More World Bank Loans.—The World Bank recently made three loans totalling \$40,200,000 for the expansion of privately-owned electric power facilities in Japan, and a loan of \$10 million to assist in the development of southern Italy. The former set of loans will help finance the construction of three high-efficiency electric power stations in central and south Japan. They are guaranteed by the Japanese Government, and were made to the Japan Development Bank, a government agency established in 1951 to supply long-term credit for high priority industrial development and economic reconstruction. The Development Bank will re-lend the proceeds of the loans to the Kansai, Kyushu and Chubu Electric Power Companies, three of the nine private concerns organised in 1951 to take over the operations of all electric utilities in Japan at the time when electric power generating facilities were denationalised. Each of the three loans is for a term of 20 years and bears interest of 5 percent per annum. Amortisation payments will begin on 1st January, 1957. The loan of \$10 million to promote the development of southern Italy has been given to the Cassa per il Mezzogiorno, a government agency charged with the administration of Italy's Plan for the Economic and Social Development of the South. It is for a term of 25 years and bears interest of 5 percent. Amortisation payments will begin on 1st November, 1958.

The Trend of Invention.—A feature of the annual report of the Patent Office for 1952 is that the steady rise in the number of applications for patents noticed since 1949 continues; 2,272 were filed in 1952, as against 2,108 in 1951. The chemical industries continue to attract considerable attention, the chief preoccupations of inventors abroad being dyestuffs and artificial fibres, and of those at home sugar processing, resins, sulphur products and phosphate fertilisers. Interest continues in the manufacture of synthetic drugs, particularly those used against tuberculosis and malaria; but, from the standpoint of invention, there is very little interest in food. Enthusiasts for metallurgy have been concentrating on the manufacture of ferro-nickel and aluminium-magnesium alloys, on processes to purify metals and on moulding and casting machines; coke ovens, rotary furnaces and liquid fuels were subjects of interest abroad. The report gives the impression that civil engineers are less ingenious than they used to be. Most of the inventions have originated in foreign countries and relate to the construction of buildings and structures; at home there have been a few achievements in the humbler sector of earth walls and structural members made of bamboo and cement filling compositions. In contrast, mechanical engineers seem to have been much more successful. There have been many inventions relating to plastic moulding and metal working and processing machines; and those relating to transport vehicles (especially railway carriages, motor cars and aeroplanes) have been far more numerous than in 1951. Indian inventors seem to have been preoccupied with Hindi and Telugu typewriters, boats, insecticide spray-

ers, motor car steering, animal driven mechanisms, cycle rickshaws—and bank cheque protectors. They have not taken much interest in electrical engineering, a field in which some notable patent applications relate to electrolysis of metals, geophysical exploration and communications engineering. Nearly all textile inventions have originated abroad, and have been concerned mainly with textile machinery and the bleaching and dyeing of fabrics. Much of the foreigners' attention has apparently been given to photography, while their interest in such things as adhesives, toys, soap, paper and lamps has been shared by Indian inventors. It is interesting to note that there has been an appreciable increase in the number of applications originating in the United States, Switzerland, the Netherlands, Italy, Norway and Japan, while those from Britain have been almost as many as in 1951. More applications have also originated in India, and nearly half of them have come from Bombay and West Bengal. The report shows that there has been a big rise in design applications during 1952; unlike the patent applications, the vast majority of these originated in India, and 68 percent of them related to textile designs.

Japan in G.A.T.T.—Because the United Kingdom led the opposition to Japan's application for membership of the General Agreement on Tariffs and Trade the view was held quite widely that that country alone was obstructing Japan's admission. That this was not true is evident from a recent announcement emanating from the head office of the International Federation of Master Cotton Spinners and Manufacturers' Associations, at whose annual meeting in Copenhagen last month "considerable anxiety" was expressed on the Geneva discussions about the admission of Japan as a subscribing member of G.A.T.T. The Federation decided that it would be "highly desirable for all member associations to take appropriate steps to keep the importance of this question before their respective Governments with a view to the necessary safeguards being taken." Japan's admission to G.A.T.T., it was felt, might lead to her enjoyment of most-favoured-nation treatment, and no other member country would be able to employ

Because Thursday 5th November is a holiday, the next issue of CAPITAL will be published on Wednesday, 4th November.

unilateral tariff defences against Japanese goods produced under conditions of an extremely low cost of living. The Federation was convinced that the difference in standards of living existing in Japan and other exporting countries was so acute and substantial as to constitute a threat to stability in international trade. The consequences in a situation in which so many countries would be inhibited from immediate defensive action could be disastrous. The statement added: "The International Federation believes that the general or provisional acceptance of Japan as a member of G.A.T.T. on equal terms with existing member countries is incompatible with maintenance of the higher standards of living now obtaining in those countries, and would place an intolerable burden on their economies."

Industrial Disputes in August.—Provisional statistics of industrial disputes in August show a decrease in the number of disputes from July, although the number of man-days lost increased considerably. The number of workers involved also increased appreciably. There were 65 disputes during the month involving 51,988 workers and accounting for a time-loss of 219,557 man-days. The average duration of disputes rose from 2.8 days in July to 4.2 days in August. Six of the disputes resulted in lock-outs which affected 15,993 workers and accounted for a time-loss of 104,579 man-days. Five of these were in West Bengal and the other was in Bombay. Apart from strikes and lock-outs resulting from industrial disputes, there was one work-stoppage in Bombay not connected with an industrial dispute. One thousand and two hundred workers were involved in the stoppage and the resultant time-loss was 1,050 man-days. Forty-three disputes ended during the month of which 32 had lasted not more than five days. Wages, allowances and bonus were the main points of dispute in 20 cases while grievances relating to personnel alone accounted for 21 disputes. Sixteen disputes ended in complete or partial success to the workers and in 12 disputes they were unsuccessful. In 8 cases, the result was indefinite and in 7 cases it was not known. Among industries, the iron and steel group alone accounted for 84,000 man-days or over 38 percent of the total man-days lost during the month. This was because of the labour trouble at Burnpur. Textiles other than jute also recorded a higher time-loss than in July. Other industries which recorded higher time-losses in August were engineering, minerals and metals (other than iron and steel), wood, stone and glass and coal mines. On the other hand improvement was noticed in jute, food, drink and tobacco, chemicals and dyes, paper and printing, docks and ports, plantations and miscellaneous groups of industries.

STOCK MARKETS WELL MAINTAINED BANK SHARES VERY FIRM

London, 28th October.

THE strike of London petrol distributing workers with its inevitable effect on industry and the tense situation in the Middle East might have been expected to have seriously unsettled the London stock exchange during the last week, but it maintained itself well and gave a good indication that it is based at present on genuine investment support. British Government stocks were kept up well, but for the first week for some time the industrial market had to contend with some indifferent and even poor company results. Nevertheless, the demand for first class equities continued unabated. A particularly firm section was the banks—which normally move only very modestly—following the reorganisation of Barclay's capital and an increase in dividends.

There were short spasms of interest in mines and foreign bonds but little money in fact flowed through either sections. Oils were inclined to be dull. Tea shares attracted little active interest during the past week despite some guardedly favourable Press comment at the week-end, but it is not thought in the markets that this neglect is an indication that prices in this section have reached a point where they are positively unattractive. The present indifference is attributed to the diversion of attention elsewhere now that investors are concerned with the resale of stock to private enterprise. The rise in price of jute brought forth a few enquiries for these shares but there was little actual business.

On the London money market conditions were patchy and generally more difficult than last week. On Monday, a considerable amount of special help was made necessary by the market's lack of maturities, though the position eased a little later in the week and on Wednesday there was no intervention by the authorities. The week closed with needs satisfied without difficulty. Applications for £240 million of Treasury Bills totalled £353,170,000 of which the former amount was allotted at the average rate of 41s. 11.67d. This week £240 million will be offered. The Bank of England Return shows a further contraction in note circulation this week of £44,633,000. Reserve of notes is now up to £44,520,000 and bankers' deposits were higher at £292,017,000.

U. K. Jute Control

The question of winding up of the agency responsible for jute control in the United Kingdom was on Monday reported to be under review by the Minister of Materials. The Minister's representative Mr. Heathcoat Amory, Ministry of State, Board of Trade, said in a written reply in Parliament "I am not at present in a position to make a statement on the future of the jute control. Lord Wulton has the question under review."

Tea Stocks

Stocks of tea in London and provincial warehouses on October 16th totalled 90,137,448 compared with 89,438,884 pounds in the previous week. Landings during the week were 11,054,556 pounds and deliveries 10,375,992.

Raw Cotton Arrivals

Arrivals of raw cotton at the United Kingdom ports during the past week amounted to 29,055 bales comprising of United States 11,944, Egyptian 5,791, Sudan 4,800, Mexican 3,624, East African 968, Peruvian 79 and other growths 1,843. The quantity at present afloat to the United Kingdom is 29,262—principally Sudan, East and West African, United States, Peruvian, Mexican, Argentine and Pakistan.

Oilseed Prices

Indian groundnut oil was harder to buy for Jan-Feb in bulk. £130 was asked and £128 per ton, c.i.f. for Feb-March without business recorded. Castor oil for shipment remained neglected and British mills repeated the recently lowered figures. Liberal inquiry sustained for linseed oil. In the last day or so demand has fallen away and sellers were inclined to solicit bids at fully 30s below the levels of a week ago. To London, Argentine and Uruguay 15th and 30th November arrival realised £82 and sales took place in 1st to 15th December shipment to London-Hull at £80. November shipment Canadian-Argentine-Uruguay to U.K. optional ports were sold at £80-2s 6d and December at £79-12-6. Indian oil was too highly priced to permit business.

Malayan Rubber Output

Malayan Federation has produced only 48,451 tons of rubber in September against 52,420 in August, according to statistics issued on Saturday. Imports totalled 2,061 tons against 1,555 in August and exports 52,031 against 47,988. Stocks of rubber at the end of September totalled 65,917 tons of which Estates 17,059, dealers 48,266 and awaiting shipment 3,032.

Hong Kong Gold

Hong Kong gold ruled steadier towards the end of the last week with fractional gains attributed to the lack of offers from Macao on the Hong Kong market. The undertone of the market, however, international prices and continued easiness of the U.S. dollar. Deliveries in the last week totalled 7,180 taels and unofficial offtake 13,400. There were no arrivals from Macao.

Finance in India & Abroad

PLENTIFUL SUPPLY OF CREDIT

RECORD TREASURY TENDER: TRADE BALANCE IMPROVES

Wednesday, 28th October.

THE supply of funds is now ample to meet trade demand in the Indian money markets. Money has been easy in Bombay for some weeks, but in the last three days credit has been much more plentiful in Calcutta too, with the result that the interbank rate has at last fallen to 14-15 percent, after remaining obstinately steady at 24 percent for several months. A further fall is possible, since the interbank rate in Bombay is 1-1 percent and there has been some movement of funds across the country lately to take advantage of this discrepancy. Evidence of a much easier supply of money is also to be found in this week's tender for treasury bills which is the highest in the new series of issues. Such a high tender would justify the offer of more than Rs. 14 crores of bills but in view of the imminence of the busy season the weekly offer may not be increased. Banks' advances are rather lower than at this time in the last few years, the sugar mills and the tea gardens having substantially reduced their overdrafts lately. The heavy accumulation of cotton textiles is reflected in bank loans, the consequences of last week-end's reduction in taxation not having made themselves felt yet. There have been some signs of increasing trade demand in Western India but none so far in this part of the country. Demand is expected to pick up next month, when busy-season funds will be required for cotton, sugar and—in view of the decontrol of foodgrains in many parts of the country—for this year's heavy crops of cereals.

There have been a fair number of tea bills showing in the exchange department after this week's big tea sale, and also a few gunny bills. Remittance has been small. Sterling has been stronger against the dollar and the forward premium has diminished. The rupee-dollar rate now stands at Rs. 476-8. Other principal exchange rates are unchanged.

Tenders for the offer of Rs. 14 crores of three-month Government of India treasury bills rose sharply to Rs. 4,10,25,000 this week. The average rate of acceptance fell by a pie to Rs. 2-6-7 percent per annum, tenders at Rs. 99-6-6 percent having been accepted in full and those at Rs. 99-6-3 percent allotted approximately 48 percent. Tenders for another Rs. 14 crores of treasury bills will be received up to 11 a.m. on Tuesday at Calcutta, Madras, Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 23rd October, treasury bills for Rs. 4 crores were sold in favour of the Reserve Bank.

Tenders for the offer of Rs. 14 crores of three-month Government of India treasury bills, which were opened last week, amounted to Rs. 2,57,75,000. The average rate of acceptance was unchanged at Rs. 2-6-8 percent per annum, tenders at Rs. 99-6-6 percent having been accepted in full and those at Rs. 99-6-3 percent allotted approximately 85 percent. During the week ended 16th October treasury bills for Rs. 8,43,00,000 were sold in favour of the Reserve Bank.

The provisional figures of foreign Sea and Air-borne trade of India on private and Government accounts during September, 1953, according to data so far available in the Department of Commercial Intelligence & Statistics, Calcutta, are as follows:—Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports—Rs. 47.54 lakhs, re-exports Rs. 27 lakhs (transit trade Rs. 1 lakh). Total trade Rs. 90.93 lakhs. Imports: Exports (including re-exports) of Currency Notes—Rs. 5 lakhs; others—nil. Imports of gold and silver—Rs. 1 lakh of Currency Notes Rs. 63 lakhs, others negligible. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports), of merchandise, gold and silver exceeded imports by Rs. 4.69 lakhs.

Bullion was quietly steady. After suffering a severe reverse during the early part of the week, prices recovered slightly at the close on bearing and fresh support at the lower levels.

Contributing to weakness were large arrivals and nervous bull liquidation owing to lack of up-country support. Reports of arrivals of Indian mine gold and smuggled gold also helped to depress sentiment. After falling to Rs. 148-12 from the pre-Puja level of Rs. 152-12 silver rallied to Rs. 150-2 today, while the ready rate was quoted at a discount of 4 to 8 annas after a long interval.

Gold recovered from Rs. 79-12 to Rs. 81-4 and the sovereign from Rs. 84 to Rs. 85-12 as against the pre-Puja quotations of Rs. 84-8 and Rs. 85, respectively.

The return of the Reserve Bank of India for the week ended 23rd October, 1953, showed a fall of 7.18 crores in notes in circulation to Rs. 1084.22 crores, while the total note issue was Rs. 72 lakhs up to Rs. 1116.62 crores. Notes held in the Banking Department consequently rose by Rs. 7.88 crores to total Rs. 32.39 crores. In the Banking Department deposits of the Government of India fell by Rs. 5.46 crores to Rs. 108 crores due to month-end disburse-

ments, but other Government accounts increased by Rs. 3.94 crores to Rs. 29.80 crores. Easier money conditions led to a rise of Rs. 6.42 crores in balances of commercial banks to Rs. 57.66 crores. Balances held abroad declined by Rs. 34 lakhs to stand at Rs. 143.79 crores. Other loans and advances dropped from Rs. 11.40 crores to Rs. 10.73 crores of which advances to scheduled banks against usance bills were Rs. 49.45 lakhs, the same as before. Investments at Rs. 84.54 crores disclosed a decline of Rs. 88 lakhs.

The statement of the position of Scheduled Banks for the week ended 16th October, 1953, discloses Demand and Time liabilities at Rs. 520.35 crores (Rs. 14.85 crores on account of borrowings from Banks' and Rs. 332.92 crores (Rs. 2.89 crores) compared with Rs. 522.84 crores (Rs. 15.26 crores) and Rs. 331.46 crores (Rs. 2.83 crores) respectively in the previous week. Cash has declined by Rs. 1.41 crores to aggregate Rs. 30.06 crores, while balances with the Reserve Bank have advanced by Rs. 2.66 crores to stand at Rs. 50.34 crores. There is a fall of Rs. 36 lakhs in investments to Rs. 336.15 crores. Advances and bills discounted at Rs. 459.51 crores reveal a drop of Rs. 2.40 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.4 percent and Rs. 59.9 percent against 9.3 percent and 94.1 percent.

The return of the Imperial Bank of India for the week ended 16th October, 1953, shows a drop of Rs. 2.97 crores in total deposits to Rs. 203.53 crores. Investments in Government Securities are down by Rs. 59 lakhs to Rs. 84.88 crores, while other authorised investments remain unchanged at Rs. 10.64 crores. Loans, cash credits and overdrafts have increased by Rs. 84 lakhs to aggregate Rs. 91.36 crores, while bills discounted and purchased have decreased by Rs. 1.61 crores to stand at Rs. 9.03 crores. Cash and balances are, in consequence, shown at Rs. 21.25 crores or Rs. 89 lakhs less.

BANK LIQUIDATION PROCEDURE

ORDINANCE PROMULGATED TO EXPEDITE PAYMENTS

AN Ordinance has been issued by the President of India by which the procedure for liquidation of banks will be expedited to provide quicker relief to depositors. The Ordinance is based on the recommendations made by the Committee appointed in July 1952 by the Government of India with Mr. D. N. Mitra, former Solicitor-General of India, as Chairman, to enquire into the difficulties and defects in the existing liquidation procedure of banks and to recommend necessary changes in the law and in administrative methods. On the basis of the Committee's recommendations the Government of India formulated a Bill but since Parliament has been preoccupied with other urgent business, no time could be found for its introduction. The Committee describes the present procedure for liquidation of banks as "cumbersome, prolonged and expensive" and has suggested administrative as well as legislative measures to expedite such proceedings. These recommendations have been circulated by the Government of India to the Reserve Bank, the State Governments and the High Courts and, barring a few suggestions and differences, the bulk of the recommendations have been approved.

According to the data collected by the Committee, approximately 321 banking companies

"Is your Overseas trade increasing?"

With a network of almost 1,700 Branches in England and Wales as well as Agents and Correspondents throughout the world, Lloyds Bank has helped many of its customers to expand their overseas business as the Bank is specially equipped to deal with every aspect of overseas trade.

For the attention of Far-sighted Industrialists STORES CONTROL

You are well aware that there is a possibility of the continuance of the general downward trend of some raw material prices since the peaks of 1951, and that related manufactures should follow suit in the buyers' market. Your mind is therefore turning to the level of your stores inventories, and you are wondering how much money is now unproductively locked up there. You may be finding it difficult to obtain a clear picture of what really is the position in your stores, and whether the methods used there are capable of maintaining stocks between economic limits. You realise that what you need is a system which will automatically provide,

on a single piece of paper, the complete and up-to-date picture of each item of stores, regarding not only the current movements and stock, but also the past quarterly consumption, and the present supply position. Only then will your staff be able to hold stock balances at economic levels. In addition you naturally want a system which will enable material expenses against jobs to be made available for costing purposes within a day or two of the issue of those materials. All these needs can be met with no increase, and possibly even a reduction, in clerical expense, and with little capital outlay on equipment.

were in liquidation at the end of 1952 involving several thousands of depositors and about Rs. 30 crores of their deposits. Most of the depositors belong to the lower middle class and much distress is caused by delays in liquidation procedure. The problem is particularly acute in West Bengal, and to a lesser extent in Travancore-Cochin, where a large number of banks failed in recent years, resulting in extreme hardship to depositors belonging to the middle and poorer classes. Information collected from a number of banks by the Committee indicates that the expenses of liquidation are very high which harms the interests of the depositors. Numerous complaints have been received by the Government of India from depositors, particularly from West Bengal, on the delays and difficulties experienced by them, but under the present law and procedure both the Government of India and the Reserve Bank are helpless and cannot do anything except to refer the complainants to the courts under whom liquidators are working. To alleviate the existing situation the Ordinance has been promulgated under Article 123 of the Constitution. It will be replaced by an Act of Parliament before the expiry of six weeks of the re-assembly of Parliament.

More Important Provisions

The more important among the legislative measures which the Ordinance empowers the Central Government to take are:

(a) Treatment of small depositors as preferential creditors. It is proposed that every depositor in a savings account should be entitled to a preferential payment up to Rs. 100, and similar priority for a sum of Rs. 100 should be allowed to current accounts not exceeding Rs. 500.

(b) The outstanding problem being the expeditious realisation of assets, the Ordinance lays down a simple procedure for settlement of loans of depositors on the analogy of the list of contributories under the Indian Companies Act. Within six months of the date of the winding-up order, the official liquidator will have to file in the court lists of debtors of the banking company which will be settled by the court on a date to be arranged after suitable notice is given to the debtor concerned. No appeal will be allowed when the amount of debt is less than Rs. 5,000. The above procedure will be available to the liquidator without prejudice to his rights to recover the debt due to a company in the ordinary course of law but it will not be availed of by him in cases where there are debts due to the bank in secured by a mortgage of immovable property and there are other mortgages of the same property.

(c) The Ordinance gives discretion to the courts to order the recovery, where necessary, of the decrees of the liquidator through summary land revenue processes.

(d) The courts will be empowered to examine at their discretion persons who have been directors of the banks. Depositions in such examinations may be used in evidence against such directors in all civil or criminal proceedings. The court may also disqualify any director for a period of up to five years from being a director of a banking company if upon such examination he is found incapable or incompetent.

Inspection of Banks

(e) The court and the Government are empowered under the Ordinance to order inspection by the Reserve Bank of all banks under liquidation and to bring irregularities to the notice of the liquidator for consideration by the court. The Reserve Bank would have the power to obtain information from liquidators on any matter relating to the liquidation.

(f) The Ordinance makes provision for the appointment of a court liquidator to every High Court to conduct proceedings connected with the winding up of banks. The Central Government may, however, exempt certain High Courts from the operation of this provision, if it is satisfied that the number of banks in liquidation in any particular area is not such that such an appointment is necessary.

(g) The Ordinance further provides that all proceedings pending before any official liquidator other than the court liquidator shall stand transferred to the court liquidator, unless a High Court directs otherwise.

TREASURY BILL MATURITIES

Details of 3 months' Bills outstanding with the public on 30-10-53

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

DR. Roy's thinking on the question of bonuses—though obviously an honest attempt to find a solution for a problem that has much disturbed his State—has never been easy to follow. His several statements do not seem to agree with one another, while his insistence on the fact that many workers who demand pujah bonuses do not celebrate the Hindu festivals looks like a red herring because so far as I know there has never been any trouble about bonuses at Christmas and Id. If the Hindu autumn festival has been the customary time for the payment of bonuses to workers of all communities, then the issue of whether bonuses are a good thing or not has to be argued on that basis. Dr. Roy can scarcely be suggesting that firms pay bonuses at each and every major festival to a section of employees according to their religion. Year-round lock-ins to celebrate the birth of each of the pantheon of gods and prophets would be no solution to a problem that now at least has the virtue of being associated only with Durga. The latest proposal of the West Bengal Chief Minister, made while he was in New Delhi, that minimum wages be fixed at a level that covers expenditure on all religious observances, at once falls under suspicion because it entails the repeatedly demonstrated impossibility of determining what are "minimum" wages. But if what Dr. Roy is getting at—he did not say this, but it seems to be implied—is that the payment of bonuses for any religious festival whatsoever be discontinued, then he is on to a worthwhile idea though one that will not be readily accepted here. Some employers would welcome the proposal to spread out over the year what is now paid out in bonuses, but I doubt whether many workers would. And there is the very likely danger that, at whatever level ordinary monthly wages were fixed, demands would still be forthcoming for extra money when the pujahs drew near. Dr. Roy might have indicated the ideal solution—and in fact the one that obtains in most other parts of the world, where employees do not suddenly demand large lump sum payments because the holidays are coming round—but its application in India would require, not so much a minimum wages board to extract more from employers, as an unprecedented change in the attitude of employees toward the whole question of payment for work done. Bonuses for special occasions are a hang-over from paternalism in Indian trade and industry, and only an advance in sophistication among workers will get them to see that they are pernicious from their point of view as much as from the employers'. In the meantime, it might be better to concentrate on getting across the idea that firms cannot pay out money they cannot afford and that violent attempts to make them do so are against the law.

The title *India at a Glance* suggests a slim little volume providing such potted information about the country as can be taken in on one inspection, but the book of that name just published in Calcutta is a "glance" weighing a couple of seers. Compiled by Binani Printers and published by Orient Longmans, it contains very nearly 2,000 pages, which is prima facie evidence of it really being what it says it is—"a comprehensive reference book on India". The bare list of the chapters in which the information it carries is arranged would fill the rest of this column, so I cannot quote them but I can support the assurance the Production Minister, Mr. Reddy, gives in his foreword, that they cover almost every question a person of normal curiosity is liable to ask about India. Turning idly from Mr. Reddy's note I came upon a blood-curdling denunciation of Mr. Nehru's administration under the heading "Government of landlords and monopolists, of bullets and lathis" and was puzzled till I saw I had looked up the election manifesto of the Communist Party, which is conscientiously published here along with the mani-

A DITCHER'S DIARY

festoos of 13 other political parties. Dipping in 1500 pages further on, I discovered a detailed reference to His Holiness the Jagadguru Shankaracharya Swami Shri Abhinava Sachchidanand Teerthjee Maharaj of Sharada Peeth, Dwarka, who fills the obviously important office of "Primate of Hinduism in Western India", but of whom I in my ignorance had never heard. Between these polar extremes there lie many hundreds of pages of up to date and evidently reliable information on the Indian economy and, particularly, on secondary industries. There is a short history and statistical outline of each of 88 industries starting from locomotives and ending up with opium. This monument to diligence costs Rs. 40 and would be of considerable assistance to people who really need to have ready access to a variety of information about the Indian Union.

The Calcutta Symphony Orchestra has made its plans for the thirtieth season of concerts, to be performed in the approaching cold weather in the New Empire theatre at 9-30 on the following Sunday nights: December 6th and 20th, January 10th and 24th and February 7th and 21st. The programmes for the first two concerts have been drawn up, and a list of likely works prepared for the remainder; they include many works not previously presented in Calcutta as well as the first performance of Senor Casanovas's symphony. The soloists who have agreed to take part in the 1953-54 season include Stanley Gomes, Korshed Madan, Mani Madan, Mehli Mehta, John Miley and Liesl Stary. Yehudi Menuhin, whose Indian tour was so successful last year, will be paying a return visit in February and March of next year, this time accompanied by his sister, Hephzibah Menuhin. They will be in Calcutta in March, when they will give first a violin and piano recital and then a concert with the Calcutta Symphony Orchestra at which Yehudi will play a violin concerto and Hephzibah a piano concerto. From my recollection of the difficulties one had last year to obtain seats for the Menuhin recital, these concerts next March will be well booked out in advance. A sure way of getting tickets is to subscribe to the symphony concert season, which costs Rs. 40 and, in addition to covering the six excellent concerts referred to above, gives a preference in booking for the virtuoso recitals.

The lists open today in London for the first stage of what must be the biggest unscrambling operation ever undertaken, the resale of the British steel industry to private ownership. The first step (of which *Capital's* London correspondent gives some particulars today) is the offer of 14 million £1 shares in the largest steel company in the Commonwealth, the United Steel Companies Limited. The free and open transfer of the whole of the ordinary shareholding in so large a concern at one blow can have few precedents in financial history, and that a nation should be willing to undertake it at a crucial stage in its industrial history signifies that it is very definitely opposed to the extension of public ownership in industry. Incidentally, the Indian subsidiary of this company, the United Steel Companies (India) Limited will celebrate the completion of 25 years' operations in this country in a few weeks' time, and to mark the occasion the managing director of the British company, Mr. Gerald Steel, will be visiting India.

Private enterprise does not get many hits from Russia, and when it does they must be gratefully seized, framed and hung up on the wall. A few days after Mr. Nehru read his accustomed funeral oration over the expiring body of private business at the Colombo Plan meeting, M. Mikoyan, the Russian Minister for Trade, told Soviet trade offi-

cials that "it must be admitted that capitalist trade also has some qualities which should be studied here. Owing to the competition and difficulties in attracting customers they have developed rather good methods of organising trade". Difficulties in attracting customers are of course unknown in an economy where, in order to sell six more of anything, you just open the door a little and call, "Next six in the queue please". After a while you leave out the please and so it was natural that M. Mikoyan also had to reprove "unpleasant and boorish shop assistants who did not know their first duty, that of helping the customer." His complimentary reference to "capitalist trade methods" did not stop there, for he went on to recommend their introduction in Russia—including even "large-scale advertising in order to instruct and inform customers". This succinct statement of one of the purposes of advertising deserves wider publicity in India. M. Mikoyan drew the line at the "capitalist way of fooling people by exaggerated publicity", which is fair criticism with which most advertisers would agree—adding perhaps that "fooling people" with exaggeration has always been more skillfully practised by governments than by private traders. M. Mikoyan's opinions fit in with the new domestic line in Russia but I do not think he has only recently adopted them. He has been the director of commercial policy in the Russian Government since 1926 (he is an Armenian, incidentally, who started life as a Nestorian priest); during the 'thirties he visited the United States and spent a long time studying big business methods in the food industry. He seems to have kept his opinions on the superiority of "capitalist" methods to himself until the climate was more suitable to express them.

A full page of pictures in an American weekly magazine this month illustrates a process that most of my readers would have thought required no explanation—the making of a suit by a London tailor to fit an individual customer. Evidently "made-to-measure" clothes for men have become such a rarity in the United States that this mass-circulation journal thought the whole business needed careful description, with the help of pictures. The latter show a tailor with a mouthful of pins displaying his materials, a cutter following the chalk lines with an immense pair of scissors, a seamstress wielding needle and thread, and a rather mystified American customer submitting to a first fitting. One need not go to London to see any of these things; we glimpse them through half a dozen open shop doors in Chowringhee any evening. But the magazine is convinced that this is a curious British foible, and its purpose in laying the mysteries of tailoring bare to its readers is to explain why "the British gentleman is the world's most correctly dressed male". While some of my readers are reeling before this tribute, and others reaching for discarded and crumpled jackets, I fear I must inform them that "the world's most correctly dressed male"—according to a report from Manchester—is once again favouring the bowler hat as his normal headgear. Manufacturers of this article in the north-west of England are deluged with orders and are frantically recalling the skilled journeymen—pullers, cutters, sandpaperers, polishers and the rest—who were dispersed when the bowler went out, it was thought for good. The return to Edwardian styles in men's clothing, and demand from former army officers, are blamed for this "swing of the sartorial pendulum". Readers of Evelyn Waugh's novels will be distressed to learn that the bowler is coming back not just black, but brown, grey and green. The report I am quoting concludes sadly: "The pre-war market for bowlers in China, Korea and Japan is now regarded as irrevocably closed".

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

HIGH WAGES FOSTER DEMAND (FROM A SPECIAL CORRESPONDENT)

INDUSTRIAL activity continues to be maintained at a high level in nearly all directions, with labour shortages evident. Some crops have been disappointing, more especially of certain fruits, but on the whole the harvest is the best for many years. One outcome is that wages of the agricultural community have attained record levels, and as the wages of industrial workers are officially returned as averaging nearly £8 a week, the monetary rewards of labour are now on an unprecedented scale. It is still the case that prices continue to mount, and that rises in wages are by no means fully reflected by corresponding increases in purchasing power. Nevertheless, the relatively prosperous condition of the British people finds a strong expression in demand for goods and, as a consequence, industries supplying the Home market are working at full pressure. Export trade does not present so uniformly a satisfactory picture; but it is certainly at a distinctly better level than it was year ago. Complaints are frequent that excessively long-term credit is required by overseas buyers. That there is substance in these allegations can be seen from the fact that the powerful British boiler-making and engineering concern, Babcock and Wilcox Ltd., has issued £4,000,000 of debentures in order to pay off a bank overdraft of approximately the same amount. A statement made at the time of the issue explains that the step has been taken by reason of the long delay experienced in obtaining payments for work done abroad.

The textile industry generally is active, but with gains still more pronounced in the woollen and rayon industries than in cotton which, indeed, only just more than holds its own. It may be recalled that, as an outcome of protests against purchases of Japanese grey cloth, trade in this material fell to negligible proportions in the early part of 1952. A marked revival of this trade has now occurred. Whilst economic objections were urged against this trade, purely political feeling also played a part: with the diminution of this last, Britain's imports of Japanese grey cloth are less likely to be disturbed by local agitators.

More Terylene Developments

October is likely to be an outstanding month in the textile world. The usual machinery exhibition to be held at Manchester is supplemented this year (under other auspices) by a fabric fair and fashion parades to be held at the Royal Festival Hall. There was a show of this kind last year, but it was then regarded more as a pre-Coronation celebration. The present exhibition takes on a more enduring aspect—as far as the term enduring can be used where fashions are concerned. A feature will be that many of the fabrics shown will be both crease and shrink resisting. The attainment of these properties in an improved form is one of the most notable recent advances in British (and American) textile technique and is dependent mostly upon the more skillful use of melamine and formaldehyde in the processing. As might be expected, Terylene will be to the fore, and occasion is being taken to demonstrate that this fibre, which has presented stubborn dyeing difficulties, can now be successfully dyed in both black and deep blue, as well as in pastel shades.

Meanwhile, Imperial Chemical Industries is making arrangements for Terylene to be manufactured under licence in various countries, in pursuance of which policy the French rights have been licensed to the Société Rhodiateta of Lyons and the Italian to the Montecatini concern of Milan. As is well known, the U.S. Du Pont undertaking is going ahead with its plans greatly to increase the output of Dacron—which is identical with Terylene—the necessary rights having been acquired by Du Pont in 1947. Apparently, these

manufacturing rights apply to the U.S.A. only, but there is seemingly nothing to prevent Du Pont exporting to any country, fibre manufactured in the United States, if it desired to do so. Among I. C. I.'s immediate plans is large scale production of Terylene in Canada. "Terylene," says that company, "is expected to make such an impact on the world's textile markets, because of its superiority for many apparel and industrial applications, that it will be impossible to meet the demands in the large textile-producing countries from the British plant alone, big as it is." Claims on behalf of new materials are apt to err on the optimistic side, but no one closely acquainted with Terylene is likely to question the correctness of this statement.

Electrical Activities

That the electrical industry has benefited from some unusual activities has been disclosed by the General Electric Company, including the lighting of the Grand Mosque at Mecca and the supply of flood-lights as part of the equipment used by the British Army in its campaign in Malaya. The chairman of the company complained strongly of the effect of nationalisation in Britain, but it also emerged that nationalisation has also resulted in the securing of substantial orders for machinery likely to have far-reaching effects on the industries concerned. Thus, its subsidiary, Fraser and Chalmers, has received a commission for the largest coal washing plant in Great Britain. General Electric itself is playing an important part in the field of guided missiles. It is also participating in alleviating what seems to be the insoluble problem of controlling the ever growing road traffic load in Britain by providing a new system of automatic traffic signals in one of the busiest parts of London.

Chemical Trends

A Press guide to British chemicals and their manufacturers gives the names of 126 companies. This does not include all of the companies so engaged; for many small chemical firms exist: but it contains all the most important ones. These are responsible for over 2,000 trade names of chemical products. The manufacture of dyestuffs, pharmaceuticals and agricultural chemicals (including animal feed supplements and pesticides) make up the bulk of these. The rise of the modern detergents industry is reflected by the fact that 23 companies are so indexed—twice the number in perfumery. There are few industries that are not touched at some point. Only one company is reported as concerned with uranium compounds and only one with tobacco processing. Bakers and brewers have much the same number of companies providing their special chemicals. The number of companies manufacturing seaweed products stands at three—where it has stood for some years, and indicates that the successful commercial exploitation of this chemicals source is proving to be slow. The Anglo-Iranian Oil Company is among the chemical manufacturers, which is explained by the fact that certain lubricating greases are classed as chemicals. The inclusion of the Distillers Company rests upon its manufacture of biochemicals, compressed gases, herbicides, liver extracts, pharmaceuticals, plastics, resins—which is surprising in its range for a company popularly associated with the production of whisky.

Industrial Expansion Plans

A visit to the chief industrial towns and the country roundabout reveals impressive plans for expansion over the next few years. The difficulty of obtaining building licences for factories is considerable, the Government insisting that priority must still be given to new houses, by reason that so many persons are inadequately housed. There is also the fact that many people have been housed in pre-fabricated dwellings, which were hurriedly erected at the conclusion of the war and that the Government promised that the inmates, if they wished, would be provided with ordinary houses within ten years. Naturally, every effort is being made to meet the demands of this possible transfer—although it is alleged that many persons have

become so used to the simplification of living in what are really very poor bungalows, that they would now be reluctant to move out.

Housing developments are creating their own industrial problems. Housing schemes have been carried out in rural areas where there are no supporting industries, and more are planned. It is evident that industrial building will have to be encouraged in the vicinity of these houses, if serious unemployment problems are to be prevented. Meanwhile, industrial undertakings, or estate agents acting on their behalf, are buying up and holding, both in town and country, suitable sites on which new factories will be erected as soon as the Government modifies its present building licensing policy. A review of that policy has been officially promised before the end of the year and concessions allowing of further industrial building are confidently expected to be followed by greater ones in 1954. The pent-up desire and apparent necessity for further widespread industrialisation disturbs some economists who wonder whether, on a long view, there can be sufficient markets to absorb all the fresh manufactures contemplated; it also causes much heartrending on the part of lovers of the English countryside. But, increasingly, the authorities are taking sternly practical views. None would have imagined a few years ago that a county council would approve the building of an industrial town to dominate the most historic of English thoroughfares—the ancient pilgrims' way to Canterbury Cathedral. But such has now occurred.

ECONOMIC EVENTS IN SEPTEMBER

- 1st—Parliament debates sugar policy.
- 2nd—Company Law Amendment Bill introduced in Parliament; Nehru condones "go slow" at Burnpur IISCO works; failure of Indo-Russian barter talks reported; sugar policy conference opens in Delhi; U.K. gold and dollar reserve figures released; Western powers propose Big Four talks at Lugano; U.S.A. announces financial aid for Iran.
- 3rd—British Cabinet reshuffled.
- 4th—Official statement on unemployment in Parliament.
- 5th—Reserve Bank report for 1952-53 published; new tariff values for imported goods announced; tool room opened at Khargpur.
- 7th—Adenauer's party wins West German elections.
- 8th—UNESCO's fifth annual report published.
- 9th—Government's decisions on Commodity Controls Committee's report published; London Stock Exchange suspends dealings in Calcutta Port Trust sterling debentures; World Bank's annual report published.
- 10th—Pakistan announces end of jute support schemes, decontrol of internal prices, and abolition of minimum export prices; new cotton export duty in Pakistan; Indian Central Jute Committee meets; I.M.F.'s annual report published.
- 11th—Bumper rice crop expected in West Bengal; Britain buys silver from Russia.
- 12th—Mills allowed to export wheat flour.
- 13th—Government invites applications to import rice from soft currency areas.
- 14th—Hessian export duty reduced to Rs. 120 a ton; Dr. Roy condemns "lock-ins" by workers; Presidential assent given to Andhra State Bill; import of self-raising flour, maize and barley to return to private trading; zamindari abolition in Orissa almost completed.
- 16th—West Bengal Government warns workers against "lock-ins."
- 17th—British Bank rate reduced to 3½ percent.

- 21st—Jute Enquiry Commission arrives in Calcutta; foundation stone of Central Electronics Research Institute laid; export of essential goods from East Bengal restricted; Pakistan allows import of Indian films on rental basis.
- 22nd—Parliament passes Estate Duty Bill; Eisenhower addresses first meeting of U.S. Commission on Foreign Economic Policy; new purge in Russia.
- 23rd—Vote of "no confidence" against Travancore-Cochin Government; China and Ceylon sign rice-rubber pact.
- 24th—U.S. move to sell surplus food for non-dollar currencies; Travancore-Cochin Assembly dissolved.
- 25th—Kidwai says India's food position is "comfortable"; Advisory Board to revise electricity legislation appointed; more purges in Georgia (Russia).
- 26th—Pakistan to appoint enquiry committee on pact.
- 27th—Britain ends sugar rationing; U.S. 1953 wheat and rye production estimate announced.
- 28th—India exports flour for first time in 12 years; rice prices to be reduced in West Bengal.
- 29th—Madras tramway company's licence cancelled.
- 30th—Indo-Pakistani talks begin in Calcutta; IISCO workers' action committee decides to end strike.

MARKET RE-OPENS ON FIRM NOTE

SLIGHT PROFIT-TAKING AT CLOSE: UNDERTONE STEADY: BONUS ISSUES BY BURN, INDIAN STANDARD WAGON

Wednesday Evening.

BROKERS returned to their offices after the Puja holidays on Monday last to find a large number of accumulated orders, and consequently business in most sections of the market was on a fairly satisfactory scale. Despite some selling pressure, prices have remained remarkably steady, which would indicate that the technical position of the market is healthy. The outstanding feature of the week was Burn & Company shares which, on the Directors' recommendation of a bonus issue in the proportion of one for one and a dividend of Rs. 15 per share (same as last year), spurted from Rs. 296 to Rs. 332.

An announcement regarding a bonus issue by the Indian Standard Wagon Company appears on page 581.

Buying has been selective in all sections that have shown an upward trend but there has been no outside support to date. The somewhat easier trend this evening is due to some fairly big selling orders, some of them from London, which have been satisfactorily absorbed. There has been a large turnover in preference shares particularly, supplies having been forthcoming to meet the sustained demand. Institutional buyers consider that fixed interest stock at present prices are very attractive.

Tea shares have been steady, with rather less activity than before the holiday break. Coal shares have been mostly neglected, and only selected jute shares have benefited from the improved state of the goods market. Indian Irons touched Rs. 25 and eased today to Rs. 24-12.

Government securities have been fully steady with the sole exception of the 1957 loan which has been offered persistently. Money has been very easy both in Calcutta and Bombay. The National Plan Bonds are quoted at Rs. 98-9, buyers.

Details of the trading in the three days since the market opened follow.

Gilt-edged prices were steady but business was on a restricted scale. On the whole, however, there were more buyers than sellers. Three percent conversion Loan 1908 at one time receded to Rs. 81-14 during the holidays but closed steady today at Rs. 82-1. It is reported that the Reserve Bank has raised its selling price of the 3 percent 1903-65 Loan to Rs. 92-9 from Rs. 92-8, and 3½ percent National Plan Bonds, which hitherto could be obtained without qualification, are now being sold only against purchases of 2½ percent 1954 and 2½ percent 1955. Contrary to the general trend, there were sellers of the 3 percent 1957 Loan at Rs. 98-6, but no declared buyers; 2½ percent 1954 and 2½ percent 1955 were a shade better at Rs. 98-12 and Rs. 98-6. In medium-dateds, there was a fair demand for 2½ percent 1961 at Rs. 90-10 and 3½ percent National Plan Bonds at Rs. 98-9. Amongst long-dated issues, there were small buyers of 1903-65 and 1964 and, to some extent, of 3 percent 1908-68 at Rs. 90-2.

There was fair enquiry for 4 percent 1963 and 1964 provincial loans but very little business could be completed because buyers and sellers could not agree on prices.

Reports from various market centres indicate that the response to the Hyderabad State Loan, which opened for subscription on 22nd October, have hitherto been very poor.

There was good enquiry for short-dated industrial debentures but sellers were hard to find. The only transaction reported was in a small lot of Calcutta Electric at Rs. 101-8.

There was good demand for selected jute and miscellaneous preference shares. Amongst jutes, Anglo-India were taken at Rs. 119, and Reliance were done at Rs. 116-8. Among other industrials, British India Corporation had buyers at Rs. 145, Calcutta Electric were done at Rs. 11-13, Dalmia Cement were crossed at the higher price of Rs. 78, Dunlop 1st at Rs. 131, and the 2nd at Rs. 101-12. Indian Iron & Steel were readily absorbed at Rs. 104-8 x.d. New Victoria Cotton were a shade better at Rs. 3-4, as were Rohas Industries 'B' Preference at Rs. 56. A small lot of Orient Paper 2nd Preference changed hands at Rs. 71-12.

In the banking section United Commercial were the feature, improving from Rs. 36 to Rs. 37-8. Punjab National Bank were quoted at Rs. 20-4, while Imperial Bank Fully-Paid and Contributory were steady at around Rs. 1,828 and Rs. 450.

No transactions were reported in railway shares.

Some enquiry was noted for selected cotton shares following the Government's latest relief measures, with Cawnpore Textiles improving to Rs. 8-4 and Elgins to Rs. 17-6. Kesoram Cotton were steady at Rs. 19-13 and New Victoria improved from Re. 1-1 to Re. 1-5. Jayashree Textiles were quoted at Rs. 3-12.

Special features in the coal section were Borra, Katras Jheriah, Amalgamated and Raneegunge, Burrakur met with some selling pressure and receded from Rs. 9-6 to Rs. 9. Bengal were quoted at Rs. 508, while Amalgamated improved from Rs. 13-8 to Rs. 19 x.d. Borra were crossed at

the higher price of Rs. 27-4 against a previous quotation of Rs. 26-8. Bokaro were offered at Rs. 8-8, while Katras Jheriah and Raneegunge were both steady at Rs. 38-8 and Rs. 8-8. South Karanpura were offered at Rs. 10-10. Central India were steady at Rs. 5-4 and Western Bengal at Rs. 4-10.

Following the improvement in the finished goods market, a fair amount of business was completed in jute shares, the features being Kelvin, Empire, Chitavalah, Bally and Nellimarla. Howrah improved steadily from Rs. 23-8 to Rs. 23-14 but closed slightly easier at Rs. 23-10. Alliance were better at Rs. 159, and Anglo-India at Rs. 206. Bally recovered sharply from Rs. 160 to Rs. 172. Belvedere were quoted at Rs. 194 and Birla were firm at Rs. 43-12. Champdany were done at Rs. 149, and Chitavalah improved by Re. 1 to Rs. 34. Dalhousie were marked at Rs. 124, and Ganges at Rs. 72. Gouropore moved between Rs. 270 and Rs. 282, and Hukumchand between Rs. 45-8 and Rs. 46-8. Dealers were reported in India at around Rs. 125. Kamarhatti at Rs. 182-8 and Kanakarah at Rs. 142. Lawrence were quoted at Rs. 154. National at Rs. 23-4, and Nellimarla after touching Rs. 37-4 eased at the close to Rs. 36-8. Northbrook and Nuddea were quoted at Rs. 18-10 and Rs. 46-14. Rameshwara were offered at Rs. 5-2, while Reliance were steady at Rs. 15-7.

Business in electric shares was on a restricted scale. Benares were better at Rs. 17-11, and Calcutta were done at around Rs. 13. Jubbulpore were crossed at Rs. 14-7.

Following the announcement of a reduced dividend (10% against 20%), Champaran Sugar met with selling pressure and receded from Rs. 25-12 c.d. to Rs. 22-8 x.d.; at the close the shares recovered to Rs. 22-10. Balrampur were offered at Rs. 7-15 and Belsund were marked at Rs. 8-5. Carew were steady at Rs. 7-10 and Darbhanga improved from Rs. 11-10 to Rs. 12-2.

Indian Iron & Steel shares fluctuated during the holidays between Rs. 24-14 and Rs. 24, opened officially after the Puja at Rs. 24-8, and steadily improved to Rs. 25; tonight's closing quotation is Rs. 24-12. Burn & Company, for the reason given earlier, provided the outstanding feature in this section. Braithwaites improved to Rs. 11-12, and Britannia Engineering rose from Rs. 20 to Rs. 23. Indian Galvanizing came in for good investment support improving from Rs. 15-2 to Rs. 16-4. Indian Steel & Wire Products Ordinary and Deferred were crossed at Rs. 63-12 and Rs. 40-4. Kumardhubi Engineering were done at Rs. 7-15 and Indian Standard Wagon at Rs. 103 cum-rights. Jesson & Company were at little easier at Rs. 24-9, while Marshalls were steady at Rs. 5-10. Saran Engineering were crossed at Rs. 9-14.

Special features in the miscellaneous section were paper shares. India Paper Mills improved to Rs. 177, Orient Paper to Rs. 37-8, and Shree Gopal to Rs. 19-4. In contrast, Tiaghar were a shade easier at Rs. 36-8. Assam Bengal Cement were better at Rs. 3-12 as were Sone Valley at Rs. 6-15. A small lot of Bengal Assam Steamship was marked at Rs. 155, India Steamship were active at Rs. 7-14 and Port Shipping were quoted at Rs. 12-6 c.d. There were ready buyers of Alkali & Chemical Corporation at Rs. 17, but sellers were scarce. Assam Saws were done at Rs. 7-2 and British India Corporation were steady at Rs. 8-14. There was a very good enquiry for British Burma Petroleum with the price improving steadily to Rs. 2-5; profit-taking at the close however brought down the price to Rs. 2-2. Calcutta Petroleum were placed at Rs. 12-12 and Eastern Investments were crossed at Rs. 142. A cross transaction was noted in Godfrey Phillips at Rs. 26. Indian Rubber Manufacturers were slightly lower at Rs. 12, while Indian Cables were steady at Rs. 20-4. Indian Wood Products were scarce at Rs. 35, against the pre-Puja quotation of Rs. 32. Indo-Burma Petroleum were steady at Rs. 69 as were Martin Burn at Rs. 19. Metal Box were crossed at Rs. 18-4 and there were sellers of Midnapore Zemindary at Rs. 33. National Tobacco encountered some buying enquiry and improved to Rs. 10-3. Rallis were unchanged at Rs. 62-8, while Rohas Industries were better at Rs. 9-4. Shav Wallace were offered at Rs. 10-12 and a few deals were reported in Textile Machinery at Rs. 6-7.

In the mining section, Indian Copper improved to Rs. 2-14 and Burma Mines were steady at Re. 1-3, as were Non-Ferrous Metals at 12 annas. Chreco Mica Industries were crossed at Rs. 10-6 and Consolidated Tin were better at Re. 1-9. Orissa Minerals, after being sold down to Rs. 32, recovered smartly to Rs. 34.

Although there has not been quite so much business written in the tea section, the undertone is steady and in some cases there have been further price advances. Ananda Assam were a point better at Rs. 16-4. Dhalakhat were asked for up to Rs. 12-6, as were Sapoi up to Rs. 10-6. Seajuli were steady around Rs. 20-12, and Teen Ali were scarce at Rs. 22-4. Amongst Dooras scrips, Banarhat were taken higher at Rs. 337-8 and Hasimara were crossed at Rs. 29-12. Chamong jumped to Rs. 9-8, Dauracherra had buyers at Rs. 7-2 and, after a long

into force of the Industries (Development and Regulation) Act, and which could not be carried out during the sanctioned periods, are also favourably considered.

All applications involving expansion are generally examined in the first instance by the Technical Committee set up by the Ministry of Food and Agriculture to judge the technical soundness of the proposals.

No More Vanaspati Units

Vanaspati: The annual production capacity of vanaspati factories at present is 3.5 lakh tons, and that of eight factories under construction will be about 40,000 tons. There is, however, a wide gap between actual production and the installed capacity, and the highest production so far achieved is 191,000 tons, in 1952. Even at the current level of production, however, supplies of vanaspati are quite adequate for internal requirements and for meeting a small export demand. The installed capacity of the industry is, therefore, far in excess of the existing demand for vanaspati. Further, there has been a great deal of agitation against the production and import of vanaspati into the country. The Congress Working Committee, at its meeting in Dehra Dun on 22nd May, considered the question of banning the production and import of vanaspati, and resolved that steps should be taken to stop issuing licences to import machinery for the manufacture of vanaspati. Private legislation was sought to be introduced several times in Parliament to prohibit the manufacture and import of vanaspati. A Bill sponsored by Mr. Bhakurdas Bhargava on this subject was discussed in the House of the People, but was opposed by the Government. It has now been conclusively proved that vanaspati is not deleterious to health. As far as using vanaspati to adulterate ghee is concerned, suitable steps are being taken by the Government to eliminate or at least minimise the practice.

The Planning Commission has also recommended that it is not necessary to have additional production capacity for vanaspati up to the end of 1955-56 beyond what has been sanctioned already. It is, however, of the view that as there is a considerable lag between the actual production and the installed capacity, fuller utilisation of the existing capacity should be aimed at. These views of the Planning Commission have been accepted by the Government. In these circumstances the latter's policy has been not to allow any further expansion in the vanaspati industry, except in cases where new factories are proposed to be set up by using one of the plants lying idle in the country, or where a certain expansion in capacity is considered essential with a view to securing increased efficiency in production. With a view to making fuller utilisation of the existing capacity, the Government has allowed substantial expansion in the case of three applications on the condition that the owners of these industrial undertakings would not import any plant from abroad, but would install one of the plants lying in the country.

The following principles have been followed in dealing with applications for setting up solvent extraction plants:

1. Pending the conclusion of investigations now in progress at the Indian Veterinary Research Institute regarding the nutritive value of deoiled cakes as cattle feed, the total capacity of solvent extraction plants to be set up is limited to an aggregate capacity of 200,000 tons (600 tons per day.)
2. Plants using either non-edible cakes such as castor and mowha cakes or oilcakes of groundnut cotton seed which are partly used for manurial purposes and partly as cattle feed are allowed.
3. The location of the plants requiring the use of groundnut and oilseed cakes should be settled in consultation with the Food and Agriculture Ministry. Plants of 20 tons per day capacity should be considered as the minimum economic unit. Capacities higher than 20 tons per day have also been sanctioned in special cases.
4. Plants are distributed amongst various States in order to avoid the concentration of too many plants in a particular area. In other words, regional distribution has been kept in view.

Encouraging Pharmaceuticals Manufacture
Pharmaceuticals and Drugs—Amputing, Tab-
letting, Vialling etc., of imported drugs: Indigen-
ous production, requirements, imports and the
quality of drugs are taken into account while con-
sidering applications for the grant of a licence
under the Industries (Development and Regula-
tion) Act, 1951. Generally, permission is given
where the manufacture is from a basic material
and the assessed demand is greater than the
domestic capacity. But in the case of firms which
do not propose to engage themselves in any manu-
facturing process a different view is taken. If the
only operations involved are bottling, tabletting,
amputing, vialling, etc., permission is not normally
given. If the Government encourages such schemes
of foreign firms which do not undertake to manu-
facture any of the basic ingredients, no Indian firm
may come forward with a programme of manu-
facture of an item from the basic stage for fear of
competition from the imported brand. It is
because of such long-term repercussions that the
problem has been referred to the Pharmaceutical
Enquiry Committee. For the time being, the
Government's policy is not to encourage schemes
which do not aim at the actual manufacture of an
item. The firms are advised to renew their applica-
tions after the Government has examined the
recommendations that may be made by the
Pharmaceutical Enquiry Committee.

Cement: During the last few years, the indus-
try has made significant progress. There are two
main groups—the Associated Cement Companies
Ltd., owning 12 factories with annual capacity of
2.4 million tons; and the Dalmia group owning five
factories with annual capacity of 980,000 tons.
Besides, there are six independent cement pro-
ducers and one factory owned by the Government
of Mysore. The regional distribution of the indus-
try at present and as it will be in 1955-56, is shown
in the following table:

Area	Installed capacity as at the end of June, 1953.	Expansion approved.	Total by 1955-56.
North-East India	1081	408	1,489
Northern and Central India	935	365	1,300
North-West India	370	200	570
Western India	932	400	1,332
South India	967.5	154	1,121.5
Grand Total	4,283.5	1,527	5,812.5

Demand is estimated at about 5 million tons per annum. The main principles followed in granting permission for this establishment of new cement factories or for substantial expansion of the existing units are briefly indicated below:

1. Adequate limestone deposits should be available near the factory site. In cases where the deposits are of doubtful nature, permission for setting up a cement factory is granted only after the quality and quantity of limestone available near the proposed site are proved.

2. Transport facilities: If it is likely to be difficult for the proposed factory to obtain raw materials and equipment and distribute its product because of the absence or lack of transport facilities, the applicant is advised to select a better site from the transport angle.

3. Demand and capacity already set up in the region concerned: In considering applications for expansion of existing units or establishing new factories, the capacity already established in the area which may be regarded as the economic area and the estimated demand in that area are always taken into account. An area within about 250 miles radius from the proposed factory is usually taken as the economic marketing area. If the existing capacity is enough and the demand is not expected to grow to warrant additional capacity, permission is not granted and the applicant is advised to reconsider the matter.

4. Export aspect: A proposal for a new factory is not turned down, mainly because its production cannot be absorbed in the country. If there is a reasonable prospect of an undertaking running its factory depending on external markets, it would be a good case for the issue of a licence.

5. Size of the factory: A plant with a minimum capacity of 100,000 to 150,000 tons per annum can be regarded as an economic unit. Requests for setting up smaller factories are not, therefore, favourably considered.

New Delhi

TENDERS INVITED FOR UREA PLANT AT SINDRI

PLANS FOR SYNTHETIC PETROL AND HEAVY ELECTRICAL EQUIPMENT

(FROM OUR NEW DELHI CORRESPONDENT.)

24th October.

THE Government of India has decided to invite tenders for establishing a urea production plant at Sindri. The Indian Fertiliser Mission which examined this question some time ago considered urea production at Sindri technically feasible. It recommended, however, that until more experience is gained and more knowledge is available about the technique, the Sindri plant should be of the smallest size consistent with economical production. It therefore suggested that when tenders and quotations are invited for a urea plant, estimates of capital expenditure and production cost should be asked for one producing 30 to 35 tons a day and also for one producing 60 to 70 tons a day. "If the estimates received reveal that the production cost for the lower capacity would not be appreciably larger than that for the higher capacity plant and would on a nitrogen basis be no higher than the cost of production of Sindri's ammonium sulphate, a single reactor plant with a capacity of not more than 35 tons a day should be installed, failing this, the installation of a plant with two reactors with an average production capacity of 60 to 70 tons a day is recommended, though with some hesitation." The Government is therefore inviting two sets of tenders, one for a plant producing 30 to 35 tons a day and the other for a plant producing 60 to 70 tons a day.

The Mission also considered the manufacture of ammonium nitrate at Sindri "entirely feasible". Following the European practice, the manufacture of a compound fertiliser like chalk-ammon-sulphate was recommended. From the point of view of balanced production a plant making 150 tons of 53 percent nitric acid a day and capable of producing 110 to 115 tons of ammonium nitrate or 120 tons of chalk-ammon-sulphate was considered the minimum size for an economic unit. As in the case of the urea plant, it was suggested that quotations should be invited alternatively for a plant producing 180 tons a day and for one producing 250 tons a day of nitro-chalk. A final decision regarding the size of the plant should be taken on the basis of tenders, particularly their estimate of production costs. The Mission suggested five firms from which tenders should be invited: The Chemical Construction Corporation of New York U.S.A., Ludwigshafen, West Germany; Montecatini, Milan, Italy; Friedrich Uhlir, G.m. b.H. of Dortmund, Germany; Kellogg and Company of New York.

Synthetic Petrol Plant

The Ministry of Production has sought the approval of the Planning Commission for its scheme to set up a synthetic petrol plant. The Government of India, it will be recalled, considered the possibility of setting up synthetic petrol plants as early as 1943, but dropped the idea on account of the large outlay involved. Messrs. Koppers Incorporated, of the United States, who were appointed consultants to the Government, recommended the establishment of a plant for the manufacture of 150,000 tons of petroleum products using 1.7 million tons of non-coking coal from the Damodar Valley area. They later submitted a modified project to produce aviation spirit, motor fuels and refined phenols simultaneously with domestic coke. Messrs. Lurgi Gesellschaft also submitted a scheme for the production of synthetic petrol by a modified Fischer Tropsch process.

Heavy Electrical Equipment Manufacture

Representatives of the German firm of Siemens who came here to discuss details of the proposed heavy electrical equipment plant, have gone back to Germany to write their project report. Negotiations for another project report are in progress at present with a British firm.

Oil Prospecting in West Bengal

Representatives of the Standard Vacuum Oil Company have arrived here and have already discussed their scheme to prospect for oil in the West Bengal basin with the Negotiating Committee. The Company some time ago carried out an aerial survey of the region with encouraging results. Subsequently it submitted its scheme for exploration to the Government of India. The present discussions are expected to finalise the proposals. The formation of an Indian rupee company to undertake oil exploration is envisaged.

Aid for Small-Scale Match Industry

New Delhi will not be surprised if the Government accepts the scheme to assist the cottage match industry. The Common Production Committee of the All-India Khadi and Village Industries Board recently suggested levying a cess of 4 annas per gross of matchboxes to subsidise non-mechanised match factories. The scheme of subsidy proposed was 1 anna per gross of matchboxes for B class factories, 4 annas per gross for C class factories, and 6 annas per gross for D class factories. This was intended to equalise costs of production. An early announcement is expected.

Taxation Commission Report by September

The Taxation Enquiry Commission is expected to submit its report by September 1954, it is learned here. It has already received enough replies to its questionnaire and proposes to embark

upon the next stage of taking oral evidence in November. According to present plans, the Commission will be in Nagpur from 16th to 20th November, in Hyderabad from 21st to 24th November, in Jaipur from 25th to 28th November, in Ahmedabad from 29th to 31st November, in Rajkot from 1st to 3rd December, in Trivandrum from 4th to 6th December, and in Bangalore from 7th to 9th December. It will then visit New Delhi, where its later programme will be decided. The Finance Secretary, Mr. K. R. K. Menon, is leaving tomorrow morning to join the Commission at Bombay.

Amending Employees Provident Fund Rules

The Central Board of Trustees of the Employees Provident Fund will meet here early in November and discuss some amendments to the rules. Under the existing system, the amount accumulated in the name of an employee can be paid to his lawful survivors after his death or to him at least one year after his retirement from any of the six scheduled industries. The main object of this social security scheme was to provide some money in the old age of a worker or to his survivors after his death. According to reports the whole object of the scheme is being vitiated by the pressure tactics of some labour leaders, who have already succeeded in reducing the period of 12 months, first to six months and then to three months. It is not known how the Government or the Board could have agreed to such a fundamental modification of the scheme without amending the rules. It is now suggested that the accumulated amount standing in the name of an employee should be paid to him immediately after he is discharged from an industrial unit. It is pointed out that, unlike other schemes, the Central Provident Fund enables a worker to get his provident fund transferred from one undertaking to another in the same or of any of the six scheduled industries. If the provident fund is paid immediately after the discharge of an employee from an undertaking, it will defeat the very object of the scheme and may encourage an employee to seek discharge whenever he is in need of money. Some surprise is felt here at the attitude of labour leaders who, instead of building an old age security scheme for employees, are actively agitating for the modification of the rules.

Railway Wagons and Pilferage

The Railway Board is holding discussions with the General Managers of Railways to finalise the works programme for 1953-54. These discussions may last for ten days. As already reported, the General Managers have been asked to bring up all schemes which can be completed within the Plan period. The principal items in the programme are indenting for wagons and locomotives for replacement and for the carriage of more goods.

The wagon capacity of the Indian manufacturing units has already been increased from 6,000 wagons a year to 8,000 wagons a year and is expected to be increased further to 10,000 wagons a year. The problem before the Board is not only how to build up a wagon fleet capable of meeting the country's requirements but also how to keep the wagon industry going. It is true that the Board can, within certain limits, procure enough wagons abroad. This might however affect the Indian wagon industry by rendering it idle at some future date.

The pilferage of railway materials, it is believed, has assumed alarming proportions and is engaging the serious attention of the Board. Accessories, even from new coaches, are stolen regularly and are often sold back to the Railways. One suggestion which is now being examined, it is believed, is to ask the All-India Railwaymen's Federation to help eradicate the evil. The Federation, it is pointed out, periodically asks the Railway Board to grant more privileges or redress grievances. It should therefore shoulder some responsibility for the proper behaviour of its members. One method of dealing with the menace, if the plan is accepted, is to withdraw recognition from a union within whose jurisdiction the pilferage of railway materials is on a serious scale. The suggestion is likely to be discussed with the General Managers of Railways.

Reducing Coffee Prices

The Government of India is determined to reduce the domestic price of coffee, it is learned. Under the scheme so far in operation, the floor price has been controlled but not the ceiling price. Growers sell their produce to the Coffee Board at a minimum price and are given more money later if the coffee is sold at a price higher than the minimum price. The Commerce Minister, Mr. T. T. Krishnamachari, in order to bring down coffee prices, banned its export. This did bring down the price but it also resulted in a glut of coffee with the Board. Because of uncertainty, merchants did not take their normal requirements from the Board. Meanwhile, the new crop is about to enter the market, so the Government recently permitted the export of 2,000 tons of coffee. As world prices are higher than the Indian prices, the Government levied an export duty of Rs. 62.8 per ton. It has also fixed the minimum price which every grower of coffee will get for his produce at Rs. 2.4 per point or Rs. 180 per cwt. Nine thousand tons of the 1952-53 crop has already been auctioned and 2,000 tons will be exported. About 12,000 tons are still reserved for home consumption. All premia over the minimum price will accrue to the consumer. To achieve this object, the Government has fixed Rs. 2.2 per point as the minimum price for future sales of coffee. It has assured growers

DUNLOP
transmission belting
[Square Edge]

Specially constructed from hard type closely woven fabric (silver duck) and skim-coated between plies. This construction ensures that Dunlop Belting is:—
* practically immune from edge wear * ideal both for high-speed drives subject to severe flexing and heavy drives necessitating shock load resistance, * extremely economical and suitable for almost all industrial and agricultural applications.

that they will receive Rs. 2-4 per point and that it will defray any loss they suffer if the basic price at future sales falls below that level. This applies to the 1952-53 crop. There is no commitment in regard to 1953-54, but it is expected that the basic price for the new crop will not exceed Rs. 2-4 per point.

Unemployment Compensation

One of the ordinances issued by the Government of India recently amends the Employees Provident Fund Act. Another amends the Industrial Disputes Act, and defines "lay-off" as the failure, refusal or inability of an employer to allot work to a workman who is on the muster rolls of his industrial establishment, on account of shortage of coal, power or raw materials or on account of the accumulation of stocks or breakdown of machinery or on any other similar account, and who has not been retrenched. "Wages" are defined as all remuneration capable of being expressed in terms of money, which would be fulfilled, be payable to a workman in respect of his employment or of work done in such employment and include:

- such allowances (including dearness allowance) as the workman is entitled to for the time being;
- the value of any house accommodation or of supply of light, water, medical attendance or other amenity or of any service or of any concessional supply of food-grains or other articles;
- any travelling concessions; but does not include (a) any bonus, (b) any contribution paid or payable by the employer to any pension or provident fund or for the benefit of the workman under any law for the time being in force, (c) any gratuity payable on the termination of his service.

"Average pay" means the average of the wages paid or payable to a workman: (i) in the case of a monthly paid workman, in three complete calendar months; (ii) in the case of a weekly paid workman, in four complete weeks; (iii) in the case of

a daily paid workman, in 12 full working days. A "badli" workman means a workman who has been engaged in the place of another whose name is on the muster roll of an industrial establishment. A workman who, during a period of 12 calendar months, has actually worked in an industrial establishment for not less than 240 days, shall be deemed to have completed one year's continuous service in the establishment.

The ordinance lays down that "whenever a workman, other than a badli workman or a casual workman, who is on the muster rolls of an industrial establishment and who has completed one year of continuous service is laid off, he shall be paid for all days during which he is so laid off, except for such weekly holidays as may intervene compensation equal to 50 percent of the basic wages and dearness allowance that would have been payable to him had he not been so laid off, provided that no compensation shall be payable for more than 45 days in a calendar year during which the workman may have been so laid off. No compensation shall be paid to a workman who has been laid off if he refuses to accept any alternative employment or if does not present himself at the establishment at the appointed time at least once a day, or for any day on which he works elsewhere, or on account of a strike or a slowing down of production on the part of workmen in another part of the establishment.

Conditions for Retrenchment

"No workman who has been in continuous employment for not less than one year under an employer shall be retrenched by that employer until: (a) the workman has been given one month's notice in writing indicating the reasons for retrenchment and the period of notice has expired or the workman has been paid one month's pay in lieu of such notice provided that no such notice shall be necessary if the retrenchment is under an agreement which specifies a date for the termination of service; (b) the workman has been paid at the time of retrenchment, a gratuity which shall be equivalent to 15 days' average pay for every completed year of service or any part thereof in excess of six months; and

(c) notice in the prescribed manner is served on the appropriate Government."

The employees will continue to enjoy their present position under the law where, if retrenched they, can appeal to an Industrial Labour Tribunal for adjudication. It is further laid down that an employer shall ordinarily retrench the workman who was the last person to be employed in that class unless for reasons to be recorded the employer retrenched any other person. The employer shall also give an opportunity to the retrenched workman to offer themselves for re-employment if he proposes to employ some persons subsequently."

Unemployment Insurance Fund

The ordinances issued on Saturday to deal with the industrial recession in general and the difficulties of the cotton textile industry in particular have generally been welcomed here. The credit for speedy action goes to the Commerce Minister, Mr. T. T. Krishnamachari, who held consultations with the Central Industries Advisory Council. Enquiries show that the question of setting up an unemployment insurance fund is being examined. Under the scheme, each employer will be asked to create a fund from which to pay retrenchment gratuity as provided by the Industrial Disputes Amendment Ordinance. As an incentive, made free of income-tax. The Government, it is further suggested, should create a statutory authority to examine each case of closure or restricted production in an industrial undertaking. Its implications, however, have not yet been accepted by labour leaders. Logically, if the proposed statutory authority were to accept the case for restricted production or for the closure of an industrial undertaking, there should be no adjudication on acceptable to workers' representatives. One criticism of Saturday's ordinance is that, while enforcing the payment of gratuity, it has kept intact the existing provisions for adjudication as a *sine qua non* to retrenchment. The success of the proposal for an unemployment insurance fund thus depends largely on a change in the attitude of labour leaders towards the problem of retrenchment.

Revenue Prospects for This Year

Despite the various tax concessions granted to encourage exports or combat unemployment, the Government of India's budgetary position is described as satisfactory. The various tax relief measures adopted since the Finance Minister presented his budget in February last are expected to reduce revenue receipts by at least Rs. 5 crores. Another worry of the Finance Minister is probably that the value of the import trade, because of high duties, has not come up to expectations. The combined impact of tax reliefs and lower import duty revenue will be considerable. Having lost some lucrative sources of revenue, the Finance Minister might find it hard to balance his budget next year.

Since February, export duties on jute goods, medium cloth, iron and steel bars, heavy structural, tinplates, baling and hoops have been reduced, as also the import duty on palm oil manufactured in a British colony. The import duty on oil from non-Commonwealth sources has been reduced to five percent ad valorem. The export Rs. 100 per ton to Rs. 50 per ton and on linsseed duty on superfine cloth has been reduced by 15 pices per yard. From the new crushing season the special excise duty of Re. 1 per maund on sugar has been ended. In addition, the Government has announced its decision to grant rebate of duty on imported materials such as cotton used in the manufacture of goods which are subsequently exported; and has also given tax relief on goods manufactured in bonded warehouses. Except for the tax modifications are not expected to make an appreciable difference to the general revenue position during the current financial year.

Income tax returns so far have been satisfactory and the railways are expected to live up to their budgetary expectations. Expenditure has not risen appreciably. The last supplementary grants, it will be recalled, related largely to loans.

Coal Arbitration Tribunal

The personnel of the Coal Arbitration Tribunal are expected to be announced at an early date. Legal difficulties have delayed the announcement. The Government included in the terms of reference a provision relating to the effect of recommendations of the tribunal on the general economy of the country. The legal view is that this provision is outside the scope of the Trade Disputes Act. The Labour Ministry's view is that even if the provision referring to the general economy of the country is not included in the terms of reference, a tribunal is bound to take it into consideration. This view is not shared by other Ministries. The case of the Bank Award illustrates the point. The Bank Tribunal, although it was aware of the need to expand banking facilities, restricted business hours. It was interested only in the dispute between employers and employees, and made its recommendations without considering their effect on the general economy of the country. It is regrettable that in dealing with labour disputes the consumer's interests are generally ignored. A departure was made in the case of coal—where the Government was the largest consumer. Legal difficulties have, however, hampered the implementation of this decision, but according to another report, a cess of Rs. 3 per ton on coal is proposed to be levied for the provident fund for colliery labour.

London

MR. BUTLER ON THE ECONOMIC OUTLOOK

VISIBLE TRADE BALANCE DECLINES IN FIRST HALF OF 1953

(FROM OUR LONDON CORRESPONDENT.)

THE Chancellor of the Exchequer has been responsible for two statements on the economic situation and outlook in the past two weeks. The first of these he gave to the Margate Conference. It emphasised his confidence, but contained the warnings for the future with which all his earlier assessments were associated. The second statement was made to the annual dinner given by the Lord Mayor of London to the bankers and merchants. As befitting the occasion, Mr. Butler switched over to give greater emphasis to the warning while still maintaining his confidence. "Do not be elated, never be depressed," he said, was a good warning for them and for himself. The points he made were that we have attacked the inflation which caused pressure of home demand on our exports; that there was increased confidence in the stability of our currency and we had strengthened our reserve; that production had increased; that our industries had been enabled to buy their material at world prices and have so improved their competitive position; that these improvements have been made while at the same time carrying out the greatest defence effort which we have ever been called upon to make in peace-time; and that now we must advance if we are to hold and cover the line which we have won. As is the custom, the Chancellor also gave two pieces of news. One was that the Government had granted licences for a programme of reconstruction work in the City of London. The second was that there had been a payments surplus on current account of £80 million, including U.S. defence aid of £55 million, in the first half of this year, compared with a corresponding surplus for the whole of 1952 of £270 million.

More detailed information regarding the second of these disclosures is available in the half-yearly White Paper on the balance of payments, which has since become available. It discloses the far from reassuring fact that the "unaided" surplus of £28 million compares with a similar figure of £93 million in the second half of last year and of £55 million in the first half of 1952. Furthermore "visible" trade provides the reason for the decline, for the balance of "invisible" transactions actually improved. Imports in the first half of this year were £135 million and exports £21 million higher than the second half year of 1952, so that the merchandise deficit was £114 million greater. Among the "invisible" items shipping provided £17 million more. The pattern of payments with different currency regions has also changed considerably. The balance with the dollar area has improved and that with the overseas sterling area was less favourable than at any time since 1946. In the capital account it is shown that almost the entire rise in the gold and dollar reserves was offset by the increase in sterling balances. While the former rose by £186 million, the latter rose by £172 million. Colonial balances are £57 million higher, those of the Dominions £154 million higher, and total sterling liabilities to all countries, excluding United Nations organisations, stood at £3,607 million at 30th June, 1953.

Critical Export Position

The detailed figures of overseas trade in September serve to confirm that the long-awaited export recovery has still to come and that at the moment this trade has reached a critical point. There should have been a seasonal rise last month, but in point of fact the daily rate was much the same as that for August. Fortunately, imports are at last showing a tendency to decline, both in volume as well as in value, so that the overall balance of payments position is being reasonably maintained. There are indications, however, that the terms of trade are now levelling off, which means that exports will occupy a more important place in future, and there is a danger at the same time that not only will they have to meet competition from foreign countries but also the danger of diversion to home consumption, which demand is also increasing. This has been evident, for instance, at the Motor Show now being held.

In these circumstances, the Chancellor is lucky to have at his disposal for the fight against inflationary tendencies a more flexible bank rate. This was mentioned at the bankers' dinner by Mr. Cobbold, Governor of the Bank of England, though he was careful to explain that at the moment he did not know which way that would go. More help for the Treasury came in the success of the second half of its recent operations on the market, when all but £25 million of the £577 million of maturing 14 percent Serial Funding Stock was converted to leave it with well over £200 million in cash. Some of this may be needed for current Budget purposes, but there will still be a substantial amount left over to retire Treasury Bills, reduce the "liquidity ratio" of the banks and so exercise greater control on bank credit.

The Conservative Party Conference had just started when my last despatch was being written, and now, just a fortnight later—and a fortnight, moreover, which was by no means distinguished by any outstanding events in the economic sphere,—neither it nor its Labour predecessor at Margate seem of very much importance, even though it set at rest all speculations with regard to Mr. Eden's return to the Foreign Office and Sir Winston Churchill resuming his full responsibilities as Prime Minister. Except for the minor adjustments made

earlier, and now Lord Cherwell's resignation of the Paymaster Generalship, which was expected, the Government position is much as it was, and looks like continuing that way for the present, while the few days remaining of the present session of Parliament are to be occupied with affairs outside the scope of an economic report.

Public Issue of Steel Shares

This week will see the first big public issue of steel shares under the denationalisation Act of last May, and the details so far announced suggest that the offer has been carefully devised to prove attractive to the market, which is being asked to provide £17½ million, either in cash or a wide range of British Government stocks which will be cancelled after receipt, for the 14 million Ordinary £1 shares in the United Steel Companies. Applicants will have the choice of paying either in cash or by tender of certain British Government stocks, which will be accepted at the respective prices set out in a Notice to be issued by the Bank of England simultaneously with the Offer of Sale. The Directors of the United Steel Companies Limited expect to be in a position to recommend a final dividend of 7½ percent for the 53 weeks ended 3rd October, 1953, on the 14,000,000 Ordinary Shares to be offered for sale. This with the interim dividend of 2½ percent paid on the £10,194,000 Ordinary capital ranking for dividend at the time of payment would represent the equivalent of approximately 9 percent for the year on the Ordinary capital of £14,000,000. Special application forms, which will receive preferential consideration, will be sent to the last known addresses of Stockholders whose names were on the Register of the Company on 14th February, 1951. Such Stockholders who do not receive their form by 27th October, 1953 should make application for special forms to the Secretary, The United Steel Companies Limited, 17, Westbourne Road, Sheffield 10. Meantime, private discussions are proceeding for the repurchase of their interests by Vickers and Cammell Laird in English Steel Corporation and by Guest, Keen and Nettlefolds of their steel works.

Lancashire-Pakistan Cotton Committee

A recent development in Lancashire, where it has been decided as a result of a recent meeting of the Cotton Board to establish a Lancashire-Pakistan Cotton Committee whose task would be to foster the use of Pakistan cotton in the United Kingdom, will take the thoughts of older readers back to the early 1930's, when a Lancashire-Indian Cotton Committee was formed which, before the war and changing circumstances brought its activities to a close, did some useful work in creating a larger market for Indian cotton in this country. With the co-operation of the Indian Trade Commissioner in London it secured sample bales of Indian cotton which were subjected to numerous tests at the Shirley Institute. As a result not only were Indian growers informed of deficiencies in their products, but a series of practical demonstrations and exhibitions were organised which helped to invite the attention of Lancashire spinners to the possibilities of certain types of Indian cotton in new lines of manufacture. The estimated mill consumption of Indian cotton by the U.K. cotton industry increased from 183,000 bales in 1932 to 342,000 in 1935 and to 428,000 in 1937. A substantial market for her goods in India, for the principle of reciprocity was recognised by both sides.

The setting up of the new Committee, which is the outcome of long consultations with the different sections of the industry under the auspices of the Standing Conference on Overseas Trade Policy and is expected to be representative of all such interests, will draw upon the earlier experience in seeking the best means of improving trade relations with Pakistan and long-term prospects for Lancashire trade. The industry feels confident that by methods which include promotional and technical activities it can create a larger market for Pakistan cotton in the U.K. and also make that market secure and stable. The policy is designed to create a wider demand based on commercial incentives. Such a condition, once firmly established, will prove more durable than any of the expedients of the kind to which resort has been made all too often in recent periods of economic stress. It will have the further marked advantage of being flexible enough to permit advantage to be taken of every new development favourable to an extension of trade between Pakistan and this country. The formulation of a detailed programme of action will be undertaken by the Committee as soon as it has been formed and this will later be the subject of consultation between Pakistan and Lancashire interests. It is hoped that an inaugural gathering may be held in Manchester towards the end of the year to set the policy and programme before the industry at large and invite general collaboration.

Brevities

Sir Paul Benthall has joined the Board of London and Lancashire Insurance, Heilgers Marine Co. Ltd., has been formed, with offices at 108, Cannon Street, London, E.C.4, to act as chartering brokers, shipbrokers and ships agents. Besides acting as U.K. representatives of three U.S. shipping companies, the new concern will also take over the chartering and brokerage activities previously carried on by F. W. Heilgers and Co.

The Burmese Government has commissioned Evans Medical Supplies, Ltd., of Speke, Liverpool, to set up a pharmaceutical industry in Burma. The company is to provide technical "know how" and to advise on the selection of architects and consulting engineers for the construction of a large new factory near Rangoon. It will also act as purchasing agents for the plant and equipment and will manage the factory in the first place for seven years.

Pakistan

CONSTITUTIONAL DEBATE CONTINUES

BETTER ECONOMIC OUTLOOK IN PAKISTAN

(FROM OUR KARACHI CORRESPONDENT.)

DURING the past fortnight the Constituent Assembly has been in almost continuous session debating, dissecting, explaining and expounding various sections and recommendations of the Basic Principles Report. The initial exhilaration generated by the achievement of the Mohammad Ali formula has receded amidst a numbing, swirling mist of rhetoric as member after member addressed the House in speeches of prodigious length, frequent irrelevancy and much repetition. After some days it was not surprising that an air of lassitude spread over the Chamber and on more than one occasion whips were despatched to the lobbies to shepherd back members, already punch-drunk with oratory, to make up a quorum.

The Karachi meeting of the Muslim League Council continued the precedent initiated by the late Mr. Liaquat Ali Khan and followed in the case of Khwaja Nazimuddin of electing the Prime Minister, Mr. Mohammad Ali, as President of the League. It was indeed unfortunate that the Prime Minister was indisposed on the day of his election but in his message of acceptance from his sickroom he addressed a particular appeal to old Leaguers who had seceded, to rejoin, to forget the past and to rededicate themselves in the service of the Muslim League organisation. Already Sirdar Shaukat Hayat Khan and Sirdar Asadullah Jan Khan have responded unreservedly to the call, but that elderly Achilles Mr. S. H. Suhrawardy still remains morosely in his tent. The President has nominated as members of the Working Committee Mr. Nurul Amin (East Pakistan), Malik Perroz Khan Noon (Punjab), Pirzada Abdus Sattar (Sind), Khan Abdul Qayyum Khan (N. W. F. P.) and Mr. S. M. Taufiq (Karachi), leaving ten further nominations still to be announced. Further important changes among the office bearers of the League are the election of Mir Ghulam Ali Khan Talpur as Vice-President and Choudhri Fazal Ilahi as General Secretary in room of Mr. Yusuf A. Haroon and Choudhri Salahuddin, both of whom had resigned. It will be the Prime Minister's earnest endeavour to regenerate the League and to recapture its erstwhile great prestige.

Improvement in Economy

The mood of cautious optimism regarding Pakistan's improved economic outlook is becoming more general and more firmly established. The key-note of Government spokesmen lately has been the need for acceleration along the highway of industrialisation towards the goal of production of, primarily, a sufficiency of basic consumer goods and, eventually, an exportable surplus. Much of this viewpoint was projected in the speech of the Industries Minister, Khan Abdul Qayyum Khan, to the Legislature when moving the consideration of his Bill to provide for the regulation of the possession, distribution, sale and prices of certain essential articles in Karachi. He restated and underlined the Government policy in the matter of foreign exchange which is in the present circumstances to give first priority to the import of industrial machinery, industrial raw material, and then to allocate whatever is left over to items which are absolutely essential. He admitted that hardships and difficulties existed among the people in the procurement of their daily requirements but emphasised that "the only way to overcome these difficulties is to get together and to realise that the need of the hour is more production, more production and more production."

The solid achievement of the Pakistan Industrial Development Corporation has made, and is making, an impressive contribution towards the fulfilling of Pakistan's aims and aspirations in the economic field. Another milestone was passed last week when the wheels started to revolve in the Chandraghona paper mill. This enterprise, which is designed to meet 90 percent of Pakistan's requirements for paper, has cost Rs. 6 crores and has taken two and a half years to complete. Raw material for this mill will be the ample supply of bamboo which exists in the Chittagong Hill Tracts and when peak production is reached it is estimated that the country will save some Rs. 4 crores annually which is at present being expended on imports of paper. Plans have been made for doubling the output of the mill should the proposition be considered economically feasible. The P.I.D.C. are also investigating the erection of a mill in East Pakistan to produce newsprint, drawing on the abundant local reserves of gewa wood which is considered suitable raw material. It is suggested that Khulna will provide an admirable and convenient site for such a mill but there is an alternative proposition that a pilot newsprint mill might first of all be established at Chandraghona. Other mills at present being constructed under the aegis of the P.I.D.C. are a paper-board factory at Nowshera, in the N.W.F.P., which will go into production in the middle of next year, and a straw-board mill at Rahwali, in the Punjab. The Nowshera mill will be able to meet the demands for cartons and covers for book-matches and will use as its raw material the "Bhabbar" or "Sabai" grass with an admixture of bagasse. Between the two mills it is estimated that there will be an annual saving of foreign exchange of the order of Rs. 1 crore.

Chemicals take Command

Today Chemicals are playing an increasingly vital role in practically all aspects of our life. Heavy and fine chemicals are necessary to make the wheels of our industries go round; chemical fertilizers to help us grow two ears of grain where one grew before; pharmaceuticals to defend us from fevers and diseases.

Mr. N. N. Sarkar, who is seen here, is the Chief Chemist in our Technical Service Laboratory in Calcutta. He has been with us for about 20 years. He works to solve the many varied and difficult problems that the ever-increasing use of chemicals naturally raises. His work and its results impinge on all aspects of our national life and every one of us. It helps our industries; our power projects; our agriculture; our public amenities.

Mr. Sarkar is an important man in the ICI (India) organisation. He is an important man in India today...

...contributing to India's progress and prosperity

FALL IN OFFTAKE OF GOLD AND SILVER WORKERS DEMAND STUDY OF TEXTILE CRISIS

(FROM OUR BOMBAY CORRESPONDENT).

GOLD has recently been the subject of speculation and discussion. Although Bombay is conveniently situated for the smuggling of gold, a practice which has been going on for several years on a fairly large scale, nobody except the customs preventive staff pay much attention to this "invisible" import. As long as people had money to spare, all the smuggled gold used to be regularly absorbed without causing anything more than a ripple in the forward and spot gold markets. In fact, forward trading in the yellow metal was possible only because of illegally imported gold, which came either direct from the Persian Gulf Ports, the headquarters of this illicit business, or via the two Portuguese possessions of Goa and Daman, situated at a convenient distance on either side of Bombay on the Arabian Sea coast. The volume of imports must have been far greater in the years when the price of gold in India stood nearly Rs. 25 to Rs. 30 higher than to-day, because the margin of profit was tempting for any one who was adventurous.

For some time now the price of gold has been ruling between Rs. 80 and Rs. 90 per tola. While the risks have increased because of the greater vigilance of the Customs staff, the margin of profit has now declined considerably. This means that the amount of gold successfully smuggled into the country must have been reduced during the last

year and a half. But because of the reduced up-country offtake, the bullion market suddenly became very sensitive to even this reduced volume of smuggled gold, with the result that prices have been tottering precipitately during the last two weeks. It has been rumoured that in order to eliminate smuggling by rendering it unremunerative, the Government of India has arranged with the Reserve Bank to invite tenders for some of the gold held by it. It was suggested that the aim of the authorities was to bring down the price of gold to somewhere between Rs. 70 and Rs. 75 per tola and to maintain it at this level. This was promptly and officially denied by the Reserve Bank. But the bullion trade, which holds that nothing is true unless officially contradicted, persists in the view that some action to bring down the price of gold is being contemplated by the Government and there has been a wave of selling.

While there is some smuggling of silver also, mostly via Kutch and Pakistan, it is not on as big a scale as gold. Yet silver prices have been hit even harder than gold. It is believed that a considerable quantity of silver has come from the famine areas as a result of distress sales during the last year, in addition to the quantity which might have been smuggled.

There is no sure method of computing the quantity of gold smuggled into the country. One way to arrive at an approximate estimate would be to ascertain the quantity seized by the customs they are reluctant to disclose the quantity of gold forfeited to them. Business circles in Bombay connected with the bullion trade place the value of smuggled gold at Rs. 3 to Rs. 4 crores annually. Whatever the amount, it is significant that even though the quantity of smuggled gold must have declined since prices went down by about Rs. 25 to Rs. 30 per tola, those who used to purchase gold that either there has been a marked change in the habit of hoarding gold, both among peasants and the rich people, or that savings which at one time were utilised to buy gold have now disappeared. There is little evidence to suggest that the habits of the people have changed to such an extent as to reduce the demand for gold appreciably. The business community is inclined to believe that the rate of saving has fallen and in support of this theory they point to the consumer resistance which is now being met in respect of all manufactured goods. It is for the Government and the economists to study this new development and base their policy and planning on the results of such a study.

Retrenchment in Textiles

During the last fortnight the situation with regard to the closure of shifts in textile mills in North Gujarat deteriorated. About 36 mills in this area notified their intention to close one shift; 26 of these mills are situated in Ahmedabad. Two of the mills have already taken action along these lines. Some were likely to follow suit from 1st November, and the rest were scheduled to reduce one shift from the middle of November. It was feared that some more mills may also find it necessary to reduce production because of accumulated stocks. The position in Bombay was not quite as bad as in Ahmedabad, but stocks here were also abnormally high. One of the reasons advanced for the surplus at Ahmedabad was that this centre concentrates more on the production of fine and superfine goods for which there has been very much less demand than there used to be. Up to the week-end there had been a feeling of despair among textile workers at Ahmedabad and frantic calls were made on the Government of India to prevent the mills from reducing production by the closure of shifts. If all the mills which have given notice so far close one shift, the number of workers involved would be about 24,000.

In this connection the Indian National Textile Workers Federation suggested to the Government the immediate appointment of a statutory committee under the Ministry of Commerce and Industry, with adequate powers to meet the situation in the textile industry and to devise a permanent remedy to avoid alternate cycles of booms and depressions. Mr. S. R. Vasavada, President of the Federation, in his letter to the Industry Minister, asked that the terms of reference of the Committee should include: investigation into the real cause of the present depression, measures to prevent curtailment of production, measures to enlarge the cloth export trade, and ways to Vasavada, the Committee should also be asked to country-wide basis and to suggest measures which should be taken by the Government to remedy defects. Mr. Vasavada also asked that this Committee should investigate the position of each a shift and to suggest suitable measures to close such action. Another suggestion made by the Federation was that no unit in the industry should be allowed to close down or curtail production before its case was examined by the Committee and reduce production. This should be secured by the closure of shifts in individual units, but by reducing hours of work uniformly in the whole industry.

The official view up to the week-end appeared to be that the accumulation of stocks, though somewhat above the average even in Ahmedabad, was such as to require immediate reduction in piece-goods market noticed during the last week expected over most of the country. (The Government of India's admission, since this despatch was written, of the existence of a crisis, and its action where in this issue.)

Madras

ECONOMIC PROBLEMS IN ANDHRA STATE PROSPEROUS AGRICULTURE, LIMITED FINANCIAL RESOURCES

(FROM OUR MADRAS CORRESPONDENT).

THE new Andhra State, with a population of about 21 million and with its abundant water, agricultural and mineral resources awaiting planned development, has unfortunately started under some grave handicaps. First and foremost among these is possible political instability arising from a fluid party situation for which the temperament of the Andhras is largely responsible. This does not augur well for the future, because the prolonged stability of Mr. Prakasam's Cabinet cannot be taken for granted and because Communists, unlike in Tamil Nad where the Dravidian Federationists campaigning for "social justice and equality" are in a position to displace them, are not likely to lose ground seriously in the foreseeable future. The second handicap pertains to Andhra's inexperience in the economic sphere which, according to a retired Andhra civilian, has been responsible for the inadequate capital formation and the failure of a number of large-scale joint-stock enterprises in the Andhra area. As a result, Andhra State finds itself industrially less developed than the residuary Madras State which already has established textile, sugar, cement, chemical, engineering and transport industries. Further, and this is related to the second point, there is the absence of a well-knit banking system and of stock-exchange facilities either in Kurnool or Vijayawada for mobilisation of savings for the capital requirements of new industries. Another disadvantage is the current adverse balance of trade and the Government's prospective deficit budgets of the State and comes, in all, to just 60,000 K.w.s, including the energy available from the Machkund Project near the southern boundary of Orissa. The transfer of most of Bellary District, with the Tungabhadra Project headworks and a large part of the new South side canal system, to Mysore State means that only about 250,000 acres of land could be irrigated by this Project in the Rayalaseema area, which has been chronically famine-stricken. Perhaps the most serious handicap is the lack of a suitable place for the State's permanent capital. The consequent dispersal of government offices in Kurnool, Vijayawada and Madras might lead to considerable delay, red-tapism and absence of co-ordination in policies pursued in the several districts. The only redeeming feature is that the new State starts with the valuable advantage (compared to the residuary Madras State) of larger irrigation facilities and larger production of food-grains and commercial crops.

Irrigation Projects

The immense water resources of Andhra State are potentially of the greatest significance for economic development. The Director of the Central Water and Power Commission. Government of India, estimates that only five million acres of land in Andhra are now under river, tank or well irrigation (as against four million acres in the larger residuary Madras State) and that an additional 10 million acres could be brought under irrigation by planned utilisation of the State's water resources. This "River State" has two major and three medium river systems including their many tributaries and 29 minor and small rivers. Of their total annual discharge of 150 million acre feet of water, only 20 million acre feet are now being utilised for irrigation while a further 80 million acre feet of water can be exploited for irrigation and power generation. With the construction of three dams on the Krishna river system, now under active examination, and of a number of other minor irrigation schemes at various stages of execution, and with the full development of the area commanded by the South Side Tungabhadra Canal, at least 2 million acres of land could be brought under irrigation in less than 10 years.

As for hydro-electric power, the Machkund Project, when fully developed, and the Tungabhadra Power Project, now under execution, might together give Andhra some 3 lakh kilowatts of energy with which a number of mineral industries in the Vishakhapatnam, Godavari and Rayalaseema districts could be developed. Incidentally, manganese, mica, asbestos, iron, copper, mineral pigments, refractories, gold, chromite, lead, coal, graphite, natural gas, limestone, sulphur and pyrites and bauxite are some of the important ores and minerals occurring in quantities large enough for exploitation in Andhra. But the prior development of cheap power so vital for the development of metallurgical and other industries would consume all the funds that the Andhra and the Union Governments might allot for development plans for the next five to 10 years.

With only two scheduled and five non-scheduled banks having capital and reserves of Rs. 60 lakhs and deposits of Rs. 540 lakhs only, with a Central Co-operative Bank which has borrowed Rs. 2-8 crores of its working funds of Rs. 3-5 crores from outside the Andhra State, with only two insurance companies registered in the State accounting for business of just Rs. 11 crores out of India's total business in force of more than Rs. 700 crores, with a possible deficit for the next five years and with a low rate of saving on the part of its population, Andhra State will have to look mainly to the Government of India and the money markets of Bombay and Calcutta to finance its development pro-

jects which in the next 10 years are bound to be mostly related to irrigation and power.

Developing New Industries

Industries, therefore, are not likely to get any stimulus for their development in the immediate future. However, the sugar industry could develop further in the next five years as there are only nine sugar factories in the Andhra area producing a little under 50,000 tons of sugar annually. As three tons of sugar per acre can be produced in Andhra as against the all-India average of 1.3 tons per acre, it is suggested that 50,000 acres of rice land should be diverted to sugarcane cultivation so that 1½ lakh tons of additional sugar could be produced. Whether the Centre, faced with the problem of finding rice for the deficit Madras State, would accept this suggestion is doubtful. Other industries that are now being canvassed for development in the Andhra area are textiles, fertilisers, cement and iron and steel on the supposition that electric power will be speedily made available. None of these proposals, however, are likely to materialise without the attainment of political stability and progress in the generation of electric power.

TRANSPORT SHORTAGE HAMPER'S U.P. JUTE INDUSTRY

SEASONAL INCREASE IN DEMAND FOR WAGONS

(FROM OUR LUCKNOW CORRESPONDENT).

THE transport bottleneck on the railways has brought about a major crisis in U.P.'s jute industry and the belated attempts to provide wagons have enabled as yet only a partial resumption of work by the units which had to close down. The jute industry has been the first to be affected, but with the busy season at hand—not to mention the enormous traffic that would have to be handled during the Kumbh Mela—other industries are also disturbed about immediate prospects. That the crisis should have developed within a month and a half of the conference in Lucknow of the General Managers of the four railway systems serving the State is not the least surprising part of the matter. The conference, which was attended by over 50 officials besides the General Managers, concerned itself more perhaps with the needs of Government in the public sector; the requirements of private trade and industry, as should be evident from recent experience, received only secondary consideration.

In the exchange of statements between the spokesmen for jute and for the North-Eastern Railway, it cannot be said that the railways have come out unscathed. It is the contention of the N.E.R. that jute mills in Kanpur have landed themselves in this difficulty by their own policy of making purchases in Bihar, West Bengal and Assam instead of buying in U.P. itself. The railways, it is also stated, cannot ensure regular indents regularly instead of making a rush at the last moment. Running of jute specials to Kanpur was considered but abandoned as the railways from the principle of "first come first served." Succour for the Kanpur jute mills, however, came later at the expense of Calcutta. According to a Press Note issued from Gorakhpur by the Public Relations Officer, N.E.R., "the despatches of jute to Calcutta had to be curtailed to utilise the available transport capacity over the Ganga ferries for the movement of urgently required foodgrains and it was thus possible to allot a large number of wagons for the despatch of jute to Kanpur."

Wagon Availability

A similar fortuitous circumstance which, incidentally, has not been given credit for by the railway spokesman, was responsible for his triumphant claim that in September the railways loaded up to 100 wagons of jute for U.P. as against 20 wagons during the corresponding period last year. Whether this performance would have been possible but for the Burnpur strike leaving the railway administration with a number of empty wagons is a point worth investigating. The jute industry's case is that the railways cannot dictate where the mills should make their purchases and that the reason why they bought jute in Bihar, West Bengal or Assam paying Rs. 3 to Rs. 4 more per maund is that the jute available in U.P. is not of the required spinning value. There can also be no question, according to the jute mill directors, of regularising or evenly spacing registration of indents as it is a matter depending entirely on arrivals of the crop in the market. Even when the registration system had not broken down, the railways have in the past been supplementing it with a separate quota for mills on the O.T. Railway. This additional facility has been withdrawn with effect from this year for reasons not known to the industry.

The acute wagon shortage for the transport of goods and commodities generally is also illustrated in the very considerable lag between the demand and supply of coal. U.P.'s quota of coal wagons at present comes to 40 per day on an average but it is per day needed to meet the needs of the State. Apart from the requirements for development schemes, of brick-kilns calls for faster movement of coal Pandit Pant, when these brick-kilns get going, the demand for coal wagons is likely to exceed the present estimates, and he is hopeful that the Coal Commissioner has got ample stocks for allotment. The brick-kiln scheme has been given high priority by the State Government because of the extensive damage that has been done to houses by this year's floods.

Periodic Fuel Prices

Pandit Pant is far from happy at the slow progress made by the railways in the transport of the irregular movement of fuel and timber. As a result rises have become common in many towns. With pockets of fuel scarcity is bound to result in much that could be urged on behalf of the railways is also the season when sugarcane is crushed. This rail transport system should endeavour to adjust itself to the seasonal nature of industrial and agricultural activity of the country instead of pleading helplessness. Special allotment of wagons after a crisis has developed is not half so good a way of treating the malaise as keeping from developing at all.

Jute

I.J.M.A. MILLS' PRODUCTION RISES IN SEPTEMBER

SWITCH-OVER FROM HESSIAN TO SACKING CONTINUES

IN September, the production of mills reporting to the I.J.M.A. was 73,100 tons, compared with 68,100 tons in August. Of the total, 33,800 tons or 46.24 percent were hessian and 39,300 tons or 53.76 percent were sacking, the balance being made up of miscellaneous goods amounting to 2,500 tons. The percentage of hessian is the highest yet reported and shows that the swing from sacking to hessian still continues. At 33,800 tons, the output of hessian was the highest when it was 35,500 tons with the exception of July when the total production was high in a month when the total production was high. It is, therefore, promising that all the output of hessian is being disposed of, as shown by the reduction in stocks of hessian each month since May.

The production of sacking in September was only 50.34 percent of the total compared with 54.4 percent in January. In pre-war times 60 percent of the total production was looked on as the normal output of sacking. The mills have, therefore, gone a long way towards adjusting supply to demand and when it is borne in mind that the total output pre-war was much larger than it is now, the shrinkage in the demand for heavy sacking will be realised. Stocks of sacking were reduced in August and September but it is too early to say whether that indicates that the adjustment is complete or whether these reductions were only a passing phase. Market indications are that the reduction in output of sacking has not yet gone far enough to enable mills to command remunerative prices for it. If stocks of sacking continue to drop it will be a fair deduction that the adjustment has achieved its object and that mills need no longer sell sacking unless they can obtain profitable prices.

I.J.M.A. Consumption

In September, the consumption of jute by mills reporting to the I.J.M.A. was 426,000 bales, compared with 397,000 bales in August. The total consumption for July-September was 12,80,000 bales. Arrivals of jute in the same period were 13,53,800 bales but, of course, all the arrivals did not go direct to mills, some going to balers and merchants in Cossipur. On the other hand the mills received considerable quantities by lorry, cart and boat which are not included in the "arrival" figures. In July-September, 1952, the mills' consumption was 13,61,000 bales.

Arrivals of Raw Jute

Imports of raw jute into Calcutta and mill stations during September were 4,42,700 bales, compared with 4,61,400 bales in August. The total for July-September was 13,53,800 bales. Of these 555,800 bales were imported from Pakistan and 7,98,000 bales were of Indian origin. The September arrivals were made up of 1,09,300 bales of Pakistani jute and 2,73,400 bales of Indian jute. In July-September, 1952, total imports were 9,63,500 bales of which 1,26,500 bales were imported from Pakistan and 8,37,000 bales were of Indian origin. It will be noted that arrivals in July-September this year exceeded those of July-September last year by 3,60,300 bales. The arrivals of Indian jute in July-September were 39,000 bales less than those of the corresponding period last year, but imports of Pakistani jute were up by 4,29,300 bales. The reason for the remarkable increase in imports of Pakistani jute is, of course, the sale of jute at cheap prices by the Pakistani Jute Board and the special E.P.C. facilities given for the export of that jute to India.

THE JUTE MARKETS

During the two weeks since the last issue of Capital, all sections of the market have continued steady with a tendency toward higher prices. Though there have been only six working days officially, business has gone on steadily throughout the period. The rise in prices has not been much; it has been rather more in raw jute than in manufactured goods and therefore to the disadvantage of mills trying to do simultaneous business. Mills which were holding stocks of raw jute in excess of their sales of manufactures have been able to take advantage of the higher prices obtainable for manufactures but are left with the problem of deciding whether it will be profitable to replenish their stocks of raw jute at higher prices.

Manufactured Goods: There has been steady business during the past two weeks and mills have been able to dispose of considerable quantities of standard goods for deliveries up to June 1954. Overseas buyers are reluctant to pay higher prices but are following the market slowly. Hessian for deliveries up to the end of this year is in short supply and buyers of special fabrics have found difficulty in getting their orders placed because they have delayed too long. There has been good enquiry for special hessian but mills have been hesitant to accept orders because of the scarcity of fine quality jute and the premium prices being asked for it. There has also been improved demand for sacking but mills have not been able to sell as much for forward deliveries as they would have liked to have done and, at times, selling pressure from mills caused a temporary drop in prices. Foreign markets have bought for near deliveries

but are not showing interest in far forward deliveries and it is reported that it is difficult to find reliable bazar buyers for deliveries far ahead.

On Wednesday morning quotations were as under and the tone of the market was firm.

	Ready.	Nov-Dec	Jan-Mar
40" 8 oz.	Rs. 37-4	35-14	34-2
40" 10 oz.	Rs. 45-0	41-8	43-4
B. Twills	Rs. 96-6	96-14	97-0
Heavy Ceers (plain)	Rs. 97-8	97-8	97-8
Cornsacks	Rs. 96-4	96-14	97-0

Raw Jute: Though there has been no heavy buying during the past two weeks there has been steady day-to-day buying on a small scale and interest has been widespread. Sellers have been largely influenced by the falling off of imports since the Pujahs which has resulted in firm markets upcountry. Though there have been periods when mills had withdrawn and sellers were willing to accept lower prices the general tendency has been upward and, over the two weeks, prices have risen by Rs. 1-8 to Rs. 2 per maund. Demand for daissee has been particularly heavy and, besides petty purchases, substantial quantities have been bought by mills on contract. Interest has, however, been very diversified and included Assam, Northern, bimli, mesta and Pakistani jat from the districts and ex-Calcutta godowns.

The following transactions were reported:—

Dhubri & Northern Rs. 25 to Rs. 25-8 basis Bottoms Nov-Dec.	Dhubri & Northern Tops alone Rs. 31-8 Nov-Dec.
Dhubri & Northern European standard Middles Rs. 31-8 Nov-Dec.	Upper Assam Rs. 24-8 to Rs. 25 basis Bottoms Oct-Nov.
Daissee Free from namla Middles Rs. 32 Oct-Nov.	Assortment Rs. 25 to Rs. 26 basis Bottoms Oct-Nov.
Bimli F.A.Q. Rs. 22-8 one month.	Daissee Mesta Rs. 25 basis Bottoms Oct-Nov.
Cut Mesta Bottoms Rs. 25 Ready.	Pakistani Jat Rs. 41-8 for Tops and Rs. 38-8 for Middles Nov-Dec.
Dundee Daissee 2/3 Long Group Rs. 135 per bale Oct-Nov.	Pakistani NC cuttings Rs. 63 per bale Nov-Dec.
Mesta Cuttings Rs. 56 per bale. Ready.	On Wednesday morning quotations are as under and the market is firm.

Mofussil: Imports into upcountry centres in India are smaller and cultivators and beparis are holding for higher prices. All imports find a ready market and prices are above Calcutta parity. The condition of present arrivals is reported to be better but quality is poor, especially in Upper Assam. Arrivals in Cossipur are only about half of what they were before the Pulahs and the bulk of the imports are of jungle quality.

In Pakistan imports into the main centres have shown some improvement, possibly because of better demand from balers. Overseas buyers are reported to have been more active and a fair amount of business in both white jute and tossa for export has been reported, the latter being at a premium of (P)Rs.3 to (P)Rs.5 per maund. Quality of current imports is poor and superior quality white jute of good colour is scarce and also commands a premium. Rivers are falling rapidly and the present small increase in imports is expected to be the last for the season as the khals are becoming unnavigable and the roads are not passable by carts. Quotations are as under:

White Jute:	
Jat	Rs. (P) 21 per md. basis Bottoms.
District	Rs. (P) 19-8 " " " "
Northern	Rs. (P) 16-12 " " " "

Tossa:	
Jat	Rs. (P) 24 per md. basis Bottoms.
District	Rs. (P) 23 " " " "
Northern	Rs. (P) 21-8 " " " "
Mill Firsts	Rs. (P) 132 per bale.
Export Firsts	Rs. (P) 112 " " " "

For forward deliveries quotations are Rs. (P) 2 to Rs. (P) 4 per bale higher.

THE FOREIGN JUTE MARKETS

IMPROVED TONE IN INDUSTRY

(FROM OUR DUNDEE CORRESPONDENT.)
The firmer tendency in prices for raw jute has brought out an improved tone in the industry generally and there are expectations of better trade coming along from consuming centres. It is felt that buying cannot be delayed much longer and that the good stocks held in many countries must have depreciated during the prolonged spell of inactivity. Several "bull" factors indicate that there is little hope of any further reduction in values of raw jute and its production. The reluctance of shippers to offer the fibre freely comes from the fact that in Pakistan it is difficult to secure the necessary material, imports from the up-country markets being light and good quality is scarce.

Since the last report, prices for all commodities in the U.K. were, on 5th October, reduced, commencing with a drop of £6 per ton on the issues rates for raw jute to spinners. Hessian yarn prices have been adjusted to show a decrease of 71d. per lb. on all grades, bringing common 8 lb. cops and 8 lb. spools down to 14.87d., and 3 ply 8 lb. twist to 16.37d. per lb., while 24 lb. sacking went to 11.18d. and 8 lb. chains at 15.44d. Rove is reduced from £38.10s. to £33.10s. for 48 lb. and from £70 to £66.5s. for 200 lb. The new prices took effect from 5th October, after a delay of one week after withdrawal of the old rates.

The price of raw jute in Britain has been increased by £6 per ton from 25th October following increase in Pakistan export prices, the Ministry of Materials announced here, says a report from Reuters. The increase, which applies to all grades of raw jute, restores the price to the level ruling before Oct. 5, 1953, the announcement said. The jute control's selling prices of imported jute goods of hessian types are correspondingly increased, but there is no change in the selling prices of imported heavy bags.

U.S. CONSUMPTION IN SEPTEMBER HIGHEST THIS YEAR

U.S. consumption for September, at an estimated 80 million yards, was the best for any month this year, bringing the total for the first nine months of this year to 597 million yards—4 million yards more than for the same period last year. U.S. stocks at the end of September, at an estimated 195 million yards, declined 9 million yards from August and also were 5 million yards lower than for September 1952. These were made up of 140 million yards spots and 55 million yards afloats. Appearing below are two tables which include the September figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap & Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. Burlap Consumption (as reported to TBMA) (Millions of Yds.)		U.S. Burlap Consumption (Estimated Industry Total) (Millions of Yds.)	
1953	1952	1953	1952
Jan. 58	35	Jan. 73 (72)*	48 (43)*
Feb. 52	46	Feb. 58 (57)*	55 (43)*

INTERNATIONAL AIR TRANSPORT PROBLEMS

DIRECTOR-GENERAL'S REPORT TO I.A.T.A.

AIRLINES of the world were carrying five million more passengers this year than last, and for longer trips, but they were actually making less money than before, the Director-General of the International Air Transport Association reported to the ninth annual general meeting which recently took place in Montreal. Sir William Hildred said that both the increased traffic and the reduced economic returns are due to the spread of lower tourist fare services over the international network. Pointing out that the airlines had cut fares by as much as 50 percent since the end of the war, he predicted that it would be several years before the growing volume of tourist traffic compensated the airlines for the drastic reduction in the price of individual tickets. Meanwhile they were "operating perilously close to the economic margin" and stood to suffer heavily from any possible recession in world trade. Governments should help carriers to achieve "a balanced airline economy" by tax, charges and subsidy policies which would enable them to build the kind of reserves necessary to absorb the initial losses from reduced fares and cushion the effects of changes in world economy.

The world's scheduled airlines carried 45 million passengers during 1952 and Sir William predicted that "passenger traffic has been expanding steadily this year and will easily pass the 50 million total during 1953." "Due largely to the rapid growth of long-haul tourist operations, the average passenger is now travelling a longer distance (880 km as against 863)," he added. The expansion of cargo and mail traffic had not been so spectacular. The amount of mail carried increased only 9 percent over 1951, rising scarcely beyond 250 million tonne-kilometres. The 1953 results would depend largely on the extent to which the recent cut in mail rates was passed on to the public. New low rates of compensation to the airlines for the carriage of foreign air mail enacted by the Universal Postal Union represented "a cut which will reduce drastically our mail revenues and which may take us 10 to 15 years to get over. Moreover, as far as mail is concerned, we have no evidence that the cut in mail rates will be offset by an increase in volume, since this does not depend on the rates which the airlines receive from postal administrations, but on the rates paid by the public for their letters." Thanks must be accorded to those few postal administrations—among them the Canadian Post Office—which had passed on the reduction in mail rates to the public.

Cargo Traffic

Cargo traffic had increased during the past year by about 6 percent to a 1952 total of 950 million tonne-kilometres. While this could be termed "disappointing," 1953 should see the 1,000 million mark passed. The world airline fleet, which had been extensively modernised during the past year, now numbered about 3,000 aircraft for scheduled operations, and the latest types of piston-engined, airscrew-turbine and jet machines were now being put into regular service in significant numbers. Fleet expansion was being accompanied to some extent by increases in the numbers of airline staff who now totalled 300,000 in the scheduled airlines.

"All these results indicate that a healthy rate of expansion has been maintained," Sir William said. "This expansion has not been at the unprecedented rate of 1951, but it still augurs well for the future of international air transport. We must not forget that with the constant growth of air traffic a given percentage is equal to a successively larger increase in terms of passengers, mail or cargo. Each year's increase becomes just a little harder to attain. Gone are the earlier years when an airline could be certain of filling its aircraft, provided these aircraft were available. In 1952, the airlines had to contend actively and incessantly for their traffic and they will have to go on doing so."

Tourist Fares

Commenting on tourist fares, which were introduced on the Atlantic routes in May, 1952, and which will reach around the world by next April, the Director-General said: "This year our attitude must be one of enthusiasm tempered by caution. These tourist services have come to stay. Although local adjustments might be made in the pattern of services, there never has been and never will be any question of going back from the step which we have taken. The trend toward cheaper and more economical air transport is irreversible, or rather, the only thing which could reverse it would be any action by governments which would jeopardise the future of the air transport industry." The net result of the new low-fares policy had been to reduce the cost of air travel by as much as 50 percent and more at a time when the cost of commodities which went into air transport and of other commodities as well, had been steadily advancing.

"Take the average transatlantic air fare," he said. "In 1945, it stood at about \$600 for a one-way crossing. In 1953, it was down to two-thirds of that level for first-class travel (\$395); it was down more than 50 percent for tourist travel (\$275). As against this, the prices of all the materials which go into the production and operation

of aircraft have gone up substantially. The cost of petrol has gone up by over 30 percent; of tin by 43 percent; and that of pig iron has more than doubled. Wage costs have also gone up ranging from a doubling of the wage rates for unskilled labourers to somewhat smaller increases for skilled employees. More important and more striking, however, is the relationship of air fares to other prices as seen from the consumer's point of view. As against the 50 percent reduction in the transatlantic air fare, may be set increases for practically every field of human activity for which money payment is made. The average cost of living in Canada increased by 50 percent between 1945 and 1953. To express this increase in another way—the purchasing power of the Canadian dollar is now equivalent to 65 cents as compared with 1945. Thus, the one-way, on-season, tourist air fare expressed in 1945 dollars is \$179 or only 39 percent of the actual 1945 figure!

No Rise in Profits

"It has sometimes been argued, and frequently implied, that the only reason for the introduction of cheap fares was to bring larger profits to the airline industry. This is not true. To begin with, international air transport is not, by and large, making profits. It is not yet paying its way. There is a basic and logical reason for this. One cannot overnight reduce the level of fares by a third and expect a rapid change in the travelling habits of the public. There is an annual rush, of course, and we experienced that at the peak of the tourist season both in 1952 and this year. Beyond that, painstaking effort is necessary to increase permanently the volume of traffic sufficiently to compensate for the loss in unit revenue. This indeed is the key to the problem. It is not enough merely to have more people travelling. The rate of expansion must be high enough to compensate for the fact that a passenger is now worth so much less in terms of revenue."

Sir William also warned the airlines, however, against a tendency to relax the restrictions on amenities which differentiate tourist from first-class services. "I am not happy about this trend. If it goes on, the tourist-class passenger is going to become more and more expensive to carry and carriers may find themselves providing first-class amenities, charging fares that are too high for tourists and still calling it tourist class. This would be a catastrophe. Tourist class is designed to provide cheap, safe travel for the millions. We must increase the volume of air travel by carrying more people more cheaply. Any tendency to add unnecessary frills to tourist-class travel is in direct conflict with the objective and should be most strongly resisted."

Governments and Airline Finances

Summarising the financial position of the airline industry, he declared: "I have already said we are not making high profits. In an effort to provide the cheapest possible travel to the widest possible public, we are taking economic risks and operating perilously near to the margin. We do not complain about taking economic risks. Any industry which refuses to do so is doomed to stagnation, but we cannot expect our dividend overnight. So far our sole dividend has been moral and spiritual. We have watched with satisfaction the tremendous expansion in tourist traffic and are looking forward to the day when it will be reflected in some increase in revenues. By that time we shall have new tasks, new equipment to purchase, new services to be provided if possible at an even lower cost. By constantly looking ahead we can best fulfil our function as servants of the public, and it is in that capacity that we feel a certain anxiety about future policy of governments towards the airline industry." The airlines had tried to meet what they conceived to be the best interests of the public by making every effort to provide the lowest possible fares for the

This new Euclid Tractor and Scraper (12 cu. yds. struck capacity), manufactured in Great Britain, is now available for sterling. Powered by the famous Leyland Diesel Engine developing 154 brake horsepower and a top loaded speed of 29 miles per hour, this Tractor and Scraper with its open bowl, positive hydraulic control and steel angle dumping ejector can greatly reduce costs on your earthmoving project.

How banking serves the RUBBER INDUSTRY

RUBBER was first planted commercially in India in 1902. Today Indian rubber plantations, concentrated in Travancore-Cochin and Malabar, produce 20,000 tons of rubber every year, valued at four and a half crores of rupees. More than 250 Indian factories depend on this output for their production of finished goods.

Without banking, this growth could never have taken place. The facilities and guidance offered by a good bank, such as the availability of ready funds when needed and the collection of dues in any part of the country, have become part of the structure of the rubber industry.

We at Palai are proud that so many important rubber producers, and indeed leading firms in every field of business and industry in South India, employ the complete banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Bill Collection—Letters of Credit—Deposits—Investments—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

greatest possible number of people. It was readily agreed that at times they had tried to interpret the public interest in a way different from the short-run preoccupations of certain people who claim to speak for the public. They felt that it was unwise, not only in their own, but in the public interest, to tear up the economy of the airline industry. Well organised though they might be to tackle the complicated task of arriving at international agreement on rates, they were in a very real and practical sense completely at the mercy of individual governments.

"Some airlines, having made a modest profit, are not certain for years whether they will in the end be allowed to keep it; others more fortunate may be allowed to retain some share permanently, only to be castigated as acting against the public interest. Finally, those who, for various reasons, cannot make ends meet, are described as reckless wasters of government money. All these facts point to a basic contradiction in government policy towards international aviation. I have noticed an ever-growing tendency on the part of the individual governments to support any move which will reduce airline revenues and any move which will increase airline costs.

"On the one hand, we are expected constantly to be reducing our fares. We are fully prepared to do this and have demonstrated our readiness to do so by putting into effect a worldwide network of tourist services. All we ask for now is a few years in which that fall in revenue can be translated by an increase in passenger volume into a greater revenue total. The greatest danger to the airlines now arises out of the arbitrary decisions of governments to increase various charges and taxes payable by the airlines. These charges take so many forms and are assessed in so many different ways that it would take far too long to list them, but they all have the same effect and render it more and more difficult for airlines to operate economically.

Airport Charges

Calling for co-ordinated action on the part of governments to control those increases and to cut charges where rates were presently excessive, Sir William Hildred maintained that "any assessment of such charges for airports and air navigation facilities should take into account the great benefits derived by communities from air transport. These benefits not only took the form of a substantial boost to local trade and industry, but also involved a very valuable contribution to national security.

"We recognise the complexity of the problem and have ourselves devoted study to it. I would commit myself without hesitation to two generalisations. Firstly the airlines recognise that they must defray some part of airport costs and must pay landing fees. Secondly, the airlines should not, under any circumstances, be responsible for the full cost of operating an airport. Between these two extremes there is room for controversy and, I hope, agreement. There is, however, no ground and no cause of unilateral action on the part of individual governments."

NEW OIL SEARCH IN ASSAM

In a Press Note the Assam Oil Co., Ltd., announces that three different types of geophysical survey, employing the latest exploration methods known to the petroleum industry, are to be carried out in Assam during the coming dry weather to "feel" for oil possibilities under the alluvium of the Brahmaputra Valley. The surveys—seismic, gravity and aeromagnetic—will be made simultaneously in the most intensive programme of oil exploration yet undertaken in India. Covering more than 5,000 square miles the area to be surveyed extends from the Mishmi Hills in the north-eastern extremity of Assam to the Mikir Hills in the south-west. In between is the flat alluvial plain of the Brahmaputra Valley, over which the Assam Oil Company, of Digboi, has been granted the rights to search for oil. The survey and ordinary aircraft for the aeromagnetic survey. This will be the first time, says the company, that helicopters have been employed in oil prospecting operations in Asia.

The starting-off place for the earliest phases of the programme will be Nahorkatiya, 18 miles south-west of the main Digboi oilfield and near the southern edge of the alluvial plain. Oil was recently struck here in a well drilled to a depth of more than 10,000 ft, and it is this important discovery that opens the way for a completely new possibility. If, finally, the surveys indicate the presence of favourable geological structures else-where in the Brahmaputra Valley, detailed possible testing by the drill. The structures of rocks sand and mud laid down by rivers in valleys—deltas—cannot be determined by surface observations but have to be explored with the help of geophysical instruments such as the magnetometer, gravimeter and seismometer.

In the hope that further results will justify the cost, Nahorkatiya is to be linked with Digboi by a Dihing reserved forest. This road, which will accommodate an oil pipeline for transporting Nahorkatiya crude to the Digboi refinery, will of the Burhi Dihing river, where there is no rail siding. It should be in operation in 1954.

Commodity Markets

WHOLESALE PRICE INDEX RISES

The official wholesale price index (base: year ended August 1939=100), advanced by 1.3 percent to 395.9 during the week ended 10th October, 1953, as compared with 390.7 (revised) for the previous week. The index was, however, lower by 2.5 percent compared to the corresponding week of the previous month but was 2.6 percent higher than that of a year ago. During the week under review, Foodstuffs witnessed a rise of 3.1 percent to 390.4 from 378.7 (revised) for the previous week, owing to advances in the prices of gur at Muzaffarnagar (+26%), bajra at Hyderabad (+10%), dal arhar (+8%), tea (+7%), wheat at Hapur (+2%), gram at Hapur and sugar (+1% each). Prices of jowar (-2%) and wheat at Amritsar (-1%), however, showed decreases. The index for Industrial Raw Materials moved up by 1.8 percent to 452.6 as compared with 444.5 (revised) for the previous week, as a result of increases in the prices of raw jute (+9%), rapeseed at Kanpur (+8%), castorseed in Bombay (+7%), rapeseed in Calcutta and linseed (+6% each), copra (+4%) and raw cotton (+2%), notwithstanding declines in rapeseed in Bombay (-15%), export price of manganese ore (-14%), cottonseed (-8%) gingelly seed (-5%), lac (-3%), castorseed in Madras (-2%) and groundnuts (-1%). The Semi-Manufactures group, however, fell by 0.1 percent to 354.3. Items, which recorded noticeable variations during the week were: Gingelly oil cake (-9%), groundnut oil in Bombay (-4%), tanned cow hides and groundnut cake (-3% each), groundnut oil in Calcutta and tanned buffalo hides (-2% each), groundnut oil in Madras (+12%), linseed oil (+6%), zinc (+4%) and mustard oil (+2%). The index for Manufactures stood at 363.8 compared with 363.9 for the previous week, as a fall in the prices of soap (-7%) was almost counter-balanced by increases in glass (+3%) and jute manufactures (+1%). Higher prices of cummin (+13%), black pepper at Cochin and tobacco-leaf (+3% each), raised the index for Miscellaneous by 1.9 percent to 728.6, notwithstanding decreases in the prices of black pepper in Calcutta (-7%) and cashewnuts (-2%) during the week under review.

POOR KATKI LAC CROP

According to the preliminary estimates of the Indian Lac Cess Committee, the Katki Lac Crop in India for the year 1953 is expected to be 1,71,000 maunds as against a normal crop of 2,98,000 maunds. The estimates for the same crop for the previous year was 1,36,000 maunds. The poor crop throughout the country is due mainly to brood shortage caused by a poor Bysakhi crop and a very hot summer. The crop is poor even in areas round about Gondia in Madhya Pradesh where the Katki is usually good.

The following is an extract from the Abstract General Preliminary Report on the Katki Lac Crop for the year 1953, as compared with the finals for the last two years.

State	(All estimates are in maunds)		
	Preliminary Final	Final	1951.
1. West Bengal	3,000	16,500	9,000
2. Bihar	70,000	25,500	94,000
3. Madhya Pradesh	75,000	75,000	1,37,000
4. Uttar Pradesh	1,000	250	1,500
5. Vindhya Pradesh	2,000	1,250	2,500
6. Bombay	5,000	2,500	4,000
7. Orissa	2,000	2,000	5,000
8. Assam	10,000	10,000	9,000
9. Other Indian States	3,000	3,000	5,000
Total Production of Indian Union	1,71,000	1,36,000	2,67,000

SIKKIM COALFIELD RESERVES

The reserves of coal in the Rangit Valley Coalfield, the newly discovered coalfield in western Sikkim, are estimated at 240 million tons, in an article contributed to the latest issue (Vol VI No. 3) of the *Indian Minerals* by Mr. A. M. N. Ghosh of the Geological Survey of India. Coarse, gritty sandstone, resembling that of the Gondwana coal measures, was noticed at Namchi and its neighbourhood in south-western Sikkim at about 5,000 feet above the sea level, in 1946. In 1950, similar rocks were also noticed in the Rangit Valley, west of Namchi and about 4,000 feet below the latter. Further investigations were made by the Geological Survey of India in 1952.

The coal is non-caking and low in moisture. It needs a good draught to catch fire and burns with a short smokeless flame if the draught is maintained. It gives a strong heat which lasts longer than that provided by the usual bituminous coal. It will serve as an ideal fuel for domestic consumption. How much of the coal can be recovered has to be worked out by detailed prospecting with the help of boring. In most cases underground mining is possible owing to the over burden of hard massive sandstone. Where the seams are covered by soilcap, open-cast quarrying will have to be resorted to instead of underground mining. There is no dearth of timber in this area, but labour has to be imported as the area is sparsely populated.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September, 1953. As compared with August, the September Index for Food shows a drop of 3 points, while those of Clothing, Fuel and Lighting, and Miscellaneous remain unchanged at 492,239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 2 points during September, 1953.

GOOD DEMAND AT EXPORT SALE,
BUT RATES EASE

FAIR ENQUIRY AT DUST AUCTION

At Sale No. 19, held on 26th October, offerings in the Export auction consisted of approximately 62,000 chests. There was a good demand although at slightly easier rates. Stylish Orange Pekoes were a strong feature of the sale and they were about one anna dearer, while Pekoes remained fully firm. The few Darjeelings offered were also well supported and generally sold at or above valuations. Tippy BOPs and OFs with useful liquors also sold well. Clean Common and Medium brokens received less support this week and they were generally half to one anna easier. Fannings grades were selling at half an anna below last rates, while the best C.T.C. Assams were also easier.

Quotations	1953	1952
Clean Black Pekoe	Rs. 1-13-8 to 1-14-0	Rs. 1-7-3
Clean Common B.P.	1-11-6	0-15-6
Medium Assam B.P.	1-12-0	0-15-6
Good Assam B.P.	2-0 to 2-1	2-1 to 2-2

Internal Auction

At Sale No. 19, held on 27th and 28th October, offerings of dusts consisted of 18,677 packages and again met with a fair general demand. Black leafy exportable types came in for strong enquiry and were fully firm while the very commonest offerings were slightly dearer. Medium showed a slightly easier tendency and the Commons and Low Mediums were up to ½ anna easier. Better CTCs were firm but those showing a decline in quality were from ½ to 1 anna easier. Darjeelings were irregular but the very flavoury ones were keenly sought after.

Quotations	1953	1952
Medium Double Dust	Rs. 1-9-8	Rs. 1-4-0
Med. Assam Grainy Dust	1-9-0	1-8-8 to 1-9-0
Best Assam CTC Dust	1-11-6	1-11-6

Offerings of other grades consisted of 629 packages and were slightly easier in sympathy with the export market.

LOCAL FREIGHT MARKET
RATES IMPROVE

UPWARD TREND OF BUSINESS

SINCE the last report there has been a distinct upward tendency in most markets and quite a marked improvement in local rates. Improved American trading has given a fillip to rates in that market and a large number of coal fixtures were made. Hampton Roads to Alexandria paid 50s for three Greek 10,000 tonners in November-December. Japan paid a new higher rate of \$9.50 for October-November loading. Six American vessels were chartered to Savona at \$7.80 and Antwerp paid 32s. The Mediterranean market assumed a more lively appearance with a good enquiry for smaller type vessels for ores and Black Sea grain. Colombo-Japan scrap has been fixed at 70s f.i.o. by the Rosa M which was reported fixed for consecutive coal voyages to Colombo at 42s 6d but failed to secure approval from the Director General of Shipping. Ore charterers indicate \$8.20 f.i.o. from Calcutta to Japan which is much more attractive business than the 50s at present indicated by coal shippers. A number of fixtures have been made for ore from Mormugao to Continent at rates varying from 54s to 60s.

LINSEED

Firm conditions prevailed throughout last week and the main feature was a shortage of ready supplies. Stocks were exceedingly scarce and supplies from upcountry were very limited. Consequently there was an advance in the price for ready and near deliveries. There were keen enquiries from local crushers for ready goods but business was reported on a very limited scale. The oil section continued unchanged. The market remained generally firm with a small volume of trading reported locally. Latest quotations were as follows: Ready Rs. 20-4 per maund; October/November Rs. 19-10 per maund; November/December Rs. 19-4 per maund.

HIDES AND SKINS

The market in skins ruled firm. Stocks were less than in the previous week.

Bazarr Sales

(Between 13th and 26th October, 1953)

Cowhides:—Wet salted (Ord) 8,800 pcs. on the basis of Annas 8-3 to Annas 9-6; Wet salted (Ord) 52,500 pcs. on the basis of Rs. 8-8 to Rs. 9-8; Wet salted (Slaughtered) 14,500 pcs. on the basis of Rs. 12-4 to Rs. 24.

Goatskins:—Wet salted (Daisee, Killed) 63,900 pcs. on the basis of Rs. 235 to Rs. 400; Purneah-Kissenjani 7,000 pcs. on the basis of Rs. 280 to Rs. 295; Assam-Dinajpur-Murshidabad 29,900 pcs. on the basis of Rs. 270 to Rs. 329; Patna (Ord) 6,400 pcs. on the basis of Rs. 180 to Rs. 212-8; Pakur 1,000 pcs. on the basis of Rs. 245 to Rs. 260; Muzaffarpore-Darbhanga-Patna 1,78,900 pcs.

SHELLAC MARKET REPORT

The Shellac market during the fortnight ended 27th October though steady at the beginning was quiet and inactive and a small business passed. It ruled firm after the first week and turned firmer towards the end—a moderate business passed at improved prices. Quotations were as follows:—

Standard Pure Buttonlac	Rs. 115 value.
Pure Buttonlac	Rs. 115 buyers.
Lemon No. 1 Shellac	Rs. 108 value.
Lemon No. 2 Shellac	Rs. 110 to Rs. 112 buyers.
F. O. Std. I Shellac	Rs. 103 value.
Pure TN Shellac	Rs. 105 to Rs. 108 buyers.
4% I.T.N. Shellac	Rs. 93 buyers.
No. 1 Kusmi Seedlac 3%	Rs. 102 to Rs. 103 done & buyers.
No. 2 Kusmi Seedlac 3%	Rs. 95 to Rs. 102 basis done & buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 90 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 92 to Rs. 96 basis done & buyers.
Ordinary Bysaky Seedlac (C.P.) under	Rs. 88 to Rs. 90 done & buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 83 to Rs. 84 buyers.
Kireelac	Rs. 48 to Rs. 49 done & buyers.

Shipments during October until the 24th were 18,251 packages.

SUGAR ARRIVALS IRREGULAR

During the week ended 27th October, prices of sugar for ready ex-Kantapukur delivery were: Rs. 30-8 a maund for Indian ordinary grain (D23); and Rs. 30 wholesale and Rs. 30-5 retail for Java sugar. Arrivals were irregular and aggregated about 6,000 bags over the week. Stocks totalled 15,000 bags of Indian and 15,000 bags of Java sugar, while sales amounted to 3,000 bags in the local markets. Ex-mill rates ranged between Rs. 28-8 and Rs. 29-8 a maund because of good enquiry from Assam, Orissa and Bihar in anticipation of the Divali holiday. There were some enquiries from Tuticorin and Calicut, but interest later declined. About 4,300 tons of Mexican sugar are expected to arrive soon.

COMPANY AND PUBLIC NOTICES

THE INDIAN STANDARD WAGON COMPANY
LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, on Monday, the 30th day of November, 1953, at 11 a.m. to consider and if thought fit to pass, with or without modification the following resolutions, namely:—

1. (As an Extraordinary Resolution)—That the Authorised Capital of the Company be increased from Rs. 30,00,000 to Rs. 40,00,000 by the creation of 40,000 Ordinary Shares of Rs. 25 each.

2. (As a Special Resolution)—That the Articles of Association of the Company be altered in manner following:—

In Article 4, the words "At the date of the adoption of these Articles" shall be deleted and in the same Article, the figures "30,00,000" and "40,000" shall be deleted and the figures "40,00,000" and "80,000" substituted therefor respectively.

3. (a) That it is desirable to capitalise a sum of Rs. 9,74,625 being part of the undivided profits of the Company standing at the credit of the General Reserves and accordingly that the said sum of Rs. 9,74,625 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 30th day of November, 1953, holders of the 38,985 issued Ordinary Shares of Rs. 25 each in payment in full for 38,985 new Ordinary Shares of Rs. 25 each and that such 38,985 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share for every issued Ordinary Share held on the 30th day of November, 1953, by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects pari passu with the existing Ordinary Shares save and except that they will not participate in any dividend declared in respect of any period ending on or before 31st March, 1953, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b) That pursuant to the above resolution, and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 38,985 new Ordinary Shares credited as fully paid up amongst the persons who are on the 30th day of November, 1953, holders of the 38,985 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares submitted to this said capital bonus in satisfaction of the said capital bonus and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 30th day of November, 1953 by some persons to be appointed by the Directors in that behalf under Article 168 of the Articles of Association of the Company.

The Share Registers of the Company will be closed from the 23rd November, 1953 to the 30th November, 1953, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta, 27th October, 1953.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 100's Rs.	Rate per cent.	Paid-up per Share Rs.	Market Quotations 28-10-53 Rs.	A year ago Rs.	Year of Issue	NAMES	Amount Issued in 100's Rs.	Rate per cent.	Paid-up per Share Rs.	Market Quotations 28-10-53 Rs.	A year ago Rs.

COAL COMPANIES

O Po F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXI No. 3282

COMMON SENSE AND QUACKERY ON UNEMPLOYMENT

LIMITED ROLE OF COTTAGE INDUSTRIES: PACE OF GOVERNMENT SPENDING

UNEMPLOYMENT has dominated discussion of economic matters throughout most of this year in India, just as production did two years ago and planning did last year. The subject has invited the attention of all sorts of pundits, some qualified and some not; a good deal of sound sense has been spoken and written on it, and a good deal of arrant rubbish. Two recent pamphlets, one by an industrialist and one by a politician, illustrate these two types of contribution. The first point to grasp about unemployment in India is that it is not new. By this we mean not simply that there has always been a large measure of unemployment, but also that employment policy cannot be separated from "the economic question" which has been under discussion from various points of view ever since India began to feel the disturbing effects of Western industrialism. When we speak of employment we are not turning to some new department of economic policy where different aims can be pursued, leaving aside for the time being such other familiar economic objectives as higher living standards, greater productive efficiency or fuller development of national resources. Advance on all these fronts can and must be made more or less simultaneously. There can be no question of suspending economic progress in most directions while we find more jobs for a growing population. The observer who sees this fact knows that there is no simple answer to complaints of unemployment, and he recalls attention to the wider problem of general economic progress. The observer who does not see this fact is likely to produce some quack's remedy that will multiply the number of jobs available in a short space of time.

Mr K. D. Jalan understands this aspect of the matter quite clearly and he states it in a paragraph that is worth repeating in full: "Unemployment in India is, by all available indications, of such a magnitude that no single measure of whatever intensity and volume can even touch the fringe of the problem. Agriculture, industry, fiscal policy or public works, none of them alone is capable of eradicating this source of national waste and misery. And it is imperative that both for humane and economic reasons a solution must be found to meet the growing intensity of the situation. An integrated programme for the promotion and implementation of inter-related economic development policies together with a change in the social pattern of the country can alone be of help to us in this direction. No action of a temporary nature will in any way affect the basic trend, though it might be capable of providing temporary relief in a way that would only make things worse when the effect of such action comes to an end. The problem cannot and should not be viewed divorced from the economic development of the country." This passage makes as much sense (and this is the test of its truth) if one reads "poverty" or "inefficiency" or "under-consumption" instead of "unemployment".

Mr Chandul Parikh, M. P., Member of the Council of States, takes quite a different view. Lacking all historic or economic sense, he thinks unemployment can be dealt with in isolation and, what is more, he thinks he has found the answer. The long pamphlet in which he develops this answer is such an inferior piece of work that it would not be worth noticing except that his *clavis universalis* is today a much spoken of weapon in India, and one that has an appeal to anyone who has ever come under the influence of the

Mahatma or belonged to the Congress. The solution to the problem, says Mr Parikh, is the promotion of small-scale and cottage industries. The process by which he arrives at this answer and the alleged arguments he adduces in its support are well worth study because they are approved in a general way by thousands of well-meaning people, many of them in office in the States. He begins by dramatising the rift between the cities and the country districts, the former fat and prosperous, the latter full of haggard and unemployed men. (The fact that unemployment is predominantly urban, not rural, he disposes of by mere assertion to the contrary.) This situation, he says, is "explosive" and he hints at dangers of revolution. He proposes to remedy it by fantastic regimentation, and control of the whole economy in the interests of the cottage craftsmen and small industries. At least he has this advantage over most other economic reactionaries, that he realises that nothing less than wholesale regimentation will ever give the decayed crafts a chance. He does not share the illusion that, with a few rupees in finance, a marketing organisation and some official support, the cottages will begin to put the mills out of business.

Small-scale industries are to be protected by "judiciously reserving" areas of manufacture to them, by penalising more efficient competitors by means of "levy of cess, a differential sales tax, reservation of types of production and a ceiling on present production;" finally, immense subsidies are to be paid to the small industries and, under Government guidance, they are to expand until they absorb all the country's unemployed. Sociologists will have no difficulty in recognising here the introduction of the caste system into industrial life, a revival of the notions of "economic justice" of the medieval Catholic Church, and the complicated manufacturing controls of pre-revolutionary France. It is typical of Mr Parikh's ignorance that he says in support of his programme that "the causes that led to the French and Russian revolutions should not be forgotten so soon," when in fact what he is recommending is the policies of Colbert, the Minister of Louis XIV, whose enemy was the bourgeoisie that later successfully carried through the French Revolution to gain its economic freedom. Mr Parikh's panacea for unemployment would cause such extensive dislocation of the economy and such ruthless urban retrenchment, that revolution would be a very likely result.

Most people who recommend revival of the crafts would not go as far as Mr Parikh in his assault on modern industry, so it might seem unnecessary to criticise his idiosyncrasies. But if they do not go as far as he, that is only because they are not as consistent. The case is really simple. As Mr Parikh says, "The whole fabric of small and cottage industrial development will fall down for want of legitimate finance." A revival of the crafts sufficient to affect the level of employment would require large funds, both given directly as subsidies and indirectly as marketing advantages, as well as immense outlay on Government organisation and advice. These funds have to come from somewhere and a moment's thought shows that most of the Indian Government's present revenues come from exactly that section of modern industry which it is sought to handicap. The only way to get enough money to help the crafts is to tax the factories so heavily that they will no longer be able to compete—and thus will no longer be able to provide the funds. The present tax on mill cloth to help the handlooms is an excellent example of a useless compromise: it has not transformed the position of the weavers because it is not heavy enough,

and in order to make any difference to their economic status it would have to be so draconian that the mills could not long continue to pay it.

There are many good reasons for wanting to help the decayed cottage industries, not the least important being aesthetic reasons. But the crafts will only survive as parasites on modern industrialism; it is ludicrous to suppose that the parasite can replace the host as a provider of employment or material goods. Until this is recognised, small scale industry and cottage crafts will continue to be produced as miraculous remedies for the unemployment problem. In fact the crafts have a very limited contribution to make to a solution of this problem, and the sooner their rôle is put in perspective, the sooner will discussion of employment policy (especially among members of the Congress Party) become more realistic. The case of Japan, so frequently quoted, is exactly the instance that proves that cottage industries can only flourish as an adjunct to a rehabilitated agriculture and a vigorous secondary industry—and even then they remain the source of much of the botched work that has given the label "made in Japan" its damaging significance. When India's agriculture and industry are as efficient as Japan's, her crafts will be more important.

It is refreshing to return from this quackery to the common sense of Mr Jalan. (Mr Jalan has been hiding his talents as an economist, as a lucid expositor of Keynes and as a writer of immaculate prose.) Because he understands that employment is only one of several ways of measuring economic activity, he offers an excellent general essay on India's economic policy, but he does not promise to find millions of more jobs overnight. Even the protectionism that is apt to be advocated by industrialists whenever the weather turns against them is stated here with considerable moderation and with an eye to its effects on the buyers of Indian exports. It is truly unusual to hear an Indian industrialist saying: "Any action on our part which may lead to reduction in the aggregate employment outside is likely to be reflected in reduced demands for the products of our industries for export and thereby hit our own interests ultimately".

The lines of approach Mr Jalan suggests are instruction in birth control, more vigorous attempts to increase agricultural efficiency, tax concessions and exemptions to encourage new industry, more Government support for the indigenous engineering industry, a revival of Swadeshi, official assistance for small entrepreneurs, closer study of export markets, a housing programme assisted by relaxation of rent controls, by cheap loans and by tax remissions, faster spending on the public works under the five year plan, more deficit financing, possibly lower interest rates, and educational reform. None of these proposals is original and many of

UNSCRAMBLING BRITAIN'S STEEL

PROGRAMME OF DEVELOPMENT

THE word used to describe the return of the British iron and steel industry from the state to private enterprise is "unscrambling". It is not strictly accurate, for the various units of the industry were never completely blended like the constituents of an egg beaten up to make an omelette. That the companies comprising the nationalised industry retained their separate entities showed that the politicians lacked conviction when, after significantly long delays, they brought under the ownership of the state the second of the twin foundations of British industry. Nationalisation of the coal industry, and its organisation in regional bodies directed by a national board, was never very strongly opposed; for the industry's financial record did not suggest that it would ever be able to attract enough private capital. The iron and steel industry, on the other hand, was efficient and prosperous; and its companies had built up individually an international reputation which could not be sacrificed in anonymity. The first operation in the immense process of selling back the industry is now in hand. From the 29th of October to the 9th of November the financial institutions and the general investing public can apply for the ordinary shares of The United Steel Companies Limited, one of the biggest and most efficient units in the industry. They can apply for shares against payment in cash or—this is an unprecedented feature of the issue—in one or more of 28 listed Government stocks (valued at the prices quoted on 23rd October). The issue involves 14 million £1 shares, offered at 25s. each, to yield almost 7½ percent on a prospective dividend of 9 percent.

The Financial Times index of industrial ordinary shares comprises shares of companies of more or less comparable status; yet when the United Steel prospectus was published the index was showing a yield of little more than 5½ percent. There is no adequate explanation of the disparity other than the threat of renationalisation. The Labour Party has necessarily stated, through several of its principal spokesmen, that if the Conservatives return steel to private enterprise—which they are doing—the industry will be brought again into state ownership if Labour is returned to power; also that no more will be paid for it than last time—whereas the first reoffer of shares, even though it looks cheap by comparison with existing investments, represents an apparent profit to the state on the basis of compensation paid to former shareholders. However, few people believe that the Labour Party has any serious intention of renationalising the industry individually, though a new broad programme of nationalisation would, presumably, necessarily include iron and steel.

The state issued Government stock, to a value of something over £200 million in exchange for the iron and steel shares which nationalisation removed from the Stock Exchange list in February 1951. It is expected that new iron and steel shares to a value of roughly £250 million will have been issued by the time that the transfer back to private ownership is completed. The difference is not, of course, clear profit. Whatever may be said against nationalisation of iron and steel, it cannot be said that the state impeded capital development. An ambitious capital programme has been put into effect after, as before, nationalisation; so the assets which are being returned to private ownership are genuinely worth more than those which were acquired.

By agreement with the Government, the industry is committed to continue the programme of development. It is planned to provide four years hence about 20½ million tons of steel annually—about 4 million tons more than the current rate of output. Some authorities are unhappy about this commitment. The British Iron and Steel Federation pointed out in its bulletin published in October that over-expansion could be as bad as under-development. The development plan is realistic in the sense that it is based on estimated demand for the various steel-based products. But it is impossible to estimate demands accurately in the present state of the world market, over a period extending years ahead. Furthermore, as the Federation pointed out, if the demand for steel is to be much increased there must be a corresponding increase in demand for coal, electricity, iron-ore, carrying and loading facilities, and so on; therefore, a corresponding increase in investment in these goods and services is implied. If expansion of steel-producing capacity is too ambitious, so that capacity is under-employed, the industry will have to carry excessive capital overheads, and the prices of British steel will not then be as favourable in relation to world prices as they are at present.

The Steel Act this year has established an Iron and Steel Board, whose function is to supervise

the industry. The Board's first major directive has lately been issued: it requires that any proposals for modernisation or development costing more than £100,000 be submitted for the Board's approval. Nor is the industry free to fix its own prices: the authorities may hold them at specified maximum levels. But in practice international competition, in steel and in steel-based goods, will doubtless act as an effective check on the price-increases which some observers have lately foreseen. The industry is not, indeed, being returned to private enterprise at an easy time; nor is it being restored to full economic freedom. The difficulties and restraints may be a partial explanation of the favourable terms offered to investors; though pessimism regarding steel implies pessimism regarding British industry in general, which, in turn, would imply that British industrial ordinary shares in general were overvalued. Anyway, the London Stock Exchange may be a little uneasy until this whole immense transaction is completed.

CURRENT COIN

India as an Investment Prospect.—The U.S. Department of Commerce has issued a handbook entitled *Investment in India* for the guidance of potential U.S. investors which gives the reassuring impression that the climate for foreign investment in this country has improved. One reason for this improvement, it says, is the growing realisation that private foreign investment, and private enterprise in general, can make an important contribution to economic development. As a result, more investors from abroad are being admitted on "what appear to be mutually satisfactory terms." The Government favours most those enterprises which are vital to India's economic development and welfare, involving large capital investment or advanced technical processes; those which further the training of Indian business men, technicians and labour in the operation of industry; and those which "improve India's foreign exchange position. Favoured least are, firstly, enterprises of a "luxury" nature; secondly, those which compete with Indian industries (particularly cottage industries) which are

fairly adequate for present needs and which might be disrupted; thirdly, those which seek to begin with the assembly of imported components rather than actual manufacture. Each investment proposal is considered on its merits, and terms for admission may vary according to how important the Government considers the enterprise and how effectively the investor presents his case. The guide specifically mentions steel, cellulose pulp, newsprint, raw film, industrial explosives, dyestuffs, soda ash, moulding powders and fertilisers as fields in which India has sought foreign investment. The case so far seems fairly stated, but of much greater interest here are the obstacles, in American eyes, to greater investment in this country. The screening of investment proposals is described as discouraging to U.S. companies because of the time and money involved. Other obstacles are the higher rates of some taxes and some ambiguity of the tax law. Personal income taxes are very high and other necessary allowances make it expensive for individual firms to send their technicians to India. Although the minimum number of nationals to be employed in a foreign firm is not prescribed, it is normally a condition of entry that Indians be trained in all levels of technical and managerial operations. Labour disputes are frequent except in firms that have given special attention to labour relations. The handbook states that business in this country proceeds at "a more leisurely pace" than in the United States and sales techniques are far from aggressive. Profit margins are apt to be high even where the return on capital is not exceptional. Contrary to a widely held opinion, it adds that the return has generally compared very favourably with the average return on investments in the United States. "A large number of individual Indian investors and at least some of the managing agencies are eager to co-operate

in joint ventures with foreign investors, particularly where the latter can supply patents and technical knowledge, as well as some capital." The handbook on India (price 70 cents) is the third to appear, similar guides on Venezuela and Colombia having been published by the U.S. Commerce Department earlier this year.

Clerks Without Jobs.—Discussion of the unemployment problem is vitiated by the lack of precise information, but the Directorate-General of Resettlement and Employment deserves congratulation on two important analyses, based on employment exchange statistics, which it has recently published. The first of these, which appeared a month ago and was discussed in *Capital* on 8th October, showed that people are right in thinking that clerks find it harder than most categories to get jobs; the second, which has just been published, suggests some of the reasons why. It shows that at the end of September this year just over 159,000 persons were on the live register of employment exchanges as applicants for clerical jobs; of these 9.2 percent were less than 18 years old, 73.7 percent were 18 to 24, 15.8 percent were between 24 and 40, 0.7 percent were 40 to 45, and 0.6 percent were over 45. The implications seem clear: since 83 out of every 100 applicants are less than 24 years old they can have had little or no experience, and most of them probably applied for a job soon after passing the matriculation or degree examinations. The attachment to white-collar employment that is among the worse products of the Indian educational system thus leads to long, static queues of hopeful but untalented clerks waiting for jobs that are simply not there—nor likely to be for some considerable time to come. To absorb this ill-equipped output of the nation's universities, the Government seeks to build schools in the rural areas where they will not go and which in any case, from the strictly economic point of view, are not likely to be very productive. In doing so, it might well note a significant observation made by the latest official review of the working of employment exchanges, for September—that many exchanges reported a shortage of trained teachers, while a large number reported a surplus of untrained ones. Apart from this, the review contains the usual disheartening features. The number of registrations increased over the previous month, carrying the total on the live register to an all-time high of 512,353; submissions increased (62,354 as against 61,420) but placements declined (12,507 as against 13,114). One of the brighter aspects of the situation was that for the first time in several months a slightly larger number of vacancies were notified (18,557 as against 17,389) and several regions seemed a little more optimistic than they have been about employment opportunities. Experienced engineers, draughtsmen and over-seers were wanted in many places but clerks could not find work. The official review makes the noteworthy comment that in West Bengal "labour disputes over the grant of Pujya bonus to workers adversely affected the employment situation in the private sector." A house-to-house sample survey in one major exchange area yielded interesting results which have some bearing on the employment situation. It showed that, despite voluntary certification to the contrary, about 40 percent of the registrants who told the exchange that they were unemployed were in fact fully or partially employed, but were seeking better jobs through the employment service. The percentages relating to educationists and technical registrants were particularly high.

Export "Know-How" for Industry.—The Federation of British Industries conducted an interesting experiment at the end of October, when it held a three-day conference at Buxton designed to get as much as possible of the "know-how" of successful exporters made available for the benefit of British industry as a whole. As the results of the conference are to be published, it may well prove of great value to industrialists in other countries. Some 150 people of experience, types of trade, of consumer and capital goods, of different parts of Britain, and of those known to world, assembled at Buxton, together with a few outside specialists, such as merchants, bankers and export credit experts, to analyse the exporting issues and methods in five separate groups. The conference was preceded and followed by plenary sessions. To most issues there is not one answer applicable to all firms, destinations or industries; export is very varied and leaves ample scope for individual initiative. But by this means it was hoped to assemble all the factors that should be in the minds of firms when they decide on their course of action, and the published results ought later to give a really useful guide to all F.B.I. members. The five discussion groups, consisting of 25 to 30 individuals, each dealt with one of the following subjects:

Discovery of Opportunity.—This group dealt with the choice of markets, commercial intelli-

gence, market research and the sources of information about regulations and other formalities to be complied with in overseas markets. It discussed such questions as: "To what extent is a conscious policy followed of limiting export activities only to the most favourable markets? What is the connection between specialisation in products and specialisation in markets? Should the exporter respond to national pressure for particular markets, even if this means the sacrifice of steady continuity for opportunist trading?"

Organising for Exports.—This group dealt with such questions as whether it is true that British exporters cannot adopt mass production methods because they must cater for infinitely varied and fluctuating markets. It also discussed the important question of whether the scale of export activities is limited by lack of finance both for production and to cover normal delays in payments. This raised the whole question of credit, credit insurance and terms of payment. Other questions discussed by the group were quotations and conditions of sale, delivery promises and similar factors.

Relations Between Exporter and Transporter.—This group was concerned with the choice of intermediary, i.e., the factors influencing the choice of distribution method. It also dealt with such vital questions as the assistance which should be given by the manufacturer to his intermediary, for instance in the matter of holding stocks and after-sales service. It discussed the possibilities of co-operative selling.

The Export Sales Force.—This group brought under review the whole question of how to recruit, train and organise the export sales force both at home and overseas.

The Creation of Opportunity.—This group discussed promotional activities of all kinds, including those carried out by individual firms and those which trade associations and others can carry out to enhance the prestige of British industry generally. It discussed such questions as exhibitions and trade fairs, trade missions, the distribution of British trade journals overseas and other forms of overseas publicity, including those carried out by the British Government's Information Services.

World Production at Record Height.—The world's industrial production in the first six months of this year was 8 percent higher than the output in the corresponding six months of 1952, according to the latest U.N. Monthly Bulletin of Statistics. The Bulletin says that the volume of world production, excluding that of the Soviet Union, rose in the second quarter of this year 3 percent above the record high level of the previous two quarters. Quarterly data on the industrial output of the Soviet Union were not available, but the Bulletin quotes an official Moscow report as stating that the U.S.S.R.'s production in the first half of this year was 10 percent larger than in the same period of 1952. If this information is included in the calculation, the Bulletin says, the world industrial output in the first half of 1953 is estimated to be 8 percent higher than in the same period of 1952. Of the U.N. member countries for which detailed data were available, the increase of production was highest in the United States. There the output in the second quarter of 1953 was 14 percent greater than for the same period last year, mostly due to the increased production of steel, automobiles and textiles. Canada's industrial activity was also rapidly growing—the output in the second quarter of 1953 topped the 1952 production in the same period by 9 percent. Western Europe produced 3 percent more in the first half of 1953 than it had in the first six months of 1952. The most impressive gain over previous levels occurred in Japan, where the total industrial output was 16 percent higher in the second quarter of 1953 than in the corresponding period of 1952. An upward trend also continued in the industrial production of India, where the output rose 7 percent since last year. Especially notable was the gain in India's textile industry, which produced 15 percent more in the first half of 1953 than it had done in the first six months of 1952.

U.S. Tariffs.—The American Tariff League has declared that United States tariffs are lower than those of most of the world's trading countries. In a special study submitted to the Commission on Foreign Economic Policy, the league said the USA is seventh above the lowest—in a list of 43 countries—in the ratio of customs collected to total imports. The league, in letters to Commission members, contradicted the recent statement of the former U.S. Ambassador to Britain, Mr. Lewis Douglas, that "for 30 years the barriers that we have erected against imports into the United States have been incompatible with and have operated against the re-establishment of international economic financial health and equilibrium." Comparing 38 of 43 trading studies examined, both

before and after World War II, the league report shows the U.S.A. in 1937 was ninth above the lowest with a ratio of 15.8 percent. In 1951, the United States dropped to seventh with a ratio of 5.1 percent. This decrease of 68 percent, according to the report, was larger than that listed for all but eight of the other countries in the same period. The study lists Chile, Pakistan, Haiti, Egypt, Ceylon, the United Kingdom, El Salvador, Burma, Guatemala, Mexico, Iran, Iraq, Thailand, Venezuela, New Zealand and India—in that order—as having the highest ratio of customs duties collected to total value of imports, with percentages ranging from 46.3 to 17.3 percent. Nations having lower ratios than the United States are listed by the league as the Netherlands, Norway, Sweden, Argentina, Belgium, Luxembourg, Denmark, and Japan, with percentages from 4.6 to 1.6 lower.

The U. S. Tariff Commission recently reported that 93 percent of the nation's 1952 imports of goods were covered by tariff agreements with other nations. The commission's report said duties had been reduced on more than 89 percent of last year's imports. Another four percent were under agreements which protected against any increase in tariff rates. The report showed a considerable decrease had been effected in tariff duties since the beginning of the trade agreements programme started in the early 1930's. The average duty for total imports fell to 12.2 percent as of 1st January this year from more than 17 percent in 1945. Average duties before the trade agreements were more than 24 percent. The commission pointed out that a maximum duty reduction of 50 percent—as permitted by law—was made on 52 of the 123 major classes of goods imported last year. Less than the maximum reductions were negotiated on 52 other items, while no cuts were made on 25 other imports.

India's Balance of Trade.—Preliminary figures issued by the Reserve Bank of India on Saturday show that both exports and imports contributed to the decline in the value of India's foreign trade during the first half of 1953 as compared with the previous half-year. Exports fell by Rs. 62.4 crores—rather more sharply than imports—with the result that the surplus of Rs. 18.6 crores in the second half of 1952 shown by the merchandise account was converted into a deficit of Rs. 39.9 crores. The quantity as well as the prices of exports declined. Terms of trade deteriorated from 91 to an average of 88 in the first half of this year, despite a fall in the import price index, which shows how considerable the decline in export prices has been. This should serve as another reminder of the lesson that since foreign markets became more competitive Indian industry's chief problem has been to reconcile itself to lower prices, an adjustment it can make only by reducing costs. Taken in conjunction with the fall in the import price index, the rise of Rs. 2.4 crores to Rs. 211.8 crores in commercial imports suggests that the quantum of imports has increased, a result that was to be expected in view of the gradual and welcome liberalisation of import policy over the past year or so. Government imports at Rs. 79.5 crores show a decrease of Rs. 6.3 crores over the second half of 1952. Net invisible receipts fell by about Rs. 8.2 crores over the two half-years. Preliminary figures on the balance of payments show that the surplus on current account was only Rs. 50 lakhs in the first half of this year, as against Rs. 63.5 crores in the previous six-month period. During the year 1952-53, an overall surplus of Rs. 64 crores was achieved, but this result might not be repeated: the earlier surpluses had already been turned into a deficit of Rs. 12.6 crores during the quarter April to June, 1953.

"CAPITAL" CHRISTMAS TOY FUND

Statement of Account for 1952.

Balance from 1951	Rs. 1,410 12 0	
Collection in 1952	Rs. 5,041 0 0	Rs. 6,451 12 0
Less		
Cost of toys distributed to 8,744 children in 1952	Rs. 3,706 7 0	
Postage	Rs. 10 3 3	Rs. 3,806 10 3
Balance in 1952 B.F.		Rs. 2,645 1 9

WE acknowledge, with thanks, the receipt of the following donations to the 1953 fund:

Rs. 85 Mr. W. J. B. Walker's Farewell Luncheon.

Rs. 25 R. M. Sethna

The fund now totals, including a carry-forward of Rs. 2,645-1-9 from last year, Rs. 2,755-1-9.

in Calcutta... they know that
more motorists use triple action Mobiloil
than any other motor oil in the world!

Under the benign influence of Shantiniketan, Calcutta, centre of many great Indian industries, has become a home of the arts as well. Music, dancing and sculpture flourish here; and the 'Bengal school' of painting continues to grow in stature and popularity.

With their wise regard for both spiritual and material values, the motorists of Calcutta naturally throng to the sign of the Flying Red Horse — not only for its artistic merits, but also for its promise of smooth, economical running. No music is sweeter to their ears than the sound of an engine lubricated with Mobiloil, the Heavy-Duty motor oil giving greater protection than regular or premium-type oils; and they know that Mobiloil...

SAVES ON WEAR by lubricating properly at all temperatures;
SAVES ON REPAIRS by preventing harmful carbon deposits in the engine;
SAVES ON PETROL by preventing acids eating away the metal parts, which causes loss of power.

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobil lubrication — the complete motor service — and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

BANK LIQUIDATION ORDINANCE ANALYSED

INCREASED LIABILITY OF DIRECTORS: CONSERVING DEPOSIT CURRENCY

[By R. M. Mitra]

IN terms of a notification issued on 26th October, 1953, and exercise of powers conferred under Article 123 of the Constitution, an ordinance has been promulgated to introduce changes in legislative provisions relating to liquidation of banking companies. These changes arise out of the recommendations submitted by the Banks Liquidation Proceedings Committee appointed in July, 1952. Though the name of the Committee seemed to restrict the scope of its enquiry to the narrow field of procedural questions, the actual terms of reference left the Committee free to traverse a wider range, and its recommendations consequently covered a large number of issues. The ordinance incorporates several important recommendations of this Committee, of which some pertain entirely to questions of procedure and others involve changes in concepts of the substantive law.

The ordinance provides for appointment of a court liquidator for every High Court, to act as official liquidator of banks in the course of winding up by the court, and of the transfer of all such proceedings pending before official liquidators to the court liquidator. In the case of those High Courts under whose jurisdiction the number of banks in liquidation is not such as to justify this special appointment, the Central Government may, however, sanction necessary exemption; and again, in the case of a High Court for which a court liquidator is appointed, the High Court may, if it considers proper and expedient, direct that any proceeding before an official liquidator at the commencement of the ordinance shall not be transferred to the court liquidator. The appointment of a permanent and continuous office to deal exclusively with banks in liquidation is intended to facilitate quicker and more efficient realisation and distribution of assets, and also to eliminate the possibility of extortionate demands on the part of liquidators appointed ad hoc.

It may be observed, however, that section 170 read together with section 171A of the Indian Companies Act automatically makes an official receiver (a permanent official) an official liquidator in a winding up action, unless the Court in exercise of powers under section 175 appoints "a person or persons other than the official receiver" as official liquidator or liquidators, and (in respect of banking companies) unless, further, the Reserve Bank applies for such appointment under section 39 of the Banking Companies Act. Though the new provision leaves no discretion to the Court, (except concerning pending proceedings,) the existing provisions might also conceivably be utilised to create a suitable tradition to achieve the purpose intended to be served by the new law. As a specific provision in this regard however, it has been considered necessary to alleviate the present situation, it seems that the reservation regarding pending proceedings may militate against its practical usefulness, because the machinery of control now operated by the Reserve Bank should be expected to prevent a repetition of bank failures of the magnitude of the past five years.

Settling Debtors' Lists

The assets of a banking company in liquidation comprise mainly debts awaiting collection. As the necessity for honourable dealings ceases to operate as a commercial motive when a bank starts winding up its affairs, it is a frequent occurrence that debtors, unless compelled under law, evade payment of even legitimate dues. The liquidator has, therefore, to undergo a prolonged and costly process of filing multiple suits as the law does not permit different debtors to be joined in one single suit which lacks a common cause of action. The provision for settling lists of debtors as made by the ordinance, therefore, marks a significant departure which should minimise delay in collecting debts and reduce law costs that whittle down the net value of assets available for distribution to depositors. This provision, if competently administered, may in fact be expected to revolutionise the procedure of liquidation.

It may be noticed that this conception of an omnibus decree is not unknown to law. A similar instrument is already available to the court under sections 184, 186 and 187 of the Indian Companies Act, in respect of shareholders' liabilities under partly paid shares. It is noteworthy that the efficacy of the new provision relating to debtors has been usefully augmented by (a) imposing on the liquidator the obligation to file in the court lists of debtors within six months from the date of the winding-up order, (b) making the settled list not subject to appeal in respect of a debt of less than Rs. 5,000, (c) extending the facilities of summary land revenue processes to decrees of the liquidator (though, in the discretion of the court). The main provision is, however, hedged with the qualification that it will not be available when a debt is secured by mortgage of immovable property on which mortgages in favour of other persons also subsist, in order perhaps to ensure that the rights of other parties

interested in the same property may not be prejudiced.

Reserve Bank's Powers

Section 45 D of the Banking Companies Act authorises the Court to direct the official liquidator (if other than the Reserve Bank) to obtain the advice of the Reserve Bank on any matter relating to the winding up of a banking company. It further provides that in such cases the Reserve Bank shall be empowered to examine the records of the relative proceedings. The ordinance widens the scope of this provision and empowers both the court and the Government to direct inspection by the Reserve Bank of banks under liquidation so that irregularities may be brought to the notice of the liquidator for consideration by the court; and the Reserve Bank is also authorised to obtain from the liquidator information on any matter relating to liquidation. The Banking Companies Act confers on the Reserve Bank ample powers for inspection and consequential action in respect of operative banks, but these powers cease with the commencement of the winding up of a bank except perhaps in respect of matters coming within the purview of the Reserve Bank before such commencement.

Experience showed that it was not practicable for the Reserve Bank to have recourse to section 39 of the Act and get itself appointed as official liquidator to hold every liquidating bank within the ambit of its supervision and influence. The Act was accordingly amended in 1950 and the above noted section 45D introduced with a view to associating the Reserve Bank with the conduct of liquidation proceedings where persons other than the Reserve Bank may be appointed official liquidators. But this section also has not proved adequate for the purpose; and the ordinance seeks to redress what is considered an unsatisfactory state of affairs from the point of the Reserve Bank's over-all control of the entire banking system of the country.

Directors' Liabilities

The court is vested with powers under sections 195 and 196 of the Indian Companies Act for private and public examinations respectively of directors. But depositions made under section 195 may not be used as evidence in any civil or criminal proceedings, and though depositions under section 196 may be admissible as evidence in a civil proceeding, an examination under this section can be ordered by the Court only if the liquidator applies for the same, and not of its own motion (as in the case of a private examination). It appears to be the intention of the ordinance to fill these lacunae. Powers are accordingly conferred on the court to examine past and present directors at its discretion, and it is also provided that directors' depositions will constitute evidence in any civil or criminal proceedings against them. The ordinance further creates a new form of statutory disqualification for the directorship of a banking company, in addition to those enumerated in section 86 I of the Indian Companies Act. Lack of capacity or competence, if so determined by the court as a result of examination under the provisions of this ordinance, may disqualify a person who has been a director of a banking company in liquidation, from holding similar office relating to any banking company for a period of up to five years.

The view has been gaining in strength and currency that the directors of a banking company

A CALENDAR IS NOT ENOUGH!

CHOOSING a suitable Christmas or New Year gift for a valued client or business associate abroad always presents a problem.

Be different this year, and solve it simply and well by giving a year's subscription to the "Overseas Weekly."

This friendly gesture may do more than gain goodwill for your firm and the recipient's lasting appreciation. It may well be a sound investment.

Heads of foreign import and export concerns trading with India are vitally concerned with "what goes on" here. The "Overseas Weekly," faithfully mirroring political, economic and social developments and recording the progress of the Five Year Plan, tells them what they wish to know.

They will be in goodly company, too, for industrial and political leaders in many lands are constant readers of the "Overseas Weekly." Indeed, its subscription list reads like a World Gazetteer.*

* The "Overseas Weekly" is sent by air to subscribers in:—

occupy a position which is invested with the character of special trust. Though this proposition is not open to much dispute, the manner in which its enforcement is being sought raises questions as to whether it is sufficiently realised that possible misuse of wide discretionary powers may cause material damage to a director whose principal vocation is after all other than the directorship of the bank and who has in the nature of things to act on assumptions and representations. It may not also be injudicious to sound a note of caution against over-emphasising the part played by a casual director (as distinguished from the executive authority) in fashioning the affairs of a company. It needs to be borne in mind that there is a necessity to get able, though busy, men to be associated with banking companies as directors and that such men may be scared away by the prospect of unforeseen harassment. It may further be pointed out that sections 195, 196, 235, 237, 238A, 282 and 282A of the Indian Companies Act and section 46 of the Banking Companies Act seem to contain necessary provisions for investigation and enforcement of liabilities of directors of banking companies; and it would appear that what is required is proper implementation of these provisions and not further extension of their scope.

Preferential Payments

Section 234 of the Indian Companies Act makes it possible for an official liquidator to pay any class of creditors in full in preference to other creditors, subject to the sanction of the court. Considerations of equity have, however, rendered it necessary to make special protection of small depositors a statutory obligation. Legislative provisions in this direction were introduced in Switzerland and Argentina in 1935. The ordinance follows these precedents and provides that every depositor in a savings account shall be entitled to a preferential payment up to Rs. 100 and that every current account holder having a balance not exceeding Rs. 500 shall be entitled to preferential payment up to Rs. 100.

The ordinance represents a determined move to ensure more expeditious and less costly liquidation proceedings and an attempt to protect small depositors, and further, seeks to strengthen the instrument for enforcement of directors' liabilities. Within the compass of its apparent and "immediate" objectives, the ordinance may be counted on to produce the expected results. But the State's responsibility towards public welfare and for protection and conservation of deposit currency yet remains to be fully discharged. Firstly, it should be realised that expenses involved in investigation of a failed bank's affairs and institution of legal proceedings thereabout diminish the fund available for distribution to depositors. As such proceedings are necessary in the interest of public welfare, these expenses should be borne by the State; and there should be a well-marked separation between the two functions of (a) realisation and distribution of assets and (b) investigation and penal proceedings.

Secondly, the manner in which the liquidator carries out his functions leads to dislocation, and even, dissolution of productive and distributive agencies which fail to make alternative borrowing arrangements. Forced sales of business assets undertaken by liquidators not only cause harm to the economic structure of the country, but also occasion losses to depositors through lower prices attending forced sales. State-sponsored liquidating institutions intended to take over the assets of failed banks have accompanied legislative control of banking in a number of countries like the U.S.A., Argentina, Belgium, Italy and Switzerland. These institutions either arrange for the transfer of failed banks' assets to operative banks or undertake their orderly realisation; and in some cases also take over liquid assets of operative banks. But it should be obvious that control and direction without protection will not only fail to be fully effective, but also may sometimes defeat their own objects. It may be assumed that the present ordinance will be followed by a regular enactment. Let it be hoped that when the occasion arises the legislators will take due note of the logical implications of the concept of legislative and administrative control of banking.

APPOINTMENT OF COURT LIQUIDATORS UNDER BANKING ORDINANCE

Following the promulgation of the ordinance expediting the liquidation procedure of banks, the Government of India has issued a notification under which court liquidators will be appointed in the High Courts at Calcutta and Bombay and of Travancore-Cochin. The other High Courts in India have, for the time being, been excluded from the scope of this notification, as such appointment is not yet considered necessary by the Central Government having regard to the number of banking companies wound up and the other circumstances prevailing.

With a view to assisting the handloom industry, the Government of India in January 1953 passed orders restricting the production of dhoria by mills to 60 percent of their average monthly production during the period April 1951 to March 1952. Under these orders the production of mill-made dhoria was brought down to about 30,000 bales per month compared to the average monthly production of 50,000 bales in 1951-52. While the average quantity of dhoria produced by mills has been within this figure, certain units have produced dhoria in excess of their permissible quota. The Government has been considering what would be the most suitable method of achieving their objective, namely, to ensure that the production of dhoria by all mills is restricted to their permissible quota. By an order issued recently, it has been decided to levy an additional excise duty on dhoria produced in excess of the quota. The duty would be on an graduated scale ranging from two annas per yard to eight annas per yard on the quantity of dhoria produced in excess of the permissible quota.

THE CALCUTTA MONEY MARKET

CREDIT CONTINUES EASY

Tuesday, 3rd November. CREDIT continues to be in easy supply. There was a slight squeeze in Calcutta before the week-end but more money has been on offer since. The inter-bank rate is 1½ percent, against 1¼ percent in Bombay. Demand for sugar finance is expected to develop in the third week of this month. The jute mills are well stocked with raw material and their requirements for accommodation at the beginning of the busy season might not be as heavy as last year. There have already been signs of increased demand for credit on foodgrains account. Cotton textile stocks have been moving more freely since the ordinance reducing the export and excise duties, and this is reflected in bank loans.

After a fair number of tea bills late last week, the exchange department has been quiet. Remittance has been normal. Principal exchange rates are steady.

Bullion ruled steady and prices improved all round. Fresh bull support and short-covering, followed by reduced arrivals, helped to improve sentiment in silver, which gained from the previous week's level of Rs. 150.2 to Rs. 152.6, quoted today. The ready price was quoted at a premium of 4 annas presumably due to Diwali offtake. The price continued unchanged at 74d. in London and at 85½ cents in New York.

Gold also recovered from Rs. 81.4 to Rs. 81.12 ad. sovereign from Rs. 56.12 to Rs. 57.14.

Tenders for Rs. 1½ crores of three months' Government of India Treasury Bills were opened on Tuesday, 3rd November. The total amount offered was Rs. 2,71,00,000. Tenders at Rs. 99-6½ percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 86 percent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 2-6-10 percent per annum. Tenders for another Rs. 1½ crores of three months' Government of India Treasury Bills will be received up to 11 a.m. on Tuesday at Bombay and up to the close of business on Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 30th October Government of India Treasury Bills for Rs. 11,64,25,000 were sold in favour of the Reserve Bank.

(Table of Reserve Bank returns etc. on page 616.)

The return of the Imperial Bank of India for the week ended 23rd October, 1953, shows a rise of Rs. 6.32 crores in total deposits to Rs. 209.85 crores. Investments in Government Securities are up by Rs. 1.19 crores to Rs. 86.07 crores, while other authorised investments remain unchanged at Rs. 10.64 crores. Loans, cash credits and overdrafts have declined by Rs. 2.41 crores to aggregate Rs. 89.95 crores, while bills discounted and purchased have advanced by Rs. 60 lakhs to stand at Rs. 9.68 crores. Cash and balances are, in consequence, shown at Rs. 26.20 crores or Rs. 4.95 crores higher.

The statement of the position of Scheduled Banks for the week ended 23rd October, 1953, discloses Demand and Time liabilities at Rs. 531.57 crores (Rs. 12.73 crores on account of borrowings from Banks) and Rs. 334.36 crores (Rs. 4.23 crores) compared with Rs. 520.35 crores (Rs. 14.55 crores) and Rs. 332.92 crores (Rs. 2.89 crores) respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 2.79 crores and Rs. 3.40 crores to aggregate Rs. 32.85 crores and Rs. 53.74 crores, respectively. There is a rise of Rs. 2.15 crores in investments to Rs. 339.30 crores. Advances and bills discounted at Rs. 452.58 crores reveal a drop of Rs. 6.93 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.0 percent and 52.3 percent against 9.4 percent and 53.9 percent.

The following is a statement of the cash balances of the Central Government on the last day of July, 1953:—

	Rs.
(1) At the Reserve Bank of India in India	112,18,52,000
(2) At treasuries in India	1,74,59,000
(3) In England (Sterling converted at 18d. the Rupee)	3,98,45,000
Total	117,91,56,000

TREASURY BILL MATURITIES

Details of 3 months Bills outstanding with the public on 6-11-53.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
6-11-53	6-2-54	1,50,00	Rs. 2 6 10%
30-10-53	30-1-54	1,50,00	Rs. 2 6 7%

A DITCHER'S DIARY

which, as Mr. Sim pointed out, ran a similar course to the strike at the Bengal Coal collieries. But later developments in both disputes showed beyond doubt that most of the workers did not favour a strike, "but that they had not the strength, organisation or right leadership to face the militant minority that were under the influence of an unrecognised and self-styled labour leader". That the members of a union—which is supposed precisely to give them strength, organisation and right leadership—lack those qualities is often the result of the political preoccupations of their elected officers. Leaders who give themselves over to party political work neglect the care and education of the rank and file workers, and it is then open to any determined band of dissidents to use every technique from demagogy to goadism to get the workers' backing for struggles that will not benefit them tuppence.

The Queen is to lose forty million subjects. Friends of Pakistan will hope that she does not lose them to the Mullahs. It is not only the Hindus and other minorities who would find themselves uncomfortably restricted under a theocracy; most Muslims, and especially those who hope that their country will progress in freedom and prosperity, must fear that Pakistan's experience of governance by theologians will be no happier than Puritan England's and Catholic Europe's. The provision introduced in this past week, that the interpretation of Islamic principles will be left to judges and not mullahs, is a decided improvement, particularly since non-Muslims can appear before the judges and argue their own interpretation of the Quran. The proposal to levy a tax for the propagation of Islam is less reassuring. But perhaps at their worst these things amount to no more than the "establishment" of several Christian churches such as still obtains in many countries that have left religious intolerance far behind. The letter of the law (which could scarcely have been different considering Pakistan's origin) is less important here than the growth of democratic manners among the people, and there is some reason to hope that religious minorities in Islamic Pakistan might yet be better off than minorities in some countries overseas that are guaranteed their "rights" under the most benevolent of constitutions.

A visitor to India lately complained to me that it was difficult to begin to take an intelligent interest in the nation's affairs as reported in the Press because to read any day's paper you had to know what had been going on for months before and, into the bargain, the reader was assumed to have a sound general knowledge of Indian politics and social life. Nothing was explained for the benefit of those who had just begun to take an interest in a particular chain of developments and there was no effort to refresh the memory of readers who did not keep a file of cuttings. I was incautious enough to disagree, saying that this was just the first impact of an unfamiliar scene. Whereupon I was asked to give some account of what was happening in Lucknow. I couldn't. I remembered well enough the dispute about whether students should have to join the union, because I recalled the surprise I felt when Mr. Nehru said he had never heard of a union that all students had to join—to my knowledge many universities are "closed shops". But what happened after that, I had forgotten, if I ever clearly knew. Most of the people and papers I turned to for enlightenment also seemed to have forgotten. Diligent research produced only the suspicion that perhaps they had

forgotten in Lucknow too. Nothing that has been made public, neither the issue of union membership nor the hunger-strikers, appears to account for the events of the last week—arson, destruction of public property, mob fury against individual politicians, and the shooting dead of a rickshaw coolie. We have seen often enough here in Calcutta how the original issues in an agitation can be quite lost to sight and when they are rediscovered, after violence has mounted on violence, they look to be a quite inadequate reason for all the unrest that has ensued. In such cases, great responsibility clearly lies on those who first introduce violence. But since the police naturally fall under suspicion as the possessors of the most effective means of violent action, enquiries into "who started it" often end up—quite unfairly, I think—in a charge that the police exceeded their duties. Things seem to be shaping that way now in Lucknow, and we need not be surprised if the trouble ends with the announcement that a public enquiry will be held into the firing (but not the stone-throwing), into the tear-gassing (but not the arson). The University authorities are already being accused of having handled the students tactlessly. This may be right, but really, need students be so difficult to handle?

I had not realised how much of Britain's precarious dollar balance with the United States she owes to the troubled state of international relations until I added up the income she derives in the hardest of currencies from the presence of American troops in the United Kingdom. There are only 38,000 U.S. troops in Britain, and they have 20,000 dependents with them, so—looking at it in another way—the fact that they can be of so much help in maintaining the balance might show how marginal the dollar gap is. These soldiers and their families spend over \$5 million a month on personal requirements outside camp, plus another million on laundry, hotels and transport. Another million or so comes from their purchases of fresh food and medicines, while British goods worth \$1.6 million a month are sold over the counters of PX stores. Together with the wages the U.S. services pay British civilians and the money they spend on construction work, the Financial Times calculates that the total income from this source is \$122.5 million a year. Now tourism is conventionally described as Britain's biggest dollar-earner, having netted \$88 million last year, but these unwilling tourists are contributing much more than that. In fact, their presence is worth the equivalent of over a tenth of all Britain's exports, visible and invisible, to the United States. It is ironical that they would rather not be there and that the British people would rather that there were no need to have them there.

By a coincidence, the film *Tonight We Sing*, in which Isaac Stern plays the rôle of the violinist Eugene Ysaie, will be shown in Calcutta on Saturday, a few days before Mr. Stern gives his concert in the New Empire, on Monday. In our Hollywood dominated age, to have played your instrument in the movies is taken as a surer mark of virtuosity than to have played it in the Salle Pleyel (Eileen Joyce had no honour in her own country until she played the piano on Miss Ann Todd's behalf in the *Seventh Veil*), so Mr. Stern should be guaranteed of a good attendance. I understand that he is still a young man, though he has been touring the world for the last seven years as a concert violinist in which time he has been acclaimed as a front-rank performer. His concert on Monday is at 6-15 o'clock in the evening.

I. M. F. ON EXCHANGE RESTRICTIONS

The International Monetary Fund: Fourth Annual Report on Exchange Restrictions, 1953 (343 pages. Price not stated). Two pre-requisites for the maximum expansion of international trade are stable exchange rates and the free convertibility of currencies. One of the main objectives of the International Monetary Fund is to assist in the establishment of a multilateral system of payments in respect of current transactions between the members and in the elimination of foreign exchange restrictions which hamper the growth of world trade. The Articles of Agreement of the Fund, however, permit considerable freedom to member countries in the application of exchange restrictions and many members have availed themselves of the arrangement under Article XIV, Section 2. These arrangements are transitional, it being "the philosophy of the Fund Agreement that restrictions are to be regarded as temporary devices to be removed as soon as conditions permit." The Fund at the same time recognises that the world situation differs so considerably from what was envisaged at the time the Fund Agreement was drawn up that many more countries rely on the use of exchange restrictions to cope with balance of payments problems than was thought would be found eight years after the end of the war.

Article XIV, Section 4 of the Articles of Agreement provides that not later than three years after the date on which the Fund begins operation and in each year thereafter the Fund shall report on the restrictions still in force under Section 2 of this Article. The first report of the Fund on exchange restrictions under the above provisions was produced in March 1950 and the second and third in the following two years. In 1952 the Fund entered into a new period of activity in the field of restrictions as a result of the requirements for consultation between the member countries and the Fund on the further reduction of exchange restrictions. Article XIV, Section 4 of the Fund Agreement, *inter alia*, provides that five years after the date on which the Fund begins operation and in each year thereafter any member shall retain any restrictions inconsistent with Article VIII, Sections 2, 3 or 4 shall consult the Fund as to their further retention. The consultations were held with 45 countries and covered such matters as their overall and bilateral balance of payments position, the nature and extent of their international reserves, the domestic situation in its relation to the balance of payments position, the measures being taken to bring greater stability and ways and means of achieving relaxation in restrictions.

The present report is in two parts. Part I gives the views expressed by the members and the Fund in the course of consultations, considers the consultation programme for 1953 and summarises other Fund activity in the field of restrictions. Almost all member countries consulting the Fund held that the restrictions which they maintained were necessary for balance of payments purposes. The inconvertibility of many currencies, the inadequacy of available reserves, the fear of capital flight and the persistence of dollar deficits in balances of payments were repeatedly stressed. In emphasising their need for restrictions, members indicated, however, their awareness that the use of such practices frequently had undesirable effects in addition to the effects which the countries were seeking to achieve. Many countries indicated that anti-inflationary measures must be continued if they are to establish conditions which would enable them to get rid of restrictions. In some cases the countries recognised that the large-scale removal of restrictions including the unification of exchange rates would be virtually impossible without the correction of overvalued currencies. A particular difficulty noted by several consulting countries concerns the problem of selling in the United States. These countries felt that U.S. import policy would play a very important rôle in affecting the nature of their ultimate policy regarding restrictions. Both the relaxation of restrictions and the building up of exchange reserves were stated as being among the basic policy goals of most countries; there was, however, a considerable divergence of opinion about the order of priority of these two goals. While the Fund felt that member countries had made sincere and significant efforts to eliminate the conditions giving rise to their restrictions, it retained its previously expressed conviction that importance must continue to be attached to the necessity for further action in the monetary and fiscal fields and expressed its concern over the continuing use and spread of multiple currency practices and discriminatory currency arrangements. The Fund also recorded its view that the interest of all member countries would be much advanced by the convertibility of sterling on a firm basis and the relaxation of United Kingdom restrictions. The Fund is of the opinion that a point has been reached where the action of surplus countries could well have a decisive effect in permitting further progress by deficit countries towards relaxation of restrictions.

Part II of the report consists of a general review of the development in restrictions during 1952 and early in 1953 and a series of country surveys outlining the restrictive systems of certain member countries. In addition, country surveys of certain non-member countries are presented at the end. The individual surveys recording the position in each country give the origin, development and essential features of their ex-

change control systems. The additional knowledge obtained by the Fund from its consultations has enabled the country surveys to be written in a form which conveys a clearer and more comprehensive picture of the working of the individual exchange control systems than had hitherto been possible. The variety of restrictive practices described in these surveys reflect the diversity of purposes for which member countries are now employing such practices and indicate the difficulty of generalising about the need for the further retention of exchange restriction.

The Fund will be issuing similar reports annually as long as restrictions on payments and transfers for current international transactions are still in force.

INTERNATIONAL TRADE STATISTICS

YEARBOOK FOR 1952

The Yearbook of International Trade Statistics 1952 (Obtainable shortly from United Nations Sales Agents, price 30s. or the equivalent in other currencies) The figures on external trade appearing in the Yearbook of International Trade Statistics 1952, just released by the Statistical Office of the United Nations, make possible an analysis of the importance of external trade. According to the figures, the production of goods for export in 1952 accounted for about 9 percent of the total production of goods and services in the world (excluding Albania, Bulgaria, Mainland China, Czechoslovakia, Eastern Germany, Hungary, Poland, Rumania and USSR). In 1938 this proportion was about 7 percent. But, as an individual country is dependent on imports as well as exports, the foregoing figures should roughly be doubled to obtain a measure of the "average" interest of a country in its foreign trade. Figures for the importance of foreign trade, imports and exports, can be compiled for individual countries. (The figures are percentages obtained as the quotient: value of imports plus exports divided by the "total availability of goods and services." The denominator is equivalent to the value of gross domestic product plus imports.)

In the case of the United States, though the value of its external trade is very large, yet relative to the availability of goods and services, the importance of trade is small (7 percent). The proportion was almost the same in 1938. The proportion of foreign trade relative to the availability of goods and services for certain other important countries in 1952 was: United Kingdom, 33 percent; France, 20 percent; Japan, 20 percent; India, 11 percent. Countries for which the importance of trade is high are: Southern Rhodesia (68 percent) Netherlands (59 percent), Belgian Congo (57 percent), Ceylon (55 percent), New Zealand (50 percent), Ireland (43 percent) and Belgium-Luxembourg (41 percent). The dependence of countries on foreign trade was generally greater in 1952 than in 1938, indicating a recovery of foreign trade from its relatively depressed condition in the immediate pre-war period. The table in the Yearbook on world and regional value of trade shows that world trade increased in value from \$49,900 million in 1937 to \$151,600 million in 1952, somewhat below the all-time high of \$155,600 million in 1951. This increase is due mainly to price rises, the actual increase in volume amounting to only 35 percent between 1937 and 1952.

The Yearbook, which is the third issue in the series, contains 384 pages of statistics of the external trade of 70 countries (as against 52 in the second issue) covering 97 percent of world trade. For 25 of these countries (covering about 65 percent of world trade) the analysis by commodity of imports and exports is according to the United Nations Standard International Trade Classification (SITC). In addition to these, the Yearbook contains tables showing world trade and world and regional quantum and unit value indices of exports. For each of the 70 countries, the following tables are shown: (i) An historical table showing, for the years 1930-1952, ten series, five for imports and five for exports, the five being total merchandise trade (in national currency), trade in gold (in national currency), conversion rates for converting total merchandise trade from national currency to U.S. dollars, quantum index numbers and unit value index numbers; (ii) Tables showing the quantity and value in national currency of imports and exports in recent years analysed by commodities. Where possible, these tables are based on the SITC; where not, they are compiled from figures based on the national commodity classification; and (iii) Tables showing for recent years the value in national currency of import and export trade analysed by principal countries of origin and destination.

THE DELAYS AND DEARNESS OF LITIGATION

CENTRAL GOVERNMENT CIRCULATES PROPOSALS FOR REFORM

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Government of India has recently circulated its proposals to reform the judicial administration. According to reports, the Government considers the present system expensive, dilatory and cumbersome. With regard to its costliness, it is pointed out that since the Montagu-Chelmsford Reform of 1921 almost every province has looked upon court fees as a source of general revenue; they are no longer treated as payment for services rendered but as a tax on litigants to be used for general purposes. Simultaneously, every province has also been trying to reduce its expenditure on the administration of justice. But it is now felt that a litigant should not be made to pay large court fees for the benefit of the Exchequer and the State should not thrive on the quarrels of its citizens. Justice should either be dispensed free or the State should charge fees just sufficient to meet the cost of administering it. There is, therefore, a case for a substantial reduction in court fees. The argument has clear merits, but the crux of the problem is whether anybody can persuade the States to reduce court fees. There are a number of precedents—sales tax, sugarcane cess, motor vehicle taxes and cinema taxes, to mention only four—where the Centre's exhortations to bring about uniformity and reduction in taxes have fallen on deaf ears. The States have refused to modify their policy, unless perhaps the Centre offered to compensate them for the loss they would suffer by reducing these taxes.

The Government of India, it is further understood, has suggested that lawyers' fees should also be scaled down and the system of arbitration should be encouraged, in order to avoid expenditure on appeals and counter-appeals. One method of reducing lawyers' fees would be to lower the fees made permissible by courts. Apart from encouraging recourse to arbitration, there is also a proposal to limit the number of appeals. It is suggested that there should be just one appeal, to be heard by an appellate bench of two judges, and an advocate engaged in trial court should be deemed to have been engaged throughout the suit. Another suggestion is to institute the district appellate bench, which would finally dispose of all cases and from whose decision there would be no further appeals without its leave. This is intended to reduce the work of the High Courts and thus also the expenses of litigants. Lastly, if a judge is satisfied that the winning party has been adopting dilatory tactics and thereby increasing expenses he could deprive it of costs. The Government seems also to overlook the widely held belief that petty corruption in the lower levels of court administration considerably raises the costliness of litigation.

The processing of a law suit, oral evidence, widespread perjury, understaffing of the judiciary, and the temperament of the judges themselves are regarded as factors contributing to the delays of judicial proceedings. It is urged that, as with the Indian Administrative Service, young lawyers selected for the provincial judicial services should undergo training under three senior judges. Periodical inspection of courts and munsifs is also suggested. Speeding up of processes, limiting the period for interim injunctions to three months, greater use of affidavits, amending the law of evidence, control of cross-examination and arguments, imprisonment after summary trial for perjury, avoidance of adjournments and speedy execution proceedings even if separate judges were needed are also proposed. Similar suggestions are made for criminal cases, including the substitution of juries for the system of assessors. Elimination of the existing practice of translating pleadings, judgments and the entire evidence into English, and the discouragement of stay orders are also recommended.

In India public opinion is not strong enough to put down either corruption or perjury. Witnesses can be hired. Further, in advising clients, the legal profession does not always discourage ill-founded but hopeless law suits. It is therefore felt that instead of letting people misuse the law courts, the Government should compel them to participate in the administration of justice and in the actual processes of adjudication. With this end in view the maximum use of panchayats and the universal enforcement of jury trials in sessions cases is recommended. It is claimed that panchayat courts will reduce delays, expenses and trouble for litigants, and the pressure on regular courts. They will also bring people into closer association with the actual administration of justice.

The main issue, however, is how far States will co-operate in implementing the scheme. The Centre, for instance, has so far played an ineffective rôle in co-ordinating education and public health measures and even in the implementation of labour laws. It has the right to tender advice, the States are likely to accept Central advice if it causes expenditure on the administration of justice to be reduced. But it is doubtful whether they will agree to reducing their income from court fees.

New Delhi

CABINET SUB-COMMITTEE ON PRODUCTION SET UP

PROPOSALS FOR SEPARATE SUPPLY MINISTRY AND NEW EXPORT BODY

(FROM OUR NEW DELHI CORRESPONDENT.)

31st October.

THE Prime Minister has set up a Production Sub-Committee of the Cabinet with himself as chairman. The other members of the Sub-Committee are the Ministers of Finance, Commerce and Industry, Transport and Railways, Defence, and Production. The various Ministries, it was felt, were working purely on a departmental basis, without much co-ordination. The Sub-Committee is intended to remove this defect. As with the Economic Sub-Committee of the Cabinet, it is intended to give the new body a Secretary with a small staff. Necessary data, already available in the reports of industrial panels, development committees and in the history of the war-time Supply Ministry, is being collected.

It is also proposed to create a Ministry of Supply with an independent Secretary. At present, the supply organisation, together with the Directorate of Disposals, is attached to the Ministry of Works. This arrangement is not regarded as satisfactory. Another noteworthy move relates to an export organisation. India's export trade has suffered because markets are now competitive, so it is proposed to set up a regular export organisation with committees for each major commodity entering the export trade. One suggestion is that banks should take greater interest in the export drive; a particular bank could specialise in financing a particular trade. The Commerce Minister, Mr. T. T. Krishnamachari, is leaving on tour of Saurashtra, Madras and Bombay next week, and hopes to discuss some of these problems with the interests concerned during his tour.

Transport Planning

Transport planning is the subject of a communication from Mr. K. C. Neogy, member of the Planning Commission, to State Governments. It is explained that for the implementation of the Plan it is necessary to ensure adequate supplies of raw materials for industry, which implies their reasonably prompt movement. Coal for brick-burning and other industrial uses, iron and steel, cement and timber are cited as examples. It is also necessary that stocks of commodities should not be allowed to accumulate for want of transport. Such accumulation would depress prices in the areas of production, create shortages in other areas and would hinder the time-schedule for the delivery of commodities intended for export. Mr. Neogy therefore asks whether State Governments are satisfied with the services rendered and facilities offered by the railways during the last two years. In this connection the latter have been invited to forward information on the following points:

(a) the demand for brick-burning coal, building materials and road metal in the State and the basis on which the demand has been assessed;

(b) the quantities of these items made available in the last two years, and in the first few months of the current year, and the gap between the demand and supply, if any;

(c) the expected demand, taking into account the additional requirements arising from any revised programme formulated by the State Government providing for additional constructional activities as a measure to relieve unemployment.

Soft coke is another commodity of interest to State Governments. Its importance arises from the fact that considerable stress has been laid in the Five Year Plan on avoiding denudation of forest wealth and conservation of cow-dung for manurial purposes through provision of alternative fuels. It is possible that these suggestions of the Planning Commission have not been implemented to the desired extent on account of the difficulty in securing the required quantities of soft coke to be used as a substitute fuel, for want of the required transport facilities. State Governments have been asked to give their assessment of the transport facilities required for the popularisation of soft coke and the offset which they visualise for this commodity over the next two years. The creation of additional railway transport facilities might take time, since the rolling stock requirements cannot be made available in their entirety from indigenous sources and there is still some uncertainty regarding additional imports. In the circumstances, short-term measures like extension of road transport in selected areas and building up of stockpiles of commodities by taking advantage of the slack period in the demand for wagons, would have to be devised so that development in other sectors might not be affected adversely.

Over the next three or four years, road transport has to play an important part by itself and as a supplement to railway transport, since the railways by themselves might not be able to cope with the additional demands for transport facilities arising from the execution of the Five Year Plan. The licensing policies of State Governments in the matter of road transport would largely determine the climate for development of the system of public carriers. In order to enable the Commission to have a proper appreciation of the developments in this field as visualised by State Governments, the following information has been asked for:

(i) the policy and future programme for passenger transport in the State;

(ii) the extent to which nationalisation of passenger transport would be achieved by the end of the period of the Plan;

(iii) the scope and the form in which private operators would be allowed to function in the non-nationalised sectors and whether long-term licences would be granted to give them a sense of security;

(iv) whether the Government envisages State operation of freight transport and the regions selected for this purpose;

(v) the licensing policy in regard to public carriers in the field of freight transport and whether any relaxation is envisaged to encourage freight transport by roadways;

(vi) the principal points between which freight transport services should be created to supplement railway facilities in the movement of commodities in the State;

(vii) whether road development programmes have been properly co-ordinated with the extension of road transport services in the State, namely, whether the roads, bridges, etc., could stand the expected additional traffic;

(viii) the part played by inland water transport and air transport of freight in the past and their future possibilities.

Four Hundred Locomotives Ordered

Germany, Australia and Japan have cut rates and shared in an Indian order for 400 locomotives, worth Rs. 15 crores, to be delivered by 31st March, 1956. Britain, Canada and the United States quoted rates higher than these three countries. India plans to obtain a total of 750 locomotives in the two years ending 31st March, 1956; she hopes to procure at least some of the remaining 350 locomotives through various aid programmes, including the Colombo Plan. Over the next ten years, about Rs. 100 crores will be spent on rolling stock. At the beginning of the five year plan, that is on 1st April, 1951, India had 8,200 locomotives, 20,000 passenger coaches and 202,000 wagons. Thirty-two percent of the locomotives, 36 percent of the coaches and 24 percent of the wagons were over-aged (that is, over 40 years old). During 1951-52, 1952-53 and 1953-54, orders were placed for 769 locomotives, 3,800 coaches and 32,300 wagons. These purchases have not appreciably reduced the percentage of overaged stock. If deliveries materialise as planned, the percentages of old stock should by 31st March, 1956, be down to the safe figure of 20 in the case of locomotives and coaches and ten in the case of wagons. As far as wagons are concerned the plan is to increase internal production by 20 percent, mostly by importing steel.

A certain number of wagons are being imported under aid programmes and the rest will be purchased abroad.

Collecting Burma's Debt

The Joint Secretary in the Ministry of Finance, Mr. M. V. Rangachari, will shortly visit Rangoon to discuss with the Burmese Government the early payment of its debt to India. The amount due from Burma on 31st March, 1950, was approximately Rs. 67 crores. The last instalment towards the repayment of debt was made by Burma on 31st March, 1952. The first *aide-memoire* about the repayment of debt was sent to Burma in December 1951. The Burmese Government suggested a date in October 1952 for discussion, but it was not convenient for the Government of India. The discussions are now due to take place next month. Burma's balance of payments position is regarded as sufficiently encouraging to allow it to resume paying back its debt to India.

New Body to Study States' Finances

The Ministry of Finance has set up a small organisation in the President's Secretariat to make a continuous study of the finance of State Governments in order to make available sufficient data for an enquiry by the next Finance Commission. The last Finance Commission recommended the establishment of such an organisation. The organisation will work in close liaison with the Finance Ministry and will make a study of the budgets of the State Governments, the changes in their finances from time to time, the rates of taxes in operation, the effects of additional measures of taxation undertaken by them, the working of their commercial enterprises and their effect on State finances. A study will also be made of the various reports on the administration of State Governments, the reports of the proceedings of State legislatures, the reports of their Public Accounts and Estimates Committees, and other points of interest affecting State finances. The organisation will also obtain direct from State Governments information in regard to the progress of various social services, such as education and public health. Current data about the number of schools, the number of hospitals and dispensaries, the number of beds provided, the number of patients treated and the dispersal of facilities, both medical and educational, in rural as distinct from urban areas will be obtained periodically and tabulated, as also will the data about the development and maintenance of communications.

Manpower Needs under the Plan

The Planning Commission is making an assessment of manpower requirements in relation to the Five Year Plan. The study of the manpower

Castings

of Infinite variety...

for architects

Cast iron pipes for draining rain water and for sewage purposes are important items in an architect's list of requirements. So are flushing cisterns, water tanks, spiral staircases and many other cast iron products. ISCO, with many years of experience in manufacturing cast iron products of all kinds, undertake to supply these products to any design or specification.

THE INDIAN IRON & STEEL COMPANY LTD.

MANAGING AGENTS: MARTIN BURN LTD 12, MISSION ROW, CALCUTTA

BRANCHES: BOMBAY Post Box 276 • NEW DELHI Post Box 44 • KANPUR Post Box 232

aspect of planning has not received enough attention, it is explained. In certain directions, the progress of the Plan itself is impeded for want of personnel. This is particularly true of the National Extension Service and the community development projects. If a large number of students are to be diverted into practical vocations before they pass the matriculation examination, it is necessary to know in what directions and to what extent training facilities should be expanded, having regard to the needs of economy as a whole. A small working group on Manpower Studies was recently constituted by the Planning Commission. It has already completed its initial work on the preparation of a classified statement of occupations. Meanwhile, the Planning Commission proposes to obtain the manpower data in the following fields:

- (1) Agriculture (including National Extension Service and community projects, minor irrigation, land reclamation and development, animal husbandry, forestry, fisheries, research, etc.)
- (2) Irrigation and power;
- (3) Industry—iron and steel, and heavy chemicals;
- (4) Education;
- (5) Medicine and public health;
- (6) Road construction programme;
- (7) Road transport development; and
- (8) Railway development and construction programmes.

The Planning Commission has made two broad suggestions to Central Ministries:

- (i) The responsibility for collecting and assessing manpower data over its entire field of development should be that of the Ministry concerned. Thus, it will be for the Ministries to address Departments in the States as well as other authorities. The Planning Commission will look to the Ministries for the relevant information in its final form.
- (ii) In relation to any field of development, every effort should be made to collect manpower data for development programmes both in the public and in the private sector.

Education Advisory Board to Meet

The twentieth meeting of the Central Advisory Board of Education will be held here on 9th, 10th and 11th November. The Education Minister, Maulana Azad, will preside. The session is expected to be an important one in view of the growing unemployment amongst the educated middle class and the need to divert young students to technical work after matriculation. As expected, the Board

will discuss the report of the Secondary Education Commission. It will also survey progress in implementing the educational development plans of the Centre and the States. Another important question relates to the replacement of English by Hindi and/or a regional language as the medium of instruction in universities, and discussion of "the place of English in the national life of India." This latter aspect is inter-related to the question of English teaching in universities and secondary schools, which has also been included in the agenda. The Defence Ministry would like the Board to consider the desirability of changing the medium of competitive examination for preparatory schools for the Armed Forces from English to the regional language. The Board will also discuss a proposal to introduce sex education and social hygiene in all training schools and colleges for teachers and for a refresher course for teachers in service and for social workers. Other important items on the agenda relate to the establishment of new universities, rural education at the collegiate stage, early childhood education and education of the handicapped, on all of which it will be guided by the reports of expert committees.

Kosi Project Finances

No financial sanction has yet been given to the Kosi project, it is authoritatively learned here. Reference is made to the Prime Minister's speech to the Central Board of Irrigation earlier this week, in which he asked irrigation engineers to form a small unit in order to evolve scientific methods of tackling Bihar floods by studying meteorological and other data on the spot. Apparently, no such data exists at present. The Kosi project has had a chequered history. At the instance of the late Lord Wavell, a plan costing Rs. 177 crores was prepared. The project was to be completed in five stages. An advisory committee was subsequently set up to examine the project report. This committee claimed that the project report had made no provision for silt control in the first four stages. It felt that any Kosi project should deal first with silt and then with the flood problem. Instead of a high dam at Barahakhetra, it recommended a low dam at the nose of the Balka Hill nine miles below Chatra at a total outlay of Rs. 55.5 crores. Dr. Savage, who examined this scheme was sure that the Balka dam would be silted up in 17 years and would become useless after ten years. The engineers, according to reports, would like to control river floods by constructing a barrage. It is however not yet disclosed how a barrage would deal with the problems of flood and silt. Barrages or weirs are generally constructed for irrigation and not for flood control. This should explain the Prime Minister's anxiety to have all relevant data

collected in order to evolve a scientific solution of the problem.

Building a New Airport in Delhi

As a result of top-level talks, the Communications Ministry has been examining sites for an international airport for Delhi. Palam airport is held and used jointly by the Indian Air Force and the Civil Aviation Directorate. This dual control has so far retarded its development in accordance with international standards. At one stage it was hoped that the Indian Air Force would build a separate airport for itself and hand over Palam to the Civil Aviation Directorate for its exclusive use. For financial reasons, this is no longer regarded as feasible. It is explained that an airport for the Air Force would be twice as expensive as the civil airport. Apart from the problem of finding money, the Air Force has a heavy building programme in hand, and may not be able to take up the construction of a new aerodrome at Delhi for a number of years. These problems were recently discussed and resulted in the Civil Aviation Directorate appointing a technical committee to select a site for a separate civil airport for Delhi. This committee, it is learned, has made its report, listing a list of 17 sites from which the selection has to be made. Some of the sites are across the river. The committee's report is now under examination and a final decision is expected to be reached at an early date. In any case, it will take at least three years to build a new airport for Delhi. Meanwhile, Palam airport is being developed according to international standards, for instance by lengthening its runways. It is agreed that in case the Civil Aviation Directorate builds a separate airport, its outlay on the development of Palam airport would be deferred by the Indian Air Force.

Institute of Public Administration

The Planning Commission has convened a meeting of the senior Secretaries of the Government of India to discuss its plan for an institute of public administration. This is to implement one of the recommendations of the Appleby report. The proposal is not a new one. A similar institute on a modest scale was started by the late Gopinath Srivastava some three years ago, when he was a member of the Uttar Pradesh Public Service Commission. It published a journal, of which only a couple of issues actually appeared. The Prime Minister has taken considerable interest in the reorganisation of the services, as can be seen from his speech to the conference of irrigation engineers this week. According to reports, the Prime Minister has also addressed a letter to the Chairman of the Union Public Service Commission on the subject and has referred to this aspect of the problem in his recent circulars to State Chief Ministers. Beyond the general observations on the subject made by Mr. Paul Appleby, there does not, however, appear to be any concrete scheme to reorganise the Public Service Commission. The Prime Minister has presumably been thinking aloud and the whole matter appears to be in the discussion stage.

The functions of the Public Service Commission are clearly defined by the Constitution and their alteration is possible only by amending it. Mr. Appleby presumably ignored the judicial functions of the Commission under which it is empowered to deal with all disciplinary matters affecting a person serving under the Government of India or the Government of a State in a civil capacity, including memorials or petitions relating to such matters. The following comments made by Mr. Appleby are highlighted here:

1. Examining techniques are not up-to-date and conscious criteria not fully enough related to modern knowledge about administrative qualifications.
2. The examining approach is academic and not administrative.
3. The development of lower-ranking personnel is specially crucial if future governmental needs are to be met.
4. A host of minor public employees is selected too casually and inexpertly.
5. Advertisements seem to have been drafted by lawyers and not by skilled advertising or public relations men.

Mr. Appleby, however, does not wholly blame the Public Service Commission for the shortcomings of the administration. He says that "until the Government indicates willingness to hire the quality of high-grade persons really needed, no large failure may be laid at the door of the Commissions. There is a widespread failure to realise that paying what is necessary to get and to develop the kind of personnel needed for highest governmental effectiveness is the one paramount prerequisite to the improvement of the masses. The tardiness can lead to the most serious, self-defeating error. Average persons working in an average way cannot bring a wholly new day to India."

Extension of Press Act

The Indian Press Act, which is due to expire on 31st January, 1954, is being extended. Necessary legislation will be sponsored by the Government during the coming session of Parliament, it is learned.

The Government of India's Resolution on the Tariff Commission's Report on the continuance of protection to the calcium lactate industry has been published in the Gazette of India dated 31st October, 1953. Government has accepted the Commission's main recommendation that protection should be continued for a further period of three years from 31st December, 1953 at the existing rates of 27.5 per cent ad valorem (preferential) and 37.8 per cent ad valorem (most favoured nation) rates. It also accepted the Commission's recommendation that if during the period of protection, the price of calcium lactate imported from the United States of America falls below the domestic price, the Government should also accept the other ancillary recommendations of the Commission.

London

GAS COUNCIL EARNS LARGER SURPLUS IN 1952

NEW HOUSE REPAIR SCHEME

(FROM OUR LONDON CORRESPONDENT.)

THE present Parliamentary session ended last Thursday, on a comparatively quiet note, which was contributed to, no doubt, by the fact that apart from foreign affairs much of the time of the House of Commons was taken up with a series of surveys on the nationalised industries, based on their recently issued reports, to which references have already been made in earlier despatches. With reservations, these reports all recorded fairly satisfactory progress, and the various Ministers' acknowledgements of the fact were received with obvious satisfaction by the Opposition. The final report in the series, that of the Gas Council, shows that the industry as a whole earned a net surplus of £2,272,631 in the fourth year after nationalisation, against a surplus of only £1,440,916 the year before. Productive efficiency has been raised so that we are now getting an increasing quantity of gas from the same amount of coal, but there is a serious warning to the effect that the quality of gas-making coal is declining while its price is rising. To meet the former problem a sum of £1,000,000 is to be spent on surveys all over the country for sources of natural gas. So far as rising costs are concerned, there appears to be little alternative to charging the consumer more. The most serious problem of all, however, is the fact that the industry's plant is still valued at cost, rather than replacement cost. It is estimated that there would be an adverse effect of something like £20 million if this adjustment were made.

Mr. Peter Thorneycroft, President of the Board of Trade, also gave the House a survey of the results of the G.A.T.T. talks. He announced the British Government's refusal to assume the obligations of the General Agreement towards Japan, and the approval of a waiver for Britain which will give her, subject to conditions, dispensation from any obligations to impose duties on Commonwealth goods in cases where she is free to impose or raise tariffs on foreign goods, and where she needs to do so to protect her own industry. He also reported the agreement to extend for 18 months the bar against negotiating duties which are bound by the General Agreement, and the provisional agreement to make a comprehensive review of the General Agreement in the late autumn of 1954. Contrary to expectations, Mr. Thorneycroft was given a fairly smooth passage and it is evident that the Government's future policy in respect of the liberalisation of world trade will depend very largely on the measure of agreement which can be secured with the Commonwealth Governments—it being appreciated that they may well hold differing views—and the clarification of American commercial policy which may be expected from the labours of the Randall Committee. For the present, in fact, Britain is playing for time.

Repair and Maintenance of Houses

In view of Mr. Macmillan's success with the house-building drive, it is hardly surprising to learn that he is likely to play an equally important part in the new programme with some bold as well as novel proposals to deal with the repair and maintenance of older houses. A report just issued, which shows that it costs more to-day as it cost in 1939, yet more than 8,000,000 houses have their rents pegged at levels based either on 1914 or 1939 values, gives some indication of the dimensions of the problem which the Minister of Housing will have to solve. Reforms in the Rent Restriction Acts, so as to enable landlords to derive sufficient income from their properties to maintain them in good repair, must be involved, and any changes would directly affect about half the electorate. The move would undoubtedly be political dynamite, but there can be little doubt that if it could be so devised that any increase in rents is devoted solely to repairs and does not go to increase the landlords' net incomes, and also that some means can be found of financing major repairs or other the scope of rent increases by grants or other means, it would make a major contribution to solving the acute housing problem in the country. Building new houses is all very well, but the difficulty is that older houses at the same time are rapidly becoming uninhabitable, since few of them have received any attention for 15 years or more.

It is also expected that the Government will announce its intention to reopen the Liverpool Cotton Exchange next year. About June would be a convenient date for the next buying season, but there are many other factors to be taken into account, and not least of all the trend of the sterling area's dollar reserve. The future of the Raw Cotton Commission is also involved, for the trial run of the contracting-out scheme has landed it in not a few difficulties.

Liberalisation of Imports

It seems incompatible with Britain's mark-time attitude to G.A.T.T. that Mr. Butler should have made a bold gesture in the interests of European trade liberalisation by telling the Council of the Organisation for European Economic Co-operation in Paris on Thursday that this country would free from quota restrictions 75 per cent of imports on private account from Europe against the present figure of 58 per cent. It used to be 90 per cent before the balance of payments crisis necessitated import cuts. The Chancellor is undoubtedly taking a risk in view of this country's existing deficit of about £200 million with E.P.U., but it does bring us back

into line with all the other O.E.E.C. countries complying with the agreed minimum proportion of quota-free trade, and it may well pay dividends in other directions. At the same time Mr. Butler increased the annual travel allowances and added a further 18 countries to the list for which these are permissible, including countries behind the Iron Curtain and, be it noted, Afghanistan, Bhutan and Nepal!

A possible dividend would be the acceptance by O.E.E.C. of the proposal for a three months' truce in the provision of artificial Government incentives for exporters while the whole topic is examined by the various Governments. The subject has been under discussion by the national industrial federations of 13 West European countries, on the initiative of the Federation of British Industries, for the last nine months, and all agreed to persuade their individual Governments to take action. The idea is to stop "a senseless race between countries for ever bigger incentives" which are "concealed subsidies and have the effect of subsidising the customer, thus increasing prices or taxation in the producing countries." Whether or not three months will suffice to iron out all the differences of opinion on this vexed question is a moot point, but it is interesting to find that the airing it has already received at the hands of the businessmen has produced a response from some Governments, and that the move has the support of both Holland and Germany, perhaps the most extensive users of export incentives.

Industrial Production Up

Any measures aimed at making competition fairer in the export markets would be very welcome to British industry, which at the moment is turning out more goods than ever before. The index of industrial production for September, on the basis of information so far received, is expected to be a record 125.125 (1949=100). The previous highest was 123, reached in November, 1951, March and November, 1952, and March and May of this year. In September last year the figure was 115, so that this year's figure is nine per cent higher than last year's, and four per cent higher than in 1951. The Treasury makes its usual cautious approach and does not tell us which industries are responsible for the expansion, but we know that the steel and motor car industries continue to set up new monthly records and that the textile trades are also doing a lot better. The encouragement which this news affords is dampened somewhat by the fact that our exports have been virtually unchanged for something like nine months, and there is increasing evidence that production is now tending to exceed orders in a number of industries. Home demand is rising, and is said to be back at the average post-war level, but that is not nearly as valuable as a revival in overseas orders.

So far as export credit facilities are concerned everything possible is now being done. Mention was made recently of the formation of Air Finance with the backing of the Finance Corporation for Industry, City merchant bankers and the aircraft industry. The manufacturers of electrical equipment are now thinking along similar lines. This was revealed this week by Mr. D. M. Buist, Export Director of the British Electrical and Allied Manufacturers' Association, who said a memorandum was being prepared for the Board of Trade giving details of cases where electrical equipment makers are losing orders to overseas competitors because of lack of adequate long-term credit facilities. He claimed that credit facilities over seven to 15 years are being offered by Britain's competitors in certain overseas markets. Largely as a result of this fact, electrical exports from Britain are likely this year to be down by five or six per cent compared with 1952, and the most serious aspect of the matter was the falling off of new orders booked in export markets for heavy equipment.

Maize and Barley Futures Trading

It has now been decided that trading will start on 4th January, in two new cereal futures markets—maize and barley. The latter is an innovation, and the former a revival under new trading terms of a traditional hedging market which was closed on the start of the war. In both cereals the basis of the contract will be the commodity on a c.i.f. basis. The terms have been deliberately drawn widely to allow many types of these two feed grains to be tenderable against the contract. For both the minimum contract is to be 100 tons and the price is to be quoted per ton.

Brevities

The National Debt was increased by £160,762,379 during the year ended 31st March, at which date, according to a White Paper, it stood at £26,051,213,252. The main changes during the year accounted for increases totalling £936 million and decreases of £775 million. At 31st March, 1953, the total of the National Debt was £27,130,752,946.

A non-profit-earning company to provide increased fuel advisory services has been set up by the British Productivity Council at the request of the Minister of Fuel in accordance with the recommendation in the Ridley Report. The primary object of the company, to be known as the National Industrial Fuel Efficiency Service, is to provide general advice to industry and non-industrial establishments other than domestic users, and to give practical help to secure the most efficient and economical use of all forms of fuel, heat and power.

IMPORT AND EXPORT ADVISORY COUNCILS TO MEET

It has been decided to hold the next meeting of the Import Advisory Council on Saturday, 28th November, in New Delhi under the chairmanship of the Minister for Commerce and Industry. The Export Advisory Council will meet the following day.

Second Thoughts

Later, as a result of a closer analysis of the concessions a good part of the earlier enthusiasm vanished. It was found that superfine cloth would still be unprofitable in spite of the cut in the duty and the voluntary price reduction which many of the mills had themselves effected earlier. This realisation was not well received by the Ahmedabad mills, which specialise in this variety. It was urged that a reduction in the excise duty on fine cloth too was required. Many holders of cloth stocks and some of the mills tried to neutralise the abolition of the export duty on medium cloth by increasing prices of these goods, before the demand from abroad could materialise. The increase of cotton prices reduced the margin of profit created by the abolition of the export duty still further.

F.I.C.C.I.'s Views on Sales Tax

The Committee of the Federation of Indian Chambers of Commerce and Industry held a two-day session here this week, under the chairmanship of Mr. R. G. Saraiya. There was a big agenda which included some very important items. One of these was the Federation's reply to the comprehensive questionnaire of the Taxation Inquiry Commission. The Committee finalised their reply to the Commission, after going through the draft prepared by the committee of experts it had appointed for the purpose. But even more than the general problem of taxation, what has been worrying the Federation particularly is the almost impossible situation of the levy of sales tax on inter-State commerce by almost every State Government on business houses situated in other States selling goods to dealers within its territories—a direct result of the judgment of the Supreme Court. The Centre has been asked to persuade the State Governments not to collect the tax with retrospective effect on all transactions since the Constitution came into force, without having been able to get all the States to accept this suggestion. But apart from this question of retrospective collection, the outlook for the future will remain very difficult so long as the ruling of the Supreme Court remains in operation. The only remedy is to amend the Constitution in such manner as to give effect to the opinion of those who drafted and passed it, namely that there should be no sales tax on inter-State trade.

The Committee of the Federation has suggested that the Central Government implement such an amendment soon to remove this anomaly and that it request State Governments in the meantime to suspend collection of sales tax on all inter-State transactions. It is very doubtful if the Centre could succeed in persuading the States to agree to the transfer of sales tax from the States' list to the Central Government. The proceeds were to be distributed wholly to the States on an agreed formula. States like Bombay and Madras, which rely heavily on sales tax for their revenues are likely to create difficulties about such a change and business men here have little hope that this measure would be accepted. In fact some industrial units have actually suspended sales outside the State to avoid the difficulty of keeping themselves informed about the State's sales tax law. It is not materially different from State to State of the sales tax laws of the States and meeting the demands of these Governments to produce their books for the purpose of verification and assessment.

Inter-State Export Duties

Another anomaly affecting inter-State trade is that despite a clear directive in the Constitution for the abolition of all trade barriers within the country, such as export duties on goods, transit duty from one State to another, such practices must continue in some of the Part B States, though the avowed aim of the Central Government is to remove them at as early a date as possible. The Saurashtra Government has been levying a heavy export duty on groundnuts and groundnut oil to safeguard the interests of the consumers in the State and also for purposes of revenue. It has now reduced this duty by 66% percent with immediate effect from last week. Groundnut culti-

vators had long been trying to get the total removal of this duty, as it reduced their return from the markets for their produce, a good part of which found its way to the State. The State Government had agreed to abolish this duty completely within five years. The recent decision will also operate in the case of the duty levied on groundnut oilcake, which was subject to this duty. In an already bearish oilseeds market, the immediate effect of this reduction in duty was a further reduction in prices. This step has been welcomed by the business community in general, as it will strengthen the case for allowing a free flow of goods from one State to another, and some speculation among business men there whether Hyderabad State, which also levies a 4 percent export duty on groundnuts, will now consider abolishing it following the example of the Saurashtra Government. Hyderabad being an important area of groundnut cultivation, a decision of this nature is bound to affect the trend of prices in Bombay.

Radar Training Centre

The opening of the Merchant Navy's Radar Training Centre as a part of the Nautical and Engineering College marks an important landmark in the history of navigation aids in this country. The Centre was inaugurated by Mr. M. Buch, Director-General of Shipping, last Thursday, in the presence of a big gathering of vessels connected with shipping. Though electronics has assumed a position of importance in marine communications, India can boast only 21 vessels with radar equipment. Mr. Buch hoped that shipping would take full advantage of the Centre and add to the safety of their fleets by installing radar equipment. Anticipating an increasing use of radar in navigation, electronic aids have been included as a compulsory subject for those taking the Masters and Mates examinations by the Ministry of Transport. It is also proposed to start special radar observers' courses of two weeks' duration open to all merchant navy personnel from next year. Capt. J. R. Davies, Nautical Adviser to the Government of India, who was present, disclosed that during the last three years there had been five serious shipping accidents off the coast of India, due to poor visibility as one of the contributory factors. Though he was not prepared to say that if the ships had been fitted with radar the accidents would not have occurred, Capt. Davies said that it was quite possible that one or more of the accidents might have been avoided by an intelligent use of radar.

Road Planning Criticised

The failure of the Government of Bombay to build an adequate mileage of roads in the State and its policy of discouraging private road transport were severely criticised both by the annual report of the Bombay branch of the annual Road and Transport Development Association and by a recent Meeting of the local branch this week. Dr. R. 7.75 crores, during the five years ending March 1952, the Government has spent less than half and when the State requires an additional 12,000 miles for an adequate road system. He suggested the formation of an autonomous authority to handle the existing road programmes in the State, on the lines of the Railway Board, with a separate budget of its own. In dealing with traffic problems in Bombay city, Dr. Antia regretted the absence of any reply by the State Government to the suggestion made by the Planning Commission to all State Governments to review their present policy of not encouraging private operators to undertake transport services. He suggested that there was scope for the issuing of 6,000 permits in the State, which would provide employment for about 60,000 people. The Association's report disclosed that in the form of taxes and duties in 1952, of which one half was used on building new roads and bridges, the other half was used remarked that it is little consolation to be told that the proceeds of the additional tax levied on road transport by the Government would be devoted to road improvement and maintenance. In the new year of the Association, it was not the lack of funds that was impeding Bombay's road programme, but the failure to utilise available funds for lack of a suitable agency like a separate Department of Highways.

THE NEED FOR A WELL-REGULATED HEDGING MARKET

BY a notice dated 28th October, the Government of India has prohibited forward trading in raw jute except under non-transferable specific delivery contracts. This brings to an end the activities of the recently-opened futures market in kutcha bales which was able to function legally because the ordinance issued by the Government of West Bengal prohibiting trading in jute futures referred only to "cleaned" bales. One of the words of that word shows how out of touch the Government of West Bengal is with realities in the jute trade, for screw presses went out of date at least half a century ago.

It is probably all the way to the good that the Government of India has taken this step because, though little notice was at first taken of the futures market in kutchra bales, the turnover was gradually increasing and kutchra balers were actually hedging in it. Up to date also there had been little evidence of gambling or excessive speculation, but there is no doubt that that has already begun. It is true that the Government has already taken steps to suppress the katchi market which has absorbed the activities of the speculative elements in recent months. Kutchra balers had also, however, been hedging in katchi, though it was not a satisfactory hedge for raw jute, and it seemed likely that they would transfer their activities from katchi to the kutchra bale futures, had been doing so for some time. Hence, now there is no satisfactory hedging market and there is no doubt that there is a general desire for one provided it can be properly regulated and operations in it confined to members of the trade and industry. This is a matter which will receive the attention of the Jute Enquiry Commission and it is hoped that it will be able to evolve a scheme which will protect the interests of the safeguards. Actually it would have been better if the Government of India had set up an entirely separate commission to draw up a scheme for a raw jute futures market so that it could be brought into being without any lengthy delay. The scheme also will have to be drawn up by experts with technical knowledge; the existing Commission is not competent to undertake the task. It would, indeed, be best if the Government were to recommend to the Government of India the formation of a new futures market and desirable that an ad hoc committee be appointed forthwith. It is generally believed that all the replies to the Commission's questionnaire are in favour of a regulated futures market with safeguards.

As regards the khatni market, police action was taken last week but with what result is not known. Raids of this kind have been taken place before and have not been allowed up by the action. It is necessary to put a stop to illegal activities. There are, moreover, other markets but authority has been for a long time been content to turn the blind eye to their activities. It seems strange that one Government has so quickly taken steps to suppress the jute futures market which was legal and whose activities had not reached the stage of being harmful, while another Government has for long tolerated markets which were not only illegal but pernicious.

IMPROVEMENT IN MARKETS CONTINUES

MILLS WELL SOLD FOR HESSIAN
UNTIL NEXT MARCH

THE higher trend noted in our report of last week has continued and has been accentuated. From Rs. 88-6 at the time of writing last week B. Twills rose with scarcely a recession up to Rs. 100-6, 40" 10 oz. hessian from Rs. 45 to Rs. 46-6 and Assam Bottoms from Rs. 25-4 to Rs. 27. This rise in the rice mills has been more to the advantage of the mills. B. Twills having gone up by roughly Rs. 40 per ton, 40" 10 oz. hessian by Rs. 53 per ton and Assam Bottoms by about Rs. 41 per ton. It is reported that there is not sufficient business from abroad to justify the rise in sacking but that the tightness in hessian up to the end of this year is increasing and that there is healthy demand. Mills have been active buyers of raw jute and bought large quantities during the week.

Manufactured Goods: Demand for hessian for near deliveries continues strong and there has been good enquiry for hessian well into next year. Mills are now well sold up to March 1954 and have fair quantities on their books up to June. Brokers report having difficulty in placing orders for specialities even for forward deliveries except for substantial premiums. There has, of course, been a good deal of speculative buying and covering by operators but there has undoubtedly been a lot of genuine overseas business even though it is reported that the U.S.A. is not following the rise in prices.

In sacking it is stated that most of the rise is in sympathy with hessian and is the result of covering by local bears. The expectation that

mills' stocks at the end of October would show a further reduction has had considerable influence but there has also been genuine overseas enquiry even though the antipodean markets have kept quiet. It is significant of the baneful influence of the katni market that, since action was taken against it last week, the disparity between the prices of B Twills and Heavy Cees has disappeared. For the first time in many months B Twills were on Monday quoted at a higher price than Heavy Cees which is as it should be since B Twills cost more to make.

Mills have taken the opportunity of the present firmness to sell large quantities of goods of all kinds both for shipment and to the local bazar. At the time of writing on Monday the market is pausing and prices are slightly under the best but this is a healthy check to an upward movement that has been rather rapid.

On Tuesday morning quotations are as under and the market is quiet. Forward hessian is easier and sacking is easier for all positions.

	Ready.	Nov.	Dec.	Jan./Mar.
40" 8 oz.	Rs. 38-8	38-0	36-8	35-4
40" 10 oz.	Rs. 46-8	46-0	46-0	44-10
B Twills	Rs. 99-8	99-12	99-14	100-4
Heavy Cees	Rr. 98-8	99-6	99-12	100-4
Cornsocks	Rs 98-12	99-0	99-12	100-4

Raw Jute: The market has continued firm throughout the week with mills buying daily at rising prices. Demand for daissee has been strong but all other classes of jute have come in for attention. Sellers have been meeting the market as prices have risen but offers are now becoming

more restricted as sellers have mostly disposed of the stocks they were holding and imports into the country are decreasing. Offers of Upper Assam paddy are particularly scanty. North Bengal and Purnea jute is more plentiful. Large quantities of Pakistani old crop are on offer both ex-Calcutta godowns and from Pakistan, but mills are shy of buying it because of disappointment with deliveries already made to mills and because most of it is district jute carrying heavy root. Mills consider that it is not worth the premium being asked for it. There are also large quantities of cuttings on offer and fair business was done during the week in the case of cuttings also, deliveries have been disappointing. The following business has been reported during the week :

Dhubri	Rs. 25-12 to Rs. 27-8	basis B ts.
North Bengal	Rs. 25-12 to Rs. 27-0	
North Bengal Tops alone	Rs. 21-8	
North Bengal Tops and Middles	Rs. 31-8 and Rs.20-8	
North Bengal X	Rs. 22-8	
North Bengal (Super-Veal)	Rs. 27-8 basis Bots.	
Dhubri (European Standard) Bots.	Rs. 29-8	
B Bots.	Rs. 26-8	
X	Rs. 24-8	
Upper Assam	Rs. 25-4 to Rs. 27-0	basis Bts.
Jungli	Rs. 22-8 to Rs. 23-0	Do.
Daissee	Rs. 26-0 to Rs. 29-0	Do.
Daissee Mesta	Rs. 24-8 to Rs. 28-0	Do.
Bimil F.A.Q.	Rs. 27-0	
Pucca Bale HJ	Rs. 95 per md. in pucca bales and Rs. 18 per md. in kutcha bales.	
Ropes	Rs. 95 per bale in pucca ba's and Rs. 19 per md. in kutcha.	
Cuttings	Rs. 67 to Rs. 70 for NC's Rs. 72 and Rs. 73 for SNC's	

Pakistani jat Rs. 34 for Middle, Rs. 30 for Bottoms
European Standard.

All the above for Nov.-Dec. shipment.

On Monday less interest was taken though some mills put out enquiries in the morning. In

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

The illustrations show sacks holding 2 cwt. of sodium sulphate being stacked at a factory of Imperial Chemical Industries.

PUT *DRIVE* INTO YOUR INDUSTRY

Conveyor Belting: Frictioned with highest grade rubber compound, jacket-ply skim-coated for high cover adhesion; covers of a rubber compound giving high tensile strength.

V-Belt: With its continuous spiral cable cord construction, the Dunlop V-Belt ensures a long and trouble free life even under the most arduous service conditions.

Transmission Belting: 'Square Edge' specially constructed from hard type closely woven fabric (silver-duck) and skim-coated between the plies. Hence Dunlop Transmission Belting is practically immune from edge wear, ideal both for high-speed drives subject to severe flexing and heavy drives requiring shock load resistance.

There has, thus, been a tendency to pick and choose the ore that fetched lucrative prices, the inferior grades being relegated to dumps. Huge dumps of ore have thus grown up in most of the Indian manganese mines. After 1948, when the U.S.S.R., the largest producer and exporter of manganese ore in the world, stopped her exports and an expansion of steel production took place in U.S.A. and Britain, a heavy demand arose for the ore.

"About 3.75 million tons of marketable ore are available in dumps in Madhya Pradesh and the reserves of ore in dumps in the Srikakulam district of Andhra have been estimated at about 1.2 million tons. Total dumps in Bihar and Orissa, where manganese mining has been started comparatively recently, amount to about 2 lakh tons. Industrial units producing over 50 tons every day can afford to set up full heavy media beneficiation units which cost a few lakhs of rupees. For mines which produce from 10 to 50 tons per day, a medium size plant has been designed as a result of the investigations conducted by the Indian Bureau of Mines in collaboration with the National Metallurgical Laboratory. This unit costs between Rs. 70,000 and one lakh. As the erection of costly machinery is difficult for industrial units producing from 5 to 10 tons per day, research in cheaper methods was undertaken by the Indian Bureau of Mines. Low-grade ore from the Keonjhar area, with 35 percent manganese content, has been upgraded by a comparatively cheap method to 47 percent manganese content.

"Similar satisfactory results have been obtained with ores from other areas also. Ores from Mansar in Madhya Pradesh were upgraded from 32 percent manganese to 48 percent by the process of magnetic separation and tabling, the recovery being 65 percent. Another sample from the Kachidana dumps in Madhya Pradesh was upgraded from 41 percent to 49 percent by jingling and tabling, the recovery being 82 percent. Ore from a Bombay dump was upgraded from 36 percent to 46 percent by hydraulic classification and tabling, the recovery being 75 percent. Dumps have grown up in asbestos mining areas also, as the separation and recovery of asbestos of less than 1/10 inch fibres by hand is very difficult. The Indian Bureau of Mines proposes to investigate the prospects of recovery of asbestos from dumps in Andhra. The programme is to collect waste rocks, subject them to the various process and separate the asbestos from the dust by a cyclone."

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (with the year ended August 1939 as 100), declined by 0.3 percent to 384.4 during the week ended 17th October, 1953, as compared with 385.4 (revised) for the previous week. The index was lower by 2.4 percent than in the corresponding week of the previous month but was 1.4 percent higher than that of a year ago. During the week under review, Foodstuffs showed a fall of 0.8 percent to 385.6 from 388.9 (revised) for the previous week, as a result of decreases in the prices of tea and jowar (-6% each), gram at Hapur and coffee (-1% each), notwithstanding advances in bajra (+3%), wheat at Amritsar and salt (+1% each). Industrial Raw Materials registered only a fractional rise to 432.9 as increases in the export price of manganese ore (+23%), gingellyseed (+6%), linseed (+4%), lac (+3%), groundnuts and rapeseed (+2% each), and cottonseed in Bombay (+1%) were almost neutralised by declines in raw cotton (-3%), cottonseed at Amravati (-2%), tanned goat skins (-4%), Coconut oil cake (-3%), copper (-2%), castor oil, cotton yarn and zinc (-1% each) were responsible for the downward movement of the index for semi-manufactures by 0.2 percent to 353.4 from 354.2 (revised) for the previous week. Prices of mustard oil and linseed oil (+3% each) and groundnut oil (+2%), however, moved up. The Manufacturers group rose by 0.1 percent to 361.2 on account of increases in the prices of jute manufactures and chemicals (+1% each), despite a fall of 3 percent in chemicals.

Calcutta Markets

STRONG GENERAL DEMAND IN TEA EXPORT AUCTION

DUST PRICES FULLY FIRM

AT Export Sale No. 20 held on 2nd November, 1953, the offerings consisted of 59,000 packages. There was a stronger general demand and teas for price were the strongest feature of the sale. Commons and Low Mediums were fully firm to dearer especially the Fannings grades which were selling at a rate above last rates, while Mediums remained unchanged. Leaf grades again met with good support and selected lines of well made OP's sold particularly well. There was slightly more enquiry for the CTC offerings.

Quotations:	1953	1952
Clean Black Pekoe	Rs. 1-14-0	1-8-0
Clean Common B.P.	Rs. 1-11-6	0-13-0 to 0-13-3
Medium Assam B.P.	Rs. 1-12-0	0-14-6
Best Assam CTC B.P.	Rs. 2-0-0 to 2-1-0	

At Internal Sale No. 20 held on 3rd November, 1953, the offerings consisted of approximately 16,000 packages. There was a fair and general demand for most descriptions and the demand strengthened as the sale progressed. Black exportable types and the Commonest offerings were the strongest features of the sale and these were sometimes dearer, while all other sorts closed fully firm.

Leaf offerings consisted of 1,267 chests and these sold at or above last rates.

Quotations:	1953	1952
Medium Doors Dust	Rs. 1-9-6	1-3-0 to 1-4-0
Medium Assam Grains Dust	Rs. 1-10-0	1-8-6 to 1-9-0
Best Assam CTC Dust	Rs. 1-14-6	2-1-0 to 2-2-0

GOOD TONE PREVAILS IN FREIGHT MARKET

ACCUMULATION OF COAL CARGOES FROM U.S.A.

A GOOD demand for grain carriers from America to Japan and a steady tone in the time charter section encouraged Owners to hold for higher rates. There is an accumulation of coal cargoes from America to a variety of destinations and slightly higher rates are indicated by charterers. In the local markets a prompt ship secured 57s for iron ore Calcutta-Japan and a 7,000 tonner is reported fixed for scrap from Colombo to Kobe at 70s. f.i.o. The Weiming, 3,430 cu. ft. bale capacity, is reported fixed from three ports Malaya to Muroran at Straits \$108,000 f.i.o. and the King James from Mormugao to Japan at 50s f.i.o.

Sugar was fixed from London to Madras at 60s and from Poland to Karachi at 65s whilst two vessels secured the better rate of 110s from Queensland to U.K. In view of the heavy movement of ore from this country to Russian controlled areas it was interesting to record a fixture of manganese ore from Port to U.K. at 40s. It is understood this is the first post-war cargo to U.K. of this commodity. Pre-war, large exports were made to U.S.A. from this port.

Liberty types were time chartered at rates between 13s 6d and 14s per deadweight ton for periods of 5-7 months whilst motorships of about 9,500 tons secured 13s 9d for a West African round voyage, 16s 6d for a Persian Gulf round voyage and 23s 9d for an Australian round trip.

The fixture of the Rosa M to Colombo last week was incorrectly reported as 42s 6d instead of 40s.

MORE FOREIGN SUGAR ARRIVALS

During the week ended 3rd November, the price of ready sugar was Rs. 30-6 a maund for ordinary grain and Rs. 31-8 a maund for big grain. Sales (excluding Syndicate sugar) amounted to 1,000 bags a day and arrivals from mills were about the same. Ex-mill delivery rates were Rs. 28-12 to Rs. 29-8 a maund, though new season's sugar cost Rs. 28-8 to Rs. 29 a maund. A steamer arrived with 4,500 tons of Mexican sugar and another with 7,000 bags of Java sugar is expected soon.

LINSEED

Although firm conditions were maintained throughout most of last week a reaction set in towards the close and prices were marked down slightly. A fairly good demand for ready goods continued from local crushers but with arrivals poor and firm advices from upcountry, sellers were very reserved. There were keener offerings for forward delivery at slightly lower rates, but buyers showed little interest. Trading was rather dull in the oil section with limited local enquiries. Despite keener enquiries owing to the higher levels no fresh export business came in. Latest quotations were as prevailing locally. Latest quotations were as follows: Ready Rs. 19-8-0 per maund; November Rs. 19-4-0 per maund; December Rs. 19 per maund.

HIDES AND SKINS

The market in skins continued firm. Prices showed an upward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 27th October and 2nd November, 1953).
Cowhides:—Wet salted (Ord) 33,000 pcs. on the basis of Rs. 8-8 to Rs. 9-8; Wet salted (Slaughtered) 12,200 pcs. on the basis of Rs. 12-8 to Rs. 24.
Goatskins:—Wet salted (Daisee, Killed) 86,700 pcs. on the basis of Rs. 265 to Rs. 335; Assam-Dinajpur-Murshidabad 32,200 pcs. on the basis of Rs. 300 to Rs. 350; Patna (Ord) 1,500 pcs. on the basis of Rs. 210; Purneah-Kissenbanj 49,500 pcs. on the basis of Rs. 295 to Rs. 310; Pakur 7,500 pcs. on the basis of Rs. 250 to Rs. 265; Muzafferpore-Samastipur 33,200 pcs. on the basis of Rs. 242-8 to Rs. 260.

Bazar Stocks

(2nd November, 1953).

Cowhides:—Wet salted 1,00,000 pcs.
Goatskins:—Wet salted (Daisee, Killed) 29,000 pcs.; Assam-Dinajpur 24,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenbanj 1,09,000 pcs.

SHELLAC MARKET REPORT

The Shellac market during the week ended 2nd November opened quiet at the beginning of the week and became steady but inactive at the end. A small business passed. Quotations were as follows:

Standard Pure Buttonlac	Rs. 115 value
Pure Buttonlac	Rs. 110 buyers
Lemon No. 1 Shellac	Rs. 112 buyers
Lemon No. 2 Shellac	Rs. 107 buyers
F.O. Std. 1 Shellac	Rs. 104 buyers
Pure TN Shellac	Rs. 99 basis done
4% LTN Shellac	Rs. 95 buyers
No. 1 Kusumi Seedlac 3%	Rs. 110 value
No. 2 Kusumi Seedlac 3%	Rs. 102 buyers
Fine Bysakv Seedlac (Manbhum)	3% Rs. 98 buyers
Fine Bysakv Seedlac (C.P.)	3% Rs. 95 buyers
Ordinary Bysakv Seedlac (C.P.) under	5% Rs. 89 done & buyers.
Ordinary Bysakv Seedlac (C.P.)	5% Rs. 84 buyers
Kireelac	Rs. 49 buyers

Shipments during October until the 30th were 24,993 packages.

LONDON TEA SALES

EXPORT TYPES SELL WELL

AT last week's London tea sales the 61,624 packages on offer realised an average price of 3s 10 5/8d a pound, against 3s 9 9/8d at the previous sale and 3s 3 2/8d a year ago. Clean common broken pekoe is quoted at 3s 4 1/8d; last sale 3s 4 1/8d. Demand for 9,216 packages of Ceylon tea was centered mainly on Fannings and good liquoring teas which generally advanced 1 to 2d per pound. Lowgrown descriptions ruled about steady but light liquoring and plainer mediums declined 1 to 1 1/2d per pound. Export types sold well. The 4,350 packages of South Indian growth also offered met ready clearance. Prices were also offered met ready clearance. Prices were mostly irregular following quality but values were mostly 1d and sometimes 1d per pound dearer. Results of some of the companies are given below:—

	No. of packages	Average per pound
Amalgamated	772	3/7
Assam Co.	1,852	4/0 1/2
Assam Frontier	1,563	4/3 1/2
Bargang	528	4/2 1/2

Surmah Valley	960	4/1 1/2
Upper Assam		

CHITTAGONG TEA SALES

At Sale No. 9 held on Wednesday, 28th October, 1953, leaf offerings consisted of 10,403 chests, dust offerings amounted to 2804 chests and there was a Supplement of 182 chests.

Leaf: The Sale commenced quietly with opening Lots up to two annas weaker, particularly for BOP and O.F.s. As the Sale proceeded there was a slight improvement but, with the exception of whole leaf grades which were usually firm and occasionally dearer, most types sold at an average of about 11 annas below "Brokers' valuations". Whilst tippy teas shared the general tendency to be easier, useful prices were paid for really desirable O. F.s., some of which realised Rs. 1-15-3, with good F.O.P. at Rs. 1-14-3. Buyers paid more attention than of late to good liquoring teas and the

best of these were occasionally but six pies to one anna easier.

Quotations

Sale 9—28th October 1953.	Sale 8—7th October, 1953.
OP Rs. 1-14-6 to 1-15-0	Rs. 1-14-0 to 1-15-0
PEK Rs. 1-12-6 to 1-13-6	Rs. 1-12-6 to 1-13-0
BOP Rs. 1-10-6 to 1-11-6	Rs. 1-11-6 to 1-12-6
BP Rs. 1-8-6 to 1-9-0	Rs. 1-9-6 to 1-10-0
BPS Rs. 1-8-6 to 1-9-0	Rs. 1-10-0 to 1-11-0
OF Rs. 1-10-6 to 1-11-6	Rs. 1-13-0 to 1-14-0
PF Rs. 1-8-6 to 1-9-0	Rs. 1-10-0

Dust: The Dust Market opened with most Lots selling slightly above valuations and, whilst there was some irregularity, little change was noticed on last rates. Every lot was sold. Clean Common Dust can continue to be quoted at Rs. 1-8-0. Once again best liquoring lots were in keen demand with Rs. 1-15-6, Rs. 2-4-0, and Rs. 2-0-6 paid for special lots.

COCHIN TEA SALES

At Sale No. 22 held on 27th October 1953, offerings for the auction amounted to approximately 13,00,000 lbs. There were some attractive invoices from the Nilgiris, but quality was otherwise average for the time of year. The sale was characterised by a good general demand, with Commons sorts and Low Mediums fully firm to dearer while mediums were all supported at about last rates. Best liquoring descriptions met with a good enquiry and were dearer where improved quality was evident. The strongest features of the sale were whole leaf grades, and clean black fannings suitable for the Middle East.

The Export Quota market hardened during the past week to 18 pies, but has now eased to 16 pies sellers.

Sale No. 23 will be held on Tuesday, 10th November 1953.

CEYLON'S TEA EXPORT DUTY

Ceylon has introduced a flat rate of duty of 45 cents per lb on all teas exported from that country. The new rate will replace the sliding scale of duty fixed weekly according to prices realised at auctions a fortnight earlier. The sliding scale of duty last week was 45 cents. The duty has varied from 35 to 62 cents per lb. since the sliding scale was introduced two years ago to replace the flat rate of 60 cents per lb. Ceylon's Finance Minister stated that he was quite satisfied that the sliding scale of duty, as applied to the special circumstances of the tea market, had proved entirely unworkable as a fair levy, both from the angle of public revenue as well as that of the producer.

CONTRIBUTIONS TO U. S. TEA COUNCIL

Ceylon is to increase her contribution to the United States Tea Council by \$25,000 (about Rs. 130,000) over the contribution for this year, bringing her total contribution for next year to \$375,000. The Overseas Campaign Committee of the Ceylon Tea Propaganda Board has made this decision after considering the success achieved by the United States Tea Council in stepping up the consumption of tea in the United States market during the current year. Another reason for the Committee's decision is the fact that the contribution from the U.S. tea trade to the Tea Council for next year is likely to be increased by \$20,000 to a total amount of \$400,000. The contributions of India and Indonesia for the current year are \$450,000 and \$50,000, respectively. The sale of Ceylon tea in the United States is expected to be in the neighbourhood of 40,000,000 dollars worth at the end of this year. According to an estimate of the Tea Association of the United States, Americans this year will drink 2,500 million more cups of tea than they did three years ago.

RUBBER REHABILITATION SUBSIDIES IN CEYLON

Owners of big rubber estates in Ceylon will benefit most from the rubber rehabilitation subsidy scheme this year. The Rubber Controller has decided to pay subsidies for the replanting of 7,236 acres this year, and of this total 5,351 acres belong to estates over 100 acres in extent. When the Rubber Rehabilitation Act was discussed in the House of Representatives recently, one of the main criticisms was that it would benefit only the owners of big estates and not small holders.

At a recent meeting of the Rubber Rehabilitation Board, the Rubber Controller, referring to such criticism, explained that that situation was inevitable in the first year of the scheme, when the main criterion in deciding on applications was whether owners of estates had supplies of highgrade planting material; and it was the biggest estates which had nurseries of replanting material. The Rubber Controller felt, however, that the position would right itself next year, when the Government nurseries would be able to supply planting material to small holders and small estates.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to September, 1953. Compared with August, the September indices for Government Securities and Preference Shares disclose rises of 0.1 point each.

There were increases in Coal (4.0 points), Mining and Oil, (8.3 points), Cement (1.0 point), Tea (26.3 points), Paper (7.9 points), Sugar (7.3 points) and Miscellaneous (1.2 points), while decreases occurred in Bank (2.3 points), Cotton (5.0 points), Jute

(3.2 points) and Engineering (1.1 points).

Combining all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 1.9 points during September, 1953.

(v) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

DATE FOR U.S. RECESSION POSTPONED AGAIN.

BUSINESS IN OCTOBER BETTER THAN EXPECTED

THE National City Bank of New York says in its November letter: "Those who have looked to the fall season as a testing period for predictions of a business downturn will find little in the record of October to support pessimistic projections. Not only has business in general held up better than expected, but commodity and financial markets as well as such basic indicators as building contract awards, steel and paper-board orders registered renewed strength during the month. Apparently the date of the much advertised 'recession' must again be postponed. Sentiment in business and investment circles has been buoyed both by this demonstration of continuing strength in underlying demand and by the excellent showing of corporation earnings statements now becoming available for the third quarter and the nine months period. With business holding at or near peak levels, and with the nearing prospect of relief from the burdensome excess profits tax at the end of this year, confidence in the maintenance of profitable operations into 1954 has been gaining, and has been reflected in the recovery of prices on the stock exchanges. Most impressive evidence of overall industrial activity comes from the steel industry. This, by reason of the far-flung uses for steel, probably serves more than any other as a barometer of general manufacturing—particularly heavy industry and consumer durable goods—and construction. Whereas a few months ago it was predicted that steel mill operations might drop to 90 percent of capacity or lower by the year end, actually they have been holding firmly around 95 percent, with no signs of waning. Indeed, indications are to the contrary. Steel order cancellations, according to trade sources, are tapering off, and consumer inventory correction, regarded as mainly responsible for the softer market tone in earlier weeks, appears to have largely run its course. Recently, Chairman Benjamin F. Fairless, of the United States Steel Corporation, expressed the opinion that operations in the industry as a whole will vary not more than 1 or 2 percent from the present near-capacity levels during the balance of the fourth quarter, adding: 'I'm optimistic for 1954, too. I believe our corporation will average right around 95 percent during the first quarter of next year.' These indications of an improved outlook for steel are supported by strengthening steel scrap prices after ten weeks of decline. Increased competition in the sale of steel products has appeared in freight absorption by mills where necessary to obtain business, and in premium price concessions, but has not brought any weakening of basic steel prices.

"One reason for betterment in steel is the continued fast pace of automobile production, which continues to defy predictions of market saturation. Output of passenger cars in October was around 530,000, about the average for the first nine months and 12 percent greater than in October, 1952. With production of passenger cars and trucks during the first nine months numbering 5,772,000 vehicles, and with the factory schedules set up for the fourth quarter, it now appears that combined output of passenger cars and trucks this year may well be within 10 percent of the record total of approximately 8 million turned out in 1950. Reports on the construction industry indicate new projects coming forward at a high rate. For the full month of September dollar value of total contract awards was 15 percent below September 1952, due to large Atomic Energy Commission contracts a year ago; excluding these, awards were 28 percent higher than last year. One important factor sustaining building is the spurt in commercial building, particularly large office structures, held back by restrictions imposed during the Korean war.

"The foregoing is not, of course, to imply that everything is on the favourable side and that business is not without its soft spots, some of them chronic and others the result of adjustments to which business is constantly subject. The situation in nonferrous metals, though apparently more encouraging at the moment, is not exactly exuberant, agricultural implements are reflecting diminished farm buying, and some branches of the textile and apparel industries are not doing too well. Reports in the Press tell of scattered lay-offs of workers occurring here and there in different areas, sometimes for seasonal reasons and sometimes because of reduced orders and accumulating inventory. Thus far, however, reflection of such lay-offs is hardly visible in country-wide reported totals of unemployment, which remain near the minimum. Department stores sales in October dropped slightly behind the same month of 1952. Last year retail trade spurred ahead in October and December following advances in employment and income which

took place after the end of the steel strike. Total retail sales have done better than department store trade. In September, for instance, all retail sales were 4 percent higher than in the same month last year, while department store sales were barely equal. This year employment and income have been generally higher, but the fact that about three-fourths of the September gain in all retail trade was accounted for by automobiles tells something about where the public has been spending its money. It would be rare indeed to find business good in all lines at the same time. In an economy as large and varied as ours some lines are bound to be down while others are up, reflecting changing supply and demand in individual situations, shifting consumer preferences, and differences in managerial ability and skill in adjusting to technological change and new market conditions. The main thing is in maintaining a general state of overall balance between the various economic groups at a high level of production and employment. Thus adjustments can proceed in orderly fashion, as by and large they have done since the end of World War II. The developments of the past month encourage hope that adjustments now going forward can be taken equally in our stride."

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity reveals a drop of 24 points between April and May, 1953. Contributing chiefly to the decline were decreases in the production of jute manufactures and coal, while rises occurred in cotton, steel ingots, pig iron, cement, paper and electricity. Notes in circulation and cheque clearances fell because of slack business activity.

Fertilisers and Food Production.—An article by Dr. D. F. Finney, an agronomist attached as FAO's statistical expert to the Indian Council of Agricultural Research, in a recent issue of *Sindri News* clears some webs of confused thinking that have recently surrounded the controversy over India's fertiliser production, supply and utilisation. Foremost among these is the notion which arose during Sindri's production and marketing crises some months ago that India is manufacturing too much artificial fertiliser. Whatever the Government or Sindri *Ngus* might say, this was certainly true in relation to effective demand, although it was never true in relation to the potential needs of the agricultural economy. Dr. Finney dismisses the notion briefly with a striking assertion: that if India's food output is to be increased by nitrogenous fertilisers alone, a new Sindri factory would have to be established every year to cope with only the annual increase in population. The reasoning by which he arrives at this conclusion is simple and not entirely original. Experiments show that if the 72,000 tons of nitrogen in Sindri's annual output of 350,000 tons of ammonium sulphate were used on rice and wheat lands at the rate of 20 lbs of nitrogen per acre, the 8.3 million acres so enriched would produce an extra 750,000 tons of food-grains. This quantity is enough to feed four million people, which is the rate at which the population is growing every year. Dr. Finney reproduces some familiar statistics to indicate the financial benefits of using ammonium sulphate; "the actual profit obtained by individuals," he states, "will vary from holding to holding, but the margin is so great that almost all cultivators can be sure of gain." It is however a measure of the Central and State Governments' marketing failures, as well as of the peasants' poverty and conservatism, that this fact is still very inadequately recognised. Dr. Finney goes on to criticise some prevailing ideas about the ill-effects resulting from prolonged use of artificial fertilisers. Referring to ammonium sulphate, he says that although further experiments are necessary, "an application of 20 lbs of nitrogen per acre can be safely recommended as to the advantage of all.... So small a quantity could be applied to most soils for many years without serious acidifying action." With phosphates, the case is different. "Uncritical recommendations that superphosphate should be applied as extensively as sulphate of ammonia have been too common in the past and inevitably become discredited by cultivators' experience in many localities, but there are almost certainly many soils on which phosphatic fertilisers can be used with results at least as satisfactory as for nitrogen." Dr. Finney says that as long as fertiliser supplies are severely limited, the policy must be to use small dressings on large areas. Heavy dressings would be justified only if the entire supply is devoted to a small total area of highly responsive land, so that a greater increase in food production is obtained. Although such a policy of conservation of supplies for responsive land may usefully be practised with superphosphate, for sulphate of ammonia the acreage likely to respond well far

exceeds the available supply even at 20 lbs of nitrogen per acre.

Pumps in the Dumps.—Mr. N. W. Gurjar's presidential address at the recent annual general meeting of the Indian Pump Manufacturers' Association in Bombay echoed a theme heard often nowadays in the sector of small engineering industries: shortage of the main raw material, pig iron, has been greatly accentuated by the Burnpur labour trouble; and with the decline in economic activity products have become more difficult to sell. On both points, Mr. Gurjar's address repays comparison with Mr. Monilal Atta's at the meeting of the Indian Foundry Association in Calcutta some weeks earlier (discussed editorially in *Capital* on 8th October). Both agreed that the raw material scarcity was a serious handicap to economic working and both urged that more pig iron must be allocated. To which of the many rival claimants, one may ask? To the pump makers, said Mr. Gurjar. To the foundries, said Mr. Atta. Marketing, however, was clearly the greater preoccupation of both speakers, and both advocated roughly identical solutions: cut imports, encourage exports, and bias official purchase policy further in favour of indigenous products. The Government, said Mr. Gurjar, should extend the import restriction to pumps of up to 14" in size, instead of only 6" as at present; it should also raise the duty from 101 percent to 30 percent ad valorem and ban the import of pumps coupled with engines. More reasonably, he suggested removal of the restriction under which the industry is not allowed to export more than 10 percent of its output. Export trade interests and the Government, he declared, should share the expense of opening permanent trade offices in South-East Asian, Middle Eastern and South American countries, and representatives of trade and industry should be among those appointed as heads of such offices. Mr. Gurjar said that the Planning Commission had set an annual production target of 85,000 pumps for 1955-56 when the industry (1951) production was 47,989 pumps and rated capacity 42,800 pumps on an eight-hour single-shift basis) even now could not sell all it produced. He proceeded to make the astonishing remark that, "as manufacturers, it would have been a happy position if we were required to concentrate on the production side only, leaving other organisations, mainly the Government, to devise ways and means to find out markets." Mr. Gurjar is perfectly justified in criticising the Planning Commission for fixing targets in the private sector without bothering about how the products are to be sold, but it was perhaps an initial error to have taken those targets so seriously. The nervousness resulting from the transition to a buyers' market is unfortunate in that it has led some interests to seek further official encroachment on what are properly the functions of industry. It is not the business of the Government to sell goods; its business is only to allow industry to produce them at a price that people are prepared to pay.

Cloth Exports Improve.—India's cloth exports are gradually improving with a rise in the demand for medium and coarse varieties. Although medium cloth has become cheaper since the duty was abolished, importers of coarse varieties have chased some fancy varieties and medium shirting to the usual shirtings, grey sheetings and drills, while Indonesia has confined her business to the usual shirtings, grey sheetings and drills, but fairly good business is reported with Britain in medium 40" greys and with Australia in the Middle East has remained at a modest level, lots of white shirtings, grey sheetings, black twills, white mulls and black parmatto. Iraq is taking grey sheetings and coatings, while West Africa has covered her usual needs. Prices are stated to will improve if speculation is curbed. Demand from Ethiopia is said to be "satisfactory." The markets has considerably improved with the abolition of the export duty on medium cloth. An early increase in demand is expected from the Sudan, where the Government is expected to resume licensing the import of grey cloth from India. It is feared however that a ban might be imposed on the import of white mulls and voiles. buyers, it has recently shown very little interest in "permissible varieties." Shipments of cotton piecegoods from India in October have been estimated at 58 million yards, consisting of 24,000 bales of greys, 8,000 bales of bleached, styles. Domestic demand has improved considerably because of seasonal purchases of coatings, and grey and bleached sheetings. Prices cent. Although the prices of superfine cloth are time, it is felt that superfine prices, especially of dhooties, might as a result stabilise at the present levels for some time to come.

Cargo Theft and Pilferage.—The unanimous report of the Cargo Loss Prevention Committee presented to the International Union offers little encouragement to insurers and merchants in most parts of the world regarding any amelioration of theft and pilferage experience. Though the committee point out that such claims are not now the dominant factor of cargo loss, as in the days immediately after the end of the war, yet in many countries conditions still leave much to be desired. The questionnaire sent by the committee to various insurance markets resulted in several answers that theft and pilferage were still the principal individual source of loss. The Australian market considered that pilferage had declined somewhat since 1951. Chile reported an improvement, and attributed this to the organisation of a service of superintendents. This service watches goods during unloading and until delivery into warehouse, and in view of the success it has achieved might well be useful to other markets if details of how it operates were made available. France, Germany, Greece and Holland are among the countries where some improvement is reported, while in India the anti-pilferage committee at Calcutta seems a main cause of improvement in this port. Israel also reports an improvement. The joint tally system at Haifa is apparently producing results. Unfortunately, the picture is not one of improvement everywhere. Conditions are still not good in Indonesia, where subversive elements can gain entry into harbour areas and much cargo is looted or destroyed. Another area from which comes an adverse report is the United Kingdom. The British member associations report that "there is definitely no decrease in these losses. The evidence points the other way, in fact, but no figures are available so far as we are aware."

Another principal cause of loss quoted by some associations is rough handling, to which inferior packing both in material and methods contribute. Delay is also a contributory factor. Delay in Customs is held to result in losses in some South American ports, whilst both India and Pakistan find that such delays contribute to losses. It is often the fact that cases lie about in the open for several months. Consignees do not always take prompt delivery; some, as suggested by the Egyptian Association, because goods not required urgently are left in Customs sheds to save storage elsewhere; others, as in Greece, because heavy duties and scarcity of funds result in delay in taking delivery. Country damage claims have exercised the Pakistan Insurance Association. This type of loss has been the subject of considerable comment recently, and therefore everyone connected with insurance might perhaps make certain that all assured appreciate that damage prior to the commencement of the insured venture is not recoverable. In Pakistan a clause to this effect has been introduced, which, while strictly speaking superfluous, may draw attention to the position regarding these claims.

Indo-British Trade.—The latest statistics from the U.K. Trade and Navigation Accounts show that in the first eight months of this year India incurred a deficit of just over £9 million in her trade with Britain, as against a deficit of only £72,000 in the same period last year. Both exports and imports declined—the former by £12.6 million and the latter by £3.7 million. There were notable falls in India's exports of tea and jute manufactures, the latter being displaced from second position by leather and manufactures, which showed a big increase. Although tea exports continued their recovery in August, they were well below the figure for August 1952. Machinery, vehicles (including ships and locomotives), and chemicals, drugs, dyes and colours largely accounted for the decline in imports from Britain between January and August this year as compared with the same period of 1952. Notable increases took place in woolen and worsted yarns and manufactures, non-ferrous metals and manufactures, and electrical goods and apparatus.

Investment and Output.—The British Treasury's *Bulletin for Industry* has published a survey of investment of all kinds over the past five years which, after drawing attention to the remarkable progress made by the engineering industry in meeting all the conflicting demands made upon it, also contains a warning to importing countries that it may not be able to continue doing so. Investment, the survey says, "has been limited by steel shortages, by the expansion of engineering exports, and by the claims of the defence programme." Defence spending has almost doubled, and the value of metal and engineering exports rose from £761 million to £1,320 million between 1948 and 1952. Even so, it has still been possible to increase investment at home by a fifth, measured in real terms. And the benefits of this investment are making themselves felt. The survey comments that "the biggest and best sustained increases in output have come from industries where investment has been considerable." For instance, with a 10 percent larger labour force, the chemical industry produced 31 percent more goods in 1952, compared with 1948. The engineering industries produced

27 percent more with only an additional 7 percent more labour on their books. Making the same kind of comparison for the textile and clothing industries, the survey comments that "these industries should be capable of producing more than at present with the existing labour force." Turning to the future the survey remarks: "It is open to question whether, in the event of a further rapid growth in world demand for capital goods, the capacity would exist in this country to take full advantage of it. In view of the continuing high level of defence, and the need for investment goods at home, there is probably need for accelerated development in several branches of engineering."

U.N. Fund for Under-Developed Countries.—The United Kingdom and France declared in the General Assembly's Economic and Financial Committee last week that they are at present unable to support the establishment of the proposed Special U.N. Fund to further the development of under-developed countries. The representatives of both countries based their reluctance partly on the fact that their governments had other calls on available finances. Statements were also heard from the representatives of Burma, Nicaragua and Poland. The Committee now has before it three proposals relating to the Special Fund. One proposal, sponsored by the United States, would have governments contribute disarmament savings to the Fund when a programme of world-wide disarmament was agreed upon. Another three-nation resolution seeks to have the experts' report on the Fund circulated to governments for their comments, while a third proposal, sponsored by 20 nations, would have the Assembly appoint a small group of highly qualified people to consider the comments of governments on the projected fund. The representative of France, M. Philippe de Seynes, declared that the Committee was not only dealing with the question of providing the \$250,000,000 necessary to establish the Fund, but also with the much vaster question of insufficient investment funds to finance development projects in under-developed countries. He pointed out that, if equal terms were offered, the private investor would prefer to place his capital in his own country rather than abroad. In France, he declared, the need for capital was never greater than at present. This money was needed chiefly for the modernisation of industrial equipment. His own country, he added, was not at present in a position to contribute funds to establish the Special Fund. Supporting the U.S. resolution, M. de Seynes declared that linking finances for the projected fund with disarmament provided hope for the future. The representative of the United Kingdom, Sir Clifford Norton, while supporting the establishment of the Fund in principle, wondered whether the hopes placed in its potential effects were not too great. Experience, he declared, had taught that the real roots of development were planted in the efforts of the peoples of the under-developed countries themselves. Recalling that in the past eight years the United States had supplied \$6,000,000,000 for the purpose of economic development, Sir Clifford asked whether it should be so surprising that the major capital-exporting countries were in the present circumstances reluctant to commit themselves to new ventures. He had no doubt, he said, that the priority given to defence was right and inevitable. Defence expenditures and military assistance programmes totalled 70 percent of the United States budget. The United Kingdom figure, he claimed, was no less impressive. The U.K. delegate declared that he did not want to consign the proposed Fund to oblivion, but to be successful it should have the support of the more developed countries. He cautioned the Committee not to take steps now which would make it difficult for those countries to join the Fund later on, and said that he considered the U.S. resolution "a very remarkable pledge and one which holds great hope for the future."

"CAPITAL" CHRISTMAS TOY FUND

BRISK BUSINESS ON THE STOCK MARKET

FIRST GRADE INDUSTRIALS IN STRONG DEMAND

London, 10th November.

ALTHOUGH declining slightly towards the end of the period, business has been excellent on the stock market during the past week, and as far as domestic issues are concerned prices finished generally higher. There was a consolidation phase just before the close when some industrial shares moved under the best, but by the close most of these small recessions had been regained. Despite the counterattractions of the new steel issue, insurance companies and pensions funds operated extensively in British Government funds, while the banking fraternity directed its attention to first grade industrials, making them virtually unobtainable in any quantity. Helping the sentiment in industrials was the succession of good company reports. Much of the money surplus after industrial share buying was used up in the oil market with the result that leading issues here were also in short supply.

This activity in domestic issues diverted attention from overseas issues where the only real feature was demand for German potash loans. German Reich issues and Japanese bonds remained in reasonably good demand but near the close the latter were depressed on a report that Japan was applying to the International Monetary Fund for

sterling to bolster up her dwindling reserves of that currency. Commodity shares were generally quiet. Teas were sometimes irregular but in a very restricted compass, while tins and coppers were generally steady. Gold mining shares continued their downward drift.

Credit conditions varied very widely from day to day during the past week. The week opened with no bill maturities because of holidays three months previously and the authorities had to give a considerable amount of assistance. They also had to intervene with assistance on Tuesday and Thursday. But otherwise conditions were easy, and with a plentifulty of funds the authorities even came in to mop the surplus. Applications for £220 million of Treasury Bills totalled £392,540,000, of which the former amount was allotted at an average rate of 4s 10d. This week £230 millions will be offered. The Bank of England statement shows a further expansion in note circulation of £7,286,000. In the banking department Government securities re-expanded by £8,520,000 while other securities increased by £4,037,000. Bankers' deposits dropped back by £6,347,000.

U.S. Outflow of Reserves

The outflow of reserves from the United States has fallen ominously from the weekly average of \$52 million in six weeks ended 9th September, to a weekly average of only \$14 million in the six weeks ended 21st October and to \$10 million in the week ended 28th October. The banking position has technically been tightened at the end of month but the banks still had comfortable free reserves of \$177 million on 28th October. The rise of \$52 million in the New York City Bank's business loans during the week ended 28th October compares with the \$50 million a year ago but it seems disappointing in the light of transfer to banks of some of the Treasury crop support loans. The enlargement of the bank's business loans from this transfer is merely technical and does not reflect current business. It mainly affects banks outside the New York City but presumably the latter gets some part of it. Even with this windfall the New York City Bank's business loans have increased by only \$29 million in the past four weeks compared with the increase of \$297 million in the corresponding four weeks last year.

Hong Kong Gold Prices

Hong Kong gold after rising from \$261 to \$261-7/8 has slumped to a new low for the year at \$257-1/4. In the last four trading sessions of October, values fluctuated within a range of one point finally closing at \$258-3/8. Gold and American dollar movements were influenced by the Hong Kong Government announcement that licences would be granted for transshipment of gold, and reports from America that the assets of Credit banks have been frozen. A further adverse factor was the continued downturn of international prices. Official offshore was 9,220 taels, unofficial 21,650. Arrivals in Macao were nil. Forward contracts comprised of 5,700 ounces at U.S. \$37.70 per ounce, c.i.f. Macao.

Rotterdam Fibre Market

The Rotterdam market for Indian coir yarns ruled firm in the past week especially for paravur and mangadam with a good volume of business passing at higher prices. There appears to be an acute shortage of husk at production centres and with buyers in urgent need of yarns business was done in afloat and spot goods. Weaving yarns and other qualities were rather quieter. Ceylon coconut fibres eased slightly despite curtailment of supplies owing to heavy rains. Mattress fibres were firm with demand continuing good.

Oilseed Market

The full effect of heavy offerings of linseed oil from the United States has now been felt throughout the technical oil section and prices in some cases have eased back considerably. During the last day or two however, selling pressure somewhat higher prices than earlier. After the linseed oil market resumed its accustomed normal and Uruguayan sellers had held up well to their shown few signs of reaction. One of the oils tions was castor oil. Indian imported condiment was difficult to price and there were no buyers within distance. Spot Indian first were lowered to £148 and South African B.S.S. to £150 per ton in drums. Firm conditions have been obtained for coconut oil but here again strength not following. For November-December shipment Ceylon £127 was bid and refused with £128 December shipment at £124 c.i.f. after business in afloats at upto £122.

No feature of interest was recorded over the week-end on the London oilseeds market and the steady at £128 for Ceylon and £125 for Straits oil while British East African castorseed was reduced out attracting buying interest. The Spanish Goil and has revised their offering price to £214 than previously.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT SHARPLY TIGHTER: ACTIVE NOTES UP RS. 31 CRORES

Wednesday, 11th November.

MONEY has become sharply tighter this week both here and in Bombay, and this sudden stringency is taken as the first sign of the onset of the busy season. The jute mills have bought raw material fairly heavily, and there is good demand for finance on cotton account in Western India. Grains finance has also increased. Textile stocks are moving satisfactorily to judge from bank figures; sugar demand has not set in yet. Rates in the interbank market in Calcutta have moved up from 1½ percent to 2-2½ percent.

A large tea sale in Calcutta on Monday has brought out a number of tea export bills, some of them quite large. What few gunny bills have been passing have been small. Remittance has been normal, and the principal exchange rates are unchanged.

Bullion was slightly easier owing to lack of support. Silver fell from the previous week's level of Rs 152-6 to Rs 151-14 quoted today, but the ready rate was done at a premium of 4 annas. The price of silver was, however, unaltered at 74d in London and at 85½ cents in New York.

Gold also quietened in sympathy with silver and the price declined from Rs 81-12 to Rs 81-10. The sovereign at Rs 57-9 disclosed a loss of 5 annas.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills this week fell to their lowest, Rs. 1,50,50,000, in the present series of issues and the average rate of acceptance rose by two pios to Rs. 2-7-0 percent per annum. Tenders at Rs. 99-6-3 percent were accepted, the total acceptance being Rs. 1½ crores. Tenders for another Rs. 1½ crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 6th November, treasury bills for Rs. 1,65,00,000 were sold in favour of the Reserve Bank.

Sharp rises of Rs 31.05 crores and Rs 8.21 crores in notes in circulation and the total note issue to Rs 1,108.84 crores and Rs 1,125.71 crores were outstanding features of the return of the Reserve Bank of India for the week ended 6th November, 1953. The expansion in currency was duly covered by raising foreign securities by Rs 10 crores to Rs 58.15 crores presumably in part through transfer of Rs 4.89 crores from balances held abroad, which consequently fell to Rs 137.27 crores. Notes held in the Banking Department were about Rs 22.83 crores lower at Rs 16.86 crores. Deposits of the Government of India and other Government accounts diminished by Rs 8.68 crores and Rs 57 lakhs to total Rs 100.22 by Rs 8.68 crores and Rs 57 lakhs, respectively. There was a sharp decline of Rs 13.45 crores in balances of commercial banks to Rs 47.15 crores owing to a revival of demand for funds. Other loans and advances rose from Rs 10.71 crores to Rs 12.88 crores, of which advances to scheduled banks against usance bills were the same as at Rs 49.45 lakhs. Investments dropped by Rs 30 lakhs to Rs 83.86 lakhs. Ways and means advances were shown at Rs 41 lakhs (Rs 5 lakhs).

The return of the Imperial Bank of India for the week ended 30th October, 1953, shows a rise of Rs. 2.18 crores in total deposits to Rs. 212.03 crores. Investments in Government Securities are up by Rs. 38 lakhs to Rs. 86.45 crores, while other authorised investments remain unchanged at Rs. 10.64 crores. Loans, cash credits and overdrafts have declined by Rs. 3.48 crores to aggregate Rs. 85.47 crores, while bills discounted and purchased have advanced by Rs. 72 lakhs to stand at Rs. 10.40 crores. Cash and balances are, in consequence, shown at Rs. 32.04 crores or Rs. 5.84 crores higher.

The statement of the position of Scheduled Banks for the week ended 30th October, 1953, discloses Demand and Time liabilities at Rs. 533.41 crores (Rs. 14.14 crores on account of borrowings from Banks) and Rs. 333.96 crores (Rs. 4.02 crores) compared with Rs. 531.57 crores (Rs. 12.73 crores) and Rs. 334.36 crores (Rs. 4.23 crores), respectively in the previous week. Cash has decreased by Rs. 1.52 crores to aggregate Rs. 31.33 crores, while balances with the Reserve Bank have increased by Rs. 5.37 crores to stand at Rs. 59.11 crores. There is a rise of Rs. 1.40 crores in investments to Rs. 339.70 crores. Advances and bills discounted at Rs. 448.92 crores reveal a drop of Rs. 3.66 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.4 percent and 51.8 percent against 10.0 percent and 52.3 percent.

The subscription list for the 3½ West Punjab Loan 1961 floated by the Government of the Punjab was opened at 9-00 a.m. on Thursday 5th November, 1953 and closed the same day. Preliminary figures show that the loan was fully subscribed. A limit of Rs. 3 crores was fixed for the loan.

JAPAN TO PRESS FOR STERLING CREDIT

Japan had paid back the £1 million sterling to the U. K. which fell due on 4th November, under the exchange "swap" made earlier this year. Mr. T. Tojo, Foreign Exchange Director of the Finance Ministry, said recently. But he described as "not far off the mark" reports that Japan's sterling balances had declined so low that she would have to obtain short-term credits from Britain or lose dollars used for previous "swaps," totalling nearly £20 million and falling due by the end of the year. Formal Anglo-Japanese trade and payments talks would probably be held in London in the near future, he added. The Government would shortly select a person of Cabinet rank to represent Japan in the forthcoming talks.

A Ministry of Trade spokesman said informal negotiations were already under way on Japan's sterling shortage and on prospects for trade between Japan and the sterling area.

TREASURY BILL MATURITIES

Details of 3 months Bills outstanding with the public on 13-11-53.

Issue Date	Maturity Date	Amount (00's of Rs.)	Average Acceptance Rate
13-11-53	13-2-54	1,50,00	Rs. 2 7 0%
6-11-53	6-2-54	1,50,00	Rs. 2 6 10%

GUARDS AT POWER STATIONS

Outwitting the thunderbolt is a task achieved by G-E Engineers. When a few million volts of lightning hit a transmission line, a high-voltage wave goes galloping along the wire. If it were allowed to surge into the power station or into the transformer at the end of the line, sparks would fly and expensive apparatus would be damaged. So G-E Engineers have built traps for this extra surge. They are called LIGHTNING ARRESTORS. They don't stop lightning, but merely shunt it out of the way to ground and harmlessly dispose of it.

G-E's THYRISTOR Station Type LIGHTNING ARRESTORS are on guard duty at most of the large power systems in India, namely, Tata Hydro, Mysore Government, the Madras Grid, Punjab Government, Damodar Valley Corporation and at several new projects under construction.

General Electric is the largest electrical manufacturing organization in the world with a production range of 200,000 different items—from tiny switches to giant generators, from lamps to locomotives. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her natural resources.

This is General Electric's 50th Anniversary of Service in India.

A DITCHER'S DIARY

forth to take the form of competing for our attentions with the greatest artists of both worlds, we in India will be well content.

The "call of the East" must be something very real, for how otherwise is one to explain the sudden reappearance in our midst of old Quoi Hais who have been accorded all the trappings of a send-off and whom we have not even heard of for many years. Not that their return is not welcome, for the majority of them have given of their best to this country, and that the fact is well appreciated is evident in their being requested to give still more of such special genius as they possess. That surely must be responsible for the return of Dr. W. A. Jenkins, C.I.E., who has many friends in this part of India, as Vice-Chancellor of the University of Dacca at the age of 62. His connection with that city goes back to the time when the University was founded in 1921, when he occupied the post of Professor of Physics, and in 1932 he became Vice-Chancellor. Dr. Jenkins' services to education here covered a period of 31 years, during which he held a number of appointments, not only in Bengal but also with the Government of India. He returned to England after the granting of independence to India and Pakistan in 1947 and since then has been Director of Studies at the University College of North Staffordshire, which appointment he resigned to return to the university in whose creation and development he played so large a part. It is to be hoped that he will find time to resume his many old contacts with Calcutta, where he was a well known and well loved figure during the time when he was Bengal's Director of Public Instruction.

Writing in *Progress*, the Unilever magazine, Mr. Oscar Hobson, the dean of British financial journalists, recalls the days when competition between the banks was "strong, vigorous and unashamed". He tells an amusing story of the antagonism between two famous banking institutions some forty years ago. Lloyds and the London City and Midland Bank (as it then was) were particularly deadly rivals, it seems, and Mr. Hobson says: "I remember that when Lloyds absorbed the Wilts and Dorset Bank, with its eighty branches scattered through the West Country, Sir Edward Holden, chairman of the City and Midland, reacted within a week or two by acquiring sites for Midland branches in every one of the Wilts and Dorset towns. Another story, perhaps less well authenticated, was told of the rivalry between these two banks. When the Birkbeck Bank (a third bank, having nothing to do with either Lloyds or the Midland) got into difficulties in 1911 it became the subject of a 'run', and a queue of depositors anxious to withdraw their money formed outside its office in Holborn. The end of this queue at one time reached the door of the neighbouring City and Midland branch. This was reported to Sir Edward Holden who jumped into a taxi, hastened to the scene, interviewed the policeman regulating the queue with the result that (after an entirely unofficial banking transaction between Sir Edward and the constable) the queue was promptly reformed in such a way that its end abutted on

the door of the Lloyds Bank branch a hundred yards on the other side of the Birkbeck Bank."

The accusation that the late Harry Dexter White of the U. S. Treasury was a "Soviet spy" would, if true, be much more astonishing than the charges against Alger Hiss. Hiss, after all, had only temporary importance as secretary of the United Nations in San Francisco, but White had been a power in the Treasury since 1934; he was the brain behind Lend-Lease and had striven harder than any American to support Britain when she stood alone against Hitler; and he was the chief architect, with Lord Keynes, of the International Monetary Fund and of the World Bank. At the time when, it is now alleged, he was spying for Russia, Keynes said White was sleeping five hours a night for months and battling all day with the fiscal authorities of dozens of nations for a scheme of international co-operation that would work. It is a great pity that so soon after such a life's work was finished, he should be accused (with no work, it seems, especially anxious to defend his memory) of betraying his country in some unspecified way to a Power that appeared, in the internationalist optimism of 1945, a friend and ally. White's enemies in influential places, and this may be part of the reason for the present attack; he had a quick temper and "rasping truculence". I have heard of a scene where Keynes threw White's plans for a world bank on the floor in anger, while White shouted and grasped his chair to control his temper, calling Keynes to his face "Your Royal Highness". But Roy Harrod says that later, when their great work was done and both men were broken and literally dying from the strain, they became affectionate friends. I suppose it would be too suspicious to connect this latest assault on the reputation of a really great American with the defeat of so many Republicans in the recent elections. I notice that Senator McCarthy lost no time in claiming that the Republicans had been defeated because they did "not harp on Communist infiltration of the Government", and Alistair Cooke said the next day in the *Manchester Guardian*, "It remains to be seen whether the Republicans will choose to strengthen their popular appeal with a shot of the powerful McCarthy vitamins". Perhaps they have so chosen—at the expense of Harry White whose faith in international goodwill may indeed have led him into too close connections with an erstwhile ally, but also gave us the IMF and the World Bank.

"600" magazine reports that the following notification to staff is displayed on the notice board of a large engineering workshop: "It has come to the attention of the management that employees have been dying on the job and either refusing or neglecting to fall over. This practice must cease forthwith. Any employee found dead on the job in an upright position will immediately be dropped from the payroll. In future, if a foreman notices that any employee has made no movement for a period of two hours it will be his duty to investigate, as it is impossible to distinguish between death and natural movement of some employees. Foremen are cautioned to make careful investigation. Holding a pay-packet in front of the suspected corpse is considered the most reliable test. There have, however, been cases where natural instincts have been so deeply ingrained that the hand of the corpse has made a spasmodic clutch even after rigor mortis has set in."

THE DITCHER.

For the attention of Far-sighted Industrialists RAW MATERIALS CONTROL

With every prospect of a buyers' market ahead, you are concerned to keep your manufacturing costs to a minimum. The raw materials cost of a product forms a high proportion of the total factory cost in paper and textiles, and a serious item of expense in engineering and chemicals. You may be wondering whether your staff are linking the provisioning of raw materials with sufficient closeness to your manufacturing programme. Then you want to be sure that you are

actually receiving the materials you have paid for and, finally, that the minimum wastage and quality loss occur in the manufacturing processes. You are not prepared to accept only verbal assurances at your plants that nothing further remains to be done along these lines. You have heard that impartial analyses and subsequent statistical control figures, (that is, quality control), have achieved further worthwhile economies in coal, timber, and steel, and in cotton and jute fibres.

The working of the CENTRAL INDIA COALFIELDS LTD. for the year ended 31st March, 1953, shows better results than in the previous year. Sales are up by about Rs. 1 lakh to Rs 17.64 lakhs and the profit has consequently increased from Rs. 3.20 lakhs to Rs. 3.98 lakhs. After allowing Rs. 1 lakh

UNITED FLOUR MILLS incurred a loss of Rs. 31,359 for the half-year ended May, 1953, because of the complete cessation of demand from Assam for a few months. Bringing forward Rs. 25,781 and transferring Rs. 25,000 from dividend equalisation account there is Rs. 19,422. The dividend has been, therefore, reduced from 12½% to 5%, leaving Rs. 6,922 to be carried forward.

Martin Burn Ltd., managing agents of the INDIAN IRON AND STEEL Co. LTD., report the production of the company for October as follows (in tons):

Pig Iron		October	September
Steel Ingots		55,880	21,320
Semi-finished		30,670	2,270
Finished steel	13,280	31,230	6,150 2,840
	17,950		
			8,990

Tata Industries Ltd., managing agents of the TATA IRON AND STEEL COMPANY LTD., report that the total approximate production of iron and steel at the steel works at Jamshedpur during October 1953 was: pig iron 99,500 tons; steel ingots 94,000 tons; semis for sale 17,200 tons and finished steel 51,200 tons.

The KOLAR GOLD FIELD returns show that the total gold obtained in October, 1953 were 17,853 fine ozs. as against 17,898 fine ozs. in September. To this Mysore contributed 5,359 fine ozs., Champion Reef 5,312 fine ozs., Ooregum 944 fine ozs. and Nundydroog 6,238 fine ozs.

Investors' Encyclopaedia, 1952-53. (Compiled by Kothari and Sons, Post Box No. 267, Madras 1, 1,300+ pages. Price Rs. 20.) The seventeenth edition of this valuable handbook for investors maintains the high standards established by earlier issues. Almost every section has been enlarged and a number of new companies are covered. The publishers claim that "so far as the existing companies are concerned, they have been rewritten from cover to cover so as to give additional information wherever necessary." The introductory reviews before each section. The introductory reviews before each section will be found on gilt-edged more up-to-date. Data ventures, debentures of mortgage banks, sterling insurance companies, coal, jute, and cotton mills, railways companies, Northern India tea companies, mills, vegetable oil mills, managing factories, paper vestments, trust companies, mining agencies, iron companies, and miscellaneous companies. Extracts from the rules and regulations of the Calcutta and Madras Stock Exchange Associations and the Native Share and Stock Brokers' Association of Bombay are given, as also is information on income tax and super-tax rates, stamp duty and rental issues control.

ber restored quotations for the two Port of Calcutta 5 percent debentures to the Official Daily List. The quotation for Bombay Improvement

it had been the practice to pay interest free
Indian taxation to holders not domiciled in India.
The quotations have been restored to the list per

ing the conclusion of negotiations on the t
question.

A STUDY tour in France, Great Britain, the Netherlands, Germany and Switzerland is being made by delegates of the Railway Subcommittee of the Economic Commission for Asia and the Far East. Visiting England a week or so ago, the party saw the London Transport civil engineering depot at Finsbury Park, where a flash-butt welding process was demonstrated. Then, visiting the canteen training centre at Baker Street, where they were met by Mr. John Clifft, Deputy Chairman, L. T. E. proceeded to Ealing Common to inspect the unpainted aluminium train. The remote control signalbox at Ealing Broadway was also seen before a return was made to Charing Cross to see the new 100-ton diesel locomotive. The next day delegates inspected track maintenance work in the London Midland Region at Leighton Buzzard and Luton, and the third day they travelled to Bristol Temple Meads, to study the mechanisation of the goods depot and to view diesel locomotives and railcars. That evening they travelled to the Netherlands by the Harwich-Hook of Holland route.

At a dinner given to the delegates by the British Transport Commission they were welcomed by Mr. David Blee, who presided. He welcomed them warmly on behalf of the B.T.C.; railway officers of many countries had been brought together through the United Nations E.C.A.F.E. organisation and this was the second time British Railways had been privileged to receive such a mission. Railways originated in these islands and although representatives of every country no doubt they had the finest system, ours were certainly the busiest, with a thousand million passengers a year, 300 million tons of freight, and earnings of almost £1 million every day. They were, moreover, paying their way in full. In science, management and administration it was an era of great change in which the best resources of all transport minds were pooled to a common end. There was increasing mechanisation, higher standards of safety, changes in rolling stock and in motive power. In common efforts to advance science and practice of transport, contributions of worldwide significance in the marketing of raw materials, distribution of finished products, and encouragement of travel had been made. That gathering had come about by their common interest in kindred problems and their facilities for exchange of ideas and experience. Transport was making an outstanding contribution to the well-being of mankind by enabling the ordinary people of all countries to meet and learn to know one another better.

LONDON INSURANCE LETTER

FINANCE FOR STEEL

IT is an accepted fact that a large part of small savings, and an appreciable part of total savings, available for investment is canalised through insurance companies and pension funds. The shares of the first big steel group returned by the state to private ownership have now been offered to investors, and the whole industry will gradually pass back into the orbit of private investment. How much is involved cannot be known until the terms of all the individual issues are decided, but it can be reckoned that if the subsequent issues follow roughly the pattern of the first the total will be of the order of £250 million. It has naturally been wondered how much of this sum the insurance companies and pension funds will provide. Aggregated figures for the life offices' investments at end-1951 show £2,382 million invested in Stock Exchange securities—more than two-thirds of their total assets. Just over £1,000 million was invested in industrial securities, of which just over £390 million was in ordinary shares.

Evidently, if the insurance companies were to take a substantial proportion of the steel industry's shares they would have to increase considerably the proportion of their investment in industry or else concentrate an undue proportion of their industrial investment on one industry. In the former case they would not have actually to sell gilt-edged stocks, nearly all of which are (and will presumably be in future) acceptable as payment for the steel shares offered. Whatever the procedure, there is no reason to suppose that the life offices contemplate changing their investment policies specially to facilitate this big financial transaction. Pension funds such as those of the National Coal Board (the NCB's are reckoned in tens of millions at present but are growing steadily to hundreds of millions) are managed on broadly the same principles. The members of the advisory committees are, indeed, drawn from such institutions as insurance companies.

Raised Interims

It seemed unlikely that the raising of the Interim dividends of the Royal Insurance Company and of the subsidiary Liverpool and London and Globe a few weeks ago represented a general continuance of the upward trend of insurance dividends, as these companies' receipts from interest, dividends, etc., had for years past been more than averagely generous in relation to dividends paid out, and there had been no question of encroaching on underwriting profits. However, one or two other interim payments have since been raised; and, of course, final dividends are raised more freely, when the whole year's result is available.

After Bank rate was lowered in mid-September, interest-rates—long as well as short—took a further distinct turn downward. Investment portfolios appreciated with the further rise in security values, and finances became stronger than ever. But there was in any case no longer any

anxiety about depreciation of investments. So the lowering of income from money newly invested tends to be the more important consideration. Since dividends come mainly from investment income, the lowering of interest-rates is not helpful to shareholders. On the other hand, investable funds are still increasing, and total investment income—as distinct from average yield—may be still increasing, too. The accretion to insurance companies' funds is of more fundamental importance than any moderate change in the value of existing portfolios. It is a factor to be borne in mind, of course, in any up-to-date estimate of resources available for investment in the steel industry.

Loss of Profits

Various industrial companies' reports issued in recent months have had to emphasise the disastrous floods which destroyed and damaged property and halted operations over a wide area of eastern England early in the year. In some cases the directors have been able to assure shareholders that the damage was fully covered by insurance; even so, they have mostly added that "of course" profits suffered severely from the interruption of work. The same excuse is frequently offered when a fire has put part of a company's works out of action. It appears that shareholders accept such explanations meekly; but the directors themselves must be well aware that if they had insured against loss of profits, as well as physical damage, they could have reported much more favourably.

Consequential losses due to the destruction of the automatic-transmission plant of General Motors at Livonia, Michigan, in August must be immense. The earlier estimate that the American automobile industry's output for the season would fall short of plan by some 300,000 cars, and so lose some \$750 million of sales, as a result of the fire, may need modifying, but the fire loss itself (estimated by the National Board of Fire Underwriters as \$35 million) is financially only the beginning of the grim story.

This fire, the largest loss on a single risk in the history of insurance, has had one useful result. It has stimulated thought on the basic principles of industrial fire business, especially regarding the layout of factories. The curious feature of the General Motors fire is that on such a scale it was theoretically impossible, as the vast building was constructed mainly of non-combustible materials. In the opinion of some experts, the implication is that no building is proof against total destruction from a fire beginning in some part of it unless the building is divided by fireproof walls which can localise an outbreak. It does not follow from this argument that the organisational benefits of uninterrupted production must be abandoned. What does follow is that relatively high fire premiums—offsetting some of that benefit—are appropriate to buildings which are not thus protected against destruction.

ECONOMIC EVENTS IN OCTOBER

- 1st—Prime Minister inaugurates Andhra State.
- 2nd—Burma-Ceylon trade agreement concluded; Central Government reviews land reform; Dr. Malan's electoral bill approved by South African Senate.
- 3rd—Colombo Plan information body proposed; Indo-Pakistan talks end; Patna electricity workers strike; U.S. claims new world air speed record.
- 4th—Mr. S. N. Buragohain dies in Calcutta; U.S. support for peace pact.
- 5th—U.K. reduces prices of raw jute; Pakistan's constitutional deadlock broken; Brazil, New Zealand and Turkey elected to Security Council.
- 6th—Burmese land nationalisation bill passed; Mr. M. Ali reviews Pakistan's jute prospects.
- 7th—The President inaugurates Chandigarh; five year plan revised to alleviate unemployment; British troops embark for British Guiana.
- 8th—Britain and U.S. announce withdrawal of troops from Zone "A" of Trieste; U.K. plans to end food rationing; Lord Strabolgi dies; Conservative Conference opens.
- 9th—British Guiana Government dismissed; Dr. K. Adenauer re-elected West German Chancellor; R.A.F. Canberra wins Air Race.
- 10th—President reviews Indian Navy; Yugoslav troops enter Zone "B" of Trieste.
- 11th—Colombo Plan delegates arrive; U.S. Ambassador in India leaves for Korea.
- 12th—Ceylon's Premier resigns; Ceylon enters monazite market.
- 13th—Japan proposes bilateral peace treaty with Burma; inquiry into assault on pressmen concludes; C.T.C. agrees to pay 15 days' bonus; Russia asks for U.N. meeting on Trieste; record U.K. steel production in September announced.
- 14th—U.K. offers capital aid to India; rice procurement in W. Bengal ends; France announces exports to E. Europe and China to be subsidised; work on Bombay oil terminal starts.
- 15th—Estate Duty Act comes into force; plans for intensive oil survey of Assam announced; Mr. K. Menon criticises U.N.; Britain explodes second atomic weapon at Woomera.
- 16th—French plan for reduction in tariffs; T.C. Government grants loans to coir industry; Viet Nam repudiates membership of French Union.
- 17th—Rajasthan State Co-operative Bank inaugurated; Indian-Israeli dispute taken to U.N.
- 18th—Indo-Pakistan Finance Ministers meet.
- 19th—Centre approves three plans for West Bengal D.P.s.
- 20th—Steel quotas to remain despite strike at ISCO; Pakistan's final wheat estimate published.
- 21st—Dr. Roy and Mr. Casey hold discussions; more U.S. aid for Pakistan announced.
- 22nd—Japan to export wheat to W. Germany; I.L.O. offers help to India.
- 23rd—G.A.T.T. tariff schedules extended; Japan admitted to G.A.T.T.; U.N. Supreme Commander tells Japan to rearm; economic data from 1951 census published; U.S. relaxes rice export restrictions.
- 24th—Steps to meet textile crisis announced; retrenchment ordinance promulgated; Government announces plan to start work on Kosi project this winter.
- 25th—U.K. increases raw jute prices; Ceylon's foreign policy defined.
- 26th—Ordinance to speed up bank liquidation issued additional excise duty on excess dhosi production announced.
- 27th—U.N.E.S.C.O. aid programme for India announced; pharmaceutical codex published; D.V.C. to supply Calcutta with power.
- 28th—Forward trading in raw jute banned by Centre.
- 29th—Kenya to seek financial aid from U.K.; Ceylon introduces flat rate export duty on tea.
- 30th—Ceylon's Premier invited to Delhi; Gadgil Committee recommendations published; sago industry inquiry opens in Bombay.
- 31st—Telegraph centenary; police fire on student demonstrators in Lucknow.

New Delhi

PARLIAMENTARY SCRUTINY OF STATE ENTERPRISES

FUNCTIONS NEED TO BE PROPERLY DEFINED

(FROM OUR NEW DELHI CORRESPONDENT.)

7th November.

TWO important issues are likely to come up for discussion during the forthcoming session of Parliament which begins here on 16th November. The first relates to Parliamentary control over State undertakings and the second concerns subordinate legislation. It is generally admitted that there has been a policy of drift in regard to the set-up of State undertakings. The railways were the first major commercial undertaking to be nationalised. The British intended to manage them through a statutory authority, the main object being to define the powers of the Legislature, particularly with regard to interference in day-to-day administration. Since then the position of the Railway Board has been considerably weakened and the undertaking is managed as a Ministry of the Central Government. Broadly speaking, it is also managed as a Government department. Impressed with this achievement, the Government created a statutory corporation for the Damodar Valley Project. The Delhi Transport Authority was later set up as another statutory corporation. The working of these two corporations was not regarded as entirely satisfactory and a swing back in favour of departmental management was in evidence for some time. Ultimately the private limited company form of management was adopted, three examples being Sindri Fertilizers and Chemicals Ltd., the Hindustan Shipyard Ltd., and the Eastern Shipping Corporation Ltd. The corporate form of management is now again favoured, as in the case of the nationalised airlines, presumably because it was supported by the P. S. Rau Committee's report on the Damodar Valley Corporation.

The private company form of management was severely criticised by the Comptroller and Auditor-General, who regarded it as a fraud on the Companies Act and also on the Constitution, because money cannot be taken away from the Consolidated Fund for the establishment and transformation of certain concerns into private companies in the name of the President and the Secretary to the Government. Under the Companies Act, a company can be formed by a group of persons. The President or the Secretary is not a person. These officers do not have any personal financial interest in the company and their joining together cannot constitute a company in the correct sense of the term. Further, to convert a Government concern into a private company solely by executive action is unconstitutional. Then, again, under the Indian Companies Act the auditors are to be appointed by the board of directors. The Comptroller and Auditor-General will not, therefore, have any automatic right to audit such a company. His audit control is thus ousted. The Comptroller and Auditor-General similarly objected to the audit procedure for these corporations; their statutes did not define in specific terms the functions and the responsibilities of the Comptroller and Auditor-General. As far as the financial stake was concerned, even the non-official directors on the boards of these undertakings had none.

Studying Foreign Practice

The Fiscal Commission discussed this issue indirectly and stated that "the problems relating to the management of Government and quasi-Government concerns have been studied intensively in recent years in the United Kingdom, in the Dominions of Australia and Canada and in the United States of America. We suggest that a study of the experience in these countries should be made by a special officer and that suitable organisation should be evolved to ensure that the management of these concerns is conducted on sound business lines at a minimum cost to the community and that their operations are subjected to periodical scrutiny."

So much for the form of management. As for Parliamentary control, the issue has almost been settled in the United Kingdom. Professor William Robson, who is shortly visiting India on a lecture tour, says: "It has been recognised that while Parliament has a right to discuss and determine matters of major policy concerning the nationalised industries, the day-to-day conduct of their business by public corporations should be immune from Parliamentary inquisition. Ministers can only be questioned where responsibility is accepted. The underlying reason for the creation of the modern type of corporation is the need for a high degree of freedom, boldness and enterprise in the management of undertakings of an industrial or commercial character, and the desire to escape from the caution and circumspection which is considered typical of Government departments. The original impetus to the movement for public corporations came from a two-fold desire to secure freedom from Parliamentary supervision over management on the one hand, and Treasury control over personnel and finance on the other. Both these normal features of the British Government were regarded, rightly or wrongly, as likely to hamper efficiency and restrict initiative in undertakings of an industrial or commercial character."

In India, Parliament wants to exercise control even over the day-to-day administration of State

undertakings and would like to set up a committee of its own for this purpose. It is sometimes forgotten that, apart from Parliamentary control, the future of nationalised undertakings depends very largely on the labour policy that is followed. The present labour policy has already turned many of them into uneconomic units. Misconceived notions of Parliamentary control could damage them further. In any case, the Government has no excuse for failing to reach a definite decision on their proper form of management.

Use of Subordinate Legislation

The issue of subordinate legislation was raised in the United Kingdom by Lord Hewart in *The New Despotism*, and again recently by Mr. G. W. Keeton in *The Passing of Parliament*. Both criticised the working of delegated legislation through statutory rules and orders. Lord Hewart stated: "All legislation derives its force from the Acts of Parliament by which the legislative power is given, and not from the authority by whom the power is exercised. Consequently, in order to ascertain whether a particular statutory rule or order is *intra vires* or *extra vires*, it is necessary to look into the terms of the authorising statute to see whether the legislating authority has acted within the limits of the mandate, and, to speak generally, the validity of such statutory delegated legislation may be judicially challenged, and, if any such legislation is held to be invalid, it may be treated as void and quashed." Rules of Parliamentary procedure were recently amended to set up a committee for the purpose enunciated by Lord Hewart. The committee will examine every regulation, rule, sub-rule, bye-law, etc., framed by the Government under its rule-making authority in order to ensure that it has not abused its power.

Automobile Policy at a Standstill

The Government's policy in regard to the automobile industry remains largely unimplemented. It was based on two main considerations. First, the Government, in selecting five units which alone could be permitted to manufacture motor cars and buses, said that these units should send in, before September 1953, their detailed programmes for the manufacture of the maximum possible number of parts within the next three years. Second, the Government expressed its determination to bring down the prices of motor cars. Both items of the policy statement remain unfulfilled. It is now November and no detailed programme for the manufacture of vehicles has been received from the five

manufacturing units. Similarly, the prices of most motor vehicles have not yet been reduced, although certain categories of import duties were cut to achieve this purpose.

The Fiscal Commission, whose report presumably forms the basis of the Government's policy, clearly laid down that "under the present conditions, when the flow of imports is primarily regulated by balance of payments considerations, it is possible that if the protected article is also one in respect of which imports have been restricted its domestic price may rise higher than the parity of landed cost plus protective duty. If this situation persists for a long time and the Government does not see any prospect of relaxation of control regulations, it may be necessary to take steps to regulate prices so that they may not rise above the aforesaid parity. The need for such regulation will be all the greater (a) if the product of the protected industry is an article of essential consumption and/or (b) the industry is dominated by one or two large units, which effectively shut out internal competition."

In the case of automobiles, imports have been restricted not because of the balance of payments but to protect the domestic industry. The prices of motor vehicles remain considerably higher than "the parity of landed cost plus protective duty." This is regrettable, firstly, because the Government's declared policy is to make transport cheaper and, secondly, because import duties have been reduced. Further, the policy will in practice lead to the semi-monopoly of a few units which are trying to shut out internal competition.

The policy of achieving self-support in the manufacture of motor vehicles is not in dispute. What is in dispute is the way it is being implemented. There should be some limit to the sacrifices the consumer is called upon to make in building an industry. The case of the sugar industry illustrates the point. Although it was no longer legally protected, the quantum of import duties for long remained unaltered. Their nomenclature was changed from protective duties to revenue duties without their impact being altered.

Import control, the policy of appeasing cane growers and imposition of the sugarcane cess increased the burden on the consumer to a considerable extent. In view of what the Fiscal Commission has said, the question to be asked is whether the price of sugar is higher than the parity of landed cost plus import duties. Such issues are creating a stronger opinion against the policy of protection. As far as the automobile industry is concerned, it is felt that since the

Your "next day" neighbour...

Over 30,000 passengers have already flown by B.O.A.C. Comet Jetliner since the world's first service was inaugurated in May 1952. Ask any one of them about this miracle of effortless flight... about the comfort and quiet as you cruise eight miles a minute... the lack of vibration and absence of travel fatigue. Then you will understand why B.O.A.C. is miles ahead in air travel. And why your next flight to Japan, Singapore or Bangkok must be by B.O.A.C. Comet Jetliner. No other airline flies so far so fast...

BRITISH OVERSEAS AIRWAYS CORPORATION

basic conditions have not been fulfilled it is time the Government reconsidered its policy.

Industrial Development Corporation: Pros and Cons

There has been criticism in certain quarters of the proposal for an industrial development corporation. The whole scheme, it is pointed out, depends on finance. Money, critics say, would be attracted by the Corporation from the market largely at the cost of Government loans; the former would, to that extent, reduce the availability of finance for the Government's other development projects. The Corporation's sole function would be to stimulate industrial enterprise either through the expansion of existing units or by starting new ones. In the nature of things, the bulk of its requirements would probably be in the form of imported machinery and plant, for which foreign exchange would be required. India's expenditure of foreign exchange during the past year has been less than expected. In fact, she has increased her sterling reserves in London instead of utilising the release made under the Indo-British Sterling Balances Agreement. For most of its requirements, the Corporation would utilise resources which are at present lying unproductive with the Bank of England.

There remains for consideration the rupee part of the corporation's expenditure. The causes of the shortage of finance for private enterprise have not yet been clearly analysed. It is not known how far the inactivity of the investment market has resulted from bad management and malpractices indulged in by certain industrialists. It is no secret that during the boom period some prospectuses of new companies had a familiar feature which announced that 80 percent of the issued capital had already been subscribed by the directors, promoters and their friends. Hardly had the ink on the prospectuses dried when share brokers were made to bid against each other, raising the premium on the shares. In several cases, shares purchased at a premium are worth very little today. Some made fortunes, while others lost heavily. It is possible, therefore, that Government loans are successful largely because the investing public has lost confidence in joint stock companies. The industrial development corporation might absorb such resources which have hitherto remained idle or are used mainly for speculation. The case of some Indian insurance companies illustrates this point. Another example is the hoarded wealth of Hindu temples, which outside Madras still remains idle. Two methods of using this wealth are suggested.

Firstly, an appeal could be made to temple trustees or 'mahants' to invest their surplus money in the corporation. Secondly, as in Madras, the temple money could be utilised for educational purposes, releasing government funds now spent on education for other development needs.

Some critics question the advisability of launching the corporation. They point out that the Ministry of Production and the Planning Commission between them are doing everything possible for industrial development. No one has questioned the ability and zeal of these organisations, but the problem calls for a single-minded and concerted effort which is largely lacking at present. In reply, it is stated that the Government does not function on the basis of watertight compartments, it works on the principle of joint responsibility so there should be no question of the proposed corporation encroaching on the affairs of a Central Ministry.

Airports Advisory Committee

The Ministry of Communications has set up an Advisory Committee for Airports, whose first meeting will be held here on 13th November. Representatives of Indian and foreign airlines have been invited to attend the meeting.

I.C.A.O. Technical Body to Meet

The Technical Committee of the International Civil Aviation Organisation will begin its next session in New Delhi on 16th November.

Explosives Factory Agreement with I.C.I.

An agreement has been reached between the Government of India and Imperial Chemical Industries, Ltd. to establish a new company to manufacture commercial blasting high explosives. Mining needs, water, power and irrigation works, and road building have increased the demand for explosives to a point where an indigenous factory has become necessary. When the factory goes into production, India will be self-sufficient in the manufacture of these essential industrial commodities. The agreement between the Government and I.C.I. provides for the registration of a new company to be known as Indian Explosives Limited with an authorised capital of Rs. 4 crores. Initially Rs. 2 crores of the capital will be issued, of which 80 percent will be subscribed by I.C.I. and 20 percent by the Government of India. The balance of the capital will be met by loans, and

a substantial portion of it is expected to come from the Industrial Finance Corporation. A site has been selected for the factory close to the Bihar coalfields so as to give the best possible service to the coal mining industry, which is the principal consumer of industrial explosives in India.

Under the agreement, I.C.I., through their Nobel Division, will plan the lay-out of the factory provide designs for plant and equipment, and will be responsible for erection and starting. They will provide all the technical "know-how" and also information on research. They will draw on their long experience of blasting explosives, which dates back to 1873 when Alfred Nobel established the first factory in Great Britain for the manufacture of high explosives containing nitroglycerine. I.C.I. will provide initially all management staff required and a number of key workers. They will train Indians to take over responsible positions. By agreement with the new company, I.C.I. (India) Limited, will handle the distribution and sale of the Indian manufactured explosives, operate the extensive series of magazines which they own throughout the country and continue to give their technical service to consumers in India. Agreements embodying these arrangements were concluded after discussions in New Delhi between the Ministry of Commerce and Industry and a seven-man mission from I.C.I., including head office staff from London and technical staff from the Nobel Division of I.C.I. in Scotland, accompanied and assisted by I.C.I. (India) staff. Full discussions were also held with the Government of Bihar at Patna. The agreements were finalised in New Delhi this week on behalf of the Government of India by Mr H. V. R. Iengar, Secretary to the Ministry of Commerce and Industry, and on behalf of I.C.I. by Mr R. C. Todhunter, one of the directors on I.C.I.'s main Board.

According to the Labour Bureau, the working class cost of living index (base 1944=100) in Assam receded by 4 points in Sihar and appreciated in Gauhati and Tinsukia during the month of August, 1953. In Sihar, the index number dropped to 133. The declining trend has continued since June, 1953, indices for the food and miscellaneous group receded by 6 points and 1 point respectively. The index number registered only a fractional rise in Gauhati. It stood at 130. Indices for the clothing and miscellaneous group dropped by 1 point. After remaining stationary during the previous three months, the index number appreciated by 2 points to 122 in Tinsukia. It was largely due to an advance in the food group index by 3 points. Appreciation was partly offset by recession in the clothing and miscellaneous group indices by 1 point each.

London

LEGISLATION FOR NEW SESSION OUTLINED

RESTORING COTTON TO PRIVATE TRADING

(FROM OUR LONDON CORRESPONDENT.)

THE speech from the Throne at the opening of the new session of Parliament last Tuesday contained little that had not been expected with regard to the Government's legislative plans for the immediate future. In so far as these have any direct bearing on the economic situation, they mark a significant advance towards the realisation of the basic policy of restoring the widest possible freedom to industry and trade within the limits imposed by the balance of payments and gold reserves positions. Seeing that this policy undoubtedly involves the risk of a rise in the cost of living—for instance, the proposed abolition of all food rationing by the middle of next year and the return of this trade to private hands, side by side with the continuance of guaranteed prices to British farmers on a deficiency payment basis—it is inevitable that it will be strenuously opposed by the Labour Party, so the new session promises to be as busy and as controversial as the last. The biggest storm will arise over the Government's new plan for housing, under which it is proposed not only to maintain new building at the present figure of 300,000 houses per annum, but by allowing some increase in controlled rents, with certain safeguards, to ensure the proper maintenance of older houses and thus rescue them from decay. As a corollary to this local authorities are to be urged, with help from the Exchequer, to engage more actively in the matter of slum clearance. The whole question had to be tackled at this time, and on the whole Mr. Macmillan's proposals represent a courageous attempt to do so, but the Government must be very sure of itself indeed to embark upon it now with a still somewhat slender majority in the House of Commons. Some 5,000,000 rents might be involved, and it is obvious that the elector has not yet appreciated that better living conditions might well be worth a few extra shillings a week, or, and this is even more important, that it is more credit to him to pay this himself rather than to hand the amount over to the Government in taxation so as to enable it to claim the credit by offering a subsidy for the job to be done at an uneconomic rate.

The housing plan is a lot more concrete than the variety of proposals which have been announced for dealing with the end of rationing and the future marketing of agricultural produce from the farms in this country. The latter is, of course, a more intractable problem, and in the circumstances it is probably an achievement that the obvious interim plan which the Government has produced after much discussion with the interests concerned goes at least part of the way towards meeting the widely divergent requirements of the producers as well as of the consumer. Here again the Opposition is highly critical, but in this case, strangely enough, less on behalf of the consumer than that of the farmer, and this despite the fact that under the plans the Government accepts a financial burden which might well prove an embarrassment to the Chancellor of the Exchequer, for it cannot be adequately assessed. So far as the consumer is concerned, he must just wait to see how things work out. Once again, however, he pays either way.

Emergency Laws Extended

For the rest of the programme, it is good to see that although approval is being sought for the continuance in force of a number of emergency laws and regulations for another year, their volume is being steadily reduced. The programme includes several bills designed to replace emergency powers, and preparatory work is proceeding on others for introduction later. In the sphere of industrial legislation, something is to be done to meet long-standing complaints of important trade unions about conditions of work in mines, in certain factories, and in the baking industry. There are three measures aimed at putting more money at the disposal of public bodies. The borrowing powers of the two nationalised air corporations are increased, those of B.O.A.C. from £60 million to £80 million and of B.E.A.C. from £20 million to £35 million and they are both to be allowed to pay pensions to the members of their boards. The National Debt Commissioners are authorised in another bill to issue sums not exceeding £500 million to the Public Works Loans Commissioners, with a limit on the latter's aggregate commitments in this issue period of £1,200 million. A third bill authorises the issue of a further £125 million for capital expenditure by the Post Office, of which £116 million will be required for the telephone service.

Then, of course, there is the Cotton Bill. This Bill is concerned almost exclusively with the removal of restrictions on private trading in raw cotton so as to permit the winding up of the Raw Cotton Commission. By removing the monopoly powers conferred on the Commission by the Cotton (Centralised Buying) Act, 1947, permission is accorded to the opening up of a private futures market to trade in cotton from all quarters, including the United States—an indication that the currency situation has improved. It is intended that the Commission will cease to provide "cover" for the industry at the end of August, 1954. By that time, it is expected, the Liverpool Cotton Exchange will be able to con-

duct these operations, and the Commission thereafter will only trade to an extent necessary to deal with outstanding obligations. Sir Ralph Lacey, the popular Chairman, to whom Lord Woolton paid a well-merited tribute in the House of Lords, is expected to leave the Commission in January to join Fine Spinners and Doublers Ltd., in the capacity of a vice-chairman.

The Raw Cotton Commission has lost no time in circulating spinners of its own intentions. For cotton of crops which will be marketed during the next few months and which must normally be bought promptly if supplies are to be secured, the Commission says it will continue to take steps to acquire such future supplies as it considers that contracting-in spinners will require. This applies in particular to Pakistan, Indian, Sudan, East African, and Peruvian (1954 crop) cotton. It is important, however, that spinners should keep the Commission more fully informed than hitherto about cotton which they expect the Commission to secure for their needs, especially in the growths mentioned. Adequate supplies of other growths of cotton have been or are being secured. Cotton in the Commission's stock which is not required by contractors-in will be available to contractors-out at fixed negotiated prices. The Commission will try to ensure that cotton likely to be required by contractors-in is not disposed of to others, but this emphasises the need for contractors-in to keep the Commission closely informed of their future requirements.

October Dollar Earnings

With the start of the movement of raw materials from sterling area countries to the dollar markets it was to be expected that there should be some improvement in dollar earnings during October. At \$34 million, however, the surplus includes \$13 million of U.S. defence aid and a further \$6 million by a gold payment from the European Payments Union in part settlement of the September surplus with that area. The net surplus, without these aids, is certainly better than the same figures for the two previous months, but is certainly not large enough to encourage the hope that the gold and dollar reserves, increased to \$2,520 million with the October surplus, will not have to be drawn upon before the year ends. The E.P.U. clearing for October shows us with a deficit of £10,800,000, half of which will have to be met in gold later this month, while in December payments on the U.S. and Canadian loans will again fall due to be met. The position in Western Europe is particularly disturbing, for it will be remembered that we are taking measures to liberalise imports from that area, and at this time of

the year the balance ought to shift in favour of sterling if the Continental countries make their usual raw material purchases from the sterling area. It may be, of course, that other sterling area countries are increasing their imports from Europe, for the figures reflect the position of the area as a whole and not only that of the United Kingdom.

Rubber Study Group

There may be disappointment, but there will be little surprise that the Management Committee of the International Rubber Study Group, which has recently concluded a three-week conference here to devise means to counteract the serious effects of recent price developments on the natural rubber industry, failed to make any progress towards the proposal for a buffer stock scheme which was put forward at the Copenhagen meeting of the Group last May. Instead, three alternative proposals—and even these apparently failed to secure general support—have been put before member Governments as means of alleviating the current position. These are: (1) Acceleration of replanting programmes; (2) Creation of new natural rubber stocks or additions to existing stocks, whether governmental or commercial; and (3) Action by the Government of the United States to increase the price of GRS (American synthetic rubber), to re-examine its practices in stockpile rotation, and to revoke a directive issued in 1952 regarding the level at which mandatory consumption requirements for synthetic rubber might be reimposed. On the other hand there was reassurance in the Group's re-examination of the rubber stock position. This shows a statistical surplus of natural rubber of 169,000 long tons by the end of 1953, compared with the surplus of 193,000 long tons forecast after the May meeting. The actual surplus is expected to be considerably less than even this revised estimate because of additions this year to governmental and consumers' stocks.

Brevities

There is good news for shipowners. The Joint Hull Committee, which comprises both Lloyd's underwriters and the marine insurance companies, has decided not to continue the 10 percent increase on premiums on vessels imposed in March. What is more, where the "surcharge" has already been paid, sympathetic consideration is to be given on re-renewal of insurances. The decision is the outcome of the Norwegian underwriters in taking sides with Norwegian shipowners and in reviving their own rating committee for hull insurance.

All restrictions on the use of nickel were removed by the Board of Trade and the Ministry of Supply from 6th November.

you, as an employer of labour, are aware of the great problem which absenteeism poses in industry today.

It is, of course, known to you that Malaria is the most common single cause of illness in India, and, therefore, almost directly the cause of all absenteeism due to illness.

The Five Year Plan, for example, says, "Malaria is the most important public health problem in India." Malaria debilitates the worker,

affects his efficiency and results in a discernible drop in production.

'Paludrine' prevents Malaria

Employers of labour all over the world confidently rely on regular 'Paludrine' dosage to do just that—prevent Malaria.

'Paludrine' is acclaimed by doctors as being most effective. In your establishment too, 'Paludrine' can produce startling results. Let 'Paludrine' go to work for you today. Given regularly to workers, it will ensure a higher standard of health, a higher rate of daily attendance and a higher level of production and profits.

We shall be happy to co-operate with you in implementing a scheme for 'Paludrine' Protection in your establishment. Special rates are available for bulk purchases. Please write today to the nearest office of:—

The whole world wants NICKEL ALLOYS

For more than a century Henry Wiggin have been pioneers in the production of high-nickel alloys, seeking always to be ahead of the engineer's demands for better properties. Continuous research for improved materials coupled with constant care and precision in manufacture ensure the high standing and international reputation of Wiggin high-nickel alloys. During the past year or so, world-wide demands have far exceeded the supply. But although some of our products are still not freely available we are doing our best to meet your requirements.

MONEL . . . corrosion-resisting alloy

NICKEL . . . in all forms

INCONEL . . . heat- and corrosion-resisting alloy

BRIGHTRAY . . . series of electrical resistance alloys

NILO . . . series of controlled expansion alloys

MANGONIC . . . stronger and more resistant than nickel in moderate sulphur-containing atmospheres

THERMOMETAL . . . for thermostatic devices

NICKEL ANODES . . . for nickel electrodeposition

OTHER NICKEL ALLOYS to meet special requirements

REPLIES TO TAXATION QUESTIONNAIRE CHAMBER'S VIEWS ON STAMP DUTIES

(FROM OUR BOMBAY CORRESPONDENT).

MOST replies to the questionnaire of the Taxation Enquiry Commission must have been received by now, although it is doubtful if the Commission has received even one set of complete replies to all its questions. (It is a joke among students of public finance these days that the questionnaire has solved the University examiner's problem of setting questions on public finance for at least a decade.) On a conservative estimate, it would take a competent research student at least one month's concentrated effort to provide suitable answers to all these questions. From the replies received, one can point to a number of important issues that the Commission must decide. Take, for instance, the question of stamp duties especially as they apply to transactions on Stock Exchanges and in forward markets. Several suitable suggestions have been made on this question by the Bombay Chamber of Commerce which observes, "There is a substantial loss in the revenue from stamp duties in conditions in which (a) the transmission of a share is possible without evidence of probate or letters of administration; (b) it is the custom to hold shares on blank transfers; (c) the stamp duty on a transfer of shares is paid by adhesive labels. It is commonly provided by Articles of Association of Companies that the directors may, in their absolute discretion, dispense with the production of probate or letters of administration or such other legal representation by the person claiming title to the shares of a deceased member of the Company. There is substantial avoidance of probate duties as a result. It is important that the avoidance be checked. It may, at the same time, be noticed that avoidance of the probate duty will continue to be possible so long as the obligations proposed to be imposed by the Estate Duty Bill may be discharged without an application for probate or letters of administration. As a result there will be a diversion of revenue from the States to the Centre.

"It is doubtful whether the practice of abstaining from securing the registration of shares has appreciably abated since the Bombay High Court held, in *Shri Sakti Mills Ltd. vs. Commissioner of Income-tax* (reported at 1948 I.T.R. 187), that credit under Section 18(5) of the Income-tax Act for the tax paid by the company could be claimed only by the person registered as the holder of the shares. The payment of the stamp duties on the transfer is avoided if the shares are held under a deed of transfer executed only by the transfer to the extent that the property in the shares may pass through a number of hands without the registration of any transfer, and it may be observed that certain banks customarily make advances upon the pledge of such shares without requiring their registration either in the name of the bank or in the name of pledger. No stock or share may be sold under sanction of the rules of the London Stock Exchange, unless registered in the name of the vendor. There can be no escape from payment of the duties on the transfer. The enforcement of that rule is rendered practicable by arrangements for securing the completion of transfer within the shortest possible time, believed to be 48 hours at the most. In India the time taken for the completion of a transfer of shares extends to three months or more.

"It may not be practicable in India to adopt the English law and practice; the evasion of the payment of stamp duties on transfers of stocks and shares may, however, be substantially abated if the banks are prohibited from making an advance upon the pledge of stocks or shares not registered in the name of the pledger or in the name of the bank or its nominees. Even if cancelled by an indelible rubber stamp at the time a transfer is approved, the adhesive label by which the stamp duty on

a transfer of shares is paid is easily removed and used a second time. The label does not carry the date of its issue as does the impressed label. It is believed that a substantial evasion of duty derives from the use of the adhesive label and that the revenue would be benefited if the stamp duty on a transfer of shares were to be paid by impressed labels."

With regard to the transactions in forward markets, the Chamber takes the same view as its counterpart in Calcutta, the Bengal Chamber of Commerce, and opposes stamp duties on these transactions. Both bodies hold that such transactions play a valuable part in the organisation of commodity sales and mobilising credit. In the opinion of the Bombay Chamber forward transactions constitute a form of insurance that is indispensable to all traders and the levy of stamp duties would only serve to impede them.

Textile Commissioner's Statement

Cotton interests were told by the Textile Commissioner at a Press conference on 3rd November that the Government did not contemplate, for the time being, further export quotas for Bengal deshi cotton, nor did it propose to reduce the export duty on dholerias, comras and mathias. This was in addition to his categorical declaration that the Government of India did not propose to reduce the excise duty on fine cloth and abolish the export duty on coarse cloth, about which there had been considerable speculation. There has been some disappointment among cotton traders who were expecting the announcement of a further quota of about 100,000 bales of Bengal deshi. They had good reasons to do so as the established shippers' share or 80 percent of the first export quota of 75,000 bales of Bengals announced on 28th September has been fully absorbed, while the licensing procedure covering newcomers has yet to be announced. Furthermore, their demand has had the backing of the Standing Committee of the Cotton Advisory Board which, at its meeting as early as 5th October, recommended the release of a further 100,000 bales of short staple varieties for export.

Tata Deferred Conversion

The curtain may at last be said to have been rung down on the Tata Deferred conversion controversy. Not only have both the deferred and the ordinary shareholders expressed their views unmistakably in favour of the special resolution at the separate meetings of the two classes of shareholders, but the resolution was adopted at the Extraordinary General Meeting last Thursday, with only three dissentients. According to the statement made by Mr. J. R. D. Tata at the two special meetings of the shareholders preceding the Extraordinary General Meeting, the proxies received show that while ordinary shareholders have voted in favour of conversion overwhelmingly, deferred shareholders have done so with a substantial majority. Moreover, the Government of India also has given its consent to the conversion of deferred shares and to the issue of bonus shares in terms of the special resolution adopted at the meeting on Thursday. With the conversion and the bonus issue, the equity capital of TISCO Ltd. will be raised from Rs. 2.61 crores to about Rs. 9.49 crores. Together with the preference capital, the total paid-up capital will aggregate about Rs. 17.25 crores, as against which the gross block account amounts to Rs. 48.90 crores. After receiving the Rs. 10-crore loan from the Government of India and the further renovation and expansion programme, the gross block will be raised to about Rs. 57 crores.

With the last hurdle in the way of Tata deferred share conversion cleared the announcement of the maintenance of the Belapur dividend at Rs. 16 per share, the same as last year, and the recent removal of export duty on medium cloth and reduction of the excise duty on superfine cloth, the stage was set fair for a good monsoon trading on Diwali day. Seeing that the old year has proved to be more favourable than had been hoped a year ago and also that the Government has begun to show greater realism of late, operators generally take a constructive and hopeful view of the Sambat year 2010.

Madras

TWO MEMORANDA ON TAXATION PROBLEMS

RATIONALISATION OF PUBLIC EXPENDITURE

(FROM OUR MADRAS CORRESPONDENT).

IN the limited time allotted by the Taxation Enquiry Commission, institutions and individuals interested in tax problems do not appear to have sent many complete replies to the exhaustive questionnaire issued. Even the Southern India Chamber of Commerce appears to have only so far dealt with questions relating to Part I. The memorandum of the Chamber starts by emphasising that a taxation policy in an underdeveloped country should have for its main objective the provision of powerful incentives to work, to save, and to invest. Any revision of the tax system should proceed on the principle that the retention of adequate profits of business or industry by the taxpayer is a very necessary and reliable way of providing resources for development. In the Chamber's view, the Indian tax system has at no time been related to the normal ability to pay.

The Chamber does not favour tax changes that would cut into the subsistence margins of a large number of people; at the same time it does not think that any country can evolve a rigid proportion between direct and indirect taxation that can be considered ideal. The burden of the present tax system is now unevenly distributed. While indirect taxes like customs and excise duties are naturally distributed very evenly, direct Central taxation is heavily concentrated. The incidence of taxation on income, says the Chamber's memorandum, has begun to weigh heavily on the urban sector, the industrialist, the business man and the higher income groups. Any increase in existing taxes would destroy incentive in industry and trade and, generally, in the sector of free enterprise. Fresh sources of taxation should be examined solely from the point of an increase or decrease in productivity. The Chamber considers it unrealistic to allow a mere reduction of inequalities in wealth and income to become the primary objective of a tax system in an underdeveloped economy.

The Chamber then outlines its specific suggestions, one of which is that a very important place should be given to economy and rationalisation of colossal waste of time and manpower in government offices; there is a need to investigate the capital formation depends on tax exemptions and on liberal depreciation allowances, the Chamber suggests that exemption from taxation should of operation of a company and not, as at present, a Corporation tax should be substantially reduced as another measure of relief. Further relief to the savings income group is also necessary to encourage industry. Ploughing back of corporate profits into agreements should be the subject of a gentleman's agreement and not a subject for fiscal regulation. For specific purposes. The profits of State under-venture projects should be carried to special funds to meet fees should be levied only in cases where property value has risen by reason of its proximity to public projects or the development of new capital towns. To talk of unearned increments, says continues to own and live on the land has not increase in its value. The Chamber also thinks should be encouraged for quite a long period to earned by foreign capital should be secured by an appropriate amendment of the taxation law. Finally the Chamber says that any check on present standards of consumption in India would be a retrogressive step.

Congressmen's Views on Taxes

What on the surface appears to be a socialist, approach to problems of taxation is contained in a memorandum submitted by the Secretary of the Madras Legislature Congress Party and two others will find very little support among business men, but they show how the Congress is thinking. Reduction in inequalities of wealth, they say, is an objective which should occupy the first place in the tax policy. Whether such a policy is sound country's general underdevelopment, but rather bearing in mind the continuing social tension that is fanned by radicals and Communists alike. The psychological effects of an egalitarian tax policy, continues the memorandum, on the low-income groups who constitute the vast majority suggested should be basically sound because steep taxes on income and property are necessary to correct the imbalance in the current structure of social and economic stability.

The Congress memorandum says that the objective, "encouragement of incentives to work, to although in the name of incentives to save and to invest some people have demanded and obtained tax concessions. That redistributive taxation does

not necessarily produce disincentive effects is known from the example of the United Kingdom where 18 percent, compared with 14 percent in 1938, of the gross national product went to investment in spite of the striking increase in the percentage of personal income tax and despite the annual average of about £175 million realised from death duties. That probably a third of the annual investment is accounted for by the public authorities' share in it does not affect the force of the argument, it is claimed.

The objective of "countering inflationary and deflationary tendencies," the memorandum continues, should be considered as a secondary function of a tax system, as inflation and deflation would have to be tackled primarily from the side of currency and production. Although there is a theoretical case for a sufficiently militant fiscal policy in an inflationary or deflationary situation, the scope for such a policy is rather limited in practice for the following reasons. Taxants revenue of Union State and local Governments can be raised at best to 10 percent of the national income; income tax coverage is very limited; and there is also widespread tax evasion amounting to an estimated 15 to 20 percent of taxes that should be paid under existing law. Besides, the attempt to produce anti-inflationary effects through the device of indirect taxation has unfortunately alienated low-income groups. Greater reliance, therefore, should be placed on direct taxes which can effectively absorb surplus purchasing power with the least detrimental effect to low-income groups. Public investment financed from the proceeds of direct taxation may well be expected to more than neutralise any possible disincentive effects of such taxation; it may also be expected that such public investment may well take the sting out of the present paradoxical position in the Indian economy—an unusual and unexpected combination of inflationary and deflationary forces.

Estate Duty Rates

In the light of the above objectives, the memorandum suggests that the rates of estate duty should be a little higher than those now proposed for the higher categories of principal value of estates and that in the case of lower categories the rates should be considerably lower than those which obtain in the U.K. The signatories expect that all the States would agree and that agricultural properties would come under the estate duty levy uniformly throughout the country. Another suggestion is that agricultural and non-agricultural incomes should be aggregated and taxed under a Central Act, that portion of the tax proceeds which is calculated to arise from agricultural income being handed over in its entirety to the respective States on the basis of origin. Agricultural income tax exempting small holders automatically would satisfy both the canons of equity and ability to pay: small holders, however, should pay a basic land tax of 4s. or 4s. 3p. acre.

Direct and Indirect Taxation

The memorandum deals at length with direct and indirect taxes. While the Government's draught on national income by way of direct taxes constitutes just 2.3 percent of such income as against 4.8 percent by way of indirect taxes, the signatories are surprised to find that it has been suggested that there is still further scope to increase taxes on consumer goods. The memorandum stresses that especially at a time when inflation has hit hard the middle and low-income groups, any further increase in the number and scale of taxes on consumption would make the tax system, already sufficiently regressive, still more regressive in character. As it is, the effect of excise duties (some of which are on an ad valorem basis), of multiple sales taxes on an ad valorem basis and of octroi duties (wherever they are levied) is to increase still further the high prices at which many essential consumer goods have to be procured by low-income groups; as the marginal utility of money is high in the case of low-income groups it is obvious that even a small addition to existing prices is a burden and is responsible for the dislocation of family budgets, in many cases causing large scale indebtedness. As most indirect taxes are on such items as food and clothing, reference is pertinent to a number of working class and middle class enquiries which show that expenditure on these two items ranges from 60 to 80 percent in the case of income-groups getting below Rs. 150 per mensem.

The memorandum suggests raising the proportion of tax revenue to national income to 10 percent in the years immediately to come. As a social service state would require about 12 to 15 percent of national income and as India is working towards both State capitalism and the Welfare State, at least a modest rise in the proportion of tax revenue to national income is called for. Even the deliberate raising of the revenue accruing from the collection of income taxes and estate duties. Generally at present the optimum limit for indirect taxation seems to have been reached; any further increase in indirect taxes might only lead to diminishing returns—a trend which is clearly evidence in States like Madras. The signatories suggest that the existing level of indirect taxation should be stabilised as any immediate relief from such taxation is not financially expedient in view of the obligations imposed on the State of Governments to carry out their part of the revised five year plan. Concrete suggestions relating to State undertakings and non-tax revenues, cesses for particular purposes, refund of a part of the taxes for specific purposes, refund of a part of the import duties in favour of backward states to stimulate their industrial development, and so on are also given in the memorandum which covers only Part I of the Commission's questionnaire.

Books and Publications

HANDBOOKS ON BANKING AND MONEY

Banking. By J. B. Parker. (Published by the English Universities Press Ltd., London. 160 pages. Price 6 shillings).

Money. By J. L. Hanson. (Published by the English Universities Press Ltd., London. 182 pages. Price 6 shillings).

These two handbooks on banking and money published by the English Universities Press in the "Teach Yourself" series will be welcomed by laymen. As these are English publications, they naturally deal with their subjects in terms of English history, institutions and practice but in view of the rôle England has played in the development of banking and monetary technique, readers in India will find them as useful as readers elsewhere.

The author of the book on banking is a tutor on the staff of a famous British bank's training college, and has written the book, keeping in mind particularly customers and would-be customers of banks who would like to know more about these institutions; young persons about to choose a career and wanting to know the type of work they would be required to do in a bank; and younger bank men seeking a broader picture of the bank's activities. Besides chapters on bills of exchange and advances on the types of accounts that can be opened with banks, and on the various services which banks render to their customers, the book also contains chapters on bank organisation, and the recruitment and training of staff.

In recent years monetary problems have attracted considerable attention and the general reader has begun to take a greater interest in the subject of money which is no longer of purely academic interest. Indeed, money affects many aspects of our lives and during the last two years monetary measures would appear have played an important rôle in bringing about an improvement in the world economic situation. Mr. Hanson's handbook is divided into five parts. Parts I and II deal with the supply of money and the value of money and the next two parts with money and economic activity, and the international aspects of money. In the concluding part he discusses postwar monetary problems. The book contains a clear and concise account of the main elements of monetary theory, monetary policy and monetary institutions and the general reader who wishes to understand the rôle money plays in the economic system will find it of great help.

AN INSURANCE DIRECTORY

Indian Insurance Directory, 1952. (Published by Sahakari Vima Prakashan Ltd., 11 Aglary Lane, Fort, Bombay. 423 pages. Price not stated.) This is the second year of publication of a Directory produced by one of the country's best known publishers of insurance literature. The Directory is fairly comprehensive and a special feature is some information relating to general insurance and reinsurance which is not commonly found in books of this kind. It opens with a short summary of the progress of insurance business and insurance legislation in the country, which is followed by excerpts from the current Insurance Act. The latter appear to have been specially chosen keeping the insurance agents and policyholders in view and even otherwise are far from complete. There is, for instance, no mention of the statutory provisions relating to assignments and nominations—one of the vital sections of the Insurance Act affecting rights under life policies. Similarly, the legal safeguards for the policyholder when he defaults in paying premiums are contained in sections 50 and 113 of the Insurance Act, should also have been mentioned. Some tables of measurements have been given but undue importance seems to have been attached to blood pressure readings. Though Oriental's experience of heights and weights given in the Directory is the most representative Indian standard available for the purposes of life insurance, Dr. Robertson's standard also have been shown as it is still adopted by many life offices. Inclusion of rates of mortality currently experienced or used in Indian insurance—like the Oriental's or the Combined Prudential and National experience—would have materially added to the value of the publication.

The publishers have done well to give the extra ratings recommended by the Indian Life Offices' Association for lives in hazardous occupations but they should have added the extra ratings for standard physical impairments as well. In giving details of accounts etc. of various companies, data have been shown itemwise instead of companywise thus facilitating comparison between companies. However, some improvements are possible in arranging the data. Business, revenue account and valuation have been shown together. Instead, it would have been better to put business, renewal expense ratio, interest yield and valuation together and show revenue account separately.

SPHEROIDAL GRAPHITE CAST IRON

Spheroidal Graphite Cast Iron: Engineering Properties and Applications. (Issued by the Mond Nickel Company Limited. 32 pages). In 1947, when the direct foundry production of spheroidal graphite cast iron was first announced it was hailed as the greatest metallurgical advance of the century,

for it provided a whole new range of materials which combined the advantages of cast iron with much of the strength and toughness of steel. The present publication deals largely with the two main grades of S.G. iron in wide current use but also mentions other special grades such as acicular and austenitic cast iron with the graphite in the spheroidal form. The two normal grades are similar except that one is in the as-cast condition while the other is annealed. The first can be expected to give a tensile strength of 35-45 tons per sq. in. with 1-5 percent elongation while the second gives 27-35 tons per sq. in. tensile strength with an elongation of 10-25 percent. Among the general data are a diagram comparing the main mechanical properties of S.G. iron with other cast irons and with cast mild steel, a table of all the mechanical properties of both as-cast and annealed S.G. iron necessary for design purposes, details of the production characteristics and a description of service properties. In addition, reference is made to the American Society for Testing Materials Standards for S.G. iron and a valuable summary of typical applications is included. In all, the booklet provides a clear picture of the current position and future possibilities of this new material, which is now being produced in India, and there will be few engineers who will not be able to visualise immediate further applications in their own spheres. The publication is available free to all interested parties on application to the Mond Nickel Company Limited, Technical Office, 1, Forbes Street, Fort, Bombay 1.

INDIAN LABOUR PROBLEMS

Labour Economics. (General Editor, Kastur Chand Lalwani. Published by Artha Vaniya Ganesan Mandir, 12 Duff Street, Calcutta 6. 240 pages. Price Rs. 6-4.) In India the problem of manpower is one of quality rather than quantity. The census reports do not provide precise statistics on the industrial labour force as such. Figures for the average daily number of workers employed in factories, mines, plantations, railways, posts and telegraphs and the Central Public Works Department are, however, available from Government publications. The number employed daily in the respective branches or departments in 1949, 50 was 2.9 million, 0.5 million, 1.2 million, 1.4 million, 0.2 million and 0.4 million. According to this publication, before 1925 the supply of industrial labour in India was very limited and the shortage of labour, both skilled and unskilled, was chronic even in organised industry: mines and plantations experienced even greater difficulties in getting a proper supply of labour. The peculiarity in India is that industrial workers generally come from a distance, often from other States. The efficiency of a worker is not something rigidly predetermined but depends on how his relation with the industrial establishment has developed and what sort of environment is provided for his work. This relationship and the conditions of work in India are still, in many places, grim. Not enough has so far been done to improve health and prevent occupational diseases. Earnings were low before the war but were raised during and after the war on the basis of the awards of arbitrators and industrial tribunals or the recommendations of pay commissions. Between 1939-49, it is stated, both living costs and earnings rose 3½ times but the productivity of labour has not generally kept pace with their earnings. The system of payment by results has been adopted on a restricted scale by certain major industries only. The basis of trade unionism in India is thoroughly unstable. There are very few trade unions with a regular membership which may be regarded as representative. Welfare schemes have assumed importance recently and they have an important bearing on the efficiency of workers. The authors of this work say that social security is practised in India on a very limited scale. After the first world war, India became a member of the International Labour Organisation; this, combined with the growing industrialisation of the country and better realisation of the duties of the State towards labour, say the authors, has led to the passing of a number of laws affecting various aspects of labour welfare.

Commodity Markets

THE CASE FOR A NEW SALT POLICY

"UNFAIR" COMPETITION FROM SMALL PRODUCERS

(By Dr. N. DAS, I.C.S., Secretary, Commerce & Industries Department, West Bengal)

SALT has had a chequered history in the politics as well as the economics of this country. The independence movement in India owed a good deal of its inspiration, and not a little of its momentum, to the fact that this poor man's seasoning of his daily diet was subjected to an excise duty by the rulers of our country. Mahatma Gandhi's famous march to the beaches of Dandi and his clarion call to every inhabitant of the sea coast to defy the Government ban on the manufacture of salt without a licence are still vivid in the minds of the present generation. In those fateful days, the right to manufacture salt became the symbol, as it were, of the duty of every Indian to assert himself against foreign rule. As a result, at the memorable Gandhi-Irwin Pact of 1931, the then Government of India had to permit the manufacture and collection of salt without licence by local residents in villages immediately adjoining areas where salt could be collected or made by the ordinary villager. Later, on the eve of independence, the excise duty on salt (it was Re. 1-4 per maund) was abolished—in April 1947.

It was, therefore, not surprising that as soon as India attained her independence, the right of the common man to manufacture salt, without any hindrance from Government, was examined afresh, and further concessions were granted. By its famous policy resolution of April 1948, the new Government of India permitted individuals or groups to produce salt freely on any land to which they had lawful access for this purpose and by whatever process they desired, "provided the total area of land covered by the salt works set up by any individual or group was not more than 10 acres." The resolution stated in clear and unambiguous terms that no licences were needed in such cases and that the provisions of the Central Excise and Salt Act, 1944, would not stand in the way of these small-scale manufacturers. This meant that the salt produced in these works was exempt from the levy of cess at 2 annas per maund as well as from quality control, both of which were in force as regards salt produced in all licensed works. To give an economic justification for the new policy, the hope was expressed that this measure would step up the indigenous production of salt, so that India could attain complete self-sufficiency in this essential commodity in as short a time as possible.

No Economic Justification

Five years have elapsed since then. Today, the Government of India has discovered that the economic justification for continuing this concession no longer exists. Far from being deficit in salt, supply today exceeds demand by a large margin, so much so that export has in fact become necessary. Overall production has increased from 635 lakh maunds in 1948 to 769 lakh maunds in 1952; a total ban on imports has been in operation since 1951 and some 72 lakh maunds were actually exported out of the country in 1952. The Government of India also seems to have awakened to the fact that it is necessary to improve the quality of salt—both for local consumption and for export markets—through a tightening of control over all production.

It appears that the concession granted in 1948 is being abused on a very large scale, particularly in Saurashtra, Bombay and Madras. Traders, it is alleged, are acting in collusion with manufacturers with lands less than 10 acres each, obtaining salt from areas aggregating as much as 100 acres, and selling this salt in the open market. In fact, there have been instances where hereditary salt workers have been actually financed by salt traders and encouraged to set up small concession works in contiguous areas on the understanding that the latter would have exclusive rights to purchase the entire production of the area. As early as 1950, the Salt Experts Committee set up by the Government of India reported that "these small ten-acre works, individual units merely in name, were in fact large salt works organised and operated with the intention of evading the provisions of the Central Excise and Salt Act." It was particularly profitable to do so, because production in these ten-acre concerns was exempted from payment of the salt cess.

There is another problem to be faced in the ten-acre concessions. These small holdings are incapable of economically producing salt of good quality. To quote from the report of the Salt Experts Committee, "if a ten-acre works is to produce good quality salt, it should reserve about 11 acres under crystallisers. From such a small area, the production, even under the most ideal conditions, would be subject to many fluctuations and would be so small as to render the enterprise uneconomic and wasteful of both solar and human energy." The experts, therefore, recommended that the policy of the Government should be to ask these small manufacturers to form themselves into co-operative societies, so that they may group together into economic units of a minimum of 100 acres or more. They further suggested that such units should be brought under the licensing system, although they were prepared to concede that the Government might adopt a liberal attitude in regard to the issue of such licences.

It is not, however, so much the alleged inefficiency of these small units as the fact that they are depriving the Government of legitimate revenue that has brought matters to a head. According to a recent estimate, production under this concession increased from 3 lakh maunds in 1948 to 40 lakh maunds in 1952. This is not an insignificant figure when considered against the background of the total production of salt in this country, which has been between 700 and 770 lakh maunds per annum since 1950. The Government of India finds that the production of these small-scale manufacturers, which was originally meant for local requirements only, is now being transported to distant markets and actually competing with the production of licensed factories. Traders, it is alleged, are trying to exploit the situation and are buying salt at lower prices from the small-scale producers, as this salt is not subject to any quality control or payment of cess. As a result, bona fide licensed producers are finding themselves at a disadvantage and some of them are in danger of being squeezed out of business.

It has, therefore, been suggested by the Government that the policy announced in 1948 needs to be modified. What precise shape the modifications will take has not been finalised yet (it is understood that the various State Governments have been asked to send in their suggestions), but it seems almost certain that there will be a retreat from the stand taken in 1948. If, as has been alleged, certain sections of the big traders are taking an unfair advantage of the concessions granted in 1948, small producers have themselves to blame for the change which has taken place in the attitude of the Government. It is, however, a moot question whether a return to pre-1948 conditions will not largely eliminate the keen competition which has helped to stabilise the price of salt for internal consumption at a reasonable level. The common man is not really interested in the politics or economics of salt; he only wants to be assured that this simple necessity, which nature in its bounty has dispersed plentifully all over and around India, should be available to him at a price he can afford.

DEMAND FOR PAKISTAN COTTON

The Lancashire-Pakistan Cotton Committee, which the Cotton Board has announced will be set up to create a wider demand in the U.K. for Pakistan cotton "based on commercial incentives," will have to thread its way past many obstacles, says *The Manchester Guardian*. Until recently Pakistan was one of Britain's best customers for cotton cloth. In the three years 1950-52 an average of almost 50 million square yards of cotton piece goods annually was shipped there from Britain, but in the first half of this year a total of only 2.2 million square yards was sent. This must not be taken as the inevitable fate of British goods in this market. British machinery makers sent large quantities of their products in 1952-53, when the United Kingdom replaced Japan as Pakistan's largest supplier of imported goods as a whole. Moreover, the important trade agreement between Pakistan and Japan has been beset with difficulties.

Lancashire's purchases of Pakistan cotton have recovered from the low point of 33 million pounds in 1952 to which they had fallen from 47 million pounds in the preceding twelve months, and in the first nine months of this year imports reached 51 million pounds. During the 1952-53 season, however, the value of exports of cotton from Pakistan to Japan was about five times as great as that of the cotton sent to Britain. There has often been a reluctance in Lancashire to meet the prices demanded. Although this cotton has near substitutes among American growths, Pakistan has seemed not to have fully realised that the sellers' market has finished, the export tax and the high exchange rate being symbols of this attitude. There are other considerations. Lancashire users of Pakistan cotton have sometimes had cause to complain of its dirtiness or the mixture of long and short fibres in one bale. This is no doubt one subject to which the Committee will give its attention.

Undoubtedly there is a large potential demand for British cotton textiles in Pakistan, while from Britain's point of view any increase in competitively priced sterling cotton is of obvious benefit. The Committee should thus start off with at least one advantage denied to many such bodies: a keen desire on both sides that it shall succeed.

BOMBAY OILSEED SCHEME

A five-year scheme estimated to cost Rs. 1.9 crores, to increase the production of oilseeds in Bombay, is being considered by the State Government. It is proposed to increase production, and distribute improved varieties of oilseeds suited for different regions in Bombay State. The additional production of oilseeds is estimated at a little over 54,000 tons, the value of which will be over Rs. 3 crores. Oilseeds grown in Bombay include groundnut, sesamum, linseed, castor and safflower, among the oilseeds.

A scheme to increase the production and distribution of improved strains of groundnuts has been in operation in the districts of Belgaum, Dharwar and Bijapur, with financial assistance from the Indian Central Oilseeds Committee. It is now proposed to produce more seeds of these strains on government farms and to supply them to progressive cultivators in the district so as to maintain the quality of these strains. It is expected that by 1957-58 groundnut production in Bombay will have increased by about 41,000 tons.

By the end of 1955-56 about 26,500 acres in the districts of Nasik, Ahmednagar, Poona and East Khandesh will have been sown with improved strains of sesamum giving an additional yield of about 475 tons. About 900 acres of linseed are to be sown with improved strains in the districts of Poona and Sholapur, while a little over 40,000 acres are to be sown with improved strains of castor-seed in the districts of Panchmahal and Ahmedabad. This should raise the yield by 500 tons by the end of 1955-56. Over 100,000 acres in the Nasik and Ahmednagar districts are to be sown with improved safflower seeds. By the end of 1957-58 production should have increased by a little over 2,300 tons.

WHOLESALE PRICE INDEX DECLINES

The official wholesale price index (base: year ended August 1939=100), witnessed a further fall of 0.3 percent to 393.1 during the week ended 24th October, 1953. The index was lower by 1.4 percent compared with the corresponding week of the previous month but was 1.2 percent higher than a year ago. During the week under review, Foodstuffs advanced by 0.7 percent to 388.2 owing to higher prices of jowar (+6%), wheat (+2%), sugar and bajra (+1% each), notwithstanding declines in dal arhar (-1%), gram at Hapur and Raw Materials declined by 2.2 percent to 443.1 as a result of decreases in the prices of groundnuts (-19%), export price of manganese (-7%), raw silk (-5%), castorseed, raw hides and rapeseed (-3% each), raw cotton and copra (+3% each) and groundnuts at Cuddalore (+1%), group also fell by 0.5 percent to 351.8 on account of declines in the prices of groundnut oil in Bombay (-9%), mustard oil and groundnut cake (-3% each), gingelly oil and copper (-1% each), Madras castor oil (+2%), groundnut oil in coconut oil (+1% each) showed increases during the same period. The index for the Manufactures group remained unchanged at 364.2 during the week. Lower prices of black pepper (-10%) and cashewnuts (-5%), caused the Miscellaneous group index to move down by 0.8 percent to 723.1 from 728.6 (revised) for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100)

Groups and Sub-Groups	24-10-53	17-10-53	26-9-53	25-10-52

SUGAR PRODUCTION AND STOCKS

The opening stocks, production, despatches and closing stock of sugar in respect of Central sugar factories in India during the fortnight ended 15th October, 1953, were 290,216, nil, 46,902 and 245,314 tons respectively, reports the Director of the basis of returns received under the Sugar Production Rules, 1935. The figures for the corresponding fortnight of the previous season were 524,284, 3,199, 48,301 and 479,182 tons respectively. Figures for the current fortnight relate to cane-crushing capacity, while the figures of the previous year relate to 121 factories representing 89.02 percent of the total cane-crushing capacity of sugar for the production and despatches 13,17,650 and 15,33,634 tons respectively, as against the corresponding figures of 14,89,377 and 11,27,040 tons during the previous season.

In a Press Note dated 16th April, 1953, a quota of 2,00,000 lbs. of Madras and Mysore silk waste was announced for export during 1953. As a result of further review the Government has decided to further increase the quota of 4,00,000 lbs. of Madras and Mysore silk waste. All applications should be submitted to the Deputy Chief Controller of Imports and Exports, Madras, in accordance with the trade notice being issued by him.

Jute

DECLINE IN MILLS' HESSIAN AND SACKING STOCKS

AS expected, stocks of manufactured jute goods held by mills at the end of October showed a substantial reduction from those held at the end of September. The total reduction was 15,800 tons of which 6,100 tons or 38.6 percent were hessian and 9,700 tons or 61.4 percent were sacking. The total stocks now stand at 102,800 tons compared with 115,500 tons on 1st January, 1953, and 133,800 tons on 1st July. Stocks of hessian were 30,500 tons at the end of October compared with 35,200 tons on 1st January, 1953, and 45,600 tons on 1st July. This reduction is very satisfactory considering the steadily increasing proportion of hessian produced by mills.

Stocks of sacking on 31st October were 70,100 tons compared with 77,800 tons on 1st January, 1953, and 85,700 tons on 1st July, 1953. These figures show that, in spite of the contraction of markets for sacking, the curtailment of sacking output has been such that all the sacking produced from January to October has been disposed of and that the alarming increases in stocks of sacking in the first half of the year have been checked. In the case of hessian, stocks amount to about one month's output and, in the case of sacking, to about two months' output—a not unsatisfactory position. Hessian stocks are 29.7 percent of the total and sacking stocks 68.2 percent.

Promotion of Burlap Consumption in U.S.A.

The news published the other day that the Burlap Council of the I.J.M.A. and an American dye concern are jointly to carry on propaganda to encourage home industry by teaching women to make colourful clothing and household accessories from used burlap bags is evidence that the campaign which started off with the I.J.M.A. delegation to the United States last year is being pursued. It is recognised that one of the advantages that burlap bags have over others is that they can be re-used and have a second-hand value and the idea is to drive this home to farmers and other users of burlap bags. This is all to the good but that alone will not bring back Calcutta's full share of the American market of which nearly 25 percent has been lost. Propaganda of that kind may aid as much those foreign manufacturers of burlap who have invaded Calcutta's market as it aids Calcutta. What must be done to recapture the lost market is to provide what the prime users want in better quality and at lower prices than the goods Calcutta's competitors can supply. Among the principal needs to achieve this end are the production of better quality jute, the abolition of the export duties and protection from price manipulations by speculators.

THE JUTE MARKETS

TREND GENERALLY UPWARD

At the time of writing the market is pausing in all sections but up to now the tendency has been towards higher levels. On Monday and Tuesday there has been profit-taking by the bazar in both hessian and sacking and this has resulted in less activity in the raw jute market. Prices are slightly lower than the best but the undertone is steady and mills' stock figures for the end of October have helped to maintain a confident note.

Manufactured Goods: The market has been very firm most of the week. There have been minor reactions but the general trend of prices has been upward. Good business was reported done with the U.K. and the U.S.A. at full prices. The business with the U.S.A. gave a lot of encouragement to bulls as it had been said that buyers in that country were not following the rise in prices and would not do so. The market continued firm up to Monday when a reaction set in and prices dropped a little but firmed up again in the afternoon. On Tuesday the market was quiet with little business passing though there was said to be good enquiry from shippers for Heavy Cees for November. Prices fluctuated within narrow limits, the highest of the week being Rs. 48-12 for 40" 10 oz hessian and Rs. 101-14 for B Twills for ready shipment. Quotations on Wednesday morning are as under and the tone of the market is firm, profit-taking by bull speculators having apparently ceased for the time-being.

	Ready.	Nov.	Dec.	Jan-Mar.
40" 8 oz	Rs 39-0	39-0	38-0	36-4
40" 10 oz	Rs 48-0	48-8	47-8	46-0
B Twills	Rs 101-10	101-10	101-14	102-2
Heavy Cees	Rs 100-0	100-0	101-0	101-12
Cornacks	Rs 100-12	100-12	101-2	101-12

Raw Jute: The market has been firm and active for most of the week. At the beginning of the week it was pausing in sympathy with the quietness in the market for manufactures but this quietness did not last long. As soon as the manufacture of goods market firmed up mills resumed the purchase of jute and higher prices were paid. Daisies continued in strong and the higher grades of jute came in for attention and prices. There has been enquiry for tops, middles free from samla and Mill Reds, all of which qualities are scarce. The following business was reported:

Lower Assam Rs. 27-8 to Rs. 28 basis Bottoms. Middles alone Rs. 30-8.

Northern	Rs 29 to Rs 28 basis Bottoms. Middles alone Rs 29 to Rs 29-8.
Upper Assam	Rs 26 to Rs 27-4 basis Bottoms.
Bongaon Tossa	Rs 26-8 to Rs 27-8 basis Bottoms. Middles free from samla Rs 35. Bottoms free from samla Rs 32.
Daisies	Rs 27-8 to Rs 30 basis Bottoms.
Daisies Mesta	Rs 26 to Rs 27 basis Bottoms.
Cut Mesta	Bottoms Rs 27
Bimil	Rs 24-8 F.A.Q.
Local Packing	Rs 23 to Rs 23-8 basis Bottoms.
Cuttings Pakistani N.C.'s	at Rs 70 per bale.

All the above for shipment in November and/or December.

At the time of writing the market is quiet but steady and sellers are showing no inclination to discount current quotations. It is believed that most of them are now oversold and because of that and firm markets and small imports upcountry they are unwilling to sell unless they get full prices. At current quotations they are offering sparingly.

On Wednesday morning quotations were as under and the tone of the market was steady to firm.

Indian Jute:	Landed at Mills	
	Rs per md. basis Bottoms	Shipment
Lower Assam	27-8	Nov-Dec
Upper Assam	27-0	Do.
Northern	27-8	Do.
Purnea	27-0	Do.
Murshidabad Tossa	27-0	Do.
Daissee (ex Sheeraphuli)	30-0	Do.
Daissee (ex Calcutta),	29-8	Do.
Daissee Mesta	27-8	Do.
Western Mesta	25-8	Do.
Bimil	F.A.Q. 25-0	Do.

Quotations for sales ex Cossipur are eight annas below these rates. Tossa is quoted at one rupee per maund higher than white jute.

	Rs per bale	
Mill Firsts	170-0	Nov-Dec
Mill Lightnings	155-0	Do.
Dundee Daisies 2/3 S.G.	170-0	Do.
Dundee Daisies 2/3 L.G.	155-0	Do.
Fakistani Jute	Landed at Mills	
ex Pakistani :	Rs(l) per md	
	basis Bottoms	Shipment
Jat	28-8	Nov-Dec
District	28-0	Do.
Northern	27-8	Do.
	Rs(l) per bale	
Cuttings SNC	80-0	
NC	72-0	
MC/TC	70-0	

Mofussil: In India imports are small and declining. This is said to be partly because growers are holding back stocks in the expectation of still higher prices and partly because paddy-harvesting is now in progress in some areas and other winter crops are requiring attention. It is reported that rather more than half of the crop has been marketed. Nearly all the daisies crop has now been harvested and more than half of it marketed. There is still daisies mesta to be harvested and

it is reported that there is a scarcity of water for retting. Prices in all markets are firm and all imports find keen buyers. Arrivals in Cossipur have been small and there is competition to buy everything that comes in, good qualities being specially sought for.

In Pakistan the markets are firm and imports about the same as last week but sellers are inclined to hold for higher prices. Fair business is reported in pucca bales for export and all classes of tossa are in keen demand at premium prices. Speculators are buying for forward shipments at higher prices than the quotations for ready. White jute is quoted at Rs(P) 23 basis bottoms for Jat Rs(P) 21-8 for District and Rs(P) 19 for Northern. Tossa is quoted at Rs(P) 4 to Rs(P) 5 above these rates. Mill Firsts are quoted at Rs(P) 140. Export Firsts at Rs(P) 120 and Export Lightnings at Rs. (P) 101 f.o.b. Narayanguj.

I.J.M.A. STOCKS OF MANUFACTURES

The Indian Jute Mills Association announces the total reported stocks of manufactured goods, exclusive of government orders, at the end of October as follows:

Description	31st Oct. 1953. (Lakh Tons) Yds.)	30th Sept. 1953. (Lakh Tons) Yds.)
Hessian Cloth & Bags	11.81	30.04
Standard Hessian	8.68	21.66
(included in above)	16.72	69.40
Sacking Cloth & Bags	14.61	59.45
Standard Sacking	2.208	17.17
(included in above)	16.90	70.40
Rope, Twine, etc.	—	2.169
Total reported stocks of manufactured goods held on government a/c.	1	27
Sandhies	6	170
Scrim Cloth	9	231
Hessian Bags & Cloth	18	698
and Canvas	—	32
Sacking Cloth and Bags	—	387
Rope, Twine, etc.	—	372

	31st Oct. 1953. (Lakh Tons) Yds.)	30th Sept. 1953. (Lakh Tons) Yds.)	Increase over or decrease from last month*
Hessian	11.81	30.04	36.1
Civil	16	0.4	20
Govt.	—	—	0.5
Sacking	11.97	30.5	14.74
Civil	16.72	69.4	19.21

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

Complete hydro-electric schemes

The ENGLISH ELECTRIC Company designs, manufactures and installs complete hydro-electric generating plant ranging from the main turbines and alternators to the smallest auxiliaries, including the transformers and switchgear.

'ENGLISH ELECTRIC' hydro-electric plant of all types and sizes has been installed in all

parts of the world under widely diverse conditions. The illustration shows the turbine end of one of the 21,000 h.p. double runner twin jet impulse water turbines. These operate under a 940 ft. head at 428 r.p.m. and drive 16,750 kVA 11,000 volts 50 cycles alternators at the Tarraleah Power Station in Tasmania.

THE FOREIGN JUTE MARKETS

RAW JUTE PRICES RAISED BY £5 PER TON

(FROM OUR DUNDEE CORRESPONDENT.)

THE Ministry of Materials has announced that, because of the increase in raw jute shipment prices in Pakistan, the Jute Control's selling prices of all grades of raw jute have been advanced by £5 per ton, ex-warehouse, as from 6.0 p.m. on Thursday, 5th November. Selling prices for imported jute goods are correspondingly increased and all prices for jute yarns and cloth of Dundee manufacture will also be raised to come into operation from 6th November. New price-lists will be issued in a few days' time. The further advance in prices for raw jute has brought out a considerable business in jute cloth and bags and the market has been really active in all sections during the past week. A fair business has been done in raw jute by the Jute Controller in the U.K., and the Indian jute mills and Continental ports. The danger is that prices may be advanced too much, but it is satisfactory to find that values of Calcutta goods have risen in sympathy and that consumers are going on paying the dearer terms.

Continental manufacturers are sticking to their guns in their refusal to compete with Calcutta in the sale of jute goods in the export markets. Indeed, they have raised their prices to something like 85s 0d for 10 oz. 40 in. hessians, f.o.b. Continental ports. Since my last report, Calcutta hessians have advanced approximately 3s 0d per 100 yards and "B" twills about 5s 0d. Latest quotations today are 77s 9d for 10 oz. 40 in. December and 75s 9d for January-March, and 56s 3d for 71 oz. December, f.o.b. Calcutta. "B" twills are quoted at 169s 6d for December and 170s 0d for January-March, f.o.b. Business has been done to the U.K. this week at 75s 0d for 10 oz. and 162s 9d for "B" twills for December shipment f.o.b. Calcutta.

A goodly number of transactions have taken place in shipment jute from Pakistan at £106 for Mill Firsts and £96 and £96 for Mill Lightnings, and shippers are offering very little now. Crack Daissee 2/3 is quoted at £98 and grade at £87, with Tossa 2/3 at £117 and £105 respectively, c. and f. U.K. It is reported that a steamer with 20,000 bales of jute destined to the Continent has been abandoned.

There has been a big rush to buy jute yarns this week and some spinners have sold largely out of the market and refuse to sell further and we have the peculiar situation that even spinners are now desirous of buying yarns from others, as they are so far behind with deliveries of yarns on order. Many orders for jute cloth have been placed and both spinners and manufacturers have had no difficulty in securing the full maximum list prices.

U.S. DEMAND REPORTED TO BE "EXTREMELY GOOD"

Boston, By Air Mail.

THE Journal of Commerce (New York) stated recently that "U. S. imports of burlap have trailed consumption for several months. While there is... no chance of the industry's pipelines running dry, the prospects of a temporary gap in distribution channels now seems likely." In this connection, a canvass of the domestic market definitely indicates that available supplies of spots and alofts are becoming less plentiful and in the case of some constructions, extremely scarce, if obtainable at all. Prices for spots and alofts have advanced sharply—50 to 60 points in most cases, for both lightweights and heavyweights. Demand has been extremely good.

Do you know... N B C ball-bearings are backed by over fifty years of research experience of their British associates Hoffmanns.

PRODUCTIVITY ON INDIAN TEA GARDENS

RESTRICTIONIST ATTITUDE OF LABOUR

By B. A. Yashanoff, B.A., F.S.S., M.S.I.E.

PRODUCTIVITY, the ratio of output of product to input of effort, is today the most critically important factor in labour-management relations everywhere. On tea gardens it means efficiency in the utilisation of labour, land or natural resources, capital, power, floorspace, plant and equipment and materials. Although productivity is most often measured as output relative to labour input, it is not a measure of change in the efficiency of human effort. Productivity, in fact, is raised by:

- (1) improvement of basic processes by research and development;
- (2) improvement in methods of cultivation and management;
- (3) improvement in existing plant and provision of new plant;
- (4) increase in the use of mechanical power;
- (5) increase in capital investment per worker;
- (6) standardisation and simplification;
- (7) improvement in planning work and the utilisation of manpower;
- (8) increasing the effectiveness of all employees;
- (9) improved teamwork between labour and management.

The first four items are unlimited in their possibilities but are long-term projects requiring considerable capital investment and scientific and technical staff. Vast progress and numerous contributions have been made in the past 40 years in agronomy, pest control, vegetative propagation, soil chemistry, fertilisers etc. In fact, technological advances are well ahead of the industry's ability to apply them. In the last few years special attention has been directed towards mechanisation, modernisation and rationalisation of production and management.

As a result of high rate of taxes, duties, increased costs of production, regulation of industry, lower prices and declining profits or no profits at all (even big losses as in 1951 and 1952) the investment of additional capital has been discouraged.

The last four items are work study problems involving no great capital expenditure, but rapid and very significant (though limited) results can be obtained from them. It is felt that insufficient attention is being paid to these questions in dealing with the problems of the industry. There seems to be a lack of appreciation of the many effective uses of work study and measurement techniques. This is possibly due to a lack of real appreciation of the fact that a technique is one thing, the way it is applied is another and the way it is maintained is yet another. The attitudes of management, workers, government and public must favour efficient production. There is no magic formula whereby industry's capacity may be raised to meet demands for higher standards of living, be competitive and economical. At some stage in the industry's attempt to price itself into profits it can surely price itself out of the market too.

To retain the present standard of living, let alone surpass it, tea gardens must work either harder, longer or more efficiently at an average compound rate of 1½ per year, the rate of population growth. It is necessary to underline the fact that a rise in the standard of living is dependent upon an increase in production or productivity at a rate faster than the growth of population. There is a definite man-land ratio which cannot be greatly altered without affecting modification in the standard of living. The existing ratio of 1.25 to 1.50 workers per acre is practically double the standard requirement (75 man per acre). To put it in another way, the choice is either to increase productivity, limit the population or accept a lower standard of living.

Productivity over 40 Years

Looking over 40 years of productivity figures in the tea industry of North East India the following percentages have been established:

Total production increased	101%
Production per acre increased	72%
Number of labourers per acre increased	23%
Production per labourer increased	39%
Garden population increased	50%
Wages increased	611%
Tea prices increased	354%

Although the above percentages have not been adjusted for quality, man-hours of effort or constant rupees it enables one to obtain an approximate measure of the progress in productivity. Even when the problem of measurement is simplified in this way, it still remains exceedingly complex.

To some, these changes in the tea industry may appear satisfactory and even impressive. But when compared with the achievement of other industries, they represent regress, particularly if examined in the light of extensive technological improvements that have been introduced, such as better pest control, heavier fertilisation, in-part elimination of hoeing and weeding, in-part increase in the number of bushes per acre,

development of higher-yielding and disease-resistant Jats, vegetative propagation, more effective pruning, better methods of transporting leaf, improvements in factory methods and plant, increase in the use of mechanical power, etc. The study points to the disquieting conclusion that in the past the major portion of the benefits from better methods of cultivation and manufacture and more skilful technique have been dissipated in output restriction by labour promoted by fear of working themselves out of a job. One meets this fear even in districts which are short of labour. There should be no such fear. There are eighteen million acres of cultivable waste in Assam alone. Surely all redundant labour can be employed in growing more food and help the country to become self-sufficient.

In support of the statement made at the beginning of the preceding paragraph, the following comparison may be used to obtain a bearing:

	Tea Industry Period 1909 to 1949	All U.S. Manu- facturing Industries Period 1909 to 1947
Total output increased	101%	277%
Number of labourers increased	47%	44%
Production per labourer increased	39%	161%
Population increased	50%	43%
Wages increased	611%	455%
Prices increased	354%	116%

Different periods are used in order to compensate for the difference in climatic conditions. Besides it is important to bring out the fact that labour costs in tea account for 60% of the total cost of production as compared to 40% in U.S.A. factories.

Change in Attitudes Needed

The most significant things in a modern economy are technology, natural resources and ideas. In this article, an attempt is made to present the idea that the level of productivity can be raised considerably by changing the attitudes of management, workers, union leaders, government and public. It is not easy to interest labourers in earning higher wages by producing more efficiently. Old ideas are hard to change. This applies to the tea industry with particular emphasis, owing to the large settled garden population and restrictions imposed on expansion by the International Tea Agreement. As a matter of fact, the tendency over the past 40 years has been in the opposite direction and is the cause of serious anxiety. The decline in efficiency, deliberate or otherwise, of the average workers, increasing absenteeism, indiscipline and even antagonism towards the employer appear to be more widespread features.

The pattern of tea garden works was built on the easy, lazy tempo of life for workers and the low cost of labour. The latter no longer obtains and therefore the conflict has arisen between the old concepts and the new requirements. A new outlook is needed to replace the present spirit of "work less, make less and get more." Many segments of labour now believe that work is something to be avoided. This attitude has been increasing among tea garden workers in proportion to the increase in population. The more the population grows, the lazier they get. What can one do to reverse this trend? How can one cure this philosophy of less work for more money? Perhaps social scientists, labour officers, economic engineers, production experts and cost accountants with the support of industrialists, government and labour unions can provide the leadership that will win workers to the philosophy of work, for work alone can provide higher wages, increased purchasing power, more holidays, more security, better housing, a welfare fund, reduced costs and prices. One cannot slack one's way to prosperity. One must work one's way there.

The realisation of a policy of high productivity as a basic condition of raising the standard of living leads to nothing less than a fundamental change in the habits of thought. The problem therefore is to inspire government, labour and management to get together and turn out better teas at lower cost, at the same time as paying higher wages.

Unfortunately, in the past few years, bad leadership has placed labour and management in two warring camps. This is unnatural and contrary to the interests of both—and all others. This chasm must be bridged and the two parties brought into harmony. The raising of social and living standards can only be accomplished by a continuous increase in productivity. To increase productivity it is absolutely necessary to create wholehearted co-operation between government, management and labour.

In many phases of industry no country can meet American competition, yet the U.S. labour force is paid the highest wages in the world. This is due entirely to high productivity. America owes its present position to the industrialists, but progress in industry today is the outcome of

human development. The machine, which formerly has been stressed is now becoming relatively less important. It is an economy based on incentive in which labour and management work as one. A study of the reports from the many Anglo-American Productivity Teams seems to corroborate this fact. In America the union's first concern is to preserve the economic health of the industry. In India today the leaders have not had the vision to see the possibilities. The standard of living for all rises in direct proportion to the efficiency of production, and the problem is therefore to secure increase in productivity and translate it into higher rewards for the worker and lower prices to the consumer. Reform of attitudes and habits toward increasing productivity can produce the utmost possible effect with least possible effort and may well be taken as a basis for the ultimate solution of the perplexing problems of the tea industry.

CALCUTTA TEA SALES IN OCTOBER

GOOD DEMAND AT SLIGHTLY REDUCED RATES

THERE was a good general demand throughout the month at slightly lower rates following the decline in quality, say Carritt Moran & Co. Ltd., in their monthly market review. Fannings attracted rather more interest than broken grades and declined by about half an anna. Broken types were 1 to 1½ annas lower, thin liquoring medium types being the weakest feature. Stylish O.P.s and good liquoring B.O.s and O.F.s. with tip were a very strong feature and realised high prices. Darjeelings received fair support and many whole leaf grades with useful flavour sold well. No sales were held during the week commencing 19th October, on account of the Puja holidays.

Darjeeling offerings included a number of useful well made teas which were free from stalk, and leaf appearance generally has been of a very much better standard than that of the previous season. Cup quality was of an ordinary rains description, though a few invoices possessed quite fair flavour in the high grades. Assam C.T.C. broken and fannings continued to show a seasonal decline and useful liquoring teas in this category were in short supply. Whilst many of the offerings were plainish in character, a number of gardens in the medium and low medium category produced teas of a much better average standard both as regards leaf and liquor, than that of recent years. Teas from the Doorgas were of a good standard for the time of the year and included a number of well made black leaf sorts. Offerings from Cachar continued to be above average and were for the most part commendably free from stalk and fibre.

Internal

	1953-54	1952-53
	Rs.As.P.	Rs.As.P.
Sale No. 17 Clean Common B.P.	1 12 3	0 12 0
Sale No. 18 Clean Common B.P.	1 12 0	0 12 0
Sale No. 19 Clean Common B.P.	1 11 6	0 12 0

Leaf offerings were again very small and sold at about last rates. The quality of dusts showed a decline though the offerings included a number of useful black leafy types suitable for export. Clean common kinds and black leafy types were the strongest feature and remained fully firm. Medium Assams and Doorgas declined by about one anna throughout the month. There was little change in the rates for best C.T.C. Assams though the poorer liquoring kinds were one to two annas lower.

	1953-54	1952-53
	Rs.As.P.	Rs.As.P.
Sale No. 17 Clean Common Dust	1 9 9	1 0 0
Sale No. 18 Clean Common Dust	1 9 9	1 1 0
Sale No. 19 Clean Common Dust	1 9 9	1 2 0

Export sales up to and including Sale No. 19 totalled 773,517 chests at an average price of Re. 1-14-1 compared with 822,747 chests at an average price of Re. 1-6-11 a year ago. Internal sales at 7,508 chests of leaf and 257,465 chests of dust (Re. 1-9-5 and Re. 1-10-7) go against 9,293 and 255,843 chests (Re. 0-15-9 and Re. 1-5-3) in the corresponding period last year.

At the beginning of the month business was transacted in the Export quota at 14½ piers per pound. The price gradually appreciated to 18 piers in the middle of the month and thereafter declined to 16 piers.

The estimated North India Crop to the end of September, 1953 was 350,349,167 pounds as compared with 372,136,773 pounds to the same date last year. The average figure at this date for the three years 1950-1952 was 358,404,763 pounds.

Arrivals (in chests) in Calcutta warehouses during the period 24th September to 23rd October,

1953 with the corresponding figures of the previous year in parentheses were as follows: by rail 147,363 (92,024); by air 10,585 (10,144); by steamer 486,277 (388,838). Since the beginning of the season, 1st April, 1953 and up to 23rd October, 1953, arrivals have been 584,076 (492,551) by rail; 59,702 (79,278) by air; and 1,882,078 (1,747,188) by steamer, making a total of 2,525,856 (2,319,015) chests.

The monthly market review also contains a useful glossary of tea-tasting terms.

TARIFF ENQUIRY ON COFFEE URGED

PRODUCTION COSTS HIGHER THAN "FAIR PRICE," SAY GROWERS

MR. N. B. ATHREY, Chairman of the U.P.A.S.I. Coffee Section Committee and Executive Committee Member of the Indian Coffee Board, has made the following statement on the Government's latest coffee proposals:

I have read with interest the statement in the Press that the Union Government have decided that the fair price of coffee at present assured to the grower should hereafter be pegged down at that level instead of it being the minimum as hitherto.

It is also stated that the price per point at present is Rs. 2.4, that the grower will get a fair price and no more, and that any extra price obtained in auctions and by export will go to the benefit of the consumer.

At the outset I should like to point out that cost accounting has not indicated that Rs. 2.4 a point is a fair price as claimed. The cost of production figure, as worked out by the Board, is Rs. 2.7-1 a point and this figure has been examined by the Cost Accounts Officer deputed by the Ministry. This officer has, in addition, conducted an independent enquiry. Though this enquiry was completed nearly three months ago, his findings have not been made known to the Board. The basis on which the Ministry claim that Rs. 2.4 a point is a fair price has not been disclosed and this figure is entirely arbitrary.

The proposal that the price to the consumer was to be reduced and that the loss to the grower was to be made good by the extra prices obtained in auctions and export was agreed to by the Board long back as April 1953. It was also considered that the grower would, in this manner, be assured of the minimum return due to him according to the cost of production. The Board accordingly reduced the allotment price to co-operative societies and the Propaganda Department to Rs. 2.2 a point, keeping the minimum release price in auctions at Rs. 2.4 a point. The benefit to the consumer has, therefore, been passed on in advance. The Government have, after considerable delay, permitted the export of 2,000 tons but have rendered the implementation of the above understanding impossible by imposing an export duty of Rs. 62.8 per cwt.

Inadequate Return to Growers

The statement in the Press that the grower will receive no more than the fair price is novel. Evidently the grower is not to receive the reward for his industry despite the fact that he is agreeable to give up a considerable portion of what his produce fetches to reduce prices to the consumer. The Indian Coffee Board, at its recent meeting, have agreed further to reduce prices to the consumer on the basis of Rs. 2.1 a point from 1st December, 1953, as per the suggestion of the Ministry, the balance due to the grower being made good by the higher prices obtained by export. The Board has not been able to accept the statement that Rs. 2.4 a point is an adequate return to the grower as no data has been furnished but have agreed to pay not more than Rs. 2.4 a point pending an open enquiry by the Tariff Commission into the cost of production and all aspects of the coffee industry.

It is regretted that relations between the producers and the Ministry should be strained. Many matters of great importance such as the existence and prosperity of the coffee industry, the well-being of the Malnad areas of South India, the livelihood and welfare of nearly two lakhs of labourers and their families, and the future development of the industry are involved. It should be easy to settle all these matters by an open enquiry by the Tariff Commission. The growers are prepared to abide by its findings. On behalf of all growers, I make an earnest appeal that the case for coffee be referred to an enquiry by the Tariff Commission.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of October 1953.

Upper Assam—Cold weather has generally set in; dry weather is interfering with outturn in Doom Dooma and cold wet weather in Panitola; outturn last month about normal but poor in Panitola; immediate prospects fair to good.

Central Assam—Weather generally reasonable, but dry in Nazira; heavy rain with floods reported from Moran; outturn last month about normal; immediate prospects fair to good.

Lower Assam—Weather generally reasonable; outturn last month about normal; immediate prospects fair but dry weather is interfering with outturn in Borsola.

North Cachar—Weather favourable and an early cold weather is imminent; black rot prevalent in some districts of Lakhimpur, but blight not so severe;

outturn last month good; immediate prospects fair to good.

South Cachar—Weather generally reasonable; black rot and helopeltis prevalent in some districts of Hailakandi and Longai; outturn last month about normal to good; immediate prospects fair to good.

Eastern Doars—Weather dry; the season will close about the normal time; the cold weather has set in; outturn last month about normal; the outturn to-date is considerably under last year; immediate prospects fair.

Western Doars—Outturn last month about normal; immediate prospects fair; weather reasonable; the monsoon has practically ceased and an early cold weather is imminent; the season will close about the normal time; crop prospects generally are favourable; the outturn to-date is slightly under last year.

Darjeeling—Outturn last month poor; the cold weather has set in and the season will close early; helopeltis prevalent; blight blight prevalent.

Teral—Crop normal; outlook fair; weather dry and cool with low night temperature; helopeltis on the increase; blight blight appearing.

LONDON TEA SALES

At last week's London tea sales the 64,569 packages on offer realised an average price of 3s 10.13d a pound, against 3s 10.53d in the preceding week and 3s 3.65d a year ago. Clean plain broken pekoe is quoted at 3s 5d, last week, 3s 4½d.

Results of some of the companies are given below:—

	No. of packages	Average per lb
Amalgamated	1,354	3/7½
Assam Frontier	2,303	4/2
Bagracote	571	3/5½
Bordubi	744	4/3
Budla Beta	1,119	4/2
Buxa Doars	960	3/8½
Chargola	426	3/4½
Cons. Tea and Lands	1,861	3/8
Darjeeling Co.	528	4/4½
Deamoolie	340	4/3½
Dekhari	661	4/3
Doars	1,635	3/7½
Doom Dooma	735	4/3½
Eastern Assam	1,354	4/3½
Eastern Produce	780	4/1
Jhanzie	508	3/11½
Jokal	1,817	3/11½
Jorchaut	1,295	3/11
Lunuvu	773	4/1
Pabbojan	256	4/5
Rajawella Prod.	456	4/0½
Scottish Assam	378	3/10½
S. India	300	3/7½
Standard	378	4/6½
Tea Corp.	363	3/8½
Tingri	474	4/3
Upper Assam	396	4/0½

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers Association:

Closing prices on 30-10-53	Average prices for this period.
(Rupees per lb.)	(Rupees per lb.)
Sheet	
No. 1	1.36
" 2	1.33
" 3	1.30
" 4	1.16
" 5	1.11
Sheet Cuttings	1.50
do.	2.45
Crepe	
R.M.A. 1X	Cts. 91
R.M.A. 1	Cts. 87/90
Sc. Crepe No. 1	Cts. 55 Nom.
Sc. Crepe No. 2	Cts. 46/50
Flat Bark	Cts. 40/45
Sc. Crepe 3X	Cts. 45

To arrive at f.o.b. Colombo prices add 22 cents in respect of rubber other than Scrap Crepe and 20 cents in respect of scrap crepe to the above market prices.

COCHIN TEA SALES

At internal sale "V" held on 3rd November 1953, offerings amounted to approximately 1,75,000 lbs. There was a good general demand. Best liquoring descriptions were well supported at prices which were about steady on last rates. Common and Low Medium descriptions however met with less enquiry and were an irregular half to one anna easier. Clean Black Exportable types were well competed for and were fully firm on last prices.

There are strong buyers of the Export Quota at 16 pies with sellers scarce.

Dust Sale "W" will be held on 17th November, 1953.

Engineering and Transport

BOMBAY PORT TRUST REPORT

THE Administration Report of the Bombay Port Trust covering the year ended March 1953 shows a reduction both in the tonnage handled and gross revenue compared to the previous year when records for both were achieved. The tonnage handled during 1952-53 amounted to 6,638,814 d.w. tons, a decrease of 840,777 d.w. tons compared with the previous year. Of the tonnage handled there was an increase of 183,000 tons of manganese ore while the amount of wheat handled at the docks and bunders declined by 817,000 tons. The general account for the year under review closed with a surplus of Rs. 72.28 lakhs as against a surplus of Rs. 12.15 lakhs envisaged in the revised estimates and of Rs. 183.91 lakhs achieved in 1951-52. The pilotage account showed a surplus of Rs. 2.09 lakhs compared with the estimated surplus of Rs. 0.53 lakhs. The improved final results when compared with the revised budget were attributable to an increase of Rs. 19.64 lakhs in receipts and to a large saving of Rs. 40.49 lakhs in expenditure. The surplus of Rs. 33 1/3 percent on the docks and bunders scales of rates yielded a sum of Rs. 80.85 lakhs. The increase in receipts was mainly under Wet Docks as a result of higher recoveries of demurrage fees, night and holiday work and handling charges etc. The decrease in expenditure was the result primarily of the slow progress of repairs and maintenance and new minor works, dredging and the saving of the whole of the provision of Rs. 10 lakhs set aside for the salvage of two ships. The report states that the heavy liability incurred by the implementation of the Minimum Wages Act has not been taken into account in arriving at the surplus.

Modernisation and the Oil Terminal

During the year the trustees sanctioned payments of inspection charges to the Director of Inspection, Calcutta and to the London Agents in connection with the erection of electric cranes for Ballard Pier and Alexandra Dock. Stage I of the work on foundations for the steel gantry was almost completed by the end of the year. Tenders for the construction of the steel gantry and the installation of a low voltage distributing system along side sheds nos. 1 to 6, Alexandra Dock, were also accepted by the Trustees.

Following the Government's assurance that Butcher Island would be released, the Trustees sanctioned a skeleton estimate amounting to Rs. 4.49 crores for the new marine oil terminal. They decided to entrust the preparation of designs, specifications and tender documents and supervision over the project to the Consulting Engineers and Agents, London. The work of wash and land borings was entrusted to the Cementation Co. Ltd. As the Government has indicated that the steel requirements for the pipes will not be available from indigenous sources, arrangements have been made for their purchase with the Messrs Durham Steel Manufacturing Co. Ltd. and the Messrs Stewarts and Lloyds Ltd. The preparation of the tender documents for the main contract for the deep water berths at Butcher Island was nearly completed by the London Agents at the end of the year.

FEATURES OF NEW P. & O. LINER

The Arcadia, a 28,000-ton liner for the Britain-Australia service of the P. & O. which was launched in May last, is expected to leave London on her maiden voyage on 22nd February. Calling en route at Port Said and Aden, she is due to arrive in Bombay on 9th March and at Colombo on 11th March, after visiting Fremantle and Melbourne respectively, the liner is similar to the Himalaya. An interesting feature is the new type of funnel which fumes and smut well aft of the ship beyond the decks. Some new metals have been used in various parts of the Arcadia to save weight. An observation lounge at the forward end of the boat-deck and under the curved sweep of the bridge enables passengers to enjoy a wide panoramic view during the voyage. Some innovations featuring in recent P. & O. ships have been incorporated in the Arcadia; they include stabilising fins to minimise water in rough weather and a plant to distil sea water. Air-conditioning is more extensive than ever before and many amenities are provided—open sports decks swimming pools, cinemas, dance floors and shops. There is an additional promenade deck where tourist passengers can sun-bathe and play deck games.

NEW SOLVENT FOR MOTOR CAR FINISHES

A new water-based synthetic resin has been introduced in the United States which may well bring about considerable savings in the cost of painting motor cars. The new resin, marketed under the trade name Hydrophen, has been developed by Reichhold Chemicals. With new base is an organic solvent. The base of the new synthetic resin is water, which can be allowed to run to waste after use. The solvent has been recovered and reprocessed. The resin, nary tap water, may either be applied to a metal surface as a clear finish or pigmented to produce coloured enamel. Because of its water base and should not be affected by moisture. The components of the product are phenol alcohol, an alkyl resin and ammonia.

COMPANY AND PUBLIC NOTICES

THE TINGAMIRA TEA SEED CO., LTD.

THE Twenty-ninth Ordinary General Meeting of the Shareholders of The Tingamira Tea Seed Co., Ltd., will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 27th November, 1953, at 2-15 p.m. for the following purposes:—

1. To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to adopt the Accounts for the year ended 31st March, 1953.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

OWING to the abnormal conditions that have prevailed at Burapur, submission to the shareholders of the Accounts for the year ended 31st March, 1953, is unfortunately delayed. In order to obviate the hardship that would be caused should payment of the dividend on the Ordinary share capital have in the normal way to await declaration by the shareholders in General Meeting, the Board of Directors have to-day declared an interim dividend of One Rupee per share in respect of the year on the Ordinary share capital, being at the rate of 10% per annum free of tax. In this connection the Board would make it clear that this dividend though termed "interim" will in fact be the final dividend in respect of the year ended 31st March, 1953, will be recommended.

Payment of this interim dividend will be made on or after the 30th December, 1953, to the holders of Ordinary shares so entitled, whose names appear on the Company's Registers on the 19th December, 1953. The Ordinary Share Registers of the Company will be closed from the 5th to the 19th December, 1953, both days inclusive.

By Order of the Board,
T. L. MARTIN,
Chairman.

Calcutta, 9th November, 1953.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED.

(Incorporated in England)
THE LIABILITY OF SHAREHOLDERS IS LIMITED.
DIVIDENDS.

THE following Interim Dividends have been declared payable on the 16th December, 1953:—

- (1) On the Preference Shares: 2½% (Two shillings and six pence per Share) less U.K. Income Tax of nine shillings in the £.
- (2) On the Ordinary Shares: 2½% (Two shillings and six pence per Share) less U.K. Income Tax of nine shillings in the £.

Payment of these Dividends will be made only to those members whose names are registered in the Books of the Company on the 2nd December, 1953, or to their Mandatees.

Dividend Warrants to Shareholders on the Calcutta Register will be made payable in Calcutta. No applications for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from the 19th November to 2nd December, 1953, both days inclusive.

Calcutta Markets

VERY STRONG DEMAND IN
TEA EXPORT AUCTION

GOOD INTERNAL SALE

AT Export Sale No. 21 held on 9th November, 1953, the offerings consisted of approximately 51,000 chests. There was a very strong and active demand and most descriptions registered advances. Common and Medium Broken were from 9 pikes to 1 anna dearer while Fannings were up to one and a half annas dearer. CTC Assams were fairly firm, but Darjeelings received irregular support and may be considered the weakest feature of the sale. Broken Pekoes Souchow did not show the rise that Common and Medium Broken experienced, while Leaf grades were firm.

Quotations	1953	1952
Clean Black Pekoe	1 14 0	1 6 0
Clean Common B.P.	1 12 6	0 12 6 to 0 15 0
Medium Assam B.P.	1 13 0 to 1 13 6	0 13 6 to 0 14 0
Best Assam CTC B.P.	2 1 0 to 2 2 0 (Nom.)	—

At Internal Sale No. 21 held on 10th November, 1953, 15,353 packages were in offer. There was a good general demand for most descriptions which were fully firm. Prices of Commons and Mediums and C.T.C. sorts were maintained while the very commonest were a little dearer.

Quotations	1953	1952
Medium Doors Dust	1 9 6	1 2 0 to 1 3 0
Medium Assam Grain Dust	1 10 0	1 7 6
Best Assam C.T.C. Dust	1 14 6	2 0 0

The offerings of other grades consisted of 817 packages. There was a strong demand for all except a few invoices of green tea which were neglected.

SUGAR CONSUMPTION GOOD

During the week ended 11th November, prices of ready sugar ex-Kantapur delivery were Rs. 30-12 a maund for ordinary grain, and Rs. 31-8 for big grain. Arrivals were 25,000 bags, stocks amounted to 25,000 bags and consumption was good. Supplies were steadily sent to South India as prices there were high, being Rs. 93 to Rs. 94 a bag. Rates in Bombay were Rs. 85-8 a bag for ordinary grade and Rs. 100 for the better grade. The ex-factory quotation was Rs. 29 a maund, but the new crop first quota was selling at Rs. 29 to Rs. 30 a maund, mill delivery.

DULL WEEK IN LOCAL FREIGHT
MARKET

GOOD ENQUIRY FOR TIME CHARTER

ALTHOUGH few fixtures were concluded last week this was more due to Owners' disinclination to accept the rates offered by charterers than to absence of enquiries. Another vessel is reported to have accepted 50s for coals to Japan from Calcutta in December and charterers are open up to February at the same rate. There has been considerable enquiry for time charter and a number of fixtures have been done, amongst them a round voyage to India delivery-redelivery Continent at 16s 6d per d.w. ton for a 10,000 ton motorship.

Activity in grain from the Black Sea to U.K. was noted with three fixtures at 45s.

Information is just to hand of the fixture of a Japanese vessel for coals from Chienwangtao to Chittagong at 37s 6d combined with coals from Calcutta to Japan at 53s with December loading at Calcutta and freight payable in yen.

Important developments in the mining and export of iron ore from Malaya, particularly at Rombin, State of Pahang, which expects to produce 2,000,000 tons annually from 1957, should act as a spur to authorities here to accelerate their plans for the improvement of facilities for the export of Indian iron ore.

LINSEED

Prices ruled firm during the past week and the undertone of the market remained steady. Activity was however, on a very limited scale. A marked shortage of ready supplies from the producing centres was a prominent feature. Keen enquiries for near deliveries from local crushers met with little response from sellers, and the turnover was very small. Dull conditions prevailed in the oil section although the market remained generally firm. There were a few local enquiries for near positions but the volume of trading was small. Latest quotations were as follows: Ready Rs. 19-12-0 per maund; November, Rs. 19-8 per maund; December Rs. 19-4 per maund.

HIDES AND SKINS

The market in skins ruled firmer, while that of hides was steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 3rd and 9th November, 1953).

Cowhides.—Wet salted (Ord) 16,000 pcs. on the basis of Annas 8-6 to Annas 11-3; Wet salted (Ord) 1,500 pcs. on the basis of Rs. 9-4; Wet salted (Slaughtered) 14,000 pcs. on the basis of Rs. 12-8 to Rs. 23-8.

Goatskins.—Wet salted (Daisies, Killed) 57,000 pcs. on the basis of Rs. 275 to Rs. 400; Assam-Dinaipur-Murshidabad 18,400 pcs. on the basis of Rs. 335; Puneah-Kissengani 45,000 pcs. on the basis of Rs. 280 to Rs. 310; Dacca 6,000 pcs. on the basis of Rs. 450; Pakur 9,700 pcs. on the basis of Rs. 265 to Rs. 280; Muzafferpore-Kurbanli Muzafferpore-Darbhanga-Patna-Chapra 14,700 pcs. on the basis of Rs. 235 to Rs. 250.

Bazar Stocks

(9th November, 1953).

Cowhides.—Wet salted 1,08,500 pcs. **Goatskins.**—Wet salted (Daisies, Killed) 44,500 pcs.; Assam-Dinaipur-Murshidabad 29,000 pcs.; Muzafferpore-Patna-Pakur-Puneah-Kissengani 1,84,000 pcs.

SHELLAC MARKET REPORT

During the week ended 10th November the Calcutta market ruled firm at the beginning and became steady but inactive at the end. A moderate business passed at improved prices. Quotations were as follows:

Standard Pure Buttonlac	Rs. 115 to Rs. 120 buyers.
Pure Buttonlac	Rs. 112 to Rs. 115 done & buyers.
Lemon No. 1 Shellac	Rs. 113 to Rs. 114 done & buyers.
Lemon No. 2 Shellac	Rs. 110 to Rs. 114 done & buyers.
F. O. Std. I. Shellac	Rs. 106 to Rs. 110 done & buyers.

Kireelac	Rs. 49 to Rs. 50 buyers.

Shipments during November until the 7th were 5,163 packages.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to May, 1953. Compared with the preceding month there were increases in Cotton Consumption (3.3 points), Steel Ingots (1.3 points), Pig Iron (13.5 points),

Cement (29.8 points), Paper (7.9 points) and Electricity (5.2 points), while decreases occurred in Jute Manufactures (13.3 points), Coal (2.6 points) and Wagons Loaded (3.6 points). Indices for Cheque Clearances and Notes in

Circulation disclose drops of 9.1 points and 5.9 points, respectively.

Correlating all the factors the Capital Index of Indian Industrial Activity declined by 2.4 points during May, 1953.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months after names of companies indicate approximately times of payment of dividends.

CAPITAL FOR ELECTRIC SUPPLY UNDERTAKINGS

REVISION OF 1948 LAW OVERDUE: DISCOURAGING INVESTMENT IN A BASIC INDUSTRY

"ELECTRICITY is civilisation. If you would civilise, if you would create modern minds capable of dealing with the problems of the modern world, first supply electricity. It is the initial instrument of technological development. Without it the modern outlook cannot grow". These words contain a measure of exaggeration but they express a view that has been shared by the zealots of progress, from Lenin to Nehru. The more spectacular implications of this view—grandiose hydro-electric works and the like—are an essential part of India's five year plan and indeed it is this part of the plan that has made the best progress in the last three years. The less spectacular implication—the gradual expansion of smaller electric supply plant—tends to be neglected by the State; not only neglected, but positively hindered. This is not accidental. It is in the field of electricity supply that several of the Indian Government's chief confusions about economic policy stand out in clearest relief—the preference for big, impressive things over solid but less obvious achievement, for instance. The mistaken fascination with mighty single projects appears in various other phases of economic policy, but it is more marked in regard to electric supply, perhaps because big schemes here can get really big—a river valley power scheme can take years to build, cost many crores of rupees more than was expected, and keep the planners busy half a lifetime. In this department also is encountered the unreasonable passion for "planned" development, a passion that is never more bigoted than when it is defending planned poverty from unplanned prosperity. (This must sound like an overstatement, but if a case were made out to support it the Bombay Government would be Exhibit A.) In the case of electricity generation, too, we meet with the purest form of the bias against the private investor, whose chief offence is that he has managed to accumulate savings in face of the tax collector's patent wish that he should not, and that he asks a return for lending them at least as high as the Government itself asks when it lends to industry.

Discussion of the return on capital invested in electricity generation is made especially difficult by the fact that we have heard only one side of the case. If the Government has a case, it has never stated it. Spokesmen of the industry and representatives of the investing public have been pressing for several years the view that the statutory limitation on the return on electric supply capital should be relaxed, but so far as we know no official or Minister has offered a public rebuttal. Their silence has been so prolonged that the origins of the controversy may have been forgotten; so they should be recalled.

The Electricity Supply Act of 1948 limited the distributed profits of a power generating company to five percent of the net block, or depreciated cost of fixed assets. This provision, which made sense in the cheap money era then still flourishing, was aimed at ridding the industry of a number of mushroom growths that sprang up during and after the war. To some extent it succeeded; to the extent that it failed, perpetuation of the limitation will not improve matters now and other methods will require to be used. But it has also come to have the effect of restricting the ability of the electric power industry to attract new capital because interest rates in general have moved higher since 1948 and the electricity suppliers, who need fresh capital urgently, find themselves excluded by legislation from competing for it. When this situation began to develop the Government could easily have admitted that its 1948 legislation had been left behind by subsequent developments, and agreed to increase the ceiling on distributed profits to six percent. What interests could possibly have been opposed to this

amendment of the law one cannot see, but for unstated reasons it was not carried out and requests for action have been studiously ignored.

This statutory limitation does not apply to any other industry in India. The least essential enterprise is entitled to distribute its profits, if it can earn any, as it wishes. Only the producers of electric power, who supply the means for the expansion of other industries, are prohibited from offering an adequate return. Thus capital is being diverted (such new investment capital as is forthcoming) away from a basic industry which the Government thinks important enough to devote much of its revenues to expanding in "the public sector". This anomaly might suggest that the Government wishes to reserve further growth of the electric supply industry to the State and to exclude private capital from competing with it. This is not the case, for the question of competition only arises in regard to the very largest of the private power producers; it does not arise in regard to the hundreds of small electric supply utilities who are working in a field that the Government has not entered and probably never will. In this sphere, small private companies, far from competing with the Government's plans, actually co-operate with them, for it is the experience of most countries that small power generators develop and promote industrial demand which only later requires large State establishments to meet it. Indeed, we could state this relation in the reverse order: until private utilities have built up the demand for electric power, the construction of gigantic State projects is not economically justifiable. The agreement reached this year between the Damodar Valley Corporation and the Calcutta Electric Supply Corporation illustrates this process: the most suitable outlet for the power generated at Bokaro has been found in the market developed over many years by the CESC, a market which would otherwise have been served by the construction of another station in South Calcutta.

The Bombay Government sees the Tata generating companies as its competitors and for this reason is persistently blocking them from installing the capacity that will be required to cater for the expanding demand for power in that State. Apart from this instance of misjudgment, no other State authority can pretend that the expansion of any of the 242 power companies would upset its electricity plans in the least. As Mr. K. G. Milne said last week at the meeting of the Federation of Electricity Undertakings of India, "No one could expect to take our place and render such service at any comparable price in all those places where we are serving or could serve. We must in the national interest, including of course the means to provide even greater employment of manpower, be encouraged to continue and expand". In these circumstances, Mr. Milne's impatience with the faint attitude of Government is understandable: "The bank rate may go up, the interest rate on gilt-edged securities may in sympathy move forward, the fully secured loans of the Central Government's own Industrial Finance Corporation may even demand an interest rate as high as 6 1/2 percent; and all these by executive acts moving in response to the day to day pressures of economic laws. Yet our request for a modest increase of one percent (making six percent) in the basic rate of ordinary equity risk return to be permitted to the investor in the electric supply industry has to be taken before the seat of Government itself, and for two years has been kept waiting in vain to get that far. I really wonder whether one could anywhere find a parallel case where a Government, having rightly given absolutely top priority to schemes for the development of electric power in its plans, has then so callously or indifferently ignored, in the way that seems to be happening

here, the very essentials necessary to the development of a substantial part of that urgently needed power".

Much of the equipment in Indian generating stations is obsolete and needs replacement. Mr. G. L. Mehta estimated last year that machinery producing more than 100,000 KW was over 25 years old and should be replaced by 1955. The Central Water and Power Commission has said that most of the planned new capacity will do no more than meet existing demand and replace steam-generating plant which has grown old and inefficient. The necessity of attracting new capital funds to the industry is plain; and the consequences of failing to keep pace with the growth of demand were made equally plain in Bombay in 1951 and 1952. If the Government of India takes a different view, if it considers that the men in the business are mistaken, and if it has some good reason for declining to encourage investment in this industry, then it clearly ought to give some explanation of its position. The stone-wall tactics of the last two years—during which time various concessions have been made to industrialists and workers whose demands may have been more immediate but were no more important—are not a very edifying illustration of the co-operation that the Government has promised industry on numerous occasions. Some explanation for inaction is required particularly after the Planning Commission has written to the State Governments informing them that one way of relieving unemployment is to assist the expansion of electric power supply to small industries.

The provision of capital for the electric supply industry is connected with another section of the 1948 law which has been allowed to become a dead letter. This is the clause calling for the establishment of statutory Electricity Boards by the State Governments; one of their main functions was to be to help in raising capital for electricity generation. Mr. Milne's predecessor, Mr. J. W. G. Church, told last year's meeting of the Federation that one State Electricity Board had been set up, in Madhya Pradesh, where it was performing a useful function in harmony with private enterprise, but since then no major State has followed this lead. Mr. Milne said last week, "It certainly does not stand against reason that the principal part of a law having for its main object 'the rationalisation of the production and supply of electricity and generally for taking measures conducive to electricity development in the States of India', should remain in abeyance for so long in the major States. I can only hope that before the current fiscal year runs out we will see the functioning of the boards at least in all the more electrically developed States". If such a board had been in existence in Bombay, the long drawn out dispute between the State Government and Tatas would surely have been brought to a satisfactory conclusion before this. The boards are also specially charged by the Act with powers to make

CONVERTIBILITY PLANS SHELVED

STERLING POLICY ADRIFT

IT is nearly a year since the Commonwealth Economic Conference in London evolved a plan which was to culminate in the convertibility of sterling. The London Economist has lately remarked: "It would be an act of decency towards the dead . . . to leave the word convertibility out of the politicians' perorations as completely as it is now out of their programme." Almost as that suggestion was published, the British Chancellor of the Exchequer offended against it by saying (in the debate on the Government's programme): "Convertibility still remains the objective of the sterling area; sterling finances half the world's trade, and its strength can be complete only when it is able to be converted". But the Chancellor could only say that the objective was unchanged; he could not show that anything was being done to attain it. Both at home and overseas, observers of British policy have been trying to discern its direction; but, so far as they can see, it is an empiric policy, adapted to immediate circumstances, awaiting some major development externally—i.e. in America. The critics at home say that this is no time to wait and watch, but a time for vigorous, independent action. The present timidity is in disturbing contrast with the boldness of early 1953, when it seemed that the British Government, with the firm backing of the other Commonwealth Governments, felt itself competent to guide Europe and other non-dollar territories towards free trade and convertible currencies. It was distressing to hear the British Chancellor himself admit recently that, in Europe, the German Minister for Economic Affairs had taken the initiative towards liberalism.

There are two sides to the problem: trade, and the currency. A truly liberal policy would work towards freedom of trade and freedom of currency, and it seemed some months ago that British policy was working towards both. It was not, perhaps, surprising that progress towards convertibility seemed to be slow, for it was always understood that convertibility was international. What distressed the liberal observers was the British request for a waiver of the commitment of the General Agreement on Tariffs and Trade which prohibited new preferential tariffs. After this waiver had been reluctantly allowed the British Government increased its proportion of quota-free trade with the members of the Organisation for European Economic Co-operation; but the liberal purport of this move was diminished by the admission that the British Government feared further restrictions on British exports if no action was taken to free trade with Europe.

Recent discussion has concerned priorities. An eminent economist, Mr. Roy Harrod, has argued in the Financial Times that convertibility should take priority over removal of discriminatory restrictions on trade. The official view is that, whereas removal of restrictions—such as the recent "liberalisation" in Europe—involves a risk, it is a small and easily revocable risk compared with that which convertibility involves. In this view, convertibility must wait until true equilibrium is restored. Those who follow Mr. Harrod's line believe that convertibility will help to restore true equilibrium, by breaking down artificial supports.

OEEC (strongly influenced, it seems, by British policy in this matter) is adopting a warning attitude towards its American advisers. The drive towards convertibility and multilateral trade is losing its momentum in Europe; it needs a fillip from America; and if no firm liberal policy develops in America next year the opportunity to gain the objectives of the early postwar era will have been lost. The British convertibility plan misfired in Europe, and, subsequently, doubts and uncertainties in Britain and on the Continent have reacted both ways across the Channel until nothing is being done beyond removing the temporary quantitative restrictions imposed (especially by Britain and France) in consequence of the payments crisis of 1951. Britain alone cannot break through the impasse, but that is no excuse for the neutral—almost negative—attitude towards convertibility adopted by the British delegates to the OEEC meeting in Paris recently, when support of the German and Dutch delegates might have resulted in positive progress.

It is easy to see what holds back the British Government. The sterling area's reserves of gold and dollars are still far from adequate to take the strain of fluctuations in international payments in an era of convertibility, and the trend of the general payments surplus is now hesitant, if not downward. The liberal American policy towards trade or finance (or gold) has not materialised and is by no means assured for the future. But it must be apparent by now that if we wait for ideal conditions, even for an assurance that nothing will go wrong, we shall wait

for convertibility for ever. It can even be argued that conditions are deteriorating, not improving, and that to take no action within a few months will be tantamount to deciding that convertibility is impracticable. When one country after another complains of shortage of sterling it may seem that the risk in making sterling convertible is not excessive, though most of those countries are short of foreign currency in general. Admittedly, there is a huge volume of sterling balances held on overseas account in London, but much of it is working balances, no larger in relation to the value of trade than before the war. Some observers in London believe that the Government, discouraged by the American attitude and lacking confidence in the economic prospect, has put the whole liberalisation policy into cold-store, only bringing it out occasionally to show that it has not been permanently buried.

EXPORTING TO BUYERS' MARKETS

WAYS TO MEET GROWING COMPETITION

THE aims of the Export Sales Conference which recently concluded at Buxton, were described in Capital last week; some indication of the results achieved at the meeting is now available. Though intended mainly as an aid to United Kingdom firms in meeting growing competition in world markets, the discussions will be of value to Indian exporters. Summarising the policies which were regarded as necessary is not easy, and careful study of the detailed proceedings, when these become available, is to be recommended, but it is possible to assess their worth by outlining briefly the highlights. The position today, when manufacturers have more to sell than the markets immediately available can absorb, raises questions wholly different from those of a few years ago when the seller's market was the general rule. Today virtually no manufacturer is in a position to pick and choose his market. Every possible market open to him should be explored. A manufacturer's long-established connections with a market must on no account be sacrificed; but, subject to this, the spread of markets should be as wide as possible.

One advantage of spreading the net wide is that, although markets go up and down, it is unlikely that all will fail at the same time. The pattern of trade has changed so greatly that a firm's exports to markets which before the war were individually so small as to be lumped together as "other markets" may nowadays account for a large proportion of its sales. As an approach is made to convertibility, the need to give priority to particular markets—e.g. the dollar areas—will grow less; but the North American market, because of its huge population and still-increasing buying power, will always be a glittering prize for exporters.

Britain's interest lies in an expansion of world trade as a whole rather than in all countries competing together for larger shares of the existing volume of trade. More capital investment overseas is the means through which this expansion in world trade must come. Economically sound development projects overseas increase the purchasing power of the countries concerned and so in turn their ability to buy more. They also increase invisible earnings. A bold policy of capital development is therefore needed on the part both of Government and of the private investor. Exporters must welcome investment in underdeveloped areas by the U.S.A. and other countries, and also by international institutions such as the World Bank. Facilities for the financing of production and export are generally adequate, but are not always sufficiently known and used by industry. Any attempt to distinguish between the export prospects of big and small firms is both fruitless and misleading. Where a firm fails in an overseas market and so damages both its own and the national reputation, its failure is the result of half-heartedness or inefficiency and bears no relation to its size. Many small firms are small because they are manufacturing a highly specialised product which, although requiring a small labour force to manufacture, commands

high returns in the export markets. Many small firms can and do play a vital part in the export trade. There is room for more.

For the greater part of the Conference delegates were divided into six discussion groups dealing with technical and practical questions of procedure, distribution, staffing, trade promotion and other aspects of export selling. The detailed findings of these groups will be published. Meanwhile, points which aroused special interest included:

Commercial intelligence.—Sources of commercial intelligence are generally adequate, but some co-ordinations is needed to make them more readily accessible to industry.

Trade fairs and exhibitions.—These are a valuable form of trade promotion, but in view of the large number of such fairs there is need for co-ordinating industrial policy with regard to them, and firms must be selective in choosing which fairs to participate in. It may be possible to draw up short lists of the exhibitions and fairs most suited to particular industries. Goods ought to be displayed in the appropriate trade section, where they can be compared directly with those of competitors, rather than in a separate national pavilion. National pavilions should be confined to prestige displays. The F.B.I. has formed a subsidiary company, British Overseas Fairs Ltd., primarily to run the British Trade Fair at Baghdad next autumn. This company might well be used as a continuing organisation to run shows elsewhere, or to assist others in running them, and perhaps to help particular trades to arrange composite shows within the appropriate section of international trade fairs.

Trade Missions.—Trade missions to other countries are a means of spotlighting home industry, especially in areas where there is little knowledge of what it has to offer, but here again there is need for a clearer policy with regard to them. It is essential that there should be careful preparation in advance and that they should be actively followed up afterwards, both by individual manufacturers sending their own representatives in the wake of the mission, and by inviting buying missions or individual buyers from the overseas country to see the products being made.

Foreign languages.—There was a call for greater attention to the use of foreign languages, both among sales staff and in publicity material. Sales literature, catalogues and other printed matter should be printed in the language of the country concerned. A high standard of translation is essential and style and presentation should take account of local tastes. The expense involved is justified many times over by the increased sales potential arising from increased readership in the overseas territory.

Long-term methods of promotion.—There is great value in long-term educational types of promotion, such as the supply of laboratory equipment and text-books to foreign universities, the training of overseas engineering graduates under the F.B.I. Overseas Scholarships and similar schemes, and the wider distribution overseas of trade and technical journals.

CURRENT COIN

Radio and TV in India.—The address of Mr. F. F. Van Rhijn, managing director of Philips Electrical Co. (India) Ltd., at a Press conference called on the occasion of the All India Philips Radio Dealers' Convention in Calcutta on Monday, gave the impression that radio manufacturers in this country at present find themselves in much the same dilemma as the automobile industry: the market is not big enough to make production cheaper, but unless production is made cheaper the market cannot be expanded. As the country's largest manufacturers, Philips intend to break what Mr. Van Rhijn called "this vicious circle" in the one logical way it should be broken—by launching a bold production programme in combination with an intensive sales campaign. The lavish dealers' convention called this week, which is to become an annual event, is a highlight of the latter; its purpose is to discuss with dealers methods by which they might persuade the customer that he is buying quality goods, assure him of better service, and, in practice, provide him with an actual guarantee of both. In sum, claim Philips, quality, service and guarantee constitute the new slogan. A tastefully organised exhibition, which is part of the convention, shows the development of Philips radios in India since the early days and includes a preview of next year's models. A number of household appliances are also displayed, but the most interesting feature is a dark-room where ultra-violet rays are used to create the effect of luminous flowers.

Philips produce about 35 percent of the 70,000 radios made annually in this country. The entire industry's annual capacity is about 150,000 radios and its rapid growth in recent years has enabled imports to be reduced to the level of 10-15,000 units per annum. Radios with more than nine

valves, radiograms and car radios are about the only types now allowed to be imported. The industry's difficulties centre on sales rather than production. The greater part of the population is far too poor to be able to afford even the cheapest set, but the Government has for years been considering plans to extend reception to the rural areas by the use of simple and battery-operated community receivers (batteries have to be used because few villages have electricity). According to a source outside the industry, these receivers probably offer the greatest scope for expansion of sales; this source adds that though a steady increase in the number of ordinary domestic receivers may be expected, it is not likely to be rapid. Apart from the problems of purchasing power and rural electrification, there is one other factor outside the control of the industry on which its sales depend considerably: the quality of programmes. The radio is after all only a medium of instruction and entertainment to ordinary people, and if they feel that the instruction and entertainment is not worth having they will not buy it. If, therefore, All India Radio proceeds to reduce drastically the time allotted to film music despite the fact that people like it, it is a matter of vital concern to the radio industry. The importance of popular taste in entertainment has never been more impressively demonstrated than by the sharp increase in sales of television sets in Britain just before the Coronation this year. Television, according to Mr. Van Rhijn, might soon be coming to India too. The only countries in Asia which have it at present are Japan, Turkey and Thailand; but All India Radio, Delhi, and the Indian Institute of Science, Bangalore, are reported to have made tentative enquiries for closed-circuit television sets. The former probably wishes to use television for entertainment, and the latter for instructional purposes. The problem here again is whether people will have the money to buy TV sets: transmission difficulties limit coverage to a radius of about 25 miles—about the distance of the horizon. This is one of TV's main handicaps, but in Mr. Van Rhijn's opinion Bombay ("where I believe people pay the highest income tax") might be the best area to make a beginning.

Plantations in Travancore-Cochin.—Mr. Kurian John, ex-chairman of the Association of Planters of Travancore, told Dr. K. N. Katju, Central Home Minister, during an interview at Kottayam recently that the plantation industry in Travancore-Cochin is perhaps the most highly taxed industry in the whole of India. Tea estates are paying the State and Central Governments about Rs. 500 to Rs. 750 per acre annually in the form of excise and export duties, State and Central income taxes, cess and sales tax. Apart from this, taxes are also levied by village panchayats, municipalities and other local bodies, and there is indirect taxation on materials used on estates. There is a high rate of agricultural income tax and supertax in Travancore-Cochin but plantations elsewhere have a competitive advantage since "no such tax is payable in the neighbouring States of Madras, Mysore, etc." The latest Central Income Tax Act provides for a rebate or allowance to assesses against agricultural income tax paid at source by companies on their agricultural dividends, but pending assessments for many years have to be completed before assesses get this rebate. The State Agricultural Income Tax Act has still to be amended; two sections, 10(b) and 46, are conflicting in effect and have complicated matters considerably for shareholders in agricultural companies. Referring to taxation by local bodies, Mr. John said that although relief from double taxation is provided for in the Panchayat Act, no such relief is given by the Municipalities Act except between municipalities. Curiously, there is also no limit on the taxation of company profits by municipalities in the State, Mr. John said that while the question of collecting sales tax on inter-State transactions has not yet been settled, the sale of export teas with export rights, as at the Fort Cochin auctions, is still subject to the Madras sales tax. Apart from taxation, labour costs have also risen. Under the recent Minimum Wages Act, the plantation industry in Travancore-Cochin "is paying the highest wage paid in plantations anywhere in India. Our piece-rates are also very high." Estates, said Mr. John, should be allowed to raise production, lower costs, and make adequate allocations for replanting in old or low-yield areas (for which no depreciation or amortisation is at present allowed by income tax legislation); the shareholder or small holder should be enabled to get a reasonable return on his investment. Although high wages have been granted, labour relations remain unsatisfactory. Political interference in labour unionism has encouraged indiscipline and caused a fall in output, while governmental instability has prevented the adoption of a firm policy on this question. Administrative work has greatly increased with recent legislation because "innumerable" forms have to be filled and a large number of returns submitted. "This could perhaps be simplified by due co-ordination between the separate Govern-

ment departments in the matter of prescribing common registers and forms applicable to many such Acts and Rules." Mr. John welcomed the move for judicial reform but hoped that "the handing over of judicial powers to bench courts and panchayat courts would be only gradual and limited to small matters and that necessary appeal facilities will be granted in order to avoid miscarriage of justice due to inexperience or prejudice by newly formed local authorities."

More Help for Stowing.—The Coal Board has decided that from 1st November, 1953, the maximum rate of assistance for voluntary hydraulic stowing carried out with its prior sanction will be an anna higher at Rs. 1-5 a ton. The rates in force until that date were originally fixed by the former Coal Mines Stowing Board in April 1948. For hydraulic stowing, they were 75 percent of the total costs of stowing subject to a maximum of Rs. 1-4 per ton of material actually stowed underground. For dry packing, they were 85 percent of the total costs, subject to a maximum of Rs. 1-9 per ton of material stowed; this rate will apparently remain unchanged. The maximum of Rs. 1-4 a ton for hydraulic stowing was fixed on the basis of an estimate that the average cost of stowing was about Rs. 1-10 a ton. It has been pointed out to the Board that the cost has increased, and a survey has shown that the average is now Rs. 1-12 a ton, "the increase being due to the payment of bonus, provident fund, leave, salary, etc., since allowed by the Board as admissible at 10 percent of the total wages, increase in the price of stores and increase in electric power charges." The increase of one anna in the maximum rate of assistance thus seems to cover only 50 percent of the rise in average stowing costs. Considering the importance of conserving India's coal resources, and the fact that stowing is one of the best methods of conservation, greater encouragement is necessary. It is reassuring that in response to representations the Coal Board has also decided to review certain items of expenditure on stowing which are at present disallowed in computing the assistance admissible.

Ahmedabad Advance Mills' Jubilee.—The highlight of last week-end's golden jubilee celebrations of the Ahmedabad Advance Mills Ltd., which completed 50 years of existence on 1st July this year, was the unveiling of the statue of the founder, the late Mr. J. N. Tata, by the Governor of Bombay. The statue has been presented to the management, its costs having been covered by voluntary contributions from the mills' employees—an exceptional tribute not only to the memory of the founder but also to the wisdom with which the company's affairs have been guided down the years. Before the mills were taken over by Mr. J. N. Tata at the turn of the century, they were on the verge of bankruptcy; but it is a measure of the energy and foresight characterising the management of the company that in the past 50 years provision for depreciation has been made every year and a dividend has also been regularly paid. The mills' history contains a most enviable record of labour-management relations: on only two occasions, both in 1920, has work stopped because of disputes; and the only stoppage since, in 1942, was part of a general protest against the arrest of Mahatma Gandhi and had nothing to do with the company's internal affairs. On the occasion of the golden jubilee, Tata Sons Ltd., have decided to build a swimming pool for workers, a welcome addition to their already impressive list of amenities.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:—

- Rs. 270 The senior office staff of Balmer Lawrie & Co., Ltd.
- Rs. 163 The Directors and staff of Shaw Wallace & Co., Ltd.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

BUSY SEASON ESTABLISHED:
TREASURY OFFER REDUCED

Wednesday, 18th November.

THE demand for credit has continued to be strong and the monetary busy season is now definitely established. Crop finance is increasing; the jute mills have been buying fair quantities of raw material; and the onset of demand on sugar account is imminent. The banks however are quite comfortably placed still. Credit was fully useable in the interbank market at the end of last week but the supply of funds has been easier since. In Calcutta today money is reported to be plentiful, with lenders over and the interbank call rate down to 2 percent.

Moderate business has been done in export bills, mainly tea and miscellaneous. Export transactions in jute goods are reported to have been fairly substantial, particularly with the United Kingdom, but the bills for these shipments have not come out yet. Remittance has been moderate. The principal exchange rates are steady.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills rose to Rs. 1,98,50,000 this week, the average rate of acceptance remaining unchanged at Rs. 2-7-0 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately three percent. The Government notes the onset of the busy season (as shown by the poor response to recent treasury bill auctions) by reducing next week's offer to Rs. 1 crore. Tenders for this amount of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 13th November, treasury bills for Rs. 5,29,50,000 were sold in favour of the Reserve Bank.

Bullion ruled firm last week and prices rose sharply. Strong speculative support, followed by the lack of arrivals of unrefined silver helped to raise the quotation from the previous week's level of Rs. 151-14 to Rs. 153-2, although there was a reaction of about 10 annas today on profit-taking. The price continued unchanged at 74d. in London and at 85½ cents in New York.

Gold also moved up to higher levels on keen demand in ready stocks. The price shot up from Rs. 81-10 to Rs. 84-4. Thereafter the quotation was lowered by 2 annas today. The sovereign also improved from Rs. 57-9 to Rs. 57-12.

The return of the Reserve Bank of India for the week ended 13th November, 1953, showed a rise of Rs. 40 lakhs in notes in circulation to Rs. 11,09,24 crores, while the total note issue was down by Rs. 13 lakhs to Rs. 11,25,58 crores. Notes held in the Banking Department consequently fell by Rs. 55 lakhs to total Rs. 16,33 crores. Deposits of the Government of India rose by Rs. 1.10 crores to Rs. 101.32 crores, while other Government accounts diminished by Rs. 2.87 crores to stand at Rs. 27.09 crores. Balances of commercial banks at Rs. 49.50 crores showed a rise of Rs. 2.35 crores. Balances held abroad improved by Rs. 5.54 crores to aggregate Rs. 142.91 crores. Other loans and advances declined from Rs. 12.88 crores to Rs. 11.19 crores, of which advances to scheduled banks against usance bills were the same as at Rs. 49.45 lakhs. Investments decreased by Rs. 1.54 crores to Rs. 82.32 crores. Ways and means advances were shown at Rs. 27 lakhs (Rs. 41 lakhs).

The return of the Imperial Bank of India for the week ended 6th November, 1953, shows a drop of Rs. 6.27 crores in total deposits to Rs. 205.76 crores. Investments in Government Securities and other authorised investments are up by Rs. 88 lakhs and Rs. 20 lakhs to Rs. 87.33 crores and Rs. 10.84 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 6.48 crores and Rs. 56 lakhs to aggregate Rs. 91.95 crores and Rs. 10.96 crores, respectively. Cash and balances are, in consequence, shown at Rs. 21.99 crores or Rs. 10.05 crores less.

The statement of the position of Scheduled Banks for the week ended 6th November, 1953, discloses Demand and Time liabilities at Rs. 512.95 crores (Rs. 11.96 crores on account of borrowings from Banks) and Rs. 334.78 crores (Rs. 3.34 crores) compared with Rs. 533.41 crores (Rs. 14.14 crores) and Rs. 333.96 crores (Rs. 4.02 crores) respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 2.49 crores and Rs. 13.43 crores to aggregate Rs. 28.84 crores and Rs. 45.68 crores, respectively. There is a rise of Rs. 54 lakhs in investments to Rs. 340.24 crores. Advances and bills discounted at Rs. 463.24 crores reveal a rise of Rs. 14.32 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.8 percent and 54.6 percent against 10.4 percent and 51.6 percent.

According to the land customs trade returns received in the Departments of Commercial Intelligence and Statistics the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of September, 1953, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	28	258
Western Pakistan	32	7
Other Countries	13	55
Total	73	320

Total trade amounted to Rs. 393 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 247 lakhs.

THE news that Mr. Nehru will address the annual meeting of the Associated Chambers of Commerce of India when they meet in the Royal Exchange on Monday, 14th December will give real pleasure to business men in this city and those of their colleagues who will travel from other parts of the country to join them on the occasion. This will not be the first time that Mr. Nehru has thus honoured this gathering of the clans: he addressed their meetings in 1946 and again in 1947. In the former year he was Vice-President of the Cabinet, and in the following year he had only just become Prime Minister after some of the most tumultuous months of India's long history. So on neither of those occasions was he outlining, leave alone defending, the mature economic policies of a stable Government. Since then of course he has spoken many times on this subject in other cities, but we in Calcutta will not be thought immodest if we attach pre-eminent importance to pronouncements delivered by the head of the Government at the Associated Chambers meeting, a tradition formed by a long line of Viceroys. (Mr. Nehru will always occupy a special place in that tradition for his address in 1946 was the final break with the viceregal line.) Since his visit in 1947, the Assocham meeting has been addressed by the Finance Minister—once Dr. John Mathai and twice Mr. Deshmukh—and last year by the Commerce and Industries Minister, Mr. Krishnamachari. Mr. Nehru's acceptance of the invitation this year shows that the occasion is losing none of its importance, even though the great changes in the country's governance mean that the days are gone when actual announcements of policy could be expected to be reserved for the address to Assocham. Mr. Nehru makes no pretence at being any sort of an economist and he has never specialised in industrial and commercial matters, but we all know that his general views on the transformation that Indian society is now undergoing count for a great deal in the framing of commercial policy in Delhi and it is in this spirit that his address next month will be awaited. We can expect the Royal Exchange to be thronged on the 14th, quite apart from the host outside who will line up for a darshan of the figure whose hold over the people of this country is still unchallenged.

Early last year Sir Winston Churchill gave Viscount Swinton, in addition to his other Ministerial responsibilities, an assignment as the Government's super public relations officer, a sort of Press Over-Lord. His abilities at explaining policy matters with vigour and clarity, which prompted the Prime Minister to choose him for the job, have been useful in his current tour of Commonwealth countries in his capacity as Secretary of State for Commonwealth Relations, and they were displayed at his Press conference at Government House last Sunday morning. From my experience of these gatherings in Calcutta, they are no severe test of a visitor's skill in dealing with interlocutors, and in any event Lord Swinton was outlining a view of the Commonwealth connection that is quite familiar in India. Apart from the appropriate things politicians say on these occasions, he included a tribute to Malaya's General Tjemper whom he described as not only a great military commander but also a capable and humane administrator, "a priceless combination indeed". Unfortunately he did not find occasion to say, as he did at a meeting in another Commonwealth country before he got to India, that "officials were not intended by God to run businesses". Lord Swinton has run some pretty big businesses himself on behalf of Government and his opinion is the more significant because the politician has never eclipsed

A DITCHER'S DIARY

the administrator in his many-sided career. It was as an administrator that he made his most important contributions to the development and defence of the Empire, first as Colonial Secretary and then as Secretary for Air. It was in the Swinton era at the Air Ministry that he ordered, "straight off the drawing board", the Spitfires and Hurricanes that won the Battle of Britain, and it is probably for his avant-garde support of aviation, both in peace and war, that he will be longest remembered.

The British have been described as owning an empire on which the sun never sets and a capital city on which the sun never rises. The failure of the sun to pierce the smog of last December lent some point to this unkind remark and the next few weeks will show whether that failure was due to transient weather conditions or whether the smoke menace is becoming secularly worse. Though I have no wish that the Londoners should suffer more than they do now from poisonous vapours, I feel that their education in atmospheric will not be complete until they have a couple of Calcutta chulas installed in each street of the metropolis. The capacity of these pieces of apparatus to generate dense clouds of smoke in the autumn air is truly astonishing. A pan-walla at the end of my street sets one fuming each evening and he succeeds in putting the district under a pall in fifteen minutes. Given the favourable conditions of the North Atlantic, he could lay a disconcerting and impenetrable screen if he were installed with his instrument aft on a destroyer during a naval engagement. There are probably thousands of these things smouldering in Calcutta any evening, so it is no surprise that we fall under a dense blanket of smog at the approach of the cold weather and do not emerge until early spring. So far as I know, this does no measurable damage to our health, and we are far from the condition of London where people are buying gauze for face masks, or the Meuse valley where in the disastrous fog of 1931 the Belgian Government ordered all fires to be put out. But it does put a damper on what Keats called with considerable under-statement the "season of mists and mellow fruitfulness".

The inquiry into the justification for an increase in the second class fares of the Calcutta Tramways Company was completed quite some time ago, and the report has been lying with the West Bengal Government for some weeks. Not knowing what it says, I can hardly offer any views on the question at this stage—but that consideration obviously could not delay the chairman of the company in making his report to shareholders on the year's working at the annual meeting in London last week. Mr. Webb's account of this turbulent year in the company's fortunes is frank and it tallies with our observations of the events of July here in Calcutta. Factional rivalry between unions, said Mr. Webb, had led to ever more exacting demands on the company until an extraordinary tribunal award cost them £83,000. This fell when the Tramways were undertaking a large programme of re-equipment and modernisation that required that about £100,000 a year be put aside to a special reserve. The board therefore decided to raise second class fares by one pice, the first increase since before the war, leaving most fares still below what they were in 1922. This decision was approved by the West Bengal Government and no evidence was ever brought forward to sug-

gest that the public were unable or unwilling to meet the small increase. The attempt to collect the higher fare was met with physical resistance and, says Mr. Webb, "during the whole of this period no adequate assistance was forthcoming from the authorities". By the end of July the State decided that the decision which it had itself approved earlier should be submitted to a tribunal, whose findings are still awaited. Meanwhile, the Tramways Company suffered a fall in its receipts of £100,000 and work on the re-alignment at the Esplanade, which was to have been completed by now, was held up; "the completion of the plan must now progress more slowly while our liquid resources are recovering". Altogether, this is not a very encouraging story. It will be interesting to see what Mr. Justice Mukharji has to say on it in his report. Whatever he says there are good reasons why it should be made public, although the same eminent gentleman's report on the police-press brush on the maidan is not to be made public. Dr. Roy is no doubt well within his rights in declining to publish the latter document, but since enquiries of this sort are instituted to answer public questionings about matters of general interest, it is preferable that their reports be made generally available.

An advertisement in the personal column of a Calcutta daily the other day invited former students of the London School of Economics to meet to form a local branch of the L.S.E. Society. I thought at the time that it would receive a good response, for I know that the L.S.E. is well represented by former students in the cohorts of business and Government in this part of the world. Indeed some of the most distinguished names in commerce and the civil service hereabouts are followed by degrees granted by that famous institution, and if the society were to flourish, as I have no doubt it will eventually, its rolls would be a galaxy of talents. Actually I understand that the response up to last week-end was timid, and I have met half a dozen potential, but not yet aspirant, members in the last few days who are hanging back to see what happens. I believe that the proposal for a Calcutta branch came from Dr. Anstey herself, the author of the well known economic history of India. One reluctant graduate showed that his economic training had not gone for nothing by telling me that he was holding off until he heard more about the entrance fee.

The following item of scientific intelligence has appeared in the journal Research: "Interest is being shown in the possibility of using unicellular algae as a supplementary source of food. Most, if not all, of the points made in this article have been made before. The literature about the possible cultivation of algae for human consumption is growing visibly. After surveying the available data, Professor Gaffron is convinced that algae may provide an excellent yield of high quality food in emergencies, that our primary concern should be not to learn to like algae but to prevent those emergencies."

Senator Henry Cabot Lodge tells a story about a herring and a whale who became inseparable companions. One day a mutual acquaintance saw the herring swimming around alone and asked, "Where's your friend?" To which the herring replied, shrugging, "How should I know? I'm not my blubber's kipper."

Company Meeting

THE CALCUTTA TRAMWAYS COMPANY LIMITED

EFFECT OF INDUSTRIAL DISPUTES ACT: MR. D. E. WEBB'S
REVIEW OF WAGES PROBLEM

The Annual General Meeting of The Calcutta Tramways Company, Ltd., was held on November 10, at 1, Queen Victoria Street, London, E.C. Mr. D. E. Webb, F.C.A., Chairman of the Company, presiding.

The Chairman said:

I want to try, this year, to take you with me through the happenings of the last 18 months to trace the results of those happenings and the problems which have arisen. Then I want to examine those problems a little deeper as to why they arose and how they are being dealt with.

Growth of Trade Unionism

In India, since her independence, there has been a very rapid growth in trade unionism. In fact India has attempted in six years to achieve a relationship between labour and management which, in this country has emerged after more than 100 years. That this rapid progress in India has been accompanied with many problems was only to be expected and, of these, one of the greatest has been the number of rival unions competing for members in the same industry. These unions endeavour to attract members by making ever more exacting demands for increased wages and other benefits.

In an endeavour to settle such claims, the Industrial Disputes Act of 1947 was passed. This Act enabled Government to set up tribunals, composed of persons of a status of High Court or District Judge, to hear disputes arising between employers and employees. These tribunals administer no principles of law and, in fact, make their own principles as they go along. They are composed of men with no commercial experience whatever, and their awards appear to bear little relationship to common sense or commercial prudence. To take one example only, when I was in Calcutta last November a tribunal issued its award granting retrospective and continuing increases in dearness allowances and also a special bonus in respect of the year 1950.

Reserves Essential for Extensions and Replacement

In that year, you may remember, £60,000 had been placed to a reserve for improvements and extensions. In 1952, two years later, a Tribunal with no experience of the running of public transport, informed the company that it was wrong in setting aside £60,000 and ought to have restricted the amount to £20,000. They therefore ordered the company to pay the £40,000 within a month to the employees as an additional bonus. Being in Calcutta at the time, I protested that the full £60,000 had already been used in paying for additional trams which were, at the moment, running in Calcutta. This made no difference and we were left to conclude that the Tribunal, in arriving at its award, had not considered whether such increases in reserves were necessary for the company or even for what purposes they were to be used, but merely based their decision on the ability of the company to pay.

The Industrial Disputes Act is rapidly destroying the relationship between employer and employee and, unless radically revised or repealed, may well, in time, imperil the future economy of India. We know in this country the effect of having a great part of the money required for re-equipment taken by the Government as taxation. Add to that burden the Industrial Tribunals, who take an unpredictable amount of the balance and give it to the employees, and you rapidly approach economic collapse.

These awards are not directed in the main against foreign firms, but are general, embracing all types of firms and all branches of industry. Neither are they made on the grounds that our company is underpaying its employees. The wages of our lower paid employees have increased by some 600 per cent. since pre-war. In 1939 our wages bill for a staff of 5,770 was £190,000. In 1952, for a staff of 10,200, it was over one million pounds.

As a direct result of the Tribunal award, made in November, 1952, and bearing in mind increased expenditure on the employees' State Insurance Scheme, and further adjustments to wages, it became clear that the company in 1953 would not earn sufficient surplus to cover the amount attributable to shareholders, let alone a balance to transfer to special reserve.

Re-equipment Vital to Continued Efficiency

Your directors consider it essential that an amount in the region of £100,000 should be available each year for transfer to this reserve in order that the efficiency of the undertaking may be maintained by a long-term programme of re-equipment and modernisation.

This programme includes such items of expenditure as:—

1. Expenditure on up-to-date workshop plant and plant to improve road surfaces.
2. Expenditure on realignment of junctions like Esplanade or Dalhousie Square from time to time.
3. Periodical expenditure on revised overhead layout and equipment.
4. Expenditure on increasing efficiency of substations.

Small Increase in Fares

Your Board decided, therefore, in June of this year to increase the second-class fares by one pice (less than a farthing). This was the first increase in the second-class fares since before the war and, in fact, still left the majority of the fares below what they were in 1922. The increase was recommended by the Advisory Committee constituted under the 1951 Agreement and approved by Government. It was brought into operation on July 1 and at once was met by physical resistance organised by the self-styled Tram Fare Enhancement Resistance Committee.

Service Paralysed

This committee formed bands who stopped the trams, forced all the passengers to dismount and pre-

vented any attempt on the part of the conductors to collect the new fares. This continued for 14 days, at the end of which our own employees were persuaded to strike by picketing, intimidation and assault. Over a hundred of our employees were treated in our dispensaries for injuries received while attempting to carry out their duties. During the whole of this period no adequate assistance was forthcoming from the authorities. At the end of July Government, having supported the increase in fares before it was put into operation, insisted that the question of increase should then be submitted to a tribunal. That tribunal has been held and we are awaiting its findings.

The whole incident illustrates the effect of a few trouble-makers being allowed to run rife in a city. We believe our own staff had no desire to strike and, in fact, in the beginning they refused to. Nor was there any evidence that the public was unable or unwilling to pay the increased fares. It was an instance of a few persons seizing power for political ends and with a view to creating trouble and embarrassing the Government.

As a result of their selfishness, everyone else has been the loser. Our employees have lost their pay, the public have had to walk to work and the company has suffered losses which preclude it from helping its employees and providing improved services for the travelling public.

£100,000 Loss in Receipts

As a result we lost approximately £100,000 in receipts, our cash reserves were reduced, and our weekly revenue takings have, since July, fallen below even what they were in June.

Towards the end of July, when our trams were off the road and negotiations for a resumption of work seemed to have reached a deadlock, I heard that the Prime Minister, who had unfortunately been abroad at this time, was returning to Calcutta. I decided, therefore, to go out and discuss the position with him and, while there, it was also able to have a press conference, which I stressed the company's view-point. Finally, our principal suppliers met me and I explained to them the financial position of the company. Without exception, they have given us every assistance and have been most helpful. Further, they have agreed to grant us extended credit of amounts due to them until such time as the situation has improved.

I have endeavoured to give you, as shortly as possible, the background and problems facing every employer of labour in India today.

Accounts: Expenditure Analysed

If you will now turn to the accounts, you will see many of the results of those problems reflected in them. From the revenue account you will note that, although receipts increased by £100,000, there was an increased expenditure of £250,000, resulting in a balance of earnings reduced by £150,000 to £277,316. You will see that, of the total increased expenditure, the tribunal award was directly responsible for £83,000.

On the general revenue account income and expenditure were approximately the same as in the preceding year and, after charging £80,000 more to renewals and replacements account, there remained a balance to be carried to appropriation account of £184,000, showing a decrease of £142,000 on the previous year. Of this balance, provision for taxation absorbed £95,000, and I think it would be as well to state here that we now receive one hundred per cent. relief from Indian taxation and we are no longer under the handicap of paying double taxation, which I referred to last year.

Finally, after paying debenture interest, there was left the full balance of £87,457 to be added to the shareholders' account and an amount of £11,574 to be transferred to special reserve account. You will remember that under the agreement with Government on the sale of the undertaking in 1972 the balance on this special reserve of £100,000 was to be paid in cash, accrues to the company, either in the form of assets or cash, accrues to the benefit of Government.

If you will now turn to the balance-sheet, you will find that it has been regrouped and notes have been added after each regrouping. This is an endeavour to explain to the shareholders and to the public in India how wrong is the popular misconception that the company has limitless free reserves. Once again I would reiterate that a reserve is only free as long as it is represented by cash or readily realisable securities. A reserve employed in the business of the company, it is no longer available to be used again for any future projects of the company.

Balance-sheet Items

The individual items in the balance-sheet are self-explanatory, and I would only draw your attention to two items. Firstly, we spent a further £74,000 on additions and improvements. These included some £20,000 on staff quarters, £15,000 further expenditure on cars and £18,000 on preliminary permanent stores have been increased by £85,000. This increase is directly attributable to the assembly of stores in readiness for the new Esplanade layout.

Turning for a moment to expenditure mentioned last year, you will see from the photos included with the accounts that the realignment of Esplanade is progressing. I had hoped that it would have been completed by now, but, unfortunately, the losses in July have compelled us to devote our programme of expenditure on this project for the time being. Two considerable benefit to the organisation of the progress more slowly while our liquid resources are re-

covering. You will also see a photo of a prototype car. The plans for replacing our remaining old-type cars were well advanced, and, in fact, 25 were replaced during 1952 and a further 20 this year. The balance will now have to wait until we can look to the future with more confidence.

I would add, however, that, although we have cut down on our commitments and are entering into no new ones for the present, the maintenance of the undertaking is being held at its previous high level and is, in fact, being improved upon in several directions. Any of you who have been in Calcutta recently will have noticed the vast strides being made in resurfacing the roads. The new treatment not only gives a smooth surface for other vehicles, but is also more weather-proof and lessens our permanent-way problems in the monsoon period very considerably.

Replacement of Liquid Resources Essential

It is with regret that your Board, viewing the position as it is to-day and bearing in mind the support and co-operation which your company has received from its suppliers, is unable to recommend a final dividend. We hope that, before long, we shall hear the verdict of the Fair Play Tribunal and be able to look forward to a period of settlement in which it will be to the benefit of all. In the meantime, it is of paramount importance to re-establish our liquid assets.

As you may judge from the foregoing, we are passing through a difficult time in our relations with labour. We, as a Board, are convinced that our employees are well paid. This is borne out, not only by the statistics, but by the waiting-list which we always have of people wishing to join our services. Sooner or later, a sense of discipline must return, together with a realisation that to strike for unjustified wage demands benefits nobody. The majority of our men long they will wake up to the realisation that before being used as tools to further the aims of political extremists at the cost of their own wages, position and welfare.

I am happy to report that our executive staff have given our company their customary first-class service. When troubles arise additional burdens fall on their shoulders and they are indeed a great source of strength and encouragement. I know it would be your wish that they are well cared for, and I can assure you that that is so.

The report and accounts were unanimously adopted and the retiring director, Mr. B. H. Clark, was re-elected.

Books and Publications

REPORT ON FORCED LABOUR

Report of the Ad Hoc Committee on Forced Labour. (Published by the International Labour Office, Geneva. Price 15s., 619 pages.) This is an annual Labour Office report which is an example of the indefatigable efforts of that body to improve labour conditions throughout the world. There is but one valid criticism of the work which is forced on the reviewer. There is no alphabetical index; nothing but a short table of wish to look up and investigate some particular phase of the Committee's inquiries and report. This volume in ordinary print and on average-sized sheets would consist of at least 1,200 pages; and anyone desirous of making a comparative study of, say, forced labour camp's allegations, their number and population in various countries, would be compelled through the absence of any index to wade through a vast amount of matter extraneous to the point on which he desires elucidation. This defect is characteristic of other and even vaster publications of the I.L.O. and it should be remedied.

This grievance apart, one has nothing but praise for a work which may be to the reader as it was to the reviewer an eye-opener as to conditions which are alleged to exist in large parts considered by the Committee. That subject was the nature and extent of the problem raised by the existence in the world of systems of forced or "corrective" labour. The Committee consisted of but three members of whom, having regard to port, one is proud to note that the chairman was Sir Ramaswami Mudaliar.

As part of its labours the Committee investigated allegations of forced labour made against 23 countries and/or territories under their administration and the answers and comments of the various Governments concerned. It is gratifying to note that neither India nor Pakistan Records of the Council of the I.L.O. The regard to the Metropolitan area and administered U.S.S.R. the Byelorussian S.S.R. and Poland far as they related to the United Kingdom. It found the ordinary Briton resident therein might find them fantastic and even a source of inopportune exonerations. The Committee found "no labour" in the United Kingdom or in India. The Union of South Africa is not so fortunate, the Committee finding that in "indirect" form it has a system of forced labour. It appears to be the Committee's general and detailed findings existence on a large scale in the world of the fundamental rights of the human person as guaranteed by the Charter of the United Nations.

Stocks and Shares

LESS ACTIVITY IN SHARES BUT

PRICES STEADY

RENEWED INTEREST IN TEA: WEAKNESS IN COALS:
ENGINEERING COUNTERS FIRM

Wednesday Evening.

THERE has been less business done in the Calcutta share market but prices are for the most part steady. The exception is coal, where some counters are weaker, notably Burrakur at Rs. 8-6 and Equitable at Rs. 32-4; but even here, some shares are supported at higher levels, such as Central India at Rs. 5-9. Engineering shares are firm. There has been less interest in jute shares but some have improved, mills sought after being those in the Yule and Jardine groups. Tea shares are more active and selected companies are quoted at higher prices. Features in other sections have been Orissa Minerals at Rs. 35-6, Carways at Rs. 7-11, India Steamship at Rs. 7-9 and BIC at Rs. 9-5. Indian Irons have moved between Rs. 25-13 and Rs. 26-2.

Government securities have been dull and some prices have been shaded.

Details of the week's trading follow.

The gilt-edged market ruled dull throughout and the volume of business was on a restricted scale. Three percent Conversion Loan 1986 recorded slightly to Rs. 81-14 but recovered again to Rs. 81-15 with small buyers at the close. In short-dated loans, 2½ percent 1954 was taken one anna lower at Rs. 98-11 ex-voucher while 2½ percent 1955 was unchanged at Rs. 98-6. Three percent 1957 which hitherto had been on offer found buyers at Rs. 98-5 but 3 percent 1958 was stagnant at Rs. 98-1. In the medium-dated group, 3½ percent National Plan Bonds met with support and improved further to Rs. 98-13 while 3 percent 1959-61 was enquired for around Rs. 96-1. Other medium-dated loans had sellers rather than buyers with 3 percent 1963-65 being quoted at Rs. 92-9 and 3 percent 1964 at Rs. 92-8; 2½ percent 1961 was offered at Rs. 90-9 and 2½ percent 1962 was marked down by one anna to Rs. 91-7 ex-voucher. Four percent 1960-70 was shaded at Rs. 101-14. In the long-dated section, 3 percent 1966-68 was quoted at Rs. 90-2 and there were small buyers of 3 percent 1970-75 at Rs. 86-6. In provincials, 4 percent West Bengal 1963 was taken at one anna lower than the previous quotation namely, Rs. 100-8 while 4 percent West Bengal 1964 was freely offered at this price without attracting buyers. Other provincials were unchanged but there were inclined to be sellers rather than buyers.

There was an unsatisfied demand for selected jute and miscellaneous preference shares. A small lot of Arglo India was done at Rs. 119 and Auckland 2nd at Rs. 74. Hooghly Jute were taken at Rs. 14-11. Northbrook were crossed at Rs. 95 and Reliance were marked at Rs. 117. Among miscellaneous scrip Birds Investments were wanted at Rs. 78. Burn 6 percent at Rs. 120 and a small lot of Burrakur 1st at Rs. 121-8. Calcutta Electric were quoted at Rs. 11-15 and Dunlop Rubber 1st at Rs. 131. Indian Iron & Steel were scarce at Rs. 106-8 as were Martin Burn at Rs. 103. National Tobacco 2nd were absorbed at Rs. 63 and Rohas Industries "B" at about Rs. 57. A parcel of Shaw Wallace changed hands at Rs. 81 and Titagur Paper 2nd were transacted at Rs. 95.

Imperial Bank fully-paid and contributory were unchanged at around Rs. 1,618 and Rs. 448. Punjab National Bank were offered at Rs. 20-12. United Commercial were done between Rs. 36-3 and Rs. 37-4 and United Bank of India "A" "C" and "D" class shares were quoted at Rs. 16, Rs. 6-6 and Rs. 3-10 respectively.

Most cotton shares were dull, the exceptions being Dunbar which improved to Rs. 202 and Kesora which were steady at Rs. 20-11. Cawnpore Textiles were quoted at Rs. 8-4 and New Victoria changed hands freely at Rs. 1-4. Elgins were slightly easier at Rs. 17-12.

Coal shares generally were neglected and in most cases prices tended to lower levels. Shares which met with small investment inquiry were Bengal at Rs. 506, Pench Valley at Rs. 22-13 and Raneeangur at Rs. 9-8. Burrakur were weak at Rs. 8-6 and business was reported in Dhemo Main at Rs. 9-6. Equitable were offered at Rs. 32-4. New Manbhoom at Rs. 9 and South Karanpura at Rs. 9-9. Central India Collieries were steady at Rs. 4-9 but Western Bengal were unchanged at Rs. 4-15.

Although jute shares presented a firm undertone and scattered gains were recorded, purchases were made mainly on speculative account and not by genuine investors. Howrah were steady at around Rs. 25-4 and closed at Rs. 25-5. Anglo India were better at Rs. 228 and Bally at Rs. 179. Barnagore improved from Rs. 154 to Rs. 162 ex-dividend. Belvedere were quoted at Rs. 207. Budge Budge at Rs. 166 and Champdany at Rs. 149. Chitavalshah and Nellimarla came in for good support following the proposal of the board of directors to issue bonus shares in the proportion of 2 to 1 in the case of the former company and 5 to 2 in the case of the latter company. The shares rose to Rs. 35 and Rs. 40 respectively. Delta came to hand at Rs. 234 and India at Rs. 130. National were steady at Rs. 24-14 as

were Northbrook at Rs. 20-6. Nuddea were marked at Rs. 51 and there were buyers of Presidency at Rs. 4-11 on expectations of an ordinary dividend. Reliance were slightly easier at Rs. 16-14.

Business in electric supply shares was on a very restricted scale. Calcutta were done at Rs. 13-5 while Dacca were lower at Rs. 8-6. There were buyers of Jubulpore at Rs. 13-8 and Patna at Rs. 10-8.

Sugar shares were mostly unchanged. Belsund changed hands at Rs. 9 and Carew at Rs. 7-11. Business was reported in Darbhanga at Rs. 12-2 and Purbapore were crossed at Rs. 14-4.

Indian Irons kept remarkably steady around Rs. 26 with the market still in the control of one powerful bull operator. Tonight's closing quotation is Rs. 25-13. Braithwaites recovered to Rs. 12-4 while Burn & Co. eased to Rs. 322. Britannia Engineering were steady at Rs. 24-8 but there were sellers of Indian Galvanizing at Rs. 15-14. Indian Standard Wagon were enquired for at Rs. 116. Jessops were reported at Rs. 25 and Kumardhubi Engineering changed hands around Rs. 8-5. Marshalls were steady at Rs. 6 and Saran Engineering was crossed at Rs. 9-14.

Paper shares remained steady with buyers of Indian Paper Pulp at Rs. 189 and Orient Paper at Rs. 37-8. Star Paper changed hands at Rs. 8-2 and Titagur were supported at Rs. 37-4. Shree Gopal Paper were crossed at Rs. 19-6. Bengal Paper spurted today from Rs. 45 to Rs. 49-8.

Sone Valley Cement were steady at Rs. 7 and there were buyers of Hercules Insurance at Rs. 34. New Asiatic Insurance were marked at Rs. 4-7 and Calcutta Landing and Shipping improved to

IT COSTS LESS...

Freight rates are only part of your total shipping costs. You have to think of many other things too - packing, insurance, loading charges, dock dues, etc. When you fly your cargo, these charges are either reduced or avoided altogether; so you start with a substantial saving.

Insurance, for instance, is based on the time your goods are travelling. By air, they take only hours instead of weeks; so you save 50 per cent or more on the premium. You save on handling costs, too. No warehouse charges, no dock dues, and the minimum delay in Customs.

Packing costs are cut right down, because your goods need less protection by air. They mostly travel with light cargo, and they are treated gently. A simple cardboard carton is enough, even for perishable goods.

Finally, we make standard reductions for bulk shipments of 100 lb. or more. And for many types of goods, we offer special reduced rates. It's worth while to find out how much you save, when you fly your goods by A.I.I. Why not write to us today? Or give us a ring, and our representative will call on you.

Company Meeting

THE CALCUTTA TRAMWAYS COMPANY LIMITED

EFFECT OF INDUSTRIAL DISPUTES ACT: MR. D. E. WEBB'S
REVIEW OF WAGES PROBLEM

The Annual General Meeting of The Calcutta Tramways Company, Ltd., was held on November 10, at 1, Queen Victoria Street, London, E.C. Mr. D. E. Webb, F.C.A., Chairman of the Company, presiding.

The Chairman said:

I want to try, this year, to take you with me through the happenings of the last 18 months to trace the results of those happenings and the problems which have arisen. Then I want to examine those problems a little deeper as to why they arose and how they are being dealt with.

Growth of Trade Unionism

In India, since her independence, there has been a very rapid growth in trade unionism. In fact India has attempted in six years to achieve a relationship between labour and management which, in this country has emerged after more than 100 years. That this rapid progress in India has been accompanied with many problems was only to be expected and, of these, one of the greatest has been the number of rival unions competing for members in the same industry. These unions endeavour to attract members by making ever more exacting demands for increased wages and other benefits.

In an endeavour to settle such claims, the Industrial Disputes Act of 1947 was passed. This Act enabled Government to set up tribunals, composed of persons of a status of High Court or District Judge, to hear disputes arising between employers and employees. These tribunals administer no principles of law and, in fact, make their own principles as they go along. They are composed of men with no commercial experience whatever, and their awards appear to bear little relationship to common sense or commercial prudence. To take one example only, when I was in Calcutta last November a tribunal issued its award granting retrospective and continuing increases in dearness allowances and also a special bonus in respect of the year 1950.

Reserves Essential for Extensions and Replacement

In that year, you may remember, £60,000 had been placed to a reserve for improvements and extensions. In 1952, two years later, a Tribunal with no experience of the running of public transport, informed the company that it was wrong in setting aside £60,000 and ought to have restricted the amount to £20,000. They therefore ordered the company to pay the £40,000 within a month to the employees as an additional bonus. Being in Calcutta at the time, I protested that the full £60,000 had already been used in paying for additional trams which were, at the moment, running in Calcutta. This made no difference and we were left to conclude that the Tribunal, in arriving at its award, had not considered whether such increases in reserves were necessary for the company or even for what purposes they were to be used, but merely based their decision on the ability of the company to pay.

The Industrial Disputes Act is rapidly destroying the relationship between employer and employee and, unless radically revised or repealed, may well, in time, imperil the future economy of India. We know in this country the effect of having a great part of the money required for re-equipment taken by the Government as taxation. Add to that burden the Industrial Tribunals, who take an unpredictable amount of the balance and give it to the employees, and you rapidly approach economic collapse.

These awards are not directed in the main against foreign firms, but are general, embracing all types of firms and all branches of industry. Neither are they made on the grounds that our company is underpaying its employees. The wages of our lower paid employees have increased by some 600 per cent. since pre-war. In 1939 our wages bill for a staff of 5,770 was £190,000. In 1952, for a staff of 10,200, it was over one million pounds.

As a direct result of the Tribunal award, made in November, 1952, and bearing in mind increased expenditure on the employees' State Insurance Scheme, and further adjustments to wages, it became clear that the company in 1953 would not earn sufficient surplus to cover the amount attributable to shareholders, let alone a balance to transfer to special reserve.

Re-equipment Vital to Continued Efficiency

Your directors consider it essential that an amount in the region of £100,000 should be available each year for transfer to this reserve in order that the efficiency of the undertaking may be maintained by a long-term programme of re-equipment and modernisation.

This programme includes such items of expenditure as:—

1. Expenditure on up-to-date workshop plant and plant to improve road surfaces.
2. Expenditure on realignment of junctions like Esplanade or Dalhousie Square from time to time.
3. Periodical expenditure on revised overhead layout and equipment.
4. Expenditure on increasing efficiency of substations.

Small Increase in Fares

Your Board decided, therefore, in June of this year to increase the second-class fares by one pice (less than a farthing). This was the first increase in the second-class fares since before the war and, in fact, still left the majority of the fares below what they were in 1922. The increase was recommended by the Advisory Committee constituted under the 1951 Agreement and approved by Government. It was brought into operation on July 1 and at once was met by physical resistance organised by the self-styled Tram Fare Enhancement Resistance Committee.

Service Paralysed

This committee formed bands who stopped the trams, forced all the passengers to dismount and pre-

Stocks and Shares

LESS ACTIVITY IN SHARES BUT

PRICES STEADY

RENEWED INTEREST IN TEA: WEAKNESS IN COALS:
ENGINEERING COUNTERS FIRM

Wednesday Evening.

THERE has been less business done in the Calcutta share market but prices are for the most part steady. The exception is coal, where some counters are weaker, notably Burrakur at Rs. 8-6 and Equitable at Rs. 32-4; but even here, some shares are supported at higher levels, such as Central India at Rs. 5-9. Engineering shares are firm. There has been less interest in jute shares but some have improved, mills sought after being those in the Yule and Jardine groups. Tea shares are more active and selected companies are quoted at higher prices. Features in other sections have been Orissa Minerals at Rs. 35-6, Carways at Rs. 7-11, India Steamship at Rs. 7-9 and BIC at Rs. 9-5. Indian Irons have moved between Rs. 25-13 and Rs. 26-2.

Government securities have been dull and some prices have been shaded.

Details of the week's trading follow.

The gilt-edged market ruled dull throughout and the volume of business was on a restricted scale. Three percent Conversion Loan 1986 recorded slightly to Rs. 81-14 but recovered again to Rs. 81-15 with small buyers at the close. In short-dated loans, 2½ percent 1954 was taken one anna lower at Rs. 98-11 ex-voucher while 2½ percent 1955 was unchanged at Rs. 98-6. Three percent 1957 which hitherto had been on offer found buyers at Rs. 98-5 but 3 percent 1958 was stagnant at Rs. 98-1. In the medium-dated group, 3½ percent National Plan Bonds met with support and improved further to Rs. 98-13 while 3 percent 1959-61 was enquired for around Rs. 96-1. Other medium-dated loans had sellers rather than buyers with 3 percent 1963-65 being quoted at Rs. 92-9 and 3 percent 1964 at Rs. 92-8; 2½ percent 1961 was offered at Rs. 90-9 and 2½ percent 1962 was marked down by one anna to Rs. 91-7 ex-voucher. Four percent 1960-70 was shaded at Rs. 101-14. In the long-dated section, 3 percent 1966-68 was quoted at Rs. 90-2 and there were small buyers of 3 percent 1970-75 at Rs. 86-6. In provincials, 4 percent West Bengal 1963 was taken at one anna lower than the previous quotation namely, Rs. 100-8 while 4 percent West Bengal 1964 was freely offered at this price without attracting buyers. Other provincials were unchanged but there were inclined to be sellers rather than buyers.

There was an unsatisfied demand for selected jute and miscellaneous preference shares. A small lot of Arglo India was done at Rs. 119 and Auckland 2nd at Rs. 74. Hooghly Jute were taken at Rs. 14-11. Northbrook were crossed at Rs. 95 and Reliance were marked at Rs. 117. Among miscellaneous scrip Birds Investments were wanted at Rs. 78. Burn 6 percent at Rs. 120 and a small lot of Burrakur 1st at Rs. 121-8. Calcutta Electric were quoted at Rs. 11-15 and Dunlop Rubber 1st at Rs. 131. Indian Iron & Steel were scarce at Rs. 106-8 as were Martin Burn at Rs. 103. National Tobacco 2nd were absorbed at Rs. 63 and Rohas Industries "B" at about Rs. 57. A parcel of Shaw Wallace changed hands at Rs. 81 and Titagur Paper 2nd were transacted at Rs. 95.

Imperial Bank fully-paid and contributory were unchanged at around Rs. 1,618 and Rs. 448. Punjab National Bank were offered at Rs. 20-12. United Commercial were done between Rs. 36-3 and Rs. 37-4 and United Bank of India "A" "C" and "D" class shares were quoted at Rs. 16, Rs. 6-6 and Rs. 3-10 respectively.

Most cotton shares were dull, the exceptions being Dunbar which improved to Rs. 202 and Kesora which were steady at Rs. 20-11. Cawnpore Textiles were quoted at Rs. 8-4 and New Victoria changed hands freely at Rs. 1-4. Elgins were slightly easier at Rs. 17-12.

Coal shares generally were neglected and in most cases prices tended to lower levels. Shares which met with small investment inquiry were Bengal at Rs. 506, Pench Valley at Rs. 22-13 and Raneeangur at Rs. 9-8. Burrakur were weak

Rs. 14.4. Calcutta Steam Navigation recorded a sharp rise from Rs. 115 to Rs. 141. India General Navigation were offered at Rs. 76.12 and a fair volume of business was reported in India Steamship at around Rs. 7.9. Angelo Brothers were steady at Rs. 19.14 and Bararee Coke improved to Rs. 19.12. Birds Investments were supported at Rs. 16.4 and Britannia Biscuits on reports of more profitable working rose from Rs. 10.4 to Rs. 12. British India Corporation met with good investment enquiry and improved to Rs. 9.4. A large parcel of Cherra Chhatrak Ropeway changed ownership at Rs. 7.10. Dunlop Rubber were dealt in at Rs. 20.8 and there were buyers of Eastern Investments at Rs. 14.6. There were sellers of Indian Cables at Rs. 19.15 while Jardine Henderson and Martin Burn were steady at Rs. 117 and Rs. 19.12. Indo-Burma Petroleum met with good buying inquiry and improved to Rs. 71.8 with few declared sellers. Midnapore Zemindary were Rs. 1 better at Rs. 41. Rallis were steady at Rs. 66.4 as were Rohas Industries at Rs. 10.0.

The feature in the mining section was Orissa Minerals which improved to Rs. 35.6. Indian Coppers were dealt in around Rs. 2.14 and Chrestien Mica Industries ordinary at Rs. 10.6. Burma Mines and Non-Ferrous Metals were quoted at Re. 1.2 and 11 annas.

The tea section continued to rule firm and in the absence of sellers most of the popular scrip were marked up. Ananda Assam were taken at Rs. 16.12, Baghmari were crossed at Rs. 12.12 and Basmatia and Bateli both appreciated a point to Rs. 30.4 and Rs. 13.8. Brooke Bond had buyers at Rs. 12.4 as did Dufflaghur at Rs. 19.14, Grob "B" at Rs. 11.14 and Hoograjuli at Rs. 31.4. Sapoi and Tezpor were strong features at Rs. 11 and Rs. 19. Amongst Doora scrips Banarhat were taken higher at Rs. 380 as were New Doora at Rs. 356. Bhakawa was a good feature, improving by one rupee to Rs. 26.12. Hantapara were asked for at Rs. 178.

The TATA HYDRO-ELECTRIC POWER SUPPLY COMPANY raised the profit from Rs. 15 lakhs to Rs. 20.18 lakhs for the year ended 30th June, 1953. Adding Rs. 18,192 brought in and other miscellaneous receipts there is a balance of Rs. 22,00,349. Contingencies reserve receives Rs. 98,848 (Rs. 92,195), arrears of depreciation Rs. 37,259 (same) and general reserve Rs. 75,000 (nil). The ordinary dividend has been recommended at the same rate of Rs. 7.8 including an interim of Rs. 3 per share, leaving a carry-forward of Rs. 14,282.

The profit of the TATA POWER COMPANY rose from Rs. 41.54 lakhs to Rs. 48.40 lakhs for the year ended June, 1953. Bringing forward Rs. 43,403 and other miscellaneous receipts there remains a balance of Rs. 50,54,738. Contingencies reserve is allocated Rs. 2,46 lakhs (Rs. 2,34 lakhs), writing off of intangible assets Rs. 23,403 (Rs. 23,402), tax reserve Rs. 61 lakh (nil) and general reserve Rs. 7 lakhs. The ordinary dividend has been the same as at Rs. 75 including an interim of Rs. 25 per share to leave a carry-forward of Rs. 33,757.

The ANDHRA VALLEY POWER SUPPLY COMPANY made a profit of Rs. 21.89 lakhs for the year ended June, 1953, and this compares favourably with the previous year's Rs. 17.97 lakhs. Bringing in Rs. 35,587 and adding other miscellaneous receipts there is a balance of Rs. 23,15,725. Contingencies reserve absorbs Rs. 1,31 lakhs (same), arrears depreciation Rs. 1,27 lakhs (same) and general reserve Rs. 1 lakh (nil). The ordinary dividend has been maintained at Rs. 75 including an interim of Rs. 30 per share, leaving Rs. 16,536 to be carried forward. Units sold rose from 264,464,682 to 300,671,385.

It has been reported that this company and its two sister companies, namely, the Tata Hydro-Electric Power Supply Co., and The Tata Power

Co., are negotiating with the International Bank for Reconstruction and Development (World Bank) for a loan of Rs. 7 crores (which may be increased to approximately Rs. 8.5 crores) for the Trombay project. Originally the companies asked for a loan of Rs. 7 crores (with a possible increase to Rs. 8.5 crores) on the basis of 2 units of 50 MW each to be installed at Trombay. In case the project is confined to one unit only, this loan may be reduced. As the loan will be made to the three companies jointly, the cost of the project, each company will be individually responsible for the repayment of the whole loan.

The BRITISH BURMA PETROLEUM COMPANY showed a profit of £46,264 for the year ended March, 1953, as against the previous year's £46,978 mainly due to the working of the South African subsidiary, and a dividend of 5% has been declared. The management and control of the company was transferred to the Union of South Africa on 1st April, 1953. In respect of its 21 percent interest in the merger of the British Oil Company Limited, the company received £12,039 during the year as its share of the net proceeds of the sale of indigenous oil products, etc. There was, however, no finality in respect of the negotiations in progress with the Burmese Government for it to participate in the industry operated by the above-mentioned merger.

Although the freight earned by the INDIA STEAMSHIP COMPANY for the year ended 31st March, 1953 was higher at Rs. 3.93 crores against Rs. 3.84 crores in the previous year, the profit fell from Rs. 45.43 lakhs to Rs. 35.15 lakhs due to higher operating costs. General reserve has been allocated Rs. 18 lakhs (Rs. 20 lakhs) and tax reserve Rs. 5 lakhs. The ordinary dividend has been maintained at 5 percent. Depreciation absorbs Rs. 23.13 lakhs (Rs. 23.08 lakhs), leaving a carry-forward of Rs. 1,90,764. The company has redeemed its debentures fully to the extent of Rs. 25 lakhs. The company is also expected to produce tangible results during the current year by availing of the loans from Government at a reasonable interest for the purpose of increasing the fleet.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening quotation—Highest for the week—Lowest for the week—Closing quotation—Quotation for the corresponding Closing Date a Year Ago the name being shown in parenthesis and will not be given where such a quotation is not available).

**EUCLID
IN
INDUSTRY**

Illustrated are 15 ton EUCLID Rear Dumps—

From the Bhakra Dam in the far north to the Manimathar Project in the deep south, from the Hirakud Dam in the East to the Gangapur Storage Reservoir in the West, EUCLID Earthmovers will be found. Bhakra/Nangal, D.V.C., Hirakud, Lower Bhavani, Neyveli, Tungabhadra, to mention but a few of the projects which have asked for EUCLID equipment because of its ability to perform a wide range of work with efficiency, economy and speed, have recognised that EUCLIDS are produced by an organisation which has specialised in the manufacture of heavy duty earthmoving machinery for years.

THE WORLD'S FINEST EARTHMOVING EQUIPMENT IS DISTRIBUTED AND SERVED BY

How oil makes an inferno useful!

Look inside a big Diesel engine — and you find an inferno of terrific heat.

Scorching temperatures and the actual flames generated inside the Diesel create the severest tests for oil. Not only is it important to prevent metal-to-metal contact between piston rings and cylinder wall, but the oil must also seal in the gases to save power.

The makers of Gargyle lubricants were the first to lubricate Diesel engines correctly. Now, there are specially made oils for every type and size of Diesel. Gargyle oils work on the principle which has proved to be the most vital factor in industry: the right oil, in the right place, in the right way. 87 years of experience has shown them how!

Temperatures can go as high as 3,500 degrees Fahrenheit inside a Diesel engine. No wonder experience was needed to develop Gargyle lubricants for Diesel engines!

Let this experience benefit you. Standard-Vacuum Industrial Lubricants give you correct lubrication with four special advantages:

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)

problem. With revival of purchasing power, cottage and small-scale industries will also expand.

The Engineering Industry

"Thirdly, I would support the proposal made by the Fiscal Commission and recently by Dr. Matthai that the rehabilitation of the small units of the engineering industry should be taken up immediately. I think a survey of these is being conducted. The difficulties they experience in regard to raw materials, finance for increased equipment and working capital should be met and the Railway and Defence and other departments should frame a five-year programme of engineering stores and simpler forms of mechanical equipment required by them and place orders with these units. The larger industries should also be induced to place fairly long-term orders for their requirements with them. Such technical assistance as they need for improving their technique should also be made available. Prompt action in this field will provide work for skilled workers who are facing unemployment

and will have wholesome psychological value at the present juncture by restoring confidence.

"Lastly, Central and State Governments should adopt active policies calculated to encourage investment of capital and increase employment. All existing policies should be reviewed with this end in view. In some States there is a tendency to veto private plans of expansion on the ground that they might add to the cost of nationalisation in the future. Such a review is needed especially in regard to the promotion of motor transport for carriage of goods, electrical power generation, etc."

Talks on New Steel Plant

Six representatives of the German combine of Krupp and Demag have arrived here and had their first meeting with Mr. A. K. Chanda, Secretary to the Ministry of Production, and other officials. It is understood that there was a preliminary discussion regarding the formation of the company to establish and run the proposed steel plant and the finalisation of the technical consultants' agreement. After completing the discussions in New Delhi, the delegation will visit the alternative sites suggested for the steel plant and assess their comparative merits. The overriding consideration for the location of the plant, it is stated, will be the economics of production and distribution.

In August last, it will be recalled, the Government of India entered into an agreement providing for the technical and financial participation of these two firms in the construction of a new steel plant with an initial capacity of half a million tons of steel ingots, capable of expansion later to one million tons. The capital cost of the project is estimated at about Rs. 71.25 crores. The share capital to be contributed by the Germans is expected to be of the order of Rs. 9.5 crores, the exact amount depending upon the value of the plant ordered in Germany. It is also

proposed to ask the World Bank for a loan of about Rs. 20 crores for the capital cost of the plant. The German combine is to act as technical consultant to the Government of India and will receive a fixed fee of about Rs. 2.1 crores. The Krupp representatives are Dr. H. Seyboth, Dr. P. Hansen and Dr. K. Schumann. The representatives of Demag are Dr. W. Thun, Dr. J. Schueller and Dr. P. J. Heider.

Expansion of Postal Services

It was recently stated that by 31st March, 1956, 10,135 post offices, 1,000 telegraph offices and 500 small telephone exchanges and public call offices were proposed to be opened. The criterion for opening new post offices has been completely changed. It has now been decided to set up post offices at all head-quarters of tehsils, talukas and thanas, provided the loss does not exceed Rs. 750 per annum per post office and Rs. 1,000 per annum in the case of backward areas. It is expected that by 31st March, 1956, there will be 46,639 rural post offices, nine square miles. In the new programme 866 post offices will be self-supporting and 413 post offices will be in the backward areas. The postal side of the Department is already running at a loss. This is in spite of the fact that an additional levy is paid by users of postal services in areas not covered by airlines. The loss will be further increased by opening unremunerative post offices. The Five Year Plan has provided Rs. 30 lakhs for the mechanisation of postal services. To what extent mechanisation will be proceeded with, in view of the growth of unemployment, is not yet disclosed. Inaugurating the Colombo Plan Conference, the Prime Minister opposed mechanisation because it tended to reduce employment.

Delhi to have New Airport

The first meeting of the Airports advisory Committee was held here this week with the Director-General of Civil Aviation, Mr. L. C. Jain, in the chair. About 40 representatives of Indian and foreign air lines attended the meeting. The Chairman at the outset announced the setting up of a Facilitation Advisory Committee to discuss problems affecting the movement of passengers from one country to another. It was also decided to hold meetings of both Committees every six months, along with meetings of the Communications Consultative Committee. The Airports Advisory Committee discussed the future of Palam airport, New Delhi. The Government, it was disclosed, has decided to build a new international airport for Delhi across the river Jumna, in the south of Ghaziabad. It is also proposed to build a new road connecting New Delhi to Ghaziabad, which will include a road bridge across the river Jumna. Meanwhile, Palam airport is being developed to accord with international standards by lengthening its runway, and by providing it with high intensity approach and runway lighting and an instrumental landing system. At the instance of the international airlines, the meeting passed a resolution urging the Government to provide an airport for Delhi independent of the control of the Indian Air Force. There was general satisfaction with the announcement on this subject. Difficulties resulting from dual control of Palam airport by the Civil Aviation Directorate and the Indian Air Force have prevented its development. Apart from the fact that plans to move out to a new airport have reached an advanced stage, the decision to bring Palam up to international standards was greatly appreciated. In the nature of things, Safdarjung aerodrome might have to be closed down in due course. One view here is that, in doing so, the existing facilities provided for the Delhi Flying Club should be retained. The possibility of installing ground control approach installations at Bombay airport was also discussed. The apparatus largely depends for its working on the efficiency of operators. With efficient handling it can be very useful. Otherwise it can be equally dangerous.

Locomotives coming from Canada

Eleven million Canadian dollars worth of locomotives are being imported by India as Colombo Plan aid from Canada under the 1953-54 allocations.

Recruitment and Promotion of Officials

The Government of India has decided to set up a board to examine methods of recruitment to the various services in order to formulate a scheme to suit present conditions. In the proposed top priority, seniority coming next. Provision is also being made for the demotion of inefficient personnel.

Bills before Parliament

The winter session of Parliament, which opens here on Monday next, will have 34 pending and 19 new Bills to consider. First priority will be accorded to six Bills, including three pending ones, in respect of which ordinances have been issued. The Indian Companies Bill, which was introduced during the last session, will be referred to a select committee. The Judicial Reforms Bill and the anti-Untouchability Bill will be introduced and circulated to elicit opinion. The new khadi and village industries, the Sea Customs (second Amendment) Bill, the Press (Amendment) Bill, the Patents and Designs (Second Amendment) Bill will be introduced and later referred to a select committee.

Indian Labour Conference

The Indian Labour Conference will hold its three-day session in Mysore from 7th to 10th January, 1954, it is learned.

London

BALANCE OF PAYMENTS POSITION STEADIER

MORE INDUSTRIAL BUILDING

(FROM OUR LONDON CORRESPONDENT).

THE economic debate in the House of Commons recently added little to our knowledge of the outlook save for one significant statement by the Chancellor of the Exchequer. "The forward outlook," he said, "is not exactly set fair but it is settled from the point of view of the balance of payments." Without being in possession of the details of the innumerable factors in the situation, which no doubt are available to Mr. Butler, that would appear to be a very bold statement. On the other hand, the Chancellor is not given to flights of fancy, so we must accept the fact that there are favourable developments not visible from the outside to justify his optimism. That is certainly not done by the provisional overseas trade figures for October, just released by the Board of Trade, even though these confirm that seasonal trends are beginning to move in our favour and nothing but a major disaster can now prevent 1953 turning out to be a better trading year than 1952. At £227.7 million, exports in October were at the highest level for well over a year, with the exception of July, and certainly compared quite favourably with September's figure of £202.2 million as well as the October, 1952, total of £218.3 million. It is still, however, not good enough in view of the important part that export expansion must play in any permanent economic recovery. Unfortunately, there was no substantial benefit to be derived from this export improvement, for it was partly offset by the rise in imports to a total of £279.9 million, against £269.4 million in September and £266.6 million in October of last year. Allowing for re-exports, the adverse trade gap in October was down to £42.9 million, against £59.2 million in September, and £35.7 million in October, 1952. From the payments point of view the figures are a little better than they appear to be, for the import figures in the third quarter included an average of £8 million each month and that for October a sum of £5 million for aircraft and parts received as a gift from Canada. The exports to the vital dollar markets of North America totalled some £27 million, roughly equally divided between the two countries, which was £1.6 million up on September but a similar amount down on October of last year.

By themselves the monthly figures do not present the whole picture. A better idea of that can be had by considering the progressive aggregates. For the first ten months of 1953 we find British exports totalling £2,206.6 million including re-exports, compared with a total of £2,266.5 million over the same period of 1952. This shows an average monthly drop of £6 million, which although it may not be disastrous, is nevertheless a disturbing trend in an increasingly competitive market, and more especially in view of the recent recovery of production. It certainly lends support to the view that too much of our efforts are being devoted to satisfying the demands of the home market. On the other hand, imports over the same period have also been on a much lower level, or have derived the advantage of being lower in price, so that the trade "gap"—the excess of imports c.f. over exports f.o.b.—has dropped by £200 million, from £790.2 million in 1952 to £589.9 million this year. This levelling-off might have something to do with Mr. Butler's confidence in the future, plus a possible upward trend in "invisible" earnings, or the belief that some stimulation of the home market may assist the export drive, or an assurance that American imports from the sterling area are unlikely to decrease any further. The most likely explanation, however, is that the volume of imports has been maintained or even increased in spite of the fall in value, and that we are at least approaching, if we have not already reached, the position where both strategic and industrial stocks have been built up to a level which will permit a return to a better balance at the higher level of production without imposing too great a strain on the gold and dollar reserves. Facts and figures to support that belief are not available, of course, but the decision to end all rationing next year and the increasing freedom which is being given for commodity transactions over a wide sphere point in that direction.

Industrial Building Licences

One other new fact was disclosed by Mr. Butler in the Commons, namely, that in the six months following the Budget licences worth nearly £85 million were issued for new industrial building. Compared with the same period of the previous year, this represents an increase of 47 per cent. It is an important development, that more resources are being devoted to re-equipment and expansion after a long period during which there has been a virtual standstill—which will ultimately, since factories take time to build and equip, help to maintain the competitive position of British industry. The fact also goes to explain the activity on the capital market in recent months and presages that it will be even busier in the months that lie ahead. It is shown in the latest issue of the *Monthly Digest of Statistics* that the total amount of new money raised in the first nine months of this year is almost as much as the amount raised in the whole of 1952, which was a record. There can be little doubt that industrial issues have shared in this increase, and particularly the engineering and shipbuilding and vehicles manufacturing industries, but it is also evident that the power-station building programme of the British

Electricity Authority makes a quite disproportionate demand on the market. In 1951 the electricity, gas and water industries took £81.4 million of the £239.7 million raised, in 1952 £151.8 million out of a total of £332.5 million, and for the first nine months of this year at an annual rate £303.2 million out of £411.1 million.

Softwood Decontrolled

Further restrictions on trade have been removed this week. On Thursday all controls were removed from softwoods to bring complete freedom to the timber trade for the first time for 14 years. Softwood timber may now be used in any quantity without a licence and the Board of Trade will invite applications for open individual import licences for softwood from any sources, including the dollar area. All hardwood has also been freed from restrictions, but in this case imports from dollar countries continue to be controlled. The trade has welcomed the Government's decision and expects that consumption of softwood will increase by about 10 per cent in 1954, with further smaller rises in 1955 and 1956. There is about six months' supply in the country, and additional home-grown supplies are becoming available as a result of last winter's gales in Scotland. The present price is not likely to rise, and may even fall, as a result of decontrol. About 33 to 50 per cent of consumption is used for house building or repair and a further 25 per cent for packing export goods.

Additions to O. G. L.

The details of relaxations of licensing restrictions in connection with imports from Western Europe foreshadowed by Mr. Butler to the meeting of O.E.E.C. on 29th October were announced on Friday. The principal additions to the open general licence list include hardwood, canned meats, clothing, pottery, veneers, certain fertilisers, essential oils, nuts and certain types of glassware, but the full list of freed goods covers nearly seven pages, closely printed, in the Board of Trade's latest Notice to Importers. As a result, the quantity of U.K. imports on private account from members of the O.E.E.C. which is free from quantitative restrictions is raised to 75 per cent, which is the minimum standard set by the Organisation for countries not in serious balance of payments difficulties.

Proposed Legislation

Details are now available of the legislative measures which the Government proposes to introduce in Parliament to give effect to the policies outlined in the Queen's Speech, while a White

Paper issued yesterday outlines its intentions with regard to commercial television. This is that a new corporation to own and operate TV stations will be established next summer so that the first programmes may be on the air by Christmas, 1954—provided, of course, that Parliament approves the policy. The new corporation will be in competition with the B.B.C. and will be run on similar lines. As a first step stations will be opened in London, Birmingham and Manchester. As to the legislation, the Housing Repairs and Rents Bill grants wider powers to local authorities in the matter of dealing with slums and lays down the scale of Exchequer grants to assist them in buying houses for temporary occupation, for improvement and conversion, and in the second part lays down the conditions under which owners may raise their rents to enable them to keep property in good repair. The Industrial Diseases (Benefit) Bill empowers the Minister of National Insurance to make a scheme under which allowances at a flat rate of 20s a week can be paid out of the Industrial Injuries Fund in certain cases of partial disablement by certain occupational diseases. The cost to the Fund of the new benefits is expected to be about £800,000 a year at first, decreasing thereafter. Finally, there is the measure for the creation of an Atomic Energy Corporation, run on industrial lines. Under a framework of Government policy and a financial ceiling, the Corporation will have full freedom to settle day-to-day problems, undertake large capital programmes and proceed without reference to the Treasury with projects up to a higher figure than is permitted to Government departments. Incidentally, it will not be limited to Civil Service scales of pay, which will enable it to attract the best brains. The present employees under the Ministry of Supply will transfer to the Corporation, which will have greater flexibility and be able to speed up work on the full exploitation of atomic energy.

Liverpool Cotton Exchange

The Liverpool Cotton Association has been busy in devising plans to work the provisions of the Cotton Bill, and sent a deputation to Westminster this week to acquaint Lancashire and Merseyside M.P.s with the details. It is expected that the bill could be made to work well to the advantage of the spinners and the public. The offices of the Liverpool Cotton Exchange will be opened about June, but it is expected to take some months to get the revived organisation working smoothly again. The rules under which the market will work will provide for disciplinary action to be taken against anyone following undesirable practices of speculation.

DESHI COTTON

(FROM OUR BOMBAY CORRESPONDENT).

THE utterances of the Union Commerce and Industry Minister in Bombay this week only go to confirm the impression that one has come to form lately of the policy of the Government of India, at any rate of Mr. T. T. Krishnamachari, in regard to exports and its attitude towards industrialists and business men. Generally speaking, it is correct to assume that the present Government is keen on exporting manufactured goods rather than raw materials. The Minister said so categorically at a Press Conference when he was questioned about the Government's policy regarding exports of cotton and oilseeds. "I am not very keen on the export of cotton and the same applies to the export of groundnuts also," said Mr. Krishnamachari. Earlier in Rajkot, the Minister said the same when the Nawanganj Chamber of Commerce urged further export of raw wool. He told the Chamber that the Government's wool export policy was guided by the interests of the producers. Free exports of wool from India might adversely affect the wool industry of the country in the same way as the export of cotton affected the textile industry in the past, he added.

But all this notwithstanding, it is on the cards that the Government will allow further exports of both cotton and wool. As a matter of fact, the Minister for Commerce and Industry felt constrained to modify his earlier firm stand in respect of raw wool exports and agree to allow interim quotas, pending a final decision. Of course, one can sympathise with Mr. Krishnamachari on a question like this, for, as he himself disclosed, there are four different sets of statistics on the total available supplies of wool in the country—one compiled by the International Wool Secretariat, another prepared by the Ministry of Agriculture, a third got together by the Commerce and Industry Ministry, and a fourth submitted by the Woollen Federation of India—no two of which seem to tally.

Accurate Cotton Statistics

There may have been some difficulty as regards accurate statistics about raw wool, but cotton certainly does not suffer from a similar handicap. Time and again, trade statistics of raw cotton have proved to be nearer facts than even the official figures. Here, for instance, is the trade's estimate of supplies of Bengal deshi as presented to the Commerce and Industry Minister by the Cotton Eayers' Association.

Carry-over on 31st August 1953	
(with mills = 34,000; with trade = 32,000)	66,000
1952-53 commercial crop	
(East Punjab and Pepsu — 196,000	
Rajasthan — 81,000)	277,000
Total supplies	343,000
Estimated mill consumption @ an	
average of 14,000 bales a month	168,000
Export quota allowed so far	75,000
Total distribution	243,000

It is thus seen that there is a clear surplus of 100,000 bales which may increase further if there be any fall in mill consumption. In view of this, it is difficult to appreciate the over-cautiousness of the authorities in refusing further quotas of this variety of cotton, especially when there is believed to be considerable foreign demand for it at present. It is possible that, after some time, the

PUBLIC RELATIONS OFFICER, CALCUTTA.

Government may revise its stand and allow exports, judging from the guarded remark that Mr. Krishnamachari made at the Press Conference referred to above, more in the nature of an after-thought, that he was "not inclined to announce any further quota at the moment." In any case, this is the interpretation of the cotton market and it was well reflected in a rise of Rs. 10 per candy of Bengal deshi even after the Minister reiterated the view expressed earlier by the Trade Commissioner to which reference has already been made in this column. Meanwhile, it is to be hoped that such action as the Government may take will be announced soon.

Quality Control of Exports

That the Government of India is really keen on promoting exports of manufactured goods from this country is evident from the proceedings of the meeting of the Cotton Textiles Fund Committee held here early this week. Addressing the meeting, Mr. Krishnamachari emphasised the importance of export promotion of textiles and impressed upon the members the need for prompt action in the matter of inspection of all textiles intended for export. He indicated the Government's anxiety to see things get going and did not mind who undertook the job. He seemed to suggest: "If you want, we shall stand aside and allow you to carry on as best as you can. We shall give you whatever guidance you may need and also assist you with funds to the extent possible. Only let us have results." This is a challenge to textile interests. Accordingly, a heavy responsibility rests on the Sub-Committee of the Textiles Fund Committee which has been asked by the Minister to draw up a practical scheme.

As to the need for instituting some sort of check on the quality of India's cloth exports, there can hardly be two views. This is not the first time that the subject has come up for discussion. The mill-owners have been at it for years now and, if no decision or action has yet been taken by them, it is because of the differences of opinion that exist about the precise form of control and method of administration. According to one school, there should be an inspection of all cloth going out of the country, while another school wants it to be restricted to the main varieties of Indian textiles for which export markets have already been established. Again, a section of millowners holds that a standard contract scheme can achieve the desired result.

Mr. Krishnamachari's own views on the subject are that the inspection work should be carried out by the millowners themselves, while the Government would only hold a watching brief. At the Press Conference, the Commerce and Industry Minister made this point very clear when he said: "We want to give a different orientation to the proposed body and do not want to do anything which will be in the nature of an imposition." The Cotton Textile Fund Committee, the Minister added, would assist any organisation set up for the purpose by a grant out of the Cotton Textiles Fund. This, by the way, is a fund created out of the proceeds from the duty on textiles exported in 1944 and 1945. The Government would also assist in appointing representatives in the more important export markets and correspondents in less important ones to keep the proposed organisation informed about market trends, nature of demand, etc. Depending upon how this organisation works, the Minister further indicated the Government would set up similar councils to push exports of other commodities.

In all that Mr. Krishnamachari said to the Cotton Textile Fund Committee about an organisation for the promotion of exports, one can observe the growing tendency on the part of the Government to entrust responsibility more and more to the industrialists and business men themselves and put them on their mettle as it were. The Union Minister began this new orientation of policy when, instead of taking action himself, he cleverly shifted the responsibility for solving the Indu Mills impasse on to a sub-committee consisting of top-ranking industrialists. From reports one hears of how this sub-committee, which is now investigating the affairs of these mills, has been faring, it seems that theirs is by no means an enviable task. They realise they are very much at the bar of public opinion,

as the Minister observed when entrusting this work to the sub-committee.

Capital Electricity Undertakings

"The Bank rate may go up, the interest rate on gilt-edged securities may move forward in sympathy, and the fully secured loans of the Central Government's own Industrial Finance Corporation may demand an interest as high as 6½ percent, but there seems to be a certain inviolable sanctity attached to the basic rate of ordinary equity risk return allowed to the investor in the Electric Supply industry. Otherwise, it is hard to explain the consistently unappreciative and positively obstructive attitude of the Government towards the repeated requests of this industry for a revision of this rate from 5 to 6 percent." So the Chairman of the Federation of Electricity Undertakings of India, Mr. K. C. Milne, said once again making a pointed reference to this subject in his address at the last annual general meeting of the Federation. For years now, this has become a hardy annual with the Federation, and each year finds this patient body adducing more and more compelling factual evidence in support of its reasonable and legitimate demand, but the authorities, instead of becoming convinced as one would expect, apparently regard it all as defiance of their wise ruling and continue to evade the issue by raising all manner of irrelevant issues.

The simple and clear argument of the industry is that it is difficult to raise fresh capital on the basis of the present low basic rate of return to the equity holder in electricity undertakings. But the Government is not impressed by it, presumably because a few leading electricity supply companies have successfully raised fresh equity capital recently and have also been able to maintain their dividends without any drastic reduction despite the increase in capital. Nowhere is the saying that one swallow does not make a summer more applicable than in this case. What the Government does not seem to appreciate is that the private sector, which is allotted the responsibility of producing additional power to the extent of some 200,000 k.w. in parallel with the power additions visualised in the public sector under the five-year plan, does not consist of only large and long-established concerns in which the investing public has come to place almost blind confidence as it were. There are, however, many small and more recent units which have also to play their respective roles, and it is surprising that a Government which is becoming known the world over for its concern for the smaller and weaker units in other spheres should be so indifferent in this particular case.

Installed Electricity Capacity

It may not be out of place here to adduce some data in connection with the relative importance of the private and the public sectors in the electricity supply industry. As at the end of December, 1951, according to official figures, the installed capacity of company-owned electricity supply undertakings was 1,137,085 k.w. or 61.95 percent of the total. Of the 451 undertakings, the number of company-owned licenses was 227 or 54.5 percent of the total. These accounted for generating 3,400,567 million k.w. hours of electrical energy or 58.04 percent of the total. The percentage share of the aggregate maximum demand of these 227 companies of 719,502 kw works out to 59.5 percent of the total maximum demand of 1,205,194 k.w. At the end of 1950, the capital expenditure of company-owned undertakings amounted to Rs. 78.1 crores or 53 percent of the total capital expenditure of all Rs. 147.7 crores. These (company-owned) undertakings paid during the year 1950, by way of income-tax to the Central Government, some Rs. 94 lakhs. In the light of all these statistics, can anything still entertain serious doubts about the dominating position of the private sector in the sphere of power supply, although eventually, with the completion of all the multi-purpose projects, the public sector may achieve that distinction? But even when that happens, it should be remembered, the burden of distribution of all the power generated will continue to devolve on the distributing licensees. It is the height of short-sightedness to ignore these modest and justifiable demands.

Ceylon

CEYLON SEEKS LARGE
LOAN FROM BRITAINREVIVED DEMAND FOR
CEYLONESE TEAS

(FROM OUR COLOMBO CORRESPONDENT).

CEYLON is seeking a large loan from Britain for development works. Sir Oliver Goonetilleke, the new Finance Minister, and Mr. N. U. Jayawardana, Governor of the Central Bank, have gone to London to discuss the matter with the British Chancellor of the Exchequer, and representatives of the private sector. Ceylon has decided to turn to the United Kingdom for a loan because she feels that the terms of the World Bank, particularly the rate of interest, are far too exacting, and that easier terms can be secured from Britain. Negotiations are already in progress between the World Bank and the Government of Ceylon for a loan of Rs. 80 million for the completion of Stage 11 of the country's hydro-electric scheme. If this loan can be secured on better terms from Britain, negotiations with the World Bank will be abandoned. Ceylon also needs a further Rs. 50 million for housing and hospitals. This will be sought from the Commonwealth Development Fund and from private sources. An attempt will also be made to secure the release of more of Ceylon's sterling balances.

Tea Exports Buoyant

The Government has decided to do away with the sliding scale of export duties on tea that have existed for two years and introduce a fixed duty of 45 cents per pound. The new flat duty rate came into existence from 30th October. The Finance Minister in announcing the new duty said that "the sliding scale of duties had been utilised by shippers to their advantage and had involved considerable loss to revenue." The Minister declared that under the sliding scale shippers were free to register their contracts, or refrain from doing so. They registered their contracts only when it was to their advantage to do so. Quoting figures, he pointed out that in the first week beginning 1st October, 1951 (when the sliding scale was first introduced) the duty rate was 35 cents per pound and shippers registered contracts for 3,200,000 pounds of tea. The following week the duty rose to 37 cents and registrations fell to 260,000 pounds. In the third week when the rate fell to 35 cents, and it was known that the subsequent week's rate would be 38 cents, the large amount of 21,000,000 pounds of tea were registered. This process was continued throughout the two years of sliding scales.

The new flat duty has met with a mixed reception. The Ceylonese planting interests are generally in favour of the fixed imposition, but European tea interests, which own about 60 percent of tea estates in Ceylon, are strongly opposed to a fixed rate of 45 cents. Their contention is that it would hardly benefit low and mid-country teas, and would definitely handicap high-grown tea and better quality producers. There is a possibility of Government reconsidering the question of high-grown teas and fixing a special rate for it.

The demand for Ceylonese tea has been very good in recent months and for the first ten months of this year tea has topped the export list. A Canberra message recently stated that Australian authorities, questioned about the larger purchases of Indian tea for sale in Australia, have replied that there was a preference in Australia for Ceylon tea, and that increasing quantities of it were being bought. A report from Berlin said that lately, with the arrival of more tea from Ceylon, Germans living in West Berlin and Western Germany were drinking more tea than before. Ceylon has also been able to recapture her Egyptian tea market, which was temporarily lost because of sterling payment difficulties. Tea exports to Egypt have increased considerably during the last six months, and figures show that the average monthly exports for the past half year have been about three million pounds, which exceeds all previous records.

Adverse Trade Balance

Ceylon has closed the 1952-53 financial year which ended on 30th September with a large fall in her external assets to a new low level of Rs. 658,836,000. There was a wide gap in trade for the first nine months of 1953, the trade deficit in this period being Rs. 40,000,000. This deficit was accentuated by an adverse balance of trade in September amounting to Rs. 37,211,000 as compared with a favourable balance of trade in August amounting to Rs. 29,950,000. But for the large deficit in September, Ceylon's trade deficit for the rest of the year would have been only about Rs. 3,000,000.

Taxation Commission

The new Minister of Finance, Sir Oliver Goonetilleke has cancelled the appointment of a Commission, which was to inquire into the incidence of taxation in Ceylon and which was to advise the Government how the island's taxation policy and methods could be integrated with the pattern of economic development. The former Finance Minister, Mr. J. R. Jayewardene, was to have led the Commission, and had decided to recruit three top-ranking British economic and financial experts. The British Treasury had been approached and had promised every assistance in selecting the men. The raison d'être for the

taxation Commission was that Ceylon's taxation policy was drawn up for a colonial economy, and there has been no change in it since colonial days, though Ceylon has been a self-governing Dominion for five years. The reason that prompted the new Finance Minister to cancel the Commission are quite inexplicable and his action has caused much speculation in financial circles.

Coconut Oil Exports Fall

Ceylon's coconut oil industry is faced with a precarious future because the United Kingdom, which has been a traditional market for this commodity has reduced its imports. The rate of reduction of coconut oil imports to U.K. can be gauged from the fact that in 1952 Ceylon exported 572,192 cwt. to Britain while the quantity exported during the first ten months of this year totalled only 10,000 cwt. The decline is attributed to Ceylon coconut oil being displaced by palm kernel cotton seed, and other vegetable and animal oils. British capital had been invested in British colonies in West Africa and Malaya, and it was therefore natural that Britain should patronise her own markets.

Ceylon expects her coconut oil trade to be further affected when the United States gives effect to a plan to dispose of surplus farm products like tallow and oilseeds.

Scrap Iron Sales

After much indecision the Ceylon Government has disposed of the 16,000 tons of scrap iron at a price of Rs. 98.46 per ton. The buyer is Richard Nathan Corporation, of New York, and the offer on their behalf was made by Messrs. G. L. Gabriel, which represents the Iron and Metal Traders Corporation of Bombay. The price quoted is exclusive of an export duty of Rs. 50 per ton, which the buyer has to pay. Meanwhile, Japanese steel interests are bidding for a total of 20,000 tons of automobile scrap owned by private traders here. Already one Japanese business man has succeeded in purchasing 5,000 tons. The delay in the Government's decision to raise the ban imposed two years ago on the export of scrap from the island has resulted in a loss of about Rs. 10 million to revenue. Had the decision been taken earlier a better price would have been obtained and the duty would also have been higher. The end of the Korean hostilities and the presence of great quantities of scrap in Korea has had a depressing effect on the scrap market. A further decline in the scrap market is expected when the United States removes, perhaps early next year, the ban on export from that country.

West Pakistan

DEFERRED PAYMENT FOR CAPITAL IMPORTS FOOD SELF-SUFFICIENCY GOAL IN SIGHT

(FROM OUR KARACHI CORRESPONDENT).

THE Trade Agreement between Pakistan and Japan which was signed in Tokyo on 10th April, 1953, contained a provision for the purchase of machinery worth £6 million sterling by Pakistan from Japan on a deferred payment system which extended credit over a period of five years. It was stated by the Pakistan Government that this system would be extended to other countries who could offer the same facilities. The implementation of this agreement has been held up for a considerable time owing to various objections by the Ministry of Finance regarding the working details. The main point at issue was the provision of forward exchange cover. In the meantime, owing to this delay and to the fact that licences for the import of cotton textiles had not been issued under the Trade Agreement, a heavy adverse balance of trade commenced to run against Japan who had already uplifted a considerable quantity of cotton. The balance up to August was £14,096,000 in favour of Pakistan. The Japanese became considerably exercised over this position and it is believed that they requested Pakistan to send a deputation to Tokyo to discuss the matter.

The State Bank of Pakistan have now published the regulations under which capital goods may be imported under deferred payment arrangements, these regulations applying to the U.K. and other countries as well as to Japan. The payment for these imports is to be spread over a period of five years and the instalments will be remitted as follows:

- (1) An advance remittance not exceeding 10 percent of the value at the time of placing the order;
- (2) a further remittance not exceeding 15 percent of the value on proof of complete shipment of the goods; and
- (3) the remaining balance in approximately equal half-yearly instalments over a period of five years from the date of contract.

As regards forward exchange cover, importers of capital goods are to open special accounts with their bankers and deposit therein full or part value of the machinery to be imported; the banks then may, with the approval of the State Bank, and in respect of funds deposited in such accounts up to 30th June 1954, allow cover in sterling for these funds to be remitted over the due dates. These special accounts are to be kept invested in Pakistan interest-free Treasury Bills and are not to be utilised for any other purpose. It is interesting to note the difference between the arrangements as now laid down by the State Bank and those which were outlined in a statement by the Ministry of Commerce, Government of Pakistan, on the 23rd June. It was stated then that the amounts placed in the special accounts could be invested in a non-resident rupee account in Pakistan Government securities and that in due course remittances could be made in sterling as current payment of the interest earned on the deposits in the special accounts or from investment. Under the new regulations the Pakistan Government will have the interest free use of these deposits, which presumably will add up to a considerable amount, on a diminishing scale over a period of five years. It remains to be seen how much of the interest element will be reflected in the prices for machinery tendered by Japan and other countries.

When the principles underlying the deferred payment system were first published it was brought to the notice of the Pakistan Government that manufacturers outside Pakistan, by opening such accounts, might become liable, under Section 42, for Pakistani income-tax. The officials concerned expressed some surprise at the possibility and stated that there had been no intention of tax being attracted and that orders were being issued that there should be no liability to tax merely as a result of an arrangement which had been made for the benefit of the importing country.

Japan to buy Rice

The food situation, on which so much of the economic future of Pakistan depends, has now considerably eased and the prospects, other things being equal, and a fair share of water supplies being available, are that the target of self-sufficiency can be reached. That is the immediate goal, the secondary objective being to accumulate a floating stock of some half a million tons which would provide a sense of security and maintain a greater stability in the price level. Pakistan is already confident enough regarding her rice position and has entered into an agreement with Japan for the purchase by that country of 30,000 tons of Punjab begmi rice and she hopes to conclude another agreement for further supplies at a later date.

Consumer Goods Prices

Both the Ministry of Commerce and the Ministry of Industries, under which the office of the Controller-General of Prices and Supplies operates, have been very concerned about the rise in price of consumer goods throughout the country. It is realised that control cannot possibly operate unless a continuous supply of goods is assured; the publication of prices is of no comfort to the public when the counters of the shops are bare,

both above and below. In an attempt to stem the rising flood of prices and the attendant evils of black marketing and hoarding, the Ministry of Commerce has decided to issue advance licences for certain classes of goods to be placed against the allocation for the January-June 1954 shipping period. It is understood that an immediate issue of licences to the amount of Rs. 10 crores will be made, to be followed by a further Rs. 10 crores before the end of the year. In a notice issued by the State Bank Exchange Control Department it is stated that it will be in order for authorised dealers to open Letters of Credit against such advanced licences providing for shipment on or after 1st January 1954, but no remittance of foreign exchange will be permissible before that date.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM GERMAN COMPETITION STRENGTHENS

THE overall picture of industrial activity in the United Kingdom continues to be remarkably favourable, but a few factors of a rather different nature are evident and perhaps these should not be altogether ignored. The official statement on the balance of payments showed that physical exports for the first half of 1953 were some £200 million lower than those for the corresponding period of 1952, the relatively good showing of the statement as a whole being largely attributable to a rise in invisible exports.

A slackening in the electrical manufacturing industry is reported, but this may be only due to a temporary contraction of purchases on behalf of the National Electricity Board. The most significant happening is the securing of Continental engineering contracts by Germany in face of British tenders; and also the great activity now being shown by the German chemical industry in foreign markets. This latter has already resulted in the complete loss to Britain of the Scandinavian markets for ethyl glycol and the partial loss of Britain's overseas markets for certain other chemical products. Ever since the close of the war German operatives have been working much longer hours than those allowed by trade unions in Britain, but, until recently, this had little effect by reason of Germany's shortage of machinery and equipment, a great deal of which had been either destroyed or taken away by Russia. Germany's inability to purchase from abroad has rendered replacement a slow and difficult matter. But a fair amount of technical re-equipment has now been accomplished and this, added to longer working hours, has delivered the question of Germany competition from mere foreshadowing into a reality which will have to be increasingly reckoned with.

British Industries Fair

The decision of the British chemical industry not to take part in the British Industries Fair has come as a shock to many people, who had gained too rosy an idea of what the Fair has accomplished in the past. This exaggerated view is probably the outcome of the optimistic Press and broadcast campaigns with which the Fair is heralded each year, with claims for record numbers of visitors, heavy orders and so on, almost before the Fair had started. Actually, the number of persons who attended is very little test of the Fair's value as a market, by reason of the widespread distribution of free admission badges. These badges are often passed round offices, with the result that typists and clerks use them. One would not contend that there is not an educational and propaganda value in the admission of such a public, but, obviously, it has been really quite impossible under such circumstances to measure prospective buying power by the number of people who attend.

There has been for many years past criticism by exhibitors of the planning and lay-out of the Fair, it being alleged that the long alleys with their many small booths allowed insufficient spacing between various exhibits. Then, too, some of the more important exhibitors have felt ill at ease at showing their substantial and high quality productions in the near neighbourhood of a medley of all sorts and conditions of wares. It is true that the Fair fell into separate sections, but there is no denying that in general a decidedly miscellaneous effect was produced. This applies to the part of the Fair held at Olympia, London and not to that held at West Bromwich, which has been much more individual in character and against which few criticisms have been urged.

The impression gained from visits to the Olympia is that it is better to confine an industries fair to strictly related products. The result is less spectacular but there is less of a bazaar effect and the fair becomes less of a show and more of a place for the transaction of substantial business. India might well take these considerations into account before she seeks to emulate fairs where quality and mediocrity, the specialised and the unspecialised cancel one another out.

Textile Machinery Exhibition

The Textile Machinery Exhibition at Manchester was notable for the comprehensive range of machinery shown. There were few notable inventive surprises, but it was evident that some of the inventions announced a few years ago, the continuous rayon spinning, for example, are going steadily forward. There was, however, a demonstration of a new drawing system for the production of worsted material, and mill managers with lengthy experience expressed the view that this

is the drawing system of the future. The system enables a decrease of doublings without causing greater irregularity of the yarn—a problem which has hitherto defied solving. It was felt that although the American and Swiss machines exhibited were sometimes more trim or elegant than the British, there was no fundamental machines—where trimness and elegance were not outstanding qualities, although the machines were neat and without superfluity. Nevertheless, in some instances, overseas machines had strong claim to attention, as in those for the combing of cotton. It was noticeable that the tendency to design special machinery and equipment for synthetic fibres, rather than to rely upon modifications of machinery used for other kinds of fibres, was more marked than at previous exhibitions, particularly in pirn winding and twisting.

No fresh developments in jute machinery were observed, but prominence was given to the Fayolle—Ancet circular loom for the making of jute sacks and the claim was made that warp breakages have now been reduced to a negligible figure. Among instrument exhibits the Swiss "projectina" for examining cloth and yarn was attractive and highly efficient. Indeed, the combination of fine lighting and considerable magnification make the instrument invaluable for examining not only cloth and yarn, but small mechanical parts also. These latest being numerous in textile operations, the early detection of damage or displacement saves a great amount of subsequent trouble.

The End Of Cotton Control

The end of cotton control was foreshadowed in a previous letter and, in fact, the official announcement that the Raw Cotton Commission would come to a virtual end in August, 1954 has surprised hardly anybody. Much indignation has been expressed by trade union leaders within the cotton industry and by various political advocates of bulk purchasing, but cotton industrialists themselves have either warmly welcomed the announcement or have remained silent. It may be recalled that a few years ago the bulk purchase of cotton by a Commission had its strong defenders, even among Platt of the Lancashire Cotton Corporation. But the excesses of the free cotton market of other days are now all minimised or forgotten. There are several reasons for this, the mere lapse of time the two chief factors being proverbially short. But are support for the policy of freeing from control in general (whatever the possible merits of cotton control) which the Government is carrying out, and the belief that the existing cotton situation is far more propitious to free market operations than it was several years ago. Certainly, unless something unexpected happens, the large supplies of cotton available and the record American crop predicted for the current season, should smooth the path of free marketing. Whether there would be any repining over the loss of cotton control if cotton supplies became short and buying competition keen is an irrelevant question at the moment.

Absence of "Free" Capital

Whilst progress is being made in the return to free markets, there is no sign of a return to "free" savings, that is to savings voluntarily accumulated for subsequent investment as the investor chooses, more especially in the shares of joint stock companies. A great deal of modern saving is of a forced character, consisting of payments to the Government for the purpose of covering unemployment and sickness benefits or old age pensions, or to building societies, insurance companies and similar institutions. Undoubtedly, if we may judge by pre-war happenings, this method of saving avoids the sustaining of losses from speculation—though perhaps we ought not to ignore that £600 millions a year goes to the football pools and several hundred millions a year on betting. The purist might argue that something like a thousand millions a year is lost through speculation—but very few people admit that football pools are gambling and there are those who argue that backing a horse is a scientific pursuit. Of course, this type of speculation is distributed over a very large number of people and serious individual losses are rare, which could not be said of pre-war Stock Exchange speculation. Possibly as far as the football pools are concerned waste of money (and it may, there is today little capital forthcoming for the big financial institutions play for safety all patation. It is perilous to take risks. But whether, longevity is increased through not taking risks has yet to be proved.

TERYLENE FOR WESTERN GERMANY

Imperial Chemical Industries Limited have licensed two companies in Western Germany to produce Terylene—the new versatile wonder synthetic textile fibre. They are Farwerke Hoechst A. G. of Frankfurt, and Vereinigte Glanzstoff-Fabriken A. G. of Wuppertal-Elberfeld. Western Germany thus becomes the third European country to take up Britain's outstanding rights for Terylene, except for the U.S.A., have and in Canada a £7,000,000 Terylene plant is under construction by an I.C.I. subsidiary—I.C.I. lene in the U.K. is now nearly £20,000,000, and more than confirmed the original estimation of the great potential for this new fibre

Jute

REASONS FOR SHARP RISE IN PRICES OF MANUFACTURES

YEAR-END SQUEEZE IN HESSIAN: SACKING OUTPUT ADJUSTED TO LOWER DEMAND

THE rise in prices of manufactured goods which has taken place in the past few weeks prompts an examination of the position with a view to assessing the future. It is well known and has been known for a long time that, up to the end of the current year, heavy shipments of hessian have been made to the Argentine. That has created a scarcity of hessian for others who have delayed deliveries and have unduly delayed their buying. There has, therefore, been competition to buy for deliveries for which supplies are scarce and sellers have been able to demand and to get higher prices. It is interesting to speculate what levels prices would have reached had mills not been producing a higher percentage of hessian than they normally do. It is also known, however, that after December shipments to the Argentine will be on a smaller scale, and that with the higher output of hessian there will be more available for other customers. The fact that the Argentine has already bought abnormally large quantities to a certain extent leaves the field to these other customers but, with hessian on a more competitive basis since the reduction in the export duty, it is probable that Calcutta in the export duty, it is probable that Calcutta will get a bigger share of the U.S. market. At one time some people thought that with the continued switch from sacking to hessian Indian mills might even be over-producing hessian, but that seems unlikely now that Calcutta prices have become competitive. If, however, Calcutta forces prices up until they are again higher than those of their competitors, the chance of recovering some of the lost markets will be missed and a reaction in Calcutta would quickly follow.

And what of sacking? For many months Indian mills have been unable to sell sacking unless at prices which show a manufacturing loss and that is the present position. The adjustment of output to changed conditions of demand must, however, strengthen the mills' position sooner or later and, at present, it looks as if it might be sooner rather than later. In the ten months, January to October, the mills produced only 978,500 tons of sacking against 521,900 tons in January to October, 1952. That is a reduction of 143,400 tons or 27½ percent and 27½ percent is not much less than the percentage of the sacking output which the Far Eastern markets used to take. It may be said, therefore, that the switch from sacking to hessian has now offset the loss of the Far Eastern trade. On the other hand, it must be borne in mind that that percentage which was formerly taken by the Far East was a percentage of a much higher output by the Calcutta mills.

With the loss of the Far Eastern markets written off, the balance of the production of sacking is available for other markets, including the internal market in India, but that balance is the balance of a smaller output. Have these markets also contracted to such an extent that that balance is too much for their needs? That appears to be unlikely. Foodstuffs are being produced and moved in greater quantities than before and that is the main use for heavy sacking. Australia is or was one of the biggest customers of Indian mills. Australia has not bought any quantity of sacking for a very long time but the I.J.M.A. delegation which visited Australia found that that was not entirely because they had recently adopted other means of handling to a notable extent but also because they had ample stocks previously bought at higher prices. These stocks cannot last indefinitely and the time may not be far distant when Australia will have to buy. Other consumers, who have been buying steadily, but not to an extent to indicate any stockpiling, will continue to buy. It seems probable, therefore, that the demand for sacking will be at least equal to the output and, though no sure deduction can be drawn from the experience of the past two months, there are indications that demand might soon exceed supply. In these notes in the issue of 21st May it was stated that the curtailment of the output of sacking was such that a shortage could develop. It looks as though that time might not be far away.

Raw jute supplies must, of course, have an important influence. It is generally agreed that, between the Indian and Pakistani crops, there will be enough to go round but not much to spare. Since the upward trend in prices there have been indications of a tendency on the part of growers to hold back supplies in expectation of getting better prices later on. Imports are, in any case, likely to be less until the paddy and other winter crops have been harvested. The question of quality also looms large. The 1953 crop has been a poor one and good quality is scarce in both India and Pakistan. With the mills now requiring a larger proportion of good jute to meet their needs for the manufacture of an increasing quantity of hessian it looks as if

the margin between high grade jute and low grade jute will widen.

I. J. M. A. Production

In October the total output of mills reporting to the I.J.M.A. was 66,800 tons, or 6,300 tons less than was produced in September. The reduction was accounted for by holidays and sporadic stoppages. In October 1952, production was 76,800 tons. The total production for the four months July to October was 285,700 tons compared with 304,900 tons in July to October, 1952. The reduced output in the current year was mainly the result of mills transferring machinery from sacking to hessian. The latter being a lighter fabric, the tonnage produced per loom per hour is less than in the case of sacking. In October last the output of hessian was 31,500 tons or 47.2 percent of the total, whereas in October 1952 the output of hessian was only 27,600 tons or 35.9 percent. Last month 23,100 tons of sacking were produced, which was 49.5 percent of the total. In October 1952, 49,000 tons of sacking were produced or 59.3 percent of the total. These figures serve to emphasise the extent to which mills have altered their production in order to meet changing conditions in consumer demand.

Consumption of Raw Jute

In October the mills consumed 3,90,000 bales of raw jute against 4,26,000 bales in September. In the four months, July to October, the total

consumption was 16,76,000 bales compared with 18,19,000 bales in the corresponding four months in 1952.

FREE JUTE TRADING PROPOSED IN AUSTRALIA

The Australian Government proposes to ask private enterprise to take over the importation and distribution of jute, Mr. John McEwen, Minister of Commerce and Agriculture, said in Canberra on 12th November.

UPWARD TENDENCY IN ALL SECTIONS OF MARKET

Apart from short pauses and small recessions the prevailing tendency in all sections of the market has been upward. As usual, it is said that the movement is speculative but there is ample evidence that overseas buyers are following the rise, however reluctant they may be to do so, while the fact that there is good consumer demand for near deliveries indicates that buyers abroad are not all overstocked. The gradual lessening of the discount on heavy sacking for near deliveries also indicates a healthier position in that section. In the raw jute section there has been steady buying at rising prices and sellers' offers have been on a restricted scale for this time of the season.

Manufactured Goods: Prices have again moved upward and mills have been able to sell very considerable quantities of both hessian and sacking. The U.K. has bought for December-January shipment and the U.S.A. has bought hessian for near shipments as well as for deliveries up to June. Fair enquiry has been received for sacking, wool-packs, cornsacks, heavy Cees and A Twills having come in for attention for shipments up to June 1954. There has been some profit-taking by local speculators which from time to time has caused a reaction in the upward trend, and there has also been some pressure by mills for forward business up to September 1954 which produced temporary easiness. On Monday there was a sharp rise when 40" 10 oz jumped about eight annas per 100 yds

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

The illustrations show sacks holding 2 cwt. of sodium sulphate being stacked at a factory of Imperial Chemical Industries.

SAINT FRÈRES, S.A.,
34 RUE DE LOUVRE, PARIS.

and B Twills Rs. 2-8 per 100 bags. This rise was said to result from the operations of a large speculator but the price was maintained and advanced further on Tuesday. Mills are reported to have sold considerable quantities to the bazar at this advance.

On Wednesday morning quotations are as under:

	Nov.	Dec.	Jan.-March
40" 8 oz.	39-4	38-8	37-0
40" 10 oz.	49-4	48-2	46-8
B Twills	105-6	105-8	105-12
Heavy Ceers (plain)	103-0	104-0	105-0
Cornsacks	103-12	104-8	105-0

Raw Jute: With mills able to effect sales of large quantities of manufactures they have bought jute steadily during the week at rising prices, though possibly not in such large quantities as in the previous week. Interest has been diversified and most classes of jute have been bought in greater or less quantities. Prices have continued to rise in sympathy with the market for manufactures and because of small imports in the mofussil markets, which is making it difficult for sellers to replace jute sold. Daisies continue to be in strong demand with prices rising quickly and the condition of imports becoming worse daily. It is reported that mills are sending their own purchasers with lorries to the village huts in order to make sure of supplies.

The following transactions have been reported:

Dhubri and Lower Assam Rs. 27-8 to Rs. 29 basis Bottoms.

Dhubri and Lower Assam Rs. 31-8 and Rs. 32 for Middles only.

Upper Assam Rs. 27 to Rs. 28 basis Bottoms; Rs. 28-3 basis Bottoms for Ready B/L's.

Upper Assam Tossa Rs. 29-8 to Rs. 30-8 basis Bottoms.

Northern Rs. 26-8 to Rs. 29 basis Bottoms; Rs. 31-8 to Rs. 32 for Middles only.

Murshidabad Tossa Rs. 29-8 basis Bottoms January. Cossimbazar Tossa Rs. 29 to Rs. 29-8 basis Bottoms. Daisies Rs. 30 to Rs. 32 basis Bottoms. Sahibganj Rs. 25 basis Bottoms. Local packing Rs. 23-8 to Rs. 24 basis Bottoms. Bimili Rs. 25 to Rs. 25-8. Pakistani Jat Rs. 30 basis Bottoms. Pakistani District Rs. 29 to Rs. 31 basis Bottoms. Pakistani Northern Rs. 28 basis Bottoms. Cuttings Rs. 70 to Rs. 75 for Northern NC's; Rs. 73 for Jat NC's; Rs. 75 to Rs. 100 for SNC's; Rs. 95 to Rs. 100 for habi-jabi.

All the above are for Nov-Dec shipment except where stated otherwise.

At the time of writing mills are enquiring for Bimili and Lower and Upper Assam jute.

On Wednesday morning quotations are as under:

Indian Jute	Landed at mills	Rs. per maund	Shipments
	29-8		Nov.-Dec.
Lower Assam	29-8		
Upper Assam	29-8		
Northern	29-8		
Purnea	28-8		
Murshidabad Tossa	30-0		
Daisies	32-0		
Daisies Mesta	29-8		
Western Mesta	27-0		
Bimili	25-8 F.A.Q.		

Quotations for sales ex Cossipur are eight annas per md below these rates. Tossa is quoted at one to two rupees above the rates for white jute.

	Rs. per bale
Mill Firsts	180-0
Mill Lightnings	165-0
Dundee Daisies 2/3 SG	180-0
Dundee Daisies 2/3 LG	165-0

Pakistani Jute (ex Pakistan):	Landed at Mills	Rs. (1) per md.
Jat	31-8	
District	31-8	
Northern	30-0	
Cuttings SNC	88-0 to 90-0	
Cuttings NC	78-0	
Cuttings MC/TC	76-0	

Mofussil: Imports are small. Growers are holding back in expectation of better prices and are also engaged with other crops. Prices have risen because of active competition for small imports and in sympathy with higher prices in Calcutta. There is said to be a large bear account to be covered. An improvement in quality of imports in Assam is reported but condition has again deteriorated. Imports into Cossipur are small and the market there is firm.

In Pakistan there has been increased demand from overseas but not much from India. Imports are smaller, with sellers holding for higher prices. Growers are not sending in much as they are mainly engaged with other crops. Except for Tossa, the quality of imports is poor. Tossa is in good demand with premiums of Rs. 3 to Rs. 5 per maund being paid for it. Prices in Narayanganj are Rs. (P) 24 per maund for jat. Good business is reported in Cuttings both for export overseas and to Calcutta. Ordinary NCs are quoted at Rs. (P) 42 per bale. Mill Firsts are quoted at Rs. (P) 147, Mill Lightnings at Rs. (P) 127, Export Firsts at Rs. (P) 127, and Export Lightnings at Rs. (P) 107.

Exports From Pakistan

An official statement issued in Dacca gives overseas shipment of raw jute for July-September at 13,92,000 bales. A further 31 lakhs are reported to have been shipped in October. In July-September, 1952, exports were only 5,97,000 bales. One reason for the smaller exports to other countries this year is that India has taken much more than she did last year in the corresponding period.

U.S. CONSUMPTION AND STOCKS IN OCTOBER

U. S. consumption for October increased an estimated 3 million yards over September. Excluding deliveries to the armed forces, the total for the first 10 months of this year of 670 million yards compares with 614 million yards for the same period last year—an increase of about 9 percent. U. S. stocks at the end of October were an estimated 4 million yards lower than at the end of September. The estimated 191 million yards at October 31st consisted of 129 million yards spots and 62 million yards afloats—the lowest for any month this year. Appearing below are two tables which include the October figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap & Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. Burlap Consumption (as reported to TBMA) (Millions of Yards)	1953	1952	U.S. Burlap Consumption (Estimated Industry Total) (Millions of Yards)	1953	1952

(Continued on Page 689)

Mr. S. Ullmann, President of Messrs. Philipp Brothers Inc., New York and affiliated companies, is expected to arrive in India on a short visit on 3rd December. He is on a round-the-world tour survey business possibilities in the extensive area covered by the operations of the company. He is expected to be in India for two to three weeks and will cover major cities such as Calcutta, New Delhi, Bombay and Nagpur.

50 years

The task of clothing India's 356 millions is an immense and important one. The textile industry forms India's biggest industrial structure, with 380 mills distributed throughout the country which employ eight lakhs of workers.

As evidenced by the cotton it consumes, our textile industry is the second biggest in the world. In fact, we can justly claim that it has been the very basis of Indian industrialisation, and a

source of valuable industrial experience. In India's industrial progress, the Ahmedabad Advance Mills, which this year celebrates its fiftieth anniversary, has played a worthy part. Last year alone, indeed, it produced sufficient cloth to clothe 2,095,000 Indians.

The Ahmedabad Advance Mills looks forward with confidence to a prosperous future both for our country and for the industry of which it forms a part.

Commodity Markets

RAISING OILSEED PRODUCTION

THE present shortage of butter and ghee and their consequent high prices has underlined the importance of oilseeds as a source of essential fats. At present about 27 million acres are being cultivated under the five major oilseed crops and the annual production ranges up to 5,000,000 tons. Addressing a meeting of the Indian Central Oilseeds Committee recently, Dr. Panjabrao S. Deshmukh, Union Agriculture Minister, said that no significant increase in acreage would be possible as long as top priority was accorded to cereal production. However the average yield per acre in India is generally very poor in comparison with many foreign countries. In the case of groundnuts, for instance, the average yield, in India during 1950-51 was 713 lbs, whereas in China the yield was 1,666 lbs and in the United States 893 lbs. If the production of oilseeds is to be increased more attention will have to be paid to improving the yield per acre through improved strains, and research intensified. The Minister stressed that research in itself, however successful, would not suffice. It is necessary that the results of research be brought home to the cultivators and that improved strains already evolved be made available to them. Although this is primarily the task of the Committee, the Minister pointed out that co-operation with the State Governments concerned would be necessary and that the modest target of 5,500,000 tons set by the Planning Commission should easily be achieved, if not surpassed. Village ghanis need special attention, for oilseed crushing in the villages is unorganised and villagers are thus not able to purchase oilseed in bulk. The Minister pleaded for concerted action to improve marketing conditions in every State with the co-operation of State Governments. Because of increased internal demand, resulting primarily from the increase in population, the shortage of ghee and the development of the soap and vanaspati industries, exports since the war have been on a much reduced scale. Despite this, oils have been earning about Rs. 25 crores per annum in foreign exchange.

SALT EXPORTS AND INTERNAL DEMAND

With the indigenous production of salt increasing every year and remembering that self-sufficiency was achieved by India in 1951, the most interesting feature of Mr. K. C. Reddy's address at the opening of the annual meeting of the Salt Advisory Committee in Madras recently was his reference to the expansion of the export market. Over the last two years great strides have been made in opening up a new market for salt in Japan. During 1952 250,000 tons were exported to that country and up to October this year 200,000 tons had already been exported against a licence of 400,000 tons for 1953. At the same time the Government has been investigating the possibility of further expanding export markets in such countries as the Philippines and New Zealand. There may, in the near future, be a revival of exports to Eastern Pakistan which have been suspended since July 1952. To counterbalance this comes the information that a salt factory has been established in Thailand with a Japanese manager which is expected to produce 500,000 tons of salt in the near future to meet the requirements of Japan. Mr. Reddy is perhaps a little optimistic when he says that since the salt produced in Saurashtra and Kutch has a higher sodium chloride content, the maintenance of proper contact with the Japanese market should suffice to overcome this new competition.

Equally important is the expansion of the home market, to which the Minister referred only briefly. The per capita consumption of salt in India is 14 to 18 lbs per annum which compares with a world average of 40 lbs. For this Mr. Reddy blamed the under-development of India's heavy chemical industries, suggesting that manufacturers should explore the possibilities of starting chemical and other industries allied to the salt industry.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (base: year ended August 1939=100), advanced by 0.3 percent to 394.3 during the week ended 31st October, 1953. Compared to the corresponding weeks of a month and a year ago, the index was higher by 0.9 percent and 2.1 percent respectively. The average for October 1953 stood at 393.6 as compared with 403.8 for the previous month and 387.5 for October 1952. During the week under review, Foodstuffs declined by 0.4 percent to 386.6 on account of decreases in the prices of rice, dal arhar and coffee (-2½ each), gram at Hapur and wheat (-1½ each), notwithstanding higher prices of jowar and gur (+3½ each) and bajra (+1½). The index for Industrial Raw Materials, however, moved up by 0.9 percent to 472.2 as the effect of lower prices of groundnuts at Cuddalore (-10½), linseed (-5½), cottonseed at Amravati and raw wool (-4½ each), raw cotton, raw silk and gingellyseed (-2½ each) was more than offset by advances in the prices of groundnuts in Bombay and export price of manganese ore (+11½ each), raw jute (+6½), rapeseed (+4½) and cottonseed in Bombay (+3½). The Semi-Manufactures group witnessed a rise of 0.3 percent to 353.0. Items which recorded noticeable variations during the week were: Groundnut cake

(+12½), coconut and gingelly cakes (+3½ each), tanned sheep and goat skins (+2½ each), castor oil (-3½), groundnut oil and linseed oil (-2½ each). The index for Manufactures also rose by 0.7 percent to 366.6 owing to higher prices of jute manufactures supported by increases in rayon and silk manufactures (+4½) and woollen manufactures (+1½). The Miscellaneous group index declined further by 0.9 percent to 716.6 because of decreases in the prices of vanaspati and cashewnuts (-9½ each), black pepper (-3½) and betelnuts (-1½). Prices of chillies, however, advanced by 4 percent.

PIG IRON PRICES INCREASED

The Government of India has decided to increase the selling prices of graded and low manganese foundry pig iron by Rs. 20 per ton with effect from 14th November, 1953. The increased price for standard foundry Grade I is Rs. 163 per ton for main port for sales by registered producers. The prices of off-grade pig iron have also been increased but to a smaller extent. The increase in the case of off-grade pig iron varies from Rs. 10 to Rs. 12 per ton depending on the sulphur content. A notification giving effect to this decision has been published in the Gazette of India dated November 14, 1953. The Government of India have also decided to control the distribution prices of foundry grade pig iron produced by the Mysore Iron and Steel Works which has hitherto been outside the control. The increased selling prices referred to above will thus be applicable to the production of the Mysore Iron and Steel Works also.

The increase in the selling price has been effected in order to enable the sale of the costlier pig iron produced by the Mysore Iron and Steel Works at the same price as that of the production of the other two main producers, viz., the Tata Iron and Steel Co., and the Indian Iron and Steel Co. The selling prices which were in force hitherto will be treated as retention prices for the Tata Iron and Steel Co. and the Indian Iron and Steel Co. The difference between their retention price and selling price will be collected for the equalisation fund for the purpose of subsidising the production of the Mysore Iron and

What is NEWALLS 85% Magnesia?

It is a blended mixture of not less than 85%, by weight, of Pure Hydrated Carbonate of Magnesia. The balance is made up of high quality Asbestos fibre.

Why is NEWALLS 85% Magnesia so efficient?

Because millions of crystals in each cubic inch trap an infinite number of 'dead' air spaces. These reduce heat transmission most effectively.

Why is NEWALLS 85% Magnesia cheaper?

Because its covering capacity is very high (one ton applied evenly 1" thick over a flat surface will cover 2,200 sq. ft.) and because its higher efficiency results in a higher saving of heat. And heat costs money!

Manufactured by NEWALLS INSULATION CO., LTD.

EXPORT OF MANGANESE AND IRON ORES

In their Press Note dated 2nd September 1953, Government of India had announced their intention to allot export quotas of iron and manganese ores to mine-owners who were not eligible to export allotments as established shippers from the port of Calcutta. It has now been decided to allot export quotas to mine-owners up to 20 percent of their best year's production during any of the three financial years ending 31st March 1953 subject to a minimum individual allotment of 1,500 tons. Allocations will be made only to such mine-owners as do not have any interest in the export allotment already granted to established shippers. Mine-owners who started mining operations after 31st March 1953 but have not applied so far should submit their applications to the Chief Controller of Exports with documentary evidence to show:

- the quantities actually mined during the six months ending September 1953.
 - quantity sold during the period and particulars of sale.
 - royalty paid to the State Government. This evidence should be either in the form of cash receipt or treasury chalan.
- It has also been decided that such of the mine-owners who started mining operations after 31st March 1953 and from whom applications have already been received should be granted ad hoc export quotas of 1,500 tons each subject to necessary adjustment against future allotments on the basis of their entitlement on further examination of their cases. Export allotments to mine-owners will be valid for shipment up to 31st January 1954.

SECOND PAKISTAN COTTON ESTIMATE

The second forecast of the area under cotton crop for the year 1953-54 is 3,120,000 acres (American and Desi varieties 2,697,000 acres and 423,000 acres respectively) as against 3,222,000 acres (American and Desi varieties 2,791,000 acres and 431,000 acres respectively), reported in the second forecast of the previous year, and shows a decrease of 3.2 percent. The decreases in respect of American and Desi varieties are 3.4 percent and 1.9 percent respectively.

There has been a slight increase in the acreage of this crop in N.W.F. Province, Punjab and Khairpur State, but a substantial decrease has occurred in Bahawalpur State, which is attributed to the propaganda in favour of "Grow More Food Campaign." The condition of the standing crop is average to good.

Plantation Topics

STRONG DEMAND AT LONDON TEA SALES

RUMOUR OF INDO-RUSSIAN BARTER DEAL STIMULATES INTEREST

THE present strength of London tea auction prices is ascribed by the trade to the persistent rumours of an impending barter deal between India and Russia. Estimates of the quantity of tea involved range from six to 30 million pounds, but most dealers think it would be around ten million. It is pointed out that the removal of this amount could have considerable effect on prices owing to the present even balance of world supply and demand.

On Monday, 11th November, there was strong general demand for 7,524 packages of Ceylon teas offered and prices for the majority of offerings advanced by about 1d. per pound. Best quality teas, however, frequently sold 2d. to 4d. above the previous rates, while Mediums were generally 1d. to 2d. up. Common and Low grown teas were 1d. to 1d. dearer. Fannings were in special request and strong. Some export demand was reported. Common Broken Pekoe was quoted at 3s. 6d. usually and Medium Broken Pekoe Fannings 4s. to 4s. 4d. 5,669 packages of South Indian were also offered and sold readily at advances of 1d. to sometimes 2d. per pound.

Demand was less pressing on Wednesday than on Monday but the good tone prevailed. Medium Assam Fannings were the strongest feature, selling at around 1d. a pound better. Good quality teas were about steady, while prices for other sorts were somewhat irregular. Monday's export demand-3 was maintained. Common Broken Pekoe was quoted at 3s. 5½d. per pound against 3s. 5½d. previously.

Results obtained by some of the companies are given below:—

	No. of packages	Average per lb.
Amalgamated Assam Co.	996	3/7½
Assam Frontier	2,458	3/10
Attaree Khat	534	4/2
Bagracote	780	3/9½

United Planters	318	4/0½
Upper Assam	408	3/11½

N. INDIAN TEA CROP EXPECTED TO TOTAL 500 MILLION LBS.

The North Indian tea crop to the end of October last is reported at 429.7 million lbs. against 451.2 million lbs last year. According to the Indian Tea Association, the estimated total crop for the current season is almost 500 million lbs—496 million lbs is the figure—which would be a decline of 12 million lbs on the 1952 harvest.

CHITTAGONG TEA SALES

At Sale No. 10 held on 11th November, 1953, leaf offerings consisted of 8,557 chests. Dust offerings amounted to 2,241 chests and there was Supplement of 84 chests.

Leaf: The market opened weak but soon improved to about last rates particularly for B.P. and R.P.S. grade which remained firm thereafter. Orange Fannings were also generally steady but whole leaf grades Orange Pekoes shed an anna was steady at the close at the prices quoted below. Once again there were no withdrawals.

Dust: Every lot of Dust 1 and a ready buyer with prices moving to slightly higher levels. Clean Common Dust may be quoted at Rs. 1-8-6, an increase of half an anna, with smaller types about Rs. 1-7-6.

Quotations	
Sale 10—11th November 1953.	Sale 9—28th October 1953.
OP. Rs. 1 14 0 to 1 14 6	Rs. 1 14 6 to 1 15 0
OP. Rs. 1 12 6	Rs. 1 12 6 to 1 13 6

O.F. Rs. 1 8 6 to 1 9 0	Rs. 1 8 6 to 1 9 0
P.F. Rs. 1 10 6 to 1 11 0	Rs. 1 10 6 to 1 11 6
	Rs. 1 8 6 to 1 9 0

The next sale will be held on Wednesday 25th November 1953 and the Catalogue will contain 13,430 chests of leaf, 3,925 chests of dust and 67 in the Supplement.

Calcutta Markets

PRICES OF MOST EXPORT TEAS FULLY MAINTAINED

STRONG GENERAL DEMAND IN INTERNAL AUCTION

At Sale No. 22, held on 16th November, the offerings in the Export auction consisted of 59,500 packages. There was a good general demand and prices of most descriptions were fully maintained. There was more enquiry for the CTC types, which were sometimes dearer. Stylish BPs were also a strong feature, while tippy teas met with better support. Low Mediums and Commons were steady but Darjeelings were easier and Leaf grades from this district sold fully two annas below last rates.

Quotations	
1953	1952
Clean Black Pekoe	1 14 0 1 4 6 to 1 5 0
Clean Common B.P.	1 12 6 0 11 6
Med. um Assam B.P.	1 13 0 to 1 13 6
Best Assam CTC B.P.	2 1 0 to 2 2 0
	1 14 0

The offerings in this week's Dust sale on 17th November, consisted of approximately 14,500 chests. There was a very strong and general demand for all descriptions. Bright liquoring Doars dusts and CTC Assams were the strongest feature of the sale and these were generally dearer by a full anna and sometimes more. Black exportable types were again keenly competed for, while Medium Assams and Commons were half an anna dearer, and if they had brighter liquors sometimes more. The Darjeelings offered met with a strong demand and flavoury sorts generally sold several annas above brokers' valuations.

Quotations	
1953	1952
Medium Doars Dust	1 9 6 to 1 10 0
Medium Assam Grains	1 1 0 to 1 10 6
Dust	1 11 6 to 1 15 0
Best Assam CTC Dust	1 11 6 to 1 15 0
	1 14 6

The Internal Leaf teas consisting of 623 chests sold at about last rates.

MODERATE ACTIVITY IN FREIGHT MARKET

AMERICAN COAL AND TIME CHARTER PROMINENT

THERE was a moderate amount of miscellaneous activity in the past week and the most prominent markets were in the American coal and in the time charter sections. Various coal fixtures were made to Italy on the basis of \$4.50 for Italian tonnage and \$7.60 for American Flag tonnage. Two vessels were taken for Holland at 30s. 9d. and two to Hamburg via Flushing at 34s. Japan was done at \$9.50 for November and at \$9 for December-January.

A 9,500 ton oil burner was fixed at 15s. for a South American round voyage with delivery Antwerp-Hamburg in December and West African charters repeated 13s. 9d. for a round trip end November delivery. A 9,500 ton motorship obtained 24s. 6d. for the voyage to U.K.-Continent with delivery New South Wales in February.

Whilst local coal charters find it impossible to obtain tonnage for Japan at 50s. ore fixtures are being concluded at considerably higher rates. A 7,000 ton Japanese vessel has been reported fixed with early November loading at 59s. whilst Mormugao paid 67s. 6d. for a 6,000 tonner to France in November.

A further fixture is reported for scrap from Colombo to Japan at 68s. 6d. and enquiries are circulating for cargoes of this commodity from Calcutta, Bombay and Madras to the same destination. Owners, however, are rather reluctant to fix in view of the very speculative nature of this trade and a recent incident in Calcutta resulting in the detention of a Japanese liner whilst her cargo was checked by the Custom Authorities has done nothing to allay owners' fears.

HIDES AND SKINS

The market in skins continued firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazar Sales

(Between 10th and 16th November, 1953).
Cowhides:—Wet salted 8,000 pcs. on the basis of Annas 9-3 to Annas 11: Wet salted (Slaughtered) 12,000 pcs. on the basis of Rs. 12-8 to Rs. 23-8.

Goatskins:—Wet salted (Dressed, Killed) 36,300 pcs. on the basis of Rs. 275 to Rs. 425: Assam-Dinajpur 26,200 pcs. on the basis of Rs. 445: Rs. 325: Dacca 3,000 pcs. on the basis of Rs. 445: Farnah-Kissenganj 3,700 pcs. on the basis of Rs. 265 to Rs. 310: Patna (Ord.) 3,600 pcs. on the basis of Rs. 210 to Rs. 225: Pakur 2,050 pcs. on the basis of Rs. 260 to Rs. 280: Muzaffarpore-Patna 25,500 pcs. on the basis of Rs. 240 to Rs. 247-8.

SUGAR MARKET STEADY

During the week ended 18th November, the sugar market was steady, consumption was good, stocks amounted to 20,000 bags and arrivals were 20,000 bags. Rates for ready sugar ex-Kanpur delivery were Rs. 31 a maund for ordinary grain, Rs. 31-12 a maund for big grain, and Rs. 30 a maund for Javan and Mexican sugar. Ex-mill delivery prices were Rs. 29-8 a maund for medium grain and Rs. 30-4 a maund for big grain. Business was

done in new crop ex-mill delivery at Rs. 29-4 a maund for ordinary grain. Good lots were sent to Bombay and South India, and a small quantity was despatched to Assam.

LINSEED

Activity was on a somewhat limited scale last week but the undertone of the market ruled firm. Prices were very well maintained. Despatches to this centre continued to be scarce and local sellers showed little interest despite keen enquiries for ready goods from buyers. Business was reported on a very small scale. The oil section remained firm and there was a fair demand. Activity in the local market was fairly brisk, chiefly for near delivery. Latest quotations were as follows: Ready Rs. 20-4-0 per maund: November Rs. 20/- per maund: December Rs. 19-12-0 per maund.

SHELLAC MARKET REPORT

The Calcutta market during the week ended 17th November at the beginning was steady, ruled firm during mid-week and a moderate business passed at slightly improved prices. A quieter tone prevailed in the market at the end of the week and a small business passed. Quotations were as follows:

Standard Pure Buttonlac	Rs. 120 buyers.
Pure Buttonlac	Rs. 115 to Rs. 118 done & buyers.
Lemon No. 1 Shellac	Rs. 118 buyers.
Lemon No. 2 Shellac	Rs. 114 to Rs. 115 done & buyers.
F.O. Std. I. Shellac	Rs. 110 to Rs. 112 done & buyers.
Pure TN Shellac	Rs. 103 to Rs. 109 basic done & buyers.
4% I. T. N. Shellac	Rs. 103 to Rs. 102 done & buyers.
No. 1 Kusmi Seedlac 2%	Rs. 110 to Rs. 115 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 104 done Rs. 107 to Rs. 103 buyers.
Fine Bysaky Seedlac (Manbhumi)	3% Rs. 102 to Rs. 106 done buyers.
Fine Bysaky Seedlac (C.P.)	3% Rs. 100 to Rs. 101 done buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 95 to Rs. 96 done & buyers.
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 90 to Rs. 91 done & buyers.
Kireelac	Rs. 54 buyers.

Shipments during November until the 14th were 12,802 packages.

LOW
TEMPERATURE

SILVER

BRAZING

ALLOYS

The advantages and economies resulting from the use of brazing alloys containing silver are now a proven fact. The old-fashioned zinc-copper spelters have been largely replaced by this new low temperature brazing technique.

Silver brazing offers these outstanding advantages:

- Low working temperature
- High strength ductility
- Sound joints between dissimilar metals
- Rapid joint penetration

CHITAVASAH JUTE MILLS CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, "McLeod House", No. 3, Netaji Subhas Road, Calcutta, on Tuesday, the 8th day of December, 1953 at 3 p.m. to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

- (As an Extraordinary Resolution) - That the Authorised Share Capital of the Company be increased from Rs. 15,05,000 to Rs. 35,15,000 by the creation of 2,01,000 Ordinary Shares of Rs. 10 each.
- (As a Special Resolution) - That the Articles of Association of the Company be altered in manner following:—

In Article 4, the figures "15,05,000" and "1,00,500" shall be deleted and the figures "35,15,000" and "3,01,500" substituted therefor respectively.

- (a). That it is desirable to capitalise a sum of Rs. 20,10,000 being part of the undivided profits of the Company standing at the credit of the General Reserve and accordingly that the said sum of Rs. 20,10,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 8th day of December, 1953, registered in the Company's Books as the holders of the 1,00,500 issued Ordinary Shares of Rs. 10 each in payment in full for 2,01,000 new Ordinary Shares of Rs. 10 each and that such 2,01,000 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of two new Ordinary Shares for every issued Ordinary Share held on the 8th day of December, 1953, by such persons respectively, and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they will not participate in any dividend declared in respect of any period ending on or before 30th June, 1953, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b). That pursuant to the above resolution and in satisfaction of the said special capital bonus, the Directors be and they are hereby directed to allot and distribute 2,01,000 new Ordinary Shares credited as fully paid amongst the persons who are on the 8th day of December, 1953, registered in the Company's Books as the holders of the 1,00,500 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c). That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorized to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 8th day of December, 1953 by some person to be appointed by the Directors in that behalf under Article 163 of the Articles of Association of the Company.

NOTICE is also hereby given that the Share Transfer Books and the Register of Members of the Company will be closed from 24th November, 1953 to 8th December, 1953, both days inclusive.

Jute

(Continued from Page 684)

THE FOREIGN JUTE MARKETS

INCREASE IN BUSINESS

(FROM OUR DUNDEE CORRESPONDENT).

THE jute markets were dull for such a long period that an improvement appeared to be inevitable. The firmer tendency in raw jute prices has brought out much more interest from consumers in many countries and there is a definite increase in business. It is to be hoped that prices will not be unduly advanced. Indeed, there are many members of the industry who consider that values of raw jute are already on the high side. Little has been said lately regarding the probability of a shortage of the fibre this season, but, judging from the paucity of offers from Pakistan, it is quite apparent that shippers are having the greatest difficulty in securing suitable fibre. To the U.K., crack Hearts are the highest grade offered, and very little at that, while the better class shippers are more or less out of the market. One large firm of shippers has not sold a bale of jute for two months and several others are quoting pounds per ton above the general market prices.

Mill Firsts are obtainable at from £107 and Mill Lightnings at from £96, while crack Daisies 2/3 is named at £98 and grade at £88. Crack Tossa-2/3 from £118 and grade at £10, less, and grade Tossa-4 has been sold again at £96, all c. and f. U.K.

Calcutta hessians are up by 1s. 3d. to 1s. 6d. to 81s. 3d. for 10 oz. 40 in. November, 79s. 6d. December and 77s. 0d. January-March, with 71 oz. at 58s. 0d. December, f.o.b. Calcutta. "B" twills are 2s. 0d. higher than yesterday at 172s. 0d. November, 3d. more December and 173s. 0d. January-March.

f.o.b. Prices are now higher than they have been all this year for hessians.

Demand for jute yarns continues on a wide scale and unfortunately for consumers, there is not enough available to meet requirements. Arrivals of yarns from Calcutta for the carpet trade are awaited, expected by the beginning of next year. It is interesting to note that inquiries are being made for jute yarns from Dundee for Belgium, which country has been making fair shipments to the U.K. for some months past. Possibly the advance in prices for raw jute is responsible for this. Dundee cloth and bags are in good demand and business continues, mainly for forward despatch.

NEW LAMINATING PLASTIC AND METAL PROCESS

The United States Rubber Company of New York has developed a method of laminating plastic sheets with sheet steel and aluminium. The resultant material has the structural strength of steel or aluminium with the corrosion resistance and bright colours of vinyl plastic, it is claimed. The company predicts that the laminate will be used in structural siding, interior panelling, lawn furniture, housings for office machines, chemical piping and ducts, truck and trailer body panels, shelving lockers, and many other products. Although price figures have yet to be set, officials estimate that the laminate will cost more than galvanised metal but only about a third as much as a comparable gauge of stainless steel.

The secrets of the process are a special adhesive which binds the metal and plastic, and the preliminary preparation of the two materials. The laminate is made by rolling sheets of plastic on sheets of adhesive-coated metal. The two sheets are held together for a few seconds under heat. The finished sheets resist high temperature, pressure and humidity, the company claims.

COAL COMPANIES

O Po F and Dd indicate Ordinary, Preferred Ordinary Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXI No. 3280

DECLINE IN VOLUME OF INDIA'S FOREIGN TRADE

DISTURBING FALL IN IMPORTS OF CAPITAL EQUIPMENT

JUST after independence India's sterling balances in London were Rs. 1,523 crores. Five years later they had fallen to Rs. 700 crores and, with minor fluctuations, they have remained at that level since. The "problem" of the sterling balances which was discussed with some acrimony in the years after the war, and which was still being agitated as recently as the election of the Conservative Government in Britain, is now settled. While the Planning Commission has based its proposals on further regulated withdrawals, a Minister spoke in Delhi last week-end of "a longer view", on which "it should be obvious that our external resources should be conserved". This is a very substantial change in approach and it shows acceptance of the fact that most of the spare cash in the till with which India began in 1947 has been spent; from here on, India must earn anew what she spends, or at least spend in excess of her current earnings only with the most careful calculation. It remains to ask if the nation got full value for the Rs. 800 crores odd that were accumulated during the war and have since been dissipated. Unfortunately the answer is no, but that does not seem to be anybody's fault. Most of it went on food and cotton for cloth; the food has been eaten and the cloth worn out and the country has precious little to show for it—except of course the continuance of stable government. The hopes of 1947—that India's accumulated reserves would be transformed into national capital that would continue to generate wealth for years to come—have been largely, but perhaps not entirely, belied. Things might have been different, but it is no use regretting the great opportunity that was lost. Without the reserves in London—and without the hundreds of crores' worth of unrequited exports that poured out from Britain to India, or to India's creditors, in those five years—disaster would have overtaken this country as it did other countries in Asia, especially in the first few years of independence before the United States had extended its international generosity to this continent.

The reserves that remain are still well in excess of India's requirements of "money in the bank" and it should be possible to draw them down in regulated stages to the extent of a further two or three hundred crores. Now that the stresses of the postwar years have abated, the country will be able to ensure that these withdrawals are transformed into capital, either by using them to buy capital goods or (what comes to the same thing) to buy consumer goods while resources in India are devoted to the creation of capital. Curiously enough, just when conditions permit rational utilisation of the sterling reserves for this purpose—withdrawals have ceased. The balances have been as good as steady for the past seventeen months. This has not been because India is earning enough and to spare on current trade to acquire all the capital equipment she needs; far from it, in most of those months the balance of trade has been adverse. The fact is that India has not been acquiring capital equipment from abroad at a rate significant enough to affect the balances. In other words, the economy has not been expanding.

This raises the question whether, even if money had not had to be diverted to the purchase of food and cotton, the sterling balances would have been used up in buying capital equipment. Put another way, the question is: has there been any real impetus to expansion in the economy, which was only being restrained by the food shortage and which will now flower out in additions to the country's capital equipment? There are good reasons for thinking that in India since the war there has not been this drive to expansion, no effective will to add to the economy's store of wealth. And there are reasons for believing that even now, when conditions for its appear-

ance are much more favourable, it will not appear unless carefully encouraged. India got through the years of liberation, partition and disruption with surprisingly little damage to its administrative and political structure, but it is only slowly being realised how much damage was suffered by the nation's economic vitality and by its belief in its own industrial future—damage that has since been exacerbated by mistaken social and commercial policies at the Centre. The slow utilisation of the reserves in London—apart from money that had to be spent on the necessities of consumption—is a measure of the poor progress of the economy since the war.

The foreign trade position, looked at as a mere matter of balance, is now excellent and there is not the slightest ground for disquiet. Imports are not being restrained by an inadequacy of exports, for there is ample foreign aid to make up any deficit and if the deficit were larger it could be met from the sterling balances for some years to come. As long as receipts, from export payments and invisible transactions, cover all a country's import needs, it has no special interest in exporting more or obtaining higher prices for its goods. The monotonous insistence on the need to import less and export more in Britain since the war leads people to think otherwise, but Britain is under that necessity only because her reserves are precarious. As a matter of fact, once Britain's reserves are more secure her chief obligation will be not to export more goods against payment but to export more capital for which payment will not be asked, in discharge of her responsibilities to the colonial empire. India has no such responsibilities to discharge and her own reserves (ignoring for the moment her rôle as a leading member of the sterling area and hence a contributor to the group's reserves) are ample. From the restricted point of view of the trade and payments balance, India has no export problem, granted the present effective demand for imports.

This statement will confuse those who think of a nation's payments problems as similar to an individual's. The oratory of Finance Ministers and Chancellors of the Exchequer since the war has succeeded in making many people think in those terms, but they are misleading. Individuals always want to sell more and at higher prices, because their cash balance increases thereby and their cash balance represents their wealth. The middle class especially reserves its approbation for men who spend little, make a lot and save most of it; they are rich and, therefore it is implied, virtuous. But with nations the position is otherwise. Their wealth consists not in their cash balance (once granted that they have the minimum balance required to carry on their foreign trade, as Britain has not yet) but in the volume of transactions they negotiate internally

and with the rest of the world. Mr. Rockefeller is rich because of the money he has in the bank, but the United States is not rich because of the gold it has in Fort Knox. It is rich because of the volume of its economic affairs, domestic and international. Whether its external transactions balance out is of subsidiary interest. A healthy instinct makes us think a man foolish if he buys and sells furiously all the year and ends up only a few pence the better for it, but if that is foolish in individuals, it is the substance of the wealth of nations.

So India's problem is not simply to export more or import less but to increase the volume of her foreign trade. This naturally includes increased exports, but it includes also, and very definitely, increased imports, and a number of other things besides, some of which have nothing directly to do with foreign trade. As India is at present situated (and, with ordinary good management, as she should continue to be situated for some years to come), her external commercial relations do not need to be considered apart from the general economic problem of developing her resources, increasing her productive equipment, promoting consumption and raising employment. This may seem to be a truism, but it is a warning against those who seek to exploit the confusion of national accounts with individual accounts by urging restricted imports of this or that "to safeguard the trade balance", without considering that if an article is made more expensively or more shoddily in India, the country is not "saving foreign exchange" but just wasting money and energy.

ONE PRICE FOR GOLD

RUSSIAN SALES MAKE INCREASE IMPOSSIBLE

WHEN the free price of gold merged with the official price the authorities of the sterling area viewed the development with mixed feelings. On further consideration they have decided that it will make the sterling area's problems more difficult. The whole paraphernalia of dual and discriminatory pricing is contrary to the policy of most countries, particularly in America and Europe, though it still exists in the field of commodities. The elimination of the premium on free gold, which has existed at widely varying rates since the war, might seem to mark a stage in the evolution towards convertible currencies; especially as one reason for the decline in the free price was the recovery of confidence in currencies, which made conversion of money into gold less desirable. But the sterling area—not only South Africa, as the leading producer of gold—had come to hope that the free and the official prices would be equalised by a rise in the official price. It is no longer easy to argue that gold is demonstrably undervalued at \$35 an ounce. However, the estimate that in 1951 approximately two-thirds of the world's output of 26mn ounces of gold has been sold on the free markets is sufficient explanation of the weakening and final elimination of the premium. A much increased proportion of output will presumably find its way into monetary reserves from now on, and the case for a rise in the official price is weakened insofar as it rested on the lack of newly-mined gold to supplement these reserves. But the basic argument for a rise in the official price, that the value of the world's stocks of monetary gold is too low in relation to the value of international transactions, is unaffected.

In the supply of gold to the free market recently there has, however, been a special element that will strengthen the American authorities' resistance to a rise in the official price—strengthen it so solidly that the case can almost be regarded as closed, at a time when the threat of economic recession might have made the Americans more amenable. That special element is the gold from Soviet sources. Soviet gold certainly played a part in the later stages of the free market's weakening. Its importance, however, is not in the size of the recent transactions—estimated to value some millions of pounds—but in the demonstration that the Soviet authorities are now willing to use gold (as previously platinum and silver) to finance imports of goods. The American authorities have always been reluctant to raise the international value of the Soviet Union's stock and current output of gold. Now that this gold is actually being used to finance trade the reluctance to raise Soviet buying-power by raising the price of gold must be absolute.

Estimates of Soviet gold production at 2mn ounces a year and of the Soviet gold stock at \$5,000mn are no better than intelligent guesswork. Some authorities believe that the true figures are much higher. But even \$5,000mn is twice the size of the sterling area's gold and dollar reserve, and the sterling area's case for a higher gold price, that the value of the reserve must be sharply appreciated if sterling is to be made safely convertible, becomes difficult to argue if the principal non-American beneficiary of a higher price would obviously be the Soviet Union.

It is assumed that some countries' reserves, even at the present price, will benefit considerably from the elimination of the premium in the competing free market. It is noted, however, that sellers of gold on the free market have nearly always required payment in dollars. It must therefore be supposed that the gold will continue to flow mostly to the dollar countries. The dollars that have been used hitherto to buy free-market gold for hoarding must have been, for the most part, withheld from official reserves. Since this form of saving has yielded poor results—no interest, and depreciation of capital—and the unofficial demand for gold has therefore diminished, the quantity of dollars thus withheld will presumably be small in the future, and monetary reserves will benefit accordingly. But it is not in the sterling countries that this hoarding has assumed large proportions, and the sterling area's reserves cannot, therefore, derive much benefit from the change. On the contrary, as the sterling area produces about half of the world's gold, the lowering of the average price of the metal, due to the loss of the premium on a substantial proportion of sales, must adversely affect the sterling area as a whole—though not necessarily the central gold and dollar reserve held in London, as South Africa does not directly contribute to it.

The sterling area may find compensation in the special factor already mentioned. The Soviet Union—the rouble area in general—is short of sterling. Much of the recent selling of Soviet gold has probably been intended to pay for purchases of wool, rubber, foods, perhaps lead and other metals (clandestinely), from the sterling area.

The Russians are not particularly concerned to acquire dollars: they may be prepared to trade a large quantity of gold for sterling and other non-dollar currencies, to finance imports from the sterling area and Europe. Additions to the sterling area's and Europe's monetary reserves may thereby be considerable—though they can hardly be sufficient to satisfy the requirements of convertibility. There is a feeling in the City of London that this is the opportune moment to restore full freedom to the London bullion market. It is believed that Soviet gold—which, the authorities emphasise, is welcome—would flow more freely through that market.

CURRENT COIN

Thapar on Unemployment.—In his presidential address at the second quarterly general meeting of the Indian Chamber of Commerce in Calcutta last Friday, Lala Karam Chand Thapar criticised the Government's emphasis on short-term measures to relieve unemployment, and urged that private industry be encouraged to expand and provide more jobs. Unemployment, he declared, could be reduced only if the country's wealth was increased and income levels raised through investment in productive enterprises. For this, the activities of various sectors of the economy would have to be properly co-ordinated and the occupational pattern of the population changed. The Government had recently decided to introduce schemes costing Rs. 150 to Rs. 175 crores, but "increased expenditure on Government schemes in rural areas will not help further investment and greater production since the incomes earned by the rural population thereby, tend to be consumed mostly rather than saved." The Government was increasing expenditure without simultaneously helping to increase the sources of revenue; this would "only accentuate the unemployment problem and perpetuate poverty." Mr Thapar stressed that while "public measures to relieve unemployment are necessary, in the matter of expenditure there should be a careful balancing of the relative advantages of public and private investments." Private enterprise had constantly tried to increase production and raise the standard of living, but had not been able to offer enough new employment because even slight increases in production "have assumed the dimensions of a glut due to absence of effective demand." The low rate of consumption and lack of purchasing power indicated the urgent need to quicken the tempo of industrial development. This could be done if industry had money for renovation and expansion, but the savings of the middle class, which formerly provided this money, had disappeared under the twin burdens of taxation and inflation. Central and State taxation policies sought to squeeze the maximum amount of money out of a small minority of the population; savings were thus appropriated by the public sector, leaving very little for private enterprise. Mr Thapar thought the Taxation Enquiry Commission should be asked to make interim recommendations on methods to encourage saving and capital formation. He also urged that the Reserve Bank should "come to the aid of industries by agreeing to give financial assistance in regard to their development schemes either directly or indirectly through commercial banks or investing houses after satisfying itself about the soundness of the proposals." Referring to competition between small and large producers, as in the cotton textile and match industries, he said that the "proper course would be to develop large industries, which in turn would give impetus to small-scale and cottage industries provided they are developed as ancillary and feeder industries."

Aid for Chemicals.—A strong plea for Government aid and protection for the chemical industry was heard from Mr. Purshottamdas Popatlal in his presidential address at the annual general meeting of the Indian Chemical Manufacturers' Association in Calcutta on Monday. Although, he said, it offered great scope for expansion, "the present times are far from encouraging to prophesy a rosy future for the industry." The most urgent problem in postwar years had been to utilise idle capacity, and that problem still remained, as the following table showed:

Name of Chemical	Installed capacity	Estimated Percentage 1953 of capacity	Production utilised
	(tons)		(tons)
Sulphuric Acid	189,000	93,900	49.6
Soda Ash	54,000	51,860	96.0
Caustic Soda	37,000	18,540	50.1
Chlorine	15,340	6,860	44.7
Bleaching Powder	7,800	1,600	20.5
Superphosphates	192,660	33,240	17.2
Ammonium Sulphate	426,850	306,640	71.7
Bichromates	5,900	2,150	36.4

Mr Popatlal offered the following comments on the difficulties of manufacture in specific lines. Sulphuric acid production capacity has almost reached the five year plan's 1955-56 target but output is down because demand has eased. As for fertilisers, production of ammonium sulphate has risen rapidly

because of Sindri, but that of superphosphates has declined sharply since the Government-operated phosphate pool was ended; Mr Popatlal thought the pool should be revived because output is far below capacity and is affecting sulphuric acid production also. In the alkali sector, whenever the import policy has been "favourable" production has been impressive. For soda ash, maximum utilisation of capacity has been possible, while for caustic soda output has necessarily had to be limited to the extent of utilisation of the co-product chlorine. Bleaching powder production suffered a serious setback because of excessive imports but has improved since the import policy was revised. Mr Popatlal said that in the alkali sector targets are well near realisation; his plea to exempt salt used in the alkali industry from cess will be examined in detail, according to the Production Minister, Mr K. C. Reddy. According to Mr Popatlal, bichromate manufacture is also well below capacity; markets have shrunk because of "reduced offtake for defence needs, partition of the country and its effects on the tanning industry, change-over in dyeing process for ordnance requirements." Efforts to increase exports have met with only partial success because the cost of production is high "due to restricted production and increasing costs of raw materials, freight and wages." Mr Popatlal thought the Government should encourage the indigenous manufacture of pharmaceuticals more than their processing and packaging. High railway freights and low priority of movements had been longstanding difficulties of the chemical industry as a whole. Sales tax and the way prohibition policies were implemented had also proved troublesome.

Fan Production and Quality.—An encouraging statement in Mr. P. H. Bolland's presidential address at the annual general meeting of the Fan Makers' Association in Calcutta last Friday was that one of the industry's main problems—the supply of electrical steel sheets—has now been solved. Shortage of this material, and its higher price, have in the past led some manufacturers to use ordinary mild steel sheets for the cores of fans, but these age far more quickly, become liable to overheating and thus increase energy consumption. Investigation has shown that whereas the loss of watts after ageing may increase by up to three percent in the case of electrical steel sheets, the loss in the case of mild steel sheets may be as much as 50 percent unless they are specially treated to render them non-ageing. The improvement in the supply of electrical steel sheets dates back to a meeting held last December at which the Government of India "enunciated a formula to assist manufacturers to obtain part of their requirements from indigenous sources and part by import." Mr. Bolland said: "Although at the time the fan manufacturers felt that the formula did not go far enough I am very happy to say that from that day to this I have not heard a single complaint in this connection." As an assurance of quality, members of his Association, who produce about 90 percent of the country's fans, have accepted an official suggestion and from early next year will put a mark on their A.C. fans "as a guarantee that during its life the watts consumption will not increase appreciably or the fan become overheated due to the use of improper steel for the cores." The emphasis on quality is welcome and timely, for marketing difficulties seem to have grown. Production declined from the record level of 212,400 in 1951 to 195,600 in 1952 because fewer table fans were manufactured (29,563 as against 47,706). Although output in the first half of 1953 was at a higher rate, the total for the year is likely to be about the same as in 1952 because sales usually decline in the second half of the year. The industry is therefore naturally turning its eyes to the export markets but is meeting with stiff competition there, especially from Japan. Mr Bolland said he was glad raw materials for fan manufacture (such as electrical steel sheets, ball bearings, winding wires, and paints) were increasingly being made at home; but some materials had to be imported and on these a heavy duty was paid. He urged that a rebate of import duty be allowed on materials used in fans for export, as suggested by the Tariff Board. Mr. Bolland also complained that the pig iron supplies were unsuitable, suggested reform in the collection of sales tax, and urged certain changes in the Government's purchase policy.

Asian Mining Development.—A 95-page ECAFE report entitled *Mining Development in Asia and the Far East, 1952-53*, states that though mineral production in Asian and Far Eastern countries was affected by the drop in world prices, by and large it continued to improve in 1952-53. Postwar production records were reached in 1952 in coal (148 million tons) and iron ore (25 million tons); aluminium production registered an increase; tungsten, manganese, chromium and tin remained on about the same production level. The fall of copper, lead and zinc prices affected Japan, which is the leading producer as well as consumer of the region, and to a lesser extent the Philippines. The decline in the free market price of gold affected the Philippines and Japan, while the cessation of sheet mica stockpiling in the

U.S.A. had repercussions in India. The cement industry enjoyed prosperity throughout the region and the demand for mineral raw materials for cement production has been increasing. Compared with world production figures, the region's output of basic resources such as coal, petroleum and iron ore was still small. For instance, coal production in the region (excluding the mainland of China) amounted to only 32.5 percent of U.S. coal output in 1952. The report makes an interesting forecast of production and price developments. In regard to production, a substantial increase is expected in refined petroleum; an increase in aluminium and limestone; a slight increase in coal, crude petroleum, iron ore, copper and salt; steady development in tungsten, manganese, chromium, titanium ore and sulphur; and a decline in tin, mica and gold. Referring to the price outlook it expects a slight increase in the case of limestone; coal, crude and refined petroleum, manganese, chromium, aluminium, titanium ore, sulphur and salt will remain steady; there will be a slight decline in iron ore; and declines in copper, lead, zinc, tin, mica and gold.

Among the major features of Asian mineral development, says the report, is that attention has been paid by all governments to systematic geological surveying and proper prospecting. While countries of the region continue to favour the development of mineral resources under their own auspices, foreign enterprises have in certain cases been permitted to operate when considered necessary. India has put into operation certain restrictions on the output of metallurgical coal. Japan has increased its efforts to obtain mineral raw materials from South-East Asia. Outside the region, the U.S.A. has remained the principal buyer of minerals produced in the ECAFE region. Dealing with the situation in India, the report points out that coal, manganese ore and mica have remained important export minerals, although there has been a slackening in the demand for mica since the latter part of 1952, while coal exports have declined since early 1953. India continues to depend on imports of lead ore, sulphur, tin and zinc. This is ECAFE's third report on mining developments in Asia and the Far East (the first two were issued in 1951 and 1952), and it provides a detailed review of current mining activities in the region, including discovery of new mineral deposits, development of new mines, including small mines, installation and expansion of mineral processing plants, and economic aspects of mineral production. In Part I production and other developments are reviewed, concerning fuels, iron ore and ferro-alloys, non-ferrous metals, non-metals besides fuels, other minerals, cement industry, and gold industry. Part II contains country summaries for British territories in Borneo, Burma, Cambodia, Laos and Viet Nam, Ceylon, mainland China, Formosa, Hongkong, India, Indonesia, Japan, South Korea, Malaya, Nepal, Pakistan, Philippines and Thailand.

Employment in October.—During October there was a decline of over 12,000 in the number of fresh registrants at exchanges, and a slight rise in the number of vacancies notified. These fluctuations were seasonal, and the total number of registered unemployed continued to rise, though less steeply. The number of persons still seeking employment assistance at the end of the month was 514,975. The number of fresh registrants during October was 108,739 as against 121,600 during September. The number placed in employment was 12,038. A special analysis of work in respect of unskilled applicants and unskilled vacancies dealt with by the employment service revealed that 53 percent of the total number of vacancies filled were unskilled. This percentage exceeded the number of unskilled persons on the live register which was only 48 percent of the total. On examination, it was found that 47 percent of the unskilled applicants were desirous of being placed in unskilled office jobs, such as those for peons, dafataries and watchmen; 31 percent of the vacancies filled by exchanges were unskilled office jobs. Under the training schemes of the Ministry of Labour 9,732 persons including 462 women and 2,130 displaced persons, were receiving training at the Ministry's training institutes at the end of the month. In addition, under the Apprenticeship Training Scheme for displaced persons, 627 apprentice-trainees were undergoing practical training in production work in Uttar Pradesh and West Bengal.

Industrial Disputes in September.—Provisional statistics of industrial disputes for September show an increase in the number of disputes and man-days lost. The number of workers involved was less. There were 100 disputes involving 41,739 workers and accounting for a time-loss of 452,856 man-days. The average duration of disputes rose from 4.2 days in August to 10.8 days in September. Eleven of the disputes resulted in lock-outs which affected 15,582 workers and accounted for a time-loss of 340,467 man-days. Eight of these were in West Bengal and one each was in Bombay, Uttar Pradesh and Punjab. Apart from strikes and lock-outs resulting from indus-

trial disputes, there were three work-stoppages not connected with industrial disputes. Of these, one was a general strike in West Bengal and the rest were in Bombay and Madras, involving 14,650 workers and a time-loss of 14,040 man-days. Seventy-eight disputes ended during the month of which 49 had lasted for not more than five days. Wages, allowances and bonus were the main points of dispute in 38 cases while grievances relating to personnel accounted for 27 disputes. Fourteen disputes ended in complete or partial success to the workers and in 23 disputes they were unsuccessful. In 27 cases the result was indefinite and in 14 cases it was not known. Among the States, West Bengal showed an increase in the number of disputes and man-days lost and accounted for as many as 43 disputes involving 24,693 workers and accounting for over 90 percent of the total time-loss during the month. Bombay accounted for 15 disputes during the month and U.P. and Bihar another 14 and 10 disputes respectively. Among industries, minerals and metals accounted for 70 percent of the total time-loss. Increases in time-loss during the month were noticed in engineering; food, drink and tobacco; chemicals and dyes; mines other than coal; docks and ports and miscellaneous industries also. Industries which recorded smaller time-loss during the month under review were textiles; wood, stone and glass and collieries.

Japanese Spinners Want Increased Trade.—The Japan Cotton Spinners' Association, according to an Agency message from Osaka, has asked the Government to press for an improvement in the country's trade with the sterling area in talks on trade and payments which are expected to take place by the end of the year. A spokesman of the Association said that it had asked the Government to expand trade with the sterling area at all costs, to make trade agreements with Australia, India, and other sterling-area countries within the framework of the present Anglo-Japanese official payments arrangements, to conclude a special agreement with Pakistan on clearing and payments whereby a trade deficit exceeding a certain amount would be settled in sterling, and to try to remove obstacles hindering the export to the sterling area of Japanese cotton goods.

CORRESPONDENCE

PERMANENT DISABILITY BENEFIT UNDER LIFE POLICIES
TO THE EDITOR OF "CAPITAL"

Sir,
Quite a number of leading Indian life offices have for some years been granting disability risk in their policies without any extra charge, but the disability has to be the consequence of an accident and not a disease. This is hardly any benefit, as is evidenced by the claims experience. Permanent disability is mostly the consequence of a disease. The business of leading Indian life offices has expanded sufficiently and their financial strength warrants them to come forward and grant a comprehensive disability cover at a reasonable extra charge, just as is done by companies in the U.S.A. People take out life insurance policies so that in the event of death the pay cheque does not stop. The pay cheque does stop in case of disability due to disease and surely this type of protection too is needed in a life policy.

I would, therefore, suggest to our leading Indian offices who already grant the disability benefit to make it a comprehensive one on the lines of the American cover by charging an appropriate extra amount. If possible, a monthly income of one percent of the sum assured should also be allowed. If a man owns a large life insurance he will not be able to pay further premiums if he is disabled by a disease and will either lapse his insurance or surrender it in case it has acquired surrender value. Either of these is a waste. The real purpose of life insurance is defeated if protection of the kind suggested by me is not forthcoming from our leading life offices.

Yours Faithfully,

N. H. LALWANI

EXTENSIVE IMPORT CONTROLS
IMPOSED BY THAILANDGREATER INTEREST IN TEAS AND
RUBBERS ON STOCK EXCHANGE

London, 2nd December.

DETAILS published here on Sunday by the British Board of Trade illustrate the wide scope of import controls which were suddenly imposed by Thailand a few days ago. A full list of goods affected shows that import permits are now required for virtually the whole range of foodstuffs, raw materials and manufactured goods. Consignments loaded abroad ship before 17th November were exempted from control by the Thai Ministry of Economic Affairs but permits for this exemption had to be obtained from the Customs Department by 23rd November. Consignments for which letters of credit were opened before 17th November but which had not been loaded by that date had to be revaluated by the Bank of Thailand before applications could be made for import permits. The British Board of Trade announcement says that applications for revalidation also had to be lodged by 23rd November but other reports published here indicated that the Bank of Thailand had since agreed to consider applications up to the end of November.

The Stock Market

The past week on the London Stock Exchange has been in rather sharp contrast to the one before as regards the quality and quantity of business transacted. One technically encouraging sign, however, has been the firmness of gilt-edged. Had this firmness not been maintained the whole tone of industrial might have been lower. But in fact the only issues to show any pronounced down-trend were those in which some sort of speculative position had been built up. Another item which helped to stabilise industrial was further issue of United Steel stock before the belief that there would not after all be a New Year. South African gold shares had their biggest turnover for several months. Most of the business was concentrated in the uranium issues and was mainly at the expense of the older gold producers which suffered from elimination of the premium on free gold. Elsewhere among mines, Mawchi improved sharply on the news that Burmese Government troops had recaptured the property from the insurgents and that the mine was in good working order. There has also been some revival of interest in teas and rubbers, with some small gains scattered here and there. A fair number of enquiries were received but these did not always result in business.

Slightly difficult conditions prevailed on the London money market at the opening of the week, but they soon disappeared and thereafter market houses found it easy to balance their books. So easy were conditions at times that the authorities stepped in to take up surplus funds. Towards the close, conditions turned slightly patchy but there was still an easy finish. The Bank of England return showed the active note circulation at £1,550 million, which is about £4 million higher because of seasonal demand, but bankers' deposits were practically unchanged at £280 million. Treasury Bill applications totalled £368,425,000, of which £240 million was allotted at an average rate of 4½ to 11.45d percent. This week's offerings are £250 million.

Russian Gold Arrives in London

Nearly 17 tons of Russian gold have been flown into London—the last of which reached on Monday. The gold is consigned to an undisclosed address here.

Japan gets Yugoslav Chemical Plant Order

Yugoslavia has bought for \$14,500,000 a chemical fibre plant from Japan to equip a viscose factory to be built in Serbia, an official of the Japanese Legation said recently in Belgrade. The plant would have a daily production capacity of 53 tons. The deal was a subject of fierce competition among British, German, American and Japanese firms.

Linseed and Castor Oil

Demand for linseed oil continued for early arrival parcels, particularly to the Continent. Later shipment positions, however, were easier and comparatively neglected. Argentine Uruguayan in bulk November-December shipment was reduced to 2741 and United States, January, could be had at £73. For imported castor oil demand was almost absent with New Year positions offered at a considerable discount. The only business reported was £131½ while January-February sold at as low as £119. Indian groundnut oil was neglected, awaiting the export quota decision.

Tea Stocks Increase

Tea stocks in London and provincial warehouses with 93,038,328 lbs. in the previous week, compared with 115,653,416 lbs. in the period were 13,972,176 lbs. and

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT REMAINS EASY

Wednesday, 2nd December.

CREDIT has continued to be in ample supply this week, though it is reported that the first advances on sugar account for the new crushing season have been made. There has been no fresh demand for finance on other accounts. There is more money about in the interbank market and the call rate stands at 1½ percent.

Exchange has been very quiet. Gunny bills are scarce and only a moderate number of tea bills had been seen in the first half of this week. Remittance has been normal. The principal exchange rates are steady.

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills fell to Rs. 1,10,00,000 this week, and the average rate of acceptance rose by two pips to Rs. 2-7-0 percent per annum—the rate prevailing just before the offer was reduced. Tenders at Rs. 99-6-3 percent were allotted approximately 91 percent. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 27th November, treasury bills for Rs. 6,80,00,000 were sold in favour of the Reserve Bank.

Bullion ruled quiet last week. Silver declined from the previous week's level of Rs. 152-2 to Rs. 149-12 quoted today. The ready rate was about 2 annas lower. The weakness was attributed to larger arrivals, followed by the absence of upcountry interest. The price, nevertheless, was unaltered at 74d. in London and at 85½ cents in New York.

Gold also moved down from Rs. 84-10 to Rs. 81-12 in sympathy. The fall in the international price because of Russia's sales was regarded as a dampening influence. The sovereign was, however, stationary around Rs. 57-12.

A further fall of Rs. 4.20 crores in notes in circulation to Rs. 1,096.85 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 27th November, 1953, while the total note issue at Rs. 1,127.04 crores showed a rise of Rs. 73 lakhs. Notes held in the Banking Department consequently increased by Rs. 4.94 crores to Rs. 30.19 crores. Deposits of the Government of India rose by Rs. 3.24 crores to stand at Rs. 98.09 crores, while other Government accounts diminished by Rs. 5.77 crores to Rs. 24.38 crores. Easier money conditions led to a further rise of Rs. 7.71 crores in balances of commercial banks to Rs. 69.82 crores. Balances held abroad declined by Rs. 1.13 crores to Rs. 141.56 crores. Other loans and advances improved from Rs. 10.83 crores to Rs. 11.01 crores, of which advances to scheduled banks against usance bills were again the same at Rs. 49.45 lakhs. Investments were fractionally lower by Rs. 11 lakhs at Rs. 81.14 crores. Ways and means advances increased from Rs. 86 lakhs to Rs. 1.37 crores.

The return of the Imperial Bank of India for the week ended 20th November, 1953, shows a fractional rise of Rs. 69 lakhs in total deposits to Rs. 210.90 crores. Investments in Government Securities are down by Rs. 1.44 crores to Rs. 86.40 crores, while other authorised investments are up by Rs. 9 lakhs to Rs. 10.93 crores. Loans, cash credits and overdrafts have decreased by Rs. 3.66 crores to Rs. 89.71 crores, while bills discounted and purchased have increased by Rs. 27 lakhs to Rs. 6.92 crores. Cash and balances are, in consequence, shown at Rs. 30.36 crores, or Rs. 8.69 crores higher.

The statement of the position of Scheduled Banks for the week ended 20th November, 1953, discloses Demand and Time liabilities at Rs. 527.67 crores (Rs. 11.46 crores on account of borrowings from Banks) and Rs. 333.62 crores (Rs. 2.63 crores) compared with Rs. 524.17 crores (Rs. 11.79 crores) and Rs. 332.69 crores (Rs. 2.88 crores) respectively in the previous week. Cash has diminished by Rs. 1.53 crores to Rs. 32.79 crores, while balances with the Reserve Bank have risen by Rs. 12.17 crores to Rs. 59.74 crores. There is a fall of Rs. 2.41 crores in investments to Rs. 307.42 crores. Advances and bills discounted at Rs. 447.68 crores reveal a drop of Rs. 10.22 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.7 percent and 52.0 percent against 9.6 percent and 53.4 percent.

The following is a statement of the cash balances of the Central Government on the last day of August 1953:

	Rs.
(1) At the Reserve Bank of India in India	132,69,95,000
(2) At treasuries in India	2,03,89,000
(3) In Britain (sterling converted at 18d. the rupee)	4,38,78,000
Total	139,12,62,000

LONDON FINANCIAL LETTER

(By Air Mail)

THE formal White Paper on the Balance of Payments for the first half of 1953 revealed that an increase in the sterling balances in the first half-year, by £172 million, was the counterpart of the increase in the gold and dollar reserve, by £183 million in the period. Experience has shown that—especially in a time of trade recession—dollars tend to flow out when sterling balances are drawn down. So the rising total of sterling balances—the total was £3,600 million at mid-year, exclusive of the debt to the European Payments Union and of deposits in international organisations—is viewed in some quarters as a threat to the currency in less favourable conditions. These balances have been introduced into discussions arising from accusations (in Parliament and in business circles) that the export trade is hampered by shortage of sterling. Various countries are, indeed, short of sterling; but they are mostly short of dollars and of Deutschmarks—the currencies of Britain's principal competitors in the engineering trades. In general, the amount of the balances held on overseas account in London does not confirm the idea that sterling is becoming a scarce currency.

The advocates of convertibility at the earliest point out, however, that in relation to the total value of the country's export trade the total of these balances is no larger than shortly before the war, that they are mostly working reserves not due soon to be spent, that the total can therefore be regarded as approximately "normal" for the present times; and argue that if the authorities showed enough confidence in sterling to allow convertibility the holders of the balances would for their part be confident enough to refrain from converting—even if the balances were not effectively tied up.

Barclays' Capital

Since the capital structures of the big British banks have remained virtually unaltered since these institutions were consolidated after the first world war, Barclays' capital plan has attracted unusual attention. It involves merging the A stock, whose dividend is limited to 10 percent, with the B stock, whose dividend is unrestricted; dividends being equalised at 10 percent, while free shares are issued to B stockholders in a proportion that effectively raises their dividend from 14 percent to 16 percent. The scheme received some criticism on the ground that it required a sacrifice from B stockholders (the granting of the right of higher dividends to the A stock) in exchange for the higher dividend that was their right anyway. It is certainly true that Barclays is following the lead of the National Provincial in raising its dividend; and the stock market is inclined to believe that the upward movement will become general among these most staid institutions.

A DITCHER'S DIARY

salesmanship in Asia, especially on behalf of the Americans whose intentions are sometimes quite grotesquely misunderstood in eastern countries. The current tour of Mr. Richard Nixon, the Vice-President of the United States, seems to have no other purpose than the holding of such meetings for the expression of friendly feelings, though while he is in India there are several matters of more solid importance that will come up for discussion. By a coincidence Mr. Nixon is in Delhi just when India, the recipient of substantial American assistance, is signing a trade agreement with Russia, an agreement that provides for the export of certain goods that some Americans do not like to see exported to Russia. To judge from his earlier statements, Mr. Nixon's own reaction will be quite sympathetic. He had some sensible things to say about the position of Hongkong when he was in that colony, and in Ceylon he said that the rubber-rice agreement with China (for which Ceylon forfeited U.S. assistance) was "just a straight trade deal". If he can convince members of his Government of the necessity of freer trade between countries of divergent political tempers, his friendly visits will have been useful.

To no one, barring Dr. B. R. Ambedkar, does India owe a greater debt for the drafting of her Constitution than Sir Benegal Narsing Rau who died in Zurich after a long illness on Monday. Although this is the token by which he will be best remembered in this country, it was not primarily as an authority on law and constitutions but as a diplomat that he was in the public eye in his last years. The suave Sir Narsing was one of the most effective speakers India has ever had at the United Nations, and to him must belong a large part of the credit for retrieving India's case on Kashmir after the assaults of Sir Zafarullah Khan. National recognition of these services came in his appointment as India's permanent delegate to the United Nations with the rank of Ambassador in June 1949; not long after, wider international recognition of his legal and diplomatic achievements followed when he became a judge of the International Court of Justice at the Hague in February last year. But Sir Narsing was not a man upon whom success attended only in later life. After a brilliant academic career in Madras and Cambridge, he joined the I.C.S. in 1909 and served for many years in eastern India. In 1935 he was given the task of adapting a myriad of statutes to the needs of provincial autonomy under the Government of India Act. The post of Reforms Commissioner and a knighthood followed in 1938. He had also served on the bench of the Calcutta High Court, and the special assignments he was given are a measure of the breadth of his experience and the esteem in which he was held: he reported on aspects of labour conditions, Hindu law and banking but his outstanding work was his report during the war years as Chairman of the Indus Water Dispute Commission.

In the dispute with Tatas about how much generating capacity should be installed at Trombay, the Bombay Government has refused to accept the advice of local technicians, foreign consultants, private industrialists, the Government of India and the World Bank. It could hardly have found anybody else of importance to disagree with. However, it has disagreed, and in consequence the new power plant will be only half as big as Tatas

wanted to make it. So there is nothing for that long-suffering city to do now but wait and see who was right. For reference six or seven years hence, Mr. J. R. D. Tata has gone on record with his forecast of coming events. This decision, he says, will "result in a continuance until about 1960-61 of the power shortage from which Bombay and the area covered by our licences have suffered for so many years; it will impede the normal economic growth of the City and the State of Bombay; it will necessitate the maintenance, or resumption, of the system of staggering factory hours which causes inconvenience to thousands of workers; it will increase the ultimate cost of the project by about Rs 50 lakhs; finally, it represents a gamble on rainfall which, if it proves wrong, may result in severe loss to industry and distress to labour in the State... I consider it a duty therefore to sound this note of warning and to state for the record that the responsibility for any loss in production, wages, etc., which may be suffered by the people of the State of Bombay as a consequence of the present decision will rest elsewhere than on the Tata Hydro Electric Group". Presumably the State Government has grounds for hoping that these things will not happen, but its record on electricity up to date does not inspire confidence.

The Chinese Communists have suggested that New Delhi be added to the long list of famous places in which the leaders of the divided world have failed to reach agreement. India will have no objection, but it is hard to resist the suspicion that the Chinese have chosen Delhi just because India's neutrality has been aspersed by one of the chief parties in Korea and therefore the suggestion will provide ground for further skirmishing. It seems odd that it is now two and a half years since a move was made to end the fighting in Korea and yet the antagonists are still arguing about where they should meet to settle the questions raised by the division of Korea. But then I remember that the heads of the three Western Powers will meet in Bermuda tomorrow to discuss what they should do about the dismemberment of Germany that was effected eight years ago. I suppose that is one of the things to be discussed in Bermuda: the first purpose of the meeting seems to have been lost in the events of the past few months. I hope it is not going to be one of those meetings where Sir Winston Churchill tells Mr. Eisenhower he should take the first plane to Moscow, Mr. Eisenhower tells M. Laniel that he should get his Parliament to ratify the European Defence Community treaty, M. Laniel tells Sir Winston that Britain should be more helpful about a European army—and then all three set about drafting a communiqué saying that they are standing shoulder to shoulder devoted to a common purpose.

CONTROL OF BARRIES, said a heading in the *Hindustan Times* on Monday, but I was disappointed to discover that the story beneath referred neither to nursery discipline nor to Mr. Gopalaswami's Census report, but only to measures against hydrophobia. A more grisly but equally false expectation was aroused by the title of a news article the day after Sir Winston Churchill had blazed to the defence of his Pensions Minister in the Commons: CHURCHILL AND HEAD DINE AT DOWNING STREET.

PROSPECTS FOR THE NEXT TEA SEASON

LESSONS OF THE SLUMP: VALUE OF CROP

REGULATION SCHEME

(FROM A CORRESPONDENT)

THIS time a year ago the Calcutta tea market was in the throes of what probably was the worst slump ever experienced by the industry. There seemed at that time little hope that many North Indian tea gardens would be able to continue unless some of those of small output, then designated uneconomical units, were completely out of production, and unless all gardens drastically cut their costs of production. Many were the gloomy prophecies heard by tea trade experts as to the number of years it would take the tea industry to get on its feet again. Who could then have foreseen that within a very few months' time the market would have started to rise and that those very buyers who, at that time were bearing the market and pointing out how much the world production of tea was exceeding world consumption, would be bemoaning the shortage of tea for their needs? It would seem that the big buying houses were led into this error of judgment by a comparison of the statistical position of tea manufactured with their estimate of the per capita consumption of the British public.

When, at last, in the U.K. tea came off the ration, the immediate indications were that there was consumer resistance to the high price of the packet, and that the per capita consumption would go down as compared with what it had been during the rationing years. It shortly became apparent that per capita consumption and, in fact, total tea consumption in the United Kingdom, had increased and that those tea buying and blending houses who had wrongly assumed that they had a surplus of tea on their hands were now left in short supply and unable to fulfil the needs of their customers.

In the early months of 1953 the Calcutta market continued to rise until the season closed in April, while the London market continued to go from strength to strength right till the end of the season, when the last auctions of the old season were held in August, 1953. Auctions for the current season opened at both selling centres on a strong note and, as the season progressed, common tea has shown a steady rise until at the present time it is quoted on the Calcutta market at Rs. 1-12-6 for Common Broken Pekoe, while the prices realised for the better types of teas from the Upper Assam districts have steadily fallen to between Rs. 2-1 and Rs. 2-3 per lb, as the buyers have had to pay more and more money for the lower quality teas which form the bulk of their blends and have hitherto been regarded as price reducers.

Re-export Markets

The current season has also seen an increased amount of tea sold on the London market, and some of the major overseas consumers have found it easier to buy the type of tea suitable for their requirements from this centre. Up to the end of September the re-exports from London showed an increase of 13 million lbs on those of the previous year, and this may well indicate that in the future, as in pre-war years, the London auctions will be able to cater for the needs of these out-market consumers who have always purchased quality teas. Sellers must always sell their teas on the market where they realise the best price and where the demand is strongest, and so it is likely that, eventually, the majority of fine teas bought from North-East India for consumption in the American continent, and in Eire and the Continent of Europe, may gradually find their way into the London auctions.

At the commencement of the season 1953, a voluntary crop regulation scheme under the auspices of the Indian Tea Association and sister associations, was wisely implemented in order to assure that a surplus of North Indian tea should not be allowed to flood the world markets and, once again, repeat the disastrous slump in tea

prices which took place in 1952. Unfortunately, nature this year has also taken a hand in crop restriction and all North Indian tea districts have experienced extraordinary climatic conditions which, in their turn, have also restricted the already short crop budgeted for by the producers. The result is that at present it looks as if the North Indian tea crop will be in the proximity of 10 or 15 million lbs short of the figures estimated by producers at the beginning of the year. It is unlikely that there will be two years running with climatic conditions unfavourable to crop production, and producers will be wise, therefore, to continue their policy of voluntary crop regulation, in any event for the next two years until it can be seen more definitely and accurately exactly how much tea is required for world consumption yearly.

Losses During Slump

In spite of the high prices being realised for nearly all North Indian teas this year, it must not be forgotten that last season many gardens suffered enormous financial losses and, however good the current season may prove financially for these gardens, it is unlikely that the whole of their previous losses will be paid off for some years to come. This is especially true for some of the Doorga gardens and most of those in the Cachar district and the lower Darjeeling areas. At the beginning of this year all gardens pared down their financial requirements to the barest minimum, and while this was a very wise policy after a bad year for tea such as 1952, to continue this policy of cheapsparing and economy on essential processes of cultivation, manuring and foundation work, can only be detrimental ultimately to the gardens concerned. The tea industry must learn its lesson from 1952's misfortunes as all sides of the industry should by now realise how very easily the post-war boom period can turn into a disastrous slump.

Tea garden proprietors and the directors of tea companies should, therefore, make certain that all available money is put back into their tea gardens during the good years in order to tide them over the bad times which may lie ahead. Shareholders should also assist their directors in this policy by not insisting on large dividends being paid as soon as profits are realised.

Residue Teas

The Indian Tea Association and sister associations also followed a second wise policy by means of a "gentlemen's agreement" among their members not to sell residue tea ex-garden nor to send this undesirable grade (which, unfortunately, is a necessary product from the manufacture of tea) down to Calcutta for sale in the bazaar. The majority of gardens have, happily, stuck to this agreement and destroyed their residue teas and this is one of the reasons why gardens have been able to get such extremely satisfactory prices for their well-made primary grades during the present year. The temptation at the end of the current season, and also at the beginning of the next season, to sell these residue grades, the making of which is unavoidable, at fancy prices in Calcutta, may be difficult to overcome for some of the smaller and poorer garden owners. The wisdom, however, of continuing to destroy this type of residue tea and of not selling it, either ex-garden or on the Calcutta market, cannot be too strongly emphasised from the gardens' or the industry's point of view if garden owners, agency houses and companies wish to get the best prices possible for their primary grades, which cost them so much more to make than do the residue grades left after manufacture of pucca invoices. The Central Tea Board could greatly help the growers of teas in this policy of destroying residue grades on the garden by advising the Government to ensure that local excise

officers were instructed to permit the destruction of these grades in the factory without payment of duty. It appears that some garden excise officers, in a mistaken sense of zeal, are refusing to permit residue grades to be destroyed, and so many garden managers are forced to store large quantities of tea in their factories which, if permitted to flood the markets, could only harm one of India's most lucrative industries.

Next Season's Prospects

It seems likely now that the Calcutta market for teas manufactured in 1953 will continue of its present strength, or perhaps even stronger, right to the end of the season, while the indications are that the London market will follow roughly the same range of prices when the same types of tea are offered there. It also seems probable that the 1954 market will open in June in Calcutta on a strong note, stronger even than did the 1953 market, while exactly the same tendency should occur when London sales commence for the new season in September. The outlook for tea garden owners would, therefore, seem to be bright for at least another year. It must, however, be remembered that as prices get higher so do costs, for labour demands increase and many of the concessions granted to the industry during the 1952 slump period will now have to be returned to labour.

The tea industry should have learnt by bitter experience a salutary lesson, namely, that when there is a world shortage of tea, care in the manufacture of quality teas does not mean the sacrifice of dividend but that the shortsighted policy of economising on all manufacturing processes and producing a stinky unattractive grade with a poor liquor which will fetch an adequate price on any market at a very low cost of production is easier and will, temporarily, show a better profit to the garden owner than a well manufactured tea carefully and expensively produced. The temptation is, therefore, for growers to manufacture a poor quality type of tea in an ever increasing quantity at a cheap cost of production until, eventually, there is once again too much tea for world consumption and a slump ensues, forcing many of the smaller gardens to close down. The tea industry would be well advised to remember this lesson and to continue the progress already commenced in 1953 of voluntarily regulated crops, carefully manufactured, and then perhaps this policy will allow the world tea market to settle down for many years to come on a satisfactorily economic level, showing a reasonable prosperity for all sides of the trade and also for the country of tea's origin.

In this article, voluntary crop regulation has been referred to and praised more than once. It should, however, be pointed out that this voluntary crop regulation scheme has been of the greatest advantage to those gardens producing a high maundage per acre at a low cost of production, and who are still able to make reasonable profits when realising comparatively low prices for their teas. The production costs of these gardens, mostly in Cachar, the Doorga and the Terai, are low when compared with those gardens manufacturing better quality teas in Upper Assam and Darjeeling. The cost of manufacture of these so-called "quality gardens" is necessarily much higher than those situated in the Doorga and Terai, and as these latter gardens are the ones that particularly benefit from any crop restriction, it would surely be fair—and not only fair but also desirable—that the crops of the quality gardens with high costs of production should not be regulated on the same basis as those gardens situated in the cheaper producing areas. In order to show a reasonable profit, a garden in Upper Assam producing tea ex-factory for, shall we say, Rs. 1-10 per lb, must make a fairly large crop, and should this crop be regulated below a certain level, little or no profit to this type of fell, so would the garden's cost per lb rise. As it is the teas from Upper Assam and the Darjeeling districts that mainly attract the large overseas consumers, particularly from the dollar markets, as a whole to allow some elasticity in the crop productions from these quality districts and, perhaps, to curtail more strictly the crops of gardens in those areas able to produce large crops at a comparatively low price, the majority of whose teas are purchased for price reducers by the big blenders in the U.K., and for internal consumption in India. These cheaper producing gardens should

still be able, in normal years, to show satisfactory profits compared with their more expensively producing counterparts in other districts.

COCHIN TEA SALES

At Sale No. 24, held on 24th November, offerings amounted to approximately 16,000,000 lbs. There was a good selection on offer and the sale was characterised by a very strong general demand. Commonest descriptions were up to 1/2 anna dearer, Low Mediums were 1 to 2 annas dearer, while good mediums were a full 2 annas dearer. Best Liquoring kinds were well supported at about last rates.

	Quotations	
	1953	1952
Low grown Travancore	B. O. P. 113 9	1 1 0
Medium	B. O. P. 115 0	1 14 0
Anamallai	B. O. P. 2 2 0	2 4 6
Best Liquoring Nilgiri	B. O. P. 2 12 9	3 1 0
Black well made	O. P. 2 4 0	2 4 0 to 2 6 0

Very large business was done in the export quota at 24 pices and the market remained steady at that rate.

CHITTAGONG TEA SALES

At Sale No. 11 held in Chittagong on 25th November, leaf offerings consisted of 13,430 chests. Dust offerings amounted to 3,925 chests. There was a supplement of 78 chests.

Leaf: The largest leaf catalogue yet to be offered in Chittagong met a ready, although a trifle irregular, market. Whole leaf grades were steady at about last rates but BOP and O.F.s., were an irregular half-anna easier. BP and BPS, however, were stronger by a like amount. The commonest sorts were in very keen demand, occasionally realising between one and two annas above valuations. Once again there were no withdrawals.

Dust: Opening prices were frequently half to one anna below valuation but soon firmed up, and useful liquoring types were keenly sought after. The very best liquoring types were in good demand with four lines of Dust realising Rs. 2-2 per lb. There was a certain irregularity in the sale but Clean Common Dust may be quoted at Rs. 1-8. Every Lot found a ready buyer.

Quotations											
Sale 11—25th November						Sale 10—11th November					
OP	Rs.	1	14	0	to 1 14 6	Rs.	1	14	0	to 1 14 6	
Pek	Rs.	1	12	6		Rs.	1	12	6		
BOP	Rs.	1	10	0	to 1 10 6	Rs.	1	11	0		
BP	Rs.	1	9	0	to 1 9 6	Rs.	1	8	6	to 1 9 0	
BPS	Rs.	1	9	0	to 1 9 6	Rs.	1	8	6	to 1 9 0	
OF	Rs.	1	10	0	to 1 10 6	Rs.	1	10	6	to 1 11 0	
PF	Rs.	1	8	9		Rs.	1	8	6	to 1 9 0	

The next sale will be held on 9th December, and the catalogues contain 10,605 chests of leaf, 3,675 chests of Dust, and 16 chests in the supplement.

NEW POSTWAR HIGH FOR COMMON BROKEN PEKOE AT LONDON TEA SALES

At last week's London tea sales the 69,315 packages on offer realised an average price of 3s 10.41d a lb. against 3s 10.02d in the previous week. Monday's strong demand was well maintained for the balance of North Indian and other miscellaneous teas amounting to 22,141 packages auctioned on Wednesday. Common and Low Medium descriptions were frequently 1d per lb. dearer. Better qualities, however, showed some irregularity. Good export demand continued. Common Broken Pekoe was quoted at 42 1/2d per lb.—a new postwar high—against 42d to 42 1/2d previously. Results secured by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	789	3/8
Assam Co.	1,924	3/10 1/2
Assam Frontier	1,223	4/2
Bagracote	258	3/7 1/2
Bengal United	224	3/7 1/2
Buxa Doorga	499	3/9 1/2
Central Province	456	4/0 1/2
Cons. Estates	1,361	3/8 1/2

United Planters	618	3/11 1/2
Upper Assam		

U.S. PEPPER IMPORTS

According to the U.S. Commerce Department's figures, U.S. black pepper imports during the nine months, January to September 1953, totalled 20,895,868 lbs compared with 18,679,081 lbs in the same period last year. White pepper imports totalled 1,067,167 lbs and 1,065,167 lbs respectively. The black pepper total consisted of 4,198,940 lbs from Indonesia, 2,689,470 lbs from British Malaya, 13,708,167 lbs from India, 73,071 lbs from Thailand and 226,220 lbs from miscellaneous sources. No break-down of the white pepper total was given.

Company Meetings

THE TATA POWER COMPANY, LIMITED

Speech delivered by the Chairman, Mr. J. R. D. Tata, at the Annual General Meeting of the Company on Wednesday, the 25th November, 1953.

The year under review may be characterised as satisfactory from the operating and financial viewpoints but one of retarded progress so far as future planning and expansion are concerned. The effects of the low 1951 monsoon were felt during the first five weeks of the year after which the satisfactory rainfall of the 1952 season made it possible to discontinue the rationing of electricity introduced in the previous dry season. However, staggering of mill and factory holidays had to be retained and the "Power Pool" set up during the previous year, continued to function and contributed towards the maintenance of normal electricity supply throughout the 1952-53 dry season.

Since I addressed you on the last occasion, the two new railway generating units of 12,000 Kw each have been put into operation and the railway power plant is now capable of meeting all rail traction requirements. The first of the three 18,000 Kw units of the Bombay Government's "Chhatrapati" started up for a short run early in September this year, and it is expected that this unit will be in commercial operation by the end of 1953, followed by the other two units at intervals of about two to three months each. It is understood that the Bombay Government is agreeable to having its plant operated as part of the Tata Grid system and negotiations are proceeding for the purchase of the station output, which will be passed on, without profit, to our consumers.

I indicated last year that the new Trombay plant, along with a new receiving station to serve the southern portion of Bombay Island, would probably be in operation during the first half of 1956. This forecast was based on the assumption that orders could be placed for the principal items of plant about the beginning of 1953. Unfortunately, the delay on the part of the Government of Bombay in finalising the documents for the extension of the Hydro licences and for the new licence for the Trombay thermal station and the difference of opinion which prevailed between Government and ourselves in regard to the capacity to be installed at Trombay have prevented us from completing negotiations with the World Bank and, until recently, from placing firm orders for plant. It is therefore now unlikely that the Trombay plant can be brought into regular operation before the end of 1956.

I am sorry to have to report that our efforts at convincing the Government of Bombay of the need to install both generating units of 50,000 Kw each, one immediately after the other, have failed. Government have adhered to their decision to grant permission for the installation of only one unit in the first instance, leaving the question of the second unit for later consideration.

I do not propose to take the time of this meeting by discussing the details of this unfortunate controversy, but in fairness to the Hydro Companies I feel I must mention at least some of the basic facts.

Our case and the facts on which it rests are quite simple. It is recognised by all, including the Government of Bombay, that there is a large pent-up demand from industry and other consumers which could not be met in previous years. This demand exceeds the whole capacity of the Bombay Government's new plant at Chola.

It is also admitted that the "un-staggering" of factory hours for which there is a persistent demand from labour would require about 38,000 Kw. Thus the installation at Trombay of only 50,000 Kw, as directed by the Government of Bombay, will, until Koyana begins to generate power, leave a very inadequate margin of only 12,000 Kw to meet the balance of unsatisfied demand. The further demand which is already building up, emergencies such as would result from plant breakdowns, and a possible monsoon failure necessitate reserve margin for the installation of two units totalling 100,000 Kw at Trombay.

The Government of Bombay's decision, on the other hand, is based on two main assumptions, namely, that the demand will not grow at the rate at which our past and current experience shows that it will, and that the Koyana project can be built at such a speed that it will generate electricity by 1957. The Government of Bombay therefore contend that if a second unit is put up it will have to be a "straw man" almost as soon as completed and as, under the Electricity (Supply) Act, any generating plant forming part of a grid system which has to be kept idle is to be allowed its depreciation and maintenance charges, plus a net return of 5% on capital, the electricity consumers would be unnecessarily burdened with such charges.

Both these assumptions are controverted by our own experience in building and operating large hydro-electric plants over a long period of years, as well as by the advice of our own experts and of our technical consultants whose competence is undisputed.

In any case, whatever may be the date on which Koyana is brought into operation, the cost to the consumer of providing the overheads and return on the second Trombay unit would be no more than .6 of a pie per Kw hour. This is indeed a negligible premium to pay as insurance against the heavy losses which would be caused to the city and the State by a recurrence of power shortage, particularly as the extra cost would have to be borne for only a few years until the rising demand absorbs the full capacity of Koyana and necessitates the re-commissioning of the thermal units. It is furthermore a premium which the textile and other industries of Bombay have expressed their willingness to pay.

Our recommendation to Government in favour of installing 100,000 Kw of capacity at Trombay, over a period of about three and a half years, took all these and other factors into account and represented the carefully considered view not only of our own technical staff but also of our consulting engineers abroad, of the technical advisers of the World Bank and, we believe, also of the experts of the Government of India. The Government of Bombay's rejection of the unanimous advice tendered by such a formidable array of experts is a matter which arouses deep concern on many counts. It will, we are convinced, result in a continuance until about 1960-61 of the power shortage from which

Bombay and the area covered by our licences have suffered for so many years; it will impede the normal economic growth of the City and the State of Bombay; it will necessitate the maintenance, or resumption, of the system of staggering factory hours which causes inconvenience to thousands of workers; it will increase the ultimate cost of the project by about Rs. 50 lakhs; finally, it represents a gamble on rainfall which, if it proves wrong, may result in severe loss to industry and distress to labour in the State.

Your Company and its sister Companies have in the past been unjustly blamed for the power shortage which has plagued the people and industries of the State since the end of the war. I consider it a duty therefore to sound this note of warning and to state for the record that the responsibility for any loss in production, prices, etc., which may be suffered by the people of the State of Bombay as a consequence of the present decision will rest elsewhere than on the Tata Hydro Electric Group.

Before I leave this subject, I would like to refer to the provisions of the Electricity (Supply) Act, 1948. That Act contemplated the establishment of an Electricity Board charged with the duty of promoting the co-ordinated development of the generation, supply and distribution of electricity within the State. The Board was to be an autonomous body consisting of persons with administrative and commercial experience and specialists such as electrical engineers and accountants. The position that has arisen in connection with the Trombay project emphasises the necessity of settings up such a Board at an early date.

With regard to the question of finance for the Trombay project, you are aware that the Central Government and the shareholders of the three Hydro Companies have approved of increases in capital to the aggregate extent of Rs. 3 crores and invitations to the shareholders of the three Companies have been sent out for subscribing to the new capital.

Preliminary negotiations with the World Bank were initiated originally on the basis of a two unit plant and the voluminous data required by the Bank were submitted, analysed and approved. However, as the Government has ruled against the installation of a second unit, fresh data on the basis of a single unit are in the process of being compiled and submitted to the World Bank. The negotiations for the loan have therefore been delayed. I may add that it was not possible for the Companies originally to apply for a loan on an alternative basis of two units or one, as the Bank would not have entertained such an application based on conflicting data in respect of such matters as the demand for power, the availability of supplies from Koyana, financial statistics and servicing of the loan, etc.

In the context of the heavy financial requirements of your and other Companies in the Tata Hydro Group, to finance capital expenditure at Trombay and elsewhere, I wish to take this opportunity of endorsing the remarks made by the Chairman of the Federation of Electricity Undertakings of India in his recent speech in which he has urged the Government of India to sanction without further delay an increase in the basic standard rate of 5% allowed as a return to power supply companies under the Electricity (Supply) Act. There is an undeniable case in favour of such an increase and in view of our own urgent need to raise additional funds for expansion purposes, I sincerely trust that the Government of India will come to an early and favourable decision in the matter.

New tariffs for electricity supply, which I indicated last year were being designed to take care of higher operating costs, have not yet been finalised. In the absence of a clear indication what the power and energy from the Government plant at Chola would cost and the basis on which payment would be made, as an interim arrangement, however, a general 12 1/2% increase has been applied to all industrial consumers from 1st May and to the Distributing Licenses from 1st June, 1953. The resultant increase in gross revenue on this account for the remaining period of the year amounted to Rs. 2,23,000. It will be appreciated that the effect of this interim increase will only be felt during the current year. The cost of the Government and Railway power will be passed on to all consumers in the shape of a thermal surcharge. Thereafter the new tariffs will be designed when all the governing factors are known.

Our rights and obligations under our licences and Licenses, including the B.E.S. & T. Undertaking, under their have been the subject of a discussion between the Association of Electrical Undertakings, Bombay Province, representing those licensees and ourselves, in view of a possible conflict of interests, as the areas of the two sets of licences cover the same territory, a general understanding has been reached that there will be mutual consultations between our organization and the Distributing Licensees in the case of large scale consumers within the territory so as to avoid, as far as possible, a duplication of capital costs and so as to co-ordinate the interests of the public and in the most economic manner. We believe that the consultation so initiated will be continued and will help towards establishing a sound and healthy system of electrical development within the territory.

It is with pleasure that I record our appreciation of the valuable services of our officers and staff throughout a difficult year.

I now beg to move the first resolution before the meeting.

Company Meeting

MALAYALAM PLANTATIONS
LIMITED
INDIA'S POLICY OF ECONOMIC
DEVELOPMENTMr. H. W. HORNER ON THE POSITION
AND OUTLOOK.

The Thirty-second Annual General Meeting of Malayalam Plantations Limited, will be held on December 10, at 1-4, Great Tower Street, London, E.C.

The following is an extract from the Address of the Chairman, Mr. Harold W. Horner, which has been circulated with the report and accounts:—

The accounts before you show results which are much better than could have been expected at the time of our meeting last year. Then the average price for South Indian teas in London had fallen well below the cost of producing and placing the tea on the market. The general recovery, coupled with the assistance of our favourable forward sales reported last year, has enabled us to sell our exportable crop at a net average price of 25.88d. (after allowing for export duty and all charges from f.o.b. to sale, about 8½d.). The crop of 14,098,000 lb. was fairly close to the estimate, but the lower price realised, coupled with increased cost of production, resulted in a reduction of profit of about £460,000 compared with last year.

Export of rubber is still prohibited and internal prices are fixed by the Indian Rubber Board set up and virtually controlled by the Government of India. These prices are, at present, above world prices, but do not provide an adequate margin for amortization and replanting the rubber; for the greater part of the rubber in South India (including the major part of this company's rubber areas) replanting is, or will shortly be, a matter of urgent necessity. The control is unfair in its operation, for whilst prices are fixed as far as

the producer is concerned, there is no obligation upon the manufacturers to buy. The company's rubber crop exceeded the estimate by nearly half a million pounds and realised a profit per lb. about the same as last year.

After providing Indian income tax and U.K. income and profits tax totalling £275,134 on the year's profits, the company's aggregate net profit is £278,851, against £411,832 for 1951-52. The directors recommend a final dividend of 7 per cent., which will make a total of 10 per cent. for the year. The board regret that the profits remaining after the heavy taxation do not permit them to recommend a higher dividend.

Higher Production Costs

Mainly owing to Government exactions in numerous forms, and also owing to various enactments, chiefly relating to labour, which increase costs in many directions, costs of production have risen constantly in recent years. These enactments are largely in accordance with international labour conventions, the objectives of which are perhaps desirable for the future. Timing of the introduction of them is, however, as important as the provisions of the enactment themselves, and these should not be imposed piecemeal and hurriedly upon employers of labour which is largely primitive in character, and in conditions which have not been otherwise prepared for their smooth working.

The investor—who over the years has done so much to render possible the opening up and development of neglected but potentially fertile territories, to the great benefit of the inhabitants—is robbed of a fair reward for his enterprise and for the risks he has taken, not by any over-cautious financial policy, but by excessive Government expenditure, often conceived on idealistic rather than practical lines, necessitating penal taxation, and by premature legislative interference with labour conditions. In what is, one hopes, a transitional stage, our greatest problems today are those relating to labour, and I fear we have difficult times ahead.

Government has set up machinery for fixing minimum rates of wages for labour in various industries and in agriculture. There are, however, flaws in the

Minimum Wages Act, 1948, which render it possible for Government, through the medium of Labour Commissioners and Conciliation Officers, to refer disputes regarding wages and conditions of employment to industrial tribunals, the awards of which are not, it appears, subject to any control by enactments relating to wages or labour. Employers are sometimes directed to pay additional remuneration in the form of bonuses or share of profits in respect of past years and to employ particular individuals or groups of individuals even when redundant or unsatisfactory. It is also claimed that labour can be directed to serve particular employers.

This company, in common with other responsible employers in South India, has always endeavoured to give its employees fair treatment in the way of wages, living quarters, medical attention, hospitals, and other related benefits, the standard of which it has continuously improved. We have labour forces built up on our estates which, if left to themselves, would be quite happy, at any rate as far as the great majority is concerned, to give a fair day's work for a fair day's pay.

Indian Government Plans

The Government of India is set upon a policy of economic development, both agricultural and industrial, virtually inescapable, with the population increasing as it is, at the rate of 4½ millions a year. India is going to require men and materials, machines and money; failure to take account of the first of these—the human element—may easily wreck their plans. At present three quarters of the population depends on agriculture but is not producing enough food, even for its low standard. Primarily, a very large increase in agricultural production is necessary to provide food for the growing population, and secondly, a vast expansion of manufacturing industry is required, both to provide means of livelihood and to improve the standard of living all round. India has not the resources and capital necessary, and will need enormous sums of capital from outside. It may be taken for granted that external capital and the "know how" which usually accompanies it, will not be forthcoming, unless assured of fair treatment, and the probability of being allowed to retain, and to take out of India, a fair return for the use of it.

Prospective lenders of capital could hardly fail to be discouraged from venturing their money within the control of the Government of India should there be grounds for the feeling that they are to be exploited, and to be made the plaything of internal politics, in a vote-catching campaign of appeasement of demands of the labourers. It is of first importance in the economic development of India that the Government should take early steps to complete the framework of legislation relating to labour and to stop the gaps which made it possible for labour to enjoy the advantages of legislation for their benefit and at the same time, by their failing to respond, to do so much damage to the employers' undertakings. Creation of an atmosphere favourable to external capital generally, is necessary. Tea is already established as an important contributor to the prosperity of India—providing employment and putting money into circulation in the important tea-growing districts of North and South India. It also shares with cotton and jute the important position of being one of the three principal earners of India's foreign exchange. The tea-producing industry could be quickly ruined by deprivation, owing to such excessive taxation as is now exacted, of the means of maintaining the necessary standard of agricultural condition and equipment, and also by the demands of labour for excessive pay and bonuses or share of profits, coupled with indiscipline and reduced productivity.

For the current year we hope to produce 14,781,000 lb. tea and 6,794,000 lb. rubber at costs comparable with those of 1952-53.

Stocks and Shares

BOOM IN TEA SHARES CONTINUES
UNDERTONE STEADY: FIXED-INTEREST STOCK
IN DEMAND

Wednesday Evening.

TEA shares have again been the feature of the Calcutta stock market, with a large number of transactions being put through at advancing rates. Some outside support has been forthcoming and certain shares have had large rises. Profit-taking by the professionals does not necessarily indicate that the tea boomlet is petering out, for reports from the auctions are still encouraging—Indian common tea was sold for 3s. 6½d. yesterday in London, and prospects for 1954 are generally held to be favourable.

The rest of the market has been steady, with no increase in the volume of business done. Jutes have been comparatively neglected, but the response to buying enquiries suggests that prices are fully firm. Coal shares have again been dull, but in the last two days there has been good demand for Burrakur and Raneeunge. Engineering shares have been steady, with Indian Irons holding up well at Rs. 25-3. After hours this evening Irons moved up sharply to Rs. 25-6 in sympathy with the rise in Tata Deferreds in Bombay. Other sections are steady without special features.

The demand for fixed interest stock continues. Debentures and selected preference shares are in demand, but sellers are hard to find. Government securities have been maintained, though the volume of business passing is small.

Details of the week's trading follow.

The gilt-edged market ruled steady throughout the week and there was a broadening of enquiry for most loans. In the absence of scrip, however, business continued to be on a restricted scale. Three percent Conversion Loan was taken an anna higher to Rs. 82, and 3% Non-Redeemable Paper was marked up to Rs. 82-2. In short-dated, 2½% 1954 was in demand at Rs. 98-11 with few declared sellers, and 2½% 1955 was taken at Rs. 98-7. There was good enquiry for 3% 1957 at Rs. 98-5 with sellers asking one anna higher, while 3% 1958 was unchanged at Rs. 98-1. In the medium-dated group, 3½% National Plan Bonds improved further to Rs. 99-1 cum-voucher, and were later quoted at Rs. 98-13 ex-voucher. Three percent 1959-61 was traded at around Rs. 96-1, and 3% 1963-65 was quoted at Rs. 92-9 cum-voucher, and subsequently at Rs. 92-7 ex-voucher. Three percent 1964 was marked up to Rs. 92-8, and 2½% 1961 was steady at Rs. 90-9; 2½% 1959 and 1962 were unchanged at Rs. 93-8 and Rs. 91-5 respectively. In the long-dated section, 3½% 1970-73 met with good support to improve to Rs. 80-7, buyers. Provincial loans were dull, and prices were unchanged at around last week's levels.

There was good enquiry for selected joint stock companies' debentures, but sellers were scarce. Calcutta Electric were crossed at Rs. 102, and Standard Vacuum were done at Rs. 103-4.

Selected preference shares continued to be required for but there were few sellers to meet the market. In jute, Birla were taken higher at Rs. 106, Hukumchand at Rs. 112, and Soorah at Rs. 108. Amongst miscellaneous issues, Alkali & Chemical were quoted at Rs. 104-8, British India Corporation were done at Rs. 146-8, and Calcutta Electric were taken at Rs. 11-12. Business was reported in Indian Aluminium at Rs. 72, Indian Iron & Steel at Rs. 107-8 and McLeod 2nd at Rs. 78. Jardine Henderson were crossed at Rs. 80-8, and New Victoria at Rs. 3-12.

In the banking section, Imperial Fully-paid and Contributory were steady at Rs. 1,825 and Rs. 455. Allahabad Bank Contributory were marked at Rs. 191. United Commercial Bank changed hands at Rs. 37-8, and United Bank of India "D" class shares at Rs. 3-13.

Although no transactions were reported in railway shares, there was good demand for shares of companies carrying a Government guarantee so far as payments of dividends are concerned.

Cotton shares were a restricted market and business was on a small scale. Basanti were steady at Rs. 3-12, while Elgins were easier at Rs. 17-12. Kesoram were done at Rs. 20-1 ex-dividend, and New Victoria at Re. 1-5.

After a dull start, some enquiry developed for coal shares. Burrakur, after receding to Rs. 8-5, following the recommendation of a lower half-yearly dividend (2 annas per share against 4 annas per share), recovered to Rs. 8-12, to close at Rs. 8-9. Bengal met with some investment enquiry at around Rs. 503, as did East Indian at Rs. 25. Equitable Coal came under selling pressure, and the price receded to Rs. 31-8 but recovered at the close to Rs. 32. New Beerboom were marked at Rs. 19, South Karanpura at Rs. 10-6, Central India at Rs. 5-7, and Western Bengal at Rs. 4-14. The outstanding feature was Raneeunge, which met with good demand and improved steadily to Rs. 11-10.

Jute shares were a dull market throughout and, if anything, prices at the close were a shade lower than last week's opening quotations. Howrah fluctuated narrowly around Rs. 25-3 to close at

Rs. 25-4. Agartara eased to Rs. 16-12, Alliance to Rs. 167 and Barnagore to Rs. 158. Birla were market at Rs. 42-12, Budge-Budge at Rs. 154, and Champdany at Rs. 150. Cheviot met with small enquiry and improved to Rs. 230. Chitavalsah and Nellimarla New shares were both marked at around Rs. 11-12 ex-rights. Dalhousie were quoted at Rs. 144 and Delta at Rs. 230. India changed hands at Rs. 126, and Kinnison met with small enquiry at Rs. 199, as did National at Rs. 24-14. Reliance were steady at Rs. 16-12, and Presidency changed hands at Rs. 5-2. Union reported business at Rs. 170.

Little business was completed in electric supply shares. Calcutta came to hand at Rs. 13, Jubulpore at Rs. 13-10, and Patna at Rs. 10-10.

Business in sugar shares was also on a much reduced scale. Among the few transactions reported were Belund, which were slightly better at Rs. 9-4, Carew at Rs. 7-10, and Darbhanga at Rs. 11-15. Ramnugger were a little easier at Rs. 18-6.

In the engineering group, there was less activity in Indian Iron & Steel shares than hitherto. The price, however, improved steadily from Rs. 24-11 ex-dividend to Rs. 25-4 ex-dividend, which is tonight's closing quotation. Bhartia Electric Steel met small enquiry at Rs. 10-4, and Burn & Company were steady at Rs. 336. Business was done in Brathwaite at Rs. 12-4, Britannia Engineering at Rs. 24-6, and Saran Engineering at Rs. 10-2. Indian Galvanizing met with some selling pressure and closed lower at Rs. 14-15. Steady features were Indian Standard Wagon at Rs. 65, Jessop at Rs. 25 and Indian Steel & Wire Products Deferred at Rs. 44-14. Kumardhul Engineering were easier at 8-5 but Marshalls recovered to Rs. 5-13.

In the miscellaneous section, Bengal Paper were steady at Rs. 52 ex-dividend, and India Paper Pulp were dealt in between Rs. 185 and Rs. 189. Shree Gopal Paper were steady at Rs. 19-10 and Orient Paper improved to Rs. 40-4. Titagur were unchanged at around Rs. 37. Sone Valley were stagnant at Rs. 7. Hercules Insurance were crossed at Rs. 34-12 and New Asiatic at Rs. 4-7. There was some investment demand for Calcutta Landing & Shipping at Rs. 16-8, while Port Shipping were offered at Rs. 12-3. India Steamship were fairly steady at Rs. 7-7 ex-dividend. Angelo Brothers were offered at Rs. 19-8, and Alkali & Chemical at Rs. 16-8. Bengal Flour continued to meet with investment support and were fully steady at Rs. 12-3. Britannia Biscuits were crossed at Rs. 12-4, and British India Corporation improved to Rs. 9-6. Cherra Chhatrak were better at Rs. 7-14. Gillanders Arbuthnot changed hands at Rs. 115 and Hindustan Motors at Rs. 4-10. Indian Cables were dealt in freely at around Rs. 19-4, as were Midnapore Zemindary at Rs. 41-4 and Martin Burn at Rs. 19-12. Indo-Burma Petroleum were quoted at Rs. 69-8 and Indian Wood Products were slightly lower at Rs. 35. National Tobacco met with good enquiry and improved from Rs. 10-8 to Rs. 11. Other transactions included Rohtas Industries at Rs. 10, and Rallis at Rs. 66. Textile Machinery continued to be popular and rose further to Rs. 8-10.

Featuring the mining section were Non Ferrous Metals, which improved sharply on rumours of a maiden distribution, from 9 annas to 15 annas. Karanpura Development, after being supported up to Rs. 17-12, turned sellers at the close at Rs. 16-8. Orissa Minerals were steady at Rs. 36-4, while Indian Coppers were unchanged at around Rs. 2-15. There was sustained enquiry for tea shares and prices continued to advance on a broad front. The following table illustrates the more important price movements:

	Opening 26-11-53.	Closing 2-12-53.
Rs.	Rs.	Rs.
Basmatia	31-4	33-4

garba dancers of gujrat

During the nine nights of the Navaratri, a festival devoted to the worship of Durga, girls in Gujrat villages perform the Garba dance. Each bears on her head the 'garbi'—a lighted earthenware pot, which gives the dance its name. The dance is performed to the accompaniment of a song, each line being sung first by the leader and then by the rest in chorus. The beats are stressed by the clapping of the hands, the dancers bending gracefully sideways at every clap and the hands sweeping upwards or downwards in beautifully formed gestures.

Ahmedabad, a city worth a visit in its own right, is an excellent starting place for a tour of Gujrat. The city, 306 miles by road from Bombay, offers all facilities a visiting motorist may require. Roads radiate from here to Baroda, Lunwada and other important towns of the region. Ready access to the numerous places of interest in Gujrat is assured by the safety and comfort of road travel made possible by J. B. Dunlop's invention of the pneumatic tyre.

DUNLOP

★ ELEVENTH OF A SERIES ON THE PLEASURES OF MOTONING

don't just ask for a tyre—ask for **DUNLOP**

It is, however, worth considering whether this analysis can be applied to a commodity like coal. Coal accounts for about 30 percent of the total traffic; a part of the track in the colliery regions has been laid for the specific purpose of carrying coal; there are officers in the General Administration

have been, greater. Somehow, the total cost of maintaining and operating the railway has to be paid for; broadly, and in the long run, the capital invested in railway construction must be remunerated at the normal rate of interest. Under a competitive system this may not be true of each individual line but, though the rates charged on an individual line may be independent of its capital cost, the capital invested in the railway system of an entire country, regarded as one whole, has to receive interest, if not out of railway rates, then out of general taxation.

"Can any system of apportionment of this necessary expenditure be more equitable than one under which the rich—well-to-do passengers, valuable freight, traffic with the advantage of geographical situation close to the markets, and the like—contribute of their abundance; while the poor—third-class passengers, bulky articles of small value, traffic that has to travel far to find the market, and so forth—are let off lightly on the ground of their poverty? Translated into railway language, the principle means this: the total railway revenue is made up of rates which, in the case of traffic unable to bear a higher rate, are so low as to cover hardly more than out-of-pocket expenses; which, in the case of medium-class traffic, cover both out-of-pocket expenses and a proportionate part of the unapportioned cost; and which, finally, in the case of high-class traffic, after covering that traffic's own out-of-pocket expenses, leaves a large and disproportionate surplus available as a contribution towards the unapportioned expenses of the low-class traffic, which such traffic itself could not afford to bear.

"This, in principle and in outline, is the system of charging what the traffic can bear. It is the system which—the point must be reiterated—is, always has been, and, as far as we can see, always

must be adopted on all railways, whether they be State enterprises or private undertakings."

Wagon and Locomotive Programmes

The rolling stock position on the Indian railways, and the arrangements being made to accelerate rehabilitation programmes as well as to provide the extra carrying capacity required during a period of economic development, have aroused considerable public interest. The actual position of orders for locomotives already negotiated is summarised below:

Nos.	Gauge.	Type and Country of supply.
100	B.G.	Goods (Steam)—West Germany.
60	B.G.	Goods (Steam)—Austria.
25	B.G.	Goods (Steam)—Italy.
75	B.G.	Goods (Steam)—Japan.
50	M.G.	Goods (Steam)—Japan.

It will be noted that these orders have been spread over a number of countries, where manufacturers offered good quality, suitable deliveries and a reasonable range of firm prices. Locomotive manufacturers from the United Kingdom were unable to secure a share of these orders as their quotations were not competitive. It is still the Railway Board's intention to try and obtain by 31st December, 1955, an additional 250 to 300 locomotives from abroad mainly through foreign aid programmes; negotiations are proceeding. These engines are urgently required in addition to all the output that can be obtained from Chittaranjan and Telco. Despite the acute shortage of materials, particularly steel, and the almost complete lack of ancillary industries in the country, Chittaranjan

is progressing satisfactorily and will have manufactured 52 heavy goods locomotives during the calendar year 1953. If the materials which still have to be imported are received in time, it is planned to set up Chittaranjan's production to about 70 locomotives of the same type in 1954 and to 90 locomotives in 1955. This rate of progress can be considered fairly satisfactory for a new locomotive works which aims eventually to produce over 90 percent of the entire engine.

Progress at Telco

Telco, which had the advantage of an earlier start, had to face much the same difficulties as Chittaranjan and, on the whole, is now making reasonable progress. These two Indian locomotive works, between them, should be turning out 200 complete engines (more subsequently) from 1955. The imports of locomotives, however, cannot be avoided at the moment as there are very heavy arrears of replacements to overtake, and expansion is necessary to cope with the increase in traffic. At present about 2,700 out of a total of 8,300 locomotives in service of the Indian railways date back to the pre-World War I era (1913 or earlier) and are not only well past their useful and economic life but are also of obsolete design. The authorities claim that it is doubtful whether there are any other comparable mechanical appliances in any country, expected to give intensive round-the-clock performance throughout the year, which suffer from as great handicaps in respect of obsolescence and obsolescence. Replacement of the majority of these locomotives, which have passed 40 years of regular intensive service under exacting Indian conditions, is therefore a matter of the highest priority. Regarding additions, even an increase of two percent per annum in traffic levels—and the railways can hardly plan for less—means adding about 160 locomotives each year to the present numbers.

Wagon building was commenced in India by four firms in Bengal shortly after World War I, about 30 years ago, and this industry can therefore be said to be well established. Installed capacity was related to the railway requirements of the time and was planned on the basis of about 5,000 wagons per annum. During the last war, every effort was made to produce the maximum number of wagons in the country, but the 5,000 mark was reached only once and never exceeded. During the past two years, however, special efforts have been made to increase wagon output and the results have been fairly satisfactory. In 1952-53, about 7,400 wagons were actually manufactured in these four old-established workshops. There are hopes of increasing this output during the current financial year but severe and continuous shortages of steel and the unfortunate slow-down at Burnpur caused a substantial shortfall. Future needs of wagons are, however, so pressing that the Railway Board has spent much time in the past six months in making a further detailed examination of the position. Very recently, plans have been finalised to increase wagon manufacture progressively in the country until a level of about 12,000 wagons per annum is reached in 1956. This will involve further rationalisation and multiple-shift working in some factories, and the entry of some new firms, which were previously engaged on engineering structural work only, into this field. These arrangements for increased production depend upon the regular import of substantial quantities of steel plates etc. for some years to come, as without adequate supplies of this vital material the increase in production cannot take place. This matter is also being attended to.

Overage and Obsolete Wagons
The overall shortage of railway wagons has been chronic for many years and further increases in industrial production will require appreciable numbers of additional wagons before 1956. The railway fleet today includes about 220,000 wagons of all gauges, but of these about one-fourth are over 40 years of age and even a large proportion are non-standard types dating back to the Company Railways' days. About 6,000 wagons are condemned each year and about 240,000 wagons should be available in good serviceable condition in 1955-56. To deal with the traffic then expected and railway plans are being based on these calculations. Along with the maintenance of indigenous production at the highest possible level for some years to come, arrangements are being made to import some wagons immediately. The number is not expected to be large and it is hoped that a large proportion will be secured through foreign aid. The expanding indigenous capacity should be capable of supplying all normal requirements of wagons in the future. It is of interest to note that by 1956 the Indian wagon building industry is expected to be larger than that of Japan and, therefore, the largest in Asia. The Railway Board has already planned for over 76,000 wagons to be manufactured in India and delivered by 1959-60.

Further Expansion Possible

To meet the expected increases in traffic, a two percent per annum addition to wagon holdings also has been planned for and this will mean, in practice, adding about 4,000 wagons each year to the fleet of the Indian railways. If the level of economic activity justifies further increases in wagon-building capacity, no difficulty is anticipated in arranging such expansion before the end of the second five year plan period. In sum, India should be completely self-sufficient in respect of the building of railway wagons by 1956 and she is already capable of manufacturing all the passenger coaches 57 onwards, two-thirds of the steam locomotives likely to be required annually will also be made in India and the Board is already studying how the remaining one-third can be produced at home in the not very distant future.

New Delhi

THREE FIRMS' PLANS TO MAKE "BABY" CARS APPROVED

SURVEY SHOWS 50 PERCENT OF ENGINEERING CAPACITY IDLE

(FROM OUR NEW DELHI CORRESPONDENT.)

28th November.

THREE out of five automobile manufacturing units have sent in detailed plans for the manufacture of "baby" motorcars. These plans have been approved and the necessary permission has been given. It is pointed out however that the manufacture of "baby" cars should in no case interfere with the manufacturing programme for bigger cars, to which the units have already committed themselves. As far as the latter are concerned, the programmes of Hindustan Motors, Premier Automobiles, and Standard Motors have been received and the remaining two units have been allowed to submit theirs by the end of this month. The Government's policy of not permitting a monopoly to any unit remains unchanged. It is asserted that consumers and the country must, on the other hand, pay a price for the establishment of an automobile industry. The Government has selected Major V. D. S. Menon as Officer on Special Duty for the automobile industry. It will be his function to report on the progress of the five selected units in implementing their plans to make India self-supporting in the manufacture of motor vehicles.

"Viscounts" Likely for Internal Air Services

Although a final decision has yet to be reached, the indications are that the Government will choose Viscount aircraft to strengthen the fleet of the internal air services. The Viscount is a turboprop plane, midway between piston-engine and jet-engine aircraft, and has the advantage of operating on kerosene. A final decision is expected to be reached in the early months of 1954.

"The Employment Prevention Bill"

Two measures were debated by the House of the People this week: one is the Industrial Disputes (Amendment) Bill but should properly be called the "Employment Prevention Bill"; and the other is the Dhooties (Additional Excise Duty) Bill. Some aspects of the first Bill need emphasis. As explained by the Union Labour Minister, it will apply to both the public and the private sector. Even after it has been enacted, a workman will be entitled to go before a tribunal to question the need for lay-off or retrenchment and, if the need is recognised, the quantum of such lay-off or retrenchment. The measure will entitle persons in contract service to compensation on the expiry of their periods of contract and the lock-out periods will be regarded as working days in deciding whether a worker has been in continuous service. A further explanation of lay-off provides that if a worker is not given employment in the first half of a shift and is asked to come in the second half, he will be deemed to have been laid off for half a day. If he is not given employment even in the second half, he will be entitled to full basic wages and dearness allowance for that half of the shift.

The Labour Minister was in an exuberant mood on the first day. He announced that compensation would be provided to workers in cases of lock-outs. On the opening day of the debate, he confessed that he had to eat his own words about adjudication and had to agree to the continuation of adjudication for both public utility and non-public utility concerns. On the second day he again ate his words when he announced that lock-outs would not be brought within the scope of the compensation scheme. He explained that the Bill, in a sense, was deterrent legislation. It was a warning to both workers and employers. If they realised their responsibilities, "unjust retrenchment would always be avoided."

Some comments are necessary. Firstly, as far as employers are concerned, the Bill certainly is a warning and a costly one at that; but the Labour Minister did not explain in what way it is a warning to workers. Secondly, it was stated that the Bill might avoid "unjust retrenchment," but the more important issue is whether it will stimulate employment.

Idle Engineering Capacity

The Commerce Ministry recently appointed a committee to survey idle capacity in industrial undertakings. In its interim report, the committee has reported 50 percent idle capacity in the engineering industry. It is disclosed that employers were unwilling to employ more labour because of the Central Government's labour policy. This contention is supported by the Federation of Indian Chambers of Commerce and Industry which, in a memorandum to the Government on "impediments to industrial production," says that "the Government's desire to help labour has been running faster than is warranted by the economic conditions in the country and the impact of labour legislation on the economy has contributed in no small measure to the present crisis where industry is sandwiched between a high and rigid cost structure and buyers' resistance. The policy of the Government and the attitude of surplus labour have had the effect of cautioning the employer against adding to his labour force even when times are good, because when times are not so good and it becomes necessary to rationalise the labour force he is not free to do so." Further support

for this point of view was given by the Deputy Chairman of the Planning Commission, Sir V. T. Krishnamachari, whose note was recently published in these columns. In practical terms, employed labour seems to be becoming increasingly intolerant of newcomers. It prefers to earn overtime bonus itself rather than assist the unemployed. There is also a contradiction in the attitude of many members of Parliament. As members of the Estimates Committee, they have published a report on the Food and Agriculture Ministry this week which recommends steps that are likely to lead to retrenchment. But, as Members of Parliament, they criticise the Government for being half-hearted about the measures incorporated in the Industrial Disputes (Amendment) Bill.

One view here is that economic circumstances will force New Delhi to modify its labour policy. As indicated last week, the Government may be able to force the Indian consumer to pay an excessive price for his necessities. But it cannot force the foreigner, and export promotion schemes might prove abortive unless the cost structure is revised. Such revision will necessitate a new labour policy. Another possibility is that, as in the case of the tea industry, labour itself may repudiate its leaders and reach reasonable adjustments without recourse to Government machinery. A case from Ajmer is significant. The State Government there fixed certain minimum wages for four industrial undertakings, one of which pleaded inability to pay the prescribed rates. The issue was referred to arbitration, which upheld the employer's contention. The State Government has refused to accept the award with the result the industrial unit has closed down, throwing the labour force out of employment.

Export Promotion Bodies

The Ministry of Commerce and Industry plans to place one Deputy Secretary in charge of export promotion work. He will help reduce red-tapism. Two cases can be cited to illustrate its extent. Although there has been no diminution in the volume of the cashew export trade, exporters have been complaining of administrative difficulties. Tobacco stocks similarly are not moving fast enough. It is intended that the Deputy Secretary concerned will move about freely, investigate the causes of such complaints on the spot, and make reports to the Central Government. Mr. B. K. Kochhar will be selected as Export Promotion Officer in the

Ministry of Commerce and Industry, it is learned. Four new posts, one each in Colombo, Rangoon, Singapore and Diakarta, have been created for the export promotion of handloom products. Personnel to fill these appointments have already been selected. As far as cotton textiles are concerned, the Commerce Minister has already announced his decision to set up an export promotion committee. Jute and tea already possess effective export promotion organisations. It is not regarded as necessary at present to start similar committees for minor commodities. Plans are, however, being examined to provide larger banking facilities for the export trade.

Indian Labour Conference Agenda

The Indian Labour Conference, which will meet at Mysore from 7th to 10th January, will consider a ten-point agenda which includes problems of women labour, wage-fixing machinery, uniformity in legislation relating to maternity benefits and payment of provident fund dues to a subscriber before retirement.

Indo-Russian Trade Pact

An Indo-Russian trade agreement is to be signed shortly. It will include such commodities as tea and jute manufactures. The Indian rupee will be the currency used in all transactions, but the trade balance, if any, will be adjusted in sterling. The Government of India entered into trade agreements with Czechoslovakia and Yugoslavia earlier this month and the agreement with Russia will be on the same lines.

ANNOUNCEMENT

VALUATION BONUS Rs. 8/-

Declared at the Valuation
as at 31-12-52.

Per Rs. 1000/- Sum Assured
Per Annum.

for all participating policyholders inclusive of those of
the absorbed companies.

Remarks of the Valuing Actuary:—

"The result of the valuation is quite satisfactory. There is a handsome margin between the bases adopted in the present valuation and the actual experience of the Company. This margin is likely to increase further with the improvement in the experience along with the increase in the premium income. I conclude therefore with the hope that you will be able not only to maintain the bonus now declared but to improve upon it at the next valuation."

TORY BACKBENCHERS' REVOLT
OVER TELEVISIONMR. BUTLER'S QUALIFICATIONS
TO EARLIER OPTIMISM

(FROM OUR LONDON CORRESPONDENT.)

T. V. or not T. V.? That certainly is the question of the moment, though perhaps it should not be approached quite so lightheartedly seeing that it has created so much controversy, or at least the Government's proposals for the introduction of commercial television have, as to attract a near-record attendance of some 350 Peers at a two-day debate in the House of Lords. Lord Halifax sponsored the motion on which the debate took place, though in his absence owing to illness Lord Hailsham was the actual mover. The opposition, it should be noted, was not to the idea of competitive television but merely to the methods by which the Government proposed introducing it. The first half-dozen or so speakers covered all the arguments, both for and against, but at least another thirty reiterated these over and over again, so it is hardly surprising that passions rose as the debate proceeded and that not a few irrelevancies were introduced. For instance, there was quite an exchange regarding the Government issuing a two-line whip, which Lord Salisbury contended was doing no more than duplicating the "personal letter" to Peers issued by the sponsors of the motion. Whether the debate has taken us any further forward is a moot point. The opponents of the Government's plans, with 87 votes in the division which took place, including those of 20 Conservatives, are well satisfied. So also is the Government, which mustered 157 votes and a majority of 70. The general public, despite all the valiant efforts to whip up interest one way or the other, is probably apathetic. One point that seems to have been overlooked is that although we are apt to throw up our hands in horror at the idea of commercial broadcasting in this country, we still get not a little of it via the Continental stations. Television will undoubtedly follow in due course as technical difficulties are overcome.

What is probably of greater moment than the subjects themselves, however, is the increasing evidence—furnished not only by the television debate, but by the storm which has arisen in the Commons over the pensions of retired 1914-18 war officers and by other less obvious pointers—that the Government is finding it none too easy to keep Conservative backbenchers under control. That they should seek to keep the Government "on its toes" is understandable, but there is always the danger that they may, quite inadvertently, overstep the mark at some time and, with the position in Parliament what it is today, not only jeopardise some major line of official policy but permit the Opposition to secure a snap tactical victory.

Exports Rising, But Slowly

The object of this brief departure into the purely political sphere is to draw attention to the fact

that these "revolts"—which are all too easy to overemphasise—have the unfortunate effect of diverting the attention of senior Ministers from their more important tasks. Mr. Butler, for instance, has recently been embarked upon a series of meetings at which he has been stressing the fact that there are many qualifications to the encouraging reports which he has hitherto been able to give with regard to our economic progress. The production index is rising, but the main contributors are the steel and building industries. Much of the recovery in the textile industry, also, has been the result of rising home demand. Some rise in consumption, Mr. Butler said, was probably a necessary condition of a higher rate of investment, but a continued rise in imports would threaten the balance of payments unless exports rose as well. Exports are still rising, but very slowly, and there was reason to believe that they were not competitive enough. In this connection he referred to the loss to Germany of the large contract for locomotives for India.

The Chancellor is also faced with other problems. He is having to find a lot more money in the immediate future. Impressed by arguments from industry and the trade unions that the inadequacy of the road system is an important obstacle to higher industrial productivity, he has apparently agreed to authorise larger expenditure on roads in the capital investment programme for the coming year. Detailed proposals are now being worked out, and it is expected that improvements will be made in industrial areas as well as on roads leading to famous tourist centres, since this traffic is an important source of foreign currency. Even more serious than this, however, was the Ministry of Food's supplementary estimate of more than £126 million, which was presented to Parliament this week. Total food subsidies in the current year are estimated at over £293 million, an increase of £72 million on the original estimate. The balance of some £35 million represents increased stocks of sugar, cereals and other foods held by the Ministry of Food, most of which should be recovered in the coming financial year as the stocks are sold. Most of the increase in subsidies goes to the British farming industry.

Mines and Quarries Bill

Mining legislation has a tendency to lag behind developments in the techniques of mining itself, and in this country the situation was rendered even more obscure as a result of nationalisation. That is why the new Mines and Quarries Bill which is now before Parliament will receive general approval. At the head of the list of supporters is the name of Sir Winston Churchill—an unusual procedure which has apparently been taken because the Bill is intended to replace the Act he introduced in 1911 as Home Secretary. The main features of this new charter for Britain's 700,000 mineworkers and mine managements is that it will, from a date to be fixed by the Fuel Minister, release from underground work some 3,000 boys of under sixteen who are now thus employed, and extend existing conditions which apply to boys under 16 working on the surface to all boys under 18, namely, maximum hours—nine a day and 48 a week—maximum

spells of work, 30-minute meal intervals, statutory week-ends and a ban on night work except for the present in some areas where special shift systems are worked. The responsibilities of a colliery manager are defined and his status confirmed, and the position and responsibilities of other managerial officials are clarified. Among technical provisions, the manager must take measures for dust suppression and roof control. Lessons learned in recent major colliery disasters have been applied in the new legislation, as a result of which mine working should not only be a great deal safer but also a lot less arduous for those least able to stand the strain involved.

Future of the B. I. F.

The future of the British Industries Fair, about which there has been much speculation for many months, has at last been decided. The question has been examined in some detail by a Board of Trade Advisory Committee, whose report, after admitting that the Fair has been losing ground and its prestige, criticised with some force the manner in which it has been run by civil servants and suggested that many economies can be effected in running costs. Two ways for extending the scope of the Fair are suggested. One is to make it "fully international," and the other "to include commercial firms from the Commonwealth in the appropriate trade sections." The 1954 B.I.F. will be run, as usual, by the Board of Trade, but the Government has accepted the Committee's recommendations that thereafter the London section will be taken over by a non-profit corporation. A board of trustees will be formed from nominees of the Federation of British Industries, the National Union of Manufacturers, the Association of British Chambers of Commerce, and probably the T.U.C., with group will appoint the management board, which there will be one nominee of the London section, and Chamber of Commerce, which will continue as at present. The Government will cease to be directly concerned with the management or financing of the Fair, but it will guarantee the initial working capital for five years and also make a temporary grant for publicity, although not necessarily the £100,000 suggested in the report.

C. D. F. C. Appointments

It is some time now since the Commonwealth Development Finance Company came into being and although there have been odd references to it having several schemes under examination nothing definite has been announced with regard to active operations. These may be looked for in the not too distant future, for this week the City learned with interest that Mr. J. G. Beevor, who is due to retire as a partner in Slaughter and May, a well-known firm of City solicitors, at the end of the year, has been appointed Managing Director of the Company. He is a well-known figure in financial and industrial circles, for in addition to his legal business he is also a director of Legal and General Assurance, Williams Deacons, Bank and several industrial concerns. Another appointment announced at the same time is of Mr. R. M. Kershaw as a part-time adviser. Until his retirement last June Mr. Kershaw, who is an Australian, was for twenty years an advisor to the Governors of the Bank of England.

Agreement on Tin

Reports received here from Geneva indicate that an international agreement on tin is now much nearer than it has ever been since the war. It is favourable and in the end it was possible to reach agreement on minimum and maximum prices, though this is still only verbal and has yet to be confirmed next Monday after delegates have consulted their Governments, when the agreement will still be necessary by all the Governments concerned, and that may well take time. The draft scheme is understood to comprise a buffer stock operating between maximum and minimum prices and production control.

Briefings

Barclay, Curle and Co., Ltd., Glasgow, have received an order from the British India Steam Navigation Co., Ltd., for two turbine cargo liners machinery supplied by the shipbuilders.

A further adjustment to easier money conditions is indicated in a cut from 5½ percent to 5 percent in the interest rate on new loans from the Agricultural Mortgage Corporation, which made a similar cut on 13th May. The Corporation's lending rates are closely linked with the price at which new money can be raised in the gilt-edged market.

Retail tea prices in the United Kingdom are likely to go up by about 4d. a lb. about the end of this year because of the continuing high level of prices at the London auctions. This week the average price is 3s. 10d. a lb. against the 2s. 11½d. of a year ago. It seems unlikely that adjustments in quality can be made to avoid a further increase in retail prices.

The much-criticised provision in the 1951 Finance Act making it necessary for banks to interest on accounts exceeding £15 had up to 31st March produced about 1,200,000 notifications. In amount or the full amount has been discovered or is suspected, and the amount of unassessed tax and penalties so far recovered is about £7 million.

Bombay

NEW CONDITION IMPOSED IN
TROMBAY PROJECT SANCTIONBOMBAY GOVERNMENT'S ESTIMATE
OF POWER NEEDS CRITICISED

(FROM OUR BOMBAY CORRESPONDENT.)

IN its agreement with Tatas on the installation of a 50,000 k.w. plant at Trombay, the Bombay Government has imposed a new condition which states: "After the supply of energy becomes available from any hydro-electric generating station belonging to or controlled by the Government or the State Electricity Board established under the Electricity (Supply) Act, 1948, covering the area of supply specified in the Trombay Thermal Power Electric Licence, and subject to the provisions of sub-clause (iv) of this clause, the Licensees shall regulate the use of the said generating station at Trombay and operate it so that they shall maintain the same as a standby and use it to the extent necessary to supplement the supply of energy to the said area of supply from any such hydro-electric generating station belonging to or controlled by the Government or State Electricity Board established as aforesaid."

The insertion of this clause may be interpreted as indicating either (1) the confidence of the State authorities about their ability to bring to fruition their Koyana scheme, which they have yet to commence, within the scheduled date; or (2) their step-motherly attitude toward the Trombay power station, a privately sponsored scheme. The public seems to have no doubt at all that it is the latter. If any doubt persisted, the speeches of Mr. J. R. D. Tata at the annual general meetings of the hydro-electric companies last week will have effectively dispelled it.

At these meetings, Mr. Tata made the point that the reluctance of the Bombay Government to accede to the request of the Tata hydro group of companies to install a second 50,000 k.w. plant after the first unit (for which alone the State Government has decided to grant a licence) was based on the assumption that demand would not grow at the rate indicated by past and current experience, and that the Koyana project could be speeded up to generate power by 1957. The Government, he added, was probably also influenced by the fear that if the second unit had to be closed, as it might if official calculations came true, it would have to allow depreciation and maintenance charges plus a net return of 5 percent on capital employed, inasmuch as this unit would be part of the State's grid system.

Load Calculations Fallacious

How fallacious the Government's load calculations are will be obvious from a study of the present supply and demand position and the general outlook for the next three years—that is, until the Trombay station comes into operation. Since October 1948, the demand on the railway system has increased from 255 M.W. to 285 M.W. (that is, about 6,000 k.w. a year on the average), chiefly because of the addition of new domestic consumers (who are now increasing at the rate of 15,000 to 16,000 a year), and some essential demands authorised by the Government itself. Assuming this rate of increase, a rise in production of 18,000 k.w. is believed to be necessary in the next three years.

In addition, the Government is committed to supply the oil refineries and the penicillin factory, which will require an increase in production of 18,000 k.w. As a result of the railways not ordering the generating plant for an expected increase in traction demand of 14,000 k.w. in the next three years, an increase in supply from outside sources of 6,500 k.w. is estimated to be required for this purpose. If to this is added the supply of electrical energy necessary for certain Central Government enterprises, a combined increase of 18,000 k.w. would be required. Meanwhile, the first unit of the Government of Bombay's plant at Chola, which

is expected to be ready for commercial operation shortly, is not expected to give the full 54,000 k.w. output until the installation of the fifth boiler, which is due for completion by about the end of next year.

Coming to the actual statistics of demand for power based on the list of applications for power supply, the following information is revealing. In the four months, June to September 1953, applications for 8,340 k.w. of electrical energy are stated to have been received and more new applications are believed to be coming in daily. An estimate of applications made between January 1949 and October 1953 (which does not claim to be complete) gives a figure of 101,428 k.w. hours as the probable demand. But there does not appear to be any hope of these applicants receiving power until the new Trombay Station comes into operation, if the Government is to give priority to the potential loads indicated earlier, let alone the demand for extra power that might normally be expected to develop over the next three years. Whatever the justification for the Bombay Government's decision not to allow Tatas to establish two units at Trombay, the fact remains that an important project of electrical development, which has the sanction of even the World Bank, has been successfully stalled by the Bombay Government. That this should happen despite the recommendation of the Planning Commission is, to say the least, regrettable.

Sales Tax Reform

The report of the Select Committee appointed by the Bombay Government to suggest changes in the Bombay Sales Tax Act, 1953, in the light of representations received from various quarters has been published in the Bombay Gazette. There is no doubt that the Select Committee's report represents an improvement. For instance, the different kinds of sales taxes under the Act have been reduced to three. The schedules to the Act have also been reduced from five to two, and there have been some additions to the list of exempted articles. The set-off suggested in respect of certain categories of articles exported outside the State is also a welcome concession to the demands of business men. But in spite of these changes and the claim of the State Finance Minister, Dr. Jivraj Mehta, that it is the Government's duty to see that trade and industry in the State are hampered as little as possible, the commercial community fears that trade will be adversely affected even under the new system. It is significant that, on the one hand, Dr. Mehta expresses the fear that there might be a fall in sales tax revenue as a result of these changes; while, on the other, he has himself remarked that the Select Committee was prompted to ensure that, while consumers did not suffer in any way by the increase in the total tax to be paid by them, the revenue should not be reduced. If the change made by the Committee are in accordance with this objective the State will not lose any revenue under the new system. Despite the so-called relief to the taxpayer, he will continue to bear the same incidence of taxes as at present.

A new rule which covers articles not already specified has been added by the Select Committee. There is also an interesting suggestion that the Government proposes to make rules in the case of smaller dealers, who buy goods mostly from other registered dealers and whose turnover does not exceed Rs. 60,000 to enable them to compound their tax liability by payment of a lump sum fixed according to different ranges of turnover. It is stated that the Collector will first consider the nature of the business of such dealers and fix the composition moneys suitable, subject to certain conditions to be prescribed under the new rules.

Tariff Enquiry On Bicycle Industry

In connection with the Tariff Commission's enquiry on the extension of protection to the Indian bicycle industry, manufacturing interests have released to the public a fund of useful information through the Press and through a memorandum prepared by the Cycle Manufacturers' Association, Calcutta. These have been submitted to the Commission, which commenced its enquiry on 26th November. In the course of his opening

speech, Mr. M. D. Bhat, Chairman, said that, judged from its progress, the Indian bicycle industry had made good use of the protection it had enjoyed for well over six years now. It may be recalled that the first investigation into the claim of the industry for protection and assistance was made in 1946 by the Tariff Board. On its recommendation, the Government of India replaced the then existing revenue duties of 36 percent standard and 24 percent ad valorem preferential by protective duties at the same rates. Another enquiry by the Board two years later led to an enhancement of these protective duties to 70 percent standard and 60 percent preferential; these were subsequently raised to 73½ percent and 63 percent respectively, as a result of a surcharge levied under the Finance Act. Ordinarily, the industry's claim for continuation of protection should have been taken up last year, but as this could not be done the Government extended the period of protection to the end of this year.

Total Demand

The most controversial aspect of the subject is the total demand for bicycles in the country. As in other spheres, estimates of demand vary from source to source. Thus, the Bombay Cycle Merchants' Association has estimated it at 600,000 cycles in 1953-54, rising to 650,000 in 1955-56. The Development Wing of the Ministry of Commerce and Industry on the other hand has placed the annual demand for bicycles at roughly 500,000; it does not share the view that it is likely to increase at the rate of 30,000 to 40,000 cycles annually during the next three years, as claimed by the All-India Importers' Association, Bombay. The Planning Commission's estimate also does not go beyond 500,000 at the end of the first five year plan. Manufacturing interests, of course, do not accept these figures. They not only feel that the total demand is very much lower but add that the existing units in the country are capable of meeting both the present and the potential requirements. In this connection, it is to be noted that the total capacity of the industry, according to producers, is 449,500 cycles. As against this, the Ministry of Commerce and Industry made an estimate of 417,500 cycles, excluding the capacity of some units which have gone into production since that estimate was drawn up. But the actual production of cycles, according to Mr. Bhat, was no more than 196,956 in 1952 and only 80,710 in the first five months of 1953. The question now is whether actual production can be raised to the full capacity of the industry, as claimed by its representatives. On this point, there is a difference of view. But the industry can expect a very fair deal at the hands of the Tariff Commission provided it bears in mind the following remarks of Mr. Bhat: "The bicycle industry has an important rôle in the economy of the country and it should be proud of its assignment and fulfil it by endeavouring to reduce costs of production and by continuing its efforts to remove all the deficiencies that may exist in its organisation, equipment and process of manufacture, always placing before itself as its immediate aim the attainment and maintenance of the highest international standards of quality and performance in its products."

The cycle manufacturers have asked that the present rates of protective duties should continue for a further period of three years and also that, in order to encourage the manufacture of cycle parts, the protective duty on them should be raised to 80 percent.

Special Tax Questionnaire

In order to have a more precise idea of the state of private industry than is afforded by the published balance-sheets and profit-and-loss accounts of public limited companies, the Taxation Enquiry Commission has just issued a further questionnaire to selected companies in different industries. The questionnaire deals with some important aspects of the corporate industrial sector, such as increases in paid-up capital from time to time, balances in different reserves over a seven-year period, details of fixed assets (especially those acquired since the end of World War II) with their original cost and additions, as also their present written down value.

Our shocked knowledge that crores of rupees are annually paid by the railways in Claims must need be balanced by the conviction that Claims are mostly man-made and can, therefore, be almost wholly prevented. You, as a consignor, can help the railways by ensuring every time that your consignment is securely packed, properly labelled and correctly marked.

P. L. M. WEEK
December 1-7, 1953

EASTERN RAILWAY
ISSUED BY THE PUBLIC RELATIONS OFFICER

THIS IS HOW
YOU CAN
HELP

- Pack the goods in strong cover. Nail properly and securely.
- Line the case with shock-absorbing and waterproof material.
- Enclose a spare label.
- Remove all traces of old markings.
- Address neatly, boldly and intelligibly.
- Mark correctly.
- Indicate the nature of goods consigned.

POPULATION TRENDS IN SOUTH INDIA

HIGH RATIO OF NON-EARNING DEPENDENTS

(FROM OUR MADRAS CORRESPONDENT).

POPULATION trends in South India covering the States of Madras, Andhra, Mysore, Travancore-Cochin and Coorg reveal an interesting pattern which, in some respects, is significantly different from that in the rest of India. Although South India is distinguished by a lower birth rate, a lower incidence of "improvident maternity," later marriages and greater urbanisation, the Report on the 1951 Census estimates that Madras State (undivided) might attain a population of 79.4 million in 1981 as against 57 million in 1951. It is indeed alarming that Madras and Andhra together are expected to register in the next 30 years a 39 percent increase in their population, as against 26 percent and 35 percent in Uttar Pradesh and Madhya Pradesh. How far the expected spread of literacy, education, industrialisation and consequent urbanisation would operate as checks on population growth, as they do in some advanced countries, remains to be seen.

The statistical relation between land and people is most unfavourable in South India where the per capita land area is just 1.42 acres as against the all-India average of 2.25 acres. The position is still worse in the sub-regions of Malabar-Konkan, Tamil Nad and coastal Andhra, the land area averages being 1 acre, 1.15 acres and 1.39 acres respectively; as all the areas are not topographically usable and as all the topographically usable areas are not cultivable, the figures of net area sown in these sub-regions are .31 acre, .44 acre and .57 acre respectively. Of these net areas sown, double crop and irrigation percentages are 11 and 12.5, 16.7 and 33.6, and 22.1 and 32.9 respectively in the three sub-regions. In the sub-region of South Deccan (which includes Mysore, Rayalaseema and South Hyderabad) the per capita land area is 2.59 acres, of which an area of 1.83 acres is topographically usable. Of this latter area, the net area sown per capita is 1.14 acres; double-crop is almost negligible (2.7 percent) and irrigation is relatively small (8.9 percent).

Cultivated Area

There has been a disquieting decline in the area of cultivated land per capita in the Madras-Mysore zone since 1891. In South Madras the average has fallen from .80 acre in 1891 to .49 in 1951, in West Madras from .36 to .32, in Madras Deccan from 1.84 to 1.47 and in Mysore from 1.20 to .70 acre. The per capita area under double crop is .07 acre which is the same as in 1891. As regards the per capita irrigated area, the average has fallen from .18 acre to .14 acre which is equal to the all-India average. A redeeming feature, however, is that the percentage of irrigated area to area sown in South India is 25.8 as against 15.5 for the whole of India.

In spite of the decline of the cultivated land per capita in South India, the relative dependence on agriculture for gainful employment has increased slightly in Madras and Hyderabad, as in the country as a whole. The main reaction to this general decline in per capita cultivated area, unaccompanied by a more than proportionate increase in non-agricultural employment, has been a general increase of non-earning dependency. The increase in absolute numbers of non-earning dependents, according to the Census findings, has exceeded the entire increase of rural population in South India in particular. These findings are borne out by the figures in respect of livelihood pattern.

Proportion of Earning People Low

From the point of view of opportunities for gainful employment, South India stands poorly among the different zones of India. The percentage of self-supporting persons to general population in South India is 26.5, that of earning dependents 4.9 and that of non-earning dependents 68.6; these compare with the all-India percentages of 29.3, 10.6 and 60.1 respectively. Again, the percentage of rural females who are either self-supporting persons or earning dependents is the lowest in South India, being 16.2 as against the all-India percentage of 26.5. That South India stands last as regards actual availability of gainful employment for males is seen from the figures of "male breadwinner percentage" worked out in the Census Report. The percentage of self-supporting persons plus one-third of the percentage of earning dependents, leaving women out of the reckoning, is called the "male breadwinner percentage." This percentage is the lowest in South India, being 44 in villages and 46 in towns as against the all-India figures of 50 and 52.

In the whole of India people who are supported by agriculture, including dependents, are 69.8 percent of the population while in South India they are 64.3 percent. Agricultural rentiers are 3.3 percent of the agricultural classes in South India, the original home of the ryotwari system, as against 1.4 percent in North India and 2.1 percent in the whole of India. Cultivating labourers and their dependents are 26.6 percent of the agricultural classes in South India, the percentage being the highest among the various zones; the all-India percentage in this respect is 18. Tenant-cultivators are 13.5 percent of the agricultural classes in South India, which is near the all-India figure of 12.7. Owner-cultivators and their dependents form the

lowest percentage of the agricultural classes in South India, the figure being 56.6 as against 83.9 in North India and 67.2 in all India.

Agricultural Employment

In the country as a whole there are 82 cultivators (owners and tenants) to 18 cultivating labourers; but in South India, excluding Mysore, cultivators are less than 75 for every 25 cultivating labourers. In the country as a whole there are 402 landless agriculturists for every 1,000 agricultural landholders; this number is the largest in Travancore-Cochin (782) and the second largest in Madras (714). Although there has been a general increase in the country in the number of cultivators and cultivating labourers (including unpaid family helpers) working on every 100 acres of cultivated land, in Madras the increase is from 34 to 36 only.

South India, however, stands high among the different zones of India in the matter of foodgrains yield; the average yield (less seed) on one acre sown to all foodgrains is 8.2 maunds as against the all-India yield of 6 maunds. But the average rate of consumption of foodgrains per head of population per annum is low in South India, being 3.8 maunds against the all-India average of 4.5 maunds. The food shortage in South India expressed in the number of consumption days is 34 out of 365 days, against 21 in all-India.

Disintegration of Joint Families

Another trend revealed by the Census Report is in the direction of break-up of the joint family system which has served as an insurance against pauperism and unemployment in South India in particular and India in general. Of every 100 rural households in South India, small ones number 34, medium 44, large 17 and very large 5; the same proportions are repeated in respect of every 100 urban households. The figures only confirm the general trend in the direction of break-up of the joint family; "such a large proportion of small households (with three members or less apiece) is a prima facie indication that families do not continue to be 'joint' according to the traditional custom of the country and the habit of breaking away from the joint family and setting up separate households is quite strong." This trend is perhaps responsible, in some measure, for the migration of large numbers of unemployed to urban areas which in South India have a larger proportion of people than in the rest of India, but which have fewer large-scale industries.

COMMONWEALTH TRADE IN 1952-53

POST-WAR EXPANSION CHECKED BY CHANGING PRICES

IN reviewing the various factors underlying changes in the trade of Commonwealth countries, a Memorandum just published by the Commonwealth Economic Committee* notes the effects of the recent check to the post-war expansion of world trade and the extent to which some Commonwealth countries were compelled to restrict imports for balance of payments reasons. It points out that changes in international prices, already marked in 1951-52, have remained as a major factor underlying these developments.

On the export side the figures given for Canada and Australia are shown as considerably greater than in the preceding year; in the former case the total was a record but in the latter, although exports for 1952-53 were £A.200 million greater than a year earlier, the peak reached in 1950-51 was not regained. The figure for Southern Rhodesia also was a record. Elsewhere there was a general reduction in exports, although this did not perhaps reach significant proportions in the United Kingdom, South Africa or New Zealand. The biggest change was in the Colonies, where the total fell by over £300 million; the reduction was very heavy also in India, Pakistan and Ceylon.

For imports the changes recorded were in many cases more extensive than for exports. Only in New Zealand and Ceylon was the import total substantially larger than a year earlier, although there was some increase in Southern Rhodesia. Imports into other Commonwealth countries were reduced to a varying extent: for both the United Kingdom and Australia (in 1952-53) the reduction was very large, amounting in each case to some £400 million (sterling), while India and Pakistan in 1952-53 were able to cut imports by about 30 percent. In other cases, however, the fall in imports was much less severe; for South Africa it amounted to only £50 million in 1952 and for the Colonies to little more than £20 million. The figure for Canada was substantially unchanged.

*Commonwealth Trade, 1952-53, published for the Commonwealth Economic Committee by H. M. Stationery Office, price 1s. net.

The general result was an improvement in the balance of merchandise trade as compared with the preceding year. This improvement was very marked in the United Kingdom, Canada and Australia, while the same trend, though less marked, emerged in South Africa and Southern Rhodesia. India and Pakistan shared in the improvement (for 1952-53) but in both New Zealand and Ceylon the balance (for 1952) became unfavourable, though subsequently an improvement was effected. In the case of the Colonial Territories the large surpluses recorded in both 1950 and 1951 were followed by an adverse balance in the following year. The available data for the first six months of 1953 indicate a continued improvement in certain cases, such as Australia, New Zealand, Ceylon and Pakistan, but some deterioration in other countries, including Canada.

The Memorandum gives figures to show how the various factors at work have affected the chief markets for Commonwealth products. Although in some cases these markets were maintained in 1952, in others the expansion attained during earlier post-war years was checked. The United Kingdom remained the largest market for the overseas Commonwealth, while the Colonial Territories as a whole in 1952 imported more than in 1951. Import restrictions, however, affected trade in such important markets as South Africa and Australia. On the other hand, the Commonwealth market in India, Pakistan and Ceylon taken together, was maintained at about the same level as in the preceding year, and markets in Western Europe were on the whole well maintained. As against this, the expansion in sales to North America, which was so pronounced in 1951, was checked in the following year, when both Canada and the United States imported from Commonwealth countries on a smaller scale. Lower prices for primary products affected the dollar earnings of wool, jute and rubber, but the United Kingdom earned more dollars with vehicles and machinery, as did Canada with minerals.

India's Foreign Trade

More detailed examination of the statistical data for India, Pakistan and Ceylon helps to highlight the particular problems attaching to this area. India, for example, recorded a marked decline in exports almost entirely due to the fall in both volume and price of jute goods, which have always represented her largest class of exports. It is only fair to mention, however, that the 1951-52 exports of jute goods represented a peak figure and that the 1952-53 value is more in line with the general trend since the war. Smaller reductions were more or less general, for instance in the cases of tea, spices, tobacco and leather, but cotton goods showed some recovery even though they were still only half their value in 1950-51. As regards the destination of these exports, both of the largest outlets, the United Kingdom and the United States, recorded particularly heavy declines, of over Rs. 65 crores and nearly Rs. 20 crores, respectively. Exports to Australia were also nearly Rs. 30 crores lower. The overall total to Europe was fairly stable, but Germany, the Netherlands and Italy all increased their totals. In the East, Japan showed a jump of more than 100 percent, and both Burma and Ceylon were slightly better balanced these in the other direction. Imports, fortunately for the balance of payments, also fell heavily, with substantial reductions in the totals for grains, raw cotton and raw jute. Purchases from the U.S.A. showed the biggest drop, followed by those from Pakistan, the U.K., Egypt and Japan.

Pakistan's Exports Fall

The fall in jute prices was also accountable for a lesser part, India's exports, with cotton playing a part, but most regular markets contributed their help to fill the gap by taking more, while the U.S.S.R. trebled its 1951-52 total. Imports were about half their 1951-52 value, with Japan, India and the U.K., in that order, showing the biggest falls. Ceylon ran into much the same difficulties as Pakistan as the result of the falling prices of rubber, tea and coconut products, which between them account for 90 percent of the island's total exports. Practically all markets of the island's total Ceylon, with the U.K. and U.S.A. showing the vated by the fact that it was accompanied by an increase in imports from almost all sources of imports became inevitable to restore the balance, that although exports to the chief markets are still declining, with China as the exception, imports have been reduced to an even greater extent.

Balance of Trade

		January-June 1952	July-December 1952	January-June 1953

Jute

ILLEGAL FUTURES GAMBLING REVIVES

IT is little more than a month since the Government of India by ordinance stopped a gap in the law by which trading in jute futures in kutchha bales was still legal while dealing in futures in other forms was prohibited. Almost simultaneously police action was taken against one of the unofficial jute goods futures markets in Calcutta. This was followed for a short time by a quietening down of illegal activities, but it is evident that these have again been resumed, and on an increasing scale. Rises and falls of as much as three rupees in the price of B Twills in one day indicate the extent of the menace to the industry which these illegal markets constitute. It is no wonder that foreign consumers complain of the instability of Calcutta prices. If the Government has decided that these markets are illegal and undesirable it is of no avail for the police merely to make an occasional raid. Action must be vigorous and continuous and the offenders must be punished with sufficient rigour to discourage them. Otherwise it is no use taking action at all. This leads to the question of whether futures markets are necessary and, if so, how soon a properly constituted and regulated market can be brought into being. Opinion in the industry appears to favour the establishment of a futures market with proper safeguards and it was suggested in these columns a month ago that an ad hoc committee should be set up to go into the matter. The health of the industry is menaced and it is urgent that remedial measures should be adopted as soon as possible. It is too long to wait for the report of the Jute Enquiry Commission and consideration of it by the Government. Hasty action is to be deprecated, but speed is essential.

Russian Trade Pact

Two items of special interest to the jute industry have emerged in the past week. The first was the signing of a trade pact between India and Soviet Russia in New Delhi yesterday, under which Russia will supply wheat to India and India will supply jute manufactures to Russia. It is a long time since Russia has taken any interest in the purchase of jute manufactures from India and it was believed that she was largely independent of the purchase of bags from abroad. Last year Pakistan shipped a considerable quantity of raw jute to Russia but indications were that Russia would take less raw jute this year.

Pakistani Bags for South Africa

The other item was the reported sale by Pakistan of 15,000 bales of heavy sacking to South Africa. It is not known whether this is an isolated transaction or whether it portends the resumption of trade relations between these two countries. It is well known that South Africa gets all the jute goods she needs but that their cost is high because of the roundabout routes by which they reach South Africa. It is probable that it is the high cost that has made it possible for Pakistan to sell sacking to South Africa in spite of Pakistan's high exchange rate. This sale can, of course, be only a gesture on the part of Pakistan because Pakistan is not yet in a position to produce enough for her own requirements.

UNDERTONE OF CONFIDENCE IN JUTE MARKETS

At the time of writing last week the markets were undergoing a check to the upward trend which had been in progress for some weeks. It was the general feeling that this was healthy because of the danger of the bull position becoming top-heavy and because there was a fear that prices were moving towards levels at which jute manufactures would again become uncompetitive. On Thursday prices of manufactures declined and with them the quoted prices for raw jute, but in the raw jute section there was evidence of resistance to the lowering of prices and offerings at the reduced rates were sparse. On Friday there were whispers in the market of an Indo-Russian trade pact and the market for manufactures firmed up again. By Saturday heavy goods had regained most of the ground lost, in the belief apparently that Russian interest would be mainly in heavy sacking. Hessian lagged behind because postponed shipments had relieved the tightness for ready goods. Since Saturday the market has continued steady and there is an undertone of confidence.

Manufactured Goods: At the beginning of the week, the market suffered a setback but it was of short duration. Apart from the prospects of an Indo-Russian trade pact referred to above the market gained strength from reports that Australia and West Africa would be in the market shortly for heavy goods. There has also been genuine business in heavy sacking and though it has been on a small scale so far, sentiment has been influenced by it. Not much interest has been shown in hessian and reports that some of the goods due for shipment in December had been covered in New York had a damping effect. Some mills have also shown keenness to sell for the April-June position and that has also put some restraint on bids. The highest prices reported during the week were Rs. 48-8 for ready 40" 10 oz. hessian and Rs. 105 for ready 'B' Twills. On Monday and Tuesday the

market was quietly steady with prices somewhat below the best.

On Wednesday morning prices are as under:

	Ready.	December.	Jan.-Mar.	April-June.
40" 8 oz.	Rs. 38-6	37-12	36-0	35-0
40" 10 oz.	Rs. 46-14	46-12	45-6	44-10
B Twills	Rs. 103-0	103-0	103-12	103-8
Heavy Cees	Rs. 101-12	102-6	103-8	103-4
Cornsacks	Rs. 103-8	104-0	104-0	104-0

Raw Jute: At the beginning of the week very little interest was shown by mills because of quieter conditions in the market for manufactures. Quotations were lowered in sympathy with those of hessians and gunnies but there was no real selling pressure. On Thursday Assam Bottoms were quoted at Rs. 26 but there was not much offering at that price. Later mills became more active and a moderate amount of business was reported. Sellers immediately raised their prices and good business was done. Northern jute was done at Rs. 27 to Rs. 28-8 per maund basis Bottoms and Dhurbi at Rs. 27-8 to Rs. 28-8 for December-January shipment with the option of delivery ex local godown. Northern Tops alone were done at Rs. 32-8 and Middles alone at Rs. 29-12 to Rs. 32 (free from samla) for November-December. Local 'X' Bottoms were done at Rs. 23 per maund and Pakistani Habi Jabi at Rs. 100 per bale. Pakistani District Cuttings were done at Rs. 70 per bale. Cuttack White Jute was bought at Rs. 27-12 per maund and Tossa at Rs. 29 per maund and small

business reported in Birli at Rs. 24-8 and Rs. 25. Daissee was done at Rs. 30 to Rs. 30-8 basis Bottoms in kutchha bales and at Rs. 175 per bale for Short Group Dundee Standard and Rs. 160 for Full Group in pucca bales.

On Wednesday morning quotations are as under and mills are showing moderate interest:

Indian Jute:	Landed at Mills	Rs. per md. basis Bots.	Shipment
Lower Assam	28-8	December-January	
Upper Assam	28-0	"	
Northern	28-8	"	
Purnea	28-0	"	
Murshidabad Tossa	29-0	"	
Daissee	30-0	One month	
Daissee Mesta	28-0	"	
Western Mesta	24-8	December-January	
Bimli	25-8	"	

Quotations for deliveries ex Cossipur are eight annas below these rates. Tossa prices are Re. 1 to Rs. 2 above the prices of white jute. The difference between Middles and Bottoms is Rs. 3 per maund but sellers are asking a premium for middles alone.

Pucca Bales	Rs. per bale.	
Mill Firsts	185-0	December-January
Mill Lightnings	170-0	"
Pakistani Jute (ex Pakistan):	Rs. (1) per md. basis Bots.	
Dundee Daissee 2/3 SG	185-0	"
Dundee Daissee 2/3 LG	170-0	"
Jat	32-0	"
District	31-0	"
Northern	30-0	"
Cuttacks:	Rs. (1) per bale.	
S N C	83-0	
N C	73-0	
M C	71-0	

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

The illustrations show sacks holding 2 cwt. of sodium sulphate being stacked at a factory of Imperial Chemical Industries.

Calcutta Markets

PRICES IMPROVE IN TEA EXPORT SALE

LESS GENERAL DEMAND FOR DUSTS

AT Sale No. 24, held on 30th November, offerings in the Export auction consisted of 58,000 chests. There was again a very strong and active demand for most descriptions. Commonest sorts were keenly competed for and were a full anna higher, whilst Common and Low Mediums were half to one anna dearer. Leaf grades were also a strong feature and were generally up by six pies and sometimes more. The best liquoring C.T.C. descriptions were also dearer. Darjeeling were again a weak feature, especially the Leaf grades, but Broken and Fannings from this district usually realised valuations.

Quotations	1953		1952	
	Rs.	as. ps.	Rs.	as. ps.
Clean Black Pekoe	1	15	0	1 4 6
Clean Common B.P.	1	13	3 to 1	13 6 to 0 12 0
Medium Assam B.P.	1	14	3	0 12 0 to 0 13 0
Best C.T.C. Assam B.P.	2	2	0 to 2	3 0

In the internal sale, the Dust offerings consisted of approximately 19,000 chests. There was less general demand. C.T.C. Assams were a full anna easier and were the weakest feature of the sale. Medium Assams, Doosars and Commons were about steady, while black exportable dusts and the commonest sorts were fully firm. Darjeelings met with very irregular support. The flavour types sold well, but other kinds were difficult of sale. Internal leaf consisted of 1,600 chests and these sold at about last rates.

Quotations	1953		1952	
	Rs.	as. ps.	Rs.	as. ps.
Medium Doosar Dust	1	10	0 to 1	10 6 to 1 1 2 0
Medium Assam Grainy Dust	1	10	6 to 1	11 0 to 1 6 6
Best Assam C.T.C. Dust	1	14	0	1 12 6

FAIR VOLUME OF ACTIVITY IN FREIGHT MARKET

U.S. COAL AND RIVER PLATE GRAIN TAKE MORE TONNAGE

THERE was a fair amount of activity in the freight markets last week, and considerable tonnage was taken up for time charters, in the American coal trade and the River Plate grain trade. A 10,000-ton British motorship obtained 19s 6d for 12 months' trading with delivery on the Continent second half December. A 9,600-ton deadweight motorship was fixed at 23s for a round voyage to Madagascar with prompt delivery on the Continent. A 8,000-ton motorship is reported fixed at 25s for 24/3 months' trading with prompt delivery Karachi and redelivery Far East. The higher rate of 22s per deadweight ton was paid for a 9,570-ton deadweight motorship for a West African round voyage with spot delivery U.K. Two 9,000-ton motor vessels were fixed at \$3.70 and \$3.80 for the voyage across with delivery Northern Range United States in mid-December and redelivery in Japan.

A variety of destinations was noted in fixtures for coal from Hampton Roads. Rates to Rotterdam were unchanged at 31s whilst Japan was arranged at rates from \$9.40 to \$9.55 for December loading, and there are reports of fixtures of three vessels January-March at \$9. The lack of tonnage in local markets has forced charterers to concede 55s for coal Calcutta-Japan in December, and indications of 53s for positions up to February-March have been made.

The River Plate trade displayed considerable activity, and no fewer than ten fixtures were concluded for December-January loading at rates up to the basis of 70s for Continental discharge. Owners are endeavouring to hold the market at this rate for forward positions. A number of fixtures concluded in Japan for ore from India to Japan have been reported but, as these are with freight payable in yen, the sterling and dollar equivalents show a higher rate of freight than would be the case were foreign currency involved. Amongst these fixtures have been two vessels from Mormugao in November at 57s and \$7.68 respectively. Other fixtures have been concluded from Madras, Kakinada, Vizagapatnam and Calcutta at rates in the region of 55/57s.

LINSEED MARKET FIRM

The market was very firm during the past week because of rumours regarding the reduction of export duties on linseed and linseed oil. Although buyers were very much in evidence, trading was limited. Arrivals were scarce, and with a keen demand for ready goods from crushers prices advanced rapidly. There were also fairly keen enquiries for forward deliveries, and some business was reported at better prices. The oil section was very active and keen enquiries from local consumers, added to the scarcity of local stocks, resulted in an appreciable rise in prices. Latest quotations were as follows: Ready Rs. 21 per maund; December Rs. 20-8 per maund.

HIDES AND SKINS

The market in skins continued steady and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Stocks

(Between 24th and 30th November, 1953)
Cowhides: Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 12-8 to Rs. 24-8.
Goatskins: Wet salted (Daisee, Killed) 61,550 pcs. on the basis of Rs. 275 to Rs. 450; Assam-Dinajpur-Murshidabad 22,100 pcs. on the basis of Rs. 300 to Rs. 335; Purneah-Kissenganj 22,370 pcs. on the basis of Rs. 290 to Rs. 310; Patna (Ord) 2,800 pcs. on the basis of Rs. 220 to Rs. 230; Pakur 2,800 pcs. on the basis of Rs. 270 to Rs. 280; Muzaffernore-Darbhanga-Patna 57,700 pcs. on the basis of Rs. 255 to Rs. 290.

Bazar Stocks

(30th November, 1953)
Cowhides: Wet salted 1,17,500 pcs.
Goatskins: Wet salted 50,000 pcs. Assam-Dinajpur-Murshidabad 49,000 pcs.; Muzaffernore-Pakur-Patna-Pakur-Kissenganj 2,26,000 pcs.

SHELLAC MARKET STEADY

The market opened inactive but ruled steady for the rest of the week and moderate business passed. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 120 buyers
Pure Buttonlac	Rs. 116 to Rs. 114 buyers
Lemon No. 1 Shellac	Rs. 114 to Rs. 116 buyers
Lemon No. 2 Shellac	Rs. 107 to Rs. 110 done & buyers
F. O. Std. I. Shellac	Rs. 110 to Rs. 112 buyers
Pure TN Shellac	Rs. 103 to Rs. 105 done & buyers
4% I.T.N. Shellac	Rs. 98 to Rs. 100 done & buyers
No. 1 Kusmi Seedlac	3% Rs. 115 value
No. 2 Kusmi Seedlac	3% Rs. 106 to Rs. 108 buyers
Fine Bysaky Seedlac (Manbhumi)	3% Rs. 102 to Rs. 103 buyers
Fine Bysaky Seedlac (C.P.)	3% Rs. 98 to 100 done & buyers
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 93 to Rs. 96 done & buyers
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 89 to Rs. 90 done & buyers
Kireelac	Rs. 50 buyers

Shipments during November until the 28th were 27,698 packages.

yes, it is my plan!

Lights will be switched on in a thousand villages. Handlooms, lathes will hum and spin. Every small community will become the hub of a growing village industry. There will be work for everyone. The Five Year Plan provides for Rs. 127 crores to be spent on developing and adding to our power resources. Multi-purpose hydro-electric schemes will supply cheap power to industry. Here is proof of a nation's determination to take its place amongst the leaders of the world.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

Without Prejudice

A REVIEW OF THE YEAR'S CURIOUS CASES

THREE LADIES' MISADVENTURES IN HOTELS

(FROM OUR LEGAL CORRESPONDENT)

HERE is a short miscellany of English cases decided during the past year. In order to select them the writer browsed through virtually the whole of the law reports for the year. The mass of law suits seems to indicate that the average Englishman is becoming more and more litigation-minded, though still not to anything like the extent that the average citizen of India is so inclined. Another fact strikes one increasingly year by year from a perusal of the reports. The British citizen is becoming increasingly the victim of Ordinances, Rules and statutory regulations independent of, and often inconsistent with, the common law of the land; what a former Lord Chief Justice termed The New Despotism, an insidious form of bureaucratic tyranny far exceeding anything of the like nature existing in this country at present—though we in India seem to be also moving steadily in the same ominous direction. At a rough guess, and leaving out of consideration the County Court and magisterial decisions throughout the country which are not usually reported but which, nevertheless, represent the main body of litigation, civil and criminal, one would estimate that at least one-third of the time of the English High Court judiciary is occupied with cases arising out of these departmental decrees, rules and ordinances. The fact is really quite startling to anyone who has been out of touch with English litigation for many years and takes one's mind right back to the Circumlocution Office and the Tite-Barnacles of Charles Dickens' day. Incidentally it also reduces the number of English cases of value as precedents for use in India. The principles of the decisions summarised below are, however, applicable to the law in India.

Several of them concern the law of negligence and, as a refresher, we may give an introductory reminder about that. Negligence in law is not the same thing as inadvertence or accident or sheer bad luck. To establish civil liability on the ground of negligence you have to prove three things: (1) a duty to take care, (2) the absence of due care, and (3) actual damage by the absence of due care. And it has also to be remembered that in India, though through statutory provision not in recent years in England, liability may be completely defeated by the defence of contributory negligence, by which is meant the absence of reasonable care by the plaintiff to avoid the consequences of the defendant's negligence. If both parties are guilty of negligence the question then arises as to whose negligence was the proximate or decisive cause of the injury.

Bearing these principles in mind, whose was the negligence, if any, and was there any contributory negligence in the following untoward events? The lady in question, a Mrs. Foster, was of considerable embonpoint, or, in the words of the report before us, "distinctly plump." She entered a restaurant owned by the defendants, Bush House Limited, and having ordered a meal was seated with other guests in readiness to partake thereof. By reason of such plumpness the lady was constrained to sit with her chair protruding further from the table than those of her neighbours. The waitress coping to the table tripped over the projecting chair. Unhappily she was carrying steaming hot soup at the time and this was cast over and down the back of the stout customer who later sued the proprietors of the restaurant for damages

for negligence. She lost in the Westminster County Court and appealed. The Court of Appeal (Evered M.R., Romer L.J. and Harman J.) refused to disturb the finding of fact of the County Court that the incident arose from an inadvertence falling short of a breach of duty to take care, i.e., that it was "simply a piece of bad luck." Thus the guest's claim in damages failed. But the learned editors of *Law Notes* in reporting the decision add a cautionary word. "The case, however, turned on the precise findings of fact in the County Court and could never be described as 'the waiter's charter.' Waiters do not enjoy a licence to trip and spill food over guests, nor restaurant proprietors to allow their waiters to do so." Probably had it not been for the plaintiff's girth and the consequent necessity to project her chair the result would have been different. (*Foster v Bush House Ltd.* 96 S.J. 763).

This matter of negligence and contributory negligence is always a tricky business. The case of the distinctly plump lady reminds us of two other restaurant or hotel cases on which we commented at length in this column some years ago and in which also the plaintiffs were ladies, one of them the wife of Mr. Nicholls, the well known Essex and Test Match cricketer. In the first case the scene was an English country Inn on a hot summer's day. The lady came in from outside and ordered a ginger beer. Being very thirsty and hot she drank it from the bottle without waiting for a glass. Unhappily within the bottle was the considerably decomposed body of a dead mouse; and in her haste the lady not only drank the ginger beer but drank or ate also a portion of the corpse. Subsequently and consequently she became gravely ill and on her recovery sued the proprietors of the Inn for damages for negligence. She won her case but it was a near thing, by no means a walkover. What really settled the issue was the fact that the drink was of the kind known as a "stone ginger," served in an opaque bottle. Had the bottle been of the transparent variety the result might have been different. There is a duty on the purchaser to take due care and a look at the transparent bottle would have disclosed the existence of vermin therein. Contributory negligence and the proximate cause of the misadventure, you might think.

In the second case the disaster arose from a pork pie. The counter at which the lady stood had just previously been covered with a linoleum table cloth. Mine host cheerfully banged the pork pies down on the table cloth. The lady ate one or more pork pies and left. She passed a bad night and several tin tacks. An X-ray examination disclosed the existence within her of several other tin tacks. On her recovery from the serious illness which followed she sued the hotel owner for damages. Negligence again. And again the defence of contributory negligence. It was broad daylight and she should, it was urged, have seen the tin tacks which had been inadvertently left on the counter, being the residue of those used for nailing down the cover. The plaintiff won her case.

Leaving English cases for the moment, would the following constitute the offence of murder according to English or Indian law? A member of a band who during the war led parties of refugees on foot from France over the Pyrenees to the Spanish border, was charged in Paris on May 23, 1953 with the murder in 1942 of M. Jacques Grumbach, the joint founder of a clandestine Socialist newspaper. The accused admitted having shot M. Grumbach through the head when he was half dead with exhaustion, because the whole organisation would have been endangered if he had fallen into the hands of the frontier guards. The defence pleaded that the accused as a member of the Resistance organisation had acted in obedience to "formal and implacable" orders. The case reminds one of the cutting of the mountaineer's rope, and forcibly preventing a man climbing into an overcrowded lifeboat which have attracted the attention

of students of law for generations. (*Law Notes*, 1953 (July), p. 152.)

A Paris jury acquitted the accused altogether. What would an English or Indian jury have done in like circumstances? Personally the writer has no doubt at all about it. "The offence was murder. Putting the accused's position at its highest and at what he himself claimed it to be, it was that of a soldier obeying orders received from a superior. But in English law obedience to superior orders is no defence, if the act done is unlawful. True it is, as Professor Dicey puts it, the soldier "may, as it has been well said, be liable to be shot by a court martial if he disobeys an order and to be hanged by a judge or jury if he obeys it." That is, as the saying goes, just too bad. A stolid English jury, one is certain, would on the judge's direction, convict the accused of murder; and, though the law in both countries is the same, one is equally certain that whatever the judge directed and however strongly, as to the law, no Indian jury and above all no Bengali jury would convict on the capital charge.

Here is another curious case. A, having placed his motor cycle in a public place, got drunk to such an extent that he was physically incapable of riding the cycle. His friends took charge of the situation and arranged to take A home and to have his motor cycle removed, but A was incapable of assenting to this arrangement. Could A be convicted of being drunk in charge of a motor cycle? Yes, said the High Court. (Lord Goddard L. C. J., Croome-Johnson and Pearson J.J.) A remained in charge because he had not given charge to anyone else. (*Haines v Roberts*, *Law Notes*, 1953, p. 61.)

And another negligence case which seems to stretch the doctrine of "duty to take care" to its utmost limit. Contractors at Liverpool were employed to repair a bombed house and entered into a contract with another contractor to erect scaffolding along a wall of the house on a piece of waste land accessible to the public and on which young children used to play. Some boys uncoiled a rope from the top of the scaffold and swung on it with the result that the scaffold was pulled over and some children were injured. Could the injured children recover damages from both contractors? Yes, said Jones J., at Liverpool Assizes. Each of the contractors owed a duty to the infant plaintiffs to take all reasonable steps to prevent the scaffold falling on them; each of the contractors should have foreseen the probability of the scaffold being pulled over by children and each contractor was liable to each of the injured children for failure to do so. (*Cuttress v Scaffolding (Great Britain) Ltd.* 1953, 1 All. E.R. 165, 72 *Law Notes* p. 60.) If the non-legal reader is sometimes inclined to complain that he does not get definite legal guidance from his solicitor on pending litigation, surely this case illustrates how impossible it is to be definite about anything legal. Personally the writer would have been in very little doubt that it is no part of a contractor's duty to foresee with prophetic vision that mischievous children are going to trespass upon his scaffold, uncoil a rope on it, swing thereon, and thereby bring down the scaffolding and injure playmates below. Now we know better.

And here is another illustration of the same difficulty where nine lawyers out of ten (including this deponent) might advise wrongly. Does the fact that Mr. A. and Mrs. B. who are strongly attached to each other, spent the night together in Mrs. B's room raise an irrebuttable presumption of adultery? No, said a Divisional Court (Lord Merriman P., and Davies J.). There was no rule of law that the conjunction of evidence of a strong inclination to commit adultery, combined with evidence of opportunity, led to an irrebuttable presumption of adultery. The husband's allegation of adultery was rejected and he was ordered to support his wife on the ground of desertion. (96 S.J. 730, L.N. Vol. 71, 285.) "If that is the law," said Mr. Rumble, "...the law is a ass,—a idiot." Well, it is the law.

COAL COMPANIES

O, P, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

G. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE NEXT COMMONWEALTH TALKS IN SYDNEY

END OF THE DOLLAR GAP: SIGNS OF INFLATION IN THE UNITED KINGDOM

A YEAR has passed since the last Commonwealth Economic Conference in London. A few weeks hence a conference of similar character will take place in Sydney. Between the two United Kingdom, leading the sterling community whose policy is supposed to be guided by these conferences, has not only failed to strengthen her economy but allowed it to lose much of the strength which had been laboriously regained during the preceding year. British economists and competent observers overseas have for many months been watching anxiously and uttering their unofficial warnings. Only recently have the Chancellor of the Exchequer, the President of the Board of Trade, and other high officials admitted in public that all is not well. These admissions may be the preliminaries to a reversal of financial policy. Defects have been easily hidden from the general public and from the business community. It was for their benefit that the defects were allowed to occur. Nearly everyone, at least nearly all payers of direct taxes, has benefited from last April's budget. Easy financial conditions were made easier still by the reduction of Bank rate in September. The volume of imports has recovered, partly because import restrictions have been relaxed but probably more because, in an industrial economy whose materials are mostly imported, industrial production has risen to new high levels. The volume of exports has not increased. Yet the series of "odd-year crises"—1947, 1949, 1951, and, it might have been, 1953—has been broken; 1953 is passing without a crisis. The policy of high production, full employment, general wellbeing, has been, superficially, vindicated.

An eminent economist, Professor F. W. Paish, has explained in this month's *London and Cambridge Economic Bulletin* what has been happening, statistically. The lowering of import prices in relation to export prices in 1953, as compared with 1951, has increased the national real income, at current prices, by something like £500 million. This improvement in the terms of trade has almost corrected the relative rise in import prices between 1949 and 1951, so that, adding the effects of the increase in production between 1949 and 1951, the increase in national income, at current prices, will be about £900 million larger in 1953 than in 1949. But the £900 million larger in 1953 than in 1949. But the balance of payments on current account (excluding foreign aid) will apparently not be much more favourable this year than in 1949. So almost the whole of the increase in the national income has been spent, at home. Only, perhaps, a quarter of it has been used for expanding internal investment; and even that modest proportion has been devoted mostly to house-building during the past year, while more than a half has been attributable to the Government (mostly for defence) and about a third of the whole on increasing personal consumption.

This is the background to the failure of British exports, to the failure, in this crucial period, to build up financial reserves and industrial capacity commensurate with the needs of the coming years. The gold and dollar reserve has been increasing steadily this year, but it is still only about a third of the amount estimated to be needed for safety. Industry has invested in fixed assets virtually no more this year than in 1949, the year of the first postwar recession of business.

There has been no crisis this year, but Britain has failed to take advantage of the singularly, unrepeatable, favourable circumstances of the terms of trade, which are even now being reversed. She has failed to make proper use of the hundreds of millions of pounds of capital released from investment in stocks by the lowering of commodity prices, which seems likewise to have been reversed. Conditions which have enabled consumption to expand without inflation are changing, at a time when conditions for export are becoming more

adverse, because some markets are contracting, others are relaxing restrictions on dollar-spending, and Germany and Japan are restored to full vigour.

The Government can hardly be blamed for industry's failure to renew and expand its assets. Policy, in respect of both taxation and credit, has encouraged investment by industry. In this sense, the "soft" budget and the "easy" monetary policy can be condoned, even if their effects have not been as intended. But the balance of economic forces has been so delicate this year that inflation would almost certainly have resulted from heavier home demands on the capital industries' production. In the event, inflation has been fortuitously avoided by the release of money from the private sector of the economy (mostly by disinvestment from stocks) to balance the increase in the Government's requirements (mostly for defence and housing). But the beginnings of deflation are already apparent on the financial scene. Since the beginning of the budgetary year (in April) net bank deposits have increased (to November) by more than £360 million, whereas in the same period of last year the increase was £290 million. Between November 1951 and November 1952 public authorities borrowed about £200 million from the banking system, but the private sector repaid rather more than that amount. In the following twelve-month the Government borrowed more than £300 million from the banking system, while the private sector repaid less than £100 million. The banks' advances have begun to expand again, after

abroad is most uncertain. These two facts will check the rises in gold and dollar holdings, while any recession in the United States—however mild—would lead to a fall in imports and to more energetic attempts to sell American exports. Reviving competition elsewhere, for example from West Germany, will complicate the case further, particularly for Britain herself. Within the overseas sterling area, the only sign of radical improvement is, curiously enough, in Australia, the country whose improvidence caused so much embarrassment to the group several years ago. The new emphasis on food production in that country, the huge increases in wool output obtained in a few seasons by scientific achievements (trace elements and myxomatosis), current high prices for wool, and the discoveries of oil and uranium all suggest that Australia's contribution to the reserves of the sterling area might henceforth be of increasing value, by contrast with the gross economic mismanagement of the recent past. In the Asian countries of the sterling area, progress is slower and no great change for the better can be looked for for some years to come. In sum, the problems before the Commonwealth Conference will be much less anxious than was the case earlier this year, but it will be much more obvious that no single resture by the United States is going to solve those that remain.

"SOME RECESSION COMING" IN UNITED STATES SMALL REDUCTIONS FROM 1953 RECORDS

IN its monthly letter for December the National City Bank of New York says: "The differences of opinion as to the business outlook which have been evident during the fall seem to be narrowing as the year-end approaches and specific statements of expectations for 1954 begin to appear. During the month it has been made clear that only a small reduction from 1953 levels of business plant and equipment expenditures is now intended, that the automobile manufacturers are laying out schedules on the assumption that next year, and that leading authorities on construction expect the drop in that field also to be slight. The McGraw-Hill survey of intentions to invest in plant and equipment indicates a decline of 9 percent in manufacturing, no reduction by the utilities, and a drop of 5 percent overall, which is from an all-time record. Private forecasters such as the Dodge Corporation are not quite as optimistic but nevertheless expect only a small recession. These estimates form a consistent pattern of moderate decline, but one which will leave activity in these key industries high by any standards except those of 1953. Of course there is no assurance that the forecasts will prove correct, and some observers consider them too hopeful. Business sentiment in general, however, is tending to move from extremes of either pessimism or optimism into the middle ground.

*Business men see some recession coming, with need for reductions in cost and expense, and conservatism in buying. It would be plainly wrong to infer, however, that they are ready to take to the storm cellars, or that the outlook inspires dread. Rather a challenge is seen to the ability of management to meet harder conditions. Capital programmes, undertaken for the purpose of improving products and reducing costs, continue aggressive in many areas. In almost all lines producers who think they can do a better job than their competitors feel that they may be able to sell as much as in 1953, even though their industries, and business indexes generally, decline. A sampling by Dun and Bradstreet shows that only 19 percent of the responding businesses expect their first quarter sales to be below the same quarter of 1953. It is also of interest that the magazine *Printers' Ink* estimates 1954 advertising expenditures at 4 or 5 percent above this year. All these influences are seen in current business reports. New orders for many things are being placed conservatively, and unfilled orders in the main have been coming down. Evidently the change is not primarily due to decreased retail sales, for they have remained above a year ago despite disappointing sales of heavy-weight apparel, affected by the warm fall. Rather what is happening seems to be a disposition to shorten stocks and commitments. Probably inventory figures, which had continued to climb through September, the latest figures available, are due to level out or turn down. If so, the reasons are plain. There are no fears of shortages, but general anticipation of plenty. In many lines deliveries are quicker, and it is therefore possible to reduce the 'lead time' in buying. This affects the order books of producers even in cases where consumption and production are essentially unchanged.

*Industrial production in November was somewhat lower in steel and consumer durable goods lines, but seemingly steady in most other areas.

Department store and retail sales showed signs of improvement with crisper weather and holiday trade. Construction remains an unexpected bulwark, with contract awards in October 45 percent ahead of last year. Automobile manufacturers slowed down production beginning in early November because of high dealer stocks and model changeovers, but output is expected to begin to increase again in early December and—with producers striving to hold or improve their share of the market—to rise thereafter. Steel activity has eased somewhat along with automobile, appliance, and farm machinery slow-ups. Output in November averaged around 90 percent of capacity compared to 95 percent in October. Customers have been giving steel mills reassuring estimates of next year's requirements, but as yet the actual orders have been slow to materialise, and the tendency to reduce lead time is evident. Machine tool orders are still running behind last year, and the backlog is being whittled away; but production remains steady. Price reductions announced during the month which indicate slower buying or enlarged supply include gasoline and fuel oil, some new model automobiles and appliances, carpeting, and industrial alcohol.

"Personal income ceased to increase last August, though it holds above last year. Lower factory payrolls, reflecting reductions of overtime, have caused the flattening out. Recent lay-offs may have some further depressing effect. However, most lay-offs appear to be of short duration since reported unemployment in October was less than 1,200,000, a postwar low for the month. Although unemployment compensation claims have increased slightly they are still lower than earlier in 1953. The total number of employed workers remains practically stationary, however, which indicates that 'over-employment' is subsiding and some people are retiring from the labour force."

CURRENT COIN

News From Tartary.—An attempt to review the main features of economic development in the mainland of China is made in the latest issue of the *Economic Bulletin for Asia and the Far East*, published by ECAFE. The 13,000-word study prepared by the Commission's research and statistics division, on the basis of published official and semi-official sources which contain scattered and incomplete statistics, states that prices were stabilised, the budget balanced, transport restored, and measures taken against the recurrence of flood and drought, in efforts to secure peace and order and to restore production 'diminished by civil war, following the establishment of the Communist Government in October 1949. The means used to increase production were also designed to pave the way for basic structural changes in China's economy and for a socialisation of the country. In industry and business, socialisation has proceeded rapidly, and State enterprises are now predominant in industry, transport, banking and trade. The measure of socialisation in agriculture, however, appears to be limited. Agricultural production has profited from favourable weather and better farming methods, and the extension of peasant proprietorship, following the expropriation of landlords, has acted as an incentive. Land redistribution, however, has brought in its wake problems of efficient farming on scattered holdings, and the Government has tried hard to organise peasants in mutual aid teams for joint use of draught animals and tools to achieve the aim of socialisation. The ECAFE report remarks that various schemes launched in the agricultural field have raised questions of the best use of pooled resources and the proper division of proceeds which, it appears, have yet to be solved. Despite the strains resulting from the Korean conflict, rigid control has maintained price stability and the rehabilitation of the economy has proceeded. Agricultural and industrial production (except coal) had by 1952 reached or exceeded the pre-1949 peak, according to official figures published by the Chinese Government. The increase in agricultural production, according to official estimates, has been rapid. By 1952, yields of all food crops were reported to have exceeded by 10 percent the pre-1949 peak, while cotton production had risen by 56 percent. The index of industrial production of the Central Committee (except coal) had by 1952 reached or exceeded the pre-1949 peak, according to official figures published by the Chinese Government. The increase in agricultural production, according to official estimates, has been rapid. By 1952, yields of all food crops were reported to have exceeded by 10 percent the pre-1949 peak, while cotton production had risen by 56 percent. The index of industrial production of the Central Committee (except coal) had by 1952 reached or exceeded the pre-1949 peak, according to official figures published by the Chinese Government. The increase in agricultural production, according to official estimates, has been rapid. By 1952, yields of all food crops were reported to have exceeded by 10 percent the pre-1949 peak, while cotton production had risen by 56 percent. The index of industrial production of the Central Committee (except coal) had by 1952 reached or exceeded the pre-1949 peak, according to official figures published by the Chinese Government.

single one was the restoration of peace and order. Institutional changes, however, have also had an important bearing on economic recovery. The growth of State enterprises has enabled the Government to direct production and trade. Production of export commodities and of capital goods has been encouraged, while production of luxury and non-essential items is curtailed. Production of major agricultural crops such as food and raw cotton has been encouraged by planned purchases, the fixing of favourable price ratios, and the supply of incentive goods like cotton textiles. But there are indications that lack of trained personnel, bottlenecks encountered both in the planning stage and in the timely supply of manpower, materials, spare parts and equipment have led in many cases to waste and inefficiency.

Collisions at Sea.—Shipping companies will remember that the International Regulations for Preventing Collisions at Sea, approved by the International Conference on Safety of Life at Sea which met in 1948, are due to come into force on 1st January, 1954. Giving effect to them, however, is the responsibility of each member country. So far as vessels of British registry are concerned this has been done by an Order in Council—"Collision Regulations (Ships and Seaplanes on the Water) and Signals of Distress (Ships) Order, 1953" (S. I. 1953 No. 1557)—copies of which are available to masters or owners from all Mercantile Marine Offices of the Ministry of Transport and Civil Aviation. The first schedule to the order contains the regulations themselves, the second a list of the countries which have accepted them, and the third a list of the provisions revoked by the order. The more important changes introduced by the 1948 regulations are: (i) They apply to seaplanes on the water as well as to ships. (ii) Under the existing regulations a second white mast-head light is optional; under the new regulations the second light becomes compulsory for power-driven vessels under way except for vessels less than 150 ft. in length and for those engaged in towing. (iii) The lights shown by fishing vessels when fishing must be visible at a distance of at least two miles. (iv) The stern light, which under the existing regulations is optional, becomes compulsory and its range of visibility is increased from one to two miles. (v) The range of visibility of anchor lights is increased for all vessels under 150 ft. in length from one to two miles and for vessels of 150 ft. in length and over from one to three miles; in daytime vessels at anchor must carry a black ball not less than 2 ft. in diameter in the fore part of the vessel; vessels aground must carry in daytime three black balls, placed in a vertical line one over the other and not less than 6 ft. apart. (vi) Vessels of more than 350 ft. in length when at anchor in fog, mist, falling snow, heavy rainstorms or any other condition similarly restricting visibility must, in addition to ringing a bell in the fore part of the vessel, sound in the afterpart a gong or other instrument, the tone and sounding of which cannot be confused with that of the bell. (vii) A new sound signal (one prolonged blast of the whistle) is prescribed for a power-driven vessel nearing a bend in a channel where another power-driven vessel might be approaching from the other direction but cannot be seen. (viii) When a power-driven vessel which, under the regulations, has to keep course and speed is in sight of another vessel and is in doubt whether the other vessel is taking sufficient action to avert collision, she may indicate her doubt by giving at least five short and rapid blasts on the whistle.

Another New Fibre for Textiles.—The real possibilities of one of the newer textile fibres have recently been demonstrated to both industrialists and traders in Lancashire, to their amazement as well as their delight. This is "Fibrolane," a regenerated protein fibre produced by Courtaulds, Ltd., at Coventry. As its selling price is 42d per pound it is the cheapest protein fibre, natural or man-made, at the disposal of the textile industries, and this consideration alone would be sufficient to arouse interest in it. It has, however, many other claims to the textile industries' attention. Like the natural protein fibres, such as wool and silk, it has a pleasing warmth to the touch, and it also displays crease-resistance, natural crimp, and softness. The fibre, as produced, is white, but it can be dyed and printed in excellent colours, and it can achieve colour-fastness equal to those of wool and of viscose rayon staple. This circumstance is especially important because "Fibrolane" is primarily intended for blending with other fibres, and blends with wool and rayon staple to produce most attractive and serviceable materials. One of its greatest advantages, however, is that it can be spun on the cottons, condensers, woolens, worsteds, and flax systems. Its similarity to and affinity with wool may suggest that it will be used more widely in long run, however, comparative costs will play an important part in determining its distribution over the different branches of the textile industry. It must be added, moreover, that blends of

the new fibre with viscose rayon staple—the cheapest textile fibre available to cotton mills—with their characteristics of warmth and good recovery from creasing seem likely to make a very favourable impression in cotton trade quarters.

Rice Exporter in Trouble.—As was mentioned in our City Cable last week the latest issue of the British "Board of Trade Journal" helps in part to clarify the sudden decision of the Siamese authorities to announce that all goods shipped to that country after 16th November will require an import permit unless letters of credit had been established by that date. This amounted to a complete stoppage of all shipments other than those already on the high seas, which importers in Siam were given some chance of getting through the barrier by one means or another. The Siamese Government has been concerned to stress that the restriction is meant only to enable the authorities to control imports selectively, but London traders familiar with recent developments in Siam are rather less optimistic. According to them, Siam has been importing very heavily of late and stocks of many goods, including cars and cotton piecegoods, are abnormally large. On the other hand, Siam's export situation is not reassuring. Apart from the effect of the heavy fall in tin and rubber prices, the export of rice has not been going well. Rice is by no means as easy to sell today as it was in the recent past. Burma, the largest rice producer in the area, has not managed to clear last year's crop. The Burmese Government has been holding out against a reduction in the price and it seems that this policy has been supported by British Government agencies in the region. The price of rice, which is so vital for the purchasing power of some countries in South-east Asia, would probably have slumped already if Indonesia had not been prevented by internal difficulties from entering the export market. What happens to rice is obviously going to influence the importing capacity of Siam. At best the country will need at least a few months to sort things out.

Bombay Merchants' Chamber Meets.—In his presidential address at the quarterly general meeting of the Indian Merchants' Chamber in Bombay last week, Mr. Ambalal Kilachand complained that 'in the Indian tax system there is not only a lack of balance between direct and indirect taxes, but the range of both direct and indirect taxes is too narrow. "There has been a tendency to exploit to an unwarranted extent income tax among direct taxes, and customs, particularly export duties, among indirect taxes." Taxes on income in pre-war years represented less than 25 percent of the total tax revenue of the Central Government, but they now constitute 40 percent. Moreover, only about 0.25 percent of the population is made to pay 40 percent of the Central Government's total revenue, while the agricultural sector pays no income tax at all in some States. The burden of increased taxation has fallen to a disproportionate extent on the middle class. Mr. Kilachand suggested the following changes with regard to direct taxation. The progression in the rates structure should be adjusted so as not to destroy incentive, and the tax structure itself simplified by combining the two levies of income tax and super-tax. Taxes on higher personal incomes should be reduced, as also those on the undistributed profits of corporate undertakings. Replacement costs should be accepted as expenditure in calculating profits and depreciation allowances liberalised. In regard to indirect taxation, Mr. Kilachand urged that import duties be based on revenue considerations and export duties be continually adjusted so as not to hamper the export trade. Sales tax should be rationalised, re-imposition of the salt excise duty considered, and possibly other excise duties could be levied where they would not affect the progress of industry.

The Vice-President of the Chamber, Mr. Chimanlal Parikh, devoted much attention to labour problems in his speech at the meeting. He said that "there is a growing feeling that Indian labour legislation is being planned and pushed forward on the basis mainly of the concepts and experience in foreign countries without adequate recognition of the fact that in those countries trade union leadership was equally vigilant in instilling into the minds of labour ideas regarding the enlightened rôle which they should play in promoting the future of industry." While the increased volume of welfare measures has increased labour costs, "a tendency of studied antagonism to industry and to industrialists is visible." He went on to criticise the growing practice of government by ordinance, and discussed the problems of controls and sales tax.

Asian Seamen.—The scope for Indo-Pakistan co-operation is apparently better appreciated by the nationals of the two countries than it is, perhaps, by their Governments. Evidence of this was forthcoming at the recent inaugural conference of the Pakistan Seafarers' Federation when the pre-

sident of the new organisation was authorised to open formal negotiations with the Indian Seafarers' Federation with a view to joint co-operation with the International Transport Workers' Federation and the National Union of Seamen to discuss various pending grievances of Indo-Pakistani seafarers serving in the British Merchant Navy. The number of these employed is not, perhaps, generally realised, but according to figures announced at the conference the Pakistanis alone total some 40,000. The number of Indians must be almost as large. The exact nature of the grievances has not been stated, but there can be little doubt that seagoing conditions of life and work for Asian seafarers in British vessels have undergone vast improvement in recent years, and in many cases new ships are designed to meet with their special needs. If this was not the case, the numbers of them employed on foreign ships would surely be much smaller. In pressing their claims it would be as well for them to keep in mind the fact that in the United Kingdom there have been several references recently to the number of British owners who employ Indian and Pakistani seamen in their vessels. The National Union of Seamen in Britain is endeavouring to persuade these owners to employ British crews, but the pressure at present is not great, presumably in view of the fact that there is little real unemployment of union members. It is possible that if the employment position should alter the pressure might be increased.

U.S. Investments Abroad.—American investments in other countries—based on the book value of U.S.-owned equity in enterprises substantially controlled by U.S. capital—has increased by about \$3,200 million in the past three years and now stands at about \$15,000 million, according to the U.S. Department of Commerce. About 70 percent of the total was invested in the Western Hemisphere. In 1950, the latest year for which

Along with the next issue of "Capital" dated 17th December, a 116-page Annual Review of Trade, Commerce and Industry in 1953 will be distributed free to subscribers. Extra copies of the Review will be on sale at Rs. 5 each, for which orders should be placed early with: The Manager, "CAPITAL," 5 Mission Row, Calcutta, 1.

detailed information is now available, other important areas included Western Europe, the Middle East, the Philippines, Australia, and South Africa. As of 1950, when U.S. investment abroad totalled \$11,800 million, the American share in foreign earnings after foreign taxes was \$1,800 million. Of this, \$1,300 million was made up of dividends or branch profits, while the remaining \$500 million was retained by foreign subsidiaries. The department stated that about 20 percent of U.S. purchases in other countries in 1950 were from foreign branches or subsidiaries of American companies. Manufacturing still leads as the greatest attraction of investment capital, accounting for \$3,800 million at the end of 1950. Oil was next with \$3,400 million. The department noted that manufacturing investments have been able to grow through the reinvestment of earnings in expanding the size and scope of production in other countries. "Nearly all of the manufacturing enterprises were incorporated abroad, providing an opportunity for local participation."

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:—

- Rs. 40 H. E. The Governor of West Bengal
- Rs. 10 H. E. The Governor of Bihar
- Rs. 110 The staff of Imperial Tobacco Co. of India Ltd.
- Rs. 25 H. A. L.
- Rs. 23 The staff of Atlantis (East) Ltd.
- Rs. 20 R. B.
- Rs. 10 each R. M. M. L. Nathani, Sir Anthony J. Elkins, P. E. G. W. Parish, J. F. E. d'A Willis
- Rs. 5 each S. M. K. Cooper, J. W. Easson, S. M. Petrie, G. A. Whitaker, S. C. Gladstone.
- Rs. 3 G. A. Carver
- Total Rs. 306
- Previously acknowledged Rs. 5,130-3-0
- Grand Total Rs. 5,436-3-0
- We have also received a collection of toys from L. F. M.

EXPORT FIGURES DEPRESS
STOCK MARKETINDIAN TEA SHARES A BRIGHT
FEATURE

London, 8th December.

STOCK market activity tailed off further in the past week as investors took note of the fact that exports had failed to expand rather than of the encouraging gold and dollar reserve figures. The one-day strike of engineers affected confidence further while optimism regarding tax reliefs in the next budget was on the wane. Despite all this, however, prices were generally maintained and losses, where sustained, were only fractional. One of the brightest features was the strength of tea shares. An influence on the price was the report that India was going to export tea to Russia under the new trade agreement, while there were also indications of continuing recovery among various companies. The shares finished the week with good gains while other notable rises were seen in North Indian companies. Rubbers and tins were generally maintained although some issues closed lower—among them Mawchi, which fell on profit-taking following the recent rise. Of the Indian utilities, Calcutta Tramways and Calcutta Electric moved up late in the week on reported Indian buying. Among domestic stocks, take-over issues were in the limelight, particularly Savoy Hotels, which fluctuated violently at times. Gift-edged were generally steady while industrialists showed only small changes either way with engineering mostly dull and textiles very firm on a batch of encouraging company reports. Oils were generally firmer under the lead of Anglo-Iranian following recent Persian developments, while in South African minings uranium issues continued to make headway.

The money market had a difficult start in the past week with a marked absence of funds initially and heavy outflow calling because of end-of-the-month factors. This brought the authorities in with assistance on a small scale. The turn of the month brought easier conditions, however, and although conditions from time to time were

slightly patchy, there was slight surplus of funds on each day throughout the rest of the week, the authorities engaging in reverse operations to skim off the surplus. At the end of the period, books were balanced without difficulty. Applications for £250 million of Treasury Bonds totalled £373,955,000, of which the former amount was allotted at an average rate of 41s 11.72d percent. This week £250 million will be offered. The Bank of England Return showed a rise in fiduciary issues of £50 million to £1,625 million, with active note circulation increased by £16.7 million to £1,566 million, leaving the reserve in the banking department at £58.8 million. The increase in active note circulation reflects Christmas spending money. The rise in active note circulation since the seasonal low in mid-October has been £38 million, compared with a rise of £38 million in the equivalent weeks of last year. But the total active circulation is £85 million higher than a year ago.

Oil and Seeds Market

Following the readjustment of the coconut oil export duties from Ceylon according to the fixed rates basic sellers were able to offer more freely. Quiet conditions continued to prevail, however, and £131 c.i.f. was generally asked for, while Straits oil was quoted at £129. Reports were circulated at the end of last week of the sale of a further 10,000 tons of U.S. linseed oil to North Europe but no confirmation was obtainable. There was nothing of interest to report elsewhere, the market being generally dull.

Hongkong Gold Prices

Hongkong gold steadied last week and showed an advance of 2½% (Hongkong) per tael for the period. After opening at \$250¼, values dipped to the week's low of \$250 but later staged a rally to a high of \$253¼, though this level was not held through to the close. The recovery was solely because of the advance in international markets, on the advance were still poor in the colony. Brakes the American dollar there and heavy Macao Official offtake was 6,050 taels and unofficial 17,900 taels. Futures contracts were 23,800 ounces at \$37.30 (U.S.) per ounce, c.i.f. Macao.

Swedish Pulp Prices to be Raised

The price of Swedish pulp for sales to Britain in the first quarter of next year has been increased. Bleached sulphite, now costing £52 to £53 per up from the present £41½ to £45, kraft sulphite from £41½ to £45, and kraft sulphite from £54 and £55 to £56 and £57. Viscose prices to Britain have also been increased from £61 to £63, while Continental Europe will pay 902.02 Swedish crown per ton against the current 867.50. In the first ten months of this year Sweden exported pulp totalling 1.7 million tons compared with 1.9 million in the same period in 1952.

U.S. Cottonseed Oil

The long-awaited advance in price for the U.S. Government's stocks of cottonseed oil came last week when the Commodity Credit Corporation offered 796 million lbs of refined cottonseed oil to domestic buyers at the market price but not less than 15 cents per lb—one cent higher than the previous price. The Department of Agriculture has also increased the price for 15 million lbs of crude cottonseed oil by one cent. The C.C.C. said it would not reduce cottonseed oil prices again until 1st September, 1954. The trade points out the factory and warehouse stocks of cottonseed oil at the end of August totalled 956 million lbs, as against 356 million lbs in August last year. Production has been seasonally heavy in recent months. The Government accounts for the bulk of the holdings.

European Steel Prices

The European Coal and Steel Pool Consultative Committee composed of producers, workers and consumers flatly rejected a proposal of the high authority of the pool that it be given the right to fix minimum prices for steel exports to countries outside the pool. The Committee further refused to consider the high authority's proposal to make existing steel prices more flexible. A Committee spokesman said that too little time has been given to considering the proposal.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT SUPPLY COMFORTABLE

Wednesday, 9th December.

THE credit position remains comfortable and there has been no increase in demand for funds. Sugar finance is gradually mounting but advances on other accounts are about steady. The demand for money is much less than at this time last year, and the banks appear to be putting surplus funds into Government securities. In the interbank market, the call rate quotes 1½ percent.

Exchange business has been slack, with only a few tea bills passing. Remittance has been small. The principal exchange rates quote: sterling T.T. and O.D. 1s 5 31/32d; three months' sight bills 1s 6 7/32d; four months' sight bills 1s 6 9/32d; and \$100, Rs. 476-8.

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills rose to Rs. 1,71,50,000 this week. The average rate of acceptance also rose by two paise to Rs. 2-7-2 percent per annum, tenders at Rs. 99-6-3 percent and above having been accepted in full and those at Rs. 99-6-0 percent allotted approximately 57 percent. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 4th December treasury bills for Rs. 3,62,25,000 were sold in favour of the Reserve Bank.

Bullion closed on a steady tone after an easier opening during the early part of last week. Lower levels induced fresh buying and short-covering. Silver improved from the previous week's level of Rs. 149-12 to Rs. 150-8 quoted today, while the ready rate was about 2 annas higher. The price was, however, unchanged at 74d. in London and at 85½ cents in New York.

Gold also moved up from Rs. 81-12 to Rs. 82-2 in sympathy with silver, but the sovereign was slightly shaded at Rs. 57-4.

A rise of Rs. 17.57 crores in notes in circulation to Rs. 1,114.42 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 4th December, 1953, while the total note issue declined by Rs. 96 lakhs to stand at Rs. 1,126.08 crores. Notes held in the Banking Department consequently diminished by Rs. 18.53 crores to Rs. 11.66 crores. Deposits of the Government of India and other Government accounts fell by Rs. 7.66 crores and Rs. 2.14 crores to Rs. 90.43 crores and Rs. 22.24 crores, respectively. Good demand for money explained the fall of Rs. 9.03 crores in balances of commercial banks to Rs. 60.79 crores. Balances held abroad at Rs. 144.85 crores showed an increase of Rs. 3.29 crores. Other loans and advances dropped from Rs. 11.01 crores to Rs. 10.93 crores of which advances to scheduled banks against usance bills continued unchanged at Rs. 49.45 lakhs. Investments at Rs. 79.13 crores revealed a decline of Rs. 2.01 crores. Ways and means advances were shown at Rs. 1.38 crores (Rs. 1.37 crores).

The statement of the position of Scheduled Banks for the week ended 27th November, 1953, discloses Demand and Time liabilities at Rs. 538.93 crores (Rs. 12.57 crores on account of borrowings from Banks) and Rs. 334.96 crores (Rs. 2.73 crores) compared with Rs. 527.67 crores (Rs. 11.46 crores) and Rs. 333.62 crores (Rs. 2.63 crores) respectively in the previous week. Cash remains unchanged at Rs. 32.79 crores, while balances with the Reserve Bank have advanced by Rs. 8.11 crores to Rs. 67.85 crores. There is a drop of Rs. 65 lakhs in investments to Rs. 336.77 crores. Advances and bills discounted at Rs. 449.04 crores reveal a rise of Rs. 1.36 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 11.5 percent and 51.4 percent against 10.7 percent and 52.0 percent.

TREASURY BILL MATURITIES

Details of 3 months Bills outstanding with the public on 11-12-53.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
11-12-53	11-3-54	1,00,00	Rs. 2 7 2

WHATEVER was achieved at Bermuda that could not as well have been achieved by other means, we may assume that Sir Winston Churchill was in his element—four crowded days of weighty discussion with the leaders of the nations, a host of experts and back-room boys, an exotic setting, a mysterious illness that kept the French Premier out of the talks: I wonder what he would have made of all this in his next volume of memoirs. We can hardly expect that, in his eightieth year and with a full term of office ahead of him, he will have time to write another. So Bermuda might be the first portentous conference of our time that the Nobel Prize historian has attended but will not be able to chronicle. The first, and perhaps he hopes the last but one. All the radio pictures so far received from Hamilton show him in strictly conventional dress but I will be surprised if the time-table was so rigid as to allow him no opportunity for one or two of those curious pranks of relaxation that, we read in his memoirs, astonished his colleagues at previous conferences. There is a description, in Mr. Amery's recent autobiography, of "Churchill retiring for the night in an old-fashioned nightshirt and a woolly tummy-band", and I wonder if he received anybody at Bermuda in this condition. Someone else has recalled one of the less formal Churchillian receptions: "It took place, rather early in the morning, in the First Lord's bedroom in Admiralty House during the calamitous Norwegian campaign of 1940, and Mr. Churchill, as he then was, was clad in only a suit of combinations and a large cigar. I can think of few other men on whom this attire would not have imposed a *je ne sais quoi* of the surrealist or even of the raffish, but it seemed neither unbecoming nor even incongruous to Mr. Churchill..." Incidentally, I heard one of the best Churchill stories only recently: it concerns his first sight of his grandchild, which took place, I think, in New York. Someone said to him (there is always someone to say this to a grandparent): "And it looks like you, too." To which Sir Winston replied lugubriously: "All babies do."

The Chartered Bank of India, Australia and China celebrates its centenary at the end of this month, having been granted a Royal Charter on 29th December, 1853. There was a function to mark the event in Calcutta lately, and more extensive celebrations were held on Monday in Bombay at which the Governor of that State, Mr. Girja Shankar Bajpai, and the Chairman of the Indian Banks' Association, Mr. Pranlal Devkaran Nanjee, both had some interesting things to say about the rôle of the British exchange banks in the Indian financial structure. I hear from London that a series of gatherings have been arranged that will there too in honour of the centenary, which will reach a climax at the end of the year. The publication of a history of the Bank has been slightly delayed, but when it appears early in the New Year we shall no doubt have an opportunity to revert to the long and honourable part this institution has played in the development of exchange banking in the East. Meantime I wonder what relics remain in Calcutta of a very great man whose name will appear prominently in that history, as in histories of other aspects of Indian economic development. I mean James Wilson, the political economist and founder of *The Economist*, who died at his home in Barrackpore in 1860 and was buried, beneath an imposing monument, in the Lower Circular Road cemetery. It was James Wilson whose name headed the list of signatures on the petition for a Charter for the Bank in 1853, and it is said that his vigorous support of the proposal before his colleague, William Ewart Gladstone, who was then Chancellor of the Exchequer, was instrumental in having the Charter

A DITCHER'S DIARY

granted. At that time Wilson had never been to India and as far as I know his only connection with the country was that he had lost his entire fortune by speculating in indigo, a link with India that was by no means unique in his day. Ten years before he had grown tired of writing the city notes for the *Morning Chronicle* and had determined to start a paper of his own, which he did with moral support from Cobden and monetary support from Lord Radnor. He called it *The Economist*, and for a long time he had to write most of the contents himself, though he later handed over the editorship to a young man who married the eldest of his six daughters—Walter Bagehot, who became famous as the author of *Lombard Street* and *The British Constitution*. Lord Palmerston sent Wilson out to India as the Finance Member in 1859, where he introduced the income tax and a paper currency. Apart from the monument in the Lower Circular Road cemetery, there used to be a statue of him in the Dalhousie Institute, which stood where the new telephone exchange is now being erected in Dalhousie Square. I do not know what has happened to these relics, but it might not be too much against the spirit of the times to suggest that they be preserved.

Large advertisements are now appearing in the London press for a book called *The World in Liquidation*, by one A. E. Ware and associates, which purports to give an account of the approaching end of the world based on "twenty years' patient study of the Bible in relation to its chronology". The publishers claim that the Bible has "at last been allowed to yield up its deeply concealed TIME SECRETS", and these latter evidently include a "faultless, astronomically accurate record of Time from the dawn of history to the present day". The authors seem to have some economic interests, for in addition to preferring the accountancy term liquidation to the more venerable Armageddon, they have succeeded in calculating that the world came to the end of its predetermined Six Thousand Years of Probation on 12th June, 1933, which was the date of the opening in London of the ill-fated World Economic Conference. Since then we have been living in a "parenthetical era" which is due to come to a conclusion in some lurid fashion in the near future, whereupon we (or those that are left of us) will enter upon the Seven Thousand Years of the Universal Kingdom. "Human history since 1933", says the advertisement, "loudly endorses the above facts". Some may doubt this. The authors describe themselves as "primitivists" but they are modernist enough to refer to these coming events as "a super-crisis", a barbarism they scarcely found in the Bible. If only the chief author had given his name as B. E. Ware and not A. E. Ware I could rest in the knowledge that this was a leg-pull; as it is, I hardly dare comment lest I be proven tamerously wrong before the week is out. I might however recall that I once was on the staff of a newspaper that had a rabidly Fundamentalist editor, and I remember that when France fell in 1940 I asked the printer to put up the largest type in the establishment, under which this intelligence could be conveyed to our readership. As it happened the largest type available was pretty big and very black. When the editor saw the front page he shook his head patiently and said, "Can't use that you know. We're saving it up". "Saving it up?" I asked, "What for?" "For the Second Coming", he replied solemnly, "for the Second Coming".

We are having a good show of fiddlers this music season in Calcutta—a series of concerts that opened

with Isaac Stern and will close with Yehudi Menuhin, with enough local talent in between to "keep our ear in". Mehl Mehta came across from Bombay last week-end to play with the Calcutta Symphony Orchestra at the first concert of its 30th season, and he performed one of the Mozart violin concerti. Those who listened to the concert over the radio heard only the Rossini and the Beethoven, but missed this delightful second half of the programme—though there is still plenty of room in the hall for additional subscribers and occasional visitors. Another talented violinist will appear at the next concert, Miss Korsch Madan, who will play a Mendelssohn concerto in the New Empire on Sunday week, the 20th. The piece de résistance in that concert will be the first performance of a symphony composed by Senor Casanovas, who has been conductor of the Orchestra since 1948.

Today being 10th December, there are only twelve shopping days to Christmas and I am moved to reprint here some reflections on the contrast between modern economics and the Christmas spirit which were written some years ago at a similar time by the irrepressible George Schwartz, under the heading *Poppycockistan*: "With only twelve shopping days before Christmas you should be thinking seriously of Fritalux and Ukiscan. No, stupid, these are not new synthetic cooking-fats, nor are they hardware gadgets. Fritalux is a regional economic grouping embracing France, Italy and the Benelux countries, and don't ask the grocer if he has any Benelux. Ukiscan is a project for a similar grouping intended to cover the United Kingdom, Sweden, Norway and Denmark. There is some excuse for your ignorance in these matters. . . . All these developments would have been subsumed in the old days under the simple concept of freedom of trade. But the term freedom is suspect in its economic context. It does not accord with the planning procedure which links hard roes with soft currencies and calls the results Barrasnoek. Have you asked yourself why your cheque should be acceptable anywhere in the United Kingdom? You take it for granted, but you took a lot of things for granted 30 years ago, and where are they now? Suppose the stores sent back your cheque on the Midland with a reminder that they were in the National Provincial system, and that there was no transferability of accounts. Your dealings would be confined to firms with Midland accounts, and now that I have broached the idea the authorities will probably kick themselves for not having thought of it before as a useful addition to the armoury of controls. For in course of time they might graciously concede a modification of the control to the extent of permitting transferability between Midland and National Provincial accounts. This would be put over as a project for Midnatprov. . . . As a counterpart to this a Lloybarwest Union would be projected and given a popular appeal as L.B.W. It would then take some years to familiarise the public with the notion of multi-lateral bank clearings, and some decades to persuade Ministers of the virtue of it. It would have to be projected as a Multibancor or Checkistan Union and secretly negotiated as Operation Pippa Passes. When it was achieved we should be back to the clearing system as it exists today and has existed for years past, except that it would take three times as many officials to run it. Peace on earth and goodwill to men. You couldn't put that over now unless you wrapped it up as Unimondpaxbonitas. Try arriving at the Customs anywhere in the world today with gold, frankincense and myrrh in your baggage, and see what happens to you."

Calcutta Markets

VERY STRONG DEMAND IN TEA EXPORT AUCTION

PRICES ALSO RISE IN INTERNAL SALE

AT Sale No. 25, held on 7th December, offerings in the Export auction consisted of approximately 60,000 cases. There was an extremely strong and active demand for all sorts and as the sale progressed prices advanced. Commonest teas were a full three annas dearer while Commons, Low Mediums and Mediums were two to three annas dearer. The few tippy offerings sold well at enhanced rates, while best liquoring sorts were one to two annas dearer. Leaf grades were also a strong feature and were dearer, while there was more support for Darjeelings than in recent sales.

Quotations	1953		1952	
	Rs. as ps.	Rs. as ps.	Rs. as ps.	Rs. as ps.
Clean Black Pekoe	2 1 0	2 2 0	1 4 6	
Clean Common B.P.	2 0 0		0 12 0	
Medium Assam B.P.	2 1 0	0 12 6	0 13 0	
Good Assam B.P.	2 3 0	2 4 0	1 10 0 (Nom.)	

Internal Market

Offerings in the Dust sale on 8th December consisted of approximately 17,000 cases. The very strong and general demand that was apparent in the Export auction was repeated in the Dust sale. The poorest teas were a full two annas dearer, while Commons, Low Mediums and Mediums were one to one and a half annas dearer. C.T.C. Assam Dusts met with much better demand and they were one anna dearer. The Darjeelings offered were well supported.

Quotations	1953		1952	
	Rs. as ps.	Rs. as ps.	Rs. as ps.	Rs. as ps.
Medium Doonara Dust	1 11 0	1 2 6		
Medium Assam Grains Dust	1 11 6	1 12 0	1 6 6	
Best Assam C.T.C. Dust	1 15 0	1 11 0		

The offerings of other grades were bigger this week and most types sold from one to two annas above the last rates. Green teas however were difficult of sale.

FAIR DEMAND FOR VESSELS ON TIME CHARTER

INDIAN FREIGHT MARKET FIRM

EXCHANGES over the last week generally went in favour of charterers. The only market showing any firmness is India, although there is still a fair demand for vessels on time charter. The feature of the Indian market was the fixture of the Queen City at 55s for coals to Japan in December. This vessel is ballasting from Japan for the cargo, which is indicative of the weakness of markets in Australia and on the Pacific Coast.

One fixture from India included Koilthottam-New York \$9.25 December loading, Mormugao-Continent 58s 9d January loading, Madras-Japan \$7.20 one port, \$7.50 two ports discharge end December, Mormugao-U.S.N.H. \$9.50 February and Vizagapatam-U.S.N.H. \$9.25 February.

Coal from America was carried at reduced rates, December tonnage accepting 29s 9d for Rotterdam and \$9.30 for Japan, whilst a January vessel accepted \$9.25 for the same destination. A further cargo was fixed from Lourenco Marques to Karachi at 42s 6d with February laydays.

A December vessel has been fixed at 62s 6d for sugar in bags from Hamburg to Bombay with the option of Madras at 65s, whilst another vessel obtained 67s from London to Madras with the option of Calcutta at 69s 6d, but a 10,000 ton vessel accepted 52s from Hamburg to Bombay with spot loading. Tonnage has been chartered for asphalt from New Orleans to Chittagong at \$16 per ton December readiness, and a cargo of cement has been arranged from Constantia to Chittagong and Chalna at 52s.

In the time charter section a 10,000-ton motorship was taken at 17s 6d per deadweight ton delivery Glasgow January, redelivery Persian Gulf and an 8,842-ton motorship secured 22s 6d per deadweight ton with delivery Scandinavia for an Indian round voyage. The Maria G. 5,228 tons deadweight, is reported fixed for three to four months trading in the East at 18s per deadweight ton.

LINSEED SUPPLIES SHORT

Following the Government's announcement that there will be no relaxation of export duties, the market displayed a weaker tendency during the early part of the past week. Thereafter a firmer tendency set in and prices fully regained the earlier losses. The main factor was shortage of supplies. There were keen enquiries from crushers for near deliveries, but with very limited offerings from sellers prices rose and the actual volume of trading was small. In the oil section, because of the prevailing scarcity of stocks and a small though steady demand for ready goods, prices were well maintained and trading was fair. Latest quotations were as follows: Ready Rs. 20-12 per maund; December Rs. 20-8 per maund.

HIDES AND SKINS UNCHANGED

The market was almost unchanged. Stocks were less than in the previous week.

Bazar Sales
(Between 1st and 7th December, 1953)
Cowhides: Wet salted (Ord) 7,000 pcs. on the basis of annas 9 to annas 10-9; Wet salted (Ord) 30,000 pcs. on the basis of Rs. 9 to Rs. 9-8; Wet salted (Slaughtered) 12,400 pcs. on the basis of Rs. 10-8 to Rs. 24-4.

Goatskins: Wet salted (Daissee, Killed) 31,700 pcs. on the basis of Rs. 275 to Rs. 425; Assam-Dinajpur-Murshidabad 12,200 pcs. on the basis of Rs. 305 to Rs. 335; Kishanganj-Purnea 9,240 pcs. on the basis of Rs. 295 to Rs. 320; Patna (Ord) 3,900 pcs. on the basis of Rs. 200 to Rs. 225; Muzaffarpore-Darbhanga-Patna 33,200 pcs. on the basis of Rs. 255 to Rs. 290.

Bazar Stocks

(7th December, 1953)

Cowhides: Wet salted 89,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 46,000 pcs.; Assam-Dinajpur-Murshidabad 42,000 pcs.; Muzaffarpore-Patna-P k u r-Purnea-Kishanganj 1,89,000 pcs.

SUGAR MARKET DULL

During the week ended 8th December, the sugar market was dull although consumption was about normal. Arrivals were approximately 18,000 bags and stocks amounted to 80,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-8 a maund for ordinary grain, Rs. 31-8 for big grain and Rs. 30 for Java sugar. The ex-mill delivery price was above Rs. 29-6 a maund for D28 grade and there was a very small turnover in this section. Small quantities were exported to South India and Assam, where demand declined because markets were easier.

SHELLAC PRICES IMPROVE

The market was steady at the beginning, and became firm at the end of the week. Business passed was moderate but at improved prices. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 120 to 123 buyers
Pure Buttonlac	Rs. 114 to 118 done & buyers
Lemon No. 1 Shellac	Rs. 115 to 119 done & buyers
Lemon No. 2 Shellac	Rs. 112 to 115 done & buyers
F. O. Std. I Shellac	Rs. 110 to 113 buyers
Pure TN Shellac	Rs. 105 to 108 basis done & buyers
4% I. T. N. Shellac	Rs. 97 to 101 done & buyers
No. 1 Kusmi Seedlac	3% Rs. 115/116 value Rs. 118 Buyers
No. 2 Kusmi Seedlac	3% Rs. 108 to 112 done & buyers
Fine Bysaky Seedlac (Manbhumi)	3% Rs. 103 to 106 buyers
Fine Bysaky Seedlac (C.P.)	3% Rs. 100 to 102 done & buyers
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 96 to 97 done & buyers
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 90 to 91 buyers
Kireelac	Rs. 50 to 52 buyers

Shipments during December until the 5th were 3,907 packages.

Commodity Markets

MORE AREA UNDER COTTON THIS YEAR

SECOND ESTIMATE SHOWS INCREASE OF OVER SIX PERCENT

ACCORDING to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India second estimate of cotton for 1953-54 puts the area at 12,956,000 acres, as against 12,174,000 acres of the adjusted corresponding estimate of last year. The increase amounts to 782,000 acres, or 6.4 percent. Details, according to trade descriptions for the current and last year's estimates, are given below:

Variety	Area (Thousand acres)	1953-54	1952-53	Increase (+) or Decrease (-)
Long Staple				
Americans	1,388	1,127	(+)	259
Hyderabad-Gaorani	1,108	1,004	(+)	104
Surti-Suyog	476	498	(-)	22
Southerns-Jayadhar	333	319	(+)	14
Total :	3,303	2,948	(+)	355
Medium Staple				
Americans	937	867	(+)	70
Oomras-Jarilla & Verum	2,542	2,289	(+)	253
Broach-Vijay	841		(-)	16
Dholeras	1,029	1,142	(-)	113
Southerns	286	272	(+)	14
Total :	5,619	5,411	(+)	208
Short Staple				
Bengals	1,005	1,095	(-)	90
Oomras	2,750	2,445	(+)	305
Dholeras-Mathlo	181	177	(+)	4
Southerns-Mungari and Chinnapathi	40	42	(-)	2
Comillas	58	56	(+)	2
Total :	4,034	3,815	(+)	219
Grand Total :	12,956	12,174	(+)	782

The increase in acreage over last year, reported by almost all cotton-growing States, has occurred mainly in Madhya Pradesh, Hyderabad, Madhya Bharat, Bombay, Pepsu and Mysore; it has been facilitated by timely and sufficient rains at sowing time. As regards varieties, the increase in area is the largest amongst long staple cottons. This estimate covers the period up to the end of September, 1953. Till then, the condition of the crop was reported to be generally satisfactory. This estimate does not cover the entire area sown to cotton during 1953-54. Experience suggests that the area at the second estimate stage is roughly 75 percent of the area under the crop finally reported.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939 as 100) rose by 0.3 percent to 391.7 during the week ended 21st November, as compared with 390.7 (revised) for the previous week. The index was 0.4 percent lower than in the corresponding week of the previous month but 2.5 percent higher than that of a year ago. Foodstuffs declined by 1.6 percent to 375.6 because of decreases in the prices of bajra (-7%), rice at Patna and gur at Muzaffarnagar (-5% each), tea (-4%), gram and coffee (-5%). Prices of wheat at Amritsar (+2%) and sugar (+1%), however, rose. Industrial Raw Materials increased by 2.7 percent to 448.9 as a result of advances in the prices of jute (+6%), rapeseed in Calcutta and cottonseed (+4% each), gingellyseed in Bombay, export price of manganese ore, cotton, groundnuts and copra (+3% each), and linseed in Calcutta (+2%), despite lower prices of mica (-8%), rapeseed in Bombay (-6%), linseed in Bombay (-3%), rapeseed at Kanpur (-2%), gingellyseed at Jhansi, castorseed, lac and raw silk (-1% each). The index for Semi-Manufactures also rose by 1.2 percent to 357.2 from 353.1 (revised) for the previous week, on account of an increase in the prices of pig iron (+15%) together with higher prices of coconut cake (+10%), groundnut oil in Madras (+4%), gingelly cake (+3%), mustard oil (+2%), linseed oil in Calcutta, cotton yarn, cow hides and coconut oil (+1% each), linseed oil in Calcutta (-7%), castor oil (-4%), linseed oil in Bombay and groundnut cake (-2% each), groundnut oil in Bombay and coir yarn (-1% each) declined.

Stocks and Shares

SHARE PRICES SHADED BUT UNDERTONE STILL STRONG

PROFIT-TAKING IN TEAS-ABSORBED: GILT-EDGED FIRM: ENQUIRY FOR JUTES

Wednesday Evening.

THE share market has been somewhat quieter this week and the turnover has been lower than last week's. The undertone however is still very steady and the easier note in the last few days' trading probably indicated only profit-taking by bazar operators when they saw that outside investors were not going to follow through the rise that began a few weeks ago. Tea shares have been shaded on profit-taking but this has now mostly been absorbed. Jute shares which have been neglected are now returning to favour and there has been investment enquiry for selected mill shares.

Details of the week's trading follow.

Trading in the gilt-edged section continued to be on a restricted scale, though the overall volume of business was slightly larger than last week. Following a revival of rumours regarding a possible reduction in the bank rate there was a strong enquiry for 3 percent Conversion Loan 1946-86 in the past 48 hours, with the price improving from Rs. 82.2 to Rs. 82.10, buyers. In short-dated issues, there was a good enquiry for 24 percent 1954-55 Rs. 98-12.6, but no declared sellers, and 21 percent 1955 was taken at Rs. 98-6. Three percent 1958 was marked up to Rs. 98-2 with buyers over, while 3 percent 1957 was also better at Rs. 98-7; 3 percent 1954-59 was enquired for up to Rs. 100-5. In the medium-dated group, both 3 percent 1959-61 and 3 percent 1961 were taken one anna higher at Rs. 96-2 and Rs. 98-15 respectively. Three percent 1963-65 was traded at around Rs. 92-8, and 3 percent 1964 was marked at Rs. 92-10; 24 percent 1961 was better at Rs. 90-10 as was 23 percent 1960 at Rs. 93-10, and 23 percent 1962 at Rs. 91-10. Four percent 1960-70 also met with enquiry at around Rs. 101-13, with sellers wanting one anna more. Long-dated loans were also steady, with 3 percent 1966-68 improving to Rs. 90-3. Three percent 1970-75 was firm at Rs. 86-8.

Provincial loans continued to be a dull market though there was an unsatisfied demand for 3 percent Bombay 1955 and 1956 up to Rs. 99-6. Four percent U.P. 1963 was dealt in at Rs. 99-13-6, and small lots of 4 percent West Bengal 1963 changed hands at Rs. 100-8.

Demand for selected preference shares continued, and buyers were willing to pay slightly higher prices, but sellers were reserved. Birla were crossed at Rs. 106, and Alliance at Rs. 109-8. Hooghly were quoted at Rs. 14-8. Amongst miscellaneous issues small lots of Alkali & Chemical changed hands at around Rs. 107-8. Business was reported in Associated Mining Industries at Rs. 25, Bathgate at Rs. 21-4, and Calcutta Electric at Rs. 12. Indian Iron & Steel were done at Rs. 107, Jardine Henderson at Rs. 80, and a small lot of Kesoram Cotton at Rs. 129. New Victoria were marked at Rs. 3-10 and Rohtas Industries 'B' at Rs. 57-2.

In the banking section, Imperial Bank Fully-Paid and Contributory were unchanged at Rs. 1852 and Rs. 454. Allahabad Bank Fully-Paid and Contributory were marked at Rs. 382 and Rs. 190. Hindustan Commercial were quoted at Rs. 8-10 and United Bank of India 'D' class shares at Rs. 3-14. United Commercial met with strong enquiry and improved from Rs. 37-8 to Rs. 39-8.

No transactions were recorded in railway shares.

Cotton shares were a dull market. Bengal Nagpur came to hand at Rs. 12-15, Bowraha at Rs. 285 and Cawnpore Textiles at Rs. 8-5. Basanti were enquired for at Rs. 3-15, Elgin changed hands at Rs. 18, and Kesoram at Rs. 20-9. New Victoria were dealt in freely at around Rs. 1-4.

Coal shares kept fairly steady and selected issues met with some investment support. Burra-kur, after being traded up to Rs. 9 ex-dividend, fell back to Rs. 8-14 at the close. Amalgamated were wanted at Rs. 21, and small lots of Bengal were done at around Rs. 507. East Indian, following directors' recommendation of a final dividend of Rs. 1-10 (same as last year), were steady at Rs. 25-12. Dhemo Main met with nibbling enquiry at Rs. 9-14 as did New Beerbhoom at Rs. 19-2, and South Karanpura at Rs. 10-14. Boreea were steady at Rs. 27-12 ex-dividend. Good business was reported in Central India Coal, with the price improving to Rs. 6. Ranegunne were well maintained at Rs. 11-2 and Western Bengal were steady at Rs. 5.

After a dull opening, some enquiry developed towards the close for jute shares, and a few small genuine investment orders were put through. Howrah fluctuated narrowly around Rs. 25-4 to close at Rs. 25-7. Here is a table showing price movements of a representative list of shares:—

	Opening 3-12-53	Closing 9-12-53
Barnagore	160	163
Cheviot	235	250
Delta	230	234
India	128	129

INSIST ON-

BELTING By GOOD YEAR

BUY ONE ANNA SPECIAL SEALS AND HELP FIGHT TUBERCULOSIS

Janeous section, the undertone was fully steady. Bengal Paper were enquired for at Rs. 52-8, and Orient at Rs. 40-8. There were stray sellers of Shree Gopal at Rs. 19-6. Titagur Paper eased to Rs. 36-10. Sone Valley were dealt in at around Rs. 7 and New Asiatic at Rs. 4-7. Triton improved sharply from Rs. 160 to Rs. 168-8. Calcutta Landing & Shipping, after being taken up to Rs. 17-9, reacted on profit-taking to Rs. 17. Business was reported in India Steamship at around Rs. 7-5 and Port Shipping at Rs. 7-4. Alkali & Chemical were offered at Rs. 16-8. Bengal Flour were steady at Rs. 21-5 as were Bararee Coke at Rs. 19-6 and British India Corporation at Rs. 9-7. Calcutta Trams spurted from Rs. 13 to Rs. 13-11. Cherra Chhatak Ropeway changed hands at Rs. 7-14 and Dunlop Rubber, after being dealt in up to Rs. 31-4 closed easier at Rs. 30-12. Gillanders Arbuthnot were placed at Rs. 115. Godfrey Phillips were crossed at Rs. 29-8 and Hindustan Motors were steady at around Rs. 5, as were Indian Cables at around Rs. 19-8, and Indo-Burma Petroleum at Rs. 70. Jardine Henderson were quoted at Rs. 116 and Martin Burn at Rs. 19-2. Several deals were recorded in National Tobacco between Rs. 11 and Rs. 11-12. Rallis were easier at Rs. 64, but Rohas Industries met with good support and closed steady at Rs. 10-10. Textile Machinery were wanted at Rs. 8-15 and Tide Water Oil changed hands at Rs. 12-2.

Good business was put through in Indian Copper Corporation shares on investment account at around Rs. 2-14. Karanpura Development were quiet at Rs. 15-12, and Non Ferrous Metals eased slightly to 14 annas. Orissa Minerals were marked at Rs. 36 and Burma Mines at Rs. 1-4.

In the past few days, there has been some profit-taking in the tea section and the upward trend would appear to have been checked. Among Assam scrips, Basmatia, Dufflaghur and

Grob B, which hitherto were unobtainable, had sellers at around Rs. 33, Rs. 40 and Rs. 14-10, respectively. Jutibari were easier at Rs. 12-12 as were Rajgarh at Rs. 26 and Tezpur at Rs. 21-6. There were, however, certain shares which were still in demand and maintained their peak prices. Bateli had buyers at Rs. 15-8. Dimakuri were taken at Rs. 37, Sapoi at Rs. 13-12, and Naga Hills at Rs. 18-4.

In the Dooars area, Banarhat, after touching Rs. 398 depreciated to close at Rs. 388. Bhatkawa fell from Rs. 30 to Rs. 27-8. Birpara from Rs. 92 to Rs. 91. Ethelburi, after having been taken at Rs. 8-10, had sellers later at Rs. 7-5, and Hasimara were easier at Rs. 32. Baradighi, however, jumped six points to be quoted at Rs. 39-4. Huldibari had buyers at Rs. 25-6 and Gaikhatia were taken up to Rs. 180. Rajabhat were marked around Rs. 18. Gielle were taken at Rs. 10-8. Margaret's Hope were marked at Rs. 11-4, and Nagri Farm had buyers at Rs. 23. Tukvar, after being taken up to Rs. 9-8, found sellers at this price. Central Cachar had buyers at Rs. 65, but Hatikhira and Kunchunore were both easier at Rs. 14-10 and Rs. 6. In the Terai area, Tirrihanna were the feature being taken from Rs. 15-8 to Rs. 19-8. Hansqua were strong at Rs. 17-6, and New Chumta were asked for at Rs. 25-4.

The profit of the EAST INDIAN COAL COMPANY was £67,261 for the year ended 30th April, 1953, as compared with £46,402 in the preceding year. This was because of larger despatches at 550,754 tons against 544,401 tons, although raisings fell by 15,162 tons to £28,631 tons as a result of the pegging of output of metallurgical coal. Adding £78,839 brought in and other miscellaneous receipts there is £148,049, of which tax contingencies absorb £12,315 (£10,455). The interim dividend was declared at 14 annas per share on the doubled capital and the final dividend has been maintained at

Rs. 1-10 per share to absorb £29,250, leaving £90,734 to be carried forward. Tax absorbs £47,775 (£48,231) and depreciation £3,002 (£2,215).

The CHANDECHERRA TEA COMPANY showed a profit of Rs. 17,630 for the year ended 31st December, 1952, as compared with Rs. 115 lakhs in 1951. After meeting all charges, there is a loss of Rs. 15,449 which, being deducted from Rs. 22,556 brought in, leaves a balance of Rs. 7,308 to be carried forward. There is no dividend. Estimates for 1953 have been made for a crop of 7,500 maunds at a cost of Rs. 4.77 lakhs.

The DELHI CLOTH AND GENERAL MILLS COMPANY made a profit of Rs. 74,94 lakhs for the year ended 30th June, 1953, after providing Rs. 1 crore (Rs. 71 lakhs) for taxation and Rs. 47.50 lakhs (same) for depreciation. The profit was Rs. 99.28 lakhs in the previous year. The ordinary dividend has been raised from 4½ to 7 percent. General reserve is allocated Rs. 10 lakhs (Rs. 5.08 lakhs), reserve for fall in prices Rs. 25 lakhs and renewals reserve Rs. 15 lakhs. The carry-forward is shown at Rs. 1,31,617 (Rs. 1,44,900).

SMITH, STANISTREET & Co. made a profit of Rs. 3.58 lakhs for the year ended 30th June, 1953, as compared with Rs. 3.91 lakhs in the previous year. Providing Rs. 73,679 (Rs. 68,985) for depreciation, Rs. 1.38 lakhs (Rs. 1.70 lakhs) for taxation, and transferring Rs. 76,000 (Rs. 2.29 lakhs) to the rehabilitation reserve, there remains a balance of Rs. 1,73,599 including Rs. 48,158 brought in. The ordinary dividend has been maintained at 10 percent, to leave a carry-forward of Rs. 73,599.

Total collections (including selami) at Rs. 29.54 lakhs of the MINAPORA ZEMINDARY COMPANY for the year ended 13th April, 1953, were about Rs. 11.46 lakhs less than in the previous year because of the loss of the company's East Pakistan and Bihar concerns; no compensation has yet been received from either Government. Providing Rs. 4½ lakhs for taxation, bringing in Rs. 4,608 and meeting other charges there is Rs. 1,45,030, of which the ordinary dividend at Rs. 1-8 (Rs. 2) per share absorbs Rs. 1,41,000, leaving a carry-forward of Rs. 4,030.

Martin Burn Limited, managing agents of the INDIAN IRON AND STEEL COMPANY LIMITED, report the approximate production of the company for November 1953 as follows (in tons):

	November	October
Pig Iron	61,240	55,880
Steel Ingots	41,550	41,550
Semi-finished steel for sale	7,890	13,280
Finished Steel	25,000	17,950
	32,970	31,230

Tata Industries Limited, managing agents of the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during November 1953 was: pig iron 100,300 tons; steel ingots 95,800 tons; semi for sale 15,300 tons and finished steel for sale 53,100 tons.

We publish below details of the accounts of the BIRD-HILLERS group of collieries for the half-year ended 30th June, 1953. There were minor changes in raisings and despatches. Borra increased the dividend and, except for Bhulanbararee, other dividends have been maintained. Standard made a net profit of Rs. 80,639 after allowing Rs. 47,749 for reserve and Rs. 1,36 lakhs for taxation and other charges. The carry-forward is Rs. 87,018.

dividend and, except for shareholders, since the latter are not entitled to

POWER FOR BOMBAY'S HOMES & INDUSTRIES

Nestled in the hills of the Western Ghats the Andhra Valley Power Station supplies power for Bombay's homes and industries. In 1922 General Electric equipped and installed 60,000 kw capacity generators, transformers, switchgear and other electrical equipment. For 31 years this installation has been in continuous service, a major contribution to the ever increasing power demands from an expanding city.

CALCUTTA TEA AUCTIONS IN NOVEMBER

STRONG DEMAND FOR ALL TYPES EXCEPT DARJEELINGS

DEMAND was strong and general for all types, except Darjeelings, throughout November, say Carritt Moran and Co., Ltd., in their monthly tea market review. The opening sale saw little change in rates, but in Sale 21 common, low medium and medium broken and fannings were a full one anna dearer. Thereafter the market remained fully firm to dealer, commonest kinds being in particular request. Whole leaf grades and stylish B.P.s. with black leaf appearance were also well supported. Darjeelings received only moderate support and generally failed to realise valuations, particularly whole leaf grades which were much weaker. No reference is made in this issue to Sale No. 24 held on 30th November and 1st December.

The leaf appearance of Darjeeling teas continued to be satisfactory. Cup quality was of an ordinary rains description though some of the whole leaf grades possessed quite fair flavour. The Assam offerings included a considerable weight of nicely made and graded teas, commendably free from stalk and fibre, though cup quality generally was rather plain in character and good liquoring teas were in short supply. The cup quality of Dooars teas was plain but leaf appearance continued to be quite good for the time of the year. With a few exceptions, offerings from Cachar district were much above the average both as regards leaf and liquor.

Sale No. 23 " " B.P.		1 12 9	0 12 9

Internal Market

The very small amount of black tea leaf on offer sold at firm rates. Green teas met with little interest and were mostly withdrawn, buyers' ideas of values being much lower than those of sellers. In the case of Dusts, although leaf appearance of the Dooars offerings showed a decline, most of the teas from this district had quite useful bright liquors. The quality of the offerings from Assam, and Cachar in particular, was well maintained. The market remained very strong throughout the month and all kinds were half to

one anna dearer. Clean common kinds and black leafy types suitable for export were again the strongest feature.

Quotations		1953-54	1952-53
Rs. As. P. Rs. As. P.			
Sale No. 20 Clean Common Dust		1 9 9	1 3 0
Sale No. 21 " " Dust		1 9 9	1 3 6
Sale No. 22 " " Dust		1 10 0	1 3 0
Sale No. 23 " " Dust		1 10 3	1 2 6

Export sales up to and including Sale No. 23 totalled 1,023,974 chests at an average price of Re. 1-14-0 compared with 955,419 chests at an average price of Re. 1-6-5 a year ago. Internal sales at 12,129 chests of leaf and 321,435 chests of dust (Re. 1-10-0 and Re. 1-10-7) go against 12,326 and 317,982 chests (Re. 0-15-0 and Re. 1-5-0) in the corresponding period of last year.

At the beginning of the month business was transacted in the Export Quota at 16 pies per lb. The price rose gradually until 26th November when business was transacted at 24 pies. During the last few days of the month there was a brisk demand and the price rose to 30 pies per lb.

The estimated North Indian crop to the end of October 1953, was 429,663,618 lbs as compared with 451,233,025 lbs to the same date last year. The average figure at this date for the three years 1950-52 was 440,629,701 lbs.

Arrivals (in chests) in Calcutta warehouses during the period 24th October to 23rd November, 1953, with the corresponding figures of the previous year in parentheses, were as follows: by rail 119,539 (118,307); by air 9,316 (16,474); by steamer 509,762 (166,503), making a total of 638,617 (301,284) chests. Since the beginning of the season, 1st April, 1953, and up to 23rd November, 1953, arrivals have been 703,615 (610,858) by rail; 69,018 (95,752) by air; and 2,391,840 (1,913,689) by steamer, making a total of 3,164,473 (2,620,289) chests.

PRICES IMPROVE FURTHER AT LONDON TEA SALES

BRISK and well distributed demand prevailed for the 31,146 packages of North Indian and other miscellaneous teas at the London auction on 7th December. They fetched generally advancing prices. Common and Low Medium descriptions recorded gains of 1d. to 2d. per lb., while other Medium and best qualities were fully steady to sometimes 1d. per lb. dearer. All Assam Broken Pekoes were very keenly demanded and generally rose by 1d. per lb. Export demand was smaller. Common Broken Pekoe was quoted at 44½d. to 44½d., against 43½d. in the previous week.

At last week's London tea sales the 70,243 packages on offer realised an average price of

3s. 10.69d. a lb., as against 3s. 10.41d. in the previous week. There was a strong demand for Ceylon teas and prices for all descriptions were dearer. Common and medium teas, especially Broken and Fannings, attracted the most attention and registered gains of 1d. to 1d. Best quality invoices were also sought and sold at dearer rates, while dusts were cleared readily at 1d. to 2d. higher. Export types met with a good demand at satisfactory prices. Clean Common Broken Pekoe was quoted at 43½d. to 44½d., against 43d. nominal previously. Offerings totalled 12,279 packages. The 3,936 packages of South Indian teas met with a good demand. Teas of up to about 48d. per lb. were generally 1d. and sometimes 2d. dearer, while better qualities were fully steady.

Results of some of the companies are given below:

	No. of packages	Cost per lb.
Amalgamated	798	3/9
Assam Co.	1,902	3/10½
Assam Frontier	897	4/1½
Attaree Khat	390	3/10
Bagracote	252	3/8½
Budla Beta	1,031	4/0½
Buxa Dooars	564	3/9½
Cent. Province	576	3/11½
Cons. Tea Lands	1,840	3/8½
Deamoolie	306	4/1½
Dima	629	3/10½
Dooars	675	3/10
Doom Dooma	564	4/1½
Eastern Assam	660	4/0½
Eastern Produce	684	4/1½
Jeltinga	444	3/8½
Jhanzie	1,110	3/10½
Jokat	1,402	3/10½
Jorehaut	2,334	3/10½
Kollabur	584	3/9½
Korva	588	4/0½
Majuli	339	3/9½
Moabund	487	3/9½
Nedem	1,535	3/8½
New Dimbula	354	4/0½
Scottish Assam	504	3/9½
Singlo	1,339	3/9½
Standard	348	4/7½
Tea Corp.	396	3/10½
Tingri	611	3/11½
United Planters	630	4/1½
Upper Assam	624	3/10½

COCHIN TEA SALES

Offerings for Sale X held on 1st December amounted to approximately 204,000 lbs. There was a stronger enquiry evident than in recent sales and common sorts were keenly competed for at rates which were fully firm. Medium and best liquoring kinds were also well supported and were 1 to 2 annas dearer. The market for the export quota has hardened to 30 pies, but the immediate trend appears easier.

Dust Sale Y will be held on 14th December and Sale No. 25 on 15th December.

CEYLON'S TEA EXPORTS TO EGYPT

Tea exports from Ceylon to Egypt have increased considerably during the past six months, and the average monthly figure of nearly 3,000,000 lbs exceeds all previous peak figures. Prior to October 1952, when the tea trade with Egypt flourished, Ceylon used to export a little over 2,000,000 lbs every month. Because of Egypt's inability to release sterling, she diverted her buying to India and other countries, and late last year Ceylon's exports showed a sharp drop and dwindled to 409,016 lbs in December. With the gradual easing of exchange difficulties from the beginning of this year, there has been an expansion of trade; the exports for May totalled 2,735,389 lbs., and increased to 2,815,767 lbs., in July. A director of a leading tea company in Ceylon has said that Egypt preferred to buy Ceylon tea because of its superior quality.

SHIPMENTS OF CEYLON RUBBER TO CHINA

Ceylon has so far shipped 41,588 tons of rubber to China and the full quota of 50,000 tons will be exported by the end of this month. A British ship, the *Ozarda*, recently left Colombo for Peking with a shipment of 625 tons of coconut oil. This was the first time that a British ship took Ceylon's produce to China, although British ships have brought rice from China to Ceylon. The earlier shipments of coconut oil were freighted in Polish, Dutch and German vessels.

CEYLON'S COCONUT INDUSTRY NEEDS PLANNING

The policy of the new Ceylon Coconut Board for the next three years was enunciated at its first meeting recently by the Minister of Commerce, Trade and Fisheries, Mr. R. G. Senanayake. The Minister said that it had become vitally necessary to embark on schemes of coconut replanting and rehabilitation, if Ceylon was to survive as a copra and oil-exporting country. He told the Coconut Board that the coconut industry needed men of vision, experience and dynamic thought. Mr. Senanayake said that what was needed more than ever before was careful, consistent and deliberate planning so that Ceylon's industries could improve and develop to keep pace with modern international economic and agricultural needs.

INCREASE IN COMPENSATION FOR 'LAY-OFFS' CRITICISED

TRIPARTITE AGREEMENT VIOLATED, SAYS EMPLOYERS' REPRESENTATIVE

(FROM OUR NEW DELHI CORRESPONDENT.)

5th December.

THE Industrial Disputes (Amendment) Bill, the Banking Companies (Amendment) Bill and the Coir Board Bill were amongst the legislative measures disposed of by the House of the People this week. The House also held another debate on unemployment. The Labour Minister, Mr. V. V. Giri, while enlarging the scope of the Industrial Disputes (Amendment) Bill, advanced a novel view on tripartite agreements. Originally the proviso to the clause relating to payment of compensation for lay-off said that "compensation payable to a workman during any period of 12 months shall in no case be for more than 45 days." Mr. Giri, by an amendment, provided that if during any period of 12 months a workman had been paid compensation for 45 days and during the same period of 12 months he was again laid off for further continuous period of more than one week at a time, he (unless there was an agreement to the contrary between him and the employer) should be paid for all the days during such subsequent periods of lay-off compensation at the rate of 50 percent of the total wages and dearness allowance. This is subject to the proviso that it should be lawful for the employer in any case falling within this sub-section to retrench the workmen in accordance with provisions of the Bill and any compensation paid to the workman for having been laid off during the preceding 12 months would be set off against the compensation payable for retrenchment.

Violation of Agreement

Several members, particularly Mr. G. L. Bansal of the Federation of Indian Chambers of Commerce and Industry, questioned Mr. Giri's right to extend the scope of the Bill. Mr. Bansal reminded the Labour Minister that the issue of lay-off was raised at the meeting of the Standing Labour Committee held under the chairmanship of Mr. Giri himself. The Committee, he said, had come to the conclusion that it would not be fair to extend the period of lay-off beyond a period of 45 days. Lay-off compensation could not be sanctioned for an indefinite period, he added. Mr. Bansal categorically denied that any employers' organisation which was a party to the original agreement had been consulted or had given its consent to the extension of the lay-off period beyond 45 days. He said: "I would most humbly suggest that it is not fair to extend the scope of the Bill. Mr. Bansal reminded the Labour Minister that the issue of lay-off was raised at the meeting of the Standing Labour Committee held under the chairmanship of Mr. Giri himself. The Committee, he said, had come to the conclusion that it would not be fair to extend the period of lay-off beyond a period of 45 days. Lay-off compensation could not be sanctioned for an indefinite period, he added. Mr. Bansal categorically denied that any employers' organisation which was a party to the original agreement had been consulted or had given its consent to the extension of the lay-off period beyond 45 days. He said: "I would most humbly suggest that it is not fair to extend the scope of the Bill. Mr. Bansal reminded the Labour Minister that the issue of lay-off was raised at the meeting of the Standing Labour Committee held under the chairmanship of Mr. Giri himself. The Committee, he said, had come to the conclusion that it would not be fair to extend the period of lay-off beyond a period of 45 days. Lay-off compensation could not be sanctioned for an indefinite period, he added. Mr. Bansal categorically denied that any employers' organisation which was a party to the original agreement had been consulted or had given its consent to the extension of the lay-off period beyond 45 days. He said: "I would most humbly suggest that it is not fair to extend the scope of the Bill. Mr. Bansal reminded the Labour Minister that the issue of lay-off was raised at the meeting of the Standing Labour Committee held under the chairmanship of Mr. Giri himself. The Committee, he said, had come to the conclusion that it would not be fair to extend the period of lay-off beyond a period of 45 days. Lay-off compensation could not be sanctioned for an indefinite period, he added. Mr. Bansal categorically denied that any employers' organisation which was a party to the original agreement had been consulted or had given its consent to the extension of the lay-off period beyond 45 days. He said: "I would most humbly suggest that it is not fair to extend the scope of the Bill. Mr. Bansal reminded the Labour Minister that the issue of lay-off was raised at the meeting of the Standing Labour Committee held under the chairmanship of Mr. Giri himself. The Committee, he said, had come to the conclusion that it would not be fair to extend the period of lay-off beyond a period of 45 days. Lay-off compensation could not be sanctioned for an indefinite period, he added. Mr. Bansal categorically denied that any employers' organisation which was a party to the original agreement had been consulted or had given its consent to the extension of the lay-off period beyond 45 days. PUT *DRIVE* INTO YOUR INDUSTRY

Conveyor Belting: Frictioned with highest grade rubber compound, jacket-ply skim-coated for high cover adhesion; covers of a rubber compound giving high tensile strength.

V-Belt: With its continuous spiral cable cord construction, the Dunlop V-Belt ensures a long and trouble free life even under the most arduous service conditions.

Transmission Belting: 'Square Edge' specially constructed from hard type closely woven fabric (silver-duck) and skim-coated between the plies. Hence Dunlop Transmission Belting is practically immune from edge wear, ideal both for high-speed drives subject to severe flexing and heavy drives requiring shock load resistance.

years for coastal operations normally and for overseas trade in an emergency. It was accordingly decided that the approval of the Cabinet should be taken for the acquisition of two medium-sized tankers, the actual size being decided after consulting the oil companies and estimating in detail the requirements of the coastal trade. It was also felt that these tankers should be built in the Hindustan Shipyard (so as to give the yard an opportunity to gain experience in construction) and given over to the Eastern Shipping Corporation to operate on behalf of the Government. There is no provision in the Five Year Plan for the acquisition of tankers. It has, however, been agreed that additional funds would be provided separately for the purchase of tankers built by the Hindustan Shipyard.

Sugar Prices Rise, Import Target Raised

New Delhi is again perturbed over the sudden rise in sugar prices. The retail price of sugar in Delhi is 14 annas a seer or Rs. 35 a maund while the wholesale price quoted during the week was little over Rs. 34 a maund. The sudden rise may be attributed to the marriage season which is in full swing at present. The authorities are conscious of the hardship caused to the consumer and have already released sufficient quantities of sugar from the reserve. As far as imports are concerned, 95,000 tons have already arrived and another 104,000 tons are expected to reach India by the end of this month. The Government has purchased a further quantity of 45,000 tons and has doubled the import target to 400,000 tons. This target will be raised further if necessary. The Government, it is emphasised, is determined to keep down sugar prices. With the arrival of imports and the end of the marriage season by the middle of this month, however, sugar prices are expected to decline substantially.

Commonwealth Finance Ministers' Talk

The Joint Secretary to the Ministry of Commerce, Mr. S. Boothalingam, will leave for Sydney, Australia, on 27th December, it is learned. He has been selected to join the official team accompanying the Finance Minister to the Commonwealth Finance Ministers' Conference meeting there early in January.

New Office Buildings in New Delhi

Pending a decision on the dispersal of offices from Delhi, the Government has decided to construct a multi-storied building near Hardinge Bridge to house the Auditor-General's Office. A proposal to build another multi-storied building on King Edward Road to match a similar building now under construction on Queen Victoria Road is now being examined.

Enquiry on Tea Industry

Mr. P. Madhava Menon, till recently Joint Secretary in the Ministry of Health, has been appointed to conduct the promised enquiry into the tea industry, it is learned. He will be assisted by two other members, in addition to whom there will be separate assessors representing labour and employers from each tea growing region to assist the committee during its examination and survey of their particular region.

Refund of Textile Excise Duty

The excise duty will be refundable to exporters of cotton piecegoods even if they make their purchases from the open market of cloth not specially marked "for export only."

Interest on American Wheat Loan

The amount of interest paid on the American wheat loan up to the half-year ended 30th June, 1953, was \$4,656,730.96.

Report on State Trading

The Committee appointed in July last to review the main recommendations of the State Trading Committee of 1950 in the light of subsequent developments, and to examine whether and to what extent the export of yarn of certain categories, handloom products and cottage industries' products could be undertaken by the State in the present circumstances, has submitted its report. The report is being examined.

STEADY RISE IN GOLD AND DOLLAR RESERVES

PERSISTENT WAGE CLAIMS MAKE OUTLOOK UNCERTAIN

(FROM OUR LONDON CORRESPONDENT)

THE sterling area's gold and dollar reserves are continuing their upward trend, though the rate of the increase is so gradual that there can be little justification for any startling changes in the present policy on international payments. The figures for November were released this week and they reflected the seasonal factors which are working in our favour, namely, the receipt of first payments against the early wool sales, which ought to be reinforced by the further movement of raw materials from Commonwealth producers over the next few months. The overall surplus for November amounted to \$41 million, including \$24 million on account of American defence aid, but after allowing for the payment to the European Payments Union of \$15 million in gold against the previous month's surplus amounting to \$32 million, against a similar figure of \$15 million in October and of only \$4 million in September. The addition of the November surplus to the reserves raises these to \$2,561 million—the highest figure since the winter of 1951, but still a long way short of the peak of \$3,867 million.

This steady improvement in the reserves has, not unnaturally, led to some questioning as to whether the Treasury has not been overdoing its warnings against optimism. Doubts may be reinforced by the information that in November we earned a surplus of £3,200,000 with E.P.U. of which half will be settled in gold this month, while the American decision to release surplus stocks of agricultural produce to this country against payment in sterling instead of dollars to a total value of some \$55 million might well represent a further welcome easing of the dollar drain. On the other hand, it seems more than likely that recent purchases of gold from Russia (one consignment alone was valued at £51 million) have helped to improve the reserves position, and it must also be remembered that nearly \$200 million will have to be found at the close of this year to service the American and Canadian loans and we still owe the E. P. U. about \$500 million.

Wage Claims

These are sobering thoughts, or ought to be. Much more serious, however, and even giving rise to pessimism, is the uncertain outlook with regard to wage claims. Last Wednesday 90 percent of the engineering and shipbuilding industries was brought to a standstill in response to the call by the Confederation of Shipbuilding and Engineering Unions for a 24-hour token strike in support of a claim for a 15 percent wage increase. In some cases there were further stoppages on Thursday as a demonstration against those who had worked the previous day. The total loss to the country, in production and wages, is estimated as being in the region of £15 million. On the credit side, the engineers claim a "victory"—but it appears to be a rather empty one, for the 39 gamated Engineering Union, the largest of the unions in the Confederation, has had to go on a threat to call for a ban on overtime and piece-work after Christmas in an effort to prod the employers or the Government into taking action. The results of such a ban, in the words of the General Secretary of the A.E.U., would "cause considerable chaos, particularly in the large works, in heavy engineering, and in shipbuilding." It also means that skilled workers would be called upon to make a considerable financial sacrifice, of about £3 a week in earnings, so other unions may be prepared to seek less drastic means of pressing the general claims, but the A.E.U. only needs the support of one or two other unions to dictate the policy of the Confederation, and they are more or less assured of that unless a ballot of members can be forced. The outcome of that might be less certain.

Are these wage claims really justified? Some are, others are definitely not, but the only final answer must come from an Arbitration Court, to which the unions are strongly opposed. Some interesting statistics, and conclusions, have just been prepared by Professor Frank Paish, of the University of London, for the Liberal Party Committee which have a direct bearing on this question. He has investigated the recent changes in wage rates, earnings and the cost of living with a view to ascertaining how far these have kept in step over the past four years. We need not concern ourselves here with the details, other than to mention that his research covered the period ending April 1953, and to point out that since then the retail price index has shown little substantial variation. With regard to wage rates he finds that "the general level... over the whole of the past four years has slightly more than kept pace with the rise in retail prices, after falling slightly behind it in 1950 and 1951 and rather more heavily in the middle of 1952, when the temporary depression checked the rise in wage rates, especially in the textile and allied industries." Earnings, however, he finds "have more than kept pace with prices, and real earnings in April, 1953, were appreciably higher than in 1949." The increase was in fact 2 percent, although conditions vary in different industries. Among those who benefited most were workers in the building and contracting industry, in mining and quarrying, and then in the engineering industries, the real earnings of the last-named being 4 percent up on 1949. On his figures, Professor Paish says, "It is difficult to justify the demand of the engineering workers for a 15 percent rise in wages."

One unfortunate effect of the engineering workers' recent activities will be to slow down the steady improvement which has been evidenced in the index of industrial production over the last few months. The Treasury has just revised the August figure from 105 to 106, estimates the September figure at 125, and gives a provisional figure for October of 127 to 128, the highest yet reached. For 1952 the figures for the three months were 116, 118 and 120, and for 1951 they were 104, 121 and 121. The position here hardly lines up with the careful appraisal of this subject which Mr. Butler gave recently when addressing the National Production Council, when he mentioned that manufacturing output was "barely back to 1951" and that much of the increase in industrial output had come from the building industry. No doubt he was looking ahead, and especially in his reference to "a slight fall in engineering output." We know that car production has recently increased, while the value of the aircraft industry's exports this year up to the end of October, at about £541 million, were then some £104 million higher than for the whole of 1952. In other branches of engineering then that output has declined the ones in which we are meeting with the greatest competition.

Since our exports overall are not increasing as they should, while the production index continues at a high level, it can only be that internal assumption has "seen" to what might well prove a dangerous level. Failing a complete change of climate in the near future, one must be driven to the conclusion that Mr. Butler's "incentive" budget last April has failed to achieve the objects he had in view. He might in that case well have to revise his ideas in presenting his new budget next April. That possibility is looming large, while not a few students of the situation are prepared for tighter credit conditions even before fiscal measures are taken. Meantime, the usual seasonal increase in the demand for notes over the Christmas period is to be met by an increase of £50 million in the fiduciary note issue, bringing the total of the issue to £1,625 million.

Changes in Purchase Tax

In view of the foregoing, one cannot but admire the optimism of the leading manufacturers' associations who have just placed before the Chancellor of the Exchequer a scheme to overcome the pre-budget slump in trade in anticipation of changes in purchase tax. Among those sponsoring the scheme are the trade associations of the cycle, motor-cycle, electrical engineering, radio equipment, refrigerator, clock, electrical water-heater, gas and motor-car industries, and they point out that they have been encouraged to sub-

mit the proposals by Mr. Butler's assurance that any such schemes would be "seriously considered." Under the plan devised, a retailer who has paid tax on a particular article will receive a rebate when purchase tax is reduced. At present shopkeepers are liable to lose money on goods on their shelves when purchase tax is lowered, and in the past year or so, when tax reductions have been expected, they have been reluctant to place orders for two or three months before the budget, and in some cases this has resulted in production being seriously curtailed. The scheme makes allowance for the fact that retailers pay purchase tax when goods are delivered to them, and not when the goods are sold over the counter. The trade associations claim that the scheme is applicable to all goods that are "readily identifiable," and would be run voluntarily by traders. They think that the existing staff of Customs and Excise should be able to control claims under the scheme "without undue difficulty," and are themselves prepared to "undertake considerable work to operate the scheme."

While on the question of taxes, another suggestion which has been made to the Board of Inland Revenue by the National Union of Manufacturers, namely, the setting-up of an arbitration tribunal to settle cases of disputed valuations of unquoted shares for death duties—the Chancellor of the Exchequer is making a review of anomalies in the assessment of death duties—is worthy of mention, for there can be little doubt that the weight of these do lead to the anomalies causing considerable damage to the private sector of industry, and at the root of this, according to the N.U.M., is the hypothetical basis of valuation of private business for estate duty. The major practical difficulty is in assessing what property would fetch if sold in the open market where to such market exists.

Brevities

Mr. David W. S. Hunt, an Assistant Secretary in the Commonwealth Relations Office, has been appointed Deputy High Commissioner in Lahore in succession to Mr. J. M. C. James.

First action to protect home horticulture by tariffs instead of quotas, under the recent waiver negotiated with the C.A.T.T., has resulted in the increase of import tariffs of a number of fresh and preserved fruit and vegetables from countries other than Commonwealth countries.

The wheat futures market was reopened in Liverpool this week after a period of four years. The move has been generally welcomed, but in view of the size of Government stocks, the market is likely to be a limited one for some time. Traders were cautious and only twenty-five bargains were struck.

The whole world wants

NICKEL ALLOYS

For more than a century Henry Wiggin have been pioneers in the production of high-nickel alloys, seeking always to be ahead of the engineer's demands for better properties. Continuous research for improved materials coupled with constant care and precision in manufacture ensure the high standing and international reputation of Wiggin high-nickel alloys. During the past year or so, world-wide demands have far exceeded the supply. But although some of our products are still not freely available we are doing our best to meet your requirements.

MONEL... corrosion-resisting alloy

NICKEL... in all forms

INCONEL... heat- and corrosion-resisting alloy

BRIGHTRAY... series of electrical resistance alloys

NILO... series of controlled expansion alloys

MANGONIC... stronger and more resistant than nickel in moderate sulphur-containing atmospheres

THERMOMETAL... for thermostatic devices

NICKEL ANODES... for nickel electrodeposition

OTHER NICKEL ALLOYS to meet special requirements

Uttar Pradesh

U.P. REACTION TO REPORT ON GROWING BETTER JUTE CANE GROWING AND SUGAR TECHNOLOGY

(FROM OUR LUCKNOW CORRESPONDENT).

OFFICIAL circles are disinclined to accept, except with reservations, the recommendation of the Damle Committee that Uttar Pradesh ought to go slow with its policy of expanding the area under jute cultivation. The general standard of jute grown in the State, according to the Committee, is poor and the State Government has accordingly been advised to confine its attention to encouraging cultivation of jute only in areas where there is sufficient rainfall and where retting water is freely available. This advice is, of course, applicable to other States as well which are growing jute of poor quality. In U.P. the drive for increased jute cultivation was taken up in 1948. Cultivation started from 5,000 acres in 1948, rising progressively to 100,000 acres in 1951 and 1,25,000 acres in 1952. It was proposed to increase it gradually so as to achieve a target of 1,65,000 acres in 1956. Whether, in view of the recommendation of the Committee, the Government will

lower this target remains to be seen. But its own experience does not warrant a rosy future for jute cultivation in U.P. because even the three mills situated in this State have always preferred to buy in markets outside U.P. The millowners have always complained that jute grown in U.P. is of inferior quality and that is why they are compelled to put themselves to the additional expense of transporting the raw material from outstations. The Government, however, does not consider this very convincing. The feeling in official circles is that some of the jute purchases made by U.P. millowners is essentially of a speculative character, intended to depress the U.P. market in jute. However, the fact remains that even if all the mills in the State were to make their purchases locally they would not need the produce of more than 60,000 acres. The target of more than 1½ lakh acres would appear to be excessive unless, of course, the jute can secure consumer preference because of its quality, which is precisely the point at issue.

Sugarcane Research

It is not only U.P.'s bid for a share in the jute trade which is threatened but also the position which it already enjoys of being more or less supreme in sugarcane cultivation and in the sugar industry. The decision of the Government of India to entrust technological research on sugar and its by-products to the Development Council and to

confine the Sugarcane Committee's functions solely to cane development has been viewed as a move to worsen the relations now existing between the industry and the growers. Even now these relations are anything but cordial and in any case it is difficult to see how they could be worse merely because of bifurcation of functions now proposed. The Central Sugarcane Committee has been in existence now for about nine years but it has little, if anything, to show on the credit side. Whatever improvement has taken place has mostly resulted from the substitution of indigenous varieties by improved varieties, and that too mostly in the factory zones. The thin indigenous varieties grown in North India seldom yield over 8 tons per acre whereas the thick exotic varieties which could give a better return and which are being grown in South India cannot stand the rigours of the North Indian climate because they have shallow roots. The thin canes have deep roots and are therefore hardy.

Climatic Factors

It may be recalled that Sir T. S. Venkataraman was able to breed a new variety by crossing the thick canes with the thin ones, but the hybrid has not actually proved as popular as it should have because, amongst other things, of the wide gap existing between research stations and cultivators' farms. Sugarcane development has hitherto been an exclusive responsibility of the Governments of U.P. and Bihar but they have not discharged their duty too well. The way both these Governments have misused the bulk of the cane cess specially intended for cane research is eminently deserving of the censure to which Sir Shri Ram gave expression at the recent sugar technologists' convention in Kanpur. He said: "If an individual or a joint stock corporation, instead of a Government, had done such things, it would perhaps have been answerable for a civil breach of trust to make good to the beneficiaries the amounts wrongfully appropriated." The growing volume of opinion that the sugar problem cannot be solved until its production is shifted to a region with more suitable climate has been duly noted by the State Government, but it is arguing against it on grounds of "impracticability." At the same time, it is well to realise that there is a point beyond which U.P. and Bihar, with the best will in the world, cannot go in cane cultivation. These two States, lying as they do in the sub-tropical areas, are not ideal proving grounds for intensive cane cultivation and the results likely to be achieved can never be comparable to those in Java, Mauritius and the Philippines, or for that matter in Bombay and Madras.

Wholesale shifting of the industry is, no doubt, the ideal solution, but for the time being other measures will have to be devised to make sugar available cheaply and in abundance to the people. Every imported ton of sugar means Rs. 700 in foreign exchange and this is a luxury which India cannot afford. Sugar technologists are agreed that the crux of the problem of the Indian sugar industry lies in the immediately perishing nature of the raw material. This problem does not arise in most of the major sugar producing countries of the world because the sugar factories own their own plantations. In India, Bombay is probably the only State where the factories own plantations. At present, sugarcane occupies just one percent of the land under cultivation and the question whether the acreage could be increased without detriment to food production does not admit of an easy answer. The technologists' convention dismissed the question as rather irrelevant because sugar itself has a higher food value (calorific) than cereals, but this argument overlooks the obvious fact that cereals are cheaper than sugar and that people who cannot buy bread can afford cakes much less. The only other alternative is to increase the yield and quality of the cane on the present area, which is estimated at about 4,200,000 acres, the average all-India yield being 12.3 tons per acre.

Utilisation of By-Products

In the factory itself, technological progress has been registered over the last decade in many directions, but it is a fact that many of the factories still cling to less efficient but seemingly cheaper methods of manufacture. The two processes by which sugar is extracted in India are the sulphitation process and the carbonation process. The latter is more costly but produces sugar of a higher quality. Because it is cheaper the sulphitation process finds favour with a large number of factories which consequently turn out sugar of inferior grade both in colour and grain size. As regards the utilisation of by-products like bagasse, filter mud, molasses etc., research has been retarded by the uneconomic nature of such utilisation under present conditions. But it is the contention of the industry that it does not have the means to modernise its plants, as much as 93 percent of its expenses being subject to official control. Having regard to all these factors the ing. as it were, overnight where the old Sugarcane Committee failed over nearly a decade must have more than academic interest, will have to be directed more and more to the utilisation of the by-products of the industry. The sugar factory of the future will have to be a nucleus of a number of industrial units utilising its by-products and producing power and industrial alcohol, acetic acid, vinegar, syrups, food yeast, cattle feed, rod compositions, fertilisers, dye stuffs, activated carbons and waxes.

Bombay

GROUNDNUT OIL EXPORT BAN DEPRESSES OILSEEDS TRADE

REDUCTION IN EXPORT DUTY ON CASTOR OIL URGED

(FROM OUR BOMBAY CORRESPONDENT).

THE oilseeds trade in Bombay has been considerably depressed by the announcement of the Central Minister for Commerce and Industry at the recent meeting of the Export Advisory Council that the export of groundnut oil will be discontinued from next year. The market was surprised because exports of the edible oils are only about 5 percent of the total production, and this small market has served as a check on crushers who might try to force prices down by not buying groundnuts during that part of the season when the crop comes into the market. The Government's anxiety for domestic consumers is appreciated in view of the scarcity conditions which prevailed during the latter part of the past year and the height to which prices rose. But conditions this year are different, and with the bumper crop that is expected there is no possibility of a shortage. It was, therefore, expected that the Government would continue the small token quota of exports in order to maintain contacts with export markets and to prevent prices being pushed down to unremunerative levels. There is still a feeling amongst market circles here that the Government might revise its decision if it might issue a small quota for export early in January. It has been suggested by some trade interests that the Government could secure both its aims—retaining the export markets for groundnut oil and increasing internal supplies—by insisting that vanaspathi manufacturers use 5 to 10 percent of cottonseed oil in their products. This would help rationalisation in the cottonseed oil crushing industry. The oilseeds trade is puzzled by the silence of the Commerce and Industry Ministry over the castor oil export policy. This oil is subject to a heavy export duty of Rs. 300 per ton at present and the trade expected that in keeping with the Government's recent policy of reducing export duties a substantial cut in the case of castor oil would be announced.

More Criticism of State's Power Policy

While the controversy between the Bombay Government and the Tata group of hydro-electric companies over the capacity of the Trombay thermal station continues, the Association of Electrical Undertakings in Bombay State has discussed this subject in reply to a communication from the Government. The Government asked this body for its views on the supply and demand for power in the area and the general outlook until 1956, when the Trombay thermal station will come into operation. After analysing the factors concerning supply and demand on more or less the same lines as Mr. Tata, the Association concludes that during the three years to the end of 1956, the extra power available for the public even on the most optimistic estimate would be only about 18,000 k.w. Considering the amount of power to be reserved for other purposes as would result from the diversity of load, the Association feels that this extra supply would be hardly enough for the normal growth of domestic load even on its present restricted basis and would leave no scope whatsoever for the expansion of the capacity of the Trombay thermal station. In limiting the capacity of the Trombay station to one plant of 50,000 k.w., it thinks the State Government has been reckoning on the prospect of load demand in the Bombay-Poona area being equal to the production capacity until power from the Koyana project becomes available by 1961. The Association, however, warns that if past and prospective load requirements are any indication, the region seems to be heading towards a serious power crisis between the period the Trombay station will be on load and the time the Koyana project is brought into commission. It therefore suggests that the Government urgently review its decision to limit the capacity of the Trombay station; on this decision depends the prospect of relief to the hard pressed power system until being given to the hard pressed power system until the Koyana project finally improves the situation. A rumour amongst industrial circles here has it that the Government of India is inclined to agree with the assessment made by Mr. Tata and that it has unofficially assured the hydro-electric companies that the Planning Commission might examine the position in the near future and try to persuade the State authorities to revise their decision with regard to the capacity of the Trombay thermal station.

Nationalisation of Textile Industry

Perhaps the real working loss of Rs. 23.94 lakhs, subject to depreciation, shown by the Sholapur Spinning and Weaving Co. Ltd. (one of the first industrial undertakings to be taken over by the Government as a result of mismanagement) in the year ended 31st March, 1953, when nearly every textile unit in the State made handsome profits, has induced textile workers to take a more realistic view of the new demand for nationalising the industry put forth by some Congress politicians in Parliament. Mr. S. R. Vasavade, Secretary of the Textile Labour Association of Ahmedabad, who is also President of the Indian National Textile Workers' Federation, declared at a Press conference at Ahmedabad that it would not do merely to replace the present capitalist system in the textile industry by a bureaucratic one. His Association felt that if

nationalisation of this industry was not to be merely a slogan it was necessary to secure nationalist workers, nationalist technicians and nationalist millowners to run it. Ignoring the purely ideological implications of the demand for "nationalisation in action," on which the Textile Labour Association of Ahmedabad passed a resolution, some of the suggestions embodied in this resolution which Mr. Vasavade amplified are worth considering by all textile millowners. The resolution, as explained by Mr. Vasavade, asks millowners to reduce expenditure by the joint purchase of cotton and stores for the entire industry, to adopt uniform standards for determining the cost of production, and to devise better machinery for the distribution of cloth. The Board of the Labour Association has also made some suggestions with regard to the technological aspects of the industry in Ahmedabad. Its resolution points out that the most important condition for the production of good quality cloth is to see that the count spun out of cotton is suitable to its capacity. Over-spinning as well as over-speeding of machinery should be avoided; in its opinion these are the main defects of the textile industry in that centre. The Board also states that indiscriminate and frequent changes in count and the spinning of yarn of several counts at the same time are harmful to the industry. One part of the resolution asks workers to do their work efficiently and conscientiously and to fulfil their obligation to the industry and to society. Reverting to the affairs of the Sholapur Spinning and Weaving Company, a curious position has arisen because the shareholders refused to adopt the report and accounts at the recent annual general meeting. A demand was made at the meeting for the appointment of a shareholders' committee to enquire into the affairs of the company, but this was ruled out of order by the Chairman. The legal position following the refusal of the shareholders to pass the report and accounts is ambiguous; the special Act passed by Parliament in 1950 for the management of this mill under Government supervision provides that no resolution passed by the company at any meeting of shareholders will be given effect to unless approved by the Central Government, but the situation now is that the shareholders have not passed any resolution and have refused to adopt the report and accounts submitted by the Board.

Textile Workers' Bonus Demands

There has been an important development in the dispute between the textile workers in the

city and the management of various mills represented by the Millowners' Association regarding the bonus for 1952—an issue which is already before an Industrial Court. The Board of the Rashtriya Mill Mazdoor Sangh (I.N.T.U.C.) which is the representative union of mill workers here resolved to refuse whatever bonus was awarded by the tribunal, if it was not given industry-wide and without any exemption or modification for units which had made no profits. This decision was conveyed to the Court hearing this dispute early in the week by the General Secretary of the Union who submitted that workers in the profit-making mills would refuse to accept bonus, as a protest, if some mills were exempted from the award. This was in reply to a strong plea put in by the Counsel for the Millowners' Association that the mills which had suffered losses during the year should be exempted from paying bonus as usual. He also argued that depreciation and reserve fund should be calculated industry-wide and suggested that profits which were not earned as a result of the efforts of the workers as well as the return of the Excess Profits Tax deposits should not be taken into consideration while arriving at the quantum of bonus. Another demand made by the workers' representative was that when scrapping old looms mills should not be allowed to replace them by automatic looms.

State Finance Corporation

At long last, the Bombay Government has established a State Industrial Finance Corporation, to provide financial assistance to medium and small scale industries in the State and to supplement the work of the Industrial Finance Corporation at New Delhi. The first Board of Directors of this Corporation, nominated by the Government, will consist of Mr. Purshotam Kanji, (chairman); Mr. D. G. Mulherkar, Director of Industries (ex-officio); Mr. V. Subramanian, Joint Registrar of Co-operative Societies (ex-officio); Mr. Naval R. Tata; Mr. D. V. Potdar; Mr. U. S. Desai; Mr. R. J. Deshpande; Mr. B. Venkatappaiah, Executive Director of the Reserve Bank of India; and Mr. S. T. Karnik. Mr. R. S. Bhat has been appointed Managing Director of the Corporation.

Taxation and Company Law Reform

At the third quarterly general meeting of the Indian Merchants' Chamber here last week, Mr. Ambalal Kilachand, the President of the Chamber, put forward a 14-point memorandum proposing a thorough overhaul of tax structure, which, if

put 'Paludrine' on your payroll

Absenteeism is today a serious problem, which employers of labour everywhere are forced to face. In India Malaria as the greatest single cause of illness has a direct effect on the absentee rate.

'Paludrine' prevents Malaria

Put it to work today in your factory and establishment. Let regular 'Paludrine' dosage raise the level of health among your employees, and so cut down that rising curve of lowered efficiency and lowered production, which always accompanies absenteeism.

All over the world today 'Paludrine' is doing just this job in many establishments and organisations, where its continued use bears silent but irrefutable testimony to its efficacy and power.

Yes—put 'Paludrine' on your payroll and fight one of the most serious causes of absenteeism in India today.

We shall be happy to co-operate with you in implementing a scheme for 'Paludrine' Protection in your establishment. Special rates are available for bulk purchases. Please write today to the nearest office of I.C.I.

AC 510

adopted, would put the tax system on a firm and scientific basis. He based his memorandum on the assumption that "the primary and major objective of a tax system in an under-developed economy must be the encouragement of incentives to work, to save and to invest, so as to enable the community to create increased wealth and ultimately improve the general standard of living of the people." One of the suggestions made by the head of this important business organisation was that the progression in the rates structure should be adjusted in such a manner as not to destroy the element of personal initiative and incentive for expansion; the income level for the maximum rate of personal taxation should undergo a radical revision so that the residue of income available for disposal would afford incentives to save and invest. Mr. Ambalal Kilachand also suggested that a greater amount of graduality should be introduced in the scheme of taxation of inherited wealth and the ideas relating to the economic concept of profit should undergo a revision. With regard to indirect taxation, this memorandum submits that the import tariff should be based on broad considerations designed to secure adequate revenue, that the structure of export tariff should be substantially modified and that the scheme of taxation on sale or purchase be rationalised.

Besides the tax system, Mr. Ambalal Kilachand dealt with another important question which is agitating citizens in general and the business community in particular here—the future of Bombay city in the event of the State being split up into three separate linguistic units of Maharashtra, Gujarat and Karnatak. He questioned the wisdom of early dismemberment of the country on the basis of language and pleaded that the problem be examined in a calm and dispassionate manner. He was also emphatic that if the present structure of the State of Bombay had to be disturbed, "the territory of Bombay cannot form part of any new State based essentially on linguistic considerations." There was an "overwhelming and irresistible case for constituting Bombay, including the port and the suburbs, into a separate administrative unit." With regard to the question of company law reform, Mr. Ambalal Kilachand's advice was that "while everyone would welcome changes intended to ensure the maintenance of a minimum standard of good behaviour in company promotion and management... it is at the same time necessary to remember that the remedy suggested and the consequent checks imposed are not such as are likely to prove to be a bar to the efforts for strengthening the fabric of joint stock enterprise."

Chartered Bank Centenary

The Chartered Bank of India, Australia and China, one of the important exchange banks in Bombay and the oldest, celebrated on Monday the completion of its first century of working. These celebrations were held at the Vallabhji Patel Stadium at Hornby Vellard and were attended by Sir Girja Shankar Bajpai, Governor of Bombay, Sir B. Rama Rau, Governor of the Reserve Bank, Mr. Pranlal Devkar, Nanji, President of the Indian Banks' Association, and Mr. D. Stewart, Joint General Manager of the Chartered Bank at London, who specially came to Bombay for the occasion. All employees of the Bank have been given a special centenary bonus amounting to ten percent of their annual emoluments. The present chief executive of the Bombay branch, Mr. H. C. MacColl, who is in charge of the centenary celebrations, has been in Bombay for the last 15 years and holds a record of 37 years' service in the Bank.

The annual general meeting of the Indian Electrical Manufacturers Association, Calcutta, will be held on 12th December at 4 p.m. at Hotel Imperial, New Delhi, and will be inaugurated by Mr. K. C. Reddy, Central Minister for Production.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc. for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railway experts. This will save you unnecessary delay and expenditure.

Pakistan

STATE IMPORTS TO MEET CLOTH SCARCITY

JAPAN TO RECEIVE MOST OF ORDER

(FROM OUR KARACHI CORRESPONDENT.)

THE dour struggle by Pakistan to improve its foreign exchange position has inevitably brought with it concomitant problems in the field of supply, price control and fair distribution of consumer goods. The American wheat gift and the aid under Colombo Plan rendered by the Commonwealth countries, along with the excellent prospects for this year's harvests, have laid the spectre of high prices and scarcity in food. The controlled retail price of rice in Karachi is now at an average of Rs. 10 per seer.

Cloth, however, the scarcity of which is next only to that of food, is a prime source of hardship and discontent and is now attracting, somewhat belatedly, the concentrated energies and attention of the Government. The supply position of cloth in Pakistan has deteriorated to an alarming extent since the early part of 1952. Up till about 15 months ago the import of the cheaper varieties was permitted without limit, control being exercised only over those textiles priced above Re. 1-8 per yard. Official opinion, although repeatedly warned to the contrary by the trade, held that there were sufficient supplies both of imported and indigenous cloth to meet demands for some time. It is still widely believed in Government circles that there is a large supply of cloth in the country, and that the present crisis has been engineered. Be that as it may, prices over the last two months have risen to an unprecedented level; in October, the Government cost of living indices for industrial workers, which are always on the conservative side, show that in Lahore there was a rise of 3.6 percent and 8.3 percent in the retail prices of shirting and dhotis respectively; in Sialkot long cloth rose by 12.5 percent and in Narayanganj coarse sari was up by 17.2 percent and long cloth by 24.1 percent. All these figures are in comparison with the statistics for September.

The Government moved suddenly and unexpectedly. It was announced that it would import on its own account Rs. 4 crores worth of cloth from Japan and other sterling area countries including India. The decision was the signal for an outburst of indignation and protest by the trade. It was stated that this amounted to a re-entry by the Government into state-trading, a policy which had been disavowed and which, it was suggested, had proved disastrous in other commodities. Mr. N. M. Khan, Controller-General of Prices and Supplies, however, has replied that this move by the Government is only a temporary expedient and that there is no intention to embark on actual state trading. It is true that the cloth will be imported by the Government, but after being landed in Pakistan the cloth will reach the consumer through normal trade channels. Allocation will be made in bulk by the Centre to the provinces and states, after which it will be their responsibility to distribute the cloth for disposal to recognised dealers. The aim is to ensure that the cloth reaches the consumer at a maximum of 20 percent over landed cost.

Speed in procurement is the essence of the whole operation as it is hoped that the arrival of supplies in the country at an early date will bring to the surface the large supplies which the Government is still firmly convinced, are held under counter by the dealers. The argument advanced on behalf of the Government bulk-import is that as there are 3,000 registered importers in the country there would have been considerable delay if the normal channels had been used.

It is stated that the whole of the Rs. 4 crores worth will be put out to tender and that price and speed of delivery will be the main considerations. It is not proposed to send trade missions or deal through trade officers in legations but to negotiate direct with local representatives of foreign manufacturers. Despite no official announcement to this effect, it is obvious that the largest slice of the supply of this cake will fall to Japan. It is expected that that country will receive Rs. 31 crores of the orders, leaving only a half crore to be divided amongst the others. It will be remembered that, in the trade agreement with Japan, Pakistan is called upon to purchase Rs. 5 crores of textiles during the currency of the agreement, which expires on 31st March, 1954.

The latest available figures regarding indigenous cloth production show that considerable progress has been made during the first nine months of this year. The output of cloth by Pakistan mills in September was 13,654 bales and taking that figure as a basis for the next twelve months it might be said that mill production will be able to supply about 24 crore yards a year, to which can be added almost the same amount from the handlooms. Looking at it another way the indigenous handloom and mill production can come with the supply of approximately six yards per head of population each year.

Pakistan mills are now going through a period of great prosperity. The return on investment has been extremely remunerative and the share of the various concerns have touched a very high level of price. The mills of course are operating at the moment under a substantial measure of protection, and it may be that, when real competition starts, some of the factories will be less attractive as economic propositions.

Engineering and Transport

ASIA'S WATER RESOURCES

TECHNICAL CONFERENCE ON DEVELOPMENT

UNDER the auspices of the United Nations Economic Commission for Asia and the Far East, a regional technical conference on water resources development will be held from 17th to 22nd May, 1954, in Tokyo. The purpose of the conference is to provide an opportunity, particularly to the experts of Asia and the Far East, to participate in an inter-regional exchange of views and experiences gained on those aspects of water resources development which are of paramount importance to this region and are generally not dealt with by other international technical organisations. The following aspects of the subject will be discussed at the conference:

(a) Criterion for justification of projects, or for the selection of a project from among alternative proposals; cost and benefit analysis; and methods of reimbursement.

(b) The necessity of sufficient basic hydrological data for appraising available water resources and planning water resources development projects; minimum length of records and minimum number of stations required in planning and methods for the indirect computation of run-off from rainfall and other records in lieu of records of direct discharge measurement.

(c) Experience gained in the selection of types of structures in water resources development with special reference to the availability of labour, material, and local condition in countries of ECAFE region.

(d) Planning of sediment control works in a river basin; technical features and economic justification (check dams, torrent control works, desilting works, and other sediment control structures).

(e) Salient features of important water resources development projects (planned or constructed) in countries of the region with special reference to multiple-purpose projects.

(f) Organisation for the effective execution of river basin development; relative merits and suitability of various kinds of organisation such as: autonomous and semi-autonomous valley authorities joint management by related states or provinces; execution of work separately by various departments or provinces under a joint co-ordination board, corporation or company under state

ownership or joint ownership of the State and private sector.

(g) Standards of methods, records and terminology of hydrological measurements as proposed by the Bureau of Flood Control.

(h) Other items that may be suggested by governments.

The conference will be followed by a Technical Excursion (Field Trip or Tour) of various river basin development projects in Japan, including works on flood control, irrigation and drainage, water power, hydraulic research institutes etc. from 24th to 29th May, 1954. The Government of Japan is making arrangements for an exhibition, to be held during the entire period of the conference, of hydraulic and hydrological instruments, and construction machinery related to hydraulic projects, manufactured in Japan. Charts, diagrams, maps and models of important projects in Japan will also be exhibited.

MADRAS PORT TRUST REPORT

EXCLUDING a sum of Rs. 1,26,517 held under "suspense", the net revenue receipts for the year 1952-53, including a sum of Rs. 46,82,922 representing surcharge, amounted to Rs. 1,47,57,983 compared with Rs. 1,36,02,765 during the previous year, an increase of Rs. 11,55,218. Excluding the amount held under "suspense" and also the contributions to the Renewals and Replacement Fund, Capital Account and the Revenue Reserve Fund aggregating Rs. 66,53,500, the net expenditure for the year amounted to Rs. 84,55,609 compared with Rs. 87,13,829 in the previous year. The actual working expenses amounted to 53.64 percent of the income compared with 60.09 percent in the previous year. The decrease in the ratio of working expenses is mainly due to the larger receipts during the year under review. A sum of Rs. 99,907 was contributed during the year towards the Sinking Fund for the repayment of the Sterling Loan of £300,000 raised in London in 1923. The repayment of this loan due on the 1st May, 1953, has since been completed. The outstanding amount of loans owing to the Government of India was Rs. 45,96,547 at the end of the year under review.

The total actual receipts and expenditure of the Portage fund for 1952-53 amounted to Rs. 3,55,964 and Rs. 3,74,251 respectively. The above expenditure included a lump sum contribution of Rs. 1 lakh to the Renewals and Replacement Fund for the replacement of *Tug Thruster* and was met partly from the opening balance of Rs. 1,90,353 available in the fund on the 1st April 1952 and partly from the receipts of the year. Excluding the contribution of Rs. 1 lakh to the Renewals and Replacement

A SUGARCANE TRUCK WITH SKF ROLLER BEARING AXLEBOXES

belonging to the Saraya Sugar Factory, Sardarnagar.

More than 200 trucks of the type illustrated with a maximum axleload of 8 tons were equipped with SKF Roller Bearing Axleboxes in 1939-1943. After 10 years of service the original bearings and boxes are still giving excellent service.

SKF Roller Bearing axleboxes help to reduce your transport costs.

As compared with plain bearing axleboxes the greatly reduced friction permits starting and hauling of much heavier trains with the same tractive effort. Maintenance and lubrication costs are drastically reduced as the only attention required is a relubrication once a year between seasons.

The services of our technical department are free and without obligation.

"Nisiloy" is a Registered Trade Mark

Fund, the result of working for the year showed a surplus of Rs. 81,713. The actual closing balance at the end of 1952-53 was Rs. 1,72,066 after taking into account the above contribution made to the Renewals and Replacement Fund during the year. The receipts, expenditure and closing balance of the Madras Port Fund for 1952-53 were Rs. 6,70,984, Rs. 7,71,927 and Rs. 2,04,172 respectively. The above expenditure included a lump sum contribution of Rs. 2 lakhs to the Renewals and Replacement fund for the replacement of the Tug Thruster and was met partly from the opening balance and partly from the receipts of the year.

Trade of the Port

There was a small increase in the volume of trade passing through the Port during the year under review. The volume of imports and exports, which passed through the Port during the year, was slightly more than that of the previous year. The tonnage figures for the year and for the previous five years are given below:-

Year.	Tons.	Year.	Tons.
1947-48	1,661,164	1950-51	2,174,128
1948-49	1,904,892	1951-52	2,154,829
1949-50	1,783,570	1952-53	2,206,147

Attempts are being made to obtain second-hand rolling stock from the Indian Railways for dealing with increased traffic inside the harbour area. Due to the unprecedented drought and the consequent water scarcity conditions that prevailed in the early part of 1952, the Trust installed six wells with high level tanks (estimated cost Rs. 43,000 and Rs. 35,000) for use of subsoil water as far as possible for plant and human consumption. With the return of the city's water-supply to normal conditions due to heavy rains in May 1952, these installations are now used for flushing all latrines in the harbour and for provision of bathing facilities. The workshop improvements (estimated cost Rs. 6,00,000) are now in the final stage of completion. A 1,000-ton hopper barge, Sandpiper has been acquired from manufacturers in Holland at an estimated cost of Rs. 10,90,000 and is undergoing trials. One new electric compressor has been obtained to replace an old one, estimated at Rs. 21,750 (Rs. 20,225 debit to Capital and Rs. 1,525, debit to "2. Wet Docks and Wharves—(g) Repairs and Maintenance—(iii) Plant and Gear"). Due to the complicated patterns of waves prevailing in the harbour under severe 'Range' conditions, it has not been possible for the

laboratory to stimulate prototype conditions exactly. A statistical analysis of the different waves that prevailed during the severe range in December 1951 was therefore made, and the model tried out for each of the several types of waves which existed at the time. The experiments on the model are now in the final stage.

CARGO SHIPS ON ORDER

A Glasgow firm of shipbuilders has been asked to reserve berths for the building of two new cargo ships for the British India Steam Navigation Company Ltd. The keels will be laid in October 1954 and January 1956, and each ship is expected to take two years to complete. The Glasgow firm already has three other British India ships on order. The 10,000-ton cargo steamer *Patongpo*, built by another Glasgow firm for the P. & O. Steam Navigation Company, has just started her trials. She was launched in August and will sail shortly for the Indian sub-continent and Australian ports.

in New York...

they know that more motorists use
triple-action Mobiloil
than any other motor oil in the world!

New York, city of skyscrapers and centre of commercial progress, today gains added glory as the home of the United Nations, the meeting ground of delegates from all over the world.

But the delegates represent the countries of the world in another sense, too; for as they drive to their homes, they are united in their recognition of the Flying Red Horse as the symbol of progress in lubrication. They know that Mobiloil is a Heavy-Duty motor oil, giving greater protection than regular or premium-type oils — and that it...

SAVES ON WEAR by lubricating properly at all temperatures;
SAVES ON REPAIRS by preventing harmful carbon deposits in the engine;
SAVES ON PETROL by preventing acids eating away the metal parts, which causes loss of power.

Stop at the sign of the Flying Red Horse

The Flying Red Horse is the sign of helpful service for your car. Go there for regular Mobilubrication — the complete motor service — and for Standard-Vacuum products backed by 87 years of leadership in the oil industry.

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)

Jute

EXTENSION OF JUTE ENQUIRY COMMISSION'S TERM

NEED FOR SEPARATE EXAMINATION OF FUTURES MARKET PROPOSALS

It has been announced that the term of office of the Jute Enquiry Commission has been extended by four months. That was not unexpected considering the extent to which the scope of the enquiry had been widened since the first announcement. It is also known that some of the replies to the Commission's questionnaire were not sent in until after 1st October, the date fixed by the Commission for the submission of replies. As far as is known, the Commission has not yet commenced hearing evidence from those who have submitted memoranda and, presumably, it will want to discuss the answers and get some elaboration on many of the points at issue. This is another reason for pressing the proposal to have a separate commission set up to deal with the problem of futures markets. A decision on this point alone is urgently required and, if the decision is in favour of the establishment of futures markets, no time should be lost in appointing a committee to formulate a scheme.

I. J. M. A. Stocks of Manufactures

At the end of November, stocks of manufactured jute goods held by the mills reporting to the I.J.M.A. were 97,800 tons—the first time since October 1952 that they have fallen below the century. This is indicative of a very healthy position and are now well below the equivalent of one month's output. This is very satisfactory, especially considering that the production of hessian has been increased to such an extent during the past year. At the end of October 1952, hessian stocks were 95,000 tons. Sacking stocks showed a slight increase, being 900 tons more than at the end of October. Stocks now stand at 71,100 tons compared with 64,300 tons at the end of October 1952 and the peak figure of 95,300 tons in February 1953. It is too early yet to say definitely whether a balance has now been struck between production and demand for heavy sacking but it certainly looks as if that position is not far away. Sacking stocks were 72.70 percent of the total at the end of November and hessian 24.95 percent, the balance being miscellaneous goods.

Improving the Quality of Jute

It is announced that the Government of India has accepted the main recommendations of the Expert Committee which was set up to consider methods of improving the quality of jute grown in India. The official summary of the Committee's report was published in *Capital* two weeks ago. It is very satisfactory that the Government's decision has been made so quickly. Much preliminary work must be done before the sowing season commences in March. If the work in connection with the proposed farm for the production of seed of improved varieties and the seed multiplication farms is not completed by then a whole year may be lost. The Government proposes to grant interest-bearing loans to the States concerned and to bear half of any losses which may be incurred. It is now incumbent on the States to get ahead with the scheme without loss of time. The Government has also agreed to the proposal to excavate new tanks and to re-excavate old ones and to make outright grants of 50 percent of the cost instead of giving loans as proposed by the Committee. There is not so much urgency about this part of the scheme, but the portion to be undertaken in 1954 must be completed in the dry season, so there is no room for delay. The whole of this part of the scheme is to be spread over three years. The States have been asked to examine the proposal to pass an Act enabling the States to declare certain districts "protected areas" where only seed of improved varieties will be permitted to be sown. This must also be done before sowing time to enable arrangements to be made for the distribution of seed of improved varieties and the collection and destruction of locally grown seed.

STEADY UNDERTONE IN THE JUTE MARKETS

In spite of fluctuations in prices because of manipulations in the phatka market, sentiment in all sections has tended toward bullishness. Though the tightness in hessian, which at one time was expected to continue up to the end of December, has been relieved and though the shipments of sacking in November were believed to have been disappointing, there was an underlying feeling of confidence. Bears, it is true, were predicting a falling off in demand for hessian in the New Year and were sceptical about the jute position, but they were unable to produce more than a very temporary downward movement. How far that has resulted from the strength of the jute position it is difficult to gauge. Some are of the opinion that a weakening in the demand for manufactured goods and a lowering of prices would result in nervous selling by holders of raw jute and that raw jute prices would fall quickly. Others take the view that the supply position for fibre is such that raw jute has sufficient intrinsic strength to maintain the manufactured goods market until, at the earliest, some indication may be had of

on Tuesday. On Wednesday morning quotations are as under:

Indian Jute:	Landed at Mills, Rs. per md.	Shipment, Dec-Jan
Lower Assam	28-8	"
Upper Assam	28	"
Northern	28-8	"
Purnea	28	"
Murshidabad Tossa	27	"
Daissee	30-8	"
Daissee Mesta	28	"
Western Mesta	24	"
Bimili	F.A.Q. 25-8	"

Quotations for deliveries from Cossipur are eight annas below these rates. Tossa prices are Re. 1 to Rs. 2 above the price of white jute. The price of Middles is Rs. 3 above that for Bottoms but sellers are asking a premium for Middles alone and are endeavouring to establish a difference of Rs. 3 between Tops and Middles.

Pucca Bales	Rs. per bale	Shipment, Dec-Jan
Mill Firsts	180	"
Mill Lightnings	165	"
Dundee Daissee 2/3 SG	180	"
Dundee Daissee 2/3 LG	165	"

Pakistan Jute (ex Pakistan):	Rs. (I) per md.	Shipment, Dec-Jan
Jat	31	"
District	30	"
Northern	29	"
Cuttings SNC	82	"
NC	72	"
MC/TC	70	"

The difference in price between Tops and Middles is Rs. 3 and between Middles and Bottoms Rs. 3-8 to Rs. 4 in the case of Pakistani jute sold in India.

Mofussil: In India, markets have been steady. Imports are small and there has been steady buying by dealers covering sales in Calcutta. Prices are, as usual, above the parity of prices in Calcutta. Imports are noticeably small in Upper Assam but are better in Lower Assam and North Bengal. In Murshidabad there is steady buying of tossa for dispatch to the daissee markets in Calcutta and white jute to Cossipur. Imports into Cossipur have increased again because better prices have been obtained recently. In Shambazar and other local markets imports are in very wet condition and the quality is suffering because of the jute being kept in an excessively wet state.

In Pakistan the markets have, in the main, been steady and imports small. It is reported that there is a bullish feeling because it is thought that it cannot be long now before Calcutta mills have to buy Pakistani jute. The majority of balers and dealers are reported to be holding as much jute as they can according to the limits of their storing and financial capacity and consequently they cannot be very active buyers. There has not been much overseas business but Calcutta buyers were showing interest in havi-jabi, ropes and cuttings. In Narayanganj quotations are Rs.(P) 24-8 for Jat Bottoms with District at Rs.(P) 23-8 and Northern at Rs.(P) 20-8. Mill Firsts are quoted at Rs. (P) 142. Export Firsts at Rs.(P) 123 and Export Lightnings at Rs.(P) 100 f.o.b. Narayanganj.

EXPERTS' PROPOSALS TO GROW BETTER JUTE ACCEPTED

All the main recommendations of the Expert Committee set up early in March this year to go into the question of improving the quality of Indian grown jute have been accepted by the

By ANANDA GOPAL BANERJEE, M.A., A.C.A.

Contains Practical Illustrations showing in detail the working and effect of all the principles of taxation and the text of the Income Tax Act as amended up to 30th September 1953. A new Chapter on "Liability of a Non-resident Individual" has been added. The provisions of (1) "The Taxation Laws (Extension to Merged States and Amendment) Act, 1949", (2) "The Merged States (Taxation Concessions) Order, 1949" and (3) "The Part B States (Taxation Concessions) Order, 1950" as amended up to 30th September 1953, have also been added to make this edition more useful.

An ideal book for professional Examiners and a useful practical reference guide for all officials and tax-payers.
PRABHAK PUBLISHERS, 61, Bowbazar Street, Calcutta-12.

Government of India, states a Press Note issued by the Indian Central Jute Committee. A scheme of work on the lines suggested by the Committee in its report has also been drawn up.

The scheme envisages the setting up of eight State farms for the production of good quality seeds, of which three are to be in West Bengal, three in Bihar and one each in Uttar Pradesh and Orissa. To help finance the establishment of these seed farms the Government of India has proposed a grant of interest-bearing loans to the States and the losses that may initially arise from the production and distribution of good quality seeds will be shared by the Centre and the States on a 50:50 basis. Also, as recommended by the Expert Committee, it has been decided to set up a Centrally-financed farm under the Indian Central Jute Committee for the production of nucleus stocks of seeds, to be distributed among the State farms for further multiplication. In this connection the State Governments have been asked to examine the possibility of passing a Jute Seed Act and to make a start as soon as possible for declaring certain areas as protected areas under the proposed Act, where no other type of jute seed except the improved varieties supplied by the State Governments to the jute growers in exchange for the local seeds produced by them, would be permitted to be sown. It would be obligatory on the jute growers of the stipulated areas to sell the surplus of their jute seeds produced on 50 percent Government subsidy from the improved varieties to the State Governments at an agreed price.

In view of the dearth all over the jute-growing States of retting water, which constitutes the most important factor influencing the quality of jute fibre, the Government of India has accepted the Expert Committee's three-year scheme for constructing 8,200 new tanks and re-excavating 4,300 old tanks. Instead of advancing loans, as suggested by the Expert Committee, it has decided to make outright grants to the States towards meeting 50 percent of the cost of construction and re-excavation; the State Governments will be required to bear the remaining 50 percent. They will, however, be free to make any recovery from the cultivators for the use of the retting water.

I. J. M. A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports total stocks of jute goods at the end of November 1953 as follows:

THE FOREIGN JUTE MARKETS**PRICES GENERALLY STEADY**
(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

A GOOD deal of uncertainty prevails in the jute markets at the moment, but the undercurrent in prices is generally steady. It is difficult to determine whether raw jute is following Calcutta goods or vice-versa; but when any change does take place, they both move in the same direction as a rule. It is pleasing to note, however, that values are not being unduly advanced and that the general level has increased only slightly over the past four or five weeks. During that time, business in goods with the Indian jute mills has been improved, probably because Continental manufacturers have not been disposed to compete with the prices emanating from Calcutta. Most Continental countries report quiet markets in both yarns and cloth, and offers of the former are now being more freely made to the United Kingdom. The prices quoted are still above those ruling for local spins by the time the import tax of 10 percent is added and as 14d per lb. more, though delivery of the foreign yarns can be obtained in January-March. Local spinners are all behind with deliveries and so well booked up that it is impossible to purchase weaving or carpet yarns before April next year. Illness amongst the workers is aggravating the acute scarcity of reasonably early delivery of both yarns and cloth.

The threat of Pakistan as a competitor in the consuming markets for jute goods is bound to be causing considerable concern, probably more in India than elsewhere. Sixty years ago Dundee had a thriving jute industry when the number of workers totalled 43,500, and as much as 1,550,000 bales of raw jute were being imported into the city. The expansion of the industry in India has since adversely affected Dundee and imports of the fibre have fallen to as low as 600,000 bales at times. Lately, under the protection of the Jute Control, there has been an improvement to 800,000 bales.

Prices for raw jute are £108 for Mill Firsts and £96 for Mill Lightnings, £100 for crack Daisee-2/3 and £92 for grade, with crack Tossa-2/3 at £120 and grade at £109, c. and f. U.K. Prices for jute yarns and cloth remain firm and unchanged. Calcutta goods have continued to fluctuate slightly, closing at 7s 6d for 10 oz. 40 in hessians, December, 70s with 71 oz. at 57s December, f.o.b. B twills are named at 17s December, 173s 9d January-March and 172s 3d April-June, f.o.b.

COMPANY AND PUBLIC NOTICES**McLEOD & CO., LTD.**

THE 30th Ordinary General Meeting of the Shareholders of McLEOD & CO., LTD., will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 29th day of December, 1953, at 3 P.M. for the following purposes:—

THE BIRLA JUTE MANUFACTURING CO., LTD.

NOTICE is hereby given that an Extra-Ordinary General Meeting of the members of the abovenamed Company will be held at the Principal Office of the Company, 8, Royal Exchange Place, Calcutta, on Wednesday the 6th January, 1954, at 3-30 p.m. in the afternoon to consider and if thought fit to pass with or without modification the following resolutions, viz.:—

Ordinary Resolutions.

1. (a) That the 35,000 new shares of Rs. 100 each created by the resolution of the shareholders passed at an Extra-Ordinary General Meeting of the Company held on the 28th June 1949 which have not been taken up nor agreed to be taken up by any person be and the same are hereby cancelled and the authorised capital is diminished by Rs. 35,00,000.
- (b) That the Authorised Capital of the Company be increased from Rs. 65,00,000 to Rs. 1,45,00,000 by the creation of 8,00,000 new ordinary shares of Rs. 10 each.
- (c) That a sum of Rs. 60,84,000 being part of the undivided profits of the company standing at the credit of the General Reserve account be capitalised and that this amount be utilised as a Capital Bonus which shall be applied on behalf of the persons who are on the 6th day of January, 1954 holders of the existing 3,04,200 issued and subscribed ordinary shares of the company of Rs. 10 each in payment in full for 6,08,400 new ordinary shares of Rs. 10 each and that such 6,08,400 new ordinary shares credited as fully paid up shall be accordingly allotted to such persons respectively in the proportion of two new ordinary shares for every one ordinary share held by them on the 6th day of January, 1954 and that the said new ordinary shares so distributed shall rank in all respects pari passu with the existing ordinary shares save and except that they will not participate in any dividend declared in respect of any period prior to and up to the 31st March, 1953 and shall also be treated for all purposes as an increase of the capital of the company held by each such ordinary shareholder and not as income.

- (b) That pursuant to the above Resolution and in satisfaction of the said special capital bonus, the Directors be and are hereby authorised to allot and distribute 6,08,400 new ordinary shares credited as fully paid up amongst the persons who are on the 6th day of January, 1954 holders of the existing 3,04,200 ordinary shares of the company in the proportion of two such new shares for every ordinary share held by them and with full powers to the Directors to make such provision for the issue of fractional certificates or otherwise as they may think expedient in the case of fractions.
- (c) That the draft of the Agreement providing for the Allotment of the said new ordinary shares in satisfaction of the said capital bonus and submitted to this meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Common Seal of the Company to duplicate engrossment of such agreement and that the same shall have been signed on behalf of the members holding the existing ordinary shares in the company on the 6th January, 1954 by some person to be appointed by the Directors in that behalf under Article 177 of the Company's Articles of Association.

Special Resolution.

3. That clause 3 of the Memorandum of Association of the Company be amended so as to include a new sub-clause 17A as detailed below:—

"To carry on, in all its branches, the business of manufacturers, importers and exporters of and dealers in Calcium Carbide and other chemicals including heavy chemicals and all products analogous to or connected therewith and to purchase and vend all material raw processed or otherwise and all articles in any way connected with the aforesaid business."

The Share Transfer Books of the Company will remain closed from 21st December, 1953 to 6th January, 1954, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.

Calcutta,
Dated 5th December, 1953.

In particular to all the Shareholders to whom a notice is required to be addressed under Article 184 of the Articles of Association of the Company.

**Tubular
cloth
sacks
don't
split**

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

By Order of the Board,
OCTAVIUS STEEL & CO., LTD.,
Managing Agents.

Calcutta, 3rd December, 1953.

THE BIRLA JUTE MANUFACTURING CO., LTD.

NOTICE is hereby given that an Extra-Ordinary General Meeting of the members of the abovenamed Company will be held at the Principal Office of the Company, 8, Royal Exchange Place, Calcutta, on Wednesday the 6th January, 1954 at 3-45 p.m. in the afternoon to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as ordinary resolutions, viz.

- (1) That 12,00,000 Ordinary Shares of Rs. 10 each be consolidated into 4,00,000 Ordinary Shares of Rs. 30 each and such consolidation be effected as follows:—

(a) That the existing issued and paid up 3,04,200 Ordinary shares of Rs. 10 each and the newly created issued and paid up 6,08,400 Ordinary Shares of Rs. 10 each in the capital of the Company be consolidated in such manner that every one of the said 3,04,200 Ordinary shares of Rs. 10 each and every two of the said 6,08,400 new Ordinary shares of Rs. 10 each together shall constitute one paid up Ordinary share of Rs. 30 each.

(b) That the unissued and unpaid 2,87,400 Ordinary shares of Rs. 10 each including the Ordinary shares newly created be consolidated in such manner that every one of such ordinary share of Rs. 10 each together with every two of such ordinary share of Rs. 10 each shall constitute one ordinary share of Rs. 30 each.

(c) That the existing certificates of the said issued and paid up ordinary shares of Rs. 10 each be called in by the Directors for suitable amendment.

- (2) That Clause 5 of the Memorandum of Association of the Company beginning from the words "The Capital of the Company" and up to the words "Rs. 100 each" do now read as follows:—

COAL COMPANIES

O, P, F and D, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, P, F, D, G and R indicate Ordinary, Preferred Ordinary, Founders' Deferred, Guarantee and Rebate Shares, respectively. P next to the names of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE INDIAN CAPITAL MARKET IN 1953

NO SUPPORT FOR NEW VENTURES: SAVINGS CANALISED TO OBLIGATIONS

THE second annual report of the Consultative Committee of the Colombo Plan, which was published last week, makes the familiar points about the need to exploit essential resources fully, to check inflation, to stimulate savings and investment and to encourage foreign financial assistance. The Government of India can fairly claim that it has given its attention to all these problems in the past two years and that this fact is responsible for the degree of progress noted in the report in the chapter on India. The concentration of effort on development of essential resources has been the keynote of Central Government policies; the States have been much less intent on concentrating their energies and in some instances they have even succeeded in forcing the Centre to divert its efforts to less essential channels. But granted the inconsistencies of "democratic planning" and the disabilities of a federal union, the degree of concentration of effort achieved in India in the last few years has been satisfactory. Inflation too has been successfully checked and, although there is a class of business men who seem to think that the only alternative to rampant inflation is disastrous deflation, the control of credit in India since late 1951 has been very competently managed. The "encouragement of foreign financial aid is ambiguous, meaning either the negotiation by the Government of loans from international institutions and foreign governments, or the attraction of private investment capital. As regards the first, performance has been better than might have been expected a few years ago, though there are a number of blots on the record that need not have been there; the delay in obtaining a loan for the Industrial Finance Corporation because of an internal political controversy; the delay in obtaining a loan for electric power development in Bombay because of the stubbornness of the State Government; and the embarrassment suffered by the Indian Iron and Steel Company, shortly after it was granted a substantial loan, in the form of a labour dispute that was unduly prolonged by official inactivity.

There remain two problems that are best considered together: the stimulation of domestic saving and investment, and the attraction of foreign private capital. These are best taken together because on all important points the conditions favourable for the one will promote the other; the supposed conflict of interests between domestic and foreign capital is imaginary, except in so far as this is an instance of the competition that must exist in any healthy economy between the inefficient and the efficient producer. Such instances are not common in India, though the current controversy between two sections of the soap industry is one such. For the rest, the creation of conditions favourable to investment in industry will serve the purposes of increasing domestic capital formation and attracting risk money from overseas. The extraordinary labour awards of the recent past have discouraged prospective foreign investors as much as they have local industrialists, while the tribulations of such foreign-based enterprises as the Calcutta and Madras tramway companies have been as much a warning to the home investor as to the foreigner. The few problems of peculiar concern to the overseas investor that have come up in the last twelve months are the introduction of double estate duty taxation, the sudden decision to tax certain local authorities' sterling debentures, and the persistence of tax anomalies that hamper the commonest form of immigration of capital.

In considering the record of the Indian administration on this joint problem of stimulating domestic and foreign investment, there are several encouraging changes to be noticed. One is that

the Government is now keenly aware of the importance of the whole question of capital creation. It is true that conventional lip-service to the crucial necessity of creating new capital has been rendered every year since the war, but in the last twelve months attention to this problem has been much more serious. It is also true that even this new access of interest is directed to comparatively subsidiary matters—bank finance, for example. There is still a reluctance to go to the problem head-on, and to study that basic change that will be required in economic policy if capital is to flow into productive endeavour. The Government is still, one suspects, hoping that ways of stimulating capital creation will be found that do not call for radical revision of its social and tax policies. But even this is no bad thing, if it eventually leads to the conviction that all the short cuts and easy paths have been tried and found useless and thus makes it clearer than ever that basic alterations of policy are inevitable.

Another important change to be noticed is that there has lately been something of a revival in the Indian capital market, though, as we shall argue, it has been of limited utility to productive enterprise and cannot be assumed to be the beginning of a healthy new trend. The Colombo Plan report refers to this development and says that "this improvement in the (Indian) capital market offers grounds for optimism", but it at once goes on to point out that "there appears to have been some reduction in private investment which has reflected itself in the recent rise in unemployment". It ascribes the latter and less welcome development to the "emergence of a recessionary outlook related in part to international factors"—which is a vague and evasive enough formulation to please any Government department. What sort of a change has there been in the Indian capital market that at once attracts attention as a "revival", giving "grounds for optimism", and a "reduction" due to "recessionary" fears?

In a word, there has been an increase in investment in fixed-interest and gilt-edged stock but a decline in the amount of new money invested in risk-taking productive enterprise. One would take this, on a priori grounds, to indicate three facts: that savings are being mobilised in significant (though no doubt still inadequate) proportions; that there is confidence in the stability of the country and in the value of its currency; and that there is much less confidence in the competence of private industry to earn enough to attract private and corporate savings. And, as every observer of the Indian economic scene knows, this is a fairly accurate description of the present state of affairs. The Government of India deserves full credit for the first two: it has stopped dissaving and has mobilised savings to a significant extent, and it has created confidence in the country's stability. But for the last it deserves censure: it has not created conditions for expansion, in which

INDIAN FOREIGN POLICY

RACIAL INEQUALITY AND ANTI-COMMUNISM

By Taya Zinkin

NATIONS, like individuals, are the product of their heredity and environment. India's foreign policy is the product of her history, and to expect India to pursue a different course to the one she has chosen would be to invite disappointment. Indeed, except towards Pakistan, India has no foreign policy but only a foreign attitude, an attitude based upon her own immediate experience, and an attitude, moreover, that is possible because independent India was born six years ago free of commitments. Before the days of British rule there was no such thing as a foreign policy in Asia, while, during the Raj, India was isolated from international stresses by the Royal Navy, by the great natural wall of the Himalayas, by the Chinese vacuum and by the fact that her nearest neighbours were under some form of Western domination. In the result, foreign policies were decided in The Hague, Paris or London, not in Saigon, Karachi, Delhi or Djakarta. Even since 1947 India has been directly concerned only with Pakistan for even her powerful Communist neighbours are not of direct concern as potential aggressors. India is a member of the Commonwealth and an attack on India by any of the latter would set off world war as surely, in fact more surely, than it did in Korea.

Therefore, free, democratic, uncommitted India enjoys a unique liberty of manoeuvre, comparable with what Switzerland would have if Switzerland were as large as India. So India behaves both like a small and a big nation, and this behaviour does sometimes require interpretation in the West. A big nation thinks that what it says matters, and it does. A small nation by virtue of its smallness can be detached in its pronouncements for they matter little. India sees herself, strategically, as a small nation, but morally as a big one. This is why India speaks with two different voices; they may sound inharmonious, but they are not contradictory from India's point of view. If India at times seems too sure that her opinions will be heeded, the West is as much to blame as the spokesman in Delhi, for whenever an Indian leader says something that pleases Westerners her "ancient wisdom" is praised quite lyrically, but when her reactions are less acceptable, Mr. Nehru's Leftist past is recalled with some bitterness. The reasons that what India says is listened to so attentively are to be found in her geographical position, in the number of her people and in the fact that she only recently became free, so that Indian verdicts are heavy on the scale of that other war—which Indians see as much greater than the cold war—the struggle for equality.

India dispenses laurels and thorns somewhat freely, no doubt. There is in this country a fundamental belief that if it sides with the West that would not prevent the totalitarian bloc from furthering whatever aggressive designs it cherishes, for after all India is a small military power, but at the same time that if India were to give full support to the West, some countries in that alliance might become "trigger-happy" for India is a large moral power. This ambivalent attitude is often unfair to the democracies and Indian leaders will lean over backwards to understand, explain and meet the totalitarian case. India expects all the concessions to come from the West and does not waste time in seeking compromises or concessions from the other side. Exasperating though it may appear in Washington, this attitude is an index of Indian faith in the democracies. One cannot change the devil, so in the hope of peace one must try to appease him; since the devil cannot be made to be good, it is for the democracies to be good for both.

This approach, however sentimental and unrealistic, ought to be received with the utmost sympathy in, of all countries, the United States; but memories are short. "Few men have dared to legislate as though eternal peace were at hand, in a world torn by wars and convulsion and drowned in blood," writes Adams in *The Formative Years*, "but this was what Jefferson aspired to do. Even in such dangers, he believed that Americans might safely set an example which the Christian world should be led by interest to respect and at length to imitate. As he conceived a true American policy, war was a blunder, an unnecessary risk; and even in case of robbery and aggression, the USA, he believed, had only to stand on the defensive in order to obtain justice in the end." And in 1914 Woodrow Wilson told his people to "be neutral not only in deed but in words and thoughts." Whether India would stand to gain—to look at the matter from a selfish viewpoint—by committing herself on the side of the democracies and thus, in her own peculiar opinion, increasing the chances of a conflict, is debatable. Secure in the comforting belief that the West would win in the end, India sees no reason to be anything but neutral. Perhaps in the event of another Dunkerque India might change her mind if she thought that by throwing in her weight she might save the day, but short of a situation

where a diversion is desperately needed to tip the scale, there is some justification for the Indian belief that by cultivating her garden this country can help democracy most. India has many problems to face, and if she can resolve them and lead her millions by the democratic way to a better life more will have been gained in the cause of freedom than if she supplied armies and collapsed under the strain.

Overlaid and perhaps fundamental to Indian "neutralism" or "independence of judgment applied to issues as they arise" (the actual opposite of a foreign policy) there is the fact that the dominant powers of the West are white and India is not. In this simple fact is to be found the reason why India and the West do not see the cold war in the same way. The West, or at least the Americans, see clearly a cold war between two blocs; one good, one evil. India sees a cold war between two blocs which both have good and evil in various proportions. On the one side there is, behind the Iron Curtain, a totalitarian bloc (bad) where one man is one man (or so Indians believe) whether he is black, yellow or white (good); on the other side, India sees a democratic bloc (good) where one white man sometimes equals (or so Indians believe) 100 black men (or more) (bad). Racial equality is the touchstone of India's foreign attitude, and it is "colour prejudice" that Mr. Nehru means when he condemns "colonial exploitation"—for if he does not, he has to show how a "satellite" is any more respectable than a colony, which we believe he could not show. India often ignores "colonial exploitation" where the exploiters and the exploited are of the same colour, or live on the same Continent—what the Economist has called the "salt-water fallacy," i.e., imperialism only exists where the rulers have to cross the sea to get their colony. Little heed is paid to the ruthless exploitation of Rumania by Russia, because the Rumanians are white. A good deal of attention necessarily was paid to the Chinese occupation of Tibet, but none to the recent famine in Tibet which was in fact a direct result of what, had it happened elsewhere, would have been derided loudly as colonial exploitation.

Because India judges the West by its treatment of coloured peoples, India seems to forget that

Russia is a totalitarian state. If the Western powers treated the peoples of Africa according to a head-count India, whose belief in formal electoral equality became history at the polling stations in 1951 when every Indian got one vote, might see the cold war as a straight struggle between democracy and totalitarianism. Mr. Nehru can truly claim that on the issue of equality he represents not only India but all coloured peoples who will, sooner or later, present their bill for equality to the Western powers. Today, Mr. Malenkov's best agent is Dr. Malan. On the Indian view the most important event in our age is not the harnessing of the atom, but the move to equality. The urge to equality is everywhere, active or latent. Everyone wants to be equal before the law. Every man wants, or will want, to be the equal of his neighbour irrespective of the colour of his skin, with a right to equal education and a vote. The only issue on which there is dissension is the means. Equality, its runners. Racial equality is going to be more sacred a cause to fight for than the desecration of the Saviour's Tomb by the Unfaithful, for a man can change his faith, not his skin.

OBSTACLES TO FREER TRADE

U.K. CONTROLS OVER TUNGSTEN AND JUTE GOODS

THE announcement in the middle of this month of the ending of the International Materials Conference caused no stir. The organisation that the American President, Mr. Truman, and the British Premier, Mr. Attlee, brought into being at the end of 1950 to allocate scarce materials was outdated almost as soon as it was functioning smoothly, for the shortages were more apparent than real and the appearance quickly faded. Yet

the local British counterpart of IMC, the Ministry of Materials, still continues, with only two materials under its control. This month the Ministry relinquished control (as from the beginning of 1954) of the sulphuric acid materials, sulphur and pyrites. They were not scarce, but the regulation of private trade seemed to linger because new plants had been set up in Britain to make sulphuric acid without sulphur, and the ability of the high-cost plants to compete with sulphur-burning plants was doubtful. The two remaining materials are tungsten and jute (including jute goods). The Government misjudged its purchases of tungsten when prices were high and is reluctant to publicise the financial loss on its stock; but the return of tungsten to private buyers cannot be delayed much longer. Jute is a different case. It was formally recognised as being no longer scarce 15 months ago, when restrictions on consumption were removed. But if jute goods were importable through ordinary trading channels Dundee would be quite unable to compete with Calcutta. So the Jute Control buys at Calcutta prices and sells at Dundee prices, not to earn the rare distinction of earning a profit for governmental trading but to maintain an essentially uneconomic industry in being. This extraordinary method of import-control (which corresponds with an export subsidy in reverse) has been subjected to a good deal of criticism recently, partly because it does not conform with the principles of the General Agreement on Tariffs and Trade (which has been under consideration for other reasons), partly because it does not conform with the British Government's declared policy for an uncontrolled economy.

The House of Commons has lately debated the new tariffs on fruit and vegetables which the British Government was ultimately permitted to impose as a substitute for restrictions by quota. It is now clear that these tariffs are not merely an alternative but also an additional protection to local growers of these foods. Quotas may be arbitrary, but if properly applied they can be adaptable; whereas tariffs remain even in periods of sudden shortage. These tariffs have been fixed so high that they must benefit British producers and penalise Continental suppliers and British consumers at any time. Again, jute goods are a different case. To impose a tariff on these products of the Commonwealth would require revision of important agreements and arouse intense feeling among suppliers—although Commonwealth countries impose tariffs freely on British manufactures. But the present method of control implies a quantitative restriction, which, according to the principles of the General Agreement, should be applied not to protect producers but only to protect the balance of payments.

The principle of protection—no matter what the method—is the main obstacle to the British Government's progress towards a "free economy". The Conservatives' achievement in freeing the economy from control is remarkable: in office little more than two years, they have already removed or modified three-quarters of the economic controls bequeathed by the Socialists. Their declared purpose has been to return commodities from governmental to private trade and to restore freedom of choice to the consumer, whose buying was for many years distorted by rationing, by price controls, and by cost-of-living subsidies. But when protection is needed for a particular industry or for producers of food (agricultural as well as horticultural) this purpose is ignored. Particular interests may, perhaps, exaggerate the exceptions. That the policy in general has not been checked this year is shown by the decontrol in 1953 of zinc, copper, magnesium, sulphur and pyrites, timber, grains, sugar, by the permission to import animal fats, rice, dried fruits, linseed oil, by the plans to restore raw cotton completely to private marketing next year. Yet the exceptions are important. Especially important is the Government's firm decision to protect the food-producing interests, by subsidies or tariffs, even if the whole basis of the manufacturing community's living costs is thereby raised unnaturally. This policy, which is the policy also of the Socialist Opposition, makes nonsense of the frequent promises to bring down the price of food. It is a negation of the right to choose freely what one will buy, from any source.

The main restriction on freedom of choice is, necessarily, the restriction of an inconvertible currency. After January's meetings of the Commonwealth Finance Ministers in Sydney it will be easier to judge whether the British Government is still seriously interested in convertibility. It may be impossible for the sterling area alone to make a move in this direction, but it is important to know whether the intention is as strong as it was; for the right to exchange its currency for another. So British policy at the end of 1953 has reached an interesting phase. In practice many restrictions have been removed, and the removal of others is already planned for 1954. But the principle of free trade and free exchange has not yet clearly asserted itself.

CURRENT COIN

High Hopes on Automobiles.—The Government's policy strongly to encourage the manufacture of automobiles in India understandably enough met with the warm approval of Mr. B. M. Birla in his presidential address at last Monday's annual general meeting of the Automotive Manufacturers' Association of India. He thought the official plans were good as far as they went, but they did not go far enough: "the extension of time given to the existing assemblers was not called for" and it was necessary to "eliminate imports of all components for assembly in the country." With "such positive assistance," Mr. Birla declared, "there is no reason why the industry should not make rapid progress." In fact, there is at least one very good reason, and that was stated by Mr. Birla himself less than a minute later. The problem before the industry, as he said, is not so much production as raising the level of demand. India "at present does not have a market for even 10-12,000 motor vehicles" but "the existing capacity with the two manufacturers which are already in the field is almost 60,000 motor vehicles per year." That, in a nutshell, is undoubtedly the industry's biggest dilemma, and it is brought no nearer solution by the fact that three more units are to start the manufacture of big and medium vehicles, and yet another three the manufacture of small cars. How this bumper crop of motor vehicles is to be sold to people who have no money is a point which few have adequately considered. Mr. Birla did speak of "increasing the level of incomes," but did not suggest how personal incomes could be increased to a point where consumers would be prepared to pay a possibly higher price for the indigenous product. He directed some well-merited criticism against the heavy taxes imposed by State Governments on road transport and against their road nationalisation policies, but there is no sign of reform on either score; not even since the formulation of the new automobile policy has there been any move in State capitals to rescue the report of the Motor Vehicles Taxation Enquiry Committee from the oblivion to which it was originally consigned. Mr. Birla is entirely correct in asserting that if the incidence of taxes on vehicles were reduced the demand for them would increase. The automobile industry's dilemma, present and future, is quite simply stated: the market is so small that output must be restricted, with the result that ancillary industries cannot grow and the economies of large-scale production cannot be realised; yet, if the market is to expand, motor vehicles must be produced more cheaply through the manufacture of greater numbers and through the growth of ancillary industries. As for talk of export possibilities and bilateral trade agreements, foreigners might well ask whether anyone will buy Indian cars if other countries offer models just as good for prices that are considerably lower.

Freedom of Enterprise.—The central question posed by Sir Homi Mody in his presidential address at the annual general meeting of the Employers' Federation of India in Bombay last Thursday was whether the Government intends to let free enterprise be really free. He doubted it, and went on to produce an impressive indictment quoting actions taken by authority which have tended to undermine the very basis of private enterprise. "The blunt truth," he declared, "is that the actions of Government lack cohesion and consistency, and create a state of uncertainty in which it has become very difficult for the private sector of industry to make any substantial contribution to the development of the country." Industry's representations are given little attention, while "the flow of labour legislation, the irksome controls over profits, production and distribution, the refusal to provide adequate incentives for either old or new enterprises, and the irresponsible opinions indulged in by some of those who hold positions of influence continue." Added to this, "if costs continually keep going up through levies of one sort or another, if even ordinary discipline is not allowed to be maintained in factories, if surplus labour cannot be retrenched except at heavy cost and through protracted proceedings, and if installation, even where the necessity is established, of new or additional machinery is hampered for one reason or another, the situation becomes intolerable and free enterprise becomes free only in name." Recently, the issue of ordinances has become a too common form of legislation and Sir Homi mentioned a notorious example. The ordinance on provident funds, he said, was issued on a plea of emergency in November 1951 despite an earlier assurance that a Bill would be drafted and circulated to the interests concerned; but "the best commentary on this plea of emergency is that it took a whole year to bring the scheme into operation." The trouble with ordinances is that they represent the viewpoint of the Government unfiltered by public criticism, and when a Bill is introduced later there is little chance of making any material changes. Sir Homi, expressed his disappointment with Mr.

Giri's change of opinion on labour policy, and strongly opposed the move in certain quarters to abolish the Labour Appellate Tribunal. "In spite of the fact that different benches of the Appellate Tribunal have sometimes given conflicting judgments on the same set of facts, we would regard such a move as disastrous and would do our utmost to resist it. Some recent awards of labour tribunals with regard to the appropriation of reserves, and their re-writing of balance sheets for the purpose of calculating the bonuses that would be payable, are alarming in their implications and emphasise the necessity of maintaining judicial machinery which would act as a corrective to individual judgments and ensure some sort of uniformity in the application of the principles which should govern the determination of claims in respect of wages, bonuses and the like."

Tea and Coffee in Britain.—Although tea has always been the Englishman's first preference among lighter beverages, coffee made considerable headway during and immediately after the war when its price was controlled and tea was rationed. Reviewing the prospects of competition between the two, a *Financial Times* correspondent points out that although coffee still remains the most favoured drink after tea, "it seems increasingly unlikely that it will ever overtake tea in this country, though increased production in Brazil and elsewhere would certainly help." The traditional pattern of demand has already begun to reassert itself, although *per capita* tea consumption is still below the prewar level. Soon after the coffee auctions were resumed in January, it became clear that its price would rise. Almost alone among the world's major commodities, the world price of coffee has remained at or above the peak levels of the Korean boom period mainly because there has been a series of poor harvests in Brazil. British consumers have been getting their coffee somewhat cheaper because the Food Ministry negotiated long-term contracts with Colonial (mainly East African) producers at prices about 20 percent below the world levels and sold these stocks at the auctions. Even so,

HOLIDAY NOTICE

There will be no issue of "Capital" next week because of the holidays. The next issue will be dated 7th January, 1954. As this is the last issue for the year, we wish readers the compliments of the season.

The average retail price of good quality coffee has risen since decontrol to 7s 6d per lb, as against the former controlled price of 5s 4d per lb. Compared to this, the retail price of tea in Britain, which was 3s 8d per lb before subsidies were removed in June 1952, has risen to about 4s 8d per lb, with a further rise of 2d to 4d expected early next year. Despite these rises, however, the *Financial Times* correspondent points out, the price differential between coffee and tea has widened considerably. The correspondent quotes the results of a survey conducted by the Tea Bureau in June which shows that tea is gaining ground at the cost of coffee, and adds: "Personalities in the coffee trade privately bear out the evidence of the survey that coffee drinking is on the decline." The decline has been most severe in the case of "pure" (roasted and ground) coffee, which is sold by a large number of fairly small producers. But producers of soluble coffee extracts—which means in effect Nestlé's and Lyons—have increased sales enormously since 1939, and are still doing so on a substantial scale; these two firms now probably control about 60 percent of Britain's coffee production. Midway between the pure and soluble coffees come the liquid coffee essences, which are believed to be holding their ground better than the former, though they too have undoubtedly lost some ground to the solubles.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

STOCK MARKET REACTION TO RAIL STRIKE MOVES

IMPACT OF POSSIBLE RISE IN FREIGHT RATES

London, 23rd December.

THE threat of a rail strike overshadowed all other matters on the London stock markets during the early part of the week. Traders naturally took precautionary measures by keeping out of the markets as far as possible and business slackened considerably. At the same time, the possible implications of this threat brought about sharply lower levels among domestic stocks. The subsequent removal of the strike threat did not receive any immediate response. It did cause a partial recovery but traders were still wary because they realised the settlement meant that the industry was booked for some additional charges in the way of freight, and passenger fares seemed destined for still another rise. Whether some industrial users will be able to absorb an increase in freight rates is problematical. While they are naturally not keen to pass on these costs to their customers, some quarters feel that the present margin of profit leaves them little scope to bear such costs. However, sentiment did become a little more cheerful, being stirred by some good company statements, and conditions towards the end of the week became more stable. Gilt-edged for a time seemed rather out of favour, with many speculators disappointed at the attitude of institutions which seemed in no hurry to start their usual year-end window-dressing. Finally, however, gilts reversed their recent downward trend. Gold

shares attracted a good deal of interest following the dividends, which in nearly all instances did not disappoint those who had looked for something fairly encouraging. Industrials, after feeling the threat of a rail hold-up, when they were mostly irregular, became rather firmer with good trade returns and the year-end optimism helping to counter the earlier depressing news. Buyers, however, were rather selective in their operations. Plantations—teas and rubbers—displayed little activity.

The money market experienced another comfortable week. Surplus funds were mopped up on several occasions by the authorities who operated in reverse by selling bills to the market. Towards the end of the week, credit conditions became less comfortable but supplies were adequate to meet demand and the final day saw ample funds to meet all requirements. Applications for £250 million of Treasury bills totalled £308,445,000, of which the former amount was allotted at an average rate of 42s 0.69d per cent. This week, another £250 million will be offered. The Bank of England return showed that the fiduciary issue was raised by a second £50 million to the record level of £1,675 million.

The week's outflow of notes was £341 million, which brought active note circulation to the record level of £1,632.1 million.

Adequacy of Tea Stocks Doubled

Doubts about the U.K. warehouse stock level of tea being adequate were expressed by Sir Eric Miller, Chairman of Messrs. Harrisons and Crosfield, at the Company's annual meeting. An average of less than 100 million lbs, he said, was not sufficient to guard against unforeseen factors which might bring about temporary, but disturbing, price movements. Sir Eric estimated the current North Indian tea crop at 20 million lbs less than the 508 million lbs of last year; the Ceylon crop at 330 million lbs as against 317 million lbs last year; the South Indian crop at about 120 million lbs as against 113 million lbs; the Indonesian crop at 76 million lbs as against 84 million lbs; the African crop at 33 million lbs as against 36 million lbs; and the Japanese crop at about 127½ million lbs, the same as last year.

U.S. Farmers Vote on Control Proposals

U.S. farmers have voted overwhelmingly in favour of the control proposals advanced by the Secretary of Agriculture for the cotton and groundnut crops. About 94 per cent of cotton growers voted for production and marketing controls—with continued high support prices. Groundnut growers gave their approval by a similar margin. Unofficial, but nearly complete, voting figures were about 447,000 in favour to 23,000 against in the case of cotton; and over 61,000 in favour to 3,600 against in the case of groundnuts. By approving controls, growers are assured that crops at 90 per cent of parity. Rejection would have resulted in the support price being lowered to 50 per cent. The cotton acreage allotment for next year was originally fixed at 17,910,484 acres but there are indications that Congress will accept a later recommendation for about two million acres more.

Import of Soyabeans

From 1st January, soyabeans can be imported into Britain from any recognised source by seed crushers and millers, according to a U.K. Board of Trade announcement. Licence holders will be required to give an undertaking to make returns to the Ministry of Food and to assure that the beans will be used only for seed crushing or milling.

Roy Harrod on the Gold Price

The Investor's Chronicle writes: "In recent London lectures, Mr. Roy Harrod, the distinguished Oxford economist, repeats his contention that the gold price should be doubled to \$70. Mr. Harrod argues that by holding gold down to \$35, America has debased it and has discouraged production at a time when expanding world trade requires more gold. Thereby, also America perpetuates the dollar gap that prevents convertibility of Western currencies. If America applied her favourable trade balance to buying gold on the prewar scale at a properly adjusted post-war price, the dollar gap would disappear. Americans retort that they already have ample gold and prefer to bestow their aid selectively instead of concentrating it on those people who have interests in gold. But Mr. Harrod develops a new argument that a high gold price would be in America's own interest. He claims that the U.S. defence preparations because in another war Britain's experience shows that this can mean a idea of a higher gold price is not yet finished, the Journal comments.

Oil Prices

Coconut oil prices were steady around the recent slightly lower levels with Straits quoted at £127 per ton, c.i.f. The market was quiet and little trading was reported, although Yugoslavia is reported to have bought 1,200 tons of Straits coconut oil at around £131. Elsewhere, castor oil was neglected, as also was groundnut oil. South African groundnut oil being reduced to £148, c.i.f. The recent steadiness in oilseeds was maintained.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT

Wednesday, 23rd December.

THERE has been very good demand for money this week, which the banks are able to meet comfortably. Sugar advances and accommodation against foodgrains account for fairly heavy outgoings of funds upcountry. Money is getting tighter in the interbank market, with the call rate quoting 2½ in Calcutta and 3½ in Bombay.

The exchange department has been generally quiet, with moderate tea bills and small gunny bills passing. Remittance has been heavier, as is usual at the end of the year. The principal exchange rates are unchanged.

During the week ended 18th December, Government of India treasury bills for Rs. 1,14,50,000 were sold in favour of the Reserve Bank. Because of the Christmas holidays there is no treasury bill auction this week or the next. Tenders for an auction of Rs. 1 crore of treasury bills will be received up to 31st January in Bombay and up to 4th January in Calcutta, Madras, Kanpur, Delhi and Bangalore.

Bullion was steady last week and prices were higher because of fresh support from upcountry centres following firmer commodity prices. The report of the seizure of a large quantity of smuggled gold in Bombay also helped to improve the tone. Silver rose from the previous week's level of Rs. 150-13 to Rs. 151-3, while the ready rate was quoted at a discount of one anna. Silver was weaker in London on suggestions of large arrivals from foreign countries, including Russia, and the price declined from 73 15/16d. to 73½d., but the New York quotation was unchanged at 85½ cents. Gold improved from Rs. 81-10 to Rs. 82-2 on keen buying and the sovereign at Rs. 57-4 showed a gain of 4 annas.

There was a decline of Rs. 1.99 crores in notes in circulation to Rs. 1,121.21 crores in the return of the Reserve Bank of India for the week ended 19th December, while the total note issue at Rs. 1,135.83 crores disclosed a small rise of Rs. 22 lakhs. Notes held in the Banking Department consequently improved by Rs. 2.2 crores to Rs. 14.61 crores. Deposits of the Government of India were about Rs. 13.89 crores up at Rs. 106.11 crores because of good tax collections, which presumably also account for a fall of Rs. 7.07 crores in balances of commercial banks to Rs. 48.69 crores. Other Government accounts were, however, Rs. 34 lakhs lower at Rs. 18.97 crores. Balances held abroad rose by Rs. 4.10 crores to stand at Rs. 141.21 crores. Open market operations of the Reserve Bank were indicated by a decline of the Bank's assets to Rs. 74.75 crores. Other loans and advances increased from Rs. 11.06 crores to Rs. 12.61 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 49.45 lakhs. Ways and means advances stood at Rs. 1.49 crores (Rs. 2.53 crores).

The return of the Imperial Bank of India for the week ended 11th December, 1953, shows a drop of Rs. 93 lakhs in total deposits to Rs. 210.26 crores. Investments in Government securities and other investments are up by Rs. 1.11 crores and Rs. 1 lakh to Rs. 88.45 crores and Rs. 10.84 crores, respectively. Loans, cash credits and overdrafts have decreased by Rs. 89 lakhs to Rs. 87.17 crores, while bills discounted and purchased have increased by Rs. 31 lakhs to Rs. 8.30 crores. Cash and balances are, in consequence, shown at Rs. 27.57 crores or Rs. 3.82 crores less.

The statement of the position of Scheduled Banks for the week ended 11th December, 1953, discloses Demand and Time liabilities at Rs. 528.29 crores (Rs. 12.04 crores on account of borrowings from Banks) and Rs. 333.19 crores (Rs. 2.11 crores) compared with Rs. 530.91 crores (Rs. 11.41 crores) and Rs. 333.16 crores (Rs. 2.46 crores) respectively in the previous week. Cash has increased by Rs. 39 lakhs to aggregate Rs. 32.12 crores, while balances with the Reserve Bank have decreased by Rs. 4.92 crores to Rs. 53.87 crores. There is a rise of Rs. 1.29 crores in investments to Rs. 338.40 crores. Advances and bills discounted at Rs. 449.49 crores reveal a drop of Rs. 1.28 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 10.0 percent and 52.2 percent against 10.5 percent and 52.2 percent.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during November 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 4,679 lakhs; re-exports Rs. 28 lakhs (transit trade nil). Imports Rs. 3,723 lakhs (transit trade Rs. 1 lakh). Total trade Rs. 8,402 lakhs. Treasury: Exports (including re-exports) of currency notes Rs. 9 lakhs; others nil. Imports of currency notes Rs. 141 lakhs; others nil or negligible. The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports

(including re-exports) of merchandise, gold and silver exceeded that of imports by Rs. 985 lakhs.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during October 1953 were as follows (in lakhs of rupees):

	Merchandise Exports to	Imports from
Eastern Pakistan	30	128
Western Pakistan	24	7
Other Countries	14	73
Total	68	203

Total trade amounted to Rs. 271 lakhs. Re-exports were nil, and trade in treasure negligible. There was adverse balance of trade amounting to Rs. 135 lakhs.

LONDON FINANCIAL LETTER

BANK RATE MAY GO UP

By Air Mail.

A CHANGE in the official view of the economic prospect was confirmed by a comment by the President of the Board of Trade on surprisingly good export figures for November, combined with the smallest visible deficit for any month in three years. Mr. Peter Thorneycroft described the achievement as "not wholly unsatisfactory." So far have we progressed since mid-year, when obviously unsatisfactory figures caused no anxiety to the Government! The official caution now observable can be well understood. Recent shipments represent orders booked some months ago, and there is plenty of evidence that current bookings are diminished. There is no margin for a decline in exports, as the 11 months' total is slightly lower than last year's for the same period—£2,456 million against £2,483 million. British export prices, at least in the engineering range, seem too high, and the growth of labour disputes is ominous.

It is now recognised that production for its own sake is not enough in an economy whose materials are largely imported. The increase in imports implicit in increased production, without a corresponding increase in exports, has not caused an external payments crisis in 1953 simply because at this year's prices a smaller quantity of exports is sufficient to pay for approximately the same quantity of goods as was imported in 1951. The 11 months' import figure, £3,067 million compared with £3,216 million for the same period last year, reflects this favourable situation. But export prices are tending downward, import prices—though more hesitantly—upward. Moreover, the recovery of various primary prices, if it continued, would soon involve more capital investment in stocks, so reversing one of the major deflationary forces of 1952.

The authorities have now tacitly admitted that the "easy money" policy, exemplified in April's budget and in September's reduction of Bank rate, designed to stimulate production and investment in fixed assets, may have been mistaken. In stimulating production, by increasing sales at home, the policy has succeeded too well. Big supplementary estimates for the expenditure of the Ministry of Food have thrown into disarray the current year's budget, which had been shaping better than last year's. But it is on grounds of broader policy that next year's budget will almost certainly be "tougher" than that which took "calculated risks" last April, with results that may be very disturbing in the coming calendar year. The appropriate corrective in the meantime is a reversal of the other "mistake," the easing of money rates in September.

A New "Bear Market"?

Before 1954 is far advanced it may be necessary to record that the "bull market" on the London Stock Exchange ended in early November 1953. With the principal exception of gold shares (because they are now treated rather as uranium shares), the market has been generally slipping back since then. It has taken to heart the Government's new-found pessimism and has appreciated the implications of labour unrest in engineering, transport, and other industries and services. The main sustaining influence in the industrial sections this year has been the bidding for control of companies whose shares have seemed undervalued, and the efforts of company boards to stave off such bids by raising dividends. But if the market value of shares is thus brought more or less into line with their true worth it is a once-for-all adjustment, implying no upward trend; and in many cases the adjustment has been made already.

If the "bull market" did in fact end in November the "cycle" was exceptionally brief, just two years. Early in November 1951, when the new Government presented the new monetary policy, 1949 was sharply reversed, and Government stocks, which had failed to establish a proper "bull market," fell heavily. This phase lasted until mid-1952, when an uncommonly brief "bear market" ensued. The "bull market" was longer, but it left both gilt-edged and industrial indices slightly below the levels reached before the new monetary policy. Neither index has in the past seven years come very near to the peak of early 1947. The "bull market" that ended then had lasted since mid-1940 in the industrial sections, since late-1939 in the gilt-edged market, and the whole "cycle," from peak to peak, had

Centuries of overseas trade

For well over two centuries Lloyds Bank has served the needs of merchants trading abroad and, today, business men know that they can rely upon Lloyds Bank for its shrewd and friendly advice on all matters relating to overseas trade and upon its integrity for their protection in all financial transactions.

lasted a full ten years. The eight-year "cycles" of prewar years are receding into distant memory.

Currency Up-to-date

The purpose of the Currency and Bank Notes Bill is to bring the currency into closer harmony with postwar conditions; the Act which it supercedes is of 1928. Inflation has made nonsense of the statutory limit of £300 million for the fiduciary issue, which is now multiplied about 5½ times by what is nominally a temporary expedient. The Bill fixes a basic figure of £1,575 million for the fiduciary issue, allowing the Treasury to make increases on that figure for periods of six months or less, subject to statutory approval to maintain it above the set figure for more than two years. This method will be more flexible, but still subject to parliamentary supervision.

More interesting to the banks is the power which the Bill grants to the Bank of England to issue (subject to the Treasury's approval) notes of denominations other than £5, £1 and 10s. The Bank used to issue notes of value between £10 and £1,000, but all denominations above £5 were withdrawn early in the war, as they might facilitate black-market operations and tax evasion. Now, however, with average prices increased about threefold, the "five" is not worth very much more than the pre-war pound note. This anomaly can soon be adjusted, and also another of longer standing, the absence of any note between £1 and £5 in value. A note of £2 or £3, or £2 10s., would certainly be widely used.

WORLD BANK PROPOSES OFFER OF DOLLAR BONDS

Mr. E. R. Black, President of the World Bank, has announced that the World Bank expects to offer on or about 12th January, 1954, a \$109 million issue of United States dollar bonds through a

nationwide underwriting syndicate managed by The First Boston Corporation and Morgan Stanley & Co. The maturity of the new issue is expected to be approximately 15 years. The exact maturity, and the price and interest rate for the issue, will be determined in the light of market conditions prevailing at the time of the offering.

The Kanpur working class cost-of-living index (base August 1939 equals 100) for November 1953 dropped by 4 points to 453 as against the previous month and was 6 points lower than the figure for the corresponding month of last year. The Food index fell by 8 points to 401 on account of a fall in the prices of birra, gram, rice, dal arhar, mutton, sugar, potatoes and salt. The price of mustard oil increased. The index for the Fuel and Light group rose by 3 points to 498 as an increase in the price of firewood offset a decrease in the price of kerosene oil. The index for the Clothing group increased by 15 points to 472 as a rise in the price of dhotis offset a fall in the price of sarees. A decline in the prices of soap and sugar caused a fall of 4 points to 448 in the index for the Miscellaneous group. The index for House Rent remained stationary.

TREASURY BILL MATURITIES

Details of 3 months Bills outstanding with the public on 18-12-53.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

THE annual dinner of the Mining, Geological and Metallurgical Institute of India always brings together, from among its large membership, representatives of very diverse interests. Not unnaturally these gentlemen do not all see eye to eye, and when the principal subject of discussion is coal—as it has been in all the years I have attended the dinner—there occurs, amid the sumptuous dining and drinking of toasts, a certain amount of crossing of swords. So altogether it makes as rewarding and as stimulating an evening as one could hope to spend. On Monday night at the Bengal United Service Club the protagonists were Mr. Karam Chand Thapar, who spoke on behalf of the industry, and Mr. C. R. Natesan, the Iron and Steel controller, who presented what I took to be the Government case. Mr. Thapar put the discussion on a very frank footing from the start by saying that the coal industry had “as many messiahs as it has problems” and that many of them had “their vision clouded by prejudices born of self-interest”. Particularly further, he said that he had in mind “the more important trade associations whose interplay of conflicting interests obscures the real issues”. One of the chief difficulties of the coal industry could not be more plainly described than that, and Mr. Thapar went on to mix his metaphors with great sincerity when he declared that “all our associations should sink their differences and join hands in curbing the destructive forces which are striking at the root of the coal industry so that it can be put on an even keel”. Certainly something like that needs to be done, though I doubt whether it will be until producers have free and competitive access to markets large enough to absorb all their output. Until it is done, and as long as the industry is divided by so many political factions, it will be open to the Government to adopt a line that Mr. Natesan was not slow to take up in his reply. If Mr. Natesan said, the coal industry is rent with sectional interests, as Mr. Thapar admits it to be, then it must accept the judgements handed down from Delhi as disinterested and therefore fair. Mr. Natesan added, as I remember Dr. Katju saying at the Bengal Chamber a few years ago, that if employers and workers both criticise what Government does, then that shows that Government is right. This is an argument that will take in no one, for with its help we could apologise for all sorts of foolishness. Disagreement between workers and employers is probably beyond the power of man to remedy, but dissension within the coal industry itself should be capable of resolution, and perhaps graduated doses of competition would be of considerable assistance.

The controversy that is now shaking the Indian soap industry—Lever Brothers versus The Rest—has already taken up some space in the news columns of the Press. Perhaps it would have taken up even more, and the public been further enlightened on this interesting subject, had not The Rest put the issue on a rather acrimonious basis by accusing their opponents of “monopolistic proclivities” and by addressing themselves to advertising managers rather than editors. Acrimonious or not, the matter deserves the fullest discussion as illustrating a problem that will be of increasing importance as Indian industrialisation progresses. (This newspaper seldom carries advertisements for soap—which is I am sure no reflection on its readers but which enables me to make that pretence at impartiality I have just been chiding Mr. Natesan for.) Levers are of course the biggest single firm in the business but they still make up only 18% of the entire industry and only 25% of the organised industry, so talk of “mono-

A DITCHER'S DIARY

poly” is rather beside the point. However they are big enough to be able to pay the best wages and still produce soap more cheaply, which seems to be the chief complaint against them of the Indian Soap and Toiletries Makers Association. Dr. J. S. Badami, who has addressed the Press on behalf of the latter body, is at pains to emphasise that he is not urging discrimination against foreign capital, and I have no doubt he is sincere in this; in any event Lever Bros. (India) can as well be described as an Indian firm, so the question hardly arises. The main point, he says, is that Levers are an emerging monopoly; “because of their inexhaustible financial resources they make bids for monopoly, spending lavishly on selling and publicity, which is not always in the best traditions”. Levers reply that not only are they not a monopoly but that the restriction of competition and stabilisation of prices at a high level which the other manufacturers are seeking would create conditions much nearer monopoly than the present keen competition. If there are too many firms in the business, that is because of an “unplanned and speculative expansion of capacity” combined with “a lack of any serious effort to win new markets”. Though I have no special fondness for bigness in business, the latter line of argument does seem more reasonable. In any event, the dispute exemplifies a truth that will become more obvious in the next few years: that India will have less trouble in producing goods than in selling them, because Indian industry (and I include Indo-British business in this too) is inclined to neglect what the Americans call the “distributive aspect” of the economy. Whenever stocks become hard to move in India we have business men urging the Government to close down plant or print more currency notes; no one much seems to think of pushing their goods in the way the Americans have now perfected. If Lever Brothers are an exception to this, the more credit to them, for that is the direction in which India will have to move as her productivity increases.

Russia's Christmas present, her agreement to attend talks on the mutual development of atomic energy, is gratefully received, though I hope it does not turn out to be like some of the Christmas cards on sale this season in the Calcutta New Market—last year's used tokens done up to look new. One reason for venturing to think that it is not, is that Russia has been broadcasting her familiar line on atomic weapons from the house-tops for some years and she would surely not request that secret diplomatic gatherings be held now to repeat it. Her reply, like Mr. Eisenhower's offer, is full of uncertainties but at least neither of them are like some of the exchanges of recent years—demands put forward in the full and clear knowledge that they would be rejected. The Russians say no more than the truth when they point out that Mr. Eisenhower's atom plan makes no mention of the one subject everyone would like to see settled: the prohibition of nuclear energy bombs. But we all know that progress in that most important direction has been blocked by Russian refusal to countenance the only sure way of enforcing it. It is an old and wise gambit in the art of controversy that if agreement is quite obviously impossible on one issue, discussion should be taken forward on others in the hope that the atmosphere of friendliness there developed will infect the original situation. If that were to happen, perhaps by next Christmas the many references to peace on earth and goodwill among men

that are made at this season will be less of a bitter joke than they have been for twenty years past.

Last Sunday night's concert by the Calcutta Symphony Orchestra was indeed a notable one for it included Senor Casanovas's long-awaited first symphony. (I wonder if ever a symphony had its first performance in Calcutta before). It was a very light-hearted piece of work, perhaps too much so for some tastes, and the Purcell dances that followed seemed positively solemn by contrast. It was fluent, dexterous and quite free of affectation, and definitely the sort of music one would like to hear again. The Mendelssohn violin concerto that featured the second half of the programme, though it includes quite the most horrid cadenza ever devised for that instrument, was most expertly rendered by Miss Korshed Madan, and I think the Statesman's Music Critic is entirely right when he says that this young lady is a transformed player since her visit abroad. One would have expected more support from the public for so eventful a concert but the hall was still very far from full. There is no want of concert-goers in the city, to judge from the difficulty one has in buying tickets when we have a celebrity passing through, but they do not appear to be curious about the music that is composed among them. This is a curious attitude to the art, and it reminds me that Neville Cardus once told me at a concert that he “wouldn't cross over the street to hear the best performer in the world” play music that didn't interest him.

I wonder why Persian law required the barbarity of sentencing Dr. Mossadik to solitary confinement, a form of imprisonment that I understood was reserved for the most hardened criminals. The term of three years is no doubt moderate if the court was convinced that the former Premier had committed high treason, while the very staging of any sort of trial is more than could have been taken for granted under previous regimes in Persia, Dr. Mossadik's own included. He has done his country infinite damage and Persia will be well served if he is kept out of politics for good, but to secure that it scarcely seemed necessary to put him in solitary confinement, especially since he is an old man who is not quite right in the head. His trial was one of the most operatic legal performances of recent times, though the evidence that came out of it was much less astonishing than the transactions of the recent conspiracy trial in Scotland, which also issued in a sentence that many people, and not only in Scotland, will think too harsh. The Shah's intervention at a crucial stage of Dr. Mossadik's trial with a plea for mercy will not elevate our opinion of Persian justice, though perhaps I should not comment on it from my ignorance. Maybe they arrange these things differently in Persia; they certainly do some other things.

On Christmas Eve I should like to thank all those many readers who have contributed to the Toy Fund and to pass on to them, all too briefly I fear, the thanks that are now coming in from the institutions that have benefited by the receipt of a bundle of toys for distribution at their Christmas parties. By no means all the donors were Christians, but I know I may wish them all a Merry Christmas and a Happy New Year, the merrier and the happier for their kindness to the children.

SUPPLEMENTARY PACTS ON STEEL PROJECT SIGNED

RATIO OF SHARE-HOLDINGS: PENALTY CLAUSE

(FROM OUR NEW DELHI CORRESPONDENT.)

FINAL steps have been taken to launch India's biggest State enterprise—for the manufacture, ultimately, of one million tons of steel. Under an agreement signed on Monday morning, the Government of India has entered into partnership with the German combine of Krupp and Demag to implement the project. The articles of association of a private limited liability company to be called Hindustan Steel Limited were signed by the representatives of the two partners. The Company will have an authorised capital of Rs. 100 crores and the initial subscribed capital will be Rs. 5 lakhs, of which Rs. 1 lakh will be contributed by the German combine. The initial ratio of four to one will be maintained in the capital structure if and when the progress of the project demands more capital. The same ratio of four to one will be reflected in the constitution of the Board of Directors; and the Chairman of the Board and the Managing Director will be nominated by the Government of India. Provision has been made for audit by the Auditor-General of India.

The German combine will provide all the technical assistance for the erection and commissioning of the project, which is to be completed in four years from the date of selection of the site. For this purpose, the combine will submit to the Company the names of the technical experts who are to be appointed. It has undertaken to train Indians for every position of responsibility from the very start. The agreement also contains a penalty clause, under which the combine undertakes to

pay the Government of India an amount not exceeding its consultants' fee of Rs. 21 crores in the event of it being unable to fulfil its guarantee. For this purpose, the consultants will also be responsible for the initial operation of the plant, which will go into production by stages as each unit is completed. They will also continue as consultants for an additional period of three years. The agreement does not provide for bonus shares or royalty. The company will enjoy no preference in regard to taxation. The estimated cost of the project for the initial 500,000 tons capacity, is Rs. 70 crores. Another Rs. 35 crores might be needed to expand the plant to a million tons capacity. The German combine's experts have inspected four sites for the plant: Durgapur in West Bengal, Sindri in Bihar, Raurkela in Orissa and Belhai in Madhya Pradesh. The experts will make their final recommendation from Germany by January, and might fly a team to India for additional information. It is claimed that the unit cost of steel when the plant is fully developed to one million tons capacity will compare favourably with that of any other steel producing unit. The cost per unit in the initial stages might perhaps be higher.

BRITISH TEXTILE REVIEW

London, By Air Mail.

IT would be foolish to pretend that the cotton spinners were wholly enthusiastic about the reopening of the Liverpool cotton market: special privileges are never willingly abandoned by all concerned. It is frankly admitted that the covering of price-fluctuations by the Raw Cotton Commission—that is, by official funds—represents a privilege enjoyed by no other trade. It could have been argued (if not plausibly) that cotton, so largely a dollar commodity, represented a special case, and that imports through official channels should have continued until international condi-

tions were quite normal. But losses by the Commission which have amounted to scores of millions of pounds over the past few years, were equivalent, more or less, to a subsidy which was quite out of accord with the Government's general policy. When some spinners "contracted out" to buy their cotton privately (though still enjoying the Commission's covering facilities) the position was an unsatisfactory compromise that could not be permanent.

When the Government made known in November its plans for reopening the Liverpool market the spinners faced their new commitments and risks with a commendable display of courage. A spokesman for the Master Spinners' Federation represented in the Master Spinners' Federation said that the move would be generally welcomed by the spinners, whose experience in trading (more or less) independently of the Commission had been favourable. The labour unions were much less enthusiastic; one of their spokesmen declared that the measure would do infinite harm to the industry, particularly to the non-combine concerns. The directors, too, of these smaller concerns have not always been able to disguise their apprehensions.

As a whole, the industry will not necessarily carry such large stocks as the Commission, which was statutorily obliged to provide all the raw cotton that the industry might need—whereas if individual firms make inadequate provisions for themselves they will have to take responsibility for their own misjudgment. It cannot yet be taken for granted that enough capital will be available, for about three times as much as before the war is needed now, and taxation and the textiles recession have made deep inroads into resources. However, the change in the rules to allow limited liability companies—including the big spinning firms—to operate in the markets on the same terms as merchant houses opens up an important new source of capital.

The technical arrangements do not entirely assuage anxiety. The futures contract is to be limited, for practical reasons, to American growths, based on 15/16ths-inch staple; it will not effect a satisfactory "hedge" for other growths (particularly Egyptian-type); of which, therefore, spinners may have to carry disproportionately large stocks. There is some time yet to strengthen out the details before the market comes fully into operation next August, and there is little doubt in Liverpool that enough experienced merchants will be available to make an effective market. But confidence cannot be fully regained until it is known that a new dollar crisis will not contract the very basis of the market's dealings.

The Stability of Wool

The wool-textile industry in this country is already looking back on a year of exceptional—and, it must be said, unexpected—stability. The steadiness of raw material prices has provided a basis for confident working, and sales have developed encouragingly. While exports of cotton textiles have fallen short of last year's average, exports of woollen textiles have risen considerably on the same comparison. Moreover, U.K. wool-textile exporters have firmly held their ground in the world market in the past few years while exporters of engineering goods—and also rayon—have had to be content with a diminishing proportion of the world trade in their goods.

In the past autumn some sections of the industry in Yorkshire have put the recession finally behind them and achieved the best rates of production since the war. Worst spinning activity, and production of crossbred tops have been notable in a generally healthy situation. Still better results can be achieved if more labour can be induced to take part, even on a part-time basis.

That business is being done more cautiously than in the boom—spinners, for instance, are confining their orders to topmakers to the minimum practicable level, to avoid buying far in advance—is due not to pessimism but to a change in the mode of working after the experience of the slump. Caution would in any case be indicated by the easing of demand for wool which must result from the general rebuilding of stocks to sure levels—in many countries that process seems to have been mainly completed—and from the easing of demand for the finished goods which, it is prudently assumed, will be apparent at the higher final prices ruling early next year.

Lace for Export

While the revival of textile trade as a whole is due mainly to the activity of the home market, the Nottingham lace industry can boast that its revival is essentially due to exports. Restrictions on selling to the home market were withdrawn late last year, when the virtual closing of the important Australian market had reduced the industry to a difficult state; yet the home market ports recovered rapidly, under the stimulus of "frillier" fashions for both dresses and under-

Official returns do not give a complete picture of exports, much of which is done by mail; but been of the order of £10 million a year. Roughly two-thirds of output goes abroad—about three-quarters if exports of made-up goods are included. The trade can expand further if supplies of yarn can be attracted back into the industry in sufficient numbers. At present delivery dates are unattractive, and some trade is being lost to Continental producers.

London

CRISIS AVERTED ON BRITISH RAILWAYS

FURTHER STEPS TOWARDS FREEING THE ECONOMY

(FROM OUR LONDON CORRESPONDENT)

THE nation as a whole must have breathed a sigh of relief at 8-30 p.m. on Wednesday, 16th December for it was at that hour, after negotiations had been in progress almost continuously for the previous two days under the initiative of Sir Walter Monckton, Minister of Labour, that the British Transport Commission and the three railway unions reached agreement on a course of action which has resulted in the calling-off of the threatened railway strike, which otherwise would have started from midnight on Sunday. The settlement was reached in an atmosphere of considerable amity so far as the participants were concerned, which perhaps was not surprising. The N.U.R., though it compromised in the end, apparently secured some measure of reassurance that its minimum demands would be met. The Commission at the same time must have received some assurance from the Government that it would, in its turn, be reimbursed for the financial outlay involved—around £15 million per annum. Finally, the Government has avoided a threatened crisis, and perhaps even shown the way whereby other impending crises in the sphere of industrial relations may be settled, with particular reference to the engineers' decision to be reached next week and the talks with the miners which are to follow early next year, for it will certainly be futile to hope that labour as a whole will be prepared to accept that the railwaymen had a special claim for more generous treatment even though that might in fact be the case. Sir Brian Robertson, Chairman of the B.T.C., said after the settlement: "Everyone will be glad, as I am, that at this season of the year we are going to have peace and goodwill upon the British Railways." That is certainly true, but we have yet to learn who is to meet the cost. Is it to be the travelling public with a further increase in fares and freights—which are both now regarded as being at a level where any further rise will result in diminished returns—or the taxpayers generally in the form of a subsidy? It is true that the railway unions have again promised their co-operation in increasing efficiency, but similar promises when previous wage increases were secured have produced negligible results. Even if they did better this time, the effects would hardly be noticeable immediately, and the accumulated deficit of British Railways at the end of 1952 stood at £31½ million.

Trade Gap Halved

These threats of industrial conflict, and their probable repercussions, have naturally had a sobering effect on the City, where the optimism of the summer has given way to a much more cautious attitude towards the economic future, and it is likely to persist. That probably explained the almost imperceptible effect of the encouraging increase in exports in November so far as markets were concerned. Provisional Board of Trade figures for November place the value of total exports at £248.8 million, almost £12 million higher than for October and indeed the highest figure returned since March of last year. The overall position was no less satisfactory, for imports at £272.4 million were £7.4 million lower than in October. As a result, the trade gap—excess of imports over exports—was cut by half to £23.5 million, the lowest since November, 1950. Over the eleven months of the year the "gap" has averaged £55.6 million, or £9 million less than the comparable figure for 1952. That is quite an achievement, but somewhat less satisfactory is the information that although exports to Canada continue to rise, those to the U.S.A. are falling and dollar exports for November were in fact some £2 million lower. The drop in imports, seeing that the general level of industry's raw material costs, as measured by the index of basic material prices, has remained virtually unchanged for four successive months, suggests that stockpile purchases are probably now being tapered off, for wholesale food prices rose slightly in November after the gradual decline since last April. The whole position is perhaps best summarised by saying that this year 3 percent more goods are leaving Britain than last year, but slightly lower prices leave values practically unchanged. On the other hand, they have enabled us to buy more goods from abroad, yet to spend 5 percent less in doing so. Not a few of the exports, however, are in fulfilment of old orders. It is the present appearance of the order books, and the outlook for 1954, which are causing official concern.

Apart from inviting attention to the economic difficulties which lie ahead, which Ministers have been doing as often as possible recently, the Government has just launched a new move in the drive for more exports. This takes the form of a "personal" letter from Mr. D. Heathcoat-Amory, Minister of State at the Board of Trade, to about 50,000 manufacturers employing more than ten workers and to trade associations in the hope of reaching even smaller concerns all over the country. The letter itself briefly outlines the need for exports and explains the various services which the Government offers to assist the process. It is accompanied by a business reply card on which manufacturers are asked to indicate briefly what export-business they are doing and what they would like to know about Government services, so that the Board of Trade need not bother those

who have nothing to export but can help either directly or through regional officers those who want to enter the export market or who want to export more than they are doing already. According to the President of the Board of Trade, Mr. Thorneycroft, the Government can help in three ways: by keeping the economy in balance and not allowing the home market to get out of hand; by seeing that exporters have a fair deal in overseas markets (he held out hopes that some agreement might soon be reached on the prevention of currency retention schemes); and by providing services to inform and protect exporters. In connection with the last of these functions, a small booklet has been prepared explaining the services provided by the Government, which include advice on markets and local marketing methods overseas and the provision of guarantees which can make it easier to obtain finance and special insurance against risks in developing exports in some dollar markets.

Bank Advances to Shipping Industry

Assistance of a more practical nature, particularly to the shipbuilding industry, came in the Chancellor of the Exchequer's announcement in the House of Commons the other day that he is giving more freedom to the banks to decide the repayment period of their advances to industry. Mr. Butler has written a letter to Lord Kennet, Chairman of the Capital Issues Committee, explaining that while the Committee will continue to consider the purpose of the credits brought to their notice, the former stipulation that loans granted to finance the purchase of ships had to be replaced by "less inflationary" means of borrowing six months after delivery is now withdrawn. As a general rule the period and repayment terms will now be left to be settled between the banks and their customers. For some time shipbuilders have experienced difficulties in financing increases in costs after the placing of orders, especially in connection with exports, and strong representations have been made to the Treasury in this connection. The new freedom should go a long way towards allaying their fears regarding orders being cancelled on this account.

Greater Freedom for Silver Market

Another freedom which has been restored is to the London silver market, which from next week will be able to buy silver from the dollar countries for the first time since December, 1947. Sales by the Government for the essential needs of industry are to be discontinued, and it is ex-

pected that remaining stocks, plus further purchases, will be earmarked to meet the obligation under the Lend-Lease silver scheme to repay a large United States loan of silver in kind. The authorities apparently take the view that supplies are now adequate for other sources to meet existing demand, and this was probably confirmed by the recent weakening in the price of the metal. Australia continues to be a large producer, meeting about half of the "essential" market's requirements, and ample supplies are available from other non-dollar sources, with large offers from Russia and Japan recently. The opportunities for using silver in "switching" operations has also been narrowed considerably by the strengthening of transferable sterling. Bullion dealers have welcomed the move as likely to lead to some increase in "essential" market operations, though it is emphasised that there may not be any significant difference right away. Licences must still be obtained from the Board of Trade for both the export and import of silver, and discretion about these applications and about re-exporting silver is in the hands of the Bank of England. There are also many restrictions on the silver trade in overseas countries, and especially in India, which used to be one of London's principal customers in the past.

The Savoy Affair

Readers will have followed the developments in the Savoy Hotel affair. There is a possibility that one of the consequences may be an amendment of the Companies Act. The Board of Trade officials are now understood to be examining the existing company law in the light of the steps taken by the Savoy directors during the struggle for control of the company in removing the Berkeley Hotel and other minor assets from the voting control of the shareholders. Their plan was to form Worcester Buildings (London) as a private company to acquire the freehold of the Berkeley Hotel and other assets. Since the voting control was vested in the hands of trustees it followed that anybody acquiring control of the Savoy Hotel company itself would still be unable to get control over the Berkeley property. The Board of Trade are now considering whether this move has revealed a loophole in the Companies Act which may need to be closed by amending legislation. The affair as a whole attracted considerable public attention, and it will be surprising if there are not other consequences and repercussions other than that mentioned above.

NEW IMPORT POLICY ANNOUNCED FOR JANUARY-JUNE, 1954

LICENCES FOR MUCH-NEEDED CONSUMER GOODS

(FROM OUR KARACHI CORRESPONDENT).

THE gradual improvement in the balance of payments position in Pakistan is reflected in the announcement of the import policy for the shipping period January-June 1954. The new Commerce Minister, Mr. Tafazzal Ali, has made an auspicious start and has improved on his predecessor, Mr. Fazlur Rahman—the interregnum during which the Prime Minister held the portfolio hardly counts—by bringing out the policy before the commencement of a shipping period and by contriving to do so without leakage of information.

The details of the items called for and the procedure are set forth in Public Notice No. 52(53)/I of 16th December, published in the Gazette of Pakistan Extraordinary of that date. There are a number of items which make a welcome reappearance to a long-suffering and exasperated consumer public, among which are cycles and watches, crockery, glassware, matches, woollen fabrics, tents, cigars, pipe tobacco, toothpaste, tooth brushes, face cream and talcum powder, cosmetics, razors and razor blades. The mere announcement that the import of these goods is to be re-introduced may have the effect of limiting the nefarious activities of the black market and bringing to the surface stocks of goods which, by official calculation, still exist in the country.

Naturally the ceiling of the value of the imports on private account has not been disclosed but it is not thought that it will be very much above the figures of last year. During the period July-June 1952-53 imports on private account were Rs. 95.85 crores and on Government account Rs. 48 crores. It is expected that the ratio of imports on Government account to private account during this current year will be greater. The only items for which countries are specifically mentioned in addition to the non-dollar area are iron and steel (special items only—Japan), art silk yarn and thread—(Japan and Italy), cotton twist and yarn (not otherwise specified—Japan and Italy), cotton fabrics—(Japan), and umbrella cloth—(Japan).

From the total amount allocated for items falling under Parts I, II and III of the I.T. Schedule—that is iron and steel, non-ferrous metals and ferro-alloys, and tools and workshop equipment—the requirements of industrial consumers will be met and the balance will be distributed among the commercial importers of such items on the basis of their past performances. An allocation of Rs. 10 crores has been made for essential items of machinery out of which Rs. 5 crores will be reserved for the Pakistan Industrial Development Corporation. It is stated that the balance of Rs. 5 crores will be reserved for the textile, cotton and woollen textile industries and other industries using raw materials produced in Pakistan.

In furtherance of the policy of accelerating industrial development, imports of machinery on a deferred payment basis are treated as in addition to the allotment of Rs. 10 crores, and already licences have been issued for machinery imported on this basis up to the value of Rs. 10.5 crores. Of this amount approximately Rs. 8 crores of licences have been issued for Japan and the balance for spare parts, accessories and raw materials required for existing industries will be issued liberally.

Order Placed for Japanese Cloth

Various difficulties were encountered over the much-debated import by Government of Rs. 4 crores worth of cloth. Tenders were lodged by the as 3rd December but a certain amount of haggling as regards terms and conditions followed. Japan £51 million sterling of cloth was due to be lifted by Pakistan before the end of March 1954 against 650,000 bales of cotton. Japan has lately held aloof from the Karachi cotton market in the hope of strengthening her bargaining position. It now appears that agreement has been reached and that orders of approximately Rs. 31 crores have been placed with Japan, and tenders for the remaining Rs. 50 lakhs from other countries are still under discussion. Mr. Tafazzal Ali stated that as soon as the Government cloth has been landed in Pakistan the Ministry will proceed to issue licences for cloth for distribution (not the landing) of the cloth has been fixed for 1st February 1954.

It is stated by the Minister that the principles on which his import policy for the next shipping season is based are: (1) expenditure on imports on private and Government account should be within estimated earnings of foreign exchange for the year with a small cushion for possible fluctuations and rebuilding the exchange reserve; (2) in as far as possible so that the pace of industrialisation is not affected; (3) where indigenous production of an article is sufficient or nearly sufficient foreign imports should be conserved by not allowing its strictly essential and are sometimes classed as "luxury goods" should be permitted to a limited extent to cater to the demand of the tourist traffic and foreigners in Pakistan.

Bombay

REACTION TO MR. NEHRU'S ASSOCHAM SPEECH

SIR HOMI MODY CRITICISES OFFICIAL LABOUR POLICY

(FROM OUR BOMBAY CORRESPONDENT).

ON the whole the Prime Minister's speech to the Associated Chambers of Commerce at Calcutta at the beginning of last week was well received here by the business community. It did not, of course, contain any of the assurances which industry had been hoping for after the Vice-President of the Planning Commission had raised doubts about the soundness of the Government's labour policy. Many business men in Bombay were inclined to sum it up as "well-meaning but vague." To those who expected some kind of interim tax relief as an incentive for the expansion of the private sector, Mr. Deshmukh's refusal to consider this question till the Taxation Enquiry Commission had reported on it came as a mild disappointment. It was, however, left to Sir Homi Mody, Chairman of the Employers' Federation of India, to reply to the Prime Minister when he addressed its annual general meeting last Thursday. As a rule Sir Homi is a genial speaker and whatever criticism he has to offer is conveyed through the medium of a joke or a story. But on this occasion he was severely critical and forthright. He said that although the Government issued reassuring statements from time to time, its policies lacked cohesion and consistency, thereby creating uncertainty in the minds of industrialists. Private enterprise had been assigned a definite task under the Five Year Plan, but it was hampered by a flood of labour legislation, irksome controls over profits, production and distribution, and inadequate incentives for industrial expansion. Irresponsible opinions were often expressed by some who hold positions of influence, thus undermining the morale of industrialists, well as investors. This state of affairs, he said, could not go on indefinitely; the situation was getting intolerable because of a steady rise in the cost of production, difficulties in maintaining discipline in factories and delays in the adjudication of disputes by tribunals. The habit of issuing ordinances frequently without any justification was severely criticised by Sir Homi, as also was the move to abolish labour appellate tribunals. The Prime Minister in his Calcutta speech had asked employers to adopt a human approach toward workers; admitting that a good deal still remained to be done in this direction, Sir Homi pointed out that the Government should also realise that excessive regimentation of employer-employee relations often hampered mutual understanding. Referring to malpractices revealed in the working of some industrial units, he said that these called for unqualified condemnation. In all cases where guilt had been proved, business organisations should expel the offenders. "We can have no truck with those who are out to exploit, by whatever means they can, the undertakings of which they have acquired control."

Two-Point Sales Tax

The special session of the State Legislature which was called to consider the Sales Tax (Amendment) Bill in the form recommended by the select committee has been busy last week discussing in detail the changes proposed. The Sales Tax Act has already been amended often and the possibility of the Assembly soon being asked to reconsider its whole basis was hinted at by Mr. C. D. Deshmukh, Central Finance Minister, in his speech to the Bengal National Chamber of Commerce last week; this has tended to depress the legislature's proceedings of realism and interest. Even when the Finance Minister, Dr. Jivraj Mehta, rose to defend the change from a multi-point to a two-point sales tax, the Assembly was almost deserted. One of the main arguments against the new Bill was that the proposed change did not bring any relief to the consumers. In fact, it was pointed out by analysing the schedules that in some cases the incidence of the tax on consumer goods was higher than on luxury goods. Replying to this, Dr. Mehta stated that as a result of the concessions granted to consumers the Government was likely to suffer a loss of about Rs. 1.75 crores. To make up this loss a slight increase was proposed in the tax on certain articles such as sugar, betelnuts, matches and cotton. He claimed that the two-point levy would benefit trade, commerce, industry, commission agents, wholesalers, retailers, small manufacturers and also consumers, and that it would help in retaining the trade, both inter-State and foreign, in the hands of merchants in Bombay.

Prize Competitions: Tax Revenue Falls

Replying to a question by Mr. Nausheer Barucha, an independent member and one of the severest critics of the Government, Mr. Morarji Desai, Chief Minister, said in the Assembly last Thursday that income from the tax on prize competitions, which amounted to Rs. 24 lakhs in 1951-52, had fallen to Rs. 16 lakhs in 1952-53, while collections for the first quarter of 1953-54 amounted to only Rs. 2.16 lakhs as against Rs. 4.5 lakhs during the same quarter last year. According to the Chief Minister, two of the eight newspaper prize competitions operating in Bombay at the beginning of April 1951 had shifted to other States; the transfer of prize competitions run by The Times of India group of newspapers away from Bombay had lost the State revenues about Rs. 4 lakhs a year. Mr. Desai said that these transfers were not entirely a result of allegedly heavy taxation; they arose partly from a desire to avoid restrictions on prize

money, the number of entries and other conditions. The Government, Mr. Desai said, did not intend to scale down the taxes on prize competitions.

Textile Workers Criticise Bonus Award

The award of the Industrial Tribunal on the 1952 bonus for textile workers in Bombay, announced last week, has been strongly criticised by the three important workers' organisations. The Rashtriya Mill Mazdoor Sangh (I.N.T.U.C.), which took part in the proceedings as the representative union for textile labour, has been the mildest in its condemnation. Its Secretary stated that the award was unsatisfactory and could not be accepted, so his organisation would appeal to the Appellate Court. According to the Socialist union, however, it would be a waste of time to appeal because under the present circumstances the dispute could not be settled amicably within the framework of the formula laid down by the Appellate Tribunal. Hinting at some drastic action, Mr. R. Kulkarni, General Secretary of the Socialist-sponsored Cotton Mill Mazdoor Sabha, said that the representative union should immediately serve a fresh notice on the Millowners' Association calling for a change in the long-range settlement of the wage issue. The General Secretary of the Communist-led Mill Mazdoor Union, Mr. Patkar, observed that "workers will not touch the award with a pair of tongs."

The award follows the lines laid down by the Appellate Tribunal in its previous awards for this industry and is confined so far to workers in 49 mills which made a profit during 1952. The cases of the 20 mills which did not earn a profit have not yet been decided. In this connection, it may be recalled that during the course of the proceedings the union representative told the tribunal that if mills which had not made profits were excluded from the award, workers who were entitled to bonus would refuse it. The amount of bonus for each worker under the latest award is 15 percent of earnings, exclusive of dearness allowance and bonus paid during the year. In the case of women employees who were granted maternity leave during the year, the maternity allowances drawn by them are to be considered as their earnings for the purposes of bonus. The Court has directed that the bonus should be paid within two months

Inspection of Textile Exports

Whatever differences Bombay State might have with Mr. T. T. Krishnamachari, Central Minister for Commerce and Industry, over his numerous impositions on the cotton textile industry, both the trade and the industry are grateful to him for the vigorous manner in which he is following up his suggestion last month for the creation of a special body to promote cotton textile exports. The Commerce and Industry Minister called a conference of representatives of the various Millowners' Associations and of the cloth export trade and members of the Cotton Textile Fund Committee to consider plans to increase exports of cotton textiles to the target of 1,000 million yards a year. After drawing attention to the alarming decline in the exports, from 1,170 million yards in 1950 to 830 million yards in 1951, 645 million yards in 1952 and an estimated 670 million yards this year, Mr. Krishnamachari emphasised that a greater part of the responsibility for this decline and the critical situation obtaining now lay with the exporters themselves, as some of the unscrupulous ones amongst them had shipped cloth inferior in quality to the samples supplied while booking orders. The minister hinted at the creation early next year of special official machinery to inspect every yard of cloth exported out of the country. He also proposed the formation of a Textile Export Advisory Council and expressed his willingness to finance this body from the Cotton Textile Fund. As a preliminary to the proposed Council, a working committee under the chairmanship of Mr. Neville N. Wadia was established at this conference, consisting of Messrs. Kasturba Lalbhai, K. M. D. Thackersey, T. V. Baddelley, Arvind Mafatal, Navnitil Shodan, Gautam Sarabhai, M. L. Shah, H. Hill, R. E. Castell, Ramnath Podar, Bharat Ram, Naranji Kara, M. N. Savani, R. D. Shroff, S. G. Saraiya, Ambalal Kilachand, W. Foges, R. M. Deshmukh, A. D. Gorwala and T. Swaminathan, Textile Commissioner to the Government of India.

Uttar Pradesh

PROGRESS OF FLOOD CONTROL AND IRRIGATION PROJECTS

BILL INTRODUCED FOR PREVENTION OF SOIL EROSION

(FROM OUR LUCKNOW CORRESPONDENT).

A CEREMONIAL start was given last week to work on the Matatila dam, the biggest irrigation project undertaken by Uttar Pradesh so far. The territories of Uttar Pradesh, Madhya Bharat and Vindhya Pradesh converge on the site of the dam and administrative difficulties had so far held up the project for which the Government of India has allotted Rs. 3,20 crores. Of the 33,000 acres to be submerged when the dam is completed, 20,000 acres are in Madhya Bharat, 12,000 in U.P. and the rest in Vindhya Pradesh. The irrigational benefit will not, however, be proportional to these initial losses because, compared to 80,000 acres expected to be irrigated in Madhya Bharat and Vindhya Pradesh together, nearly three lakhs of acres in Jhansi, Jalaun and Hamirpur districts of Uttar Pradesh will benefit from the project. Although conceived as a multi-purpose project, attention at present is concentrated only on irrigation.

Work has been started also on another smaller project, the Arjun dam in the same area, while another dam, the Rangwan dam, constructed at a cost of Rs. 1 crore was formally opened in Bundelkhand by the Chief Minister. The State Government has further announced that work will be begun shortly on the Sarda Canal reservoir for which Rs. 373 lakhs has been sanctioned by the Planning Commission. Another Rs. 246 lakhs has been made available to Uttar Pradesh by the Commission to finance a number of irrigation projects, which includes Rs. 46 lakhs for the Chandraprabha dam and Rs. 15 lakhs for the Navgarh dam. The small works being planned or in the process of execution are too numerous to mention, but it is estimated that as a result of all the works big and

small, 20 lakh acres of land will be irrigated at the end of the five year plan period.

Inadequate Rainfall

The normal rainfall in the plains of U.P. varies between 22 and 28 inches in places like Agra, Mathura and Meerut and between 47 and 48 inches in Pilibhit and Gorakhpore. Irrigation is, therefore, essential in the more arid regions of the State both for the protection of most of the "rabi" crops as well as sugarcane, rice and cotton in "kharif." The sum total of the progress of irrigation till 1946 was that this State had 17,824 miles of canals and 1,847 tube-wells, the area served by these works being below 68 lakhs acres. It is not possible to assess precisely the improvement that has been effected up to date, but it is claimed that over 13 lakh acres have already been irrigated since 1946. The mileage of irrigation channels as well as the number of tube-wells have also registered corresponding progress. According to official statistics, out of the total cultivated area of 370.7 lakh acres, about 11.2 lakh acres is irrigated annually by all sources and out of this latter acreage approximately 42 percent is irrigated by canals and tube-wells.

Not all this constructional activity, however, has been fully rewarding and there has been criticism in the State Legislature, as well as outside, against some projects which were undertaken in haste and abandoned later. For instance, it has been said that proper attention has not been given to flood control in the river valley projects because the damming of rivers is not without its disadvantages. The Himalayas charge the waters of the rivers flowing through U.P. with a heavy load of silt which gets deposited in the bed of the reservoirs made by the dams, thereby reducing the dams' storage capacity in a few decades as well as increasing the risk of floods. There are chronically flood-stricken areas in the State like the Ballia district, 55 percent of whose land surface is liable to floods. A Technical Sub-Committee, which submitted its report last week, has recommended against the construction of marginal "bunds" and embankments not only because they are artificial obstructions to the free flow of water but also be-

cause, the Committee feels, the flooding of such lands in most cases increases fertility and improves crop production even in the years of drought.

This is of small comfort to the people, who have to abandon their hearts and homes; and the discontent is increased when, as in the case of the Arjun dam, the kisans whose lands are submerged have to be moved about more than once. The issue of compensation to kisans who have to give up their holdings to make way for the waters of the dams is being raised by the Praja Socialists, who have also declared their intention to start a "satyagraha" against enhanced irrigation rates. A feature of most of the projects under way in U.P. is that the minimum use of machinery is made in order to provide for the maximum employment of human labour, including prison labour. Masonry wells which occupy a conspicuous place in the scheme of minor irrigation may be mentioned in this connection because, unlike cement concrete constructions, the masonry work involves the use of lime and bricks and gives employment to a larger number of workmen.

The agricultural problem in Uttar Pradesh consists not merely in maximising irrigation but also in conserving the present cultivable area which is being damaged by soil erosion. Uncontrolled "run off" has resulted in extensive ravines in the Yamuna, Chambal and Gomati as well as in the "kholas" of the Ganga, and the Rajasthan desert is extending into U.P. at the alarming rate of 32,000 acres per year. The entire problem of checking soil erosion is sought to be tackled by a Bill which was introduced in the legislature last week providing, amongst other things, necessary measures for soil conservation and allocation of costs between the farmers and the State. The statement of objects and reasons declares that it is necessary to exercise compulsion where the interest of the community is involved. All sections of the House welcomed the objectives of the Bill but several members, including some from the Congress benches, were critical of the principle of realising the cost of conservation from its beneficiaries. In some cases, it was pointed out, the conservation operations would have to be so gigantic that it would be quite outside the means of beneficiaries to foot even a fraction of the bill.

Failure of "Grow More Food" Campaign

Already some three million acres of good productive land has been completely destroyed while it is estimated that another six million acres of land has been damaged so severely that its present production is only 25 to 50 percent of the normal yield. The process of deterioration and exhaustion of soil is continuous and every year it results in the abandonment of thousands of acres. "Increase in population and reduction in the area of productive land," according to the Agriculture Minister, "have now made it incumbent on the Government to take care of every patch of land." At present, he adds, "the produce of only 0.64 acres of cultivated land is available per capita, which is inadequate at existing levels." On the Government's own admission, the "people were not with the Grow More Food Campaigns" and "whatever was achieved was a production at the end of the planning period is nine lakh tons annually but this, it is feared, may not be achieved if all the good work done by irrigation and reclamation is neutralised by erosion of previously fertile land.

The most important schemes undertaken in connection with soil conservation relate to the afforestation of two big blocks. The first of these of the Ganga Khadar tract of the Meerut district, begun two years ago, this is the largest afforestation programme in a single compact block yet undertaken in India. The other scheme—creation of a forest belt all along the Rajasthan-U.P. border in the Mathura and Agra districts—was sanctioned a year ago. Nurseries have already been established and plantings will soon begin.

An Invitation to Business

As the largest commercial bank in the South-West Pacific, the Bank of New South Wales facilities businessmen to make use of the Bank's facilities in conducting their trade with that area.

At over 850 points in Australia, New Zealand, Fiji, Papua and New Guinea, the Bank of New South Wales has branches and agencies which keep in touch with local conditions, providing a full and overall picture of the local business and rural scene. Thus the Bank is well-equipped to assist enquirers from overseas.

Ceylon

CEYLON ASKS WORLD BANK FOR RS. 100 MILLION LOAN

MORE EXPECTED TO BE RAISED IN U.K.

(FROM OUR COLOMBO CORRESPONDENT).

A FINANCIAL mission from Ceylon consisting of the Finance Minister, Sir Oliver Goonetilleke, and the Governor of the Central Bank, Mr. N. U. Jayawardana, has gone to the United States to negotiate a loan of Rs. 100 million from the World Bank. The loan is sought for the second stage of the island's hydro-electric scheme and would be drawn on in stages according to the progress of the scheme, so that interest payments would not be as high as if the whole sum were borrowed at once. The scheme will cost a total of Rs. 150 million, and the balance of Rs. 50 million is expected to be borrowed from the London money market. The Finance Minister and the Bank Governor visited London last month and explored the possibilities of loans from the U.K. as there was a hope of obtaining more favourable terms there than from the World Bank. In a statement on his return from Britain, the Finance Minister said his discussions in the U.K. had suggested that the overseas investor considered Ceylon a safe repository for his capital. But the present visit to Washington in search of a World Bank loan indicates that though the British investor is prepared to invest in Ceylon, sufficient funds cannot be raised in London at present.

Duty on Coconut Products

The Ceylon Government decided to impose a flat rate of duty from 4th December on coconut products, replacing the sliding scale of export duties that had existed for some years. The abolition of sliding scales for agricultural products, which were introduced by the last Minister of Finance, Mr. J. R. Jayawardene, is being gradually extended by his successor, Sir Oliver Goonetilleke. The previous sliding scales of duties to be removed were those on tea. The new flat rate of duties are as follows: copra Rs. 260 per ton; coconut oil Rs. 208 per ton; desiccated coconut Rs. 156 per ton; and fresh coconuts Rs. 65 per thousand nuts. According to the Minister of Finance, the working of the sliding scale of duties has reduced Government revenue without benefiting the producer, who sold the products on the basis of a flat rate of duty prevailing at the time of the sale. Further, the sliding scale gave the shipper definite advantages which he was not slow to make use of. Shippers were free to select the time at which to register their contracts, and thus select the rates of duty to be paid. In the financial year 1952-53, the average rate of duty was just over Rs. 250 per ton of copra, but the duty actually paid averaged Rs. 200 per ton. This showed how much more the flat rate of Rs. 260 per ton would earn.

Sheet Rubber Prices

A reduction of ten cents per pound in the price paid by the Government to producers of sheet rubber became effective from 21st December. This reduction has been decided on to enable the Government to buy excess sheet rubber; most crepe rubber producers have turned to the production of sheet because prices of crepe are uneconomic. It is estimated that the switchover will result in an excess production of 20,000 tons of sheet rubber. The new price, which will be Rs. 1-10 per pound for top-grade sheet rubber, will ensure the payment of the same prices for the surplus rubber as for the 50,000 tons that will be produced to meet the non-tract with Communist China. If no such arrangement had been made, the price of the surplus rubber would have been uncertain and would certainly have been much less than that paid for rubber bought by the Government for export to China.

Control of Rubber Exports

The Minister of Agriculture and Food is considering legislation for an Export Registration Board to control rubber exports. Making the announcement recently, he emphasised that in concentrating their attention on increasing the production of rubber by extensive replanting and oidium control, rubber interests should not lose sight of the importance of better packing, grading and marketing methods, and exporting technically graded rubber at higher prices than ordinary rubber. This was necessary if Ceylon rubber was not to be quoted at a discount in the markets of the world. Other countries like Malaya and Indo-China were ahead of Ceylon in this respect, he said, and it was important that Ceylon should take similar action without delay.

Tea Rehabilitation Scheme

Like rubber, tea is also engaging the attention of the Minister of Agriculture and Food, and the Government has launched a Tea Smallholders Rehabilitation Scheme which will benefit 84,000 smallholders owning about 67,000 acres. Under this scheme, financial assistance will be provided to improve holdings and to sell tea leaf through a network of co-operative societies. The need for rehabilitation of small holdings was impressed on the Government by the Tea Controller; he said that it was advisable to assist these smallholders, as one-eighth of the total acreage under tea was owned by them. It was stated that they were being exploited by factory owners and had no alternative but to accept the prices offered by the latter. For the disposal of their green leaf, small holders had

to depend on what are called "bought leaf factories" and were virtually at their mercy. Particularly during the fall in tea prices, there were frequent complaints by smallholders that factories were paying them very low prices which were insufficient to cover the cost of production, resulting in smallholders rapidly going out of production. It is to prevent these abuses, and also to establish the smallholders, that the Government has now started its rehabilitation scheme.

The Ceylon Premier has asked the Finance Minister to consider amending the Monetary Law Act of Ceylon to grant wider powers to the Government in its relations with the Central Bank of Ceylon. One of the reforms desired by the Prime Minister is the enlargement of the personnel of the Bank's Monetary Board. The Board at present consists of the Governor of the Bank (chairman), the Permanent Secretary to the Ministry of Finance, and a third member appointed by the Governor-General on the recommendation of the Prime Minister.

LONDON INSURANCE LETTER

HOME-SERVICE VERSUS ORDINARY LIFE ASSURANCE

By Air Mail.

INDUSTRIAL life assurance has been on the defensive for many years, and the report of the Industrial Assurance Commissioner for 1952—the first in 15 years—brought the attackers and the defendants into action again. The focus of the controversy is the high proportion of expenses inherent in a form of insurance whose premiums are collected weekly, in sixpences and shillings, from the policyholders' homes.

Management expenses represented 30.8 percent of premium income for companies, 38.9 percent for collecting societies, last year—percentages that are not significantly smaller than in 1938. Less than one-half of the total expense rate of the business represented costs of collecting and of related services last year, and other expenses were comparable with those of ordinary life assurance; but the figures confirm the commonsense conclusion that door-to-door collecting is costly.

The companies have made out a convincing case for this method of insurance as conducted by private initiative: that if these small premiums were not so collected much of the public's saving done at present in this form would not occur at all, and that private undertakings conduct the business efficiently. But they have not been able quite to overcome the criticism that has reassessed itself in the latest controversy, that when 14 companies and 115 societies are competing for business there is multiplication of effort and cost and risk of overselling by excessive persuasion.

A Remedy Suggested

Operation of industrial assurance by the State, as advocated in the past by the Labour Party, is not the only possible corrective—if it is granted that a corrective is needed. Critics feel that home service should not be uncritically defended by those who practice it but recognised as wasteful, however necessary, and that the prospective policyholders should be made clearly aware of the financial advantages of ordinary life assurance. Transfer of business from home-service to ordinary assurance would then be regarded as progressive.

The latest report shows, in fact, that the rate of expansion of home-service assurance has lagged some years behind that of ordinary life assurance. Sums assured by industrial assurance totalled £2,804mn in 1952, which was not quite twice the figure for 1937; whereas the premium income of

ordinary life assurance had more than doubled two years earlier. The number of new home-service policies issued last year was not much over 6mn, compared with more than 11mn (at much lower values, of course) just before the war. More of these prewar policies lapsed on the initiative of the assured, but the rate of lapsing last year—18.3 percent for the companies, 23.4 percent for the societies—was still high enough to suggest that people had been persuaded to take policies which they did not really want or could not afford to maintain.

Choice of Policy

There has been some discussion recently on another topic of life assurance, what kind of policy is most suitable to normal circumstances. The variety of contracts is almost infinite—almost every company offers something a little different from the others. But the basic principle is invariable—the provision of adequate income for the assured and for his dependents when he is past effective working age and for his dependents in the event of his death.

Broadly speaking, the assuring public's preference these days is for endowment policies, providing cover against early death or a specified sum at a specified age; but the insurance profession is still inclined to favour, in principle, whole-life policies with optional conversion rights, on the ground that assurance can be thereby provided for the full period of need, premiums ceasing about retiring age, with the policy convertible into an endowment assurance if desired. The assurance, by endowment, of a substantial sum for later years may provide adequate security in most cases, but there is a feeling that some assured have still not allowed for really advanced age without a whole-life policy.

Even more positively, the assuring public has decided in favour of with-profit policies. In this country bonuses to holders of such policies exceed £200m a year, and the companies' success in handling the funds entrusted to them has persuaded more than 70 percent of policyholders to adopt the with-profit form. The possibility that more than double the fixed sum will be distributed on maturity of the policy is an undeniable attraction, out of proportion to the increase in the premium that has to be paid for the privilege of participating in profits.

Annuities are widely favoured by the assuring public, but not by the companies. The demand for annuities is sensitive to the rate of interest: it is always strong when "cheap money" prevails, and there has been some response this year to the lowering of interest-rates-which, however, has been at least temporarily checked. Annuities have yielded very uncertain results to the companies, some of which have made their terms comparatively so unattractive that it can only be assumed that they do not want the business.

Private Safeguard

Addressing the Corporation of Insurance Agents in London last month, Sir Harold Bellman commented on the fact that life assurance, especially, had continued to expand in the welfare state: "evidently people are still able and willing to provide protection for themselves, in addition to the safeguards offered by the state." He stressed the importance of insurance funds as capital for industry, in times when a large proportion of total saving was in the form of insurance premiums. And he paid tribute to the companies' enterprise overseas, without which he said, many projects for Commonwealth development could not succeed.

Sir Harold is chief of one of the biggest building societies, which compete directly with insurance companies as media for saving and in such special fields as house-purchase.

EXCHANGE CONTROL IN INDIA

The Foreign Exchange Regulation Act, By S. R. Vakil. (Published by N. M. Tripathi Ltd., Law Publishers, Princess Street, Bombay 2. Price Rs. 10, 339 pages.) The reviewer perused this book—the first of its kind—with interest and growing dismay. That the continuance and extension of a system of exchange control and of regulation of transactions in foreign exchange and the import of currency and gold and of the proceeds of exports are necessary is an indisputable fact. What dismays one is the knowledge which even a cursory glance through the pages of the work conveys of the fearful number of criminal offences which it is possible for the ordinary law-abiding citizen to commit. Opening Mr. Vakil's book at random one was immediately conscious of having probably personally transgressed. For this is what Lord Goddard L.C.J. said in Section 5(1) (a) of the Indian Act. "... If a person plays a game of cards in this country with a person who does not live in one of the scheduled territories—as for instance an American—and at the end of the game he hands in five shillings, which he has lost to him, he is really committing an offence."

Of course the answer to that is that the Act is administered with good sense and that it is hardly likely that in such a case there would be a prosecution. All the same such wide powers to invoke the criminal law are dangerous. The number of possible offences is legion, and when one realises that in the case of one committed by a limited company each and every "director, manager, secretary or other officer thereof" is presumed to be guilty and that the onus is on him or them to prove lack of knowledge or the exercise of due care [Section 23(4)] the need for such a book as this one is obvious.

Not that everyone will be able to comprehend it. As Sir J. B. Kanga puts it in his introduction, the law on the subject "bristles with difficulties," and "... to a layman the task of unravelling

the various provisions borders well nigh on the impossible."

Mr. Vakil has essayed the almost impossible and one congratulates him on the result. He has even succeeded in making a dull and uninteresting subject readable and almost of interest in itself. Relying largely on English decisions in the absence of Indian precedents the work is a model of precision and learning on a most difficult and complicated measure on which no other legal author has, as far as the reviewer knows, tried his hand. All relevant Notifications, Rules and Forms are included in a work of great value to lawyers, accountants and bankers especially. The set-up and printing are, as one has learned to expect from the publishers, excellent.

THE NICKEL BULLETIN

The Nickel Bulletin is issued monthly and is mailed free of charge to all interested parties by the Mond Nickel Co. Ltd., Technical Office, 1 Forbes Street, Fort, Bombay 1. Requests for inclusion on the regular mailing list should be made to that address. The Bulletin for October contains a series of articles devoted to the production, manipulation and uses of stainless steel sheet and strip. These include a detailed description of plant recently erected in Sheffield for the continuous rolling of stainless steel strip up to one metre in width, various articles dealing with the processing of stainless steels, and reviews of the applications of such materials in various branches of industry. The series includes consideration of welding techniques suitable for use on stainless steels, and welding is the subject also of other abstracts in this issue. The electro-deposition section contains references to an extensive investigation on the corrosion-resisting qualities of nickel, nickel-cobalt, and nickel-iron alloy deposits, with or without a final coating of chromium; also a report on development of baths for electro-deposition of black chromium plate. Ni-Hard cast iron is the subject of the leading article, in which typical properties are summarised in data-sheet form. The October issue of the Bulletin also contains the usual quarterly survey of recent patent literature.

Our Forests. (Issued by the Publications Division, Ministry of Information and Broadcasting, Government of India, Old Secretariat, Delhi-8. Price Rs. 1-8, 22 pages.) "A land denuded of forests must become a desert... America offers a recent example of the terrible consequences of the destruction of forests. In India, too, the twin evils of erosion and aridity have caused havoc, the most spectacular effects of which are visible on the friable soils of the Pabbi and the Sivalik hills of the Punjab." This warning is contained in the first chapter, The Role of Forests. The publication traces the efforts being made to cultivate forests, discusses timber and its uses and reviews the work of the Forest Research Institute, Dehra Dun.

Our Plan. (Issued by the Publications Division, Ministry of Information and Broadcasting, Government of India, Old Secretariat, Delhi-8. Price As. 8, 67 pages.) This booklet is yet another on the five year plan. In this instance the matter is described with accuracy and clarity and is backed by good diagrams and tables.

BOOKS RECEIVED

Economic Development in the United Kingdom Dependencies. (Issued by the Central Office of Information, London, W.1. 42 pages. Price not stated.)

Economic Survey of Saurashtra. By C. N. Vakil, the Director, Information and Publication Department, Government of Saurashtra, Rajkot. 664 pages. Price not stated.)

Colombo Plan, Third Year. (Issued by the Publications Division, Ministry of Information and Broadcasting, Government of India, Delhi 8. 108 pages. Price not stated.)

The Revival of Monetary Policy. (Published by the International Monetary Fund, Washington. Price not stated. 16 pages.)

Jute

MR. ISPAHANI ON THE JUTE POSITION IN PAKISTAN

SIXTY LAKH BALES RECOMMENDED AS NEXT YEAR'S PRODUCTION TARGET

ADDRESSING the fourth annual meeting of the Pakistani Jute Association, the President, Mr. M. M. Isphani, said that the last season ended on an optimistic note. Overseas countries had taken 40,00,000 bales and India had taken 18,00,000 bales. The prospect of less jute being grown in 1953 resulted in an unprecedented rise in exports in seven months, rose above the E. P. C. minimum. He admitted that there was a large carry-over from the 1952-53 crop but said that that was offset by the expectation of a small new crop in 1953. Cheap jute had meant hardship for the ryots but had the effect of assisting to maintain markets for jute goods and even make inroads into the ground lost to substitutes. As far as the economy of the country is concerned, Mr. Isphani said the seasonising note on which they entered the season still continued. Except for a slight recession in September, prices had remained at a level satisfactory to both producer and consumer. Up to the end of November 16,00,000 bales had been exported overseas and 8,00,000 bales to India. There would be just enough jute to satisfy world demand and the carry-over into 1954-55 would be negligible. The stage had now been reached when they had to consider how much jute should be grown next year. The Committee had recommended that they should aim at having 60,00,000 bales at their disposal and it was understood that the Jute Board were in general agreement with that. Mr. Isphani then went on to speak of matters connected with licensing procedures, inland freights, port organisation and so on.

In his reply Mr. Nurul Amin, the East Bengal Premier, said that he was determined to protect the small jute grower who did not have the means and capacity to hold his jute and was compelled during the first critical months to sell his crop for the best price he could get. He asked the Association for advice and co-operation in solving this problem. He said that the fixing of the quota of production for next year was a matter of supreme importance. He was conscious of the risk of producing less than was required but, at the same time, if production exceeded requirements the growers would suffer and also the country's food economy.

Failure of Price Support

In making the statement mentioned above that cheap jute had enabled them to retain markets and make inroads on ground lost to substitutes Mr. Isphani could not have been referring to Pakistan because Pakistan can hardly yet be described as an exporter of jute manufactures. Perhaps he was referring to the jute industry in general but really it is India that has been regaining the lost markets. Overseas manufacturers benefited also by the cheapness of raw jute but there does not appear to be any evidence that there has been a general increase in world consumption of jute manufactures. Mr. Isphani's statement that in April-June prices rose for the first time in seven months above the E. P. C. minimum is surely a confession that the fixing of minimum prices had failed and also that the scheme for supporting the market had failed. Nor did he adequately explain the sale of the Jute Board's stocks at prices below the official minima which involved the Government in serious loss at a time when Ministers were telling the public that jute prices would rise because of the measures taken to restrict the 1953 crop. Mr. Isphani was also silent on the question of how Pakistani jute can be sold in Calcutta at prices which cannot be explained on the basis of the official exchange rates. There are more things in heaven and earth than are dreamt of in your philosophy, said Hamlet. Likewise there are strange things about the economics of jute in Pakistan.

THE JUTE MARKETS

FIRMNESS IN HEAVY GOODS

All sections of the market have been steady to firm during most of the week without any large business being reported. In the first half of the week, a fair amount of business was done in raw jute as well as in manufactured goods, but the outstanding feature was the rise in the prices of heavy sacking. Hessians, on the other hand, have lagged behind. In the past day or two there has been less activity in all sections but prices have been maintained. Sentiment in the market is bullish and the rise in the price of heavy goods may be an indication that the reduction in mills' output of sacking is now producing results.

Manufactured Goods: Early in the week, moderate business was reported with the U.K. and the U.S.A. in hessian. Covering business was also reported in cornsacks and Cubans for December and prices moved up. Profit-taking by speculators and selling by mills at the higher prices brought about a reaction and, on Friday

afternoon, the market was easier. Business in cornsacks for the U.K. was reported on Saturday and speculative buying and bear-covering during the week-end gave prices another boost, B Twills in the speculative market having been as high as Rs 107-4. There was a sharp reaction on Monday afternoon followed by an almost equally quick recovery. Though it cannot be said that there has been a large business there has been a considerable and diversified demand from overseas markets which has been met by mills. Prices are higher all round though the gain in heavy goods is more than in hessian and it is an improvement in heavy goods prices that mills have been hoping for.

On Wednesday morning quotations are as under.

	Dec.	Jan.	Jan.-March	April-June
Rs.	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	38-4	37-12	37-0	36-0
40" 10 oz.	47-6	46-10	46-2	45-4
B Twills	107-4	107-10	108-0	107-8
Heavy Cees	104-8	106-0	107-0	107-8
Cornsacks	107-8	108-0	108-8	108-0

Raw Jute: Early in the week there was a fair amount of buying by mills, mostly for delivery ex Cossipur. Sellers were not keen for business for deliveries from upcountry because of the overparity prices prevailing there and the smallness of imports. On the other hand, Cossipur sellers willingly accepted business at the prices offered and would have continued to do business at the same rates or with only a modest increase. Over the week quotations have been raised by one rupee per maund which is less than the rise in the prices of heavy goods and it is probable that Cossipur sellers would accept business at lower than the quoted rates, but buyers, at the time of writing, have almost entirely withdrawn from the market.

The following business was reported:

Pakistani Jat	Rs. 29-8 to Rs. 30-0
Lower Assam	Rs. 28-0 to Rs. 28-8
" (supervised)	Rs. 29-8
Upper Assam	Rs. 27-0 to Rs. 27-8
Agartala	Rs. 27-12
Agartala Tossa	Rs. 28-12
Murshidabad	Rs. 27-0
Murshidabad Tossa	Rs. 28-0
Daissee (ex Calcutta)	Rs. 29-8
Jungli Mesta	Rs. 25-0
Daissee Mesta	Rs. 28-8

All the above quotations are basis Bottoms and for Dec-Jan delivery. Birni F. A. Q. was done at Rs. 24-8 to Rs. 25-8. Mills also bought Mill Reds at Rs. 200 to Rs. 220, Dundee Daissee 2/3 at Rs. 180 for Short Group and Rs. 160 to Rs. 165 for Long Group, Pakistani ropes at Rs. 100 and Habi-jabi at Rs. 97 for white jute and Rs. 100 for Tossa. Tops and Middles free from Samla ex Cossipur were sold at Rs. 39 and Rs. 37 and Daissee Middles free from samla at Rs. 37. Pakistani N C cuttings were done at Rs. 37. Business was also done in European marks of Pakistani jute of high grades and also X Bottoms, details of which have not been divulged.

On Wednesday morning quotations are as under:

Indian Jute:	Landed at Mills Rs. per maund.	Shipments basis Bottoms
Lower Assam	29-8	Dec-Jan.
Upper Assam	29-0	"
Northern and Furnea	29-8	"
Murshidabad Tossa	27-8	"
Daissee (ex Calcutta)	31-0	"
Daissee Mesta	29-8	"
Western Mesta	26-8	"
Bihar	26-0	"
Birni	F.A.Q. 26-0	"

Quotations for deliveries ex Cossipur are mostly eight annas below the rates for deliveries from agencies. Tossa prices are Re. 1 to Rs. 2 above the prices for white jute; middles are Rs. 3 above the price of Bottoms but sellers are getting a premium for middles alone.

Pucca Bales.	Rs. per bale	Shipments
Mill Firsts	185	Dec-Jan.
Mill Lightnings	170	"
Dundee Daissee 2/3 SG	185	"
Dundee Daissee 2/3 LG	170	"

Pakistani Jute (ex Pakistan):	Rs. (1) per md.	Shipments
Jat	31	Bottom Jan-Dec.
District	30	"
Northern	29	"

The difference in price between Tops and Middles in the case of Pakistani jute is Rs. (1) 3 and between Middles and Bottoms Rs. (1) 3-8 to Rs. 4.

Mofussil: Imports are small at all upcountry centres and prices, as usual, are above the parity of Calcutta. The general impression is that growers and middlemen now intend to hold on to stocks in the expectation of getting higher prices later and will sell only very slowly. Some indication of this may be had from the falling off of arrivals in Cossipur. Advantage was taken immediately of the release of wagons two or three weeks ago to despatch large quantities to Cossipur but, though wagons are still in good supply, despatches have fallen off. It is reported that there is little jute left in upper Assam and that the bulk of the crop in the jungli districts has been despatched to Cossipur to be mixed with other jute for sale to mills. Daissee imports are small and most of what is being offered ex Calcutta as daissee is really Murshidabad and jungli tossa.

In Pakistan there has been little overseas business and the market has fluctuated in sympathy with movements in Calcutta. Imports are small but buyers in the main centres are already holding large stocks and are not inclined to add to them unless they can sell some of their existing holdings. On the other hand, beparis and ryots are holding in expectation of higher prices and it is said that, besides the carry-over from the 1952 crop, growers are still holding four annas of the 1953 crop. Both pucca and kutcha bales are keen for business. Quotations are as follows:

Kutcha bales:	Rs. (P)	23-8	Basis Bottoms
Jat	22-8	"	"
District	19-8	"	"
Northern	"	"	"
Pucca bales:	Rs. (P)	141	NC cuttings Rs. (P) 60
Mill Firsts	122	SNC	70
Export Firsts	107	HJ	58

All quotations are f.o.b. Narayanganj.

Arrivals of Raw Jute

Arrivals in Calcutta and at mills' stations during November were 5,04,000 bales compared with 4,33,000 bales in October. Of the November arrivals 4,24,000 bales were of Indian origin and

Journey to prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round... it is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

The illustrations show sacks holding 2 cwt. of sodium sulphate being stacked at a factory of Imperial Chemical Industries.

SAINT FRÈRES, S.A.
34 RUE DE LOUVRE, PARIS.

80,000 bales were imported from Pakistan. The total arrivals for the five months July-November were 22,99,000 bales. Of these, 15,63,000 bales originated in India and 7,36,000 bales were imported from Pakistan. In July-November, 1952, the total arrivals were 22,90,000 bales made up of 16,82,000 bales of Indian jute and 6,08,000 bales of Pakistani jute. It is noteworthy that while the total arrivals in July-November, 1953, were 22,99,000 bales consumption was only 20,72,000 bales. It has to be kept in mind, however, that all the arrivals do not go direct to mills; a large proportion go into the local bazars. It may also be noted that arrivals in July-November, 1952, were 22,90,000 bales and consumption in the same period was 22,50,000 bales.

THE FOREIGN JUTE MARKETS

CRAIGIE MILLS TO BE CLOSED DOWN (FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.
AFTER the satisfactory reports which had been coming from Calcutta for some time, the sudden weakness that took place recently in prices was surprising. The market has, however, practically recovered the extent of the fall and business in Calcutta goods is apparently coming away again, as might be expected. The past year has not been a good one for the Indian jute mills, but they are again the cheapest sellers in the market since Continental manufacturers could not compete with them after the reduction in the export tax on Hessians last September.

Raw jute prices have been maintained and Mill Firsts have been bought at £106 and £107 per ton, and Mill Lightnings at £95 and £96, while crack Daisies-2/3 has not been less than £100 and grade £90, crack Tossa-2/3 £119 and grade £108, with fours at £109 and £98 respectively, c. and f. U.K.

Caird (Dundee), Limited, have startled the Dundee jute trade by intimating that they are closing down their Craigie jute spinning and weaving establishment about 1st April next. On

grounds of economy, they are concentrating all their production of jute yarns and cloth in their other mill, Ashton Works, which has 334 looms. During the war, Ashton was one of the jute works closed and these were producing jerry-cans. After the war, the firm installed all the latest and most modern spinning and weaving machinery and the 500 workers from Craigie will be given the first opportunity of obtaining employment in Ashton, which will work it with a double dayshift. The firm's statement says it is hoped that, should the Jute Control be abolished, they will be in an immensely more competitive position by taking this step now, and it was with this view that they came to consider the future of Craigie Works and their employees.

Business in jute yarns and cloth is quiet because of spinners and manufacturers being so well booked up and disinclined to enter further orders. Prices are naturally all very firm and unchanged. Latest prices for Calcutta goods are 75s 9d for 10 oz. 40 in. and 56s 9d for 14 oz. January-March, and 74s 6d and 55s 0d April-June, with "B" twills at 175s 3d and 174s 6d respectively, f.o.b. Calcutta. Hessians are 1s 3d and "Bees" 2s 6d higher than the lowest rates quoted during the week.

PAKISTAN JUTE ASSOCIATION MEETING

MR. ISPAHANI'S ADDRESS

IN his presidential address at the annual general meeting of the Pakistan Jute Association in Narayanganj last Saturday, Mr. Mehdi Isphani recalled that the Association "was formed in 1949 on the initiative of the members of our parent organisation, the Dacca-Narayanganj Chamber of Commerce, whose Secretary is ex-officio Secretary of the Association. Since 1949 our expansion has been constant and nearly all firms of standing in the jute trade are numbered amongst our members. Our members or their associates account for about 95 percent of the volume of exports of jute overseas and about 80 percent of the jute business with India. All local business is transacted on contracts drawn up and approved by us and we are consulted by the London and Dundee Jute Associations regarding overseas contracts. We are not yet in the happy position of being consulted by the Indian Jute Mills Association regarding the contract for Pakistan jute day to day to be able to establish this arrangement. We issue a daily jute market report, accurate monthly statistics on jute exports and are responsible for the issue of Unavoidable Delay Certificates under the London Jute Association's contract. We maintain a Jute Inspection Panel which is at the disposal of members and non-members alike on payment of a nominal fee.

"On behalf of the trade we represent all matters affecting us to the Government and are in constant consultation with the Jute Board on matters which affect our members, either individually or as a whole. We are represented on the Foreign Trade Development Council, the East Bengal Railway Local Advisory Committee, and our members in their personal capacity represent our views on the Central Jute Committee and the East Bengal Jute Advisory Committee.

"It is said by some that smaller merchants are not properly represented or organised. At Government's request we, therefore, endeavoured to organise through the Chamber a representative Bengal Jute Dealers Association, which was to assist in organisation of the trade to run in accordance with established business ethics. Our efforts in this connection have, however, proved infructuous as the Committee of the Jute Dealers Association remained inactive in spite of all our encouragements and the combined efforts of the Chairman of the Jute Board and this Association proved insufficient to persuade rival factions to unite and work together for the common good.

Recovery in Prices

"When my predecessor spoke to you last year jute was in the doldrums. Shipments had been small due, we feel, mainly to the increase in export duty in 1951 coupled with the trade recession after the Korean war boom. We were faced with great overproduction and it had become apparent that we should move into the current season with an abnormally large carryover which would consist mainly of low quality jute. We minimum export price which, though it did not bear any relationship to the cost of production, foreign exchange for our produce, Pakistan and including the previous carryover, was estimated world demand of about 120 lakh bales compared to become clear during the year that we should have 1953-54 or we should again be faced with unneeded kutchha bales, Indian demand for Pakistani jute had remained small as the own crop had that year would purchase 18 to 25 lakh bales in the new season and it was further hoped that the overseas countries would purchase 35 to 40 lakh bales. Taking all these factors into consid-

deration Government decided to aim at growing 42 lakh bales for this season.

"The prospect of less jute being grown in 1953-54 had at the end of March the desired effect on the markets. Exports during April, May and June rose to an unprecedented level for those months, which are normally most inactive ones in the jute trade. Prices steadied in April and for the first time in seven months rose above the E.P.C. minimum. The outlook had improved so much by April that it became clear that the time had come for the Jute Board to commence release of the 13 lakh bales purchased and held by them under the 1951-52 support scheme. The season therefore ended on a most optimistic note. Overseas countries had purchased in all 440 lakh bales while India had taken their promised 18 lakh bales. We had a large carryover to bring forward and sell in 1953-54, but this was offset by the expected small new crop. The fact that jute had been cheap meant hardships to our cultivators, but it also had the effect of assisting us to maintain the markets for jute goods and even make some inroads into the ground lost to substitutes.

Exports Satisfactory

"As far as the jute economics of the country is concerned, the promising note on which we entered the current season has been maintained. Except for a slight recession in September, prices have remained steady at a level which is satisfactory for both producer and consumer. It is calculated that at the present Narayanganj market rate of Rs 24-8 per maund the cultivator can purchase nearly 20 maunds of rice for every maund of jute sold and that at the export price of £35 to £105 we can hold at bay the threat of substitutes. Up to the end of last month the volume of our exports had been satisfactory. Overseas offtake being 16 lakh bales compared to Indian imports of 8 lakh bales. We shall have just sufficient jute to satisfy world demand, and the carryover into 1954-55 should therefore be negligible. We are already at the stage where we have to consider how much jute is to be grown next year. Our aim as usual should be to achieve that happy state where there is neither too little nor too much. Overproduction would mean low and uneconomic prices for our cultivators, while shortage of jute making prices high for markets, losses which Pakistan cannot afford. After careful consideration, my Committee have recommended that we should aim to have at our disposal about 60 lakh bales, including the carryover, for next season. The method of arriving at this figure has been made known to the Jute Board, who are, I believe, in general agreement with it.

"We as a Trade Association have it in our power to advise regarding the size of the crop, but beyond this we cannot go. The next and the most important step lies with the Government of East Bengal. It is necessary that a careful study is made by Government of overseas and Indian requirements, of the average yield per acre in different areas and of the percentage of Tossa and White jute necessary to satisfy world demand. Overseas countries have due to the shortage of good quality jute and the need to cut down cost of production, learned to use additional poorer quality jute. This, however, does not mean that we should relax our efforts to grow better quality. It is only by maintaining our standards as high as possible that we shall be enabled to compete against the menace of substitutes and also to earn more foreign exchange. We are aware of the plans of the Central Jute Committee to improve jute yield and to give us better strains of jute plants. Much remains to be done, however, to bring their plans for research to fruition. It has taken two years of meetings of the Committee before they were able to settle on the site and commence building of the new Research Institute. I understand that import licences have not been granted for equipment essential for the running of the Research Laboratories, nor have we yet managed to obtain the services of a qualified Director of Jute Research. We would urge the Central Government to give the top priority to the establishment of the Research Institute. It is a national necessity for no country in the world depends so much on jute as does Pakistan. In the interim a great step forward in the efforts to improve quality can be achieved by the East Bengal Government who should endeavour through volunteer parties to better the retting facilities available to cultivators. Much deterioration of quality is due to retting in unsuitable stagnant water, despite the fact that running water is nearby or that cleaner tanks are possible.

Loss on Government Stocks

"This Association would be among the first to be critical of Government's policy if we thought it were at fault. We feel therefore that it is only right if we speak out for the Government against unjustified criticism. Jute Board stocks were sold in April and on paper Government had lost Rs. 84 crores. We maintain, however, that this was not in fact the extent of the loss as, if Government had not purchased jute and thereby indirectly subsidised the cultivator, they would have had no alternative but to abolish or drastically cut the export duty. This was at that time Rs. 35 per bale and would have meant a revenue loss of about Rs. 4 crores. Regarding the price at which the Jute Board jute was sold, we must remember that it was stored in most inaccessible places and had been kept for more than a year. The sale could only have been made while the market was rising and it is felt that the Chairman did sell in a most businesslike manner by taking advantage of the rising market and pressing the

prices of the Jute Board sale higher every day. We know of very few lots of Jute Board jute which have changed hands locally at a profit to the original buyer and that the price obtained was actually good is further proved by the fact that some purchasers have still not taken delivery.

Future of Jute Board

"We understand that there is under consideration a proposal to abolish the Jute Board or severely to cut down its staff. We agree that it is unnecessary to maintain a large establishment at Narayanganj and we support the view that anything which tends to restrict the free movement of trade should go. In a trade as large and important as ours, however, difficulties always arise which require the immediate attention of Government. The need is always there, therefore, for constant liaison between Government and trade. There is the necessity for co-ordination between Customs, Treasury, State Bank, railways, ports, shipping agents and all other ancillaries which are necessary to keep the trade moving. Internal freight rates are still too high; market arrangements can be improved; export control needs streamlining. It is essential to Pakistan's economy that Government have the proper guidance with regard to its jute policy. Such functions can only be performed by a high ranking officer who is on the spot to consult the trade and having himself an intimate knowledge of the working of the trade and of the day-to-day position of the jute and jute goods markets. It is therefore the strong recommendation of this Association that Government retain at Narayanganj as Chairman of the Jute Board a senior administrative officer with a rank not less than that of a Joint Secretary in the Central Government.

"One method by which we strongly advocate that the work of the Jute Board can be cut down is in the realm of licensing. Licensing of jute exports was introduced when Government decided to levy a licence fee of Rs. 2-8 per maund on kutchha bales. This fee was abolished in March and we were surprised that licensing was not abolished at the same time. The only purpose served by licensing at present is to maintain an additional check that the price at which jute has been sold is in line with market rates. This function is already performed by the State Bank and therefore the procedure amounts to unnecessary duplication. The old destination quota system worked very well and we see no reason why we should not return to it.

"The Dacca-Narayanganj Chamber in consultation with this Association is at present working on a Memorandum which will give detailed suggestions to Government regarding speeding up of the export trade control procedure for jute. The paper will cover all aspects of procedure from the moment the jute is packed and ready to leave a bales' godown up to the time it has been shipped and payment drawn. While the scheme is under preparation, I would, however, like to make one or two observations regarding the various Government departments, whose work it will cover.

Operation of State Bank

"We have had the pleasure recently of meeting Mr. Abdul Qadir, Governor of the State Bank, and, as we pointed out to him, although the machinery for the smooth working of the trade in its dealings with the State Bank exists, the desired standard was not being achieved. This, it was felt, was mainly due to the long distance we were from the Central Directorate. We were assured by Mr. Qadir that the officers of the State Bank stationed at Dacca and Chittagong were given sufficient powers to deal expeditiously with E.P.C. forms, remittances against claims, remittances of dividends etc. Our experience, however, seems to prove that this is not a fact or that the officers concerned are not using the powers which have been granted to them. We further pointed out to Mr. Qadir that it is essential that the State Bank, before issuing instructions affecting the trade, should always consult either the trade or, if the matter is confidential, at least the Jute Board. On one occasion all exports to Chittagong were held up for three days due to an order being issued by the State Bank without consultation with the trade. A new order has now been issued which contravenes the terms of the overseas contract on which we work, and has held up payment for jute which had already been shipped. This action is neither in the interest of the trade nor of the country and we would again stress the desirability of consultation before issuing instructions affecting the trade.

"The Customs procedure has shown some improvement of late. Amongst the suggestions which will be embodied in the Memorandum will be one, however, which will simplify export of jute through Land Customs stations. It is to be suggested that exporters be allowed to deal only with the Customs House situated at their head office and that a "B" Form system for Land Customs be introduced in the same way as Sea Customs. Without going into details, this will work by our agencies merely submitting a "B" form to the Customs officer at station of despatch while all the detailed documentation will be carried out at Narayanganj, the station at which nearly all head offices are situated.

Port Organisation

"I now turn to the question of port organisation as it affects the working of the jute trade. For the past two years this Association has advo-

cated that it would be in the interest of the trade and the country if the pooling system at the ports were progressively abolished. This contention is, we believe, supported by the Jute Board and by the Port Director at Chalna, but we have as yet not been able to convince the railway, the Chittagong port authorities or the Conference, lines, that the time is ripe for this move. Under the pooling system, shippers cannot give the desired service to their overseas customers by guaranteeing them shipment on named vessels which are due to arrive at their ports of destination on specified dates. Under this system when jute is shipped from our press houses, we lose control of it completely and find ourselves faced with bills for demurrage and removal charges due to causes completely beyond our control. At Chalna ocean-going vessels have arrived and stayed for 10 days waiting for a full load and nearly 14 ships waited for more than one month before pulling up anchor. This means that our customers had to wait for one month more than was necessary to get their jute, due only to the manner in which the pooling system is operated. As shippers we get very little service from ship agents, as they are aware that if they bring their vessels into Chittagong and wait their turn they can get a full load of jute no matter when they deliver it to overseas customers.

"This state of affairs is having serious repercussions with our buyers overseas and it is most certainly the desire of all of them that the pooling system be abolished as early as possible. We do not for a moment suggest that the pooling system at Chittagong can be completely abolished in a day, but we are of the view that jetties facilities there have improved sufficiently to allow a progressive return to the normal procedure in vogue at ports throughout the world. We, however, see no reason why Chalna should not discontinue with pooling immediately as the overseas loading system practised there presents no difficulties providing all concerned carry out their responsibilities in a proper manner. There had been a decision by the Government to move the anchorage at Chalna to Mangla. We reiterate our view that it is an urgent necessity for Government to make up its mind regarding the final allocation of Chalna soon so as to enable the anchorage to be provided with jetties, storage space, Customs facilities, adequate water supplies, railway lines and other items essential to ensure speedy and efficient import and export of goods. We believe that even now, though the decision to move to Mangla had been made some months ago and it is necessary to commence the move during the fair weather, the Port Director has not yet been given the necessary authority or the equipment to enable the change to be made.

"Overseas and Indian mills are carrying good stock and can afford to negotiate for their supplies freely from a position of strength. In addition the price at which the mills can sell manufactures does not warrant them paying higher prices for jute. On the other hand our sellers feel that as the crop is small there will shortly be a squeeze on jute and buyers must eventually pay higher prices. Shippers have been caught in between buyers and sellers and it will probably surprise some to learn that we cannot buy in Narayanganj market today except at a loss of about £3 per ton on our selling price."

NEW AMERICAN DECORTICATING MACHINE

A NEW American decortiating machine called Banproma (Bast-fibre processing machine) is claimed to be different from any other put on the market or for which a patent has been sought. While all other decorticators crush or break the canes in order to separate the fibre from the wood, this one keeps them intact until the fibre or ribbon is separated from the wood. By this procedure, the fibre is not spoiled. It is not necessary to strip the leaves off the canes, as this is done by the machine; the mincing of the wooden core is done after the ribbon is peeled off. The canes are fed in bunches, tip first. The machine is intended for small and medium-sized farms and works in the field, though it can be used as a stationary appliance. It throws out the wood particles, leaves and fibre ribbons at the same time; but, while wood and leaves fall to the ground and remain there as fertiliser, the ribbons are thrown against a catch-bar, where they hang until removed by hand. It is necessary to move the machine along the field so that the chaff is evenly distributed; otherwise, if left in heaps, it will retard the next growth. The first series of the machine is to be moved along the field either by manpower, jeep or tractor. The next series will be built for self-propulsion in conjunction with or independent of the decortiating operation. This feature will be optional at an additional charge. Since different soil and climatic conditions produce different results, it is difficult to quote exact production figures on a weight basis. The number of cuttings for ramie, for instance, varies according to climatic conditions and precipitation in individual countries. The machine works at a speed of 1.8 metres per second, which means that, theoretically, 108 metres of canes fed in an uninterrupted line end to end can be decorticated in one minute. Besides decortiating ramie, the machine will handle kenaf or jute equally well, although the canes of these two fibres are considerably longer and thicker than those of ramie. It is 11 feet long, 5 feet 3 inches wide, 4 feet 3 inches high, and weighs 1,500 lbs.

COMPANY AND PUBLIC NOTICES

THE COIMBATORE SPINNING & WEAVING COMPANY LTD.

COIMBATORE.

NOTICE.

NOTICE is hereby given that the 65th Annual General Meeting of the Shareholders of the Company will be held on Thursday the 31st December, 1953 at the Registered Office of the Company at 10 A.M. for the following purposes:

1. To receive and adopt the Directors' Report and Audited Balance Sheet as on 30th June, 1953 and Profit and Loss Account for the year ending 30th June, 1953.
2. To elect Directors in place of those retiring by rotation and are eligible for re-election.
3. To appoint an Auditor or Auditors for the ensuing year and fix his or their remuneration.

By Order of the Board.

For THE COIMBATORE SPINNING & WEAVING CO. LTD.,

(A) Repayable at par between the years 1924 and 1942 in instalments of not less than Rs. 100.00 per annum by drawings to be held in June of each year. (B) But before 21st December 1940 Also redeemable out of a cumulative sinking fund of 10 per cent per annum by purchase at any price less than par or by annual drawings at par. (C) Redeemable at any time in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah, or at January 1945 or every seventh year thereafter. (D) These Bonds are deposited with Imperial Bank of India as security against overdraft. (E) The holder of these Debentures have the right to convert them into shares of Rs 10 each at any time after the 1st January 1945 and thereafter on giving 3 months' notice the Bonds being exchangeable for 30 Ordinary shares. (F) Redeemable (a) at 102 per cent on 1st October 1974 or (b) at the option of the holder of the undertaking in the event of voluntary liquidation or of the undertaking being purchased by the Government of India or of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent. (G) The holder of each Debenture has the option of converting the same into Ordinary Shares of the value of Rs 10 payable in cash and this option expires at the end of 3 months from the date of the option of repayment by the Company. (H) To be redeemed at a premium of 10 per cent on 1st January 1954 or at the option of the holder of the undertaking to be made after full term.	(I) Up to and including the year 1943 the holder may at any time convert into fully paid Ordinary Shares at the rate of 1 share of Rs 10 for every 10 shares of the stock. (J) Ordinary Shares allotted with such stock to be divided par value in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised. (K) Holder, if the fully paid up convertible Debenture may at any interest date up to 1st January 1945 convert into fully paid up Ordinary Shares each £50 debenture, for 40 Ordinary Shares of Rs 10 each on 1 month's notice. (L) This option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946. (M) Repayable at par by 1986 by annual drawings on 1st July each year. (N) Option of redemption in part out of gross profits every year up to a maximum of Rs 1,50,000. Notified to be redeemable at par on 1st November 1945. (O) At par by 12 annual drawings. (P) Option of repayment on a 6 months notice after 31st July, 1954 at Rs 105 per cent Prem. (Q) At all or any of this Debenture on 31st December, 1960 or on any subsequent interest date. (R) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1960 at a premium of 10 per cent on Calcutta monthly notice.	(S) Option of redemption within 3 years from the date of issue on one month's notice. (T) The Company has the option to repay all or and at par giving notice for 3 months expiring on any interest date after the 31st October 1940. Any time on or after 1st October, 1940 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such date. (U) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1952 on three months notice. (V) May be redeemed on 31th June 1952 at 102 per cent Prem. On 31th June 1957 at a premium of 1 per cent or on 30th June 1960 at a premium of 1 per cent. (W) Redeemable at a premium of 5 per cent on 31-12-54 with option to redeem on 3 months notice on any interest date after 31-8-55 at same premium. These Debentures are not to be transferred by Transfer Deeds. (X) At 105 per cent premium between 1-1-60 and 31-12-64. (Y) Any time on six months notice. (Z) At par on or after 1-1-54. (AA) Repayable at par on 31-12-54 with the option of redemption on 31-12-54 or on any subsequent interest date at a premium of 10 per cent. (AB) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of redemption at any time after expiration of 5 years. (AC) N=Nominal

COAL COMPANIES

O. Po. F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.
