burdens in the common defence of freedom", and this might be thought to hint at a less enthusiastic attitude to near-neutrals; but at the same time there was the recognition that "the impoverishment of any single people in the world means danger to the wellbeing of all other peoples", and this might be thought to mean the opposite. Most promising was the undertaking to foster and practise "policies that encourage productivity and profitable trade", though if this means that tariff barriers and the customs laws are to be revised it will remain to convince Congress and its pressure groups. In any event we shall know soon enough what the new President does intend, for every effort has been made to reduce the interregnum that separates the terms of old and new executives under the complex American constitutional system—although some of Mr. Eisenhower's own attempts to bridge the gap by having his new Cabinet passed by the Senate in good time seem to have come unstuck. "Personally obnoxious" is a term I would have thought insulting but it appears to be formal Senatorial language to express disapproval of a candidate for office in the administration and it has been applied by two Senators from Nebraska to Mr. "Val" Peterson who had been mentioned as successor to Mr. Chester Bowles as Ambassador to India. Mr. Peterson has been

A DITCHER'S DIARY

involved in some sort of political feud with the Senators in question back home in Nebraska and India may have to wait some time for her new Ambassador as a result. Whoever he is, he will go to Delhi to replace a man who has achieved the reputation over the past year of being a firm friend to this country and whom, it is said, the Indian Government would have liked to see retained at his post despite the changes in Washington. But Delhi must be regarded as a vital appointment for any American Government and it is natural that a new President would rather name his own man for the job than inherit someone from his predecessor. In that case there would be no reason to see in Mr. Bowles' recall any intimation that the Republicans consider that U.S. policy to India in the past twelve months has been too soft, a pessimistic interpretation that has been placed on these events in some quarters in India.

The Reader's Digest is one of the prodigies of the publishing world for it has a total world circulation of 16 millions and is printed in 12 languages ranging from Japanese and Korean to the principal European tongues. Plans are now advanced to publish a special Indian edition which it is expected will become available from September of this year, and Mr C. H. G. Brann is at present on a business tour of this country to scout out the ground for what will be the 18th separate edition of the Digest. I understand that this edition will be Indian in the sense that it will carry Indian advertising though the editorial matter will be the same as appears in the British edition issued in London; in fact the magazine will be produced in London and shipped out here monthly. The 40,000 copies sold in India will not be a substantial increment to the Digest's millions but they will make it a major advance in the Indian publishing business; it is possible that ventures will be made into the vernacular languages at some later stage.

Sinister connection between trade and the Bible has often been alleged as a feature of imperialism and it has even been charged that business subsidised proselytising missions while religion made the indigenes more reliable and useful in trade. Perhaps this was just a cynical misunderstanding of the undoubted fact that many of the European pioneers of colonialism, especially when of the Protestant faith, combined great business ability with sincere religious feeling; but in any event I had thought that the matter was of only historical interest. I have just learnt however of a new enterprise which is a combination of religious philanthropy and business on a grand scale. This is the idea of R. G. Le Tourneau, the American manufacturer of earth-moving equipment. His staff, belonging to the Le Tourneau Technical Foundation, are dedicated to land reclamation and Bible teaching. The profits from Mr. Le Tourneau's considerable business in the United States are being devoted to what he believes is the creation of a new type of missionary who will co-operate with the various plans for land and community development in Africa and elsewhere. His first venture is being made in Liberia, where he has a concession of 500,000 acres, some of which will be planted with rice, bananas, pineapples and sweet potatoes, and he sees the area as being capable of economic self-sufficiency. In a specially constructed ship, "The Ark of Le Tourneau," he has recently sent to

Liberia a million dollars worth of equipment and 5,000 Bibles. On its second trip the ship will carry 800 chicks for a poultry experiment and sufficient food to keep them going until it can be grown locally. Meantime "The Ark" is back in America with a load of valuable timber, of which the concession is full. This first consignment was of 103 logs, capable of producing eighty thousand feet of board timber. Samples are to be sent to other countries also. Mr. Le Tourneau's farm and lumber men are trained Bible teachers as well as being efficient in their craft.

"Britain Growing Older" and "Not Enough British Babies" have been popular headings for Sunday paper scare stories for as long as I remember, while the epic caption "Take Grannie Too" appeared over at least one discussion of the effects of emigration on the kingdom's age distribution. An authoritative article in the latest number of *Lloyds Bank Review* demonstrates that the panicky forecasts published beneath these headings were wide of the mark and there is no reason to think that in 1982 our children will be slaving to support millions of pensioners. Mr. W. A. B. Hopkin argues therein that the age pattern of Victorian England was quite abnormal and its continuance into modern times would have made Britain's economic position intolerable. Since 1891 there has been a movement to a more normal state of affairs and in that time the average age of the British population has risen by eight years; all that will happen between now and 1982 will be that it will rise another three and a half years, a process which he regards as thoroughly desirable. The increase in average age to date, far from saddling active producers with more idle old folk to support, has actually lightened their burden because the larger number of pensioners has been more than outweighed by the smaller number of young people, who work less and eat more. From now on, it is true, the shift will be the other way, towards increasing the number of dependents, but only to an extent that will be amply compensated for by rising productivity. If Britain's population is to stabilise at about the present comfortable level, readjustments of this sort are inevitable; meantime emigration makes no difference to the age distribution. However Mr. Hopkin does think that some revision of the law regarding old age pensions is required, not to force our elders to stay on the job but rather to remove the obligation on them to retire while they are still capable of useful work, and he quotes the view of employers that men who stay on after the current retiring age are actually superior in important respects to their younger fellow-workers. As one who will be entering the pensionable category about the period Mr. Hopkin has in mind, I take a close interest in the matter, and from this distance it does not seem to me unjust that the national insurance scheme cease to be interpreted as a firm contract to provide contributors with a free living at a fixed age, regardless of circumstances, though I reserve the right to reconsider this in 1982.

The many friends Mr. and Mrs. L. J. L. Addison left behind in Calcutta when "Bunny" retired from the post of Deputy High Commissioner for the United Kingdom in this city last November will be interested to hear that he has now joined the Metal Box Company Limited in London. Since this firm is an associate of the Metal Box Company of India it is not altogether impossible that we shall be seeing the Addisons on a visit to India some time in the future.

INDIAN PIECEGOODS OUTLOOK
STOCKS TO BE SOLD BELOW COST

THE views of the India, Pakistan, Ceylon and Burma section of the Manchester Chamber of Commerce provide a useful commentary on India's cotton textile industry and its future. The outstanding feature of its annual report is the expectation that substantial stocks of cotton piecegoods which have been built up lately, some of it by State Governments, owing to over-production of local qualities by Indian mills, will be sold at prices well below the cost of production.

The report gives the following figures of exports of cotton piecegoods from the United Kingdom:—

	Thousand Square yards.	1950	1951	1952
			(10 months).	
Ceylon	11,933	10,776	6,921	
India	5,947	7,010	5,542	
Pakistan	67,099	39,393	41,043	
Burma	18,232	10,252	8,880	

It states that, notwithstanding the persistence of balance-of-payments difficulties, the executive is concerned at the increasing elimination of facilities for the export of cotton piecegoods to India. Special representations are again being made to the British Government, since cloth of Indian origin continues to be imported into the United Kingdom free of import duty and quantitative restriction.

The report continues: "It is to be hoped that the ideals of greater inter-Commonwealth trade can surely now warrant a more generous interpretation of import policy by the Government of India, without detriment to their balance of payment position. . . . It is pleasing to record that, chiefly to cater for the hand-loom industry, our exports of United Kingdom cotton yarns to India for the past year have substantially increased and achieved a total of 1,845,000 lb., valued at £1,116,000 for the first ten months of this year, compared with 389,000 lb., valued at £315,000 in 1951. All cotton yarns are subject to import licences, but only counts of 80's or finer are now permitted to be imported into India. The late and irregular issue of licences continues to trouble exporters who have found difficulty in meeting shipment dates within the currency of the licences when issued."

Japan has again been Pakistan's chief supplier of cotton textiles, the report states, and in spite of recent reduced licensing, shipped 176 million yards in the first ten months of 1952. The Pakistan Government has favoured trade with Japan so long as the purchase of Pakistan raw cotton tended to balance shipments of textiles and other goods from Japan.

CONTROL OF IRON PIPES
AND TUBES RELAXED

The Government of India has removed control over the distribution and prices of all varieties of iron and steel pipes and tubes, both indigenous and imported. It will no longer be necessary to obtain a permit for the acquisition and disposal of any variety of these items. A notification giving effect to this order was published in the Gazette of India, dated 19th January. It has also been decided to remove control over the distribution of bars, rods and light structurals by all registered stock holders other than controlled stock holders and registered producers. Price control over these latter items, which are made of steel, will continue.

WHOLESALE PRICE INDEX

The official wholesale price index (base: year ended August 1939 = 100) remained almost unchanged at 374.7 during the week ended 3rd January, 1953. The index was higher by 0.7 percent compared with the corresponding week of last month but was 13.1 percent lower than that of a year ago. During the week under review, Foodstuffs witnessed a further rise of 0.5 percent to 348.0 as a result of higher prices of gram (plus 7%), jowar (plus 4%) and dal arhar (plus 2%) in spite of decreases in salt (minus 2%), gur and coffee

(minus 1% each). The index for Industrial Raw Materials, on the other hand, declined by 0.9 percent to 425.4 owing to lower prices of manganese ore (minus 7%), raw jute, castorseed and rapeseed (minus 2%) each, raw cotton, groundnuts, rubber and raw hides (minus 1% each). Linseed, gingellyseed and lac (plus 2% each) and raw silk (plus 1%), however, advanced during the week.

The effect of higher prices of mustard oil (plus 3%), cotton yarn, copper, coconut oil and linseed oil (plus 1% each) was partly offset by decreases in zinc (minus 3%), castor oil, sheep and goat skins (minus 1% each) and the index for Semi-manufactures stood at 343.1 as compared with 342.2 for the previous week. The manufactures group moved down by 0.3 percent to 367.1 because of falls in the prices of jute manufactures (minus 2%) and chemicals (minus 3%). Notwithstanding lower prices of cashewnuts (minus 4%) and spices (minus 1%), the index for miscellaneous advanced by 1.9 percent to 636.9 because of a rise of 5 percent in tobacco-leaf.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Index, by groups, have now been brought up to December, 1952. As compared with November, the December Index for Food shows a drop of 13 points while those of Clothing, Fuel and Lighting and Miscellaneous remain unchanged at 493, 239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 10 points during December, 1952.

Groups	Weightage	GROUP INDICES

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stock of sugar in respect of Central Sugar Factories in India during the fortnight ended 15th December, 1952, were 497,119, 68,013, 44,948 and 480,184 tons respectively, reports the director of the Indian Institute of Sugar Technology, Kanpur, on the basis of returns received under the Sugar Production Rules, 1935. The figures for the corresponding fortnight of the previous season were 164,066, 96,256, 36,013 and 224,309 tons respectively. Figures for the current fortnight relate to 133 factories representing 97.44 percent of the total cane-crushing capacity, while the figures of the previous year relate to 129 factories representing 94.67 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 113,264 and 111,721 tons respectively, as against the corresponding figures of 165,355 and 98,834 tons during the previous season.

INDIAN AND PAKISTAN WOOL SALES AT LIVERPOOL

The eighth and final series of auctions for 1952 was held from the 9th to 11th December, 1952, with a total offering of 7,838 bales (6,346 bales from India, 1,492 bales from Pakistan). Of these 4,051 bales (3,258 bales from India and 793 bales from Pakistan) have been sold to date, leaving 3,787 bales held over. Of the quantity sold it is estimated that the British manufacturers bought 3,064 bales, the Continent 827 bales, and America 160 bales. The offering included a large proportion of Grey Wools, Joria descriptions, most of which were tinged, were a feature of the Sale. Some superior parcels of Bionere were offered but White Wools of all descriptions were in short supply. Whites and Yellows were par to five percent lower, Light Grey about unchanged, Medium to Dark Greys and Blacks irregular up to 10 percent lower.

The working class cost of living number in Kanpur, (Base, August 1939=100) for December, 1952 has fallen by 12 points to 417 as against the previous month. This figure is also lower than the index number for the corresponding month of 1951 by two points. The index for the Food group has registered a significant fall of 17 points to 497 as the decreases in the prices of rice, meat mutton, sugar, sheep, mustard oil and potatoes were greater than the increases in the prices of wheat, gram, dal, arhar and oil. The index for the Fuel and Light group has increased by six points to 389 because of a rise in the price of firewood. A significant fall in the prices of clothes and sarees has been responsible for a fall of 23 points to 427 in the index for the Clothing group. The index for the Miscellaneous group has increased by five points to 453 because of a rise in the price of sugar. The index for House Rent remained stationary.

Trans World Airlines will inaugurate direct flights from New York to Colombo, Ceylon, on 3rd February, 1953, subject to approval of a revised service pattern filed on 8th January, with the Civil Aeronautics Board, TWA Chairman Warren Lee Piersen has announced. Service will be provided by a continuance of TWA flights to Bombay.

Stocks and Shares

PRICES STEADY IN LISTLESS TRADING

ENQUIRY FOR ANDREW YULE JUTES ON SATISFACTORY RESULTS: BRITANNIA BISCUIT DEBENTURE ISSUE

Wednesday Evening.

THE Calcutta Stock Exchange has seen very little business done in the past week and prices have shown no particular trend; there were no features in any section. There was a holiday on Tuesday and there will be another on Friday, followed by a short session on Saturday and a third holiday on Monday next; so it is unlikely that business will get going again for a week yet.

Rates are largely steady and there continues to be good demand for blue chips, which is difficult to satisfy at market prices. Jutes are out of favour because of reports of difficult trading conditions for the mills and what little business has been put through in this department has been at under quoted rates. Indian Irons are fluctuating narrowly around Rs. 23.

It is reported that sanction has been obtained from the Controller of Capital Issues for an issue of debenture stock by the Britannia Biscuit Co. Ltd. Rs. 15 lakhs will be issued at par carrying interest at 51 percent, running to 1963-68; since there has been sustained enquiry for debentures for some months now, it is likely that this issue will be readily absorbed.

A little more interest was shown in Government Securities during the week though the volume of business was small. The barometer of the section, 3% Conversion Loan 1946-86, was fully steady at Rs. 82-13. In short-dated loans, 3% 1953-55 was supported at Rs. 100-1 ex-voucher, but both 3% 1957 and 1958 were offered at Rs. 98-8 and Rs. 98-6. Medium-dated issues were unchanged at their previous quotations, but there were rather more sellers than buyers. Among medium-dated loans 3% 1970-75 was fairly steady at Rs. 86-7, and this may be attributed to bear covering. There was some enquiry for 4% 1960-70 and the price improved from Rs. 101-4 to Rs. 101-6.

Business in Provincials was again centered on the 4% State Loans 1964 and the prices of all issues advanced further because of shortage of scrip. Opening and closing prices of these loans are given below:—

	Opening	Closing
4% West Bengal	Rs. 100-5	Rs. 100-8
4% Bombay	Rs. 100-9	Rs. 100-14
4% U.P.	Rs. 100-4	Rs. 100-8
4% Madras	Rs. 100-5	Rs. 100-10

Preference shares continued to receive support, but with sellers holding off, business was on a restricted scale. In Jutes, Kankannarrah and Kamahatti were both crossed at Rs. 111-8 as were Lawrence 'B' at Rs. 100-12. Among miscellaneous issues, British India Corporation were taken at Rs. 146 and Indian Iron & Steel at Rs. 107-8. Jardine Henderson met with some enquiry at Rs. 84 and small lots of Shaw Wallace were placed at Rs. 82-4. New Victoria were done at Rs. 3-12.

In the Banking section, Imperial Bank Fully-Paid and Contributory were both quoted on an ex-dividend basis at Rs. 1722 and Rs. 419. Hindustan Commercial was marked at Rs. 9-6, United Bank of India (Rs. 10 paid-up) at Rs. 3-15, and United Commercial at around Rs. 34-12.

A solitary transaction was reported in the Railway section, Burdwan-Cuttwa at Rs. 62.

Elgins provided the only feature in the Cotton section with the price improving to Rs. 16-2. Bengal Nagpur changed hands at Rs. 13-12. Jay-shree Textiles at Rs. 4-2, and New Victoria at Rs. 1-5. Business was reported in Kesoram at around Rs. 18-14 cum-dividend.

In the Coal section, Burrakur fluctuated within three annas, to close at Rs. 10-4. Bengal were steady at around Rs. 510. Bengal Nagpur were quoted at Rs. 18-8, and Dhemo Main at Rs. 9-12. Other transactions included Pench Valley at Rs. 21-9, and South Karanpura at Rs. 13. Among the small-priced shares Western Bengal came to hand at Rs. 3-12, Central India 4 and Talcher at Rs. 3.

The satisfactory dividend announcements by the Andrew Yule group of jute mills for the latest half-year caused a ripple of interest in the shares of companies under this management. The rest of the section, however, provided no features. A comparative table follows, which shows the latest half-yearly dividends recommended, together with the dividends for the previous half-year.

	Half-year ended April, 1952.	Half-year ended October, 1952.
Budge-Budge	Rs. 6-8	Rs. 6-8
Caledonian	6	6
Cheviot	6	6
Delta	10	10
National	1	1
Orient	1	1

Howrah fluctuated between Rs. 23-5 cum-dividend and Rs. 23-11 cum-dividend, to close at Rs. 22-2 ex-dividend. Anglo-India were done at Rs. 215 and Barnagore at Rs. 149. Shares which brought other adjustments, Belvedere at Rs. 24-6, Cheviot at Rs. 205, and National at Rs. 24-6. Champdany were marked at Rs. 168-8, Ganges

between Rs. 70 and Rs. 74-8, and Kinnison at around Rs. 204. Nuddea changed hands at Rs. 44-8, India at Rs. 122, Reliance at Rs. 13-4 and Union at Rs. 178.

In the Engineering section, Indian Iron & Steel shares, after being sold down to Rs. 22-12 staged a mild recovery to Rs. 23-10, but subsequently closed lower at Rs. 22-14. Bhartia Electric Steel were transacted at Rs. 11-2, while Indian Galvanizing New and Old Ordinary were taken at Rs. 13 and Rs. 13-6. Indian Steel & Wire Products Contributory were crossed at Rs. 16-4, and Marshalls were quiet at Rs. 6-2. Braithwaite continued in strong demand with buyers at Rs. 10-10 but few declared sellers.

Among Electric Supply shares, Agra were done at Rs. 145, Calcutta at Rs. 13-10, Patna at Rs. 10-6, and Sijua Jherriah at Rs. 10-2. After a long interval, Muttra reported business at Rs. 8-4, while there were buyers of United Provinces at Rs. 143, but sellers were scarce.

Little interest was shown in Sugar shares, and business was on a disappointing scale. Balrampur came to hand at Rs. 5-11 and Belsund at Rs. 6-6. Carew were quiet at Rs. 4-4, while Dyer Meakin Breweries improved from Rs. 5 to Rs. 5-4. Cawnpore Sugar changed hands at Rs. 28-4 and Champaran at Rs. 16-14.

In the Miscellaneous section, Shree Gopal Paper were steady at Rs. 16-10 as were Titaghar at Rs. 34-2. India General Navigation were marked at Rs. 73-12, Assam Bengal Cement at Rs. 3-9 and Sone Valley at Rs. 6-6. Angelos were offered at Rs. 18-12 ex-dividend and Cherra Chhatrak Rope-way were crossed at Rs. 7-11. F & C. Osler continued to meet with good enquiry with the price improving further to Rs. 4-8. Indian Cables were steady at Rs. 18-4 and a fairly large parcel of Martin Burn again changed hands at Rs. 18-3. Metal Box were marked at Rs. 18-4, Jardine Henderson at Rs. 125, and Eastern Investments at Rs. 137. Shaw Wallace were offered at Rs. 13 as were Rallis at Rs. 73. Rohtas were a shade better at Rs. 8-5 and Midnapore Zemindary changed ownership at Rs. 32. British India Corporation were dealt in freely around Rs. 9-4. Airways (India) improved further to Rs. 8-6 as did Indian National Airways to Rs. 3-7.

In the Mining group, Indian Copper moved around Rs. 3-2, while Burma Mines and Non-Ferrous Metals were steady at 14 annas and 11 annas. There was a mild flutter in Karanpura Development, which improved from Rs. 14 to Rs. 15; profit-taking, however, brought the price down at the close to Rs. 14-12.

The enquiry for selected Tea shares continues and prices have, in quite a few cases, shown a further improvement. The most popular counters have been Basmatia which were taken at Rs. 22-6, Bishnauth at Rs. 23-8, Dufflaghur at Rs. 27-8 and East India at Rs. 15-4. Hasimara were also marked up to Rs. 23-8 and Huldibari to Rs. 15-12. Business was reported in Gohpur at Rs. 23-8. Brooke Bond at Rs. 11, and Dessai & Parbutia at Rs. 169. Jay-birpara came to hand at Rs. 17-12, and Mim at Rs. 108. At the close there were further buyers of Basmatia, Bishnauth, and Hasimara at the prices quoted and also for Mantapara at around Rs. 106, but sellers of the better class scrips have already become scarce.

We have received the reports of the HOWRAH and RELIANCE JUTE MILLS for the half-year ended 30th September, 1952. After allowing Rs. 1½ lakhs for depreciation, (same) crediting Rs. 2,16,015 on account of E.P.T. refund and writing back Rs. 2,16,036, being liabilities over provided in the previous year, profits total Rs. 14,78,224 against Rs. 23,00,595. Bringing in Rs. 1,43,870, there remains Rs. 16,22,095, of which taxation absorbs Rs. 5.8 lakhs (Rs. 10.25 lakhs). Machinery Reserve is allocated Rs. 2 lakhs (Rs. 5 lakhs). The ordinary dividend has been reduced by 2 annas to 14 annas per share, leaving Rs. 1,71,001 to be carried forward.

THE RELIANCE JUTE MILLS earned a net profit of Rs. 87,867 (Rs. 1,17,932) after providing the same sum of Rs. 70,000 for depreciation, adding Rs. 3,36,287 being rent received on requisitioned premises and making other adjustments. Adding Rs. 40,817 brought forward, the balance totals Rs. 1,28,685. The usual preference dividends have been paid, but the ordinary ones have been again passed over, leaving a carry-forward of Rs. 58,685.

THE GILLANDERS ARBUTHNOT & COMPANY reports another year of successful working. Profits at Rs. 32.20 lakhs for the year ended 31st March, 1952, compare favourably with the previous year's Rs. 32.08 lakhs. Bringing in Rs. 1,99,978, there remains a balance of Rs. 34,20,130, of which taxation absorbs Rs. 16,37 lakhs (Rs. 14.28 lakhs). Contingencies Reserve has been allocated Rs. 6 lakhs (Rs. 4 lakhs), investments reserve Rs. 1 lakh (same), superannuation fund Rs. 1 lakh. The ordinary dividend has been maintained at 10 percent, leaving a carry-forward of Rs. 2,07,524. The company has obtained some valuable new agencies,

The first report of the National Sample Survey published this week says that the average rate of consumption of foodgrains in the rural areas is about 26.4 maunds (2,163 lbs) per household per year or 18.3 ounces per person per day. Production is estimated at a little less than 20 maunds per household. On this basis it is estimated that domestic production in 1949-50 was about 60 million tons. But official statistics showed production at about 48 million tons including gram, and 44 million tons without it. As all gram is not consumed by human beings, the discrepancy is of 12 to 16 million tons. "Official statistics of food production are thus probably under-estimated by something of the order of 20 or 25 percent for India as a whole."

Cloth Production Record

Cloth production in December totalled 426 million yards, the highest for any month in 1952. The earlier record was achieved in July 1952 when 424 million yards of cloth were produced. The output of yarn also created a new record in December 1952 having gone up to 135 million lbs. Latest figures show that during 1952 production of

cloth and yarn reached the record figure of 4,608 million yards and 1,448 million lbs. respectively. The corresponding figures for 1951 were 4,079 million yards of cloth and 1,304 million lbs. of yarn. The monthly average of cloth and yarn production that year was 339.9 million yards and 108.6 million lbs.

Income Tax Receipts Higher

The collection of taxes on income for the nine months ended December 1952 totalled Rs. 109.4 crores as against Rs. 104.1 crores for the corresponding period of 1951. At the present rate, collections for the whole year should exceed the Budget estimate of Rs. 145 crores.

Film Production Code Administration

The Government has been examining in detail the report of the Film Enquiry Committee in order to decide which particular recommendation should receive legislative sanction first. The three main recommendations are to rationalise taxation on the film industry, and to set up a film council and production code administration. The issue of taxation has been left to States while the proposal for

a Film Council requires more careful consideration. Meanwhile suggestions for setting up a production code administration are being examined here, and it is recalled that the Film Enquiry Committee has urged that "whether the Film Council is set up or not or whether there is any delay, we would recommend that the Government should set up the production code administration as soon as possible. We hope that there will be no constitutional difficulties in setting up this body. If however there are, in the interests of all concerned it is essential that they should be removed. It is possible that the industry will offer to set up a body of its own in preference to an organisation sponsored by the Government. If such a claim is made we feel that it should be resisted."

The Committee has recommended that for the first five or ten years the Government should be responsible for the constitution and working of the production code administration. Operating under a Central Ministry, its functions should be the same as those of its counterpart in the United States. When established, it would have a Central office, with regional branches at Delhi, Calcutta, Bombay and Madras. The Central body would have nine members, six of whom would be Government nominees. Apart from scrutinising scripts, the production code administration would advise on changes adopted later by producers; it would give a certain amount of guidance and exercise some control over the handling of pictures. The Committee claimed that in addition to ensuring conformity with accepted standards of social behaviour and convention, such an administration would reduce wastage and thereby ensure considerable savings in the cost of production and in the total investment required by the industry. "We also feel that with production based on completed plans, it would be possible to secure some reduction in the amount of raw film used." One complaint against the present system of film censorship is that it often seeks to make alterations in the body or language of a film after it is ready for exhibition, but the production code administration would examine scripts before production. The Government, it is learned, is likely to sponsor legislation on this subject during the Budget session.

Postal Conference Next Month

A conference of Postmasters-General will commence here on 11th February. The 16-item agenda includes a discussion of posts and telegraphs under the five year plan, improvement of rural delivery of mails, decentralisation of accounts and extension of telegraph and telephone facilities.

Khadi and Village Industries Board Set Up

The Government has set up an All-India Khadi and Village Industries Board, with Mr. V. L. Mehta as chairman. There will be 15 members, including Messrs. A. W. Sahasrabudhe, Wardha; Dhruva Prasad Sahu, Muzaffarpur; Dwarkanath Lele, Wardha; G. Venkatachalam, Madras; Jhaverbhai Patel, New Delhi; Lakshminarain, Muzaffarpur; Rajibhai N. Patel, Gujarat; R. Srinivasan, Palghat; Satish Chandra Das Gupta, Calcutta; Sidharaj Dhandha, Rajasthan; Srikrishnadis Jaju, Wardha; Vichitra Narain Sharma, Lucknow; V. V. Rajwani, Bombay; and a member-secretary to be appointed later on the recommendation of the Board. Working in close co-operation with State Governments and the All-India Spinners' Association, its headquarters will be in Bombay. The Board will be responsible for preparing and organising programmes for the production and development of khadi and village industries, including training of personnel, manufacture and supply of equipment, supply of raw materials, marketing and research and study of the economic problems of different village industries. It will also function as a clearing house of information and experience relating to these industries. The Government proposes to create a khadi fund by the levy of a cess on mill-made cloth from which grants or loans will be made for financing the development of the khadi industry. The Government also proposes to make available separate funds for the development and improvement of village industries. The first meeting of the Board will be inaugurated by the Prime Minister at New Delhi on 2nd February.

PAINT EXHIBITION

An exhibition on "Home and Colour", believed to be the first of its kind held in this country and sponsored by Jensen and Nicholson, was opened in Calcutta last Tuesday. Of the home itself there are three rooms, a dining room, a bedroom and a sitting room, each showing to the best advantage a selection of the company's products. Another section is the garden and includes brightly painted outdoor furniture. The section devoted to industry contains bicycle, fans and refrigerators with different finishes. The exhibition will be open for a month at Hall and Anderson's showrooms, Park Street.

The work of taking additional test probes on the required for the foundation design continues. Eleven probes have been completed. Samples of rock have been taken from the site and despatched to our technical advisers at the Haque for investigation on the corrosive properties of the rock samples. A further series of probes at the existing site are now in hand. Arrangements are also being made to initiate tests to provide evidence of the extent of marine growth in the waters adjacent to the refinery.

Seth Khushalchand B. Daga of Messrs. The Model Mills Nagpur Ltd., Nagpur and Seth Madanlal Guekha of Messrs. The Savitram Ramaprasad Mills Co. Ltd., Akola, have been unanimously elected as Chairman and Deputy Chairman of the Madhya Pradesh Millowners' Association, Nagpur, for the year 1952-53.

West Pakistan

RAIN SAVES PUNJAB WHEAT CROP

STRICT IMPORT CONTROL LIKELY THIS YEAR

(FROM OUR OWN CORRESPONDENT).

Lahore, 15th January.

THE Punjab has just had half an inch of rainfall, and rain is still falling steadily at Lahore, where this dispatch is being written. This may not sound a very spectacular piece of news, but in point of fact this moderate downpour is putting several crores of rupees into the pockets of the hard pressed farmers of the Punjab, for it has come just in time to save the young wheat crop which, in the non-irrigated areas of the province, was threatened with disaster. It is also likely to save the Government several crores of foreign exchange during the coming financial year.

It is hard to say which forms the Government's most troublesome problem at the moment—the foodgrains shortage or the Constitution. To the man in the street—and judging by the recent incidents at Karachi he seems to be a man in a very angry mood—the former is the main concern. The same applies to the business man, for he ruefully sees the country's foreign exchange resources which, had the gods been kinder, might have been applied to imports of all kinds, being used up on the import of wheat. The recent purchase of 100,000 tons from Canada will, it is understood, cost Pakistan ten million dollars; and if, as seems probable the Government has to import about a million tons of wheat during the course of the next financial year this will involve expenditure of foreign exchange to the tune of about Rs. 30 crores. The worst of it is that most of this wheat will probably have to be drawn from the dollar area. Pakistan will not have the dollars to pay for it and this means another setback for the gold and dollar pool of the sterling area.

It also means a very tight import control policy for another year. It is understood that officials of the Commerce Ministry have been hard at work on this policy, and on licensing procedure and ceilings, for the last ten days and that an announcement on the subject can be expected any day now. Obviously it will leave little scope for business except in essentials.

Cotton Prices Slump Further

Cotton prices in the Karachi market have hit a new low, and even the most pessimistic are beginning to feel that the time has come to buy. Japan has been the best buyer so far this season, but must buy a good deal more if she hopes to get a respectable quota for import of cotton piece-goods and yarn into Pakistan, for quasi-barter deals are obviously going to be the order of the day. What is the United Kingdom going to do? Much depends on the answer to this question. Hitherto the Raw Cotton Commission and other British buyers have shown little interest, and this is particularly galling to Pakistan in view of the fact that Britain has been doing very good business with the country throughout the year; in fact the British are in much the same position as the Japanese were last year in that they have been selling Pakistan far more than they have been buying from her. Now that cotton is so cheap the Pakistanis find it difficult to understand the lack of interest in Lancashire and are inclined to regard it as most unfriendly. It is a fair conclusion that if the United Kingdom wishes to maintain the level of her exports to Pakistan she will have to bestir herself to buy Pakistan's cotton on a generous scale.

Interpretation of Registration Order

The Registration (Importers and Exporters) Order, issued in December, continues to cause anxiety, mainly because many firms are uncertain how to interpret some of its provisions. One of the most important questions is whether industrial concerns which import materials not for resale but solely for use in their own manufacturing operations are to be treated as importers for the purposes of the Order. The answer must be in the affirmative, for all organisations engaged in importing goods into Pakistan, no matter what their end-use, are by definition importers. But clause (9) empowers the Government to exempt any importer or category of importers from the provisions of the Order and such exemption should certainly be sought, for in the case of such concerns, importing is merely ancillary to the main business and it does not seem likely that Government, who are so anxious to attract foreign capital into industry, can have intended that industrial concerns should be subject to the mischief of the Order.

In general there is little inclination to trouble the Commerce Ministry (which in truth has more than enough problems in its plate) with requests for clarification of this and that doubtful point at this stage. After some months have elapsed, and all concerned have had experience of the working of the rules, it is probable that the Government will invite representatives of the business community to a conference for discussion of outstanding problems and difficulties. In the meantime, if every firm proceeds in good faith and makes a genuine attempt to comply with the Order, no fear need be felt that the authorities will take a harsh line of any unwitting offences against the letter of the law. Or so, at least, we are assured.

Speaking of the letter of the law, how do individuals stand in respect of their personal imports by post? They are all right provided that the value of each consignment does not exceed Rs. 150, but if it is higher the individual should (strictly

speaking) be registered as an importer. So let the man who orders an evening dress or a piece of jewellery from London or Bombay for his wife's birthday beware!

Baluchistan Coal Deposits

There are fresh reports in the press of discoveries of coal deposits in Baluchistan. If they are true, it can only be hoped that the quality of the coal will prove somewhat better than the Baluchistan coal now being mined. A Punjab cotton ginner has stated that twenty tons of this coal will serve him to gin and press only 120 bales of cotton, while the same quantity of South African coal (which does not cost him very much more) will serve for 400 bales.

Bombay

HIGH TAXES ON VEHICLES AND MOTOR FUEL CONDEMNED

MACHINE TOOL FACTORY OPENED AT AMBERNATH

(FROM OUR OWN CORRESPONDENT).

18th January.

THE Tariff Commission has concluded its open enquiry into protection and assistance to the automobile industry. At the enquiry all were unanimous in condemnation of the present high level of taxes on motor vehicles and motor fuel imposed by the various Governments, as being the most important factor retarding the growth of the automobile industry as well as the development of road transport. Mr. M. D. Bhat, Chairman of the Commission, who opened the enquiry, reviewed the history of the industry in India. He was not very hopeful of seeing a rapid advance of the automobile industry, although he said that demand for goods carriers and passenger vehicles was bound to grow. He felt that unless adequate provision was made to meet this demand, following the execution of the five year plan, serious difficulties might arise. According to Mr. Bhat, the most important cause for anxiety about the automobile industry was the low volume of demand for vehicles as a result of the low average income of the people, high costs of production and poor roads. He said that so long as demand remained stationary, there was no room for the existing number of factories to function efficiently and economically and that it might, therefore, be useful to see if it would be possible to co-ordinate the activities of the manufacturing and the assembling units to utilise the available capacity more fully. The Commission is now engaged in consulting the manufacturers and assemblers of motor vehicles. The consultations are likely to end about the middle of this week.

The automobile associations in the country met here last week for a three-day conference under the auspices of the Western India Automobile Association. This was the first conference of its kind and the associations in Delhi, U.P., Bengal, Western India and Southern India were all represented. One of the most important results of the deliberations was the decision to form a federation of all these bodies to deal with common problems. For the present the membership of the Federation will be restricted to the founder associations, but it may be thrown open to other associations at a later stage. Among subjects discussed at the conference was the introduction of a standard system of motor vehicles tax. A resolution was adopted asking the Centre to implement the recommendations of the Motor Vehicles Taxation Enquiry Committee at an early date.

In spite of the exodus to Hyderabad for the 58th Congress Session, there were several important events in Bombay during the earlier part of the week. One of these was the opening last Tuesday of the Defence Ministry's prototype machine tool factory at Ambernath, Bombay, by the Prime Minister. Speaking at the ceremony Mr. Nehru stressed the need to develop basic industries so as to make the country economically less dependent on other countries and said that he had been interested in this factory from the very beginning, not because it was essential for defence but because it was one of those basic things that every country must have. The machine tool industry was important because it helped the development of other industries. After his usual call to the people to co-operate in the implementation of the five year plan with enthusiasm, Mr. Nehru said that the Ambernath machine tool factory was an example of international co-operation, proving that India had no desire to isolate herself from others.

Addressing the employees of the factory he asked them to regard themselves as partners in a great national undertaking and to remember that the factory was not built solely to make profits whatever profit was made would help in the economic recovery of the country. Mr. G. S. Bajpai, the Governor of Bombay, who presided at the function, said that the factory was probably the biggest of its kind in Asia and that it was fitting that it should be located in an industrial city like Bombay. The factory is a result of a joint endeavour by the Indian Government, personnel of the armed forces and Messrs. Oerlikons, a leading Swiss firm, and is adjacent to the already existing Ordnance Factory at Ambernath.

Address by Sir G. Schuster

Sir George Schuster, former Finance Member of the Government of India, had a busy round of

visits and social functions during the week. He spoke at several important gatherings of the business community and dealt with various aspects of the economic situation as he found it five years after the termination of British rule in India. Addressing the Bombay Rotary Club last Tuesday, he warned the country that even if there had been no threat from Communism, if India failed to provide fruitful employment in industry for the 44 million additional workers that were added to the population every year and produce the necessary food for the relative positions of India and Britain in the present world. Sir George believed that both the countries stood at the end of an abnormal transitional period and at the beginning of a new phase. He expressed admiration for the Government of this country, which, he said, had produced order out of chaos, maintained an orderly administration and had also given profound and constructive thought to planning for the future. Referring to the future of the two countries he said that both had set out to attain the "welfare state", but that both had to guard against the danger of a "wrong conception of welfare", saying that attempts to build a structure of social benefit before the economic foundations were soundly laid could bring nothing but misfortune.

Centre's Loan for Housing

As a result of discussions during the week between Sardar Swarn Singh, Union Minister for Works, Housing and Supply, Dr. Feroz Mehta, Bombay Finance Minister, and Mr. G. D. Tapase, State Minister for Housing, the programme for industrial housing which had been halted because of lack of funds will now be taken up again as a result of a loan of Rs. 1.04 crores to the Government of Bombay from the Union Government for this purpose. This will enable the State Government to complete about 720 tenements in Bombay and 120 at Ahmedabad, estimated to cost about Rs. 44 lakhs, which are already under construction, within the next two months. The housing scheme, which has emerged as a result of these discussions provides for the construction of 4,300 multi-storied tenements in the State capital and 2,700 single-storied units outside Bombay. Of the amount of over Rs. 1 crore sanctioned by the Union Government, Rs. 44 lakhs for houses already under construction will be in the form of a loan, while the balance will be given to the State, partly as a loan and partly as a subsidy for future construction. From the latter it is proposed to build 900 tenements in the suburbs of Bombay for industrial housing and 720 at Ahmedabad, in addition to this the Government of India has asked the State Government to furnish details about housing schemes in other parts of the State for next year for consideration.

Further Irrigation Prospects

There has been a joint conference of officials of the Union and State Governments and district heads of the 14 famine-stricken districts in the State. Sardar Datar Singh, Additional Secretary, Ministry for Agriculture, and Production Commissioner to the Government of India, told the State Government that the Centre was prepared to render all possible assistance for the construction of tanks, weirs, and bunding operations to fight the famine. He asked for definite proposals for small irrigation works to combat scarcity which were likely to be completed before the beginning of the next monsoon. He said also that any help given by the Government of India in the form of loans for the execution of irrigation projects affording substantial and immediate relief in the famine areas, should not be mixed up with the schemes of "grow more food" or the five year plan for which the Union Government was committed to grant loans to the State Government separately. One of the important suggestions made by the Union Government's representative at this conference was that the Bombay Government should undertake legislation to make it compulsory for cultivators to avail themselves of irrigation facilities so that the irrigation works provided did not become uneconomic merely because of recalcitrance on the part of certain individual farmers.

Mr. Neville Wadia of the Bombay Dyeing and Manufacturing Co., Ltd., has been elected Chairman of the Millowners' Association, Bombay, for 1953-54. Mr. Wadia has been a member of the Committee of the Association for nearly 12 years and was the Deputy Chairman for three years in succession from 1948-50.

Mr. T. T. Krishnamachari, Minister of Commerce and Industry, Government of India, accompanied by Mr. H. V. R. Iyengar, Commerce Secretary and Mr. C. R. Natesan, Iron and Steel Controller, paid a visit on Tuesday afternoon to the Maharashtra Manufacturers' Corporation Ltd., Khandesh, where they were shown round the factory by Mr. K. C. Mahindra, who showed great interest in the manufacture of textile machinery.

The Government of India has released for sale the entire balance or the stock of controlled sugar of the 1951-52 season totalling 1,01,000 tons. On 3rd January, 1953, it had released 1,04,000 tons of sugar from the controlled stocks.

In modification of orders in force hitherto, the Government of India has decided to permit the manufacture of cotton in all counts of yarn and in all groups of cloth. This measure is intended to assist mills gradually to consume the large stocks of high-priced imported cotton which they have acquired and to facilitate the manufacture of yarn and export. No increase in prices over those already sanctioned and for, however, be permitted wherever price control is in force.

12-YEAR NATIONAL SAVINGS CERTIFICATES

SEE HOW THEY EARN. The certificates are worth 50 per cent. more in twelve years' time. Every Rs. 100 invested today becomes Rs. 150. You get 4 1/6 per cent. per annum over the entire period.

NO INCOME TAX TO PAY. The interest which Savings Certificates earn is tax-free and will not be taken into account in fixing the rate of income tax on total income.

IN CASE OF NEED the Certificates can be cashed before the full period on certain easy terms.

Issued in denominations from Rs. 5 to Rs. 5,000 with a maximum of Rs. 25,000 for one person, Rs. 50,000 for two joint holders, Rs. 60,000 for charitable institutions.

10-YEAR TREASURY SAVINGS DEPOSITS

3 1/2% INTEREST TAX-FREE paid to you every year or remitted to your address. The interest will not be taken into account in fixing the rate of income tax on total income.

Deposits refundable any time after one year for a small discount which comes out of the interest. The capital always remains intact.

DEPOSITS ACCEPTED IN MULTIPLES OF Rs. 100 with a maximum of Rs. 25,000 for a single depositor, Rs. 50,000 for two persons jointly and for institutions, Rs. 1,00,000 for charitable institutions.

of great benefit to you
and the Nation

Madras

MR. WANCHOO'S ANDHRA ENQUIRY CONTINUES

PROPOSAL FOR ALLOCATION OF ASSETS AND LIABILITIES

(FROM OUR OWN CORRESPONDENT)

18th January.

MR. JUSTICE WANCHOO'S enquiry into the issues involved in establishing a separate Andhra State is now under way. A memorandum submitted by a Rayalaseema deputation sets out the grounds on which they oppose the division, explaining how the financial position of both the new State and the residuary State, and all plans for their development, will be upset. It is feared that the change will prove detrimental to Rayalaseema, already a backward area. Forming an Andhra State without including in it all Telugu areas, such as Telengana in Hyderabad, will not, in their view, conform to the principle of a linguistic division.

The Andhra Communist Party's memorandum, on the other hand, sets out the case for the immediate formation of an Andhra State with the disputed Telugu areas, namely the eleven Telugu districts and three taluks of the Bellary district. The location of the capital and the High Court, the memorandum suggests, should be the large buildings of zamindars in some Andhra towns. The principle to be followed in the allocation of assets and liabilities, they say, should be similar to that followed when Orissa and Sind were formed, with necessary modifications. About Rs. 4 crores should be allocated to compensate Andhra for its share

of assets in the form of Government buildings used in common in the undivided State; another Rs. 6 crores being made good by the Central Government in loans and subsidies for the building of a capital. All other assets and liabilities, irrigation and hydro-electric projects, commercial concerns, etc., should be divided in the proportion of the population of the two States. The memorandum also states that the total capital outlay on projects from April 1950 to March 1953 comes to Rs. 31 crores for the residuary Madras, Rs. 11.5 crores for the Andhra area and that on industries to Rs. 3.1 crores and Rs. 0.5 crore respectively. In the services, the memorandum says, the percentage of Andhra is just 15 percent of the total staff of the present Madras State.

Engineering Production Targets

At the annual meeting of the Engineering Association of India, Mr. Prem Ratna Bagri referred to the production targets fixed by the Planning Commission for the various engineering industries. He doubted if maximum utilisation of that productive potential would be feasible in view of the trade recession which had set in. There were many industries such as those which manufactured pumps, diesel engines and automobiles, where the targets had been fixed considerably higher than present output, but where, because of the fall in demand, it was difficult for the manufacturers even now to dispose of their stocks. He drew the attention of the Government to the alarming rate of exports of iron and steel melting scrap. Mr. Bagri urged the Government to help attract private enterprise to the field of production of vital engineering stores required by the Defence Services.

Constables Strike

The strike by policemen in Madras City, which threatened to develop into a serious crisis, was averted by C.R.'s firm but generous measures. The trouble started with the City Constabulary Association, the members of which refused to draw their December salaries unless their demands were conceded. The Government acted quickly by granting a number of concessions in respect of service conditions, but refused to increase salaries and allowances in view of the State's difficult financial position. C.R.'s appeal and the announcement of concessions had no effect on the 3,000 police constables in the city. Faced with their continued defiance by way of refusal to draw their salaries, the Government withdrew the recognition accorded to their association and took into custody more than 150 policemen. Within a few days practically all constables took their salaries, and the trouble subsided.

Dollar-Earning Commodities

The Centre's Spices Enquiry Committee has been recording evidence here. Mr. Kuttikrishna Nair, Law Minister, told the Committee that as the State Government would be mainly concerned with food production for the next three years, the Central Government should take up the question of increasing the production of dollar-earning commodities like pepper and cashewnuts. In this connection he suggested the constitution of a Regional Board for South India, to devise measures to increase production of such crops. The Director of Agriculture said that gambling in spices had led to difficulties and suggested the constitution of an all-India marketing board.

Kolar Gold Field

It was announced by the Kolar gold-mining companies recently that owing to the shortage of water for power generation as a result of the failure of seasonal rains, the Mysore Government had imposed a power cut on Champion Reef, Nundydroog, Ooregum and Mysore Gold.

The Coimbatore Indian Chamber of Commerce has asked the Government of India to give protection to the Indian ring spinning frames manufacturing industry. According to information from the Chamber the Import Advisory Committee has recommended a liberalisation of the import policy for ring frames. A plea has been made for protection from Japanese competition.

The State Government is to continue its scheme for relief for handloom weavers for six more months. The scheme involves payment of money allowances to help weavers become members of co-operatives. The Government of India has also informed the State Government that the latter's share of the proceeds of the cross on mill will be Rs. 1.25 crores. The amount, when realised, investigating methods for popularising handloom designs and varieties.

Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, last Thursday opened Madras. The Institute had been working before its formal opening and had been disseminating technical knowledge to the leather industry on enquiry. Work was started some time ago on 26 research projects prepared in the light of the requirements of the Indian leather industry of which nine were successfully completed before the opening of the Institute.

The buildings of the Electro-Chemical Research Institute were declared open on 18th January by Dr. S. Radhakrishnan, Vice-President of the Republic of India, at Karaikudi. The laboratories have been well equipped for research. The object of the research work is to increase the productive capacity and efficiency of the existing industries for the utilisation of Indian raw materials.

London

OVERALL IMPROVEMENT IN FOREIGN TRADE BALANCE

BRITAIN'S ECONOMIC OUTLOOK

IN 1953

(FROM OUR OWN CORRESPONDENT)

17th January.

WITH the publication this week of the provisional figures of British foreign trade in December, which showed a slight recession, it is possible to form a tentative picture of 1952 as a whole. It is a reassuring one inasmuch as official forecasts have been fulfilled or even slightly improved upon. In December itself, however, which like November had 25 working days, exports recorded a small decline of £3½ million to £203.7 million. Imports, on the other hand, showed a slight increase of almost £6 million, while re-exports dropped by over £1 million to the lowest monthly figure for some time, namely, £7.5 million. As a result of all these movements, the excess of imports over exports and re-exports increased in December to £56½ million, a rise of just over £10½ million as compared with the previous month, but still a good way below the "gap" figure for December, 1951. Considering the competitive aspect of world markets today, British exports are holding their own reasonably well. The most unfortunate feature of the December returns was the drop in exports to North America, occasioned by a further £2.4 million fall in those to Canada, although those to the United States, at £12.2 million, were actually slightly more than in November.

The salient features of the year's trading are apparent in the following table:

	1951	1952	Increase + or Decrease -
(in £ million)			
Imports	3,904	3,481	-422
Exports	2,580	2,550	-30
Re-exports	127	144	+17
Gap	1,197	788	-409

Encouragement is to be derived from the fact that the cut in imports is actually in excess of the £400 million forecast by the President of the Board of Trade last July, and even more so by the smallness of the drop in exports. Whereas imports show a drop of 11 percent over the year, the fall in exports is no more than 1 percent. It must not be forgotten, however, that import cuts will reveal themselves in the figures much earlier than export difficulties, and that the 1952 exports total benefitted to a considerable extent from the high level achieved in the first quarter. That was 11.4 percent higher than the 1951 average. In the second quarter they were 2.6 percent below the 1951 average, in the third quarter 11 percent below, and in the fourth quarter 2.5 percent below. The reduction of the trade gap is most satisfactory, for if invisible items are taken into consideration this is likely to be brought down to something like £350 million.

On the basis of these figures alone, it would perhaps be foolhardy to attempt to look ahead into the current year, but fortunately the Chancellor of the Exchequer has done that for us in his answers to a series of questions on Britain's affairs put to him by the American magazine "United States News and World Report" which the Treasury re-published here simultaneously. Mr. Butler takes a confident view of the economic outlook, even though he stresses the need for further strenuous efforts on the part of those countries short of dollars and the extreme importance of helpful American policies in connection with such matters as imports and overseas investments, for they would greatly strengthen the "Trade not Aid" approach to such an expansion of world trade that both exchange and trade restrictions could be gradually relaxed.

Turning to the situation in Britain, Mr. Butler claims that, apart from the improvement in the balance of payments and the reserves of the sterling area, domestic policies are now working along the right lines and producing results. Civilian consumption this year is expected to be 2 or 3 percent lower than in 1950. The seasonal Budget deficit is larger than usual, but good progress has been made and is being maintained. For instance, retail prices are being held steady, there has been some decline in consumption and average bank advances are lower. As to the future, the Chancellor expects some reversal in the production trend, especially in steel and engineering. He takes heart from the fact that British capital goods prices have been kept at a level which has so far overcome the severe competition from both Germany and Japan, despite the advantages which these countries have enjoyed in other respects, and that British firms have secured some large orders even in America itself. Indeed, Mr. Butler's only worry would appear to be the heavy burden of defence expenditure, both at home and overseas.

Commonwealth Development Targets

It is to be hoped that the new American administration will play its full part in the realisation

of Mr. Butler's hopes, for it would appear from details which have just been made available of one aspect of the recent Commonwealth discussions in London, that Britain has accepted responsibility for the provision of machinery and capital for a great Commonwealth effort to increase food production and mineral extraction. It is pointed out that investors outside the sterling area, particularly in the United States, can make an important contribution and that the International Bank for Reconstruction and Development is to be approached to help finance these plans, but the greatest emphasis is that Britain must make bigger savings at home and achieve a satisfactory surplus in her overseas trading. The engineering industries will also need to step up their production—now that they have been relieved of some defence work—for they will have to supply even more than the 50 percent (in some cases it is as much as 75 percent) that they now supply of the capital goods requirements of the Commonwealth countries, with agricultural machinery, heavy electrical plant, locomotives and rolling stock at the head of the list of priorities.

The development plans of the various countries have already been publicised, but may be summarised briefly here to complete the picture of the tasks that lie ahead. India and Ceylon have undertaken to increase output of rice and foodgrains so as to reduce imports, which in the case of India account for two-thirds of her dollar spending. About 30 new irrigation schemes are expected to be completed in India by next year or very soon after that. Pakistan is also concentrating on improving irrigation, and the completion of the Kotri barrage on the Indus, again in a year or so, will add 2,800,000 acres to her cultivated area. Australia plans to increase her wheat acreage from 10,500,000 to 13,700,000 by 1958, and has promised more dairy produce and meat for Britain, with New Zealand giving a similar undertaking. Australia also hopes to increase her steel output by 50 percent by 1956 and her copper output by a third by next year, to raise lead and zinc output by one-fifth within three years and become self-sufficient in coal supplies. South Africa expects to mine substantially more gold and "appreciable quantities" of uranium in the next fifteen years, and dollar-saving mineral developments elsewhere include big plans for the expansion of copper production in Northern Rhodesia, development of bauxite deposits in Jamaica and by the Gold Coast's ambitious Volta River aluminium scheme.

Industry's views on Economic Position

The fullest co-operation of British industry is a pre-requisite to the achievement of all these hopes and plans. It is interesting to study their reactions to events and their views as to the future. Next Monday the National Union of Manufacturers and the Federation of British Industries, the two organisations representing virtually the whole of productive industry in this country, are issuing a joint statement on the economic position. It agrees that the fundamental objective is that laid down by the Commonwealth Conference—the expansion of production and of savings—and the immediate need for a further increase in exports. This heavy duty British industry is anxious to discharge, but cannot succeed in the task unless the Government and the people recognise that certain conditions are essential to any prospect of success. The vital need is to reduce costs without impairing quality, so as to meet increasing competition, and to achieve this a much more rapid programme of development and re-equipment is required. Financial stringency in recent years has prevented sufficient progress in this direction, particularly in the case of smaller firms, and responsibility for this is placed on the burden of industrial taxation. If enterprise and effort are to be stimulated, some hope of greater reward must be offered to all individuals engaged in industry from higher management to manual worker. The curtailment of saving by excessive taxation, the organisations contend, must operate to check expansion, the undertaking of new ventures, the acceptance of responsibility and risk and the exertion of the maximum individual effort. "We are convinced that the continuance of this state of affairs will lead to an inevitable fall in the productive efficiency and therefore the competitive ability and, ultimately, the output of British industry."

Appreciating that taxation cannot be significantly lowered without a reduction in national and local Government expenditure, the organisations do not presume to suggest where cuts should be made, but point out that a reduction in public spending represents the price to be paid by the community for the ultimate protection of the real standard of living—the standard we can earn—but if it is not made now, the price in the long run will be heavier. The success of the measures already adopted by the Government is acknowledged, but it is pointed out while it was perhaps inevitable that they should have been restrictionist in nature for that reason, they militate against the expansion of international trade which is fundamental to the correction of economic instability. The last Budget made a welcome start in the direction of realism, the statement concludes, "but it is in our view now essential that as a

foundation for expansion the Government should in the forthcoming Budget proceed much further in the way of setting a sound internal financial policy, by creating the conditions in which an adequate measure of corporate and private saving can be resumed. It is only with that help towards the improvement of efficiency and competitive power that industry can play its part in securing greater production and increasing exports."

Coal Miners' Pay Demand

Labour reactions are much more mixed. In some circles there is a welcome realism that the economic situation should not be bedevilled by party politics. In others, however, the political aspect takes precedence. In present circumstances threats of stoppages and go-slow methods are indefensible, and are widely condemned by the more responsible trade union and political leaders alike, but that does not prevent them being made. The fear of a national transport strike as a protest against the denationalisation of road haulage has receded within the last few days, but the coal situation is still giving rise to some anxiety. The N.U.M. Executive has informed the National Coal Board that failure to meet the full demands of the lower-paid workers in the industry—who were offered a 6s a week increase—will almost inevitably result in the stoppage of the Saturday shift working over the winter, which last year produced 12,000,000 tons of coal and is the industry's only hope of maintaining coal exports. The hard facts of the situation, which were outlined by Sir Hubert Houldsworth last week, have not produced any alteration in the miners' views. The question is now to be decided next Wednesday, when the Board is to announce its decision.

Meantime, the Bevan-T.U.C. "war" has been revived by a strong attack in "Tribune" on Mr. Lincoln Evans of the Iron and Steel Trades Confederation, for having accepted a knighthood. This is not likely to be taken lying down.

Delay in Deliveries

"British industry is rapidly earning a reputation throughout the world for not keeping its promise," said Sir Norman Kipping, director-general of the Federation of British Industries, in Glasgow last week. He stated that a British firm had lost a Canadian order worth £1 million because it was feared the firm would not be able to keep its delivery promise. Sir Norman was addressing the annual meeting of the Scottish Council of the Federation. He said he realised he was saying a very serious thing but it was a dominant worry about British overseas trade.

"Only last week," he added, "I heard of one case, I cannot mention the details—concerning an order for Canada running into seven figures. The tender was from a substantial British firm and was well below that of the others received, and the quality of the goods was not doubted. But the tender was not accepted by a very friendly customer—who wanted to think British and buy British—because," he said, "I am sorry to say I cannot bring myself to believe in this promise because promises have been broken in the past." The order went to America.

Complaints of broken promises were frequent, Sir Norman said, and added that he had heard a great deal more relating to the engineering industry than to other branches of trade. That was because the engineering firms had a more difficult job.

They suffered to a large extent in the fight for raw materials and in trying to fit in export orders alongside rearmament work, but broken promises were not limited to the engineering industry by any means.

Calcutta Markets

FURTHER PRICE INCREASES IN EXPORT SALE

DEARER RATES FOR DUST

AT Sale No. 31, held on 19th and 21st January, there was an increased demand in the export auction; as a consequence most of the offerings sold at dearer rates. The strongest features were bright liquoring Broken Orange Pekoes, Orange Fannings and stylish leaf grades. These were usually two annas dearer. Low medium broken were sold from one to one and a half annas per pound dearer. Common teas were from a half to one anna dearer while C. T. C. grades were firm and sometimes dearer. Once again Darjeeling teas with flavour were in good demand and sold well.

Dust: The Dust market also met with a strong and general demand, the majority of the offerings being sold at dearer rates.

Internal: The small quantity of Internal leaf tea met with a fair demand.

FREIGHT MARKETS FIRM

THE recent firmer tendency particularly in Eastern trades has been maintained and a good volume of business concluded. The rate for cereals from China to the Continent has hardened and half a dozen ships were fixed at 92s 6d. an improvement of 12s. 6d. per ton over December rates. Chartering for iron ore from Dungun to Japan has been resumed and 12 Japanese ships have been fixed from March onwards at 32s. 6d. Further grain fixtures from the Pacific Coast to India have been arranged at the unchanged rate of 82s. 6d. whilst there is a fair demand from Australia to various destinations. Fixtures of additional vessels from Whampoa to Ceylon with rice were made at the unchanged rate of 47s. 6d. and charterers are open for further tonnage up to March shipment.

A number of time charters were reported including two of local interest, s.s. Khosrau, coal-burner, 6,450 tons d.w. at 16s. 6d. for four months trading with delivery Cochin in January, and a Japanese coal burner, 8,750 tons d.w. at 16s. for six months trading with delivery Calcutta in February. Forecast drafts for March 1953 in the river Hooghly show a distinct drop compared with March 1952, despite an intensive dredging programme. The poor drafts available over the next five months make it increasingly difficult to attract tonnage to the port and the consequent higher rates of freight demanded make India's exports uncompetitive.

LINSEED

There prevailed a generally firm undertone last week although the turnover was very limited. Arrivals continued on a small scale and there were fairly keen sellers for forward delivery, but ready goods were scarce. Local crushers were rather inactive and showed little interest for ready and forward purchases. The oil section was exceedingly dull and excepting small local enquiries there was no business to report. Latest quotations were as follows: Ready Rs. 20.4 per maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 13th January and 19th January, 1953)
Cowhides: Wet salted (Ord) 25,000 pcs. on the basis of Rs. 9-8 to Rs. 10-8; Wet salted (Slaughtered) Rs. 13-8 to Rs. 23.

Goatskins: Wet salted (Daisee, Killed) 30,600 pcs. on the basis of Rs. 275 to Rs. 412-8; Assam-Dinajpur 12,550 pcs. on the basis of Rs. 270 to Rs. 300; Kishanganj-Purneah 1,000 pcs. on the basis of Rs. 275 to Rs. 290; Patna (Ord.) 21,550 pcs. on the basis of Rs. 180 to Rs. 225; Muzafferpore-Darbhanga-Pukur 24,460 pcs. on the basis of Rs. 235 to Rs. 250.

Bazar Stocks

(19th January, 1953)

Cowhides: Wet salted 1,06,000 pcs.
Goatskins: Wet salted (Daisee, Killed) 47,500 pcs.; Assam-Dinajpur 1,01,000 pcs.; Muzafferpore-Patna-Pukur-Purneah-Kishanganj 1,22,500 pcs.

WEEKLY SUGAR MARKET REVIEW

The sugar market was steady during the week ended 20th January. Arrivals were poor but stocks amounted to 15,000 bags. Local sales were good and sugar has been moving daily to Madras and Assam. Only 5,000 tons of export business has been done since the declaration of the subsidy. Although all old season sugar had been released by the Government, no mills appeared as sellers. Quotations were: big grain Rs. 31 a maund; medium grain Rs. 30 a maund; and small grain Rs. 29-4 a maund.

WEEKLY SHELLAC MARKET REVIEW

During the week ended 19th January, the market was generally quiet. Prices were steady at the beginning of the week, but tended to decline later. The volume of business was not great. Quotations were as follows:

Standard Pure Buttonlac	Rs. 92 buyers
Pure Buttonlac	Rs. 86 buyers
Lemon No. 1 Shellac	Rs. 85 done & buyers
Lemon No. 2 Shellac	Rs. 80 to 81 done and buyers
F. O. Std. I. Shellac	Rs. 76 to 78 buyers
Pure TN Shellac	Rs. 72 to 75 basis done and buyers
4% I. T. N. Shellac	Rs. 66 buyers
No. 1 Kusmi Seedlac	Rs. 82 to 83 done and buyers
No. 2 Kusmi Seedlac	Rs. 76 to 77 done and buyers
Fine Dysaky Seedlac (Mauhim)	Rs. 74 to 75 done and buyers
Fine Dysaky Seedlac (C.P.)	Rs. 69 to 72 done and buyers
Ordinary Dysaky Seedlac (C.P.)	Rs. 62 to 64 buyers
Kireelac	Rs. 27-8 done & buyers

Shipments during January until the 16th were 18,602 packages.

Jute

STEADY RISE IN PROPORTION OF HESSIAN TO SACKING MANUFACTURED

IT is interesting to examine the trend of production by the I.J.M.A. mills in relation to the trend of prices of jute manufactures during the past two years. In the spring of 1951 when the prices of raw jute and of jute manufactures were decontrolled the output of the mills was roughly 40 percent of hessian and 60 percent of sacking. The proportion remained the same up to August of that year. Before that time it had begun to be evident that consumers of hessian goods were developing a resistance to the high prices then prevailing but demand for sacking continued good and the manufacture of sacking was more remunerative than that of hessian. From August, 1951, the proportion of hessian turned out began to decline and, by December, 1951, it had fallen to 32 percent. By May, 1952, it had fallen to 30 percent but, by that time, there had been a reversal of the position in regard to sacking. Mills were finding difficulty in marketing their output of sacking while, with the prospect of a hessian order from the Argentine, the outlook for hessian had improved. The manufacture of sacking had become unremunerative and, while overseas markets were steadily absorbing the output of hessian, stocks of sacking began to accumulate in mills' godowns. From June, 1952, the proportion of hessian manufactured began to increase—at first slowly but, later, more rapidly until, by December, 1952, it had risen to over 42 percent of the total output. It is, moreover, likely that there will be a further increase because of the unremunerative prices at present obtainable for sacking and the continued accumulation of stocks.

Of course, apart from the unsatisfactory market position of sacking, the Argentine order for hessian, which was placed with the mills in October and the bulk of which had to be completed by December, provided an additional stimulus to increase the output of hessian. In this connection it is interesting to recall the agitation by a certain section of the Press in Calcutta for an immediate increase in mill working hours as soon as the Argentine order was received. It was argued that the mills should at once increase their production so as to prevent any substantial rise in prices, which would again make jute goods uncompetitive. Prices did, indeed, rise temporarily under speculative pressure but, in spite of the vociferous demand for increased production, the I.J.M.A. Committee refused to be jockeyed out of the position they had taken up. How wise their decision was later events and the present depressed conditions of the market have proved. The difficulties the mills are now facing are bad enough. What would they have been had the I.J.M.A. given way to irresponsible clamour?

THE JUTE MARKETS

Manufactured Goods: The continued weakness of the gunny market is causing a great deal of concern to manufacturers who, as pointed out last week, are gradually being compelled to put most of their products to stock because sales are poor. Very little interest is being shown by overseas buyers, except in specialities at lower rates. With raw jute constituting nearly 70 percent of the present price of sacking and over 50 percent of hessian a very small margin is left for manufacturing expenses, so that no profit would be shown on present rates, even with combined business if such business could be found. Mills might soon have to review the position and decide whether they should continue working at the present rate in the hope of a rise in the market, or go on short time and reduce production. If they decide on the latter course, the benefit would not be felt immediately as mill stocks are large enough to satisfy demand for some time to come. Only after the present surplus is worked off would an advantage be apparent. Mills, unable to sell their finished goods, are taking very little interest in the jute markets. They are buying only small lots for "filling in." Although it is reported that their stocks of jute are fairly healthy it is not thought that these total more than six to seven weeks' consumption on an average, but this means that they will not be forced into the market for the next two or three weeks. Meanwhile jute sellers' stocks are piling up in the local Cossipore market, and as a result of the protest strike against the railway company it is reported that over 1,000 wagons are lying in the Cossipore sidings waiting to be unloaded. When these are released it will tax the sellers' storing facilities as their godowns are full already, and it is possible that if mills can hold out a little longer they may get the price down to a workable level even with today's low rates for finished goods.

Rates in the finished goods market have declined. Hessians have fallen by Re. 1 per 100 yards and sacking by Rs. 4 per 100 bags over the week. Quotations at the opening on Thursday morning were unchanged, only plain heavy Cees showing an increase of 8 annas to Rs. 95-8 per 100 bags due to covering for 15th January delivery. Hessians were at Rs. 42-2 per 100 yards and B Twills Rs. 94 per 100 bags. On Friday rates were slightly lower, 40" 10 oz. hessians and B Twills falling by 2 and 4 annas respectively, whilst plain heavy Cees, with demand satisfied, began a levelling out process in comparison with other fabrics, and fell Rs. 1 per

100 bags. In the absence of any large business, rates on Saturday continued downward, especially in heavy goods; plain heavy Cees fell by 8 annas and B Twills by 12 annas. 40" 10 oz. hessians showed a small loss of 2 annas. Over the week-end no business was reported and overseas enquiries being few prices were easier all round. Opening quotations were down 6 annas in hessians which were at Rs. 41-8 per 100 yards, Re. 1 in plain heavy Cees which opened at Rs. 93 per 100 bags, and Rs. 1-4 in B Twills which ruled at Rs. 91-12 per 100 bags. Prices fluctuated on a minor scale throughout the day with no business passing, and the tendency was weak, with the accent on heavy goods. Tuesday being a public holiday there were no quotations, but on Wednesday rates were again down and general indications were that they would go lower still. Opening quotations were as follows:—

	January	Feb-Mar	April-June
40" 8 oz.	Rs. 33-0	33-0	32-12
40" 10 oz.	Rs. 41-2	41-4	41-4
Heavy Cees (Plain)	Rs. 92-0	92-0	91-8
B Twills	Rs. 90-0	90-4	90-12
Corn sacks	Rs. 82-8	92-8	93-0

Raw Jute: Conditions in the jute markets this week have been dull and very little business has been reported. Sellers were very keen for business and discounted their prices almost hourly in an attempt to infuse some life into the market; in some cases they left the price open for the mills to declare. But with the gunny market in the doldrums mills were unable to reduce their stocks of finished goods and consequently stayed out of the market for jute. The only interest is still for good quality, high colour jute, but this type of fibre continues to be scarce and high prices are being paid. It is reported that sellers, over the past week, were holding over 25,000 maunds of jute in ready bills of lading of all districts, but even the bait of having agency jute on their doorstep did not bring out any eagerness on the part of the buyers to enter the market. It is known that the majority of sellers are holding very large stocks in Calcutta and that when the jute against these ready bills of lading arrives, holders will probably let it go at well below the market rate to save congestion in their already overcrowded godowns.

Quotations at the opening of the market on Thursday were unchanged, ordinary Assam jute being quoted at Rs. 23 per maund basis Bottoms for January-February shipment. This price remained constant, though it was purely nominal, but after the week-end rates dropped 8 annas in sympathy with a weaker goods market and the general lack of business. Sellers are anxious for business, and any counter-bids by mills, no matter how ridiculous they may seem, are getting a sympathetic hearing. The result is a purely buyers' market in which the buyers are not interested.

During the week the following sales were reported:—
European Local Packing:—Rs. 30 to 31 per md for Bottoms only for ready delivery.

Rs. 33 per md for Middle only for ready delivery.
Supervised Local Packing:—Rs. 26 per maund for Bottoms only for January-February delivery.

Dhubri:—Rs. 27 per md. for Middles only for one month's shipment.
Rs. 23-8 per md. basis Bottoms for a ready bill of lading.

Assam:—Rs. 26 per md. for Middles only for one month's shipment.

Rs. 22-8 per md. basis Bottoms for a ready bill of lading and for one month's shipment.

Cossimbazar Tossa:—Rs. 22-8 per maund basis Bottom for January-February shipment.

Mesta (Uncut):—Rs. 19 to Rs. 20 per maund basis Bottoms for one month's delivery.

Daisee:—Rs. 23 to Rs. 24 per maund basis Bottoms for one month's delivery.

Dimlit:—Rs. 17 to Rs. 18 per maund for F.A.Q. for one month's shipment.

The only business reported in the pucca bale market covered some small lots of mill Firsts at Rs. 145 per bale, and mesta Firsts and Lightnings at Rs. 130 and Rs. 115 per bale respectively for one month's delivery. Pakistan NC cuttings were also done at Rs. 72 per bale for one month's delivery.

At the close the market was unchanged with an easier tendency and quotations purely nominal in the absence of business. Opening prices on Wednesday morning were as follows:—

Pakistan Jute	January-February	Landed at Mill.
Jat	Rs. 28	per maund basis Bottoms.
District	27	"
Northern	26	"
Indian Jute.		
Lower Assam	23-8	"
Upper Assam	22-8	"
Northern Bengal	23-8	"
Murshidabad		
White	20	"
Bihar	19	"
Daisee	24	"
Dimli	18 per md F.A.Q.	
Mill Reds	165 per bale.	
Mill Firsts	145	"
Mill Lightnings	130	"
Mill Hearts	120	"
Dundee Daisee	145	"
(Short Group)		
Dundee Daisee	130	"
(Long Group)		
Pakistan Cuttings	68	"
Indian Cuttings	63	"

Tossa is offered at Re. 1 to Rs. 2 per md. above the rates for white jute.

Mofussil: Upcountry markets in India are much easier, and prices in all areas have dropped by Rs. 2 to Rs. 3 per maund. There are practically no imports and no reports of any business having been done. As a result quotations are purely nominal and give no indication as to the real price of jute. Local quotations are on the basis of Rs. 19-8 to Rs. 20 per maund basis Bottoms for Dhubri jute, Rs. 17 to Rs. 18 per maund basis Bottoms for ordinary Assam, and Rs. 18 to Rs. 18-8 per maund for Northern Bengal jute. In the local Cossipore market the sellers' strike against the railway company continues, and no wagons are being unloaded. It is reported that over 1,000 wagons are now affected. No business is going on and the market is closed for normal transactions, but the unofficial quotation for Kishengunge jute is Rs. 22 per maund for garsat quality. Daisee imports into Sheoraphuli are very low just now, and only small business is passing. Quotations are based on Rs. 24 to Rs. 25 per maund for garsat quality.

In Pakistan the markets are quiet, and the only business being done is for overseas export. Consequently there is still a good demand for high grade jute, whilst the lower grades are being completely neglected. Imports are steady in Narayan-ganj at about 15,000 maunds daily, but the majority of arrivals are still of low quality jute. Quotations in Narayan-ganj (in Pakistani rupees) are

most POWERFUL

550 HORSE POWER AT 2100 R.P.M.

This is the most powerful precision built single unit CUMMINS diesel—an addition to a famous range of 72 different models from 50-550 H.P.

As with the large so with the small!

Every CUMMINS engine (irrespective of size) has the same:—

1. Skill, precision and care behind its construction.
2. Efficient design to ensure maximum power with minimum fuel consumption.
3. Rigorous tests on the Cummins test benches before it leaves the factory.

as follows: Jat Balers' Bottoms (White) Rs. 14-9 per maund, Tossa Rs. 17-8 to Rs. 18 per maund, District Bottoms (White) Rs. 13-8 per maund, Tossa Rs. 16-8 per maund.

Raw Jute Arrivals: Arrived of raw jute in Calcutta and at mill stations during December 1952 amounted to 6,34,849 bales as compared with 7,00,062 bales in November. Total arrivals for the period July to December 1952 are now 29,24,913 bales, of which 20,96,894 bales came from India and 8,28,019 bales from Pakistan. Of the arrivals in December, 4,14,935 bales (65.5 percent) came from India and 2,19,914 bales (34.5 percent) from Pakistan. The arrivals from Pakistan have fallen back slightly this month, but are still well above the rate at the beginning of the season, and compare very favourably with December 1951, when only 21 percent of the total arrivals were Pakistani. Arrivals from Pakistan for the current season, however, are only half of last season's figure and 22 percent of the total arrivals. In the period July to December 1951 total arrivals were 28,45,916 bales, of which 15,83,624 bales came from India and 12,62,292 bales from Pakistan. Actual figures for December 1951 were 4,66,365 bales, of which 3,67,208 bales or 78.8 percent came from India, and 99,157 bales or 21.2 percent from Pakistan.

THE FOREIGN JUTE MARKETS

HOLDERS KEEP PRICES DOWN
(FROM OUR OWN CORRESPONDENT).

Dundee, By Air Mail. THERE is still a good deal of uncertainty surrounding the jute industry, at least so far as demand for goods is concerned. The prevalence of holders of both hessians and heavy goods in Calcutta apparently bought before the closure of the "Fatka" market, is having the influence of keeping prices down, probably more so than any

competition from Continental manufacturers. The latter are still naming round about 80s 0d for 10 oz. 40 in. and 60s 0d for 7½ oz. for January-March shipment, f.o.b., but there are quotations from Calcutta at as low as 76s 6d for 10 oz. and 57s 0d for 7½ oz., f.o.b. B twills are usually quoted at 176s 0d January, 177s 6d February-March and 178s 0d April-June, but even in the last named position 175s 0d could be done, with Liverpools mentioned at 210s 0d, January-March.

It is usual in January-March, for consumers of jute goods to plan their purchasing programme for the later months, so that an improvement in trade can be looked for. Prices for raw jute are being so well maintained in Pakistan that there is little likelihood of any material fall in prices this year. The situation is entirely different from that prevailing last year at this time, when the value of Mill Firsts was £178 per ton and 10 oz. 40 in. hessians were at 176s 0d per 100 yards, f.o.b. Calcutta, including export taxes at £21 5s and £112 10s per ton respectively. "B" twills were ruling at over 400s 0d per 100 bags, f.o.b. Calcutta, export tax being £25 per ton. There was plenty of room for the big reduction which took place over the next few months, initiated by the Indian Government halving the export taxes and eventually bringing them down to £20 for hessians and £12 10s for sackings. The Pakistan Jute Board appears to be determined to maintain prices for raw jute and consumers of goods cannot expect lower terms on this account.

Some Continental manufacturers are still quoting low rates in the export markets. Belgian hessians are quoted on the basis of 76s 6d for 10 oz. 40 in. and 56s 9d for 7½ oz., f.o.b., and shipment can be given during this and next month. The supposition is that export business is being subsidised by the Government. Dundee goods and yarns are still very firm and unchanged.

Mr. Ernest W. Stephen, in charge of the carpet department, and Mr. Lewis Strachan, superintendent of weaving, have been appointed Special Directors of Jute Industries, Ltd. They do not have places on the Board of Directors.

GUNNY SALES IN DECEMBER

The total reported sales of gunnies during December 1952 and the consolidated position at the end of the month are given below (in thousand tons):

Delivery Month (1952-53)	Contracted during December 1952	Position as at 31-12-52
	Hessian Sacking	Hessian Sacking
December	4.9	5.8
January	2.6	3.4
February	2.2	1.0
March	1.6	0.7
April	1.4	0.4
May	1.2	0.3
June	1.2	0.3
July	0.1	0.1
August	0.2	0.2
October	0.1	0.1
November	0.1	0.1
	11.7	11.9
		109.3
		93.3

N.B. The above figures represent member mills in Bengal plus Gagalbhal, Chitavalah, Nelli-marah and Ramchawara. The figures are actuals with the exception of two mills whose figures have been estimated.

LABOUR RELATIONS BITTER DURING NOVEMBER

Provisional statistics of industrial disputes for November, 1952, released by the Labour Bureau, show a further improvement in industrial relations as compared to the preceding two months. There were 83 disputes involving 47,902 workers as compared to 94 disputes involving 77,639 workers in October. The loss of man-days, which declined from 460,000 in September to 350,000 in October, dropped further to 270,000 in November. Four of the disputes reported from Bombay, Madras, Punjab and Uttar Pradesh involved lock-outs affecting 410 workers in all and accounted for a time-loss of 4,037 man-days. Apart from strikes and lock-outs resulting from industrial disputes there were two work-stoppages not connected with industrial disputes. These involved 292 workers and resulted in a time-loss of 146 man-days. One of these was in Bihar and the other in Uttar Pradesh. Sixty-nine disputes ended in November, of which 52 lasted for no more than five days each. Only in three of the disputes involved more than a month. One and accounted for more than 50,000 man-days. Wages, allowances and bonus were the main points of dispute in 34 cases while another 34 concerned retrenchment and other grievances relating to personnel. Workers were successful or partially successful in 23 disputes while in 27 they were unsuccessful. Most disputes relating to wages and allowances ended in complete or partial success for workers, while in disputes relating to personnel a majority were unsuccessful. Bombay and West Bengal accounted in each case for about two-fifths of the total time-loss. Both States, however, showed considerable improvement as compared to the previous two months. Orissa recorded a considerable time-loss in November, on account of a strike in the Talcher coalfields. Among industries, cotton textiles as usual suffered the heaviest time-loss. Marked increases in time-loss were shown by jute, minerals and metals, paper and printing, collieries, railways, and miscellaneous industries. Improvement was noticed in mines other than coal, transport other than railways, plantations and municipalities.

Plantation Topics

PROBLEMS OF THE PAKISTAN TEA INDUSTRY

CHAIRMAN'S ADDRESS AT P.T.A. MEETING

THE following is an extract from the Chairman's speech at the annual meeting of the Pakistan Tea Association in Chittagong last Monday.

"Reading through previous Chairmen's speeches I have come across phrases such as 'The year under review has been one full of difficulties for the Association' or 'a very serious crisis faces the industry' and so on. Now I am not suggesting for one moment that those remarks exaggerated the position as it was at the time, but I do suggest that they pale into insignificance when they are compared with what could be said of the happenings during 1952. We are all aware that we are in the midst of a crisis the like of which has never been known before, and that as I speak the very existence of many of our members is at stake. It might therefore be of some interest if I gave you as brief an account as possible of the way in which the Association has endeavoured to meet the crisis.

"A year ago the position was that every effort was being made to persuade Government to reduce the export duty on tea, then standing at 4 annas per lb. The prices being paid for Pakistan teas by our best customer, Great Britain, were then just about sufficient to meet the cost of production, but there were indications that a considerable drop, due to heavy offerings in London, could be expected. Rationing and the price control order were in force in the U.K., and these coupled with the large amount of tea either in the U.K. or on the seas, were having a depressing effect on the market. At the Chittagong auctions prices were firm but again buyers were showing some discrimination although generally producers could expect a reasonable return on whatever they had to offer. Due to a liberal import policy, for which we, in company with other industries, were to suffer severely later, supplies of practically every article required on a tea garden could be readily imported, and provided the money was there, tea companies were in a position to carry on with improvements and extensions to their properties. Financial results for the 1950 season were out, which showed that a year of satisfactory working had been achieved in most cases.

"At this time last year, however, there was still a large quantity of 1951 teas to be sold, the prices for which were likely to show a sharp recession, in addition to which all producing countries were faced with the spectres of over-production and continuance of Governmental controls. It was very clear that a buyers market had developed in the tea industry and with world supply exceeding world demand by some 40 million pounds of tea a year, producers had already appreciated the necessity of making teas which would fetch a remunerative price wherever they might be offered. Coupled with this was the desirability of effecting those economies in expenditure which could be made without actual detriment to the gardens, and without running contrary to the agreed arrangements about wages, concessions and so on, the control over which was out of the hands of individual managers. That, gentlemen, is something like the general position at or about the time our last annual meeting was held.

"As I think we all know Government reduced the export duty on tea from 4 annas to 3 annas per lb. in March last, in recognition of the industry's need for assistance and with a view to encouraging exports. The Association had asked for complete suspension of the duty and a further case was therefore submitted to Government by a delegation which visited Karachi in June with the object of demonstrating to the Commerce and Finance Ministries the seriousness of the position at that time. It was not until September that we received the welcome news that the export duty had been taken off, although our initial jubilation was somewhat tempered by hearing that the concession had been granted for a limited period of three months only. By this time however the situation in regard to prices had changed very considerably since our earlier visit to Karachi, teas in London having dropped 5d a pound between June and September, the Chittagong market also suffering a recession, but not to the same extent thanks to the natural reluctance of producers to flood the internal market with an excessive weight of tea which it could not absorb.

Average Costs and Prices

"During this period, and in fact for the whole year the average cost of production did not follow the downward price trend, and it was only at the time of export that the benefit of the removal of duty accrued. This benefit was of course of very great value but it could not be applied to more than approximately 50 percent of the estimated exportable crop in view of the quantity of tea already shipped before the duty free period came into force on 11th September. On the average prices being obtained for our teas during the month of September, we calculated that the average loss in London was the equivalent of 5 annas per lb. and the average loss in Chittagong about 2½ to 3 annas. I have deliberately used the word 'average' three times because it is inevitable that that is what we must consider when dealing with any

matter on an Association basis. Figures can sometimes be dangerous things and in an agricultural industry such as ours all sorts of wrong conclusions can be drawn if to ascertain the position in general, individual units rather than the whole are taken as examples. The figures of average losses I have quoted were based on an average cost of production of 18 annas for a pound of tea laid down in Chittagong and I think that statistics now being compiled will demonstrate that insofar as the 1951 season is concerned this figure was representative of at any rate the Agency House members of the Association.

"Having established the extent of the losses being borne by tea companies, no time was lost in enquiring into ways and means as to how these could be made up and as our discussions continued we were forced to the conclusion that sooner or later it would be impossible for us to continue to protect our labour forces from the effects of the crisis. Expenditure on labour in the form of wages, dearness allowance, food concessions, medical welfare and the like is of course always the largest item of every tea company's budget and the savings which could be made in other directions were thought to be so small that the result of effecting them would not make the slightest difference between a garden running at a loss or a profit. Excluding proprietary estates, two-thirds of our members ran at a loss in 1951, the total sum involved being more than Rs. 34 lakhs. To put it another way there are 27 Agency House tea companies operating in Sylhet, 18 of whom showed a loss, and 9 a profit, amounting to approximately Rs. 10 lakhs. These figures I would remind you are applicable to 1951, and for 1952 I feel sure that most if not all of those fortunate 9 companies will join their unlucky brethren in the red. This seems virtually certain when I tell you that the price of common tea in London has declined by 1s 3d from the price it was in January last year. Drastic crisis, gentlemen, require drastic remedies, as we who live in Pakistan know full well, and with great reluctance the Association decided that they must recommend to their members those measures introduced on 1st of this month, which have taken the form of a 2 anna reduction of labourer's daily dearness allowance, the sale of foodstuffs by the garden at cost price instead of concession rates, reduction of managerial and clerical staffs' salaries by 5 percent, and reduction of Agency House remuneration both in Pakistan and the U.K. of 10 percent.

Wage Reductions

"You will be asking yourselves what the effect of these measures will be not only on the staff and labour but also on the future prospects of tea companies. Insofar as individual's earnings are concerned a male worker will now receive a total minimum wage of 0-14-0 per day instead of Re. 1 and a female As. 0-13-0 instead of 0-15-0. The managerial and clerical staffs have already suffered considerably and bonus on profits. These have now disappeared, we hope only temporarily, but it was thought only right that the supervisory staffs should be asked to bear an additional sacrifice in view of the cuts which had been made to the labourer's earnings and I am glad to say that this further lightening of the pockets of those concerned has been accepted with cheerful resignation. In regard to foodstuffs the price which the labour will have to pay will depend to some extent on the distance of the garden from Chittagong, where rice and salt are usually taken over from the Civil Supplies Department by the Association, but I understand that arrangements are being made to offer these for sale at a uniform price within each circle, which I calculate will be in the region of Rs. 20-4 per maund for rice as compared with Rs. 17-8 under the concession system. On this basis the cost of the rice ration to the individual will rise by about 1 anna per day or slightly under 4 annas for a full week. This I submit is not an unduly harsh imposition on the worker, even taking into account reduced earnings but it could be considerably lightened if labourers were able to purchase their requirements through the local bazaars, which are now virtually closed by the restrictions imposed by Government within a five mile belt of the Indian border.

Economy Measures

"The economy measures adopted by our members will not suffice to ensure that losses are eliminated, and I feel it necessary to issue a warning that unless costs are further reduced, or the price of tea rises sharply many companies cannot hope to continue in operation beyond 1953, if indeed they are not faced with closure during the course of the year. You will have noticed reports in the local press that 33 proprietary estates have had to close down due to lack of finance and it seems that a similar fate may well be in store for others for the same reason. If therefore prices do not meet, or preferably exceed, the cost of production what are tea companies to do? It seems to me that there are only two alternatives. Either they must go into liquidation or else further reduce costs to arrive at a figure roughly parallel to

that which they receive for their teas. I am sure it is the aim and desire of Government, not to mention producers, buyers, blenders, brokers, the public and last but by no means least the labour, that on no account should the industry be allowed to perish and it therefore seems quite possible that within the next few months we may again be faced with the necessity of yet further reductions in whatever way may be thought suitable to ensure the survival of our members until better times come.

"It would be inappropriate for me to offer any speculation at this meeting as to whether further economies will be necessary and if so the form they are to take, but as I see it the reduction of labourers' dearness allowance plus the sale of foodstuffs at cost price will make up not more than 1½ annas of the 5 to 6 annas and 3 annas loss now being incurred in London and Chittagong respectively. A further rise in price of at least 4 annas must therefore take place and what is more important must be maintained if gardens are to even make ends meet. I must confess to being doubtful whether this can be expected within a short space of time and we have therefore been examining other means by which the gap could be closed. Gardens are now undertaking only those works absolutely essential for the production and manufacture of the 1953 crop and therefore it seems that very little further can be done to reduce expenditure at the garden. We do think however that Government is in a position to assist us in the following ways. Firstly by a continuance of the suspension of export duty beyond 31st March. Secondly by relaxing controls within the border area, and consequent upon that by shouldering responsibility for the feeding of our labour forces. Thirdly by supplying rice and salt to the event of Section 144 remaining in force in the border area. Fourthly by abolishing the import duty and sales tax on tea chests amounting at present to a total levy of 43 percent on the landed cost of the article. Fifthly by a downward revision of the present rates of freight for tea as applicable on the E. B. Railway and lastly by a suspension of the cess on tea.

Savings from Concessions

"It is not possible to calculate the effect of all these concessions, if granted, in terms of so many pies or annas saved in the cost of production except in regard to food, tea chests and cess, and to a lesser extent, a reduction in railway freight rates. So far as the first three items are concerned we estimate that taken together they would save us about one anna of our costs based on a crop of 53 million pounds. The saving on foodstuffs, however, just over 1 anna, is already being paid for by the enhanced prices which labour are having to meet, and we would very much prefer to see Government, instead of our labourers, accepting this liability. If no border restrictions existed and adequate stocks of rice and other items were available locally I think we should seriously consider closing our godowns and requesting the Civil Supplies Department to relieve us of the heavy financial and administrative responsibility which has been that of the Association for far too long. Under present circumstances however we must see that our labour are fed and the most satisfactory solution would be for Government to supply us with our requirements in Chittagong at a sufficiently low price that will enable gardens to sell at Rs. 17-8 per maund without loss to themselves, or alternatively devise a procedure whereby rice will be available at some point or points in the tea districts again at a cost that after transporting to the estate will permit of re-sale to the labour at no profit, no loss to the management.

Taxes on Tea Chests

"We appeal to the Government to give every consideration to the abolition of import duty and sales tax on tea chests. A 30 percent duty is I feel unjustified at the best of times and when added to this is a 10 percent sales tax on the landed cost I consider we have good cause to request that tea chests be placed on the free list. If I have interpreted Government pronouncements correctly the establishment of an indigenous plywood industry engaged in the manufacture of tea chests is not visualized or likely to be encouraged for some time to come, and in view of results experienced elsewhere I would request the authorities to approach this matter with the utmost caution. At present our teas hold an enviable position in that they are packed in the best possible containers, thereby ensuring that they arrive at their destination and are taken over by the buyer in first class condition in practically every instance. It is a significant point in our favour for Pakistan teas to have a good outward appearance but there is no doubt that the present rates of duty and sales tax, which taken together, we reckon to total Rs. 15 lakhs for a year's requirements of chests are placing a heavy burden on producers, and I repeat my request that these be removed without delay.

The present rate of tea cess at Re. 1-6-0 per 100 lbs. is a relatively small item of expenditure amounting to less than ¼ of an anna per pound of our costs and in normal times the levy would not be opposed, required as it is for the financing of the Licensing Committee, the establishment of a research station and the institution of a propaganda campaign. However accumulated funds from cess collections are now considerable, something approaching Rs. 30 lakhs I believe and until the projects I have mentioned get under way and heavier expenditure is incurred than at present it would be of assistance to the industry if the

CALCUTTA LONDON

cess could be abolished, and I suggest that for Season 1953 gardens should not be asked to bear this charge.

Chittagong Warehousing

"Passing to the matter of the warehousing of our tea in Chittagong which, as you may know, has been inadequate for our requirements since partition, the position now is that two sheds, each capable of storing some 80,000 chests at one time, have been earmarked for the industry in the new Port Development area and are now nearing completion. If both these sheds are taken over by our warehousemen the accommodation they offer will be sufficient in our estimation for the entire crop whether the tea is to be offered internally or shipped overseas. We have at present the Foudzdarhat warehouse, built at Government's wish by the industry, and two sheds in the jetty area. We would be perfectly willing to surrender the latter accommodation once alternative space is available but would be extremely reluctant to lose Foudzdarhat unless and until full compensation for the cost of the building and its ancillaries is forthcoming. If we had plenty of money it might have been thought best to have accepted both of the new sheds, which are adjacent to each other, and thereby have concentrated the warehousing of tea in one central area. This however is the ideal and we could not possibly consider having two new sheds, plus Foudzdarhat with much of the available space never in use. The matter is now under discussion with the Port authorities and it is hoped that we shall be allowed to retain the Foudzdarhat warehouse and to take over only one of the new sheds in the development area.

Outlook for the Industry

"That very nearly brings me to the end of my remarks except that I would like to give you one or two of my own impressions as to the future prospects of our industry. Firstly, I think that in spite of all our present difficulties prospects are not as bad as they might be and although the road back to prosperity may be long and as rough as those in the town of Chittagong given our rightful share of good luck and provided we realise what is required of us we should be not so long in reaching our goal. If we look for a moment to the world in general and tea's position in it I think we will find there certain features which are not altogether unsatisfactory. The supply position is that world production in 1951 exceeded absorption by some 37 million lbs. Now this is not an excessive figure when we remember that in the same year the world consumed 1,175 million lbs. of tea but it was sufficient when taken with certain other factors to produce a serious slump. What is the supply position at the moment? To the end of November last world production was about 131 million lbs. ahead of 1951 which would give the impression that supply will exceed demand by that figure, plus December production added to the 1951 surplus. I suggest however that such is not the case. Let us first consider the position in the U.K., where although the response by the public to the de-rating of tea is disappointing so far there should be every possibility of more tea being consumed once the householders have become used to being able to buy as much as he likes and can afford. Imports into the U.K. of tea for consumption stood at the end of August 1952 at 30 million lbs. higher than at the same date in the previous year. Stocks at the end of October, after the end of rationing were sufficient to last the country only five weeks and the recent hardening of the London auctions suggests that wholesalers and retailers have disposed of most of their accumulated stocks and are anxious to re-enter the market.

"If consumption is to go up are producing countries still going to have more tea than the world wants or can buy? We have seen in the newspapers reports of a scheme whereby gardens in North and South India are voluntarily to reduce their production by 8 percent. Theoretically therefore this percentage can be deducted from world supply. If we look to other producing countries we immediately notice one, Indonesia, whose output has seriously diminished. She in 1951 produced 101 million lbs. and in 1952 the figure is expected to be in the region of 82-84 millions. At one time it looked as though the Indian crop for 1952 would be a record one but from September onwards production fell away to a remarkable extent due mainly to more selective plucking and the final output should not be much greater than that for 1951. In Pakistan I reckon that we have not reached the forecast of 54 million lbs. For the ensuing season it seems more than likely that production will be further reduced either as a result of the closing of gardens due to lack of finance or to voluntary restriction of crop. This latter expedient is, in my opinion, unworkable in Pakistan as our relatively small productive capacity has practically no influence over the world supply and demand position. The possibility however of some such measure being introduced cannot be overlooked if the signatories to the International Tea Agreement, which include Pakistan, decide that it is necessary.

"It looks to me therefore as if the present relatively small world surplus of tea may be eliminated before long, but it does not automatically follow that we are going to get fancy prices for our teas. The accent now is most definitely on quality without, if possible, any appreciable loss of crop and with the experience of the last two years behind us it should be obvious to all concerned that a clean, well-made tea has al-

ways, and as far as I can see, will always fetch a reasonable price."

Mr. Salim's Reply

Mr. Salim, East Bengal's Commerce and Industries Minister, addressing the meeting said that the Government was prepared to help the tea industry in every possible way to enable it to recover its former prosperity. He agreed with the Chairman of the Association that present conditions were probably the worst the industry has so far had to face. It was obvious that its survival depended on prices going up or the cost of production falling. In view of the general slump in world trade and recent price trends in tea, any marked increase in the price of the commodity was unlikely for some time to come. The only alternative was therefore to reduce costs.

He emphasised that producers should carry out a thorough investigation and see what further economies "beyond cuts in the emoluments of the supervisory staff and streamlining within the organisation are possible without sacrificing efficiency. This latter aim must never be lost sight of. If reduction in costs tells on the efficiency of those employed in production it will be doubtful wisdom to introduce such measures."

Referring to the suggestion contained in the Chairman's address that the suspension of export duty should be continued beyond March, the Minister said that if things did not change for the better within the next few months "it is quite likely that export duty may be suspended for a further period."

LONDON TEA SALES

At the London Tea Sales during the week ended 17th January, the 60,801 packages offered were sold at an average price of 3s 2.84d a pound, against 3s 0.34d in the preceding week. Results of some of the companies are given below:

	No. of packages	Average per lb
Amalgamated	1,097	3-1
Anglo-Ceylon	288	4-7
Anglo Dutch	327	2-11
Assam Company	1,116	3-7
Assam Frontier	1,087	4

Single	414	2-11
Tiwangie	78	2-6
United Planters	258	4-5

LONDON TEA CENTRE'S RECORD

1952 beat all records in the history of the London Tea Centre. Public attendance was 344,004 as against 295,268 in 1951, which itself was the best year up till then. Total attendances since the Centre opened in 1946 have just passed the million-and-a-half mark. The steady upward curve has been helped by the policy of attracting the public to the Centre by stag exhibitions of national as well as of trade or technical importance. This policy will be continued in Coronation Year, for which three highly topical exhibitions have already been booked.

In the first, which will open to the public on 24th February 1953, the Council of Industrial Design will display current Coronation souvenirs chosen from thousands submitted by manufacturers. These have so far only been seen by the trade. From 1st to 22nd April the Lullingstone Silk Farm will be showing how the material for the Coronation robes was produced—from the silkworm to the finished fabric. This will be followed by "Royal Occasions," 11th May to 6th June an exhibition of souvenirs of past Royal events—not only Coronations, but Jubilees, Weddings and similar celebrations. This is being organized by the well-known authority on popular art, Miss Barbara Jones.

COCHIN TEA SALES

At Internal Sale No. 'A' held on 13th January, 1953, about 3,89,000 lbs. of Dusts were catalogued. There was a good selection of dusts on offer but demand was very irregular. The better Travancore sorts and bright liquoring Nilgiri types were neglected with buyers concentrating on the milled and the fine dusts. Prices for these were very irregular but can be quoted about 2 to 3 annas per lb. dearer. Sellers were unwilling to meet the market drop for the better sorts and prices for these were about firm against last rates.

The Export Quota market was very quiet with a few buyers at 3 pias.

Internal Sale No. 'B' will be held on Tuesday 27th January.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

AMERICAN TEAM CRITICISE COTTON INDUSTRY

(FROM OUR OWN CORRESPONDENT)

London, By Air Mail.

ALTHOUGH something of a storm has been raised by an American delegation's criticism that Lancashire is failing to re-equip or "modernise" its principal industry at sufficient pace in reality the incident calls for little comment. The British textile industry as a whole has never attempted to conceal its reluctance to purchase any but essential machinery at present high costs, unless the Government provides the greater part of the money or the industry can be assured that the consumption of its goods will be fully maintained over a very lengthy period. As neither of these desiderata can be met, the industry is unlikely to be persuaded in the near future that the responsibilities of fresh capital equipment should be swallowed in large doses. Meanwhile, however, the Lancashire cotton industry is seizing the psychological moment to aver that it could be more venturesome if only taxation were substantially reduced.

There are those who see in this attitude more than a touch of complacency. Financial results so far announced show that even for 1952, the year of setback, the average dividend paid by both spinning and weaving companies was the quite respectable one of 22 percent. The conclusion might be drawn from these figures, so the unkindly disposed say, that whilst much is heard at annual meetings of onerous conditions, the industry is actually doing well for itself. Lacking the spur of acute necessity, why should it desire other than superficial change? But is a one-legged posse the same as balance and can it last as long. The Cotton Board's figures show that international trade in cotton fabrics continues to decline. There is no check on the tendency of many countries to rely increasingly upon home markets for the disposal of their cotton manufactures. It may be that there is still some leeway to be made up in household linen, furnishings and apparel through war-time depletions; and there is the fact that world population continues to increase. Nevertheless, it is difficult to believe that, if the present trend in the international cotton trade continues indefinitely, the British cotton industry can avoid the taking of major measures as, with a few notable exceptions, it has so far succeeded in doing.

Combine Harvester Problems

Britain had some very dry periods in 1952: it also had some very wet ones and this fact has once again raised the question of the relative merits of the combine harvester, the use of which has so widely increased during the last decade. As is well-known, there are serious drawbacks to the use of the combine in wet weather, by reason that the grain thus harvested is liable to be stored in a damp condition, and mildew and other troubles result. It has been contended that this handicap can be overcome by using one of the many types of artificial drying machinery now available. This view is not accepted by grain producers. Their argument is not directed against artificial drying as such, but proceeds from the fact that the skill required in its successful practice is very considerable and is seldom exercised to the necessary extent. A result of this deficiency is that the germinating capacity of the grain is ruined. Since there is every reason to believe that use of the combine harvester will extend year by year, an unresolved dilemma exists. Either the risk of damage by artificial drying has to be run, or the presence of moisture in the grain accepted—assuming that is, that the requisite skill in artificial drying cannot be developed to the degree required. The problem is complicated by the unpredictable factor of seasonal conditions. No one wishes to go to the expense of purchasing drying equipment and of training labour for its very careful use, if climatic conditions may be such as to render such preparations superfluous. It is another illustration of how difficult it is to find a satisfactory half-way house in agriculture—a house where not only farmers can meet without occasion for grievance but the consumers of agricultural produce also.

Food Additives

Critics of the use of chemicals in food manufacture have had it nearly all their own way so far; but, as was only to be expected in a chemical age, other voices are beginning to be heard. These voices may be independent, but they are scarcely disinterested. The baking industry which has been severely castigated for its use of the agene process in the bleaching of flour has replied through its scientific experts. These allege that the experiments administered to dogs, with resulting toxic symptoms, are not analogous to the much less concentrated intake by human beings in the eating of bread. It is further remarked that, however selectively man eats, he cannot avoid taking in poisons. Indeed, the age-long argument is being resuscitated that without the aid of a certain amount of poison in his system he could not survive. The official, that is the Governmental, view still obtains that the case against the agening process is not wholly proved, has sufficient weight to warrant its abandonment in favour of flour bleaching methods which, at present at any rate, are under no shadow of suspicion.

I. C. I.'s contribution to the controversy is an article by Dr. A. C. Frazer, published

in its quarterly *Endeavour*. It is interesting to note that Dr. Frazer is medical and pharmacological consultant to the British Baking Industries Association and, therefore, so to speak, is not an outside opinion—which is not to question impartiality. Dr. Frazer broadens the approach in the *Endeavour* article and, whilst referring to the baking industry, treats also of the use of food additives in general. He has no doubt that the use of these additives will be much more widespread in future and he welcomes this prospect, chiefly on the grounds that their employment helps to make the most of the world's inadequate food supplies. His article, however, is not without admissions; but he falls back on the suggestion that some of the troubles reported are due to certain people being "allergic." Few words have been more used in Britain than that of "allergic" since it was imported from the United States some years ago. People who do not react in the prescribed way to diet or medicine used to be said to have an idiosyncrasy. The patient today who vomits and becomes severely depressed after doses of M and B, and is changed over to Penicillin and comes out in a rash, may feel that it is high time a Royal Commission were appointed to inquire into the implications of "allergy" for civilisation. Dr. Frazer admits the possibility that besides producing toxic symptoms—but occasionally in his opinion—additives to food may have an effect upon the nutritional value of diet, though this problem "may not be very serious." It is, on the whole, a cautious article, and leaves the impression that the author is conscious that a very great deal has still to be learnt upon the subject, before the balance, for good or ill, of chemical food additives can be fully ascertained.

A Veterinary Advance

The announcement that the British Pharmaceutical Society is to publish a British Veterinary Code is interesting. It should be useful as a general guide to veterinary practice and also to firms seeking to engage in the manufacture of veterinary medicines. Nothing of the kind has been available hitherto and it has been long recognised that the establishment of uniformity in veterinary practice, in accordance with scientific knowledge, is a crying need. Many middle aged veterinary surgeons seem to be unaware of the new aids to animal treatment, whether through the judicious use of drugs intended primarily for humans or by more specific remedies. It is true that by far the greater part of medicines that can be beneficially administered to animals come under the heading of substances found in the ordinary pharmacopoeia. But it is admitted that these last have been used rather indiscriminately; hence this present attempt to introduce precision.

The Chlorophyll Boom

Whilst an undertone of scepticism is heard with regard to the boom in chlorophyll, a substance which has been credited in the United States with the power to cure most of mankind's minor physical ills, interest in this product still continues fairly high in Britain. The Ministry of Food is encouraging tests to discover whether food odours can be removed by steeping meat, fish, etc. in chlorophyll. The few critics who make their voices heard comment that it is of no value, and might be dangerous to remove odours without dealing with the source of the trouble and that chlorophyll has little, if any, antiseptic power. This is also the objection to the use of chlorophyll for sanitary purposes, unless it is used with a clear recognition of its limitations, and an awareness of the fact that it may "gather up" smells before householders realise that something needs not disguising, but removing.

Sulphur Shortage Eases

The acute shortage of sulphur seems to have departed as quickly as it came, although there is a reluctance to admit the fact, in view of the prophesies which were made that this deficiency was likely to last for many years. The sulphur crisis was, indeed, a horrible theme of the popular newspapers. Moreover, there are grounds for believing that speculative activities played some part in that bringing about the temporary sulphur difficulties. But easier conditions have not led to any diminution of efforts to lower the costs of production of sulphur from anhydrite, in which process Imperial Chemicals has invested a substantial amount of capital, as has also the well-known fertilizer company, Fisons Limited. The chairman of Iser company recently mentioned that, by reason of the high cost of sulphuric acid, the fertiliser industry is increasingly turning its attention to the use of nitric acid for the treatment of phosphate rock.

The discreet toning down of the rearmament programme is already conferring benefits upon ordinary industry through the release of steel supplies and the virtual elimination of British stockpiling programmes. It may be noted that supplies of steel to the Clyde shipbuilding industry (which has four years' work in hand) have been increased by 9 percent in the first quarter of the year. While the volume of registered and unregistered unemployment for industry as a whole remains between 400,000 and 500,000, there has been no further increase during recent weeks. This is partly due to the additional steel that has also been made available, but the severe weather has also played an important part, helping the woollen industry through the heavy demand for warm clothes. Almost all export industries report that the order books are fairly satisfactory, but that the getting of orders is an increasingly stubborn business.

COMPANY AND PUBLIC NOTICES

THE UNITED COMMERCIAL BANK LIMITED. PRESS COMMUNIQUE.

THE profit of the Bank for the year 1952, subject to audit, including the amount brought forward from last year's accounts is Rs. 30,24,733-7-4. Out of this sum, the Directors have made the following appropriations:—

1. Disbursed as ex-gratia payment to staff	Rs. 3,73,614	5	4
2. Provision made for taxes	" 10,00,000	0	0
3. Transferred to Reserve Fund	" 7,50,000	0	0
4. Balance	" 9,01,119	2	0
	Rs. 30,24,733	7	4

Out of the above balance, the Directors propose to recommend to shareholders at the next General Meeting payment of dividend at Rs. 2/- per share, free of income-tax, which will absorb Rs. 8,00,000/-, leaving Rs. 1,01,119-2-0, to be carried forward to the next year's accounts.

The securities and investments of the bank appear in the accounts on 31st December, 1952 at or below market rate ruling on that date.

By Order of the Board,

B. T. THAKUR,

General Manager.

Calcutta, 7th January, 1953.

KRISHNABEHARI TEA COMPANY, LTD.

NOTICE is hereby given that the Sixteenth Ordinary General Meeting of the Shareholders of Krishnabehari Tea Company, Limited will be held at the Registered Office of the Company No. 161-1, Harrison Road, Calcutta on Saturday the 24th January, 1953 at 3 P.M. (sharp).

AGENDA:—

- To receive and approve the Report of the Directors for the year ended 31st December, 1951.
- To receive and approve the Audited Accounts of the Company for the year ended 31st December, 1951.
- To declare a dividend.
- To elect Directors.
- To elect Auditors and to fix their remuneration.
- To transact any other business that may be brought before the meeting.

The Share Transfer Register of the Company will remain closed from 17th to 24th January, 1953, both days inclusive.

By Order of the Board of Directors,

BIHARILALL LAHOTY,

Managing Director.

Calcutta, 22nd December, 1952.

MUTTRA ELECTRIC SUPPLY CO., LTD.

NOTICE is hereby given that the 49th Ordinary General Meeting of the Shareholders of MUTTRA ELECTRIC SUPPLY CO., LTD., will be held at the Registered Office of the Company at No. 15, Shib Thakur Lane, Calcutta, on Saturday the 31st January, 1953 at 2 P.M. to transact the business on the following Agenda:—

AGENDA

- To receive the Directors' Report for the half-year ended 31st March, 1951, and to approve the dividends recommended.
- To receive the Audited Accounts for the half-year ended 31st March 1951, and to adopt the same.
- To transact any other competent business which may regularly be brought forward.

N.B.—The Share Transfer Books of the Company will be closed from the 24th January, 1953 to the 31st January, 1953, both days inclusive.

By Order of the Board,

G. D. BHAGAT,

Chairman.

Calcutta: 7.

The 10th January, 1953.

NEW OIL TANKER ARRIVES

The Burmah Oil Company Tanker M.V. *Burmah Emerald* arrived in Calcutta on 26th December on her maiden voyage. M.V. *Burmah Emerald* was launched on 23rd May by Lady Harper wife of Sir Kenneth Harper, Chairman of the Burmah Oil Co. (Tankers) Ltd., at Cammell Laird's Yard, Birkenhead. The tanker is the first of three new ships now being built by B.O.C. to replace their present ships s.s. *Masimpur* and s.s. *Singu* which have been employed for most of their long service in the carrying of petroleum products to Indian ports. These new ships will retain the summer tank construction which was a feature of the older ships and they will have a length of 408' 6" and breadth of 56 ft. They are designed to carry a cargo of 8,400 tons at a draught of 25 ft. and will have a service speed of 12 knots. They will be equipped with forward and aft pump rooms and will be capable of unloading rates of up to approximately 1,000 tons per hour.

TO WHOM IT MAY CONCERN.

We have pleasure to notify that M. W. D. Oldman, Esq., O.B.E. has joined the Board of Directors of Messrs. Carritt Moran & Co. Ltd., on and from the 15th of January, 1953.

CARRITT MORAN & CO. LTD.,

R. W. CARTER,

Managing Director.

NEGOTIATIONS BETWEEN TATAS AND JAPANESE STEEL FIRM REPORTED

According to a newsagency report, it has been announced in Tokyo that negotiations are going on between a leading Japanese steel firm and the Tata Iron and Steel Company for erecting a 1,000-ton blast furnace in India. The Japanese firm of Kobe Seiko Kaishiki Kaisha (Kobe Steel Works), setting up the furnace, hopes to receive a monthly average of 10,000 to 15,000 tons of pig iron. Tatas were reported to have submitted a plan recently to the Japanese firm for improving transportation and harbour facilities prior to erecting the blast furnace. Industrial circles in Japan estimate the blast furnace project will require 7,500 million yen (approximately \$20,834,000), and 4,000 million yen (approximately \$11 million) for the improvement of land transportation and harbour facilities. Kobe Seiko is expected to discuss the plan with the International Trade and Industry Ministry officials before taking concrete steps.

PROTECTION TO THE BALL BEARINGS AND STEEL BALLS 'INDUSTRY

The Government of India's resolution on the Tariff Commission's report on the ball bearings and steel balls industry has been published in the Gazette of India, dated 10th January, 1953. The Government has accepted the recommendation of the Commission that protection to the ball bearings industry be granted for a period of two years by (i) converting into protective duties the existing revenue duties on ball bearings not exceeding 2 inch bore diameter and adapted for use as parts and accessories of motor vehicles other than motor cycles and motor scooters, and (ii) imposing a protective duty of 94 percent ad valorem on ball bearings not exceeding 2 inch bore excluding those specified above.

The rate of duty on adapter bearings not exceeding 2 inch bore diameter which are specially designed for use exclusively with power-driven machinery has also been increased to 10 percent ad valorem and converted into protective duty, following the recommendation of the Tariff Commission. Government has also agreed with the Tariff Commission that as the existing rate of import duty on steel balls combined with import restrictions obtaining at present adequately safeguards the position of steel balls industry, no protection need be granted to this item. Notifications bringing the enhanced duties into effect have also been issued.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

† Liquid Assets.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, P, F, Dd, G and R indicate Ordinary, Preferred Ordinary, Founders' Deferred, Guarantee and Rebate Shares, respectively. P next to the names of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CALCUTTA.JAPANESE COMPETITION IN WORLD
EXPORT MARKETSNEED OF JAPAN'S CO-OPERATION IN ASIAN
DEVELOPMENT PLANS

THE great and continuing improvement in the military and economic strength of the non-Communist world that has taken place in the past few years has at one and the same time abated fears of Russian aggression and re-awakened fears of former aggressors who are now honorary members of the "free world." Revival of the economic strength of Germany and Japan has been an integral part of American-directed anti-Communist strategy and it has succeeded to the point where at least one or two members of the democratic alliance are as much concerned about the future of their relations with the Germans and the Japanese as they are about the menace of Communism. The two sensitive (some would say hypersensitive) antennae of the free world in this regard are France and Australia, the French in relation to Germany and the Australians in relation to Japan; reactions in these two countries in recent months have been significant. There has been a noticeable stiffening of the French attitude to the resurgence of Germany, a change of heart that felt itself confirmed by British action against neo-Nazi conspirators this month. The defection to the Communist peace movement of intellectuals like Jean-Paul Sartre was not unconnected with growing disquiet about the real source of the threat to European peace and, although it is hazardous to read meanings into the periodical reshuffling of French Cabinets, the relegation of MM Schuman and Plevin followed their close association with plans for a "controlled" rehabilitation of German industry and military power. The Australians took the uncharacteristic step of administering a brutal snub to Britain over the ANZUS pact in order to ensure that their agreement to Britain's exclusion would purchase America's agreement to the exclusion of Japan. A stronger anti-Communist alliance would no doubt have resulted if both Britain and Japan had been included in the pact, but the Australians and New Zealanders evidently felt that a weaker front against Communism was preferable to active support of Japanese re-emergence as a major Pacific Power.

These reactions are exaggerated if they imply that there is foreseeable danger of renewed aggression from Germany and Japan; there can be no doubt that the first danger to international peace still lies where it did in 1948, in the strategy of the Kremlin. But military aggression is possible only on the basis of a healthy economy producing goods at peak capacity, and German and Japanese productivity has now reached a level where, well short of war, it could become a serious embarrassment to the trading policies of many of the USA's less affluent partners. If the French and Australians mean to call attention to the fact that German and Japanese economic competition is a problem to be reckoned with, they are entirely right and would be supported in countries like the United Kingdom which do not share all their misgivings about the prospective military threat.

The case of Germany is perhaps less urgent, for by Germany we mean the truncated West German republic which is short of the 18 million people absorbed behind the iron curtain. Further, the European coal and steel pool, whatever its deficiencies, has been set up to adjust heavy industrial policy on the Continent, and to that extent provides machinery to minimise economic friction between West Germany and her neighbours. (It does not limit, and might in fact aggravate, Britain's forebodings about competition from the Continent in just that field in which she has chosen to deploy her export strength, engineering products.) But Japan has entered no such co-operative agreement and is, unlike Germany, actually more populous and productive than before the war. All the economic justifications Japan put forward in the thirties and

forties for military action on the Asiatic mainland and later in the Pacific islands could be advanced with greater force now that she has lost her colonies and her Asian markets and is obliged to support 20 million more people at (thanks to democratic trade unions) an even higher standard of living. Her assurances of peaceful intentions are no doubt quite sincere, but they only indicate that less productive energies will henceforth be wasted on naval and military might and more left for direct economic competition with the other democracies—just when those democracies are required to undertake heavy rearmament burdens from which Japan is exempt.

Stalin has predicted that the Western trading bloc will, for what he sees as militarist reasons, inflate the productive capacities of Germany and Japan so much that it will then be unable to digest the export potential they will release. This is an astute analysis of the danger. In a world that is forgetting about post-war shortages and has begun to suspect that only unrestricted multilateral trading with freely convertible currencies will provide the means to absorb all the goods being produced (especially if rearmament should slacken off in a few years), it is opportune to give thought to the effect of Japan's reappearance as an exporter who will soon join the United States and Britain as one of the three principal participants in international trade. Mr. John D. Rockefeller III recently estimated that if Japan is to support at pre-war levels a population that will reach 90 millions in 1955 she will need to expand her commercial exports from the \$1.4 milliards achieved in 1951 to \$5.5 milliards within a few years. Failing a considerable increase in the volume of world trade, such as could only be attained with full convertibility, the effects of this massive export drive from the East can be imagined. What are the prospects that Japan will reach this goal?

In recent years Japan has been achieving an excess of exports over imports only by including in the first the invisible exports represented by "special procurement" orders of goods and services required by U.N. troops in Korea and by U.S. troops stationed in Japan. Thus in 1951 Japan had a deficit on trade account of \$428 million but had a favourable invisible balance of \$763 million largely made up by \$297 million spent by American troops in Japan and by \$327 million earned by supplying materials for the Korean war. Clearly the end of the Korean hostilities or a diminution of American spending in the East would leave Japan heavily in deficit and under the obligation of competing strongly in Asian and African markets with Britain, India, the USA and Australia in order to earn her living. This obligation would

be all the greater because the main item in her imports is food, on which she spent \$558 million in 1951, compared with only \$114 million on coking coal and iron ore which are popularly supposed to be her principal imports. She can scarcely grow more food herself but she obviously has a keen interest in seeing other rice-eating countries do so, because an expansion of foodgrain output in South Asia would relieve competition in rice markets and release more Asian purchasing power for Japanese goods. If India, for example, were able to withdraw from the Asian rice market Japan would get more and cheaper grain for herself and would be able to sell India more industrial equipment. When the United States, Britain and the other Colombo Plan countries are doing so much to assist the improvement of Indian agriculture it is surprising that Japan, who has a closer interest in the matter and is better able to help, has not been more forthcoming. India is now taking up Japanese rice cultivation techniques seriously and this should furnish the opportunity for the Japanese to step in with large-scale help, which would pay her dividends within a few years.

Japanese preoccupation with the export task is apt to centre on the lost trade with China, and the Asian markets for consumer goods. But her allies have the right to point out that these problems are not the crucial ones and even supposing a solution of them were possible, it would not make a positive contribution to better living standards in the non-Communist world. The China trade has never in fact been as vital to Japan as is often pretended. Pre-war statistics are irrelevant because they were the outcome of Japanese military intervention and semi-colonial adventures such as will never be repeated. In 1935 two-thirds of Japan's trade with China was with Manchuria and Kwangtung, both of which were under her political control, and was subsidised by Japanese investments in those regions which are now lost forever. In 1950 when trade with China was still permitted by the Occupation authorities Japan sold only 2.4 percent of her exports to and bought only 4.0 percent of her imports from China, even though the war in Korea and preparations for Chinese intervention must have carried the volume of trade to unusual levels. It is true that at that time Japan was getting 69 percent of her coal from Kailan—but Indian coal was then being landed in Japanese ports at cheaper prices than Chinese. There is little support for the view that the crux of Japan's export problem is renewal of trade with the mainland. Concentration on cut-price consumer goods is an equally unwarranted approach to Japan's export task for the market in textiles, to take the most important example, is contracting as indigenous industries are established in independent Asian countries. If trade with China were to be resumed the Communist régime would not be interested in cheap consumer goods; nor would India who is encouraging her own light industries; while imperial preference will always serve to protect Lancashire from Japanese incursions in colonial markets. Current Japanese emphasis on consumer goods is due

MINING COSTS AND COAL SELLING PRICES

I.M.A. MEMORANDUM ON COLLIERIES' BURDENS

A STRONGLY worded memorandum on the economic position of the coal industry was submitted last week by the Indian Mining Association to the Central Ministry of Production in which it is argued that the collieries need to be relieved of many of the burdens they now carry if the closure of some mines is to be avoided. The analogy is drawn of the mines' present position with that of the tea industry and it is suggested that a crisis of the same nature and proportions will ensue if relief is not granted. Particular emphasis is laid on the inadvisability of decontrolling coal prices before the rigid costs of producing coal are lowered. It is felt that the effects of decontrol at this stage would be that "the relative stability which the industry has enjoyed since the war years would be immediately destroyed and, at a time when coal is being produced in abundant quantities which are more than adequate for the country's needs and more than the railways can currently move, there would be a renewal of that cut-throat competition among coal producers which was such a common feature in pre-war years. The industry would again be involved in a vicious circle of depression, collieries exploiting their resources and increasing their production in order to lower raising costs, the lower costs leading in turn to fiercer competition and reduced selling prices, and the circle being completed by the encouraging effect of lower prices on further exploitation and yet fiercer competition." Consumers of coal, which is the basic fuel of India's industries, might think that instead of concentrating on the ill-effects of competition and lower prices the memorandum could have taken its stand on the completely uneconomic additions official policy makes to the cost of mining coal, for it is here that the Government owes its main debt to the collieries and the consumers of coal alike. But as long as the railways cannot move all the coal being mined, consumers will derive no benefit from higher output; and as long as the cost of raising coal is maintained at indefensible levels the only result of lower selling prices would certainly be the closure of collieries, with no one better off.

The memorandum lists the contributions State and Central Governments have made to higher production costs, which run from local cesses and State sales taxes to railway freights and statutory obligations to labour. The heaviest burden is the cost of food concessions which, it is estimated, now represent a complete loss to the collieries of between Rs. 6 and Rs. 7 lakhs per week. As with the tea industry, the obligation to protect labour from rising grain prices was undertaken during the war with the intention of holding workers in the industry, but it has been continued into changed conditions and has become more and more onerous as State Governments have found the arrangement a convenient way of evading their clear responsibility to provide food for their citizens. The injustices of the system and the abuses to which it is liable have been discussed in these columns before; the Association now suggests a scheme to link food concessions to actual productive work rather than, as at present, simply to attendance at the place of work. After several years of debate and sundry official enquiries the Indian Government now appears to be coming around to the view that this burden should be lifted, at least in part, from the tea estates; the Indian Mining Association is well advised to take the opportunity of pointing out that similar relief is required by the collieries. The Coal Mines Bonus Scheme is another measure that was introduced in order to stabilise the industry's labour force but which has deteriorated into a positive obstacle to industrial efficiency. It now involves, says the memorandum, "more wages for less work," and it is urged that it now be replaced by a system of annual payments which bear some relation to work done.

In view of these and other additions to production costs, the voluntary price cut of nine or ten annas agreed to in 1949 is plainly out of date, and should be restored if nothing is to be done promptly to remove the burdens the industry complains of. Even if they were removed, it might be found that the collieries would need increased revenue to finance the ambitious and expensive programme of coal conservation by means of sand stowing and beneficiation which it is now agreed they should undertake in the interest of the nation's chief source of fuel.

CURRENT COIN

Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows an increase of 8.9 points between June and July, 1952. Notable rises in production occurred in jute, steel, paper, coal, electricity and

cement, but there was a fall in the output of pig iron. Cheque clearances were larger because of increased turnover in commodities.

Encouraging Report from A.C.C.—The cement industry's excellent performance in recent years is naturally enough reflected in the report of its biggest component—Associated Cement Companies Ltd.—presented by Mr. Dharamsey M. Khatau, chairman, at the annual general meeting of shareholders held in Bombay on 23rd January (a summary of which appears on page 108). Total output of cement in India increased from 1,480,000 tons in 1947-48 to nearly 3,400,000 tons in 1951-52, and to this A.C.C.'s contribution has been so significant that it alone now produces nearly one and a half times the former figure. By following what Mr. Khatau called "a policy of continuous expansion", the output of the firm's Indian factories, including the Bhopendra subsidiary, has risen from 1,291,000 tons to 2,017,000 tons. Demand for cement is expected to increase further, especially in view of construction projects of the five year plan, and the Company has drawn up a ten-year programme of rehabilitation, modernisation and expansion which will increase productive capacity to 3,130,000 tons by 1960. An initial outlay of Rs. 1.49 crores in the past year has enabled effective capacity to be increased from 2,195,000 tons to 2,452,000 tons; and an agreement has been reached with the Government on establishing a new cement factory at Sindri with a capacity of 200,000 tons. Mr. Khatau complained that rehabilitation will be hampered by the fact that "depreciation for taxation purposes is still related to the original cost of machinery rather than present-day replacement costs, while the appropriation to Plant Reinstatement Reserve (Rs. 50 lakhs) has to be met from profits after they have been taxed. If industry is to maintain and increase its present level of production and efficiency, the Government must give this matter their immediate and serious consideration." Cement producers' claims for an increase in price, on the ground that manufacturing costs have risen, were referred to the Tariff Commission some weeks ago and Mr. Khatau gave interesting details on this point: "The prices of raw materials and consumable stores and spares have increased substantially. The railway freight on coal has gone up by about 45 percent since April 1952, and we estimate that the burden of this increase alone is of the order of Rs. 38 lakhs per annum at our present level of production. During the last few years fuel oil has registered an increase of over 100 percent. There has also been an upward revision in the scale of basic wages and dearness allowance by about 12 percent." Cement companies have probably been able to work more economically because production is on a larger scale, but these economies cannot have offset such large increases in costs.

Pakistan's Cotton Slump.—The heavy dependence of Pakistan's economy on jute and cotton exports makes the country peculiarly susceptible to the present lull in trading conditions; the blizzard which swept the jute markets last year has now affected cotton no less severely and prices some days ago fell to their lowest since partition. Official reactions conform to pattern; foreign demand for Pakistani cotton had been negligible even at considerably lower price levels, but the Pakistan Cotton Board boldly decided last Thursday not to permit the export of cotton at prices below the following: 4-F R.G. Rs. 56, L.S.S. R.G. Rs. 58, N.T. (R.G.) Rs. 58, and 580-F R.G. Rs. 61. Price differentials for various grades and qualities have been left to be determined in market transactions. There will be a premium of Rs. 3 per maund for saw-ginned cotton and the State Bank of Pakistan will decline to register export transactions at lower prices. The crux of the matter, however, is whether there will be very many transactions to register; present world supply prospects suggest that there will not. Normally, world demand is of such proportions that the price support given by the U.S. Government to growers in that country in effect holds a price umbrella over cotton producers elsewhere. At present however not only is demand restricted, but American prices have declined and Egypt and Brazil are making desperate efforts to liquidate stocks at competitive rates. France has cancelled import licences for Pakistan cotton and placed large orders in Brazil, while Germany, another important customer for Pakistan, has signed a barter deal with Egypt. In Britain the Raw Cotton Commission has large stocks. Japan is holding off from the market until something definite emerges from her barter talks with Pakistan; moreover, instead of buying large quantities, she has now changed her policy and makes only hand-to-mouth purchases. Russia and China have been negotiating barter deals with Egypt, who is also exploring markets in the Far East. As a result, the off-take of Pakistani cotton has been very poor just when the new crop is arriving on the market. To the carry-over of 400,000 bales from last year is being added a bumper crop of 1,750,000 bales while against an exportable surplus of 1,850,000 bales only about 507,000 bales have actually been exported (a large part of these against contracts

negotiated in September and October). When faced with a similar situation last year, the Pakistan Government resorted to price support schemes, but the fiscal position no longer allows such extravagance. As it is, the Pakistan Cotton Board stated earlier this month that it held a carry-over of 99,000 bales; this cotton was bought when the floor price of the lowest quality was about Rs. 90 a maund, nearly twice what it is now.

Nationalisation Fuses Blown.—Many State Governments, particularly those which sacrificed much revenue to improve their citizens' drinking tastes, are finding it increasingly difficult to balance their budgets and their financial difficulties have led to second thoughts on nationalisation experiments. Electricity undertakings were lately regarded as especially suitable prey by nationalisation enthusiasts but strong public criticism of official policies, which last year brought about a serious shortage of electricity in South India, has moderated their zeal. Mr. C. Rajagopalachari, Chief Minister of Madras, told a conference convened by the Madras Presidency Electric Licensees' Association last week that his Government would not be able to put through its plans to nationalise electricity, mainly because it was short of money. "You may take it for granted—I am telling you as a pavement astrologer—that you will be left alone", Rajaji said. "If, however, an undertaking is so badly managed that even a State without finances must take it over; it will happen. Or if you yourselves demand that the State should take over, it will happen." Madras was formerly an advocate of electricity nationalisation and in 1949 passed the Electricity Undertakings (Acquisition) Act and laid down as official policy the intention to acquire all undertakings within five years. However, three years have passed and, as Mr. P. Natesan pointed out in his presidential address at the conference, only a few undertakings which were considered uneconomical or inefficient have been taken over, some under the Act and some by negotiation with licensees. Electricity development is a pressing need in Madras as was shown by last year's severe cuts on consumption, but it has been hampered by the constant threat of nationalisation and because producing concerns have not been able to raise money for development. Mr. Rajagopalachari's assurance will abate the fears of prospective investors, but an equally urgent need is to amend the Electricity (Supply) Act, 1948, in order to make such investment more attractive. That would also be the answer to his suggestion that private concerns rather than the Government should build a thermal power station (the need for which Mr. Natesan stressed earlier) "instead of complaining whenever there is a power cut." Mr. Rajagopalachari appears to think that there is no need for an Electricity Board in Madras because the Electricity Department can perform its functions efficiently; this reinforces suspicions that, so far as most States are concerned, an important section of the 1948 Act will remain a dead letter.

Spices Enquiry.—In the past fortnight the Spices Enquiry Committee appointed by the Government of India has been holding meetings in Kozhikode with representatives of the spice industries. Extreme and violent fluctuations in prices were blamed by many representatives for the industry's difficulties and its loss of markets, and it was claimed that a floor price guaranteed by the State would remove the uncertainties of producers and thus encourage production. It was also suggested that some form of quality control would stimulate demand at home and abroad. Producers pointed out that there was no adequate organisation to assist farmers in the fight against the various diseases which take a serious toll of spice crops. A memorandum submitted by the Malabar Chamber of Commerce proposed that either loans be made to producers to assist them expand the area under crops, or a guaranteed price be assured to cultivators. The price for lemongrass oil, at Rs. 4 or Rs. 5 per lb., is already below the cost of production—Rs. 7—and the Chamber warned that pepper production might decline because the price had slumped from Rs. 1,300 per candy last year to Rs. 400. In another memorandum, submitted by the North Malabar Chamber of Commerce and other Associations, it was proposed that an All-India Pepper Board be formed with a 75 percent representation for producers and the trade. The Board would assist in the development of cultivation, marketing and utilisation of pepper. A similar suggestion was put forward by Mr. P. B. Kurup, a member of the Indian Council of Agricultural Research, who proposed that the Board should be modelled on the Indian Coffee Board. A point on which all producers seem to be agreed is that transport facilities on the Malabar coast are inadequate and it was suggested that the Committee should recommend the building of a railway between Tellicherry and Mysore.

ECAFE's Railway Training Centre.—Dr. P. S. Lokanathan, executive secretary, told a joint meeting of the ECAFE sub-committees on railways and inland waterways in Bandung, Indonesia, earlier this month that satisfactory progress had

been made with arrangements to establish a railway training centre at Lahore; it is expected to start functioning from 15th August this year. The site has been selected after detailed investigations by ECAFE and the U.N. Technical Administration, the two organisations which will be responsible for it, and the choice has no doubt been influenced by the situation of the Moghulpura railway workshops which are probably among the best in Asia. A group of senior railway operating and signalling officials from ECAFE countries have visited Europe, America and Japan and are now in Bangkok to formulate detailed recommendations on the curriculum and equipment for the Centre. The initial cost of establishing it is expected to be \$115,000 and the annual recurring expenditure \$100,000. ECAFE's secretariat has in the past year undertaken a number of studies on railway operation and mechanical and civil engineering and, judging by official reports of this month's proceedings, the more efficient use of firewood in locomotives has been one of its major preoccupations. The question of course is of little direct concern to India, which has ample reserves of coal, or to Pakistan, which has negligible forest resources. But it is of interest in such territories as Cambodia, Viet Nam, Thailand, Malaya, British Borneo and Indonesia, which are all real or potential markets for Indian coal and where reports on the use of firewood are said to have been favourable. In view of their large forest resources, the question of increased and more economical use of wood was certainly worth investigating. The preliminary conclusion of ECAFE and the FAO is that "wood might not be a second-rate fuel for steam locomotives in some countries," though the Indian representative at the meeting pointed out that experience in this country with firewood has not been "too bad," but it would not be fair to class it as a first-rate fuel.

Opium.—One of the more useful activities of UNESCO is the work of the Permanent Central Opium Board, which has just published its annual report—the last to be published by the present Board, whose five-year term of office expires on 1st March, 1953. The Board notes that 90 percent of the statistical returns required of Governments were received in 1951 and that all the principal opium-producing countries have declared their licit opium production, although in some cases only quantities taken into possession by Government agencies were indicated. On the other hand, the two most important of the four coca-leaf producing countries failed to supply the required information, thus making it impossible for the Board to arrive at a world total for this substance. Special reference is made to the control of opium in India and Iran. The Board has continuously occupied itself with the question of the abnormally high consumption of diacetylmorphine in several countries, and the report summarises the developments of the Board's action which has been taken in conjunction with the Drug Supervisory Body and the World Health Organisation. In Australia, a thorough enquiry has been initiated by the authorities into reasons for the increasing consumption, while in Sweden manufacture has been discontinued as from 1st January, 1952. Switzerland has also prohibited manufacture and joins the lengthening list of countries which have abandoned the use of this drug in therapeutics. The Board reports that in 1951, and for the first time, codeine was successfully converted in one country into morphine, giving a 70 percent yield. There is as yet no indication of how this process will be developed or of how it might call for the modification of the control at present exercised over codeine. The field of discovery of new synthetic drugs continues to expand and their uses are increasing rapidly. During the year, yet another synthetic drug—3-methoxy-M-methylmorphinan and its salts—together with all the salts of those preparations previously put under control, were brought under the provisions of the 1948 Protocol. The report notes that the manufacture of such drugs is being developed: this is particularly true of Pethidine, while the use of Methadone would appear to have stabilised and that of other newer drugs (Phenadoxone, Racemorphan, Levorphan, for example) is incipient.

Travancore Fishery Scheme.—The first supplement to the tripartite agreement between the United Nations, the Government of Norway and the Government of India was signed in Delhi last Saturday. Under this agreement a community project for the development of the fishing industry in Travancore-Cochin, at a joint cost of Rs. 37.6 lakhs during 1953-54, will be undertaken. The object is to increase fishing activity, to arrange for the efficient distribution of fresh fish and an improvement of fish products, to improve the health of the fishing population and in general to raise the standard of living for the community in the area of the project. A limited area of Travancore-Cochin, about ten square miles, has been selected, with a population of 12,000. Some of the boats in the locality, which at present number about 400, will be supplied with suitable motors, while repair facilities, new types of nets and new shore installations will be provided, including plant for the manufacture of ice. Insulated store

sheds for ice, insulated vans, and, if thought desirable, motor craft to transport fresh fish, will also be furnished under the agreement. Efforts will be made to improve the marketing of fish through co-operative organisations and equipment will be introduced for the extraction of fish oil. In view of the importance of marine fisheries research, equipment will be provided for use by the marine biological laboratories in the University of Travancore. The project will be administered by the State Government of Travancore-Cochin under the general supervision of the Centre, in consultation with the representative of the Board of the Norwegian Foundation. The Norwegian Foundation is to provide equipment, technical personnel and scholarships for Indian students in Norway. The United Nations' contribution will be through its Technical Assistance Board, while the Indian Government will bear most of the local costs of the project.

Secondhand Tonnage for Eastern Fleets.—In its usual annual review issue, *The Siren and Shipping* publishes a comprehensive list of sales on the secondhand ship market during 1952. From this it would appear that activity was well maintained, despite increasing costs as the year progressed and the subsequent recession in freight rates. A certain amount of research is necessary to work out the participation of the countries of the East, but the results are sufficiently interesting to justify the effort. Japan, of course, shows the greatest activity, but it is significant that the operations of her shipowners appear to be on a smaller scale than in 1951, which may be accounted for by the development of her own shipbuilding facilities and the greater availability of new tonnage. More important than this, however, is the appearance in the list of other Eastern countries, including Burma, Indo-China and Indonesia, though their purchases are still on a small scale and mainly confined to smaller ships suitable for coastal or inter-island voyages. Pakistan's anxiety to develop a mercantile marine is evident from her acquisition of seven vessels representing a total deadweight tonnage of 61,806. Her buyers have ranged far and wide in their search for bargains, having acquired a 12,800-tonner from Japan, two vessels of over 10,000 tons from Panama and another of a similar size from Canada. The three smaller ships range from 5,000 to 7,000 tons—including one for breaking-up!—from Australia, Norway and the United Kingdom. The sums paid for some of these vessels have not been ascertainable, but judging from those which have been disclosed it would seem that Pakistan's total outlay is a long way behind the £2,147,250 which Indian buyers expended during the year on the acquisition of six secondhand vessels, all from United Kingdom owners, with a total deadweight tonnage of 55,640. Two of these were of 8,755 tons, two of 8,800 tons, one of 9,750 tons and one of 10,750 tons. Two sales are recorded from Indian vendor to Indian purchaser, involving a tonnage of 11,809, while two vessels were also sold to foreign buyers, the 7,950 tons *Jalabala* to Japan and the 4,808 tons *Englestan* to Belgium, bringing in a return of £251,000.

Subsidising Sugar.—As expected, India's sugar export ambitions have foundered on the reef of high prices, but the Government has now decided further to reduce the export price of sugar by Rs. 2 a maund. Producers are already refunded the sugarcane cess and excise duty, together amounting to Rs. 4-12 a maund, on all the sugar they sell abroad, and the latest reduction is to be financed from the proceeds of the additional excise duty of Re. 1 a maund imposed at the beginning of December. The Sugar (Temporary Additional Excise Duty) Act which sanctioned this much criticised impost was intended exclusively to cover the loss arising from the fact that the Government was left with a large carryover of sugar for which it would get less than it had promised the factories. The Act did not state that the levy would be used to squeeze a higher price from the indigenous consumer so that sales abroad could be subsidised. The levy was to be, furthermore, temporary, but an export subsidy would require to be continued for years. Whether or not the Indian consumer is actually milked in this way depends on whether sugar can even now be exported—exports have totalled only 26,000 tons since 1st September. Selling over 200,000 tons of sugar during a world glut would in any case be a difficult task but the preoccupation with exports has diverted attention from the possibility of increasing domestic consumption: in 1951-52 this rose by well over 100,000 tons to the record figure of 13 lakh tons, largely because much sugar was available at less than the controlled rates. The reduced cane price might now lead to small output, and this is another argument in favour of holding on to stocks. Last week the Government is reported to have warned mills not to hold back sugar in the hope of selling it at a higher rate later. A reply issued by the Indian Sugar Mills Association says that the "slight rise in prices in the South and some other consuming centres" was due to transport difficulties. Denying that factories are withholding stocks, it says that transport uncertainties "prevent further sales stocks already sold have moved at least partly."

POSSIBILITY OF COPPER
FREE TRADINGSTRENGTH OF STERLING LIFTS
GILT-EDGED SECTION

London, 28th January.

LONDON metal traders believe that free trading in copper by 1st July, which has been widely mentioned as the target date, will prove to be too early and that 1st September is now a more likely date. While it is widely known that Government's intention is to hand back copper trading to private enterprise at the earliest opportunity, consistent with the balance of payments position and certain other technical and political considerations, the technicalities involved in a change-over of this nature are considered formidable. On the marketing side, however, details are believed to have already been worked out in broad principle. The more formal details regarding currency and long-term supply contracts have still to be finalised before administrative decisions can be made which would enable free trading to become a reality. Under the Ministry's long-term contracts with Rhodesia, it is necessary to give six months notice terminating the present supply arrangements. The labour position in Rhodesia is delicate, pending the outcome of arbitration talks on miners wages. However, with a satisfactory settlement of these labour problems, the position may become clearer, though the last word will rest with the Treasury, who must decide whether they can afford to take the risk of copper from the sterling area by-passing Britain under free marketing, necessitating greater imports of dollar copper to fill the gap.

The Stock Exchange

Domestic stocks have been the highlight of dealings on the London Stock Exchange during the past week, although the buying of both gilt-edged and industrials has been better than for some time. The continued strength of sterling against other currencies, particularly the dollar, and the latest Treasury returns, have helped sentiment in the gilt-edged section. The strength of the industrial market has been largely based on a rather optimistic view of the budget, together with the growing belief that there will be some tax relief possibly both for companies and private

individuals. The increased demand in both sections caused an acute shortage of stock and this led to some of the less rigid trusts and other companies turning to oil shares and first-class shipping issues. Both these sections showed appreciable improvements, although the more speculative issues were rather out of favour. Much of this buying has been at the expense of overseas issues of all kinds. The European section of the foreign bond market has naturally been out of favour because of the current political background. This factor has been reflected in Japanese issues where some liquidation has occurred. Mining shares have been left very much alone by local operators, but little in the way of reverses has been seen among them, because of South African support for gold shares and Continental support for diamonds and coppers. Tea shares, after beginning the period rather irregular, with rises in the majority, became dull later in the absence of any real interest, despite firmness of auction prices. Southern Indian issues have been relatively firm on the good showing of these growths at auctions.

Short term loan conditions on London's money market have been difficult in the past week. On all days calling was heavy and bill buying small, with the result that special buyers' assistance was required on several days to balance the books. There was, however, a slight easing of the position in the closing stages of the last day, but even so all requirements were not covered and special buyers were called in again. Applications for £190 million Treasury Bills totalled £285,280,000. Allotments were £190 million at the average rate of 47s. 11.47d. percent. This week £190 million will be offered. The Bank of England Return showed a decrease of about £18 million in note circulation to £1,455 million.

U.K. Textile Machinery Export Record

A new record for foreign earnings from exports of textile machinery made in Lancashire and Yorkshire engineering works, was established in 1952, when shipments were valued at over £50 million. The chief buyers of British-made textile plant were India with 19,762 tons, Brazil with 13,257 tons, Italy with 11,246 tons, and Pakistan with 10,774 tons. Board of Trade figures show that in December 1952 earnings from the export of textile plant were £4,620,932, bringing the annual total to £50,446,766. This exceeds the previous peak, recorded in 1951, by nearly £7,000,000. The quantity of textile machinery shipped abroad totalled 112,690 tons—the largest volume since 1929. This was an increase of over 7,000 tons compared with the 1951 total.

Germany Re-admitted to Shipping Chamber

The meeting of the International Chamber of Shipping has adopted a resolution urging that profits derived from sea transport services should be taxed only in the country of residence of the shipping undertaking. Renewed endeavours should be made to secure general acceptance of this principle, through unilateral legislation and reciprocal agreements. The meeting, attended by representatives of shipowners' organisations from 15 maritime countries, approved the list of the important shipping conventions which, in its view, should be included in the future peace treaty with Germany. Details of this list have not been disclosed. An application from the German shipowners' association for re-admission to the International Chamber of Shipping was considered and approved. The Indian delegation supported the principle of avoiding double taxation.

Turpentine and Rosin

Enquiry for turpentine and rosin was fairly active in the past week. A good portion of the improved turpentine demand came from canners who are anticipating spring requirements for the paint trade. The Savannah price of turpentine was slowly firming, with sales noted this week at 54 cents.

Japanese "Shadow Accounts"

Representatives of the Japanese Government and the Bank of England have agreed to abolish sterling "shadow accounts" in Japan. This was disclosed by the financial counsellor of Japan's Finance Ministry. As a consequence, Japan's sterling accounts will in future be only in London. He added that the agreement would enable the Japanese Government to allow Japanese Commercial Banks to hold some sterling exchange at their own risk, in the same way as they are at present holding dollar exchange. About one month will be required to complete preparations for implementing the agreement.

Hong Kong Gold Market

Bull support bolstered the Hong Kong free gold market at the beginning of the week, but values dipped following reported fresh arrivals in Macao and the easier trend of international prices. At lower levels bulls again entered the market on a small scale and succeeded in bolstering values by one point. Trading officially listed was 12,300 taels and 29,000 was privately transacted. Arrivals in Macao totalled 40,000 ozs. Unofficial exports are estimated at 18,500 taels. Forward contracts totalled 12,800 ozs. at \$40.75 per oz. Market sources estimated that approximately 10,000 taels of gold have been seized by the authorities since 7th November.

Goat Skins Rate Falls

The first series of public auctions this year, of tanned East Indian goat skins commenced on Tuesday. Enquiry was weak in the presence of a difficult market and prices declined generally. Average results came out 6d. to 15d. per pound below December rates. Poorer quality parcels found less competition and these registered the maximum decline. There was a fair attendance of buyers, but many Continental representatives were absent. Catalogue comprised 325,000 goat skins against 289,000 in December and 379,000 in October.

Coconut Oil Price Decline

Business was done in Indian nigerseed at £50 per ton c.i.f. and in British East African castorseed at £70 1/2 but were later quoted at £49 and £69 respectively. Business developed in palm kernels at 8,850 Belgian francs per ton for Belgian Congo, and 66,000 French francs for French West Africa. Coconut oil continued to decline, Straits being offered by resellers at £114 and Ceylon at £116. However, American oils were slightly better with groundnut oil at \$534 and soyabean oil at \$310 f.o.b.

Report on Inland Revenue

New record receipts from profits tax, stamp duties, income-tax and surtax contributed to an all-time peak level of net receipts by the Inland Revenue during 1951-52. At almost £2,375.5 million, the total net amount collected by the Inland Revenue during the year compared with the previous record level of £2,107.8 million collected in 1949-50, according to the annual report of the Commissioners of Inland Revenue for the year. The report shows that income-tax receipts amounted to £1,682.3 million, compared with £1,414.2 million in the previous year, and the previous record level of £1,436.7 million in 1949-50. Profits tax receipts amounted to £323.1 million, compared with £239.3 million in 1950-51, and the previous record level of £260.6 million reached in 1949-50. Net receipts from surtax during the year amounted to £129 million, against £120.6 million in the previous year, while stamp duties amounted to £61.5 million, against £54.8 million in the previous year, and the previous record of £56.6 million in 1948-49. On the other hand, Excess Profits Tax yielded no revenue; in fact, repayments during the year exceeded receipts by £5,882,086. An analysis contained in the report of assessments for income-tax made under Schedule D shows that these numbered 2,900,242 during the year 1950-51. Gross income of individuals, firms, companies, local authorities, etc., covered by Schedule D was assessed at £3,707.7 million. Gross true income after adjustments was £3,053.3 million. After allowing for depreciation allowances of £576 million, and for exemptions from tax of £31.5 million, the actual income taxable under Schedule D in 1950-51 amounted to £2,445.8 million. The net produce of tax amounted to £740.1 million.

Finance in India & Abroad

THE STRENGTH OF STERLING

NEW POST-DEVALUATION PEAK

STERLING last week continued the upward march that began late last year and after gaining a quarter of a cent in several days touched a new post-devaluation peak of \$2.81 11/16. It would probably have reached the upper limit of \$2.82 if the British control authorities had not intervened to buy dollars in order to keep the rate down. Sterling at \$2.82 would make a handsome window display for the sterling area but it would also give bears a chance to undertake speculative operations that gave hope of profit and no danger of loss. Meanwhile the purchases of dollars made for this and other reasons have all gone to swell the central dollar reserves as will be reflected in the January figures shortly to be released.

It will be remembered that there was a similar, but short-lived, advance by sterling just after last year's budget statement but that was due to temporary factors such as the closing of bear accounts after abatement of devaluation fears and optimism about the current balance of payments. Opinion in London is that the present rise is not due to these transient causes, though of course it cannot be predicted that the supply of dollars will remain in excess of demand for any length of time.

Commercial buying of dollars is not heavy just now and in any case is met by offerings under Mutual Aid. It is reported that there have been continued sales of dollars, both spot and forward, on Eastern account as well as liquidation of bear accounts in the United States. On the other hand, sterling is in demand on the Continent for purchases of raw materials. That more than evanescent causes are at work is shown by the firmness of forward sterling; for one to three months' sterling the premiums for the dollar are at their lowest levels for some time. Security sterling in New York has been steady at \$2.64 and other varieties of cheap sterling have similarly been buoyant.

MONEY STILL TIGHT IN
CALCUTTA

Wednesday, 28th January.

CONDITIONS have changed little since last week, though in addition to the steady demand for cotton and sugar finance it is reported that advances to jute mills have been increasing. Credit is tight in the interbank market where rates still quote 2 1/2 percent for overnight money and 2 1/2-3 percent for call money.

The exchange market has been dull with only a few small gunny bills passing. Remittance is in very small demand. The rupee-dollar rate has fallen to a new low, Rs. 47s-8. Sterling rates are unchanged at T.T. and O.D. 1s 5 3/32d; three months' sight bills 1s 6 1/2d; and four months' sight bills 1s 6 5/16d.

The response to the Rs. 1 crore offer of treasury bills was more modest this week, a total of Rs. 1,00,25,000 being tendered, but the rate obtained remained at Rs. 2-7-0 percent per annum. Tenders at Rs. 99-6-3 were accepted. Another Rs. 1 crore will be offered next week up to Tuesday in Bombay and Monday elsewhere. During the week ended 23rd January treasury bills for Rs. 2,50,00,000 were sold in favour of the Reserve Bank of India.

Silver ruled firm last week and the price rose from Rs. 154-7 to Rs. 158-12 on short-covering, followed by keen support and smaller arrivals. The ready rate was quoted at a premium of 4 annas. The price continued unchanged at 74d. in London and at 65 1/2 cents in New York.

Gold, however, was a shade quieter, the price falling from Rs. 90-4 to Rs. 88-12 on profit-taking. The free market price in Europe also moved down from \$38.15 to \$37.95 per ounce. The sovereign at Rs. 60-2 disclosed a fractional loss of 3 annas.

A fall of Rs. 5.15 crores in notes in circulation to Rs. 1,110.20 crores is the outstanding feature of the return of the Reserve Bank of India for the week ended 23rd January, but the total note issue at Rs. 1,131.82 crores discloses a fractional rise of Rs. 15 lakhs. Notes held in the Banking Department have increased by Rs. 5.30 crores to total Rs. 21.63 crores. In the Banking Department, deposits of the Government of India fell by Rs. 6.19 crores to Rs. 164.03 crores because of month-end disbursements, while other Government accounts improved by Rs. 4.77 crores to stand at Rs. 7.14 crores. Balances of commercial banks at Rs. 46.05 crores showed a decline of Rs. 98 lakhs over the week. Balances held abroad were down by Rs. 1.70 crores to Rs. 157.52 crores. The item of Government Treasury Bills declined from Rs. 19.59 crores to Rs. 14.89 crores as also ways and means advances by Rs. 90 lakhs to Rs. 3.62 crores. Other loans and advances fell from Rs. 14.14 crores to Rs. 13.56 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 98.93 lakhs. Investments were up by Rs. 51 lakhs to Rs. 99.79 crores.

The statement of the position of Scheduled Banks for the week ended 16th January, 1953, discloses Demand and Time Liabilities at Rs. 524.44 crores (Rs. 13.14 crores on account of borrowings from Banks) and Rs. 316.29 crores (Rs. 2.15 crores) compared with Rs. 521.40 crores (Rs. 11.70 crores),

and Rs. 315.24 crores (Rs. 1.87 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 78 lakhs and Rs. 1.97 crores to aggregate Rs. 34.66 crores and Rs. 44.99 crores, respectively. There is a drop of Rs. 5.06 crores in investments to Rs. 310.91 crores. Advances and bills discounted at Rs. 482.05 crores reveal a fall of Rs. 81 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.5 percent and 57.3 percent against 9.2 percent and 57.7 percent.

The return of the Imperial Bank of India for the week ended 16th January, 1953, shows a rise of Rs. 1.92 crores in total deposits to Rs. 208.01 crores. Investments in Government Securities and other authorised investments are down by Rs. 5.11 crores and Rs. 2.76 crores to Rs. 74.35 crores and Rs. 10.89 crores, respectively. Loans, cash credits and overdrafts have decreased by Rs. 86 lakhs to aggregate Rs. 108.36 crores, while bills discounted and purchased have increased by Rs. 11 lakhs to stand at Rs. 7.15 crores. Cash and balances are, in consequence, shown at Rs. 20.29 crores or Rs. 4.49 crores higher.

Net profits of the CENTRAL BANK OF INDIA, LTD., totalled Rs. 1,18,26,609-9-9 including Rs. 17,65,628-10-7 brought forward for the year ended 31st December, 1952. An ad-interim dividend at the rate of 6 percent absorbed Rs. 18,87,255-0-0. Bank's investments have been allocated Rs. 35,00,000-0-0, taxation Rs. 10,00,000-0-0 and bonus to staff Rs. 12,00,000-0-0. The directors have proposed to pay a final dividend at the rate of 8 percent, making 14 percent per annum for the year, leaving a carry-forward of Rs. 17,23,014-9-0.

The working of the PUNJAB NATIONAL BANK LTD., resulted in a profit of Rs. 34,12,477-8-1 for the year ended 31st December, 1952. Bonus to staff absorbed Rs. 5,48,462-3-3, charity Rs. 42,256-4-4 and scaling down of Pakistan assets in view of displaced persons (Debits Adjustments) Act, 1951 Rs. 7,92,275-6-6. The total balance available for appropriation is consequently Rs. 25,63,312-8-11, including Rs. 5,33,828-14-11 brought in. Provision for income-tax absorbed Rs. 10,00,000 and an ad-interim dividend at 6 percent per annum Rs. 2,62,500, leaving a balance of Rs. 13,00,812-8-11 to be further appropriated.

The net profit of the INDIAN BANK LIMITED amounted to Rs. 15,10,200, including the amount brought forward from the previous year for the year ended 31st December, 1952. An ad-interim dividend at the rate of 5 percent and a bonus of 1% absorbed Rs. 3,23,000. The directors have proposed to recommend a final dividend of 5% and a bonus of 1%, making 12% for the year. Provision for taxes absorbs Rs. 3,90,000, reserve fund Rs. 2,50,000, sinking fund Rs. 1,00,000 and buildings account Rs. 10,000, leaving a carry-forward Rs. 1,04,200.

LONDON FINANCIAL LETTER

BIG BUDGETARY DEFICIT LIKELY:
NEED TO BOOST EXPORTS

THERE are two sources of anxiety in London financial circles in this first month of 1953. One is the slow progress in eliminating the budgetary deficit; and the other is the slow progress—indeed, lack of progress—in expanding exports. The two problems converge on the budget. By the end of December, with three-quarters of the fiscal year expired, the overall budgetary deficit had reached the huge total of £952 million. An approximate balance by the end of March was envisaged when Mr. Butler framed the budget. Revenue flows plentifully in the final quarter; but it would have to flow at a rate providing a surplus in the quarter twice as large as that of the same quarter last year if the budgeted esti-

STAND SOLIDLY BY INDIAN MERCHANT MARINE

mate of approximate balance in the full year were to be realised. Despite the economy of rearmament, there are supplementary expenditure estimates due late in the quarter, and if these are substantial the year will inevitably close with a deficit of hundreds of millions.

The time could scarcely be less opportune for renewal of inflationary pressures, for the whole programme for stabilising the external payments account and building up a current surplus is in the balance. The visible trade deficit was reduced last year from £1,197 million to £788 million, but only by a reduction of imports by 11 percent. Improvement cannot continue by this method; yet exports, which were scheduled to expand last year but in fact contracted slightly, have failed recently even to maintain the recovery apparent in the autumn. Inflation has not noticeably asserted itself, and it is uncertain how much adverse effect on exports can be attributed to the Government's over-expanding. The banking system can claim credit for having faithfully enforced restrictions on inessential borrowing, while it has provided short-term capital freely for essential purposes. But governmental inflation is nullifying the effects of this stringent policy: bank credit is inevitably tending to expand again, and even the rise in interest rates has not been firmly held. Unless the authorities regain control of financial policy, and use that policy purposefully to restrain demands, reduce costs and promote useful investment, there is little hope of achieving the planned objectives for exports in increasingly competitive conditions.

Good Year for the Banks

The banks' profit statements for 1952 show that the new monetary policy has been decidedly profitable. The aggregate increase in the published net profits of the "Big Seven" London clearing banks amounted to about 7 percent; and it is clear from the manner of treating depreciation of assets that manipulation of inner reserves did not yield the increase. In the middle of the year, when the rise in interest rates had caused a disturbing fall in the value of investments, it seemed that the current benefits of higher interest rates were completely nullified. But in the second half-year the gilt-edged market recovered substantially, while the

banks derived full benefit from the increase in income from a total of advances that was not materially changed, and not inconsiderable benefit from the transfer of low-yielding liquid assets into higher-yielding investments—an essential factor in the tightening of the credit system. The increase in profits was expected. What was not expected was that one big bank, the National Provincial, would raise its dividend to shareholders. Bank dividends had been unchanged for a generation, during which time, of course, their value in terms of purchasing power had diminished. Customers, however, are paying relatively high charges for the services of the banks, and some of them have already put forward their claim to be among the first to benefit from the rise in profits.

IMPERIAL BANK'S MANAGING DIRECTOR

We understand that Mr. S. K. Handoo, Deputy Managing Director, Imperial Bank of India, has been appointed to succeed Sir Roderick Chisholm as Managing Director, when the latter retires in September next. Mr. T. S. Raghavachari, Inspector, Central Office, Calcutta, will succeed Mr. S. K. Handoo as Deputy Managing Director.

Saint Frères Circular Looms installed in Jute Industries Ltd. factory, DUNDEE

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and in old, sometimes working alongside flat looms; in the highly developed industries of Scotland, France and Italy; in the more recently established mills of South Africa and the Belgian Congo, where only unskilled labour is available.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

REPLACING A COP.—Immediately one of the cops runs out the loom stops automatically. All the shuttles emerge from the shed and lie on the warp threads. New cops are placed in each shuttle and the loom is restarted. By replenishing all the shuttles at once much time is saved. The butt-ends of the cops left over are, of course, not wasted.

DESPITE an exterior which was often unpromisingly dour, John Sutherland is best described as an enthusiast whose main passion was his work. A man who shunned society, save on those rare and alas increasingly infrequent occasions when he appeared as a singer of surprising range and wit, he found his main interests in the problems of industrial administration which developed so rapidly in the Associations of the Bengal Chamber with whom his work lay from the early thirties. Those years saw a surprising growth of collective organisation on the part of the main Indian industries such as tea, jute and mining and Sutherland found there a field where his drive and capacity were exactly what were required. The depression in the tea industry in the late twenties and early thirties led to extensive schemes of reorganisation and development, and the part which Sutherland played in the working of the Indian Tea Control Act, the scheme for the regulation of production and the constitution of the Indian Tea Market Expansion Board, was perhaps only appreciated by those numerous Chairmen and Committees whom he served. His great love, of course, was the mills, and his contributions to the administration of the Indian Jute Mills Association when the present Working Time Agreement was being arranged and the Association reconstituted, and later during the war when the industry made so notable a contribution to the national effort, were of a very personal nature. He accomplished all this in the face of ill health and physical suffering which would have daunted most. Before coming to India in 1929 he had been involved in a serious motor accident, the results of which never left him and which necessitated frequent hospital treatment. Lesser men might have been soured by such an experience but one of his most attractive characteristics was his jovial good humour. He had a great capacity for establishing friendly relationships, and his personal kindnesses were as numerous as they were unpublicised. But he was also a "bonnie fechter" whose words, either written or spoken, were always vigorous and could on occasion have more than the usual bite. The loss to the Chamber of an outstanding and senior servant is a heavy one and the Press—in particular, may I say, this journal with whom he had frequent and intimate contacts—will miss one who was consistently frank and helpful.

Khwaja Nazimuddin's gracious speech at a Republic Day banquet in Karachi seemed to have more earnestness about it than many of the protestations of friendship that have been exchanged in the last few years, and I think it is significant that he made it with a letter from Mr. Nehru in his pocket. Whatever its sincerity, it looked too much like a real olive branch to be met with recriminations of the "you-started-it" variety. For a time it appeared that differences of opinion over Pakistan's possible participation in a Middle East defence organisation would add yet another log to the bonfire of Indo-Pakistan unfriendliness, but in reality that issue should be precisely the means to set current disagreements in proper perspective, for it brings up the whole question of safeguarding the new national independence of both countries. The rights and wrongs of theoretical neutrality and entangling alliances take second place to the overriding importance of the defence of national sovereignty in a world threatened by a group of powers that (when it suits them) deride national sovereignty as a bourgeois myth. Obviously the best way to guard the independence of both countries is to co-operate in common defence measures, and the surest way to lose it is to prolong conflict over local issues. A defence pact with India would be of more value to Pakistan than a line-up with any number of ramshackle Arab powers, while India's

A DITCHER'S DIARY

neutrality on wider issues will be precarious as long as she has a potential enemy on her doorstep.

A "canine passenger", for your information, is any ordinary dog that travels on the liner *United States*. I discover this in a fetching little booklet put out for the owners of dogs that go down to the sea in that particular ship, which advertises the following conveniences: "The kennels are located on the sports deck. They provide 20 separate air-conditioned cabins with wire mesh doors, each equipped with a folding bed, clean blankets and fresh water. Adjoining is an exercise run". Dear, dear, no television.

Lord Balfour of Burleigh, parts of whose chairman's address to Lloyds Bank are printed in this issue of *Capital*, there takes up a point that has occupied all the bank chairmen making their statements at this time: that monetary policy, for all its undoubted usefulness, is ineffective unless backed by an equally austere budgetary policy. He quite fairly takes Mr Butler to task for making a show of firm intentions when he raised the rate of interest but then producing a "soft" budget last April for fear that the first steps toward dearer money would bring on a deflationary cataclysm. Mr Butler admittedly had bad luck in that he was framing his budget just when fears of trade recession were at their height and he had to make concessions to pessimists who have since been proven wrong, but Lord Balfour points out that "the mechanism of inflation embodies, as it were, a thermostatic control to ensure that as soon as the temperature begins to fall fresh fuel will be added to the flames in the form of a budget deficit." Half-measures, therefore, are worse than useless and the chairman of Lloyds feels that "this year there can be no easy way out." Drastic economies will be required and these will depend on major changes of policy, "however unpalatable"; any tax concessions thereby made possible should go in the first place to industry. Whether the Chancellor is now girding up his loins for a tough budget along these lines we do not know, but there is great truth in Lord Balfour's assertion that "in a country that still spends nearly three times as much on drink, tobacco and amusements as on rent it is absurd to suggest that the mass of the people would suffer real hardship if they had to pay more as consumers for various benefits now provided 'free' or at subsidised prices, and paid less for them as tax-payers."

Bengal has contributed many gifted men to Indian public life but very few whose talents bent toward the foundation of business empires in the way that Rajasthan's and Bombay's have during this century. Of those few undoubtedly the most eminent was Nalini Ranjan Sarker whose death at 70 last Sunday came after two years of retirement from active work. Like so many distinguished Bengalis he came from East Bengal but unlike them he had very little formal education; this, and the peculiar direction his leading talents took, made his political success remarkable enough without the added circumstances that he was several times a rebel from the Congress fold and was inept at rhetoric in an age that produced much of it. The full list of his achievements is a long one and took up several columns of the Press last Monday but perhaps his most enduring were the expansion of the Hindustan Co-operative Insurance Society, which he rescued from the idealist origins given

it by those great but unbusinesslike figures, Surendra Nath Tagore and Deshbandhu C. R. Das, and his second spell as Finance Minister of this State. The latter task was undertaken at a most difficult time and perhaps only Dr. B. C. Roy, with whom he worked in close and quiet alliance, could tell us how extensive was Nalini Sarker's contribution to the reorganisation of the finances of the truncated province in the troubled years between 1948 and 1951.

The Commons will tomorrow debate the Fourth Commandment. Though I have no great hopes for the private member's Bill seeking to reform the law governing observance of the Sabbath, many will agree that State enforcement of the dreary English Sunday is quite out of tune with the spirit of the times and those who wish to follow their conscience in the matter should be deprived of the power to make others do likewise. Even if repeal is not granted, the laws on the Sabbath require rationalisation for some of them are centuries old and have such ludicrous results as permitting a game of cricket between teams from the same parish but making it an offence to play a match against visitors from a neighbouring parish. The Bill relates only to England, so strong Sabbatarianism in other parts of the islands could continue to please themselves. Foreigners find the dull Sunday particularly galling, though I agree laws should not be amended to meet their tastes even when thousands of them are invited to visit the kingdom for the Coronation, but now that the welfare state requires work on only five days of the week there does not seem to be much sense in drawing distinctions between the other two. Hopes of reasonable action are limited by the existence of the Lord's Day Observance Society which, in common with all societies for minding other people's business, can usually muster more support than their scattered opponents.

Posting a late letter at a Calcutta post office the other evening I had to spend some time in search of the appliance to wet the back of my stamps, and was then dismayed by its sloppy and impractical appearance; the incident brought to mind James Bones's account in the *Manchester Guardian* of the origins of the salubrious sponge pads that adorn British post office counters. The credit for the innovation goes to a post office cat who used to sit on the counter of Charing Cross post office contemplating visitors with her tongue out. A patron, about to lick a stamp, found the temptation quite irresistible and, in his words, "the deed was done in a moment and the letter stamped." The incident enjoyed the publicity of a paragraph in an evening paper under the heading "Post Office Novelty. Stamp-licking Cat of Charing Cross." Thousands came to see her. Medical experts dilated on the suitability of cats' tongues for licking stamps, and societies pre-occupied with cruelty to animals protested at the unsuitability of stamps for being licked by cats' tongues. The Post Office introduced sponge pads. Meanwhile the poor bewildered cat disappeared in the face of so much attention, being "driven half mad by the efforts of the public to get her to put out her tongue."

Ike's uncertainty about who will in fact be his next Ambassador to India appears to have led a prominent Delhi newspaper to rename the new President: "Attempts have been renewed, it is understood, to retain Mr. Chester Bowles as U.S. Ambassador in India following the failure of Mr. Eisenhower to secure approval of the nomination of Mr. Peterson."—Democrat papers please copy.

Company Meetings

THE ASSOCIATED CEMENT COMPANIES LTD.

MR. KHATAU ON PROBLEMS OF REPLACEMENT

Speaking at the Sixteenth Annual General Meeting of the Associated Cement Companies Ltd., on Friday, the 23rd January, Mr. Dharamsey M. Khatau, the Chairman, said:

"It will be seen from the Statement of Accounts that a sum of Rs. 50 lakhs has been set aside from the profits made this year as Plant Reinvestment Reserve. This reserve is necessary for providing the additional finance required for replacing old machinery and equipment as and when they become worn out. I have in previous years referred to the high prices of new machinery and to the increasing price gap between the cost of the originally installed machine and the machine which has to take its place when the former has completed its useful life. The first duty of industry is to maintain the operation of its plant at the highest peak of mechanical and organisational efficiency, and naturally the first charge that should legitimately be made against the trading profits of a company is the setting aside of adequate finance to enable this peak of mechanical efficiency to be maintained. At present, however, depreciation for taxation purposes is still related to the originally installed costs of machinery rather than the present-day replacement costs, while the appropriation to Plant Reinvestment Reserve has to be met from the profits after they have been taxed. The attention of the Government has been drawn to this anomalous position but nothing has yet been done. I submit that if industry is to maintain, and increase its present level of production and efficiency, then Government must give this matter their immediate and serious consideration. Unless there is some easing in the present high level of taxation, and a realistic approach to this vital question of making available the requisite finances to replace old and worn out machines with modern and up-to-date ones, then it is difficult to see how industry can be expected to play the part which it is anxious and eager to do in the development and progress of our country."

Production and Despatches

Reviewing the rapid progress of the cement industry in India and A.C.C.'s contribution towards it, the Chairman said, "the total cement production in India has more than doubled during this period—from 14.8 lakh tons in the year 1947-48 to nearly 34 lakh tons during 1951-52. In this rapid growth of the industry, your Company has naturally played a prominent part. Your production, excluding our factories in Pakistan, but including the Bhupendra factory, our subsidiary has risen from 12.91 lakh tons to 20.17 lakh tons during the same period. In fact, it is in a large measure due to your Company's policy of continuous expansion that the industry is to-day able to meet the demands made on it by the Government and the public."

Referring to the pre-eminent position cement enjoys among building materials the Chairman continued, "I consider that the demand for cement in India is likely to go on increasing. Large quantities of cement will be required for the development projects included in the Five-Year Plan. Moreover, with the increase in population and the development of a higher standard of life in the country there will be a constant demand for new and better houses. It is the intention and the determination of your Company to achieve the target set in the Five-Year Plan especially in so far as it deals with the requirement of cement."

Modernisation and Expansion

"In order to provide for the increased requirements of cement which I have enumerated above, your Company has planned a programme of rehabilitation, modernisation and expansion to be implemented over a period of ten years. This programme will be implemented by stages, each stage having been determined in order to achieve a definite objective, and in accordance with the finances which will be available to us. I am glad to be able to report to you that during the past year, we have spent Rs. 1.49 crores as an initial start to this programme, and that as a result our effective capacity has increased from 21.95 lakh tons to 24.52 lakh tons."

The Chairman then referred to the successful conclusion of the negotiations with the Government of India regarding the new cement factory at Sindri and said that this new Works, when finally completed will add another 2 lakh tons to the A.C.C.'s rated capacity. "With the completion of this programme of modernisation, plant rehabilitation and expansion we hope to raise our capacity to 31.3 lakh tons by 1960-61."

The Chairman then referred to the Five-Year Plan and said "the Plan is essentially a democratic approach to the solution of the complex economic

problems confronting the country, and a well thought-out effort towards building a new economic structure on a sound basis. It is in this perspective that we should view this plan for national development and work whole-heartedly towards fulfilment of the targets set by it."

Cement Prices

Coming to cement prices the Chairman said: "The price increase granted by the Government of India to compensate for the steep rise in the cost of packing materials was operative throughout the year 1951-52. Recently, following the downward trend in the jute market, the Central Government revised the price chargeable to consumers for packing materials with effect from 1st December, 1952. This has resulted in a substantial loss to the Company on the large quantities of bags which are normally held in stock. Further Government has not taken into consideration the increase in cost which has recently taken place in the manufacture of cement."

"In spite of increased production and despatches and despite all efforts of the management to keep the cost of production in check, there has been a further rise this year in the manufacturing cost of cement, on account of factors totally beyond our control. The prices of raw materials and consumable stores and spares have substantially increased. The Railway freight on coal has gone up by about 45% since April 1952, and we estimate that the burden of this increase alone is of the order of Rs. 38 lakhs per annum at our present level of production. Also during last few years, fuel oil has registered an increase of over 100%. There has also been an upward revision in the scale of basic wages and dearness allowances by about 12 per cent. As these increases in costs affect the whole industry, all the different interests in the industry have been obliged to approach Government for a suitable adjustment in the selling price of cement and the question has been referred by Government to the Tariff Commission for enquiry."

Labour Relations and Welfare

"During the year under review welfare activities were undertaken on the usual scale. Your Company's policy of providing modern amenities such as houses, hospitals, canteens, clubs for its employees, is continuing, and their maintenance costs your Company considerable sums of money each year. The true measure of all these amenities to workers and your Company's concern for their welfare is best reflected in the increase in the per capita income of our workers and in the general improvement in their living standards. Judged purely in terms of wages earned by our workers, you will be happy to learn that there has been an increase of over 24% in the minimum average earnings per month of unskilled workers in your factories between the years 1949-50 and 1951-52."

"Unfortunately, our labour relations during the year, could not be described as altogether satisfactory. We had our share of labour disputes, strikes, and adjudications. There are however signs of improvement in industrial relations in the country, —the shift of emphasis from legislative action to voluntary settlement in industrial disputes and the correlation of workers' responsibilities to benefits secured by them. If workers want higher wages and greater benefits and welfare measures, they must also recognise that their Company cannot give these in the shape of increased production. It should also be borne in mind that the advantage of every economy, invention, new tool, or capital expenditure cannot be claimed exclusively for the benefit of the labour but has to be shared by the various contributing factors, such as investors, management, workers and the consumers. Let us hope that the will to work hard and replace mere material incentives, so that the prosperity of our country and the consequential rise in our national standard of living may be attained. Your Company has all along advocated this progressive labour policy and it is heartening to note that we have in our Union Labour Minister a champion of voluntary settlement of disputes."

The Chairman then announced that "the Board has recommended this year the payment of a bonus equivalent to three months' basic earnings to all its employees and concluded by referring to the Company's appreciation of the loyalty and efficiency of the staff and operatives."

The Report and the Audited Statement of Accounts for the year ended 31st July, 1952, were then adopted.

LLOYDS BANK LIMITED

LORD BALFOUR OF BURLEIGH'S STATEMENT

The annual general meeting of Lloyds Bank Limited will be held on February 13 in London.

In his statement accompanying the report and balance sheet the Chairman, The Rt. Hon. Lord Balfour of Burleigh, D.C.L., D.L., states that the profit for 1952 is £148,807 higher at £1,964,605. Increased earnings have been to an appreciable extent offset by higher running expenses and by the increase in the rate of interest allowed on deposits. In view of the uncertain economic outlook and the wide fluctuations which we have experienced in the gilt-edged market, it has been considered desirable and prudent to strengthen the external reserves of the Bank. A General Reserve which has therefore been allocated to the Reserve fund, together with the Share Premium Account, will make the total Reserve Fund £16,000,000. Current, Deposit and other Accounts at £1,169 millions show a reduction of less than £2 millions.

Loans and Advances have decreased by £32 millions, substantial increases in advances to many industries essential to the well-being of the community having been more than considerably offset by reductions in other directions.

India, Pakistan and Burma

The year 1952 proved a difficult one for our Eastern Branches as a result of the heavy fall in price of the primary products upon the export of which both India and Pakistan so largely depend. Pakistan suffered particularly through the lack of demand for her large jute and cotton crops, which made it necessary for her to impose stringent import restrictions. The reduced tempo of business activity was naturally reflected in reduced demand for the services of the Exchange Banks; nevertheless our Branches in both India and Pakistan have fully maintained their position.

There is little to report about Burma; politically the country is more settled, but our business in Rangoon, although maintained, shows little expansion. Once again I should like to offer my warm thanks to the officials and staff of all our Branches in East for the standard of service they have maintained during a year of more than usually difficult conditions.

Important Ground Gained

Recalling the critical state of our affairs a year ago, Lord Balfour of Burleigh observes, we must be thankful for the progress made during 1952. Important ground has been gained and there is, moreover, no sign of its being lost again in the immediate future. Unfortunately, the evidence suggests that in the recovery of the past year far too large a part has been played by purely stop-gap expedients and a favourable change in world conditions, far too little by fundamental changes of policy.

There can be no doubt, to my mind, that the raising of Bank Rate dealt a psychological shock to the domestic public that could not have been administered half so effectively in any other way. This alone helped to dissipate a great deal of inflationary froth, dampened down the demand for bank accommodation for the less essential purposes, and so made it far easier for the banks to restrict its supply. Moreover, this move convinced overseas opinion that nothing else could have been done of the new government's determination to put our financial house in order, and so helped to break the speculative movement against sterling in world markets.

A great deal of the good done by monetary policy has so far been undone by government spending. There can be no hope of keeping a tight rein on the supply of money unless the Government is able to keep its own finances in order. If the new monetary policy is to fulfil its purpose, it requires the support of a strong budgetary policy; yet it will be much more difficult this year to produce a balanced budget.

Our greatest need is to speed up the production of those capital goods—mainly engineering products—so urgently required both for export and for the modernisation of our own factories. To promote the necessary shift of resources and to create the necessary saving are therefore the supreme tasks of financial policy at this juncture.

There was a perceptible slackening of inflationary pressures during the spring and summer. In the latter months of the year, however, the picture was rather different. Consumer expenditure seems to be running at fully the same level as a year ago, the consumer trades are picking up again and manpower is being moved back into the same employments from which it was released earlier in the year.

The thesis that inflation has now been definitely mastered cannot be squared with some other features of the situation, such as the severe limitation of imports, the long delays still imposed on some of our overseas customers. Most significant of all is the admitted fact that a wages spiral is still a real danger. So long as that is true, the country must indeed feel of responsibility exhibited by the leaders of the trade union movement. That such restraint is necessary, however, is itself proof of the persistence of inflation. If we are to put our economy in proper shape, but by our own efforts alone, the picture must be one of large, no task can be more urgent than to rebuild the exchange reserves of the sterling area, as a prelude to the restoration of convertibility, and for this a capital operation of some kind is indispensable.

Essentials for Prosperity

Our vital need now is to rebuild our financial and economic strength so that we may with certainty pay our way abroad and earn our keep, and that can only be through increased and more efficient production of the right things.

But as long as our solvency is menaced by excessive expenditure, as long as our industry is strangled and our people remain unaware that they are now sacrificing the future to the present, so long will our social services, including the maintenance of our standard of living, including the maintenance of our social services, continue to be in mortal danger.

"For future prosperity," Lord Balfour of Burleigh concludes, "some painful decisions are now necessary. The question is whether modern democratic party leaders dare have the strength of purpose to take them. I am optimistic to believe that the sound sense of the British people would accept any required temporary sacrifice the necessity for which they could be made to understand. And only so can our country's future be made secure."

Stocks and Shares

LIMITED TURNOVER IN SHORT TRADING WEEK

CONVERSION LOAN IN DEMAND: RALLIS ORDINARY LOSE GROUND ON NO-DIVIDEND NEWS

Wednesday Evening.

IDLE conditions have continued in the Calcutta Stock Exchange and the holidays which interrupted trading on Friday last week and Monday this week did little to help matters. Turnover remains limited and the daily list of transactions is very short. Heavy engineering and selected tea and miscellaneous shares have displayed an underlying firmness.

With the Central Budget approaching, investors appear to have adopted a cautious attitude and it is unlikely that in the intervening period prices will show much variation. Meanwhile the technical position of the market is sound and attempts by bears to hammer speculative issues are unsuccessful.

When it was learnt that no dividend has been recommended on Rallis ordinary shares the price reacted from Rs. 73 to Rs. 66, but recovered to close at Rs. 70 with buyers.

The moderate improvement that was reported last week in Government Securities was maintained and during the latter half of the week under review, prices were steady although the volume of business reported was still restricted by shortage of scrip. The 3% Conversion Loan was in keen demand and the price improved from Rs. 82-13 to Rs. 83-2, at which rate there were further buyers. On the other hand, 3% Non-terminable Paper closed 2 annas easier at Rs. 83-4. In short-dateds, 3% Loan 1953-55 continued in demand at Rs. 100-1. During the earlier part of the week, there were sellers of 3% Loan 1957 at Rs. 98-7, at which rate buyers later appeared, and the price was unchanged at Rs. 98-6 with sellers rather than buyers. Among medium-dated loans, there was steady enquiry for 4% 1960-70 with the price moving up to Rs. 100-8. On the approach of the interest date, the 2½% 1961 issue met with enquiry and the price improved to Rs. 90-6. Quotations of other medium-dated issues were unchanged. In the long-dated section, there was nibbling enquiry for 3% 1966-68 at Rs. 90-8, and 3% 1970-75 was supported at Rs. 88-8.

Little or no business was reported in State Loans, although the demand for 4% issues maturing in 1964 continued unabated, probably due to the fact that the half-yearly interest falls due for payment on 1st February, 1953.

There was some demand for selected jute and miscellaneous Preference shares, but buyers were not prepared to raise their limits. Among Jutes, the only transaction reported was in Hooghly at Rs. 14-2. In the miscellaneous group, a small lot of Bharat Collieries changed hands at Rs. 49 and British India Corporation were done at Rs. 146. Indian Iron & Steel were scarce at Rs. 107-8, and Martin Burns were placed at Rs. 101-8. Shaw Wallace (which are now an "approved" investment under the Insurance Act) were crossed at Rs. 84, and Rallis came to hand at the same rate.

Among Bank shares, Imperial Bank Fully-Paid and Contributory were slightly easier at Rs. 1710 and Rs. 418. United Commercial Bank changed hands at Rs. 34-8, and United Bank of India (Rs. 10 paid-up) were marked at Rs. 3-15.

Although no business was reported in Railway shares there was an unsatisfied demand for issues on which the interest is guaranteed by the Government of India.

Once again Elgin Mills provided the only feature in the Cotton section with the price moving up to Rs. 16-8. Basanti were quoted at Rs. 3-14 and New Victoria were unchanged at Rs. 1-5. Business was done in Cawnpore Textiles at Rs. 8-4 and Kesoram at Rs. 17-5.

Little or no interest was shown in coal shares and business was limited. Burrakur fluctuated narrowly within 2 annas, to close at Rs. 10-1. Bengal were marked down today from Rs. 510 to Rs. 502. Bharat Collieries were done at Rs. 6-1, while East Indian were fairly steady at Rs. 20-14. Equitable and New Beerboom changed hands at Rs. 38-8 and Rs. 18-7.

Jute shares continued to lag behind the rest of the market, with Howrah fluctuating narrowly around Rs. 22-4, to close at Rs. 22-5. Shares of companies in the Andrew Yule group of mills remained comparatively steady. The following chart illustrates the trend of prices in this section:

	Opening January, 22nd.	Closing January, 28th.
Agarpara	Rs. 19-6	Rs. 19-0
Alliance	155-0	150-0
Barnagore	149-0	146-0
Birla	35-0	34-0
Kelvin	220-0	215-0
Nuddea	44-8	43-8
Standard	154-0	149-0

IMPROVEMENT IN TERMS OF
TRADE DURING 1952STEEL OUTPUT EXCEEDS TARGET
(FROM OUR OWN CORRESPONDENT)

24th January.
THE detailed figures of Britain's overseas trade for 1952 justify the satisfaction with which the preliminary figures were received, for they confirm that the import restrictions have not had quite so adverse an effect on exports as was originally anticipated. They also show, however, that a big part in the recovery has been played by the favourable movement in the terms of trade. In this connection the Board of Trade index for December (1950=100) stands at the same level as in November, namely 89, which compares with 97 in December 1951. Over the year import prices have fallen from 103 to 92, and export prices from 106 to 103. On the other hand, 1952 is shown as being the first post-war year in which exports have declined. The 1951 rise, it is true, was almost wholly due to price increases. In 1952 the decline in value was comparatively small, but it also represented a 6 per cent fall in volume. These figures confirm the difficulties now facing British exporters. These are shown in the detailed returns to apply mainly to consumer goods, for the demand for capital goods has been well maintained. Not unnaturally, the future trend of prices in occasional speculation in business circles, particularly as the latest details of wholesale prices published in the Board of Trade Journal disclose that there was a small rise in December—the first for twelve months. This was occasioned by higher prices paid for such commodities as rubber, hides and skins, jute, wool, lead, some of which at least are now lower, while one or two other commodities have continued to decline. Generally speaking, therefore, it is felt that December's small rise will not be maintained and that commodity prices will remain stable for as far ahead as it is sensible to look under prevailing conditions.

Steel Production Prospects

Even more encouraging to industry is the hope of the British Iron and Steel Federation that the steel shortage should be over by the end of this year. Its annual survey shows that 1952 output actually exceeded the 16 million tons which had been hoped for, while pig iron production rose by a million tons to 10,728,000 tons. Looking forward, the annual review sees "no reason why any desirable programmes for exports or capital investment should be limited by shortage of steel. Supplies have been expanding rapidly in recent months and a further considerable increase is in prospect." The figure of this increase is placed at least two million ingot tons this year. Three reasons are given for this optimistic forecast. Firstly, the industry is now reaping the benefits of the first post-war development plan, as the increased pig iron capacity shows; secondly, as steel supplies rise so will more scrap become available; and thirdly, there will be no need to replenish as there was last year, stocks both of steel-making materials and of steel, for it is shown that in 1952, when steel was being rationed by Government allocation, at least 500,000 tons were added to stocks. The industry has set itself a 1953 target of 17½ million tons, which it is hoped will allow a reduction in imports and a moderate increase in exports.

Deadlock on Coal

Too much optimism, however, is as bad as none at all. A corrective is provided by the coal outlook, to which the last few despatches have made special reference. The deadlock between the National Union of Mineworkers, which looked like being resolved as a result of a six-hour discussion on Wednesday, is now complete. The differences between the two have been narrowed very considerably. The miners' original request was for a rise in pay of 2s. 6d. per shift for about 400,000 day-wage men in the pits. The National Coal Board offered a rise of 1s. per shift to 150,000 of them who now draw the minimum rates provided output is increased and the Saturday working arrangement is accepted for next winter. The N. U. M. finally agreed to recommend acceptance of 1s. per shift to the 400,000 and offered consultation on improving output, while the N. C. B. withdrew its conditions and offered 8d. a shift rise to the 400,000 men or 1s. per shift to the 150,000. From those positions neither side would move any nearer, so a special meeting of colliery representatives has been called for next Tuesday to confirm and support the N. U. M. Executive's outright rejection of the 8d. a shift rise, defer consideration of whether or not to recommend the miners to continue Saturday working after the present agreement expires on 30th April, and to seek a meeting with representatives of the Government to resolve the deadlock. The Board, meantime, is also understood to be approaching the Government, for it is expected that to cover its 1952 loss of about £10 million the price of coal will have to be increased by 7s. a ton soon, and acceptance of the N. U. M. proposal would involve a further increase of 3d. a ton. The resolving of this deadlock looks like being the most urgent problem Mr. Churchill will face on his return from his holiday in Jamaica.

Debate on Supplementary Estimates

In Parliament the week has been comparatively unexciting, but promises to be livelier next week when supplementary estimates of £164 million, details of which were published last Wednesday,

will be debated on Monday and Tuesday, while Wednesday and Thursday will be the first two days of the Committee stage of the Iron and Steel Bill, which Mr. Sandys, the Minister of Supply, has amended to an extent sufficient to obviate the threatened opposition from the back-benchers of his own party. The Bill's impact on foundries and engineering works has been softened, while the Steel Board's powers, particularly in regard to inspection of private plants, has been reduced. The Opposition, of course, will fight the Bill line by line. On the other hand, the Government's confidence in itself is obviously growing, as is evident from the politically dangerous decisions which it has announced this week in giving effect to its long-range economic plans and the manner in which Mr. Butler faced a barrage of questions on the cost of living when Parliament reassembled.

More Food Decontrol

A major step towards restoring something approaching free trade in food was the decision to withdraw the subsidies on flour and other cereals with effect from 1st April and to end all controls on feeding stuffs for animals after this year's harvest. After 14 years the grain trade returns to private hands. A whiter loaf will now be available, but it will cost not less than 10d. for a 1½ lb. loaf compared with 7½d. for the present national loaf of the same weight. As a safeguard for the poor, bakers will have to stock the latter at the same price and will be recompensed by an increased baking subsidy for the official loaf. Flour will be unsubsidised and will rise in price by about 2d. per lb. With regard to the decision on feeding stuffs, the Government hopes for increases in pig production and egg supplies, as well as the growing of more home-produced feeding stuffs, but the farmers are uncertain. Another unpopular decision is that the charge to parents for school meals will be increased from 7d. to 9d. from 1st March, against their actual cost to the State of 1s. 5½d., again with certain safeguards to avoid hardship.

The London Fog

It will surely not be long before someone essays the task of working out the economics of fog. The figures will certainly prove staggering. The matter has been raised in the House of Commons, which met again last Tuesday after the Christmas recess, but only in connection with the remarkable rise in mortality figures during December which was attributable to this cause. They jumped to something like 4,000, mainly among persons suffering from lung ailments, and the Government was asked what it meant to do about it. Unfortunately, there does not seem to be much that can be done, though the scientists are hard at work—not to combat the natural phenomena, but to eliminate the admixture of smoke with fog to produce what is aptly termed "smog" and is certainly quite as ugly as its name implies. We have been free of the "killer" fog of December since then, but the cleaner type has persisted in varying degrees of density, bringing most forms of transport, and especially air, sea and road traffic, to a virtual standstill, often for days on end. Travellers to and from the East have been seriously inconvenienced, particularly in the larger passenger liners which have been unable to leave or enter the Thames, but their difficulties are small by comparison with the enormous losses being incurred by transport companies, while the disorganisation of business as a whole must be causing even bigger losses. Among the worst hit are undoubtedly the air lines, who are agitating strongly for the use of the wartime "Fido" apparatus so as at least to permit arrivals and departures from the principal airport.

Brevities

Mr. Aneurin Bevan is leaving week after next for a month's visit to India in response to an invitation which was made to him when he was Minister of Health in the Labour Government by Rajkumari Amrit Kaur with Mr. Nehru's approval and which has since been repeated. He has Mr. Attlee's permission for his absence, but there is some speculation in Westminster as to whether his absence will extend over the coming debates on the Government's Defence programme.

The discovery of a new kind of mineral very rich in the radio-active elements thorium and uranium was announced to the Mineralogical Society the other night by Mr. S. H. U. Bowie and Mr. J. E. T. Horne, of the Geological Survey and Museum, Department of Scientific and Industrial Research. Recognition of a new mineral species is a rare event. The mineral contains 31 percent thorium oxide and 4 percent uranium oxide. It has been named cheralite, from Cheral, the ancient name of the State of Travancore, where it was found. The deposit of the mineral is, unfortunately, much too small to be of any commercial importance.

In the Chancery Division this week Mr. Justice Roxburgh confirmed a reduction of capital of Reuters, Ltd., from £200,000 to £187,500 and of its share premium account from £96,222 to £52,472 by repaying capital in excess of the wants of the company. Mr. T. D. Divine, for the company, read an affidavit by Mr. A. C. Duncan to the effect that £56,250 was to be repaid to the Press Trust of India, Ltd., in order to determine its membership of the company.

Sir Frank Tribe, Controller and Auditor-General, in his report on the trading accounts relating to Government dealings in raw materials, points out that the provision for possible losses through the sale of stocks at less than cost had been increased by the year 1951-52 to £5,378,773. He anticipates further substantial losses in 1952-53 for jute, timber and non-ferrous metals. There is a net surplus of £50,989,740 for the post-war period.

The shortage of British-made X-ray films should soon be a thing of the past, for a new factory to make film base, from which all kinds of photographic films are made, has just gone into full production at Manningtree, near Colchester. It is a joint venture by Iflord and B. X. Plastics, Ltd., and will cost in all about £1½ million, but its production will save almost \$2 million in imports from America, the previous source of much of the film base used here. About half of the production is being exported and most of the remainder is sold to the Ministry of Health.

Uttar Pradesh

BUDGET DEFICIT EXPECTED
TO INCREASE IN 1953-54
RATIONALISATION IN TEXTILE
AND SUGAR MILLS

(FROM OUR OWN CORRESPONDENT).

Lucknow, 24th January.
THE budget for 1953-54 will be presented to the U.P. Legislature on 17th February. The current year's deficit of Rs. 4.24 crores is expected to increase substantially in the coming financial year. A development levy intended to net Rs. 14 crores was proposed during the current year, but was actually put into operation as the U.P. Congress Legislature Party voted it down. It is possible that the budget for 1953-54 will contain a number of new taxation proposals to bridge the widening gap between revenue and expenditure. It is also considered likely that the budget will recommend to the Government flotation of loans for larger amounts than in the past. A forecast of U.P.'s revenue and expenditure, based on existing levels of taxation, prepared by the Planning Commission, showed deficits of Rs. 10.21 crores for 1952-53, Rs. 11.25 crores for 1953-54, Rs. 11.7 crores for 1954-55, Rs. 12.7 crores for 1955-56 and Rs. 13.03 crores for 1956-57. It is hoped, however, that future deficits may not necessarily reach these figures, as the Commission's forecast has already been proved wrong by the current year's deficit.

Failure to Form Enquiry Committee

The U.P. Government has dropped the idea of getting the rationalisation schemes of the textile mills in Kanpur examined by a committee representing labour and industry. Instead, the schemes will now be examined by a Government expert. The suggestion that a committee be formed was made originally by the Tripartite Conference held in Naini-Tal in September last year. The Conference also recommended the setting up of a similar committee to examine standardisation schemes for the sugar industry in the State. A press note issued by the Government says that the committees could not be appointed because of differences of opinion in naming labour representatives. The press note adds: "A Government officer is examining the details of the schemes in order to formulate his own views and make suitable recommendations to the Government. The management of the mills concerned are taking steps to give all possible facilities to the Government expert, including opportunities of consultations with their own experts." The cost of the enquiry into the sugar industry will be met by the industry itself and part of the funds has already been remitted to the Government.

First Rice Crop Estimate

According to the first estimate of the rice crop in the State for 1952-53, made by the Department of Agriculture, the area under rice is 78,48,384 acres against 86,09,959 acres, which was the actual revised area for the previous year, a decrease of 9 percent. The average yield per acre is estimated at 5.55 maunds compared with 4.18 maunds at the same time last year. The estimate of the normal yield per acre (obtained as the average yield from crop-cutting experiments over five years ending 1949-50) is 6.47 maunds. Reports reaching Lucknow during the past week say that the rice crop has been damaged by hailstorms in several districts, especially in eastern U.P. How far this damage will year remains to be seen, but it is claimed that the first six months since zamindari was abolished have proved encouraging. Receipts from agricultural income tax may fall next year by about Rs. one crore consequent on the abolition of zamindari. Although the net land revenue after zamindari abolition is taken at Rs. 17.14 crores, a progressive decrease of Rs. 50 lakhs a year has to be allowed for because of the remissions promised to those who contributed to the Zamindari Abolition Fund and acquired Bhoomidhari rights. The rules and Zamindari Abolition Act, were passed at a midnight session of the Legislative Assembly early last week before the Assembly was prorogued by the Governor.

Provident Fund Scheme

The Provident Fund scheme, which was launched by the Central Government last November, is reported to be making satisfactory progress in the State. According to the Regional Provident Fund Commissioner's office, all the workers and trade unions in the State are co-operating with the Government in implementing the scheme which now covers 99 factories and 55,000 industrial workers. Labour organisations in the State, however, have been agitating recently over the non-implementation of the Payment of Wages Act. The Secretary of the Lucknow Mazdoor Sabha, for example, alleges that although 15 Wage Inspectors have been appointed, they have not so far been posted.

Bombay

MOTOR ASSEMBLY PLANT TO
CLOSE FROM APRILMEMORANDUM ON FAMINE RELIEF
(FROM OUR OWN CORRESPONDENT).

25th January.
ONE of the first results of the Central Government's new import policy for motor vehicle parts for assembly in this country can be seen in the decision by General Motors to close its plant here from April. According to Mr. Nelson Stork, Managing Director, the company had neither received a licence to import component parts for the second half of 1952, nor for the first half of the current year and it is expected to exhaust its stock of parts imported earlier by April 1953. The issue of fresh licences to this and similar concerns in the future will naturally depend on the recommendations of the Tariff Commission, resulting from the inquiry at present under way on the protection and assistance to be given to the automobile industry in India and on the decision taken by the Government on the Commission's recommendations. The position of other assembling plants such as Ford Motor Co., is not so desperate as that of General Motors, as they still have on hand a sufficient supply of parts imported earlier to keep functioning for some time to come.

New Proposal to Combat Famine

Relief to districts where there are food shortages continues to occupy the State Government here. In a lengthy memorandum submitted to the Bombay Government, the Maharashtra Famine Relief Committee has asked the Government to provide relief for four million people who are expected to be affected during the coming months by a severe famine. The memorandum also asks for work to be provided for all able-bodied persons and for gratuitous relief for those who cannot work. In the opinion of the Committee, the authorities have underestimated the severity of this scarcity, and it has offered a plan to relieve distress permanently, promising to help the authorities find the necessary personnel to supervise small irrigation schemes; the shortage of trained personnel is believed to be the cause of the slow implementation of many such small projects. The memorandum asks the Government to devise measures for the speedy and integrated administration of relief. It is also understood that there is widespread distress in many areas in Gujarat, especially among the large number of backward forest tribes inhabiting the coastal and eastern tracts. The Central Famine Enquiry Committee, after completing its study of the conditions in Maharashtra, has been touring Gujarat during the last week. The Bombay Government seems to be overwhelmed from all sides with requests for relief measures for large sections of the population in the central and southern parts of the State, and it is reported to be encountering some difficulty in finding the necessary financial resources, though its determination to provide relief on a generous scale still remains.

Budget Discussions

The raising of funds for famine relief will be an important topic of discussion at the forthcoming budget session of the Bombay Legislature, which is scheduled to commence on 16th February. The first authoritative and comprehensive review of the famine situation in the State and an outline of the Government's policy of relief will be line of the Governor's speech during the meeting. Earlier, Mr. Morarji Desai, Chief Minister, will discuss policy measures relating to the forthcoming budget with the Presidents and General Secretaries of the four Provincial Congress Committees of Karnataka, Maharashtra, Bombay and Gujarat and the Executive Committee of the Congress Legislature Party. Apart from the budget, which will take up a considerable amount of time during this session (which is expected to last for about seven to eight weeks) one of the most important items on the agenda, from the business community's point of view, is the ordinance promulgated by the Governor to validate the multi-point sales tax. The Act will have to be submitted to the Assembly for confirmation and re-enactment. Perhaps the appeal by the Bombay Government, filed in the Supreme Court over the State's High Court judgment, will also be disposed of by the time this subject comes up for consideration before the State Assembly in the next session.

Printers' Federation Proposed

At the inauguration of the All-India Printers' Conference under the presidency of Mr. J. C. Jain of Messrs Bennett Coleman & Co., Ltd., which is being attended here by about 300 delegates from all over the country, Mr. Morarji Desai, Chief Minister of the State, after welcoming the proposal of the President to form a countrywide Federation of Printers' Associations, said that it was "unfortunate" that although there were nearly 100,000 printing presses operating in India there had been no effort made to manufacture and supply printing machinery. He suggested that the first and most important task to which the Federation should address itself was to devise ways and means to produce more printing machinery on the same co-operative basis as the textile industry had done with textile machinery. Mr. Desai prophesied that if the proposed organisation conducted its business in a fair and just manner, the

Central and the State Governments were bound to assist it in its task and also to consult it at every stage on any matters relating to printing and allied subjects.

Burmese Housing Delegation

There is a four-man mission in Bombay from the Burmese Government this week, to search for engineers and technicians for the staff of the National Housing Board of Burma. Earlier the Board had invited applications from Indian nationals for service in Burma and the members of this delegation are engaged in interviewing candidates for engineering and technical posts on the Board. The delegation consists of two members of the Board, Dr. Ba Aye and Mr. Ba Zan, one engineer, Mr. Soo Aung, and a journalist, Mr. S. Chatterjee. Mr. Chatterjee informed Press representatives in Bombay on arrival that his country was facing an acute housing shortage and the Government had set up a Rs 2 crore housing project to relieve the congestion. The mission is leaving for Madras tomorrow after completing its work here.

Tata Share Conversion Enquiry

The enquiry into the conversion ratio between the ordinary and deferred shares of the Tata Iron and Steel Co. in any scheme for the transformation of the latter into the former, conducted by Mr. M. C. Setalvad in his capacity as a mediator, has continued this week. Both ordinary and deferred shareholders were strongly represented at this hearing by eminent counsel. One of the pleas submitted by counsel for the Deferred Shareholders' Committee is believed to have been that the hidden reserves of the company should be taken into consideration in fixing the ratio, because holders of deferred shares are privileged to share 60 per cent of the surplus assets of the company in the event of liquidation.

The State Government has set up an inter-departmental Committee of Secretaries on Planning, under the chairmanship of the Chief Secretary, to act as a co-ordinating committee on statistical work done by the Government's Bureau of Economics and Statistics and other agencies under the various heads of departments. Besides the Secretaries of the Ministries connected with the implementation of the five year plan, other officers such as the Directors of the Bureau of Economics and Statistics, Agriculture, Industries, Education and Public Health and the Commissioner of Labour, the Registrar of Co-operative Societies and the Chief Conservator of Forest, or their representatives, will take part in the deliberations. The Committee is to formulate a plan to co-ordinate the statistical work in the State, to review the progress made in specific enquiries and to publish the results of all enquiries and statistical information collected by the Bureau and the other departmental agencies.

Mr. Ambalal Kilachand of Kilachand Devchand & Co. has been elected as President for 1953-54 of the Indian Merchants' Chamber, Bombay, in succession to Mr. Pranlal Devakaran Nanjee. Mr. Ambalal is at present Vice-President of the Chamber and has been a prominent member of its Standing Committee for a number of years.

The following have been elected office-bearers of the Indian National Steamship Owners' Association for the current year: President, Mr. M. G. Kapadia (Merchant Steam Nav. Co.); Vice-President, Mr. N. Dandekar (Bombay Steam Nav. Co. Ltd.); Honorary Treasurer, Mr. Vasant J. Seid (Great Eastern Shipping Co. Ltd.); Honorary Secretary, Mr. S. N. Hall (Scindia Steam Nav. Co. Ltd.); and members of the Committee, Mr. Bhoj Prasad Sinha Roy (India Steamship Co. Ltd., Calcutta), Mr. G. T. Kamdar (Bharat Line Ltd.), Mr. H. Dhunibhoy (South East Asia Shipping Co. Ltd.), and Mr. Mathuradas Mulji (Shri Ambica Steam Nav. Co. Ltd.).

TAXATION OF DIVIDENDS OF AGRICULTURAL COMPANIES

CLAIM FOR PARTIAL EXEMPTION REJECTED

(FROM OUR LEGAL CORRESPONDENT)

THIS is a reference more in the nature of a test case, as thousands of shareholders holding shares in tea, rubber and other similar companies would be affected by the decision of this Court one way or the other. These remarks were made *Per Curiam*, the strong bench consisting of Chagla C. J. and Tendolkar J., in the Bombay High Court when deciding "a very important question as to the liability of an assessee to pay tax on his dividend income when the dividend has been received from a company which derives its profits from agricultural activities and whose income or part of it is exempt from tax on the ground that it constitutes agricultural income." The judgment occupies some 20 closely printed columns and we cannot hope to do justice to it in a brief note but the main points on which hitherto there had been no direct decision were these:

The assessee, Mrs. Bacha F. Guzdar, held shares in two tea companies, Patrakola Tea Company Ltd., and the Bishnauth Tea Company Ltd., and in the year of account she received dividends aggregating to Rs. 2,750 on the shares she held. The two tea companies in the course of carrying on business of growing and manufacturing tea had 40 per cent of their income taxed as income from the manufacture and sale of tea, while 60 per cent was exempt from tax as agricultural income. This was pursuant to R.24 of the Indian Income Tax Rules. The contention of the assessee was that 60 per cent of the dividend income in her hands was agricultural income and, as such, exempt from tax, a contention which was supported on her behalf by Sir Jamshedji Kanga in the High Court and resisted there by the Solicitor-General on behalf of the income tax authorities.

Now to claim exemption from tax, the assessee had to satisfy the Court that the income received by her fell within one of the exempting classes enumerated in S.4(3) of the Income Tax Act and her contention was that she did so as her income fell within the category of agricultural income mentioned in S.4(3) (VIII). "Agricultural income" is defined in the Act itself. It is "any rent or revenue derived from land which is used for agricultural purposes." Therefore Mrs. Guzdar had to show that the dividend which she had received from each of the two companies was revenue derived from land which was used for agricultural purposes.

The Court had to consider the difference between a company and a firm in the light of Sir Jamshedji's contention that a company is, after all, a glorified edition of a firm, a contention which their lordships eventually rejected as untenable.

There is, the Court held, no analogy between a partnership which does agricultural business and whose income is agricultural income and a company whose income is agricultural income. Partnership is not a separate entity. "It is true," said Chagla C. J., "that when a partnership has agricultural income and the partnership is registered under the Indian Income Tax Act, in the assessment of individual partners, the agricultural income would be exempted because there is no distinction in law between the income of the partners and the income of the partnership. Entirely different is the position with regard to a company. It cannot be said that the income of the company is the income of the shareholders. . . . Till a dividend is declared the shareholder has no right to the profits earned by the company. The further important fact which has to be borne in mind is that when profits are distributed and a dividend is declared, the shareholder becomes the creditor of the company and the company is liable to pay the dividend as a debt. Now when these general principles are borne in mind, can it be said that the assessee in this case, who has received dividends from these two companies in which she is a shareholder and which companies' income or part of it is agricultural income, has herself derived income from land which is used for agricultural purposes. . . . ? But the contention of Sir Jamshedji is that although the heads may be different, the dividend which the assessee has received has been received from the same source as the income made by the company. Sir Jamshedji says that the dividend received by the assessee is nothing more than the very income which the companies derived and which was ultimately distributed between the shareholders who were entitled to the profits. This argument would have considerable force and validity if a shareholder had the same right to the profits of a company that a partner has to the profits made by the partnership. But, . . . whereas a partner has a right independently of any condition being satisfied, a shareholder has no such right unless the most important condition is satisfied, namely that the profits are distributed and a dividend is declared. To my mind the difference between the position of a partner and a shareholder in this respect is vital and that difference distinguishes the case of a partner from that of a shareholder. . . . It cannot be disputed that in one sense and perhaps an important sense, the dividend received by an assessee is derived from the profits made by

the company. But what we are concerned with in the present case is not whether the dividends are derived from the profits made by the company but whether the dividends themselves constitute revenue derived from land and . . . even though the source may be the revenue derived from land within the meaning of the Act, it is not sufficient that that should be the source in a remote sense; it must be the source in the sense of its being an effective source. It must be shown that directly and effectively without any intervention the dividend represented revenue derived from land or that the effective source of the dividend was revenue derived from land. In my opinion it is impossible to predicate of a dividend that the effective source of the dividend is revenue derived from land or the agricultural income earned by the company. The effective source of this particular kind of income, which is subject to tax, is the declaration of a dividend by the company. It is that and that alone which entitles the assessee to receive the income."

Thus the learned Chief Justice and Tendolkar J. agreed though, in view of the importance of the question, he delivered a separate judgment. But Sir Jamshedji relied very strongly on a passage in the judgment of the Chief Justice (in which Tendolkar J. also concurred) in a previous case, the Phaltan Sugar Works Ltd. v. Commissioner of I. T. It is indeed difficult, if one may respectfully say so, to reconcile the observation made by their lordships in that case, though they were obiter only, with the principles enunciated so clearly above. These were the observations: " . . . Now, Sir Jamshedji says that the dividends which came to the hands of the shareholders were not liable to tax at all, because the profits out of which dividends were paid were not liable to tax in the hands of the company and Sir Jamshedji says that if an income bears a certain character, that character cannot be altered because it is transferred from the company to the shareholders. The principle which Sir Jamshedji enunciates is unexceptional, and I entirely agree with him that if the income bore a character which exempted it from payment of tax, then the mere fact that the income was transferred to the shareholders in the shape of dividends would not alter still not be liable to tax. That principle has been recently enunciated or rather re-enunciated by the Privy Council in the case of Premier Construction Co. v. Commr. I.T. 51. Bom. L.R. (3) P.C."

These observations which seemed at first so favourable to the assessee's case and which were, of course, one of the main planks on which her advisers relied turned out in the result to be of no help at all.

Their lordships per Tendolkar J., in the light of further consideration, qualified them drastically. Said Tendolkar J. "What we were there attempting to state was undoubtedly the effect of the Privy Council decision as we then conceived it to be. In the first instance, it is quite obvious when one looks at the facts of the case that this particular statement was not necessary for the decision of that reference and to that extent the observations are obiter. . . . and in any event we made no attempt in that case to enunciate a new principle but merely attempted to state what we thought was the correct effect of the decision of the Privy Council in Premier Construction Co. Ltd. v. Commr. of I.T. I must say that upon further reflection and upon a very careful consideration of the decision of their lordships of the Privy Council in Premier Construction Co.'s case, the ratio we attempted to lay down in that passage is not correctly stated."

Their lordships found against the assessee but in view of the importance of the matter to shareholders in general and of the fact that it was a test case made no order as to costs. (A.I.R. 1953 Bombay, 1.)

Books and Publications

INDIAN LABOUR LAW

CENTRAL AND STATE LEGISLATION

Conciliation and Arbitration.—By Dr. Also Dinshaw Shroff. (The Popular Book Depot, Lamington Road, Bombay. Price Rs. 16-4. 277 pages). We hazard the guess that this work was originally the thesis for a doctorate; at any rate it bears the imprint of much scholarly research and theoretical learning on a subject of which much has been said and written in recent years. Conciliation, Dr. Shroff towards the former. The author presents her conclusions with such charming naivete and feminine positiveness as of one laying down propositions of axiomatic correctness, that it is difficult to be exasperated at dogmatic assertions that attitude and continued to make vast profits to the utter players is and was one of hostility and distrust towards the workers." Dr. Shroff has, we think, Sydney and Beatrice Webb, reinforced by a touch of the petulant impatience of Professor H. J. Laski, though not accepting them unreservedly. But all the same, the Webbs and Laski were very often right and the book is an excellent one for Honours students in law or industrial economics. It will induce them to think not merely of the principles of conciliation as they are, but of the reasons for

them and of trends of development. Also, unlike most quasi law books, it is eminently readable. It is a powerful defence of compulsory conciliation and the commercial reader will find it useful as a background to the whole field of legislation on this thorny subject.

The Indian Factories and Labour Manual.—Second Edition. By R. Mathrubutham and R. Srinivasan, Advocates, Madras. (Madras. The Madras Law Journal Office. Price Rs. 18. XVI+732 Pages.) A second edition of this useful work has been called for within three years of its first publication. It is a collection of the Labour legislation of the Central Government and something more. For the authors have in this edition added to every important enactment, explanatory notes and an instructive though not exhaustive summary of the appropriate case law. It is, of course, a fact and one which may be the cause of considerable confusion, that both Parliament and the State Legislatures have the right to enact Labour Laws, and the provisions of an Act passed by the Union may on occasions conflict with legislation on the same or a cognate subject by a State. Generally speaking, where there is such a conflict the Union Law will prevail. And this being so, a complete and comprehensive collection would necessarily have to include the whole of the enactments passed by every State Legislature. To include all these with accompanying explanation and case law would be a manifestly impossible task in one volume; and the learned authors have wisely not attempted it. But a companion work embodying the State Laws and the Rules thereunder is obviously called for. This work is a compendium which will be of practical use to lawyers, industrialists, labour organisations and legislators alike.

Labour Legislation in India, 1937-1952. (From the International Labour Office, Indian Branch, New Delhi. Price Re. 1.78 Pages.) This compact little volume is an I.L.O. production and is an interesting picture of the increasing industrialisation of a still largely agricultural country as seen reflected in the accumulation of an incredible mass of legislation in the short space of fifteen years. It is also a picture which the next generation may look back upon with interest and not a little admiration of the growing realisation of the concept of the Welfare State. Trade Unions, industrial and labour disputes, conditions of work, workmen's compensation, old age pensions and maternity benefits, social security, social insurance, provident funds, unemployment, vocational training, conciliation; all are there in epitome, outlined admirably in this small brochure in their birth pangs. We congratulate the anonymous author on the admirable and clearly practised manner in which he has been able to compress, and yet make interesting and informative, the whole of the industrial legislation of an epoch designed to establish a healthy relationship between capital and labour. How far the design has so far been successfully carried into effect is another matter. But if people can be rendered contented by Acts of Parliament, these should indeed be halcyon days. The book is not divided into chapters and there should be an index.

Depreciation Allowances and Replacement Costs. (Issued by the Employers' Association, Calcutta.) For some years now the raising of finance for the replacement of obsolescent plant and machinery has presented a complex problem. This pamphlet attempts to assess the magnitude of the problem of replacement finance in India and suggests ways to make the required funds available. Methods suggested include additional depreciation allowances, such as those current in France which increase in proportion with a rise in prices, lower taxes on undistributed profits and loans at reasonable rates of interest.

Burnah-Shell News.—The January issue of the magazine commemorates the twenty-fifth anniversary of the company. Maintaining its usual high standard of production, this issue contains several articles of general interest and many others concerning the company itself. Of particular note is an article on a Himalayan expedition which, like the rest of the articles, is amply illustrated. Also included in the magazine are contributions from the branches in India, an article on the Backwaters of Malabar and a profile of R. V. Divecha, the Indian Test cricketer. The coloured cover is most attractive.

The Tabulator. To commemorate the inauguration of Hollerith (India) Ltd., the company has produced a special edition of their magazine, The Tabulator. Included is an editorial on the growth of the British Tabulating Machine Company in India culminating in the formation of the new company; a long article on the uses of the company's machines in Bangalore woollen, cotton and silk mills; a short note from the chairman on the future of the new company and a number of other articles. All are amply illustrated and there is an interesting map of the sub-continent showing the various industries and their location, which use the company's products.

Sugar Mills in India and Pakistan. (Published by the Indian Sugar Mills Association.) As its name implies contained in this booklet is a list of sugar mills in India and Pakistan. The list is divided State-wise and against the name of each company information is given as to address, location, district, nearest railway station, nearest steamer station, and the daily cane-crushing capacity in tons. A note is also made of those mills which have a gur-refining plant.

Jute

FINAL ESTIMATES OF THE INDIAN JUTE CROP

THE IMPORTANCE OF QUALITY: ACREAGE DECREASES IN AREAS WITH BEST YIELDS

ACCORDING to figures issued in Delhi the estimated outturn of the 1952 crop is 46,94,954 bales on an estimated acreage of 18,34,079 acres, or 2.56 bales per acre. These figures, presumably, include mesta and bimli fibres. There are, of course, sceptics who doubt the accuracy of the figures and think that the estimate has been inflated to justify official claims in regard to the progress being made in the direction of self-sufficiency. However that may be, there are certainly grounds for satisfaction that progress has been made, though there is room also for disappointment that there has been practically no advance beyond the position reached in 1951. It is also disappointing to find reports of decreases in acreage in Orissa, West Bengal, Bihar, Assam and Tripura—the areas where real jute is grown. It may be deduced, therefore, that the production of the inferior fibres, mesta and bimli, increased. The increased cultivation of these fibres probably also accounts for the low average yield per acre. There is, however, a good deal of scepticism regarding the reported decrease in the acreage in West Bengal as there is a general belief based on visual inspection by people long familiar with the districts that there never before was such a large daisee crop as that of 1952.

Apart from the doubts regarding the accuracy of the figures there are other aspects which merit attention. For instance the low average yield means that production costs are high, and that leads to the question whether the propaganda to increase the crop is following the right lines. Is it economically sound to bring under jute cultivation lands which cannot give a yield big enough to make jute a paying crop for the growers at prices which the industry can afford to pay? Would it not be better to concentrate on those lands where, given normal climatic conditions, a satisfactory yield of, say, 3½ bales per acre can be obtained? Complaints are being made that the mills are not paying prices which are remunerative to the growers. On the other hand, even at present prices the mills cannot sell their manufactures without a loss. The fault, therefore, does not lie with the mills. It is rather on the shoulders of those who have encouraged the ryots to cultivate jute on lands where the yield is so low that it is not economic to grow jute or mesta or bimli. No doubt the growers were misled by the prices they obtained in the exceptional circumstances in 1951 but official encouragement should not be given to the growing of jute and similar fibres on such lands.

Then there is the question of quality. Mesta and bimli are not altogether satisfactory substitutes for jute. The percentage of these fibres in the mills can use is not large and is mostly in the manufacture of heavy sacking. Much of the jute being produced is also of poor quality partly because it is grown in poor land, partly because of poor strains of seeds and partly because of ignorance of the best methods of cultivation of the plant and treatment of the fibre. There are areas in India which produce as good jute as any grown in Pakistan and rather than carry on propaganda to extend the cultivation of jute on unsuitable lands or increase the cultivation of mesta and bimli it would be better to concentrate on increased crops in the areas which have been found most suitable. This is not an attempt to minimise the importance of quantity. It is necessary, however, to emphasise the importance of quality, for if India is to retain her position in the world's markets, she must maintain the quality of her manufactures and to do that she must be assured of supplies of jute of high quality.

Exports of Pakistan Jute

As a measure of the extent to which Pakistan has overcome the difficulties at first encountered in exporting jute through her own ports it is interesting to note that during the six months July-December, 1952, only 1,324 bales were exported in bond through Calcutta. In the corresponding period in 1951, 39,500 bales were exported through Calcutta and in the same period in 1950, 10,56,000 bales. As Pakistan had exported to destinations overseas in July-December, 1952, about 19 lakhs bales it is clear that the organisation at Chittagong and Bechna has been developed to an extent which will enable Pakistan to export all her raw jute through her own ports and that Calcutta must look on this as a permanent loss.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Thursday prices recorded their small increase for many days as a result of some small enquiries through shippers for cornsacks and hessians. At the same time rumours that the I.J.M.A. was considering a reduction of mills' working hours helped to boost the market and there was a general upward trend in rates. Opening quotations showed an increase of 8 annas in plain heavy Cees and 12 annas in B Twills. Actual quotations were Rs. 41-12 per 100 yds; heavy Cees rose by Re. 1 and Rs. 1-8 in plain heavy Cees and B Twills respectively to rule at Rs. 93 and Rs. 91-8 per 100 bags. Friday was a public holiday and all

markets were closed. The rise was held on Saturday and in spite of only small business being done rates were unchanged, except that plain heavy Cees and cornsacks showed an 8-anna increase due to covering demand. All markets were closed from Saturday afternoon until Tuesday morning, when the improvement continued and prices opened 6 annas better in 40" 10 oz. hessians, 8 annas in plain heavy Cees and 12 annas in B Twills. Actual quotations were Rs. 42-2 per 100 yds. for 40" 10 oz. Rs. 94 per 100 bags of plain heavy Cees and Rs. 92-4 per 100 bags of B Twills for ready delivery.

At this stage the price of hessian had risen by Re. 1 over the week and was the same as in the week ended 14th January; but heavy goods, in spite of a Rs. 2 increase over the week, still lagged behind the quotations of that date by about Re. 1 to Rs. 1-8 per bags. It is interesting to note that there is no confirmation date was quoted at about Re. 1 higher than it is today, so in effect the market is a good deal better now than it was about a fortnight ago. Mills however are showing no eagerness to cut their losses and sell. Rumours that they are going to curtail production have persisted and helped to keep the finished goods market steady in spite of limited business being reported. Another rumour after the week-end was that the Government was considering reducing the export duty on sacking to help the heavy goods market but so far there is no confirmation. The market responded to this development and towards the close a steadier feeling was apparent. Opening quotations on Wednesday showed an improvement of 8 annas in hessians and 8 annas to Re. 1 in heavy Cees on account of local covering for January shipment:

	Rs.	Rs.	Rs.	Rs.	Rs.
Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
40" 8 Oz.	34-4	34-4	34-4	34-4	34-4
40" 10 Oz.	42-10	42-12	42-14	43-0	43-0
Heavy Cees	94-8	94-8	94-8	94-8	95-0
(Plain)	94-8	94-8	94-8	94-8	95-0
B. Twills	93-8	93-12	94-0	94-8	94-8
Cornsacks	96-0	96-0	96-0	96-8	97-0

Raw Jute: The jute markets have been depressed over the past week because mills have not been interested and there were two holidays. Sellers were keen for business and willing to offer discounts but with no response from mills all rates were nominal. A large number of bills of lading are on offer, and it appears that when mills do come into the market this is the only section of jute that they will be interested in as they are sure of delivery and reasonably certain that they are getting jute from the districts they want. All buyers are watching the market very carefully, as the time is drawing near when a large percentage of mills will have to buy so that they get their jute within the next few weeks. This is most important as mills at the present moment are working mainly on stocks and it is estimated that these will not carry them very much beyond the end of February. It is now nearly five weeks since they came into the market in any strength, and at that time they all bought approximately two weeks' consumption, the majority of which has already been delivered. Since then they have only indulged in spasmodic buying of good quality jute in small quantities and it is likely that their stocks will have to be replenished in the very near future. The incentive to buy jute however is not forthcoming from the finished goods market, and buyers are holding out as long as possible in the hope of gunnies recovering sufficiently to enable them to operate even at par. At the present moment this would appear to be rather a forlorn hope, as the jute market shows no definite signs of continuing the improvement which started at the beginning of the week and which is only due to end of the month covering. Mills in the very near future may be faced with the position of having to buy jute to keep running.

Opening quotations on Thursday were unchanged from last week. Ordinary Assam being quoted at Rs. 22-8 per maund basis Bottoms for February-March shipment, but in the absence of business rates did not remain very long at this level and soon dropped by 8 annas per maund. The market remained steady at Rs. 22 for the rest of the week, but this price was purely nominal and could be reduced considerably for interested parties. At the close, with the gunny market showing a slight improvement over the beginning of the week a few mills began to take an interest in ready bills of lading, but at very reduced rates, and small business was done.

Over the week small business has been reported as follows:—

Pakistan Jute:	
Semi-Jut	Rs. 26 per md. basis Bottoms for February-March shipment.
Indian Jute:	
Dhuhri	Rs. 21-8 per md. basis Bottoms for ready bills of lading.
Assam	Rs. 20-8 per md. basis Bottoms for ready bills of lading.
Murshidabad Tossa	Rs. 20-8 per md. basis Bottoms for one month's shipment.
Dongoon Tossa	Rs. 22-8 per md. basis Bottoms for February shipment.
Daisee	Rs. 23 per md. basis Bottoms for February delivery.

At the close the market is unchanged with sellers keen for business and buyers taking a little

interest in ready bills of lading. Opening quotations on Wednesday morning were as follows:—

Pakistan Jute:	February-March	Landed at Mill
Jat	27-8	per md. basis Bottoms
District Northern	26-8	"
Indian Jute:	25-8	"
Lower Assam	23-0	"
Upper Assam	22-0	"
Northern Bengal	23-0	"
Murshidabad	19-0	"
White	18-0	"
Bihar	23-0	"
Daisee	17-0	"
Bimli	165-0	per md for F.A.Q. per bale
Mill Reds	145-0	"
Mill Firsts	120-0	"
Mill Lightnings	120-0	"
Mill Hearts	145-0	"
Dundee Daisee (Short Group)	130-0	"
Dundee Daisee (Long Group)	65-0	"
Pakistan Cuttings	60-0	"
Indian Cuttings	60-0	"

Tossa is offered at Re. 1 to Rs. 2 per md. above the rates for white jute.

Mofussil: Reports from Narayanjanj indicate that a considerable amount of business is still going on for overseas exports and good quality jute suitable for this standard is fetching good prices due to scarcity. On the other hand business with India is at a complete standstill, and there is a glut of jute suitable for baling for export to this country which can be had at very cheap rates. However, no business is being done in spite of the reduced rates as most sellers' godowns are full with quality fibre. Imports into Narayanjanj are very steady at about 15,000 to 20,000 maunds daily, of which only a very small percentage is good quality jute and about 30 per cent Tossa. Prices have remained fairly steady and are more or less unchanged from last week. Latest quotations from Narayanjanj in Pakistan rupees are as follows:—Jat Bales' Bottoms (White) Rs. 14 to Rs. 14-6 per maund, Tossa Rs. 17-8 per maund; District Bottoms (White) Rs. 13-8 per maund, Tossa Rs. 16-8 per maund.

The dullness in Indian upcountry markets continues and no business is passing. Reports from all districts indicate that imports have virtually ceased so that all quotations can be regarded as nominal. The feeling in the market is easier and local quotations are as follows:—Dhuhri Rs. 19 per maund basis Bottoms, Ordinary Assam Rs. 17 per maund basis Bottoms, and Northern Bengal Rs. 18 per maund basis Bottoms. The local Cossipore market is at a standstill as the strike against the railway company has entered its third week. It is reported that about 2,000 wagons are awaiting clearance, and sellers show no indication of weakening in their demand for a reduction of demurrage charges, which are the same today as when jute cost about Rs. 100 per maund. No business of any size has been reported for some time. Quotations are nominal and are on the basis of Rs. 22 per maund for garsat quality of Kishengunge jute. Very little business has been reported from the Sheorahuli Daisee market where prices have fallen off considerably; here also prices are nominal, on the basis of Rs. 22 per maund for garsat quality.

(FROM OUR OWN CORRESPONDENT.)

Dundee, By Air Mail.

REVISED prices for jute yarns and cloth have been issued to the jute industry in the U.K. The new prices came into effect on 19th January. Prices for most yarns have been reduced while hessian cloth values have been raised slightly. Sacking cloth rates are lower in most instances, but on the other hand tarpaulins have been increased. Small changes have been made in the issue prices of raw jute to bring them more into line with the fixed limits in Pakistan. Mill Firsts are up by 20s per ton and mill Lightnings are down 20s per ton, while grade Daisee is reduced 8s and goods marks by 20s. The new rate for common 8-lb cops and 8-lb spools is 1s 2-4d per lb, and three-ply 8-lb twists 1s 3-8d. Sackings, 24-lb weight is 11.15d., and 8-lb sacking chains is 2.79d. Rove is now at £85 for 48 lbs compared with £80.

It is the case that conversion costs have not been gone into since September, 1951, and it is understood that these have been reviewed. Costs of production have certainly risen during the past sixteen months. For one thing, wages were increased by 6½ per cent on 16th April last year, and the price of coal has gone up. The workers have forwarded an application for a ten percent increase in wages, which was considered by the Jute Wages Council the other day, when it was decided to postpone the matter until 29th April next. On the last occasion a change was made in U.K. prices, existing rates were withdrawn from Saturday, 22nd November, but it did not take the authorities long to effect the alteration and the new rates were in the hands of the industry on 26th November.

Offers of raw jute of decent quality are extremely few. The Jute Controller is buying quietly but steadily, sometimes at a premium where good marks of Daisee-3 and Mill Firsts are available. Before the new prices came into effect Mill Firsts were offered at £85, but usually £63 and £87 were quoted, while Daisee-3 was often named at £84 and £85, against the then minimum rate of £81, c. and f. U.K. Demand for jute yarns and cloth continues good for delivery to the end of June. Indeed, in some cases, buyers of narrow width hessians have been asking for reservations of contracts for delivery to the end of this year. At the moment, of course, business is entirely suspended. The Calcutta goods market has been generally

easier at 76s 0d for 10 oz. 40 in. and 58s 6d for 71 oz. January-March, and "B" twills at 171s 0d January and 172s 0d February-March. Business is reported to have been done in hessians at 14s 0d for 10 oz. and in B twills at 167s 0d January-March. Continental manufacturers are competing strongly with Calcutta in the export markets, quoting even lower rates than Calcutta for some makes of hessians.

RUMOUR OF CUT IN WORKING HOURS DENIED

CHEERFUL OUTLOOK FOR 1953

(FROM OUR OWN CORRESPONDENT).

Boston, 23rd January.

A REUTERS press dispatch on Wednesday reported that there was a possibility of Calcutta mills reducing their working hours from next month or alternatively declaring a week's mill holidays in February and possibly continuing beyond February. This report received wide circulation but has been denied by Mr. A. Low, North American representative of the Indian Jute Mills Association. He stated that the subject has not been discussed and therefore no plans whatsoever are being considered for any curtailment in the Calcutta jute mills operations.

Not so long ago, the burlap consumer was hoping for a burlap situation such as presently exists. It was almost too much to hope for; yet today burlap is in ample supply and prices can be expected to remain fairly reasonable and steady, at least during the present jute crop season. In fact, after giving effect to the decline in the value of the dollar, current burlap prices may be said to be almost as low as they ever have been. The situation augurs well for 1953. Calcutta knows that its best burlap market can only be retained

if supplies are ample and sold at reasonable prices. If these two "specifications" are lived up to, many in the trade expect that burlap consumption in the United States, which last year totalled an estimated 827 million yards (55 percent more than in 1951), will continue to increase.

U.S. consumption in December was surprisingly good. The estimated 75 million yards includes 36 million yards delivered to the armed forces. Estimated total consumption during December 1951 was only 45 million, December 1950 67 million and December 1949 76 million yards. U.S. stocks reversed their declining trend of the previous two months and increased by 29 million yards during December. At an estimated 213 million yards, 128 million were spots and 85 million afloats. Although Calcutta seems to consider that this increase more or less offsets the bullish effects of the better-than-expected consumption current stocks here may be considered about normal.

Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

FINAL JUTE ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the All-India final estimate of jute puts the current year's acreage and production at 1,834,079 acres and 4,694,954 bales (of 400 lbs. each) as against the corresponding estimate of 1,951,143 acres and 4,677,541 bales respectively for 1951-52. This shows a decline of 117,069 acres or 6 percent in area and an increase of 17,413 bales or 0.4 percent in production. The decline in acreage under jute during the current year has been reported mainly from Orissa, West Bengal, Bihar, Assam and Tripura because of a general depression in loose jute prices prior to sowing and the lack of rains from the middle of June to the third week of July, 1952. The decrease in acreage has been offset to some extent by the increase registered in Uttar Pradesh.

In spite of an overall decrease in acreage there has been an increase in production of jute during the current year. The increase in production has been shared by Assam, West Bengal and Uttar Pradesh and is attributed partly to the efforts made to grow more jute under the integrated production programme and partly to better climatic conditions towards the end of August, 1952. This increase has been offset to a large extent by decreases registered in Orissa, Bihar and Tripura caused partly by a decrease in area and partly by the scarcity of rains towards the end of October, 1952. In parts of Assam and West Bengal the crop also suffered to some extent from insect pests.

CIVIL AIR BOARD PROPOSED MASTER COMMITTEE'S REPORT ON TRAINING OF PILOTS

IN April last year, the Central Government appointed a Committee, with Mr. M. A. Master as its Chairman, to examine the system of training of civil air pilots and to recommend measures for its improvement, consistent with economy. The Master Committee on the Training of Air Pilots has now made its report to the Government of India. Its most important recommendation is that a Civil Air Board be constituted as a statutory body in public life with knowledge and experience of educational activities; a representative of Air Headquarters; a representative of the Director-General of Civil Aviation; two representatives of the proposed Air Corporation or, in its absence, of the Air Transport Association; a pilot of outstanding ability and experience; a representative of the Flying Clubs, and a Member of Parliament. The Chairman and the Secretary will be whole-time employees.

Functions of the Board

The Committee has recommended that the functions of the Board be to: 1. Select candidates for admission to the Flying School of the C.A.T.C. for training as commercial pilots. 2. Lay down the details of the curriculum and training to be imparted at the Flying School. 3. Ensure the maintenance of proper standards of instruction, training and discipline at the Flying School and Flying Clubs. 4. Exercise supervision and control to ensure the best use of the financial assistance given to the Clubs. 5. Select examiners for the different categories of pilots' licences. 6. Ensure that operators take all steps necessary to maintain the operational efficiency of pilots and aircrew at the highest level. 7. Foster and encourage love for sport flying and develop air-mindedness. 8. Consider all questions affecting national civil air policy. 9. Advise the Minister.

Formation of Flying Clubs

Tracing the history of civil air training in India, the Committee pays tribute to the Flying Clubs which were started as far back as 1928 in Delhi, Calcutta, Bombay and Karachi. During the period 1946-47 to 1951-52 the clubs trained 937 pupils for "A" licences, 42 for "A-1" licences and 258 for "B" licences. Financial assistance was received by the clubs from their inception through subsidies from the Central and State Governments. The Central subsidy has increased from Rs. 35,000 in 1928-29 and Rs. 1,36,650 in 1951-52 to Rs. 15 lakhs in 1952-53. The total assistance given by the Centre during the six years ending March 1952, amounted to Rs. 54 lakhs. During the same period the State Governments paid Rs. 36,43,497 in recurring and Rs. 9,54,000 in non-recurring grants.

The Committee felt, however, that there was scope for improving the clubs. It was not satisfied with the arrangements made at the clubs for giving instruction in ground training. Sufficient importance was not attached to proper briefing and de-briefing of trainees before and after flight exercises. The Committee did not feel that all the instructors came up to the standard required of them and has therefore recommended that flying instructors should undergo a course of regular training at the Indian Air Force School of Flying Instructors at Ambala and that it should be a condition of their employment that they periodically undergo a refresher course and tests at the School.

The Committee would confine the activities of the clubs to giving joy rides, providing air sport and to training private pilots. They already assist in the training of the National Cadet Corps, which practice should continue to supply a regular flow of trainees to the clubs. In this connection, the Committee has recommended the doubling of the present strength of the air units. They recommend that the training fee should be reduced from Rs. 25 per hour to Rs. 10 per hour, irrespective of nationality, for trainees up to 28 years of age. Each of the ten clubs, it is urged, should be assured of minimum flying work of 3,500 hours per year and should possess two Chipmunks and three Tiger Moths. To that end the existing planes owned by or lent to clubs, should be redistributed. The training of the National Cadet Corps will provide 2,700 hours of flying work for the clubs, who will have to find 800 hours of flying work by themselves.

The Committee makes three definite recommendations for Central assistance to the clubs. Firstly it would like the Centre to refund the entire duty of annas 15-9 per gallon on aviation spirit instead of the present rebate of eight annas a gallon. Secondly, it suggests that the Centre raise its subsidy of Rs. 15 lakhs to Rs. 18 lakhs a year. Thirdly, the Centre, or the Centre and States together, should finance the training at the clubs of the increased number of National Cadets.

Management of Clubs

The Committee holds that the present system under which one single individual, namely the Director-General of Civil Aviation, is vested with wide powers, has not led to either economic management, efficient control or harmonious working. It recommends that the Central and State Governments have the right to nominate one representative of their own to the management

of each club and that the existing control of the Director-General should be replaced by the supervision of the proposed, Civil Air Board.

Referring to the Government Flying School at Allahabad, the Committee says that the target of training 280 commercial pilots in three years was laid down by the Government: 56 in 1949-50 and 112 each in the following two years. In fact 14 pilots were trained in the first year, 20 in the second year and 13 in the third year. The Committee also found that although no "B" Licence could be granted unless a pilot produced evidence of flying experience of not less than 200 hours of solo flying, licences were issued at the Allahabad School for 135 hours and less. The Committee also found that a trainee was required to pay Rs. 6,850 more for his "B" Licence at a flying club than at the Allahabad School.

From the data made available to the Committee, it was learnt that 259 trainees obtained "B" licences in the three years ending March 1952. The Committee also found that more than 100 pilots were unemployed and 150 were under training at present. This fact, says the Committee, lends support to the widely expressed demand that the number of trainees should be restricted in future, a view which the Committee accepts. The airline companies, according to the Committee's information, had in their employ on 30th June, 1952, 330 pilots; 295 Indians and 35 non-nationals; 180 acting as commanders and 150 as co-pilots. Of these 163 were trained at Flying Clubs, 24 at the Allahabad Centre, 84 by the Air Force and 24 abroad. According to one estimate, the number of pilots required under the nationalisation scheme would be reduced to 220. In the absence of any definite indication by the Government, the Committee, taking into consideration the normal wastage in the existing force of pilots, holds that the industry should be able to absorb 30 new pilots every year. Half of this number should be

recruited from the demobilized short-service personnel of the Indian Air Force and the other half through the Training Centre at Allahabad.

Licence Categories

The Committee objects to the present rule under which a trainee and his security have to enter into a bond that after getting a "B" licence a pilot shall have to serve in an employment offered to him as a pilot or in any other agreed capacity. The Committee suggests tighter rules and higher qualifications for the licensing of commercial pilots. It has recommended five categories of licences, namely, student pilot licence, private pilot licence, commercial pilot licence, senior commercial pilot licence and airline transport pilot licence, the last one to be granted only to those who produce evidence of 2,150 hours flying of which 250 hours shall be solo flying, 100 hours night flying and 100 hours cross-country flying. No one should be permitted to operate an aircraft exceeding 10,000 lbs unless he can produce evidence of 1,500 hours flying.

The Committee has laid down that it shall be the responsibility of the operator to ensure the operational efficiency of the aircrew employed by him and that it shall not be within the competence of the Director-General of Civil Aviation to lay down procedure for that purpose. Lastly, the Committee has made recommendations to deal with present unemployment among pilots.

The 20th Annual General Meeting of the Indian Sugar Mills Association, Calcutta, will take place on Friday, the 15th February 1953, at the Hotel Imperial, New Delhi. Shri R. P. Nevatia, M. P., the President of the Association, will preside over the meeting. Besides review of the various important developments in the sugar industry during the outgoing year, it is understood that certain important resolutions will also be discussed. It is understood that besides a large number of sugar mill owners from the various parts of the country, certain prominent Government Officials will also attend the meeting.

Super-6 Clippers* to U.S.A.—EUROPE and The ORIENT

Now — Pan American puts a whole new fleet of dependable, luxurious Super-6 Clippers* at your service! They're faster than ever, pressurized, air-conditioned and sound-proofed for your extra comfort. You'll slip along smoothly high above the weather while you enjoy superb meals aloft by Maxim's of Paris... excellent bar service... courteous attendants.

Super-6 Clippers of the "Asia Express" fly direct from Calcutta and Karachi to Beirut, Istanbul and London ("Strato" Clipper connections to New York)—or Bangkok and Hongkong (connecting with "Strato" Clippers from Tokyo or Manila to San Francisco or Los Angeles). Other Super-6 Clipper flights stop in addition at New Delhi, Basra, Frankfurt and Brussels.

LONDON TEA SALES

North Indian, Pakistani and Indonesian teas offered on Monday last totalled 22,082 packages. Broken teas were not generally in strong demand, especially for teas up to 36 cents per pound, which advanced a half to 2d. Above this figure prices were inclined to be irregular, but on balance hardly changed. Growths suitable for export sold well.

At the London tea sales during the week ended 24th January the 62,036 packages on offer realised an average price of 3s. 3.31d. a pound, against 3s. 2.84d. in the preceding sale. Results of some of the companies were as follows:—

	No. of packages	Avg. per lb.
Amalgamated	1,020	3/
Anglo Dutch	274	3/12
Assam Co.	1,379	3/4

COCHIN TEA SALES

At Sale No. 2 held on 20th January, about 9,15,000 lbs. came to auction and met with keen demand. Buying however was somewhat erratic but prices paid exceeded Broker's valuation by several annas on most occasions. It was satisfactory to note however that the biggest increases were for improved teas.

The best liquoring flavour kinds sold well and realised some astonishingly good prices. Medium teas of all descriptions, most of which were of better quality than recently, fetched anything from 4 to 8 annas above valuations and on occasions even more. Increased rates above 4 annas however, were only paid for those teas which showed a definite improvement in cup.

Whole leaf grades and FPs were popular but some of the prices paid for the latter were flattering to their quality.

The poorest liquoring types shared in the general rise in value, but not by so great a margin as the others.

	Rs. a p.	Rs. a p.
Low Grown	B. O. P. 1 5 0	1 2 0
Transacore	B. O. P. 1 13 0	1 8 0
Medium Grown	B. O. P. 2 0 0	1 14 0
Transacore	B. O. P. 3 12 0	3 2 0
Anamallai	O. P. 2 3 0	2 1 0 to 2 2 0
Best liquoring		
Nilgiris		
Black well made		

The Export Quota market is very quiet. A small amount of business has been done at 3 p.c.

At Dust Sale 'A' held on 13th January, approximately 3,75,000 lbs. were on offer. There was a good but irregular demand particularly for Fine Dusts and milled dusts and prices for these types

advanced by two to three annas. Clean black dusts met with some competition but prices were irregular. Best liquoring descriptions were about steady although there were some withdrawals.

EXCISE DUTY EXEMPTION ON TEA WASTE WITHDRAWN

It was announced last Friday that the Government of India had decided to withdraw the exemption from excise duty on all tea wastes. It is explained that the Government found that in the process of giving relief to the small producers, they were indirectly encouraging the export of stinky tea, which was having an adverse effect on the reputation of Indian tea abroad. The export duty now restored to tea waste is 3 annas per lb.

CHITTAGONG TEA SALES

At Sale No. 15 leaf offerings consisted of 8,953 chests. Dust offerings amounted to 3,849 chests. There was a Supplement of 91 chests.

Leaf: Once again there was a strong demand and all grades were readily absorbed at an advance of approximately two annas on previous rates. Good liquoring and/or tippy teas were particularly strong and occasionally advances of up to four annas above valuation were registered.

	Rs. 15-21st	Rs. 11-7th
January		January
OP	Rs. 1-5-0 to 1-6-0	Rs. 1-4-0 nominal
PEK	Rs. 1-3-0 to 1-3-6	Rs. 1-1-0 nominal
BOP	Rs. 1-3-0 to 1-3-6	Rs. 1-1-0 to 1-1-6
BP	Rs. 1-0-6 to 1-1-0	As. 14-0 to 14-6
BPS	Rs. 1-0-0 to 1-0-6	As. 14-6
OF	Rs. 1-4-0	Rs. 1-2-0 to 1-2-3
	Rs. 1-0-6 to 1-1-0	As. 14-0

Dusts: The big blenders and Karachi buyers were very active, the offerings selling readily at an irregular advance of up to four annas above last rates. Prices are not easy to give because of the irregularity but Clean Common Dust may be quoted between Rs. 1-2-0 and Rs. 1-3-0 with Churamoni at As. 0-15-0 to Rs. 1-0-0.

Sale No. 16 will be held on Wednesday 4th February 1953 when 3,089 chests of leaf and 3,984 chests of dust will be offered. The total quantity to be offered in Sale No. 17 will not exceed 10,000 chests.

COLOMBO RUBBER PRICES

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

TOBACCO PRICES AND EXPORTS

The prices of Bidi tobacco were generally lower in December than during the preceding month, according to the Tobacco Bulletin issued by the Indian Central Tobacco Committee. The prices of cigar and cheroot tobacco, hookah, and snuff tobaccos, in most centres, also registered a slight decrease in December. During November 1952, 7.5 million lbs. of tobacco worth Rs. 102.5 lakhs were exported by sea and air. The United Kingdom and Japan were the most important export outlets for Indian tobacco. Between them they purchased about 2.6 million lbs. of unmanufactured tobacco worth about Rs. 44.2 and Rs. 29.6 lakhs respectively. Other important markets included France, Ceylon, Pakistan, Belgium and Hong Kong. Imports of both unmanufactured and manufactured tobacco by sea and air during November 1952 amounted to about 0.23 million lbs. valued at Rs. 7.9 lakhs. Most of the imported tobacco came from the United States and Burma.

EXPORT OF TEA BY POST

The Pakistan Tea Act of 1950 has been amended by the Pakistan Tea (Amendment) Act, 1952. The two main changes effected by it are that the original Act has been extended indefinitely, and that the permissible limit of the weight of a package of tea exported by post without licence has been raised from 1 lb. to 20 lbs. avoirdupois. The amendment has been made in response to representations from the tea industry to facilitate the dispatch of commercial samples.

Commodity Markets

THE FUTURE OF COMMODITY CONTROLS IN INDIA

F.I.C.C.I. REPLY TO QUESTIONNAIRE
IN the introduction to its memorandum to the Commodity Controls Committee, the Federation of Indian Chambers of Commerce and Industry say that:—

"In a consideration of the future of controls, there are two questions which require careful examination—one relates to the place of controls in our economy and other the type of controls that should be exercised. These two questions have to be broadly taken note of by the Commodity Controls Committee also before they proceed with the task entrusted to them, namely, of examining and reviewing the working of the three Control Acts. The Committee of the Federation, therefore, would like to discuss briefly the above-mentioned questions and then deal with the specific question of modifying the various controls.

Experimental Decentral

"Most of the commodity controls operating at present were imposed during the war period, with a view to diverting the resources for war purposes and to enable an equitable distribution of the remaining supplies under scarcity conditions which prevailed. These controls were admittedly devised on an ad hoc basis. The exigencies of the war period projected themselves in the post-war period and resulted in the continuation of the wartime controls. An experiment in decentralisation was initiated in December 1947, but in December 1948, it was abandoned within a short period, i.e., in July 1948, on the ground that it led to a rise in prices—the index number of wholesale prices advanced from 302.0 in November 1947 to 389.6 in July 1948. It is seldom realised that the price rise in the decentral period was inevitable, for under the system of controls, prices had been fixed at an artificially low level and the experiment in decentralisation brought to the surface the latent inflation which was in the economy. The present position as compared to 1947 is totally different. The increase in agricultural and industrial production, the existence of more rigid monetary controls, the continued stringency in the money market and the low purchasing power of the people mark the more important factors which require themselves out as distinctive factors which require to be taken note of. The Committee feel that we are gradually emerging from a shortage economy to an economy of relative plenty and inflationary pressure is certainly not the dominating factor in the economic situation obtaining in the country at present, for instead of too much money chasing too few goods there is at present a definite lack of effective demand for the increased available quantities of goods.

"The basic problem at present in respect of a large sector of our economy is to help in stimulating the demand and to tackle the problem of low purchasing power. The fact that by and large there is no fear of an inflationary situation developing once again, would be borne out by the fact that in spite of certain recent relaxations in policy controls, coupled with the abolition of food and liberal export policy and the abolition of food subsidies, the index number of wholesale prices has been around 370 to 390 after February 1952 as compared to 458 in April 1951, 391 in April 1950 and 390 in July 1948. The policy of cautious deficit financing as adumbrated in the five year plan also would not call for rigid commodity controls. For its effects would be counterbalanced by increased production in the agricultural and industrial sector. The position today is that Government may have to adopt schemes of some of its primary products including raw cotton and raw jute. This clearly illustrates that the problem will increasingly be one of marketing production rather than of devising measures to control prices or enforcing physical controls.

Indirect Controls Favoured

"The Committee feel that such controls as have to be operated should be mainly indirect type of controls and through appropriate changes from time to time in fiscal, monetary and commercial policies. Perhaps, a few controls on some items of production, movement and allocation may be used to maximise the utilisation of scarce supplies and ensure the realisation of the approved plans of economic development. But the continuance of such controls should be subjected to continuous review in the light of changing conditions.

"The Committee realise that the rôle of physical controls will have to be considered in the context of the requirements of a planned economy, for the question of commodity controls cannot be considered in isolation. By and large, it can be said that the types of commodity controls needed in a planned economy will be substantially different from the present controls. The modification of present controls would have to be considered against the background of the extent of deficit financing which may be necessary for implementing the plan and the fields of different controls will have to be demarcated more clearly than at present. The Committee feel that despite the extent of deficit financing envisaged in the plan, physical controls will have a lesser rôle to play in future inasmuch as there would be increased supplies available for distribution as a result of the implementation of the plans of economic development. The Committee would here also like to point out that the existence of controls cannot be regarded as a sound reason for

the expansion of public enterprise in the field of distributive trades as envisaged in the plan, for over-much incursion by the State is likely to cause undue hardship and harassment to the people engaged in various trades and commerce, without necessarily giving relief to the consumers. State trading in foodgrains, cloth, kerosene, salt, etc., as admitted in the Report, would raise complex organisational problems. The object in view, viz., to check a diversion of investment on any large scale to trade would not be served, for in the conditions obtaining at present the margins of distributive trade are by no means large and the difficulties of administering an extensive system of controls in this field would be colossal. Any scheme of further incursion and extension of controls would have to take note of the administrative difficulties involved in further enlargement of economic and social responsibilities of the State.

Pressure on Public Administration

"Even in the efficient conduct of State enterprises Government are finding it difficult to man key jobs. The implementation of the five year plan is bound to increase the pressure on public administration both at the higher levels and at the lower rungs of the ladder. It has been noticed that even properly conceived policies have foundered by their bad execution at the lower levels of administration. The inefficiency of administration at the district level and the general harassment caused by arbitrary controls is too well known and in these circumstances to place additional burdens on the administration would be a misdirection of energy. A further intrusion in the distributive trade would also cause a serious shrinkage of opportunities for gainful employment to that section of the community which earns its livelihood from these occupations, for their mobility to change to other occupations is indeed very limited. The Committee feel that the lack of gainful employment to people engaged in distributive trades, and their dependents, has not so far received the attention of Government. The oversight of the problem of rehabilitating distributive trade is causing acute hardship to a section of the community."

ANNUAL COTTON MILL RETURNS

The following statistical table, compiled by the Millowners' Association, Bombay, gives some of the more important figures of the mills' working in India and Pakistan during 1952, year ended 31st August, with comparative figures for the preceding year.

	1951.	1952.	1951.	1952.
Total No. of Mills	445	453	27	27
Spindles installed	10,38,675,862	10,69,200,034	30,662,870	33,848,970
Spindles working	11,240,635	11,417,034	336,810	362,143
Looms installed	9,798,260	10,104,719	176,507	207,313
Looms working	201,484	203,786	5,562	5,895
Looms working (App. quantity of cotton consumed in yards of 784 lbs.)	183,045	187,282	4,641	5,039
No. of hands employed (Day shift)	1,843,577	2,066,516	43,568	48,929
	425,032	432,588	11,538	11,400

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks of sugar in respect of Central Sugar Factories in India during the fortnight ended 31st December, 1952, were 451,392, 127,325, 55,379 and 523,338 tons respectively, reports the Director of the Indian Institute of Sugar Technology, Kanpur. The figures for the corresponding fortnight of the previous season were 233,035, 135,767, 41,829 and 306,973 tons respectively. Figures for the current fortnight relate to 126 factories representing 91.32 percent of the total cane-crushing capacity, while the figures of the previous year relate to 127 factories representing 90.37 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 240,943 and 167,907 tons respectively, as against the corresponding figures of 302,786 and 140,546 tons during the previous season.

MINERAL AND METAL PRODUCTION IN 1948

The total value of minerals produced in the Indian Union during 1948 was over Rs. 70 crores and the total value of metals manufactured during that year was of the order of Rs. 40 crores. These figures appear in the Mineral Production of the Indian Union during 1948, just published by the Geological Survey of India. The publication also gives the figures for 1939 so that some idea can be given of the progress made by the mineral industry during a span of nine years. In 1939 the total value of the minerals and metals produced was Rs. 21.5 crores and Rs. 18.2 crores respectively. The corresponding figures for 1947, the year immediately preceding the one under review, were Rs. 64 crores and Rs. 31 crores.

The first part of the review deals with the statistics of production and value of minerals and metal products. The notes on each mineral give

data regarding its uses, treatment, average annual world production, location, reserves, quality and grade, production in the year under review and also the year preceding, figures of exports and imports, consumption in Indian industries and future prospects. The second part of the review deals with the statistics of mineral concessions granted and terminated during the year 1948.

WHOLESALE PRICE INDEX

The official wholesale price index (base: year ended August 1939 as 100) advanced by 0.9 percent to 378.2 during the week ended January 10th, 1953. The index was higher by 1.7 percent compared with the corresponding week of last month but was 12.3 percent lower than that of a year ago. During the week under review, Foodstuffs increased by 2.4 percent to 356.2 because of a substantial rise in the prices of tea which appeared after a lapse of two weeks, together with higher prices of rice at Patna (+5%), gur at Muzaffarnagar (+10%), dal arhar (+8%), gram at Hapur (+4%) and salt in Bombay (+8%). Industrial Raw Materials advanced by 1.9 percent to 433.6 as a result of increases in the prices of raw cotton (+5%) raw jute and lac (+3% each), rapeseed (+2%), groundnuts, gingelly-seed, cottonseed and copra (+1% each) in spite of an appreciable fall in manganese ore (-23%) and castorseed (-5%).

The index for Semi-manufactures increased by 0.3 percent to 344.1 because of higher prices of mustard oil (+4%), coconut oil and groundnut oil (+1% each) and the reappearance of price quotations for gingelly oil and groundnut cake at a higher level, although sheep skins, castor oil and gingelly cake (-3% each), buffalo hides (-2%), cow hides, goat skins, zinc, brass and coir yarn (-1% each) registered falls during the week. In spite of a rise of 2 percent in jute manufactures, the index for the Manufactures group declined by 0.2 percent to 366.1 compared with 367.0 (revised) for the previous week, because of lower prices of rayon and silk manufactures (-6%) and soap (-8%). Decreases in the prices of tobacco-leaf (-5%) and spices (-2%) brought down the Miscellaneous group index by 2.5 percent to 621.0. Cashewnuts, however, moved up by 1 percent during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS.
(Base: Year ended August 1939=100)

Group and Sub-Group	Week ended			
	10-1-53	3-1-53	13-12-52	12-1-52

Calcutta Markets

PRICES IMPROVE IN EXPORT AUCTION

IRREGULAR DEMAND FOR DUSTS

AT Sale No. 32, held on 27th and 28th January, demand was once again well maintained in the Export auction, the general tendency being a further increase in price for the majority of offerings. The best liquoring C.T.C. Assams were strong, but those of ordinary rains quality generally sold at rather easier rates. Prices for Fannings and medium and low medium brokens were well maintained, whilst common teas were often half an anna dearer. Teas with clean black leaf in the above categories were well competed for and often sold an anna above last rates. Stylish leaf grades once again sold well and were generally dearer.

The Dust market met with a very irregular demand. The strongest features of the sale were Clean Black dusts suitable for the Egyptian market and the commonest sorts which were two annas and often more dearer. Medium and C.T.C. Assam dusts tended to be easier whilst Darjeelings received less support and were several annas easier in most cases.

The few packages of Internal leaf tea on offer sold well.

Quality	1953	1952
Clean Black Pekoe	1 7 0	1 9 6
Clean Common Broken	0 15 6 to 1 0 0	1 7 6 Nominal
Pekoe	1 1 0	1 10 0
Good Assam Broken	1 15 0	2 4 0 to 2 5 0
Medium Darjeelings	1 0 0 to 1 8 0	1 10 0
Medium Assam Grains	1 8 0 to 1 9 6	
Dust	1 8 0 to 1 9 6	
Best Assam C.T.C. Dust	1 14 6	

Approximate Quantity Offered	47,100 Packages
Export	51,400 Packages
Internal	1,800 "
Dust	15,100 "

FREIGHT MARKETS ACTIVE

COTTON CHARTERING SLACK

THE movement of ore from India continues to be the most active market and many fixtures have been made amongst which are: s.s. Nica, 5,000 tons, 10 percent, Calcutta-Constanta-85s. An Italian Steamer, 9,000 tons, 10 percent, Mormugao-Constanta-63s. 3d. A Steamer, 8,000 tons, 10 percent, Calcutta and Madras-Constanta-85s. Further fixtures were arranged from Durgun to Japan at 35s. and to the U.K. at 67s. 6d., both rates being 2s. 6d. more than previously paid. In the grain markets an increase of 2s. 6d. per ton was paid from the Plate to India and a vessel was fixed from the U.S. Gulf to India at 78s. 9d. Cereals from North China to the Continent rose to 95s. and there is a good demand from Australia although few fixtures have been reported.

Little progress has been made in chartering for Calcutta coal exporters and a solitary fixture to Singapore at 49s. is a measure of the slackness of this trade. Japanese importers are still unwilling to meet owners' ideas of rates and the latter, with a variety of cargoes to consider, are not disposed to reduce their rates.

Freight Prospects

The Indian National Steamship Owners' Association, Bombay, says in a review that the freight market has made an encouraging beginning in the new year. Substantial business has been concluded and new orders are coming in fast. Rates have advanced in several sectors and values for forward loading are also sympathetically higher. India is once again prominent with chartering operations, notable attention being paid to the ore trade. A number of vessels have been fixed for this commodity for American and Continental ports, several of them at improved rates. Vizagapatnam to Northern Range has paid \$11.75, against \$10.50 in December last; Calcutta to Japan 65s. against 62s. and Marmagao to Rotterdam 65s. against 62s. 6d. before. Although there have been a number of inquiries for coal from Calcutta, no significant business has been done as rates are not attractive and are expected to increase. American wheat exports to Pakistan have also accounted for about ten fixtures. Halifax or St. John to Karachi has been fixed at \$10.50 and North Pacific to Karachi at \$18.25.

The Indian Ocean region is expected to show considerable shipping activity in coming months. According to the recent trade agreement, China is to supply Ceylon 250,000 tons of rice annually for five years and India is expected to import considerable quantities of rice from Siam. South Africa has begun to export coal and numerous vessels are reported to have been fixed for Karachi at 50s. for January loading and 43s. 6d. for February-March loading. The movement of the new grain crop from Australia is also expected to commence soon. Till now activity in this section has been meagre because it was expected that heavy movement of grain carriers from the North Pacific to India and Japan towards the end of last year would provide ballast for comparatively cheaper rates. The expectation has not materialised, however, because these ballast rates have been engaged for taking ore to the United States, owners finding the ore rates more attractive. Orders circulating for grain cargoes from Australia to India, Ceylon, U.K. and the Continent are not meeting with a favourable response from owners as

the rates do not seem sufficiently attractive. It is therefore felt that rates in this section should improve. The American grain section has been well supported. About ten grain carriers have been fixed from the Pacific and Atlantic coasts to Karachi, and the U.K., Japan and Egypt have several orders circulating for grain vessels. There has also been a revival of coal traffic from the United States to European ports, with a moderate improvement in rates. Hampton Roads to Antwerp or Rotterdam has paid 34s. against 33s. 6d. before.

WEEKLY SUGAR MARKET REVIEW

During the week ended 27th January, the ex-mill price of sugar was 4 annas a maund less than in the previous week but the price in the local market was 4 annas higher because not enough wagons were available to move sugar to Calcutta. Arrivals were very poor and stocks amounted to about 15,000 bags. Market prices were big grain Rs. 31-4; medium grain Rs. 30-4; and small grain Rs. 29-8.

LINSEED

There is very little change to report and although price levels were maintained, the undertone appeared to be somewhat easier. Trading was on a very limited scale. There were fairly keen sellers for forward delivery at slightly lower rates but ready goods were scarce. Enquiries from the local mills were very feeble and buyers in general were disinclined to make any commitments for the present. Conditions ruled dull in the oil section with no fresh business reported. Sellers were fairly keen but no interest was shown by buyers. Latest quotations were as follows: Ready Rs. 20-4 per maund.

HIDES AND SKINS

The market continued steady. Stocks were less than in the previous week.

Bazar Sales

(Between 20th and 26th January, 1953)
Cowhides:—Wet salted (Ord.) 8,000 pcs. on the basis of Annas 11-6 to Annas 9-8; Wet salted (Ord.) 15,000 pcs. on the basis of Rs. 8-8 to Rs. 10; Wet salted (Slaughtered) 10,400 pcs. on the basis of Rs. 12-8 to Rs. 22-8.

Goatskins:—Wet salted (Daisee, Killed) 30,800 pcs. on the basis of Rs. 275 to Rs. 412-8; Assam-Dinaipur-Murshidabad 23,400 pcs. on the basis of Rs. 240 to Rs. 310; Purneah-Kissenganj 6,300 pcs. on the basis of Rs. 270 to Rs. 295; Patna (Ord.) 9,500 pcs. on the basis of Rs. 170 to Rs. 225; Muzafferpore-Darbhanga-Pakur 27,500 pcs. on the basis of Rs. 235 to Rs. 245.

Bazar Stocks

(26th January, 1953)

Cowhides:—Wet salted 143,200 pcs.
Goatskins:—Wet salted (Daisee, Killed) 1,21,500 pcs, Assam-Dinaipur 83,000 pcs; Muzafferpore-Darbhanga-Patna-Pakur-Purneah-Kissenganj 1,45,500 pcs.

WEEKLY SHELLAC MARKET REVIEW

During the week ended 27th January, the market was quiet at first but remained generally steady throughout. The volume of business was not great. The range of quotations was as follows:—

Standard Pure Buttolac Rs. 92 buyers.
Pure Buttolac Rs. 85 buyers.
Lemon No. 1 Shellac Rs. 85 done & buyers.
Lemon No. 2 Shellac Rs. 80 to 81 buyers.
F. O. Std. I. Rs. 75 to 77 done & buyers.

Pure TN Shellac Rs. 70 to 73 basis done & buyers.

4% I.T.N. Shellac Rs. 64 done & buyers.
No. 1 Kusmi Seedlac 3% Rs. 80 to 82 buyers.
No. 2 Kusmi Seedlac 3% Rs. 75 to 76 done & buyers.

Fine Bysaky Seedlac (Manthum) 3% Rs. 70 to 73 done & buyers.

Fine Bysaky Seedlac (C.P.) 3% Rs. 67 to 68 done & buyers.

Ordinary Bysaky Seedlac (C.P.) 5% Rs. 60 to 62 done & buyers.

Kireelac Rs. 27 to 28 done & buyers.

Shipments during January until the 22nd were 24,487 packages.

TRADE THROUGH CHALNA IN NOVEMBER

The Chalna Anchorage handled 50,240 tons of cargo in November, 1952; exports 40,197 tons and imports 10,043 tons. During the corresponding month of the previous year, the Anchorage had handled 34,514 tons; exports accounting for 23,483 tons while imports totalled 11,031 tons. This brings the total cargo handled by the Chalna Anchorage during eight months of the financial year beginning from April, 1952, to 2,68,371 tons as against 1,71,210 tons during the corresponding period of the previous year.

There was an appreciable increase in the export of jute. During the month under review, 2,00,985 bales of jute were exported through the Anchorage as against 1,40,905 bales in November, 1951. In all 17,318 bales of jute were exported during the period April-November, 1952. Of imports, which have shown a slight decline over the figures for November 1951, foodgrains accounted for 1,322 tons, salt 4,950 tons, kerosene oil 3,550 tons and commercial cargo 221 tons.

COMPANY AND PUBLIC NOTICES

RALLIS INDIA LIMITED

NOTICE OF MEETING.

NOTICE is hereby given that the Fourth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, No. 16, Hare Street, Calcutta, on Monday, 23rd February at 3-30 o'clock in the afternoon, for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st August, 1952, and the Balance Sheet as at that date.
- (2) To declare a Dividend on Preference Shares.
- (3) To elect Directors.
- (4) To appoint Auditors and to fix their remuneration.
- (5) To transact such other competent business as may be brought before the meeting.

The Share Transfer Books of the Company will be closed from the 9th February, 1953 to the 23rd February, 1953, both days included.

By Order of the Board,

K. SHEPPARD,

Secretary.

16, Hare Street,
Calcutta, 22nd January, 1953.

Note:—Dividend Warrants will be issued and posted to Registered Shareholders or their mandatories only. Persons holding shares on blank transfers are advised to submit their shares for registration in their names before 9th February, 1953.

THE DIMAKUSI TEA COMPANY LTD.

NOTICE is hereby given that a Dividend of 8% on Cumulative Preference Shares, and a Dividend of 15% on Ordinary Shares for Season 1951 have been declared payable on or after the 22nd instant. Warrants will be issued to Registered Shareholders whose names were in the Register on the 11th December, 1952, or in accordance with instructions received from them.

By Order,

WILLIAMSON MAGOR & CO.,

Managing Agents.

Calcutta, 24th January, 1953.

THE BISHNAUTH TEA CO. LTD.

NOTICE is hereby given that a Dividend of 5% for Season 1951 has been declared payable on or after 22nd January, 1953.

Warrants will be issued to Registered Shareholders whose names were in the Register on the 11th December, 1952, or in accordance with the instructions received from them.

By Order,

WILLIAMSON MAGOR & CO.,

Secretaries.

Calcutta, 22nd January, 1953.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Monthly Index of Indian Industrial Activity (Base: 1935) has now been brought up to July, 1952. Compared with the preceding month there were increases in Jute Manufactures (5.1 points), Steel Ingots (4.0 points),

Cement (34.5 points), Paper (9.9 points), Coal (6.0 points), Wagons Loaded (1.9 points) and Electricity (6.1 points), while the production of Pig Iron decreased by (2.6 points).

The Index for Cheque Clearance revealed a rise

of 12.2 points, while that of Notes in Circulation showed a drop of 6.3 points.

Combining all the factors the Capital Index of Indian Industrial Activity advanced by 8.9 points during July, 1952.

		Industrial Production						Miners Production	Total Number of Wagons Loaded (J)	Financial Statistics	Trade, Foreign & Coastal		Trade, Foreign & Coastal		General Monthly Index
		Ind or Cotton Consumption	Jute Manufactures	Steel Ingots	Pig Iron	Cement	Paper	Coal		Cheques Disbursed	Exports	Imports	Imports to Export	Imports to Export

(A) Option of Redemption.

(U) 2 months' notice, (v) 1 month's notice (w) Any int. date (x) 8 months' notice, (y) 3 months' notice.

(A) Payable at par between the years 1928 and 1945 in instalments to be paid in June of each year.

(U) Just before 31st December, 1950, 100 per cent per annum by accumulation of interest.

(U) Just before 31st December, 1950, 100 per cent per annum by purchase at any price less than par or by annual drawings at par.

(U) The January 1951 drawings at 100 per cent per annum purchased by the Corporation of Calcutta or Hyderabad.

(U) These Bonds are denominated with Imperial Bank of India at security against assets.

(U) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 1951 and 31st December 1950.

(U) The notice on a Bond being exchangeable for 50 Ordinary Shares.

(U) Redeemable (a) at 102 per cent on 1st October 1954 or (b) in the event of company liquidation or the undertaking being purchased or (b) out of a sum of Rs 100000000 enforceable or (b) out of a sum of Rs 100000000 or (b) at the rate of 102 per cent.

(U) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 10 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(X) To be redeemed at a premium of 10 per cent Rs 100000000.

(U) Option not exercised repayment to be notice.

(U) These Debentures are registered and are transferable by Transfer Deed.

(U) Up to and including the year 1943, holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every 12 months' notice.

(U) Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.

(U) Holders of the fully paid up convertible Debenture may on any interest date convert into fully paid up Ordinary Shares each Rs 500 debenture.

(U) The fully paid up Ordinary Shares of Rs 10 each on 1 month's notice.

(U) The option is not exercised before 30th September, 1952 the Company will not be entitled to exercise the option before 30th September, 1950.

(U) Repayable at par by 1984 by annual drawings on 1st July, each year.

(U) The repayment in part out of gross profits every year to a maximum of Rs 1,50,000.

(U) The option is not exercised before 30th September, 1950.

(U) At par by 15 annual drawings.

(U) Option of repayment on 5 months' notice after 31st July, 1953.

(U) The interest on the Debenture will be paid at par all or any of this Debenture on 31st December, 1950 or on any subsequent date.

(U) The interest on the Debenture will be paid at par all or any of this Debenture on 30th June, 1950 or any subsequent half-yearly date for payment of interest up to 30th June, 1964, at a premium of 1% on giving 5 calendar months' notice.

(U) 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 4 months' made afterfull term.

(U) Option not exercised repayment to be notice.

(U) These Debentures are registered and are transferable by Transfer Deed.

(U) Option of repayment within 5 years from the date of issue on one month's notice.

(U) The Company has the option to repay all or and at any date after 30th September 1953. Any time on or after 1st October 1947 holders may convert each notice of Rs 300 into 23 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to each day.

(U) May be redeemed at depreciation of Rs 20 per Debenture on 30th June, 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent.

(U) May be redeemed on 30th June 1952 at 2 per cent. Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent.

(U) Redeemable at a premium of 3 per cent on 31-12-54 with option to redeem on 3 months' notice on any interest date after 30-6-54 at same premium. These Debentures are registered and are transferable by Transfer Deeds.

(U) The option to redeem on 31-12-54 and 31-12-54.

(U) Any time on six months' notice.

(U) At par on or after 1-12-54.

(U) Repayable at par on 31-12-54 with the option of repayment at a premium of 2 per cent on subsequent interest date at a premium of 2 per cent.

(U) Repayable at the end of 10 years at a premium of 50 per cent per annum.

(U) The option to redeem on 31-12-54 and 31-12-54.

(U) N-Nominal.

COAL COMPANIES

O, P, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other Funds	Accrete under Tea	Outturn and Average Price per lb realised for crop.				Estimate	NAMES.	Accounts closed	Managing Agents	Net profits including Taxation	Dividends per cent.			Paid-up Share	Latest Market Quotations as available until.

DISTRIBUTING SINDRI'S OUTPUT OF FERTILISERS

LOWER PRICES AND BETTER PROPAGANDA NEEDED TO PROMOTE USE BY CULTIVATORS

LESS than a year ago, the Sindri fertiliser factory was formally opened by the Prime Minister amidst publicity wholly appropriate to the inauguration of the country's first major State enterprise since independence. The opening ceremony was marked by Mr. Nehru lowering a signal that permitted the first train loaded with fertilisers to roll away from the factory. The marketing bottlenecks which have in recent weeks threatened to slow down production suggest a painful contrast with the symbolism of that ceremony. Sindri entered 1953 with the ability to produce 350,000 tons of ammonium sulphate a year, a rate of nearly 1,000 tons a day; but with end-1952 stocks at the factory already amounting to about 50,000 tons, against a storage capacity of 90,000 tons, and offtake continuing to be poor, it has been debated whether a pruning cut might not be necessary. This would be an unfortunate beginning for a major State project.

The statistics of Indian agriculture are largely guesswork and the fact is that no one really knows what the demand for fertilisers is. In 1942, the Foodgrains Policy Committee said that two to three million tons were needed and efforts should be made to establish, as a beginning, a plant which could manufacture about 350,000 tons a year. In recent years, however, the Food and Agriculture Ministry has been working on the assumption that effective demand is 400,000 tons a year and the Planning Commission expects that it will henceforth increase by about 50,000 tons a year. During 1952, the Sindri factory produced about 180,000 tons of ammonium sulphate, other small producers added about 50,000 tons and imports amounted to 170,000 tons. Although the resulting total of 400,000 tons equals the Ministry's estimate of demand, stocks with State Governments and at the Sindri factory amounted to about 150,000 tons at the end of December 1952, as against about 50,000 tons a year earlier, and were worth over Rs. 3.5 crores. It is possible that some part of the decline in demand, from tea gardens for instance, was caused by the economic recession. But that decline could hardly have been as great as the stocks indicate, and obviously was not foreseen by the Government when it drew up its import budget.

Ever since production began in October 1951 the Sindri factory has been asked to supply fertilisers to private parties but has not been able to do so because its entire production goes into the Central Government-operated Fertiliser Pool. It was originally proposed to wind up the Pool on 1st January, 1953, and about two months ago, while that decision stood, it was announced that Sindri would be prepared to sell fertilisers to private parties. A flood of enquiries followed, offering the hope that the congestion would ease; but soon afterwards it was announced that the Government had decided to continue the Pool for another year, until 31st December, 1953. The reasons for that decision remained somewhat of a mystery and an official Note offered no more information than that it was taken "on further consideration." At about the same time, Mr. B. C. Mukharji, Sindri's managing director, delivered a speech to the Rotary Club in Calcutta which gave rise to criticisms that the Government had undertaken fertiliser production on a large scale without first fostering demand for it; his reported statement that fertilisers were being used mainly in cities, towns and other large centres gave the impression that the chief potential market, the rural areas, had not been given adequate

attention. The charge has considerable justification. Although, admittedly, the task of persuading millions of conservative peasants to use the expensive novelty of ammonium sulphate is far from easy, Governments and their present agencies are far from suited to tackle the job.

The evidence indicates that the distributive machinery is badly in need of overhaul. Under the present system, the Pool is operated by the Food and Agriculture Ministry which takes up Sindri's entire production, adds to this the output of other local manufacturers and imports the balance of estimated requirements. Quotas are then issued to State Governments and other large consumers such as planters' associations at a price so fixed by the Ministry that the Pool makes neither a profit nor a loss. (Some small producers in Travancore and Mysore have been granted the exceptional privilege of selling their product in the free market and have done so at prices much higher than Rs. 400 a ton.) When State Governments receive their quotas they distribute it by various methods. In West Bengal and Madras the fertiliser is passed on to the co-operative movement and to State-appointed agents for further distribution. The Madhya Pradesh Agriculture Ministry distributes fertiliser through district and local officials, and in Bihar the monopoly has been given to the provincial co-operative bank. The distributors appointed by State Governments are usually allowed to charge commission of Rs. 15 to Rs. 20 a ton to cover their stocking, selling and financing charges.

The Pool issue price was Rs. 380 a ton until 1st October last year, when it was reduced to Rs. 365 a ton. From 1st January this year it was brought down further to Rs. 335 a ton. Some allege that these prices are too high because Sindri's contribution to the Pool is too expensive and this belief has been encouraged by the fact that recent imports from Japan cost only Rs. 240 a ton. However, as has been explained in this newspaper before, the price in Japan itself is more than Rs. 300 a ton and transport costs are about Rs. 50 a ton; the only reason Japan is selling cheap is that with the dollars she gets from the U. S. Technical Co-operation Administration for supplying ammonium sulphate to India she can buy Cuban sugar which in Japan fetches a price high enough to more than cover the loss on sulphate sales to India. For imports generally India last year paid Rs. 360 to Rs. 400 a ton.

When the Pool issue price was Rs. 380 a ton, Sindri was being paid Rs. 350 a ton, and the cor-

responding figures at present are Rs. 335 and Rs. 310. Sindri's managing director is reported to have said last year that with efficient management the ultimate cost of producing ammonium sulphate would be about Rs. 230 a ton. Reductions in price therefore are possible, but Sindri has an expansion programme for which money has to be found. Substantial aid, amounting to about \$20 million, is expected from the U. S. Technical Co-operation Administration, but more funds will have to be raised locally and the Government apparently thinks that the easiest way of doing this is for Sindri to accumulate reserves. In the expansion programme are included plant for the manufacture of urea and ammonium nitrate and another (costing Rs. 60 lakhs) for methanol. When these expansion plans have been completed, by 1955, production of ammonium sulphate is expected to be 40 percent higher at 500,000 tons. But unless demand increases much beyond the Food Ministry's present estimate of 400,000 tons, the Government will have to explain why users of fertilisers have been paying higher prices in order to create useless additional capacity.

It is difficult to guess what the demand for fertilisers might be two years hence, but it seems clear that if the increase is to be commensurate with official hopes energetic action will be necessary, firstly, to reduce prices, and secondly, to evolve better distribution machinery so that the cultivator can get his requirements easily whenever and wherever it suits him.

Although ammonium sulphate was issued from the Pool at Rs. 380 a ton during most of last year consumers had to pay anything up to Rs. 500 a ton. This large margin for distribution expenses deserves to be investigated, with special reference to the profits being made by middlemen, including State Governments. It is here that will most likely be found the cause of the decline in demand. Some States have controls and permit systems, so that consumers have to cut through thick seams of red tape before they get their requirements. Rail and sea transport bottlenecks are not unknown; regional stocks have sometimes run down and led to black markets. Official agencies also are not equipped to conduct the steady and intensive sales campaign which is necessary to persuade an ignorant peasantry of the benefits of fertilisers. The average Indian farmer, deep in indebtedness, is not prepared to invest what little cash he has to spare on something whose value is to him unproven.

The Central Government recently suggested to States that ammonium sulphate be given to cultivators on credit and the cost recovered after they had sold their crop. Dr. Panjabrao Deshmukh, Agriculture Minister, announced last Thursday that a beginning was to be made

KAFFIRS BUOYANT ON FIRST
URANIUM EARNINGS
GILT-EDGED DEPRESSED BY
RHODESIAN LOAN RESULTS

London, 4th February.

TURN-OVER on the Stock Exchange during the past week has been greater than for some time past, particularly in domestic industrial issues. Most deals, however, caused very little disturbance to prices. During the early part of the week, activity was mainly in the Kaffir section where price rises were rather sharp following the announcement of first-ever earnings from uranium extraction by West Rand Consolidated Mines. Stronger advocacy of a higher gold price also helped but later profit-taking made deep inroads and gains were reduced by 25 to 50 percent on an average. Copper and diamond shares showed the reverse trend by being out of favour at first but later benefiting from the investment of funds obtained through profit-taking in gold shares. Gilt-edged suffered minor setbacks—mainly because of the disappointing response to the Rhodesian Loan and the bad flood news—but generally continued to move ahead. Industrials too remained in favour and quiet buying lifted values.

Foreign bonds were irregular, with a tendency towards lower levels. This resulted in bearish reports from various centres together with switching by speculators into gold shares. However losses over the week were restricted. Oil issues were quietly higher as the overflow of demand from industrials was diverted to them but dealers in shipping shares appeared cautious, though not seriously so in view of the approaching dividend season. Most of the interest was in domestic issues and minings, tea shares were rather neglected and this lack of interest offset the higher auction prices. Much of the business was on sellers' account and for the most part the section was a dull affair. British Assam were about 15d lower at 20s and Borian and Dorelli a like amount down at 18s 9d and 35s respectively. Several other losses of 9d were recorded, including Eastern Produce at 27s 9d. Majute at 20s 6d and Jokai at 26s 9d.

Apart from a slight improvement on one day early in the period, conditions on the London money market have generally been difficult. Out-

side calling was often heavy and official intervention was needed on several days to ease the situation. Although conditions remained difficult, the period closed with some slight improvement and the overall credit position proved just about adequate. Applications for £190 million Treasury Bills totalled £306,265,000. Allotments were £190 millions at an average rate of 47s 11.05d percent. This week £220 million will be offered. The Bank of England's Return shows a reduction of £6 million in the active note circulation from £1,454 million to £1,448 million.

The Price of Gold

There is no reason to believe that the United States will in the near future change her negative attitude towards an increase in the price of gold, the General Manager of the Swiss National Bank said in an interview with *Tot*. Asked by the paper what would happen in the case of devaluation, he said that any foreign currency holdings brought with them certain risks, but these were rather limited in the case of the dollar. He added that there was an agreement with the U.S. whereby Switzerland would be informed in time for any change in dollar parity.

Sterling's Strength

The Investor's Chronicle Market News Letter says—the industrial market seems likely to remain under the influence of hopes of a more generous dividend policy of various companies as a result of recent activity in bids, but markets will also reflect the weekly trend of national revenue figures. The recent strength of gold shares presents some puzzling features. Does it make sense in relation to the recent strength of sterling? We feel that its real reason lies in a deliberate official policy of restricting the amount of sterling available. In other words sterling's strength is to some extent artificial, and does not carry the implication that any freeing or upward adjustment of the sterling-dollar rate is in the offing. Indeed, if sterling were freed there is some shrewd opinion which thinks that the rate would fall to \$2.50 and settle down around \$2.65 to \$2.70, which of course would be beneficial for gold shares. On the other hand, those who buy gold shares are in effect "buying for peke" which makes an odd contrast with the politically depressed foreign bond market.

U.S. Aluminium Plant

The U.S. Defence Production Administration announced that it has made arrangements for the construction of a \$70 million aluminium plant with a production capacity of 50,000 tons of primary aluminium. The plant is probably being built in

the Tennessee Valley. The agency said that the plant would complete the nation's "third round" of aluminium expansion for defence.

Hides and Skins Firm

Offerings of East Indian hides and skins remained firm but buying interest was small. Superior tannage East Indian goat skins were offered at 155 cents per pound, c.i.f., New York, while prime tannage were offered at 130 cents. The best buyers were willing to pay for prime was 120 cents.

It was a moderately quiet week in tanned hides with the volume of business smaller than last week, mainly because of the fall in buying interest. This has not caused any great setback in the price level and the market continues steady with only slight tendency to weakness. Shippers are showing every indication of holding-out for their prices. Moderate offers for buff calf and cow calf have been received and prices have shown weakness. Shippers have increased prices in front of the auction but buyers were not inclined to follow these raises. Tanned sheepskins are particularly reflecting this firmness. It appears unlikely that any startling changes will be seen in the forthcoming auctions although some buyers think that prices will drop.

Bonded Warehouse Tea Stocks

Stocks of tea in London and Provincial bonded warehouses on 23rd January totalled 130,904,130 lbs. compared with 131,189,625 lbs. on 16th January. Supplies landed during the week were 9,484,020 lbs. and deliveries 9,769,515 lbs.

Rayon Production

With a further increase in December, Britain's 1952 rayon production has reached 283 million lbs., 26 percent below 1951. December production at 29.2 million lbs. comprised 14.3 million lbs. of continuous filament yarn and 14.9 million lbs. of staple fibre.

Sisal Prices

Fair buying by United Kingdom and Continental spinners at the recent low prices has reduced the available supplies of British East African sisal. Continued moderate demand met with few offers for early shipment and this resulted in firmer conditions. Today sellers of British East African asked £95 for No. 1, £92 for No. 2 and £90 for No. 3, per ton, c.i.f. U.K. and £1 more to the Continent, compared with £90, £87 and £85 respectively a week ago.

U.S. Copper and Aluminium Production

The Senate Finance Committee has agreed to hold open hearings on 3rd February on a bill, already approved by the House, extending duty free imports of copper until 30th June, 1954. Production of civilian types of copper and aluminium items are to continue at 50 and 55 percent respectively of the pre-Korean base. There is active demand for copper and moderate buying of lead but a generally disappointing demand for zinc.

Indonesian Tin Exports

December exports of 3,462 tons brought the total shipment of Indonesian tin in ore for 1952 to 24,191 tons against 30,490 tons in 1951. December shipments comprised 2,707 tons to Holland, 740 tons to the United States and 15 tons to Japan. London trade quarters believe this is the first time Japan has imported Indonesian tin in ore.

U.K. Futures Trading in Wool

The rules and regulations of the London Wool Terminal Market Association have been determined and, subject to final wording, are complete in form. When they are available for publication, which should be within a few weeks, the formation committee will invite applications for floor membership of the Association. The Association will consist of two classes of members. Floor members will operate the market and control the capital of the Association. All trading on the floor must be directed through them. Associate members will be unlimited in numbers but will have limited representation on the Association's management committee. Associated membership will be available to interested parties resident at home and overseas who may be approved by the committee of the Association. At first the market basis of contract will be a Bradford 64's B top. The market will be in London: appraisals and deliveries will be made in Bradford. The formation committee, recognising the importance of arbitrage business in international markets, has had the advantage of close consultation with the Bank of England on arrangements to enable members of the market to deal also in foreign markets. It is satisfied that an appropriate scheme will in due course be provided for that purpose without the immediate withdrawal of any existing individual arrangements.

World's Safest Tanker

The 18,000-ton *Helix*, launched at a British shipyard earlier this month, is claimed to be the safest tanker yet built in the world. This turbo-electric oil tanker, which has a service speed of 14½ knots, is the first of a series of 50 standard vessels of that weight which the Royal Dutch Shell group of oil companies have under construction or on order. Hitherto the standard vessel had been the 12,000-ton ship, and the new standard ships are a great advance, said a spokesman of the company. They will be economical in operation. The risk of accidents at sea will be greatly reduced.

The new safety features in the *Helix* are designed to eliminate the risk of fires and explosions due to escaping gases. If, through accident, dangerous gases escape, they are prevented by special devices, from entering those parts of the ship where naked lights are in use.

Finance in India & Abroad

GOLD AND DOLLAR RESERVES
GAIN \$132 MILLIONSTERLING STEADY NEAR UPPER
LIMIT

THE gold and dollar reserves of the sterling area gained \$132 million in January, announces the British Treasury. This brought the reserves to \$1,978 million at the end of the month—the largest gain for any month in the past year. It compares with a fall of \$49 million in December, when Britain had to pay out \$181 million as the annual instalment of her North American loans. No doubt many of these newly earned dollars were obtained by the control authorities selling sterling in the exchange market, where it has been consistently strong in relation to the U.S. dollar since the end of last year. As pointed out here last week, sterling would be sold under these conditions partly in order to keep the rate below the ceiling of \$2.82.

Since our last comments, sterling has been within 1/16 of a cent of the upper limit fixed under the existing regulations, and the opinion has been expressed that if sterling were now unpegged the rate would rise to \$3. Perhaps, but there is no call for that experiment yet. The figures given above for the sterling area's reserves are still far from healthy and certainly much below the level that would be required for any venture into freer trading conditions of the sort discussed since the autumn. As long as that is the case, it is better for the authorities to channel the excess supply of dollars into the reserves rather than allow them to find expression in a higher dollar-sterling rate. The improvement in sterling over the past few months has been enough to justify outside confidence in the currency and that, together with the steady addition to the reserves, is sufficient for the present.

STEADY DEMAND FOR CREDIT
IN CALCUTTA

Wednesday, 4th February.

THOUGH conditions have been quiet in Calcutta, there has been sustained demand for money, and advances against sugar and seed crops have risen. Credit is still fairly tight in the interbank market, although some easing of the tension has been reported from Bombay. Overnight money quotes 2½ percent and call money 2½–3 percent.

The export business is slow and the bill of exchange market is having a quiet time in consequence. There have been some small tea and gunny bills passing. Remittance on the other hand has been in good demand. The rupee-dollar rate stands at Rs. 47s for \$100. The selling rate for Hongkong dollars has been changed after a long interval from Rs. 83-8 to Rs. 83-4 for one hundred Hongkong dollars. Sterling rates are unchanged at T.T. and O.D. 1s 5 31/31d; three months' sight bills 1s 6d; and four months' sight bills 1s 6 5/16d.

The response to the offer of Rs. 1 crore of three-month Government of India treasury bills was a little better this week, at Rs. 1,14,25,000. Tenders at Rs. 99-6-6 were accepted in full and those at Rs. 99-6-3 allotted about 87 percent. The average rate of acceptance was once again Rs. 27-0 percent per annum. Tenders for another Rs. 1 crore will be accepted up to Tuesday in Bombay and Monday elsewhere. During the week ended 30th January, treasury bills for Rs. 3,10,00,000 were sold in favour of the Reserve Bank of India.

Suggestions of a second front in China, following the first message of Mr. Eisenhower to Congress, evoked fresh support in silver. Bears also rushed in to cover, and the price consequently rose from Rs. 158-12 to Rs. 163-8 in the face of scarce arrivals. There was no variation in London and New York quotations, which were maintained at 74d. and 85½ cents, respectively. Gold also moved to higher levels in sympathy with the white metal, the price improving from Rs. 88-12 to Rs. 90-8. The sovereign at Rs. 60-8 disclosed a gain of 6 annas.

There is a fall of Rs. 3.82 crores in notes in circulation to Rs. 1,106.38 crores according to the return of the Reserve Bank of India for the week ended 30th January, 1953, while the total note issue at Rs. 1,132.05 crores discloses a fractional gain of Rs. 23 lakhs. Notes held in the Banking Department were consequently up by Rs. 4.04 crores to total Rs. 25.67 crores. In the Banking Department, deposits of the Government of India declined by Rs. 96 lakhs to Rs. 163.07 crores, but other Government accounts improved by Rs. 5.58 crores to stand at Rs. 12.72 crores. Balances of commercial banks also diminished from Rs. 46.05 crores to Rs. 45.06 crores. Government treasury bills fell from Rs. 14.89 crores to Rs. 11.32 crores. Balances held abroad were about Rs. 2.45 crores higher to Rs. 159.97 crores. The item of other loans and advances declined from Rs. 13.56 crores to Rs. 12.66 crores, of which advances to scheduled banks against usance bills continued unchanged at Rs. 98.93 lakhs. Investments rose by Rs. 31 lakhs to Rs. 100.10 crores. Ways and means advances to Governments were shown at Rs. 3.40 crores (Rs. 3.62 crores).

The return of the Imperial Bank of India for the week ended 23rd January, 1953, shows a rise of Rs. 37 lakhs in total deposits to Rs. 208.38 crores. Investments in Government Securities are down

by Rs. 1 lakh to Rs. 74.34 crores, while other authorised investments remain unchanged at Rs. 10.89 crores. Loans, cash credits and overdrafts have increased by Rs. 85 lakhs to aggregate Rs. 109.21 crores, while bills discounted and purchased at Rs. 7.15 crores reveal no change. Cash and balances are, in consequence, shown at Rs. 19.51 crores or Rs. 78 lakhs less.

During the fortnight ended 30-12-52 National Savings Certificates amounting to Rs. 20,38,730 were sold in the State of West Bengal. During the same period applications totalling Rs. 4,89,500 for subscription to the 3½% Treasury Savings Deposit were also received by the Treasuries and the branches of the Imperial Bank of India, West Bengal and the Public Debt Office at Calcutta.

The following is a statement of the cash balances of the Central Government on the last day of November 1952:—

	Rs.
(1) At the Reserve Bank of India in India	170,01,06,000
(2) At treasuries in India	1,58,08,000
(3) In England (Sterling converted at 13d. the Rupee)	2,90,06,000
Total	174,49,20,000

BARBER-GREENE OLDING & CO. LTD., HATFIELD, HERTS, ENGLAND

account open in these shares. Britannia Engineering were taken at Rs. 17.4. Braithwaite were steady at Rs. 10.12 and Indian Galvanizing New improved to Rs. 13.10. Indian Standard Wagon were wanted at Rs. 82. Indian Steel & Wire Products fully-paid ordinary were scarce at Rs. 57.8 and Jessors were better at Rs. 22. Parcels of Kumardhubi Engineering and Marshalls changed hands at Rs. 7.8 and Rs. 6.3.

The outstanding feature in the miscellaneous section was Airways India Limited. Large scale buying operations took the shares up during the week from Rs. 10.8 to Rs. 14.14; profit-taking at the close brought the price down to 14.6. Orient Paper also provided a good feature with the price improving by Rs. 1.8 to Rs. 28.8 with few shares offering. Titagarh were a shade better at Rs. 24.8 while Sone Valley Cement improved from Rs. 6.4 to Rs. 6.9. Several deals were recorded in India Steamship at around Rs. 6.5 and Port Shipping was marked at Rs. 11.12. Anglo Bros. were one at Rs. 18.4 and British India Corporation were better at Rs. 9.7. Dunlops were steady at Rs. 28.8 and Indian Cables were dealt in freely at around Rs. 18.4. Jardine Henderson were quoted at Rs. 126 and Indo Burma Petroleum improved to Rs. 51.8. Martin Burn were marked at Rs. 18.2 and Metal Box were a shade better at Rs. 19.4. Rallis were supported at Rs. 70 and there were buyers of National Tobacco at Rs. 10.2. In contrast, Shaw Wallace were easier at Rs. 12.10.

In the mining section Burma Mines and Non-Ferrous Metals were steady at Rs. 1.6 and Rs. 1.3. Indian Copper were better at Rs. 3.4.

Enquiry for selected tea shares continued and prices in a number of cases reached higher levels. Principal amongst these were Dufflaghur which came to hand at Rs. 29.4. East India at Rs. 17.4 and Huldibari at Rs. 16.12. Others to be asked for and taken up were Brooke Bond at Rs. 11, Dhelakhat at Rs. 9.4, Murphulani preferred-ordinary at Rs. 20.4 and Tezpur at Rs. 15.8. Business was also reported in Basmatia at Rs. 22, Betjan at Rs. 21.12 and Teen Ali at Rs. 18. Choonabutti were better at Rs. 180 as were Hantapara at Rs. 118 and Rajabhat at Rs. 12. At the close there were further buyers of Dufflaghur at Rs. 29.6, East India at Rs. 17.8, Bishnauth at Rs. 25, Hasimara at Rs. 24.4 and Huldibari at Rs. 17, but in all cases sellers were scarce.

The working of the HABIB BANK LTD. for the year ended 31st December, 1952, details of which are published elsewhere in this issue, shows that the institution continues to make good progress. Net profits at Rs. 27.63 lakhs are about Rs. 12.34 lakhs less than in the previous year due to larger provision at Rs. 40 lakhs (Rs. 28 lakhs) for taxation. Adding Rs. 10,48,195, there is an available balance of Rs. 38,10,824. Interim dividends at Rs. 2 per share (Rs. 1.8) absorbed Rs. 10 lakhs. The final dividend has been declared at Rs. 2 per share (Rs. 2.8), making Rs. 4 (same) for the year, leaving Rs. 18,10,824 to be carried forward. Deposits fell by Rs. 9.24 crores to Rs. 34.58 crores, and this explains declines of Rs. 3.51 crores, Rs. 2.86 crores and Rs. 3.72 crores in cash, investments and loans and advances to Rs. 9.83 crores, Rs. 20.25 crores and Rs. 7.73 crores, but earnings were well maintained presumably due to higher interest yields. The above figures are in Pakistan rupees.

THE MIDNAPORE ZEMINDARY COMPANY earned a profit of Rs. 8,16,988 for the year ended 13th April, 1952. Providing Rs. 6,80,000 for taxation, meeting other charges and bringing in Rs. 93,983, there remains Rs. 1,92,608. The directors have recommended an ordinary dividend at Rs. 2 against a capital payment of Rs. 3 per share, leaving Rs. 4,608 to be carried forward. The company's properties in Eastern Pakistan have been acquired by the State as also the Barabhum Concern of the Company in Bihar by the Government of Bihar, but no compensation has been yet received on either property.

Profits of the BHOPLA SUGAR INDUSTRIES LTD. rose from Rs. 2.84 lakhs to Rs. 4.24 lakhs for the year ended 30th September, 1952, chiefly due to the sale of the accumulated stock of molasses. Bringing forward Rs. 36,556 there is an available balance of Rs. 4,60,419. Notable allocations include taxation Rs. 75,000 (same) and General Reserve Rs. 1 lakh. The ordinary dividend has been reduced

by 4 annas to Re. 1 per share, leaving Rs. 47,913 to be carried forward.

There is a fall from Rs. 38.88 lakhs to Rs. 9.99 lakhs in profits of ANGLO BROTHERS LTD. for the year ended 31st August, 1952, because of the sharp falls in prices. Allowing Rs. 1.38 lakhs (Rs. 1.37 lakhs) for depreciation, Rs. 2.45 lakhs (Rs. 13.65 lakhs) for taxation and making other adjustments, there remains a distributable balance of Rs. 10,31,014, including Rs. 5,30,014 brought forward. General Reserve is allocated Rs. 1.75 lakhs (Rs. 6 lakhs), and the dividend is maintained at 12½ percent, but the bonus of 12½ percent has been passed, leaving Rs. 5,24,909 to be carried forward. It was reported that prices of shellac had become uneconomic, causing the closure of small factories, because shellac prices fell more sharply than those of raw materials.

The working of RALLIS INDIA LTD. for the year ended 31st August, 1952, was adversely affected by falls in prices of commodities. The company incurred a loss of Rs. 3,05,126 after allowing Rs. 11,07,700 for depreciation and adding Rs. 2,39,967 from previous provisions no longer required, and this compares with a profit of more than Rs. 75.84 lakhs in the preceding year. Bringing in Rs. 4,61,848 and transferring Rs. 2 lakhs from Contingencies Reserve, there is a distributable balance of Rs. 6,61,848. Preference dividends have been paid, but the ordinary ones have been passed, leaving Rs. 24,847 to be carried forward.

THE WEEK'S TRANSACTIONS

ONE-MAN ENQUIRY ON JUTE

MOVE TO REDUCE AGENDA FOR BUDGET

SESSION OF PARLIAMENT

(FROM OUR OWN CORRESPONDENT).

31st January.

THE proposed official enquiry on jute will be conducted by one man, a high court judge, and the Government is considering whom to appoint.

With only 23 working days for official business during its Budget session, Parliament is being asked to pass 25 pending Bills and 42 new ones. It is reported that the Minister for Parliamentary Affairs, Mr. Satyanarain Sinha, held a meeting of Secretaries this week to emphasise the need for a lighter agenda. The Prime Minister, it is learned, is opposed to a haphazard legislative programme under which important Bills are brought up towards the close of a session and a large number are left pending. Mr. Sinha is believed to have said that only very urgent Bills should be sponsored during the Budget session. Enquiries show that most Bills have not even been drafted yet so that the list indicates Ministers' thoughts rather than intentions. The Transport Ministry, for instance, has said that it will sponsor two new Bills, including the Motor Vehicles (Amendment) Bill which the Transport Advisory Council has already decided to circulate amongst States to elicit opinion. Such measures as the Navy Bill and the Indian Citizenship Bill have been on the legislative programme for several sessions. Several Bills have been put on the agenda but are by no means urgent. It seems therefore that much pruning will have to be done before the programme is finalised.

Following is a list of the 42 proposed new Bills. The Commerce and Industry Ministry has the Indian Tariff (Amendment) Bill, the Indian Patents and Designs (Amendment) Bill, the Iron and Steel Control Bill, the Control of Royalties Bill and the Coal Board Bill. The Communications Ministry will sponsor the Air Services Corporation (Amendment) Bill; and the Defence Ministry the National Cadet Corps (Amendment) Bill and the Navy Bill. The Education Ministry has the Children's Bill and the Ancient and Historical Monuments (Declaration of National Importance) Amendment Bill. The Finance Ministry's list includes the Finance Bill, the Negotiable Instruments (Amendment) Bill, the Indian Companies (Amendment) Bill, the Spirituous Medicinal and Toilet Preparations (Excise Duty) Bill, a Bill to give effect to the recommendations of the Finance Commission, and another to give effect to the recommendations of the Mitra Committee on the liquidation of banks. The Food and Agriculture Ministry has the Livestock Importation (Amendment) Bill, the Agricultural Products (Grading and Marketing) Bill and the Indian Cotton Cess (Amendment) Bill. The Health Ministry will sponsor the Control of Undesirable Advertisements Bill, the Drugs (Amendment) Bill and the Dentists (Amendment) Bill. The Home Ministry has only the Citizenship Bill. The Information and Broadcasting Ministry proposes legislation under entry 52 of the Union List on the film industry. The Labour Ministry will sponsor the Factories (Amendment) Bill and the Minimum Wages (Amendment) Bill. The Law Ministry's list includes Representation of the People (Amendment) Bill, the Hindu Adoption Bill, the Hindu Guardians and Wards Bill, the Repealing and Amending Bill and the Vice-Chairman's and Deputy Speaker's Salaries Bill and the Members of Parliament Daily Allowance Bill. The Production Ministry has the State Industries Bill and the Salt Cess Bill. The Railways Ministry will sponsor the Indian Railways (Amendment) Bill and the Rehabilitation Ministry the Displaced Persons (Payment of Compensation) Bill. The States Ministry has the Travancore-Cochin High Court (Amendment) Bill. The Transport Ministry proposes to introduce the Motor Vehicles (Amendment) Bill and the Delhi Road Transport Authority (Amendment) Bill. The Works, Housing and Supply Ministry's list includes the National Housing Bill, the Government Premises Eviction (Amendment) Bill and the Indian Boilers (Amendment) Bill.

Schuster's Press Conference

Sir George Schuster, former Finance Member of the Viceroy's Executive Council, held an interesting Press conference here this week. He expressed his belief that the five year plan would succeed where there was adequate public support. Indian industrialists, he said, should interest themselves in the development of agriculture as well as in large-scale industrial expansion. They should in their own interest do everything to support agricultural development because their own markets depended on it. A group of industrialists in Calcutta, Bombay, Madras, Kanpur and Ahmedabad could combine to raise adequate funds in order to launch community development projects to supplement the Government's programme. Sir George laid special emphasis on co-operation between the industrialists and the Government, adding that there was no harmonious collaboration with the Government "to mutual confidence." It was the confidence of the Government and the public. They could demonstrate their frankness and confidence by publishing their financial results in a manner which everyone could understand and by restraining personal expenditure and dividend payments. In Britain, big undertakings published elaborate statements to convince the public that they were making not excessive,

but reasonable profits. "I am a believer in increasing the turnover and keeping the margin of profit at a minimum."

He also advised Indian industrialists to build proper management cadres, especially in the middle and lower grades. Favouritism should be eliminated and good recruiting techniques developed instead with proper training methods, efforts to discover new talent and promotion policies which reward merit. Sir George emphasised the need for small industries, which were ancillary to and could assist large factories to produce more complex goods. The lack of such small industries was a weakness in India's industrial structure. "Such small industries can and must rest on a sound economic basis. The artificial protection of small or large industries is a dangerous course." Sir George urged the Government to review its taxation policy, relax controls and reduce expenditure on a top-heavy administration. It was true that the five-year plan left the main field of industrial development to private enterprise but the Government maintained extensive powers of control. The Government's actions had not always been wise or helpful and Sir George felt that there was a need for newer and more intimate methods of consultation with industry. In short, there should grow up a new class of "industrial statesmen" on both sides. Sir George said he believed that high wages should be paid and the man who tried to earn profits by depressing wages was a public danger. But high wages must be justified by productivity, otherwise the enterprise would end in disaster.

India's need for capital resources was so great that everything should be done to encourage the inflow of capital from abroad, he said. Foreign capital would be invested in India if she maintained her reputation for fair dealing, commercial integrity and a scrupulous respect for obligations. He felt the Government should make a clear and unequivocal statement of policy on this subject, avoiding reservations which tend to undermine confidence. Factors of production were not cheaply available in India. Labour costs were high and continuing to rise. Sir George apparently did not mention an important factor discouraging the inflow of capital—double taxation. Foreign capital can be attracted only if it is allowed to earn slightly higher profits here than it does elsewhere, but the Government of India has so far not concluded a double taxation agreement with any country.

Sir George made three other notable points. Firstly, he said that deficit financing was dangerous. Secondly, India should give top priority to the economic rather than the social aspects of the plan. Thirdly, the growth of population by 4½ millions a year was a problem which required immediate attention, perhaps through a campaign to limit the size of families.

Surplus Labour on Tea Gardens

Since the closure of a large number of gardens, greater realism has been shown in discussions on the tea industry's problems. In many cases bipartite agreements have been reached on the conversion of food concessions into cash payments. The Labour Ministers' conference to be held here next week will discuss the question of surplus labour in tea estates and will consider the following suggestions: (1) Inter-garden movement of workers should be encouraged to adjust local surpluses and shortages; this may be done through the tea districts' labour associations. (2) Recruitment of tracts' labour should be stopped and surplus outside labour who are immigrants should be repatriated in accordance with the provisions of the Tea District Emigrant Labour Act. (3) Schemes for the development of cultivable waste lands should be undertaken to absorb surplus labour. (4) Cottage industries should be started. (5) Surplus labour could also be diverted to employment on public works projects. The Ministry of Commerce is planning another enquiry into the cost of production of tea and an early announcement is expected.

Industrial Relations Bill

The Industrial Relations Bill is an important item to be discussed at the Labour Ministers' conference. Opinions will be expressed on the relative merits of compulsory adjudication, collective bargaining and a mixture of the two. Compulsory adjudication was at one time strongly opposed by all important workers' organisations, but it became necessary during the last war and has since been increasingly used. To the structure of labour courts and industrial tribunals was later added the appellate tribunal. The consensus of opinion at the Naini Tal session of the Indian Labour Conference was that while compulsory adjudication would be made only in exceptional circumstances. It was agreed that the various stages in settling a dispute should be: (1) Serving of notice. (2) Collective bargaining (mutual negotiations with or without the assistance of the conciliation officer). (3) Conciliation through a conciliation board. (4) Voluntary arbitration or compulsory adjudication. It was also agreed that in a non-public utility service, the Government should not order adjudication unless a strike or lock-out is in the opinion of the appropriate Government, likely to: (a) cause serious or prolonged hardship to a large section of the community; or (b) affect seriously the industry concerned; or (c) curtail seriously the prospects of and scope for employment in the industry. The Conference will be asked to endorse these principles. Although employers demanded the retention of appellate

Pakistan

DELAY IN ANNOUNCING
NEW IMPORT POLICYBLACKMARKETING BEGINS IN
SOME CONSUMER GOODS

(FROM OUR OWN CORRESPONDENT).

Karachi, 30th January.

IT is now nearly six months since Open General Licence 13 was cancelled, and nearly two months since total control over imports was established when O.G.L. 14 suffered the same fate. Yet even now no fresh licences are being issued—in fact the new licensing policy has not even been announced. By the time applications have been called for and dealt with, orders placed and executed, and shipment arranged and effected we shall be well on into the hot weather. This is causing great anxiety not only to importers and consumers, but also to all those who are hopeful of Pakistan's economy remaining on a sound basis. There are some redeeming features in the situation. In the first place there was a good deal of stuff in the pipeline, and the flow of goods covered by commitment licences is only just beginning to dry up. Secondly, the country held, and is even now burdened by, very large stocks of certain classes of goods, the most important of which are cotton piecegoods. Cycles and cycle tyres are other examples of consumer goods in general demand which are in plentiful supply. But in many other articles black-marketing has already begun.

With regard to machinery and the other essential classes of goods which were on the restricted O.G.L., we had been assured that licensing of these would be practically automatic and that no time would be lost. In most cases "category cards", based on imports during the past three years have now been issued to applicants, but there the matter stands. Rumour has it that ceilings for imports of such goods are to be fixed at sixty percent of past imports, and of other goods (which means consumer goods generally) at thirty percent. This is a different story from automatic licensing, and in any case the office of the Chief Controller of Imports seems to have neglected no opportunity to cut down the category figure. For example, one firm submitted a return showing imports of a certain machinery item amounting to Rs. 23 lakhs in three years. This was cut down by six lakhs, on the flimsy pretext that certain bills of entry, submitted as proof of the importation, did not bear the Customs stamp; it was pointed out that only the office copy of the bill of entry was available in these cases, and the C.C.I.'s office was quite ready to admit that the goods must have been imported, but "anything to save foreign exchange" seems to be the slogan of Government in the present crisis. In some cases this will obviously prove shortsighted; in the one in question the machinery will be needed solely for the firm's own factory, and not for resale. To starve one's own industries can surely never pay.

Private Cotton Barter Deals

The cotton market, which has been wallowing in the depths of depression, has been slightly flattered by Government letting it be known that they will permit private barter deals, provided that the goods to be received in exchange for the cotton are of an essential nature. The Government themselves have already been working on bilateral deals practically amounting to barter for some time. It is said that one is likely to be concluded shortly with Italy, under which rayon yarn and certain other goods will be taken in exchange for cotton. With regard to the always enterprising Japanese, it is understood that the latest idea is that they should take Pakistan's cotton and return it in the form of yarn, being paid fixed processing fees for the purpose. This would suit Pakistan, for there is a shortage of yarn, and would also suit any manufacturing country where looms are idle and the threat of unemployment is making itself felt. For some reason, the United Kingdom never seems to get in on these bilateral deals.

Foodgrain Self-Sufficiency

Mr. Muhammad Ali, the Finance Minister, is reported to be in excellent health after the serious illness which incapacitated him all through the period of the gathering economic storm. This is very good news, for the country looks to him to bring it through to calmer waters. It requires no special knowledge or foresight to predict that the crisis will continue right up to the wheat har-

vest of 1954, for it is clear that the foodgrains shortage is the chief source of Pakistan's troubles at the present time and that wheat is the key to the whole problem. The Government can hardly do more than they are doing to reduce their foreign exchange commitments, and Mr. Muhammad Ali's main problem, in preparing the forthcoming budget, will no doubt be to fit development demands into the pattern of sadly shrunken revenues.

Economic Prospects

Looking to the more distant future, there is no reason to be pessimistic. Self-sufficiency in foodstuffs can be regained without undue difficulty, and if it means that there will be less jute and cotton for export one can at least take comfort from the thought that it will probably fetch better prices; in any case, for next season there will be a big enough carry-over of both crops to meet any demands. Requirements of foreign exchange will also diminish as the six year plan nears fulfillment. The chief drain has, after all, been caused by cotton goods, and such has been the progress of the nascent textile industry that Pakistan will be independent of foreign supplies (except as regards finer qualities) in a couple of years. Sugar has been another notable offender, especially because it consumes dollars, and in this field too Pakistan will soon be able to boast of self-sufficiency. The same applies to cement, of which large quantities have recently had to be imported from Japan and elsewhere. As regards jute goods, Pakistan is already an exporter instead of an importer of these. If the country can tighten its belt for the next twelve months or so, it should be able to pull through; but it is not enough for the Government to expect all the belt tightening to be done by traders and consumers—they will not cheerfully accept the austerity unless they see the administration taking in several holes itself. Taxation has not permitted companies to make very big profits or build up reserves during the boom years, but there is visible scope for economy in Government spending.

Bombay

DESHMUKH'S HINT ABOUT
PROHIBITIONNEW SHIPPING CONFERENCE BEGINS
OPERATIONS

(FROM OUR OWN CORRESPONDENT)

1st February.

FAMINE relief in this State continues to preoccupy both the Central and State Governments. Sir Chintaman Deshmukh has been here for over a week studying conditions to determine what help the Centre will have to give to the State Government to help relieve the situation. He stated at a press conference in Poona that as Bombay was badly hit by scarcity, about Rs. 7 crores from the amount of Rs. 15 crores provided for famine relief and welfare work in the five year plan might be available for relief operations in the State. He hinted, however, that the State Government could review its prohibition policy as well as its plans for education and road improvement if it desired to go ahead with irrigation schemes in the famine affected areas. The Finance Minister also expressed his willingness to give as a loan to the States any amount of money they could collect beyond the target set for them by the National Savings Organisation. He announced that the International Monetary Fund was sending a mission to advise the Centre on the limits of deficit financing in view of world monetary conditions.

Reacting sharply to the suggestion to revise its prohibition policy, Mr. B. S. Hirey, State Minister for Revenue and Agriculture, told a press conference in Bombay that his Government did not think it necessary to scrap prohibition to raise funds for irrigation works in the famine areas of the State and assured the public that the Government would not fail in its attempt to find enough funds for these projects. Regarding the Union Finance Minister's suggestion for the transfer of funds allocated for road development, he said that this was not possible as it was a statutory provision made by the Legislature, though the Legislature could revise or suspend the road development schemes if it wanted to.

New Shipping Conference

The Conference of shippers comprising four Japanese, one Danish, one Swedish and two British lines, formed at the end of December to cover trade moving between the Persian Gulf, Karachi and ports on the west coast of India and the east coast up to Madras and also including Hongkong and Japan, came into operation today. The Conference has undertaken to provide a reduction in freight rates to regular customers under the terms of a new contract entered into by them and to guarantee a measure of stability to shippers which will allow them to trade within a defined period with an assurance as to fixed freight rates, provided the shippers apportioned their business in certain goods to Conference lines. Indian shippers here are somewhat perturbed by these developments. The Conference claims that the formation will help to check fluctuations in freight rates caused by unforeseen incursions of tramp and casual shipping and will provide shippers with a stable and cheaper service, at the same time giving a measure of assurance to the participating companies by a steady volume of cargo, making it possible for them to operate a regular and frequent service throughout the year. One of the immediate developments of the formation of this conference is that an

American line has quoted lower contract rates than those offered by the Conference for cotton shipment to Japan.

Concrete Association Meets

The Concrete Association of India and its technical journal *The Indian Concrete Journal* celebrated their Silver Jubilee in Bombay last week with an exhibition at the Council Hall opened by Sir G. S. Bajpai, the Governor, Mr. Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd., inviting the Governor to declare this exhibition open, stated that it was fitting that the celebrations should be held simultaneously with the annual session of the Institution of Engineers, the body which had substantially contributed towards the furtherance of engineering and construction in this country. Mr. Khatau said that the pre-eminence which cement concrete enjoyed today as the foremost building material was largely due to the initiative on the part of the cement manufacturers in marketing a high quality product which compared favourably with cement manufactured in any part of the world and also to the enterprise and co-operation of the engineering profession who fought early prejudice against Indian cement and accepted it as a quality product. Mr. Khatau emphasised the service rendered to the country by the Association through its village improvement schemes and hoped that this pioneering work would provide valuable data for the Government in the implementation of the Community Project programme. He announced that the Association was planning the establishment of a research station.

Central Cotton Committee Talks

The Indian Central Cotton Committee is meeting here with Mr. K. R. Damle, Vice-President of the Indian Council of Agricultural Research and Additional Secretary to the Government of India in the Ministry of Food and Agriculture in the chair. The first four days of the session will be devoted to a detailed examination of the subjects coming up for discussion at the plenary session of the three Subject Committees. Among the new schemes for approval by the Agricultural Research Sub-Committee are control of some important insect pests in Bombay, breeding of Deshi and American cotton in Madhya Pradesh and the distribution of the Madras Uganda-1 cotton seeds in the Central and Southern districts of that State. The Technological Research Sub-Committee is expected to consider a comprehensive note by the Director of the Technological laboratory on the production and utilisation of Ramie fibre, its economic and financial possibilities. The Committee is also likely to examine the effect of sales tax imposed by various States on the sale of cotton, on cotton production in general and the reaching of the target for it in the five year plan.

Cotton Export Scheme

Except for exports to Nepal, Tibet, Portuguese and French Possessions in India, there will be free licensing of all permissible varieties of cotton textiles and cotton manufactures up to the end of 30th June for export, according to a Government of India notification issued here last week by the Joint Chief Controller of Exports. All varieties of coarse, medium, fine and superfine mill-made and powerloom cloth are to be considered as permissible varieties. This announcement together with the permission given for the export of yarn has created a measure of confidence among cotton and textile circles in Western India, although there is some criticism from the trade because of the discrimination shown by the Government in favour of exports of yarn by mills or their nominees. This feeling of confidence has also been reflected in the share market quotations for textile mill shares.

Developing Foreign Handloom Markets

The Standing Committee of the All-India Handloom Board met here last week, with the Textile Commissioner to the Government of India presiding. The Committee is believed to have accepted the principle of developing foreign markets for Indian handloom products and given their approval for the appointment of four commercial travellers to implement this scheme. The travellers will cover, for the present, countries in the Middle-East and South-East Asia. The Committee also approved several schemes, estimated to cost about Rs. 3 crores, to assist the handloom industry in the various States of the Union.

Tata Share Conversion

The latest development in the scheme for the conversion of Tata Iron and Steel Deferred shares into ordinary is a fresh effort now being made by the representative committees of holders of both categories of shares to come to an understanding on the ratio of the conversion so as to avoid the possibility of an award by a third party. Several such efforts in the past having failed and market circles express doubts about the success of this latest effort.

NOVEMBER WORKING CLASS COST
OF LIVING

During November 1952 the working class cost of living index (base: 1944-100) showed a general decline. This is mainly attributable to the food group which decreased in all the towns mentioned below except Ludhiana and Akola. In both these towns the food group appreciated slightly. The following are the November working class cost of living indices for certain selected centres: Ajmer: fall of three points to 176. Akola: rise of one point to 158. Berhampur: fall of one point to 156. Cuttack: fall of one point to 155. Jubbulpore: fractional fall to 150. Khargpur: fall of four points to 132. Ludhiana: rise of one point to 152. Silchar: fall of five points to 136. Tinsukia: fall of three points to 132.

Jute

INDIA'S RAW JUTE PROBLEM

IMPROVING THE QUALITY OF MESTA: INCREASING THE
PRODUCTION OF REAL JUTE

LAST week we dealt with some aspects of the problem of making India self-sufficient in jute. This week we turn to some other important aspects of the matter. At present a large proportion of the fibre being produced in India is mesta and bimli. Before partition Indian mills did not use these fibres, except in very meagre quantities, because their poor spinning qualities resulted in a deterioration of the quality of the cloth produced and because of the high rate of wastage during the manufacturing process. Since partition the mills have been forced to use substantial quantities and, as a result, the quality of the goods turned out by Indian mills has suffered.

This deterioration in quality of Calcutta goods would have been serious enough even in the days when Calcutta had a near-monopoly of the supply of jute manufactures. In these days when Calcutta has to compete with expanded European production and increasing production in Pakistan the maintenance of high quality is doubly important. As we remarked last week Indian mills must, therefore, be assured of supplies of high quality jute.

To achieve a return to the previous high standard of Calcutta goods it would be desirable to eliminate as far as possible the use of mesta and bimli. That is not at present practicable but, meantime, something may be done to improve the quality of these fibres themselves. The mesta plant is allied to kenaf which is now being used as a textile fibre in various parts of the world, but the fibre produced in India is much inferior to that produced abroad. This is due to the use of seeds of inferior strains, poor methods of cultivation, the growing of the plant on poor land and bad methods of fibre extraction. The use of seeds of better strains, if obtainable, and better handling of the crop might result in fairly early improvement. The elimination of land of low production may come automatically from the low return obtained and the present low prices. Good mesta is now being produced in the daisee lands round Calcutta. This is said to be the result of methods and seed introduced by refugees from East Bengal and, if so, efforts should be made to introduce these methods in other areas of West Bengal. In undivided Bengal the best mesta came from the Madaripur and Khulna districts. There was and is no comparison between the mesta grown in East Bengal and West Bengal and, if India is to depend partly on the use of mesta as raw material for her jute products, the quality of Indian mesta must be brought up to the equal of that grown in East Bengal and other parts of the world.

More important, however, than the improvement of the yield and quality of mesta is the necessity to increase the outturn and quality of jute. To do this, propaganda should be concentrated on the lands and in the districts which have been proved suitable for jute cultivation. And not only must the normal conditions of climate, adequate water is available for retting purposes. In the past two years the high prices prevailing, plus propaganda, induced growers to grow jute on marginal lands which cannot give a good yield and in districts where water supplies were inadequate for satisfactory preparation of the fibre. The resulting crops have been poor in quality. In consequence production costs have been high and, with the fall in prices, the crops have not proved economical to the growers. These factors may themselves bring about the necessary adjustment. That will mean a reduction in the total quantity of the crop which must be compensated by an increase in the output of the best areas.

To achieve this increase in the outturn of jute of good quality, intensive propaganda will be necessary. It is desirable that as much seed of proved strains as it is possible to obtain should be distributed in these districts at reasonable prices. It would be advantageous if some of the refugees from East Bengal who have a knowledge of jute-growing could be sent to advise the growers on the best methods of jute cultivation and, later, on fibre extraction. Much good jute grown in Northern Bengal is spoiled by faulty methods. It may be difficult to effect a change in the traditional methods employed but, if it could be demonstrated to the growers in Northern Bengal that East Bengal methods produce better jute and so better prices, something might be achieved.

THE JUTE MARKETS

Manufactured Goods: The improvement in the finished goods market towards the end of last week continued last Thursday, and prices in all sections were better, by about 6 annas per 100 yards in hessians and 8 annas per 100 bags in sacking goods. Opening quotations were Rs. 43 per 100 yards of 40" 10 oz. hessians, Rs. 95 per 100 bags of plain heavy Cees and Rs. 94 per 100 bags of B Twills. Throughout the day there were rumours and counter rumours regarding the curtailment of production by mills and the reduction of the export duty on jute goods. When no confirmation was forthcoming on either point, prices fell rapidly, heavy goods dropping by Re 1 per 100 bags. The fall in hessian was slowed down slightly by news

of enquiries from America and it is understood that some business was put through. At about this time it was reported that 2,000 bales of cornsacks had been done for shipment to Australia at prices ranging between Rs. 88 and Rs. 89 per 100 bags for April-June shipment. This raised some controversy and was the chief point of discussion in the market, because the rate was at least Rs. 7 lower than the current market level, and mills had been declining to sell at Rs. 93 per 100 bags earlier in the day. It is believed that the business was done mainly by Indian shippers and represented bear sales by bazaar parties, as at no time in the past few months have cornsacks been down to that level. Reports of this transaction, coupled with a fall in demand from other overseas markets, caused prices to weaken and at the opening on Saturday morning 40" 10 oz. hessians were down to Rs. 42-10 per 100 yards, plain heavy Cees to Rs. 94 and B Twills to Rs. 93 per 100 bags.

There was very little activity over the week-end and in the absence of business prices again fell on Monday morning by 4 annas in hessians and 8 annas in heavy goods. On Tuesday morning the market took a turn for the better on the news that President Eisenhower had decided to end the neutralisation of Formosa by the Seventh Fleet. The decision was interpreted as suggesting the possibility of a "second front" with its many requirements, and prices hardened in all sections. Opening quotations on Tuesday morning were Rs. 42-12 for 40" 10 oz. hessians, which was 6 annas up, Rs. 94 per 100 bags of plain heavy Cees, an increase of 8 annas, and Rs. 93-4 per 100 bags of B Twills, which was 12 annas higher. As the day progressed prices improved, and towards late afternoon hessians were quoted at Rs. 43-4 per 100 bags and B Twills at Rs. 94 per 100 bags for ready delivery and Rs. 96 per 100 bags for April-June delivery. This was not altogether the result of Far Eastern developments; some mills came out as sellers for small balances and a certain amount of bear covering also took place, mainly in heavy goods.

At the close the market is steadier as a result of these sales and prices are slightly better in all fabrics. Opening quotations on Wednesday morning were as follows:

	Ready	February	March	June	Sept.	F.A.S./
						F.O.R.
40" 8 Oz.	35-4	35-4	35-4	35-4	35-4	
40" 10 Oz.	43-10	43-10	43-10	43-12	43-12	
Heavy Cees	94-8	95	96	96	96	
(Plain)						
B Twills	94-4	94-8	95	96	96	
Cornsacks	97	97	97	97-8	97-8	

Raw Jute: There has been more activity in the jute markets over the past week than for some time, and before the week-end a fair amount of business was transacted. Ready bills of lading were being offered freely by sellers at greatly reduced rates, because if the jute was not sold before arrivals in Calcutta, unloading and storage charges would add another Rs. 1-8 to Rs. 2 per maund to their costs. Sellers were therefore willing to discount rates and have the jute diverted to a mill rather than bear the extra expense after its arrival in Calcutta. Late on Wednesday and Thursday last week, a large mill group came into the market and purchased a fairly large quantity of jute of all districts at varying prices. This was followed by business with other mill groups on a much smaller scale and it was estimated that by the week-end about 21 lakh maunds had been sold. Although not a large amount in normal times, this was

This is the latest single-operator transformer type arc welding set, oil-cooled for efficient operation in all climates—maximum capacity 300 amperes—only one of the new Quasi-Arc range of arc welding sets.

WHOLESALE PRICE INDEX
DECLINES TWO POINTS

THE official wholesale price index (Base: year ended August 1939 on 100) recorded a fall of 0.6 percent to 376.1 during the week ended 17th January, 1953. The index was higher by 0.9 percent than in the corresponding week of last month but was 12.5 percent lower than that of a year ago. During the week under review, Food-stuffs declined by 0.2 percent to 355.6 because of a decrease in the prices of rice at Patna and gram at Hapur (-3% each), coffee (-5%) and salt (-1%) despite further advances in tea (+3%) and gur (+2%). The index for Industrial Raw Materials also fell by 1.7 percent to 426.2 as a result of lower prices of raw cotton (-6%), raw jute (-4%), raw silk (-2%), castorseed and cotton seed (-1% each), linseed and raw hides (+1% each), however, moved up during the week. In the Semi-Manufactures group prices of coconut cake (+3%), coconut oil, groundnut oil and gingelly oil (+1% each) and cotton yarn at Bangalore (+3%) increased but the effect was almost counterbalanced by decreases in castor oil (-3%), coir yarn, cow hides, sheep skins, goat skins, mustard oil and linseed oil (-1% each), and in consequence the group index showed a nominal rise from 344.1 to 344.4 during the week.

The Manufactures group declined by 0.5 percent to 364.4 because of falls in jute and rayon and silk manufactures (-3% each). Prices of glass (+4%) and dyestuffs (+1%) advanced during the same period. Lower prices of bricks and tiles (-6%), spices (-1%) and cashewnuts (-2%) were responsible for a fall of 1.3 percent in the index for the Miscellaneous group which stood at 612.7. Betelnuts, however, rose by 1 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August, 1939=100)

Group and Sub-Group	17-1-53	10-1-53	29-12-52	19-1-53

* Estimated

DECEMBER CANE PRICES

On the basis of returns received from the Central Sugar Factories, the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during the month of December 1952, gives figures for (a) the total price of cane per maund (including co-operative societies' commission, transport charges, etc., but excluding cane cess) at the factory as follows:

	Maximum.	Minimum.	Average.
	Rs. a p.	Rs. a p.	Rs. a p.
Uttar Pradesh	1 8 2	1 4 11	1 6 1
Bihar	1 7 2	1 4 9	1 5 8
Madras	1 5 0	1 5 0	1 5 0
Bombay	1 10 4	1 5 0	1 7 0
Madhya Bharat	1 5 8	1 5 8	1 5 8
All India	1 10 4	1 3 0	1 5 11

(b) the portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum.	Minimum.	Average.
	Rs. a p.	Rs. a p.	Rs. a p.
Uttar Pradesh	1 5 0	1 3 4	1 4 3
Bihar	1 4 9	1 3 5	1 4 3
Madras	1 5 0	1 5 0	1 5 0
Bombay	1 5 0	1 0 11	1 4 5
Madhya Bharat	1 5 8	1 5 8	1 5 8
All India	1 8 6	1 0 11	1 4 4

SUGAR FOR OPEN MARKET

The Government of India has released 35,000 tons of sugar from factories in South India out of their 1952-53 production for sale in the open market. This is the first release which has been made from the current year's production.

LONDON INSURANCE LETTER

LIFE BUSINESS EXCEEDS ESTIMATE

THE total of new life business transacted in 1952 has passed the figure of £720 million which was regarded at the turn of the year as the likely upper limit. The increase on 1951, just over 3 percent, is healthy but not spectacular. It has been noted, moreover, that results published this year have been by no means uniform, even in trend: the number of offices reporting reduction in new business is relatively large. However, it would be reckoned a remarkable achievement to maintain new business on an average, let alone increase it, in a year when business generally was in recession and when the rising cost of living made premiums more burdensome, but for the fact that insurance is now the favoured medium of saving. The element of saving through the insurance companies (additional, of course, to saving through the National Insurance Fund, which is a diminishing quantity) has been estimated at approximately £150 million for 1951, and it was evidently larger last year.

It is agreed that one of the features of the past year was group life and pension insurance. An employer's offer of an assured income after retirement is often the deciding factor in recruiting labour, even though the life offices provide many attractive policies to enable the individual to take care of his post-working life by endowment, annuity or the option of either. There is some disagreement—though naturally not in insurance circles—on the question whether the life offices' pension schemes are necessarily preferable to schemes planned and operated by individual firms to suit their individual requirements. Most firms seem to be agreed that the specialised actuarial experience of the life offices is indispensable, but a minority opinion argues that the cost of this experience, and of the administration of standardised schemes, is fully represented in premium rates. An actuary who put his views recently to readers of *The Economist* calculated that the rates charged under group life and pension schemes embodied a loading for administration expenses (including commission) of about 5 percent of the premiums. He thought it may, this type of business is expanding rapidly.

The Cost of Fire

The ravages of fire have seldom been so much publicised here as in the early weeks of 1953. *The Times* has made its estimate of direct fire damage in the British Isles, and it is the highest monthly figure for many years. Another exceptionally bad month was as recent as September last. The estimate of direct damage for 1952 comes up to £24.2 million, compared with £23.1 million for 1951; and in many cases consequential losses are as heavy as direct damage. Moreover, these problems for the fire departments are paralleled now in the marine market, with the destruction of the Canadian Pacific liner *Empress of Canada* in Liverpool docks. The total loss payment involved in this case, £1.5 million, is little less than an average month's fire damage on land; and consequential losses are heavy, as the vessel was heavily booked for Coronation traffic.

Underwriters distinguish between a total loss resulting from the sinking of a ship where it cannot be salvaged and a "constructive total loss" where a part of the claim, likewise paid in full, is recoverable by salvage. The case of the *Empress of Canada* is not, however, straightforward, for removal of the vessel is a long and complicated operation, a matter for the authorities rather than for the underwriters to arrange when the hull may be obstructive and dangerous. Salvage is normally the underwriters' liability when a claim for total loss is accepted, but if the underwriters are not free to carry it out the liability falls on the shipowner. The Canadian Pacific's procedure is to effect 60 percent of insurance through the British market, and of the remainder 15 percent is reinsured here for total loss. The disaster made a bad beginning to the 1953 account, the current insurance having taken effect on 1st January.

Fires in port are no uncommon experience, and underwriters have learned that where passenger accommodation is affected the cost of repairs is very heavy. The cost of ship repairs in general is still at peak levels, and no early decline is envisaged, either in the cost or, consequently, in premium rates. Discussing this position at the annual meeting of the Institute of London Underwriters during the month, the chairman, Mr. A. Glanvil Smith, said that underwriters might be criticised for not demanding a substantial increase in rates.

Freer Reinsurance

While British interests have had to watch the gradual contraction of scope for foreign insurance in more distant lands, there have been encouraging moves towards liberalisation in Europe. The most important recent development in this respect relates to Holland, where it is permissible, since the beginning of 1953, for Dutch insurance companies to reinsure with foreign insurance companies up to 100 percent. Previously the percentage had been restricted. There has been a ready response to this easing of facilities, for British reinsurance rates are lower than the Dutch tariffs. It is, indeed, in the matter of reinsurance that the London market has most to offer, in these times when direct insurance is favoured locally. Oversea business by companies represented abroad is still being actively developed and is, indeed, expanding, as the latest figures show. But London's worldwide interest is primarily through reinsurance of policies originating elsewhere.

Engineering and Transport

ANGLO-AMERICAN PRODUCTIVITY TEAM REPORTS
ON PLANT MAINTENANCE

USEFUL CODE FOR INDUSTRIAL ENGINEERS

IN order to achieve a high rate of productivity in industry, it is of vital importance that machinery, together with the associated engineering services, should be maintained in a high state of operating efficiency. Maintenance can never be an end in itself, and for this reason its true value has often tended in the past to be overlooked by industrial managements. The only criterion of maintenance is the service it can render to production, but progressive managements are now realising that the two functions must be closely integrated if maximum efficiency is to be achieved. For this reason, in recent years the importance of plant maintenance has become increasingly recognised. Such proper and adequate maintenance is especially essential now, when a great deal of machinery and equipment in industry has already exceeded its normal life and replacement is difficult because of restrictions on capital investment. This important subject is dealt with in *Plant Maintenance*, the report of a team of senior engineers drawn from a wide range of industry in the United Kingdom which visited the United States early in 1951 under the auspices of the Anglo-American Council of Productivity. Management and technicians are presented with a comprehensive code of maintenance, based on the best features in the experience of both countries, and designed to be equally applicable in either. One might go even further and say that it could be studied with advantage by industrialists and industrial engineers everywhere.

In general it was noticed that the closest relationship between management, production and maintenance exists in those industries where operation is continuous, and loss of revenue due to shut-down time is consequently highest. In other industries with seasonal production capacity and lower rates of physical depreciation, the maintenance organisation is generally regarded by management as of less importance. This attitude may underestimate the possible contribution to lower costs which better maintenance could give. In its broadest sense the purpose of maintenance is to safeguard an investment, and it is therefore a continuous and not an intermittent function. The purpose of maintenance may be said to be five-fold: (i) to keep plant in a condition to perform consistently the function for which it was designed; (ii) to keep production costs down to the minimum; (iii) to reduce actual maintenance work to the minimum; (iv) to improve the operation of plant while in production; and (v) to improve working conditions for the operators.

Preventive Maintenance

In recent years a new attitude has developed towards maintenance, and the resultant outlook, which is an attitude of mind rather than any specific system, has acquired in the course of time the same title on both sides of the Atlantic, namely, that of "preventive maintenance." The growth of that of "preventive maintenance" in the continuously-automatic control, particularly in the continuously-automatic control, has tended to make maintenance costs an ever-increasing proportion of total production costs. The more advanced stages of preventive maintenance may be economically justified only in those cases (for which they were primarily developed), but it is suggested that the economics of extending the application of even preventive maintenance approach to other industries is worth further investigation. Preventive maintenance depends on the timing and its contribution, to ing of maintenance effort, and its contribution, to ing of most value, should be made before production policy is determined. This view involves the acceptance of the maintenance department as an equal partner with the operating department in planning production and determining the policy which governs that production. For effective control, maintenance policy must be formulated at a sufficiently high level to ensure this position and to co-ordinate all maintenance activities in a particular factory or group of related factories. The status of the "works engineer" is fundamental to the establishment of any sound system of maintenance. He should be directly responsible to the chief production executive of a works, and should thus be of equal status with the head of the operating or production department.

It became clear very early in the team's discussions that some detailed definition of the main types of maintenance policy was necessary. Further consideration suggested five classifications, to only one of which would be applied the title "preventive."

* Copies can be obtained from the British Productivity Council, 21, Tothill Street, London, S.W.1. (Price 2s. 6d.)

tive," a word which the team finds is being loosely applied to the beginnings of "scheduled" maintenance. An attempt is made to indicate the scope of the five classes, having particularly in mind the demands of the continuously-operating process industries, where the problem of maintenance is most acute. The classes are: (i) Maintenance controlled by production supervision, which is confined to the engineering industry, where supervisors and employees have the qualifications necessary to control and perform maintenance work. (ii) Breakdown maintenance, which is intended to imply a situation in which an independently organised maintenance section acts as an emergency repair service, summoned by the production staff when interruption to or restriction of production has actually occurred. (iii) Scheduled maintenance, or the provision of an inventory of major items of plant, and joint discussion in advance by production and maintenance staff of the annual production programme, so that items considered by the maintenance staff to need attention can have any periods of availability (i.e., non-production) scheduled. (iv) Planned maintenance, or the more detailed analysis of programmed work, so that more precise planning of work and allocation of labour to it become possible. (v) Preventive maintenance, or the upkeep, replacement, and modification rather than repair. At this stage the techniques of work study become indispensable.

Control of Labour Force

The control of the labour force of a maintenance department is complicated by the fact that maintenance is not readily expressed on a quantitative basis. It is probable that such control may best be exercised by a comparison of the actual man-hours needed to complete a programme of work with those estimated as "standard" for its completion. Such a comparison could also serve as a basis for incentive payments to those engaged on maintenance work. The selection of the most appropriate technique will always be governed by the prevailing circumstances; and it will always be necessary to arrive at a suitable compromise between the need for precise specification of method and accurate assessment of allowed times, and the need for reasonable simplicity in application. The non-repetitive nature of the work will also have an influence in these considerations, as it permits of a greater tolerance in the accuracy of individual standards than is acceptable for the more highly repetitive types of production work. The team found on both sides of the Atlantic a fear that better organisation of maintenance must involve a disproportionate increase in clerical and similar overheads. It is thought that rationalisation of paper work may prevent this, and an attempt is made in the Report to give some guidance on means of achieving this.

Since the maintenance of plant is an element in the cost of production, it is very desirable, and is now coming to be regarded as essential, that maintenance costs should be controlled in the same manner as are other production costs. This necessitates a proper system of authorisation to cover both revenue and capital items of expenditure. The latter are affected to a considerable extent by the maintenance policy, since it should be the function of the maintenance engineer to advise on the relative merits of repair or replacement of equipment in any particular set of circumstances. This again emphasises the part the engineering staff should play in the formulation of maintenance policy. As development proceeds to scheduled, planned or preventive maintenance, authorisation becomes essential and should be carried out at as early a stage as possible, and this is probably best brought about by the institution of budgetary procedure. If a maintenance budget is prepared, the maintenance section is able to take full advantage of long-term planning both as regards the labour strength required and the way in which the work shall be carried out. Some details are given in the Report of the way in which such a budget may be prepared and the items which it will cover. It should thus give top management an effective means of knowing the significance of the cost of maintenance as an element of production costs. Consideration is given to the best contribution which maintenance staff can make towards this end, and an attempt is made to show an organisation which will provide them with the data they will require, without throwing an excessive load on financial accounting staffs. An attempt is made to cover some of the accountancy field in language likely to be understood by the engineer, in the hope that it may stimulate his interest and improve his ability to co-operate in that field.

Two main points of maintenance technical policy were most noticeable during the team's visit to the United States, namely, the provision of adequate maintenance workshops themselves, and the provision of labour-saving devices in the way of mechanical handling equipment and mechanised transport. The Report deals in some detail with the advantages to be gained in the design of new plant for easier maintenance, and the control of process operations in existing plant to reduce the incidence of maintenance work to the minimum. Here again close collaboration is necessary between the maintenance engineer and the designer of the plant on the one hand, and the maintenance engineer and the production manager on the other. Only if the maintenance engineer's position in the organisation is properly established will this collaboration be fully effective, particularly when design and construction are in the hands of a contractor.

Training Personnel

Methods of labour recruitment, training and payment are discussed. With regard to the training of maintenance personnel, the team feels that, in view of the increasing complexity of modern industrial plant, it is essential to maintain and expand the methods of training apprentice craftsmen. Where incentive schemes are put into operation, it is important that a correct relationship between performance and payment be established and maintained. The use of work-study methods does not necessarily pre-suppose the introduction of an incentive payment scheme, and it should be clearly understood that the two are not necessarily associated.

The essential requirement for the establishment of an efficient maintenance organisation in any industrial undertaking is the provision of means which will ensure that the maintenance contribution to policy is made and considered before that policy has taken shape as a final production programme. Reconsideration of the status of the chief maintenance executive may be the first step to this end. When an integrated programme has been produced in this way, the most important factor in its successful completion is a clear statement of the functions of all levels of staff concerned. In particular their individual responsibilities for making budgets and exercising control over the actual costs incurred in their particular spheres of responsibility are stressed as a lesson to be learned from American practice. This approach will determine the extent to which firms of any given size or in any particular industry proceed towards full preventive maintenance, which is not presented as a formula or panacea, but as an informed assessment of all the factors affecting the useful productive life of industrial plant.

EXTENSION OF SUBURBAN TRAIN SERVICES IN CALCUTTA

Suburban trains serving Calcutta terminate at, and originate from, Sealdah and Howrah, and several hundreds thousand passengers travel to and from these stations every day. This results in a serious congestion of road traffic during the peak hour. To provide some relief to the congested road traffic of Calcutta, the West Bengal Government has suggested extending suburban passenger services over the Port Commissioners' Railway up to Fairlie Place, which is the centre of business offices.

The Government of India has formed a Committee to study and report on the various aspects of this proposal, including costs. The Committee will consist of the following: Mr. Satyendra Nath Roy, Chairman; the Parliamentary Secretary to Minister for Transport and Railways; a representative of the West Bengal Government; the Chairman, Calcutta Port Commissioners; a representative of the Calcutta Corporation; General Manager, Eastern Railway; and the Director, Rail Movements, Calcutta (representing the Ministry of Railways).

The terms of reference are: (a) To investigate the possibility of running suburban passenger trains on the Port Commissioners' railway lines in Calcutta, bearing in mind the requirements of the present and future goods traffic to be dealt with by this railway; (b) to determine what works and other facilities, including roads over or under bridges in replacement of level crossings to avoid further congestion of road traffic, will have to be provided; and to specify which items should be provided by each of the authorities concerned, viz., the Port Commissioners, the Eastern Railway, the Calcutta Municipal Corporation, the West Bengal Government, etc.; (c) To prepare a rough estimate of the initial and recurring costs of the complete scheme and show the share to be borne by each of the various parties concerned. The financial results of operating this scheme will also be estimated; and (d) to indicate whether, and to what extent, the line or lines on which the passenger services will be run can be controlled by the Eastern Railway.

The Headquarters of the Committee will be at Calcutta and it is expected to commence work early in February. It is hoped that its report will be available to the Government by the middle of March.

Calcutta Markets

PRICES FIRM IN EXPORT
TEA AUCTIONGOOD DEMAND FOR BLACK LEAFY
AND COMMON DUST

AT Sale No. 33, held on 2nd and 3rd February, a strong demand again prevailed in the Export auction and prices for most sorts were firm. Once again stylish leaf grades were often dearer while common broken and commonest sorts were six pias and one anna dearer respectively. Bright liquoring Assams and C.T.C. Fannings were well competed for, but poor liquoring B.O.P.'s and O.F.'s were at times easier. There was a fairly good demand for Darjeeling teas, especially those with flavour.

In the Dust sale there was a good demand for Black leafy dusts suitable for export and also for the common sorts. The remainder of the offerings sold irregularly and were usually about six pias easier.

There was a fair demand for the few Internal leaf teas on offer.

Quotations	1953	1952
Clean Black Pekoe	1 7 6	1 9 0
Clean Common B. P.	1 0 0 to 1 0 6	1 6 6 (Nom.)

Internal	950	3,800
Dust	15,150	21,200

FREIGHT MARKET'S FIRM

COAL FIXTURES DULL

A firm tone has been maintained in freight markets and a good volume of business was concluded last week. Many fixtures were arranged for grain from Pacific to India at the unchanged rate of 62s 6d and the Australian market was credited with a number of fixtures to the U.K. on the basis of 95s. Sugar from Queensland to the U.K. rose 10s per ton at 137s 6d for March loading. Hampton Roads coal moved freely to a number of destinations with Japan being done at 59s. This contrasts with the dullness of the Indian coal market where a solitary fixture at 60s to Japan was recorded. Scrap fixtures from Calcutta included a 5,500 tonner to Genoa at 85s and an 8,000 tonner to Japan at 78s. A local ship accepted 72s 6d for ore to the Continent and Mormugao shippers conceded 69s for the same destination.

The time charter market was active with many fixtures recorded for various trades. A 7,500 ton motorship was reported at 15s 6d for a West African round trip and a 9,600 ton oilburner obtained a similar rate for the trip out to the Persian Gulf. A 9,000 ton oilburner was fixed at 16s 6d for three-five months American trading and a 7,000 ton Japanese vessel accepted 15s 6d for six-eight months Indian trading.

Karnafuli River Project

An interesting item of news is that the Central Engineering Authority of Pakistan have recently carried out extensive surveys of 30 miles of the Karnafuli River with a view to providing deep water berthing for ocean-going vessels. Model experiments were carried out at the Punjab Irrigation Research Institute, at Lahore. An expert from the United States, under the auspices of the United Nations Organisation was called in for expert advice. The training work includes the construction of a spur on the left bank of the Karnafuli River at Chittagong port so as to impel the flow of the river towards the jetties and thereby maintain deep water. The construction is to begin immediately and is expected to be concluded late in February.

HIDES AND SKINS

The market ruled easier and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 27th January and 2nd February, 1953)
Cowhides:—Wet salted (Ordinary) 2,000 pcs. on the basis of Annas 9-6 to Annas 11; Wet salted (Ordinary) 4,000 pcs. on the basis of Rs. 10 to Rs. 11; Wet salted (Slaughtered) 7,500 pcs. on the basis of Rs. 12-8 to Rs. 22-8.

Goatskins:—Wet salted (Daisee, killed) 24,850 pcs. on the basis of Rs. 245 to Rs. 387-8; Assam-Dinajpur 3,900 pcs. on the basis of Rs. 240 to Rs. 260; Purneah-Kissengani 4,350 pcs. on the basis of Rs. 260 to Rs. 275; Patna (Ordinary) 2,750 pcs. on the basis of Rs. 150 to Rs. 220; Muzafferpore-Darbhanga-

Samastipur 44,750 pcs. on the basis of Rs. 235 to Rs. 250.

Bazar Stocks

(2nd February, 1953)

Cowhides:—Wet salted 1,44,500 pcs.
Goatskins:—Wet salted (Daisee, killed) 1,63,200 pcs.; Assam-Dinajpur 90,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissengani 99,500 pcs.

SUGAR PRICES RISE DESPITE

BAN ON EXPORTS

During the week ended 3rd February, the market was steady and prices rose by six to eight annas despite the announcement of the export ban. Arrivals were poor and stocks amounted to 7,000 bags. Business was done for 500,000 bags of the new season's sugar against the rest release. Ready market prices were: big grain Rs. 32; medium grain Rs. 30-8; and small grain Rs. 29-12.

WEEKLY SHELLAC MARKET
REVIEW

During the week ended 3rd February, the market was steady although the volume of business was not great. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 92 buyers.
Pure Buttonlac	Rs. 86 to 87 buyers.
Lemon No. 1 Shellac	Rs. 84 to 85 done & buyers.
Lemon No. 2 Shellac	Rs. 80 to 81 done & buyers.
F. O. Std. I. Shellac	Rs. 75 to 78 done & buyers.
Pure TN Shellac	Rs. 71 to 74 basis done & buyers.
4% I.T.N. Shellac	Rs. 65 to 68 done & buyers.
No. 1 Kusmi Seedlac	3% Rs. 80 to 82 done & buyers.
No. 2 Kusmi Seedlac	3% Rs. 74 to 76 done & buyers.
Fine Bysaky Seedlac (Manbhumi)	3% Rs. 71 to 73 done & buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs. 67 to 70 done & buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 60 to 62 done & buyers.
Kireelac	Rs. 27 done & buyers.

Shipments during January were 34,679 packages.

BRITAIN INCREASES OIL TANKER TONNAGE

During the second half of 1952 Britain not only maintained her position as the nation with the largest tonnage of oil tankers in the world, but increased her lead over her nearest rival, the U.S.A. More than 190,000 tons were added to the U.K.'s tanker resources to bring the total to 7,336,449 tons, or 22.37 percent of the world total. U.S. tanker tonnage (excluding Government-owned vessels) was virtually unchanged in this period at 7,069,168 tons, or 21.5 percent of the world's total. Figures disclosed in a half-yearly analysis of tanker tonnage compiled by a British firm of ship-brokers for vessels of 500 tons gross and over afloat on 1st January show that the world's resources in tankers were more than double the 1939 figure of 16,078,000 tons. During the second six months of last year the world total increased by 1,600,000 tons deadweight to 32,373,775 tons.

The analysis reveals that 16 percent of the world tonnage is over 18 years old, 38.3 percent was built during the war, and 36.8 percent since the end of the war. America built 79.6 percent of her present fleet during the war and 7.4 percent since. Britain built 35.6 percent during the war and 39.7 percent since. Between 1946 and the end of last year over 2,900,000 tons were added to the U.K. tanker fleet.

COAL COMPANIES

O. Po. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FOREIGN ASSISTANCE FOR INDIA'S FIVE YEAR PLAN

FEARS OF CUTS IN U.S. AID: THE DECLINE OF POINT FOUR

SHORTLY after the Indian Government adopted its plan for national development—a plan that shows a gap between estimated income and expenditure of Rs. 655 crores which it is hoped will be filled by external assistance—a new administration in Washington began talking about reviewing foreign aid programmes to ensure that they had not deteriorated into "give-away agencies." At about the same time, the United Nations technical aid board discovered that it was approaching bankruptcy because only \$12 million of the \$19 million promised it by member governments in 1952 had been received, and the outlook for 1953 was no better. Nothing so drastic had happened to the third source of possible foreign assistance, the Colombo Plan, but then nothing substantial had been heard about it for some months and much of the enthusiasm with which it had been launched several years before had evaporated. The apprehension is naturally growing that just when India has worked out how much foreign help she is going to need, the chances of getting it have fallen sharply.

Not a great deal was said in the Indian five year plan about external assistance, for the good reason that it was no use speculating there on developments that depend on political factors as much as anything else. Further, the Planning Commission was quite firm—not to say heroic—in its declaration that the plan would be gone ahead with whether or not external financial help was forthcoming and this determination has since then been repeatedly expressed by the Finance Minister in public statements. This dogged independence is admirable; a plan that depended on foreign help primarily or mainly would demean the nation, and it is more proper to press on with one's plans and hope for the best as regards help from others. But, admirable or not, it does not quite square with the realities of India's situation for the plain truth is that if most of the Indian five year plan will not be carried through to the goals set by the Planning Commission. If the supply of foreign loans dried up, no doubt some sort of plan would be put through but it would not be the plan presented to the nation last December. To put the case in its simplest terms, the Indian Governments hope to spend Rs. 2,069 crores but the resources in sight (counting foreign aid received up to the end of last year) total only Rs. 1,414 crores. Some people speak as if it were possible to "raise" the remaining Rs. 655 crores by inflationary techniques, but as has been argued on this page previously that would put an end to all planning and to all economic progress, planned or unplanned. There is no escaping the conclusion that the success of the plan as it stands depends on how much foreign aid is received between now and 31st March, 1956.

Some attempt was made to relieve public ignorance about the gap in the plan by means of a Press Note distributed on Tuesday of this week but unfortunately, even for close students of the subject, the Note is a completely mystifying document and has not, so far as we have noticed, been published in the popular Press at all. It begins with the obviously inaccurate statement that Rs. 156 crores is the total of foreign assistance India has received since the five year plan was inaugurated. This was written last November or plan itself, which was written last November or December. Since then there has been a loan of \$31 1/2 million from the World Bank to the Indian Iron and Steel Company in December, a loan of \$19 1/2 million to the Damodar Valley Corporation from the same source in January, a grant of Rs. 27 lakhs from the Government of Norway for a fishery scheme, a contribution of £375,000 promised by New Zealand for the year 1953 and a loan of \$8 million is now under negotiation with World Bank. Though under calculation is frustrated by the ambiguous wording of the Note and the various currencies in which these sums are expressed, it would probably be safe to assume that India has now received, or been very firmly promised, well over Rs. 200 crores of foreign financial assistance for the five year plan.

The Press Note goes on to give particulars of grants and loans from sundry other governments and from the Ford Foundation, but there is considerable vagueness about how these sums fit into the pattern of the five year plan and which

of them should be deducted from the outstanding gap of Rs. 655 crores. It is sincerely to be hoped that this sort of confusion is not allowed to prevail in those foreign countries where India has hopes of securing help, for friendly governments will be more inclined to render assistance if they are shown plainly how much more is required to fulfil the ambitions set out in the plan.

The lavish enthusiasm of "fourth pointery" that prevailed in the West in 1949 has now subsided. That is not to be regretted, for the proposition that the world's economic health would be promoted by extravagant distribution of American or United Nations funds to any suppliant that called itself "under-developed" was always a doubtful one. The splendid vision awakened by Mr. Truman's inaugural speech after his election in 1948 is now recognised as a mirage. No amount of money, given or lent, will develop countries like Iran that do not want to be helped, and no government can go on sinking its taxpayers' money in countries that repudiate their obligations or confiscate foreign property whenever the fancy takes them. As for the flow of private capital across international frontiers, especially to Asian countries, the prospects today are probably worse than they were three or four years ago because the guarantees offered to the overseas investor are now, if anything, more ambiguous. Even in the case of India, which is by far the best risk of the under-developed economies, private investors in other countries might be pardoned if they wonder just how seriously this country wants foreign capital when it is prepared to argue about a few hundred jobs paying Rs. 1,000 and over, instead of giving its attention to the real problem of expanding the number of jobs available for its nationals by adopting dynamic and progressive economic policies.

But although the approach to requests for aid from backward countries is now more circumspect in the United States and elsewhere, we would not agree that the chances of India raising the foreign capital she needs for her plan are poor. India has a definite programme of development and she is prepared to offer security and reasonably fair treatment for new investment from abroad—at least treatment that is not noticeably worse than she offers domestic investors, though that leaves much to be desired. It would be a great pity if these advantages as a candidate for external aid were sacrificed by confused and inadequate publicity for the progress India is making with her plan and by comparatively unimportant debates about the administration of foreign businesses resident in India. The five year plan, although only published in its final form two months ago, is now almost two years old and there should be freely available both in India and abroad much more information on what results have been achieved to date; but as has been shown above it is difficult to secure even the simplest facts about how much foreign assistance has so far been given toward its implementation.

Many of the services and facilities given to India by the United States, the United Nations and the Commonwealth cannot readily be evaluated in money terms, especially the provision of experts and the offer of training facilities for Indian students abroad. Here the facts are rather easier to come by: it appears that up to the end of last year India had received 69 experts from the United Nations, 71 from the USA under Point Four, 36 under the Technical Co-operation Scheme of the Colombo Plan and many more from U.N

inflow of foreign expertise to assist private industry in India.

Pessimistic forecasts of sharp cuts in foreign aid from the West, such as have been put out since the change of government in Washington and since the United Nations technical programme began to run short of money, should not be taken to mean that India will have to manage her plan without the substantial help the Planning Commission obviously had in mind. What is becoming clear however is that more imaginative presentation of India's potential and present achievement (not simply of her needs), a livelier and more up-to-date picture of the progress she is making toward reaching the goals she has set herself, and a more accommodating attitude to the private investor from overseas will all be required to keep the money flowing into this country without which the five year plan will be a sadly truncated achievement.

TRENDS IN COMMODITY PRICES

DOLLAR GOODS AND FOOD NOW SHARE DECLINE IN VALUES

THERE was some evidence in the late months of 1952 that the general downward trend of commodity prices was ending, but the evidence has not been confirmed in the first months of 1953. The decline—uneven and interrupted, but a decline nonetheless—has been in progress for about two years. In that period, again with individual exceptions, the big and rapid price increases of the Korean boom have been wiped out. What producers and consumers of commodities are now anxious to know is whether this adjustment is a preliminary to a further decline substantially below the levels of mid-1950. The early months of the calendar year are normally an easy period; so recent movements need not be deeply significant. If the downward trend persists in March and April it will have to be taken more seriously. Declines in actual consumption have, of course, played a part in the decline of prices, but a more important element at present is reluctance to hold stock. In the case of wool, prices have been able to recover even while stocks are kept low, because actual consumption has revived; but in most cases the rate of buying for stock, and of selling to unload stocks, has been in the short run decisive.

It is in this connection that the tighter monetary policy lately observable in the United States is specially significant; and it may yet be necessary to follow the American lead in Britain. President Eisenhower's monetary policy is still in the formative stage, and some observers believe that its inflationary elements will overwhelm its deflationary elements. But a general return to cheap money is not in prospect. Carrying stock is expensive, for producers as well as for traders and users. There is a general inclination to hold no more than is needed for current operations. Buyers' reluctance is due partly to cautious estimation of needs; and a strengthening of business that showed needs to have been under-estimated would presumably cause some stockbuilding, within the limits imposed by financial stringency. But the industrial prospect is obscure. Few people expect a serious recession in 1953, but few are equally confident of 1954. In the meantime, it seems safe to buy from hand to mouth, and watch.

It is an evident fact that most commodities are now being produced in sufficient quantities to satisfy both civilian and military needs. Both needs are still very large. But the growth of production of commodities after the outbreak of the Korean war was not merely temporary. It needed military and civil stockpiling, or the expansion of consumption against which stockpiling was a precaution, to support it. Instead, there were deflationary measures intended, wisely, to restrain consumption and stockpiling. Not all of the expansion of output, therefore, was justified. In the few cases where output was sharply reduced, or where demand still kept ahead of it, prices have mostly strengthened, or risen higher. This year's increase in the price of nickel reflects one shortage that has persisted.

In the decline, not all groups of commodities fell equally. The fall in sterling commodities while dollar commodities remained high had a disastrous effect on the sterling area's balance of payments in the latter part of 1951. The strength of food prices had a similarly adverse effect on countries, notably the United Kingdom, which had to sell more manufactures to pay for their imports of food. Now a new relationship is being established. Dollar commodities are no longer immune. Food prices, including dollar-costing grains, have been under pressure. The American policy of price-supports to aid the farming community has had its inevitable effect in swelling

production of foodstuffs and producing surpluses which press on the international markets. The relation between sterling and dollar prices, the relation between foods and materials, the relation between primary goods and manufactures, has moved nearer to normal—assuming that it was abnormally unfavourable to primary prices in the years just before the war.

These changes are of vital importance to the sterling area and to the West European economies. If they are permanent, they mean that the whole dollar problem is eased. Manufacturing countries must import regular supplies of food and materials, whereas developing countries may temporarily defer buying scarce equipment; and the manufacturing countries have been heavily dependent on supplies of food and materials from the dollar area since the war. They are still dependent, but at more favourable prices. The relation between one group of prices and another is important, but the general trend of prices is important, too. Britain's position is peculiar. She benefited considerably from the lowering of material prices in relation to manufactured prices last year, but if the movement went much further the whole sterling economy would suffer from the reduction of dollar earnings from materials exported by the sterling area. Commodity prices are notoriously volatile. If, for instance, the eastern war began to expand in scale they might rise again sharply. But on present indications their course is more likely downward.

CURRENT COIN

Cotton Supply Prospects.—As a result of last year's worldwide textile recession cotton consumption has declined and almost all producing countries have experienced difficulty in selling the resulting surpluses. Trade prophets estimate that the carry-over at the end of the current season (31st July) will total more than 15 million bales; prices in the more important producing countries have fallen to a little below pre-Korean war levels and differentials between various grades of interchangeable cotton have narrowed appreciably. India is affected rather less than she would normally have been because she bought a large quantity of foreign cotton in 1951-52—unfortunately at prices considerably higher than they are now. Nevertheless, the frantic efforts now in progress to sell cotton all over the world are of immediate practical interest. This country needs a substantial amount of good quality cotton, and will continue to do so as no attempt has yet been made to achieve self-sufficiency in varieties of over 1" staple, of which about 700,000 bales are imported annually. Textile interests consider domestic production prospects, as stated by Mr. Damle and Mr. Deshmukh at the Indian Central Cotton Committee meeting last week (and reported by our Bombay correspondent today), to be rather optimistic. India's chief foreign suppliers are the United States, East Africa and Egypt; the visit of a mission from the last-named of these to textile centres in western India was briefly reviewed in *Capital* last week. Considering that until recently Britain was the leading buyer of Egyptian cotton, Cairo and Alexandria must have envied Brazil's success in persuading her to conclude a barter deal—70 Meteor jet aircraft in exchange for 15,000 tons of cotton. Some consolation for Egypt has been forthcoming in Japan's agreement to buy 40,000 bales, but this deal has caused some disappointment in Pakistan, where the pressure of stocks is increasing and where the fixation of minimum export prices has done little to improve output. The Pakistan Government's decision to allow cotton to be bartered for a specified list of commodities has done no immediate good, although negotiations of this kind would naturally take time to mature. The export minima fixed last month are somewhat higher than world price levels but traders have probably already recognised that in barter deals such obstacles are not difficult to circumvent.

U. S. Business Outlook.—Current business reports, says the February monthly letter of the National City Bank of New York, show that the U.S. economy is still operating at peak levels, and that business men generally are putting their faith in a continuance of active demand in the months ahead. Final returns, when they are in, will probably show that January has set another peacetime record in aggregate industrial production, continuing the upturn that has run since the steel strike. Little further gain in employment and industrial output is possible, for many of the key industries are at capacity. However, the view that business can go along on this plateau for some time is increasingly accepted. Unemployment is abnormally low. Latest figures show weekly hours of work and hourly wage rates rising. Personal incomes therefore are still edging upward, though at a moderate rate, and providing the means for sustained consumer pur-

chases. The automobile industry is conspicuous among those which expect to sell all they can produce in the spring and summer. Last autumn the tendency in Detroit was to set probable passenger car sales for 1953 at 5 million units. Recent figures have gone beyond this. Mr. Cur-tice, who will succeed Defence Secretary Wilson as president of General Motors, has raised his sights to 5,500,000. Press reports say production schedules for the first half year total 3,100,000, to be reached if materials are available. With the machinery, equipment and defence industries as busy as they are, such a schedule virtually underwrites general industrial activity during that period. Manufacturers of other consumers' durable goods, including television and most household equipment items, are similarly optimistic. They see high demand ahead and hope for relaxation of controls and more plentiful supplies of steel and other scarce materials. The construction industry is another which looks for a busy year. With expectations of this kind it is not surprising that unfilled orders remain high enough to assure sustained operations and that many industries continue under pressure. The chairman of the U.S. Steel Corporation, Mr. Fairless, reports that January orders for steel were ahead of a year ago and that the current backlog, representing nineteen weeks of capacity operations, is about unchanged from the September 1952 figure. The most discordant note in the good business news is the easiness in prices of basic commodities and particularly of farm products. Reports from the farm States—and from Congress also—indicate a growing concern as to farm purchasing power. Several farm spokesmen in Congress have already introduced Bills to supplement and extend the present price supports. The fact that the drop has occurred in spite of a high level of industrial activity adds to the concern. Surpluses of farm products are accumulating, largely in stocks owned or financed by the Government, and exports face an uneasy future.

Insurance in 1951.—The Indian Insurance Year Book, 1952, issued under the authority of the Controller of Insurance, Government of India, surveys the activities of insurers operating in this country during the calendar year 1951 and shows that the number of insurance companies registered under the Insurance Act, 1938, declined from 334 on 7th October, 1951, to 324 a year later. Of the latter, 222 were Indian companies (115 engaged in life business, 48 in life and other classes and 59 in purely non-life business); corresponding figures for the 102 non-Indian companies were 4, 13 and 85. The premium income under Fire, Marine and Miscellaneous classes of insurance business was greater than in 1950, the increase being more marked in the case of Fire and Marine business. The quantum of new life business rose to Rs. 132.9 crores, but was still below the 1949 figure. The decline in new business secured by Indian companies continued, but was more than offset by a big rise in the figure for non-Indian companies. The report does not comment on this feature, certainly among the most interesting of the year's operations. The total new life business transacted in India by Indian insurance companies during 1951 amounted to about 452,000 (27,000) policies assuring a sum of Rs. 116.46 crores (Rs. 1.92 crores) and yielding an annual premium of Rs. 6.38 crores (Rs. 8 lakhs); the decline as compared with the previous year is shown in parentheses, and is probably accounted for by the fact that the newer and smaller companies have found it less easy to operate since the Insurance (Amendment) Act, 1950, came into force. On the other hand, non-Indian companies operated with increasing vigour and sold 22,000 new policies (3,000) assuring Rs. 16.46 crores (Rs. 2.76 crores) and yielding an annual premium of Rs. 96 lakhs (Rs. 14 lakhs); figures in parentheses here show the increases over 1950.

About 31,79,000 policies involving a sum of Rs. 677.02 crores with a premium income of Rs. 33.32 crores were in force with Indian insurance companies at the end of 1951, which represents an increase from the previous year's total by 1,30,000 policies and by Rs. 41.21 crores in the sum assured. The average sum insured per new policy increased by about Rs. 104 per policy during 1951, while the annual premium income accruing to Indian life insurers increased by Rs. 173 lakhs. Non-Indian insurers had 235,000 policies in force in India at the end of 1951 involving a sum of Rs. 115.92 crores with a premium income of Rs. 6.42 crores, which represented an increase over the previous year's business of 4,000 in the number of policies, Rs. 7.08 crores in the sum assured and Rs. 31 lakhs in the premium income. By comparison with 1950, the net amount of life insurance effected outside India by Indian life insurance companies declined to 17,000 (4,000 less) policies, Rs. 7.08 crores (Rs. 45 lakhs) in the sum assured and Rs. 45 lakhs (Rs. 43 lakhs) in the yearly renewal premium. The contribution of these companies to India's invisible exports thus shows a considerable decline. The average net rate of interest earned increased slightly. The ratio of management expenses to the premium income worked out to 26.8 percent for Indian and 23.0 percent for non-Indian insurance companies. The corresponding figures for the previous year

were 28.9 and 21.8 percent. Of the 68 new valuations of Indian insurance companies published in the Year Book, 47 disclosed a surplus. In the case of 31 the surplus was allocated to policy-holders and/or shareholders, and in the case of the others the surplus was carried forward unappropriated. Twenty-one companies showed a deficit, and in 13 of these the deficit was covered by the free paid-up capital. On 31st December, 1951, insurance companies held invested in all categories of approved investments nearly 103 percent of policy liabilities against the statutory requirement of 100 percent. The total of approved investments expressed as a percentage of the total investments works out to about 97 percent in the case of Indian and about 98 percent in the case of non-Indian companies. Insurance companies which complied with the requirements of Section 27A(2) (i) of the Act held non-approved investments to the extent of only about 4 percent as against the statutory limit of 15 percent whereas companies which had not complied with that section held non-approved investments to the extent of about 53 percent.

Turning to non-life business, the net total premium income of Indian insurance companies was Rs. 13.09 crores, consisting of Rs. 7.12 crores from Fire, Rs. 2.48 crores from Marine, and Rs. 3.49 crores from Miscellaneous business. The corresponding figures for non-Indian insurance companies were Rs. 2.27 crores from Fire, Rs. 1.64 crores from Marine and Rs. 1.36 crores from Miscellaneous. The ratio of claims to the net premium income of Indian and non-Indian insurance companies combined was 31 percent in Fire insurance, 55 percent in Marine insurance and 51 percent in Miscellaneous insurance. The corresponding percentages for 1950 were 31, 37 and 45 respectively. The ratio of commissions to the net premium income was 13 percent in Fire insurance as against 24 percent for 1950; 5 percent in Marine insurance as against 11 percent for 1950 and 15 percent under Miscellaneous as against 17 percent for 1950. The ratio of expenses of management to the net premium income was Fire insurance 29 percent as against 28 percent for 1950; Marine insurance 23 percent as against 24 percent for 1950; and Miscellaneous insurance 27 percent, the same as in 1950. At the end of September 1952, there were 82 provident societies registered under the Insurance Act, of which 81 were constituted in India and one in Pakistan. The new business of these societies in 1951 amounted to 13,900 policies involving Rs. 106.95 lakhs, or an increase of 2,000 in policies and Rs. 4.43 lakhs in the assured sum. The total business at the end of the year was about 63,100 policies involving Rs. 346.89 lakhs.

Coal Production and Transport.—Despite uncertainties and disabilities, the coal industry managed to produce a record 36.2 million tons in 1952 against 34.3 million tons in the previous year. It is gratifying to note that despatches showed a similar improvement—31.09 million tons in 1952 against 29.1 million tons in 1951. The daily average number of wagons loaded in the Bengal Bihar coalfields increased from 3,020 to 3,163, and as a result stocks at pitheads showed only a minor rise, from 2.09 million tons to 2.45 million tons. The latter figure is large enough to warrant further efforts to provide more facilities for coal transport, which would also ensure that there is no recurrence of the serious shortages which threatened closure in many industrial units in the middle of 1952. Coal exports are reported to have reached a record total last year at 3.28 million tons, about 480,000 tons more than the previous year; but large sums were paid as demurrage because ships to lift this coal were delayed at Calcutta port. The leading foreign buyers of Indian coal were Pakistan (1,145,000 tons), Japan (750,000 tons), Ceylon (277,000 tons) and Australia (204,709 tons); and it is interesting to note the two newcomers to this field—South Korea (100,000 tons) and Indonesia (54,000 tons). As against an official ceiling of 7.9 million tons imposed on the production of selected A and B grades of coal, only 7.752 million tons were actually raised in 1952; this figure compares with 7.877 million tons in 1951, 7.387 million tons in 1950 and 7.239 million tons in 1949. The view is gradually gaining ground that simple restriction of output is not the best method of conserving coal and that much better results can be achieved by washing and sand stowing. Both methods are being investigated, the former by a Coal Washeries Committee set up under the chairmanship of Mr. J. N. Mukherjee and including Mr. S. C. Ghosh, Superintendent of Collieries, Jamadoba; the Director of the Fuel Research Institute or his representative; Mr. T. P. M. Evans, General Manager of Turner Morrisons' collieries; Mr. S. W. Willet, Deputy General Manager of I.I.S.C.O.; Mr. M. V. Kamlani, member-secretary of the Railway Fuel Economy Enquiry Committee; Mr. H. N. Nandy, Manager of Bhurkunda colliery; and Mr. S. Mukherjee, Inspecting Officer of the Coal Board, who will also be secretary to the Committee.

Ownership of Bank Deposits.—The expansion of deposit money during the war and in the immediate post-war years focussed attention on the

pattern of ownership of deposits. In 1945 the Reserve Bank of India initiated an annual survey of the ownership of demand deposits and since that date the scope of the survey has been expanded. By 1946 banks were asked to supply data regarding the ownership of their demand deposits including the demand liability on savings deposits. The following year inter-bank deposits were included in the survey and in 1949 many alterations were made in the form of the survey so that more detailed information could be obtained on the actual ownership of deposits. The new schedule required banks to give a separate ownership classification of their demand, time and savings deposits; the classification under demand deposits now excluded the demand liability portion of savings deposits. In the latest issue of the Reserve Bank's Bulletin the results of these enquiries are published as a review of the ownership of bank deposits from 1947 to 1951. Total demand deposits with scheduled banks, including the demand portion of savings deposits, rose from Rs. 603 crores on 31st December, 1947, to Rs. 616 crores at the end of 1948, but in the following six months fell sharply, by Rs. 56 crores, to Rs. 560 crores. This tendency was accentuated during 1948-49, for following the liberalisation of import controls there was a large increase in imports which resulted in a considerable outflow of funds, both on Governmental and private accounts. Business demand deposits at the end of 1947 amounted to Rs. 276.81 crores, but because of the adverse balance of payments in 1949 they fell sharply and although there was some recovery after the outbreak of hostilities in Korea the lost ground was never made up. Business deposits represent from two-fifths to half of total demand deposits. Trading deposits are by far the most important single constituent of business deposits though their share in the total of demand deposits held by business fell in four years from 56 percent to 49 percent at December 1951. The major portion of non-business demand deposits were personal deposits. At Rs. 238.43 crores in December 1947 such deposits represented nearly 40 percent of all demand deposits. In the four years from that date personal deposits fell by Rs. 114.51 crores. The greater part of this apparent decline can be attributed to the exclusion in the Reserve Bank's enquiry of the demand liability portion of savings deposits which from December 1949, onwards have been shown under a separate heading. After making adjustments for this, the fall in the two items together comes out at about Rs. 42 crores. Savings deposits have shown remarkable stability since information was first collected about them, remaining between about Rs. 134 to Rs. 137 crores. Since December, 1949, banks have been asked to classify their time and savings deposits by ownership. The major portion of time deposits are personal deposits, their proportion to the whole, in December 1951, being about 53 percent. Business time deposits account for only a relatively small proportion of the whole, about 25 percent. Demand deposits with scheduled banks at the end of December 1947 amounted to Rs. 603.44 crores held in 24,60,830 accounts while by the end of 1951 total demand deposits amounted to Rs. 456.31 crores held in 10,17,045 accounts. Of this about Rs. 205 crores were held in 5,496 large accounts, about Rs. 152 crores in 61,456 medium-sized accounts and Rs. 99 crores in 9,50,093 small accounts.

Assam Tea Wages Modified.—A Gazette Extraordinary says that the Assam Government has, as a "purely temporary" measure, decided to modify the wages fixed under the Minimum Wages Act, 1948, for tea estates in Cachar district and uneconomical gardens in the Assam Valley. Foodgrains will not be issued at concessional rates and no cash compensation will be paid instead to workers, but they will get extra dearness allowances. This extra daily payment on Cachar estates will be one anna for an adult and six pies for a minor and the corresponding figures for uneconomical gardens in the Assam valley will be two annas and one anna. A committee has been set up to decide which gardens are uneconomical and also to decide which of them need not pay the increased dearness allowances. The committee will consist of the Commissioner of the district, labour officer of the district, one MLA of the district to be nominated by the Government, and one representative each of labour and industry. Basic wages are to remain unchanged and management will have to stock and supply cereals throughout the year at the controlled rates. Dividends cannot be declared nor commissions paid as long as the new regulations are in force; after meeting previous losses, as determined by the Government, and building up a reasonable reserve, labour's claims will be met before any dividend is declared. No increments can be given to managerial and other staff; on the other hand their salaries might be cut by an amount to be determined by the Government. Head office expenditure will also have to be reduced by not less than 5 percent. Estates will not be allowed to retrench or lay off workers, even temporarily; there are to be no short working weeks—they are to provide employment to a normal working force for six days a week and also agree to a reasonable leave system to be framed later by the Government.

GILT-EDGED GAIN GROUND ON STRENGTH OF STERLING

DOMESTIC ISSUES REMAIN FIRM IN DEPRESSED MARKET

London, 11th February. SEVERAL opposing factors in the stock markets last week were responsible for the caution among dealers. Week-end pronouncements by the Chancellor of the Exchequer were well received but the gravity of flood news became apparent and offset much of the earlier benefit. The encouraging mid-week treasury returns of gold and dollar reserves were partially neutralised by the Government's attitude on the Formosa question. Despite all this domestic stocks were reasonably firm. Gilt-edged gained over the period mainly on the strength of sterling and despite poor results of the Rhodesian loan of which underwriters had to take up approximately 78 percent. Another adverse factor was the desire to await the full cost of the floods to the country, which led to a toning down in some quarters of hopes of taxation relief in the next budget. For this reason industrialists were quiet but there was some good buying of issues connected with defence orders.

Kaffirs reversed their short-lived upward movement as speculators who were primarily responsible took profits and switched into diamonds and copper in the hope that the Continent, particularly Paris, would continue to buy these stocks. At the end of the period this hope proved fruitless with both sections idling. Foreign bonds were rather out of the picture but Japanese rallied to recover most of the week's losses on the talk of good write-ups in the week-end press. Reports of a Chinese Nationalist landing have caused further weakness. Although the frequent changes among fees were usually adverse, dealers reported that a good deal of stock overhanging the market has been absorbed. The better outlook for the industry brought in buyers and prices were changed moved higher, particularly among low priced issues. At the end of the period however business tailed off and movements became irregular.

The calling and return of a large volume of money in the closing stages of the week broke the monotony of stringent conditions on London's money market. The period started in a bad way with harrowers keenly searching around for

money. This position obtained most of the time and authorities were obliged to pump fresh supplies into the market, which was done mostly through banks. Late week easiness came as a relief to discount houses who, for the first time in a long period, were able to balance the books without the aid of privilege money. Applications of £220 million Treasury Bills totalled £315,780,000. Allotments were £220 million at an average rate of 48s. 3.19d. percent. This week's offerings are £220 million. The Bank of England Return showed that active note circulation rose by about £3 million to £1,452 million. Bankers' deposits fell by about the same amount to £272 million.

Linseed Market Report

The past week has not been lacking in conflicting rumours which mainly had the effect of separating linseed sellers and buyers more widely than usual. It is not surprising that there was a run on near and early positions and less disposition to discount forward shipments, even so it is difficult to shift linseed from its persistent somnolent state although an offer of Uruguayan seed February-March shipment at \$155 per metric ton, c.i.f. was a redeeming feature. There was a promise of more demand initially for linseed oil but Canadian and Indian qualities remained out of line. Groundnut oil provided a bright spark in the edible field following the strength of the market at the origin and sustained European demand. There are reports that Indian authorities are considering reducing or removing the export tax on linseed oil and placing one on groundnut oil. Buyers for castor oil have shown little interest even at \$160 for basis February-March or commercial at \$50 c.i.f.

Bonded Warehouse Tea Stocks

Stocks of tea in the United Kingdom bonded warehouses on 30th January totalled 129,743,565 pounds compared with 130,904,130 pounds a week earlier, according to the London Tea Brokers Association. Landings during the period were 8,139,915 while deliveries were 9,300,480.

Tea Auction Offerings

At the London tea auction on Monday, offerings consisted of 25,388 packages of North India, Pakistan, Nyasaland, Malayan and Indonesian. Good and generally well spread demand prevailed. Good liquoring with colour sold well at fully steady rates, while common and low medium kinds were inclined to be dearer. Thin liquoring

broken pekoes and fannings, however, were irregularly easier. Clean common broken pekoe, free from stalk, was quoted at 30 to 31½d. against 29½ to 30d. previously.

Brazilian Cruzeiro

The Brazilian cruzeiro has reached its lowest level in the black market since the announcement was made that the free market will become effective from 21st February. The cruzeiro is currently offered at 37½ to the dollar, while buyers are seeking 38 per dollar. Earlier rumours here were to the effect that Banco Brazil has planned eventually to stabilise the cruzeiro at 30 to the dollar. According to usually reliable sources, however, Brazil is said to have approached the I.M.F. and indicated that it proposes to stabilise the cruzeiro at 35 to the dollar.

Petaling Tin Dividend

The final dividend of Petaling Tin Limited is 10 percent, less tax, making 105 percent for the year to 31st October, 1952 compared with 150 percent. Profit on mining operations was £727,000. Net profit was £419,000, after taxation of £234,000. The Manager's report states that during the current year lower returns are expected from No. 3 dredge but Nos. 5 and 6 will continue operating in the Pechang area in a ground of good average value and it should be possible for the standard of last year's output to be maintained.

Sterling's Strength in Dollar Market

A technical shortage of sterling in New York during the early part of the week pushed the London sterling-dollar rate to a ceiling level of \$2.82 for the first time since the partial relaxation of exchange controls about twelve months ago. Although business in the Exchange market is still comparatively small there is a marked improvement in confidence of American operators who are showing less disposition to go short. No business is yet reported at the \$2.82 level but the Bank of England is bound to sell sterling at this price to conform with the agreement notified to the International Monetary Fund. This restricts fluctuations in the rate of one percent either side of parity. A contributory factor to sterling's strength on the dollar market is its hardening in Canada where the pound is now about \$2.74½ to \$2.74.

Budget Hopes A Bull Factor

The Investor's Chronicle Market Newsletter says: The market continues in a very mild bull trend with the Financial Times industrial ordinary index (No. 119.8) remaining comfortably above the previous peak of 117.8 established early in December. In view of the strength of sterling, the possibility of a more generous dividend policy for some companies and budget hopes, the market will continue this slow upward. Bearish forces seem at work in base and other metals. It is believed that uranium shares will still prove good purchases particularly on reactions.

Hides and Skins Steady

There was very little change to report in East India tanned hides but a moderate amount of business has been concluded. Prices do not reflect any weak tendency as far as Madras is concerned. On the contrary, prices towards the end of the week were firmer. Any noticeable weakness seems to be in light weight lower grades but even here it is not so evident as recently. Practically no business is being done in buffalo which are steady. Both buffalo calf and cow calf have been quiet and slightly reduced prices have not tempted buyers to operate on any large scale. Interest in tanned skins was centred around public sales. Prices have shown a decline compared with December but the reduction has not been so great as was expected in some quarters.

Petroleum Exports

More than 1,300 million gallons of finished petroleum products, worth over £50,000,000, were exported from British refineries last year. This is a record figure, and compares with 774,900,000 gallons in 1951 and 271,800,000 in 1950. Among the products shipped abroad last year were 875,400,000 gallons of fuel oil (valued at over £25,000,000), 139,700,000 gallons of Diesel oil, 109,800,000 gallons of motor spirit, 94,800,000 gallons of gas oil, and 47,000,000 gallons of lubricating oils. The sharp increase both in the volume and value of these exports—worth last year nearly twice as much as in 1951 and four times as much as in 1950—is another outcome of the large-scale refinery expansion programme undertaken during the past five years.

Briefs

Burma Estates has agreed in principle to the sale of the company's estates. It is expected that the company will be able to wind-up and remit cash balances in Burma, which will then be available towards a distribution to stockholders. Members will also receive shares in the local purchasing company as part consideration for the properties.

Motorists gave premier grade petrol an enthusiastic welcome on 1st February, when branded motor spirit was back after 13 years of "Pool." The demand for the higher-priced fuel was unexpectedly great, and something like nine out of every ten motorists asked for it.

The number of permanent houses built in Britain in 1952 was 239,922. It is disclosed in Government housing returns. The total is about 45,000 more than in 1951 and about 5,000 more than that forecast in recent Ministerial statements. Progress reports also show a continuous rise in the number of houses under construction.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND FOR FUNDS UPCOUNTRY AND IN BOMBAY

Wednesday, 11th February.

THERE has been steady and moderate demand for funds in Bombay on cotton account and in upcountry centres against sugar and grains. Conditions in Calcutta have been relatively quiet, though money is very tight and rates are tending to harden. Overnight money quotes 2½ percent and call money 3 percent. The call rate in Bombay has moved back to 3 percent after easing last month to 2½ percent. Money is fully useable but there is little of the tension of a real busy season.

The exchange market has been very dull, with only a few small miscellaneous bills about. Remittance is normal. All rates are unchanged at T.T. and O.D. 1s 5.31/32d; three months' sight bills 1s 6½d; four months' sight bills 1s 6.5/16d; and U.S. dollars Rs. 47s.

This week's offer of Rs. 1 crore of three-month treasury bills met with a tender of Rs. 1,18,50,000. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 allotted about 84 percent; lower tenders were rejected. The average rate of acceptance was somewhat lower than in the past few weeks, at Rs. 2-6-11 percent per annum. Another Rs. 1 crore of bills will be offered next week, up to Tuesday in Bombay and Monday elsewhere. During the week ended 6th February, treasury bills for Rs. 2,19,00,000 were sold in favour of the Reserve Bank of India.

Silver was very firm early in the week and the price went over Rs. 168 on strong speculative support, but a reaction set in at the close on the report that the board of directors of the Bombay Bullion Association had unanimously declared a state of emergency in the forward market and fixed 13th February for a general ballot of the members confirming this step. This induced large bull liquidation because it was held that either the market would be closed or compulsory squaring up of all transactions would be insisted upon in the event of the declaration of an emergency. The price consequently eased to Rs. 165-12. The ready rate was quoted at a premium of about 6 annas. Silver was unchanged at 74d. in London and at 85½ cents in New York.

Gold was also firm and rose from Rs. 90-2 to Rs. 91-0 on good demand from upcountry centres. The sovereign at Rs. 60-10 showed a gain of about 3 annas.

Sharp rises of Rs. 8.85 crores and Rs. 17.55 crores in the total note issue and notes in circulation to Rs. 1,140.90 crores and Rs. 1,123.93 crores, respectively, are outstanding features of the return of the Reserve Bank of India for the week ended 6th February, 1953. The expansion in currency was duly adjusted by raising foreign securities by Rs. 10 crores to Rs. 568.15 crores and this also explains the fall in balances held abroad from Rs. 159.97 crores to Rs. 151.48 crores on transfer to the Issue Department. Notes held in the Banking Department consequently fell by Rs. 8.70 crores to total Rs. 16.97 crores. Deposits disclose an all-round decline. Deposits of the Government of India and other Government accounts have dropped by Rs. 5.61 crores and Rs. 6.02 crores to stand at Rs. 163.07 crores and Rs. 12.72 crores, respectively. Better demand for funds accounts for a fall of Rs. 3.36 crores in balances of commercial banks to Rs. 41.70 crores. Government Treasury Bills rose from Rs. 11.32 crores to Rs. 13.03 crores. Other loans and advances increased from Rs. 12.66 crores to Rs. 14.97 crores, of which advances to scheduled banks against usance bills totalled Rs. 74.18 lakhs against Rs. 98.93 lakhs. Investments at Rs. 100.07 crores showed a small decline of Rs. 3 lakhs. Ways and means advances stood at Rs. 3.50 crores (Rs. 3.40 crores).

The statement of the position of Scheduled Banks for the week ended 30th January, 1953, discloses Demand and Time liabilities at Rs. 529.10 crores (Rs. 12.29 crores on account of borrowings from Banks) and Rs. 315.23 crores (Rs. 11.63 crores) compared with Rs. 527.70 crores (Rs. 11.61 crores) and Rs. 315.53 crores (Rs. 1.89 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 88 lakhs and Rs. 1.89 crores to aggregate Rs. 32.96 crores and Rs. 44.71 crores, respectively. There is a rise of Rs. 1.50 crores in investments to Rs. 311.38 crores. Advances and bills discounted at Rs. 489.96 crores reveal an increase of Rs. 6.02 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.2 percent and 57.9 percent against 9.6 percent and 57.4 percent.

The return of the Imperial Bank of India for the week ended 30th January, 1953, shows a fall of Rs. 43 lakhs in total deposits to Rs. 207.95 crores. Investments in Government Securities are up by Rs. 1.80 crores to Rs. 76.14 crores, while other authorised investments remain unchanged at Rs. 10.89 crores. Loans, cash credits and overdrafts have advanced by Rs. 1.87 crores to aggregate Rs. 111.08 crores, while bills discounted and

purchased have declined by Rs. 11 lakhs to stand at Rs. 7.04 crores. Cash and balances are, in consequence, shown at Rs. 16.85 crores or Rs. 2.66 crores less.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in India during the month of October, 1952, amounted to Rs. 1,318 lakhs as compared with Rs. 1,719 lakhs in the corresponding month of the previous year. The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with those of the corresponding period of the preceding year.

Of the total customs revenue collections, import duties accounted for Rs. 908 lakhs as against Rs. 1,164 lakhs, export duties for Rs. 371 lakhs as against Rs. 520 lakhs and land customs and miscellaneous for Rs. 39 lakhs as against Rs. 35 lakhs. The total gross collection of Union Excise duties amounted to Rs. 455 lakhs as compared with Rs. 776 lakhs.

During the seven months, April to October 1952, the grand total of gross Customs and Union Excise Revenue realised was Rs. 15,432 lakhs as compared with Rs. 18,966 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 7,056 lakhs as against Rs. 8,053 lakhs, export duties for Rs. 3,403 lakhs as against Rs. 5,175 lakhs, land customs and miscellaneous for Rs. 242 lakhs as against Rs. 220 lakhs and Union Excise duties for Rs. 4,731 lakhs as against Rs. 5,518 lakhs.

WORKING OF INDIAN BANKS IN 1952

DIVIDENDS MAINTAINED

THE results of the working of the Indian banks in 1952 which have been released lately indicate the soundness of the banking structure in the country. Banks encountered a difficult trading period last year because of the commodity slump and tight monetary conditions, which were partly relieved by the availability of discounting facilities on commercial bills from the Reserve Bank. Higher interest yields and the absence of depreciation in securities, which latter eroded their profits in late 1951, helped the banks to maintain their earnings. The revival of Treasury bills also stood them in good stead by providing an outlet for secure short-term investments. The table below shows that the profits of ten banks fell from Rs. 4.69 crores to Rs. 4.40 crores in 1952. Imperial Bank of India, Indian Overseas and Punjab National having raised their profits fractionally. Reserves at Rs. 1.17 crores disclose a sharp decline of more than Rs. 50 lakhs, while taxation is up from Rs. 59.80 lakhs to Rs. 78.55 lakhs, presumably due to the absence of provision for depreciation in investments, except in cases of the Bank of Baroda and Central. The distribution to shareholders was maintained by all, but the capital of the Bank of India, Indian Bank and Indian Overseas Bank was increased meanwhile.

The first engine built at Chittaranjan

PROGRESS ON oiled WHEELS

The Locomotive Works of the Government at Chittaranjan and of Tata at Tatanagar, move, as might be expected, with the times.

Both have installed Hollerith machines. At Chittaranjan they handle analysis of wages and stores. At Tatanagar, they handle every aspect of Cost and Stores Accounting. (There are some 12,000 items of stores.) These are but two typical Hollerith installations in a vital industry. All over Asia, in industries heavy and light, in commerce, in Government Departments—Hollerith installations are at work, oiling the wheels of progress.

● Publications of greatest interest to key executives are THE TABULATOR, issued periodically, and IN BUSINESS, TOO...describing Hollerith methods. Copies can be obtained by applying to any of the offices below—on your business note-heading, please.

castings of infinite variety

Cast Iron plays a vital role in modern engineering. Lamp Posts and Surface Boxes for roads, Spiral Staircases for buildings, Rose Strainers for waterworks, Pile Screws for piers and jetties, and Spur Wheels for Collieries and other industries are only a few examples of the manifold purposes for which Cast Iron is extensively used. ISCO, with many years of painstaking research and manufacturing experience behind them, undertake to supply Cast Iron products of a wide range to any design or specification.

According to the land customs trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during December, 1952, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	87	(33)
Western Pakistan	19	3
Other countries	13	55
Total	124	(91)

The figure for imports from Eastern Pakistan are exclusive of the value of 2,07,721 bales of raw jute awaiting adjustment and are therefore incomplete. Total trade amounted to Rs. 215 lakhs (incomplete). Re-exports were nil, and trade in treasure nil. The balance of trade cannot be calculated exactly because the data is incomplete.

A DITCHER'S DIARY

shape and after many years of slow decay the combination of gales and high tides has wrought great devastation. I doubt whether this line of reasoning will move Mr. Butler to concessions in his forthcoming Budget, but it is just another example of how governments, by taking money away from those who know best what should be done with it, eventually let themselves in for the heavy costs of making good the insidious depreciation of the years.

After independence there was a marked tendency for Indian students to choose universities in the United States and Canada for their higher education in preference to the institutions in the United Kingdom that had traditionally attracted Indian scholars in quest of the higher learning. It was thought at the time that this indicated the beginning of a new trend which, if it had continued, could have had significant results for Indian culture. A study by the Reserve Bank however shows that since 1949 the trend has been reversed and applications for foreign exchange on behalf of students proposing to join universities in North America have been declining while applications from candidates for British universities have increased and are now well ahead of the other group. I hesitate to read any significance into this brief enthusiasm for the trans-Atlantic academics, but it would seem that India has now reverted to her former teachers to instruct her graduates.

Why stock exchanges exist at all, what goes on in them and what sort of people make use of their facilities are subjects on which the darkest ignorance prevails not only in this country but also in places where the generality are better informed. As long as this ignorance persists, and as long as stock exchange associations preserve the unnecessary mystery that surrounds their activities as far as common folk are concerned, it is open to leftists to answer that they are gambling casinos where moneyed idlers speculate on others' misfortunes. This is a subject I have harped on before in this column and my excuses for returning to it are that the latter myth is more popular than some business men suppose and that stock exchanges in other centres are lately showing awareness of the need to dispel it. The London Stock Exchange has a publicity campaign under way at present and has begun to admit "strangers" in excess of the traditional 1,399 members for instructional visits. Its chairman, Mr. John Braithwaite, last month gave a useful lecture to students in which he explained how two million people make use of the facilities in Throgmorton Street to deal in 10,000 different securities worth £25,000 million. More revealing still is a study carried out by the New York Stock Exchange to determine just who does use the stock market, and why. The results are summarised in a recent issue of its booklet, *The Exchange*. All transactions put through on two particular days last September were analysed, and counting the sale and purchase of the same share as two transactions they totalled 3,232,000. It appears that almost half these shares were bought with a view to long-term capital gain and about a quarter as investment for income; the in-and-out-quickly operator was rarer than one might think and only 4 percent of shares were held for less than a month. Forty percent of shares are held for over a year and 22 percent for between six months and a year. Not much of the gambling casino about that. People with annual incomes of under \$5,000 made up only 7 percent of investors but the three

income brackets, \$5,000 to \$10,000, \$10,000 to \$25,000, and from there up, provided about equal numbers of share buyers, showing that the stock market attracts not only the rich but all those with some money to invest and sufficient understanding of its services. The prominence of the ladies is something of a surprise: they bought a quarter of all shares sold and in some age groups and income brackets were well ahead of the menfolk. That the middle-aged, 40-59, predominated among investors is to be expected but brokers handling new issues might notice that there was a preference for shares priced between \$10 and \$15; taking account of the difference in average incomes between India and the United States this might suggest that the Rs 5 or Rs 10 share would be most popular here.

Mr. Rafi Ahmed Kidwai's optimism is astonishing. One cannot help liking a man who is just constitutionally incapable of taking a gloomy view of anything. It is bound to get him into trouble—and Mr. Kidwai has had plenty of that since he took over the Food and Agriculture portfolio—but when all the gloomy folk have damned and denounced him he can be relied upon to produce some more sanguine and expansive piece of good cheer. On a visit to Calcutta last summer he created no end of a shindy by assuring everybody that there was plenty of food in West Bengal and the State Government would no doubt relax controls and rationing early in 1953. He then departed for Delhi, leaving Dr. Roy to explain that matters were not quite so easy. The odd thing is that since the New Year the State has done something very close to what Mr. Kidwai said was possible. Back in Delhi, Mr. Kidwai put himself at odds with the rest of the Government by claiming that there was no real food shortage in India, and then treated Parliament to the spectacle of the Prime and Finance Ministers openly contradicting their colleagues in the Food Ministry on how much grain is produced in the country each year. Again it is a curious thing that the National Sample Survey has assembled statistics that suggest very strongly that Mr. Kidwai's opponents have been grossly underestimating food production, and that the Food Minister may well be right. This week on a visit to Calcutta he has claimed that the jute target in the plan is very near achievement (an ambiguous statement dealt with elsewhere in *Capital* this week), and has then gone one better by prophesying in Beldanga that within four years or so India might be exporting foodstuffs. Whatever the value of Mr. Kidwai's forecasts, at least they do not push up grain prices, a point that might be noted by the rest of the Government which has talked the market against itself, both within and outside India, consistently in the past six years. We shall probably not know how much right he has on his side until there is adequate transport to move grain freely from one part of the country to another; at present it is difficult to separate India's food shortage from her transport shortage. But as long as no one really knows the facts about the food situation in India there is no harm in having one unquenchable optimist in Delhi.

From East Germany comes the story that a local Communist boss in a small town had died and a member of the party was making the rounds to collect money for a suitable funeral. "Can you spare a mark for the burial of a Communist official," he asked a householder. Came the reply: "Here's five marks. Bury four more."

BRIGHT LIQUORING DOOARS AND ASSAM TEAS IMPROVE

IRREGULAR DECLINE IN DUSTS

At Sale No. 34, held on 9th and 10th February, the strongest features at the Export auctions were the brighter liquoring Dooars and Assam teas with cold weather character. These sold well and were usually dearer. For common teas, commonest sorts and most fannings demand was general and strong and these types were often a little dearer. Other descriptions tended to be easier.

There was less demand in the Dust sale, most sorts being generally an irregular one anna easier. The best C.T.C. sorts were from one to two annas easier, but the majority of these were mostly plain liquoring. Once again Black leafy types suitable for export were strong, whilst commonest and Darjeeling Dusts with flavour were firm.

The few packages of Internal leaf tea on offer met with a fair demand.

Quotations	1953	1952

FAR EASTERN CHARTERING HALTED BY FLEET MOVE

COAL FIXTURES DULL

PRESIDENT EISENHOWER's decision to withdraw the American Seventh Fleet from Formosan waters has temporarily halted chartering in the Far Eastern trades, which had shown most activity in recent months. Owners are inclined to ask for somewhat higher rates in view of war risks and have suggested that any extra insurance raised after conclusion of contracts should be borne by charterers. Meanwhile a steady demand for grain carriers from the Pacific and River Plate to India was maintained with rates unchanged on the basis of 82s 6d and 80s respectively. Dungun-Japan iron ore was done at 34s 6d for one voyage with an additional 3d for two further voyages of the same vessel. Dungun-U.K. paid 66s 3d for May loading while Mormugao-Japan was arranged at 55s for March-April shipment.

The first time charter Continent-Australia after a very long interval was arranged at 18s 6d for a motorship and a 10,000 ton oilburner obtained 14s for 6-8 months trading. There is a good demand for vessels on time charter with delivery India, mainly for the trip to U.K.-Continent and a handy sized motorship was fixed at 22s 6d with delivery Bombay in March. Calcutta coal charterers were again idle and the only fixture reported was a small carrier for Korea at 73s.

LINSEED

A steady undertone prevailed and prices moved to slightly higher levels, but turnover was limited. With firmer trends prevailing upcountry, prices for new crop forward delivery were quoted at

much higher levels than previously and sellers for ready delivery were very reserved. Local stocks were poor and a generally improved demand from crushers met with little response from sellers. In the oil section, prices revived following a small enquiry from Australia and there was a small daily turnover. Latest quotations were as follows: Ready Rs. 20-8 per maund.

HIDES AND SKINS

The market in skins ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 3rd and 9th February, 1953)

Cowhides: Wet Salted (Ord.) 27,000 pcs. on the basis of Annas 9-6 to Annas 11; Wet Salted (Ord.) 38,000 pcs. on the basis of Rs. 9-8 to Rs. 11; Wet Salted (Slaughtered) 8,000 pcs. on the basis of Rs. 12-8 to Rs. 23.

Goatskins: Wet Salted (Daisee, Killed) 95,500 pcs. on the basis of Rs. 230 to Rs. 400; Assam-Dinajpur 10,100 pcs. on the basis of Rs. 245 to Rs. 265; Purneah-Kissenganj 3,300 pcs. on the basis of Rs. 260 to Rs. 275; Patna (Ord.) 6,200 pcs. on the basis of Rs. 150 to Rs. 215; Muzafferpore-Samastipur-Darbhanga 63,170 pcs. on the basis of Rs. 230 to Rs. 260.

Bazar Stocks

(9th February, 1953)

Cowhides: Wet Salted 1,20,000 pcs.

Goatskins: Wet Salted (Daisee, Killed) 84,000 pcs.; Assam-Dinajpur 1,01,500 pcs.; Muzafferpore-Pakur-Patna-Purneah-Kissenganj 66,000 pcs.

SUGAR PRICES DECLINE

During the week ended 10th February, prices declined by about Rs. 1 and were: big grain Rs. 31, medium grain Rs. 29-8 and small grain Rs. 28-12 a maund. Arrivals were fair and stocks amounted to about 25,000 bags. The Government released a further 106,000 tons from the 1952-53 production for sale in the free market.

WEEKLY SHELLAC MARKET REVIEW

During the week ended 10th February the market ruled firm and a moderate business passed. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 95 value.	
Pure Buttonlac	Rs. 86 to 87 buyers.	
Lemon No. 1 Shellac	Rs. 86 to 90 done and buyers.	
Lemon No. 2 Shellac	Rs. 82 to 85 done and buyers.	
F. O. Sid. 1. Shellac	Rs. 78 to 81 done and buyers.	
Pure T.N. Shellac	Rs. 74 to 77 done and buyers.	
4% I.T.N. Shellac	Rs. 67 to 70 buyers.	
No. 1 Kusmi Seedlac	3% Rs. 83 to 85 done and buyers.	
No. 2 Kusmi Seedlac	3% Rs. 77 to 78 buyers.	
Fine Bysaky Seedlac (Manthum)	3% Rs. 75 buyers.	
Fine Bysaky Seedlac (C.P.)	3% Rs. 72 done and buyers.	
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 63 done and buyers.	
Ordinary Bysaky Seedlac (C.P.)	under 5% Rs. 67 to 68 buyers.	
Kreelac	Rs. 28 buyers.	

Shipments during February until the 7th were 7,797 packages.

ECONOMIC EVENTS IN JANUARY

2nd—Industrial Finance Corporation enquiry committee appointed; sterling area gold and dollar reserve figures for December announced.

4th—Indian cloth export duty cut; Egypt-China cotton deal announced; U.S. nylon output figures published.

5th—Churchill meets Eisenhower in New York; Bombay motor transport strike ends; Burma gives Britain notice to end defence pact; Britain releases £10 million from Egypt's sterling balances; International Rubber Study Group meets in London.

6th—Asian Socialist conference opens in Rangoon; tractor import policy announced.

7th—Chief Ministers of Part C States meet in Delhi; Engineering Association of India meets; Truman sends annual "State of the Union" message to Congress; USA gives \$20 million grant to Yugoslavia.

8th—State Food Ministers' conference begins in Delhi; Mayer forms new French Cabinet; Malayan security loan oversubscribed.

9th—Tea growers decide on 8 percent voluntary cut in production; Indian cotton acreage estimate published; Truman presents 1953-54 budget proposals.

10th—Cloth export licensing period extended.

12th—Pakistan details jute production cut for 1953-54; Pakistan Insurance Corporation Act comes into force; Tariff Commission begins enquiry on Indian automobile industry.

13th—Talks begin on tea promotion campaign in New York; Indian 1952 cloth output figures published; new Reserve Bank directors nominated; purge starts in Russia; Japan warns Russia against air violations.

14th—Joint tea promotion fund plan announced at New York talks; first National Sample Survey report published; Truman sends farewell economic message to Congress.

15th—Centre gives Bombay loan for industrial housing; Rajendrasinhji succeeds Cariappa as Indian C-in-C.

16th—Proposal for enquiry into working of jute industry; India's coal export figures announced; move to extend West Bengal Electricity (Emergency Powers) Act; Indo-Hungarian trade agreement concluded.

17th—Nehru addresses open session of Indian National Congress; British steel industry announces 1953 production target.

18th—Congress session concludes.

19th—Pakistan Tea Association meets; I.C.A.O. announces settlement of Indo-Pakistan dispute over plane flights to Kabul; Persian Majlis extends Mossadig's special powers for one year.

20th—Eisenhower installed as U.S. President; reports on sugar export subsidy move published; Britain and Siam to sign rice pact.

21st—India-Indonesia trade talks begin; British announces lifting of cereal and foodstuff import controls from next harvest.

22nd—India's December foreign trade figures published.

23rd—Excise duty exemption on tea waste withdrawn; all India final jute crop estimate published; Transport Advisory Council session ends.

25th—Death of N. R. Sarkar; elections in Viet Nam.

26th—World Bank announces new loan for D.V.C.; world 1952 oil output estimate published; Bihar nationalises Patna bus transport; Indo-Malayan trade figures published.

27th—Pakistan jute export figures published; Bihar appoints lac inquiry committee; Malayan rubber export figures for 1952 released.

28th—Coal Mines Provident Fund Board meets; cotton yarn quotas announced; Canberra plane breaks Britain-Australia flight record; West Bengal announcement on Employees State Insurance Act.

29th—Agriculture Minister announces campaign for improved rice cultivation proposed; April-June steel allocations announced; appointment of Backward Classes Commission; Central Health Council meets.

30th—Indian sugar and gur exports banned; talks on International Wheat Agreement begin in Washington; India and Indonesia sign trade pact.

31st—Official mesta production estimate issued; Rubber Board official forecasts rubber self-sufficiency in 1953; official sugar production forecast issued; free licensing of castor oil exports for three months announced.

The Finance Minister, Sir Chintaman Deshmukh, laid the foundation stone of the building of the Institute of Chartered Accountants of India on the Delhi-Mathura Road, on 10th February. The Institute is a statutory body incorporated under the Chartered Accountants' Act of 1949. It was established to regulate the profession of accountancy throughout India, which was until then regulated by the Commerce Ministry under the Auditors' Companies Act, 1932, framed examinations and has disciplinary jurisdiction over its members. Only they are entitled to practice as chartered accountants. The Government of India has sanctioned a grant of Rs. 2 lakhs and allotted a plot of land of nominal cost for the Institute's office.

Stocks and Shares

PROFIT-TAKING AFTER RECENT IMPROVEMENT: UNDERTONE FULLY STEADY

INCREASED TURNOVER: SPECULATIVE COUNTERS AND AIRWAYS SHARES WEAKER

Wednesday Evening.

THE marked improvement in sentiment reported here last week has continued, and the market has since gained added strength from the appearance of outside investment support. There have been an increase in the turnover and useful rises over a wide range, but the investor is concentrating on the blue chips that have been steady all along, and is leaving jutes and the speculative counters alone.

Second thoughts on how far the boomlet would develop were brought on when the market turned rather flabby over the last 24 hours. Weakness has been confined to speculative shares, where the retreat has been due to profit-taking and technical adjustment, but good class scrip have remained as steady as ever. This is not to say that further extensive gains can be expected, for the Budget is too close to permit of a general move to higher levels. The position this evening appears to be that the market has not so much faltered as paused to digest its sudden gains over the past ten days.

Indian Irons closed at the lower rate of Rs. 24-8 and Howrah Jute at Rs. 23-8. Airways shares have lost ground and Airways (India), which had been well over Rs. 14, came back to Rs. 13 when rumours of a higher dividend for 1952 were questioned.

Imperial Bank shares have been taken to higher levels on rumours of a bonus issue and, alternatively, nationalisation with consequent compensation of shareholders at above market rates. Neither of these canards have any foundation whatsoever. There has since been some profit-taking in these shares.

Digwarrah Rubber have improved again to Rs. 13-13. The rise that took place in these shares last week was caused by news that the company's agents in Malaya had informed the company that the option holders had decided to buy its property and it is expected that the break-up value of the shares will be higher than recent market prices.

Although the tone of the gilt-edged market was quietly steady, there was a shrinkage in the volume of business and trading conditions were dull. The demand for 3% Conversion Loan was satisfied and the price declined to Rs. 83 at which rate, however, there were small buyers. Rather more interest was shown in short-dated loans, and the prices of 3% 1957 and 3% 1958 improved by one anna to Rs. 98-9 and Rs. 98-7 respectively, while other issues remained steady at their previous levels. In contrast, the 4% Loan 1955/60 met with slight selling pressure to ease to Rs. 103-6. Medium-dated issues were without exception supported and the notable feature was the further improvement in 4% Loan 1960/70 which closed at Rs. 101-10 with buyers over. Both the 3% Loans 1963/65 and 1964 were slightly better at Rs. 92-8, and because of the approach of the interest date, 3% 1959/61 was fully steady at Rs. 96-1. The long-dated issues, 3% 1966/68 and 3% 1970/75, continued to meet with small enquiry and their prices were unchanged at Rs. 90-7 and Rs. 86-8.

The demand for 4% State Loans maturing in 1964 continued unabated and the prices of all issues were again marked up, as will be seen below:

	5-2-53	11-2-53
Rs.	Rs.	Rs.
4% West Bengal Loan	1964 ... 100-5	101-2
4% Bombay	" 1964 ... 101	101-4
4% Madras	" 1964 ... 100-6	100-10
4% U. P.	" 1964 ... 100-5	100-8

Other State Loans were neglected, the exception being 3% U.P. 1958 which have buyers at Rs. 97.

Selected preference shares have continued to meet with good enquiry but sellers have been reluctant to part with their holdings. In jute, the only transactions reported were in Dalhousie at Rs. 118 c.d. and Lawrence 'B' at Rs. 96 x.d. Amongst miscellaneous issues, Indo-Burma Petroleum were crossed at Rs. 89 and Indian Iron & Steel were transacted between Rs. 107-8 and Rs. 108-12. Business was reported in India Steamship at Rs. 86 and New Victoria Cotton at Rs. 3-12. Rohtas 'B' were marked at Rs. 53-10 and a small lot of Jardine Henderson changed hands at Rs. 84.

Imperial Bank of India shares moved from strength to strength and tonight's closing quotations are Rs. 1,805 for the Fully Paid and Rs. 448 for the Contributories. Small lots of Allahabad Bank Fully-Paid and Contributory came to hand at Rs. 347-8 and Rs. 173. Hind Bank were steady at Rs. 20-12 and United Commercial improved to Rs. 36-4.

Cotton shares met with slightly more enquiry during the week with buyers of Cawnpore Textiles at Rs. 8-4, Elgins at Rs. 17-1 and Kesoram at Rs. 17-10. Dunbar were transacted at Rs. 124 and Muir Mills were taken at Rs. 215. New Victoria Cotton were unchanged at Rs. 1-7.

There was a general improvement in prices of coal shares though closing quotations were slightly

below the best as will be seen from the following table:—

	Opening	Highest	Closing
Rs.	Rs.	Rs.	Rs.
5-2-53	522	528	527
Bengal	6 3	6 4	6
Bharat Collieries	4 5	4 11	4 10
Central India	9 6	10 2	10 2
Dhemo Main	20 13	22 11	22 8
East Indian	19 12	21 8	21
New Beerhoom	20 12x.d.	21 1	21
Pench Valley	7	9	8 6
Rancegunge	13	13 14	13 8
South Karanpura	3 2	3 6	3 5
Talcher	3 13	4 7	4 5
Western Bengal			

Burrakur fluctuated narrowly within 3 annas to close at Rs. 10-8.

There was increased activity in the jute section and selected shares recorded gains of a few points. Closing quotations, however, were slightly below the best. The table shows price trends of a representative list of shares:—

	Opening	Highest	Closing
Rs.	Rs.	Rs.	Rs.
Anglo-India	222	226	224
Barnagore	158	165	160
Chandpary	162	165 8	163
Delta	230	235	230
India	127	130	128
National	24 14	25 2	25
Nudea	47 8	51	49
Reliance	13 12	13 15	13 10

Howrah fluctuated between Rs. 23-8 and Rs. 24 to close at the former rate.

With the exception of Calcutta Electric and Patna which were steady at Rs. 14 and Rs. 10-5, the remaining shares in this section of the market were neglected.

duplichot

Here is a modern photographic device which reproduces within 6 minutes on a specially sensitised paper copies of any printed or written document at a small cost. In up-to-date offices 'duplichot' is employed for reproducing accurately, accounts, sketches, plans, drawings, patents, contracts, agreements, legal documents, insurance policies, extracts from books and newspapers, posters and showcards, letters of reference, court summonses, barristers' briefs, reference files, indices, financial statements, balance sheets, music, statistics, graphs, charts, diagrams, etc., etc. Photographic reproduction is the most accurate, the cheapest and the quickest and 'duplichot' is the ideal apparatus for copying by photographic process.

For further information apply to Sole Importers.

Limited

BOMBAY CALCUTTA MADRAS NEW DELHI

Outstanding features in the Sugar section were Cawnpore and Champaran which under the influence of investment support improved from Rs. 25 to Rs. 28 and Rs. 18.4 to Rs. 19 with few declared sellers. U.P. were crossed at Rs. 14 and business was reported in Balrampur at Rs. 5.12, Belsund at Rs. 6.8 and Darbhanga at Rs. 7.8.

In the engineering section, Indian Iron & Steel shares fluctuated during market hours between Rs. 24.13 and Rs. 25.3 to close at Rs. 24.8. Braithwaite's were a steady feature with strong buyers at Rs. 11. Indian Galvanizing (new) came in for good enquiry improving from Rs. 13.14 to Rs. 14.6 but the closing quotation was shaded at Rs. 13.15. Jessops were steady at Rs. 22.6, Kumardhubi Engineering at Rs. 7.14 and Marshalls at Rs. 6.6.

In the miscellaneous section there was strong enquiry for Orient Paper with buyers at Rs. 30 but no sellers. Titagur were steady at Rs. 34.12 and a parcel of Bengal Paper changed hands at Rs. 44.10. Sone Valley were better at Rs. 6.12 as were India Steamship at Rs. 6.13. Airways (India) which provided the outstanding feature last week turned sellers at the close at Rs. 13 cum div. with few declared buyers.

In the mining section, Indian Copper at one time improved to Rs. 3.5 but closed slightly below the best. Burma Mines were quoted at Rs. 1.6 and Non-Ferrous Metals at As. 13.

The tea section has been extremely steady in the past week and the stage has now been reached where sellers of the more popular scrips have almost completely withdrawn from the market making it very difficult to transact business. Those in strong demand have been Bishnauth, which after a period of three weeks were reported at Rs. 26.8, Dufflaghur at Rs. 30.8, East India at Rs. 17.12, Hasimara at Rs. 24.12 and Huldibari at Rs. 17.12. Business was reported in Ananda Assam at Rs. 10.12, Betjan at Rs. 21.12, Brooke Bond at Rs. 11.2 and Dhekkhat at Rs. 10.12. Dunseri changed hands at Rs. 9.12. Crob 'B' at Rs. 7.14 and Murchulani preferred ordinary at Rs. 22.4. Namburadi were better at Rs. 5.4 as were Teen Ali at Rs. 18 and Tezpor at Rs. 15.8. Sapoi after being quoted down to Rs. 7.8 were asked for at Rs. 7.12. Banarhat was a shade easier at Rs. 26.8 and Rydak at Rs. 48.12. On the other hand there was a strong enquiry for Hantapara which were marked up to Rs. 123. Bhatkawa also showed some improvement at Rs. 24.4. Oodlabari at Rs. 23.6 and Rajabhat at Rs. 15. Among Pakistan scrips, New Samanbagh changed hands at Rs. 6.14 and Patrakola at Rs. 70.

BIRD-HEILGERS JUTE MILLS RESULTS

THE working of the Bird-Heilgers group of jute mills for the half-year ended 30th September, 1952, was adversely affected by the familiar difficulties of the jute industry. During the six months the general trend of prices of raw jute and finished goods was downwards. In May the Government of India announced a reduction in the export duty on hessian from Rs. 750 to Rs. 275 per ton and on sacking from Rs. 350 to Rs. 175 per ton. Immediately after this announcement, America came into the market and business on quite a large scale was done at slightly higher rates. Prices were not maintained however, and rates for both hessian and heavy goods receded. With the prices of raw jute remaining relatively steady, mills were forced to dispose of their production at very substantial losses; mills with a large proportion of sacking looms suffered more than others because of the very low rates offering for sacking fabrics. It was not until September, when the I.J.M.A. agreed to sell through the Government of India 40,000 tons of hessian to the Argentine, that prices rose and simultaneous business was again remunerative. Despite a substantial increase in U.S. consumption figures, prices, particularly of heavy goods, dropped

to uneconomic levels mainly on account of speculative operations and lack of overseas demand.

The closure of the hessian fatka market in December was generally approved by the industry and it is hoped that stable prices will broaden foreign enquiry.

Sales diminished all round, as did profits. Dalhousie, Naihati, Standard and Union incurred losses. The ordinary dividends have been reduced in all cases; Naihati is paying no dividend. Mortgage debentures of Rs. 10 lakhs at 4½ percent were redeemed by Lansdowne. The electrification of the Dalhousie mills was reported to be progressing satisfactorily. The directors of Naihati have decided to modernise the mills at an estimated cost of about Rs. 20 lakhs, which will be found partly from the reserves of the Company and partly from the recent issue of a debenture loan of Rs. 25 lakhs bearing interest at 5½ percent annum of which the sum of Rs. 12 lakhs was realised by the conversion of the existing 4½ percent debentures, which were due for redemption on 30th June, 1952, into 5½ percent Registered Bonds. Details of the accounts are published below:—

INCREASED REVENUE ENHANCES BUDGET PROSPECTS

NEW PLAN FOR COMMONWEALTH DEVELOPMENT

(FROM OUR OWN CORRESPONDENT).

7th February.

THE remarkable inflow of revenue recently must be heartening to the Chancellor of the Exchequer. At the end of 1952 the deficit was £500,691,007; at 10th January it was £274,562,384; at 23rd January £231,589,745; and at 24th January £102,493,511. The returns for the week ended 31st January issued this week, show a surplus of £109,227,374, which converts the earlier deficit into a surplus of £5,733,863. At the same date last year, however, there was a surplus of £237 million, and the "below the line" figures are not quite so encouraging. Mr. Butler has been able to present a further reassuring picture of the extent to which both Britain and the Commonwealth countries have succeeded in improving their balance of payments position during the past year and to anticipate that we can look forward to a period of at least relative stability. In January the sterling area had a gold and dollar surplus of \$132 million, to which U.S. defence aid contributed \$4.8 million and the December surplus with E.P.U.

CLAIM FOR EXEMPTION OF RAW COTTON FROM SALES TAX

JAPANESE RICE-GROWING
TECHNIQUES
(FROM OUR OWN CORRESPONDENT.)

THE Indian Central Cotton Committee has been meeting here during the past week. Important questions relating to the production and marketing of cotton were considered at the meeting, which was inaugurated by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, and presided over by Mr. K. R. Damle, I.C.S., Vice-President of the Indian Council of Agricultural Research. Although the Committee's earlier recommendation against the imposition of sales tax on cotton by State Governments seems to have been ignored, the Committee once again reiterated its views on this question by passing a formal resolution. It recommended to the Central and State Governments that cotton should be exempted from sales tax as it is an "essential article" under the Essential Goods (Tax on Sale) Act. The resolution contends not only that the tax on raw cotton will adversely affect the return to the grower and thereby greatly retard the expansion of cotton production in the country, but that yarn and cloth manufactured from cotton is already being taxed and that therefore taxation of the raw commodity amounts to double taxation. Little hope is held by cotton traders that any of the State Governments, where cotton is subjected to sales tax, will pay heed to this recommendation, because of the present precarious finances of many States.

According to Mr. Damle, cotton production during the current season was expected to be lower by half a million bales because of unfavourable weather conditions. As any further diversion of land from food to cotton was improbable, the Committee has recommended intensive cultivation for additional production. The methods recommended include the cultivation of improved varieties, adequate plant protection, the availability of suitable manure and minor irrigation facilities. Mr. Deshmukh, in his inaugural address, deplored the fact that although India possessed nearly 20 percent of the world acreage under cotton, she actually produced only 9 percent of the world output, but, he said, it was a satisfactory sign that about 55 percent of the area in India under cotton was producing improved varieties, when before the war only 13 percent of the acreage was growing these varieties. Mr. Deshmukh said that the fundamental problem before the Committee was to have more cotton of the right quality for the textile industry, which was the biggest industry in the country. Regarding the Planning Commission's target for the 1953-54 season, the Committee hoped that in the absence of unfavourable weather conditions, increased production was likely to be achieved and decided that a comprehensive note containing information on varieties of cotton grown in the country and types of cotton required for consumption by the mill and handloom industries, with particular reference to the future trends of market demands, including those of exports, should be prepared for consideration at the next meeting of the Committee. The President while addressing the Committee welcomed the reopening of the forward market in Bombay and said that it was functioning satisfactorily.

Improved Methods of Rice Growing

The Food and Agriculture Ministry of the Government of India seems to have at last awoken to the merits of the Japanese method of growing rice which has yielded very good results in Bombay. Dr. Punjabrao Deshmukh, Union Minister for Agriculture, who arrived here last week for the meeting of the Central Cotton Committee, stated that his Ministry had decided to open about 3,000 centres for rice cultivation by the new method in the Bombay State alone, and that very soon this method of cultivation would be spread throughout India, especially in the major rice producing States, through a net work of 200,000 centres. The Ministry was at present, he said, engaged in preparing literature on this system of cultivation. Dr. Deshmukh remarked that he would hold further discussions on this subject with the officials of the State Governments. Some of the experiments by non-official bodies and a large number of individual farmers in the Thana districts adjoining Bombay City have yielded spectacular crops, while at the same time cutting down seed requirements. Now that this type of cultivation has been officially sponsored it is believed that if properly and efficiently pursued it might help the country to reach self-sufficiency in rice within a relatively short time.

Objections to Proposed Seamen's Federation

The attempt to form an All-India Federation of Seamen is meeting with stiff opposition from various bodies which it was originally proposed should be included. Seamen's organisations in Calcutta are believed to have refused to join the proposed Federation, not on technical but political grounds. In Western India, though half a dozen important unions have expressed their willingness, theoretically, to participate in the Federation, there is some disagreement about the details of the constitution of the proposed body. A meeting of the representatives of these unions failed to find agreement even on the preliminary steps to be taken for the establishment of the Federation. Much of spade work has been done by Mr. Omer Becu, Secretary of the International

Transport Workers Federation during his recent visit to India, but most of it seems to have gone to waste and the various Seamen's unions are once again as disunited on this proposal as before. There is a feeling among seamen here that the effort to form an All-India Federation might have to be abandoned for the time being.

Collective Bargaining

Mr. Shantilal Shah, State Minister for Labour, told the Labour Advisory Board last week that the policy of the Government was to utilise collective bargaining in the settlement of industrial disputes. Mr. Shah announced at this meeting that as the Government of India was likely to take some time in introducing legislation in Parliament for the establishment of the welfare trust fund for industrial workers, his Government had decided to introduce the necessary legislation in the State Legislature at an early date. Under this scheme, unclaimed wages and bonuses lying with factories, together with unspent balances of fine funds, will be taken over by the Government.

Improved Egyptian Cotton

The Egyptian Cotton delegation, before its departure for New Delhi en route to Japan, told some of the leading consumers of Egyptian cotton in Bombay that Egypt hoped to introduce into the market newer varieties with greater intrinsic strength and fineness after experiments which are being carried out at Izra had proved successful. The results of some of these experiments given by the delegation showed a great improvement over the established commercial varieties at present in use in Indian mills.

Saurashtra Sales Tax

Agitation over sales tax in the State of Saurashtra, after dislocating trade and commerce for

a period of about nine weeks, has now been terminated finally by the formation of an *ad hoc* body called the Praja Parishad, which was formed to carry on the protest and which has made a formal decision to and all demonstrations. The agitation, however, has not been altogether abortive as the State Government has been forced to revise some of the provisions of the law and make large scale concessions both to the list of articles subject to sales tax and to the procedure for assessment. In response to the resolution of the Praja Parishad, the Government has now ordered the release of all persons taken into custody or kept under detention, with the exception of those against whom there are charges of using violence. In Bombay the question of the multi-point sales tax is sub judice and an appeal from the State Government over the High Court's judgment is lying before the Supreme Court.

Tatas and the Automobile Industry

There were rumours some time ago that Tatas might join hands with General Motors and enter the Indian automobile industry. It was also rumoured that Tatas might join another prominent automobile manufacturing concern in Bombay to help speed up the expansion of the automobile industry in this country. These rumours have again gained strength since Mr. A. D. Shroff of Tatas, who is at present on a visit to Japan studying the Japanese textile industry, is also visiting the plants of the Toyota Automobile Company in Nagoya. At present Tatas have no interests in the automobile industry.

The Government of India has, by a Notification issued in the Gazette of India Extraordinary, dated 30th January, 1953, extended the period of validity of Omen General Licence XXVI which is applicable to Pakistan only, upto 31st March, 1953.

POWER FOR BOMBAY'S HOMES & INDUSTRIES

Nestled in the hills of the Western Ghats the Andhra Valley Power Station supplies power for Bombay's homes and industries. In 1922 General Electric equipped and installed 60,000 kw capacity generators, transformers, switchgear and other electrical equipment. For 31 years this installation has been in continuous service, a major contribution to the ever increasing power demands from an expanding city.

There are many other major installations in India with large G-E generators including those at Sivasamudram, Shimsha and Jog in Mysore, and Mahora in Kashmir.

General Electric is the largest electrical manufacturing organization in the world with a production range of 200,000 different items—from tiny switches to giant generators, from lamps to locomotives.

Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

RICE FROM NEPAL TO HELP MEET PROCUREMENT QUOTA STATE GOVERNMENTS WRANGLE OVER NEW DAM PROJECT

(FROM OUR OWN CORRESPONDENT)
Lucknow, 7th February.

THE State Government has announced that to check the rise in wheat prices in non-rationed towns they will make available imported wheat at the rate of Rs. 22 per maund. The current rise in prices is attributed to pre-harvest conditions but the upward trend in almost all mandis in the State has been noticeable for some time. On 31st January, the wholesale price of wheat had reached Rs. 25-8 in Agra and the price of rice had risen to Rs. 30-12 in Hapur. The Centre has fixed a procurement quota of 5,000 tons of rice for U.P. and to meet this commitment in part, the State Government has been procuring rice from Nepal. Several thousand tons of rice normally come to U.P. from Nepal through regular trade channels, especially in the eastern districts, the price varying according to the grade, but on an average being available at Rs. 18-8 a maund.

Jhansi Dam Dispute

Differences of a serious nature are reported to have arisen between the Governments of U.P., Madhya Bharat and Vindhya Pradesh over the proposed construction of the Jhansi dam. The two latter Governments have taken exception to the survey carried out in their territories in connection with the project and have taken into custody some contractors and workers. Later, guards were posted to prevent "encroachment." The Madhya Bharat Government has further promulgated an order banning the entry into the State of persons connected with the survey and construction of the dam. The dam site is at Matatila, 30 miles from Jhansi. The estimated cost of the project is Rs. 6 crores.

Bonuses for Sugar Workers

Some 82,000 workers employed in the U.P. sugar industry in 1951-52 will get about Rs. 35 lakhs by way of bonuses if the State Government accepts the unanimous recommendation of a committee appointed by them to inquire into the matter. The committee which was presided over by the Labour Commissioner has recommended that the amount to be paid as bonuses should be determined by the production of every unit, and should be divided amongst the workers of every unit in proportion to their seasonal earnings. The basis on which the bonus was paid in 1949-50 was Rs. 2 per maund on 1 to 2 lakh maunds of sugar produced, Rs. 4 per maund on 2 to 3 lakh maunds, Rs. 6 per maund on 3 to 5 lakh maunds, and Rs. 8 on all sugar over 5 lakh maunds. In 1951-52 the production was 227 lakh maunds and calculated on the above basis the workers will get about Rs. 35 lakhs.

Finance for Local Projects

The State Government is considering issuing debentures in order to finance local bodies which undertake productive works. The Government has made a provision of Rs. 50 lakhs for loans to the local bodies but this is considered to be far too small a sum. In Kanpur alone, the total financial requirement for the sugarcane farm and other schemes is estimated to be Rs. 3 crores. Only 34 towns and cities in the State out of a total of 157 urban areas have waterworks systems, and their installation in a few more towns will cost a great deal. Under the existing Municipal law, the Municipalities are empowered to issue debentures but the Government has to guarantee them.

Patwaris' Strike Threat

The U.P. Patwaris' Association, claiming a total membership of 23,000, has threatened the State Government with mass resignation if their demands are not met. At a recent meeting of the Association in Lucknow, it was resolved to serve a month's notice on the Government starting on 2nd February and expiring on 4th March. The Government is taking a firm attitude and has informed the Association that the resignations, if sent, will be accepted. Official information regarding the actual receipt of notices is scanty, but according to the Association nearly 22,000 patwaris have already sent in their notice.

December Labour Review

The general labour situation in U. P. during December remained peaceful and no major trouble was reported, according to a press note issued by the Labour Department. There were eight cases of strikes and three of closures. The total number of workers payed-off during the first fortnight of the month was 9,767 and in the second fortnight the figure went down to 5,609. The majority of the workers payed-off were from textile mills; the main cause being the shortage of coal and raw materials. About 400 workers were retrenched by eight concerns during the period.

A New Use for Lac

The Directorate of Cottage Industries, U. P., announces that the Lac Research Institute in Ranchi has discovered a new use for lac. A film of shellac on earthenware resists the action of water, soap solution, salt minerals, vegetable oils and also dilute minerals and organic acids. It is suggested that such coated vessels can conveniently replace costlier materials such as porcelain, glazed earthenware or glass for making strong articles of everyday use.

Plantation Topics

CENTRAL BILLS PROPOSE TIGHTER BUREAUCRATIC CONTROL FOR TEA, COFFEE AND RUBBER

WEAKNESSES OF NEW ARRANGEMENTS: NO OBLIGATION TO CONSULT INDUSTRIAL BOARDS

(By Valale I. Chacko)

SINCE the days of the cess committees, industrial boards and commodity committees have evolved from small advisory bodies with very limited aims and functions to large industrial and commodity boards which shape and execute important policies. The Indian Coffee Board is a striking example of the small committee developing into a large and powerful organisation controlled jointly by growers, labour, and trade and Government representatives. Since the end of the war there has been a perceptible move towards increased Government intervention and direction and the bigger the industry the greater the attention it receives. In the past it was recognised that the nature and amount of Government control would remain indefinite to some extent where policy decisions were taken jointly through the industry's statutory board or committee. On these boards producers had a dominant voice and Governments, Central and provincial, were represented by senior officials.

On the Coffee, Tea and Rubber Boards, one-third of the members were Government officials and the remainder representatives of producers, labour and the trade. The Boards were largely autonomous; the Government did not interfere in their day-to-day working but held vast reserve powers in case of emergency. There have been instances when the Government took action without consulting the Board but such instances were rare and the Boards were more or less free to manage their own affairs. During the last two years, however, crucial changes have been taking shape. Not only has interference in the detailed working of the Boards become common but there is also increasing intolerance towards official interference and intolerance of criticism finds its latest expression in the three new Bills on tea, coffee and rubber.

The Tea Bill which is to be discussed during this session of Parliament spotlights the wide difference between what the industry really needs and what the Government thinks it needs. Of course, the Minister for Industry and Commerce while presenting the Bill said that it was not inspired by the crisis although the crisis had underlined the defects of the present Tea Act. But he did not explain what "defects" had necessitated the scrapping of the 1949 Act. Nor did he say what made it necessary to rush in the new Bill towards the end of the last session without giving the industry a chance to present its views, and without even consulting the Central Tea Board, the statutory body which is to be unceremoniously ushered out of existence.

In the new Bills for tea, coffee and rubber, drastic amendments are proposed. Certain features common to all show that the Government has adopted a new attitude to private industry in general and to the plantation industries in particular. When the proposed changes are made, the "new look" boards will no longer be the autonomous, consultative and advisory bodies as first intended, but relaying points for Government directives.

Industries not Consulted

Introduction of the Bills without consulting the industries and the proposals providing for price control have probably given rise to most objections, but these features are only part of the implications of the new policy. The entire representation on the boards, as well as the details of what they do, will depend upon the Government's unquestioned will and pleasure. The board's decisions and proceedings can be cancelled or amended without notice or explanation. In all three Bills consultation with them, as a procedure, has been expressly eliminated. Tea, coffee and rubber are not the only plantation crops (although they are the only ones organised on an industrial scale); cardamom, cashews, arecanuts, pepper and coconuts also come under this category in India and sugarcane, tobacco and cotton are included in other countries. Why should such stringent control be exercised over only the first three of these crops? What is the reason for this sudden and wholesale reversal of policy in regard to a particular segment of the country's agricultural sector? The emphasis of the three Bills is more on control than on development, unless official control is assumed to be synonymous with progress and efficiency.

Since increased Government control is the principal object of the three Bills the rôle of the official representatives assumes the highest importance. Experience shows that the most inefficient link in the chain of Government control over statutory boards is constituted by the official representatives, despite their formidable number and status. A senior official directly responsible for his own department is appointed to a board, sometimes to several boards simultaneously, but can hardly contribute to its efficient grouping because of his other responsibilities. Frequent changes in nomination and difficulties in studying

the detailed affairs of each board. Apart from this, officials are not given clear guidance when they deal with the boards and are naturally reluctant to commit themselves. They rarely take a lead in discussions because they are afraid of responsibility for the resulting decisions. There have been instances when four successive nominations were made in a single year to a board; in one case a Government representative did not attend a single meeting of a certain board during its entire life. Yet, these official members are the medium through which the Government receives its impressions of board affairs and reacts to them.

Officials Inexperienced

The fundamental weakness of attempts to exercise control is that upon officials whose entire working life has been concerned with routine administration based on precedent is suddenly thrust the responsibility to decide vital questions of industrial policy about which they know next to nothing. In addition, business motives are often viewed by them with disbelief and suspicion. A sense of frustration often results among industrial interests from the apparently unintelligible and at times unpredictable course of official policies. Under such circumstances a further addition to the powers of officials which sets them above the consequences of their actions and beyond question or explanation will place private industry in a state of bureaucratic bondage. Whatever the Government's intentions, the result will be not greater efficiency but bureaucratisation of industry, not development and expansion but frustration and stagnation. These Bills will hand over the boards, bound hand and foot, to the Government but there is no reason to believe that they will work any better.

The Government proposes to assume a wide variety of powers. Under section 32 of the Tea Bill it is proposed that: (1) All acts and proceed-

ings of the Board shall be subject to the control of the Central Government, which may cancel, suspend or modify as it thinks fit any action taken by the Board. (2) The Board shall carry out such directions as may be issued to it from time to time by the Central Government for the efficient administration of this Act. Under section 47 (1) and (2) the Government may suspend or relax any section of the Tea Act or under section 11 by a notification in the official gazette declare the Board to be dissolved, and on the date of the publication of any such notification the Board shall stand dissolved and the very Act shall be deemed to be repealed.

Consultation with Boards

In all three Bills, the Government specifically eliminates all suggestions which might place it under an obligation to consult the boards, which in any case are monopolised by Government nominees. The Government will appoint the chairman and vice-chairman of each board and nominate all members. This does not specifically deny nomination to representatives of the industry but it also accepts no obligation to nominate them. In the case of the Tea Board, the Government will appoint all officials drawing a salary of Rs. 1,000 or more a month thereby reserving considerable scope for political patronage. The functions of the proposed Board have been enlarged to include section 10 (2) (e) fixing grade standards of tea; (f) improving the marketing of tea in India and abroad and "preventing unfair competition"; and (g) regulating and controlling the sale of tea etc. The Government assumes the power to fix the retail or wholesale price, under section 31 (1) and (2), of tea at auctions or otherwise. These particular proposals show a surprising lack of understanding of the industry's practices: experience of coffee marketing seems to exert an unconscious influence in all discussions of this nature but is not applicable to a leaf crop such as tea of which India produces four times the quantity she herself consumes. India can do no more to improve marketing practices or prevent competition in foreign countries than the latter can in regard to the commodities they sell to this country. For five years India has anxiously waited for the removal of controls over tea in Britain and other countries but while controls are being gradually removed there her Government has introduced a Bill seeking to clamp new ones here (under section 31 of the Tea Bill).

Neither blanket opposition to official proposals nor detailed Government intervention in board affairs are suitable in the circumstances. If the

Government feels a need to secure increased control over the boards, it should also accept the obligation to improve their working. The industry depends on private finance for its growth, so that the relegation of those most concerned with it to a nominated position, with little scope for initiative or direction, is particularly unfortunate. What the three Bills will together achieve is not rational control over the industry but rule by bureaucratic whimsy.

REVIEW OF TEA GARDEN INDUSTRY IN CACHAR

TRANSFER OF SURPLUS LABOUR TO DEFICIT AREAS

THE following are extracts of the speech made by the Chairman, Mr. C. W. Morley, O.B.E., at the annual general meeting of the Surma Valley

For better grip and greater efficiency

Insist on "Indo" Brand
Cotton & Hair Beltings.

India Belting & Cotton Mills Ltd.
Saanpiri Lane, Serampore.

Branch of the Indian Tea Association held in Silchar, on 28th January, 1953.

"This year has been a singularly unfortunate one for Cachar. Two floods, the first in June, and the second as late as October, caused considerable damage to rice crops, and severed all road communications with Silchar. In addition, the Hill Section rail route was blocked and vital supplies of rice from the Assam Valley were held up. To complete our misfortunes, the market for Cachar teas both in London and Calcutta commenced a steady decline and by the end of the calendar year, we found ourselves faced with the deplorable situation where no less than 62 gardens out of a total of 111 had been forced to close down due to the fact that the gap between the cost of production and sale prices had reached a figure varying between 0.10.0 and 0.13.0 annas on various estates, and they could no longer remain in operation.

"There is, however, a ray of hope. There are unmistakable indications that the Government of Assam is aware of the fact that the situation arising from the closure of more than 32,000 acres of tea in Cachar alone presenting a problem in unemployment amounting to 38,000 labourers and a population of 92,000 is a matter which requires serious attention if the economy of the District as well as law and order is to be maintained.

"Four times in the last two months, I have met labour's representatives and spared no effort to reach an agreement with them which would enable the majority of gardens in Cachar, if not all, to continue to function and to tide over the present crisis. Unhappily, on all occasions, no agreement could be reached, although many hours were spent attempting to convince them that the situation was really serious and demanded drastic measures for its solution. Earnest attempts have

been made both by the Deputy Labour Minister and the Secretary to the Labour Department, Government of Assam, to bring about a bi-partite agreement but even these august persons could not succeed, although at the recent Conference held in Silchar on 4th January Agreement was within an ace of being reached.

"At the more recent meeting of the Minimum Wages Advisory Committee on the 21st January a convincing case for the revision of the Minimum Wage was presented to the Government and I am cautiously optimistic that some relief will be forthcoming. The high light of this meeting was the offer of the leader of the labour representatives to finance the Industry in Cachar to the extent of Rs. 150 lakhs from the Indian National Trade Union Congress and Rs. 10 lakhs for Koonber. This offer I promptly accepted on your behalf, but unfortunately have heard nothing more of since.

Cereal Supply.

"Turning to the matter of cereal supplies, the situation during the early part of the year showed some improvement over previous years. By April, for the first time for a considerable period, stocks of rice on gardens had been built up substantially and with a further supply of some 40,000 maunds promised by the Government and the off-setting scheme in operation, there appeared to be every prospect of gardens being assured of their rice requirements throughout the year. However, this state of affairs did not in fact materialise, due partly to the promised 40,000 maunds disappearing into thin air, and partly to the fact that the anticipated saving from the off-setting scheme proved to be too optimistic.

"It would be true to say, I think, that had it not been for the June flood the Procurement Department would have been able to meet our demands. As it was, our requests for additional supplies to tide over the lean months were only partly met, and had it not been for stocks of Calcutta wheat and atta which had been built up, and the generous action by certain gardens in permitting surplus supplies of rice to be pooled, gardens would once more have found themselves in the unfortunate position of having no stocks of cereals and having to pay cash in lieu thereof. Owing to Mr. Dattas' initiative and unremitting efforts, a critical situation was averted until the Government could resume supplies, both from local sources and from the Assam Valley.

Industrial Relations

"The past year has been one of the most difficult years from the point of view of labour relations. There has been a marked deterioration in discipline and a pronounced tendency to the adoption of violent methods by labour. The increase in the incidence of strikes during the year over petty grievances, is a true indication of the state of affairs. Labour leaders have failed, time and again, to stop such irresponsible action, even when they were conscious that these lightning strikes were flagrant violations of the bi-partite Agreement. The two very bad cases of assault on Managers, one at Dewan and the other at Manipur, have not added to the prestige of the Labour Union which has pledged itself to the Gandhian ideals of truth and non-violence. I will refrain from commenting on the cases, as these are now 'sub judice'.

"In the sphere of Labour Legislation, the Maternity Benefit Act in its amended form, was enforced on 15th January, 1953; and the Minimum Wages Act was enforced on 31st March, 1952. Under the former, the period of payment during the post-natal period, was increased by a period of four weeks more, even though this is not in conformity with similar legislation elsewhere in India. Another example of discrimination against the industry. You are all aware of the Minimum Wage controversy and it is not necessary for me to go into the matter in detail. I have, however, to assure you that the fact that we have been compelled to pay the wage for a full working day, for hours of work varying from three to five hours, but which is defined in the Act as consisting of eight hours, is not due to any lack of vigilance on our part, but to restrictions imposed on us by the Government. We felt that during the introduction of the Minimum Wage which granted a further increment in the earnings the time was opportune to rectify certain weaknesses in our employment policy but, here again, we were prevented from introducing any change by a Government Order.

"The bi-partite experiment in Cachar, probably the first of its kind in Tea, has not been an unqualified success. The intransigence and air of unreality which taint negotiations between employers and the representatives of employees today is primarily due to the presence of an element which, while not belonging to the industry or understanding its problems, still claims to represent a part of it. We are suffering from a leadership in labour which has assumed authority without responsibility and I cannot see any end to it unless the Government comes to the rescue of labour and ourselves. Labour, like everyone else, has to learn through their mistakes,—the hard way. This is regrettable but it is the only way to learn so as not to forget. In this process, we have to suffer with our labour but, I sincerely hope that if this crisis is overcome, our ties with our labour, will be closer and more enduring.

Labour Recruitment

"The recruitment of labour, from the usual recruiting areas has been stopped this year, and

(Continued on page 181)

Jute

IMPROVING THE FIBRE YIELD OF INDIAN JUTE

A PROBLEM FOR THE NEW AGRICULTURAL RESEARCH INSTITUTE

AT the foundation stone laying ceremony of the Indian Central Jute Committee's new building for the Jute Agricultural Research Institute, India's Food and Agriculture Minister is reported to have said that the Planning Commission's target of producing 85 percent of the industry's requirements by 1955-56 is almost within reach. While there was in the Minister's speech no hint of complacency on the subject, the very fact that it is claimed that the objective is nearly within reach may tend to beget complacency. In recent weeks we have reviewed the raw jute position and pointed out some of the defects which require to be remedied and it is gratifying to know that the Government is aware of some of them.

Before partition research into the propagation of new varieties of the jute plant was carried on at the agricultural research farm at Dacca. Since that organisation is no longer available to India, she has had to set up a new research institute for which the Government of West Bengal has provided the land and the Government of India through the Indian Central Jute Committee is providing the money. One of the criticisms directed against the research institute at the Dacca farm was that, while they had produced new varieties which gave a bigger yield of green plant, nothing had been achieved in the way of producing plants which gave a greater yield of fibre per plant. The weight of fibre obtainable from the jute plant is only about 6 percent of the total weight. Any increase in the size of the plants, though it will result in an increase of fibre per acre, also results in a heavy increase in waste material. The main object of research should, therefore, be to increase the fibre yield of the plant. Whether or not that can be done is a matter for the scientists, but when it is realised that in regard to foodgrains like wheat and oats the yield of grain per plant has been increased to six or eight times what it was a century ago, the layman is encouraged to hope that something similar may be done for jute.

One thing that may be in India's favour in her efforts to achieve self-sufficiency is that the seed of the new varieties produced at the Dacca farm was sent to Northern Bengal and Bihar for multiplication. Why these areas were chosen is not known, but presumably the scientists at Dacca must have come to the conclusion that these areas were the most suitable for the purpose. The bulk of the seed from the multiplication plots ultimately went back for distribution in East Bengal in districts where the best jute was grown. It would appear, therefore, that India may have an advantage in this business of multiplication of varieties of jute on land which will give a high yield of fibre so that the crop is an economic one for the cultivator; and also that the fibre should be of the best quality so that the mills can turn out manufactures which will compare favourably with those of foreign competitors.

Argentine Order Rumours

Reports published in the Press abroad that the Argentine is to seek 20,000 tons of hessian from India cannot be confirmed locally, though such an approach is not impossible in view of the good crops in that country this season. An American report that this deal would be "done direct with the mills" seems to have run rather far ahead of the known facts.

As has been reported elsewhere in the Indian press, Mr. J. A. Stevenson, the Australian Jute Controller, will be in Calcutta over the weekend, and although it is understood he is in the country on other business he will no doubt take the opportunity to meet representatives of the industry, which has been concerned of late with the decline in demand for its heavy goods.

Reported Import Ban on Low-Grade Pakistani Jute

A feature of the week has been that mills have completely neglected Pakistani jute. This has been put down to the report, which has not been officially confirmed so far, that the Indian Government has banned the import of low-grade Pakistani jute into India, on the ground that India is self-sufficient in this type of fibre. In future import licences for Pakistani jute will be issued only for high grade qualities, but so far there is no indication as to where the distinguishing line between the two grades is to be drawn. This news must come as a blow to Pakistan, because India is probably her only customer for jute which could be termed "low grade;" she is now faced with the possibility of being left with large stocks of jute on her hands that she normally sells to India. Mills, however, are also rather perturbed as many of them have orders for Pakistani jute on their books for which they have not yet received a licence; also it is likely that prices of the lower grades of Indian jute will rise if there is no competition from across the border. Mills can ill afford this further imposition for lower grades

selling price of heavy goods—the only type of fabric that this jute can be used for.

U.K. Complaint on Continental Supplies

According to reports from Britain, buyers there are beginning to regret their purchases from Continental manufacturers at the end of last year when the latter were underquoting Calcutta rates for hessians. These orders are now being delivered, and although the goods are purported to have been manufactured from the best Pakistani jute, in many cases the quality has been below even the lowest grades delivered from Calcutta mills. In addition it is reported that some rolls of cloth were 10 to 20 yards short and in a few of the bales there was one roll less. This is a situation that buyers have not met in all the years they have been dealing with India. British business houses have indicated that in future they will confine their purchases to Calcutta goods even though they may have to pay a little more. When they were negotiating these deals late last year, it was mentioned in these columns that the Continent was underquoting Calcutta although the tinent was underquoting Calcutta although the values indicated could not possibly be based on the rates of Pakistani jute then prevailing; the former's lower quotations were based on the hope that by the time the goods were due for delivery jute would be much cheaper. Subsequent developments indicate that the gamble has failed.

India's Protest Before G.A.T.T. Renewed

It is reported from Geneva, where the committee of the General Agreement on Tariffs and Trade is meeting, that India's complaint against Pakistan regarding the special licensing fee on her exports of jute to India has again come up for

discussion. The subject some months ago was referred to a special sub-committee of G.A.T.T. which deferred consideration until Pakistan's reply had been received. When this arrived, it was accompanied by a protest against India's levy of an export duty on coal. The committee now has before it the complaints and explanations of the parties and has asked to see the recent correspondence between the two governments on this subject. It is understood that after the correspondence has been examined the committee will resume its discussions.

THE JUTE MARKETS

Manufactured Goods: The steadiness in the finished goods market reported towards the end of last week which held out prospects of business, received a setback at the beginning of the current period, when the absence of overseas enquiries coupled with the eagerness of some mills to sell certain constructions forced down prices. A period of inactivity resulted, which was only relieved momentarily by speculative activity in other markets; this was reflected in the jute goods market, on the possibility of the war in the Far East spreading. After the week-end the situation was unchanged but prices declined on unofficial reports that mills' stocks of manufactured goods in January had again shown an increase over the preceding month, especially in heavy goods. Enquiries from overseas consumers for heavy goods were very small, although it was reported that Australia was buying her requirements of consacks slowly. Mills, however, were not anxious to sell at the lower levels ruling towards the end of the week and only very small business was done. In hessians, sales were reported to the U.K. and the United States, but here again the quantities were very small.

Quotations at the opening on Thursday morning showed slight losses in all constructions. Hessians fell by 2 annas to Rs. 43-8 per 100 yards of 40" 10 oz. and plain heavy Cees by 8 annas to Rs. 94 per 100 bags. B Twills were quoted at the same price, this being 4 annas down from the previous day's quotations. On Friday small losses were again recorded, hessians falling by 2 annas per 100 yards and heavy goods by 4 annas per 100 bags. Saturday brought about a slight revival in the markets as a result of speculation over the extent to which the war in the Far East would spread, and the previous day's losses were made up. In the absence of business motives opened unchanged in hessians, heavy Cees and B Twills, but as a result of some enquiries for A's,

Going Home For SPRING LEAVE This Year?

TRAVEL BEFORE THE END OF FEBRUARY AND SAVE Rs. 836

Saint Frères Circular Looms installed in Jute Industries Ltd. factory, DUNDEE

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and in old, sometimes working alongside flat looms; in the highly developed industries of Scotland, France and Italy; in the more recently established mills of South Africa and the Belgian Congo, where only unskilled labour is available.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsey & Robertson Orchar Ltd., Dundee, Scotland.

REPLACING A COP—Immediately one of the cops runs out the loom stops automatically. All the shuttles emerge from the shed and lie on the warp threads. New cops are placed in each shuttle and the loom is restarted. By replenishing all the shuttles at once much time is saved. The butt-ends of the cops left over are, of course, not wasted.

FAIRBAIRN LAWSON COMBE BARBOUR LTD
LEEDS, ENGLAND

Liverpools and cornsacks, rates for these three fabrics rose by Re. 1 per 100 bags, although it is not thought that very much business was put through. Towards the evening reports that mills' stocks had again increased caused a sudden weakening of the market, and rates began to fall. At the opening on Tuesday morning quotations were down in all fabrics except plain heavy Cees, which remained constant at Rs. 94 per 100 bags. Other quotations were Rs. 43-2 per 100 yards of 40" 10 oz. hessians which was 4 annas down on the previous quotations, and Rs. 93-4 per 100 bags of B Twills which was 12 annas down from Monday's rates. Cornsacks, Liverpools and A's lost the Re. 1 they had gained the day before as enquiries slackened.

At the close the market is quiet with no reports of business or enquiries from overseas. Quotations are unchanged in hessians, but are 4 to 8 annas down in heavy goods. Opening rates of Wednesday morning were as follows:—

	Feb.	March	April	July	F.A.S.
40" 8 oz.	Rs. 34-12	34-12	34-12	34-4	F.O.R.
40" 10 oz.	Rs. 43-2	43-2	43-4	43-4	
Heavy Cees (plain)	Rs. 93-8	94	94-8	94-8	
B Twills	Rs. 93	93-8	94	94	
Cornsacks	Rs. 95	95-8	96	96	

Raw Jute: Mills have again shown interest in jute this week as their stocks show signs of running low. An increasing amount of "filling in" purchases of special lots have been made as well as the normal buying by the larger groups. Ready bills of lading have again been in demand but in many cases buyers have been waiting for the jute to arrive in Calcutta to enable them to carry out an inspection before committing themselves to purchase. High grade jute and good quality Daisee has also come in for a certain amount of interest and small lots, in some cases only amounting to a few hundred maunds, have changed hands at high rates. Up to the week-end it was estimated that about 2 lakh maunds had been purchased.

In spite of the business done over the week, there has been little alteration in the quoted rates of jute, ordinary Assam jute remaining at Rs. 22 per maund basis Bottoms for February-March shipment. After the week-end in sympathy with a weaker goods market and the lack of enquiries from buyers, quotations dropped 8 annas, but no interest was shown at the lower rate, and mills stayed completely out of the market.

During the week the following business was reported:—

Indian Jute (Kutcha Bales):
European Dhurri: Rs. 26-8 per md. basis Bottoms for Feb.-March shipment (ex agency).
European Local Packing: Rs. 24-8 per md. basis Bottoms for one month's delivery.
Rs. 27-8 per md. for Bottoms and Rs. 24-8 per md. for B Bottoms for Feb.-March delivery.
Dhurri: Rs. 22-8 per md. basis Bottoms for Feb.-March shipment. Rs. 22 per md. basis Bottoms ready bills of lading.

Assam: Rs. 25 per md. for Middle only for one month's shipment. Rs. 21-8 to Rs. 22 per md. basis Bottoms for one month's shipment. Rs. 20-8 to Rs. 21 per md. basis Bottoms for ready bills of lading.
Assam Tossa: Rs. 22 to Rs. 22-8 per md. basis Bottoms for one month's shipment.
Rs. 23 per md. basis Bottoms for one month's delivery ex local godown.
Northern (Dinhatta-Cooch Behar): Rs. 22-8 per md. basis Bottoms for February-March shipment.
Karimpur-Bongaon Tossa: Rs. 21 per md. basis Bottoms for one month's delivery.
Murshidabad Tossa: Rs. 19-8 to Rs. 20 per md. basis Bottoms for one month's shipment.
Lalgola Tossa: Rs. 19-8 per md. basis Bottoms for one month's shipment.
Dhulian Mesta: Rs. 17-8 per md. basis Bottoms for one month's shipment.
Bimil: Rs. 16-8 and Rs. 17-8 per md. for F.A.Q. for one month's shipment.
Daisee: Rs. 23 to Rs. 23-8 per md. basis Bottoms for one month's shipment.

Pucca Bales:
Mill Reds: Rs. 170 per bale for Feb.-March delivery.
Mill Firsts: Rs. 140 " " "
Mill Lightnings: Rs. 125 " " "
Dundee Daisee: Rs. 145 " " "
Pakistan Habi: Rs. 80 per bale for one month's shipment.
Pakistan N.C. Cuttings—Rs. 64 per bale for one month's delivery ex Calcutta godown.

At the close the market is quiet in sympathy with the finished goods market and no interest is being shown by mills. Quotations are nominal and on Wednesday morning were as follows:

Pakistan Jute:	February/March	Landed at Mill.
Jat	27	per md. basis Bottoms.
District	26	" " "
Northern	26	" " "
Indian Jute:		
Lower Assam	22-8	" " "
Upper Assam	21-8	" " "
Northern Bengal	22-8	" " "
Murshidabad (White)	18-8	" " "
Bihar	18	" " "
Daisee	23	" " "
Bimil	17	" " "
Mill Reds	170	per md. for F.A.Q.
Mill Firsts	140	per bale for Feb.-March delivery
Mill Lightnings	125	" " "
Dundee Daisee	145	" " "
(Short Group)	140	" " "
Dundee Daisee	125	" " "
(Long Group)	125	" " "
Pakistan Cuttings	64	" " "
Indian Cuttings	60	" " "

Tossa is offered at Re. 1 to Rs. 2 per maund above the rates for white jute.

Mofussil: Upcountry markets in India continue to rule quiet in the absence of any large business and the almost complete lack of imports. Sellers, on the whole, are not interested in the present rates, and prefer to hold on to their stocks. There is no change in local quotations, which are nominal and still slightly above the parity of rates quoted to Calcutta mills. Some sellers are sending goods to Calcutta without a buyer in the hope that the offers of ready bills of lading may induce a higher price, but jute of this category does not now command the premium it previously did, and more often than not the jute has to be off-loaded in Calcutta and stored at considerable loss to the sellers. Local quotations are based on Dhurri jute at Rs. 18-8 per md. basis Bottoms, ordinary Assam jute and Northern jute at Rs. 18 per md. basis Bottoms. The local Cossipore market is quiet with little or no business passing. The backing of wagons that were held up due to the recent strike have now been almost completely cleared, and no more have arrived as bookings to Cossipore have been suspended temporarily. Sellers business going on is being done by distress sellers who are in need of finance. General quotations are based on Kishengunge jute at Rs. 22 per maund for garsat quality, but this is nominal in the absence of business. Reports from the Ducease indicate that imports are small and sellers are holding. Quotations are unchanged from last week and are Rs. 23-8 per maund for garsat quality, but very little business is passing.

In Pakistan the only business reported is still for overseas export, and no business has been imported with Calcutta, nor is there any likelihood in the immediate future on account of India's reported ban on the import of low grade jute from Pakistan. Prices are steady despite the lack of business and quotations are the same as last week. Imports have improved slightly and are now about 20,000 to 25,000 maunds daily in Narayanganj, of which about 30 percent is Tossa jute. The premium for Tossa has dropped to about Rs. 2 per maund as a result of the increased imports, but the demand for this fibre is still good. Latest quotations in Narayanganj (in Pakistani rupees) are as follows: Jat Balers Bottoms (White)—Rs. 14 per md., Tossa—Rs. 17 per md., District Bottoms (White)—Rs. 13 per md., Tossa—Rs. 16 per md.

Stocks of Manufactured Goods:
Stocks of manufactured goods held by mills reporting to the I.J.M.A. at the end of January 1953 again showed a sharp increase over the previous month, and were reported to be 1,28,400 tons, of which 88,400 tons, or 69.1 percent, was sacking, 37,000 tons or 29.1 percent were hessians and the balance of 2,700 tons (1.8 percent) miscellaneous manufactures. It is believed that this figure is a record high and constitutes the largest stocks ever held by mills. Sacking showed an increase of 10,200 tons which is approximately equal to one week's production, hessian stocks rose by 3,100 tons and miscellaneous manufactures by only 100 tons. The overall increase is therefore 13,400 tons, which is nearly 20 percent of the mills' total monthly production. The percentage of sacking manufactures to hessian manufactures has altered very slightly, sacking increasing by 1.7 percent and hessians falling by 1.4 percent. Total stocks held a year ago, in January 1952, amounted to 88,400 tons, of which 51,600 tons or 58.3 percent were sacking, 34,800 tons or 39.3 percent hessian and 2,000 tons or 2.4 percent miscellaneous manufactures. It is interesting to note that from one year ago the proportion of hessian manufactures has decreased by 10 percent and sacking manufactures have increased by nearly 11 percent.

I.J.M.A. STOCK FIGURES
The Indian Jute Mills Association announces that the total reported stocks of manufactured goods exclusive of Government orders at the end of January were as follows:—

Description.	31st January, 1953		31st December, 1952	
	(Lakh Tons)	(Lakh Tons)	(Lakh Tons)	(Lakh Tons)
Hessian Cloth and Bags	13.73	36.449	12.53	33.656
Standard Hessian (included in above)	10.70	28.557	9.63	25.003
Sacking Cloth and Bags	20.51	83.394	18.14	73.969
Standard Sacking (included in above)	16.80	69.267	13.28	54.164
Rope, Twine, etc.	2.530		2.475	
Total reported stocks of manufactured goods held on Government account:	4	92	7	149

Commodity Markets

STABILITY OF WOOL PRICES KEY TO 1952 RECOVERY
STEADYING INFLUENCE OF U.K. STOCK-PILING

At the end of 1952 wool prices were at almost the same level as at the beginning of the year. Although at times prices fluctuated both upwards and downwards, the overall picture is one of reasonable stability. This is in marked contrast to the two previous years; in 1950 there was an unprecedented rise in prices while during 1951 there was an equally sharp decline. The increasing stability of prices for this commodity during 1952 may be attributed to two factors. Early in the year the prices of certain qualities of New Zealand wool did not reach the guaranteed minimum levels. In accordance with the terms of the Wool Commission Act, passed to ensure that growers received a fixed minimum price, the New Zealand Wool Commission entered the market by bidding for lots some of which were eventually bought by others, thus contributing towards a return of confidence. Probably of more importance was the decision by the United Kingdom Government to continue its wool stock-piling programme for another season, instilling additional confidence in the primary market. Producers regarded the British Government's buying policy as a steady and constant factor in the salerom.

Sharply fluctuating values have proved of no benefit either to producers or manufacturers and in spite of improving conditions the lot of the wool textile manufacturer has not been happy. It is only now, after a year of reasonably steady prices, that the industry is recovering from the severe recession with which it was faced in 1951. Although by the beginning of 1951 values had been falling steadily for some nine months and continued to do so up until about the end of April, 1952, manufacturers had bought much of their material at peak prices. Wholesalers and retailers had built up large stocks of high-cost goods in anticipation of a prolonged shortage of raw wool only to find that they were faced with a consumers market which had been saturated after a buying spree in previous months. Another problem faced by the industry was that many Governments, in order to combat inflation, were taking measures to restrict internal credit. The end of 1952, however, saw something of a revival for the wool textile industries in a number of countries, with a resultant increase in the consumption of raw wool in order to replenish depleted stocks and satisfy an increasing demand from retailers.

FIRST SHIPMENT OF COMPRESSED CARBON BLACK TO CALCUTTA

A consignment of compressed carbon black arrived in Calcutta last week from the U.S.A. aboard the s.s. Steel Scientist for the Dunlop factory at Sahaganj. Carbon black was in very short supply in mid-1951 and shipments to India were arranged with great difficulty through the office of International Trade, U.S. Department of Commerce. Carbon black consignments were hitherto packed in 50 lb. paper or fabric bags, but shippers in U.S.A. are now compressing this material and putting it into 50 lb. cardboard cartons of 1.55 cu. ft. capacity. This new method of packing minimises the risk of damage in handling and also saves on freight costs.

EXPORT OF BENGAL DESHI COTTON

In October 1952 the Government announced export quotas for cotton of 50,000 bales of Mathias, Kalagins and Dholleras and 50,000 bales of Central India, C.P. I and II and Oomra Deshi. The Government has now decided that persons holding quotas of these cottons may, if they so desire, export Bengal Deshi cotton instead, to the extent of half of such quotas.

WHOLESALE PRICE INDEX STEADY

The official wholesale price index (base: year ended August 1939 as 100) advanced by 0.4 percent to 377.5 during the week ended 24th January, 1953. The index was higher by 0.8 percent compared with the corresponding week of last month but was 12.0 percent lower than that of a year ago. During the week under review, Foodstuffs showed a rise of 1.5 percent to 360.8 because of the higher prices of tea (+11%) gur (+6%) and gram (+5%) although the price of coffee moved down by 1 percent. The index for industrial Raw Materials declined by 0.2 percent to 425.4 because of decreases in raw jute linseed and rapeseed (-2% each), manganese ore (-5%) and lac (-3%). Groundnuts and castorseed (+2% each), raw cotton and copra (+1% each), however, registered a rise during the week.

The Semi-Manufactures group remained almost unchanged at 344.5 during the period under review. Items, which recorded noticeable changes were, gingelly oil (+6%), castor oil (-4%), groundnut oil (+3%), tanned buffalo hides and linseed oil (-2% each), tanned cow hides, brass and copper (+1% each) and mustard oil (-1%). Lower prices of jute manufactures (-2%) and paints (-1%) brought down the Manufactures group index by 0.2 percent to 363.5. In spite of a rise of 2 percent in cashewnuts, the index for the Miscellaneous group fell to 612.2 from 612.7,

mainly because of a fall of 2 percent in the prices of black pepper.

Leadership — Our Ancient Heritage

Peerless Ondanique

From early antiquity Indian Steel was famed for its strength as for its beauty. famous in the civilised world. So greatly did Indian Steel excel all others that it was eagerly sought after wherever men met to trade. From "Wootz", as it was called in the Levant, was fashioned the famous chased armour of Damascus, as

famed for its strength as for its beauty. The curved scimitars of the Saracens, chain mail and shining armour similar to that worn by the Knights of thirteenth-century Europe — these were made from the metal which the Indian master-craftsmen produced in their foundries.

The "Ondanique" Steel referred to by Marco Polo, the "Alhude" and "Alfide" of the Spanish armourers — these are but corruptions of "Hundwani" — the Indo-Persian term for Indian Steel. Today, Indian craftsmanship and genius are expressing themselves anew. Ancient skill is equipping itself with new technology, to raise even higher

our standards of excellence, and to gain new leadership.

In this Indian Renaissance, Tata Steel plays a vital part.

COAL COMPANIES

O. P. F. and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, Po, F, Dd, G and R indicate Ordinary, Preferred Ordinary, Founders' Deferred, Guarantee and Rebate Shares, respectively. P next to the names of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FINANCE COMMISSION'S REPORT ON DEVOLUTION OF REVENUE

SEARCH FOR SETTLED PRINCIPLES IN INDIAN FISCAL PRACTICE

BECAUSE judgments on the equity of the Finance Commission's award follow provincial lines it is easy to conclude that therefore Mr. Neogy and his colleagues have acted in the best national interest and attained a golden mean which, precisely because it is impartial, could not please everybody. Reaction since the publication of the report appears to support this facile conclusion. Bombay has had its share of Central revenues cut, and newspapers in that State have decried the award as simply unjust. West Bengal gets less than it hoped for, and its Chief Minister has expressed restrained dissatisfaction; Madras has done very well out of the new dispensation, and Mr. Neogy has been hailed in that State as a paragon of justice and fiscal wisdom; Uttar Pradesh receives an increment of over Rs. 3 crores a year and the U. P. Press has accepted the award with quiet satisfaction. But, even if it was inevitable that the demands made on the Finance Commission from the State capitals should have been founded in provincial self-interest, it should surely be possible to pass judgment on the final report from the standpoint of some less dubious set of criteria. Federal finance after all has certain principles and it should be sufficient to see whether the Neogy commission has observed them in recommending the new distribution of Central revenues. Before we set ourselves up as disinterested judges we should perhaps explain our position regarding the share of our native State, West Bengal, which we have many times argued in the past deserves a better deal in the hand-out of Indian revenues. We still think that West Bengal should have got more than the Finance Commission has granted it, but hasten to add that most of the reasons with which the West Bengal Government supported its demand for more income were extremely weak. In fact several of the arguments put forward from Writers Building (if pages 71 and 72 of the Finance Commission's report are a fair summary of them) were special pleading of a strained and unconvincing sort.

Unfortunately, the search for general principles of federal finance in the Report is disappointed; at most crucial points, when it is being decided just how much the suppliants should receive, there is some such oracular remark as "After examining the matter in all its aspects we decide that..." No rational case is produced for these awards and at times the decisions of the commission seem frankly arbitrary. For example, it was felt that the States should be given an interest in the excise duties raised by the Centre, on the grounds that the units should have "elastic" sources of revenue, and then the commission produces, like so many rabbits out of a hat, the three excise duties on tobacco, matches and vegetable products. Admittedly it is said that the levies selected for division should be raised on commodities "of common and widespread consumption and which yield a sizeable sum of revenue for distribution", but these tests are just as well satisfied by the duties on cloth, sugar, tyres, tea and petrol. We mention this piece of arbitrariness not to suggest that the Finance Commission has made a wrong choice—for possibly with the statistical information at its disposal any group of excises chosen for distribution would have been just as haphazard—but to show that the commission is on no firmer ground than its critics in defending its award. To dismiss individual States' censures as biased does not prove the commission right; that could only be done by bringing forward sound and clear principles that have guided the commission in its work. In fact such principles are almost entirely wanting.

This arbitrariness is most obvious in allocating grants and divided revenue among the various States. A better show of rational decision is made when considering the claims of the units as a whole on the Centre. The two principles invoked here are that the States certainly need greater resources if they are to meet the responsibilities of develop-

ment and social security cast on them by the Constitution, and that the Centre must nevertheless be left adequate funds to maintain itself "strong and financially stable". There will be no disagreement with these general precepts, but they are so general that one cannot see how they led to the particular conclusion that the Central Government should forgo about Rs. 21 crores of its income in favour of the units of the federation. When we come to the further subdivision of income tax between the various States the commission lays down the rule that a unit's claim will be considered 20 percent as to its relative collections and 80 percent as to its relative population. On the face of it, this rule has no more to commend it than the sundry other criteria framed by previous fiscal commissions, and indeed it can be argued against it that it puts too heavy a premium on sheer populosity, which Mr. Nehru and others say is one of the country's principal disabilities. Commenting on this issue in his Budget speech in the West Bengal Assembly on Monday, Dr. Roy said: "We have to reconcile ourselves to the position under which the State Governments will receive credit not for increasing industrial and business activity in their respective territories, nor for raising the standard of living of their people which also helps such increase in production, but simply for the number of their population". Considering the political power within the Union of the two populous States of Madras and Uttar Pradesh, some such bias was perhaps to be expected.

There could be (and probably will be) endless dispute about the validity of the scattered "principles" the commission has used during its enquiry, but when the first disappointments have faded most States will accept the award in the spirit of *lex dura sed certa*. Though a settlement more favourable to this unit or that could have been reached, the Neogy award has the merit of giving the States certain foreknowledge of their constitutional claims on the Central Government over the next four or five years. This is not to say that they can foresee their actual revenues any more certainly, since a feature of the award is that it increases the States' interest in fluctuating sources of income, like income taxes and excise duties, which vary considerably from year to year. This is of course a great advantage; it is very proper that the States should be at one with the Centre in seeking to increase income from taxes and duties, rather than neglecting economic needs while they await fixed grants from Delhi. The Finance Commission, as Dr. Roy indicated, could have done more to enhance the States' zeal in increasing revenues, but that they have done something is cause for limited satisfaction.

Before quite accepting the view that the Finance Commission has done its arbitrary best

with a complex problem, it is worth reflecting on the curious circumstance that one principle of division of revenues, both between the Centre and the States and between the States themselves, has been neglected, though one might have expected to hear much of it. That is the commitments of the units of the federation under the five year plan. Since the award is to run for roughly the same period as the plan, some attempt to correlate proposed development expenditure with Central bounty might have led to an award which at least would have had some justification in the popular acceptance of the aims of the five year plan. It is true that the monies divided among the States under the award have to meet many other needs besides planned development expenditure, but the adjustment of incomes according to a rough measure of the requirements of the plan would have shown that the whole fiscal machinery was being geared to accomplishment of the plan's objectives. As it is, one gets the impression that the plan, which is supposed to require the whole energies of the country for its fulfilment, has been quite forgotten by the economic experts who were sent to

restraining trade and industry. Some measures in such a programme would involve tax reductions, but not all; tax increases, especially on land, might do much to stimulate some forms of output. The Finance Commission naturally did not deal with these matters, because they lie outside its terms of reference, but it is just that fact that shows that the redistribution of revenues between the units of the federation is a problem of secondary importance, despite the provincial passions it so easily arouses.

RESOURCES FOR DEVELOPMENT

SIR B. P. SINGH ROY ON INDIAN CAPITAL FORMATION

THE debate on the prospects of the five year plan since its final version was published about two months ago has centred on two points: firstly, whether the country's financial resources are adequate to achieve the targets fixed by the Planning Commission; and secondly, even if these targets were to be achieved, would demand justify the increase in production. Criticism on the first dates back to the time the Draft Outline was published. But the second line of attack is more recent and is a direct result of the trade recession which so radically altered economic prospects and circumstances last year. It has provided ammunition to those—and the group includes distinguished economists—who feel that the Planning Commission has been looking at the country's actual and potential resources through a magnifying glass. Sir B. P. Singh Roy devoted the greater part of his presidential address at the quarterly general meeting of the Indian Chamber of Commerce in Calcutta last Friday to an assessment of the country's development prospects, and arrived at distinctly sombre conclusions. The four chief sources of finance for the five year plan are: governmental revenue—from the Centre, States and the railways; internal borrowing; external loans and credits; and deficit financing. Sir Bijoy's argument briefly was that the first two had been overestimated, so that if foreign lending was not commensurate with the Planning Commission's hopes the limit of Rs 290 crores on deficit financing would have to be raised substantially. But he saw "no harm" in this, "provided it brings tangible and financial return to enable Government in the near future to cover up the deficit from increased revenues."

Meanwhile, he thought, political idealism should be tempered with realism by abolishing prohibition and reimposing the salt duties. At one stage of his speech, he argued that the Planning Commission had not set the sights high enough: "a more rapid rate of economic development should have been aimed at to bring about an increase in the productive capacity and productivity of the country." At another, he was doubtful whether even the present estimated sums required for development could be raised. Some contradiction was thus apparent, and was sought to be resolved by unwarranted assumptions regarding the harmlessness of extensive deficit financing. Such assumptions have unfortunately been encouraged by the Finance Minister himself when he claimed in Secunderabad recently that "there is perhaps a certain amount of deflation at the moment." Indian industry's most urgent need is to reduce prices by lowering production costs, and inflationary policies would frustrate this programme. If productive capacity in many industries is idle because demand has declined, the remedy is not to increase the money supply so that consumers can buy the products of these industries but to assist industry to produce goods at a price consumers can afford to pay.

Sir Bijoy was on firmer ground when, welcoming the decision to leave the major part of industrial development to private enterprise, he pointed out that "the private sector should be left with sufficient incentive to invest and maintain the increasing tempo of industrial production." The Planning Commission's belief that Rs 150 crores are required for replacement and modernisation, he felt, was a gross underestimate and Sir Bijoy declared that about Rs 700 crores, in addition to the regular depreciation allowances, were needed to "renew a substantial part of the existing plant and machinery." There will be general agreement with his view that the Planning Commission should have suggested revision of the present procedure of allowing depreciation on the basis of original cost. Industrial rehabilitation and expansion depend in the last analysis upon the rate of investment and Sir Bijoy emphasised that "the declining rate of capital formation, the rising tempo of unemployment, reduction in national savings and persisting deficits in the Central and State Governments' budgets and the balance of payments position bear testimony to the fact that the taxable capacity of the country has already been exceeded and that there is no further scope for additional taxation." Sir Chintaman Deshmukh's budget next week will show to what extent these truths are acceptable in Delhi.

CURRENT COIN

Counter-Blast from the Sugar Mills.—The main interest of last Friday's annual general meeting of the Indian Sugar Mills Association in New Delhi was that it provided both Government and the industry the occasion to conduct a post-mortem on the sugar export policy. Mr. Kidwai brought public understanding of the official muddle one step nearer when he stated that although most manufacturers had helped to keep prices stable, some factories and the trade had not co-operated. Mr. R. P. Nevatia, president, did not discuss this point but reiterated the Association's earlier complaints that sugar shortages were purely local and the result of transport difficulties. In one of the most cogent surveys of the industry's affairs we have yet seen, he declared that in 1951-52 factories crushed 12.3 crore maunds more of cane than in the previous season, as a result of which growers received an additional income of Rs. 22 crores. If this extra cane had been used to produce gur, growers would have earned only Rs. 9 crores. Although sugar production increased to 14.9 lakh tons, consumption was only 11.7 lakh tons; the carry-over into 1951-52 had amounted to 1.8 lakh tons. Factories were burdened with excessive stocks and as prices in the free market fell below the controlled rates Government nominees stopped lifting their quotas and factories had to sell sugar at a considerable loss. Even so, they entered the 1952-53 season with a total physical stock of about 5 lakh tons, as against the normal 1.5 to 2 lakh tons. This extra carry-over of 3 lakh tons meant that about Rs. 23 crores of capital was locked up. The Government promised last September to make special arrangements for finance to factories, but no details had yet been announced. Meanwhile mills could not postpone purchases of cane because it was highly perishable, and crushing had to be planned according to maturity if sugar recovery was to be maximised. Mr. Nevatia stated that even if production declined to 12.5 lakh tons (the first official forecast puts it at 13.1 lakh tons but expects subsequent estimates to be smaller) the total supply in 1952-53 would be 17.5 lakh tons. Less than 20,000 tons had been exported, and even if domestic consumption increased to 12.5 lakh tons the closing stock at the end of the current season would be 4.8 lakh tons. As against this, it was the Government's policy to make the industry carry a reserve of 3 lakh tons; the industry had failed to persuade the Government to carry this reserve itself, but would nevertheless continue to crush as much cane as possible. Mr. Nevatia then went on to explain why Indian sugar was expensive, and gave the break-down figures for the 1951-52 control price of Rs. 50-8 a maund fixed for western U.P. factories, which produce most of the country's sugar. These showed that cane constituted 61 percent of the ex-factory price; official levies in the form of excise duty, cane cess and co-operative societies' commission 17 percent; salaries, wages and packing 11.4 percent; manufacturing charges, including power, fuel, stores, repairs and renewals 5 percent; and overhead charges and profit 5.6 percent. The Government determined the cane price, taxes and wages (totalling 89.4 percent) and manufacturing charges had risen, so the industry's scope for reducing production costs was "very limited." Since 1946-47, when the ex-factory price of sugar was Rs. 21-7, the cost of cane had risen by 48 percent; official levies by 73 percent; salaries, wages and packing by 44 percent; and manufacturing charges by 20 percent; while overhead charges and profits had declined by 20 percent. Mr. Nevatia urged a reduction in Government levies and the rail freight on cane, and supported the 1950 Tariff Board's recommendation that the cane cess should be cut and no separate commission charged for co-operative societies. Cane should be intensively cultivated and better varieties developed. The percentage of sugar recovery had shown no improvement; the U.P. and Bihar Governments had spent on cane development "a negligible portion" of the Rs. 27 crores they had collected as cess. Mr. Kidwai later agreed that not much was being done to produce better cane but suggested that mills open their own experimental farms. To charges that mills in U.P. and Bihar are uneconomic, Mr. Nevatia replied that their operation had been affected by the neglect of cane development. The technical efficiency of the Indian industry "compares favourably" with that of any other but the financial difficulties of replacement and modernisation required to be tackled soon.

More Sugar, More Sweets.—The burden of Mr. A. L. Goenka's presidential address at last year's annual general meeting of the Indian Confectionery Manufacturers' Association was that too little sugar had been allocated for the manufacture of sweets. Supplies have of course enormously improved since and Mr. D. Allerton, president, was able to tell the Association on Saturday that the industry "can now at last obtain with reasonable

freedom its requirements of raw material." This is the more encouraging because for years the industry has worked below capacity, which according to Mr. Allerton "is sufficient not only to meet the whole of internal demand but also to re-establish a flourishing export trade." Difficulties now centre more on sales than on production because demand has declined, foreign markets have been lost, and the internal market has been flooded with cheap, inferior and unhygienic sweets made by small producers. The industry is trying to cut costs, but Indian sugar is expensive and constitutes from 25 to 90 percent of the factory cost of confectionery. Sugar is dear partly because Governments levy a heavy excise duty and cane cess, so Mr. Allerton's "first request is that these taxes should be remitted on all sugar consumed in the production of factory-made quality confectionery." Other countries, he said, allow a rebate of internal taxes on sugar when it is used for confectionery and industrial purposes and the Indian Government has accepted the principle in the case of certain other commodities used as industrial raw materials. The Government is willing to refund the excise duty on sugar and also the customs duty on imported raw materials used in sweets for export, "but the conditions under which a manufacturer may claim refund are so onerous as to be impracticable." Mr. Allerton estimates that taxes, duties and cesses on high quality wrapped and boiled sweets total Rs 315 a ton, and unless the suggested refunds are allowed "there is no possible hope of any substantial export business under present conditions." He insisted that strong action is necessary to stamp out the trade in inferior sweets which are usually produced and sold in unhygienic conditions. This trade has grown since sugar became plentiful and constitutes a particular threat to children who are attracted by the high colouring and cheapness of such sweets. Mr. Allerton believes that the confectionery industry has the equipment and technical resources to produce sweets of the highest quality. No token imports should therefore have been allowed; instead, the import of essential raw materials should have been facilitated.

Flag Discrimination.—At the recent meeting of the Scindia Steam Navigation Co., Ltd., the chairman, Mr. Dharamsey M. Khatau, spoke in most forthright terms on the subject of flag discrimination. The facts were straightforward, he said: India's foreign trade accounted for about four percent of the total world trade and her shipping amounted to about one-half percent of world tonnage, but there was a growing tendency on the part of powerful shipping interests to raise the cry of flag discrimination at any action on the part of the Government of a country whose shipping was not developed to assist and encourage that industry. He asserted that, having developed their own maritime position, some of the leading maritime nations were now preaching a doctrine of *laissez faire* for shipping. India was at present endeavouring to build up her shipping power both for trade and defence purposes and this, said Mr. Khatau, was a sufficient reason for flag protection, if such it can be called. There could be only one section of maritime trade in which discrimination was permissible and that was coastal trade; there should be no call for discrimination in such things as port dues, light dues, consular fees, etc. Another point to be remembered, he said, was that some discriminatory measures may be justified as the only protection against discriminatory action taken either by other countries or by conferences. Complaints, he maintained, against Indian shipping companies and the Government of discrimination were hardly fair though he noted that they often came from countries who had generously assisted in the development of India's shipping industry.

Textile Trade Trends.—A warning against permitting international competition in the textiles industry to push down wages and eventually cause unemployment was the main theme of the proceedings of the ILO's Textiles Committee in Geneva recently. Opening the session, the Director-General, Mr. David A. Morse, pointed out that some of the difficulties confronting the textile industry in certain countries had resulted from insufficient attention to the possibilities of increasing productivity. However, he said, "full account must be taken of local circumstances in devising measures to raise productivity. Clearly, it will not be appropriate in a country where labour is plentiful and capital scarce to push mechanisation to anything like the same pitch as in a country where labour is scarce and capital cheap." Judging from the report which the Committee was meeting to discuss, the best hope for an increase in world demand for textiles lies in an increase in consumption per person in the underdeveloped, and under-clothed, countries. This is so, not only because the per capita consumption in these areas is very low compared to the level in advanced countries, and thus offers more scope for raising consumption, but also because even this low level has recently suffered a further decline. The present pattern

of world trade in textiles goes to show that countries which were formerly importers have now become exporters, and countries which had specialised in exporting textiles find that their outlets are dwindling due to the appearance of new competitors and by the old customers ceasing to import. In this development, if there is any fall in demand, the first reaction is to increase protection for the home market. This aggravates the situation so far as the exporting countries are concerned. Regarding the market in the underdeveloped areas, apart from climatic and other factors, the low consumption of textiles is largely a reflection of the very low purchasing power of the masses of the population. Thus Asia, with over half the world's population, provides only one-tenth of the world's national income and has a per capita consumption of 1.5 kgs. of textiles, though the figure stood at 2.2 kgs. per person in 1938. Comparative statistics gave the following position of the consumption of the main textile fibres in kilograms: Asia 1.5, Africa 1.6, USSR 3.1, North America 17.5, South and Central America 3.8, Europe 7.1, Oceania 7.1. Other changes taking place in the world trade pattern may be summarised thus: From being the world's largest importer of cotton goods, India emerged in 1950 as one of the world's major exporters; Japanese exports to South-East Asia, Africa and countries such as Pakistan have increased considerably; Pakistan, however, is rapidly developing its own textile industry; Argentina, Brazil and Mexico have, except for certain types of goods, already become self-sufficient in respect of cotton textiles, and Chile hopes to achieve self-sufficiency in 1953; the United States of America, with about 10 percent of the world's population, consumes nearly one-third of the world's textiles, as against 20 percent in 1938.

Builders' Hardware.—The builders' hardware industry began with a few firms in the 1930's but expanded rapidly during the war when imports were difficult to get. It now consists of about 54 factories employing approximately 10,000 men and Mr. Ajayendu Paul, president, told the first annual general meeting of the Builders' Hardware Industries Association in Calcutta last week that "India today can very well be proud of having attained self-sufficiency in almost all items of builders' hardware and fittings like hinges, pad bolts, tower bolts, padlocks, smith locks, hasps and staples, etc. in quality on a par with any first-class foreign manufacture." No tower bolts and pad bolts had been imported in recent years because India's products were the cheapest in the world. Mr. Paul complained that the Government was not helpful to the industry and the latter's main difficulties arose from the shortage of raw materials and "excessive imports." Allocations of steel were inadequate and were not supplied as sheets, the main form in which the industry required its steel. Of the 54 units, 16 received their quotas of steel from the Central Government and the remainder from State Governments. The Central allocation amounted to about 2,500 tons a year and the States' total allocations were not known, but Mr. Paul asserted that with the amounts they got factories could hardly work up to 50 percent of their installed capacity. He urged that the industry be allowed to take its entire allocation in the form of steel sheets; the Development Wing of the Commerce and Industry Ministry was prepared to allow this but the Iron and Steel Controller said he had no more sheets to spare. Other forms of steel were more easily available but the industry could not use them. In present market conditions, controls over the end-use of steel should be relaxed so that factories could use the steel they got for whatever orders they had on hand. Criticising import policy, Mr. Paul said that "imported steel hinges have been dumped in the market in such huge quantities that competition has become keener and keener and even the imported goods have to be sold below the landed cost." The Tariff Commission, he added, should be asked to examine the industry's case for protection, without which some units would have to be closed down.

Appellate Tribunal Overruled.—The Travancore-Cochin Government recently used its powers under Section 15(1) of the Industrial Disputes (Appellate Tribunal) Act, 1950, to reject an award of the Appellate Tribunal permitting the Tata Oil Mills Company's factory at Tatapuram to retrench 45 employees. The importance of the decision lies in that it is the first time a State

Government has entirely rejected the verdict of the highest judicial authority on issues of labour law. Sir Homi Mody, President of the Employers' Federation of India, has written a letter of protest to Mr. V. V. Giri, Central Labour Minister, which points out that the Company gave notice of retrenchment to a number of its employees who were considered redundant and for whom other jobs could not be found. The Appellate Tribunal examined the case and concluded that the retrenchment was *bona fide* and that it was the function of the management "to determine its labour force and to judge the number of workmen who would become surplus on the grounds of rationalisation and economy." The State Government rejected the award on grounds which Sir Homi Mody says are "utterly untenable and which amount to this, that when there is no charge of incompetency or indiscipline against the workmen who are sought to be retrenched, and when the company concerned is progressively making profits, retrenchment should not be permitted as alarm would be created in the minds of workers everywhere in the State regarding their security of service and it was not in the public interest to allow this to be done." Describing this as a gross misuse of powers vested in State Governments under the 1950 Act, he declares that when the question of retrenchment arose in government or semi-government concerns the Travancore-Cochin Government's attitude had been quite different. "It is obvious that the Government of Travancore-Cochin have one law for themselves and quite another for non-government employers." Sir Homi urges Mr. Giri to help persuade the State Government to reconsider its decision; otherwise, he says, "the Appellate Tribunal might as well be abolished."

Insurance in 1951.—The review of the Indian Insurance Year Book which appeared in last week's issue of Capital was necessarily incomplete in so far as the results of insurance activities in 1951 given in the Year Book are themselves incomplete. Particulars relating to 63 insurers and 19 provident societies had not been received by the Controller of Insurance by the specified date (7th October, 1952). Although according to the Year Book new life business secured by Indian companies declined by Rs. 192 lakhs, particulars relating to 21 Indian life insurers are not given because they were late in submitting returns. One of these completed Rs. 955 lakhs of new life business during 1951, so that if only this company's figures are taken into consideration new life business secured by Indian insurers increased by over Rs. 700 lakhs during 1951. This significantly changes the perspective and invalidates the comparison of foreign and Indian companies' business set out in the report; it also shows that the failure of many insurance organisations to submit particulars in time severely restricts the value of the Year Book. An examination of this and other persistent defects in the Insurance Year Book was published in Capital on 21st February, 1952.

Railways Earn Less.—Against a surplus of Rs. 23.47 crores estimated last May for the 1952-53 railway budget, the surplus now anticipated is only Rs. 9.48 crores, a drop of almost Rs. 14 crores. This is due to a fall of Rs. 12.61 crores in earnings and an increase of Rs. 1.16 crores in working expenses. The decrease in earnings is mainly accounted for by a fall of Rs. 10.14 crores under passenger earnings and Rs. 1.10 crores under goods. Mr. Lal Bahadur Shastri, the Railway Minister, observed that passenger traffic, which had reached its peak in 1950-51, is adjusting itself to a normal level along with the restoration of the post-war inflationary economy of the country to equilibrium. As regards the budget for 1953-54, in view of fairly good crops this year, the extension of railway lines and general economic development in various fields, passenger earnings have been kept at more or less the same level as the revised estimates for 1952-53. For the same reasons, the estimate of goods earnings has been placed at about Rs. 3 crores, or 2 percent above the revised estimate for the current year. The working expenses for next year are estimated at about Rs. 2 crores higher than the revised estimate for 1952-53. The dividend payable to General Revenues is also higher by Rs. 66 lakhs. Consequently the budget estimate for 1953-54 provides for a surplus of Rs. 9.31 crores, which is about the same as that anticipated for the year now ending. No major revision of fares or freights has been proposed.

	Actuals, 1951-52.	Budget, 1952-53.	Revised Estimate, 1952-53.	Budget, 1953-54.
Gross Traffic Receipts	290.82	282.16	269.55	272.28
Working Expenses	194.35	187.93	189.10	191.20

BOOMLET IN DOMESTIC AND INDUSTRIAL SECTIONS

FOREIGN BONDS NEGLECTED

London, 18th February.

PRICES in most sections of the London Stock Exchange have been consistently firm throughout the past week. Domestic issues remained in the fore-front with buying stimulated by talk of good budget prospects. Buying in leading industrials has been the best for many years and has been compared to the semi-boom days of the middle 1930's. Even so, demand has still not been satisfied. Occasional profit-taking occurred late in the week but was welcomed in the majority of cases. Gilt-edged had a fair share of activity with both smaller investors and institutions operating. An overflow of investment demand from domestic issues found its way into shipping and oil issues and both these also recorded useful gains. Mining shares, particularly Kaffirs with uranium interests, were very active though genuine investment by the public has been small, most of the business being done by Cape or local professionals. Coppers and diamonds made good showing until late in the week when switching into Kaffirs left the former dull.

Foreign bonds were again mostly neglected and late in the week Japanese were easier. Dealers in these issues showed disappointment at the possibility of the Japanese Government buying its own bonds and were not too happy about present Japanese foreign exchange holdings. After several days of dull and easier conditions tea shares perked up at the close and several substantial losses were recovered. Central Provinces is early but by the close were back at 16s. Part of the midweek easiness caused by the selling of deceased estates was reflected when Ceylon and Indian lost 15d. to 18s. 1d. Demodora fell by a like amount to 26s. 6d while Doom Doona lost 2s. 3d. to 32s. 9d. However most of the losses were recovered and the last mentioned share closed around 35s. with the section firm.

Credit was in short supply throughout the week on London's money market. Conditions grew worse as the week progressed and on Thursday tax transfers drained the credit system dry and there was heavy and widespread calling. Despite

considerable assistance and the taking up of privilege money, the market remained in difficulties and was forced in the end to borrow small amounts from the Bank of England for a week at the penal rate of 3½ percent. The period finished with more comfortable conditions although credit remained in short supply. Most houses were able to balance books without undue difficulty. Applications for £220 million Treasury Bills totalled £297,225,000. Allotments were £220 million at an average rate of 48s. 7½d. percent. This week £230 millions will be offered. Note circulation increased by £5 million to around £1,457 millions. Bankers' deposits also increased, being £7 million higher.

Demand for Sandbags

Because of the quantities of sandbags already used for flood damage repair, demand over the next year for replacement purposes is likely to be much greater than it was at first thought likely, according to the British Jute Trade Federal Council. Tenders under consideration by the Ministry of Supply for 16,000,000 sandbags for delivery over the period April 1953 to March 1954 might be increased to between 40 and 50 million.

Shipping Freight Index

The latest Chamber of Shipping index denotes a further small on balance decline in tramp shipping freight rates during January. The index number of 96.0 compares with 98.8 in December and 163.9 in January 1952 which was the highest for any month last year. The big fall from a year ago, however, occurred almost entirely in the first half of last year. Since June when the index was 99.1 the market has held relatively steady. The general level of tramp employment was well maintained in January and Eastern and Far Eastern rates actually showed useful gains. Falls in the average rates of other trade such as fertilisers and coal only slightly outweighed these improvements. So far during February Far Eastern activity has slowed down considerably owing to political uncertainties in that area and while the market looks for some improvement in the world trade, at least during the six months no return of 1951 activity is considered likely.

Adverse January Trade Balance

United Kingdom exports in January rose to £217,900,000 from £209,700,000, the monthly average of the fourth quarter of last year, according to the Board of Trade provisional figures. December exports (which are not strictly comparable

owing to Christmas holidays) were £203,700,000. Imports in January were also higher at £230,100,000 against the fourth quarter monthly average at £263,900,000 and December's £267,700,000 and re-exports for the months were £10,100,000 leaving a net deficit of £62,100,000 compared with £44,800,000 in the fourth quarter.

Tea Auctions and Imports

At the London tea auction last Wednesday bidding was brisk and general for 20,655 packages from North Indian, Pakistan, African, Portuguese, East African, Belgian Congo and Indonesians. Prices for all descriptions were well maintained at about Monday's levels, especially for clean coloury commons and flowery orange pekoe which showed occasional advances. Some export demand was reported on Continental account. Clean common broken free from stalk was indicated at 30½d, low Assam fannings at 33½d, low Assam Broken Pekoes at 30½d, good medium Assam fannings at 38d and good medium Assam broken pekoe at 34½d per lb. United Kingdom tea imports in December totalled 50,745,000 pounds weight, the International Tea Committee reports. These comprised from India 35,957,000 lbs, Ceylon 8,729,000, Pakistan 35,959,000, Indonesia 1,289,000, Kenya, Uganda and Tanganyika 275,000, Nyasaland 251,000 and other countries 265,000 lbs. The total for December 1951 was 60,423,000 lbs. Re-exports for the month amounted to 2,847,000 lbs leaving net imports at 47,898,000 compared with 59,617,000 in December last year.

Warehouse Tea Stocks

Tea stocks in London and Provincial bonded warehouses declined to 126,849,925 lbs. in week-ended Feb 6th from 129,743,565 on 30th January. Stocks landed during the week were 7,819,935 lbs and deliveries 10,713,675.

Investors Chronicle Newsletter

The Investors Chronicle market newsletter: The London Stock Exchange looks dull for a period of consolidation or technical correction, especially in the light of Far Eastern developments. But search for "special situations" and possible adoption of more generous dividend policies by various companies may raise prices. There are hopes of tax relief, especially as Western Germany proposes to cut taxes but it is difficult to see how the British Chancellor can afford to do this. South African gold shares may benefit from announcements on more uranium producers but could become nervous as South African General Election approaches. German bonds might revive. Commodity shares are likely to remain clouded.

Hong Kong Gold Market

Hong Kong gold prices sagged to the year's low when it touched 278 dollars last Tuesday, but recovered two points before the market closed for the Chinese New Year. Tightness of the money market was the chief factor for the decline while lower international prices also contributed to the heaviness. The late rally was attributed to short covering. Trading officially listed totalled 7,560 taels, while 18,000 were privately transacted. An unconfirmed report said that 4,120 ounces arrived in Macao on last Wednesday. Unofficial exports were estimated at about 10,000 taels. Forward contracts were 8,000 ounces at 40.35 U.S. dollars per ounce, c.i.f. Macao.

Hide and Skin Market

The East Indian hide and skin market was steady but quiet with buyers disinclined to purchase at Eastern offering prices. Buffaloes quoted at 52 cents bid 62 cents asked, cost and freight New York with tanned goat skins 11 to 12 lbs average unchanged at 120 cents bid 130 cents asked, cost and freight New York. Dried salted goatskins were offered at about 950 cents per dozen with bids ranging about 895 to 900 cents, cost and freight New York.

LAUNCHING TWO LINERS ON THE SAME DAY

Thursday, May 14th 1953, will be an important date for shipping interests in Britain and Australia for the two largest ships to be launched this year, each of a similar tonnage, will be put into the water on that day. They are the 28,000 ton vessels Orsova for the Orient Line and Arcadia for the P & O, the first named from the Vickers-Armstrongs Yard at Barrow-in-Furness and the latter from the Clydebank Yard of John Brown & Co. Ltd.

The Orsova is to be launched by Lady Anderson, wife of Sir Colin Anderson, Director of the Orient S. N. Company; the Arcadia by Mrs. Donald Anderson, wife of the P & O Company's Deputy-Chairman, Mr. D. F. Anderson. Both vessels are intended for the U.K.—Australia trade and should be in service by next year.

SPAIN TO BUILD NEW IRON & STEEL PLANT

Spain is to build a new iron & steel works in Asturias the first stage of which will be in operation towards the end of 1956 or early in 1957. The output will amount to 350,000 tons steel a year which is almost half as much again as Spain's present total production. Orders valued at approximately £6 million for equipment have been placed with engineering firms in the U.K. by the Empresa Nacional Siderurgica, a company sponsored by the Spanish Government.

Among the items to be procured from the U.K. is the main electrical equipment for the steel works worth £1 million, a contract for which has been placed with The English Electric Co. Ltd. Included in this contract are a 7,000 h.p. twin drive for a 42" blooming mill and two 6,700 h.p. motors for driving the three stands of a 32" section mill.

Finance in India & Abroad

LIQUIDATION OF BANKS
REPORT OF COMMITTEE ON
WINDING-UP PROCEDURE

(By R. M. Mitra)

IT is a not uncommon experience that legal procedures intended to facilitate the expeditious despatch of business tend in the course of time to lengthen into tiresome processes of routine involving embarrassing costs and avoidable delay. Procedure relating to the liquidation of banks has been no exception. Though the wider aspects of the liquidation of banks were considered by the Banking Enquiry Committee of 1929, the legal issues have till recently been seen as part of the general questions of flotation, management and dissolution of companies. Post-war failures of banks in Bengal aroused the Government of West Bengal to a consciousness of the importance of simplifying and improving procedure so that the liquidation of banks could be carried out with the minimum cost and delay and the maximum benefit to depositors. The State Government appointed a committee in 1949 to investigate and report on the matter. The findings of this Committee led to the promulgation of an ordinance calculated to secure quicker realisation and equitable distribution of assets of banks in liquidation. This ordinance was repealed and replaced by legislation enacted in 1950 (vide Banking Companies Amendment Act XX of 1950).

Two years' working of the new procedure showed that the Banking Act of 1950 failed to achieve the desired results. Further, several judicial decisions raised misgivings regarding the proper interpretation of important provisions of the amendment. The Government of India realised the necessity of further examination of the position and accordingly appointed a committee to review it. The committee was set up by a resolution of the Ministry of Finance issued on 16th July, 1952, and consisted of four members with Mr. D. N. Mitra as Chairman and Mr. R. K. Desai of the Reserve Bank, as Member-Secretary. The report, which was completed on 31st December 1952, has just been published. The Committee has concluded its labours with speed and appears to have produced an equally commendable report.

The survey of the background contained in the report reveals the bewildering magnitude of the problem. It shows that 180 banks with total liabilities (other than to shareholders) aggregating Rs. 92 crores 63 lakhs, failed during the years 1947-51, of which 83 banks with liabilities of Rs. 25 crores 52 lakhs were in West Bengal and 24 banks with liabilities of Rs. 61 crores 82 lakhs in the Punjab. One bank in Bombay had 1,800 debtors and a total debt of Rs. 8,55,000.

The Law's Delays

The committee finds that "results achieved by the liquidation proceedings of banks have been far from satisfactory. Information available discloses that only one bank, out of the 78 banks in liquidation in Calcutta, has declared a dividend." On the basis of evidence heard and investigations made, the committee concludes that the existing law and procedure have yielded unsatisfactory results for the following reasons:

- (1) The procedure and time involved in filing suits against a large number of debtors help debtors evade their liability and often invite the operation of the law of limitation (notwithstanding the amendment of 1950).
- (2) The costs of management have been disproportionately high; the incidence of commission payable to liquidators has been especially burdensome.
- (3) Except in Bombay there is no permanent office of Court Liquidator.
- (4) The system of combining the offices of official receiver and official liquidator has not proved successful in its working in Calcutta.
- (5) There is no provision for making funds available to liquidators to enable them to discharge their essential functions when banks do not possess assets capable of early realisation.
- (6) The Displaced Persons (Debts Adjustment Act) of 1951 has aggravated banks' difficulties with debtors, especially in the Punjab.

The committee has considered other questions arising in the course of winding up a banking company, including: (a) filing claims by depositors; (b) preferential payment for small depositors; (c) jurisdiction of winding up courts and the proper definition of a "court"; (d) admissibility in evidence of entries in books of account of a banking company; (e) transfer of execution proceedings; (f) examination of directors and auditors; (g) onus of proof in a prima facie case of misfeasance; (h) directors' liabilities and rules of limitation; (i) proper conditions for, and enforcement of, schemes of arrangement sanctioned under Section 153 of the Indian Companies Act; (j) the Reserve Bank's powers of inspection of banks in liquidation; (k) applicability of the operative part of the Banking Companies Act to banks in liquidation; (l) exemption from court fees and stamp duties; (m) appointment of a special officer for a bank which has suspended payment but not been placed in liquidation; (n) rights of appeal in matters of small claims by or against a bank in liquidation. The committee has dealt adequately with the complex question of liquidation proceedings under the headings above and has made a number of valuable suggestions for administrative and legis-

lative action in order to remedy the defects of the existing law and procedure.

Settling Debtors' List

One of the far-reaching recommendations made by the committee relates to the settling of the debtors' list. Though perhaps inspired by the provisions of the Indian Companies Act in respect of contributories' liabilities, these recommendations are more comprehensive in scope. The procedure suggested for settling the debtors' list is intended to obviate the necessity for a multiplicity of suits entailing protracted and costly legal proceedings, and at the same time should ensure protection and preservation of properties constituting security against debts. In order further to strengthen the position of a bank in liquidation, the committee recommends that limitation should cease to operate in favour of debtors against a bank, just as it now ceases to operate in favour of a bank against its creditors.

Another recommendation of the committee deserves special reference. As the report shows, the question of appointment of a liquidator is of major importance. It may be recalled that the original intention of the famous Banking Companies Bill was that the Reserve Bank should act as official liquidator in all cases of the winding up of a bank by a court. But the law as finally enacted left it to the discretion of the Reserve Bank whether it be appointed liquidator. As a matter of fact the Reserve Bank has so far sought such appointment only in respect of one bank and relinquished office shortly after the appointment was made.

The observations made by the committee on this subject therefore assume considerable significance. As the Reserve Bank does not seem to be willing to undertake the task, some other way is required to restore order out of the existing chaos, and it is suggested that the liquidation of banks should be handled by the specialised office of a Court Liquidator. As appointment of a Court Liquidator is not, presumably, dependent on legislative change, it should be practicable to create this office immediately, at least in West Bengal, so that the banks now in the charge of the official Receiver and other banks in the charge of private persons acting as official liquidators, may be transferred to the care of the Court Liquidator for expeditious, economical and efficient disposal of their assets.

The report contains an "addendum" written by the Chairman and agreed to by another member, Mr. R. C. Deb, which seeks (a) to advocate that, in respect of contributories who do not dispute their liability, provision should be made for calls on them before the general list is settled and (b) to repudiate the Chairman's responsibility for the paragraphs of the main report which tend to exclude "criminal proceedings from the purview of the recommendations" (paragraphs 45 and 46). Though the arguments elaborated in the addendum deserve consideration, it seems that the formalities involved in making interim calls on contributories would take up time and attention which could be more usefully employed—especially in view of the fact that unpaid subscribed capital forms a small part of the total assets of a bank. As regards the other question raised in the addendum, it may not be unreasonable to hold that if small cases of local importance involving local investigations are transferred to the winding up court, the result may be to delay justice.

Mobilisation of Assets

The wider social issues involved in the liquidation of banks have not been examined, for the terms of reference of the committee restricted the scope of their labours to an examination of procedural questions. It is being increasingly recognised abroad—in the U.S.A., Germany, Argentina, Belgium and Italy—that "mobilisation" of the assets of a banking company in difficulty is of greater importance than realisation in the ordinary course of administration by a liquidator. The disruption entailed in the process of breaking up industrial and business units occasions greater loss of wealth than is represented by an arithmetical measure of the assets disposed of in liquidation. Several countries have therefore found it more profitable to preserve industrial and business units which happen to be borrowers of a bank that has failed. If it is not considered prudent or feasible to set up "mobiliser institutes" on the models of the countries mentioned above, schemes of arrangement sanctioned under Section 153 of the Indian Companies Act could be used for a similar purpose. If schemes are properly formulated and operated in co-operation with an established bank or a consortium of banks, the results may be expected to be advantageous to depositors in particular and the economy in general. There appears, therefore, to be a need for further thought on the recommendations of the Committee concerning "schemes of arrangement".

SUPPLEMENTARY DEMANDS FOR GRANTS

A STATEMENT on the last of the series of supplementary demands for grants for the current year amounting to Rs. 46.69 crores was laid on the table of Parliament on Tuesday by Sir C. D. Deshmukh, Finance Minister. An expenditure of Rs. 14.23 crores is to be met from the revenue account, while the amount from the capital budget will be Rs. 32.41 crores. In December 1952, supplementary grants amounting to Rs. 19.36 crores were presented to Parliament by the Finance Minister. The main items of expenditure to be covered by the latest supplementary demands are: Rs. 13.28 crores representing special

loans or ways and means advances to State Governments. Central assistance of Rs. 6 crores for relief in famine affected areas, and over Rs. 1 crore for the relief and rehabilitation of displaced persons from East Bengal. The last of these items was met from the revenue account, as also was an amount of Rs. 6.11 crores used to subsidise wheat at the rate of Rs. 2 per maund. The third item of expenditure to be met from the revenue account totals Rs. 5.65 crores, consisting of grants to State Governments under the interim award of the Finance Commission. These were given directly as loans and did not cover such additional payments as will have to be made on account of the States' share in the proceeds of income-tax and excise duties; the figure also includes grants to certain backward States for primary education. The fourth item is the subsidy of Rs. 69.86 lakhs paid last year by the Central Government from the capital budget to the shipbuilding industry, but which has since been transferred to the revenue account.

Of the Rs. 13.28 crores of the capital budget, which represents special loans or ways and means advances to State Governments, Madras alone received Rs. 6 crores to stabilise its ways and means position, but this amount has to be paid back to the Centre by March 1953. Central assistance amounting to Rs. 6 crores for famine relief, included in the capital budget, is stated to have gone to Madras, Saurashtra and Rajasthan. Expenditure on the Damodar Valley Corporation amounted to Rs. 2.36 crores—Rs. 1.28 crores constituting the Central loan to the Governments of West Bengal and Bihar for financing the D. V. C. and Rs. 1.08 crores paid directly by the Centre to the D. V. C. last year. The sale proceeds of the U.S. wheat loan during the current financial year, amounting to Rs. 16.57 crores, have been transferred to the Special Development Fund. A part of the wheat which India obtained in 1951 under the Rs. 90-crore wheat loan was also sold during the current financial year. The counter-part funds created out of the sale proceeds are devoted to expenditure on development projects.

THE CALCUTTA MONEY MARKET

CREDIT TIGHT BUT BUSINESS SLACK IN EASTERN INDIA

Wednesday, 18th February.

CONDITIONS continue quiet in Calcutta despite reports of brisk activity on the other side of the country. Cotton advances have increased fairly substantially and sugar advances are again higher. Jute advances on the other hand are stationary. Money is tight in Calcutta and interbank rates still quote 2½ percent for overnight money and 3 percent for call money.

There have been very few export bills passing; what little activity has been reported was in gunny bills. Remittance has been moderate. Sterling is strong at just below the upper limit of \$282. The rupee-dollar rate stands at Rs. 475. Sterling rates are also unchanged at T.T. and O.D. 1s 5 3/32d; three months' sight bills 1s 6 1/2d; and four months' sight bills 1s 6 1/2d.

More was tendered for the offer of Rs. 1 crore of treasury bills this week, but the tenders were made at a lower rate than in the recent past: Rs. 1,39,50,000 has been tendered and tenders at Rs. 99-6-3 were accepted. Lower tenders were rejected. The average rate of acceptance was Rs. 2-7-0 percent per annum. Tenders for another Rs. 1 crore of bills will be received up to Tuesday of next week in Bombay and up to Monday elsewhere. During the week ended 13th February treasury bills for Rs. 2,49,50,000 were sold in favour of the Reserve Bank of India.

Silver ruled very firm and the price rose from Rs. 165-12 to Rs. 167-8 chiefly because of professional support. The market paused at this higher level on the report that a state of emergency had been declared by the Bombay Bullion Association. The Board also decided to impose a margin on every rise of Rs. 7 in silver and Rs. 4 in gold over the basic rates. The present margin, namely, Rs. 500 per bar of silver would also be doubled. The President of the Association while administering a warning to the members that the Board would not hesitate to take strict action against excessive speculation, appealed to them to square up their outstanding positions. The price continued unchanged at 74d. in London and 85½ cents in New York.

Gold eased fractionally, the price falling from Rs. 91-6 to Rs. 90-14. The international free market price of gold in Europe also suffered a further small decline from \$37.60 to \$37.45. The sovereign at Rs. 59-15 revealed a decline of about 11 annas.

A further rise of Rs. 5.27 crores in notes in circulation to Rs. 112.20 crores is the outstanding feature of the return of the Reserve Bank of India for the week ended 13th February, 1953, while the total note issue at Rs. 114.30 crores shows a fractional fall of Rs. 60 lakhs. Notes held in the Banking Department consequently fell by Rs. 5.87 crores to total Rs. 111.10 crores. Government of India Rupee Securities also diminished by Rs. 20 lakhs to Rs. 449.86 crores. In the Banking Department, deposits of the Government of India decreased by Rs. 6 lakhs to Rs. 157.40 crores as also other Government accounts by Rs. 5.68 crores to Rs. 1.02 crores. Balances of commercial banks rose by Rs. 3.74 crores to stand at Rs. 45.44 crores. Government Treasury Bills were up by Rs. 3.30 crores to Rs. 16.33 crores, and balances held abroad

at Rs. 152 crores disclose an increase of Rs. 52 lakhs over the previous return. The item of other loans and advances increased from Rs. 14.97 crores to Rs. 15.61 crores, of which advances to scheduled banks against usance bills totalled Rs. 74.18 lakhs (same). Ways and means advances to Governments were up from Rs. 3.50 crores to Rs. 4.48 crores.

The statement of the position of Scheduled Banks for the week ended 6th February, 1953 discloses Demand and Time liabilities at Rs. 525.00 crores (Rs. 12.39 crores on account of borrowings from Banks) and Rs. 315.27 crores (Rs. 1.93 crores) compared with Rs. 529.10 crores (Rs. 12.29 crores) and Rs. 315.29 crores (Rs. 1.93 crores) respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 87 lakhs and Rs. 2.75 crores to aggregate Rs. 32.09 crores and Rs. 41.96 crores, respectively. There is a drop of Rs. 3.93 crores in investments to Rs. 307.45 crores. Advances and bills discounted at Rs. 497.57 crores reveal a rise of Rs. 6.61 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.8 percent and 59.2 percent against 9.2 percent and 57.9 percent.

The return of the Imperial Bank of India for the week ended 6th February, 1953, shows a rise of Rs. 75 lakhs in total deposits to Rs. 208.70 crores. Investments in Government Securities and other authorised investments are down by Rs. 1.42 crores and Rs. 13 lakhs to Rs. 74.72 crores and Rs. 10.76 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have advanced by Rs. 2.82 crores and Rs. 72 lakhs to aggregate Rs. 113.90 crores and Rs. 7.76 crores, respectively. Cash and balances are, in consequence, shown at Rs. 14.24 crores or Rs. 2.61 crores less.

During the fortnight ended 15-15 National Savings Certificates amounting to Rs. 25,73,050 were sold in the State of West Bengal.

During the same period applications totalling Rs. 5,69,000 for subscription to the 3½% Treasury Savings Deposit were also received by the Treasuries and the branches of the Imperial Bank of India, West Bengal and the Public Debt Office at Calcutta.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during December 1952, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 4,333 lakhs; re-exports Rs. 50 lakhs (transit trade Rs. 5 lakhs); imports Rs. 4,346 lakhs (transit trade Rs. 1 lakh). Total Trade Rs. 8,729 lakhs. Treasury: Exports (including re-exports) of Government of India coins nil; of currency notes Rs. 10 lakhs; of others nil; imports of currency notes Rs. 131 lakhs; imports of others nil or negligible. Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government Stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 33 lakhs.

WITH the appearance in our city yesterday of another daily newspaper the morning ritual of "going through the papers" will be increased in length by about one-third. I have not yet decided whether to order my tea fifteen minutes earlier or arrive in office so much later; quite possibly I shall do neither. I was not aware that we were so badly served by the popular Press here in Eastern India, but Bombay seems to have thought otherwise. Still, independent opinion, when it is really independent, is something we cannot have too much of, and to the extent that the newcomer provides it, it is welcome. Of the making of books and newspapers there is no end, and the weekly journalist, a superior type of being whose function it is to correct the errors of his hurried and flurried daily colleagues (in addition of course to making a few more of his own) accepts extra grist to his mill with no more than a light sigh. I thought this particular newcomer rather put its head in the lion's mouth by asserting in its first issue in India's premier commercial city that of course its new Calcutta edition might not be an economic proposition, but then "the Press, having a high and special role to play in national affairs, should be prepared at times to shed the profit motive which ordinarily dominates business enterprise in most other fields." Most folk within a radius of a mile of where I am writing have no intention of shedding the profit motive, nor even of requesting others to do so, for the sufficient reason that, despite the tiresome moralisms of our socialists, it is the force that keeps our society going. Newspapers are no exception to this, and all the papers I ever saw that shed their profits shortly afterwards began to shed their readers. However, profits or no profits, the Times of India's new venture in Indian journalism cannot pass without salute.

The East India Charitable Trust has launched its annual appeal for assistance in its good work among the Christian community of Eastern India, and at the same time has published its report on 1952's activities which will give donors some notion of the wide range of the Trust's beneficence. Subscriptions and donations in each of the last two years have totalled roughly two and a half lakhs of rupees, but this has fallen short of expenses; for 1953 the Trust hopes to raise nearer three lakhs. Several leading firms have already promised generous support, and although it is from firms and companies that the largest donations usually come, perhaps the best hope of raising more funds than in the past is to interest larger numbers of individuals in the Trust's work, which is my purpose in mentioning the matter here. The latest annual report is a comprehensive document describing the activities of the various committees and of the funds and institutions through which the Trust administers relief to the poor and needy. I commend it to those unfamiliar with the institution's work; others, no doubt, will need only this annual reminder.

Mr. Attlee's scrupulous propriety in dealing with all questions on Britain's foreign policy put to him during his recent visit to India, Pakistan and Burma compares very favourably with Mr. Bevan's often unsolicited opinions on a "third force", such as he put out in Delhi earlier this week. The fact that Mr. Nehru expressed himself in similar terms on the same day and in the same city in no way mitigates Mr. Bevan's breach, for Mr. Nehru is the architect of his country's foreign policy and is entitled to say what he likes about it at home. Mr. Bevan's clear implication that Russia and the United States are on the same moral plane in the present international dispute and that certain countries should desert the West

A DITCHER'S DIARY

tern alliance to join a third force would be rejected by most members of his own party, while the practice of airing fundamental disagreements on foreign affairs while on trips abroad has been eschewed for obvious reasons by most British politicians. Many of his countrymen, inside the Labour Party and out, would agree with some of Mr. Bevan's specific strictures on Republican policies in the Far East, and roughly similar views have been put forward in this column before. But my criticism, and I think most others', has been founded on the belief that co-operation between Britain and the United States is so vitally necessary that it should not be endangered by divergencies on comparatively minor points; free and friendly criticism of American attitudes has been motivated by the hope of perfecting an alliance that sometimes tends to get out of step. It is surely for this reason that one does not waste one's breath censuring Russian actions, though they are infinitely more objectionable. Mr. Bevan on the other hand seems to think that co-operation with America is impossible, unnecessary or both. I notice that he did not actually mention Britain as a candidate for his third force but unless he meant that she should join, his Indian listeners would be entitled to ask him why he gives them advice he does not pass on his own countrymen.

The Bengal Chamber of Commerce and Industry has chosen a strong team to direct the 101st year of its activities. The Committee for 1953-54 includes no newcomers, for the three new members not on the 1952-53 Committee have all seen earlier service: Mr. A. S. Officer in 1949 and 1951, Mr. G. A. S. Sim in 1950 and Sir Anthony Elkins as President in 1949 and a committee-man many times before that. Mr. E. J. Pakes accedes to the presidency after a year in the vice-presidency and previous membership of the committee. Mr. G. M. Mackinlay will be his vice-president through a year that promises to be no less strenuous than any since the war. The seven other members will bring a wealth of experience in every major branch of the commerce and industry of Eastern India, as well as considerable knowledge of the working of industrial and business associations. They will enter on their responsible duties in a few weeks time with the good wishes of a community that has learnt from a century of varied fortunes the great value of such instruments of co-operation as the Bengal Chamber. For the record I give the full list of office-bearers for 1953-54: President: Mr. E. J. Pakes (Mackinnon, Mackenzie & Co. Ltd.); Vice-President: Mr. G. M. Mackinlay (Jardine Henderson Ltd.); Committee Members: Mr. R. H. D. Cambell (Shaw Wallace & Co. Ltd.), Sir Anthony J. Elkins, C. B. E. (Gillanders Arbuthnot & Co. Ltd.), Mr. N. D. Harris (Imperial Chemical Industries (India) Ltd.), Mr. O. T. Jenkins (Balmer Lawrie & Co. Ltd.), Mr. D. D. MacGregor (The Chartered Bank of India, Australia & China), Mr. A. S. Officer (Bird & Co. Ltd.) and Mr. G. A. S. Sim (Andrew Yule & Co. Ltd.).

The Calcutta Light Opera Group and Society's production of *A Country Girl* will be repeated at the New Empire tomorrow, the 20th, at 6 in the evening in aid of local charities. I am assured that some of the shortcomings for which this enthusiastic company were taken to task by a not over-generous critic after an earlier performance have since been repaired and the prospect for those

who go along on Friday is of an excellent evening's entertainment. The show is quite good enough not to need any other appeal than to the Calcutta public's taste for a few hours' unusual enjoyment, but I understand that this is the first move in a welcome attempt to revive a form of theatrical production for which Calcutta was known before the war. It has been well enough received to put CLOGS in the mood to present us with another light opera later in the year, probably about December; the piece has not yet been decided upon.

The armoured Daimler built for the late King during the war and then the property of the Nizam of Hyderabad, which I referred to here some weeks ago, has been sold in London through the Indian High Commissioner. I remarked previously that there could not be much of a market for vehicles of this sort in Britain, but having learnt its destination I see how wrong I was: it has been bought by a rubber company and shipped out to Johore for use by their estate staff.

Dispute about the quality of Indian plywood chests has dragged on for years and has at times become rather acrimonious, so I suppose I must be careful what I say. Local manufacturers are apt to claim that their products are as good as the imported, and in the next breath to urge continued tariff protection and straight import restrictions; when taxed with the inconsistency of these attitudes, there is talk of conspiracy among agency houses, an improbable accusation that is levelled at the unfortunate tea industry more often than any other. Knowing nothing about the matter, I was interested to hear the views of Dr. Ing. Otto Kraemer, a United Nations plywood expert from Germany, at a reception by the Plywood Manufacturers Association in Calcutta last Saturday. Dr. Kraemer has been touring the country for some months visiting and advising tea chest makers, and his guarded opinion, put as carefully as his command of his listeners' language would permit, was that Indian panels can be as good as foreign if produced under "strict and permanent" supervision. If the outcome of the current Tariff Commission enquiry is another lease of life for protection, perhaps the authorities will take note of the second half of Dr. Kraemer's judgment and provide adequate supervision. He felt that the factories producing plywood needed considerable improvement and rationalisation, better machinery and more experienced technical staff; as with other Indian enterprises of this sort, the average factory was too small and too poor to invest in modern equipment. Indian tea chests had got a bad name because unapproved factories had put out defective panels and also, Dr. Kraemer said, because too much tea was crammed into them by some packers. This generally accords with the opinion of many tea traders, who are not such confirmed opponents of the local plywood industry as they are made out to

Company Meeting

THE SCINDIA STEAM NAVIGATION COMPANY, LTD.

MR. DHARAMSEY KHATAU REPORTS SUBSTANTIAL IMPROVEMENT IN LIQUID RESOURCES

Extracts from the speech delivered by Shri Dharamsey M. Khatau, Chairman of The Scindia Steam Navigation Co., Ltd., at the 33rd Ordinary General Meeting of the Company, held on Wednesday, the 11th February, 1953, at 4-0 p.m. at Scindia House, Ballard Estate, Bombay.

The results of the year's working yielded profits which were sufficient, after charging Depreciation, to enable the Company to write off not only the heavy accumulated losses brought forward from preceding years, but also the substantial loss incurred in the sale of the Shipbuilding business of the Company to the Messrs. Hindustan Shipyard Ltd. The new Government sponsored shipbuilding concern at Visakhapatnam. The liquid resources of the Company have improved substantially. Furthermore, after the lapse of three years, it has been found possible to declare a modest dividend of 10% on the share. All these indications of a marked change in the Company's fortune will, I am sure, be received by the shareholders with satisfaction.

Taxation

As already stated in the Directors' Report, E.P.T. assessment of the Company have not as yet been finalised. I cannot say when the various issues that are still pending will be decided and assessments completed. I may state, however, that in view of the payments so far made and the Double-Income-tax Relief due to the Company, any undetermined taxation liability is fully covered. This leaves only the question of making adequate provision for future taxation. You are aware that under the provisions of the Income-tax Act, the Company is entitled to certain accelerated Depreciation Allowances known as Initial and Additional Depreciation in respect of new assets. Since the Company has been acquiring new tonnage for the last few years, substantial Depreciation Allowances have accumulated under these heads. While it is not possible for the Company to provide out of its current profits any amount towards these special Depreciation Allowances, it is clearly necessary, as and when the Company makes profits, to provide each year, by way of Reserve for Deferred Taxation, an amount equivalent to the tax that would otherwise have been payable and would have had to be provided for had there been no such accelerated Depreciation Allowances. On this basis, a provision of Rs. 3 lakhs has been made this year. This procedure, I may add, is in accordance with the practice followed by the Company in the past when, for the accounting year ending 30-6-1947, the Company had provided Rs. 19 lakhs towards Deferred Taxation against the Initial Depreciation Allowance due to the Company for that year. It would clearly be imprudent not to make adequate provision in this manner for a tax liability properly arising out of current profits which is merely deferred to subsequent years by virtue of (accelerated) depreciation being allowed now instead of in those years.

Coastal and Adjacent Trades

The results of the last year's working should be considered particularly satisfactory, in view of the fact that the aggregate volume of coastal trade, which was 25.56 lakh tons in 1950/51, registered a noticeable decline to 24.45 lakh tons in 1951/52. This was due mainly to a fall of nearly 2 lakh tons in the movement of coal from Calcutta.

In the adjacent trades, namely, Burma/India, Burma/Ceylon, Pakistan/India a similar decline occurred mainly due to lesser intake of rice from Burma both by India and Ceylon, and almost complete stoppage of trade between Pakistan and India.

The effect of these decreases in the volume of Coastal and the Adjacent Trades was reflected in the Company's aggregate cargo liftings in these Trades which fell from 12,43,200 tons in 1950/51 to 11,35,400 tons in 1951/52. Fortunately, however, the freight earned in 1951/52 amounted to Rs. 3,82,57,000 as compared with Rs. 3,31,48,000 in 1950/51. Much of this advantage, which resulted from the regular and planned employment of our ships at comparatively reasonable levels of freight rates, was considerably offset, however, by a continuing increase in the cost of handling cargoes and decrease in output at loading and discharging ports, to say nothing of delays in turn-round of ships.

The prospects for the current year are not as good as those of the last year, whether on the coast or in the adjacent trades. The Ceylon Government has decided to import Chinese rice in substantial quantities thus reducing their intake of Rice from Burma; the rates for the movement of rice from Burma to Ceylon and India have had to be substantially reduced; so, too, the rates for the movement of coastal salt. Moreover, there has been a noticeable fall in the volume of coastal cargo offered. Altogether, the results of Coastal and Near Trades operations during the current year are likely to be comparatively poor.

Inordinate delays in securing berths and loading coal at Calcutta as also in discharging the same at various destination ports on the coast continues to be a matter of some concern. It has resulted in considerable wastage of operating days; and while some improvement in loading rates was noticeable at times, the situation again deteriorated considerably and has resulted in further heavy wastage of operating days during the current year.

Overseas Trade—India/U.K./Continent

The two passenger ships, the s.s. Jalazad and s.s. Jal-Jawahar have maintained their services regularly in the India/U.K. Trade, except for an interruption of about two months in the case of s.s. Jalazad as a result of her grounding, whilst in Suez Canal, on her way to U.K.

I have referred earlier to the good results which your Company has been able to show for the financial year under review. In the overseas trades, this was due mainly to the planned utilisation of our tonnage as a result of rationalised sailing programmes, a more economic level of freight rates and good cargo offerings. I would like however to add that cargoes are presently not as plentiful as they were last year because trade is also not as brisk, with the result

that the ships are not infrequently sailing with some space. There is, however, no significant change in the operating expenses; and if these do not go up, the result of the current year's working may not be as bad as I had at one time feared.

You will be glad to learn that the two Indian Companies, namely, ourselves and India Steamships who are trading regularly between India and the U.K./Continent, have decided to offer a joint service from the ports of Hamburg and Bremen to ports in India, Pakistan and Ceylon. By this arrangement, the Indian Lines will jointly be able to provide a more frequent and regular service from these ports to India than has been possible hitherto. I trust this endeavour of the two Indian Companies will be appreciated both by the shippers in Germany and importers on this side.

Overseas Trade—India/U.S.A.

During the financial year under review, our vessels engaged in the Trade with U.S.A. have shown exceptionally good results due partly to increase in freight rates, but mainly to the rationalised voyaging. Two of our vessels were employed on chartered terms from India to the Pacific Coast of America via Japan, thus allowing the loading of grain from the west coast of U.S.A. in addition to loadings from the east coast where our steamers were normally employed.

However, as grain rates have now fallen considerably as compared with last year the results of this year are not expected to be as profitable as last year. Moreover, imports of foodgrains have now diminished, and there have been no grain shipments to India during the last few months from the east coast of America. There is also considerable paucity of general cargo on this trade. Since the Company has been acquiring new tonnage for the last few years, substantial Depreciation Allowances have accumulated under these heads. While it is not possible for the Company to provide out of its current profits any amount towards these special Depreciation Allowances, it is clearly necessary, as and when the Company makes profits, to provide each year, by way of Reserve for Deferred Taxation, an amount equivalent to the tax that would otherwise have been payable and would have had to be provided for had there been no such accelerated Depreciation Allowances. On this basis, a provision of Rs. 3 lakhs has been made this year. This procedure, I may add, is in accordance with the practice followed by the Company in the past when, for the accounting year ending 30-6-1947, the Company had provided Rs. 19 lakhs towards Deferred Taxation against the Initial Depreciation Allowance due to the Company for that year. It would clearly be imprudent not to make adequate provision in this manner for a tax liability properly arising out of current profits which is merely deferred to subsequent years by virtue of (accelerated) depreciation being allowed now instead of in those years.

Tonnage Position

During the year under review, two old and altogether uneconomic ships, s.s. Jalabala and s.s. Jalavijaya were sold; for the same reason, s.s. Englestan was disposed of after the close of the year.

Two second-hand cargo ships were purchased during the year as additions to the Company's coastal fleet. They have been re-named s.s. Jalashan and s.s. Jalayoti. We have also acquired two more cargo ships, s.s. Jalapratap and s.s. Jalapushpa built at Visakhapatnam. These were the last two of the second batch of three ships ordered by Government from the Visakhapatnam Shipyard, before it was taken over by Messrs. Hindustan Shipyard Ltd. In addition to these purchases, orders have been placed with Messrs. Hindustan Shipyard Ltd. for the construction of five 7,000 D.W. Tons cargo ships which are to be powered with Diesel machinery. While everything possible is being done to expedite the progress of their construction, the unavailability of timely deliveries of steel may cause delay in the construction and completion of these ships. As far as I can say at present, provided no further difficulties arise, the keel of the first ship will be laid in June this year and the deliveries of the 5 ships will be spread over 1954/55 commencing from April 1954 or so.

I referred earlier in my speech to the improved position as regards our liquid resources which, at present, quite ample for our requirements. The plans for addition to Coastal Tonnage which I have just outlined will indicate that your Directors are quite alive to the need for the full and profitable utilisation of all our available resources. Mostly, these will be used in modernising our Coastal Fleet in addition to it as and when suitable opportunities occur or the need arises.

As regards our Overseas Fleet, there is need, on the one hand, to bring up our U.K. Continental Fleet to its full strength of twelve vessels as agreed to by the India-Pak/U.K./Continental Conference, and, on the other, to place at least four fast modern vessels in our India/U.S.A. Service. The way to achieve these targets has now been opened for us, so far as finance is concerned, by the provision which has been made in the First Five Year Plan for loans on attractive and easy terms for the purchase or building of vessels suitable for the Overseas Trades. In this matter the Government of India, and in particular the Director General of Shipping and the Ministry of Transport, merit the warmest commendation from the Shipping Industry; for I venture to prophesy that this will be a decision of far reaching benefit to the development of shipping in this country. It is to be hoped, however, that the essential merits of this admirable step will not be whittled down in practice by procedural limitations such as the total lapsing of grants at the end of each financial year. It is not easy, even when finance is readily available, to decide quickly about buying or building ships; and where it is a question of building a vessel, it generally takes even longer to reach final decisions because the issues involved are so complex, the investment so large and the market conditions both as to freight rates and tonnage prices, not to mention cargo availabilities, so uncertain that quick decisions would almost certainly be wrong decisions.

Flag Discrimination

I should like to refer at this stage to an important and disturbing trend of thought in certain international shipping circles, that has gathered rapid momentum in recent months. It has an important bearing on the future growth of our Shipping, which at present constitutes less than 4% of world tonnage even though the overseas trade of India is about 4% of the total World Trade.

The trend to which I refer is the growing tendency on the part of certain powerful and entrenched shipping interests to raise the cry of "Flag Discrimination" at the slightest sign of any attempt by the Government of a country, whose shipping is ill developed, to assist

and encourage National Shipping by appropriate regulatory steps. Notwithstanding the total and unrepentant abandonment of laissez faire by all countries in almost every field of economic endeavour, a high level concerted attack is now being launched, under the guise of abolishing governmental restrictive practices and barriers to the free movement of international trade, against every legitimate attempt to encourage and assist the development of national shipping by the Governments of those countries whose shipping is still backward and undeveloped in relation to the volume of their foreign trade. And the slogan for this attack is that it seeks to eliminate "Flag Discrimination" in the field of international shipping. Discreetly, there is no attempt to define this term. Were it defined, it would be clear that what is really sought is the perpetuation of a "free for all" in which the weak would struggle in vain with the most powerful and in which therefore the few, but financially mighty, would soon crush the many, but financially puny.

Such a doctrine of "every one for himself and devil take the hindmost" has only to be stated to be at once rejected. We cannot accept it; and, I am sure, neither can the Government of India, however tender may be their susceptibilities against accusations of "Flag Discrimination." The position of those countries, which by every legitimate means the development of national shipping in consonance with the trade, defence and general economic requirements of an independent country is too well known to need recapitulation. What is less well known is the vital part which a well developed national merchant marine can play in maintaining an equilibrium in a country's balance of payments and so the integrity of its currency. That this latter aspect is not so well known as it should be, will be clear from the fact that not only the vast numbers of importers and exporters in this country but also the Governments themselves, particularly of the States, seem to be unaware of the urgent economic importance of buying F. O. B. and selling C. I. F.

In such circumstances, the cry of "Flag Discrimination" must be recognised for what it is, namely, plain "last ditch" stand couched in pious phraseology, by the vested and powerfully entrenched shipping interests of certain countries, whose tonnage is far more than their more generously conceived legitimate claims to prevent the growth of national shipping in other maritime countries, where the tonnage is at present insufficient.

By the same token, we must be prepared to state our own position in this respect plainly and in unequivocal terms. I may say we have already done so, on the appropriate platform, through the Indian National Steamship Owners' Association. But in view of some publicity which has been given to the opposite view in the U.K., in the course of which our stand has been belittled, I venture to recapitulate our standpoint here.

In the first place, we agree that except in the Coastal Trade, which may of course be wholly reserved for national shipping, there should be no discrimination in favour of vessels of the national flag in such matters as berthing or other port facilities, Port Dues, Light Dues, Consular Fees on commercial documents, etc. Secondly, the concept of "Flag Discrimination" in all other fields need to be carefully defined, nothing being deemed to be flag discrimination which is for the legitimate encouragement and development of, or assistance to, national shipping in countries whose merchant marine is backward and undeveloped in relation to the volume of their coastal and foreign trade, or which is necessary for purposes of defence or for safeguarding the national economy including, in particular, the integrity of national currency by way of redressing an unfavourable balance of external payments.

Thirdly, it must not be overlooked that measures which may admittedly be discriminatory may nevertheless be justifiable as the only effective way of protecting national shipping against discriminatory action (a) by other countries in favour of their own national shipping or in favour of shipping of other countries, or (b) by powerfully organised foreign trading interests who may unduly favour, to the point of unfair discrimination, their own national shipping under the ostensible cloak of "customer preference."

This is our stand; and I make no apology for urging it in such explicit terms. It happens almost precisely to be the basis on which, over a century ago, British shipping was rapidly developed by appropriate action at Governmental level. What was good for them once is good for us now, even though it happens to be a thorn in the side of those following the first World War, they seem to have abandoned. I am aware that this attitude of ours is sought to be brought into disrepute on the ground that it constitutes more a definite notion of "flag protection" than of flag discrimination. Personally, I think "flag protection" is an admirable way of describing what we want; for it is indeed protection that I seek for our national vessels operating in the field of our international trade so that we may develop to our full stature in consonance with the legitimate needs of our country for an adequate merchant marine. I would much rather have flag protection than flag destruction masquerading under the guise of eliminating flag discrimination.

Hull Insurance

In consonance with our tradition to be the pioneers in all shipping matters in India, we decided this year to entrust the Hull Insurance of our entire fleet of a Hull Insurance Companies, thus launching our Fleet Insurance which in India for the first time. Rs. 22 crores was placed with a group of eight Indian Insurance Companies, of whom the New India Assurance Co. Ltd., was selected as the leader. I need hardly say that this step was taken after the most careful consideration to ensure that we should in no way be prejudiced either in the matter of rates or in the matter of prompt settlement of our claims.

I hope other Indian shipping companies will also endeavour to do their best to strengthen the Indian insurance market by placing their hull insurance also with the Indian Companies.

Before I conclude, I should like to express the warm appreciation of the Scindia Company for the co-operation, assistance and advice which it has received on numerous occasions from the Ministry of Transport and Directorate-General of Shipping. I should like also to convey the thanks of the shareholders and the Directors to the Management, the staff both ashore and afloat and the Agents of the Company at various ports for having discharged their responsibilities in a manner which has enabled the Company to achieve such excellent results.

Stocks and Shares

PRE-BUDGET HESITATIONS LEAVE MARKET UNDERTONE FULLY STEADY

BONUS ISSUE BY INDIAN WOOD PRODUCTS: ENGINEERING AND MISCELLANEOUS IN DEMAND

Wednesday Evening.

THE stock market is living on the news about China, and President Eisenhower's statement at his first Press conference that a blockade was being considered by some agencies of the U.S. Government encouraged speculators. The volume of business put through in the past seven days was probably less than in the previous week, but after a quiet day on Monday there was distinct improvement in turnover yesterday and today. Pre-budget caution restrains investors and speculators alike and it is unlikely that the next week will see any broadening of activity; but meantime the market is fully steady.

Outside support, which has been in evidence to an encouraging degree, has centred on engineering and good miscellaneous shares, to the neglect of jute and coal shares. Tea shares have been notably steady. There has been good enquiry for sugar shares on reports that the mills are crushing an excellent crop of cane; this buying is from within the sugar trade and is not speculative. Sone Valley and Titagur Paper have been in demand and Rallis has been taken up to Rs. 72. Digwarrah Rubber are now over Rs. 14, with buyers.

There has been heavy bear-covering in Indian Irons which took the price to Rs. 25. An announcement concerning a bonus issue by Indian Wood Products appears on page 217 of this issue of Capital.

The general tone of the Gilt-edged market was quite steady, except for the 3% Conversion Loan 1946/86 which met with heavy selling pressure from Bombay, and in consequence reacted sharply from Rs. 83-1 to Rs. 82-13 sellers. The 3% Non-Terminal Government Paper 1896/97 was marked down in sympathy from Rs. 83-4 to Rs. 82-13. The buying enquiry in short-dated issues, which were reported last week, has continued, but there were no changes in prices except in the case of 3% 1957 which was better at Rs. 98-10 because of the approach of the half-yearly interest date (1st March). In the medium-dated group, 4% 1960/70 improved to Rs. 101-12 while 3% 1959-61 after being quoted at Rs. 95-15 ex-voucher, found buyers at the close at the improved rate of Rs. 96. Both 3 percents 1963/65 and 1964 were supported at their previous level of Rs. 92-8. There was a small enquiry for long-dated loans, but prices showed no variation.

In Provincials, the 4% Bombay State Loan 1964 met with keen enquiry and the price improved further to Rs. 101-6. 4 percents U.P. and Madras were also in demand at Rs. 100-8 and Rs. 100-12 respectively. In contrast, the West Bengal 1964 issue, after being taken to Rs. 101-2, was freely offered at the close at Rs. 101 without attracting buyers.

Among preference shares, there was some enquiry for selected jute and miscellaneous issues, but business was on a reduced scale. In jute, Chitavalah and Empire were both taken at Rs. 114-8 and a small lot of Gourepore changed hands at Rs. 104-8. Khardah were marked at Rs. 97 and Kankannarrah at Rs. 110. Lawrence 'B' were done at Rs. 100. Amongst miscellaneous issues, Calcutta Electric Supply were quoted at Rs. 12-7 and British India Corporation were crossed at Rs. 146-12. Dunlop Rubber 2nd improved to Rs. 102 and Indian Iron and Steel changed ownership at Rs. 108. India Steamship were marked at Rs. 86, Martin Burn at Rs. 101-8. Muir Mills at Rs. 108 and Rallis were taken at Rs. 79 ex-dividend.

Although no business was reported in Calcutta in Imperial Bank fully-paid and partly-paid shares, their prices were fully steady at Rs. 1,820 and Rs. 446. Hind Bank were done at Rs. 20-4. Hindustan Commercial improved further to Rs. 12-4. United Commercial changed hands at Rs. 36-8 and United Bank of India (Rs. 10 paid-up) at Rs. 4.

Among railways, Futwah-Islampur were quoted at Rs. 57 and Howrah-Sheakhala at Rs. 60.

Business in cotton shares was on a restricted scale. Benares were marked at Rs. 2-4, Cawnpore at Rs. 8-2 and Elgins at Rs. 17. New Victoria changed hands at Rs. 1-8 and Swadeshi Cotton ordinary and preferred Ordinary were both done at Rs. 9-10.

Business in coal shares was also on limited lines and, with few exceptions, closing quotations were slightly easier. New Beerboom on the announcement of an ordinary dividend at the rate of 8 annas per share, after a lapse of 1½ years, improved to Rs. 21-8 but closed a shade easier at Rs. 21. East Indian met with profit-taking and closed lower at Rs. 22 while Ranegunge were steady at Rs. 8-4. Burrakur fluctuated within 2 annas to close at Rs. 10-8. Bengal were reported at Rs. 524, Dhemo Main at Rs. 10-1 and South Karanpura at Rs. 13-8. Central India changed hands at Rs. 4-9, Western Bengal at Rs. 4-3 and Talcher at Rs. 3-3.

The jute section ruled dull and the volume of business was disappointing. Howrah fluctuated between Rs. 23-3 and Rs. 23-9 to close at Rs. 23-10.

Agarpara were done at Rs. 19-8, Alliance were marked at Rs. 161 and Barnagore at Rs. 162. Belvedere came to hand at Rs. 209 and Champdany at Rs. 162-8. Other transactions included Delta at Rs. 230, India at Rs. 125 and Nuddea at Rs. 48. Presidency were quoted at Rs. 5-5, Reliance at Rs. 13-8, Shree Ambica at Rs. 17-10 and Union at Rs. 17-5.

Very little business was reported in the electric supply section. Calcutta Electric, however, met with good enquiry at around Rs. 14-1. A solitary transaction was reported in U.P. at Rs. 14-3.

Special features in the sugar section were Darbhanga and Champaran, the former improving to Rs. 8-8 while the latter were in demand at Rs. 20-8 without attracting sellers. Belsund were steady at Rs. 7 as were Cawnpore at Rs. 29. Carew were quoted at Rs. 5-4 and Ramnugger improved sharply today to Rs. 16-12. U. P. were steady at Rs. 14-14.

In the engineering section, Indian Iron & Steel fluctuated narrowly during official market hours between Rs. 24-5 and Rs. 25 to close at the latter rate. Braithwaites met with unsatisfied enquiry and were fully steady at the higher rate of Rs. 11-6. Bridge & Roof changed hands at Rs. 18. Britannia Engineering at Rs. 17-6 and Burn at Rs. 262. Indian Galvanizing New were easier at Rs. 13-15. Business was reported in Jessops at Rs. 22-4. Kumar-dubi Engineering at Rs. 7-12 and National Iron at Rs. 4-4.

In the miscellaneous section, Shree Gopal were steady at Rs. 17 and Titagur Paper improved to Rs. 35. Sone Valley were steady at Rs. 6-14 as were New Asiatic Insurance at Rs. 4-1. India

BRAND CONDUIT PIPES.

- * Best Protection of Elec. wires.
- * Highly inside insulated & Stoved.
- * Perfectly According to B.S.S. 31.
- * Produced 4 lakh feet monthly.

The National Conduits Ltd.

Approved by Govt. Test House (Est. 1940)

on Govt. Rate Contract.

Factories: Delhi, Kanpur, Bombay, Calcutta.

Sole Agents:

Shree Nursingsahay Mudungopal Elec. Co., Ltd.

55/58, Ezra Street, Calcutta.

Delhi, Kanpur, Bombay, Madras.

As a result of all these recommendations, States will receive the following amounts (in lakhs of rupees) from the Centre:

State	Finance Commission Award	Deshmukh Award
Assam	3.43	2.21
Bihar	8.53	6.55
Bombay	11.25	11.60
Hyderabad	3.50	1.25
Madhya Bharat	1.46	6
Madhya Pradesh	4.20	3.35
Madras	11.10	8.56
Mysore	3.68	3.45
Orissa	3.74	2.01
PEPSU	65	16
Punjab	3.82	3.43
Rajasthan	2.89	10
Saurashtra	3.02	2.75
Travancore-Cochin	3.23	3.22
Uttar Pradesh	11.70	8.88
West Bengal	9.60	7.54

Assam and other States with scheduled areas and scheduled tribes will in addition receive grants under Article 275(1) of the Constitution. Assam will also receive Rs. 40 lakhs under sub-clause (a) of the second proviso to Article 275 (1).

In addition to the share of revenues under the Commission's scheme, States will also receive the outstanding arrears of their share of income-tax for the period before 1st April, 1952. The budget for 1952-53 assumes that these arrears will be Rs. 5 crores and, if the actual amount is of this order, Madras will receive Rs. 87 lakhs, Bombay Rs. 103 lakhs, West Bengal Rs. 68 lakhs, Uttar Pradesh Rs. 90 lakhs, Punjab Rs. 27 lakhs, Bihar Rs. 63 lakhs, Madhya Pradesh Rs. 30 lakhs, Assam Rs. 15 lakhs and Orissa Rs. 15 lakhs.

The Commission has made two further recommendations: to set up a small organisation to study States' finances and to improve the statistics on

income-tax. The organisation performing these functions, the Commission says, should preferably be part of the President's Secretariat and should make a continuous study of the finances of State Governments so that future Finance Commissions will have sufficient material available at the very commencement of their enquiries. The organisation should work in close liaison with the Finance Ministry.

The Commission's recommendations are not applicable to the State of Jammu and Kashmir. To implement the recommendation on the distribution of certain Union excises, a Bill will be introduced in the current session of Parliament.

Plantation Labour Conference

The Plantation Labour Conference is due to meet in Shillong on 27th and 28th February. The principal item for discussion will be surplus labour on plantations. The demand and price of tea have improved recently and, according to New Delhi reports, some tea gardens which had given notice of closure have not actually closed down. Others which had closed down have now reopened. The number of gardens closed at present is 107 as against 124 a fortnight ago.

Budget Session Begins

The Budget session of Parliament was inaugurated here this week with an address by the President. The debate on the address was colourless; the address itself was merely a narration of the Government's achievements, which have already been publicised through the Press. The Commerce Minister, Mr. T. T. Krishnamachari, introduced a Bill to levy a duty on textiles in order to assist the handloom industry.

Pharmaceutical Enquiry Committee

The Central Government has appointed a committee to enquire into the working of the pharmaceutical industry. Major-General S. L. Bhatia is its chairman and other members are: Dr. Vasudev Rao, Dr. B. B. Yodh, Dr. J. C. Ghosh, Dr. Anil Kumar Sen, Dr. R. C. Shah, Dr. T. R. Seshadri, Dr. H. R. Nanji, Sri K. R. Chandiani, Shri P. M. Natar and Dr. A. Nagaraja Rao. The terms of reference of the Committee are: (1) To study the working of pharmaceutical manufacturing concerns, with particular reference to (a) the demand for the drugs produced and their essentiality; (b) the quality of drugs; (c) the cost of production; (d) the efficiency of the process employed; and (e) whether the product is made from imported intermediates and penultimate products or from basic raw materials and chemicals. (2) To study the operation of foreign and/or Indian concerns which import drugs and pack them in the country; and the extent of the tie-up between wholly or partly owned Indian concerns and foreign companies. (3) To recommend steps to encourage the manufacture of important drugs which are imported at present. (4) To enquire into the scheme of distribution of pharmaceutical products, whether imported or manufactured or packed in the country, the profit margins of the trade or industry and the part played in this by purely Indian as well as other concerns. (5) All ancillary matters connected with the above.

Technical Examination of Steel Project Begins

The Government of India has set up a technical mission to reassess its steel project. The mission consists of the Indian Steel Controller, Mr. C. H. Natesan, an expert of the International Bank, Mr. Rembert, and a representative of Koppers, Mr. Hill; it has already commenced work. An official steering committee consisting of the Commerce Secretary, Mr. H. V. R. Iengar, the Chairman of the Railway Board, Mr. F. C. Badwar, and the Secretary of the Production Ministry, Mr. A. K. Chaudhri, has been set up to advise and assist the mission, which will revise the project report by bringing its estimates up to date and recommend a site for the plant. The Production Minister, Mr. K. C. Reddy, explained this week why negotiations with the Japanese firm were dropped. He said that the Government did not desire that the overall charge and control of a basic industry such as steel should be handed over to a foreign interest. The Prime Minister added that the Government intended to set up the steel plant under its own control. "The only question is whether someone else might be partly associated with it".

Oil Refinery Talks with Caltex

Mr. Ferguson and Mr. Roskie, representatives of Caltex, have arrived here and commenced negotiations with the Government on the installation of an oil refinery on the east coast of India. The agreement they are expected to conclude will be similar to the two previous ones signed by Standard Vacuum and Burmah Shell last year.

Industries Licensing Committee

Under the Industries (Development and Regulation) Act, 1951, a licensing committee has been set up to advise the Government on the establishment of new industrial undertakings covered by the Act. In making its recommendations, the Committee will consider such factors as the suitability of the site, the existing capacity of the industry and the general state of industrialisation in the area concerned. The Government has no intention to set up a Statutory Development Board. Under the Industries Act, 53 licences have been granted—29 for establishing new undertakings and 24 for the expansion of existing ones. The Act came into force in May 1952 and the time allowed for implementing the projects is generally from 12 to 18 months.

West Pakistan

BARTER DEAL SYSTEM MAY BE SCRAPPED

NEW PROCEDURE FOR IMPORT APPLICATIONS

(FROM OUR OWN CORRESPONDENT)

Karachi, 12th February.

BARTER deals on a government-to-government basis seem to be now a well established method of exchange of goods. In Pakistan, however, we have gone beyond this and the Government, in the hope of expediting the disposal of exportable commodities, is trying to encourage private barter deals. It is the vicious circle set up by Government interference in the normal processes of trade which has led to this, if a circle can be said to lead to anything. The country is indeed reduced to extreme straits when trade has to be conducted on a pre-monetary basis.

The Government's policy in this matter has given rise to a storm of criticism. In the first place, it is being asked whether in present conditions, when a distinct improvement in the tone of the cotton market is noticeable and cotton has been moving fairly steadily at prices slightly above the floors, it was necessary to embark on this experiment. Secondly, there has been endless discussion of the difficulties of co-ordinating such barter deals which in most cases must be three or even four-cornered, correlating prices of goods in widely different categories, and obtaining the approval and the necessary licences from the Government. Admittedly, the Government is doing its best to streamline the procedure and a high level committee of Secretaries has been sitting daily to deal with applications. Yet the difficulties are immense. They would not be so serious if the exporter who is granted the import licence for the goods he intends to bring in against cotton or other exportable commodities were permitted to sell the imported goods as best he can; but it has been laid down that he must supply them to established importers in the particular line, according to the shares determined by the Chief Controller of Imports and at prices to be fixed by the Government. He is thus left to wonder whether he is going to get payment for his goods. Allowing for the time required for shipment, there is no reason to suppose that he will not receive his instructions from the Government in plenty of time. But suppose the price of the goods in question falls in the meantime; it is obvious that the exporter-importer will have a difficult job to keep the nominated established importers to their share of the bargain and recover the sale price from them. For these and many other reasons, the barter system is being strongly assailed. A deputation of leading businessmen has just had an interview with the Commerce Minister on the subject, and it seems quite possible that the whole system will be scrapped. So far it is understood the only barter deal that has been finalised is the sale of some of the old-crop cotton, held by the Pakistan Cotton Board, in exchange for a cargo of sugar from Spain. Some exchanges of raw cotton against cotton yarn have also been under consideration and may possibly have been approved.

Import Licensing Procedure

The immense care and attention to detail shown by the office of the Chief Controller of Imports in systematising the import licensing arrangements can only compel one's admiration. Although the new licensing procedure has not yet been published, the C.C.I. has recently brought out a public notice describing the procedure for submitting review applications in respect of licences granted last year. This notice, with its annexure, covers 65 pages of a Gazette Extraordinary and is to be read with the public notice of the 17th March 1952 (almost as lengthy) which describes the principles of licensing. It explains, for each item, the basis on which licences were issued, in order that disappointed applicants shall know exactly what they should have received and shall not put in unnecessary review petitions. Licensing system appears extremely complicated, but the C.C.I. has done well to go into sufficient details to remove almost all elements of uncertainty. For example, importers are divided into three classes: (1) established importers whose aggregate of categories (based on their half-yearly imports) of licensable items does not exceed Rs. 25,000; (2) those whose aggregate exceeds this figure; and (3) newcomers who are divided into three sub-classes, (a) industrial newcomers, (b) sole-agent newcomers, and (c) refugee newcomers.

To illustrate how the system works, I take at random one of the more simple items in this annexure of the public notice, liquid gold. This attractive sounding product is not, as might have been supposed, Scotch whisky. From the "Basis of Licensing" column against it the disappointed applicant will learn that the world share for established industrial importers, i.e., the total value of licences to which they were entitled on the basis

of their categories, was 40 percent of the category for the Karachi centre and 80 percent for other centres in West Pakistan. As regards East Pakistan, established importers of all kinds were licensed up to the value applied for, but only for imports from the dollar area. He will also learn that industrial newcomers were admitted in the dollar area only. From all this he will be able to decide whether it is worth his while to put in a review application. It should be noted that the C.C.I. will take no notice of any communications already received, before the issue of the public notice, seeking redress against the decisions of the licensing boards, and that the Commerce Ministry will entertain no appeals unless the petitions have been first reviewed by the C.C.I. in the light of the public notice.

Trade Mission for Paris

A trade mission under the leadership of Mr. Osman Ali, Joint Secretary in the Commerce Ministry, is on the point of leaving for Paris to discuss a new trade agreement. They will visit Italy on the way back for the same purpose. No decision has yet been reached about the composition of the trade mission for Japan, but it is understood that this will soon be settled and the mission is likely to leave for Tokyo in about a fortnight.

Company Law

As far back as last May the Government announced its intention to set up a commission of enquiry to examine the question of Company Law revision. There seems to have been some difficulty in finding a suitable chairman for this body, but I understand that Mr. Justice Lobo of the Chief Court of Sind is to be appointed and that an announcement on the subject will be made shortly. The commission will no doubt begin by issuing the usual questionnaire to Chambers of Commerce and mercantile associations.

Glaxo Capital Issue

Considerable satisfaction has been felt over the success of the capital issue of Glaxo Laboratories (Pakistan) Limited. Shares to the value of Rs. 18 lakhs were offered for subscription by Pakistani nationals and the offer had to be closed after four days, by when applications for roughly double the amount had been received. It is hoped that this is another indication, coming so soon after the success of the Adamjee jute mills' issue, that the Pakistani public is becoming more investment-minded.

Bombay

MEETING OF PLANNERS AND INDUSTRIALISTS URGED

BULLION EMERGENCY PROPOSAL REJECTED

(FROM OUR OWN CORRESPONDENT).

15th February.

MR. NAVAL H. TATA, a director of Tata Sons Ltd., had some interesting suggestions to make when he addressed the Democratic Group here last Wednesday. He asserted that if the Planning Commission were to convene a representative conference of business men to define clearly the scope of the public and the private sectors in the plan, in spite of a sense of frustration amongst industrialists it might pave the way to a useful understanding and co-operative effort in its implementation. On the other hand, he maintained that it was the duty of the industrialists to support the plan and give an assurance that they would do so cheerfully if only they knew where they stood. Mere loose talk of a Welfare State and nationalisation would only dissuade private enterprise from venturing into new fields, he said. Mr. Tata, who is an expert on labour relations, stated that when the amount of money paid as wages, allowances and amenities was related to the turnover of work, it would be seen that it was fallacious to say that Indian labour was cheap or that Indian workers were less well paid than American textile workers. On this basis workers in Indian mills were actually paid more. Mr. Tata also pleaded that industry should be allowed to retrench where necessary in the same way as the Government did.

Tea Chest Protection

Dr. B. V. Narayanaswamy Naidu opened the enquiry into the continuance of protection and assistance to the plywood and tea chests industry last week at the office of the Tariff Commission. He said that continuation would depend largely on whether the industry was already sufficiently well established to face foreign competition and that the Commission had received conflicting reports on this point. At the same time Dr. Naidu stated that the Commission would like to discuss the efficiency, merits and demerits of the two forms of protection enjoyed by the industry at present—higher tariffs and import restrictions. Manufacturers asked that imports be limited so that a fixed percentage of chests be purchased

from the indigenous industry. Consumers and certain importers were pressing for the abolition of import restrictions as this system was alleged to have given opportunities for abuse by some of the approved factories. The next point according to Dr. Naidu for the Commission to consider was the period for which protection to the industry should be continued.

Bullion Emergency

There is trouble once again at the bullion exchange here. The Board of the Bombay Bullion Association passed a resolution early last week declaring an emergency in the market, following a requisition for such a measure by some of the members. Activity in the exchange having reached unhealthy proportions the Board was compelled to take this step unanimously, which had it been ratified by the general body with the requisite number of votes in support would have given wide powers to the Board enabling it to fix maximum prices or to close the market and order liquidation of outstanding business at rates fixed by it with the permission of the Government. But the Board's resolution obtained only 169 votes at the ballot arranged last Friday, while the rules required a minimum of 250 votes for such a measure to be operative. Most members appeared to believe that the position had corrected itself to a certain extent by the bulls loosening their grip on the contracts collected by them during the two or three days preceding the ballot and that a large number of people would become unemployed if the Board decided to suspend forward trading. The Board has, however, decided to levy an additional emergency deposit of Rs. 500 per bar of silver for each successive rise of Rs. 7 in the price and warned the operators against their resorting to the evasive tactics which had been in evidence for some time.

Textile Wage Dispute

The registered union for textile labour in Bombay, The Rashtriya Mill Mazdoor Sangh, has asked for an increase of 25 percent in wages and dearness allowance and the incorporation of a part of the present dearness allowance in the basic wage. The dispute, which has been referred by the authorities to the Industrial Court, is being heard by the full bench of the Court. The Millowners' Association, representing the industry is opposing the demand and has asked for its rejection on the ground that apart from being an exorbitant request it is neither opportune nor expedient.

Burmah-Shell Welfare Stock

Mr. Shantilal Shah, the State Labour Minister inaugurated the workers' welfare block built by Burmah-Shell at its oil installation. This block is planned to meet all welfare needs of the company's staff and labour, numbering about 1,800, and includes rest rooms, canteens with kitchen facilities, shower baths and dressing rooms with lockers for each employee, a medical wing for workers and their families and office accommodation for the company's Labour Officer. Mr. W. R. Wood, Branch Manager of the company here, stated that in designing the building, the company had tried to look ahead to the future and to provide facilities which would remain as models for many years to come. Representatives of the workers' union, thanking the management for this welfare block, gave an assurance that they would try to keep it in good order and asked that the company provide residential quarters as well. Mr. Shah replied by requesting the workers to sponsor co-operative housing societies and promised that the Government would give financial assistance both by way of subsidies and loans to unions which did this. Mr. Shah advised the workers that while fighting for their rights they should also realise their obligations as citizens by stepping up production. He told the workers, "Your approach should not be that of merely increasing the money wages. Production also must go up if prices of essential commodities are to be brought to the reach of everybody."

Indonesian Trade Delegation

Dr. Asmaun, leader of the Indonesian trade delegation, said at a reception held in its honour by the newly constituted Indian Council for the promotion of International Trade, that Indonesia was looking forward to closer business relations and more substantial trade with India, even though his country had to resort to certain restrictions on imports to consolidate its economy. He said that his Government was more interested in imports of essential goods and because of its present position with regard to foreign exchange had to favour barter trade agreements.

When the Import policy for the period January-June, 1953, was announced on 1st January, it was indicated that the policy in respect of certain items would be announced later. The policy regarding some of these outstanding items has now been announced in a Gazette of India Extraordinary dated 13th February, 1953. The items in respect of which the policy has been announced are: ball bearings; sundries; tape; flashlight cases; communication equipment; encyric; old newspapers; zip fasteners; cycles and cycle parts; liquid paraffin; paper board and hard board.

The Kanpur Working Class Cost of Living Index No. (Base August 1939=100) for the month of January 1953 has risen by 7 points to 454 as compared to the previous month. This figure is, however, higher than the index number for the corresponding month of the last year by 12 points. The index for "House Rent" remained unchanged.

ROADS TO PROGRESS

India must have better roads. Their significance in the development of the country cannot be over emphasized. Bad roads mean a terrible waste of time, effort and materials. This raises the price of agricultural produce in the market and of manufactured goods in the villages.

Good roads mean greater industrial and agricultural activity. They increase motor transport and the revenue from motor fuels. They conserve the vehicles in operation. And, better roads mean less expenditure on road maintenance because they last longer.

Machinery for road construction and improvement must be of the finest quality. CARLISLE GRADERS, built for long, arduous service, will pay for themselves many times over. When you think of better roads, remember the name CARLISLE.

REACTIONS TO FINANCE
COMMISSION'S REPORT
HANDLOOM WEAVERS' PROPOSALS
ON MILL CLOTH CESS

(FROM OUR OWN CORRESPONDENT)

16th February.

THE recommendations of the Finance Commission were well received here, particularly those references relating to the divisible pools of income-tax and three Union excise duties. Financial circles, however, forecast a deficit of Rs. 5 crores in the State in the current year in spite of the increased allocations recommended by the Finance Commission. It is thought that taxation on sales of tobacco, including cigars and cigarettes as luxury goods, would yield a revenue of Rs. 60 to 75 lakhs a year. The Finance Minister said that the State Government was pressing for special assistance from the Centre to bridge the gap in revenue in the current year. He said that the Government was faced with a difficult financial situation at present and that if consumers would come forward with loans for implementing the various electricity schemes they needed, they would be taken up forthwith. Meanwhile, the enforced cut in the expenditure on capital works amounting to nearly Rs. 75 lakhs in the Vijayawada Circle of the Andhra Power System has led to the retrenchment of 1,500 people. The President of the Southern India Chamber of Commerce, commenting on the Commission's recommendations, pleaded for an increase in the percentage for Madras in the Income-tax Divisible Pool and also for the inclusion of tea,

coffee, etc., in the division of excise duties. The President of the Madras Stock Exchange Association, however, considered the recommendations "extremely satisfactory."

Handloom Research Institutes Proposed

The Madras State Handloom Committee, at its recent meeting, recommended that the allocation to the State from the cess on mill cloth should be spent on schemes for internal marketing, opening of research institutes for the improvement of designs, etc. It was also recommended that the funds should be utilised to cover the cost of transport, freight and other charges for yarn and to grant subsidies to weavers in the co-operative field, registered master-weavers and handloom factories on the cloth produced. Advances of loans should be made on the security of goods to weavers and co-operative societies. The Committee also recommended the founding of a joint stock company for marketing of handloom goods. The Madras Provincial Handloom Weavers' Congress suggested the constitution of a finance corporation to which a sum of Rs. 50 lakhs out of the Rs. 1.25-crore cess fund might be made over every year. The All-India Handicrafts Board, at its conference in Trivandrum, got approval for its decision to establish a central marketing organisation for handicrafts with a section for technical development.

Handloom Marketing Organisation

In a memorandum submitted to the State Minister for Industries, the Coimbatore Indian Chamber of Commerce pleaded for an efficient marketing organisation for handloom goods. The Chamber also said that protection to the handloom industry should not mean additional tax burden on textile mills. In its view, it was quite possible for the mills and handlooms to function side by side as complementary instead of as competitive units.

Hydro-Electric Supply

In a statement issued last week, the Southern India Mill-Owners Association criticised the demand of the Tamil Nad I.N.T.U.C. for an ordinance on the paying of compensation for involuntary unemployment because of power cuts. In Madras, power generation was a State enterprise and most industrial undertakings were dependent on Government electricity supply. Low water levels in reservoirs had affected power generation and caused drastic cuts in its supply. Mills in South India had installed diesel generating sets and were trying their best to cover shortage of power supply from Government undertakings and to provide employment for the labour population. The cost of such diesel equipment for Coimbatore alone had so far exceeded Rs. 50 lakhs, and the cost of generation was nearly four to five times that of the Government's hydro-electric supply system. The Association expected that the majority of mills would go into normal production in March as many of the generating sets already booked were on their way to India. The mills, according to the statement, were already granting advances to labour against power cuts and also recuperative annual holidays with pay in order to reduce their hardship.

Roads Congress' Annual Meeting

The Indian Roads Congress held its annual session here last week. Mr. T. Mitra, President of the Congress, said that an adequate road construction programme could not be financed entirely from revenue and that a resort to capital sources outside the revenue account would be necessary. He was in favour of a Central Highways Fund and State Road Fund on a non-lapsable basis, to which all monies made available for road expenditure would be credited. Mr. Mitra commended the methods of highway financing in the U.S.A., where the main highways were made self-supporting by devoting the revenues from road-users exclusively to highway improvement.

Coimbatore Cotton Crop

The cotton crop in Coimbatore has been adversely affected by drought, and South Indian mills, it is stated, may have to depend mostly on imports throughout the 1953-54 season.

Perspex Exhibition

At an exhibition organised by the Imperial Chemical Industries (India) Ltd., the variety of uses to which "Perspex", a plastic raw material, can be put, is shown. All the items exhibited have been produced in India by local fabricators on a cottage industry basis. A number of items such as door knobs, paper weights, wash basins, floral designs, etc., are on show.

Sir Alexander Fleming discoverer of penicillin, told pressmen here that research was now being carried on two anti-biotic drugs, Erythromycin and Magnamycin, at the Wright-Fleming Institute of Micro-biology of London University. He said that these drugs would have the same properties as penicillin and would be useful in cases which were resistant to penicillin.

Leftists in general and Communists in particular have received a serious set-back in municipal elections in Travancore-Cochin where only a year ago they had registered striking victories in the General Elections. While the Congress Party gained nearly 65 percent of the municipal seats, Communists could scrape just 10 percent.

London

WIDER TRADE GAP
IN JANUARYCHANCELLOR'S STATEMENT ON
ECONOMIC PROSPECTS

(FROM OUR OWN CORRESPONDENT)

14th February.

THE provisional figures of Britain's overseas trade in January have been awaited with more than usual interest as a possible indicator of the general trend for the current year. On the whole, they are reasonably promising. The export rise is being maintained, especially to the dollar area, though it is still some way behind the more satisfactory levels of 1951 and early 1952, before the summer and autumn recession. On the other hand, imports record an even bigger rise, with a consequent widening of the trade gap, and in this there is at least the suggestion that the import restrictions and drawing upon stocks have played their immediate purpose and there must now be some relaxation, and to cushion the effects the results of the new export drive inaugurated after the Commonwealth Economic Conference is to be depend upon. There were 27 working days in January against only 25 in December, and the comparative figures are as follows:

	Jan 1953	Dec. 1952	Jan 1952
(in £ million)			
Imports ..	280.1	267.7	357.1
Exports ..	217.9	203.7	230.1
Re-exports ..	10.1	7.5	14.2
Trade Gap ..	62.1	56.5	92.8
Dollar Exports (U.S. and Canada) ..	25.0	22.3	19.4

The detailed figures will help to clarify the position, but meantime it has to be noted that the President of the Board of Trade told the House of Commons the other day that the "volume" of exports in the third quarter of 1952 was 14 percent and in the fourth quarter seven percent less than in the same periods of 1951. Compared with the monthly average for the last quarter of 1952, both imports and exports in January were much higher, and the figure for imports actually equalled the average for the whole of the year after being down to £264 million in the fourth quarter. The trade gap of £62 million compares with £45 million in the fourth quarter of 1952 and of nearly £66 million for the year as a whole. Dollar exports, however, in the case of both the U.S.A. and Canada, are about 10 percent above the 1952 average.

Mr. Butler's Warning

Whether or not the Commonwealth Correspondents' Association hoped in entertaining Mr. Butler this week to get more out of him than did the members of Parliament last week it is hard to say, but they must certainly have been disappointed with the result. The Chancellor was not to be drawn, though it is possible that he was speaking no more than the truth when he said "not everyone seems to realise that what emerged from the Commonwealth Conference was not a cut-and-dried agenda for early action but a broad strategic plan of campaign—a general idea of the right way to approach the problem of getting beyond the economic restriction that has followed on the war." What he did give the correspondents was a nice blend of optimism and warning. He said that the improvement in the sterling area's position would allow for some months, possibly for the greater part of the year, for the working out and application of policies for long-term progress, without obstruction by immediate crises. "In the last twelve months the sterling area as a whole has experienced an improvement in its affairs so striking that it affords us great encouragement in tackling the pressing and difficult problems that remain. I think the United Kingdom can take its due share of credit." For the future, Britain's share was two-fold. First, there was the crucially important work of development at home and providing capital goods for the other countries of the area. Secondly, she had undertaken to continue, and enlarge, the considerable part she already played in the provision of capital for investment in the sterling area. As to the warning, Mr. Butler said that the present state of relative stability would not automatically continue and it must be used to the full while it lasted. Much remained to be done to strengthen the productive and competitive power of the countries of the sterling area, for they were all still vulnerable to various economic hazards. He mentioned the talks he will be having in Washington and Ottawa later this month—the latter his first visit to one of the Commonwealth countries in his present Ministerial capacity, and one which he implied he hoped would not be the only such visit he would pay during his term of office—and explained that after a preliminary exchange of ideas with the new American Administration he hoped there would be further discussions with the European countries and with the other members of the Commonwealth before a final scheme was drawn up and presented.

Parliamentary Business

The Parliamentary struggle has been given a new twist this week with something like one hundred members of the House of Commons confined to bed with influenza, which is widely prevalent at the moment although the Health authorities assure us that it is not in epidemic form. The Whips on both sides are being particularly cagey in disclosing lists of "casualties" so as to avoid the

believed that the two main parties are equally affected whereas the Liberals so far appear to be immune. Their attitude is understandable, for the floods have also made certain demands on the time of both Ministers and Members, and this at a time when both the Transport and Iron and Steel Bills are under debate in the House. In respect of both the Ministers concerned continue to meet whatever they regard as reasonable opposition to their original proposals. Mr. Lennox-Boyd, for instance, accepted an amendment to the former Bill whereby Londoners are to be protected from disproportionate increases in fares, while Mr. Sandys has agreed to certain modifications to the powers of the new Steel Board. In the last division of the Transport Bill report stage debate the Government's majority fell to eight, the lowest figure since 20th November last, but as a rule it has experienced little difficulty in keeping the figure somewhere around the twenty mark all through the week. No unusually, the floods have occupied much of the time of the House, and to a lesser extent foreign affairs, but the only real clashes have arisen either at question time, which is almost always lively, or over private member bills or motions on the adjournment.

Coal Miners' Wage Dispute Ends

Both politically, and most certainly economically, the most important development of the week has been the final agreement which has been reached by the National Coal Board and the National Union of Mineworkers on the question of increased wages for the lower-paid miners. The outstanding feature of the settlement of what appeared to be an insoluble deadlock was that both sides have made concessions. From next week 350,000 miners' day wages will get 6s. a week more, bringing minimum weekly rates in the industry to £7 6s. 6d. underground and £6 7s. 6d. on the surface. The increase will add something like £6 million a year to the Board's wage bill, or between 6d. to 9d. per ton in the production costs of coal, but in return the Union leaders of the miners have agreed to recommend the working of Saturday shifts next winter and to co-operate in a joint campaign to increase production and efficiency in the industry and to improve the relationships between management and men. These latter promises have been made before and have not proved particularly rewarding, but Saturday working is more or less an essential to the Board's export plans, and as the cost of coal to the consumer was expected to rise from 5s. to 7s. a ton anyhow to cover other rising costs and to wipe out the deficits of earlier years, perhaps the possibility of the campaign being more successful this time might offset the addition of the extra pennies to the new price for coal when it is finally decided upon.

Shortage of Sandbags

A week of storm and stress, climatically speaking, with gale-force winds, sleet or snow, and the temperature well below normal, has severely handicapped the efforts of those who have been so valiantly struggling to repair the breaches in the coast defences bordering on the North Sea against the new threat which those areas are facing over this week-end with the reappearance of the spring tides. In parts these labours have proved insufficient to hold back the waters entirely, but such further flooding as has occurred has been slight and generally speaking there is a quiet confidence that the danger will be overcome and there will be no further repetition of the disaster of a fortnight ago. No words of praise would be too high for the manner in which the urgent needs of the situation have been met, all the way down from the Government Ministers and their officials who have been responsible for setting in motion the machinery to the volunteer helper, Service or civilian, actually working in the areas themselves for relief of the afflicted or repairing the damage which has been inflicted.

To a former frequenter of Clive Street it has come as something of a shock to learn of the shortage of sandbags which has intervened in the last few days to slow down the work of repairing the breaches. The need has been for 10,000,000 within a matter of a couple of days and supplies are being flown in from almost every Western European country in response to the British appeal. Whole fleets of aircraft, both Service and civilian, are being used for the lift and four aerodromes in this country have been cleared to handle this extraordinary and probably unique traffic.

On 5th March, the shareholders of Tenasserim Plantations are to be asked to ratify sale of the company's estates in Burma and to sanction proposals for a voluntary liquidation. A break-up of nominal value of Rs. 2 (3s.) in King Island Rubber Estates, the purchasing company, for every three Tenasserim 2s. stock units, is forecast

Industrial
Progress
In India

When the 18th turned into the 19th century one of Calcutta's best known citizens was William Hickey, whose fascinating memoirs enable us to relive those almost unbelievable times.

Judging by his memoirs he seems to have known nearly everybody in the city at that time. He may well have been acquainted with Colonel Swinton or James Rolt, who were at that time quietly and unobtrusively laying foundations upon which has been built what is now one of the oldest, largest, and soundest industrial and commercial organizations in the eastern hemisphere.

Today the name of Martin Burn Ltd. is the first to come to mind when requirements for building, engineering, and machinery are considered. This organization's long participation in the industrial and civic progress of India gives it a unique insight into the needs of every form of development. The story of the growth of the Martin Burn organization is the story of India's industrialization and the expansion of her civic amenities.

For many years there can have been few major projects undertaken in India in which Martin Burn have not played a part at one of the many stages from the planning to the conclusion of the enterprise. The extension of the supply of electricity; the many railways; the provision of adequate water supplies; the design and building of civic, religious and commercial buildings—all have been assisted by the Martin Burn organization.

would be prohibitive for economical working of even the highest grade of hessian on today's rates. It is perhaps significant that imports into Calcutta in January of Pakistani jute were nearly half of the average for the three preceding months.

At the opening of the jute markets last Thursday quotations were virtually unchanged although the undertone was stronger in sympathy with an improved finished goods market. Ordinary Assam jute was quoted at Rs. 21-8 per maund basis Bottoms for February-March shipment, and remained at this level until after the week-end in spite of a fair amount of business having been transacted. On Tuesday, however, with the gunny market showing distinct signs of recovery, opening quotations increased by 8 annas. Sellers were inclined to resist mills' counter-offers even after a slight fall in goods prices towards evening. Indications from mills at this stage were small but in some cases there was difficulty in finding sellers for even these quantities at the mills' rates.

The following sales of jute were reported during the week:—

Pakistan Jute:
Jat and "Sami-Jat": Rs. 25-8 per maund basis Bottoms for February-March shipment.

Indian Jute:
Dhubri: Rs. 22 to Rs. 23 per md. basis Bottoms for ready bills of lading.

Assam (Tossa): Rs. 21-8 to Rs. 28 per md. for Middles only for February-March shipment.
Rs. 23 per md. basis Bottoms March shipment.

Assam (White): Rs. 24-12 per md. for Middles only for one month's shipment.

Rs. 22-8 per md. for Bottoms only for February shipment.

Rs. 21 to Rs. 21-8 per md. basis Bottoms for ready bills of lading.

Northern Bengal (Kishanganj): Rs. 24-8 per md. for Middles only for one month's shipment.

Northern Bengal Karimpore Tossa: Rs. 22 per md. basis Bottoms for ready bills of lading.

Cosimbazar Tossa: Rs. 21 per md. basis for February-March shipment.

Sheoraphuli Daisee: Rs. 23 per md. basis for one month's delivery.

Dhulian White: Rs. 19 to Rs. 19-8 per md. basis for one month's delivery.

Lalgola Tossa: Rs. 19-8 per md. basis Bottoms for one month's shipment.

Murshidabad District: Rs. 20 per md. basis Bottoms for one month's shipment.

Murshidabad Tossa: Rs. 15-8 per md. for X Bottoms alone for one month's shipment.

Local Packing: (free from jungle) Rs. 19 per md. basis Bottoms for one month's delivery.

Purnea (White): Rs. 14-4 per md. for X Bottoms only for one month's delivery.

Binli: Rs. 16-4 to Rs. 17 per md. for F.A.Q. for February-March shipment.

Daisee: Rs. 25 per md. for Middles only for one month's shipment.

Rs. 22 to Rs. 22-8 per md. basis Bottoms for February-March shipment.

Mesta Cuttings: Rs. 60 per bale for one month's delivery.

At the close the market is unchanged with sellers reserved for the sale of Dhubri jute. Other types of fibre are fairly easily obtainable. Opening quotations on Wednesday morning were as follows:—

Pakistan Jute:

February-March Landed at Mill

Rs. 26-8 per md. basis Bottoms

25-8 " " "

25-8 " " "

25-8 " " "

25-8 " " "

25-8 " " "

25-8 " " "

25-8 " " "

small recently. Only a little business has been put through, but in spite of this a steadier tendency is indicated, which is largely in sympathy with the improvement in Calcutta markets. Sellers are still inclined to place any purchases they make to stock rather than put them on the open market at this stage, as the general feeling is that the market will improve in the near future. Local upcountry quotations have changed very little over the week and Dhubri jute is now quoted at Rs. 19 per maund basis Bottoms, which is about 8 annas up over last week. Ordinary Assam jute is the same as last week, being quoted at Rs. 18 per md. basis Bottoms, whilst Northern Bengal jute has improved to Rs. 18-8 per maund basis Bottoms. Business in the local Cossipore market has been restricted due to the lack of imports, rail bookings to Cossipore siding still being suspended. It is expected however that these will restart in the near future as soon as the new rates of demurrage are finalised. The wagons that had been held up during the recent strike have now all been cleared and the railway sidings are inactive. Prices are much the same as last week but the markets are steady, and high prices are being paid for good quality jute of which there is an acute shortage. Kishanganj jute is quoted at Rs. 22-8 per maund for garsat quality. Imports of Daisee into Sheoraphuli have again fallen off and as a result sellers are inclined to be reserved.

There has been little activity in the Pakistan markets. Markets are slightly weaker and latest quotations in Narayanganj (in Pakistani rupees) are as follows:—Jat Bales' Bottoms (White)—Rs. 14-8 per md. Tossa Rs. 17 to Rs. 18 per md. District Bottoms (White)—Rs. 13-8 to Rs. 14 per md. Tossa Rs. 16-8 per maund.

Raw Jute Arrivals.

Arrivals of raw jute in Calcutta and mill stations during January, 1953 amounted to 5,20,693 bales as compared with the revised figure of 6,36,493 bales in December 1952. Total arrivals for the period July 1952 to January 1953 are now 34,47,429 bales, of which 24,78,990 bales (72 percent) came from India and 9,68,439 (28 percent) bales from Pakistan. Of the arrivals in January, 3,81,197 bales (73.2 percent) came from India and 1,39,684 bales (26.8 percent) were of Pakistani origin. Arrivals from Pakistan were down in January 1953 by about 8 percent over December but were 4 percent better than the arrivals in January 1952. In the period July 1951 to January 1952, total arrivals were 34,49,082 bales, of which 20,60,067 bales (60 percent) were Indian and 13,89,015 bales (40 percent) came from Pakistan. From these figures it will be seen that during the current season imports from Pakistan are down by about 12 percent compared to last season.

JANUARY PRODUCTION FIGURES

The Indian Jute Mills Association announces that the total reported production of manufactured goods exclusive of all Government orders is as follows:

Description	Quantity
1. Twine and Yarn	1,999 tons
(a) For sale	729 "
(b) All other including that used in sewing	33 "
2. Canvas	0.3 Lakh Yds.

3. Gunny Bags (Tonnage exclusive sewing twine)	
(a) Hessian	928 tons
	32.5 Lakh Yds.
(b) Sacking	27,397 tons
	9,127 Lakh Yds.
	57.8 " Nos.

4. Gunny Cloth	27,323 tons
(a) Hessian	11,347 Lakh Yds.
(b) Sacking	1,941 tons
	46.0 Lakh Yds.

Commodity Markets

RESTRICTIONS ON THE WOOL TEXTILE TRADE IN 1952

OUTLOOK MUCH IMPROVED

DURING 1952 no fewer than 16 countries were reported to have imposed new limitations on wool or wool textile imports. Some which already had restrictive measures in force before 1952 have since further reduced the quantity and value of imports permitted. Other customers of Western Europe's textile industry such as Australia, Brazil—which is now understood to have banned wool and textile imports completely—Chile, Colombia, Egypt, Greece and Mexico, have imposed new import licensing systems. A further six countries, at least, have raised the existing duties or taxes on imported wool goods, while South Africa implemented her suspended duties on a variety of worsted articles.

Where restrictions have been imposed on the import of woollen goods it has usually been the case that they are but one item among many which have been affected in order to combat an adverse balance of trade, but where raw materials or manufactures have been singled out for action the reason is more often than not protection for the domestic industry. The worldwide recession in the consumption of textiles and under-employment in the industry has in the more recent past probably accentuated this latter motive. The other reason for restrictive measures is purely retaliatory. An instance of this sort was the action of the Swiss Government last September when, after France had imposed severe import restrictions, the Swiss suspended import licences for a wide variety of wool textiles from France. It is understood that the domestic textile industries of the United States and Canada favour increased protection against foreign products. If the new U.S. administration sees fit to introduce some such measures the outlook for the industry in the rest of the world will be correspondingly bleaker, for the North American market is one at which almost all export drives are directed.

Although balance of payments problems are no less pressing at the moment, the position of the wool textile industries in most countries is much improved and the outlook shows more promise than a year ago. It may therefore be argued that, if it is true that under-employment in an industry accentuates trade barriers and quantitative restrictions, then an easing in textile trade conditions may lead to a reduction in trade barriers, although it is a notorious feature of protective devices that they remain long after the need for them has disappeared.

WHOLESALE PRICE INDEX RISE

The official wholesale price index (with the year ended August '39 as 100) witnessed a further rise of 0.6 percent to 330.6 during the week ended 31st January, 1953. The index was higher by 1.6 percent as compared to a month ago but was 10.5 percent lower than that of a year ago. The average for January '53 stood at 377.5 as compared with 372.7 for the previous month and 430.3 for January, 1952.

During the week under review, foodstuffs advanced by 0.9 percent to 364.2 as a result of increase in the prices of rice at Patna (+3%), gur (+10%), jowar, gram and coffee (+1% each) and tea sold for export (+2%). The average price of tea (-10%) for internal consumption and the price of a substantial decline. Industrial Raw Materials also registered a rise of 0.5 percent to 427.5 during the period under review. Items which recorded significant changes in this group were: groundnuts (+8%), raw skins (-7%), mustard seed at Kanpur (-10%), gingelly seed (+5%), manganese ore and raw hides (-4% each), rapeseed in Bombay (+4%), lac (+3%) Karaungani raw cotton at Tirupur (-2%), raw silk, and castorseed in Madras (+2% each), Umra raw cotton at Amravati (+1%), linseed, cotton seed, copra, and castorseed in Bombay (-1% each).

The index for Semi-Manufactures moved up by 0.3 percent to 345.4 because of the higher prices of coconut cake (+6%), tanned goat skins and gingelly cake (+3% each), tanned cow hides, tanned sheep skins and groundnut oil (+2% each), castor oil and gingelly oil (+1% each) despite decreases in brass and copper (-2% each), cor yarn and coconut oil (-1% each). The Manufactures group rose by 1.2 percent to 368.0 because of increases in the prices of Jute Manufactures (+3%), Fuji silk fabric (+6%) and the reappearance of the price quotation for Tafetta Koro art silk fabric at a higher level. The Miscellaneous group also showed a rise of 0.8 percent to 617.3 because of advances in cummin (+20%) and cashewnuts (+2%) although the price of chillies declined by 4 percent.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks of sugar in respect of central sugar factories in India during the fortnight ended 15th January, 1953, were 532,403, 141,905, 71,501 and 602,809 tons respectively, says the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement of figures of returns. The figures for the corresponding fortnight of the previous season were 317,689; 137,970; 54,772 and 400,887 tons respectively. Figures for the current fortnight relate to 127 factories representing 93.87 percent of the total cane-crushing capacity, while the figures of the previous year relate to 126 factories representing 92.35 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 390,217 and 244,170 tons respectively, as against the corresponding figures of 456,437 and 200,061 tons during the previous season.

EXPORT OF CASTOR OIL

The Government of India has announced that the export of castor oil, commercial as well as medicinal, will be licensed freely on shipping bills from 1st February to 30th April, 1953. Intending exporters should present their shipping bills with requisite treasury challans for application fees to Export Trade Controllers at the ports. They should not, in their own interest, enter into any commitment for shipment beyond 30th April, 1953. Add Books.

MORE SUGAR RELEASED

The Government of India has released a further 106,000 tons of sugar from the factories from their 1952-53 production for sale in the open market.

BRITISH CRANES FOR BOMBAY

A British company reports an order by a Calcutta firm for electrical equipment for 23 three-ton dockside cranes and seven six-ton cranes for the Bombay Port Trust. These cranes will all have Type CHT variable-speed three-phase commutator motors on the hoist motion.

Four other dockside cranes for the same customer will have "Stacreep" hoist control. The company says that steady demand continues for these "Stacreep" equipments for use on hoist motions of cranes, and also for skip hoists and wagon tipplers.

Saint Frères Circular Looms installed in Jute Industries Ltd. factory, DUNDEE

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and in old, sometimes working alongside flat looms; in the highly developed industries of Scotland, France and Italy; in the more recently established mills of South Africa and the Belgian Congo, where only unskilled labour is available.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

REPLACING A COP.—Immediately one of the cops runs out the loom stops automatically. All the shuttles emerge from the shed and lie on the warp threads. New cops are placed in each shuttle and the loom is restarted. By replenishing all the shuttles at once much time is saved. The butt-ends of the cops left over are, of course, not wasted.

FAIRBAIRN LAWSON COMBE BARBOUR LTD
LEEDS, ENGLAND

pack them in TRAYONS transparent paper!

It's protective!
It's elegant!
It's economical!

Trayons Transparent paper offers these advantages—It's ideal for sweets, soaps, sports goods, tobacco, toiletry, textiles and dried fruits and foods. Give your products the elegance and protection of Trayons packaging and increase your sales!

Available in 2 varieties: Colourless and Amber in reams of 500 sheets (20"x30") at current mill rates.

PRODUCTIVITY IN INDIA

The term 'Productivity' has been brought into prominence by the Anglo-American Council on Productivity which defines it as the ratio of production of wealth (goods, services and human satisfaction) to human effort expendable. You will agree that on the basis of this definition, the Indian worker lags far behind the equivalent American. It has been accepted that low productivity is due to the Indian factory worker not being mechanised to the same extent as the American, and also that he seldom exerts himself to make the best use of the equipment he has; his efforts

are spasmodic, with the consequence that his measurable idle time generally amounts to more than four hours a shift. You recognise that to re-equip to American standards may be desirable, but to do so is costly and, in existing trade conditions, difficult. It has, however, been observed that productivity can be greatly increased, even with existing equipment, if the active co-operation of the worker can be obtained. The idle time can be reduced substantially by setting up, through the co-operation of labour unions, rational graded wage structures, and production incentives based on time study.

FOOD SUBSIDY TO ASSIST TEA ESTATES PROPOSED

PLEA FOR REFUND OF EXCISE DUTY TO SOME GARDENS

THE following is an extract of a speech in the House of the People by Mr. A. K. Basu, Member for North Bengal, on 14th February. After reviewing the precipitous fall in the price of tea since September 1951 he went on to say:—

"It is quite clear that the excise duty of three annas per lb. is a burden which the industry cannot bear. It was imposed at a time when the industry was in a prosperous condition and could bear this burden. It was stated at that time that circumstances might arise when this duty would have to be reduced or even abandoned. Now, at the time of this crisis, the Government should give up this duty or, at any rate, reduce it. I am not in favour of the Government giving up all the three annas per pound duty on tea because giving up that three annas duty would not mean the industry getting the full three annas. That three annas would be divided between the wholesalers, the retailers, the customers and the industry. Therefore, the industry will get only a small fraction of this amount. I suggest that the Government should collect the duty in full and give it back to the industry directly or indirectly so that they can get benefit of the full three annas which is now a burden on them. On that principle I would suggest that from the area which is affected, namely, Assam, Cachar and North Bengal—these areas have produced tea to the extent of 498 million pounds—the duty should be realized from them at the rate of three annas—and that

will amount to Rs. 9,33,75,000—and that this amount may be given in full or in part to the industry in the following ways.

"First I suggest that there should be a food subsidy of Rs. 34 lakhs of rupees for the year 1953-54. The tea gardens at the moment have to buy rice at an average price of over Rs. 30 a maund and have to sell it to the labour at Rs. 5 a maund. The requirement of rice in West Bengal is 40,000 maunds a month, which means 4,80,000 maunds per year. The requirement of rice for the rest of the affected area, Assam and Cachar, is 8,76,000 maunds; that is to say, the total requirements of rice for the affected area is 13,56,000 maunds, which is equivalent to 50,000 tons. I suggest that the Central Government give this amount to the Governments of West Bengal and Assam, earmarked specially for the feeding of the labour in those areas. If 50,000 tons of rice is given from the Centre's pool, where the pool price I understand is about Rs. 20 a maund, to the West Bengal and Assam Governments at a price of Rs. 17-8 per maund, then the Centre would be giving a subsidy of Rs. 2-8 a maund which would mean that the total amount that the Centre will have to bear on the 50,000 tons of rice would amount to Rs. 34 lakhs. This is very small. As I have already said, the excise duty that is realized from this affected area at the rate of three annas per pound of tea amounts to Rs. 9,33,75,000.

"Secondly I suggest that this should be given to the State Governments and they should not be asked to contribute anything towards that to the Centre. Income tax, super-tax, export duty, excise duty, railway freight and all that goes to the Centre. Therefore, the State Governments should not be asked to contribute anything. My suggestion is that this rice to be given to the gardens at the rate of Rs. 17-8 a maund, will have to be given by them to the labour at the present rate of Rs. 5

a maund, that is to say, that the labour's food concession should not be interfered with. Neither their wages nor their food concessions shall be interfered with; they shall remain as before.

"My next suggestion is that there should be a refund of the excise duty to the losing gardens for the year 1951-52, a refund of the full excise duty or refund to the extent of the loss suffered by those gardens, whichever is less. On my calculation, in 1951-52 the excise duty collected from these losing gardens in West Bengal and Assam amounted to about Rs. one crore. Therefore, on the "whichever is less" formula, the Government will not have to refund more than Rs. one crore of excise duty for the year 1951-52. With regard to 1952-53, I suggest the same formula, namely that the refund of the excise duty to the losing gardens or the refund of the excise duty to those gardens to the extent of their losses. Here, according to my calculation, the maximum refund that may be required would be about Rs. 7.4 crores. I arrived at this figure in this way. There are 498 million pounds of tea produced in this area. Out of these 498 million pounds produced, Upper Assam produces about 100 million pounds and they are not losing gardens. Therefore, the losing gardens are producing 398 million pounds of tea. At the rate of three annas per pound that amounts to Rs. 7.4 crores. On the "whichever is less" formula, the Government may not be required to refund more than Rs. 7.4 crores for the year 1952-53. I also suggest that the duty of three annas per pound be collected for the year 1953-54 and the refund may be given on the same principle as I have suggested for the years 1951-52 and 1952-53. I do not think that there would be any loss, or, at any rate, the loss would be very small.

"On all these four points the amount that will have to be refunded or spent by the Centre would be less than the figure that I have given, which is realized from the affected area, namely Rs. 9,33,75,000; that will cover the refund and the food subsidy."

CALCUTTA TEA SALES IN JANUARY

THE strong general demand which was evident at the last sale of 1952 has continued throughout the month and has resulted in a further welcome advance in prices for all types according to the monthly review of Carritt Moran & Co., Ltd., Competition for all grades of flavoury Darjeelings was strong and they realised satisfactory prices. Whole leaf grades, particularly stylish Orange Pekoe and best liquoring Assams were well competed for and rates advanced appreciably. Clean commons and low medium broken received much better support than in recent months and at the close of January were about three annas dearer than in the last sale of December. Although there has been a recent increase in most prices it should be pointed out that many of the estates are still selling their teas several annas below the cost of production.

The quality of offerings from Darjeeling showed a considerable improvement and offerings included a number of invoices with an attractive autumnal flavour though none of the teas were of fine quality. The leaf appearance of the teas from Assam was generally good and bright liquoring teas were in better supply in the last two sales of the month. The offerings from the Doorgas were generally plain in character, leaf appearance showing a seasonal decline. With a few exceptions offerings from Cachar were of a satisfactory leaf and liquor standard.

	1952-53	1951-52
Sale No. 29 Clean Common B.P.	Rs. As. P.	Rs. As. P.
Sale No. 30 " " " "	0 14 6	1 8 6
Sale No. 31 " " " "	0 14 9	1 9 0
Sale No. 32 " " " "	0 15 6	1 7 6
	B.P.	B.P.
	0 15 9	1 6 6

Leaf offerings were again small and consisted mainly of residue grades. Following the trend of the Export Sales all lots sold at dearer rates. The demand for dust was strong for all types, particularly Darjeelings and the cleaner leafy kinds suitable for export. Also a strong feature were commonest kinds which sold at considerably enhanced rates.

	1952-53	1951-52
Sale No. 29 Clean Common Dust	Rs. As. P.	Rs. As. P.
Sale No. 30 " " " "	1 5 0	1 9 6
Sale No. 31 " " " "	1 8 0	No Sale
Sale No. 32 " " " "	1 6 6	1 10 0
	Dust	Dust
	1 6 9	1 8 6

Export sales up to and including Sale No. 32 totalled 1,278,845 chests at an average price of Rs. 15-10 compared with 1,490,266 chests at an average price of Rs. 14-6 a year ago. Internal sales at 22,166 chests of leaf and 435,550 chests of dust (Rs. 0-15-5 and Rs. 1-5-0) go against 62,980 and 385,661 chests (Rs. 1-6-1 and Rs. 1-12-6) in the corresponding period of last year.

The price of the export quota has fluctuated between 21 and 3 pices per pound throughout the month.

North India Crop

The estimated North India crop at the end of December amounted to 507,937,322 pounds as compared to 509,737,598 pounds at the same date last year, a shortfall of 1,750,276 pounds.

Arrivals (in chests) in Calcutta warehouses during the period 24th December to 23rd January with the amounts in the corresponding period of last year in parentheses were as follows: by rail 95,422 (100,240); by air 7,616 (15,181); by steamer 423,167 (428,510). Since the beginning of the season, 1st April and up to 23rd January, 1953, arrivals have been 840,434 (692,442) by rail; 114,705 (203,873) by air and 2,781,748 (2,965,111) by steamer.

COMPANY AND PUBLIC NOTICES

CALCUTTA JUTE MANUFACTURING CO. LTD.

NOTICE is hereby given that the Forty-second Ordinary General Meeting of the Shareholders will be held at "Stephen House", fourth floor, No. 4, Dalhousie Square East, Calcutta, at 3 p.m. on Wednesday, the 4th March, 1953, for the purpose of receiving and passing the Report of the Directors and the Managing Agents for the half-year ended 31st December, 1951, declaring a dividend and transacting such other business as may be brought forward.

The Transfer Register will be closed from 21st February to 4th March, 1953, both days inclusive and it is notified that Dividend Warrants will be issued and posted to the registered shareholders only on application. Persons holding shares under blank transfer are advised to effect registration of scrip to their names as soon as possible but not later than 21st February, 1953.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"Stephen House" 4th floor,
4, Dalhousie Square East,
Calcutta, the 11th February, 1953.

THE INDIAN WOOD PRODUCTS COMPANY LIMITED.

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the Statements made or opinions expressed with regard to them."

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday, the seventeenth day of March, 1953 at 12-30 p.m. to consider and if thought fit to pass, with or without modification the following resolutions namely:—

1. That the authorised capital of the Company be increased from Rs. 15,00,000 to Rs. 30,00,000 by the creation of 1,50,000 Ordinary Shares of Rs. 10 each.

2. (As a Special Resolution). That the Articles of Association of the Company be altered in manner following:—

Article 4 shall be deleted and the following substituted therefor:—

"4. The Capital of the Company is Rs. 30,00,000 divided into 3,00,000 Ordinary Shares of Rs. 10 each."

3. (a) That it is desirable to capitalise a sum of Rs. 5,00,000 being part of the undivided profits of the Company standing at the credit of the General Reserve Account and accordingly that the said sum of Rs. 5,00,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the seventeenth day of March, 1953, holders of the 1,50,000 issued Ordinary Shares of the Company of Rs. 10 each in payment in full for 50,000 new Ordinary Shares of Rs. 10 each and that such 50,000 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of 1 new Ordinary Share for every 3 issued Ordinary Shares held on the said seventeenth day of March, 1953, by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects pari passu with the existing Ordinary Shares and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b) That Fractional Certificates in respect of shares which would be distributable in fractions shall not be issued but such shares shall be allotted to the Chairman of the Meeting as Trustee on behalf of those shareholders entitled thereto and

shall be sold by the Chairman and the proceeds of sale distributed to the shareholders who would have been entitled to a fraction of a share.

(c) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 50,000 new Ordinary Shares credited as fully paid up amongst the persons who are on the seventeenth day of March, 1953, holders of the 1,50,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(d) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the Margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the seventeenth day of March, 1953, by some persons to be appointed by the Directors in that behalf under Article 174 of the Articles of Association of the Company.

The Share Transfer Book of the Company will be closed from the 6th March, 1953 to the 17th March, 1953 both days inclusive.

By Order of the Board,

Free of Cochin Govt. Income-tax
Free of Transvaal Govt. Income-tax

Price of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. (For reference see notes below.) Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 000's	Rate per cent.	Paid-up per Share	Market Quotations		Year of Issue	NAMES	Amount Issued in 000's	Rate per cent.	Paid-up per Share	Market Quotations

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BRITISH BUSINESS ENTERPRISE IN EASTERN INDIA

ADJUSTMENT TO THE NEW POLITY: THE SERVICES OF THE BENGAL CHAMBER

"FIFTY years hence, when the Bengal Chamber of Commerce is celebrating its centenary, and when a still more powerful and more numerous body entertains the Viceroy of that day at an even larger banquet in a more commodious hall, I am sanguine enough to believe that it will be in his power to point to the realisation of some at least of the predictions in which I have indulged this evening, and to congratulate your successors upon the expanding range of your influence and the fruition of your toil." This fulsome prophecy was the peroration of Lord Curzon's address to the fiftieth anniversary banquet of the Bengal Chamber of Commerce in 1903. As we know, 50 years after he spoke there is no banquet and no commodious hall to replace the old Calcutta Town Hall in which the 1903 banquet was held—and there is no Viceroy either. But there is a Bengal Chamber still, and while it celebrates its centenary in a very different way to that foreseen by Curzon, few among its members will regret the lack of the trimmings—the junketing and the emblems of imperialist power. This willingness to accept without resentment inevitable changes in the milieu in which they prosecute their business is one of the characteristics of the British trading community that Geoffrey Tyson stresses in his centenary review of the Chamber's history. But beyond mere acceptance of change is the positive feeling that few would wish to have matters otherwise. Given the choice of entertaining a Viceroy or sending a young man abroad to study, the latter is preferred not simply because it is a concession to the changed conditions of the political environment but because Britons in India today think that it is the more worthwhile thing to do. In other words, it is not merely external conditions that have changed, but Britons themselves. This is a point one is apt to miss in pondering the great changes that have taken place in the political structure within which Britons work in India—the historic transition from the dominion of John Company to the empire of the Crown, the peaceful withdrawal of the raj and the rise of the new republic. These latter transformations have affected vaster numbers of people than a small business community in one corner of the country. But the subtle changes in temper and outlook among that community itself have been vital for the success of its adjustment to the new polity.

These internal changes have produced attitudes that Curzon would have found difficult to understand, for all his liberalism. As the quotation with which we opened shows, Curzon saw the future of Indian history as an uninterrupted succession of enlightened Viceroys, and there is more than a hint in his speech of the typical Edwardian assumption that institutions such as the Bengal Chamber would inevitably become bigger and more powerful as the world in general got better and better. None of his audience's successors share that belief today, and if in fact the institution he was addressing has grown in stature in the intervening fifty years we know that it is not because of the omnipotent workings of "Progress" but, in part at least, precisely because it has shed some of the beliefs Curzon regarded as unquestionable.

Curzon was a great man and a good one, but he was also a snob. In his address to the Bengal Chamber's golden jubilee banquet one can discern his self-righteous conviction that he was talking to a gathering of money-chasers who felt little or nothing of his concern for the future of India as a nation and of Indians as a race of men. He would have been more than sceptical if his prophecy had been met with another: that fifty years later benevolent imperialism would be dead and discredited but that British business men would retain a position of some respect in the new nationalist society. Summoning all the resources of his oratory that evening Curzon read the following little

I, Englishmen and Scotchmen and Irishmen in this country, were simply writing inscriptions on the sand to be washed out by the next tide, if I felt that we were not working here for the good of India in obedience to a higher law and a nobler aim, then I would see the link that holds England and India together severed without a sigh. But it is because I believe in the future of this country, and in the capacity of our own race to guide it to goals that it has never hitherto attained, that I keep courage and press forward". The ideology of imperialism at its best probably never found finer expression than that: but, while at this distance it excites some admiration, it also reveals an approach to great questions that is antiquated and as hard for modern Englishmen to accept as for Indians.

The centenary celebrations of the Bengal Chamber this week will have no new Curzon with his oratorical talents to sum up with equal brilliance the outlook of Britons in India in the mid-twentieth century. Perhaps one of the changes of the last fifty years is that we no longer feel the need to justify our daily work in grandiloquent formulas, and we would certainly hesitate to ground our commercial activities in "higher laws and nobler aims". After decades of cynicism and suspicion, such claims are apt to be taken for hypocrisy. But grandiloquent or otherwise, men still hold general beliefs about the ordinary things they do, and the British commercial and professional community in Eastern India is no exception. Curzon's formulation may be time-barred, as the lawyers say, but it does contain a line of thought that can be amended to represent in some degree the views of the community that still finds in the Bengal Chamber of Commerce and Industry its instrument of co-operation. That is when he said that it was because he believed in the future of this country that he "kept courage and pressed forward". Curzon, also believed in the capacity of his own race "to guide it". That belief must have been a potent ally to the other, but it is one that Britons have long since surrendered. They still hope however that they have the ability to assist the country in whose future they have faith in its own efforts to reach "goals it has never hitherto attained". And it is with that less resounding formula that we must be content in our search for a centenary ideology to replace the one that found expression on the occasion of the golden jubilee.

Perhaps even that

THE RAILWAY BUDGET DECLINE IN PASSENGER EARNINGS A WARNING

THERE has been general relief that the Railway Budget for 1953-54, presented by Mr. Lal Bahadur Shastri in Parliament last week, proposed no new charges, in contrast to the previous two budgets which imposed heavy additional burdens on the customers of India's largest enterprise. The results for 1952-53 suggest that even semi-monopolistic concerns cannot go on increasing their charges without losing business. Passenger traffic has been declining since 1950-51 but the fall during the current year has been especially sharp: the revised estimates show passenger earnings at Rs. 102 crores against Rs. 112 crores in the 1952-53 budget. The economic recession is the principal contributory reason for the decline, and the Financial Commissioner admits in his explanatory memorandum: "The peak of passenger movements by the railways is over and the railways must now adjust themselves to more normal conditions." Passenger traffic this fiscal year has also suffered from localised floods, cyclones and near-famine conditions; zamindari abolition in some States has meant fewer "court" passengers, and some railways have met with increased competition from bus services. Mr. Shastri says that "it is difficult to forecast at what level passenger traffic will ultimately stabilise itself" but his Budget for 1953-54 assumes that the plateau of stability has been reached and he expects only a minor decline to Rs. 101.78 crores. His Financial Commissioner explains that apart from the growth of population factors "which may also somewhat stimulate" earnings are the Kumbh mela next winter, the opening of new lines and better crops. Estimates of goods earnings were not as wide of the mark as passenger earnings and the revised estimate of Rs. 144.56 crores compared with the actual figure of Rs. 140.48 crores (excluding freight on railway stores and fuel) in 1951-52. In the eight months to November 1952 goods earnings were higher than in the corresponding period of the previous year and indeed better than the budget had expected, but a recent decline in wagon registration figures indicates that they have been affected adversely.

The net result of a series of downward revisions is that gross traffic receipts during the current year are expected to be only Rs. 269.55 crores, but "ordinary working expenses" have risen by Rs. 1.16 crores to Rs. 188.85 crores. The Financial Commissioner explains that "this rise is mainly on account of the increased provision required for additional staff charges and for repairs and maintenance of railways' assets and installations." One of the major official arguments in favour of the much-criticised regrouping scheme last year was that it would lead to more economical working, but there is no evidence of it in the estimates which have now been presented. In fact, under the demand for "Administration" there is an inconspicuous but interesting item relating to "additional staff required to cope with increased work on all railways including dearness allowance, contingencies, etc. (Rs. 32 lakhs)." Admittedly, Mr. Gopalaswami Ayyangar compromised the aims of rationalisation by giving a number of conciliatory assurances regarding the retrenchment of surplus staff; it would have been helpful of his successor to explain what sort of additional work has arisen that should have necessitated the employment of more men. When Mr. Shastri presented the final

1952-53 budget last May, controversy over the regrouping scheme had just passed its climax and he devoted the major portion of his introductory speech to expounding its merits. Last week in reviewing the year's performance he might have been expected to measure actual achievements against those supposed merits, but in fact the only concrete claim he could make was that "some railways have found it possible even in this short period to cater to the conveniences of the public by the extension of existing train services or by the introduction of new services." One cannot be very sure how far this is an outcome of the regrouping scheme, for the railways have in fact been steadily providing more and better services as they recovered from the wounds of war and partition. Working expenses in the coming year are expected to rise to Rs. 191.2 crores against Rs. 189.1 crores in the revised estimates (and Rs. 187.93 crores in the 1952-53 budget); while gross traffic receipts will show only a slightly larger increase—to Rs. 272.28 crores from Rs. 269.55 crores. But "net miscellaneous expenditure" rises and so does the dividend to general revenues, with the result that the net surplus in 1953-54 will be Rs. 9.31 crores.

CURRENT COIN

Trade-Promotion in the Far East.—Ways to increase trade, both among Far Eastern countries and between the region and the rest of the world, are the main topic at the trade-promotion conference which opened on 23rd February at the Philippine capital of Manila, under the auspices of the U.N. Economic Commission for Asia and the Far East. The 10-day conference is a follow-up to a similar meeting held in October, 1951, at Singapore which surveyed the trade situation and resulted in "highly successful" trade negotiations, according to ECAFE. It will be remembered that the recent economic survey of the region stressed the importance of trade. It noted that most of the countries were primarily exporters of foodstuffs and raw materials and importers of manufactured goods. At the same time, because the countries concerned have concentrated a great part of their exports in a few primary products, they are extremely sensitive to fluctuations in the world market. In 1951, for example, the region had a surplus of \$1,130,000,000 in its balance of trade for the first six months—and a deficit of \$350,000,000 for the last six months. Delegates at the conference will examine the present trade situation and the outlook for trade, and then deal with specific questions such as marketing research, methods of increasing trade and of improving existing trade-promotion.

Foreign Aid for the Plan.—A leading article in Capital on 12th February which referred to inadequate information concerning the flow of foreign assistance for India's five year plan has moved the Information Bureau of the Government of India to come to light with the following table, which purports to show the position on 15th February. Adding together the rupee sums shown below, including amounts promised for this year but excluding the loan given by the World Bank before the plan was inaugurated, we obtain a total of foreign aid either received or promised for this year of about Rs. 178 crores. This compares with the sum of Rs. 156 crores mentioned by the Planning Commission in its report late last year.

EXTERNAL ASSISTANCE (LOANS AND GRANTS) SO FAR RECEIVED OR PROMISED				
Country or Organisation	Nature of assistance	Amount	Approximate amount in rupees	Remarks
World Bank	Loan	\$109.8 million	Rs. 53 crores	This includes a loan of \$32.8 million taken in 1949 for the purchase of locomotives, etc., which does not form part of the five year plan.
U.S.A.	Wheat Loan	\$190 million	Rs. 90 crores	Produces counterpart funds of about Rs. 73½ crores.
U.S.A.	Grant	\$ 50 million	Rs. 23.7 crores	
U.S.A.	Grant	\$ 38.35 million	Rs. 18.2 crores	
Norway	Grant	\$ 27 lakhs	Rs. 27 lakhs	
Canada	Grant	\$ 15 million	Rs. 7.1 crores	
		Note: For the year ending June 1953, a contribution of \$13.8 million has been promised.	Rs. 6.5 crores	
Australia	Grant	£(A) 4.2 million	Rs. 4.2 crores	
		Note: For the year ending June 1953, a contribution of £(A) 3 million has been promised.	Rs. 3.0 crores.	
New Zealand	Grant	£250,000	Rs. 33 lakhs	
		Note: For 1953, a sum of £375,000 has been promised.	Rs. 50 lakhs	
Ford Foundation	Grant	\$1,200,000 \$ 230,000	Rs. 67 lakhs

THE BENGAL CHAMBER'S ROLE IN INDIAN ECONOMIC HISTORY

SERVICE UNDER THE COMPANY, THE EMPIRE AND THE REPUBLIC

By GEOFFREY TYSON

THE Indo-British connection had its genesis in trade, and it is upon the trade of the two countries that their new relationship chiefly rests now that the formal political ties have been dissolved and India is a sovereign independent Republic occupying, by her free choice, a place inside the Commonwealth. Though current events in Persia and China might seem to argue otherwise, much of history goes to show that where trade has been developed on a strong and equitable foundation between two countries the bond thus created tends to act as a solvent in periods of political stress and strain. One has no wish to make extravagant claims, but the fact that there was this mutuality of interest between Britons and Indians has helped materially to smooth over what, by any test, was bound to be a difficult phase of readjustment. The little band of men who met in the offices of the Bonded Warehouse to proclaim the inception of the Bengal Chamber of Commerce on 12th February, 1853, on the flickering embers of the earlier Calcutta Chamber of Commerce, can hardly have foreseen that the institution they brought into being was destined to outlive the administration under which they worked and had their being and not infrequently criticised with a brusque frankness which in those days was regarded as part of the natural savour of public life.

Not many, but some Indian names of importance in the then commercial world are to be found in the inaugural records of the Bengal Chamber of Commerce, and it is a fact that at no period in the Chamber's history has it been without an influential Indian element in its membership. In the early days of British enterprise in India, Indo-British trading partnerships were not uncommon in which a Bengali or other Indian gentleman presumably found a substantial proportion of the working finance with his European associate supplying the day-to-day administration and regular contacts with markets. The wheel has again come full circle, for in the last ten years a great deal of Indian capital has been imported into what were formerly almost exclusively British businesses with a corresponding addition of Indian directors and executives. This development is important both in itself and because it is strongly reflected in the leadership of the twenty odd industrial associations which the Chamber manage and service on behalf of a wide range of manufacturing and other interests.

Widening Interests

Perhaps, therefore, looking back down the long vista of the years which separate the first days of the Bengal Chamber of Commerce from this week's centenary one may say that its outstanding characteristic in the face of far-reaching political and economic changes, and one or two crises in its own affairs, has been its flexibility whilst keeping steadily to its main objective, which it first formulated as the determination "to watch over and protect the general interest of Commerce; to collect information on all matters of interest to the Mercantile Community; to use every means in its power for the removal of evils, the redress of grievances and the promotion of the common good....". With the effluxion of time its work has expanded into many specialist fields, and there are few departments of the life of the large and modern business community which it serves into which it is not drawn at some time or another. Equally, as those who have lived and worked amidst the vast industrial complex of north-eastern India know, the Chamber has rarely failed to come forward with wise counsel or practical assistance when these were needed. For by now it has gathered into itself a corpus of knowledge and experience which gives it a highly dependable judgement in public affairs, though it would not claim to be infallible.

In reaching this position the personal factor has counted for much. All human institutions are what men make them, and the Bengal Chamber has been singularly well served by a long line of presidents, secretaries and committee members. Ordinarily speaking, a president's term of office lasts for no more than a year, and indeed the considerable inroads which it makes into his time, energies and personal business activities are such that it would be unreasonable to expect a further consecutive term in an office which is at once a high honour and a heavy responsibility. When one takes into account the probability that a president has already served a term as vice-president, one or two other years as a member of the

general committee and has usually been an office bearer in one of the industrial associations it will be seen that the process of graduation is neither brief nor nominal. But hard-worked presidents would themselves be the first to acknowledge the dependence of the whole organisation upon the secretariat which has been directed by a succession of secretaries of outstanding ability and single-minded devotion to the affairs of the Chamber. Including one whose term of office was, by reason of his death, for no more than five months, the Bengal Chamber has had in all nine secretaries in the hundred years of its existence. Of this small and distinguished company the writer has had close dealings with three, and from personal observation may perhaps be permitted to say that no public body is better served by its permanent officials, which assertion applies at every level of what is now a very large staff indeed.

Industrial Advance

The scale of the Bengal Chamber's present operations is, of course, a measure of the growth of commerce and industry in north-east India and of the complementary development of the great port of Calcutta which is the main outlet for an ever growing volume of overseas trade. In the Chamber's archives are mirrored the triumphs and failures of a hundred years of intensive economic development in four of India's States which were (and are) magnificently endowed with natural resources. The rise, decline and ultimate extinction of indigo belongs to a chapter of the now distant past. From humble beginnings on the peasant handloom, jute has risen to the position of a great international industry in the lifetime of the Bengal Chamber, whilst tea has created the modern province of Assam out of what was once a wilderness. Indian coal from the rich seams of Jharia and Dishergarh power the country's transport and industry and feeds the markets of Asian neighbours. These things did not happen fortuitously, and as great industries arose the need for association and co-operative action was met by the facilities provided by the Chamber. Nor have its activities been restricted to the affairs of commerce as such. It has played no small part in promoting the civic amenities of the city of Calcutta, whose growth has been immensely stimulated by the rising tempo of economic life. Calcutta is not a perfectly planned city, but many of its public services owe their inception and subsequent improvement to the mobilisation of public, and especially business, opinion by the Bengal Chamber and its continuing representations to Government. The members of the Chamber have given generously throughout

the years to innumerable public funds for the relief of suffering and distress.

Such is the bare record. All this, it may be argued, adds up to no more than enlightened self-interest. What, in fact, the questioner may ask, has the Chamber done for India? To such an interpolation no short answer can be given, and the seeker after truth will doubtless wish to consult the more detailed accounts of the Chamber's progress and growth which are now available. In any case the query is no more susceptible to a ready-made answer than a demand to be told what the Paris Chamber of Commerce has done for France. The famous English economist Walter Bagehot once said in defence of traders as a class, "They estimate the wants of the community and conceive how best to supply them. Capitalists," he added, "are the generals of commerce, they plan its whole strategy, determine its tactics, direct its commissariat and incur the danger of great defeats as well as earn, if they do not always gain, the credit of great victories." I would not apply the whole of this grandiloquent formula to the subject at present under discussion, for capitalists are no longer permitted to plan the strategy of commerce and they rarely get the credit of great victories, if such there be. But I would say that the Bengal Chamber of Commerce & Industry has a long and creditable record in estimating and conceiving how best to supply the wants of the community, using the phrase in its widest sense, and of pressing those wants upon the appropriate authorities. To this extent this truly catholic institution has served the best interests of the old India and the new in the hundred years of its existence.

A CENTURY OF INDUSTRIAL CO-OPERATION IN EASTERN INDIA

THE GROWTH OF THE BENGAL CHAMBER OF COMMERCE AND INDUSTRY FROM 1853 TO 1953

By FERGUS INNES

FROM small beginnings in 1853, rising out of the ashes of the defunct Calcutta Chamber of Commerce, the Bengal Chamber has grown into the respected and influential institution we all know and admire today. Its development has been intimately bound up with the expansion of commerce and industry in the Indian subcontinent. Its history is, in some degree, the history of the British trading community in India, and since it was trade that brought the British to India and it is by trade that they stay, this centenary survey* is a narrative of far more than merely local interest. The Chamber has been most fortunate in its historian, Mr. Geoffrey Tyson, who writes—and readers of *Capital* of which he was editor for 20 years will not need to be told how well he writes—with a background knowledge of the Indian commercial and political scene which must be almost if not quite unique.

In 1853 the East India Company was on its last legs. This was in fact the year of the Charter Act which threw the Civil Service open to competition and thus deprived Leadenhall Street of its valued privilege of patronage. But there were still five years to go before the Indian Empire was called into being and the government of the country passed directly to the Crown. It is an interesting coincidence that the end of the first one hundred years of the Chamber's existence came just five years after the Crown relinquished direct control and the Indian Empire ceased to exist. The Chamber has thus witnessed both the beginning and the ending of that Empire and has indeed seen some history in its time. If there is a moral to this story it is that the business men who formed its membership during this span of history displayed such qualities and so conducted themselves as to enable their successors to survive, after British rule

*The Bengal Chamber of Commerce and Industry, 1853-1953. A Centenary Survey. By Geoffrey W. Tyson, C.I.E. Published by the Statesman Ltd., Calcutta. Rs. 10 or 15s.

was withdrawn, not merely on sufferance but as useful and highly respected members of the commercial community of India.

Characteristics for Survival

Mr. Tyson's account unobtrusively brings out the factors which gained the Chamber and its members their survival value. In his first chapter, entitled "Background to the Beginning", dealing with abstractions far more difficult to discuss than facts, he is at his best; equally he shows a deep understanding of the imponderable factors in the situation in his last two chapters when he describes how the British commercial community approached and passed the great climacteric of 1947. An apt quotation from M. André Siegfried, the French scholar, throws some light on the particular British quality which has carried the community unimpaired through such momentous times. "In life in general and in political life in particular," says Siegfried, "the Englishman acts like an old-time sailor; he manoeuvres in an unstable environment, and he accepts that instability as a fact which he cannot change and which it would be folly to resent." There is perhaps a tinge of Gallic cynicism in this acute observation, and there is an implication that the British are motivated by considerations of expediency.

Mr. Tyson, however, points out, reasonably enough, that where there is no resentment the higher emotions are at least free to operate. Can we claim that they have in fact operated? Judging by the result they must have, for short-sighted opportunism, or a mere trimming of sails to prevailing winds, would never have produced the results apparent from the last five years. Mr. C. A. Innes, the President of the Bengal Chamber for its centenary year, perhaps puts his finger on the key factor in the policy and outlook of the Chamber, and its members in claiming that the Chamber, through its long history, "has consciously striven

to subordinate short-term expediency to long-term policy in the interests alike of its members and the country as a whole." This is the sort of aim which must be substantiated more by general results than by specific facts, but there is a great deal in the record which bears out its truth.

It should also be noted that the Chamber, though predominantly British in character and membership, has never been a "closed shop" for purely British or European interests. It is interesting to find more than half a dozen Indian names among the original members of 1853. In 1870, in the great hey-day of British rule and commercial expansion, it was embodied in the constitution of the Chamber that it was highly desirable not to recognise any principle of exclusion, and that all persons engaged or interested in the commerce or shipping of Bengal should be admissible as members. Evidence also crops up from time to time of the sympathy shown by the British business community towards Indian nationalist aspirations. It will probably be news to most readers, as it was to this reviewer, that on one occasion a President of the Chamber was not merely a member of the Indian National Congress but presided over one of its annual sessions.

Industrial Progress

Although the Chamber was originally called into being to serve humble purposes, mainly confined to the pooling and publishing of commercial information, the removal of trade abuses and the setting up of arbitration machinery for trade disputes, as time went on it came to play a notable part in the vigorous creative activity of Calcutta and its hinterland in the second half of the nineteenth century. It was called on to provide the secretariat for the great mercantile associations, such as the Indian Jute Mills Association, the Indian Tea Association and the Engineering Association, to name only three out of the many which sprang up in those years and now fill so important a rôle in the commercial activities of India, and to assume a sort of managing agency relationship towards them. The expansion of industrial activity was indeed phenomenal. In 1855, two years after the establishment of the Chamber, the first power-driven jute mill was set up, with a production of eight tons a day; in 1952 the monthly production of the IJMA mills was over 80,000 tons and jute had become the mainstay of India's foreign exchange earnings. In 1853, the output of tea in Assam was no more than 266,700 pounds; in 1950-51 Indian tea exports earned Rs. 78 crores of foreign exchange. In 1853, Calcutta was importing coal; by 1902, half-way through the hundred years of the Chamber's existence, exports had already reached

I.C.I.'s famous symbol—the Roundel, has for many years been recognized in India as a guarantee of the reliability of the products to which it is related. This confidence is well-placed, for reliable products are the result of careful attention at every stage—Research, Testing, Manufacture, Marketing and Technical Service. The I.C.I. organisation is equipped to deal expeditiously with any problem which arises in connection with any of its wide range of products and I.C.I. (India) Ltd. is able to call on the experience and skill of any of the many laboratories and expert technicians maintained in various parts of the world. These facilities are particularly useful in view of the intention of I.C.I. (India) Ltd. to increase the number of products

**ICI
IN
INDIA**

manufactured locally. Through its associate company, The Alkali & Chemical Corporation of India Limited, I.C.I. has for some years been producing in India a number of heavy chemicals, Chlorine, Caustic Soda and Hydrochloric Acid. More recently has been undertaken the manufacture of Benzene Hexachloride, the basic ingredient of the well-known 'Camexane' brand of insecticides, and I.C.I.'s famous range of paints—'Duco', 'Dulux' and 'Nocol'. I.C.I. supplies a range of products, too wide to enumerate here, to India's industrial, agricultural, commercial, public and home lives and, whether imported or made in India, products bearing the I.C.I. Roundel trade mark are backed by the vast experience of the world-wide I.C.I. organisation—this symbol is a guarantee of reliability.

1½ million tons. These form but three examples of the economic expansion which has taken place, and many others will be found in the book. No doubt the theme will be more fully dealt with in the larger volume of which this survey is a forerunner.

There is perhaps another moral to be drawn from this story. We may well ask whether such rapid development of industry, under the banner of unimpeded private enterprise, could have taken place if business activity had been trammelled as it is today. The Victorian pioneers must indeed be turning in their graves at the official assumption, a legacy of the war years and the unsettled economic conditions which succeeded them, that the business man will make a mess of his task of production and distribution unless he is guided, controlled, and restricted or prodded by an all-wise Government. Free enterprise, the profit motive, and laissez faire, whatever else may be said of them, were in the highest degree conducive to industrial and commercial expansion. It is only within the last few decades that Government have conceived it to be their duty to exercise control over every sphere of business activities, if not to stifle incentive by crippling taxation. It was not till Curzon's day that the Government of India had any Department of Commerce and Industry at all. Is there any hope that expansion will continue in the present climate of political and administrative theory? Again, is there any hope that new countries, such as Pakistan, which are crying out for development, will in present circumstances get the assistance from private capital and enterprise which they require? These are difficult questions to answer, and one can only hope that the history of the next hundred years will not record a decline in industrial progress and productivity.

Mr. Tyson makes no pretence that the record of the Chamber and its constituent firms was free from blemishes. To us moderns, for example, its opposition to the Factory Act of 1881 appears so reactionary as to be wanting in elementary humanity, for the Act did little more than prohibit the employment of children under seven years of age in factories and restrict the employment of children between eight and twelve years of age to nine hours daily, with four holidays a month. Yet in these matters it was an unregenerate age, where economic theory, implicitly believed in, condemned any tendency to swerve from the inexorable law of supply and demand; and probably no student of social history would be found to argue that the industrial leaders of Bengal were more purblind in their approach to such problems than those of most other parts of the world.

Oddly enough the Chamber, in its early days, showed itself surprisingly broadminded in its attitude towards new taxation measures. So far back as 1860 it actually supported the Government of India's proposal for the introduction of income tax. The Chamber at this distance of time "may be forgiven", comments Mr. Tyson drily, "their failure to foresee the powerful physical weapon which was being forged for the undoing of generations of merchants and traders as yet unborn". The fact was that Mr. James Wilson, the new Finance Member of the Viceroy's Council, had produced a workable plan for rescuing the country's finances and the members of the Chamber felt that the incidence of income tax would fall equitably on all sections of the community.

The Chamber's first serious incursion into politics was somewhat unfortunate, for it joined in the agitation against the Ilbert Bill of 1883, which sought to abolish the racial discrimination under which no European could be tried for a criminal offence except by another European. Illiberal as this attitude now appears, one can hardly feel surprised at it, looking to the views and outlook of the average European of those days; the surprising thing, in fact, was that the Chamber Committee was not unanimous in this matter. Lord Ripon's "noble epilogue to the whole affair," to use Mr. Tyson's words, is one that must even now strike pride in every British heart; as a viceregal pronouncement it must surely rank with Lord Curzon's famous valedictory speech. "It is not by the force of her armies," said Ripon, "or by the might of her soldiers that a great empire is permanently maintained, but by the righteousness of her laws and by her respect for the principles of justice." No empire, however great, can be permanently maintained and the Indian Empire, that great achievement of the British race, has been no exception to the general rule; but the British connexion with India happily continues in a manner beyond any historical precedent, reinforced and strengthened as it is by memories of that respect for justice and passion for fair dealing which gave the British a more than transitory status in this subcontinent.

This review may well be brought to a close by quoting one of Mr. Tyson's most telling passages on this subject. "To one who has spent many years of his working life in the old India and the new, the way in which both sides have approached the profound readjustments which had to be made as a result of the changes of 1947 stands, in some strange and inexplicable way, as justification of those things of the spirit that are decent and valuable and abiding in human relationships. Where

there might have been vindictiveness and recrimination there has been built up a new understanding, halting and incomplete perhaps as yet, but not without charity, giving that word its full Pauline meaning. For this, much of the credit must go to the Indian leaders.... Much of the credit, too, as readers of this book will conclude, must go to those leaders of the British community who, during the past hundred years, have guided the affairs of the Bengal Chamber of Commerce and Industry, the record of which from 1853 to the present day "will serve future generations in good stead by reason of its integrity, its high purpose and its great achievements".

LORD CURZON AND THE BENGAL CHAMBER

THE GOLDEN JUBILEE CELEBRATIONS IN 1903

With the Bengal Chamber this week celebrating its centenary, it is interesting to turn back the files to a lively account of the fiftieth anniversary celebrations in 1903. The event was marked by a Golden Jubilee Banquet in the Calcutta Town Hall on 12th February: the president of the Chamber, Sir Montagu Turner, was in the chair and the chief guest was Lord Curzon of Kedleston, Viceroy and Governor-General of India. The comments that follow are from the issue of CAPITAL for 19th February, 1903.

THE Jubilee Banquet of the Chamber of Commerce was a great success, that is, it provided a very pleasant evening entertainment for the assembled members and their guests. Everybody seemed to be happy and to be well pleased with himself and with everybody else. Peliti excelled himself, not only with the character of his viands but with the admirable manner in which they were served. Punctuality is not one of Lord Curzon's strong points, although it is a virtue he ought to cultivate, at all events in his public engagements, and he kept us waiting on him for a good quarter of an hour. However the dinner did not seem to suffer for the delay, and when ten o'clock arrived, the Company having enjoyed a splendid feast, well washed down with good Rhine wine were just in that happy, expectant mood with "radiant faces and beaming eyes," as one chronicler has it, which fitted them for entering with zest into the after dinner entertainment provided for them by the Committee of the Chamber.

After Lady Curzon and the other "fair women and brave men" of her party had arrived to grace the assemblage with their presence, Sir Montagu Turner got up to make the running for the great event of the meeting. Considering that he was still suffering from a damaged collar bone, he got through his little performance in a very plucky manner, and his speech, which was well heard, did not contain many inaccuracies. No sooner was our Knight finished than the great Prestidigitator from Government House got up to amuse the great audience already prepared for him by the magic wand of the wizard Peliti. And right well the able conjuror and acrobat did his work. For the space of nearly an hour and a half, without a single hitch or break, he kept us spellbound with his exhibitions of necromancy and optical illusions and also by his vocal agility, while he rode his hobby horses, balanced himself on the tight-rope, or vaulted with the long pole—in every case landing gracefully on his feet—amid great applause. When the performance ended there were shouts heard of—"The greatest Viceroy India has ever seen!"—"Most masterly and eloquent speech!"—"What mighty pronouncements!"—"What a magni-

ficent peroration!"—all of which were really meant to be taken seriously by the audience that evening.

What although they found next morning that all that was left was only a Leeds Smoke Doctor prowling about looking for soot? Had they not enjoyed themselves on the previous evening? And that was all they wanted. Did we not all thoroughly enjoy ourselves in seeing the magnificent display of Coronation fireworks the other week, although all that was left next morning on the maidan was only a few sticks and bits of cartridge paper. Even so everyone thoroughly enjoyed the Jubilee Banquet of the Bengal Chamber of Commerce.

"Viceroy, Limited"

Lord Curzon is too sensible a man to have his head turned by the obsequious and fulsome flattery of those decoration hunters who in presumably sober moments are continually lauding him as a Viceregal non-such, and as the paragon of all human excellence. He, at all events, knows perfectly well that this is not the time for a final judgment upon his merits, and that, only when his work in India and its effects are seen in their true perspective, which time alone can give, and in the dry light of history, will he get his proper place in the Viceregal line of India. Meantime he knows it is no easy matter to be a Viceroy. People think of him as being a sort of absolute dictator, commanding and it is done. The truth is, he is hampered on all sides. He is the Viceroy, Limited. He is one of the hardest working men in India, and has done much to send the electricity of his own energy through every branch of the service, much to the disturbance and annoyance of many an "armchair" civilian who longs for this regime to come to an end, that, with them at all events, things may get leave to slide back to "as we were."

His Excellency tells us that he is on the lookout for a live man for the new Commercial Bureau about to be brought into existence here, but that he has not found him yet. This has not been for want of suggestions, unless, indeed, he has been meeting with refusals. Probably he will

adopt the method he did in other cases. He could not find a Railway man of sufficient calibre in India to survey the lines and report with suggestions as to the necessary reforms, and so he indented home for one, and got Mr. Thos. Robertson, C.V.O., who will, in all probability, amply justify his selection. A Director General of Architecture was wanted, and not a single architect here was deemed fit enough for the billet, and so, a man of special eminence was obtained from England.

In like manner, when a Librarian had to be obtained for the newly-organized Imperial Library the Viceroy simply did the right thing. Finding no one able to fill the post in all the Service he brought a first-rate expert from London. In the Department of Archaeology, the same thing happened. And, finding that no one on the Government Engineering staff had any other remedy for the prevention of smoke than that of the viscous who recommended "constant observation and rigorous prosecution," Mr. Fred Grover is on his way out to suggest means for keeping the coming great white marble Victoria Memorial Hall from being begrimed by soot from the Mills at Howrah.

The fact is that Lord Curzon has realised that this is an age of specialisation and of trained experts in all lines of life. It is not reasonable to expect that an Indian Civilian, who has passed into the Service high up in his marks as regards his knowledge of Mathematics but by the bare skin of his teeth as regards acquaintance with his own or any other language and literature, should be such a versatile genius as to be able to do everything and to fill well, or even in a tolerable fashion, all the divers posts into which he may be pitchforked from time to time during his career. The truth is, he does not, and there are at the present time, hundreds of Civilian, round men in square holes, who have entirely to trust to their personal assistants for keeping them right in the duties of their offices. They sit in their chairs and sign their names. His Excellency gave a gay and festive poke in the ribs last Thursday night to what he designated the "Armchair Critics," of whose work, however, he admitted being an ardent student. I daresay he knows there are also such things as "Armchair Administrators," not only in India, but in the India Office at home.

Agriculture and Archaeology

By all means, if the Chamber of Commerce cannot produce "the best man possible" for being the head of the Commercial Bureau, let him be imported from England or the United States. One thing above all others, let us be spared from seeing a mere Civilian pitchforked into the place for which neither nature nor past training has fitted him. If Lord Curzon does nothing else during his

term of office, than place the internal administration of the Empire on such a footing that all the various billets shall henceforth only be held by the men best qualified to fill them, he will deserve well of India and of England. It is to be noted with satisfaction that, at last, Agriculture is to receive the serious attention of the Government. It ought to have had the first place long ago, for in this land, where no inconsiderable number of the inhabitants are always in a chronic state of hunger, when not absolutely suffering from starvation, the primal duty of a Government is surely to set about creating such conditions as will put the cultivators of the soil on the plan of raising a sufficiency of food for themselves (making two blades grow where only one grew before) and so eliminate for ever that ghastly term "Famine Administration" from having permanent place amongst the bureaux of the Government.

Improving Calcutta

As an illustration of the manner in which the Government of India is carried on, and of the way in which even a strong Viceroy feels himself hamstrung, when striving with might and main to further the best interests of the community, may be mentioned that contained in the melancholy confession which His Excellency had to make last Thursday evening about the improvement scheme for Calcutta. It seems that the Viceroy and all his Council, aided by the combined wisdom of the Chamber of Commerce and the Municipal Corporation plus the matter as devising and carrying out the reformation of the streets in an Indian city, Lord George Hamilton and his "armchair critics" of the India Council, valued at £1,200 a year each, paid by the people of India, have to sit upon the scheme. And they have been sitting upon it, we are told, for the past three years, keeping Calcutta sweltering in filth and disease all the time they take to make up what they are pleased to call their minds on the subject.

There was little in the speech that we did not know before, and his remarks about the improvement of Calcutta, if taken seriously, would seem to imply that its condition was hopeless. When a Viceroy, who is presumed to be of transcendental ability and who, if we are to accept Sir Montagu's statements, is a man the like of whom we may never see again, is fain to confess that he would need ten years' time, a free hand, and an unlimited command of money to make Calcutta the Queen of the East, we are tempted to exclaim, poor creatures as we are, we would undertake to do it under these conditions in three years. It really seems to us to be trifling with the question to make these observations. Because it must be patent to anyone of the most limited comprehension that given these three things, almost anything under the sun is possible and that, too, quickly.

The proposed gift of fifty lakhs of rupees would not even suffice to widen Bentinck Street, and in dealing with the great problem of the improvement and sanitation of Calcutta, we must have no statesmanship of the tin-can kind; the order is a large one and must be dealt with in a large spirit. We look upon His Excellency's remarks, however, about the absolute necessity for the sanitation of Calcutta as the prelude to something being done, and now that the Black Hole is off His Excellency's mind, the black slums may take its place. We are glad to see that the Government of India are going to have that expert advice, but it seems to us, that in getting out a gentleman to investigate the Smoke, Archaeological and other recondite questions, the Government is going a little beyond the sphere of practical usefulness. What we really want in Calcutta are buckets and brooms and not to extract sunbeams from cucumbers.

Victoria Memorial Controversy

The Victoria Memorial Hall came in for mention at the Thursday evening banquet, and it would be well for Lord Curzon to take note of the rising tide of public feeling against his high-handed proceeding in deciding to filch a good slice of the maiden as a site for his pet project. Lord Curzon is a mere bird of passage here. If he passes a law which turns out to be unworkable it can be repealed or modified. If he is allowed to curtail and spoil the chief glory of our City, the act is irremediable. He, and he alone, is responsible for wishing to filch away that fine and much used portion of the maiden between the Eden Gardens and the Fort, for a site for the memorial. He knows that the whole of the Memorial Committee are not at one with him in this matter, but apparently he has overruled the opposition, and shapes as if he were determined to carry out his own sweet will, for men are now busy surveying and making preparations on the proposed site.

He should pause and take stock of the situation before it is too late. There is no particular reason for being in a hurry. The plans can mature, and the money accumulated can, in the meantime, swell by accruing interest, until the question of the best site gets time to be definitely settled. The site of the present old jail would, in the opinion of a large number of the community, be an admirable one for the Memorial from every point of view, and there are other alternatives. If Lord Curzon proves stubborn, the necessity may arise for convening a public meeting on the subject to protest against the proposed destruction of the maiden—the very lungs of the City. But there is every reason to believe that if Lord Curzon is convinc-

ed that the majority of the citizens are against the filching of the site he proposes, he will gracefully give way to public opinion. Steps, however, must be taken to convince him, and there is no time to lose.

Speaking at the Chamber of Commerce Dinner on last Thursday, His Excellency referred to the Jute Mills that he had seen in so many parts of the country. Might I respectfully ask His Excellency whether it was the outside or the inside that he has seen?

Growth of Bengal's Trade

In proposing the health of His Excellency the Viceroy at the Chamber of Commerce Dinner last Thursday, Sir Montagu Turner took a brief survey for the last fifty years. Turning to the trade of the Province he commented on the fact that, whereas in 1853 the total value of the Foreign trade of Bengal was less than 23 crores, it was now nearly 111 crores. He added that a very large number of industries were concerned in this enormous total, but that to his mind one of the most remarkable was that of the manufacture of Jute goods, and that the value of raw Jute exported had increased from 12 lakhs to 12 crores. Sir Montagu was a little at sea regarding our thirty Jute mills, whose annual production he valued at 9 crores of rupees, for we find that the value of the exports of jute fabrics to foreign countries alone from Calcutta last year was 81 crores, and this, of course, does not include the Burma or Bombay trade, or the value of bags used for the internal trade of the country and to cover the large exports of grain and seeds. The total value is over 11 crores. We are a little surprised at Sir Montagu's ignorance upon this point, because his firm was one of the pioneers of the Jute industry, the India Jute Mill, which his firm manages, being about the fourth to have been erected.

We note that the law relating to the office and duties of Administrator-General was discussed by the Chamber of Commerce in 1953, and Sir Montagu remarked that it was curious that it should have again been dealt with some fifty years later. We are not aware that the Chamber was of much service to the public in cleansing the Augean stable of the Administrator-General, and we are under the impression that Capital had more to do with that.

Sir Montagu also claims that the Chamber of Commerce suggested a line of action to Government in connection with the Currency legislation in 1893. We were hitherto under the impression that the Chamber of Commerce were made a stalking horse by Sir David Barbour, and that the whole Currency legislation was initiated by him, the Chamber simply saying "ditto to Mr. Burke."

The pith of the President's address lies in the following words with which we thoroughly concur:

"I would add that the exploiters cannot possibly be successful, nor can they be expected to persevere in efforts needing considerable thought, time, attention and outlay, unless they are given a free hand to carry out their projects, and unless Government refrains from placing unnecessary obstacles in their way."

The newly elected officers of the Bengal Chamber of Commerce are: Mr. E. Cable, of Messrs. Bird & Co., President, and Mr. A. A. Aparcar, of Messrs. Aparcar & Co., Vice-President. The other members of the new Committee are: Messrs. A. Forsyth, (Graham & Co.), E. Henry (Blackwood, Blackwood & Co.), A. P. Rodocanachi, (Ralli Bros.), W. A. Dring (Acting Agent, E.I.R.), D.M. Hamilton, (Mackinnon, Mackenzie & Co.), J. C. Shorrocks, (Geo. Henderson & Co.) and W. Touch (National Bank of India, Ltd.)

AN APPRAISAL OF THE BRITISH INFLUENCE ON INDIA

POLITICAL AND MORAL CHANGES IN THE ERA OF FOREIGN ADMINISTRATION

By GEOFFREY TYSON

THREE, possibly only two, really important books about India have appeared since independence. Sir Percival Griffiths' *The British Impact on India* is one of them. It is fitting that this book and its subject matter should be brought to mind at a moment when that symbol of British commercial enterprise in India, the Bengal Chamber of Commerce and Industry, is celebrating its centenary with due éclat. And perhaps this is the point to say that in this massive study (for such it is), which puts its author in the company of such famous writers of Indian history as Lyall, Foster, Thompson, Gairatt, Jadunath Sarkar and Coupland, the economic chapters are the least satisfying of a book that runs to over five hundred pages and therefore quite obviously could not proceed to greater length to satisfy the specialist reader who is looking for fuller treatment of his pet subjects. Having said that, it should be added that the rest of the thesis is admirably balanced between the early and modern phases of the British connection and the student has reason to be grateful to Sir Percival for the pains he has taken over the early period in which the first hesitant steps were being taken towards the establishment of British rule in the sub-continent. For he has collated and interpreted a whole lot of factual information which has hitherto only been available in fragmentary and scattered form. An impressive bibliography at the end of the book shows how widely Sir Percival has cast his net, and although more than three hundred and fifty books are named in the list the author recommends them as suggestions for general reading! So much for the physical proportions of this important work.

For the ordinary reader the beginning and end of the British period furnishes the more exciting chapters of the story; the middle years were the hard plodding years when an alien civil service was mainly engaged in building an administrative system that would be inexpensive and efficient. And how well the work was done if we measure the results merely in terms of law and order and add to these the provision of Western education for a few and the encouragement of liberal institutions such as a free Press and political parties. As becomes an ex-civil servant, Sir Percival writes affectionately, but not without an objective judgement, of what were probably the halcyon days of the administrator as such. Great achievements do not blind him to the defects of a system which had both its strength and its weaknesses. In his view the most important characteristic of the British administration was its impersonality which differentiated it from all previous attempts to govern and unify India. If impersonality gave the raj a quality of endurance, it also bred a class of civil servant who was accused of conscientious aloofness, and though such men might work zealously for India they were always open to the charge that they did not love or understand its people. Though Sir Percival considers this was often not true of individual officers, he says that the allegation was not unmerited as an indictment of the spirit of British rule. Conceding all the limitations under which an alien bureaucracy must anywhere labour (and those limitations are inevitably severe, even when foreign rule has consolidated itself over a century and a half) the Indian Civil Service and its attached cadres come pretty creditably out of any historical survey of the Indo-British connection. They did supremely well the limited job they were given.

Rise of the Technician

But that does not mean to say they were able to satisfy the requirements, political and spiritual, which in part they helped to create in India or that by tradition, training or organisation they could meet the country's needs for a new breed of administrator—half civil servant half technocrat who seems to offer the countries of Asia the best value for money in the second half of the twentieth century. Withal, it is a most significant fact that the outstanding figures in the present administration are the Indian survivors of the old régime, partly of course by reason of their seniority but also because of their background.

India, however, ceased to be primarily an administrative problem in the mid-nineteen twenties by which time it was clear that the growth of Indian nationalism, based in part on

the unifying processes of the previous hundred years, would ultimately demand political fulfilment in terms of a self-governing Indian democracy. For much of this period Sir Percival Griffiths was a close spectator of the Indian scene and in writing of it he is at his brilliant best. A short concluding chapter, in which he draws together the strands of the complex processes which were at work during the period of the British connection, furnishes a clear and compact picture of cultural and emotional stresses of which most people were vaguely aware but few could have described.

The British period, he emphasises, has been short, "a fleeting moment in the long history of India" and effectively no more than a quarter of the duration of Muslim rule. If Islam is uncompromising, Hinduism "has protected itself throughout the centuries by its flexibility and absorptive capacity.... and in the British period the Hindus with their greater sensitivity to new ideas and spiritual influences have been profoundly affected by European thought". During the later years of the British nexus, Hinduism has, Sir Percival considers, "experienced a mighty resurgence", though elsewhere he notes a growing indifference to its ritual and formularies. He does not make clear how far the Hindu revival was incidental to the steady and continuous upsurge of Indian nationalism during the last thirty years, and indeed is careful to emphasise that we are still too near many of the events which he discusses to pass a final verdict upon them. Nonetheless, he has written a most valuable book. Not only is it a detailed narrative of the crowded events which reached their climax on 15th August, 1947, but its pages set down with scholarly detachment the judgements of one who has for many years been both a friend and a servant of India.

RALLIS INDIA LIMITED.

A DITCHER'S DIARY

Another recurrent subject of debate has been preservation of the Maidan, "the very lungs of the city", and it is sad to record that civic awareness of the value of an extensive park in the heart of Calcutta has declined over the years. Whatever may be the architectural merits of the Victoria Memorial, I am willing to wager that they will not be outshone by the pile of bricks now being thrown up on the Chowringhee side of the Maidan opposite the Continental Hotel. Yet the extraordinary thing is that the proposal to erect the monument to Victoria encountered vigorous opposition because it would "flick a good slice of the Maidan", while the construction of a permanent market on another part of the park has not even been questioned—and the Maidan was much more extensive in 1902 than it is today. We have in recent years suffered the devastation of the Eden Gardens and the loss of various other sections of our parkland to the ramshackle monstrosities erected in honour of sport, exhibitions and the like. Surely the time has come for the citizens of Calcutta to put a stop to encroachments on a park that in the last century, when the town was smaller and less crowded, was known as "the chief glory of our City".

Mr. Mackay Tallack gave some fascinating figures concerning the health of tea garden workers at a meeting of the India and Pakistan Branch of the Ross Institute of Hygiene last week, which if more widely publicised might counter some of the misunderstandings popular on this head. The birth rate on tea estates is 42 per thousand, which is nearly double the all-India average. While, as Mr. Mackay Tallack said, this may not be a good thing in itself it at least shows that general health conditions on the gardens cannot be too bad. Striking progress has been made in the last few years in the battle against the scourge of the tea areas, malaria. Between 1947 and 1951 the malaria attack rate per thousand was brought down from 181 to 70 in the Assam Valley, from 274 to 94 in the Dooars and from 147 to the very low figure of 32 on tea estates in Madras; spleen rates in the first two areas dropped from 22 to 8 and from 46 to 14. These excellent results are due to the use of anti-malarial drugs and insecticides but unfortunately the freedom from constant exposure to malarial mosquitoes which is thus achieved also robs the workers of the immunity they possess as long as they are being repeatedly infected. As a consequence, any slackening of the war on the insect can lead to disastrous relapses, and the case of one Assam estate was quoted where after four years of relative freedom from malaria the attack rate suddenly increased eightfold. The Institute has calculated that it costs Rs. 2,225 to provide an estate population of 2,000 people with a popular anti-malarial drug during a malaria season, and of this sum Rs. 1,080 is wasted because labourers spit out or throw away the tablets issued to them.

A Viceroy told the Bengal Chamber about the turn of the century: "Gentlemen, sometimes when I contemplate the possibilities, the enormous possibilities of this place, I almost feel—you may regard it as a strange ambition—as if when I laid down the post of Viceroy I should like to become chairman of the Calcutta Corporation. (Cheers) I would undertake to make this city the pride of Asia and a model for the Eastern World. (Loud cheers) I would open out all your crowded quarters and slums. I would have electricity as the universal illuminant. I would have a splendid service of river steam-boats and ferries. I would have all the quarters of the town connected by a service of suburban railway or electric trams". And more in the same vein. Needless to say, the publisher of these brave words did not become Chairman of the Calcutta Corporation; he went home leaving his audience, the Chamber, to espouse the cause of improving Calcutta and two of its members to supply the "universal illuminant" and the "electric trams". As for the suburban railway, the West Bengal Government is still talking about it. There are other hardy annuals in the century-long discussion on how to make Calcutta a better city. Thus we find a President of the Bengal Chamber saying at an annual meeting fifty years ago: "Even assuming that the Hughli were a dying river, could we allow the port of Calcutta to be closed on that account? Surely we should at once set about constructing a ship canal from Calcutta to the sea".

The small car market, which is naturally the section of the automobile industry in which Indian enterprise has interested itself first, promises to become considerably more competitive this year and next. A British manufacturer has announced a project to turn out cheap light cars costing much less than the usual model, and as with the greater part of the British motor industry's output, these cars will no doubt be channelled to the export markets; their low price indicates that buyers will be sought in Asian countries particularly. This decision is actually a reaction to the growing competitive threat from Germany and France where the production of very light cars is now being organised on a more ambitious mass production basis. The Volkswagen factory near Hanover

will be working double shifts this year to produce about a quarter of a million units priced at £375 for the standard model and £460 for the de luxe export model. The Volkswagen is competing strongly in the European market with the small Renault and the Morris Minor but its makers are turning their attention overseas, where this year they plan to send up to 60,000 vehicles. They have assembly plant in Eire, South Africa and Brazil and are beginning to push into the Far Eastern market. Incidentally this was the firm that was to supply every German family with a motor car, according to Hitler's promise, in return for the savings stamps that workers bought each payday under the Nazi régime. It didn't do that, but it looks set to provide a good many Asian families with a car in return for relatively small sums of cash over the next few years. British, French and perhaps Czech manufacturers will be aiming to do the same. The young Indian industry, already in difficulties despite lavish protection, will evidently have to face keener competition than it has known in the past.

Most people believe, as I did until the other day, that it is one of the canons of the English law that a man is innocent until proven guilty, and that the burden of proving him guilty lies with his prosecutors. Discussion that followed the Commons debate on the flogging Bill this month reveals however that there are "scores of exceptions" to this in the criminal law, and the Government's Prevention of Crime Bill proposes to make another. The Bill will make liable to arrest without warrant anyone suspected by a policeman of having with him in a public place any variety of dangerous instrument "without lawful authority or excuse, the proof whereof shall lie on him". Those last few words have been under fire as undermining the "presumption of innocence" which, as I say, is not nearly as universal as commonly thought. A familiar exception is the requirement that a possessor of stolen property prove that he came by it innocently, but there are plenty of others which all appear to have been introduced into the law by Acts of Parliament. As for the latest departure from the ideal, it is perhaps the only way to put down the use of "coshes" by vicious youths which has caused so much anxiety of late.

Recent sharp declines in rice prices have further justified Mr. Rafi Ahmed Kidwai in his optimism about India's food supplies, and he has been able to go so far as to forecast the end of rice imports next year. Whether such a decision would be warranted by one good harvest in Eastern India remains to be seen; past experience shows that crops are too capricious to permit of long-range planning of this sort. But while the Food Minister is in an expansive mood one cannot help wondering what he has had to say about food subsidies to his colleague in the Finance Ministry during the preparation of the budget that will be presented tomorrow. Mr. Kidwai joined the Cabinet last year at the height of the controversy over Sir Chintaman Deshmukh's proposal to reduce the subsidies drastically, and he let it be known that he was accepting the food portfolio more or less on the understanding that the subsidies would be restored. They were restored to a large extent last summer, but by now others in the Cabinet must have come around to the view that they are indefensible in view of the Government's financial difficulties. The easier food supply position may have abated the Food Minister's opposition to the sensible course of stopping this drain on the treasury and if so this will be the most useful cut the Finance Minister can make in the swollen expenditure side of his budget.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December, 1952, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches and report that:—
(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

Bombay, 29th January, 1953.

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1952, does not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

A. C. CLARKE, General Manager. H. T. COULTAS, Chief Accountant.

COWASJEE JEHLANGIR, Chairman. AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAIJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, Directors.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

BALANCE SHEET 31st DECEMBER, 1952.

Capital Authorised and Fully Paid Up 100 Ordinary Shares of £1 each ..	£100	Cash at Bankers ..	£100
	£100		£100

Signed on behalf of the Board
J. DONALDSON, Directors.
S. H. BRADFORD.

We have examined the above Balance Sheet of the Company which is in agreement with the books of account. We have obtained all the information which was necessary for the purposes of our audit. In our opinion and to the best of our information the Balance Sheet shows a true and fair view of the state of the Company's affairs at 31st December, 1952. No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

THE CALCUTTA MONEY MARKET

CREDIT SLIGHTLY EASIER

Wednesday, 25th February.

MONEY has been somewhat easier in Calcutta in the past few days and on several occasions there have been lenders over. The general opinion is however that this is only temporary and there will be no let-up in the demand for funds. Advances against sugar, cotton and grains have increased slightly and other accounts are about steady. Rather easier money supply conditions have been reported from Bombay. Business is generally quiet on the eve of the budget. Rates in the interbank market are unchanged at 2½ percent for overnight money and 3 percent for call money.

There has been something more doing in the export bill market where moderate business is reported this week; gunny and tea bills have been reported. Remittance has been fair. Rates are unchanged at T.T. and O.D. is 5 31/32d. three months' sight bills is 6½d. four months' sight bills is 6 5/16d. and the U.S. dollar Rs. 47s.

Tenders for Rs. 1 crore of treasury bills were opened on 24th February. The total amount offered was Rs. 1,09,25,000 and tenders at Rs. 99.63 percent were accepted. Lower tenders were rejected. The average rate of acceptance was Rs. 2.7-0 percent per annum. Tenders for another Rs. 1 crore of bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 20th February, Government of India Treasury Bills for Rs. 3,27,50,000 were sold in favour of the Reserve Bank of India.

Bullion was slightly quieter last week with activity restricted because of the proximity of the Holi festival. Sentiment was well maintained following the failure of the Bombay Bullion Association to have a state of emergency declared. It was also suggested that legal opinion was not in favour of the Association's decision to impose a margin on every rise of Rs. 7 per 100 tolas in silver and of Rs. 4 per tola in gold over the basic rates helped the bulls. The price rounded off at Rs. 167-3 or about 5 annas less than the previous week. The ready rate was quoted at a premium of 3 annas. Silver, however, continued unchanged at 74d. in London and at 85½ cents in New York.

Gold also eased fractionally in sympathy and the price fell from Rs. 90-14 to Rs. 90-4. The sovereign at Rs. 59-7 disclosed a loss of 8 annas.

A decline of Rs. 7.84 crores in notes in circulation to Rs. 1,121.36 crores is the outstanding feature of the return of the Reserve Bank of India for the week ended 20th February, 1953, while the total note issue at Rs. 1,140.58 crores shows a small rise of Rs. 28 lakhs. Notes held in the Banking Department consequently rose by Rs. 8.12 crores to total Rs. 19.22 crores. In the Banking Department, deposits of the Government of India diminished by Rs. 4.28 crores to Rs. 153.12 crores, but other Government accounts were Rs. 4.05 crores higher at Rs. 5.07 crores. Balances of commercial banks at Rs. 45.52 crores are about Rs. 8 lakhs higher over the previous week. Government Treasury bills decreased by Rs. 2.76 crores to Rs. 13.57 crores, while balances held abroad were up by Rs. 1.53 crores to Rs. 153.53 crores. Other loans and advances declined from Rs. 15.61 crores to Rs. 12.27 crores, of which advances to scheduled banks against usance bills continued unchanged at Rs. 74.18 lakhs. Ways and means advances fell from Rs. 4.48 crores to Rs. 3.42 crores. Investments at Rs. 100.14 crores reveal a small increase of Rs. 5 lakhs.

The statement of the position of Scheduled Banks for the week ended 13th February, 1953, discloses Demand and Time liabilities at Rs. 526.64 crores (Rs. 11.58 crores on account of borrowings from Banks) and Rs. 314.79 crores (Rs. 1.83 crores) compared with Rs. 525.00 crores (Rs. 12.39 crores) and Rs. 315.27 crores (Rs. 1.83 crores) respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 2.22 crores and Rs. 2.64 crores to aggregate Rs. 34.31 crores and Rs. 44.60 crores, respectively. There is a drop of Rs. 5.63 crores in investments to Rs. 301.82 crores. Advances and bills discounted at Rs. 500.68 crores reveal an increase of Rs. 3.11 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.4 percent and 59.5 percent against 8.8 percent and 59.2 percent.

The return of the Imperial Bank of India for the week ended 13th February, 1953, shows a fractional fall of Rs. 74 lakhs in total deposits to Rs. 207.96 crores. Investments in Government Securities are down by Rs. 3.54 crores to Rs. 71.18 crores, while other authorised investments remain unchanged at Rs. 10.76 crores. Loans, cash credits and overdrafts have declined by Rs. 3.54 crores to aggregate Rs. 110.36 crores, while bills discounted and purchased have advanced by Rs. 5.60 crores to stand at Rs. 13.36 crores. Cash and balances are, in consequence, shown at Rs. 15.94 crores or Rs. 1.70 crores higher.

Stocks and Shares

MARKET AWAITS BUDGET QUIETLY STEADY

STANDARD JUTE DEBENTURE ISSUE: ORISSA MINERALS DOUBLE DIVIDEND

Wednesday Evening.

THE Calcutta share market has been surprisingly steady in the last week despite the near approach of the Budget. Very little business was put through today as Holi festivities were more in evidence than Budget jitters; tomorrow will probably be equally quiet and the exchange is then closed on Friday and Saturday except for a short Budget session on Friday evening. The position is that the market took its stand on the Budget prospects some two weeks ago and has heard nothing since to dispel the belief that the Finance Minister has nothing terrible would be said on the estate duty exemption limits or rates in the Budget proper have confirmed the expectation that Sir Chintaman has no shocks prepared for Friday.

Jutes and coals are the only exceptions to the quietly bullish sentiment of the market. Engineering shares have been in sustained demand, with Braithwaite and Jessops the two features this week. Selected miscellaneous shares are also fully firm.

The Standard Jute Company has obtained sanction for the issue of Rs. 25 lakhs of 15-year debentures, 5½ percent at par.

The gilt-edged market continued steady throughout the week though 3½ Conversion Loan 1946 was again subjected to selling pressure and the price was marked down to Rs. 82-9. Small buyers appeared at this level and at the close the loan was slightly steadier at Rs. 82-10. In the short-dated group, both 3½ 1957 and 1958 were taken higher at Rs. 93-12 and Rs. 98-6 and there were buyers of 2½ 1954 at Rs. 98-3. Increased activity was witnessed in the medium-dated section, particularly in 2½ 1961, 2½ 1960, and 2½ 1962 which were fully steady at Rs. 90-5, Rs. 92-6 and Rs. 91-5 respectively. Both 3½ 1959-60 and 1963-65 were one anna better at Rs. 92-9 and Rs. 96-1 while 4½ 1960-70 continued to find support at the higher rate of Rs. 101-14. Long-dated issues remained unchanged.

In the provincial section, the 4½ State Loans maturing in 1964 turned slightly easier and it would appear that the higher rates have attracted sellers. The West Bengal Loan was particularly quiet and the price was marked down to Rs. 100-12. Four-percent Bombay 1964 had small sellers at Rs. 101-4 but both Madras and U.P. were taken at their previous levels of Rs. 100-12 and Rs. 100-8. Other Provincial issues were neglected.

Selected preference shares continued to meet with enquiry but the actual amount of business completed was small. Among jutes, small lots of Budget changed hands at Rs. 120, Gourapore at Rs. 105, Kelvin at Rs. 118 and Nalhati 2nd at Rs. 78. Hukumchand were taken at Rs. 115, Agarpara at Rs. 121 and Standard at Rs. 117. In the miscellaneous group, Dunlop and Rance-gunge were steady at Rs. 10-10 and East Indian were supported at Rs. 22. Katras & Jheriah were marked at Rs. 40 and New Manbhoom changed hands at Rs. 10-10. Among the smaller priced shares, Central India came to hand at Rs. 4-9, Talcher at Rs. 3-3 and Western Bengal at Rs. 4-4.

There was little activity in the jute section. Howrah fluctuated narrowly between Rs. 23-6 and Rs. 23-10 to close at Rs. 23-7. Agarpara were marked at Rs. 19-7, Alliance between Rs. 158 and Rs. 165 and Anglo-India at about Rs. 224. Barnagore changed hands at Rs. 161, Belvedere at Rs. 208 Champdany at Rs. 162-8 and Delta at Rs. 230. Empire were quoted at Rs. 20-5 and India at Rs. 127. Nudada were offered at Rs. 47-8. Reliance were done at Rs. 13-10 and Union at Rs. 173-8.

Very little business was completed in Electric shares although Calcutta were steady at Rs. 14 and Jubbulpore at Rs. 13-4.

Special features in the sugar section were again Champaran and Ramnagar which improved from Rs. 20-2 and Rs. 15-4 to Rs. 20-14 and Rs. 15-14.

Rs. 16-12. Belsund were steady at Rs. 7-4 as were Darbhanga at Rs. 8-2. Carew rose from Rs. 5-2 to Rs. 5-11 and there were steady buyers of U.P. at Rs. 14-14.

Features in the engineering section were provided by Braithwaite and Jessops, the former improving from Rs. 11-8 to Rs. 12-5 and the latter from Rs. 22-8 to Rs. 24-8 with few shares offering. Burn & Co. were steady at Rs. 264 while Indian Galvanizing New were offered at Rs. 13-15. Kumardhubi Engineering were marked at Rs. 7-12 and Marshalls were quoted at Rs. 6-4. Indian Iron fluctuated narrowly between Rs. 24-9 and Rs. 25-1 to close at Rs. 24-12.

On rumours of better working, Orient Paper improved from Rs. 30-8 to Rs. 32-8. Titagarh were steady at Rs. 35-2 while Shree Gopal were offered at Rs. 16-14. Sone Valley met with investment enquiry at around Rs. 7-1 as did India Steamship at Rs. 6-12. Digwarrah Rubber continued to meet with steady enquiry at around Rs. 15 while Airways (India) were neglected at Rs. 9-8. British India Corporation on the announcement today of a reduced ordinary dividend (10 annas per share against 12 annas for the previous period) receded from Rs. 9-12 to Rs. 9-9. Calcutta Trams were steady at Rs. 15 and Dunlop Rubber after being required for up to Rs. 28-12 turned sellers at the close at Rs. 28-4. Indian Cables improved from Rs. 18-5 to Rs. 18-12 and Indo-Burma Petroleum moved up further to Rs. 55. Indian Wood Products were steady at Rs. 49-8 c.r. and a large parcel of Jardine Henderson changed hands at Rs. 125. Metal Box were scarce at Rs. 20-5 and Rallis came to hand at Rs. 71. There was a mild flutter today in Textile Machinery shares with the price improving from Rs. 4-3 to Rs. 4-14.

The outstanding feature in the mining section was Orissa Minerals which improved sharply from Rs. 27-8 to Rs. 29-12 as soon as news was received that the dividend had been doubled, from 7½ for the half year to 15%. Chrestien Mica ordinary were taken at Rs. 9-10 and Indian Copper Corporation were active at Rs. 3-4.

Although profit-taking has been noticeable in a few cases, the majority of selected tea shares, particularly of companies in Assam, continue to be asked for and there has been a further improvement in prices. Baghmari were better at Rs. 9-2 while Bishnauth were crossed at Rs. 27. Dessai & Parbutia were marked up to Rs. 185 and East Parbutia at Rs. 16-4. At the time of writing there are further buyers of the latter at Rs. 18-12 but sellers are scarce. Business was also reported in Telujan at Rs. 9-8 and Tenpani at the improved level of Rs. 18. Ethelbari came to hand at Rs. 5-2, Hasimara at Rs. 26 and Huldibari at Rs. 18. Oodlabari after being crossed at Rs. 23-2 were on offer at Rs. 23 but no interest was shown. Hattikhira improved to Rs. 9-8 but Telipara were weaker at Rs. 74-8. A parcel of Kallinugger & Khoreel changed hands at Rs. 59-4 c.d. while Sonai River were taken at Rs. 4-8.

The working of the ORISSA MINERALS AND DEVELOPMENT COMPANY for the half-year ended 30th June, 1952, has produced excellent results owing to rising exports to overseas countries. The company's share of profits in the Eastern Shipping Syndicate has shot up from Rs. 2.02 lakhs to Rs. 942,852, while trading profits at Rs. 4,27,082 are almost unchanged from the previous half-year. Allowing Rs. 1,22,809 (Rs. 29,968) for depreciation, Rs. 5,25,000 (Rs. 21 lakhs) for taxation, transferring Rs. 28,000 (Rs. 10,000) to tax contingency reserve, Rs. 50,000 (Rs. 75,000) to mechanisation reserve, Rs. 1 lakh (Rs. 25,000) to building forward Rs. 42,938 and making other adjustments, there is an available balance of Rs. 2,24,275. The dividend has been doubled to 15 percent to absorb Rs. 1,50,000, leaving Rs. 74,275 to be carried forward. Raisings of iron ore at 3,09,359 tons showed a decrease of 1,20,905 tons over the previous half-year, and despatches fell by Rs. 1,41,751 tons to 2,85,693 tons due to a fall in demand from the steel works, but exports increased from 28,138 tons to 51,013 tons. Sales, completed and despatched, of manganese ore and manganese dioxide were 12,491 tons and 1,327 tons respectively compared with 2,214 tons and 609 tons respectively during the previous half-year. There has been a transport shortage, and it is held that the present quota of over half a train per day is far short of the potential output of 2 trains per day for export only.

The working of the IMPERIAL BANK OF INDIA for the year ended 31st December, 1952, discloses satisfactory results as usual. Although interest and discount earned rose, from Rs. 4.98 crores to Rs. 5.52 crores in pattern with the general trend, the rise was partly offset by higher interest paid on deposits. Profits consequently showed a small rise from Rs. 1.30 crores to Rs. 1.33 crores. Bring-

ing forward Rs. 46,40,589 net profits for the half-year ended last December totalled Rs. 1,09,68,272. Pension Funds have been allocated Rs. 2,60,700 (Rs. 2,83,500) and bonus to Staff Rs. 20,00,000 (Rs. 19,00,000). The dividend has been maintained at 8 percent, making 16 percent (same) for the year, leaving a carryforward of Rs. 42,07,572. Deposits at Rs. 206.09 crores disclose a fall of Rs. 20.70 crores. Advances also declined by Rs. 33.38 crores to Rs. 111.88 crores reflecting the general business recession, and this explains the rise of Rs. 10.18 crores in investments to Rs. 97.15 crores. Cash was lowered from Rs. 27.81 crores to Rs. 26.74 crores.

Taking credit of Rs. 10,034 in respect of E. P. T. refund, a profit of Rs. 38,950 is reported by BRUSHWARE LTD. for the year to last November, and this compares with the previous year's Rs. 45,281. Depreciation absorbs Rs. 7,500 (Rs. 10,000), and Investments Reserve Rs. 10,000 (Rs. 7,273). Bringing in Rs. 17,553, there remains an available balance of Rs. 39,003. The dividend has been consequently reduced by Re. 1 to Rs. 2 per share to absorb Rs. 20,000, leaving a carry-forward of Rs. 19,003.

The AMALGAMATED COALFIELDS made a profit of Rs. 2,45,851 for the half-year ended 30th September, 1952, compared with the previous half-year's Rs. 2,66,327. Adding Rs. 33,891 brought forward, the available balance totals Rs. 2,79,742. Taxation absorbs Rs. 1,01,443 (Rs. 1,37,000). Machinery replacement reserve has been allocated Rs. 25,000 and the dividend has been reduced from 6½ to 5 percent to absorb Rs. 1,27,500, leaving Rs. 25,799 to be carried forward. Raisings totalled 3,55,863

London**DEFENCE EXPENDITURE INCREASED****COMMONWEALTH FINANCE COMPANY**

(FROM OUR OWN CORRESPONDENT)

21st. February.

THE difficulties attendant upon "taking a view" of the country's financial and economic prospects have been demonstrated this week by the House of Commons debate on the recent floods and the publication of the Government White Paper on Defence. The motion on which the debate took place recognised that our loss was overshadowed by that suffered by our neighbours Holland and Belgium, to whom, with a welcome unanimity from all sides, sympathy was extended prior to its expression for our own victims, followed by praise for the work of all who have participated in rescue and rehabilitation and approval of the Government measures both to relieve distress and to avoid any possible recurrence. Not the least of the achievements of the Home Secretary, Sir David Maxwell Fyfe, in directing and co-ordinating the nation's relief efforts was his masterly review of the situation in the House. Excluding any sum it may be thought necessary to spend on improving the sea defences after full inquiry by a Departmental committee into the causes of the happenings and the lessons to be learned from them, he put the total loss at between £40 to £50 million. In brief, the tragic tale he had to unfold was this: 307 persons killed, including 17 Americans; over 32,000 evacuated, of whom 7,000 were cared for by public authorities for some days and 2,000 are still in rest centres; 25,000 houses flooded, about 500 destroyed and between 200 and 300 more likely to be beyond repair; 150,000 to 175,000 acres of farmland flooded, with about one-third seriously affected by salt water; upwards of 1,000 cattle, 8,000 sheep, 1,500 pigs and 20,000 poultry lost; most of 66,000 tons of stored sugar, 500 tons of margarine and 2,000 tons of cereals, lost or seriously damaged; 1,200 breaches in sea walls; three oil refineries damaged, but no imminent shortage of petrol involved; gas and electricity works affected now back to normal; and some £2,000,000 damage at Ministry of Supply and Admiralty establishments.

Not all of this loss will fall on the Exchequer. For the present it is meeting the first-aid cost of repairs and will subscribe £1 for every £1 given to the Lord Mayor's National Fund to aid victims, which is now approaching the £1,000,000 mark. But however the burden is finally shared, the national economy must suffer the effects, directly or indirectly, and the problem must be adding to Mr. Butler's headaches in framing his Budget in view of all the advice he has been given to afford substantial reliefs in taxation and increase "welfare" benefits.

White Paper on Defence

The White Paper on Defence, on the other hand, is probably less "unexpected" so far as Mr. Butler is concerned, for both he and his Department have undoubtedly played a large part in framing its overall conception. It reveals that although cuts have been made in the original defence programme, expenditure under this head will nevertheless exceed in 1953-54 last year's total, including supplementary, of just over £1,500 million, excluding United States aid. The estimated figure is £1,636 million, or an increase of £123 million, and the incalculable factor is that about one-third of the increase is attributable to rises in costs. The practical effect of the Conservative Government's decision to amend the original four-year defence plan of the former Labour Government and spread it over a longer period—"a long pull" instead of a "short, sharp burst"—is apparent in the fact that on production it is estimated that £650 million will be spent, against the original figure of £580 million. Expenditure on research has not been reduced to the same extent and will be about £100 million, to maintain the emphasis on quality as opposed to quantity in the matter of arms and equipment. As a sequel to this new thinking on defence, the Government will propose to Parliament an extension for five years of the National Service Act, 1948, due to expire at the end of this year—a development which will increase Socialist support for Mr. Shinwell's demand for the abolition of National Service, or at any event for a reduction in its length.

Meantime, Mr. Butler has been busy in other directions also. This week he has had discussions with Mr. Eugene Black, President of the World Bank, and there can be little doubt that among the subjects considered were the problems of Commonwealth development and investment. Assistance from this source would go a long way towards enabling the Chancellor of the Exchequer to meet his commitments to the Commonwealth Conference, as well as to allow—perhaps in conjunction with some allied form of tax relief in a limited sphere—a substantially higher level of investment in factories and industrial equipment during the coming financial year. It was in November that he anticipated that work completed on new factories in this country in 1952 was likely to be one-fifth greater than in 1951. Since then, however, steel supplies have increased substantially and the prospect of introducing a less severe system of steel allocation is a lot brighter. Any easing of the tight credit policy would undoubtedly encourage industrialists to step up their plans for investment, especially if there was some

prospect of projects being authorised on a larger scale than Mr. Butler forecast in November.

Commonwealth Finance Company

Contributing to these hopes is the progress which has been reported in the preparations for establishing the proposed Commonwealth Finance Company. The Daily Telegraph's City Editor says these are nearing completion and that it is likely to be launched shortly. It is believed that substantial support for the project has been forthcoming from a wide variety of financial and industrial interests. One half of the capital, which may be around £15 million, will be subscribed by the Bank of England and the balance by City, industrial and mining institutions. None of the capital will be put up by the joint stock banks. The usefulness of the company will depend, inevitably, on the total funds available for investing in the Commonwealth, and these must, of course, be related to savings and the balance of payments surplus. It is felt, however, that the new company will fill a gap in the overseas financing machinery and that it should play a useful part in co-operation with existing organisations, such as the World Bank, working in the same field. It is also hoped that it will provide a link with overseas capital markets and that it may attract money from other countries which has not been available for Commonwealth projects through existing channels.

Transport Bill's Third Reading

The Transport Bill was given its third reading in the House of Commons early this week and was sent up to the House of Lords, where it is to undergo further modification. Indeed, Mr. Lennox-Boyd, the Minister, admitted on the final day that the debates had brought out the errors in his original bill and that it had emerged "vastly improved." No one is likely to dissent from that opinion, and at least some of the credit must go to the Opposition for making the best of what is undoubtedly regarded as a bad situation and concentrating upon effective discussion within the timetable. The Bill is no less acceptable to the Labour Party, as was made clear by Mr. Callaghan at the end, and his reiteration of their intention to repeal it when returned to power was met with cheers, but at least it abjured obstruction and clamour, and in the process might well have helped to disprove their own main argument that the Bill does not offer a solution of the transport problem. If that proves to be the case, the main credit will still have to go to the Minister of Transport. Indeed, it would be just reward for his remarkable industry and the practical manner in which he has met and surmounted each difficulty as it has been presented to him. The Iron and Steel Bill has also progressed along its allotted path, with frequent divisions, occasional amendment, but with safe Government majorities to ensure that the wheels keep moving.

More Food Decontrol

The human interest side of Parliamentary business has centred in Mr. Lloyd George, the Minister of Food, who followed up his recent successful decontrol of sweets with the news that the rationing and price control of eggs is to end on 20th March, while the control of the meat content and price of sausages is to be lifted on 1st March. The Opposition get no change out of Mr. Lloyd George. When asked whether his policy was to decontrol and decontrol himself out of a job he was quick to reply that if that was in the interests of the nation it would certainly be his policy. There has been interest also in the Parliamentary Labour Party's rejection, by 58 votes to 51, of a proposal put forward by Messrs. Attlee and Morrison, that the former should accept Mr. Churchill's invitation to join all-party talks on reform of the House of Lords on conditions which it was felt the Conservatives would not be prepared to accept. At the same time, the organisation sub-committee of the National Executive of the party has recommended that a ban should be put upon the Tribune's trusts. The internal cut and thrust still goes on.

Voluntary Press Council

At long last the committee representing a number of newspaper press organisations have drafted proposals for the formation of a voluntary Press Council for submission to their governing bodies. It is proposed that the Council should be constituted as from 1st July next, with 25 members, with the objects of preserving the freedom and character of the Press, studying developments in its structure and promoting methods of recruitment and training of journalists. There would be 15 editorial and 10 managerial representatives who would be full-time directors or employees and professional freelance journalists, with the editorial representatives being drawn from three national and five provincial newspaper editors, four nominees of the National Union of Journalists and three of the Institute of Journalists. In dealing with representations it may receive about the conduct of the Press, it is proposed that the Council should consider only those from complainants actually affected. Two of the recommendations made by the Royal Commission which reported on this subject have not been implemented in the draft proposals, namely, that there should be a Lay Chairman and that the Council should represent the Press in its relations with the Government.

Sandbags for Flooded Areas

The Dundee jute industry's participation in the provision of sandbags for the flooded areas was disclosed after my last despatch was in the post. All factories have been working full stretch to meet two Government orders, the first for 4,500,000 bags and the second for 3,500,000, and lorry loads have been leaving daily for the flooded areas. The industry has also received a Government order for 21,000,000 bags over the next twelve months.

Bombay**SURPLUS BUDGET FOR 1953-54****OPTIMISTIC ESTIMATE OF NEXT YEAR'S REVENUE**

(FROM OUR OWN CORRESPONDENT).

23rd February.

THE markets have reacted favourably to the State Budget for 1953-54, which was presented to the Assembly by the Finance Minister, Dr. Jivraj N. Mehta, on Saturday afternoon. The budget had practically no surprises except that there is to be no increase in taxation. An increase was thought to be certain because of the heavy strain on the State finances of the widespread famine conditions in many parts of the State. The interest of the business community, however, centres not so much on the budget estimates for 1953-54 which have somewhat been balanced to show a small surplus, but on the revised estimates for the current year. As expected, revenue, as now estimated, shows a drop of over Rs. 3 crores and while Rs. 1 crore of the reduction in revenue is due to the abandoning of the proposed surcharge on land revenue, the balance of over Rs. 2 crores is attributable to the decline in the tempo of business activity and prices in the State. In spite of this clear warning, the Finance Minister has chosen to estimate revenues for the coming year at a figure slightly higher than he placed them in June 1952. It is doubted whether in fact revenue will reach this target. Similarly in respect of expenditure which would seem to be justified by present figure than he proposes to spend during the current year, the famine relief measures are being very severely criticised as inadequate and more pressure is bound to be exerted on the Government to increase expenditure under this head. This alone, apart from other factors, is likely to enhance expenditure next year. It is feared that the year, 1953-54 will not end with a small surplus of Rs. 7 lakhs as estimated but with a great deficit as that of the current year if not a higher one. Expenditure which is about works is placed at Rs. 17.81 crores, which is about Rs. 6 crores higher than the revised figure for this current year. An amount of Rs. 2.5 crores for this purpose will come from the Bombay State Development Fund.

Reactions to Railway Budget

Bombay's reaction to the railway budget can be summed up in one phrase: relief tempered with some anxiety. The business community here is relieved at the absence of any increase in rates and fares while the anxiety emerges from the fact that the receipts from traffic show a considerable decline, reducing the anticipated surplus by Rs. 14 crores. If the same tendency is in evidence in general Central revenues, neither trade and industry nor the common tax-payer can escape from the additional burdens in the coming budget. The announcement of the appointment of a Committee to investigate corruption on the railways has been welcomed. The wisdom of the Railway Minister in estimating revenue from goods and passenger traffic at a higher level for 1953-54 than in the current year is doubted for there is, it is felt, nothing to justify this optimism.

Defence of Business Men

At a function last Thursday in honour of Mr. Pranlal Devkar Nanjee, retiring President of the Indian Merchants' Chamber, Mr. S. K. Patil, President of the Bombay Pradesh Congress Committee, championed the cause of the business community. He made an oblique reference to what a Central Minister had said at a conference at New Delhi, and said that it was fantastic to describe the business community as inimical to the interests of the nation and added that whoever placed such remarks, however highly placed he might be, was doing great injustice to the national cause. Defending the community, Mr. Patil added that business men in general, and those in Bombay city in particular, had shared equally in the struggle for the country's independence. This sentiment was echoed by Mr. Nanjee. He said that it was unfortunate that it had become fashionable to look upon business men with suspicion and to believe that their moral standards were lower than those of other sections of society. His advice, on the other hand, to the business community was that, while it should be vigilant in safeguarding its legitimate interests, it should play the game fairly.

Rationalisation of Textile Mills

An important issue relating to the future of the textile industry in Western India is being fought out at Ahmedabad. The Sarangpur Mill is introducing automatic looms and 72 such looms have replaced the old ones with the result that 36 mill hands have been relieved. When this process is completed, it is believed that over 900 workers will be retrenched. While the official Textile Labour Association and the support of the Indian National Trade Union Congress, it is being opposed by the Mill Kamgar Union, a Communist-sponsored body, which is affiliated to the All-India Trade Union Congress. The latter union led a procession of textile workers to protest against rationalisation and has also permitted five workers to go on a hunger strike in front of the offices of the Textile Labour Association. The Association has appealed to the textile workers not to be misled by

Communist-inspired propaganda and has assured the workers that the mill in question has not so far dismissed any workers and that it has no intention of dismissing employees illegally. It is believed that because of the great influence of the Textile Labour Association, the agitation will die a natural death after a time and that the process of rationalisation will be completed.

Mr. Bevan's Address on the Welfare State

Mr. Aneurin Bevan, ex-British Health Minister, arrived in Bombay last Thursday and has been busy addressing various gatherings. His programme was so overcrowded that two of his important engagements, one to address the Bombay branch of the Indian Council of World Affairs at the Bombay House and the other at the local Rotary Club had to be abandoned. One of his important speeches was at the University, made to a gathering of educationists, students, doctors, lawyers and business men, when he referred to the emergence of a welfare State in this country. He said that what was happening in various other countries of the world was insignificant compared with the experiment in which India was now engaged. The country had rightly accorded priority to the food problem because one of the most important aspects of health service is nutrition. He stated that it might not be feasible for India, with her limited resources, to reproduce all the welfare activities undertaken by the Government in the U. K. but the Indian Government had accepted its obligations to the people in accordance with established moral values and had determined the order of priority in which these obligations should be fulfilled. He said that this was a very great piece of work undertaken by India, the size of which might not be realised by the people of the country themselves but it was easier for the outsiders like him to see the dimensions and to measure the progress made.

Health Insurance

Speaking in the State Legislative Council on the address of the Governor to the Joint Session, Mr. Shantilal Shah, Bombay's Health and Labour Minister, suggested that the Government might have to drop the health insurance scheme, if the medical practitioners in the city insisted on very high fees. He told the Council that it would be better to give up the scheme if the doctors did not reduce their demands. It appears that the doctors are asking for a fee of Rs. 12-8 per person which would amount to a remuneration of Rs. 2,000 per month. In addition, they were asking for freedom to continue private practice. Mr. Shah was hopeful that this demand would be modified and that the Government would be able to introduce the scheme as soon as approval was received from the Centre.

Uttar Pradesh**BUDGET DEFICIT EXPECTED IN 1953-54****HEAVY LOSS INCURRED ON RATIONING COMMITMENTS**

(FROM OUR OWN CORRESPONDENT).

Lucknow, 21st February.

PRESENTING the budget estimates for 1953-54 in the U. P. Legislature today, the Finance Minister, Mr. Hafiz Muhammad Ibrahim, said there was no intention of imposing "fresh taxes for the time being" but said that "Government may have to make small increases in the rates of sales tax on certain commodities." The sales tax yield in U. P. at present, he pointed out, is only Rs. 5 crores compared to Rs. 17 crores in Madras which has a multi-point system of levy, whereas in the U. P. it is a single point tax. It has, however, been decided to increase irrigation rates by 50 percent, as a result of which the percentage of gain from 4.51 in the current year expected to go up from 4.51 in the current year to 11.57 in the budget year. Mr. Ibrahim called upon the people not to regard this or such other levies as "taxes," which, in his view, was a misnomer; they should be more appropriately called "prosperity taxes." Receipts for the budget year are estimated at Rs. 74.38 crores and expenditure at Rs. 78.80 crores, leaving a deficit of Rs. 4.42 crores. Provision has been made for a capital expenditure of Rs. 7.09 crores. Compared to Rs. 20.74 crores in the original estimates of the current year. Increased receipts for the budget year are expected from sales tax, electricity duties, motor sugar cane cess, panchayat election receipts, motor vehicles, and irrigation. Land revenue is expected to increase by Rs. 4.79 crores as a result of zamindari abolition, the full effect of which was not reflected in the current year as additional revenue for only one "fiscal" fell due for collection. The increased revenue under irrigation is to be wholly transferred to a Special Development Fund for meeting future capital expenditure on irrigation and hydro-electric works.

The original estimates for the current year, forecast a deficit of Rs. 4.24 crores, but the revised estimates place the deficit at the higher figure of Rs. 6.46 crores. The recent allocation of a share to the State from the Central excise revenues is expected to bring down the deficit to Rs. 3.25 crores, and this is to be met by the transfer of an equal amount from the Revenue Reserve Fund. The Finance Minister said that the modification of the basis of allotment of income tax shares, while welcome, does not materially affect the

receipts so far as U. P. is concerned. "The allotment of excise revenues, however," he said, "means a permanent increase in the order of Rs. 2 crores to Rs. 3 crores to the annual revenues of the State." He indicated that because of the improved food position in the State "it will now be possible to reduce progressively the heavy financial commitments in respect of supply and rationing arrangements." According to lobby opinion, the Government is likely to confine its rationing commitments only to cities with a population of over 100,000 and the new scheme will be run on a "no profit, no loss" basis. In the current year the Government sustained a loss of Rs. 4.50 crores because of their rationing commitments. Mr. Ibrahim hoped that such "crippling losses" may not recur again.

New Loan

The major part of the budget speech was devoted to a survey of the Government's achievements since 1946. The budgets of all these years, the Finance Minister said, have been inspired by the goal of a Welfare State. "In short, numerous measures were undertaken for the benefit of the common man entailing a total expenditure of Rs. 247,40,67,900 from 1946 up to now," he declared, and added: "Uttar Pradesh has now the highest revenue receipts and expenditure figures of any State in the Union." Provision has been made in the budget for floating a new loan of Rs. 4 crores. The Finance Minister said that there should be no worry on account of the rise in "normal indebtedness" of the State as the interest charges, on the loans taken by the State "are almost entirely covered by the interest earned from the projects of public utility owned by the State." He said that even though it is not obligatory that sinking funds should be opened in respect of all loans, the Government have made it a point to create such funds for every loan and put into those funds the full amounts necessary to liquidate the loans on the dates due. The Debt and Deposit Heads show an "abnormal rise" in both the receipts and disbursements figures by Rs. 80 crores, but this is merely because the Government propose to issue Zamindari Abolition Compensation Grant Bonds of that value to ex-zamindars in the budget year.

Shortage of Railway Wagons

There have been serious complaints from more than one exporting centre in the U. P. of the shortage of railway wagons resulting in accumulation of stocks, potatoes at the moment being the hardest hit. Trading circles say that comparatively more wagons are being allotted to the Eastern Zone—Bengal—than to the Northern Zone which serves the export markets of U. P. The Railway Board, it is stated, is afraid of cutting the wagon quota for coalfields because it would provide West Bengal with ammunition for agitation against regrouping. The normal loading in the Northern Zone which is about 400 wagons per day is reported to be in arrears to the extent of 5,000 wagons.

Handloom Development

A Three-Year Plan for the development of handloom industry in the State at an estimated cost of Rs. 3 crores has been prepared by the Director of Cottage Industries. The scheme will be considered at the meeting of the U. P. Handloom Board on 27th February. There are about 50,000 weavers in the State who will be organised into co-operatives with an average membership of 20 each. Thirty-five districts will be taken up in the first year, ten in the second year and the remaining six in the third year. Perhaps the most important proposal contained in the plan is the setting up of spinning mills as a joint enterprise by the Government and the weavers' co-operatives. Big spinning mills are not contemplated, but it is stated that even if mills with production capacity of 1,000 bales a month could be set up it should help reduce the dependence of the weavers on the private-owned mills. Provision has been made for one such mill, the Government's share in it being placed at Rs. 50 lakhs payable in two instalments.

MARKETING OF SESAMUM AND NIGER-SEED

Although sesamum covers one-fourth of the total acreage under oilseed cultivation in India, it is comparatively less important from the export point of view, says the Agricultural Marketing Adviser to the Government of India in a report on the marketing of sesamum and niger-seed in the country. Before World War II, less than two percent of the total production was exported, but in recent years the exports were more or less insignificant. The main producing areas are Uttar Pradesh, Hyderabad, Madras, Rajasthan, Madhya Pradesh and Bombay. It is mostly used locally for oil extraction (75 percent) and edible purposes (20 percent).

Compared to sesamum, niger-seed occupies a still more minor place. The demand for this oilseed is also mostly confined to its areas of production, which are localised. The report, just issued by the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture, analyses the principal difficulties in the marketing of these oilseeds and makes several suggestions for stepping up production, avoiding wastage in transport and preventing spoilage.

Since these two oilseeds are produced and consumed in compact areas in the countryside, the steps for helping growers to get increased returns stressed in the report are organisation of co-operatives for the crushing and sale of sesamum and niger-seed oils, increasing the efficiency of village ghanis by using improved types and better storage facilities in the villages.

Our City Cable

LONDON STOCK MARKET
RELAPSESFADING HOPES OF TAX RELIEF
DEPRESS DOMESTIC ISSUES

London, 24th February.

ON the whole industrial equities again made good progress but the best features were outside leading issues. Towards the end of the week, however, they became quieter and were inclined to be mixed. Kaffirs had a fairly good week apart from some hesitation caused by remarks made in South Africa by Mr. Harry Oppenheimer about the shortage of labour in the mines. Copper and diamonds have emerged from their recent state of neglect.

Gilt-edged were again quiet with medium-dated stocks the most favoured. On the whole the market moved narrowly without any substantial change, although there were some reports of selling by small investors. Disappointment in domestic issues was caused by fading hopes of some relief in taxation. The foreign bond market showed very little sign of real life; the overall tendency of Japanese bonds was lower. An announcement that the German debt agreement would definitely be signed on 27th February put some life into German issues. Japanese latterly came back and earlier losses were more or less wiped out. Elsewhere in overseas issues, Canadian stocks were actively higher with the Canadian budget and its tax relief giving further help.

Both oil and shipping sections were disappointing to the attraction of speculative counters elsewhere. Teas were steady to firm with a little fresh interest being shown. Little business was done but orders were mainly for buyers and the tone was firm. The biggest improvement was seen in Estates and Agency which improved 1s. 6d. to 15s. 9d.

Although not as difficult as recent weeks, conditions were by no means easy on the London money market in the past week and most days saw keen searching for loans. Early in the week Government dividend disbursements and Ministry of Education payments as well as milk money, were not sufficient to cover all needs and special buyers' assistance was often required. Late in the week, however, there was a return of some outside money and authorities said that books were balanced.

Applications for £230 million Treasury Bills totalled £231,685,000. Allotments were £230 million at an average rate of 48s. 7.30d. percent. This week's offerings are £230,000,000. The Bank of England's return revealed more than £1 million rise in active note circulation to £1,459 million. Bankers' deposits were also up by about £1 million to £280 million.

The Future of Wool

The President of the American Woollen Co. has said that wool suffered a blow from which it may never recover when prices were allowed to reach such heights after the Korean war that synthetic fibres could undercut the wool market. He predicted that by 1960 all men's summer suits would be made of synthetic fabrics and that 25 percent of all woollen and worsted fabrics would include blends of synthetic fibres.

American Saving Bonds

New York banking quarters believe that the forthcoming policy on the decision concerning the maturing savings bonds will see the Treasury offering holders a long term (15 or 20 years) marketable bond in exchange. This would be in line with the new debt lengthening policy. It would encourage holders to exchange since they could always obtain cash by selling bonds in the open market. About 1,100,000,000 dollars worth of bonds will mature this year and 2,300,000,000 dollars worth in 1954.

The Board of Governors of the New York Stock Exchange have approved an amendment to the constitution which, if adopted by the membership, would make a corporate form of doing business available to the present and future member firms.

Transfer of German Mark Accounts

West German foreign exchange banks are now allowed to transfer "D" mark accounts of any bank in any of the European Payments Union countries to an account in any German foreign exchange bank in the name of any other bank in any E.P.U. country. The Bank Deutscher Laender announcing this today said that blocked "D" mark accounts are excluded from this new regulation. The bank said it reserved the right to restrict or revoke the regulation at any time.

Liverpool Cotton Arrivals

Total arrivals of raw cotton in the past week were 35,790 bales including U.S.A. 14,278, East African 7,872, Sudan 2,445, Mexican 2,100 and 1,862, and at present afloat 46,655 bales. There was slight interest by contracting out spinners on the local market in addition to the usual inquiries for the United States and American type medium qualities. Some demand developed for Peruvian and Tangus.

ies for the United States and American type medium qualities. Some demand developed for Peruvian and Tangus.

Hide and Skin Market

Considerable excitement has been shown in the East Indian tanned hide and skin market and prices have risen several pence per pound to the level at which buyers in the United Kingdom were not inclined to operate. It was difficult to see any real reason for the sudden increase unless a certain amount of speculation is taking place. This is possible but in addition supplies do not appear to be plentiful. Only one or two deals were concluded and these were not at top asking prices. There was a sign of prices coming back slightly towards the end of the week. Tanned skins in common with kips saw substantial increases in both goat and sheepskins. According to reports, Japan is buying on a fairly large scale and this no doubt partly accounts for an increase in asking prices. Buyers in the U.K. have expressed their inability to follow these prices, although, moderately good prices have been paid for spot goods.

Woven Cotton Piecegoods Exports

United Kingdom exports of woven cotton piecegoods of all kinds during January increased nearly 4,000,000 sq. yards over the December totals. January exports totalled 64,796,000 sq. yards against 60,872,000 in December and 77,171,000 in January last year. January exports of grey unbleached piecegoods dyed in piece and coloured cotton piecegoods all increased over the previous month. Exports of bleached and dyed yarn and printed piecegoods during January showed a decrease on the previous month. Nigeria remained Britain's largest customer for cotton piecegoods of all kinds in January taking 10,112,000 sq. yards against 11,760,000 in December. The Union of South Africa remained the second largest importer with 7,797,000 sq. yards against 5,817,000.

Tea Auctions

The 12,006 packages of Ceylon teas offered at the London auction on Tuesday, 17th February met an irregular market. Best flavour and colour kinds were well competed for at firm to sometimes rather dearer rates. Other sorts showed an irregular fall of one penny to two pence per pound, especially teas with light and rather poor liquors. Dusts were cheaper and quality generally continued to decline. Clean Common B.P. was indicated at 35d per lb against 36d previously. Other quotations were unchanged except Low B.O.P.s at 40s to 45d and Low B.O.P. Fannings at 46d to 48d. There was a quieter demand for the 7,012 packages and Southern Indian growths offered with light liquoring sorts were the weakest feature.

At the sale held on 23rd February. Buyers' attention was again focussed on lower priced teas up to around 3s. per lb. and prices for these advanced by about 1d. per lb. Above 3s. and up to 3s. 5d. prices tended to be irregular and some items were easier, while good types were steady. Continued export interest was reported on Continental account. Clean Common Broken Pekoe free from stalk was quoted at 32½d. per lb. against 31½d. previously. Offerings of North Indian, Pakistan, African, Portuguese East Africa, Mauritius, Belgian Congo and Indonesian teas were finally catalogued for sale this week totalling offerings 48,235 packages instead of 49,714 as previously advertised. Of the revised total, 8,514 packages of North Indian, Pakistan and other growths were put up for auction last Monday.

Bonded Warehouse Tea Stocks

Tea stocks in London and Provincial bonded warehouses on 13th February totalled 123,508,770 pounds compared with 126,848,925 pounds a week earlier, according to the Tea Brokers Association. Landings during the week were 5,688,480 and deliveries 9,028,635.

Australian Import Relaxations

Australia's latest import relaxations are useful rather than far-reaching. They released £40 million of Australian business to be shared among nearly all supplying countries (excluding dollar on 1st April reaching Australia mostly in 12 months starting 1st July. During her import orgy before her cuts last March, Australia was taking £35 million of goods each month from Britain alone. Imports of many consumer goods will still be licensed at only 30 percent (compared with hitherto 20 percent) of the base year ended June 1951. This high imports before last March. The relaxations seem to have some protectionist element though this is only incidental. Sweeping Australian relaxations would have benefited British exporters, but not the sterling area's reserves.

Sulphur Controls

All controls on the supply and use of sulphur except for the manufacture of sulphuric acid were dropped with effect from 23rd February, the Ministry of Materials announced. It is possible to do this because of an increase in the available supplies and because of its substitution by other materials, such as pyrites and arsenite, in the manufacture of sulphuric acid, the Ministry said. Control of sulphur for making sulphuric acid is being retained because it is necessary that sulphuric should be used only to the extent that requirements for the acid could not be met by using other materials. There could be no assurance that there would not be another serious shortage of sulphur within a few years and for this reason imports of sulphur would continue to be restricted to a level necessary to

Jute

RAW MATERIAL SUPPLIES EASE BUT DEMAND
FOR GOODS DISAPPOINTING

MR. MONCUR'S REVIEW AT I. J. M. A. MEETING

IN reviewing the position of the jute mill industry in the past year at the Annual General Meeting of the Indian Jute Mills' Association last Friday, Mr. W. B. Moncur, the Chairman of the Association, said that raw jute supplies were easier because of the large crops of 1952 and the jute and jute goods fell to the lowest prices since World War II. In 1951 burlap consumption in North America had fallen to the lowest on record when Indian export duties were at a crippling level but, after the reduction of the duties, there had been a recovery and the consumption in the U.S.A. had returned to normal. Offtake of hessian in the other main markets was, however, disappointing.

The position in the sacking markets was, said Mr. Moncur, most disturbing. Stocks of heavy goods had been accumulating and the mills had been incurring heavy losses in the manufacture of sacking. It was apparent that some of the consumers of which were formerly important. Sacking had for some time, and perhaps permanently, reduced their consumption of sacking. That was a matter the seriousness of which could not be overestimated and which justified intensive study by the Association. The delegation to the U.S.A. reached the conclusion that, while there is still a demand for hessians and packaging materials to meet the heavier tasks of trade and industry, that position can be maintained only if ample supplies are available at competitive prices. That was subject to the qualifications that present and foreseeable demands are very much smaller than they would have been had burlap consumption advanced equally with that of its competitors; that new competition is arising in every direction; and that the long term position is one to which the industry must give its unremitting attention.

Export Duties

Dealing with competition, Mr Moncur said that the industry outside India had access to Pakistani jute on preferential terms and was thus able to produce high quality goods at a price and of a type which the Indian industry would find it difficult to surpass unless they had the same facilities. The export duties also gave the foreign manufacturer the advantage of a substantial price difference over his Indian competitor. This had led to the undercutting of prices of Indian goods in the American market and a larger share of the American market going to mills in Europe. There had also been a disturbing growth in the tropical areas of factories which manufacture jute cloth or utilise locally-grown fibres. The Pakistani mills were also a grave threat.

Mr Moncur referred to the poor quality and unsatisfactory yield of much of the jute grown in India and stressed the necessity of concentrating on areas where there were better yields. He also emphasised the need, which Capital has been pointing out, of better methods of cultivation, improved implements, greater use of fertilisers and the expansion of seed multiplication farms. Dealing with complaints that mills were buying Pakistani jute to keep down Indian prices he said that Pakistani jute was so expensive that mills had to restrict its purchase but they had to buy a certain amount to maintain the quality of their products. Purchases were, however, less this season than last season.

Publicity Campaigns

Subsequent to the I. J. M. A. meeting members of the Association had an opportunity of hearing two of the Association's representatives outline the campaign in America and the progress it has made up to date. The apparent success of this campaign leads us to wonder whether there are not other markets where similar propaganda would meet with success. The immediate need is, of course, to promote the sales of heavy sacking but whether any success in that line can be looked for when the main markets are in a state of political chaos is problematical. Burma, for instance, exported pre-war over three million tons of rice in jute bags. Now she exports barely 1½ million tons. Can propaganda for the sale of gunny bags do any good in these conditions? On the other hand there may be other countries with more stable conditions where propaganda might give results and in the present circumstances of the gunny market, anything with reasonable chances is worth investigating.

There follows a substantial part of Mr. W. B. Moncur's Chairman's address.

This has been a year of rapid transition. A year which has seen a change in many of the basic economic factors affecting the jute mill industry of a degree seldom surpassed in the long annals of our history. 1951 was a year which experienced a shortage of raw jute, a most amounting to famine conditions, prices of jute and gunnies higher than ever before and a startling reduction of consumption in the United States, our main overseas market, only offset by the sustained demand from sacking consumers. In 1952 supplies of raw jute became plentiful once more as a result of two of the largest harvests in the history of the trade, prices of jute

and goods were reduced to the lowest figures experienced in the postwar period, consumption in the United States returned to normal levels but, on the other hand, demand from other markets diminished to an extent that has almost resulted in a crisis of over-production. We have escaped from the immediate peril of shortage and unreal price levels, but we are faced by the problem of reduced demand from many of our markets, the disappearance of profits over a considerable field of our operations and the economic and other difficulties which arise from the precipitous fall in the prices of jute to the cultivators.

A great international industry such as ours is affected by every current and whirlpool in the stream of world commerce, but I think it is true to say that during the last two or three years events domestic to this sub-continent have been the main determining feature in our position, vis-a-vis world markets. During 1952 this situation underwent a radical change. With the raw jute position no longer so acute, the industry here has been throughout most of the year in the position to meet any conceivable increase in the world's needs of jute goods, but in fact no expansion of production commensurate with the increased supplies of our raw material has taken place. Instead, demand from important markets has within recent months faltered and weakened. There has been no need for more production and indeed it has been difficult to dispose of current supplies. This seems to me to be the main problem which at present faces the industry not only here but elsewhere, and its direct and in-

direct repercussions are rapidly assuming dominant importance.

U. S. Burlap Consumption

So far as the export trade is concerned, the main event of the year was the reduction made by the Government of India in the levels of the export duties on hessian and sacking. It had become increasingly obvious during the latter months of 1951 that the reaction of these crippling duties on the total consumption of jute goods, particularly in North America and the competitive advantage and stimulus which they offered to jute manufactures in other countries were having both immediate and long-term effects on the fortunes of the jute mill industry here which could no longer be ignored. In North America, for instance, total consumption of burlap for all purposes fell in 1951 to a record low figure of 532 million yds: 268 million yds. less than in the previous year. Since the total demand for packing materials was as great or greater than in the postwar years, this reduction meant a change over to substitute materials within the short period of 12 months by a significant proportion of consumers. Not only was the total consumption reduced but the proportion of supplies from India showed a heavy reduction. Foreign jute manufacturers, taking advantage of the higher prices of Indian goods still resulting from the export duty, were able to undercut Indian products at will, and it was only the fact that their total production could not be increased greatly that prevented further encroachments being made.

In these circumstances it is gratifying to note the rapid recovery which has taken place in American consumption of burlap since the second reduction of the export duty in May 1952, to the present level of Rs. 275 per ton. Total consumption for 1952 is calculated to have been 827 million yds. representing a total increase of 295 million yds. over 1951. Average monthly consumption since August 1952 has been 82 million yds. which compares with the figure for the comparable period in 1951 of 41 million yds. It is indeed pleasant to record that despite the difficulties and uncertainties of the previous two years there is still so substantial a support for burlap in our

Give the salesman
a cup of tea

he will work better...

Your salesman's is a trying job: it calls for infinite tact and cheerfulness. On how he sells depend largely the prestige and prosperity of your firm. Help him in his day's work by providing a timely cup of tea... because tea drives tiredness away and has the remarkable quality of cheering one up. Employers should write to us for free advice on serving tea in office centers.

Saint Frères Circular Looms installed in Jute Industries Ltd. factory, DUNDEE

SAINT FRÈRES
CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and in old, sometimes working alongside flat looms; in the highly developed industries of Scotland, France and Italy; in the more recently established mills of South Africa and the Belgian Congo, where only unskilled labour is available.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

REPLACING A COP.—Immediately one of the cops runs out the loom stops automatically. All the shuttles emerge from the shed and lie on the warp threads. New cops are placed in each shuttle and the loom is restarted. By replenishing all the shuttles as once much time is saved. The butt-ends of the cops left over are, of course, not wasted.

LEEDS, ENGLAND

main market, and it says well of the proven qualities of the burlap bag and of burlap as an industrial fabric that it has been able to regain so much of a market in which consumers had every opportunity and incentive to adopt substitute materials. Nevertheless it is necessary to sound a note of caution and of warning for the astonishing resiliency of the American market has to a considerable extent been due to the continued activity of the American economy as a whole and the outstanding prosperity and productivity of the agricultural sector during 1952. Had there been in the United States anything approaching the reduced activity, and in particular the reduction in imports which characterised so many of our other main markets towards the latter part of 1952, the position might have been very different.

Heavy Goods Stocks

In the other main hessian markets, notably the Argentine, United Kingdom, Canada, etc., demand continued to be low and off-take disappointing. In the case of the Argentine, there were special reasons, including the widespread failure of agricultural crops which prevented the resumption of trade on a normal basis, or at pre-war levels, and in the case of the U.K. it was necessary to liquidate heavy stocks purchased during previous years. It is greatly to be hoped that the reports of satisfactory crops in the case of the former and the reduction of excess stocks in the case of the latter will encourage these important markets to expand their requirements of hessian during the coming year. It is, however, in the important heavy goods markets that the position has been most disturbing. In response to the more satisfactory demand for hessian, there has been a considerable change-over in the balance of production but sacking still represents 55.3 percent of the industry's production. In the early months of the year off-take was reasonably satisfactory, but demand has tailed off in recent months and there has been a steady accumulation of stocks. For some time mills have been making very heavy losses in their sacking manufacture and the question of an increased off-take of heavy goods at more satisfactory prices has become a matter of vital importance. To some extent the reduced demand for sacking from the important Far Eastern markets is mainly an indication of the specific problems in which these areas are involved. In the case of Australia, it appears to be largely a combination of increased import restrictions, the development of substitute packing materials and bulk handling, and the need to liquidate the heavy stocks accumulated at the time of the Korean crisis. It is to be hoped that some of these influences are temporary and that improved conditions and the invasion of new markets may lead to a more normal off-take. Nevertheless it is apparent that some of these markets which were formerly important consumers of sacking may for some time to come and perhaps permanently have reduced requirements of this vital part of our production. This is a matter the seriousness of which cannot be overestimated and one which I think justifies prolonged and intensive study by the Association.

The industry has been acutely aware since the end of the war of the problem presented in many markets, but particularly in the United States, by the development of substitute materials and study and considerable thought have been devoted to the possibility of recapturing old markets or developing new ones by the study of marketing conditions and the development of public relations work. The general shortage of jute goods and the high prices prevailing in 1950 and 1951 prevented any positive action but the reduction in the export duties in 1952 created an opportunity of which we have taken full advantage.

Public Relations

Shortly after the first duty reduction our representative in North America intimated that the trade in that country was strongly in favour of the early inception of an Indian Jute Mills Association public relations campaign, and the Committee decided to appropriate a sum of \$100,000 for expenditure during the initial year of the scheme. Plans were laid throughout the summer, additional staff appointed, including our able Director of Public Relations in the New York office, Mr. W. Nugent, and the first advertisements in connection with it appeared in selected periodicals in September 1952. Since then the scheme has been pursuing its course and has received widespread support and encouragement from the trade and industry in that country. It is apparent that in a market such as the United States, where the swing to competing materials has been so considerable and rapid, there is justification for intensive efforts amongst these consumers in an attempt to persuade them of the advantages of burlap. This is the main basis of the present campaign. At the same time the organisation is gradually being built up and extended. Its range of activities has already been considerable, and there is little doubt that in the near future it will constitute a highly expert body whose assistance in enabling the industry to maintain its position in the North American continent would be of value.

Following the inception of the Public Relations Campaign it was decided by the Committee to despatch a Goodwill Delegation to America to meet members of the American trade and bag manufacturing interests, and to establish liaison and contact with consumers. The visit of the Delegation, which I had the honour to lead and which, in addition to myself, consisted of the Deputy Chairman and Vice-Chairman, has al-

ready been fully reported to members, but I should add that subsequent contacts and correspondence with America only served to strengthen our conviction that the decision to send a delegation was more than justified and that its results in establishing contacts with the burlap trade and industry and consumers, and at the same time providing information on the problems and difficulties which faced the burlap industry in the United States were of value. The delegation reached the conclusion that while there is still a demand for hessians and packaging material to meet the heavier tasks of trade and industry, that position can be maintained only if ample supplies are always available at a price reasonably competitive with substitute packaging materials. That conclusion is subject to the qualification that present and foreseeable demands are very much smaller than they would have been if the consumption of burlap had advanced equally with its competitors, that new competition from substitutes was rising in every direction, and that the long-term competitive position was still a critical one and one to which the jute industry must give unremitting attention.

Members of the Association will have an opportunity of learning of the details of the plans and present activities of the American campaign this afternoon when Mr. Nugent will address the meeting. In the meantime, I think I should emphasise the importance of this step which has been taken by the Association. For the first time in our history we now have in our most important market an organisation which is carrying out two vital functions, namely, the intensive study of market conditions including existing and potential demands for burlap as well as the general economic conditions which determine total off-take, and secondly an approach to consumers to induce them through advertising and a large variety of public relations activities to use more burlap. The mills have gone to the consumers and have attempted to find out what their problems are and are trying by direct persuasion to encourage the use of our goods. In a market such as America, which is of such vital importance to us and to the country's economy as a whole, I believe that this important development is more than justified; indeed it was long overdue. A major industry cannot afford to be behind its competitors in their use of modern techniques of publicity in influencing the consumer to select their particular product. It used to be said that jute goods need only be low in price and they would sell themselves. That may be still true, but our investigations in America have already shown that our product is like every other commodity and that efforts to convince the consumer of its advantages and uses will be amply repaid. Indeed, the question now seems to be not so much whether the work or activities in North America are justified, as whether they should not be an extension of our public relations activities to other important markets, where a situation not unlike that in America is rapidly developing.

The Goodwill Mission also paid a visit to the United Kingdom, in particular London and Dundee. Although the U.K. is on the face of it one of our main competitors, the fact still remains that Britain is a very important market for our goods and the function of the London office in keeping us informed about developments there, as also on the continent of Europe, is of great importance and one which we have recognised by the new arrangements whereby the Research Institute and ourselves, whereby the Association has assumed direct control of the London office. In future we may expect a considerable development in the existing arrangements whereby the London organisation is the source of information on significant happenings in the jute industry in Britain and in Europe and on such vital matters as the growth of substitutes and the growth of new consumer habits in these areas. In many respects the fundamental problems of the Continental industry resemble those which face us as producers in the U.S.A. and a good deal can be learnt by the techniques now being developed successfully in such countries as Britain and France.

Substitute Packaging Materials

If world jute markets are examined from a rather longer term than the next year or two, two main influences must be considered. In the first place, there may be a slow but steady disappearance of certain markets because of the developments of the new methods of handling products or because of new consumer habits. In the United States, our main market and at the same time the one most subjected to rapid change, the main examples are the adoption of bulk handling which eliminates or reduces the use of bags, and on the other, the adoption of consumer packages which has the same effect. These tendencies are most marked in America, but every other modern market such as the United Kingdom, Australia, the various European countries, etc. show the same characteristics against that it may not be unduly reasonable to expect that the gradual increase in standards of living in other countries, particularly the East and perhaps South America and especially the development of agricultural production, may produce new demands which will to some extent compensate for those markets which are lost. We would, however, I think be particularly failing in our duty as an industry if we left matters to the play of these natural forces. It must be remembered that some of these very influences which tend to drive burlap bags from their long-established markets are merely one aspect of the development of industry which makes itself felt in an irresistible demand for new methods and new materials. We have in jute fabrics a

raw material with a wide range of technical and commercial qualities. Already some progress has been made by using it in combination with other packaging materials such as paper and plastics, and there is now evidence that there might be a wide field of development not in competition with substitutes but in co-operation with them. The war stimulated the development of many new uses for jute goods, and though postwar difficulties and shortages in many cases slowed down or halted developmental experiments, it seems to me clear that the time is approaching when renewed attention must be given by the industry to a scientific and practical examination of new fields in which jute fabrics might be introduced. The industry already has, as a result of the enterprise and foresight of our predecessors, a research organisation second to none in this country in its equipment, organisation and personnel. We must look to the Research Institute for a resumption of investigation into the practical problems associated with the development of new uses for jute.

The Indian jute mill industry is, however, not only confronted by the problems of changes in markets but by the development in the productive capacity of jute mills in other countries. Before the last war the problem of foreign competition did not seem unduly alarming. Foreign production was large but the Indian mills were more than able to compete and the range of our markets was slowly extending. Since then the situation has changed for the worse. The greater part of the competing jute mill industry in other countries was reconstructed after the war or is entirely new. The cost has been high but is probably balanced by greater efficiency. The industry outside of India has access to Pakistan jute on preferential terms and is thus enabled to produce high quality jute goods at a price and of a type which the Indian industry may find hard to surpass unless the same export duty on both hessian and sacking was and, I am afraid still is, such that the foreign manufacturer has the advantage of a substantial price difference over his Indian counterpart.

This is a situation which actually and potentially is disturbing. Its effects have already been seen in the under-cutting of Indian jute goods and the consequently increasing share of the American market secured by European manufacturing industries during the last two years. At the best this improvement in European productive capacity and efficiency means that domestic markets in which the Indian industry has a chance of competing will probably be no longer open to us. At the worst it might lead to substantial over-production and the invasion of some of our main markets by Continental goods. Apart from this, there has been a disturbing growth throughout the main tropical areas of factories which either weave jute cloth or are engaged on the exploitation and development of local fibres. From our point of view the erection of the Pakistan mills with assured supplies of high quality jute at their disposal represents the most serious potentiality, but this is merely one of numerous new enterprises throughout the world. The cumulative effect of these new enterprises in adding to productive capacity that already is demonstratively above present-day demand constitutes a serious threat to our worldwide trade. From now on it seems likely that increasing competition from all directions will make itself felt, and while we cannot object to the desire of other countries to develop their own resources it must, I submit, be a major part of our policy to ensure that the Indian jute industry is in a position to offer the consumer in these and our other markets materials which effectively compete in price and more than compare in quality and reliability.

Modernisation of Mills

In this context the improvement in the productive efficiency of the Indian mills is a matter of vital significance. Some considerable progress has been made but the difficult economic circumstances of the industry in the last two years and the extremely high cost of re-equipment have combined to make development less rapid than might have been hoped. The modernisation of the Indian industry is, of course, a major task and the mere financial limitations of available plant and the task can be completed for a good number of years to come. This is a matter in which substantial assistance might well be expected from the State or from such international organisations as the World Bank, and I trust that some success may be achieved in this direction during the forthcoming year.

I feel that at this stage it is appropriate to make a careful reference to the assistance and support which we have received from the Government of India, the Hon'ble Ministers concerned and the members of the Secretariats in all matters concerning our industry and its place in the trade and foreign commerce in this country. In particular, the efforts to develop our public relations activities abroad have received every support and encouragement, and the members of the Goodwill Mission knew our visit had created in Government circles, to whom we reported very fully on our return. During our visit to America, too, we received every support and assistance from the representatives of the Indian Government there, particularly His Excellency Mr. G. L. Mehta, Ambassador of India in the United States, and his staff, and Mr. A. S. Lall, Consul for India in New York. After our return from America, the Government of India were good enough to make the Association a grant of \$25,000 to be used in the prosecution of the

public relations campaign in America, and I would like, on this occasion, to say how very much heartened the Association have been in their endeavours by this very gratifying indication of Government's confidence in our arrangements.

Raw Jute Supplies

Since 1947 supplies of raw jute have been the major preoccupation of the industry, and despite the substantial and, indeed, dramatic improvement in the situation, it is one that so far as can be seen will continue to be a matter of grave and outstanding importance.

For the immediate present, it seems that the difficulties of the scarcity of raw jute supplies have been alleviated. Two successive crops of between 10 and 12 million bales in Pakistan and India have produced ample supplies of raw material for current consumption and for some degree of re-stockpiling. Nevertheless, this situation, satisfactory though it is generally, throws into relief some of the problems inherent in the attempt to develop jute production in India and in the complementary question of the terms and conditions on which the necessary supplies of raw jute from Pakistan can continue to be obtained by the industry.

Superficially, the results of the "Grow-More-Jute" campaign in India have exceeded expectations. According to the official figures, there has been an increase of 14 lakh bales in the present year over the figure of 33 lakh bales in 1950-51, but year over year there has been a result of investigations it is now apparent as a result of the trade carried out by the Association and by the trade from that a good deal of the increase has come from areas where soil condition, rainfall and water supplies available for retting lead to the cultivation of jute low in yield and of unsatisfactory quality. In the meantime, there has been a substantial fall in raw jute prices and there has been a good deal of criticism to the effect that at these levels the cultivator is not securing an adequate return for his labour. Such information as we have on this intricate question does not support that point of view in any cases in which reasonable yields of satisfactory quality jute are obtained. In these instances the cultivator is still obtaining a price which, though far below that realised during the years of scarcity, nevertheless ensures a satisfactory return for his time and labour. But it is also painfully clear that in many areas where so jute production has been expanded yields are so low and quality so poor that only abnormal prices and acute scarcity will justify its cultivation. This leads to certain very important conclusions. Nothing could be further from the interests of the Jute Industry than that low jute goods prices should be achieved at the expense of the cultivator. Our object should be to ensure conditions which will guarantee a steady supply of raw jute which will encourage the cultivator to maintain his planting and do everything possible to maximise his returns. We believe that there are still extensive areas in India where soil, climatic and water conditions make it possible for a high and increasing jute yield to be obtained from the land. It is in these areas, and in these areas alone, that the expansion of jute cultivation should be intensified, for nothing can be more disastrous to the Jute Industry in India than to rely on supplies which fluctuate widely from year to year depending on market conditions.

The Association has recently approached the Government of India and has drawn their attention to this most serious and important problem. It has been suggested that the time is ripe for a qualified Commission of Enquiry to investigate the recent development in jute cultivation and, in particular, to attempt to establish the areas where the maximum effort should be applied. Once this is done, we will support an intensification of the efforts at present being made to improve jute yield and quality. The practical research which has been done shows clearly the directions in which improvements can be made. Better methods of cultivation and cropping, improved implements, the use of fertilisers and, in particular, the rapid growth in seed multiplication farms which will ensure adequate supplies of better seed to the cultivator are most urgently required. I would like to place this foremost amongst our agricultural development problems in this part of the country. On the answer depends a good deal of the future prosperity of this industry, not only the working of the Calcutta mills but also whether the goods which they produce will be equal to the more and more exacting demands which I am sure will be made of commodities of this nature.

Purchases from Pakistan

For the present the maintenance of the flow of Pakistan jute to the Indian industry is of the utmost importance, though, unfortunately, the mills are faced by two view-points which if accepted might reduce it to the merest trickle. On the one side there are those who consider that the mills have not purchased Pakistan jute with the object of keeping Indian prices down. I need hardly say that this is not the case. The difference in the rate of exchange and the Pakistan export duty make Pakistan jute so expensive that mills are automatically forced to reduce their purchases to the minimum. That minimum is established by the need to maintain the quality of our products as far as possible by a mixture of superior quality of Pakistan jute. The need for that becomes more critical in view of the fact that Continental mills and, in particular, the new Pakistan mills have ready access to the finest jute. The

trade here continually receives complaints about the lower quality of Indian hessian, both in comparison to pre-partition days and to the products now available from foreign mills. It is of the highest importance that our quality should improve and, to do this, access to reasonable quantities of Pakistan jute is of the utmost importance. Bearing the above in mind, a study of the relative purchase figures is illuminating. In the half year July 1951/January 1952 purchases of Pakistan jute represented 78 lakh maunds as compared to 130 lakh maunds from India. During the half year July 1952/January 1953 purchases from Pakistan were only 48 lakh maunds in comparison with 116 lakh maunds from India. I think these figures speak for themselves, and I trust that in view of them Government will accept the urgent importance of restricting as little as possible the movement of jute from Pakistan.

So far as Pakistan is concerned, the extra export duty of 12 annas a maund is still levied on kutchha bales and represents a small though irritating increase in our costs as compared with our foreign competitors. I realise that this is not a matter on which I can appropriately make any comments, save one which is that the interests of the producers of raw material and of the mills coincide in one particular direction, namely, the need to maintain the consumption of jute goods throughout the world in the face of determined competition from the producers of substitutes supported by a variety of the strongest arguments ranging from the need for self-sufficiency to the desirability of meeting new consumer habits. That competition can be met only if jute goods of high quality are available at economical prices and any fiscal action which maintains artificially high price levels is not in the long-term interests of the industry.

Labour Relations

No reference to the affairs of a great industry in these times would be complete without mention of one of the most important questions affecting our productive capacity and efficiency, namely, our relations with the large labour force employed in the mills amounting to almost 300 thousand souls. On many occasions since the war these relations have been of critical difficulty and employers have had many occasions to draw the attention of Government to the problems so created.

In particular, there has been an extreme dissatisfaction, and not only on the part of employers, with the provisions of the legislation relating to industrial disputes. The settlement of industrial disputes by reference to compulsory adjudication has been found to have many defects and, accordingly, the Association has followed with great interest the negotiations between the employer and labour, particularly since the Hon'ble Mr. Giri became the Union's Labour Minister. Generally speaking, the Association are strongly in favour of Government's appeal for the development of joint consultative machinery and the gradual elimination of compulsory adjudication.

The whole problem of labour relations has a most vital significance to the urgent task of improving mills' efficiency and in particular introducing modern machinery. Some progress has been made but too often the employer who desires to modernise his plant and equipment is met by a blank wall of prejudice and in many cases I regret to say distortion of facts. There is no doubt that the Jute Mill Industry at present employs a labour force far in excess of its requirements. Its gradual reduction to more reasonable proportions and the employment of more skilled and efficient operatives capable of earning the higher salaries which higher production will justify is a prime objective of the industry which will be in the interest of all concerned.

Industrial Co-operation

It is not possible to say at present that either the immediate or the long-term outlook of the Indian Jute Mills Industry is one that is free from difficulty, and indeed danger. But we have had in the past a history of co-operation which has been achieved by few major world industries either as regards degree or continuity. The close co-ordination of effort that has been attained under our Working Time Agreement, the collective activity and support which has made possible our Research Institute and such organisations as the Association Labour Department, the Technological Institute and most recently the organisation of our public relations and propaganda campaigns in the United States, have resulted in benefits of the utmost value. Because of them the Association speaks with an authority still unsurpassed in this country and has been able to ensure that its problems and has been able to ensure that its problems receive the urgent consideration which they deserve. With many serious problems of adjustment and development to be faced, with the new conditions created as the result of the separation of our former main raw producing areas, with the development of foreign competition and the encroachment on our markets of substitute materials and modern methods of handling commodities, it seems to me more than ever urgent that we should maintain our organisation not only intact but in an even more cohesive form. Difficult times sometimes create a desire on the part of individual units to break away from restraints and to seek salvation through their own efforts. I trust that this tendency may not appear in the jute industry and I would appeal to all members and to all interested in the future of our great enterprise to maintain and strengthen that tradition of common working which has been practised with such advantage in the past.

G.A.T.T. URGES FURTHER TALKS ON JUTE AND COAL

The International Committee of GATT, which has had the question of the jute fee and coal surcharge between India and Pakistan under discussion, has directed both Governments to continue consultations with each other with a view to reaching an amicable settlement. It is understood that the results of any consultations that take place have to be in the hands of the Chairman of the International Committee by 10th March and it is, therefore, expected that talks at a high level will take place between India and Pakistan in the near future, as this is one of the factors that is standing in the way of trade agreements between the two countries. India has intimated her intention of selling coal to Pakistan at the lowest price at which she sells it to other countries, providing Pakistan withdraws both the licence fee and the higher duty on raw jute to India. It would appear that Pakistan would thus get the better of the bargain because although India has been charging her a higher price for coal than she has charged other countries, it is still cheaper for Pakistan to buy Indian coal than to buy coal from any other country. India on the other hand has no other markets to turn to for jute of the standard she gets from Pakistan, and as she is still not fully self-supporting in jute has no other alternative but to pay the higher price asked. It will be remembered that India and Pakistan signed a trade agreement in August of last year that excluded jute and coal, but no restrictions were placed on trading in these commodities between the two countries. It is to be hoped that the two Governments will now make progress towards a long-term trade agreement.

THE JUTE MARKETS

Manufactured Goods: The question of reduction of the export duty on jute goods has again loomed large in the finished goods market, and it is rumoured that an approach has been made to Government to reduce the duties substantially, especially on sacking, to bring Indian manufactures down to a level at which they can compete with Continental mills. These rumours have caused a dearth of shipping instructions with mills, who report that shipping in February is the poorest for a long period. It is only natural that consumers will delay their shipments until the last possible moment if there is any likelihood of the duties being reduced, and it is obvious that these rumours will persist until the results of the Central Budget are made known or Government issues a categorical denial. As a result of these rumours the finished goods market ruled steady at the beginning of the period after a quiet opening, and mills sold small quantities, there being also a certain amount of inter-bazaar covering business which helped to maintain prices. Overseas business has been small and quotations of all fabrics were regarded as largely nominal in the absence of any large business. After the weekend, rates eased off slightly as operators paused in their activities waiting for the budget.

At the opening of the market on Thursday last prices showed a decline in all sections due to selling pressure by mills for certain fabrics and bazaar activities. Hessians dropped by 3 annas and 40" 10 oz. was quoted at Rs. 43-8 per 100 yards, whilst plain heavy cees and B. Twills recorded drops of 12 annas and Re. 1 respectively to rule at Rs. 94-12 and Rs. 94-8 per 100 bags. These losses were made up the following day as rumour and counter-rumour flooded the market, and before the close on Friday the market was ruling steady, with mills reserved. On Saturday heavy goods were unchanged with both plain heavy cees and B. Twills being quoted at Rs. 95-8 per 100 bags, and the only alteration recorded was in hessians where 40" 10 oz. improved 2 annas to Rs. 43-8 per 100 yards. After the weekend these prices were unchanged, but during the day the undertone grew easier and minor fluctuations took place, there being no business recorded. The same prices were quoted at the opening of the market on Tuesday morning, but in the absence of any enquiries prices were not maintained. In the afternoon session, however, the market firmed up considerably and towards the evening mills came out and sold small quantities.

At the opening of the market on Wednesday morning rates were well maintained following the previous day's business, and sacking quotations were up by 6 to 8 annas per 100 bags, whilst hessians were unaltered. Opening quotations were as follows:—

	Ready	March	April-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40" 8 Oz.	34-12	34-12	34-12	34-12
40" 10 Oz.	43-8	43-7	43-8	43-8
Heavy Cees	96-0	96-8	97-8	97-8
Plain	95-14	96-4	97-4	97-8
B Twills	99-0	99-4	100-0	100-0
Cornacks				

Raw Jute: Throughout the week under review the jute markets have been dull and inactive with buyers taking very little interest except in small lots of good quality jute, and ready bills of lading. The finished goods market has been ruling steady and it is only because of this that quotations for jute were maintained at last week's level, and sellers, with an eye to higher prices, adopted a reserved attitude. However, when mills did indicate that they were buyers for any quantity, it was generally noted that in spite of their reluctance to sell, there were always sellers over. This was the state of the market up to the weekend, but on Monday, with the finished goods

returned to private interests. The terminal markets, however, are one thing; private importing is another. The plan was finally revealed in January to restore to private enterprise by the end of the harvest in autumn 1953 the whole of the trade in grains, from bread grains to feeding stuffs, whether of domestic or of external origin. It was the biggest and the boldest of all the moves back to private trading. The annual value of the trade is reckoned in hundreds of millions of pounds. But the principles involved are no less important than the size. By removing subsidies, the principle of the economic price is being systematically restored alongside of the principle of private trading. It is not, of course, possible to allow unlimited imports of grains from non-sterling sources; they will be subject to control by import licence. But the licensing will be so manipulated that sterling prices will be reduced whenever they show a tendency to command the former premiums over dollar prices. The policy fits in with the Government's whole plan to bring sterling and dollar prices into harmony, as a condition of resuming entrepôt trading on something like the prewar scale. And in the meantime the historic Baltic Exchange in London can perform even more important functions than the chartering of grain ships.

There were no such basic problems involved with sterling commodities, and it is natural enough that wool, rubber, tin, cocoa, shellac—commodities of which the sterling area normally produces a surplus—were high on the list for decontrol. Curiously, the first important market to resume

free dealing, within a few months of the ending of the European war, was the London fur market at the Hudson's Bay Company's headquarters. This is hardly a sterling "commodity," and, indeed, the open general licence had to be revoked in the currency crisis of 1947 to be replaced by a quota which related imports to exports. The main non-ferrous metals, as well as cotton, cereals, and sugar, have had to wait until later. Yet progress is quite rapid. In October last lead took its place beside tin on the London Metal Exchange; in January this year zinc took its place beside lead. The dollar element in these metals is subsidiary; in copper, despite the big Rhodesian output, the dollar element is larger, but it can be only a matter of months before copper, too, has its sessions on the London market. The London Metal Exchange will then be restored to its full prewar stature. It can claim already to have usurped the function of New York in establishing world prices for the metals in which it deals. Even sugar, though traded for home consumption by the Ministry of Food, is restored to private interests for import of the raw product to meet export demands for refined sugar.

Coffee and Tea

Coffee auctions, impeded by the currency problem and by the shortage of supplies, were resumed last January—of more value at first to the Continental than to the home trade, whose main requirements were still being supplied on allocation by the Ministry of Food. The problem with tea was different. This is essentially a sterling commodity; yet it was not until August last that the London market, nearly eclipsed in the war and

after by the growing markets of Calcutta and Colombo, was able to trade unhampered by rationing and price control at home. This problem of new competing markets should not be underestimated. Since the British markets were closed—and not only because they were closed—there has been a tendency to develop distribution centres near where the commodities are produced, and also to consume more commodities, especially fibres, in the areas which produce them. Britain's geographical position is no longer an unquestioned advantage in international trade.

The most serious difficulty, however, in restoring the markets in something like their pre-war form may be the shortage of finance. While, on the one hand, capital is depleted by taxation, it needs, on the other, something like four times as much as before the war to finance a cargo of wheat or cotton. It was the difficulty of financing private stockbuilding, and the lack of financial margins to carry the trading risk, that made cotton spinners so reluctant to contract out of the Raw Cotton Commission last year; it was the inability of financing a futures market, and as when it might reopen, that induced the Liverpool Cotton Association to admit limited companies, with their more plentiful resources, to full membership.

Lower Prices under Tea Trading

It has been noted that when commodities revert to private trading they usually fall in price. We have even witnessed the strange spectacle of Americans, apostles of free enterprise, looking askance at Britain's new market arrangements because they have "undermined" the values of some American commodities. British manufacturers have been well pleased to be able to obtain raw materials more cheaply in a period of strengthening competition. But it is well to recognise that the weakening of prices has been partly due to the traders' and consumers' own financial weakness, and to the exaggerated caution which results from it. Government Departments' stocks offered on the free markets should be passing into private hands. But some private traders, disregarding that governmental stocks will be exhausted, have been buying only for consumption. In the period of governmental trading—as recently as 1949 Government Departments bought more than £1,000 million abroad, accounting for more than half of all Britain's imports—private trade has been relieved of much of the burden and anxiety of carrying stock. The return to private trade brings with it a new responsibility, not to be easily fulfilled.

But the rewards, on a national scale, are great. Before the war between five and 10 percent by value of all British imports were shipped again as re-exports, and this entrepôt trade was a permanent support to the balance of payments. Even bigger—involved many hundreds of millions of pounds' worth of goods a year, at much lower prices than now—was the trade negotiated through Britain's markets for direct shipment between the country of origin and the country of consumption overseas. In real terms, the trade may not again be as large as it was before the markets closed; but these services are still needed in the world, and Britain needs the revenues from them. Yet the dollar shortage is widespread, and the burden of paying for dollar commodities cannot be shifted entirely to the sterling area, at least until sterling is much scarcer. Sterling may become effectively convertible by stages through the commodity markets, but full restoration of these markets cannot be permitted until it can be safely made convertible in the full sense.

WHOLESALE PRICE INDEX FIRM

The official wholesale price index (year ended August 1939 as 100) declined by 0.1 percent to 380.2 during the week ended 7th February, 1953. The index was higher by 0.5 percent compared to the corresponding week of the last month but was 8.8 percent lower than that of a year ago. INDEX NUMBER BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

PAKISTAN TEA AUCTIONS

SALES TO BE HANDLED BY TRADERS' ASSOCIATION

IN future the sales of Pakistani tea will be handled by the newly formed Tea Traders' Association of Chittagong. Sales will ordinarily be held on Wednesdays unless that day falls on a public holiday, in which case an alternative day will be selected by the general committee of the association. The last sale of the current season (Sale 20) will be held on Wednesday, 1st April. It is expected that in the last three or four sales of the current season a maximum of 10,000 chests will be offered for each sale, and of this figure approximately 35 percent will be dust grades. After the current season closes on 1st April no further auction will be held until 3rd June.

On the basis of figures for previous years, the association anticipates only small sales in June, July and August, but expects larger sales during September and October, with the maximum quantities being offered during the months of November and December, 1953, and January, 1954.

WORLD COFFEE PRODUCTION

IN 1952-53

WORLD production of coffee in 1952-53 is forecast at 93,360,000 bags of 132.3 pounds each, a million bags more than the estimated 38,135,000 bags produced in 1951-52, according to the *Tea & Coffee Trade Journal*. Of this total, it is estimated that 30,899,000 bags will be available for export, or five percent more than the exportable production from the 1951-52 crop. Production increases are expected in each of the principal producing areas of the world except Asia and Oceania. Coffee production in North America in 1952-53 is estimated to be four percent higher than 1951-52, South America two percent higher, and Africa five percent higher. Asia and Oceania are expected to be four percent lower.

Brazil, which normally provides about half of the world's coffee supply is estimated to produce this year about 18.5 million bags, a slight decrease from last year's crop. The new trend in Brazil is to secure higher yields through improved varieties, irrigation and fertilization rather than from an increase in the number of trees. Colombia, the second largest coffee-producing country, is expected to show a substantial increase over the 1951-52 crop because of alternating fair weather and steady, mild rains.

Because of adverse weather, production of coffee in Ecuador in 1951-52 was considerably below previous years but well spaced and well scattered rains during May and June are expected to yield the largest crop on record during 1952-53. The unusual May rains in Ethiopia and the renewal of coffee trees in Madagascar are expected to result in increased production in these countries. Higher yields are also expected in Costa Rica, Cuba, El Salvador, Honduras, Belgian Congo, Uganda, India and Yemen.

While some improvement in coffee supply is in prospect and all the indications point to a continued upward trend in world coffee imports, there are no indications of a surplus of coffee in the immediate future. Potential demand appears to be greater than present production. The recovery of the European coffee market and increased per capita consumption resulting from greater industrialisation and a spread of coffee-drinking are expected to increase the demand substantially, necessitating higher production to supply world requirements. An expansion of coffee production is under way in a number of countries. Coffee production costs are increasing, but present coffee prices are sufficiently high to encourage greater production.

CHITTAGONG TEA SALES

At Sale No. 17 held on 18th February, 1953, leaf offerings consisted of 5,894 chests. Dust offerings amounted to 3,636 chests and there was a Supplement of 134 chests.

Leaf: The market opened slightly easier but demand developed all round as the Sale progressed and most grades firmed up by 1½ to 2 annas by the end. Broken Pekoe came in for most support, particularly those with good colour liquors. O.P. and Pekoe were half to one anna easier.

Dust: The market was very irregular. Leafy types were about two annas dearer and there were occasional advances of up to As. 4 above brokers' valuations. Best liquoring types were in keenest demand and the highest price for several years, Rs. 2-1-0, was paid for a break of 30 chests.

There were no withdrawals.

Quotations

Sale No. 17—18th February 1953.	Sale No. 16—4th February 1953.
OP Rs. 1-2-0 to 1-3-0	Rs. 1-3-0 to 1-4-0

COMMONWEALTH OUTPUT OF PLANTATION PRODUCTS

THE major part of the world's tea, about half of the world's rubber and over half of the world's cocoa are produced by Commonwealth countries. This is revealed in *Plantation Crops*, a publication just issued in London by the Commonwealth Economic Committee. Covering in the main the first six post-war years, the publication records that the world rubber output for 1951 marked an 80 percent increase over the pre-war rate, while sugar and tea had risen 25 percent. World exports of sugar and coffee in 1951, while under the post-war peak, were still greater than before the war, but cocoa exports had not yet reached the pre-war volume.

In comparison, Commonwealth output of tea and rubber in 1951 marked a 50 percent increase over the pre-war level, with Commonwealth production of sugar increased by a third. Shipments of Commonwealth rubber and tea had expanded 50 percent, those of sugar and coffee by 25 percent and tobacco by nearly 250 percent. The United Kingdom remained the world's largest market for tea and tobacco, with the U.S.A. as chief importer of sugar, coffee, cocoa and rubber. Commonwealth countries supplied practically all the United Kingdom's tea, cocoa and rubber.

World exports of tea from the principal exporting countries in 1951 are given as 980,000,000 lb. Of these, 827,000,000 lb. came from Commonwealth countries. India accounted for 445,000,000 lb., Ceylon 205,000,000 lb. and Pakistan 47,000,000 lb.

Figures for net exports of natural rubber from the principal exporting countries in 1951 show that those for the two chief Commonwealth exporters, Malaya and Ceylon, were 608,000 and 102,000 tons respectively, and for the two leading foreign exporters, Indonesia 794,000 and Thailand 109,000 tons.

The summary shows that India was the leading Commonwealth producer of leaf tobacco, with 589,000,000 lb. in 1951, Pakistan second with 161,000,000 lb. and Canada next with 154,000,000 lb. Leading foreign producers were the United States, 2,329 million lb., China 1,100 million lb. (estimated) and Brazil 257 million lb. Easily the biggest Commonwealth exporter of unmanufactured tobacco, India's sea-borne exports under this head in 1951 amounted to 109,000,000 lb. and her land-borne exports of tobacco amounted to 12,000,000 lb., of which 11,000,000 lb. went to Pakistan.

Another section of the booklet deals with spices, and it comments that a notable feature of recent years in the sphere of plantation crops has been the part played by spices, where India has supplanted Indonesia as the United States' source of supply for pepper.

REDUCTION IN TEA CROPS

In pursuance of the policy announced on 18th December, 1952, a meeting of representatives of the Tea Producing Associations of North East India was held in Calcutta on 23rd February, at which it was agreed that the tea crops in Assam, West Bengal, Tripura and Purnea should be regulated by a cut of some 12½ percent on the best year's crop in the years 1947-52.

For many months now, Tea Associations have placed special emphasis upon the necessity for finer plucking, and the decision, which is in conformity with the advice of the Central and State Governments, and with the recommendations of the Rajaram Rao Team's report, will mean a reduction in North East India output from 506,000,000 lbs of tea in 1952 to 466,000,000 lbs in 1953. Producers do not expect to be able to judge, until much later in the season, the extent to which the present adverse gap between costs of production and sale price will have been bridged by the proposed regulation.

TRANSPORT

Let's face it—transport in India takes a beating, wherever you are. Long distances, uncertain road conditions, gruelling heat in midsummer, and fine insinuating dust everywhere—all tend to shorten the life of your equipment and to increase operating costs.

If you are having trouble with your equipment, or if, in any case, you would like to have a second opinion on a number of points, ask your nearest Burmah-Shell Office to send along one of their experts. He will study your problems—and then submit recommendations for 'planned lubrication'—lubrication, in other words, specifically designed to meet your needs, and to overcome your own particular problems. All this advice is free—and quite often we find that in addition to reducing operating costs we actually cut down your lubrication bills as well! This is not so altruistic as it seems—for although you may not buy quite so much oil and grease as you did before, on account of our recommended economies, we have gained a satisfied customer. And that's the really important thing.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to January 1953. As compared with December, the January Indices for Food and Clothing show drops of 3 points and 14 points, while those of Fuel and Miscellaneous remain unchanged at 239 and 266, respectively. Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 4 points during January, 1953. for Calcutta. Prices in August, 1939=100

A QUALITY CONTROL AID
NEW YARN AND CLOTH EXAMINING
INSTRUMENT

PROCESSORS of textiles—whether yarn suppliers, manufacturers, dyers, finishers or merchants—are faced under present competitive conditions with checking the quality of goods at all stages if they are to avoid the possibility of serious loss. This is, however, a slow and therefore expensive matter and tends to hold-up production until samples have been approved by mill or warehouse testing departments. Any means therefore by which this continual checking process can be speeded up must inevitably lead to a reduction in cost and an improvement in quality. Textile Mercury and Argus reports that the Swiss optical instrument firm of Hans Hock, Zurich, have recently introduced a new scientific cloth and yarn examining instrument, the "Projectina," in which the sample is projected on to a screen with magnifications of 10, 20 or 50 times. One of the important features of this new device is that the sample is projected either with the light passing through it and silhouetting it on to the screen (diascopy) or by surface light (episcopy). In this way it is possible to inspect samples of even the densest fabrics through which light cannot pass. The instrument can be used in numerous ways. For example, the specimens, whether yarn or fabric, may be projected on to a large screen of some seven inches diameter with magnifications of 10 or 20 times in either diascopy or episcopy. This screen is graduated in inches so that there is an immediate check of ends and picks per inch.

More important, however, is the fact that this magnification gives a detailed picture of the

sample and, so far as cloth is concerned, shows up clearly and unmistakably any uneven picking, "reediness" or yarn variations in the fabric. This method of projection on to the large screen simplifies also to an extraordinary degree the abstraction of weaving particulars from the cloth and, when single lengths of yarn are projected, shows up irregularity of twist, broken filaments in synthetic yarn and other faults. Where, for example, a cotton spinner suspects that he is having difficulty with twist irregularity the introduction of a coloured roving and the projection of the resultant yarn will show up the incidence of the faulty twist and will also enable the mill to establish the necessary mathematical calculations of periodicity in a given length of yarn, etc. In addition to this projected image on the large screen, however, the specimen can be examined in more detail through an eyepiece where the projected image is seen with a magnification of 50 times against an engraved scale which makes possible the measurement of yarn diameter, etc., as well as the closer examination of the cloth structure, yarn faults, etc.

The "Projectina" is, moreover, supplied with another screen upon which the image of the specimen is projected with 10 times magnification and shows it in adjoining panels against scales representing centimetres, the French inch and the English inch, giving an immediate conversion of cloth particulars from one to the other of the systems. Long lengths of yarn can be traversed through the instrument and the examination carried out by study of the image on the screen. This is achieved through the use of a special fitment designed to facilitate the handling of yarn of all kinds. Realising that for certain purposes it is necessary to examine specimens over a larger area and with a greater depth of focus, the makers have provided the "Projectina" with an additional lens which gives a magnification of only three times but with an intense concentration. This is of par-

ticular value in the examination of knitwear and is normally used in conjunction with illumination from a side-lamp the position of which is infinitely variable.

In mill use, of course, the instrument has other incidental uses such as, for instance, the examination by projection of heat eyes, reed wires, etc., which it is suspected are the cause of trouble in end breakages and broken filaments. The "Projectina" is also supplied complete with a microscope for magnifications of 200, 300 and 400 times. Whether used with the microscope or as a projection instrument however, the "Projectina" gives the facility for the traversing of the sample on the plate on which it is placed. This mounting plate can be moved lengthwise or crosswise and it can also be moved in an arc. This is, of course, an extremely useful feature when the irregularity of the cloth structure has to be checked and for cloth analysis.

Many firms using the "Projectina" have found it useful to have a photographic record of cloth and yarn faults as revealed through the magnified projected image and the makers have introduced a means by which photographs can be taken without removing the sample from the instrument. When the specimen has been projected on to the screen, the screen is removed and is replaced with a solid panel into which is fitted a 9 x 12 cm. plate-holder. A photograph is then taken on to the plate in the normal manner and a permanent record is obtained of the projected image.

COPPER-CLAD ALUMINIUM

UNION OF TWO METALS EXTENDS
USES OF ALUMINIUM

DEVELOPED originally in Germany for service in the electrical industry to overcome shortages of copper, copper-clad aluminium is finding many new fields of application where the properties of both metals are desirable. Of course, many applications for which the material was originally designed have since been successfully made of aluminium alone at a considerably reduced cost, but there are still many uses for which copper-clad aluminium is peculiarly suited.

Produced in Germany for over 15 years, where it is known as Cupal, the material consists of commercially pure aluminium with a covering layer of copper. The bond between the two must be exceptionally good. While the copper can be applied by spray or by electroplating, such a covering layer is very thin and often not uniform. For this reason a clad material made by heating the two metals and uniting them by hot rolling is preferable.

Single, Double Clad

Copper-clad aluminium is produced with an aluminium core clad on one or both sides with copper. Most applications for single-clad material call for an 80-20 ratio (80 percent aluminium, 20 percent copper by thickness), although other ratios can be supplied with copper running from 5 to 50 percent of the total thickness. In double-clad material, the most common ratios are 5-90-5 and 10-80-10. The minimum amount of copper necessary depends on the application and the working of the material will receive in the process of manufacture. To obtain an impervious layer of copper, a minimum thickness of 0.001 in. is required. However, where the copper layer is used merely for ease in soldering, thinner layers can be used.

At present, the composite metal is available commercially in the U.S.A., Britain, Germany and certain other countries, in the form of sheet, strip, circles and busbar. Tubing has been announced quantities.

The physical and mechanical properties of the usual commercial grades of copper-clad aluminium are dependant on the ratio of aluminium to copper, but in general they are about the same as the theoretical values for these ratios. There is no additional thermal resistance at the bond, as is the case when separate sheets of metal are held together by pressure.

When aluminium and copper are bonded together, their corrosion resistant properties are the same as for individual sheets of the two metals. However, when very corrosive conditions are likely to be encountered, the cut edges of material should be lacquered to prevent galvanic action between the components.

Fabrication

For spinning, deep-drawing, sharp bending and embossing copper-clad aluminium, annealed sheet is the most suitable. Half-hard sheet can be used for shallow shaping, while hard sheet is suitable only for moderate deformations and punching. When deep-drawing, recommended reductions are 40-45 percent for the first draw, 20-25 percent for the second, 15-18 percent for the third, and 14-15 percent for the fourth. When spinning the composite sheet, it should be upset gradually, following the technique used with copper and brass. Machining can be done satisfactorily with tools similar to those used on aluminium. When drilling or cutting threads, it is preferable to place the copper side on top when working material that is clad on one side only.

Care should be taken when it is necessary to anneal the composite metal. This operation should be done at a temperature within the range of 700-750° F. in an accurately controlled furnace or salt bath. Annealing time should be as short as possible as prolonged exposure within or below the specified range or limited exposure above the

range, results in the formation of a compound metallic layer at the interface of the two metals which can modify the properties of the clad material drastically.

The composite metal is an excellent material for heat exchangers, as it has a higher thermal conductivity than most other standard materials used for this purpose. As it can be soft-soldered, parts can be joined to produce a thermally effective joint.

When the material is clad on one side only, it is often possible to take advantage of the particular corrosion resistant properties of both metals. In the case of coal-fired hot water boilers, for instance, the copper layer can be used on the water side, and the aluminium layer, with its greater resistance to sulphur-laden flue gases, on the fire side.

Electrical Applications

The greatest field of application for the composite metal is undoubtedly the electrical industry. There is a strong trend today towards a much wider use of aluminium conductors, due to their lighter weight and overall economy, but often at some stage the aluminium conductor has to be connected to one of copper. This introduces the possibility of electro-chemical corrosion and increased resistance at the joint. By using single-clad composite metal washers or shims, suitably protected at the cut edges, between the two conductors, the only copper to aluminium joint is within the washer and away from corrosive agents. Similarly, the material is useful for cable lugs, soldering eyes, connecting clips etc.

Aluminium clad with copper has many properties that are not available in a single metal, and in time may find many other unique and useful applications.

RESTORING WAR-DAMAGED BRIDGE
IN BURMA

A British firm of constructional engineers has completed two bridge spans weighing 2,000 tons for repairing the war-damaged Ava Bridge over the Irrawaddy in Burma. The order, valued at £150,000 (Rs. 20 lakhs), was placed by Burma Railways under the Colombo Plan. The spans, 70 feet in depth and each 360 feet long, were erected on the premises of the company to ensure a perfect fit upon arrival in Burma. Shipments in eight-ton lots will be made from Birkenhead in April and are expected to reach the site—which is south of Mandalay—next autumn. The bridge, erected in 1934 by the Indian branch of the same company at a cost of Rs. 1 crore, is nearly 4,000 feet long, and is designed to carry both road and rail traffic. The two spans now being replaced were destroyed during the British withdrawal from Burma in 1942.

BRITISH AVIATION EXPORTS
A RECORD IN 1952

The British Aircraft Industry's exports in 1952 totalled almost £44 million, thus continuing their steady expansion since 1945. The actual figure is £43,933,539 as against the previous year's total of £41,955,652. Aviation exports have almost doubled since 1947—and are now at a record figure. In December 1952 the value for exports was over £4½ million, the highest monthly value ever recorded.

Exports in 1953 and the years to come will increase because overseas sales of the gas-turbine airliners are only just beginning and have as yet hardly begun to appear in the statistics. Already orders for these airliners are placed for as far ahead as 1957. Military exports will also be growing. And statistics show that, in general the sale of spare parts and equipment which follows the aircraft's use abroad is roughly equal, during the aircraft's useful life, to its original cost. A big annual income ful life, to its original cost. A big annual income ful life, to its original cost. A big annual income ful life, to its original cost.

RECORD U.K. CYCLE EXPORTS

India was among the leading buyers of British bicycles in 1952. The value of all British bicycle and motor-cycle exports in the year was £43,946,000, an all-time record and an increase of over £1,000,000 on the previous year. Exports of bicycles reached a fresh record in both numbers and value, some 2,789,000 machines, worth £23,757,000, being sold abroad. These figures compare with 2,738,000 bicycles, worth £21,337,000, exported in 1951.

Malaya purchased the largest number of British bicycles for one territory (365,875), other leading buyers being British West Africa (244,707), India (219,600), the U.S.A. (185,188), Indonesia (172,634) and Pakistan (136,948).

BRITISH MACHINE TOOLS FOR
KHARAGPUR INSTITUTE

Some £35,000 (nearly Rs. 4,70,000) worth of machine tools of the most modern design are being provided by the British Government, under the Technical Co-operation Scheme of the Colombo Plan, for the tool-room of the Indian Institute of Technology at Kharagpur. The equipment includes milling, shaping, drilling and grinding machines, lathes, lapping machines and sawing and filing equipment. Twelve firms are participating in the supply of equipment to the Kharagpur Institute.

The Kharagpur Institute is the first of four new technical colleges which are being established by the Government of India. The colleges will provide courses for undergraduates in civil, mechanical and electrical engineering and also post-graduate courses. The Kharagpur Institute has a large machine shop and other workshops, together with a tool-room for the production and maintenance of the necessary small tools, dies, jigs and fixtures.

Travel Agent services

POWERFUL

600
HORSE POWER
AT 2100 R.P.M.

This is the most powerful precision built single unit CUMMINS diesel—an addition to a famous range of 72 different models from 50-600 H.P.

As with the large so with the small!

Every CUMMINS engine (irrespective of size) has the same:—

1. Skill, precision and care behind its construction.
2. Efficient design to ensure maximum power with minimum fuel consumption.
3. Rigorous tests on the Cummins test benches before it leaves the factory.

In their report on the Karachi stock market for the week ended 20th February, Messrs. Merwanjee Bomanjee Dalal & Sons say that there was a 21 percent 1955-56 and 3 percent 1963-64 feature prominently and 3 percent 1958-59 and 3 percent 1968-69 accounted for all transactions. Enquiries for 3 percent 1958-59 were only casual, and other maturities were dull 3½ percent Punjab 1963 was again done in substantial amounts but 3½ percent 1964 issues were not offered. 3 percent Punjab 1955 tended to harden, but conditions were otherwise apathetic. Municipal and Port Trust Debentures did not record any business. State Banks declined; so did Habib Banks, which are now at an attractive level. Muslim Commercial Banks were quiet and PIFCOs were dull. Muhammad Steamships were done at around Rs. 149 and Haydari Constructions proved vulnerable. Orient Airways rose but actual absorption was poor, and Spencers were firm. Adamjee Jutes received a lot of attention and many short positions were corrected, but the technical position was not so strong. Valika Textiles and Valika Woollens were inactive. Purchases of Colony Textiles at the ruling rate should prove very profitable. Premier Insurance were sectional and lower and Habib Insurance were weak. Exceptionally, Eastern Federal Insurance were in keen demand. Karachi Electrics were neglected and Rawalpindi Electrics were firm with sellers comparatively reserved. Quetta Electrics could be placed higher if available. Orient Airways Preference could not be done at the quotation rate. Spencer Preference were wanted but Muhammad Steamship Preference were relatively quiet.

* First Publication 5th August, 1937; First Revision 16th October, 1941; Second Revision 9th January, 1943.

(76) If the option is exercised on or after 30th September, 1942, the Company will be entitled to exercise the option before 30th September, 1946.

(77) If the option is exercised on or after 30th September, 1942, the Company will be entitled to exercise the option before 30th September, 1946.

(78) If the option is exercised on or after 30th September, 1942, the Company will be entitled to exercise the option

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary, Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other Funds	Accrue under Tea	Outturn and Average Price per lb. realised for crop.		Estimate 1952	NAMES	Accounts closed	Managing Agents	Net profits including Taxation	Dividends per cent.			Latest Market Quotations as available until.

THE INDIAN FINANCIAL REVIEW

65th YEAR OF ISSUE

CALCUTTA, MARCH 5, 1953.

Vol. CXXX No. 3218

REDUCING THE DEFICIT IN THE 1953-54 BUDGET

PROSPECTS FOR FURTHER BORROWING: THE ROLE OF FOREIGN ASSISTANCE

THE review of economic conditions that accompanies presentation of the budget estimates is sometimes written less with the intention of stating facts than of supporting the Government's revenue forecasts and justifying resort to whatever new impositions are proposed in the Finance Bill. Having no new proposals of importance and taking a fairly cautious view of future revenues, Sir Chintaman Deshmukh in the last two years has been able on budget day to furnish a fairly reliable picture of economic trends. But the five year plan has more or less prescribed the expenditure side of his account for him, and his main concern in his economic review has been to show that it will be "safe" to expand capital spending regardless of whether revenue income and public borrowing meet total requirements. The view that "the climate is now suitable" for spending more than the Government earns or borrows was one of the principal themes of his speech last Friday, as it has been of his public pronouncements in recent months. Many people do not agree with him; they think furthermore that Sir Chintaman's views on the matter stem from the political necessity of pressing ahead with the five year plan and the economic difficulty of raising funds within India. The Finance Minister has made a concession to these critics (and no doubt to his own economic conscience, for he is by training a sound money man) by inviting to the country a mission of technical experts from the International Monetary Fund to study just this question. They will "help us ensure," said Sir Chintaman in his budget speech, "that resources for implementing our five year plan are raised in an optimum manner," which seems to be a way of saying that they will advise whether printing more bank notes is an optimum manner.

The report of this mission will be made to the board of the Fund, and this brings us to another important plank of Indian budgetary policy, one which found little mention in the budget speeches. Sir Chintaman hinted that the financial deficit in India would not only advise on experts now in India would not only advise on deficit financing but they "may perhaps encourage external assistance on lines entirely acceptable to us." Clearly this hope was not far from the Finance Minister's mind when he framed the budget presented last Friday. An inflow of fresh substantial foreign assistance would maintain the Government of India's working balances well above the minimum of Rs 50 crores Sir Chintaman regards as essential and to that extent man regards as essential to borrow lavishly would make it unnecessary to raise treasury bills from the Reserve Bank against treasury bills. The entry of Rs 110 crores in the budget under the heading treasury bills was described by the Finance Minister as being "for the purposes of the budget," indicating that he has not by any means finally resolved on releasing inflationary forces to the extent expected, and even hoped for, by some business men. How far Government spending during 1953-54 will be inflationary cannot be determined by a study of last week's budget, since it depends on the outcome of negotiations for further foreign aid and on an uncertain loan programme. It is in case these funds are not forthcoming in adequate amounts that Sir Chintaman has been preparing the country for large uncovered deficits.

To put the question of foreign aid at the beginning of discussion on the budget might look like starting at the wrong end, but in fact the success of the last two Indian budgets cannot be understood without taking into account the \$190 million American wheat loan. The counter-fund yielded by this loan, which totalled over Rs 73 crores, have been the mainstay of the Government of India's ways and means position in the past two years. Thus, during 1952-53, the

Centre did not ask the market to lend the Rs 25 crores forecast in last year's budget but was able to leave the field clear for the States because the sales proceeds of wheat procured under the American loan kept the ways and means position easy throughout. Receipts from this source had been put at Rs 10 crores in the 1952-53 budget but in fact they exceeded Rs 26 1/2 crores, with the result that despite the absence of new borrowing and the higher tempo of development work the overall budget deficit was only slightly larger than expected.

Apart from the general economic effects of deficit financing, there was little in the budget to enthuse or dismay trade and industry. The reduction of Rs 95 in the export duty on sacking is discussed elsewhere in this issue. The full significance of the concession to companies investing surplus funds in new undertakings "in selected industries," the revision of taxation on Indian subsidiaries of foreign concerns and the provision to check the practice of buying speculation losses, will not be clear until the income tax authorities show how the new arrangements are to be applied. The higher postal charges for parcels, which are designed to pay for the extension of postal facilities to the villages, and the exemption of lower incomes from taxation, which is primarily aimed at giving tax-collectors more time to chase larger accounts, are both extensions of the obnoxious principle that runs throughout Indian fiscal practice of dunning not the people who receive services from the State but those who can most easily be taxed.

The results achieved in the revenue budget for 1952-53 were relatively satisfactory, in part because estimates of revenue had been deliberately pitched low last May. This underestimation applied particularly to Customs receipts which, in the event, exceeded estimates by Rs 12 crores, but corporation taxes also yielded Rs 9 crores more than was forecast. This marked improvement in the return from two major sources of revenue was not fully reflected in the revised estimates because of two other contingencies over which the Finance Minister had no control. They were the restoration of the cuts in food subsidies which he had made last March, and the non-payment of an instalment of Rs 9 crores on account of Pakistan's partition debt. The food subsidies had originally been estimated to cost Rs 15 crores, but the vigorous reaction to higher ration prices, particularly in Bombay, and division within the Cabinet itself led eventually to a total of Rs 21 crores being spent on subsidising grain prices. Since these two contingencies played so large a

part in upsetting his 1952-53 budget, the Finance Minister might have been expected to say more about them in connexion with next year's budget. In fact, all he said was that food would no longer be subsidised from revenue, and that Pakistan's Rs 9 crore debt for this year had been carried forward to next year plus another Rs 9 crores due in 1953-54.

These two brief references do not make clear what the position will be in the coming 12 months. If food is no longer to be subsidised from revenue it is to be subsidised at all, and are the costs of the subsidies to be shown in the capital budget as losses in State trading in foodgrains? The implications of subsidisation policy are too important to be covered by transfers from one part of the budget to another, and a clear statement of what the Government proposes in this regard is owing, for it cannot be found anywhere in the budget papers. The other matter, of Pakistan's debt, could also have been dealt with more fully by the Finance Minister. No account was given to Parliament of the negotiations undertaken to recover the sum of Rs 9 crores shown in last year's estimates of revenue, and if, as appears likely, Pakistan is for the time being unwilling or unable to repay this debt there is no sense in showing two instalments, totalling Rs 18 crores, in next year's revenue estimates. It would surely have been better to keep these instalments under "suspense" outside revenue account, as has hitherto been done with the few crores expected as India's share of German war reparations. Estimates of revenue are meant to represent sums which the Government has cause to believe it will realise in the coming fiscal year but the Finance Minister would have some difficulty in convincing Parliament that there is a live possibility of Rs 18 crores being obtained from Pakistan in the near future. Sir Chintaman has been known as a cautious budgeter in previous years, but with Rs 18 crores in his 1953-54 revenue estimates that he has little chance of raising, and an unstated liability on food subsidies, his latest budget is anything but cautious.

The conversion operation involved in repaying the outstanding balance of Rs 115 crores of the 3 percent 1953-55 loan and raising a market loan of Rs 100 crores should not present any difficulties, for large parcels are held by the Reserve Bank and Government departments, while life insurance companies are buyers of long-dated loans. It should indeed be possible to float a further loan provided the Centre is willing to offer terms no less attractive than the State Government loans that have lately

Orders have been lost to German firms who have offered a similar product to South American buyers at half the British price, a circumstance which the Manchester Guardian considers probably represents extreme cases for "German firms are known to accept almost any price to get into a market." But the facts are ominous, and Mr.

Grant warned his audience of the growing possibility of unemployment in the engineering trades which with short-time working is at present confined to the motor-car industry. Nonetheless, he added, "the same factors affecting that industry have spread to almost every other section of engineering. But for the rearmament programme there would already be tens of thousands of workers unemployed. And, rearmament programme or not, widespread unemployment within the next twelve months is certain to result unless the present trend in exports can be halted and our sales abroad increased."

A less depressing view of the future was recently pronounced by the chairman of a well-known firm of British constructional engineers who, whilst admitting loss of business overseas owing to delay in the execution of contracts and the cancellation of others said he had no doubt of his firm's ability to recapture such trade, "provided we are not handicapped by restrictions on supplies of steel or limited by export quotas." There is reason to believe that the rearmament programme has added greatly to delays in the delivery of certain British goods overseas, and India and Pakistan have both made representations on this point. The South African Minister of Transport recently told the Union Parliament of the delays in the delivery of British made locomotives and trucks, a statement which cannot have been any more palatable to the U.K. because at the same time he vouchsafed the information that a new German-made class 25 locomotive, recently assembled in Capetown, broke down during its trial.

CURRENT COIN

Vindication for Vanaspati.—The year 1952, said Mr C. S. Pettit, chairman, at the annual general meeting of the Vanaspati Manufacturers' Association in Bombay last week, "might be called a year of vindication—vindication of the industry's claim to provide a pure, wholesome and nutritious food, and vindication of its claim to occupy an important place in the country's economy." Scientists were asked by the Government to investigate the effects of vanaspati on health in Indian conditions, and on the results of this investigation the Prime Minister said in Parliament last June: "The Government are quite clear and convinced of the fact that the use of vanaspati is not harmful to health. By repeated scientific and medical tests it has been found that vanaspati, or its like, has been used in three-fourths of the world and nobody has suffered from it." Mr Pettit hoped that this pronouncement would change the attitude of some legislators and municipal authorities who might still be inclined to view vanaspati with suspicion and that "we may be in sight of the end of discriminatory taxes on it." The Association, he said, welcomed the Government's decision to accept two recommendations of the Ghee Adulteration Committee (whose report was discussed in Capital on 13th November, 1952): the first related to stricter enforcement of the Baudouin test by which the adulteration of ghee with vanaspati could be detected, and the second to the fortification of vanaspati with synthetic vitamin A. That the Government recognised the industry's importance was shown by the latter's inclusion in the schedule to the Industries (Development & Regulation) Act, 1952, and also in the Industrial Section of the five year plan. Vanaspati appears as one of the 42 industries examined in the Plan and is given a production target of 300,000 tons by 1955-56, a figure which is little short of the industry's total capacity today. In 1952, production reached a record of 190,000 tons, which was 19,000 tons more than in the previous year. "That such a level of production should have been reached in a year which began with a serious slump and in which business conditions throughout were uneasy and unpromising, indicates a vitality in our industry which cannot but impress the planners and the economists," said Mr. Pettit. "If business confidence returns and if Government plays its part in providing a proper background for development, I believe we shall hit the target in 1956." He said "provide a proper background." I have in mind principally the higher standard of living which the five year plan sets out to provide." Vanaspati consumption should be encouraged, and so should the consumption of milk as such, instead of in the form of one of its by-products. If an increase in the consumption of milk results in a smaller supply of fats, vanaspati could cover the shortage. Also milk sold as such would bring the producer a better financial return than any of its by-products," said Mr. Pettit.

Repatriating Capital Gains.—A Press Note issued by the Government of India announces an important relaxation of the restrictions governing the repatriation of capital investments from countries outside the sterling area and excluding Norway, Sweden and Denmark. Capital invested after 1st January, 1950, in projects approved by the Government of India may be repatriated together

with any capital appreciation in the value of the investment. Hitherto capital gains on the value of an investment were expressly excluded from repatriation except where profits from the investment had been ploughed back into the business with the Government's approval. The latest relaxation, however, will not apply to the purchase of shares on the stock exchange unless the investment is in an integral part of an investment project approved by the Government after 1st January, 1950. Similar concessions relating to the repatriation of capital gains were lately announced by the British Government.

Duty-Free Samples.—Salesmen will be able to move their sample cases across borders with much less "red-tape" under a new international agreement which has just opened for signature. It aims at eliminating much of the cost and waste of time now involved in sending samples of goods, catalogues, price lists and advertising matter to other countries. The treaty provides that countries agreeing to it will permit commercial samples of "negligible value" to enter free of duty. Samples of some value can also be imported duty-free, but a returnable bond will have to be furnished. Advertising matter and samples will be exempt from quota restriction and such advertising material as films will be treated as duty-free samples. The treaty, officially called the Convention to Facilitate the Importation of Commercial Samples and Advertising Materials, will come into force when 15 governments have ratified it. It was worked out by the parties of the General Agreement on Tariffs and Trade.

Ports in East Pakistan.—Inadequate transport facilities have long been East Bengal's major economic handicap, the more so since partition, and complaints on this score are voiced regularly at meetings of commercial organisations in that province. Heavy dependence on exports of jute and imports of fuel has caused much official attention to be paid to the development of ports and it was encouraging to hear Mr. R. R. Hloghar, president, report at the recent annual general meeting of the Chittagong Chamber of Commerce that "congestion and the turn-round of ships has greatly improved since I returned to Chittagong about 18 months ago." However, shallow drafts at jetties are still a major inconvenience because "when ship coming in has to commence discharge of goods, then has to go to the anchorage, the main jetties where she finishes discharge, then loads down to the available draft and then again shifts to the new moorings to complete." Mr. Hloghar pointed out in particular that although tanker tonnage was scarce tankers could not come in fully loaded because of inadequate drafts over the bars in Chittagong. Although the port authorities were tackling the problem "realistically" they had only one dredger and that an old one. With the progress of industrialisation, he felt East Bengal would need more petroleum products, and the oil companies should be encouraged to expand storage and filling facilities as they were trying to do at Pethanga. He was less complimentary about official efforts at Khulna; "despite the port having made a considerable profit since its inception nothing has been done to provide normal port facilities such as jetties, storage sheds, fuel supply, health officer or resident marine officer," and inland water transport companies had to bear the burden. These companies operated over 2,000 miles of waterways in the province as against the East Bengal Railway's 1,700 miles of track; and although the Government believed that their facilities were inadequate it did not realise that their potential capacity "is seriously reduced by detentions imposed on draft boats at loading points and at land customs stations because of the various formalities which have to be observed by both shippers and operators." Mr. Hloghar estimated that "the removal of these hindrances or the streamlining of procedure would increase the existing potential capacity of carriers by some 30 percent."

Indian Woodscres.—The Tariff Commission has been busy in the last few months with a number of important enquiries referred to it by the Government of India. One of the latest to engage the Commission's attention concerns the wood-screw industry which is being investigated by a panel consisting of Dr. B. V. Narayanaswamy Naidu, Mr. B. M. Das Gupta and the newly appointed member, Mr. C. Ramasubban. The public enquiry into the continuance of protection and assistance to this industry was opened last week by Dr. Naidu with a speech reviewing the position of the industry and the issues before the Commission in the presence of producers, importers, consumers and representatives of the Ministry of Commerce and Industry, State Governments and the Railway Board. Taking 1947 as the starting point when protection was given to this industry for the first time, Dr. Naidu expressed satisfaction with the increase in production and the improvement in the quality of its products recorded by the industry. He added, however that to meet all Indian requirements,

March 5, 1953.

which he placed at about 2,500 tons, the industry would have to show considerable further progress. There was a wide gap between installed capacity and actual output; total annual capacity of all the units taken together worked out to 8,328 tons (which was more than three times the present needs of the country), but average production in the last three years was only 450 tons. The industry's explanation for this discrepancy was that steel wire required was not available in adequate quantities for even one shift working by all units. Dr. Naidu said that the supply and price of indigenous steel were subject to control by the Iron and Steel Controller, who arranged for the manufacture and distribution of this commodity. He disclosed that the Commission had been informed by the Government that there had in the past been some delay in supplying wire to the factories, but that the Government were now taking action to expedite delivery. While the general opinion expressed by the consumers, including the Indian Railways, was that the quality of indigenous wood screws had improved appreciably in recent years, Dr. Naidu mentioned such defects as lack of appropriate slotting and a tendency to rust easily. Producers attributed these faults to insufficient supplies of the required quality of wire. Dr. Naidu also referred to the size of an economic manufacturing unit, the trend of prices and difficulties experienced by the industry with regard to consumable stores, technicians, labour, and railway bookings.

Discrimination in Transport Insurance.—Any suggestion that discrimination is being employed by a country as a restraint to trade usually meets with vehement denial, though in point of fact the suggestion may well be true. What is apt to be overlooked is that discrimination takes many forms. For instance, a recent report to the United Nations Transport and Communications Commission says that discrimination practised by a number of countries against foreign insurance companies "must ultimately have a harmful effect" on international shippers. These restrictions in effect are "widespread geographically." According to the International Chamber of Commerce, discriminatory practices are used in Argentina, Brazil, Colombia, Chile, Cuba, Haiti, Iran, Peru, Austria, France, Italy and the Netherlands, and the list is by no means exhaustive. The discriminatory practices to which the report refers are used by governments to put foreign insurers in a less favourable position than domestic companies. According to the ICC, five main types are being used. They are: (1) Laws and regulations which compel goods entering or leaving a country to be insured by domestic companies; (2) Heavy taxation on insurance contracts between national and foreign ship insurance companies; (3) Discrimination through government control of foreign exchange; (4) Regulations used to discourage foreign insurers from doing business in a particular country, such as a requirement that a certain

amount of capital be owned by nationals, of (3) discrimination hold executive positions; and (5) discrimination in connection with nationalisation of insurance companies. Governments which have nationalised insurance sometimes use restrictive laws to assure the prosperity of their insurance industry. These restrictions affect the whole mechanism of international insurance and tend to drive the insurance premiums up. They affect international credit arrangements, result in higher insurance rates which are a burden on the consumer and often lead to retaliatory measures. The restrictions now being practised "may have various harmful effects, with repercussions on international trade rather than directly on international transport." The report suggests that this remedy may be for countries which feel their interests are being "damaged" by discrimination in another nation to "try to adjust matters through bilateral negotiations. Should these fail, it declares, the "appropriate forum might be the General Agreement on Tariffs and Trade, which has, as one of its objectives, "the elimination of discriminatory treatment in international commerce."

Technical Assistance to Asia.—During 1952 the countries of Asia and the Far East have experienced a rapid expansion over the preceding years in the volume and scope of technical assistance received from the United Nations. The countries to which this technical assistance is being given in each case at its own request—are Cambodia, Ceylon, China, India, Indonesia, Korea, Laos, Malaya, Nepal, Pakistan, the Philippines and Thailand. The assistance rendered covers a wide variety of fields. In Burma, for instance, experts are advising the Government on cottage and small-scale industries in an effort to provide off-season employment for rural population, while in Ceylon experts are helping with the establishment of a sugar industry so that the volume of expensive imports may be reduced. In India during 1952, the production of fertilisers received high priority, while in Laos the United Nations provided a civil engineer to advise the Government on the possible construction of a hydro-electric project on the river Nam Theun. In all, a total

90 experts were appointed and 230 fellowships and scholarships were awarded or recommended in the 12 countries of the region during the first 11 months of 1952. The corresponding figures for 1951 were 15 and 91, while in 1950 only 11 experts were appointed and 32 fellowships and scholarships awarded. Similarly, there has been a progressive expansion of the programme of training and demonstration centres, in line with the wishes of the Economic Commission for Asia and the Far East and with the views of many Governments of the region. These encouraging facts must be viewed, however, in the light of the existing financial situation. The heavier demands for technical assistance are not being matched by the availability of financial resources to meet them. It will be necessary for Governments to fulfil their pledges for 1952, and to reach the target figure of \$25,000,000 in 1953 if present commitments are to be carried out and new projects undertaken.

* * *

Industrial Disputes in December.—Provisional statistics of industrial disputes for the month of December, 1952, show a continued improvement in industrial relations. The number of disputes which resulted in work-stoppages was the lowest during the year—74 as compared to the peak figure of 134 in April. The number of workers involved in disputes was also the lowest for the year, 25,972, against 3,05,831 in January. Time-loss due to work-stoppages, which was of the order of 1,48,770 man-days was less than half the monthly average for the year. Five of the disputes resulted in lockouts affecting 303 workers and accounting for a time-loss of 1,248 man-days. Three of these were in West Bengal and one each in Madras and Uttar Pradesh. Apart from strikes and lockouts resulting from industrial disputes there were, during the month, 10 other work-stoppages. These involved 14,005 workers and resulted in a time-loss of 15,386 man-days. Six were in Bombay, two in Madras and one each in Madhya Pradesh and Punjab. Sixty-five disputes ended during the month, of which 38 did not last for more than five days. Only in six cases was the duration more than a month. Wages, allowances and bonus were the main points of disputes in 30 cases while grievances relating to personnel in 30, and retrenchment were the central issues in 31 cases. Workers were "successful or partially successful" in 12 disputes, while in 33 others they were "unsuccessful." Improvement in industrial relations was reported in almost all States, the only notable exception being Bihar. West Bengal accounted for about 55 per cent of the total time-loss recorded during the month. Among industries, the cotton mill industry, which used to be the main centre of trouble was comparatively quiet, the time-loss suffered being less than 20,000 man-days. The heaviest time-loss during the month was recorded in the paper and printing group, mainly because of a continued strike in the Bengal Paper Mills, Raniganj.

Workers' Living Costs.—Working class cost of living indices for December 1952, compiled by the Labour Bureau, with base year 1944=100, show satisfactory general decline over the previous month. In all towns for which the indices are given there has been a fall, except in Berhampur where there was a rise of one point. The biggest fall was in Dehri-on-Sone where the index declined by 22 points to 171, the lowest level recorded since June 1950. In Tinsukia there was a fall of eight points to 124; in Ajmer six points to 170; in Silchar six points to 130; Cuttack five points to 150; Luchania four points to 148; Kharagpur four points to 128; Akola three points to 155; Gauhati one point to 138 and Jabalpur one point to 149. In nearly every town the food group was mainly responsible for the decline in the index. Particularly large falls in this group occurred in Dehri-on-Sone, 30 points, and Tinsukia, 13 points. In number of towns, the fuel group showed decline and in a few the clothing group also fell. In Delhi during January 1953, base year the same, the index declined two points. Here again the food group registered a fall while the fuel group remained stationary. The estimated cost of living index number for Delhi, based on August 1939=100 was 351.

Coal Statistics for January.—According to the Chief Inspector of Mines in India, 813 collieries and eight coke plants worked during January, 1953. On an average 365,462 persons were employed daily and 9,229,462 man-shifts were worked. The overall percentage of absenteeism was 12.7. The output per man-shift for miners and loaders was 1.06 tons, for all persons employed in underground and open-workings 0.57 and for all persons employed 0.33. About 3,110,200 tons of coal were produced during the month and 124,079 tons of soft coke, 182,305 tons of hard coke and 13,630 tons of other kinds of coke were also manufactured; 2,638,564 tons of coal, 126,376 tons of soft coke, 47,182 tons of hard coke and 4,402 tons of other kinds of coke were despatched in January. Coal stocks at collieries on the last day of the month were reported to be 3,031,244 tons.

REPORT OF THE CENTRAL BOARD FOR THE YEAR ENDED 31st DECEMBER, 1952.

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1952, amounted to Rs. 63,27,883-1-0 which, with Rs. 46,40,589-10-8 brought forward from the half-year ended the 30th June, 1952, makes a total of Rs. 1,09,68,272-11-8.

This sum the Directors of the Bank have disposed of as follows:—

	Rs.	s.	p.
1. In payment of a Dividend to the Shareholders at the rate of 10% per annum	45,00,000	0	0
2. Transferred to Pension Funds	2,80,700	0	0
3. Bonus to Staff	20,00,000	0	0
4. Balance carried forward to the Profit and Loss Account	42,07,572	11	8
Total	1,09,68,272	11	8

The Balance Sheet of the Bank as at the 31st December, 1952, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the year ended the 31st December, 1952 (wherein the figures for the past half-year have been shown separately).

By Order of the Central Board,
A. R. CHISHOLM,
Managing Director.

Calcutta, 5th February, 1953.

BALANCE SHEET OF THE IMPERIAL BANK OF INDIA AS AT 31st DECEMBER, 1952.

CAPITAL AND LIABILITIES	Rs.	s.	p.	PROPERTY AND ASSETS	Rs.	s.	p.
1. Capital:				1. Cash:
