Raw Jute : With practically no business passing in the market for manufactured goods mills have shown little or no interest in raw jute. Early in the week a small business was reported in supervised standard Old Crop at Rs. 30-8 basis Bottoms for Assam. Old Crop Marwari packing was done at Rs. 26-12 basis Bottoms for Upper Assam. Later New Crop was reported done at Rs. 28 basis Bottoms for Assam. The position is not encouraging much business. There is keen for business but are not getting much business. There is position to cut prices in the hope of getting business. There is practically no interest in Old Crop from agencies on offer and sellers are not offering much New Crop from Upper Assam. There are fair quantities of Old Crop being offered from local bazars but mostly jute from the western districts of Bihar. Considerable quantities of Pakistani jute are being offered in Calcutta but the bulk is Pakistani jute. Board jute and, as the standards are irrelevant, those of Indian New Crop, mills are selling higher than those of interest. No business is reported in Pakistani jute ex Pakistan, but business was reported in Pakistani MC and TC cuttings ex Calcutta.

at Rs. 70. Quotations on Wednesday morning were as

Assam and Northern jute ex Calcutta godown is quoted at Re. 1 per moun less than the price ex agency. Imports into Cossipur continue large and consist mostly of Old Crop jungli jute; imports of New Crop from Northern Bengal are increasing.

Mofussil : In Upper Assam imports are coming in very slowly but in Lower Assam and in Northern Bengal they are more plentiful. The condition is reported to have improved but in Upper Assam quality is said to be poorer. Rivers have fallen.

In Pakistan imports of New Crop are arriving in good quantity and are all being taken up at steady rates by local buyers. Imports are expected to continue at the present rate until after Bakr-Id. There has been good overseas enquiry for high grade Old Crop tossa but buyers are unwilling to pay the prices being asked for New Crop, either with or without tossa. It is reported that New Crop arrivals contain more moisture than there has been in Pakistani jute for a very long time.

(FROM OUR OWN CORRESPONDENT)

Boston, By Air Mail

ALTHOUGH business between normal U.S.A. importers and Calcutta-shipper channels reported continues very active, it may be that through other channels, such as consignments business between Calcutta and this market, the volume of actual business being done with Calcutta is more than the statistics seem to reflect. However, burlap consumption continues below expectations. Burlap piecegoods and burlap bag buyers for some time have been regarded as burlap piecegoods buyers that should have resulted in more burlap being consumed. The spot and ahead market was moderately active last week; and although prices eased slightly, there were no discernible signs of any appreciable weakness in this market. Sharp declines in commodities generally, both domestic and imported, however, caused some nervousness. The situation generally seems to be in fairly strong hands. The serious situation in France has sharply curtailed burlap offerings from that country. Other Con-

mental countries continue to offer; but for the most part, October shipment is earliest.

U.S. consumption for July was disappointing, being 3 million yards below June and 11 million yards less than last July (excluding sandbags). U.S. stocks at the end of July were estimated to have declined by 6 million yards during the month and were a little lower than where they stood a year ago. At an estimated 195 million yards at the end of July, they were sufficient for around 34 months' consumption at the current rate. Appearing below are two tables which include the July figures—(1) based on members' reports to the Textile Bag Manufacturers' Association and the Burlap & Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

NEW YORK BURLAP FUTURES TRADING TO START ON 9TH SEPTEMBER

The board of governors of the Commodity Exchange, Inc., of New York has set 9th September, 1953, as the date on which trading in burlap futures will be initiated on the Exchange, it was announced a few days ago. Trading in burlap futures will be conducted between the hours of 10-45 a.m. and 3-05 p.m. and the first delivery month will be November 1953. Other delivery months will be February, May and August 1954. Margin requirements have been fixed at \$500 per contract and at \$200 per straddle transaction. The trading unit in the burlap futures contract will be 50,000 yards in 25 bales, the contract basis being 40"-10 oz. standard Calcutta burlap. With the introduction of transactions in burlap futures, next month, the number of commodities dealt in on the Commodity Exchange will be increased to seven. Futures trading is currently conducted in rubber, lead, tin, zinc, copper and hides.

THE FOREIGN JUTE MARKETS

ORDER BOOKS WELL FILLED

(FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.

THE feature of the Dundee jute industry at the moment is the very satisfactory state of the order books of spinners and manufacturers. There is plenty of fresh business about, but buyers are forced to accept delivery some months ahead, and already a fair volume of trade has been negotiated into next year. On the other hand, reports from most Continental countries state that business is very quiet again, and while producers are busy enough buyers are hesitating to place new orders for delivery any distance forward. Competition is keener and prices are being shaded in the case of decent sized quantities.

The raw material is quiet and values are being more or less maintained. Some shippers are anxious to get on and occasionally they are offering to accept £1 or £2 under the general market quotations. Mill Firsts are usually quoted at £103 and Mill Lightnings at £93 for old crop, but £102 and £92 respectively would go through. New crop is ruling quite firm at £105 and £95 for Firsts and Lightnings, and not many sellers there at for September-October, c and f. U.K. Good Marks of Daisee-2/3 are quoted at from £92 to £93 and grade at £10 less, while grade Tossa-2/3 is from £102 and Tossa-4 at £92 to £93, c and f. The general feeling in regard to raw jute is that Pakistan will be able to maintain prices at round about their present levels for some time, with possibly an advance taking place in the event of any spate of buying when the new crop becomes more freely in demand.

Dundee spinners are all behind with deliveries of yarns on contract and they are very reluctant to sell further. The shortage of supplies continues and the position of local manufacturers is serious. Prices for all descriptions of yarns are very firm, with common 8 lb. cops and 8 lb. spools at 15.58d per lb. Continental spins are offered at from 1d to 1½d per lb. more, but only a small business is being done. Calcutta goods are moving around recent levels at 82s 3d for 10 oz. 40 in. and 60s 9d for 7½ oz., August-September, and 82s 0d and 60s 9d October-December, with "B" twills at 174s 3d and 175s 9d for the respective positions of shipment, all f.o.b. Calcutta.

JUTE GOODS MANUFACTURE IN EGYPT EXPANDING

Commenting recently on the expanding manufacture of jute goods in Pakistan, the Dundee Press Current says: "Pakistan is not alone in the extension of jute goods manufacture. It is said that Egypt is planning for near self-sufficiency in her bag requirements during the next few years. The Egyptian Jute Company—the only jute mill in that country—has invited US capital investment for purposes of expansion, it is reported. The present factory has 110 looms, and supplies about 8 percent of Egypt's home requirements of fibre bags, the balance being imported. The company proposes to increase its plant to 1,100 looms at a cost of approximately £E3,000,000 with a view to attaining self-sufficiency in twill and hessian cloth. The Egyptian Government is said to have promised all possible co-operation to attract foreign capital participation."

JUTE INTERESTS' VIEWS INVITED BY ENQUIRY COMMISSION

Corporate bodies, associations or individuals connected with or interested in raw jute production, the jute industry and the gunny trade have been invited to send to the Jute Enquiry Commission any facts or views relevant to its terms of enquiry that they may like to present. The functions of the Commission were published in a notification of the Central Ministry of Commerce and Industry in a Gazette of India Extraordinary dated 8th August (printed in Capital last week). Copies of the notification can be obtained from the Secretary of the Commission. The Commission will shortly issue a questionnaire to all those who are interested in the subject and would like to reply to it or to give evidence before the Commission. Communications in this regard may be addressed to the Chairman or to the Secretary of the Commission, Room No. 147-B(II), North Block, Central Secretariat, New Delhi.

PAKISTAN JUTE TRADE PROSPECTS IN 1953-54

According to a Press Note from the Pakistan Government the position of Pakistan's jute exports during the season ending June 1953 has been quite satisfactory. The total sales to the end of June 1953 are said to be about 67,000,000 bales, of which about 53,000,000 bales have been exported up to 30th June. The Note quotes these figures from the monthly Jute Survey for July 1953, issued by the Department of Trade Promotion and Commercial Intelligence. "The Survey says that the total value of jute exports during the season 1952-53 amounted to Rs. 57 crores. From the standpoint of the value of the total exports, Pakistan has earned far too little from her jute exports during 1952-53 compared to the 1951-52 season, which brought Rs. 99 crores against exports of only 48 lakh bales. This marked decline in earnings is obviously due to low prices of jute prevailing in the first half of 1952-53.

More Exports To U.K. and U.S.A.

"During the first 11 months of the 1952-53 season, India imported about 13 lakh bales while the United Kingdom's imports during the same period amounted to about eight lakh bales. In the previous season—1951-52—India imported 16 lakh bales while

the U.K., obtained only 5 lakh bales. This shows that during 1952-53 season, India has bought less jute from Pakistan while the U.K.'s purchases have improved. The Jute Survey further reveals that Pakistan's jute exports to dollar countries which totalled only 171,043 bales in 1951-52 have improved to 5,53,868 bales during the first 11 months of 1952-53. In regard to carry-over stocks the Survey points out that out of the total exportable surplus of 81,00,000 bales (production plus carryover from 1951-52 season) Pakistan has exported 53 lakh bales. This will leave a carry-over of 28 lakh bales.

Prospects in 1953-54

"The Jute Survey forecasts optimistic trends in jute trade during 1953-54. Limited jute production combined with prospects of firm prices are expected to bring large earnings of foreign exchange during 1953-54. The acreage for 1953-54 crop in Pakistan has been so fixed as to yield a limited quantity of jute which, according to provisional estimates, is not expected to exceed 42 lakh bales. Preliminary estimates about the size of the crop do not, however, exceed 3,500,000 bales. Even if this estimate is provisionally accepted, the total available supply of jute in Pakistan during 1953-54 season will be about 63 lakh bales (35 lakh bales plus 28 lakh bales), says the Survey. The production of jute in India during 1953-54 season is expected to be about 30 lakh bales, according to Indian jute circles. The total world supply of jute during 1953-54 season will be about 93 lakh bales against the normal world demand of 100 lakh bales. Both supply and demand will thus be well balanced, the Survey concludes."

I. J. M. A. PRODUCTION IN JULY

The Indian Jute Mills Association reports the total production of manufactured goods during July as follows:

Description	Quantity
(A) Total reported production of manufactured goods exclusive of all Govt. orders.	
1. Twist and Yarn	
(a) For sale	1,266 tons
(b) All other including that used in sewing bags	803 tons
2. Canvases	92 tons
3. Gunny Bags (Tonnage exclude sewing twist)	2.3 lakh yds.
(a) Hessian	860 tons
(b) Sacking	31.0 lakh yds.
(c) Sacking	19.9 " Nos.
4. Gunny Cloth	37,321 tons
(a) Hessian	892.6 lakh yds.
(b) Sacking	368.7 " Nos.
5. Other manufactures (including ropes)	335 tons
6. Total production (above figures combined)	
(a) All kinds	75,925 tons
(b) Hessian (both bags and cloth)	12,67.4 lakh yds.
(c) Sacking	9,47.9 lakh yds.
(d) Canvases	2.3 lakh yds.
(B) Total reported production of goods manufactured on Govt. account.	
7. Sandbags	Nil
8. Scrim Cloth	46 tons
9. Hessian Bags and Cloth & Canvases	1,892 tons
10. Sacking Bags & Cloth	70.1 lakh yds.
11. Ropes and Twine etc.	472 tons
	18 tons

DEVELOPMENT OF CALCUTTA TEA AUCTIONS URGED

MR. K. R. BHANSALI'S ADDRESS TO MERCHANTS' ASSOCIATION

IN his address at the annual general meeting of the Calcutta Tea Merchants' Association on 13th August, Mr. K. R. Bhansali, chairman, said: "Happily for us all, the protracted tea crisis seems now to be a matter of the past and some semblance of order and stability has come to the tea markets of the world. The revival in prices witnessed in the beginning of this year has since gathered strength and the main auction markets are giving a more or less even reception to the teas forthcoming for sale. The common grades have benefited more from this revival. This is as it should be, because these teas had suffered most in the downward drag of last year. It would appear that at the present level of prices the majority of producers should be able not only to make both ends meet but to earn some profits although the liabilities that accrued in the course of the last recession may take time to wipe out. Leaving this consideration aside, I consider the present prices to be satisfactory. Now that the initial spurt of the revival has also spent out, it may be regarded that this price level is an appropriate one at which trade could function. As traders, the actual level of prices is not of such consequence to us as price stability which a well-regulated commodity market as tea should normally ensure. This price should be such as renders production regular and remunerative and facilitates off-take by different consuming countries. After all, tea drinking is a cultivated habit and the more we keep its place as the cheapest drink next to water, the more chances we have of making it popular.

Production and Demand

"This leads to the question of supply and demand in the season that is now on. An important cause of last year's crisis was the disturbance of the demand and supply relationship apart from other reasons such as the quality of the manufactured tea, credit stringency, distribution and price control, high production costs and many more. At the beginning of the last season, we were very much ahead of the 1951-52 output and if this race had not been halted in time by a judicious move for finer plucking, the brake may not have been applied so well. According to figures now available, Indian production, which in 1951-52 reached 629.2 million lbs., closed at 617 million lbs for the year 1952-53, taking figures for the financial year of April to March.

"Since then, many things have happened. Producers in North India have adopted a crop regulation scheme which means control of output by finer plucking and stick on quality. The South Indian output is currently behind the figures of the comparable period in the last season. The International Tea Committee's statistics have placed the decline in Ceylon's output in the 1952-53 period at 12.5 million lbs. and of Indonesia's at 20.25 million lbs. Total world output in 1952 is placed at 1,178 million lbs. against 1,229 million lbs. in 1951. Actually, the present final figures show a deficit in supply over the calendar year, 1952. The regulation scheme is expected to reduce Indian output by a 50 million lbs. and if, as expected, the output records of Ceylon and Indonesia in the 1952-53 season were not to exceed, world production should not exceed that of last year. Blister blight, increasing labour costs, and other such factors may all augment the deliberate choice exercised by producers in North India in favour of quality to keen world supplies to the correct side of demand. The Government of India's decision to maintain the export quota allotment for the new season at 115 percent of the standard exports may also automatically adjust actual exports to the maximum we have sent out of the country so far while the fact there is no baggage of surplus quota hanging over the market in the new season is an additional factor on the positive side of stability in tea.

"On the demand plane, stocks in the United Kingdom are of the lowest in recent times and the packet trade there seems at last to be aware of the consumers' taste, offering hopes of orderly replenishments from this market. Our overall exports in the last season were very nearly at previous level, judged by the quantities exported and we gained also some ground in markets such as Australia and Egypt. We may hope to go farther in these areas while built-up stocks in the United States, Canada and the Eire are likely to have run out. Although the Persian tangle continues, the cotton-for-tea deals with Egypt may facilitate better off-take from that country if energetically followed up by the trade. Some of the Continental countries such as West Germany have reduced tea import duties and with the increased efforts being made from the London end of the trade to sell more in the Continent, there is not much fear that demand may not be sustained.

The Calcutta Market

"I consider however that the crisis of last year has some important lessons for the future, from the point of view of development of the mechanism available at Calcutta for the disposal of our teas. In the last season particularly and generally since London reopened, producers all over felt, mainly on the pre-war record of London and the expertness gathered there, that London may protect them

from the vagaries of wide price fluctuations. Looking back over the quantities handled in the last year, the trade stock carried and the prices fetched for teas of comparable description at different centres, I do not find this hope to have been fulfilled. Very clearly, the offtake capacity of the London market in its new conditions has not been assessed; this is the reason why large quantities went to London and depressed prices for long. Calcutta and Colombo often paid the producers higher prices than London and in the light of this experience and the delay that normally takes place to realise payments against shipments made to the London auctions, the building up of the Calcutta market appears to be an urgent necessity. Ceylon has in the last year disposed of more than 70 percent of her crop at Colombo and has introduced certain ceilings on exports to the London auctions of the high and the medium qualities this year. We have dispensed with even the bare restrictions we had hitherto on the maximum quantities for shipments to the London auctions and the quantities forthcoming for sale now at Calcutta will put a question mark on our professions to the building up of Calcutta. Private sales and forward contracts usually remove appreciable quantities of the top grades from here and with the free option, estates now have in the matter of off-taking at Calcutta or London the overall 115 percent, it would seem that the idea of building up Calcutta as a bigger centre is not going too far.

More Warehousing Accommodation

"Warehouse position, which is the despair of those pleading to offer more at Calcutta and the strong point of others who oppose it, continues as before. In the last season only nine temporary sheds enabled handling of the teas arriving for disposal at Calcutta and while clearances slowed down owing to temporary strikes in the steamer flats or warehouses or restricted or paced offerings, accumulation became serious. Two of the sheds used last year are no longer useful and the new Sale Tea Warehouse is not yet ready, all of which go to show that the efforts in increasing warehouse facilities at the port have been tardy. Other as-facilities at the port have been tardy. Other aspects of competition which London as a terminal market offers or may offer in future such as 90 days' prompt discount facilities by banks and so on will also be seen on closer study to be intertwined with the question of efficiency of warehousing at some stage or other. It must therefore be a question of the highest priority for the new Tea Board to examine this problem and also advise the Government sufficiently ahead of each season of the sale policy that India may adopt, keeping in view the object of building the Calcutta auction centre further by quick and imaginative moves.

"In the day-to-day administration of the warehouse it is a matter of satisfaction that the warehouse agents have been generally co-operative and helpful. The manner in which this work has been carried on by them should reassure the Port Commissioners and the Government that the money which may be spent on extra space will be properly utilised by the trade. There are no doubt a few directions in which we may like things to improve such as the avoidance of casual delays in effecting deliveries, introduction of a system of check weigh-ment for teas delivered by rail and so on and where we realise that considerations of practicability are all important. It would however be desirable that all tea waste despatched from factories be received by a central bonded warehouse controlled by the Government from which releases may be made direct to steamers against orders of individual ship-owners. If this should be done and the undesirable teas totally excluded from auctions, the Calcutta market is sure to benefit therefrom considerably.

The New Tea Board

"These will be some of the problems which no doubt will be tackled by the members of the new Tea Board, when it is eventually constituted. When the new Act setting up this Board was in the discus-sional stage, it had been stressed that the industry and the trade should be taken into greater confidence and the Board entrusted with well-defined responsibility. Now that the Act setting up this

For the attention of Far-sighted Industrialists

YOUR OFFICE

You must be among the lucky exceptions if your office organisation provides all the service you require for the proper running of your affairs. Generally, far too many men are still employed in the soulless and unsatisfying work of transferring repeatedly bits of information from one sheet of paper to another, for someone else to work out, in time, information of little but historical value. Methods are deep in a series of long-established and rutted, while up-to-date facts and figures, which the modern business man urgently and constantly requires for guidance on important decisions,

are virtually unobtainable. If you are not among the lucky exceptions, you must have many times to have your office procedure analysed, unnecessary effort eliminated, your real needs in the way of facts and figures set down, and then a scheme prepared and implemented to provide them quickly and accurately, with a minimum of effort and expense. Then only, you feel, you would be in full control of your business, and as an important by-product, your staff, employed on more interesting and responsible work, are likely to co-operate better than in the past.

Board has become final, we the trade as represented in this Association, hope that the Government will strive its utmost to make of the new Board a truly competent and informed organisation that shall grapple with tea's problems effectively and in time. This Board has certainly more powers than its predecessors, and we hope that with understanding and patience, it may grow into a machinery for development that it should normally be.

Tea Promotion

"The importance of promotion work, which is among the items of the Board's work in the future, has acquired a new emphasis recently in India. Although consumption estimates for India have varied from 150 to 200 million lbs., it is generally agreed that consumption is rising. I would stress that in progressing this work, it is not new ideas that are so wanted as a new enthusiasm to execute old ideas. Press advertisements or radio publicity have indeed limited scope today in India and methods that carry tea to the door of the prospective customer such as campaigns by organised tea centres and mobile canteens should have the first importance.

"The vacuum in the international field following our withdrawal from the I. T. M. E. B. should be closed as we have so far made substitute arrangements only in the United States. It seems to be the feeling now that there is considerable force in the contention that tea sells in blends. The arrangement made in the United States recognises this position and it has some advantages over what we were doing so far, as we are to be directly associated with the propaganda machinery hereafter. Apart from enabling an adequate number of our personnel to get trained in methods appropriate to each market, we shall to a great extent be doing the job ourselves instead of having it done for us by others however competent they be. In the process, local talents of each country will be associated with us in a common endeavour. The Commerce and Industry Secretary who recently toured some of the other main consuming markets would no doubt have made his assessment of the needs and possibilities of these and I therefore hope that arrangements will be made soon in these also, associating the trade closely in a direct partnership with India in the expanding work of tea promotion.

Tax Amendments

"Another subject which I desire to briefly touch upon is the recent amendments made in respect of the excise duty and some development in the field of sales tax as affecting our members. With effect from the middle of April, the excise duty levied at the source has been reduced to one anna while the teas being cleared from the packers' premises have to bear an additional 3 annas per lb. While this is

some relief to the producers and gives encouragement to loose tea, which in the context of the large numbers in the lower income groups in India has a definite place in the tea trade here, procedural difficulties of the amendment are serious. Exemption of samples and sample chests from the rate of levy proper to packets; enforcement of simple methods of proof regarding payment of duty; simplification of the number of forms to be filled in; all these continue to be matters of urgency. The filling up of many forms and prior permission to make clearances even for export do all mean a lot of trouble which augurs to grow."

NORTH INDIAN TEA CROP REPORT

The following summary of crop and weather telegrams have been received for the month of July 1953.

Upper Assam.—Weather generally seasonable but abnormally wet in Sonari and North Lakhimpur, and excessive rain interfering with outturn in Doom Dooma; black rot prevalent in Sonari; outturn last month below normal; about normal; immediate prospects fair to good.

Central Assam.—Weather conditions generally normal but unfavourable in Golaghat; black rot prevalent in Moran; outturn last month poor to about normal; immediate prospects fair but bad in Golaghat.

Lower Assam.—Weather generally seasonable; rainfall for the month has been deficient in Nowgong; outturn last month about normal; immediate prospects fair to good.

North Cachar.—Weather generally favourable but abnormally wet in North Cachar; blight not so severe in Lakhimpur; red spider blight lifting in Happy Valley but severe in some districts of North Cachar; outturn last month poor to about normal; immediate prospects fair to good.

South Cachar.—Weather seasonable but rainfall in Chargola is much above normal for the season to date; red spider blight prevalent in Chulla Bheel; black rot and helopeltis prevalent in some districts of Halakandi; outturn last month about normal to good; immediate prospects fair to good.

Eastern Doars.—Rainfall for the month has been deficient; weather unfavourable; the outturn to date is considerably under last year; immediate prospects fair; blights negligible.

Western Doars.—Outturn last month about normal; immediate prospects good; weather wet; helopeltis prevalent in some districts.

Darjeeling.—Outturn last month poor; immediate prospects fair; wet weather is interfering with outturn; blight blight prevalent.

Teral.—Crop slightly behind last year; prospects fair to good; signs of black rot; weather abnormally wet during day; paucity of sunshine.

COCHIN TEA SALES

At Internal Sale 'P' held on 11th August, approximately 1,70,000 lbs. were offered. There was a good general demand at prices which tended easier on last rates except for clean black exportable types which together with the better liquoring kinds, were fully firm to dealer.

The Export Quota market has eased to 16 pias at which price business has been done.

Dust Sale 'Q' will be held on Tuesday 25th August, 1953.

LONDON TEA SALES

There was generally improved demand for 24,040 packages of Ceylon teas catalogued last week. Where quality was better, prices were often 4d. dearer. Medium and colour sorts held steady at previous levels but among Broken Orange Pekoes and Broken Pekoes, where quality was indifferent, prices were irregular and sometimes easier. Export types were in better request than recently, mainly it is understood on Continental account. Clean Common Broken Pekoe was nominally quoted at 39d. against 39d. previously. The 4,343 packages of South Indians auctioned met a quiet market with prices irregular and mostly half penny lower.

Quiet demand prevailed for the 12,776 packages of North Indian and other various teas finally put up for auction on 17th August with price movements throughout very irregular. Any colour and useful kinds were well supported at generally firm rates but poor liquoring sorts were occasionally easier. Clean Common Broken Pekoe was indicated at around 38d. per pound against 37d. to 38d. previously. Low Assam Fannings were mentioned at about 40d and good medium Assam Fannings at 42d.

NEWLY REGISTERED COMPANIES

Bharat Mangnese Ltd.—Director, Mr. J. L. Baid, 9, Ramkumar Rakshit Lane. Acquisition of mines and mining rights. Capital Rs. 5 lakhs.

Hind Trading & Minerals Ltd.—Director, Mr. M. R. Bhimsaria, 135, Canning Street. Tea and coffee cultivation. Capital Rs. 5 lakhs.

Chura Properties Ltd.—Director, Mr. F. C. Kothari, 11, Armenian Street. Dealers in land. Capital Rs. 50 lakhs.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August '39 as 100) recorded a further rise of 0.3 percent to 411.1 during the week ended 1st August, 1953, as compared with 409.8 (revised) for the previous week. Compared with the corresponding weeks of last month and a year ago, the index was higher by 1.1 and 7.3 percent respectively. During the week under review, Foodstuffs remained unchanged at 406.4 as the effect of decreases in the prices of gram at Patna (-6%), wheat at Jabbalpur and salt (-3% each) and dal arhar (-1%), was completely neutralised by advances in gur at Muzaffarnagar (+6%), tea vances in gur at Muzaffarnagar and gram at Hapur (+2% each). The index for Industrial Raw Materials witnessed a further rise of 1.1 percent to 492.7, on account of advances in wool in Bombay (+9%), raw cotton and raw jute (+3% each), rapeseed and copra (+1% each) supported by higher average export prices of manganese ore (+23%). Prices of wool at Kalimpong and groundnuts (-4% each), iron ore (-5%), silk, linseed and castorseed (-2% each), however, moved down during the week. The Semi-Manufactures group, on the other hand, fell by 0.1 percent to 366.6 from 367.0 (revised) for the previous week, as a result of lower prices of groundnut oil in Bombay (-8%), linseed oil in Bombay (-6%), goat skins and coconut oil (-4% each), gingelly oil (-3%), castor oil in Madras, cow hides, sheep skins and copper (-1% each). Groundnut cake and mustard oil (+3% each), groundnut oil in Calcutta (+2%), linseed and castor oils in Calcutta (+1% each) registered increases during the period under review. The index for the Manufactures group rose further by 0.6 percent to 371.7 as compared with 369.5 (revised) for the previous week, due to increases in the prices of rayon and silk manufactures (+5%), jute manufactures (+2%), and cast iron pipes (+10%) under iron and steel manufactures. Lower prices of cashewnuts (-5%) and black pepper (-3%), brought down the Miscellaneous group index by 0.3 percent to 693.7.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS.
(Base: Year ended August, 1939=100)

* = Estimated. (R) = Revised.

FINAL LINSEED ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, Government of India, the All-India Final Estimate of Linseed for 1952-53 puts the area and production at 3,394,000 acres and 355,000 tons as against 3,402,000 acres and 316,000 tons of the partially revised estimate for 1951-52. This shows a decline of 8,000 acres or 0.2 percent in area and an increase of 39,000 tons or 12.3 percent in production. The decrease in acreage under linseed has been shared mainly by Madhya Bharat, Madhya Pradesh, Hyderabad, Vindhya Pradesh and Bombay and has been attributed to insufficient moisture in the soil at the sowing time. This decrease has, however, been largely offset by the increases reported by Rajasthan, Uttar Pradesh and Bihar.

Production, however, shows an increase during the current year mainly shared by Rajasthan, Uttar Pradesh and Bihar due to an increase in acreage. This estimate includes for the first time information in respect of the "non-reporting areas" i.e. areas for which forecasts for this crop are not prepared. The "non-reporting areas" included in this estimate are Assam, Jammu and Kashmir which together account for an area of 30,999 acres and a production of 1,330 tons during the current year.

Calcutta Markets

TEA EXPORT AUCTION PRICES EASE A LITTLE

LESS DEMAND IN DUST SALE

AT Export Sale No. 10 offerings consisted of 44,400 packages. Demand was less general than in recent sales and though Leaf grades when they were stylish sold well and Darjeelings continued to meet with good enquiry, most descriptions eased in price. C.T.C. Broken and Fannings were barely steady while Commons were 1 to 1 anna lower. Selected good liquoring BOP's met with some competition but the majority declined by 1 to 2 annas per lb.

Demand further slackened during the small breaks sale and rates of all descriptions eased further.

Quotations.	1953	1952
Clean Common Pekoe	1-13-6	1-13-6
Clean Common Broken Pekoe	1-10-9	0-14-0 to 0-14-6
Medium Assam Broken Pekoe	1-11-6	1-5-0
Best Assam CTC Broken Pekoe	2-8-0 to 2-10-0	

At Internal Sale No. 10, dust offerings consisted of approximately 17,000 packages. There was considerably less demand and the market was easier for most descriptions. An exception to this was Black Leafy Exportable Dusts which were in good demand and were firm. The very best C.T.C. Assams were selling at about last rates, but there was much less enquiry for the majority of C.T.C. teas and they were selling from one to two annas below valuations. The Darjeeling teas offered met with a fair demand and once again small powdery types with flavour were the most popular. Medium Assams, Doars and Commons were irregularly easier by one anna per lb.

Quotations.	1953	1952
Medium Doars Dust	1-9-0	1-3-6 to 1-4-0
Medium Assam Dust	1-9-6 to 1-10-0	2-6-0 to 2-7-0
Best Assam CTC Dust	2-2-0 to 2-3-0	

The offerings of other grades for Consumption in India amounted to 628 packages and were sold at slightly easier rates.

FREIGHT MARKETS STILL WEAK

CHARTERS SECURE OWN RATES

THERE has been some increase in activity in the past week but the market is so weak that Charterers have had no difficulty in securing their own rates. A large number of fixtures were concluded for sugar to U.K. and to India. Fiji-U.K. paid 90s. Queensland-U.K. 108s 9d and Mauritius-U.K. 60s. Tampico-Bombay was fixed at 82s 6d prompt loading with the option of Madras at 65s or Madras and Calcutta 87s 6d. Three vessels were fixed from Java to the same range of ports on the basis of 40s Calcutta or Madras, 41s Bombay, on the basis of 40s Calcutta or Whampoa to Colombo. Rice from Shanghai or September and 48s for was arranged at 49s for September loading. U.S. Gulf to Karachi at 70s for September loading.

Two more ships were chartered at 37s 6d for Coals Chinwangtao-Chittagong, whilst local Charterers arranged tonnage to Singapore at 40s for September loading. Another coal ship has been taken for September loading from Calcutta to Japan at 50s and Charterers are stated to be closely working tonnage for November and December at the same rate although Japanese Owners are indicating one shilling less on unclear terms.

The ship sale and purchase report for April-June 1953 published by a prominent London firm shows a further decline in tonnage values and Liberty ships that fetched £600,000 in January, 1951 are now valued at about £240,000. The pre-Korean War value was about £105,000.

SUGAR MARKET REVIEW

During the week ended 18th August, prices of ready sugar ex-Kantapur delivery were Rs. 30-14

to Rs. 31-8 a maund for ordinary grain and Rs. 33 a maund for big grain. Stocks amounted to 34,000 bags and arrivals were 3,500 bags daily. Sales averaged 3,000 bags a day for the local markets and 1,000 bags outside. Ex-mill delivery rates were from Rs. 28-14 to Rs. 30-8 a maund. The Kanpur, Bombay and Madras markets were steady but there was a shortage of stocks everywhere. There was a small but steady demand from Madras, Tuticorin and Calicut, where prices ranged from Rs. 93 to Rs. 96 a bag. Foreign sugar is expected to arrive in Bombay in the second week of September.

LINSEED

With a general decline prevailing in oilseeds prices there was a marked reaction in the Calcutta market last week and the undertone continued easy. Supplies however were still very scarce largely owing to transport restrictions. Although ready stocks were negligible, there were somewhat keener sellers for forward delivery. Interest from crushers however weakened and business was reported on a very restricted scale. The oil section was dull and prices fell in sympathy with an appreciable decline in groundnut oil. There was also an absence of enquiries. Latest quotations were as follows: Ready Rs. 21-40 per maund; August-September Rs. 21 per maund.

HIDES AND SKINS

The market was steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 11th August and 17th August, 1953)
Cowhides.—Wet salted (Ord.) 70,000 pcs. on the basis of Rs. 8-4 to Rs. 9-12; Wet salted (slaughtered) 8,600 pcs. on the basis of Rs. 12-8 to Rs. 22-8.
Goatskins.—Wet salted (Daisee, Killed) 1,10,630 pcs. on the basis of Rs. 185 to Rs. 375; Assam-Dinajpur-Murshidabad 19,600 pcs. on the basis of Rs. 280 to Rs. 305; Purneah-Kissengani 25,700 pcs. on the basis of Rs. 285 to Rs. 310; Patna (Ord.) 1,700 pcs. on the basis of Rs. 170 to Rs. 240; Pakur 900 pcs. on the basis of Rs. 235 to Rs. 260; Muzafferpore-Darbhanga-Samastipur 5,300 pcs. on the basis of Rs. 255 to Rs. 270.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MISCELLANEOUS COMPANIES—Contd.

O, Po, C and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, P, F, D, G and R indicate Ordinary, Preferred Ordinary, Founders' Deferred, Guarantee and Rebate Shares, respectively. P next to the names of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PERSIA'S NEW GOVERNMENT AND THE OIL DISPUTE

LOSS OF ABADAN MADE GOOD: TEHERAN'S MISJUDGMENT OF PETROLEUM MARKETS

OF all the multifarious crimes Dr. Mossadik has been charged with since last week's "change of government," none has been connected with oil. No one whose statements are reported at this distance has said that one of Dr. Mossadik's greatest disservices to Persia was his handling of the controversy with the Anglo-Iranian Oil Company, with the British Government or with the American mediators. It seems plain that dissatisfaction with the former Premier's oil policies was not one of the proximate causes of his downfall, so there is no reason to expect, at least immediately, a more accommodating attitude from his successors. By implication, perhaps, most of Dr. Mossadik's critics are in fact complaining of the sterility of his oil policy. There would be no sense in bewailing the empty treasury, unpaid civil servants, the lack of funds for development, international bankruptcy and popular discontent without recalling the stoppage of revenues from petroleum, which led to these things. But as long as the new governing party does not realise this, or is not prepared to admit it, it cannot be expected to inaugurate a period of new relations with "the former company." This is not surprising of course, for Dr. Mossadik did not formulate Persia's present position on the oil industry. He came to power after the industry had been nationalised and his only contributions were, in the international field, to make negotiations for a settlement unnecessarily difficult, and in the domestic field, to work out the full implications of bankruptcy. The important thing for the rest of the world is that Persia's oil was nationalised before Mossadik and, after Mossadik, most Persians seem determined that it should remain nationalised. It is from this point that discussion of Persia's future must start.

There is no need to insist very strongly on this fact, however, for the British Government has long since accepted it. It has not been the intention of any of the negotiations in the last 18 months, to upset nationalisation of Persia's oil resources. Already last August, when Mr. Churchill and Mr. Truman sent their joint note to the Persian Premier, their demands were limited to two points: that Persia submit the issue of compensation to international arbitration, and that arrangements for the distribution of oil be made in agreement with the Anglo-Iranian Oil Company. Neither of these conditions impugns

FIVE-YEAR NATIONAL SAVINGS CERTIFICATES CAN NOW BE HELD FOR SEVEN MORE YEARS AFTER MATURITY

Although further issue of 5-Year National Savings Certificates has now been discontinued, present holders of these certificates may, at their option, continue to hold them after maturity for a further period upto seven years.

RS. 150 FOR RS. 100

For example, if your investment in these Certificates amounts to Rs. 100/-, the encashment value, seven years after maturity, will be Rs. 150/-.

CASH VALUES

You also have the option of cashing your Certificates any time after maturity and the amount payable will be

Rs. 120/- after first year, Rs. 135/- after fourth year,
Rs. 125/- after second year, Rs. 140/- after fifth year,
Rs. 130/- after third year, Rs. 145/- after sixth year.

IT PAYS YOU TO HOLD YOUR MATURING FIVE-YEAR CERTIFICATES FOR SEVEN MORE YEARS.

Issued by The National Savings Commissioner,
Government of India, Gorton Castle, Simla-3.

GOOD BUSINESS DONE IN INDUSTRIAL EQUITIES

GILT-EDGED FULLY STEADY

London, 26th August.

THE tone of the Stock Exchange for most of the past week was good. Towards the close, however, sentiment was adversely affected by labour troubles in electrical trades which, it is thought in some circles, might spread to other branches of industry, and also by the easiness on Wall Street. Gilt-edged continued firm throughout. A feature was the unsatisfied demand during practically the whole of the week for all types of industrial shares. Persistent investment enquiry pushed up values and improvements were generally out of all proportion to the business done. Textile shares were again very prominent but stores, tobaccos, breweries, motors and miscellaneous recorded useful gains.

In foreign bonds, Japanese and Germans were both firm at the outset though latterly, on apprehensions of the outcome of the coming election, Germans eased slightly. Hungarians improved on hopes that Mr. Sanders' release might mean the resumption of trade in the near future between Britain and Hungary. Among oils, which were generally firm, Anglo-Iranian attracted most attention. They registered considerable gains when Dr. Mossadik was overthrown but enthusiasm later declined. Interest in mines was very limited. Kafirs were quietly firm but coppers were inclined to be reactionary. Favourable Press comment on the Malayan situation enabled rubbers to

improve slightly at the end of the week and hopes of a better outlook encouraged higher prices in this section.

With the exception of one day in the first half of the week when money was plentiful and some balances were left unmet at the close of business, conditions in the money market have been patchy throughout the week. However, authorities' assistance was only needed in a very small way. Heavy outside calling at times and only moderate buying of bills by banks gave rise to this position. Applications for £270 million Treasury Bills totalled £38,175,000 of which the former amount was allotted at an average rate of 47s. 4.25d. percent. This week's offering amounts to £280 million. The Bank of England Return showed a decrease of nearly £1 million to £158.6 million and a decrease of banker deposits by around £4 million to £269.6 million.

Sugar Conference Ends

The final plenary session of the five-nation International Sugar Conference was held in London on Monday afternoon. The Conference negotiated a new five year world commodity sugar agreement which will now be submitted to the importing and exporting countries for ratification. It is designed to assure supplies of sugar to importing countries and markets for sugar to exporting countries at "equitable and stable prices." The agreement, provided it is ratified by sufficient exporting and importing countries, will come into operation on 1st January, 1954. The five-year agreement has a provision that towards the end of the third year, its whole working will be reviewed in the light of the circumstances then. At that particular time, if a participating country so desires, it might withdraw from the agreement. The new pact will replace the 1937 world sugar agreement which technically expires on 31st August, 1955. The London talks were attended by Communist countries, including Russia, and non-Communist countries.

Mexican Cotton Crop

More than 350,000 bales of the 1953-54 cotton crop in Mexico will be lost as the result of the drought which ended too late to permit replanting, according to sources in Mexico City. Latest estimates of the current crop say the yield will be around 1,060,000 bales compared with 1,227,500 in the previous season.

Tanned Goatskin Auctions

Auctions of tanned East Indian goatskins continued last Tuesday. The market has now settled down and all descriptions are coming out on an average 6d to 9d per lb below June sale prices, with occasional declines of 1s. There is a confident tone and steady trade is being done at the new levels.

Hong Kong Gold Prices

Gold opened steady at \$264½ last week hitting the week's high of \$264½ on Monday, but thereafter drifted until it reached \$262½, finally recovering slightly to close at \$261½. The easiness was attributed to the cut in the Macao licensing fee by 50 percent. Continued buying of American telegraphic transfers by gold merchants towards the end of the period was a contributory factor as this is seen as an indication of the possible resumption of buying from the Philippines. The official off-take was 6,430 taels and the unofficial off-take has risen substantially to 9,820 taels. Arrivals in Macao were nil. Forward contracts totalled approximately 10,000 ounces at \$39.0 and \$38.50 U.S. per ounce.

Liverpool Corn Hedging

The Directors of the Liverpool Corn Trade Association have advised members that it is impracticable to reopen the hedging market in Liverpool for the time being. They explain that physical difficulties regarding Government stocks and available warehouse space in the port of Liverpool are such that smooth working of the markets would be jeopardised. The position is being closely watched and the markets will reopen when Government stocks and arrivals fall to reasonable proportions.

Rubber Prices

In moderate trading, rubber prices recovered to the pre-Korean armistice levels. Afloats which have been dragging for several weeks are moving a little more freely but demand for near positions is still insufficient to reduce discount much from forward positions. A belief that prices would improve later in the year was strengthened by reports of a cut in the United States synthetic production for the fourth quarter. Business further improved and at the close values showed about half penny gain on the week. Sole crepe was quietly steady.

Tea Stocks

Tea stocks in London and Provincial warehouses on 14th August totalled 92,233,404 pounds compared with 92,098,764 in the previous week. Landings during the period amounted to 8,203,644 and deliveries were 8,157,024.

C.T.C. Dividend Postponed

The Directors of the Calcutta Tramways Company have stated in London that it is not possible to complete accounts and come to a decision on the final dividend until the findings of the tribunal to which the question of fare increases has been referred are made known. It is further stated that the Company has resumed all its services and receipts are slowly returning to normal.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET QUIET CONDITIONS: CREDIT EASY

Wednesday, 26th August.

MONEY continues to be relatively easy in Calcutta but there has been no reduction in short-term rates. Jute finance is slack and sugar advances are falling seasonally; business is generally quiet.

Similarly, the exchange department has been very dull. Small tea bills and very few gunny bills have been reported. Remittance has been small. Exchange rates are unchanged.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills rose to Rs. 2,02,00,000 this week. The average rate of acceptance rose by three pips to Rs. 2-6-3 percent per annum, tenders at Rs. 99-6-6 percent having been accepted in full and the rise at Rs. 99-4-3 percent allotted approximately 98 percent. In view of the holiday, the treasury bill auction will not be held next week but tenders for another Rs. 1½ crores of bills will be received up to 11 a.m. on Tuesday, 8th September, at Bombay and up to 7th September at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 21st August treasury bills for Rs. 6,47,75,000 were sold in favour of the Reserve Bank.

A further fall of Rs. 7.80 crores in notes in circulation to Rs. 1,093.23 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 21st August, 1953, although the total note issue was fractionally up by Rs. 77 lakhs to Rs. 1,131.31 crores. Notes held in the Banking Department consequently rose by Rs. 8.58 crores to total Rs. 28.08 crores. Deposits showed an all round rise. Deposits of the Government of India and other Government accounts improved by Rs. 4.74 crores and Rs. 2.64 crores to Rs. 129.41 crores and Rs. 21.10 crores, respectively, due to good tax collections. Balances of commercial banks at Rs. 45.79 crores were about Rs. 3.13 crores higher than in the previous return owing to easier money conditions. Balances held abroad diminished by Rs. 1.60 crores to Rs. 125.93 crores. Other advances and loans fell from Rs. 11.58 crores to Rs. 10.87 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 49.45 lakhs. Investments declined by Rs. 50 lakhs to stand at Rs. 88.70 crores. Ways and means advances were shown at Rs. 20 lakhs (Rs. 1.29 crores).

Silver was quiet last week in the absence of interest. The price fell from the previous week's level of Rs. 152 to Rs. 151-12 quoted to-day, while the forward rate fetched a premium of 4 annas. The price was unchanged at 74d. in London and at 85½ cents in New York.

Gold was rather steady on the announcement of the rates of Death Duty, which were bullishly interpreted in market circles. The price rose from Rs. 88 to Rs. 88-2, and the sovereign was 8 annas higher at Rs. 58.

The return of the Imperial Bank of India for the week ended 14th August, 1953, shows a fall of Rs. 7.48 crores in total deposits to Rs. 204.76 crores. Investments in Government Securities are up by Rs. 1.21 crores to Rs. 78.12 crores, while other authorised investments remain unchanged at Rs. 10.79 crores. Loans, cash credits and overdrafts and bills discounted and purchased have decreased by Rs. 2.79 crores and Rs. 2.42 crores to aggregate Rs. 86.49 crores and Rs. 23.20 crores, respectively. Cash and balances are, in consequence, shown at Rs. 17.22 crores or Rs. 3.62 crores less.

The provisional figures of foreign sea and airborne trade of India on private and Government accounts during July, 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 39.12 lakhs, re-exports Rs. 30 lakhs (transit trade Rs. 3 lakhs). Total Trade Rs. 69.46 lakhs. Treasury: Exports (including re-exports) of Currency Notes Rs. 9 lakhs, others nil. Imports of gold and silver Rs. 2 lakhs, of Currency Notes Rs. 18 lakhs, others nil. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this definition.

Total		16,00.00	

ciency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 10.61 lakhs.

Dr. H. L. Dey, former President of the Indian Tariff Board, has been appointed Director of the Asian Department on the regular staff of the International Monetary Fund. Dr. Dey joined the Monetary Fund in August last year as Adviser to the Managing Director and Chairman of the Executive Board. The Asian Department of the Fund was recently established and is responsible for taking care of the Fund's relationships under the articles of agreement with the member countries in South Asia and the Far East and for maintaining regular contact with the E.C.A.F.E.

The EASTERN BANK, LIMITED has declared an interim dividend of 3s. per share less income tax at 9s. in the pound.

The MERCANTILE BANK OF INDIA, LIMITED has declared an interim dividend of 7 percent less tax payable 29th September, 1953.

The NATIONAL BANK OF INDIA LIMITED has declared an interim dividend for the year 1953 of 8 percent less income tax at 9s. in the £ payable 17th September, 1953.

LONDON FINANCIAL LETTER AIMS OF ECONOMIC CONFERENCE

THE planning of another Commonwealth economic conference is seen here not as any cause for disquiet but as a matter of routine. The procedure for managing the sterling area will never be entirely formal, but it is now elaborate enough to require these periodic high-level meetings. Even so, and although the conference's main business may be to review the solid achievements of a year, the next meetings promise to be interesting.

Whether serious progress towards convertibility of sterling can be made at the next conference depends to some extent on the sterling countries' individual and collective balance of payments in the next few months; but it is ultimately more dependent, of course, on the co-operation of America and Europe. At least, the question of convertibility is no longer deferred indefinitely, as it appeared to be towards the middle of the year.

When Mr. Menzies mentioned recently that,

When you go to Rangoon

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED.

as some time had been lost in reaching agreement with America, we might have to build up intra-sterling trade until sterling was strong enough to take its place beside the dollar he seemed to be taking a long-term view. But in Ottawa about the same time Mr. Lester Pearson referred to the work on convertibility that had been going on for some months as being "on the way to completion". And after Mr. Oppenheimer had suggested to Mr. Havenga that the only chance of agreement on a higher price for gold would be by demonstrating that at a higher price convertibility of sterling would be a practicable proposition Mr. Havenga revealed that the two matters had indeed been linked in the negotiations.

The British "Plan"

This question of the gold price, though it seems to be quite fundamental to the plan for convertibility which has been evolved between Britain and the other Commonwealth countries, has not been stressed in the information leaking from the Continent recently. (This information is especially interesting for British financial circles, because the plan itself has always been officially secret, it has been discussed with the European Governments, and leakages occur more easily on the Continent than in London. It has naturally been "revealed" that American and Canadian standby credits are required, indirectly through the International Monetary Fund, and that bold measures to free international trade and payments—but gradually, not abruptly—are regarded as essential to the success of free exchanges. Neither of these requirements has endeared the plan to the American Administration.

More problematical were the question whether the European Payments Union could or should survive in a convertible era, and the question whether the exchange rates at which currencies should be convertible should be fixed or flexible. Intentions towards EPU are still by no means clear, but it seems that it could survive only as a truncated body confined to those countries whose currencies were too weak to be convertible. There seems to be no doubt that the controversy on fixed or flexible rates have been tentatively decided in favour of flexible rates. It may be that the British Treasury has in mind only a widening of the permitted limits within which rates may fluctuate: they are at present less than 1 percent but might be widened to 2 percent on either side of parity. Anyway, there is a feeling in the City that the Treasury's idea that flexibility is needed is bad publicity for the convertibility plan; it suggests

little confidence in sterling's ability to maintain its value.

Restrictions Relaxed

Actually, confidence in sterling is almost buoyant at present, with the gold and dollar reserve further recovered with an unexpectedly large increment in July at the best level of the year. Though the Treasury has warned that the expansion of production this year has been due mainly to home demand, and that it must be supported by increased exports to pay for increased imports, there is no longer any suggestion that a payments crisis can occur this year.

The authorities have now withdrawn the overseas-credit restrictions which were imposed in a critical period early last year. But they are still content to hasten slowly towards the restoration of London's international monetary functions. Refinance credits involving hard currencies are not willingly authorised; and extensions of acceptance credits from 90 days to 120 days will be observed for evidence that they are really needed for the commercial transaction in question and are not being used for the importer's convenience in financing stock. Before the restrictions were imposed these overseas-credits were used extensively for speculation against sterling, but they are not interesting for that purpose now that devaluation is quite out of the question for the foreseeable future.

The Build-up of Confidence

While it is obviously true, and clearly recognised, that the home demand which has stimulated production may be inflationary, the increase in production and the improvement in the gold and dollar reserve have both fortified dealing on the Stock Exchange for months past, with only occasional hesitant lapses. Hesitation is due partly to the memory of the readjustment after last summer's revival, but it is due also to the admission that the present position of the external finances is no better than it should be in a period of full employment and reasonably active trade—that at this time we should be building up reserves not only to support convertibility but also as protection against an American recession.

However, in one respect the stock markets seem quite confident. They recognise that the improvement in the reserves has been largely the work of monetary discipline; but they do not believe that the authorities will reinforce monetary discipline, even if the strength of spending—and the diversion of resources which is undeniably resulting from it—persists. Home consumption seems to be regarded now not as an extravagance but as the ultimate purpose of production.

EARLY this week Mr. Kidwai said that the Indian food problem had been solved, producers of eggs in England had to cut their prices to get rid of stocks, and the *Financial Times* wrote an editorial under the heading "The Economics of Plenty". There was no special connection between these events but I could quote half a dozen others from recent weeks with a similar tendency. It is strange to reflect that after 14 or so years of shortages of almost everything, we have reached the stage we have been talking about, it seems, all our lives: the days when there is plenty of everything. Not plenty in the sense that everyone can have as much as he thinks he needs, but plenty in the sense that he can get supplies of anything he can afford to buy—and, though it is a hard saying, that is the only "plenty" known in economics. It is a matter of plain fact that there are in the world today no absolute shortages at all, saving one or two special exceptions. Naturally, there are local pockets of inadequate supply, but they are almost all due to government intervention, import restrictions, exchange controls and the like. I wonder how long it will be before we are looking back on "the good old days back in '53 when you got anything you wanted". I am not suggesting that we start congratulating ourselves on our present good fortune, for I realise that for many millions of people life today is not much better than it was in 1949, when the economists said there were lots of shortages. Indeed, it is a sobering and not a cheering thought that the international economy will never be putting up a much better showing than it is now, in the second half of 1953. If current conditions do not answer to the picture most consumers and business men had formed of the "age of plenty", that is probably because when we speak of really good times we mean a state of affairs in which our own business is doing fine and everybody else's is suffering from a slump of over-production.

Now that we know what rates of estate duty are to be levied, we are better able to judge the Bill that Parliament hopes to pass this session. There is nothing in the schedule of rates to alter the opinion that this is a thoroughly desirable piece of legislation that ought to have been enacted years ago. Though the Bill, as it stands at present, contains anomalies and over-cautious restrictions, and although we might harbour certain fears about what future governments will do with the schedule of rates, we cannot honestly condemn a law that limits the inheritance of wealth to the extent of requiring the heirs to a Hindu family property of Rs. 1 lakh to pay over to the State the sum of Rs. 2,500. The heirs to Rs. 1 lakh in any other form of property will have to fork up Rs. 1,250. If we bequeath Rs. 10 lakhs to our successors, the State will claim about Rs. 1½ lakhs, while if we are happy enough to leave Rs. 20 lakhs, our heirs will have to struggle along somehow on Rs. 16 lakhs. This is not a very terrible imposition, and indeed the estate duty is the most painless way the State has of extracting money from its citizens. All the Government of India has to do now is collect the money. I am afraid that even when it has set up the elaborate machinery needed to administer the law and when it has caught all the evaders, it will not get very much for its trouble—ten or fifteen crores a year maybe. But it will have made a grand gesture to the doctrine of economic equality. The gesture made, it might be better if we heard a little less of the doctrine. When there is a two-fisted engine standing at the door, ready to strike but once and strike no more, you may as well let the players make a little something out of the

A DITCHER'S DIARY

game. With estate duty, the great leveller, waiting for him at the end of his labours, the Indian business man should be allowed to make one of those fortunes that are said to have been such an affront to equality when they were handed on intact to idle scions. The thirsty gods of equality having been satiated, we should reconcile ourselves to that inevitable requirement of any efficient economy: bigger rewards for better work.

For people with a liberal temper and less than a lakh of rupees, the interesting thing about the estate duty legislation is that it goes straight to the knottiest part of the Hindu customary law: property and inheritance. Once the Government of India put its mind to it, it framed and got ready for enactment a law on this complex subject in little over a year. Yet the Hindu Code Bill, which has as old a history and on the passing of which certain famous politicians have fought election campaigns, staked their reputations and all but sworn their lives away, still lies gathering dust. It has been shelved, revived, buried, diluted and disintegrated, while the estate duty measure has been pressed through with vigour. Nothing maintains a government's reformist ardour so well as the promise of extra revenue. The Hindu Code Bill offers no such attraction and, although some of the fine arguments about equality and progress that were used in support of the estate duty could as well be used of it, it has been quietly laid aside.

Capital's Legal Correspondent, who had the pleasure of 30 years' close friendship with Noel Barwell, wrote to me when he heard of his colleague's death last week: "When one suddenly loses by death a friend of 30 years' standing, held in deep regard, one is hardly fitted to write a dispassionate note in his memory. Sorrow and the sense of permanent loss are perhaps the highest tribute one can pay him, but they also increase his stature beyond that to which he would himself aspire. Noel Barwell was an eminent lawyer. If he was not a great one to the extent that his natural abilities and wide learning and culture qualified him, that was because the law is a jealous mistress and he—rightly I think—never gave it the undivided allegiance it demands and which is the pre-requisite to the award of its glittering prizes. Barwell never sought those prizes. He was not the man to follow the example of far greater lawyers than he, who make their acquisition their sole life's work, and in gaining them lose their own souls withal. Barwell kept his own soul intact; and, without being sentimental, I know that as the years went by and mellow old age encroached not on undimmed faculties, it reflected more and more a kind and loving heart. It was plainly discernible in his advocacy in criminal cases. Only once have I ever heard of him conducting a prosecution. It resulted in an acquittal; for Barwell so scrupulously brought forward and emphasised every point in favour of the accused man that his speech sounded like an additional one for the defence. It was as a defence advocate that he excelled, and in my humble submission ranked with the very highest in the country. And that was due to his essential kindness and sympathy with the underdog. All his geese were swans; and like Marshall Hall—greatest of the great—he was able genuinely to persuade himself that every one of his clients was an innocent and deeply wronged man. It is odd, perhaps, that one whose real love was music, literature and art should have special-

ed in Railway law (on which he was the acknowledged authority in India), Insurance law and that of Master and Servant—mundane subjects indeed for the musician, the savant and the artist. He had a gift for repartee, not exactly spontaneous but apposite quotations from a well-stored scholarly memory. In one of the last cases in which we were together I ventured to remonstrate with him on being too prolix, on labouring the obvious in his address to the Judge in Mussoorie. He replied that it was intentional and countered with an anecdote of that master of suave insolence, Lord Birkenhead. Young Mr. F. E. Smith, as he then was, was appearing for the first time before the august and venerable Judges of the Court of Appeal trying to upset a King's Bench decision against him. He was prolix, the Judges were bored and showed it. 'Can't you give us credit for a little common-sense, Mr. Smith?', said the Lord Chief Justice, impatiently. 'No, my Lord,' said F. E., 'That's the mistake I made in the Court below.' Noel Barwell loved India. It was his adopted home and its countrymen were his countrymen. Again at the risk of appearing sentimental I would claim for him that he fulfilled the injunction to 'put on a heart of compassion, kindness, humility'. He laid up his treasure in the hearts of his friends; and by them he will not be forgotten till their own time comes."

There have been hints lately that academic politics are delaying progress with the ambitious statistical plans the Government of India laid down some years ago. I know nothing at first hand of these fusts, but the delay is obvious enough. Mr. Deshmukh told a questioner in Parliament on Saturday that the report of the National Income Committee "had not been finalised so far", but that it was expected to be so shortly. This is odd, for the interim report appeared in April 1951 and therein it was promised that the final accounts would be ready early in 1952. We are getting near the end of 1953, but all we have to show for this major statistical operation is an interim estimate of India's national income in the year 1948-49. National income figures for any one year standing by itself are not much use because it is the trend from year to year that is significant. At this rate it will be ages before Indian industry and government have to hand reliable estimates of changes in the national income. Without suggesting that this is the cause of the slow progress, I notice that some of the members of the National Income Committee have been involved in the controversy over the National Sample Survey, a controversy that has now become public. I understand that the Government will soon be publishing further results of the Sample Survey, but they are results that have been arrived at by only one of the academic factions concerned and we have been warned in advance by the other that they are of dubious value. One of the participants in the dispute has just taken the financial papers to task for referring to this merry mix-up as an "unseemly feud", but I am afraid that this is just what it looks like, an unseemly feud. Both Government and industry had formed great hopes of the value of reliable statistical information about the Indian economy, but so far they have been disappointed because the statisticians in Bombay and Calcutta cannot agree on how they should be collected. If the resources of the academic institutions can produce nothing better than this, I will continue to share Mr. Rafi Ahmed Kidwai's suspicion of the figures that Government departments obtain from the humble *patwaris*.

sanctioned for the hand-made paper scheme. It is proposed to promote the development of the existing 11 centres so that they may produce the varieties that are imported at present. These centres will be provided with equipment, technical advice and financial aid. The scheme also aims at introducing paper-making in secondary schools. A loan of Rs. 1,35,000 and a grant of Rs. 97,000 have been sanctioned to the soap making industry which uses neem oil. Funds required are Rs. 2,82,000. The programme is to set up soap-making and oil-crushing centres. Demonstration units will be set up at various places where neem seeds will be collected, decorticated and crushed. The oil will be supplied to the central soap centres to be used for soap-making and oilcakes will be used as manure.

Activities such as the hand-pounding of rice are also to receive assistance. The programme provides for the replacement of dhenkis by chakis and fans. It is proposed to distribute chakis and fans to registered societies at 50 percent of the cost. The scheme has been approved by the Government and a grant of Rs. 2,75,000 has been sanctioned for it. Besides, a sum of Rs. 1.25 lakhs has been approved for establishment expenditure in this regard. The following schemes are being examined by the Government:

Village oil industry: Funds required are Rs. 16,19,320. It is proposed to introduce 2,000 improved ghanis during 1953-54 in areas to be taken up for intensive work. It is also intended to assist the existing ghanis on a limited scale.

2. Bee-keeping: Funds required are Rs. 3,10,750. The programme is to (1) train field men; (2) give elementary training in bee-keeping; (3) locate and establish bee-keeping stations; (4) stock and supply appliances etc.; (5) assist in marketing honey, etc.; (6) maintain at a central place a unit to extract, process and pack honey; (7) supply standard type of bee-keeping appliances at reasonable rates and on an instalment system.

3. Palm gur industry: Funds required are Rs. 14,00,000. The programme is to develop the existing industry and, on the basis of experience gained so far, to extend the programme by making available subsidies and other forms of assistance. It is also proposed to improve the quality of the existing production.

4. Gur and khandari: Funds required are Rs. 13,90 lakhs. The programme is to introduce in various States 1,933 improved cane-crushers, 690 improved boiling pans, 21,400 furnaces, 100 centrifugals and to popularise gur moulds, drum stocking and juice clarifying agents.

Bombay

GOVERNMENT-BUSINESS RAPPROCHEMENT

MERCHANTS' CHAMBER RECEPTION TO MINISTERS

(FROM OUR OWN CORRESPONDENT).

23rd August.

THERE was last week a "reunion" of Ministers of the State Government and members of the Indian Merchants' Chamber, as a body, after many months of estrangement. Since Mr. Morarji Desai became Chief Minister last year and Dr. Jivraj Mehta Finance Minister, the Bombay Government has been sensitive to any criticism of its policies, especially from those quarters which it had come to regard as friendly. There was in fact a marked fall from the degree of tolerance usually shown to critics by Mr. B. G. Kher's Government. The Indian Merchants' Chamber,

because of its powerful and influential pro-Congress majority, was regarded as a friendly organisation, and one looked upon as likely to remain loyal even under provocation. Despite the fact that loyalty has lately been taken to mean hailing every policy announcement of the Government, however adversely it might affect one, a large section of the Chamber has remained friendly, if critical. But it was too much to expect the business community in this city, which even in the earlier part of this century had maintained its own independence and integrity, defying at times even the officialdom of those days, to remain silent about what it considered to be unwise policies of a Government which was avowedly democratic and so could be expected to be more responsive to suggestions and criticism emanating from important organisations of commerce, industry and finance.

Another psychological mistake on the part of the Government, in the first flush of its success at the polls, was its failure to recognise that however friendly and co-operative the Indian Merchants' Chamber as a body might be to the political party which the Government represented, a small but important section of the Chamber which had no political ties and which owed no political allegiance to any Party, was growing restive and openly resentful at some of the more controversial policies of the Government such as prohibition. Rightly or wrongly, this section believed that many of the financial difficulties of the Government, which were advanced as the cause of its new tax proposals, resulted from this and other similarly wasteful policies. The pressure from this group in the Chamber on the more conciliatory leaders of the organisation was gradually increasing and gaining support from the rank and file of its membership. The leaders, who were reasonable and experienced men, had to take note of this development and to accommodate it in framing the Chamber's attitude towards the Government's policies and in the drafting of its resolutions concerning the actions of the new Ministry. The Chamber was often more critical of the Central Government than of the State Government. But New Delhi did not resent this and, even if it did, did not think it politic to express such resentment. The State Government, especially the leading personalities in it, did not display such wisdom.

Even, then matters would not have come to a head between the Government and the Chamber, if the very first act of the new Government had not been to precipitate the multi-point sales tax controversy. Perhaps this by itself would not have strained relations to the point of open estrangement, if the highly respected leaders, known for their moderation and generally co-operative attitude for which they were already being increasingly criticised within the body, had not been treated cavalierly by the Chief and Finance Ministers during the course of the negotiations undertaken repeatedly at the initiative and requests of these leaders. Ahmedabad, next in importance commercially to Bombay, in the State and much more Congress-minded than Bombay even among the ranks of industrialists, was also treated, in the heat of this controversy, with great indifference if not contempt. When all representations had failed, when every one of the alternatives suggested to secure the income estimated by the Government from this source was summarily rejected; when even the request to postpone the implementation of the Act, which had in the meantime been passed through the Legislature with the aid of a peremptory Party whip, was turned down, the Chamber passed a comparatively strongly worded resolution opposing the new tax. In the course of the resolution it criticised, also the prohibition policy of the Government, with a request that it be re-examined in the light of the financial position of the Government. It was this resolution, and more so the rider about prohibition, which upset Government leaders. The resolution had to be passed, because tempers in the Chamber were high and there was actually a proposal to censure the then President of the Chamber and Committee for their so-called complacent attitude about multi-point sales tax.

It is not without significance that the Government has had to give way on the three important tax measures in its first draft budget. That for increasing the land tax was virtually still-born; in the matter of the vehicle tax also, the authorities, after a long drawn out struggle with operators in the road transport industry, had to make important concessions. And finally, they had to yield, with a good deal of ill grace, on the multi-point sales tax. Taking advantage of this, some members of the Indian Merchants' Chamber succeeded in bringing about a rapprochement between the Ministry and the Chamber by persuading the present President of the organisation, Mr. Ambalal Kilachand, to hold a reception in honour of the Chief Minister and other members of the Cabinet last week. On the following day, however, when the Chamber held its quarterly general meeting, some awkward questions regarding this happy ending of an unhappy interlude were put to the President; but Mr. Kilachand evaded them with great tact. It is generally held that both the Government and the Chamber will endeavour to avoid any unpleasantness in the future. While some extreme elements of the business community and the Indian Merchants' Chamber are not yet reconciled to the steps taken by the President of the Chamber in going out of his way to organise this function, to put an end to what they call a situation of the Government's own creation, there is general satisfaction expressed amongst business men at the way in which this chapter has been brought to a close.

London

BRITAIN'S TRADE GAP SHIFTS TOWARDS STERLING AREA

INTERNAL COSTS HAMPER EXPORT TRADE

(FROM OUR OWN CORRESPONDENT).

22nd August.

AN air of suspended animation has been apparent in the business world during the past week, occasioned by such diverse events as the dramatic conclusion of the fifth and final Test match by winning which Britain regained the "Ashes" from Australia after a period of almost twenty years—the even more dramatic rise and fall of Dr. Mossadeq with the possibilities it holds of the resumption of relations between Britain and Persia, and the manoeuvring at the United Nations headquarters on which may well depend the future of a lasting peace not only in Korea but throughout the Far East. With Parliament in recess, Ministers of the Government widely dispersed, and the leaders of the Opposition out of the country, the international political developments, not unnatural, have given rise to some anxiety. This was the moment when Sir Winston Churchill selected to mark his reappearance on the scene by presiding at an urgently summoned Cabinet meeting at 10, Downing Street. This may not mark the Prime Minister's resumption of his full responsibilities—that is not expected to take place until after the recess at the earliest—but it does mean that he is back in control and it has put an immediate end to the spate of speculation with regard to his health and what effect that might have on his own political future, to say nothing of that of the Government which he now leads. Incidentally, it has led to a marked lessening of earlier anxiety in all but interested quarters, and this has been reinforced by the indications that Mr. Eden is planning to resume his full duties immediately after his return from Greece next month.

This temporary respite from day-to-day economic developments affords a welcome opportunity to point into the scene some further aspects of the background against which, when they are resumed, the daily developments must be judged if their true value is to be understood. For instance, if one accepts, as indeed one must, that Britain can hardly avoid having an excess of imports over exports, it is reassuring to learn from an analysis of British trade in the first half of this year, just issued by the Board of Trade, that the "gap" has been shifted very considerably from the dollar to the sterling area. Indeed, though the adverse balance as a whole was actually greater in the first half of 1953, most of the increase was borne by sterling area trade and in the case of the dollar portion the gap was actually reduced. The position is set out in the following table:—

	Monthly Trade "Gap"			
	1953		1952	
	1st half	2nd half	1st half	2nd half
Dollar area	16	40	18	18
O.E.E.C. countries	2	20	6	6
Other non-sterling	15	14	2	2
Total non-sterling	33	74	26	26
Sterling area	31	2	24	24
Total excess of imports over exports	64	76	50	50

The severe restrictions imposed by sterling area countries last year had much to do with this, so the principal interest attaches to the export figures for non-sterling countries, which show some interesting changes. Their 1952 to 54 percent in the same period of this year, but as exports to Brazil, Egypt, Finland, Argentina and Russia fell below even the low levels of the second half of last year, shipments to the dollar area and other European countries had to expand even more to make up these deficiencies. That is why we find that exports to non-sterling O.E.E.C. countries, which rose by 3 percent between the two halves of 1952, showed a further jump of 5 percent in the first half of 1953. The increased demands from Denmark, the Netherlands, Norway, Sweden and Western Germany for such products as chemicals, refined petroleum and woollen and worsted yarns and manufactures were mainly responsible. In the dollar area exports of textiles and clothing, which rose by 17 percent between the first and second halves of 1952, increased by a further 8 percent in the first half of this year, with woollen and worsted goods doing particularly well in the United States, while Canada accounted for larger exports of iron and steel manufactures, machine tools and cars.

Production Costs

In view of the continuing trend of basic raw material prices to decline—the Board of Trade index was again 1.2 percent lower in July—and the imperative need to maintain and indeed to expand exports, it is unfortunate that most of the recorded prices for the products of British industry show little or no change. The trouble is that other costs, and particularly fuel, transport and labour, have risen, so as to offset the other benefit, which, of course, is also enjoyed by our competitors, since raw material prices are not influenced only by internal factors. This is the root cause for the fears that we will price our goods out of world markets. It is certainly proving to be the case in those sterling area markets where import restrictions are now gradually being relaxed. Lancashire was given a forceful reminder

of this when Mr. A. C. Nwapa recently visited Manchester. The Nigerian Minister of Commerce and Industry discussed the possibility of Lancashire industrialists starting cotton mills in his country, but in referring to imports he warned that Lancashire's prices were too high and recently had gone up instead of going down and that in staple lines they were quite unable to compete with Japanese goods which were now being imported. Associated with these fears have been recent indications that inflation is again endangering the economy, and especially the rise in food and consumer goods imports, the increase in production for home consumption, and the loss of labour and materials by the export industries. As yet, none of these movements has been excessive, and with the end of the holiday period there are signs of an end to the spending "spree" and a return to more normal conditions, but the danger cannot be overlooked. One countervailing factor calls for mention, and that is that so far the Exchequer accounts show a smaller deficit than the Chancellor budgeted for—£337 million, against £462 million at the same time a year ago. We are no more than half way through the second quarter of the fiscal year, but it is promising that expenditure, both "above the line" and "below the line," is well below last year's levels and that at least one fertile source of inflation would seem to be under check.

It is obvious, however, that so far as the trade balance is concerned "invisible" earnings will have to carry a heavy burden. The loss of Abadan's oil output has been more or less completely offset by the increased output of crude from other Middle East and Far East wells and the large expansion of refinery capacity elsewhere, but there have been not a few doubts in recent months as to whether the shipping industry would be able to maintain its valuable contribution to these earnings. Some encouragement is to be found in this respect from the latest statistics issued by the Chamber of Shipping. On 1st July 55 fewer ships were laid up in British ports than at the beginning of the previous quarter, and the improvement has been particularly marked in the case of British ships. Even more surprising is the revelation, disclosed in a new index which makes its first appearance, that freight rates for tramp ships were slightly higher in July than in June—the first upward movement since they started falling in April. The new freight index figure, which is less dominated by grain than the old one and takes 1952 as a base, is 75.8 for July, against 73.8 for June and 73.5 for July of last year. Rates for coal, grain, ore and fertilisers improved and the only recorded falls were in timber and esparto grass. The movement is not yet regarded as significant, but the simultaneous publication of an index of time charter rates

shows a continual fall. On the 1952 base the figure was 57.4 for July, against 61.6 in June and 85.2 in July of last year.

Road Transport Denationalisation

The denationalisation of the road transport services of British Railways has advanced one step forward this week with the announcement that British Road Services will pass from the control of the Road Haulage Executive on 1st October to the care of a Board of Management. There will, however, be little apparent change, for the present members of the Executive as well as its secretary move on to the Board, as does the Chairman, Major-General G. N. Russell who is widely respected in all quarters. The instructions to the Board are apparently to carry on as usual while at the same time assisting "in the formation and disposal of transport units in accordance with the Transport Act, 1953, and to ensure during this process the least possible disturbance of the transport system of the country." So far as is possible, the British Transport Commission certainly appears to be trying to ensure that the metamorphosis is as painless as possible, anyhow to the public.

In view of General Russell's success, it is rather surprising that the railwaymen have seen fit to issue what amounts to a warning to General Sir Brian Robertson, who is to take over the Chairmanship of the Transport Commission as soon as he can be released from his present task of assisting the talks in connection with the Suez Canal base. While acknowledging his administrative ability, an article in a publication which is generally regarded as the organ of the N.U.R., points out that the railwaymen are not soldiers but trade unionists with their own point of view and with no intention of submitting to being what one might almost refer to as "being pushed around." Sir Brian's record hardly suggests the adoption of such tactics, and it is perhaps all the more unfortunate therefore that an attempt to bedevil future relationships should have been made at this stage. Labour reactions these days, however, are almost always unpredictable. By contrast, Sir Arthur Pugh, a former President of the T.U.C. and for many years General Secretary of the Iron and Steel Trades Confederation, forecasts in an article in the Confederation's journal that, given the facilities and raw material, the progress in steel output will continue whether the industry is nationalised or not.

Index of Retail Prices

The official index of retail prices remained at 141 last month (June, 1947=100), the same as in June. In July a year ago it was 138; it was 141 last April and fell to 140 in May.

Soon you too can afford to fly and find the time in which to do it

B.O.A.C. Speedbird Tourist Fare Services will make it possible for everyone to fly and more often

CALCUTTA TO LONDON Rs. 2808 RETURN

Off-season Tourist Fares available from India only between 1st October and 28th February

Tourist Fare Services also to Middle East, Europe, North America and the West Indies

HERE ARE SOME OF THE MAIN FEATURES:—

- ★ You can return any time within one year
- ★ Pressurized, air-conditioned Argonauts, equipped with 4 Rolls-Royce engines with specially developed system reducing noise and vibration to a minimum
- ★ Free meals on board; full bar service
- ★ Free baggage allowance of 44 lbs.
- ★ Stop-over wherever you like at no extra fare
- ★ Half fares for children under 12 years

Any B.O.A.C. Appointed Agent will be glad to give you fullest details—or write to B.O.A.C. Booking Office 41 Chowringhee (entrance Middleton Street), Calcutta. Phone: Pk. 367015

Uttar Pradesh

WIDESPREAD FLOOD DAMAGE IN U. P.

BETWA DAM PROJECT

(FROM OUR OWN CORRESPONDENT)

Lucknow, 23rd August.

SIGNS of agrarian unrest have lately been discernible in the countryside. This year's floods have, from all accounts, been the worst for many years and the suffering has been widespread. According to the Agriculture Minister, 4,474 villages have been affected, while the Praja-Socialist Party estimates the number of people affected at not less than 3,000,000. Floods in Uttar Pradesh are an annual affair but the Government has yet to evolve a clear-cut policy to control the menace. A Flood Committee was appointed four years ago but its report has not yet been published. The Government seems to be unable to make up its mind whether bunds are an effective barrier against floods or are, on the other hand, actually dangerous as is maintained by some experts. As a result, the Government has been spending lakhs of rupees every year in relief, running work-schemes which are essentially clay or mud-replacement structures and which are washed away by the water the following year.

The absence of a clear-cut policy, or of the determination to implement it if there is one, has also been evident in major enterprises like the Rihand dam on which work was started in 1947. The prosperity of eastern Uttar Pradesh depended on this dam, but work on it was gradually slowed down and finally stopped in 1949. Curiously enough the Rihand dam was not at first included in the five year plan and it required a petition of over 200 legislators before the Planning Commission agreed to it and a sum of Rs. 10 crores was promised in the first instance by the Centre. Now, after all these and other preliminaries it has been decided to commence work on the Betwa dam which will replace the Rihand dam. The former, it is estimated, will cost Rs. 47 crores, that is Rs. 15 crores more than the Rihand dam. This is not the only instance of a project being abandoned after considerable initial expenditure of money and materials.

The Opposition, mainly the Praja-Socialists, have made capital of these wasteful actions of the Government. They have been very active in the villages in eastern Uttar Pradesh, especially in the Azamgarh district where they have launched what they call "satyagraha", but what the Government considers to be forcible seizure of land from its rightful owners. It is the Socialist thesis that the revenue records are completely wrong and that the "satyagraha" has become necessary to correct them in favour of the landless and the underprivileged. Some 20 gazetted officers and a Deputy Minister investigated the complaints of wrong entries and found them to be baseless in the large majority of cases. If in any particular case there has been a miscarriage of justice the obvious course for the aggrieved party would have been to take the matter to the civil courts.

Land Reform Schemes

Much of the present ill-feeling and tension could have been avoided if the Government had set about its land reform schemes in stages instead of rushing them all together. Land Reform Acts are passed only to be followed by Supplementary Land Reform Acts and the payment of compensation rules are also periodically revised, altered and added to, leaving all kinds of landholders, including the ex-zamindars, uncertain of their position. The Compensation Officers have been in no great hurry to disburse payments and, in the meantime, certain rules have been framed affecting the 40-year 2½ per cent compensation bonds. Under the rules, it is proposed to grant "bhumi-dhari" rights against payment made in the form of these bonds subject to two conditions. First, that a Rs. 100 bond will be taken as equivalent to Rs. 80 and second, that the bond, if received by transfer, must have been received in a transfer by succession only.

A further source of perplexity to tenants is the proposal to set off, against the revenue payable by them, the annuity payable to them on the bonds. In other words, the Government's offer runs somewhat as follows: "If you hold a bond of Rs. 100 and have to pay land revenue of Rs. 4 per year, you can surrender the bond to the Government and you will be saved all further bother for 40 years which is the redemption period for the bond." The offer looks good enough on paper but a good deal of persuasion is necessary to make the villagers before they can be induced to make advance payment of the revenue. There is no mention in the rules about floods, drought or other natural calamities and a cultivator who has paid revenue in advance will not get the benefit of any remissions within these 40 years. Besides "bhumi-dhari" rights could be lost through contravention of the law as, for example, illegal mortgaging or sub-letting—and who knows what may happen within 40 years. Worse still, even advance payment of land revenue will not save a cultivator from his joint responsibility for the payment of land revenue of the whole village. Those of his heirs so long as the law remains as it is, future, and the smash and grab tactics of the Praja-Socialists are making many villages in Uttar Pradesh uneasy and restless.

Jute

THE FORWARD CONTRACTS ACT AND THE JUTE INDUSTRY

THE Forward Contracts (Regulation) Act came into force on 24th August. It does not, however, become operative in any area until a proclamation to that effect is made by the Government and an announcement is made of the commodities to which it will apply. The Act was largely designed to deal with cotton and bullion futures in Bombay but its net is so wide that it could easily be spread to catch raw jute and jute manufactures. It is intended to set up a Commission to advise the Government on the administration of the Act. The Chairman will be a full-time appointment. Presumably the members will be persons with some knowledge of the commodities they have to deal with and it is possible to envisage that when the Act becomes fully operative, there will be several commissions, each dealing with a particular commodity, with a common chairman.

The jute industry has not had a happy experience of futures markets but, if they are to be introduced, it would be preferable that they should come under the control of an independent and authoritative body rather than be run by self-appointed committees such as have operated some of them in the past. It seems that the Government of West Bengal, whatever their intentions and powers, have neither the wish nor the ability to prevent the running of futures markets so, if we must have them, let us have them under the Act and let them be run in such a way that they are an asset and not a menace to normal trading.

THE JUTE MARKETS

MILL GROUP BUYS CONSIDERABLE QUANTITY OF RAW JUTE

On the whole it has been a dull week, the only spot of brightness being the buying of a considerable quantity of jute on Saturday afternoon and Sunday by a large group of mills. After that the market lapsed again into idleness. The market for manufactures has not given the mills any encouragement to add to their stocks of raw material and the general feeling appears to be that, because of the disparity between the prices of raw jute and those of manufactures, particularly sackings, it is better to delay purchases as long as possible—that is, as long as their stock position permits.

Manufactured Goods: There has been a conspicuous absence of demand during the week. Enquiry even for specialties has been less than normal. Bazar dealers appear to have bought up to the hilt and have been disappointed in being able to dispose of their purchases. In consequence there was heavy selling in the kaini market and the quotation for B Twills dropped by Rs. 4 in as many days. It is reported also that offers were made to overseas buyers at considerable discounts from current local quotations and this discouraged any enquiries which might have come. Some local dealers are also said to have been refused licences to export certain goods because there was a suspicion about the destination and these goods are being offered here for re-sale. On the other side of the picture it is said that some of the offers made abroad at discounted prices were accepted and that modest business was actually done in jute, heavy Cees, B Twills and Liverpools. Bear covering on Saturday and Sunday caused a rise in prices but the recovery was not maintained and on Monday and Tuesday prices dropped back but not to the lowest of the week.

On Wednesday morning the market opened quiet but steady and quotations were as under:—

	Aug.	Sept.	Oct-Dec.
40" 8 oz.	Rs. 35-6	35-4	35-2
40" 10 oz.	Rs. 44-12	44-12	44-8
B Twills	Rs. 100-6	100-12	101-8
Heavy Cees (Plain)	Rs. 101-3	102	102-8
Cornsacks	Rs. 100-8	101	101-12

Raw Jute: Dullness has been the chief characteristic of the market during the week just closing. Most mills have kept out of the market. Small business was reported in high class jute for special purposes and cuttings were done at Rs. 68 to Rs. 70 for Pakistani jat, at Rs. 68 for Pakistani MC's and TC's and at Rs. 85 for Pakistani Special NC's. Between Saturday and Monday one group bought a quantity of jute, said to be between 1½ and 1¼ lakh maunds, old and new and including Pakistani jute and Assam and Northern jute, bimli and mesta. This group indicated willingness to go on at a reduction of eight annas per maund from the prices previously paid but sellers were inclined to be reserved. In fact, the feeling among raw jute sellers is more towards bullishness than bearishness partly because of current crop conditions and the lateness of imports and partly because they think that mills, having bought very sparingly in the past month, cannot delay purchase much longer. The following business was reported during the week:

Indian Jute:

Old Crop

Northern Rs. 26 basis Bots for ordinary marks with option of delivery ex Calcutta. Rs. 26-8 basis Bots for Supervised marks with option of delivery ex Calcutta.

Local packing free from jungli Rs. 23 and Rs. 23-8. Karimpur-Bongaon Tossa Rs. 26 basis Bots. Daissee Rs. 26 basis Bots. Daissee Mesta Rs. 22-8 and Rs. 22-12 basis Bots. Bimli Rs. 22-8 F.A.Q. European X (Local Packing) Rs. 26.

New Crop

Lower Assam and North Bengal Rs. 28 and Rs. 28-8 ex agency.

Lower Assam and North Bengal Rs. 27-8 ex Cossipur. Assam Rs. 27-8 and Rs. 28.

All the above are for Aug-Sept shipment. Ready bills of lading were done at the same prices.

Pakistani Jute:

New Crop

Semi-jat Rs. 30 basis Bots. Aug-Sept.

Cuttings Jat NC Rs. 68 to Rs. 70.

District NC Rs. 68

MC's Rs. 68.

TC's Rs. 68.

Cuttings were done at these prices for ready bills of lading and for August-September shipment both ex-Calcutta and ex-Pakistan.

Except for deliveries ex Calcutta there is practically no Indian Old Crop on offer.

The following were the quotations on Wednesday morning:

Pakistani Jute:

	Landed at Mills.			
	Old Crop	New Crop	Old Crop	New Crop
	Rs. per md.	Rs. per md.	Rs. per md.	Rs. per md.
Jat	28	31-8	27	30-8
District	27	30-8	27	30-8
Northern	27	30-8	27	30-8
Cuttings Jat NC	Rs 70 per bale			
Cuttings Dist. NC	Rs 68 per bale			

Indian Jute:

	Landed at Mills.			
	Old Crop	New Crop	Old Crop	New Crop
	Rs. per md.	Rs. per md.	Rs. per md.	Rs. per md.
Lower Assam	28-8	28-8	28-8	28-8
Upper Assam	28	28-8	28	28-8
North Bengal & Purnea	28-8	28-8	28-8	28-8
Murshidabad Tossa	28-8	28-8	28-8	28-8
Mesta (Daissee)	25-12	25-12	25-12	25-12
Daissee (Sheoraphuli)	25-8	25-8	25-8	25-8

	Landed at Mills.			
	Old Crop	New Crop	Old Crop	New Crop
	Rs. per md.	Rs. per md.	Rs. per md.	Rs. per md.
Jungli ex agency	Rs. 23 per maund basis Bots.			
ex Calcutta	Rs. 23			
Bimli	Rs. 23 per md. F.A.Q.			

Mofussil: In Upper Assam imports are small and quality is poor because of lack of steeping water. The dry spell, with low rivers, which slowed down harvesting, has been broken and it is reported that cutting has been resumed and that, with more steeping water, an improvement in quality may be expected. In Lower Assam, North Bengal and Purnea conditions are better.

In Narayanangj less interest has been shown by overseas buyers but all imports of New Crop have been readily taken up by local buyers. Prices are above the parity of those quoted for export but have shown an easier tendency in the past day or

Saint Freres Circular Looms installed in Italy.

SAINT FRERES CIRCULAR LOOMS

Hundreds of Saint Freres Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Freres Circular Looms for hard fibres are now available. Saint Freres Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

The J.3 loom (3-leaf, 3-shuttle) weaves twill tubular cloth for sacks.

Sacks made from Tubular Cloth are stronger

They cost less to make

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
 LEEDS, ENGLAND.

To arrive at f.o.b. Colombo prices add 20-cents per lb. to the above market prices.

Engineering and Transport

PORT OF LONDON EFFICIENCY
GREATER THAN EVER
TREMENDOUS POST-WAR
RECONSTRUCTION

THE Port of London, which suffered £20,000,000 worth of damage in World War II, has now quite recovered; in fact, it has never been more efficient or of greater importance in world trade than it is today. The ultimate result of the war damage, says the *Board of Trade Journal*, in a review of the post-war development of the Port, has been a vast scheme of reconstruction, including the building of new and up-to-date transit sheds and warehouses and the installation of up-to-date equipment which have greatly enhanced the Port's cargo-handling facilities. The Port of London retains its proud place as the premier port in the Commonwealth.

Since the end of the war the trade of the Port has steadily increased. Net registered tonnage of shipping using the Port in the year ended March 1953 was 59,750,000 tons, and goods traffic for the same period amounted to 48,282,262 tons. In 1951 the Port dealt with 60 percent of Britain's exports of motor vehicles and tractors. The Port of London extends from The Nore, at the mouth of the River Thames, to Teddington, some three miles above Richmond—a total of 69 miles. Its trade is divided between the docks under the control of the Port of London Authority and the accommodation and services of public companies of wharfers, of whom there are more than 200 providing wharves, warehouses, bonded stores and cold storage. The public companies handle, in bulk, some 70 percent of the traffic of the Port.

Damage to the Port during the war grew in intensity from the mouth of the river to the Pool

of London. Temporary repairs were effected immediately and reconstruction started as soon as possible. Much repair work has now been carried out, and the remainder is well in hand. Damage is being repaired in co-ordination with a post-war scheme of development which, in turn, is in line with plans put into operation in the 1930's. The most serious damage was done to the transit sheds and warehouses, some of which, however, were as much as 150 years old and in need of modernisation.

Overhaul of Lock-Gates

In all new construction provision has been made for the use of mobile cranes and electric trucks to speed movement and mechanical handling of stores and cargoes. The destroyed or damaged leading-in jetties at the lock entrance to many of the docks have been rebuilt or repaired as part of an extensive overhaul programme which includes the provision of 11 new pairs of lock-gates. Re-equipment of the docks also includes the provision of many new electric cranes, which has greatly increased the handling capacity and speedy turnaround of ships.

One of the many features of highest national economic importance is the vast cold-storage accommodation at the Royal Albert Docks. During the war the refrigerating plant was duplicated by the installation of the latest-type refrigerating machinery. Modernisation of the Port of London Authority's property has not been confined to the Docks. New elevators have been provided for discharging grain, in addition to two new floating grain elevators. Many shipping companies' offices throughout the dock system generally which were destroyed have now been rebuilt.

HYDRAULIC BENDING MACHINE

The new automatic hydraulic machine for cold-bending tubes, bars and profiles designed by an Amsterdam concern, boasts considerable advantage over the various existing types. The patent-

ed construction of the bending head is such as to provide adequate free space around the bending arm. Work-pieces with bends in different planes can thus pass through the machine in different positions during the bending operation and be completely finished in one operation which speeds up production considerably. For example, a tube from which a steel chair has to be bent, requiring ten bends, need not be taken out of the machine; the ten bends are formed in about one minute. During the automatic bending operation the tube is clamped against the bending disc, the mandrel—the rod over which the tube is pushed—is lubricated, the bend is formed, the mandrel is withdrawn from the bend, the clamping die resumes its initial position and the next bending angle of the twelve-station bending-angle turret turns into position.

Once the machine has been accurately adjusted, unskilled workers will have no difficulty in operating it. All the bending angles remain absolutely true. The mandrel is drawn back from the tube hydraulically and at a variable speed before the bending movement on the bend in question stops. This so-called pre-release, together with the non-stepped variable bending speed, make it possible to produce bends without visible transition from the bent to the straight part of the tube. The machine can be supplied in a design with which work can be provided with bends of different angles and with two or three different bending radii, all in the same work (e.g. seats for motor cars). After inserting the tube only once into the machine, it is possible with this model to complete such work in only one operation.

DUTCH ORDER FOR BOMBAY OIL PIERS

The Koninklijke Nederlandsche Maatschappij voor Havenwerken N. V. (Royal Netherlands Company for Harbour Works) has received an order from the Bombay Port Trust for the construction of oil piers in the harbour of Bombay. This will enable the oil refineries operating there to extend considerably the discharge of their products. This order, which must be executed within 20 months, involves about Rs. 20 million.

U.K. EARTH-MOVING EQUIPMENT
FOR INDIA

A British firm has received a contract from the United States Government's General Services Administration in Washington for the supply of earth-moving equipment to India. The contract, which covers the supply of 16 heavy-duty diesel motor-graders and spare parts for them, is valued at approximately £60,000, for which payment will be made in dollars. The equipment has been ordered by the General Services Administration against requirements by the Government of India under the Indo-U.S. Technical Co-operation Agreements, and is intended for use on such civil projects as roads and airfields in India. This contract has been secured by the British firm against the keenest competition from American manufacturers, and shipment is expected to be completed within three months.

KOTRI BARRAGE SLUICE GATES

The last seven of the 43 sluice gates for the Kotri barrage, in Sind, are nearing completion at an engineering works in Ipswich, Suffolk, and are expected to be ready for shipment to Pakistan in a few weeks' time. Three more of the 60-foot-span gates are at present being shipped from Ipswich; the other 33 sluice gates and two gates and a lifting bridge for the navigation lock at the site of the barrage are already in Pakistan, together with virtually all the mechanism for all the gates. The whole of the water-control equipment for the barrage is expected to be in Pakistan by the end of the year.

The sluice gates for the Kotri barrage, which will irrigate 1,600,000 acres of the Sind desert, are being built by a British firm which has constructed a large number of the giant sluice gates that are controlling waters in many parts of the world.

CLYDESIDES PLANS GIANT DRY-DOCK

A giant dry-dock, 1,200ft. long and capable of accommodating the world's biggest merchant ships and warships, will be built at Greenock, Scotland, if plans submitted by the Greenock Harbour Trust to the British Admiralty are agreed to. The dry-dock will be 160ft. broad and have a water depth of 47ft. Cost is estimated by the Trust at between £3 and £4 million. Erection would take about three years. Six years ago the Admiralty carried out a number of experimental borings in the area of the East India and Victoria harbours, where the new dock would be erected. These revealed an average of 50ft. of clay over the underlying foundation of sandstone. This would reduce expenditure on excavations considerably. During the last quarter-century, with the increase in the size of ships, all the larger passenger vessels built on the Clyde have had to be sent to Liverpool for dry-docking. Today, even oil tankers have outgrown existing facilities. The plans include provision for a fitting-out basin for ships, complete with rail and crane facilities.

It has been announced that the Annual Industrial Fair at Zagreb will this year be held for a fortnight—beginning from 12th September. Last year, 680 participants from 15 countries including Western Germany, France, Italy, Austria, U.S.A. and about 500 from Yugoslavia took part in it. Further information of the Fair may be had from the Consulate General for Yugoslavia, 120 Ditcham Road, Churchfields Reclamation, Bombay 1, or direct from the Director of the Zagreb Fair, 25 Savska c. Zagreb. (Telephone: 21-730) and their branches at 45 Dubrovnik, Belgrade and Apatz. Turner Group Ltd., 45 Gerrard Street, London, W.1.

Commodity Markets

WORLD CONSUMPTION OF RAW
COTTONNEW HIGH RECORD IN FIRST HALF OF
THIS SEASON

WORLD consumption of raw cotton reached a post-war high record in the second half of the 1952-53 season, when mills consumed a total of 17,012,000 bales, according to the returns collected and published by the International Federation of Master Cotton Spinners' and Manufacturers' Associations. In the first half of 1951-52 there was a sharp fall, to 16,417,000 bales, and in the second half a slight further fall, to 16,245,000 bales. The latest returns, just issued, show that in the six months ended 31st January there was a new high record in total consumption of all growths. The improvement in the first half of last season was greatest in Asia and Oceania, where consumption rose to 5,465,000 bales, against 5,003,000 bales in the second half of 1951-52. In Europe there was an increase to 5,632,000 bales, against 5,247,000 bales, and in North America one to 5,152,000 bales against 4,841,000 bales.

In Europe, British consumption increased by 84,000 bales in the first half of last season, to 758,000 bales. There was an increase of 90,000 bales, to 536,000 bales, in Western Germany, and there were substantial increases also in Spain and Portugal. French consumption, however, fell by 44,000 bales to 553,000 bales. In America, consumption increased to 4,748,000 bales, against 4,429,000 bales in the second half of 1951-52, and there were increases of 68,000 bales (to 549,000 bales) in Brazil, and of 24,000 bales (to 172,000 bales) in Canada, but Argentina showed a fall of 84,000 bales, to 177,000 bales. There was an increase of 221,000 bales, to 2,183,000 bales, in India, and one of 85,000 bales, to 953,000 bales, in Japan. On the other hand consumption of American cotton in Japan fell by 100,000 bales, to 334,000 bales.

Decreased consumption of American cotton appears to have been reported by most countries except the United States, and other growths derived most of the benefit from the increase in mill activity, as the following table shows:—

	World Cotton Consumption (000s omitted)					
	31st Jan. 1953	31st July 1952	31st Jan. 1952	31st July 1951	31st Jan. 1951	31st July 1950
American	6,693	6,867	7,108	6,693	6,867	7,108
Indian and Pakistan	2,618	2,140	2,122	2,618	2,140	2,122
Egyptian	553	456	547	553	456	547
Sundries	7,508	6,786	6,629	7,508	6,786	6,629
Total	17,372	16,245	16,406	17,372	16,245	16,406

In the United Kingdom there was in the half-season, as compared with the previous half-season, a reduction of 25,000 bales to 194,000 bales, in American cotton, with one of 5,000 bales to 44,000 bales, in East Indian, and one of 4,000 bales, to 28,000 bales in Egyptian, but in "sundry" cottons there was an increase of 118,000 bales, to 494,000 bales.

More Spindles

Along with the recovery in consumption the International Federation's returns show a further recovery in the world's spindleage. The total at 31st January, 1953 is given as 129,246,000, compared with 129,060,000 six months previously, and with 127,869,000 twelve months previously, though with 147,153,000 at 31st July 1953. This spindleage in Europe, however, decreased by 205,000 during the half-season, to 72,195,000, and that in North America by 149,000, to 25,505,000. Asia and Oceania, however, showed an increase of 904,000, to 25,634,000. South America one of 99,000, to 5,027,000, and Africa one of 73,000, to 885,000.

For the United Kingdom a reduction of 524,000 in mule spindles, to 16,948,000 during the half-season is shown, and one of 221,000 in ring spindles, to 10,284,000. Japan is shown as having 7,460,000 spindles, against 6,948,000 six months previously,

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July, 1953. As compared with June, the July index for Food shows a rise of 1 point, while those of Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 239, 496 and 266, respectively.

Group	Weight	GROUP INDICES											
		July 1952	Aug. 1952	Sept. 1952	Oct. 1952	Nov. 1952	Dec. 1952	Jan. 1953	Feb. 1953	Mar. 1953	Apr. 1953	May 1953	June 1953

POOR BYSAKHI AND JETHWI LAC
CROPS

According to the final estimates issued by the Indian Lac Cess Committee, the Byasakhi lac crop in India (excluding Assam) for the year 1953 is expected to be 4,26,500 maunds; 30,000 maunds less than the revised estimate. The final estimate for this crop for the year 1952 was 8,85,000 maunds, the normal being 6,48,000 maunds. The poor yield is due to the poor 1952 Katki crop, resulting in extreme brood shortage and unfavourable climate conditions. Except for some showers in April there were no rains in the period February to May which adversely affected the growth of the crop. Arrivals of new lac at the manufacturing centres are poor and quality also is not good. The Jethwi (Kusmi) lac crop in India for the year 1953 is estimated at 15,500 maunds, as compared with the estimate of 29,000 maunds for 1952 and a normal of 49,000 maunds. The last Agham (Kusmi) crop was poor resulting in brood shortage for this crop. Climatic conditions also were not favourable.

The following is an abstract general final report on the Byasakhi lac crop for the year 1953 as compared with the finals for the last two years along with the normal yield (Average of final estimates for 10 years preceding 1939) State by State (All estimates are in maunds)

State	1953	1952	1951	1950	1949	1948	1947	1946	1945	1944	1943	1942	1941	1940	1939
1. West Bengal	65,000	75,000	45,000	60,000	50,000	50,000	50,000	50,000	50,000	50,000	50,000	50,000	50,000	50,000	50,000
2. Bihar	2,90,000	2,70,000	2,46,000	5,69,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000	5,33,000
3. Madhya Pradesh	91,500	71,500	75,500	1,82,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000	2,18,000
4. Uttar Pradesh	5,000	5,000	5,000	25,000	8,000	8,000	8,000	8,000	8,000	8,000	8,000	8,000	8,000	8,000	8,000
5. Vindhya Pradesh	25,000	30,000	30,000	37,000	47,000	47,000	47,000	47,000	47,000	47,000	47,000	47,000	47,000	47,000	47,000
6. Bombay	5,000	13,000	13,000	5,000	12,000	12,000	12,000	12,000	12,000	12,000	12,000	12,000	12,000	12,000	12,000
7. Orissa	2,600	2,000	2,000	2,000	5,000	5,000	5,000	5,000	5,000	5,000	5,000	5,000	5,000	5,000	5,000
8. Other Indian States (ex. Assam)	2,500	10,000	10,000	5,000	13,000	13,000	13,000	13,000	13,000	13,000	13,000	13,000	13,000	13,000	13,000
Total Production of Indian Republic	4,76,000	4,26,500	4,26,500	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000	8,85,000

The last Katki was poor and so there was a shortage of brood and a large proportion of hosts could not be infected. Climatic conditions also were unfavourable, as there were very little rains between February and May. Hence the crop's poor this year.

In Murshidabad District of West Bengal the lac insects died due to excessive summer heat; hence the arrivals were poorer than expected at the time of giving the Revised Byasakhi report. The arrivals in the Revised Byasakhi report are lower than expected. Hence the estimates for Bihar and West Bengal have been reduced.

WHOLESALE PRICE INDEX AT
PRE-SLUMP LEVEL

THE official wholesale price index (base: year ended August 1939=100), advanced by 0.3 percent to 412.0 during the week ended 8th August, 1953, as compared with 410.7 (revised) for the previous week. This brings the index to the highest level attained since February 1952. Compared with the corresponding weeks of the last month and a year ago, the index was higher by 1.4 and 6.8 percent respectively. During the week under review, Foodstuffs witnessed a rise of 1.2 percent to 411.1, owing to higher prices of tea (+4%), bajra and gram (+2%) and rice, wheat, sugar and gur (+1% each). Dal arhar (-2%) and coffee (-1%), however, decreased. The index for Industrial Raw Materials moved down by 0.3 percent to 491.2 from 492.8 (revised) for the previous week, as a result of decreases in the prices of copra (-5%), silk

and India is shown with 11,427,000, against 11,241,000. The United Kingdom had 274,000 spindles in course of erection at 31st January, 1953 (including 110,000 to replace existing machinery), compared with 185,000 (including 133,000 which were replacements), at 31st July, 1952.

(-4%), rapeseed (-3%), raw jute, groundnuts and linseed (-2% each) and castorseed (-1%), despite advances in iron ore (+5%), manganese ore (+3%), raw cotton (+2%), lac and gingelly seed (+1% each). The effect of higher prices of groundnut cake (+5%), coconut oil, zinc and petrol (+1% each) was more than offset by the lower prices of Gingelly oil (-4%), copper and sheep skins (-3% each), coconut oil and Cochinn, castor oil and mustard oil (-2% each) and cow hides (-1% each). In consequence, the index for Semi-Manufactures declined by 0.2 percent to 363.1 as compared with 363.9 (revised) for the previous week. A fall of 1 percent in jute manufactures brought down the index for Manufactures to 371.5 from 371.7 for the previous week, despite a rise of 1 percent in the prices of glass. The index for the Miscellaneous group advanced by 1.6 percent to 704.9 on account of increases in the prices of tobacco-leaf (+4%), black pepper in Calcutta and Turmeric (+3% each), chillies (+2%) and betelnuts (+1%). The price of black pepper at Cochin, however, declined by 12 percent during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August, 1939=100)

WORLD CRUDE OIL OUTPUT UP

Crude Oil production in the free world in the first six months of this year is estimated to have totalled about 290 million metric tons. This is 15 million tons more than in the first half in 1952, but only approximately 3,000,000 tons higher than in the second half. Largely owing to seasonal changes in consumption in the USA, production in the USA and Venezuela showed small declines in the last six monthly period, but this was more than offset by the continued rise in Middle East production which is now approximately equal to the output of the whole of Latin America. Production also continued to rise in the USSR and some other Iron Curtain countries, so that the world total in January-June 1953 was about 4 million tons more than in July-December 1952—the previous record period—and about 18 million tons more than in January-June 1952. World production of crude oil for 1952 as a whole was 617 million tons, compared with 587 million tons in 1951. In 1948, only three years earlier, production had been 471 million tons.

The absence of any substantial advance in the free world's total production in the first half of this year should not be taken as an indication that the last few years' persistent upward trend in world production has now come to an end. In some countries there is a considerable slowing-down in the rate of growth of oil consumption, but nowhere is there any decline in sight. Short of a slump in world trade, production of crude oil will almost certainly rise in the second half of this year.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks sugar in respect of Central Sugar Factories in India during the fortnight ended 31st July, 1953, were 600,605, nil, 72,696 and 5,27,469 tons respectively, says the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement. The figures for the corresponding fortnight of the previous season were 7,66,294, 2,812, 59,391 and 7,09,9715 tons respectively. Figures for the current fortnight relate to 124 factories representing 91.55 percent of the total cane-crushing capacity, while the figures of the previous year relate to 127 factories representing 92.55 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 13,17,629 and 12,21,469 tons respectively, as against the corresponding figures of 14,86,686 and 8,79,483 tons during the previous season.

LINSEED

Generally easier conditions prevailed last week and activity was on a very limited scale. Prices showed a downward tendency owing to a decreased demand, although upcountry advices were not easier to any great extent nor was there an improvement in despatches to this centre. Local millers for the most part were inactive and despite a keener interest from sellers very little business resulted. Dull conditions prevailed in the oil market and very few enquiries were received. The outlook for export still remained unhelpful at prevailing price levels. Latest quotations were as follows: Ready Rs. 21 per maund; September-October Rs. 21-per maund.

HIDES AND SKINS

The market showed little change. Stocks were higher than in the previous week.

Bazar Sales

(Between 18th and 24th August, 1953.)

Cowhides—Wet salted (Ord.) 7,000 pcs. on the basis of Annas 8-9 to Annas 11; Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 9 to Rs. 10; Wet salted (Slaughtered) 7,500 pcs. on the basis of Rs. 12-8 to Rs. 22-8.

Goatskins—Wet salted (Daisee, Killed) 42,500 pcs. on the basis of Rs. 175 to Rs. 375; Assam-Dinajpur-Murshidabad 3,800 pcs. on the basis of Rs. 290 to Rs. 350; Pakur 3,100 pcs. on the basis of Rs. 260; Muzafferpore-Darbhanga-Samastipur 26,700 pcs. on the basis of Rs. 250 to Rs. 260.

Bazar Stocks

(24th August, 1953)

Cowhides—Wet salted 91,700 pcs.

Goatskins—Wet salted (Daisee, Killed) 24,500 pcs.; Assam-Dinajpur-Murshidabad 91,000 pcs.; Muzafferpore-Patna-Purneah-Kissanganj 2,13,000 pcs.

SISAL OUTPUT IN TANGANYIKA

The annual general meeting of the Tanganyika Sisal Marketing Association, says the Financial Times, held in Dar-es-Salaam, was presided over by Mr. Abdullah Karimjee, the vice-chairman, in the absence of Mr. E. F. Hitchcock, who is at present in England. In his report the vice-chairman said that there had been an all-round improvement in sisal production on estates represented in the association "but there is still room for improvement on some where the standard of decortication, brushing, grading, and baling could be better."

The association is establishing an office in Dar-es-Salaam at the end of this year to supervise the sisal warehouses being built to meet the expansion of the sisal industry at Central Line. The indications were, he stated, that production was falling in certain countries by reason of higher production costs or lower quality and he felt that the present price would continue with a possible improvement next year.

Tanganyika Sisal Marketing Association, during the four years of its existence, has shipped 243,800 tons of sisal valued at approximately £26 million sterling c.i.f. of which nearly 40 percent has been sold to hard currency countries. Tributes were paid at the meeting to the work of Mr. Hitchcock and his contribution to the soundness of the Tanganyika sisal industry.

JAPANESE TEXTILE EXPORTS FALL

A cut of more than 50 percent in purchases of Japanese cotton goods, says the Financial Times, by the sterling area during the first six months of 1953, was responsible for a decline of \$60 million in Japan's textile export income, compared with the corresponding period of 1952. Cotton cloth exports from January to June amounted to 390 million yards, a drop of 77 million yards; and cotton yarn exports totalled 6,037,000 lbs. only one-third of the total for the first half of 1952. In value, cloth and yarn earned 21,200 million yen, or 41 percent less than the 1952 total of 53,100 million yen. Sales to the sterling area represented only 32.9 percent instead of 77.3 percent. The dollar area's proportion increased from 6.5 to 43.2 percent, and the open account's from 16.2 to 43.2 percent.

Pakistan, which topped all textile purchasing countries in 1951 and 1952, was replaced by Indonesia as the leading buyer of Japanese cotton piecegoods and by Burma in the purchase of cotton yarn. Japan's raw cotton imports during the six months increased in volume by more than 48 million lb to 514,012,000 lb, though the value declined by \$47 million to \$180 million.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to March, 1953. Compared with the preceding month there were increases in Cotton Consumption (1.0 point), Jute Manufactures (4.6 points), Steel Ingots (5.9

points), Cement (17.2 points), Paper (3.2 points), Coal (1.7 points), Wagons Loaded (10.2 points) and Electricity (5.0 points).
Indices for Cheque Clearances and Notes in Circulation revealed rises of 15.9 points and 3.7

points, respectively.

Correlating all the factors the Capital Index of Indian Industrial Activity advanced by 8.7 points during March, 1953.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PACE OF INVESTMENT ON THE FIVE YEAR PLAN

DR. MATTHAI'S INTERPRETATION OF SOME ECONOMIC PARADOXES

SEVERAL paradoxes in the Indian economic scene have attracted attention in the last few months. As far as the totally inadequate statistical apparatus of the country allows, we can detect economic trends which would not be remarkable in themselves, taken individually, but which ought not, according to the received theories, all appear simultaneously. For example, there is the much noticed contradiction of increasing unemployment and rising prices. There is the contradiction of increased industrial and agricultural output together with higher prices. Greater unemployment is similarly inconsistent with higher output. Then there is the contraction in the supply of money, which is consistent with falling employment and rising interest rates but not with higher prices, and not with oversubscription of government loans. Of course it is artificial to break down a paradox into these twin sets of contradictions, but they are useful ways of looking at the disequilibrium which, it is everywhere agreed, now marks the Indian economy. So far no one has produced a satisfactory explanation of this disequilibrium in all its aspects, and it is not our claim to do so here. As suggestive first approximations, however, we draw attention to a speech by Dr. John Matthai in Bombay last Friday (which we publish on a later page) and, on the purely monetary side, to an article on "The Missing Link in the Indian Economy" elsewhere in this issue of Capital. Here we will content ourselves with developing the hypothesis (or guess) that some of the present disequilibrium is due to over-investment by the Government on the five year plan.

This proposition will no doubt be resisted. The plan was assailed last December, when it was presented in its final form, as being too timid, too conservative. Public opinion, which expects so much from the deity called "Planning", is probably not yet prepared to accept the criticism that the plan was in fact far too ambitious on the "public" side. Most discussion of the plan at the end of last year centred on the difficulty of raising the money, but equally important were the questions whether the Indian governments could ever invest at such a rate supposing they did acquire the funds, and what would happen to the rest of the economy if they did succeed in making such large public investments. The progress of the plan to date gives some cause to suspect (i) that funds cannot indeed be raised at the pace hoped for by the planners, (ii) but also that what funds have been raised cannot be economically invested at the speed planned because investment requires not only "money" but assets, labour of certain kinds and administrative resources, and (iii) that the sums withdrawn by Government for these investments have left too little for private enterprise.

We offer this hypothesis quite tentatively, knowing that it will be an unpopular one, but believing that it is partly supported by several passages in Dr. Matthai's speech to the Commerce Graduates' Association last week which point in the same direction. Thus Dr. Matthai gave as one of the reasons for the success of State loans despite the smaller supply of money: "The slow rate at which funds intended for capital expenditure are absorbed, (which) results in unspent balances in the hands of public authorities such as municipalities and local boards". Later, speaking of the long-term remedies for unemployment, Dr. Matthai said: "Unemployment will not find an effective solution unless we are prepared for a comprehensive recasting of the structure and underlying assumptions of our economy. However much some of us may be dissuaded by ideas based on past experience from facing this task, I have little doubt that the logic of events will leave us no choice in the end". More explicitly, the former Finance Minister included among his short-term remedies for unemployment the suggestion: "An examination should be made of

segments of the public sector where the pace of development might be worked down so that monetary and physical resources may be released for employment in the private sector". Without wishing to burden Dr. Matthai with our views on the subject, it does appear that he inclines to the opinion that at least some of the trouble comes from the attempt to over-invest on planned projects at the expense of private industry.

Less perspicacious observers not only fail to see this but in fact take the contrary view: if the plan so far has not produced the results required, then the solution is more planning. Thus the last meeting of the Congress Party at Agra agreed that the plan had to be "stepped up" and wider sectors of the economy, e.g. cottage industries, brought within its scope. This would only lead to more trouble, not less. If the cause of the malady is too much investment (investment here meaning the setting aside of funds, not necessarily the actual creation of productive assets) on schemes that do not cater for consumption, then we will not mend matters by multiplying investment on public projects. The popular belief that the cottage industries should be promoted in order to reduce unemployment and increase the supply of goods is quite wide of the mark, for there is no sense in turning out more goods than people do not want to buy or cannot afford to buy. Dr. Matthai put this quite plainly when he said: "What we are apt to forget in our planning is that a community to be economically viable must not merely produce but be able to market what it produces. In the suggestions so frequently made about cottage industries and co-operative production, for instance, the difficulties of marketing do not seem to receive sufficient consideration". This criticism applies to much of the five year plan; marketing problems have been largely overlooked. The simple faith was accepted that if the Government planned to spend enough money, this would naturally absorb all the goods produced, which is far from true if you are producing hydro-electric works that take years to complete, or inferior handloom cloth which few people want, or export-goods which are too expensive.

Now some people, and especially business men who are caught with large unsold stocks of goods, are apt to argue that if the trouble is over-investment then the remedy is to stimulate consumption. Thus we have the spate of "purchasing power" theories that are in fashion in India today, usually mixed up with vague references to Roosevelt's New Deal and Keynes's "spend-and-get-rich" programme. These notions, we believe, have no relevance to India today. Any further increase in purchasing power at this stage by artificial "reflationary" means or by restoring the late unlamented food subsidies would only serve to bring back pockets of inflation, dislocate the economy further and do precious little to mend the real causes of disequilibrium. It is one thing to stimulate purchasing power in a country

with extensive capital equipment lying idle, developed marketing organisations that are unused and a large reserve of skilled labour looking for work; it is quite another thing to pump more money, mere money, into an economy that lacks all these things. The Government of India has succeeded in getting inflation under control, for which it deserves to be congratulated and not scolded into starting the inflationary spiral again.

If this sounds inconsistent with our first diagnosis, we can only point out that the evil is not over-investment simply, but over-investment in particular sections of the economy, to be exact in those projects for which the Government has accepted responsibility in the five year plan. India's need, as with every other backward country, is still for more investment, the creation of more capital assets. But they must be capital assets that will employ more people and produce goods that can be readily marketed. That is to say, India needs more investment in private productive industry, and if the only way to make that possible (without reducing consumption any further than it has been reduced, by the abolition of the food subsidies for instance) is to cut back investment in government schemes, then Dr. Matthai's advice should be taken: some monetary and physical resources must be diverted for the time being from the public sector to the private sector. For the time being because if the unplanned parts of the economy, industries that serve the market, can be got to expand, funds will be generated that can be spared later for greater investment in public schemes. It is not just that an economy cannot do everything at once; it is that it cannot do one thing at all unless it does the other first. The economic activities that are known in this country as the "private sector" must always support the public sector; not the other way around. Some devotees of the "mixed economy" have the idea that private enterprise can be kept going as an appendage to the State-planned economy, and therefore as long as the State is investing fast enough, all will be well with private industry. This is the reverse of the truth.

It seems to be the common fault of all "plans", from Stalinism to the Indian variety of mixed economy, that they lean too far toward grandiose schemes whose immediate market value is very slight. This is not to condemn all planned projects; obviously the "market" cannot be made the sole arbiter of a nation's economic life in the way the liberals used to imagine; but it cannot be ignored either. Governments and boards of planners can decide that certain works will be undertaken regardless of their short-run profitability, but if a nation as a whole wants to know what goods it should produce and to what economic activities it should devote its largest energies and resources, then it can only find out by freeing investment markets and leaving enough money in the hands of business men and consumers for them to choose the most profitable (i.e. the most useful on the whole) ways to spend it.

This analysis leaves unexplained the continuance of high productivity in Indian industry, as measured by the official index of industrial output. There are reasons why basic industry should be producing at a high level when markets and distributive business are stagnant, but they are too complex to go into here. The important thing to notice is that this situation is unstable and does not last. So anyone who looks at unemployment, poor sales and high prices, and then comforts himself with the thought that at least industry is still producing at a high rate, will not have his comfort for long. Nor will anyone who comforts himself with the planned increase in expenditure on the plan, an increase which it is said will go even as far as deficit financing if necessary. The problem of deficit financing will probably never arise now, for the Government's dilemma is not that it has not enough cash for its purposes, but that it has taken too much from industry and is using it on schemes that will not "drive" the economy in the way private industry can drive an economy. Dr. Matthai was right when he said that no period since the war contained trends so difficult to determine and interpret as the past year, but his suggestion that a scaling down (not necessarily a drastic reduction) of planned investment by the State might assist in restoring equilibrium deserves to be considered as an acute interpretation of some aspects of the present situation.

American Policy Not Sufficiently Clear

Moreover, our policy in regard to relaxation of our own restrictions on trade—so important and vital to the free movement of currencies—has not yet been made sufficiently clear. Under the circumstances, an extension of the liberty with which sterling can be converted into other currencies would now seem to be doubtful. The British Gov-

to Rs. 10.54 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 35 lakhs and Rs. 1.17 crores to stand at Rs. 86.14 crores and Rs. 22.03 crores, respectively. Cash and balances are, in consequence, shown at Rs. 19.80 crores or Rs. 2.58 crores higher.

The statement of the position of Scheduled Banks for the week ended 21st August, 1953, discloses Demand and Time liabilities at Rs. 528.18 crores (Rs. 12.66 crores on account of borrowings from Banks) and Rs. 328.52 crores (Rs. 12.46 crores) compared with Rs. 522.66 crores (Rs. 12.46 crores) and Rs. 330.10 crores (Rs. 2.10 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.36 crores

Because of the holiday, the treasury bill auction was not held this week; nor was the return of the Reserve Bank of India received until the time of going to press.

and Rs. 2.98 crores to aggregate Rs. 31.22 crores and Rs. 44.10 crores, respectively. There is a rise of Rs. 49 lakhs in investments to Rs. 323.56 crores. Advances and bills discounted at Rs. 476.79 crores reveal a drop of Rs. 3.89 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.8 percent and 55.7 percent against 8.3 percent and 56.4 percent.

The annual expenditure on the National and Small Savings collections was about 0.8 percent of the total collections in each of the years from 1949-50 to 1952-53. The expenditure, which included the cost of staff employed in the National Savings Organisation, publicity charges and commission, was Rs. 25,25,552 in 1950-51, Rs. 28,82,736 in

mission to authorised agents, was Rs. 19,57,379 in 1951-52 and Rs. 31,89,946 in 1952-53.

The following is a statement of the cash balances of the Central Government on the last day of May 1953:—

	Rs.
(1) At the Reserve Bank of India in India ...	107,50,32,000
(2) At treasuries in India ...	1,78,82,000
(3) In England (Sterling converted at 18d. the Rupee) ...	4,14,82,000
Total ...	113,43,96,000

SIR RODERICK CHISHOLM leaves from Bombay today after 33 years in Indian banking, a career that began with the old Bank of Madras and ended with eight years' service as Managing Director of the Imperial Bank of India. The departure of the last Briton from the headship of the country's greatest banking institution is of course a sign of the times that we cannot regret, but the loss of Sir Roderick's practical wisdom and personal charm will indeed be regretted by the officers of the Imperial and by the friends he has made throughout the country. I should think it is no secret that his services have been retained as long as possible. It was in the last years of his career with the Imperial Bank, when the far-flung branches of that national institution were divided by partition, that Sir Roderick's wide experience and firm regard for the principles of a sound credit structure were most valuable to the nation. A good part of his early Indian career was spent in Madras, where he was Secretary and Treasurer of the "circle" at the beginning of the war but when he joined the Imperial's travelling head office we saw him in Calcutta every winter. He became Deputy Managing Director in 1939, Managing Director in 1945 and was knighted two years later. They say the evidence of a banker's merits is in his balance sheet, but there would be much to say of Sir Roderick's excellences apart from the sterling balance sheet of the Imperial. Mr. Wofor, who was in the chair at the annual meeting of the bank in Madras last week, told the shareholders, "It is not only as an able and experienced banker that we shall miss him but also as a staunch friend, and I know you will want to join me in wishing him and Lady Chisholm many years of health in which to enjoy the retirement he has so well earned." Sir Roderick was a keen sportsman, and his friends in Calcutta will remember the close interest he took in the golfing and winter racing here during his cold weather visits. It is an index of the vigour he retains after so much hard work with some of his colleagues have presented him with not a wheelchair, but an order on Lillywhites for a new set of golf clubs. May he long be able to wield them. He is succeeded by Mr. S. K. Handoo who has been Deputy Managing Director since 1950.

The Times of India's venture into the upper crust of Indian journalism, the Calcutta daily newspaper business, did not last long—just over six months in fact. Evidently old loyalties are held more closely, and newcomers regarded with more suspicion, in Bengal than in cosmopolitan and go-ahead Bombay. The failure of the powerful Bennett Coleman organisation to obtain a foothold here should demonstrate that much to those who have been saying for years past that Calcutta would support another daily paper. It has usually been suggested that we need an evening paper, and indeed I believe that the Times first intended to start one here until it decided in favour of the more economical proposition of a duplicate of its Bombay and Delhi editions. Perhaps someone will try some day to launch an evening daily here; a paper of national standing I mean, not the "delegum" that we are sometimes offered on the way home in the evenings. But a city that would not support a fourth morning daily would scarcely provide a field for the much riskier venture of an evening paper. There are readers, right enough, and I understand that the Times had no trouble in building up a respectable circulation; but advertising support for newcomers is conspicuously lacking. For that matter, the Times chose an inauspicious six months for its Calcutta run because advertising expenditure by firms in Eastern India has been at a low level through most of this year. Any valiant successor would have to have the patience, and the resources, to wait more than six months

A DITCHER'S DIARY

for results. As a final reflection I suppose it would be unfair to recall that the Times began its brief Calcutta career with an editorial about how newspapers "should be prepared to shed the profit motive which ordinarily dominates business enterprise in most other fields".

The Dena Bank (Devkaran Nanjee Banking Company Limited) is better known in Western India, where it has 57 branches throughout Bombay, Gujarat, Saurashtra and Maharashtra, but it is now expanding to other parts of the country, including Delhi and Calcutta. The branch in Calcutta, which will be situated at 23A Netaji Subhas Road, will be opened on Saturday of this week. Indian banks have been contracting the number of their branches rather than expanding in recent years, and the appearance of this highly reputed institution in the form of a branch in Calcutta is to be welcomed as a token of vigour. The Dena Bank is of course connected, through the person of its chairman, Mr. Pranlal Devkaran Nanjee, with the well-known insurance and investment companies that bear the same name. I understand that the new branch, which is to be managed by Mr. K. Patwardhan, will transact all general banking business.

Look back to any Indian book on economics written in those optimistic days before 1947 and you will see it stated that one of this country's greatest advantages as a prospective industrial power is that it constitutes the largest single, undivided market in the world after China. Though there are obvious qualifications, this is indeed a real advantage and one that should be preserved no matter what political system is adopted. One of America's chief advantages as an industrial nation has undoubtedly been that behind its tariff wall it has a larger single market than is found anywhere in Europe, though it has required the constant vigilance of the U.S. Supreme Court to keep it one market. The Australians, at the other extreme, have recently discovered that even a very high standard of living is no compensation for a large market at home when industrialisation is the aim. So this should have been one of the permanent objectives of Indian economic policy: to keep the home market one, and to unify it further by improving the primitive transport system. How many steps have in fact been taken in the oncosite direction? I read recently that the West Bengal Government was considering banning the "export" of saris and dhoties outside the State, while a South Indian State last year was toying with the idea of banning the "import" of the same products. The limitation on mills' output of certain types of cloth has caused a fragmentation of the domestic textile market just when the effort should have been to integrate it as far as possible. The decline of Calcutta as the distributing centre for the whole of Eastern India, which began with partition, has continued ever since and is one of the main causes for distress in this city today. This applies not only to textiles but to everything else from boots to bidis: a useful contribution to alleviating distress would be to restore the free commerce in hundreds of small and unimportant commodities that used to exist in the eastern provinces. The that used to exist in the eastern provinces. The that used to exist in the eastern provinces. The that used to exist in the eastern provinces.

Some idea of what all these tourists do when they go to Britain was given by Lord Gifford in the House of Lords some months ago. Lord Gifford is the head of the tourist agency known as Theatre Tickets and Messengers Limited, and he told his peers: "We run a tour to two great houses in the south of England which we call the 'Stately Homes of England' tour. In the morning they visit one run by the National Trust; in the afternoon, one owned by a noble Lord who sits on these benches. The afternoon trip goes down much better, because the guide used to be a house-maid in the house, and the walking stick and hat hanging up in the corner actually belong to his Lordship. I would suggest that a few extra walking sticks and property hats might add to the income, particularly from the Americans, if sold as souvenirs".

certain way to keep India poor. Adam Smith might be out of date in Bretton Woods and such places, but he is still the best guide at home on the subject of the wealth of nations.

I suppose we seldom think of ourselves as tourists, even when we are. Tourists are the other funny-looking people, unsuitably dressed and wearing the characteristic lost expression of the well-to-do away from home; but ourselves, we are paying a visit to the pyramids or seeing Milan with the assistance of Cooks, not just touring. Well, those other folk of whom there is nothing to be said except that they are tourists are, it seems, inheriting the earth. There are more of them than ever before and they do not by any means all come from the United States. The airlines have recently recognised their existence as a separate species of humanity by providing tourist air services; now the shipping companies, the transition from wartime to peacetime conditions quite completed, are laying their plans with the tourist well before their eye. This they do, for example, by converting vessels to one-class accommodation: the *Strathnaver* and *Strathaird*, among P & O boats, and the *Orontes*, among Orient line boats, are to be converted thusly in the near future. The Greeks, Dutch and Swedes have all recently put in service ships that normally carry only tourist class passengers. All this is not new, I know, but I am assured that it is dominating the plans of the shipping companies more than ever in the past. These reflections stem from the discovery that tourism is now Britain's second biggest dollar-earner, and that in July Britain received an all-time record of 145,268 overseas tourists. This traffic, as it is unfortunately called in the trade, came after the Coronation and there is every prospect that further records will be set up before the winter. Britain, as far as I know, does not exert herself particularly to attract tourists; certainly she puts out very little of the superb travel literature the French specialise in. That she succeeds all the same in earning as many dollars as her Continental neighbours is either a tribute to the island's natural merits or a proof that tourists are not as exclusively interested in good food and drink as they are supposed to be.

Before I get off the subject of tourists, I might recall the story of an American tourist wandering curiously down Whitehall. He stopped one of the natives and asked courteously, "Would you mind telling me which side the War Office is on?" "Great Scot", responded the startled Briton, "Ours, I hope".

THE DITCHER.

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Looms for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

The J.3 Loom (3-leaf, 3-shuttle) weaves twill tubular cloth for sacks.

CONTRADICTIONARY TRENDS IN THE INDIAN ECONOMY

DR. MATTHAI'S ADDRESS TO COMMERCE GRADUATES

We publish below the text of Dr. John Matthai's address to the Commerce Graduates' Association in Bombay last week. Some comment on this contribution to discussion of the current outlook is offered in a leading article. Dr Matthai was formerly Finance Minister in the Central Government and is now Chairman of the Taxation Enquiry Commission.

NO period since the end of the war has presented economic trends so difficult to determine and to interpret as the past 12 months. Although the level of purchasing power and consequently the demand for goods is lower and although industrial and agricultural production has not merely been maintained but has increased, the price movement is showing an upward trend. Rising prices and increased production would presume better employment, but instead unemployment is increasing. In spite of the fact that the volume of money has dwindled, there has been a good response to Government loans, particularly of the State Governments.

I have no authentic explanation to offer for these apparently contradictory movements. My object in this talk is to urge the need for exploring the subject and examine if the contradictions can be resolved and the conflicting trends fitted into an intelligible pattern. There is, otherwise, the danger of fanciful hypotheses and half-baked remedies clouding public opinion and making confusion worse confounded.

Supply of Money

Let me first take the supply of money on which purchasing power depends and indicate some of the more important factors which have led to its curtailment:

(1) This is largely the result of the deflationary measures adopted towards the end of 1951, consisting of the increase in the bank rate, the curtailment of open market operations and the selective restriction of bank credit. In spite of the Reserve Bank agreeing to discount usance bills, there are still large pockets in business and industry in which money supply is constricted.

(2) On account of the fall in the prices of export commodities, as compared with imports, the terms of trade have moved adversely to India.

(3) Agricultural incomes have declined since last year, the resulting situation having been only slightly altered by the recent rise in prices. Further the general relaxation of the control of foodgrains has reduced the black-market income of the trader.

(4) The unemployment which has resulted from various causes has led to a corresponding reduction in purchasing power.

The extent to which these factors have affected the availability of money and of incomes is evidenced by the rise in interest rates, the fall in demand deposits (as distinct from time deposits) of scheduled banks, the fall in railway passenger earnings, the drop in the current receipts of Central excise revenue and so on.

State Loans

If money is scarce, how is it that there has been such a satisfactory response to the recent State loans? The following facts provide some explanation:

(1) There has been undoubtedly a good deal of official propaganda as in the case of war loans during the British régime. But the theory of official pressure is somewhat overdone because unless there are spare funds, even official pressure cannot produce results. As compared with the war period, official propaganda must have worked under more difficult conditions because then there was a current flow of inflated income which has now ceased.

(2) The existence of compulsory provident and other funds which are held by Government provide an increasing source from which loans can be fed.

(3) The slow rate at which funds intended for capital expenditure are absorbed results in unspent balances in the hands of public authorities such as municipalities and local boards.

(4) The cessation of speculative transactions which has followed the slump in 1952 and the fall in the quantum of import trade have reduced the outlet for bank advances. Banks, therefore, are in a better position to invest in Government loans.

(5) The attractive terms offered by the State Governments have provided a strong incentive to banks and other financial institutions for investing the funds thus released in Government loans.

Level of Prices

I turn next to the level of prices. If purchasing power is lower it must be presumed that the effective demand for goods is weaker. Moreover, the estimated production of foodgrains in 1952-53 shows a substantial increase and there are also large stocks of foodgrains imported from the U.S.A. under the wheat loan. If the demand is less and the supplies are greater, how does it happen that prices of foodstuffs have risen?

(1) There is, first of all, the purely adventitious circumstance that food subsidies have been substantially curtailed since the beginning of 1952

—a circumstance which has little to do with the economic law of demand and supply.

(2) The relaxation of control, as happens generally, leads to a rise in open market prices. At the same time, it leads also to a fall in black-market prices. Setting one against the other, it is a fair presumption that the average price paid by the consumer is not greater but probably less.

(3) Our wholesale index number is apt to present a distorted picture of price movements and it is likely that the recent upward movement in food prices, as shown by the index number, exaggerates the increase which has taken place. The index for rice, for example, is mostly determined by the free market quotation at Patna, with the result that local circumstances, such as a temporary interruption of railway transport, may affect these quotations and vitiate the general picture. Similarly, substantial reductions in the pool price of wheat and in the open market prices, which are reported to be below the prices in fair price shops, are not reflected in the price index for wheat.

If the increase in prices is to this extent illusory, the growth of unemployment becomes less difficult to explain. But there is still the anomaly that unemployment is growing while industrial and agricultural production has improved or is at least maintained.

Unemployment

Broadly, the position is that except during the war unemployment has been steadily increasing because economic activity has failed to keep pace with the increase of population. Assuming an increase in population of 4 million per annum, there is need for providing additional employment for 2.2 million adults men and women, if at least the status quo is to be maintained. Even if the Planning Commission's optimistic assumptions of additional employment are fulfilled and even if the greater part of the adult women population are left out of account in planning gainful employment, we are still left with the prospect of ever-increasing unemployment—a serious matter in a country in which every adult is a voting citizen.

Although we have been responsible for our own affairs practically since the war, we have overlooked the potential menace of growing unemployment. The persistence of inflation since the war, with the deceptive stimulus it provides for economic activity, and the momentary pressure of other urgent problems diverting public attention, have made us unappreciative of its implications.

We have been more appreciative of food scarcity and have bent our energies mainly to remedying it. But food, even if available, must be bought. This does not happen unless there is sufficient employment that yields income. What we are apt to forget in our planning is that a community to be economically viable must not merely produce but be able to market what it produces. In the suggestions so frequently made about cottage industries and co-operative production, for instance, the difficulties of marketing do not seem to receive sufficient consideration. There is no more important and difficult problem in economic planning. When Roosevelt planned his New Deal and Keynes built the philosophy of his General Theory, this was the problem to which both devoted their main thought.

End of War Boom

Mass unemployment, either as under-employment or as disguised unemployment, has been with us as far back as we can remember. What is it that has suddenly brought the problem to the fore? The spurious economic activity which wartime inflation created has ceased or is languishing. This is another way of saying that the sellers' market is giving way to a buyers' market. The inflationary boom which started with World War II in the final stages of its long-drawn subsidence, received a fresh impetus from the Korean war which also has now ceased.

Neither of these has so far affected production. The reason is not that current demand is keeping pace in India but rather that the cessation of the boom has made the position regarding raw materials and capital equipment easier because of lessened world demand. The gradual cessation of the boom has not so far affected production which still has some past arrears of demand to feed it, but it has definitely affected trade in both volume and turnover. It is in the sphere of trade that the reason for the present decline in employment opportunities should be principally sought.

We have no definite information regarding the extent to which unemployment has increased, but some indication is provided by the employment exchange statistics. These show that (1) the number of new registrations was higher in 1952 than at any time before; (2) on the other hand, the number of placements has gone down by half since the beginning of 1952, the absorption in pri-

vate employment being down by three-fourths; and (3) the number of applications at the same time has gone up by nearly half. The employment exchange figures relate entirely to people in search of clerical and unskilled jobs in cities and throw a disturbing light on unemployment as a social problem affecting the educated middle-class populations.

Retrenchment

What has brought the problem with almost dramatic suddenness to public consciousness is, therefore (1) its emergence in sharp contrast with the inflationary boom conditions of the immediate past and (2) its heavy impact on a section of the population so politically conscious and mentally alert as the urban middle class.

Several circumstances may be mentioned which have led to this increase in urban unemployment:

(1) The total value of foreign trade in 1952-53, as compared with the previous year, after allowing for the fall in prices, points to a substantial reduction in the volume of commercial activity in internal as well as external trade.

(2) Although industrial employment has been generally maintained in the large organised industries, there has been curtailed activity in specific industries; for example, in tea, jute, mica and shellac on account of weak foreign demand, and in the automobile industry and small scale engineering industries because of slack internal demand.

(3) The growing volume of welfare legislation has so increased labour costs, with no corresponding increase in output, that it constitutes a strong factor operating against additional employment and in favour of retrenchment.

There are also other causes which in varying degrees have worked in the same direction; e.g. decontrol has led to retrenchment in Government offices of persons for whom no alternative employment is available; small dealers have been displaced from business as a result of the multi-point sales tax in States like Bombay; considerable unemployment has resulted in cities from the enforcement of prohibition; heavy taxation of motor vehicles has led to a large reduction of lorry traffic; low purchasing power has reduced employment among people catering for public entertainment—in Bombay alone a fall of 20 percent being anticipated in the entertainment tax receipts in 1953-54, as compared with 1951-52, with no change in the rate of tax.

Remedies

Remedies for unemployment have been proposed recently by the Planning Commission and by leaders of business and political opinion. Most of the remedies suggested, however valuable in their own way, view the problem as a long-term one affecting the entire range of Indian economy. Regarded in this way, unemployment will not find an effective solution unless we are prepared for a comprehensive recasting of the structure and the underlying assumptions of our economy. However much some of us may be dissuaded by ideas based on past experience from facing this task, I have little doubt that the logic of events will leave us no choice in the end. The sooner, therefore, our thinking is geared to the wider objective of business conceived as a form of national service par excellence with all that it implies, the better for the country and the interests concerned.

Meanwhile, if the recent increase in unemployment is looked upon as a short-term problem calling for immediate remedy at the point where its impact has been abnormally heavy and sharp, a solution might usefully be considered on such a lines as these:

(1) The committee now engaged in investigating the unutilised capacity of engineering and allied industries must expedite its task, including in it not merely an estimate of existing surplus capacity but also how far, with such adaptation and expansion as can be readily carried out, it can meet further requirements.

(2) The Government should arrange immediately for a properly-phased programme of purchases in India over the next few years of engineering stores and the simpler forms of mechanical equipment required by the Railways and by the Defence and Production Ministries.

(3) Except where imperative considerations of foreign exchange are involved, imports should be regulated by Customs tariffs fixed at adequate rates rather than by import quotas.

(4) An examination should be made of segments of the public sector where the pace of development might be worked down so that monetary and physical resources may be released for employment in the private sector.

(5) Credit restrictions should be relaxed and means devised for channelling credit into industries which can provide employment.

(6) A reasonable system of compensation should be instituted for workers displaced as a result of unavoidable retrenchment.

The present position is difficult enough. But more difficult times may be ahead if the Korean settlement leads to an intensification of Japanese competition in export markets and if a recession occurs in the U.S.A. On the latter, opinion is divided, the general trend being still optimistic. But the existence of large dealers' stocks, the huge expansion of instalment credit, the curtailment of construction activity and the fall in agricultural prices are symptoms which cannot be disregarded.

Stocks and Shares

SHARE MARKET BARELY STEADY

—Wednesday Evening.

THE stock market has been exceedingly dull, the volume of business has shrunk even further and prices for the most part are barely steady. Though the enquiry for good debentures and preference shares (other than in jute manufacturing companies) continues and government loans are being supported, common stock are quiet. Jute shares are quite neglected, coals are stagnant and it is reported that no more than five transactions were completed in tea shares over the week. Indian Irons have been surprisingly steady after falling to Rs. 22 they are quoted this evening at seven annas higher on the strength of a statement by the Prime Minister condemning the go-slow movement that led to the lock-out and endorsing the stand taken by the company.

Business in loans was fairly active last week, but Bombay has been closed yesterday and today and this section is consequently idling. Prices are maintained.

Details of the week's trading follow.

The gilt-edged market ruled steady throughout the week, and there was an increase in the volume of business reported. The 3 percent Conversion Loan 1986 met with good enquiry and improved from Rs. 82.2 to Rs. 82.3 with buyers over. Three percent 1896 was quoted nominally at Rs. 82.2. In short-dated, 3 percent 1957 was marked at Rs. 98.9 cum-voucher and later at Rs. 98.7 ex-voucher. Three percent 1958 was steady at Rs. 98.2 and there were buyers of 21 percent 1954 at Rs. 98.9. 21 percent 1955 was marked at Rs. 98.5. In the medium-dated group, 31 percent 1961 was taken one anna higher to Rs. 98.6 while 3 percent 1959-61 was also better at Rs. 96.2. Both 3 percent 1963-65 and 1964 were enquired for at Rs. 92.7. 4 percent 1960-70 was taken at Rs. 102.1 possibly because the interest date falls on 15th September. In long-dated, 3 percent 1966-68 continued to be on offer at Rs. 90.1 while 3 percent 1970-75 was steady at Rs. 86.8. Provincial Loans continued to meet with good support. Four percent Bombay 1963 and 1964 improved to Rs. 100.5 and Rs. 100.4 respectively. Both 4 percent Madras and U.P. 1963 were also better at Rs. 99.9. There were, however, rather more sellers than buyers of 4 percent West Bengal Loan 1963 and 1964 at Rs. 100.4.

Among debentures, a small lot of Standard Vacuum was crossed at Rs. 102.14 and there were buyers of market lots at around Rs. 102.8. Both Calcutta Electric and Dunlop Rubber were steady at Rs. 101.8. There were buyers of Dalmia Cement and Rohtas Industries at Rs. 73.4 and Rs. 84.3. Orient Paper changed hands freely between Rs. 93 and Rs. 93.8.

During the past week, sellers of jute preference shares continued to predominate. Shares on offer included Belvedere, Claverley, Empire, Hooghly, Kinnison and New Central. There were buyers of Auckland 2nd at Rs. 111. There were small buyers of Khardah and Kelvin at Rs. 101 and Rs. 120. Among miscellaneous preference shares, British India Corporation were marked at Rs. 144.8 at which price there were further buyers. Burn 6 percent and Burrakur 1st were both done at Rs. 120. Parcels of Brooke Bond and Shaw Wallace came to hand at Rs. 79 and Rs. 80.8. Cawnpore Sugar 8 percent and Elgin Mills 8 percent were quoted at Rs. 143.8 and Rs. 144 at which price there were further buyers. Calcutta Electric were a shade easier at Rs. 12 while a small lot of Duncan Brothers was sold at Rs. 60 against a previous quotation of Rs. 70. F & C Coker improved further to Rs. 50 while Indian Aluminium, in the absence of support, were sold at Rs. 71. Indian Iron and India Burma Petroleum continued to be supported at Rs. 107 and Rs. 93. Karanpura Collieries, on the announcement of the payment of the arrears of preference dividend, found many buyers at Rs. 92 against a previous quotation of Rs. 84. Martin Burn, Ramnugger Cane and Rohtas Industries 1st preference were enquired for at Rs. 104, Rs. 102 and Rs. 101. Orient Paper 1st were in demand at Rs. 102 while the 2nd were on offer at Rs. 73.8. A parcel of McLeod 2nd Preference was placed at Rs. 78.

In the banking section, Imperial Bank fully-paid and contributory were fully steady throughout at around Rs. 1820 and Rs. 434. Punjab National Bank had buyers at Rs. 21.4 and sellers at Rs. 21.8. United Bank of India "D" shares were marked at Rs. 3.13 and business was reported in United Commercial between Rs. 36.4 and Rs. 36.10.

In the railway section, small lots of Baraset Basirhat and Bukhtiarpur Bihar were done at Rs. 20 and Rs. 26. Bankura Damodar, Futwa-Islampur and Ahmadpur-Katwa were some of the shares on offer. Arrah Sasaram, Howrah Amta and Shahdara Delhi were, on the other hand, difficult to buy.

In cotton, Bowreah were quoted at Rs. 285 with buyers but no sellers while Dumbay eased to Rs. 171 with sellers over. Cawnpore Textiles were a shade better at Rs. 8.5 and Elgins were supported at Rs. 17.2. Muir could be sold without difficulty at Rs. 209.

The coal section continued to stagnate and selling orders were difficult to execute. Bengal

and Burrakur fluctuated narrowly around Rs. 505 and Rs. 8.11. East Indian were marked at Rs. 22.12 at which price there were further sellers. Equitable were quoted at Rs. 33.8 and Karanpura Collieries eased to Rs. 80. South Karanpura were supported at Rs. 9.9 while Standard and Pench Valley showed no change at Rs. 20.12 and Rs. 20.6.

Sugar shares were on the whole unchanged. Belsund were taken at Rs. 7.12, Champaran at Rs. 24.8 and Samastipur at Rs. 14.13 at which prices there were further buyers. There was a small enquiry for Ramnugger at Rs. 17.12 but Purnabore were offered at Rs. 15.

Comparatively speaking more business was completed in the engineering section last week. Braithwaite were done at Rs. 11.2 and Bhartia Steel at Rs. 10.5. Burn were fully steady at Rs. 279. Hooghly Docking spurted 10 points to Rs. 100. Indian Iron and Steel fluctuated between Rs. 22.9 and Rs. 22.1 to close at Rs. 22.3. Business was reported after market hours at Rs. 22.7. Indian Standard Wagon were marked at Rs. 88. Jessops improved from Rs. 22.4 to Rs. 22.10 as did Kumar dhubi Engineering from Rs. 7 to Rs. 7.4. Marshalls were a shade better at Rs. 5.2. There was a good enquiry for Indian Galvanizing, Indian Steel and wire Products Ordinary and Saran Engineering but in the absence of sellers no business could be recorded.

A minimum amount of business was completed in the jute section and dealings were confined to small lots. Agarpara were unchanged at Rs. 17 while Fort Gloster were lower at Rs. 387. Howrah fluctuated within a few annas to close at Rs. 22.14. Nudex were marked at Rs. 44 and Presidency at Rs. 4.7.

In electrics, Calcutta were steady at Rs. 13-12 as was Jubbulpore at Rs. 14. Patna had buyers at Rs. 11 while U.P. were offered at Rs. 167.

Paper shares like India Paper Pulp, Orient and Titagur were steady at Rs. 160, Rs. 31-4 and

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED.

The par value of the shares held by Indians was 65.58 percent of the total paid-up capital of the Imperial Bank of India as on 28th May, 1953, it was disclosed in Parliament this week. The corresponding figures for non-Indians and others, including operations trusts, societies, associations, etc., were 9.76 percent and 24.66 percent respectively. The number of Indian shareholders was 9,247, non-Indian shareholders was 737 and others, which included corporations, trusts, societies, associations, etc., was 310. Of the 16 directors on the executive board of the Imperial Bank, 12 were Indians, four non-Indians (including Sir Roderick Chisholm and Mr. C. W. Middleton who are due to retire in September 1953 and May 1954 respectively). Seven of the seven directors of the Bombay local board were Indians while in each of the Calcutta and Madras local boards there were four Indian directors out of seven.

West Pakistan

NEW MINISTRY OF NATURAL RESOURCES EXPECTED

DEVELOPMENT PLANS FOR SUI NATURAL GAS FIELD

(FROM OUR OWN CORRESPONDENT)

Karachi, 27th August.

AN announcement is expected shortly regarding the creation of a new Ministry of Natural Resources. The most important subjects which it will take over are Mines and Power. The Ministry of Industries, which at present handles these, is greatly overburdened, and the intention is that the truncated Ministry shall be amalgamated with that of Commerce. Khan Abdul Qayyum Khan will probably be relieved of his charge of the Food Ministry, which was never intended to be more than temporary, and will take over the Ministry of Commerce and Industries. The new Minister to be appointed to the Central Cabinet from East Bengal will no doubt assume charge of the Ministry of Natural Resources.

This new Ministry will indeed have an important part to play in the development of Pakistan apart from the big hydro-electric schemes which are now approaching the stage of implementation it will be called upon to handle the vast problem of the utilisation of the natural gas field recently discovered at Sui, in the Bugti tribal area of Baluchistan. We have frequently been told during the past few years that this or that development will transform the whole economy of Pakistan, but in this case the saying is literally true. It has always been recognised that the great handicap to Pakistan's development programme has been the lack of fuel. Mr. C. Striding Snodgrass the international expert on natural gas utilisation, who has prepared an interesting report on Sui for the B.O.C. and Pakistan Petroleum Ltd., has some significant remarks to make on the subject. "Historically," he says, "the great industrial revolutions have been prompted and made possible by ample fuel resources. In England, the fuel was coal; in the United States first coal, then oil, then natural gas in combination with the other two. The discovery by Pakistan Petroleum Limited of a large reservoir of natural gas near Sui in Baluchistan is of great national importance and significance as a ready source of fuel for the agricultural and industrial development of West Pakistan. A pipeline is all that is needed to bring this abundant supply of natural gas to points of consumption." Hitherto, of course, the Pakistan Government had been looking to its hydro-electric projects to afford the main source of fuel, but the scope for hydro-electric supply of electricity in the area which will primarily be served from Sui is limited. In any case power from natural gas, which is regarded as the most convenient and cheapest form of fuel which nature has provided, and perfectly suitable for steam power installations, has certain advantages over hydro-electric power. It is interesting to recall the note of warning uttered by the United States Steel Mission in 1949. "There is a certain glamour about such projects," said the Mission "and a general belief that hydro-electric power means cheap power. This is not necessarily the case."

Pakistan's annual coal requirements are approximately two million tons of which all but 600,000 tons must be imported. Sui gas can largely take its place. The proved reserves in the Sui field are estimated at 2.28 million million (i.e. billion) cubic feet, sufficient to supply 100 million cubic feet per day for 80 years; this is the equivalent in effective heating value of about 1.6 million tons of imported coal per year.

Mr. Snodgrass's proposal, which is under close consideration by the Pakistan Government, is points to 181.

that the gas should be piped down to Karachi via Sukkur-Rohri and Hyderabad-Kotri—a distance of approximately 350 miles—by means of a 16" diameter pipe line. The initial capital cost would be about £9 million. During the first stage of the project (1956-1959 inclusive) fuel requirements along this route are estimated at about 37 million cubic feet per day for three power plants, at Hyderabad, Kotri and Karachi, and three cement works, at Rohri, Hyderabad and Karachi, all of which have already been installed or are definitely planned by the Pakistan Government or the Pakistan Industrial Development Corporation for completion by the end of 1955. Adding the requirements for other uses, such as new textile mills, the estimated demand by the end of 1959 would be about 54 million cubic feet a day. The substitution of this quantity of gas for imported fuels would save the equivalent of about £3.24 million. The second stage would be from 1960-1963 inclusive, during which the average offtake would rise to 86 million cubic feet per day, which would save about £81 million of foreign exchange annually. The cost of the gas will depend on the agreement to be reached between Pakistan Petroleum limited and the Pakistan Government, but it can confidently be said that it will be substantially cheaper than other forms of fuel, and this will obviously give a fillip to industrialisation in this area. It should be added that natural gas is excellent raw material for the chemical industry, particularly for the manufacture of nitrogenous fertilisers, and Government are already contemplating the establishment of another factory in this area, which would be additional to the new fertiliser factory being set up at Daud Khel in the Punjab.

Taxation of Agency Commissions

Some weeks ago I mentioned that the two-man Committee, at its session in Karachi, had reached an agreement on the long-outstanding question of taxation of managing agency commissions with a view to avoiding double taxation. Further details are now available, although no official pronouncement has yet been made. It is learned that the gist of the agreement is that 50 percent of the commission should be allocated to the country in which the head office of the managing agents is situated and the other 50 percent should be allocated between the two countries in proportion to the income of the managed company arising in each country. Provision has also been made for relief to be granted in those cases in which assessments have already been completed.

Taxation and Devaluation

The Appellate Income Tax Tribunal at Lahore has recently made a decision which will have an important bearing on the vexed question of taxation of book profits and losses arising out of the devaluation of sterling and of the Indian rupee in 1949. The particular appeal related to the allowance of losses arising from devaluation as an admissible charge against profits. The Income Tax officer had disallowed the loss, but the Appellate Assistant Commissioner upheld the claim of the assessee company. The Income Tax officer then made a departmental appeal to the Tribunal, contending that the amount of the loss would be admissible only on actual conversion of the debt due to the Pakistan company from India, and that a mere writing down of the value of the debt in the Balance Sheet and Profit and Loss account was not enough. The Tribunal however gave the decision in favour of the assessee, holding that there was no doubt that the fact of devaluation had adversely affected the realisable value of the company's dues from its sister company in India and that the difference must accordingly be regarded as a business loss. Presumably the Tribunal is likely to follow the same principle when appeals against the assessment of book profits arising from devaluation come before it. The Tribunal's ruling is final as far as the Income Tax Department is concerned, unless the matter is taken to the High Court, which is the final Court of Appeal.

Bombay

REACTIONS TO THE ESTATE DUTY BILL

MILD PROTEST FROM INDIAN MERCHANTS' CHAMBER

(FROM OUR OWN CORRESPONDENT).

30th August.

THE interest of the business community have last week was centred on the announcement of the proposed rates and slabs for the assessment of estate duty as embodied in the Bill introduced last Monday by the Central Finance Minister. As the day happened to be a public holiday, the news regarding the Bill arrived only in dribbles so that the immediate reaction was not based on a complete understanding of the scheme. The Stock Exchange, which was officially closed, and which generally gives a lead in such matters, took a very gloomy view of the situation and prices in the trading were marked down sharply. By Tuesday morning, market opinion had veered round completely and the proposed rates and slabs were regarded as very reasonable, the market regaining its buoyancy. During succeeding days, it actually registered not merely a healthy but an unusually optimistic tone, except in the textile section, which for special reasons remained depressed.

The explanation for this reaction is obvious. For some peculiar reason, the business community in Bombay had, during the last few weeks, become obsessed by a vision of the crushing effect Estate Duty would have on its future existence. As a result of the tone of some of the speeches in the House on the Estate Duty Bill, and especially the exuberance displayed by leaders like Mr. N. V. Gadgil, a fear had arisen in the minds of even those who were only moderately well-to-do, that in order to reduce inequalities in the possession of property, a greater part of their wealth would somehow or other be expropriated as soon as they died. It was argued that even the Finance Minister, though generally moderate and balanced in tone, had spoken with indifference of the fate of those whom he considered well-off. In such a frame of mind, they were agreeably surprised by the comparatively small amount which he proposed to levy.

Although the subject of Estate Duty rates still forms almost the exclusive topic of conversation among business men very few strong protests have been raised by numerous business organisations here. Protests are inevitable, but judging by the tone and the contents of the telegram which the Indian Merchants' Chamber sent to the Finance Ministry, these will probably be both vague and half-hearted. Though the Committee of the Chamber has urged a revision of the rate structure and the progression in the slabs "to introduce the need of the incidence of this tax," the arguments it has advanced in support of this request have more to do with the levy of such a tax than the rates and slabs proposed. After having given an almost implicit welcome to the provisions of the Estate Duty Bill, by the behaviour of its members, the Registered and Stock Brokers' Association, has registered a mild protest in the wake of the Indian Merchants' Chamber. This protest follows the same line as that of the Chamber. That there are few complaints does not amount to saying that the business community is altogether happy at the prospect of paying estate duty or that it would not like the rates lowered or the slabs expanded. It means simply that just as it had come a little earlier to reconcile itself with the idea of estate duty itself, the business community has now experienced some relief because the severity of the levy is not as great as was feared. There is also some reason to believe that the immediate effect of this duty will not be to disperse capital, which in the present urgent need of the country for increased investment in private sector of industry would be regretted. But it is felt here by some that instead of frittering away time and energy in fighting the principle of the duty itself or the proposed structure of the rates and slabs, business representatives in the House, and its various organisations outside, should concentrate on getting the meagre exemptions rationalised and enlarged.

LABOUR LIVING COSTS

According to the Labour Bureau, the working class cost of living index number (base 1944=100) in Akola appreciated by six points to 168 during June, 1953. This increase was mainly due to a rise in the prices of rice, jwar, tur dal, milk, fali oil, onions and chillies by about 11 points. As a result of a drop in the amusement charges, the index number for the miscellaneous group receded by six points. In Jabalpur the index number advanced by four points to 159 during the same period. The food group index rose by seven points but this was slightly offset by a decrease in the prices for the clothing group which fell by three points.

In Jamshedpur, the index number appreciated by four points to 156 during the same period. There was a rise of seven points in the food index but this was slightly offset by a fall in the prices of articles in the clothing group by two points. The index number for the miscellaneous group appreciated by one point due to a slight increase in the price of pan. In Jharia, the index number for the food group went up by 13 points but the clothing group index receded by two points as a result of lower quotations for sarees and markin.

London

IMPENDING CHANGES IN GOVERNMENT

T.U.C. AND LABOUR PARTY ON NATIONALISATION

(FROM OUR OWN CORRESPONDENT)

29th August.

THE holding of three Cabinet meetings in August, to say nothing of the fact that Sir Winston Churchill presided over another of them this week, suggests not only that he is quite definitely resuming the control of affairs which his lieutenants were obliged to take over during his enforced rest but is believed by political and Parliamentary columnists to mark even more significant developments. The scope of his week-end conferences with party colleagues has recently been extended beyond the needs of purely current affairs, and to attend them the various Ministers and others concerned have been obliged either to curtail or postpone holidays which no doubt they badly needed and had undoubtedly earned. All these comings and goings—the Prime Minister himself has apparently postponed his own projected holiday in the south of France until late in September—are confidently taken to mean that an announcement with regard to the reconstruction of the Government may be expected before Parliament meets again on 20th October.

A re-shuffle now would hardly occasion any surprise. The Government has been in office for two years now, and there has been time to assess both its strength and its weaknesses, though it is fairly generally admitted, even in Opposition circles where they are prepared to forget politics, that the latter have been surprisingly few. Nevertheless, many members of the team who were not expected to succeed have in fact done much better than had been anticipated; others, however, have not quite achieved what they and their supporters hoped they might. A period of consolidation lies ahead, and the Conservatives no doubt realise that on what they can make of it depends the course of the next election. Now, then is the time to eradicate the weaknesses by an adjustment of the strengths. It would be profitless to attempt, as so many commentators are doing at the moment, to forecast the moves Sir Winston may be contemplating. So much depends on the state of health of the Prime Minister and of Mr. Eden. It may, for instance, be necessary for the latter to give up the heavy departmental duties of the Foreign Office to do more as Deputy Prime Minister and perhaps as Leader of the House—with relief for both—and that would set up a whole series of moves. Again, the "overload" system can hardly be said to have proved a success and it may well be dropped, and that also would involve quite a considerable reshuffle within the Cabinet. At the moment, it should be mentioned, every indication points to Sir Winston and Mr. Eden both being physically fit to resume their former duties by the time Parliament meets.

Trade Union Congress

The Trade Union Congress will be meeting in the Isle of Man shortly, as a sort of curtain-raiser to the annual meeting of the Labour Party, and what will undoubtedly prove to be the main as well as the most controversial topic at both meetings will be the question of further nationalisation. The Labour Party Executive has outlined its attitude in Challenge to Britain. The T.U.C. General Council now comes forward with an Interim Report on Public Ownership. The differences between the two are marked and to resolve them is not going to be easy, and least of all with the Bevanites on the warpath. The General Council reaffirms its belief in the "principle" that public ownership is good and in certain instances may be necessary, but it approaches the subject from a practical viewpoint, accepts the fact that it has both advantages and disadvantages, appreciates that from the consumers' point of view public control "does not appear to be very effective as yet," and wisely insists that extensions of public ownership "must grow logically and demonstrably out of the experience of nationalisation already gained." The practical approach explains the caution which marks the recommendations. These favour the extension of nationalisation to water undertakings, which is a "clear case," some agricultural land, by a fuller use of existing powers; part of the chemical industry and the mining machinery industry, but a final decision ought to be left over until the "next Labour Government" institutes an inquiry. In addition, iron and steel and transport should be rationalised. Greater public control, it hints, might be necessary over big finance and investment corporations and the railway wagon manufacture and repair industry. For the rest, the report emphasises the need to interfere as little as possible, though it thinks development councils could be set up in shipbuilding, marine engineering, the machine tools industry, and possibly also in railway engineering and in the motor industry.

The significant differences with Challenge to Britain are that the T.U.C. General Council go further than the Labour Party on land and on investment policy, but fall a long way short in respect of the aircraft and machine tools industries, chemicals and the other engineering industries. In the last-named case, indeed, they even move counter to the views of the engineering unions.

Industrial Production and Shift Working

Industrial production, as measured by the Treasury index, has fallen markedly in June and July from the high level it reached in the spring.

The figure for June is given as 119 and that for July is expected to fall to 112-13. In May the index had risen to 123, although output that month was affected by Whitsuntide holidays. The June figure was, of course, affected by the Coronation holiday, while that for July reflects the general annual holidays. A more useful comparison, perhaps, is with the figures for earlier years. The 119 for this June is still well above the figure of 112 for June, 1952, but lower than the 122 for June, 1951. The July figure of 112-113, however, is well above last year's figure of 102 and even above the 111 of July, 1951. Again, whereas this year the fall between June and July is six to seven points, it was 10 points last year and 11 points in 1951.

Nevertheless, industries in which it is thought double-day shifts would increase production and lower costs have recently received a memorandum from the Minister of Labour. These shifts, generally 6 a.m. to 2 p.m. and 2 p.m. to 10 p.m., are already worked in collieries and some steel and engineering industries, but the National Joint Advisory Council agreed in February that efforts should be made to extend the system. In his memorandum, Sir Walter Monckton emphasises the need for the shift system in the country's present economic situation "as a normal feature of industrial organisation." Detailing other advantages, employers are advised that where overheads and capital charges were high in relation to labour costs, the advantages of shift working would be most marked. Each employer should work out relative financial advantages of single and double shifts. Extension of the system should help to make possible the re-equipment of industry which might be necessary in the immediate future, while husbanding the capital resources of the country. Plant and equipment would be more likely to be kept up to date. Other national advantages would be more efficient use of generating plant and a reduction of peak demand for electricity. As an alternative to new factories, additional shifts would help to limit encroachment on agricultural land. The memorandum also discusses the social consequences and suggests means whereby the inconveniences might be offset so as to make the system as desirable on social grounds as a factor influencing favourably the standard of living and, indeed, the maintenance of full employment.

Raw Cotton Commission

With something like 56 percent of the raw cotton trade back in private hands, there has been quite a lot of speculation as to the selling methods which the Raw Cotton Commission would adopt with effect from 1st September. This has now been set at rest with the receipt by contracting-in spinners of a comprehensive explanation. Differentials

under the new system will be computed by reference to the price indexes for selected groups of similar cottons, and not by reference to the current standard symbols. For the growths known as U.S.A., etc., for example, there will be nine indexes, ranging from high-grade good staples to low-grade short staples; for Pakistan and Peruvian growths there will be two indexes each. It is understood that the Commission intends to make daily changes in the index prices to accord with any variations in replacement costs. The big increase in the number of indexes will obviate the need for more than periodic adjustments in the differentials. The Commission has also informed spinners that cotton of most descriptions would be offered for sale for September delivery on "ex stock" terms only. November-December delivery in American and Egyptian growths will be generally available at the forward discount, but the October position varies according to individual descriptions and qualities. For growths other than American and Egyptian, quotations for October-December are uniform with those for "ex stock" (i.e., September delivery). Until realistic forward replacement quotations are available, the Commission will normally sell these growths, as at present, for a delivery period agreed at purchase date, any charges incurred through late delivery being calculated as at present.

July Trade Figures

The detailed trade figures for July reveal the welcome information that exports of manufactures, in which nearly all groups showed an increase over the second quarter, were responsible for almost all the improvement of £24 million in United Kingdom exports in that month. Shipments of engineering products rose by £7 million (of which the vehicles group accounted for £4 million), textiles by £5 million, metals by £3 million and other manufactures by £6 million. Exports of food and drink increased by over £1 million, but those of raw materials were slightly below the second quarter average. On the import side, the increase of £11 million was for food, drink and tobacco.

Brevities

The Central Provinces Manganese Ore Company are to pay an interim dividend of 17½ percent, tax free, an increase of 5 percent on the payment a year ago.

Whiteaway, Laidlaw and Company, who have been closing down unprofitable stores in Africa and India in recent years, hope to buy the Jaeger Company (Canada), which has retail shops in Montreal, Toronto, Ottawa and elsewhere. Treasury consent has yet to be obtained.

BATTERY SPRAYERS

CHARGE PUMP light yet stable. Three efficient filters. The CONTAINER is tested to twice maximum pressure recommended. INSPECTION PLUG embodies air release and safety device. CONSTANT PRESSURE at jets COMPREHENSIVE SPRAY LANCE preventing loss of fluid when spraying is suspended. ADAPTOR permitting use of tyre inflating apparatus for initial air charge, etc. PACKING specially designed for permanent use for transport and storage of apparatus.

There is a "MYSTO" sprayer for every purpose.

INCIDENCE OF TAXATION ON PLANTATIONS

RAJAJI DEFENDS STATE'S FISCAL POLICIES

(FROM OUR OWN CORRESPONDENT).

31st August.

WITH the circulation of the Taxation Enquiry Commission's questionnaire, tax problems have come to the fore. Commercial and industrial circles in the State, barring plantation interests, express the view that present taxes are unnecessarily heavy, that they are acting as a damper on trade, and that they discourage capital formation. As for plantations, Col. Spain, President of the United Planters' Association of Southern India, said that they suffered from the oppression of the taxing authority at lower levels. *The Hindu* said recently however that although tea is the most heavily taxed commodity, conditions in the post-war period have been good enough to make the burden bearable.

Mr S. Narayanaswami, a stockbroker of importance who deals in plantation shares, has analysed the incidence of taxation on different kinds of plantations. Forty percent of the profits of tea estates are liable to income tax. Where a joint stock company is the owner of a plantation, this 40 percent is liable not only to income tax and surcharge at 4 as 2 ps. in the rupee, but also to Corporation tax and surcharge at 2 as 9 ps. in the rupee, total which together 6 as 11 ps. Besides, an excise duty of 3 annas per lb in respect of tea consumed within the country and an export duty of 4 annas per lb are levied. The Central Tea Board collects a cess of Rs. 2 per 100 lbs for the cost of tea propaganda. The planter also has to pay the Indian Tea Licensing Committee a licensing fee of 15 annas per 1,000 lbs. The Madras Government collects a sales tax of 11 percent on turnover. The land tax paid to the State Government is about Rs. 2.4 per acre. Quit-rent payable to municipalities is about 8-2/3 percent on the annual rental value. In addition to these taxes, there are levies on tea factories, taxes on buildings, education cess and various other imposts. The coffee industry, however, does not pay any income tax as coffee curing is not considered an industrial process. Even the excise duty is not collected directly from the coffee

planter, but is collected from the buyer when delivery is made to him after the Coffee Board auctions. Sales tax on coffee is at the rate of 3 pies in the rupee. As the Coffee Board is a statutory body whose expenses are met by the industry, these charges should be considered virtually as a Government levy. They vary from year to year, and amount to about 10 percent of the value of the produce.

Rubber, like coffee, is immune from Central income tax. There are no excise duties on rubber, but plantations pay the usual sales taxes and small land taxes and municipal levies. However, most of the acreage under rubber, a large part of the tea area in South India, some areas under coffee and a considerable acreage under pepper and cardamom lie within Travancore-Cochin State, which levies an agricultural income tax of 4 annas with a surcharge of 1 as, 6 ps. for companies. In that State, agricultural income tax alone absorbs a third of a company's gross profits. General income tax is now collected by the Centre from tea companies situated in the State. In Madras tea too, the Government is likely to levy agricultural income tax on plantations in pursuance of the recommendation of the Land Revenue Reforms Committee. The plantation industry, on the whole, does not object so much to taxation as to the cost of labour welfare legislation.

In comparison with the views of plantation interests the criticism of taxation policies by other commercial groups in Madras State is much harsher. The President of the Southern India Chamber of Commerce thinks that the tax burden in the country is heavy without adequate return to the tax-payer and that governments should return as much of the taxes as possible in the form of security and social services to the general public rather than spend them on the maintenance of an unduly heavy administration. Sales tax, in his view, should be made a single-point levy and collection of tax on inter-state transactions was never sought to be allowed by the framers of the Constitution. He learns, however, that the Central Government has recently persuaded the States not to demand the payment of tax with retrospective effect. He advocates a uniform sales tax levy for the entire country; if this is not possible, it should at least not operate as a handicap to dealers in one State against their counterparts in other States in respect of tenders to the Union Government, railways, etc.

C. R.'s Reply to Criticisms

The Chamber President's comment on taxation policies and the cost of Governmental administration is criticised by Mr. C. Rajagopalachari, Chief Minister, who has suggested that a way might be evolved to collect sales tax at one point without reducing the revenues of the Government. The question of uniformity in sales tax, according to Rajaji, is a difficult matter, because the requirements and the volume of trade in various States differs. States, he says, will be able to a uniform tax at maximum rate but only at the minimum rate. Therefore, the Chief Minister is not surprised that business men are pleading for uniformity. But if there was uniformity, it would be difficult to alter the tax from time to time; these replies deserve consideration, but few will agree when Rajaji says that the agitation for uniformity has the object of handing over the power of taxation to the Central Government and that the cry for uniformity in sales tax is but one aspect of a view which favours India being governed as a unitary State. He claims to be a "decentralisationist", believing in the dispersal of governmental authority as far as is practical. Decentralisation implies that there are bound to be different rates of taxation in different States. It may be clever politics to go with the current of opinion in Tamilnad, as when C. R. lays too much emphasis on States' autonomy, but his circumlocutory pleas for decentralisation give the impression that he sometimes exerts a divisive influence in politics. Rajaji claims that the administration is not top-heavy. All categories of government employees, from teachers to policemen and district collectors, are under-paid, he says. Nothing but the tyranny of poverty maintains the administration of this country. Mr. Appleby's findings also support C. R.'s admission that government servants are paid far less than they should be.

Entertainment Tax

There are contradictions in C. R.'s views on taxation. In one instance he says that it is difficult to levy a tax which cannot be transferred by the trader to the consumer; but in another place he says that it is the entertainer or the cinema industry that pays the entertainment tax, forgetting that this tax is paid wholly by the consumer. C. R. who has time and again appealed to the public to boycott the cinema, gives his support to film interests who have always advanced the doubtful plea that the entertainment tax is a tax on enterprise, technique and on the producers. If the box-office returns of pictures have decreased, it is not entirely because of the entertainment tax on which the film producers throw the blame for all the ills of their industry. It has seemingly escaped their notice that people in the State, especially those in formerly-ratoned urban areas, now spend at least 50 percent more on rice, which means they have so much less to spend on other requirements. Again C. R. observes that a tax should bear some relation to net income, but he is reluctant to apply this principle to agriculture where land assessments have no relation to current net incomes from land; it also contradicts his policy of increasing indirect taxes on essential goods and services.

Estate Duty Reactions

The rates of estate duty proposed in the Union Parliament have been criticised in the Madras Press. *The Hindu* thinks that the exemption limits are too low, that the rates proposed are stiff and that the rise with every successive slab is steep. Although India proposes to have the slab system as against the step system in the U.K., property worth Rs. 14 lakhs would, if it represented a share in a joint family property, have to pay 4.16 percent while in Britain property worth the equivalent of Rs.130,000 pays only 4 percent. As the vast majority of estates, the paper continues, would fall below the Rs. 2 lakh limit, the Indian estate duty will be heavier than the British duty. The concession in respect of agricultural property compares unfavourably with the position in the U.K. for in India agricultural property is by far the most important of the various classes of property that pass at death. Inherited property in India serves the purpose of an insurance against customary and inescapable obligations towards relations, society, etc. The rates on larger estates are far too steeply graded. It is only from beneficiaries of large estates that we may normally expect a substantial contribution to the provision of risk capital. *The Hindu* recalls that it has taken 60 years for Britain to work up to her present rates.

COATING STEEL WITH ALUMINIUM

Scientific and technical progress towards the economic production of aluminium-coated steel in Britain is reported in the second annual survey of the British Iron and Steel Research Association. It states that new markets are open to the steel industry by the development of "a hot dip method of coating steel with aluminium."

Aluminium-coated steel is regularly produced in the United States, but few British plants can install the equipment without heavy capital expenditure. The new process, however, reduces the capital cost. Another new coating method, the report says, is being developed by the simultaneous depositing of iron and zinc on steel sheet, the zinc content improving corrosion resistance. Similar coatings that have the brightness of a mirror can also be used for ordinary galvanised goods, such as roofing sheets, wire, and hollow ware.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM
ADVANCES IN TEXTILES, INSECTICIDES
AND FOOD PRESERVATIVES

(FROM A SPECIAL CORRESPONDENT)

London, 27th August.

BUSINESS conditions at the time of writing are still under the influence of the holiday season and, therefore, industrial outputs are showing declines in comparison with those of previous months. It is, however, possible to say that when allowance is made for the seasonal factors now operating, industrial activity is well maintained in most directions. Industrialists have been encouraged by the receipt of fairly substantial orders from overseas, especially for machinery. These include a contract secured by Textile Machinery Makers for the supply of textile machinery to Korea. The bill for this—amounting to £250,000—is to be met by the United Nations Reconstruction Agency.

Whilst the British textile industry has small cause for dissatisfaction at the time of writing, it still professes uneasiness at its prospects. In consequence, it has voiced two demands very strongly, one for the abolition of what still remains of the purchase tax and the other for a guarantee that protection will be afforded against "foreign" competition. Neither of these demands is new, but in one direction the second of the demands has a fresh emphasis. The East African market has been singled out for particular attention as an outcome of a visit to that territory by a Lancashire mission which has made certain recommendations, not yet fully disclosed, to the British Government. From another section of British industry complaints have been made against alleged American "dumping" of textiles into Canada, and the chairman of Courtaulds Limited has expressed anxiety with regard to the revival of Japanese rayon industry. It must be admitted that the tendency of many British textile manufacturers is to look upon textile problems parochially and as if they had exclusive trading rights. This is noticeable in the speeches delivered by the chairmen of British textile companies at the recent annual general meetings, where the absence of advocacy of international co-operation as a means of solving world trade problems was conspicuous.

Tracer Techniques and Textile Printing

Radio-active tracer techniques have been described as "the most useful research tool since the invention of the microscope." The chief industrial uses of these techniques are in thickness gauges, eliminators of static electricity, liquid level indicators and industrial radiography. It is now claimed that a technique of this kind can be used to prevent colour soiling in textile printing. The methods to lessen colour soiling hitherto known have been lengthy and not always entirely effective. As with most of the tracer techniques, the method of use is simple, as is also the equipment.

Multiple Stores and Style

The close relationship which is being effected between multiple stores and the British textile industry has been carried further by the well-known firm of Marks and Spencer. This concern, by owning textile mills and hosiery factories, has been able to market direct to the public, thus cutting out the middleman's profit. The textile goods offered so far have been mainly for the working classes, although there has been for some time past evidence of appeal to other types of buyers also. It is announced that this latter policy is to be developed and that dresses are to be introduced in which special attention has been given to design. Much of the designing will be original work carried out by the company's own staff, but it is also intended to copy and, if necessary, to modify Paris and other Continental designs. The number of potential purchasers is considerable; for many women of the middle classes have not been able to afford the prices asked by the ordinary West End stores—which are now to be faced with keen competition.

New Synthetic Fibres for Britain

The most interesting textile development has been the decision of the Board of Trade to allow limited quantities of new synthetic yarns and fibres, not at present made in the United Kingdom, to come in from dollar sources. It is stipulated that importers will have to agree to re-export at least 50 percent of the fibres or yarns which they purchase. It is probable that the fibre most concerned at present is the acrylic kind known as "Orlon", manufactured by the Du Pont Company and indeed British agents for the sale of "Orlon" fibres and yarns have already been appointed. "Orlon" is one of the most distinctive of the new fibres and does not duplicate nylon or "Terylene" either in methods of manufacture or in fields of employment, although there is some meeting point in use. As with the other synthetics, "Orlon" is valuable for blending with other fibres, natural or synthetic, especially with wool—for which reason it has attractions for the British woolen and worsted industry. But it can also be the sole fibre constituent of fabrics, and fabrics so made, although having a soft feeling, are of exceptional durability.

The Silk Congress

Encouraged by the small, but nevertheless marked, increase in world consumption of silk during the past 12 months, an optimistic view is taken of the Fourth International Silk Congress which is to be held in Milan, 28th September—3rd

October. Various papers are to be given upon technical aspects of the silk industry, but the one which will command most attention will be that by Mr. I. Haratini who will speak upon the Japanese Price Stabilisation Law. It is appreciated that whatever the technical progress made, the silk industry can have no assured future unless it is delivered from the severe price fluctuations which were so unsettling a feature of the years immediately before the war. The use of silk for blending with nylon is as yet but little known in Britain, but apparently it has made headway in the United States and also for blending with orlon.

Food Poisoning Reactions

Food poisoning in Britain shows no diminution and, in fact, has reached such proportions of late as to call forth a leading article in *The Times*. The whole position is confused and stands in need of clarification if these outbreaks are to be substantially reduced. There is no question that certain articles of food, as, for example, imported hams, and eggs—home laid or imported—have been responsible for many outbreaks of severe gastric illness. But other issues arise far from plain. For instance, whilst much has been charged against synthetic cream, it is contended that natural cream is equally to blame. The interesting point here is that the Government prohibited the use of certain preservatives of natural cream on the ground that they are injurious to health. But it would now appear that, on balance, the preservatives may have safeguarded the national health. But there is no doubt that official opinion is tending to be more critical of both food preservatives and substitutes. A Government prohibition of a number of sugar substitutes has just been issued. Boumarin Coumarin, the synthetic flavouring, which United States manufacturers have withdrawn from the market, following upon experiments showing its damage to the liver, has been taken off the British market also. The modern food manufacturing industry has been built up so extensively upon the use of additives and substitutes that largely to discontinue their use means a good deal of inconvenience and an acknowledgment that a more conservative attitude should have been adopted in the first place. But there is little doubt, in view of the increasing suspicion with which the medical world

looks upon derivatives from tar, that flavourings, sweeteners, preservatives, etc., thus obtained will soon occupy a less important position in the food manufacturing industry than they do at present.

A New Phase in Insecticide Uses

Industrial activity in connection with insecticides has taken a new turn in the attempt to manufacture paints and other coatings which have the power of killing insects on contact. It is clear that if such can be accomplished, then a very great service would have been rendered to tropical and sub-tropical countries in particular. A good deal of experimental work has been done for several years past, in which the Colonial Insecticide Research Unit has played a prominent part. Licences to manufacture paints, etc., along the line of the conclusions reached, are now being granted. The composition of the paints is similar to what would have been expected, namely, there is employment of a urea-formaldehyde resin into which has been mixed one of the modern insecticides, such as D.D.T. or aldrin. The problems which have had to be solved have been chiefly those of ensuring that the insecticide retains its efficacy over a lengthy period and also that it has no unpleasant effects upon human beings. This has necessitated that the film surface should not be too hard, while yet remaining durable and also that the insecticide should be so incorporated that its effect was not soon exhausted. It is claimed that these conditions can be brought about, the first by the use of ultra-violet radiation and the second by ensuring that the insecticide migrates slowly to the surface. Statistics have been published showing the effect on tse tse flies, mosquitoes and other pests. It is thought that the principle can be applied to a wide range of surfaces and in various directions. Some of the most extensive experiments have been in the use of insecticidal coatings for the shipping industry where the anti-fouling effect is said to be striking.

Cattle Feeding Stuffs

Whilst sceptical voices are still raised as to the likely long-term effects of administering penicillin and aureomycin to cattle feeding stuffs, the Ministry of Agriculture gives at least tacit approval to such courses. Consequently, the British chemical industry is launching out into this field and various new branded feeding stuffs are promised in the near future.

STRUCTURAL STEELWORK BY BRAITHWAITES

Nature of the Burlap Futures Contract

The Burlap Contract calls for the delivery of 50,000 yards of Standard Calcutta Burlap in 25 bales of 2,000 yards each.

Each contract must be made up of:—

- (1) exclusively one of the deliverable grades.
- (2) the make of one or more of the A/B Group Mills, officially listed by the Exchange.

The Seller has the option to deliver either one of the deliverable grades at any time during the month specified in the contract in one of the warehouses licensed by the Exchange for delivery of Burlap in the Port of New York or New Orleans, La.

Details of the Contract

TRADING UNIT

50,000 yards

PRICE MULTIPLES

Quotations are in multiples of 1/100 of 1c per yard. Each 1/100 of 1c per yard is equivalent to \$5.00 per contract. A fluctuation of 1c per yard is thus equivalent to \$500.00 per contract.

TRADING MONTHS

No contract shall be made or recorded for any month other than February, May, August or November within a 12 month period.

EXCHANGE QUOTATIONS

All quotations on the Exchange are in respect to 40 inch—10 oz. Burlap.

DELIVERABLE GRADES

The contract basis grade is: 40 inch 10 oz. (11 porter, 12 shot) Standard Calcutta Burlap.

The seller may also deliver: 40 inch—7½ oz. (9 porter, 9 shot) Burlap at a discount of 30% below the price of the contract (basis) grade.

COMMISSION —(Regular Rates)

	Buying or Selling per Contract	Round Turn
Members residing in the U. S., Canada, Cuba or Puerto Rico	\$7.50	\$15.00
Non-Members residing in the U. S., Canada, Cuba or Puerto Rico	15.00	30.00

Special rates of commission are provided for Day Trades and Straddle Transactions.

For members or non-members residing outside the U. S., Canada, Cuba, or Puerto Rico, an additional commission of \$2.50 per contract, bought or sold, will be charged.

For further particulars, address the Secretary, Commodity Exchange, Inc., 81, Broad Street, New York 4, New York

Jute

SUPPLY OF RAILWAY WAGONS FOR JUTE

PEOPLE engaged in the jute trade were surprised to read last week a Press statement that there had been an improvement in operational efficiency and such an augmentation in the supply of rolling stock that in some parts of the country wagons were available in excess of requirements. The coalfields were specially mentioned as having been in that position but it was certainly not the case in the jute districts. There has, it is true, been an improvement in Bihar but, in parts of North Bengal and Assam, the wagon supply is still inadequate. At the end of each delivery period contracts for the supply of jute to mills have to be extended because wagons are not available. Even at the end of July, which is not a rush period, mills had to accede to requests for extensions supported by certificates from station masters and, in some cases, from divisional superintendents to the effect that wagons were not available. It would seem, therefore, that the wagon supply for jute is still inadequate. If this is the case, as was stated last week that there were 2,000 wagons at the coalfields which could not be utilised, it is pertinent to enquire why some of them could not be transferred to jute districts.

Another grievance which the jute trade has against the railways is the difficulty in getting wagons at any time for the transport of jute to mills on the west bank of the Hooghly and the virtual impossibility of getting wagons for mills south of Howrah. This has been a standing grievance for years and there have been several conferences in Calcutta to discuss it but no solution has been found. Whether it is because of bottlenecks or operational inefficiency is not known. Before the regrouping of the railways the E.B.R. used to blame the E.I.R. and vice versa. Now it is all one railway group but the deadlock continues.

Another matter which the railway authorities might investigate is the question of the correct calculation of freight charges. In an enormous number of cases—some people would say in the majority of cases—the charges are incorrectly calculated. Rectifying these charges and making the necessary adjustments must take very many man-hours and cost the railways many lakhs of rupees. Worse still, in many instances, demands are made for alleged under-charges and, as these are paid by the mills by the debit-note system, they have got to be paid. Furthermore the demands are often not made until the time for making bits is about to expire or has expired, with the result that the jute merchant, who is responsible for the freight, loses his money.

A frequent occurrence is that consignments arrive at mills short of a few bales. This commonly happens where bales have to be transferred from narrow gauge to broad gauge or at ferries. A claim for such shortages will not be entertained by the railways unless supported by a "short certificate" from the goods clerk at the delivery station and it must be submitted within six months. Cases are not infrequent in which the goods clerk refuses to issue the certificate within the stipulated time and then the railways take shelter behind the provisions of the Railway Acts and refuse to pay. It would be possible to cite many more ways in which difficulties and inconveniences are suffered by the jute trade at the hands of the railways but sufficient has been said to show that there is urgent need for a general overhaul of the railway administration so that the present shortcomings are reduced as much as possible and the railways are made to serve the trade efficiently and expeditiously.

THE JUTE MARKETS

The dullness which set in during the second half of August has continued without anything to relieve it. In consequence bear speculators have taken a hand in the matter and have further depressed prices by offering gunnies abroad at depressed prices from current local quotations. It is also counts from current local quotations. It is also reported that jute balers in Pakistan have been acting similarly in regard to raw jute. The impression thus created abroad is that gunny prices were being dragged up by raw jute prices. The position is now reversed. Gunny prices are dragging jute prices down. There is, however, some resistance to lower prices for jute. Imports are being held back upcountry because the prices in the main markets are not attractive to growers who are inclined to hold back and wait for an improvement. In Assam they are being helped by this lack of steeping water which is delaying a harvesting. Reports from Pakistan indicate a similar attitude there. Whether the growers will be able to put a brake on the downward movement remains to be seen but it is likely that the influence which will prevail in the end will be that of the katni market which has now attained a magnitude almost, if not actually, as great as that of the suppressed phatka market.

Manufactured Goods: Absence of enquiry from abroad has given bazar speculators all the scope

they have needed. Prices have fluctuated considerably from time to time but the general trend has been downwards. Small business has been done in standard makes and also in specialties but the business has been so small that it has not had the slightest influence on the market. The occasional and fleeting upward movements have been the result of local covering. There is no serious selling pressure from mills but all mills are holding jute against which they do not have sales and they would welcome the opportunity of shortening that position. It is reported that, in the past few days, the U.K. has been able to buy Calcutta goods at considerable discounts from the prices quoted here.

On Wednesday morning the market opened dull and easy and quotations were as under:

	Ready	Sept.	Oct.-Dec.
40" 8 oz.	Rs. 34	33-11	33-14
40" 10 oz.	Rs. 43-8	43-8	43-6
B. Twills	Rs. 96-10	97	98
Heavy Coes (Plain)	Rs. 99	99-8	99-8
Corn sacks	Rs. 96-10	97	98-4

Raw Jute: There has been very little activity during the week just closing. In spite of reports of small imports upcountry, the disparity between mofussil and Calcutta prices sellers have been rather more keen for business. This has been a result, more than anything else, of the weakness in the katni market which has produced a feeling that it would be wise to sell something a little higher than the market should go lower. The now in case the market is accompanied by a anxiety to effect sales is accompanied by a wailing of the fact that, unless mofussil prices come down a lot, those who have sold will have to cover at a loss. Nevertheless, because sellers do not have enough business on their books to keep their upcountry presses busy, they are willing to discount mofussil prices still further in order to get business. Sellers who have imported jute bought from the Pakistan Jute Board are particularly keen but mills are chary of buying it because of the irregularity of assortment and poor quality generally. Apart from jungli there is hardly any Indian Old Crop on offer. The following business was reported:

Indian Old Crop:	
Northern Rs. 26 to Rs. 25 basis Bottoms ex agency and/or ex Calcutta September.	
Assam Rs. 25 to Rs. 24-8 basis Bottoms ex agency and/or ex Calcutta September.	
Local Packing Rs. 22-8 basis Bottoms ex agency and/or ex Calcutta September.	
Bimil Rs. 22 F.A.Q. basis Bottoms ex agency and/or ex Calcutta September.	
Indian New Crop:	
Northern and/or Dhubri Rs. 26 to Rs. 27-8 basis Bottoms ex agency.	
Northern and/or Dhubri supervised Rs. 27-8 basis Bottoms ex Calcutta.	
Assam Rs. 26-4 to Rs. 27-8 basis Bottoms ex agency and ready B/L's.	
Sahibganj Rs. 24-8 basis Bottoms.	
Jungli Rs. 24 basis Bottoms.	
All the above are for Sept.-Oct. Shipment.	

No business is reported in Pakistani long jute but small business has been done in Pakistani cuttings at Rs. 68 for NC's and Rs. 67 for MC's and TC's ex Pakistan on C.O.D. terms.

Quotations on Wednesday morning were as under:

Indian Jute:		New Crop Landed at Mills	
	Rs. per md.	Basis Bottoms.	Shipment
Lower Assam	27-8		Sept.-Oct.
Upper Assam	27		Do.

Jat	27		Sept.
District	26		Do.
Northern	26		Do.
Cuttings NC	68 per bale		Do.
MC/TC	67		Do.

Mofussil: In most areas imports have increased but in Upper Assam they are still small and it is reported that harvesting is again delayed by insufficient steeping water. All the imports are being taken up at prices above Calcutta parity, the buyers probably having sales in hand at higher prices. On the other hand, there are still considerable quantities to be bought against sales in Calcutta at roundabout Rs. 27 per maund for Bottoms. Mills report that hardly any deliveries have been made against these sales. Growers and beparis are inclined to be reserved and would rather hold back jute than accept lower prices. There appears to be no selling pressure. Cutting of the daissee crop is now in full swing and good imports may be expected within the next two or three weeks. The small imports that are coming in now are short jute from the margins of the fields and stunted plants and the quality is not very good. Quality of the mature plants appears to be promising.

Arrivals in Cossipur are increasing. Old Crop jungli is falling off and there is much more New Crop, chiefly from northern districts. In the past few days imports have been mostly of new crop. They are mostly wet and the colour is disappointing.

In Pakistan, markets are easier and overseas buyers have withdrawn almost entirely. Sellers are inclined to be reserved and would rather delay selling than accept lower prices. In the main centres most imports are being taken up by merchants covering previous sales but imports are actually small for the time of year. In Narayan-gunj unassorted jute is quoted at Rs. (P) 21 basis Bottoms and assorted jute at Rs. (P) 22-8 basis Bottoms for balers' standard. Mill Firsts are quoted at Rs. (P) 128 per bale F.O.B. Narayan-gunj. It is reported that offers of white jute are being made in London at £5 per ton below the current

THE LIABILITIES OF A
COMMON CARRIERRAILWAY'S NEGLIGENCE IN
TRANSPORTING GOODS

(FROM OUR LEGAL CORRESPONDENT)

THIS note concerns the legal position of railway administrations in regard to goods entrusted to them for carriage, of which they grant open delivery to the consignee and which turn out to be damaged or, in part, missing.

Now a railway administration—from now on we use the word "railway" for brevity—is a common carrier, and as the non-legal reader may not have any precise idea as to what that expression means we will expatiate on it a little. A common carrier as distinct from a private carrier is a very historical character indeed. He is not the creation of English law, still less of India which has adopted him completely, but traces his ancestry back to, and was brought into being by, an enactment of the Roman legislature, to wit a praetorian edict of the civil law contained in the ninth title of the fourth book of the Pandects. Unhappily the learned author of the tome from which we have culled the above, giving us credit for a knowledge of Latin which we have long ceased to possess, quotes the edict without any translation of it into English, but after seeking outside aid we think this is a sufficiently accurate paraphrase of it. A common carrier is any person who holds himself out to the public as ready

to carry for hire from place to place the goods of such persons as choose to employ him, and his liability is to carry them securely and safely. That simple rule of liability is today the common law of England, and the law of India, the United States and of most civilised nations. But, obviously, no Government or company could run a railway for six months successfully unless the common law liability were qualified by statute. And it has been so qualified, the broad effect of the remedial enactments being to allow railways to limit their liability for loss by special contracts, such as risk notes, which contracts must however be reasonable and signed by the sender, and to prescribe for compulsory methods of notification of claims to specific persons within specific time limits. With this general outline of the law before him the reader may now consider the facts in this case of "open delivery."

The plaintiffs' case was that they were proprietors of a general merchant's shop known as S. Bashiruddin & Sons in Muradpur, Patna, and that the Imperial Tobacco Company Ltd of Muzaffarpur booked a consignment of four cases of cigarettes weighing 5 maunds 13 seers from Muzaffarpur to Mahendra Ghat at Patna as per invoice No. 46 dated the 10th July, 1945 at railway risk. Another consignment of cigarettes weighing 1 maund 10 seers was booked by the same Company at Muzaffarpur to Mahendra Ghat as per invoice No. 73 dated 6th August, 1945 at railway risk. In both cases the railway receipts were endorsed in favour of the plaintiffs. It appeared that the goods under invoice No. 46 arrived at Mahendra Ghat on 14th July, 1945 and when the plaintiffs went to take delivery of them on 26th

July, 1945, they found the goods damaged and they desired open delivery which was refused. Wherefore on 23rd August, 1945 the plaintiffs wrote a letter to the Traffic Manager requesting open delivery. On 27th September, 1945 the Traffic Manager passed orders deputed the Commercial Inspector to give open delivery. Open delivery was accordingly offered on 4th October, 1945 and it was found that 3 seers of cigarettes were short and one of the cases was in damaged condition.

As to the other consignment covered by invoice No. 73, this had reached Mahendra Ghat on 9th August, 1945. In this case also the plaintiffs refused to take delivery on 23rd August, 1945 and demanded open delivery which was refused. But, after written application to the Traffic Manager repeating the request, open delivery was offered on 4th October, 1945 and it was found that 760 cigarettes were short. Thereafter the Claims Supervisor was deputed by the railway to Mahendra Ghat and the plaintiff took delivery of only one case of cigarettes, and refused to take delivery of 3 cases of Sportsman cigarettes on the ground that they were rotten and not fit for human use. The entire consignment under invoice 73 was refused on the same ground. The plaintiffs charged the railway with pilferage, gross negligence and misconduct in regard to the goods.

The defence was that the notices required under S.77 of the Railways Act and S.80 Civil P.C., had not been served by the plaintiffs, that the suit was barred by limitation and that the railway was not guilty of misconduct or pilferage.

We need not concern ourselves with that part of the defence which related to the statutory notices or limitation, because the finding of fact by the lower court that the notices had been served and the finding that the suit was not barred by limitation were upheld in the High Court. What we are interested in is the point about open delivery, and the degree of liability which, in the absence of special contract, attaches itself to a railway as a common carrier; and we will now investigate this.

The trial judge upon consideration of the evidence had held that by its own conduct the railway was estopped from urging that the plaintiffs were not entitled to take open delivery. Counsel for the railway contended on appeal that the lower court was entirely wrong in so holding. The High Court supported this contention. Said Sinha J., "I am in agreement with the contention of Mr. (N. C.) Ghose. I think it is now established... upon the authority of case law that the consignee is not entitled to open delivery... I would accordingly hold that the plaintiffs in this case were not entitled to claim open delivery." That conclusion, however in favour of the railway, did not dispose of the matter. There remained the question as to what its legal responsibility was, in any event, and how it had discharged it."

"... (The) position of the railway as a carrier," said his lordship, "is the same as that of a bailee. S.151 of the Indian Contract Act runs as follows: 'In all cases of bailment the bailee is bound to take as much care of the goods bailed to him as a man of ordinary prudence would, under similar circumstances, take of his own goods of the same bulk, quality and value as the goods bailed.' In the present case, in my opinion, the railway administration failed entirely to take the care that they should have taken. Mr. Ghose suggests that there was no other place where the goods could have been kept. In my opinion that is no answer. If the position of the railway administration was that of a bailee they should have taken care of the goods as they would have taken care of their own goods and should have made provision for the safe custody of the goods which they undertook to carry... In the present case there is no doubt that the plaintiffs had refused to take delivery when the goods arrived and although they were not entitled to open delivery, the plaintiffs did ask for it and the railway administration granted the request and when the railway officer came to deliver the goods it was found that most of the packages containing the cigarettes were badly damaged. If the goods had been kept properly in a protected place, no damage could have been caused to them... In this case, however, the railway company left these consignments absolutely to the winds and in the months of monsoon; and the result was that most of the cases were damaged." The appeal was dismissed and judgment in favour of the plaintiffs affirmed.

An ordinary case of negligence so far as the facts are concerned. But two legal points of importance to railways and consignees emerge from and are clarified by it.

One is that a consignee is not entitled to claim open delivery from a railway administration; and the other is that if a railway does voluntarily grant open delivery it is not estopped thereby from relying upon the point that the consignee was not entitled to it.

(A.I.R. 1955. (August) Patna. 207).

A tool room at the Indian Institute of Technology, Kharagpur is to be opened next Saturday by the U. K. High Commission in India. The room has been endowed by the United Kingdom Government under the auspices of the Colombo Plan.

quotation for new crop with the condition that the shipper has the option of shipping old crop or 50/50 old and new.

THE FOREIGN JUTE MARKETS

Dundee, By Air Mail

LITTLE of interest transpired in the jute markets last week, yet despite the small volume of business taking place prices did not show the weakness that might be expected. The raw material tended slightly easier, with business done in small quantities of the old crop Mill Firsts at £100 and in Mill Lightnings at £90 per ton, c. and f. U.K. New-crop dropped a pound or two to £101 and £91 respectively. Shippers made few offers of either Daisee or Tossa, old or new crop. They say it is difficult to secure the necessary material in Pakistan. Crack marks of Daisee 2/3 are at £90 and grade at £80, while grade Tossa 2/3 is quoted at £101 and fours have been sold down to £88, c. and f. old crop. New crop is generally named at £1 to £2 dearer. Calcutta goods were lower on the week, closing last Thursday 79s 9d for 10 oz. 40 in. and 58s 3d for 7½ oz. September, and 79s 6d and 58s, October-December.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to July, 1953. Compared with June, the July index for Government Securities discloses a drop of 0.2 points, while that for Preference Shares reveals a rise of 1.8 points.

There were decreases in Coal (6.6 points), Jute (4.0 points), Mining and Oil (6.4 points), Cement (2.3 points), Engineering (1.4 points), Tea (11.1 points), Paper (10.0 points), Sugar (0.7 points) and Miscellaneous (0.5 points), while Bank increased

by 1.6 points. Index for Cotton remained unchanged at 199.2 points.

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 3.2 points during July, 1953.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 00's	Rate per cent	Paid-up per Share	Market Quotations	Year of Issue	NAMES	Amount Issued in 00's	Rate per cent	Paid-up per Share	Market Quotations

COAL COMPANIES

O, P, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Liquid Assets

MISCELLANEOUS COMPANIES

O, Po, C and Dd, indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INTERNATIONAL COMMODITY AGREEMENTS

THE NEW SUGAR PACT: NEGOTIATIONS ON TIN AND RUBBER TO BE RESUMED

A REVIVAL of interest in international commodity agreements has followed the successful conclusion of a sugar pact and, in the same week, a reference by Mr. Lewis Douglas in his report to President Eisenhower to the value of such agreements in maintaining regular relations between the dollar and soft currencies. That the agreement on sugar will serve as an example for the conclusion of agreements with regard to other commodities is by no means certain, though it has undoubtedly stimulated faltering optimism about the long drawn out discussions with regard to rubber and tin. Indeed, the meeting of the Management Committee of the Rubber Study Group fore-shadowed last May has now been convened to take place in London on 12th October. Its duty will be to try to bridge differences of view on the draft regulation scheme, and to see if there is any possibility of agreement on the need for such a scheme. If those two difficulties can be overcome an International Commodity Conference under the Havana Charter will be sought. Once again it is encouraging to learn that America is to participate in the October meeting, for it is that country's objections which have so far blocked the introduction of a rubber regulation scheme. Despite the low price of rubber today, there may still be acute differences at the meeting and, even if it is decided to ask for an International Conference, differences may still arise at the conference itself. All available indications of American thinking on the subject go to suggest that their attitude is unchanged, and expert circles are inclined to the belief that the decision to close the biggest U.S. synthetic rubber manufacturing factory, at West Virginia, with an output of some 100,000 tons a year, may well represent the only concession which the United States is prepared to make as an alternative to the international scheme.

So far as tin is concerned the outlook is perhaps rather less disappointing. It is now almost certain that it will be possible to reconvene the Tin Commodity Conference. As widely expected, the United States has decided that it is ready to enter world tin talks, though it cannot promise to ratify an agreement if one is achieved. There is as yet no evidence that the American objection to an international regulation scheme for tin has been withdrawn. The machinery for a tin conference is already in being, for the abortive commodity conference on tin of three years ago was adjourned and never disbanded. Thus it is being suggested that the Commodity Conference may meet in November.

Neither rubber nor tin, however, lend themselves as readily to regulation as does sugar, for only one-seventh of the production of the latter enters the free world market.* On the other hand, the recent booms and slumps in raw commodity prices and their repercussions on the economies of the countries which produce them—repercussions which must inevitably have some impact on world trade as a whole—make it appear highly desirable to some governments that no opportunity should be lost of stabilising both prices and production over as wide a field as is possible and on a basis which promises reasonable equity for both sides. Whether this in fact is possible—even with sugar where a pact has been concluded—remains to be seen.

In view of Britain's withdrawal from the wheat agreement and her present acceptance of the sugar agreement—she is the largest single importer of both commodities, and the former is particularly concerned in fostering free markets and low prices—it is instructive to consider the differences between the two schemes. The International Wheat Agreement lays down that the exporting countries undertake to sell agreed quantities at the maximum or minimum price if the free market price is respectively above or below these limits. No such obligations are undertaken in the sugar agreement.

Nor will importing countries be obliged to take agreed quantities at the fixed prices. The wheat agreement is, in fact, a multilateral contract; the sugar agreement is merely an agreement to regulate the market. Nevertheless, the price range agreed upon (from 3.25 to 4.35 cents a pound, which may be compared with the annual averages of 4.16 cents in 1952 and 3.70 cents in 1951) was only accepted after a long struggle with the U.K. delegates against the somewhat inflated ideas of the main exporting countries. At the same time, of course, the Commonwealth is also a large exporter, so a compromise was so much easier to reach.

There has been no international sugar agreement since the war. The agreement entered into in 1937 did not survive the war and the only organised arrangement for sugar was the Commonwealth Sugar Agreement. An International Sugar Council was set up in 1937 to administer the Sugar Agreement of that year and has continued to exist and provide an international meeting ground for sugar discussions. In the meantime the Interim Co-ordinating Committee for International Commodity Arrangements was set up by the United Nations and it was owing to the interest of this body that the recent conference was held. The International Sugar Council in 1948 set up a special committee to study the difficulties of the sugar situation, and a year later produced a draft Commodity Agreement. This was considerably revised at intervals and reached its final form in June, 1953. It formed the basis of the discussions. One of the conditions which was insisted on at the Commonwealth Sugar Conference was that if Great Britain were to enter into an international agreement such agreement should in no way invalidate the Commonwealth arrangements already made. It is essential that the Commonwealth itself should accept full responsibility for both producers and consumers of sugar within its own orbit. According to a review issued by the United Nations Committee in April of this year world sugar production (of beets and cane processed by centrifugal machine) for the crop year ending 31st August, 1952, was a record of 35 million metric tons, an increase of 5 per cent on the previous year. At the same time world sugar consumption was over 2 million tons below the production figure. The large production was due mainly to Cuba and the drop in demand so affected the Cuban producers that national measures to limit the crop were initiated.

The International Sugar Conference had been meeting in London for several weeks and had reached a virtual deadlock before it suddenly took a turn for the better. The line of approach to the difficult problem of reconciling the wide difference of opinion which must inevitably arise amongst exporting and importing countries showed an interesting innovation in this particular case, and had it survived objections it might well have pro-

vided a useful guide in the negotiation of similar agreements covering other commodities. In point of fact, however, the agreement finally reached is no more than a quota agreement, and it has of course still to be ratified by the participants. Nevertheless, it will be welcomed by the advocates of international commodity pacts as a limited step forward towards the goal of ensuring world needs of commodities at reasonable prices and the elimination of wide fluctuations in output and costs.

Briefly, there is to be a floor price and a ceiling price, and between them the market is allowed to fluctuate. The attempt is to keep the New York price of Cuban sugar f.a.s. between 3.25 cents a lb. and 4.35 cents a pound. Action is only required when the price (at present about 3.40 cents); passes out of those limits. At that point similarity with the Wheat Agreement ends. The machinery for keeping the price of sugar within its prescribed limits is quota increases or decreases. The world free market is estimated at 5,300,000 metric tons and this has been allocated to the exporting countries on the following basis:

					Tons
Belgium	...	...	...	...	50,000
Brazil	...	...	...	...	175,000
China	...	...	...	...	600,000
Colombia	...	...	...	...	5,000
Cuba	...	...	...	...	2,250,000
Czechoslovakia	...	...	...	...	275,000
Denmark	...	...	...	...	70,000
Dominican Republic	...	...	...	...	600,000
France	...	...	...	...	20,000
East Germany	...	...	...	...	150,000
Haiti	...	...	...	...	45,000
Hungary	...	...	...	...	40,000
Indonesia	...	...	...	...	250,000
Mexico	...	...	...	...	75,000
Netherlands	...	...	...	...	40,000
Peru	...	...	...	...	280,000

The International Sugar Council, which will operate the scheme, has a duty to cut the quotas whenever the daily price of sugar has averaged below the minimum for 15 consecutive days, and has the right to cut the quota with a view to preventing the price of sugar falling below the minimum. Similarly, tonnages are to be increased if the maximum is passed. The special position of the British Commonwealth has been acknowledged with an irreducible quota of 2,375,000 tons for the first two years, 2,450,000 tons for the third year and the presumable intention that Commonwealth producers shall participate in any growing market for sugar. The scheme naturally leaves importing countries with the obligation to provide a world free market for sugar. British negotiations with the Commonwealth producers have always been conducted on that basis and allow for a modest world free market in the region of 250,000 tons a year. The "final act" embodying the outlines of the agreement will be open for signature between 15th September and 31st October, and if ratified by a sufficient number of the 51 countries which participated in the discussions, will come into force on 1st January for a period of five years. Of particular importance is the fact that both the United States and Russia took part in the conference, and that the British purchase in Cuba of about 1,000,000 tons—which is the basis for the end of sugar rationing in the United Kingdom—is regarded as being outside the Cuban quota under the agreement.

BRITAIN'S NATIONAL INCOME DISTURBING TRENDS IN CAPITAL FORMATION

It is a disadvantage of all serious statistical analyses that they are never up to date. The importance of the time factor diminishes as the period covered by such analyses increases; and in that perspective the survey of national income and expenditure published by the Central Statistical Office of the British Government is very valuable, for it covers nearly all the post-war period, from 1946 to 1952. It might, however, show some important changes of trend if it were brought right up to date—to include, for instance, the aftermath of the budget of 1953. This Government "blue book" shows that the annual value of goods and services, reckoned at constant prices (in terms of 1948), rose from £9,636 million in 1946 to £11,117 million in 1952. As 1946 was the year of reconversion to a peacetime economy, it may be questioned whether an increase of 15 percent over that period is as good as it should be. However, it is on the allocation of the resources, rather than on their amount, that discussion has been focussed. Over the same period, reckoned likewise at constant prices, imports increased from £2,047 million to £2,434 million. Thus, the gross domestic product plus imports provided total available supplies of £13,551 million last year. Of that amount, consumers took £7,254 million, public authorities £2,258 million, exports £2,637 million; leaving £1,402 million for capital formation. By an interesting coincidence, both consumers' spending and capital formation were increased by £542 million, compared with 1946—they shared equally the benefits of increased supplies.

However, the latest figures are not the outcome of a steady trend. Military spending diminished for some years after the war, then expanded again as the pace of the cold war was accelerated. Consumers had to be content with a slightly reduced standard of life in both 1951 and 1952: a reduction of 2 percent (again, in real terms) during those two years brought consumers' spending back approximately to the level of 1949. And by 1952 capital formation had receded by nearly 4 percent from the level reached in 1949. There are two disturbing facts in the trend of capital formation. First, the total is tending to diminish. Second, as the proportion attributable to central and local governments and to governmental corporations is tending to increase, the capital formation of companies is clearly inadequate to assure their position in a competitive world. But this conclusion may be modified by two other facts revealed in the survey. Merely to keep pace with the rise in prices it was necessary in 1951 to invest an additional £800 million in stock and work in progress, but the corresponding figure for 1952 was only £50 million. (Also, in the psychological conditions of 1951 it was felt to be necessary to add to the physical volume of stock, but the mood was altered last year.) Secondly, the private saver, who had been spending capital in previous years, emerged again in 1952 as a positive influence. Whereas personal financial capital had been consumed to the extent of £346 million in 1951 (and of comparable amounts in preceding years), there was a net addition of £49 million to individuals' financial assets last year. It is not a large amount, but it is struck after heavy repayment of bank debt (the gross figure saved was £502 million), and it is, anyway, in marked contrast with earlier results.

The question now is whether personal savings can make good the deficiency of company savings when they are both discouraged, though not quite so much as previously, by high taxation. In other words, with more goods coming on to the market, and the cost of living still inclined to rise, will the British public maintain the discipline which was forced upon it last year? The answer seems to be that, with less debt requiring urgent repayment, there may still be net savings; but they are no longer being achieved by restricting consumption. Almost certainly, the downward trend of consumption in 1951 and 1952 has been reversed this year.

Just after the "blue book" appeared the quarterly survey of the London and Cambridge Economic Service. It noted "manifest signs of a rising level of internal demand," resulting in an increase in production and an increase in imports, with no corresponding increase in exports. It acknowledged the improvement in the sterling area's payments position but attributed it mainly to the surpluses of the rest of the sterling area, with defence aid and the fall in import prices as contributory factors. Now the sterling area's import restrictions are relaxed, U.S. aid is diminishing, the fall in import prices is, at least temporarily, checked. The London and Cambridge economists remarked: "With stagnant exports, rising imports, credit expansion essentially for fixed capital (houses), and a threat of rising wage costs, the position as a whole suggests dangers

ahead of an all-too-familiar kind." They observed an analogy—not perfect, but nonetheless disquieting—with the first half of 1951. And the forces stimulating internal demand—for house-building, industrial investment, personal consumption, defence—are, they recognised, difficult to moderate. There is another school of thought, which argues that the growth of expenditure on consumption, houses, industrial equipment, is natural and necessary. The question remains whether it is permissible until expenditure on defence is materially reduced.

U.S. BUSINESS SUSTAINED, BUT SENTIMENT CONSERVATIVE

THE National City Bank of New York in its September letter says that the month of August has rounded out a summer which, in volume of production and trade, has probably exceeded any previous summer. Industrial production, after a dip in July due mainly to vacations, recovered in August to near the high levels of the spring. Employment overall has continued to tax the available labour supply. Aggregate retail distribution apparently equalled or exceeded last year's figures. At the same time, supplies in some durable goods lines have become easier under the impact of such high production. Consequently buyers, feeling more assured of being able to satisfy their requirements, are tending to shorten their forward commitments. The steel industry, after setting a new output record of 67,220,000 tons in the first seven months, has recently been operating under less pressure. While some steel products continue scarce, others are reported to be freely available. Steel production eased off to about 95 percent of capacity during the summer, due partly to seasonal factors, the need for furnace repairs, etc. With the less insistent demand, operations have remained around that level, and the presidents of two large steel companies voice the expectation of a further dip during the fourth quarter. Similar easing is found in other durable goods lines. Farm machinery makers have cut back production as the decline in farm incomes has been reflected in lower farm implement sales. In the home appliance fields, production of air conditioners, driers, and television sets continues active, whereas several other items are lagging. The machine tool industry has been working down its backlog, as new defence orders have been fewer. In the lumber industry activity is somewhat lower than last year, but new orders are in line with current production. In general, the durable goods industries appear to face some moderation of the hectic pace at which they have been going since Korea. Non-durable goods, which as a group did not experience as great an expansion in production, continue, with few exceptions, to make a good showing. Paperboard production demonstrated renewed strength after a vacation let-down, and the price was advanced \$5 a ton. Paperboard serves as a good indicator of short-term business activity because it reflects the quantity of shipping containers required to package an almost countless variety of finished manufactured goods. Production, new orders, and unfilled orders for paperboard are considerably higher than a year ago. Similarly sulphuric acid and alcohol, key chemicals widely used as industrial materials, are being produced at capacity. In the textile industry many cotton mills have booked orders well into the first quarter of 1954. The strength in non-durable goods production reflects the sustained high level of employment and personal incomes. Employment holds around a record high of 63,000,000 with unemployment near rock-bottom. Most of the net addition of workers this summer was in agriculture, but non-farm employment showed less than its usual seasonal dip. Full employment and a continued advance in average hourly earnings have carried the total of personal incomes to a new peak in spite of the lag in farm income. Consumers remain well disposed to spend their income, as indicated by figures on automobile sales and sales by department stores and other retail outlets throughout the country. July retail sales of all outlets, including automobile dealers, gasoline stations, chain stores, etc., made a better showing than those of the department stores alone, with a gain for the month of 6 percent over a year ago—the same as shown for the first seven months. The gain over last year was largely accounted for by durable goods such as automobiles, refrigerators, and other appliances. Consumers are still buying on credit, but apparently the volume of new instalment credit extended has not been increasing. According to figures published through June, the volume of new business written peaked in March, declining moderately in succeeding months. Nevertheless, since new loans made exceeded monthly repayments, the reported total outstandings continued to rise to a new high at the end of July. An encouraging feature of the business news is the favourable showing of the latest building construction figures. In summary, business activity is being well sustained by high levels of employment, incomes, retail

trade, and construction, which in turn lend strength to the non-durable manufacturing industries. Government expenditures and business outlays for plant and equipment also continue at high levels.

Against the sustaining influences may be set the more conservative buying sentiment of businesses induced by the more plentiful supply of goods and by symptoms that some of the factors which have kept business operating under full steam may be losing their urgency. A good many people have felt for some time that the extremely high rates of activity might be subtracting something from the future. The revised budget estimates, published last month, will need to be taken into account in business calculations. The projected cutback of \$2½ billion in federal expenditures during the current fiscal year ending next 30th June, with reduction of the deficit from \$9.4 billion last year to \$3.8 billion (and practical balancing of the budget on a "cash" basis, including government trust fund receipts), means a lessening of inflationary pressures on the economy. On the other hand, business will be aided by expiration of the excess profits tax on 31st December, and individuals will have a reduction in personal income taxes at the same time. This still does not take account of further reduction in corporate taxes and reduction in excise taxes next year if the cuts scheduled for April under present law are permitted to go into effect.

CURRENT COIN

Employment Round-up.—The latest statistics on the working of employment exchanges show that the employment situation deteriorated further in July this year: more persons registered for jobs than in June but fewer vacancies were notified and fewer placements were made. The live register had 493,408 names at the end of July—nearly 19,500 more than a month previously. This figure included the 136,333 who registered during the month, as against 123,883 registered in June. The number of vacancies fell from 21,398 to 18,714, and were notified predominantly by Central and State Government establishments. Placements declined by 1,558 to 14,487 in July. Referring to the educated unemployed, an official review says that "the heavy increase in registrations and of the live register figures between April and June may, to a great extent, be regarded as seasonal in view of the fact that most of the universities published their examination results during the quarter." Meantime, the Planning Commission is organising a number of special enquiries to obtain accurate statistics on unemployment in rural and urban areas. The National Sample Survey, for instance, has begun field work on a survey of 4,000 households, selected on a random sampling basis, in the Calcutta area; the results are likely to be known by February next year. It is also conducting a sample enquiry into the live registers of employment exchanges in Delhi, and a special preliminary enquiry into unemployment in 18 towns selected at random. The Planning Commission proposes to study the problems of small-scale industries and trends in migration from rural areas. In regard to rural unemployment, a scheme is to be drawn up for an enquiry in Travancore-Cochin and a special study is to be made of the employment potentialities of the irrigation and power programme. There has been some talk of revising the five year plan, and the matter will be discussed by the National Development Council when it meets in New Delhi on 6th and 7th October. The Planning Commission states that the adjustments will fall into four distinct categories: funds required for the remaining period of the plan; consideration of revised estimates; additional programmes necessitated by the general economic situation and the overall progress of the plan; and break-up of items shown under the Central Government's plan which include expenditure both at the Centre and in the States. Central Ministries have been asked to review their existing intentions with a view to increasing the employment potential of schemes; steel programmes in the private and public sectors are particularly mentioned. Formulation of schemes to encourage cottage and small-scale industries and the establishment of State Financial Corporations are among the other suggestions made by the Commission.

Loans for South Africa.—The World Bank has recently sanctioned two loans totalling \$60 million to South Africa to expand transport services and increase supplies of electric power. One loan is of \$30 million to the Union Government. It will be used chiefly to help pay for imports of equipment and goods needed to enlarge the carrying capacity and extend the services of South African railways. The other loan, also of \$30 million, is to the Electricity Supply Commission (ESCOM), an autonomous State corporation, and is guaranteed by the Union Government. It will be used for part of the imports needed in a programme designed to increase ESCOM's power-generating capacity by 80 percent during

the period from 1952 through 1958. Both loans carry interest of 4½ percent and are for a term of ten years. Amortisation payments on the ESCOM loan will begin on 15th September, 1953, and on the railway loan on 15th November, 1953. In postwar years, the rapid growth of secondary industry and the opening up in the Orange Free State of new gold mining operations have put a heavy strain on public services in South Africa, and especially on the railway system and the power supply. The tonnage carried by the railways has increased by one-third since 1947, and ESCOM's sales of electric power have grown even more. The South African railways are operated by the Railways and Harbours Administration, a department of the Union Government. The Administration's programme for expanding railway services consists of the addition of new locomotives and rolling stock, the enlargement of workshops to assure adequate maintenance of equipment, and improvement of the permanent way and other traffic facilities to increase carrying capacity.

K. C. Thapar on Insurance.—In his statement to shareholders of the Indian Trade and General Insurance Co. Ltd. (published in full on page 353), the Managing Director, Lala Karam Chand Thapar, states that 1952 was a year of general depression and financial stringency so "I think we may congratulate ourselves on the results disclosed in the accounts now submitted." (These were summarised in Capital last week). The decision to reinsure the Fire Account more heavily abroad in return for overseas business has enabled the company to stabilise its affairs by giving a very much wider spread of risks, which is essential to a balanced account. The Marine Account shows a loss which has arisen not from underwriting but from a strengthening of reserves; Mr. Thapar thinks that with the fall in commodity values, import and export restrictions and current competitive rates, income here will fall. He recalls that it was decided to abolish the combined marine surcharges on marine cargo risks in 1949, and adds that competition has since forced down basic rates all over the world to a level that is "definitely uneconomic". The tendency now is to use the war risk rate to subsidise the marine rates; "to make matters worse these rates in many cases include risks which are not marine or transportation risks at all, and the increasing practice of granting all risks cover in a buyers' market is quickly reflected in the claims figures." Turning to more general problems, Mr. Thapar says that an unfortunate feature of the Insurance Act is that the quantum of management expenses is based on the gross direct premium in India. This encourages severe and unhealthy competition, often with little regard for the quality of business. "Our direct Indian premium is particularly susceptible to economic ups and downs and it is unfortunately impossible to adjust management expenses from year to year to fall in line with wholesale prices or any other yardstick adopted for measuring prosperity or recession. As a result, some companies find themselves between the 'devil' of expense ratios and the 'deep sea' of increasing claims." The Government is aware of this problem and Mr. Thapar hopes that a new formula will be found on which to base the quantum of expenses. Another result of the unhealthy competition for direct business, he says, is that some offices and principal agents provide "almost unrestricted credit" to agents and insured parties. This encourages some to go on deferring, or even to evade, the payment of premiums. Mr. Thapar emphasises that it is the function not of insurance companies but of banks to give credit, and urges general insurers to conform closely to the standards laid down in the Code of Conduct.

Company Law Reform Bill.—The full text of the Companies Bill, 1953, introduced by the Finance Minister in Parliament last week has not yet been received, but it is known that the Bill is based largely on the recommendations of the Company Law Committee which submitted its report in March 1952. The main principles underlying these recommendations were to improve company promotion and management without imposing rigid restrictions; to ensure that prospectuses and accounts present information fully and fairly; to safeguard shareholders' interests by enabling them to examine the management's activities; to provide for investigation into a company's affairs when it is established that it is being mismanaged; and to set up an authority to administer the Act. The major changes in the Indian Companies Act which the Bill introduces relate to the promotion and formation of companies; capital structure; company meetings and procedure; the presentation of accounts, their audit, and the powers and duties of auditors; the inspection and investigation of the affairs of companies; the constitution of boards of directors, and the powers and duties of directors, managing directors and managers; the appointment of managing agents, terms and conditions of their service, their remuneration; the

powers of managing agents vis-à-vis directors, and the activities of managing agents in regard to borrowings, loans, contracts, sales and purchases; and the administration of company law. In a few minor particulars, the provisions of the Bill deviate from the recommendations of the Company Law Committee, and there is one important deviation. The Committee recommended that the Central Government should not only resume responsibility for the administration of joint stock companies which it had delegated to State Governments, but that a statutory authority at the Centre, to be called the "Corporate Investment and Administration Commission", should be set up under the new Act for the administration of company law as well as for the discharge of other related functions, e.g. capital issue control and regulation of stock exchanges when a Central measure for the latter purpose was passed. State Governments have already been informed of the Centre's intention of resuming its powers under the Indian Companies Act and the constitution of a Central Organisation under the administrative control of the Department of Economic Affairs has been sanctioned. However, the question of conferring statutory status on this Organisation will be considered only after it has functioned for some time. For the present, therefore, the duties and responsibilities which the Company Law Committee visualised for the statutory authority will be carried on by the new departmental organisation. The Bill empowers the Central Government to provide for the amalgamation of companies in the national interest—a matter which was not covered by the recommendations of the Committee. The Government proposes to retain for three years quasi-administrative powers given by sections 2, 3, 4, 5, 6 and 8 of the Amendment Act of 1951 under which it can impose restrictions on the appointment, reappointment and the number of directors and their remuneration and on the extension of the term of office of managing agents. The various parts of the Act have been rearranged in such a way that they follow the chronological sequence in the formation, growth and decay of companies. One of the biggest measures of legislation introduced in recent times, the Bill contains 612 clauses and 12 Schedules.

Tool Room at Khargpur Institute.—A tool room equipped with some of the most modern machine tools, supplied by British factories, was opened by Mr. G. H. Middleton, acting U.K. High Commissioner in India, at the Indian Institute of Technology in Khargpur last Saturday. The equipment, which includes a high-precision jig borer, milling, shaping, sawing and grinding machines, lathes, lapping machines and precision measurement instruments, has been provided by the British Government under the Technical Co-operation Scheme of the Colombo Plan. Its total value is estimated at Rs. 4,70,000 and another Rs. 1 lakh worth of equipment has been supplied by UNESCO for the tool room. Dr. J. C. Ghosh, Director of the Institute, said at Saturday's ceremony that the United States and Canada have also promised help, and Australia will soon be supplying most of the equipment and machinery for agricultural engineering that the Institute requires. For the erection of these machines and tools at Khargpur, the services of a British expert have been lent for two years by the British Government to the Institute under the Technical Co-operation Scheme. In addition to installation, the expert will train Indian technicians in the use of the machines. The tool room at Khargpur is intended to serve two important objects. The machines will be used, firstly, to service the large student workshops at the Institute, and, secondly, to produce scientific equipment needed for technical education and research work, prototypes of machinery and production tooling. With the opening of the tool room, it will be possible to provide at Khargpur first-rate workshop training not only to under-graduate students but also to post-graduates in the manufacture of small tools, dies, jigs and fixtures. In his address on the occasion, Mr. Middleton took the opportunity to emphasise the co-operative character and the practical achievements of the Colombo Plan. He said that the Plan does not represent a one-way traffic of experts and material to less developed countries. Although, for example, India has received 39 experts under the scheme and has sent 352 trainees to other countries within the Commonwealth for instruction, she has herself supplied five experts and taken 98 students for training in India and supplied 55 scholarships for students from other Asian countries. Of the 39 experts, 28 were provided by the U.K. because it so happened that the subjects on which special knowledge was required were those in which the U.K. had probably the best available men. So far throughout the area covered by the Plan the U.K. has provided in all 78 experts and training for 381 persons, whilst Australia has provided 44 experts and accepted 402 trainees, Canada 31 experts and 118 trainees, and New Zealand 19 experts and 149 trainees. Ceylon and Pakistan have also accepted a number of trainees.

Commodity Markets

PERMANENT CENTRAL LAW
FOR COMMODITY CONTROLSSUMMARY OF COMMITTEE'S
RECOMMENDATIONS

THE Commodity Controls Committee has suggested that the Constitution should be amended to give Parliament the power to enact a single permanent and consolidated law conferring upon the Central Government the reserve authority of control over any commodity at any time. For balanced progress in the economic field, it says, the Government must retain powers of overall guidance and control, and controls on all essential commodities should be regulated on an all-India basis. Mr T. T. Krishnamachari, Minister for Commerce and Industry, presented the committee's report to the House of the People yesterday.

In recommending a permanent comprehensive law of controls, the report says: "Whether at any time it is necessary to exercise control in respect of a particular commodity, and if so to what extent and in what form the control should be exercised, depends entirely on the overall situation regarding that commodity at that time. The commodities in respect of which control is necessary and the form and extent of such control, therefore, keep on changing from time to time. It is neither possible nor desirable that legislation should be undertaken time and again to provide for control of different commodities as the occasion arises. To have a number of laws on the subject of control is also confusing. The Committee considers it essential that there should be a single permanent and consolidated law conferring upon the Central Government reserve powers to enable the exercise of control over any commodity at any time; such law should be sufficiently elastic and comprehensive to meet every emergency."

"The proposed Central law should be on the lines of the Essential Supplies (Temporary Powers) Act. If it is not possible to transfer entries 26 and 27 of the State List to the Concurrent List for some reason, the Constitution should be amended to confer legislative power on Parliament in respect of foodstuffs, cattle fodder, raw cotton, cotton seed and other agricultural products. For this purpose an appropriate new entry "33 A" may be inserted in the Concurrent List. As the Essential Supplies (Temporary Powers) Act 1946 is due to expire on 28th January, 1955, the Committee suggests that the action recommended by it in regard to legislation by the Centre should be taken before that date.

Punishment for Offences

The Committee has made a number of recommendations regarding punishment for offences against control laws. It feels that the maximum imprisonment for any offence against control laws need not be more than three years. It is not necessary to provide that imprisonment should be compulsory in respect of any offence or that a penalty of both imprisonment and fine should be given in any specified case. It should be left to the courts to determine the form and extent of punishment in each case on its merits. Regarding the suggestion that certain classes of offences should be punished by administrative action, it thinks that the established course of justice should not be short-circuited by this method.

The Committee says that it may be advisable to have separate advisory committees for some important commodities such as cotton textiles, iron and steel and coal. It suggests that a summary of the recommendations of the Central and State Advisory Committees and the action taken thereon may be placed before the respective legislatures once a year.

A number of recommendations have been made to improve the administration of controls. The committee says that control laws should be easily intelligible to everyone concerned and all provisions relating to controls on a commodity should be made in a single order. A sound system of numbering the orders and notifications and amendments should be evolved and forms and returns under control orders simplified. A number of recommendations have also been made regarding publicity for control orders.

Food Controls

The Committee thinks that as long as the food shortage continues compulsory procurement will remain a necessary evil, but its irksome features should be minimised. With the improvement in the food situation and the measures towards decontrol taken by some States, the normal trade channels could be increasingly utilised for procurement. As long as food controls continue, it is necessary to prevent forward trading not only in wheat and gram but also in other foodgrains. The Committee has examined all existing controls over foodgrains, sugar, food products, skimmed milk, spices, onions, oilseeds, oils, oilcakes, cattle fodder, cotton seeds, etc. It feels that as long as the overall deficit in foodgrains persists and there are transport difficulties, recurring famines and local scarcities resulting from natural calamities, continuation of the Foodgrains (Licensing and Procurement) Order, 1952, and other supplementary orders is essential. In regard to the need for parity for prices as between food and non-food crops and as between States, early action should be taken to set up suitable machinery to determine expeditiously and with precision the

cost and prices of various competing crops. The Ministry of Food and Agriculture should keep the question of inter-commodity and inter-State price parity under constant review and minimise all such disparities as well as prevent exploitation by a surplus State of the difficulties of a deficit State. As regards the distribution of foodgrains, the system of statutory rationing may be replaced by that of fair price shops, except in very big cities and highly deficit areas where fair price shops should be allowed to operate side by side with ration shops.

Regarding control on cotton, the Committee recommends that a definite announcement should be made each year before the end of June, at the latest, regarding floor and ceiling prices of cotton even if no change in the price is intended. Control over the production of cloth should be progressively lifted and need only be retained to the extent necessary for (a) protection to the handloom industry and (b) to ensure that the consumer gets durable cloth.

Coal Controls

In view of the importance of the coal mining industry, the Committee recommends that the existing controls on it should be continued. These controls cover prices, distribution and production. Distribution control should continue as long as transport is short, and special efforts should be made to create coal dumps in the South at central places like Madras and Bangalore to ensure regular supplies to industries.

The Committee says that the present zonal scheme for the distribution of salt should continue until transport improves. However, the nominee system has outlived its utility and should be re-examined in the light of the main object to be achieved viz., that the consumer should get his supply of salt regularly and at a fair price. States where the nominee system prevails strongly oppose its removal, but the Committee recommends that, in the first instance, they should allow free imports, that is, traders other than nominees should be allowed to bring salt into these States.

Iron and Steel

The Committee says that as supply is still far short of demand, there is no case for complete decontrol of iron and steel. The Government should, however, continue to make such relaxation in distribution control as the situation justifies. For the allocation of steel, it should pay particular attention to the needs of small-scale industries. The Committee feels that it will be difficult to let States change the allocation of steel at their own discretion because allocations are made on the basis of importance and priority of demands.

The Supply and Prices of Goods Act of 1950, the Committee declares, may be allowed to lapse. Orders and notifications under the Drugs (Control) Act, 1930, may be withdrawn in view of the fact that the supply position has improved considerably. By liberalising the import control policy, if necessary, supply of drugs and medicines can be maintained at a reasonable price level.

BRITISH WOOL MARKETING
BOARD REPORT

THE report of the British Wool Marketing Board for the year ended 30th April last has just been published, and shows that the 111,000 wool growing farmers, who received a guaranteed average price of 54d. a lb. for their 1952 clip, did well out of the marketing scheme. To that date over 80 percent of the clip had been sold at an average price of 49d. a lb. The difference of 5d. a lb. on the 67 million lb. of wool in the clip, which incidentally was 10 percent higher than in the previous year, was met by drawing on reserves to the sum of £2,400,000. The year before the deficiency was as much as £7,650,000. These deficiencies are met from the £14,750,000 special account built up because the guaranteed price in the first year of the Marketing Board's operations was far too low and a great profit was made.

For the 1954 clip the guaranteed average price is again 54d. and, on the behaviour of the market this year, it seems reasonable to anticipate that the loss, if any, should be less. The Board point out that the special account built up from 90 per cent of the 1952 clip is completed, have been drawn down to approximately £4,800,000, a reserve which the Board hopes will help to maintain the more stable conditions now existing in the industry.

In the first year of the scheme's operation, which ended April, 1951, the farmers were paid 27d. a lb. and the Board made a profit of over £13 million. In the second year the guaranteed price was raised to 72d. The Board made a loss of £7,650,000. In the third year a price of 54d. resulted in a loss of £2,400,000 and for the fourth year, in which the price is again 54d., the results are not yet known. For the fifth and sixth years, 1954 and 1955, minimum prices have been fixed at 39d. and 36d., respectively, but that does not mean that the guaranteed price in those seasons will be dropped to those figures. The price will, as usual, be negotiated between the Ministry of Agriculture and the National Farmers' Union, with the Minister's promise that they shall not be below the minimum figures stated.

EXPORT POLICY FOR IRON AND
MANGANESE ORE

In a Press Note dated 30th July, 1953, the Government of India announced its intention to revise the system of export licensing for iron ore and manganese ore in the light of the availability of

transport and other relevant considerations from the middle of October, 1953 and for this purpose it called upon shippers to furnish full particulars of all shipments of these ores made between January 1950 and 30th June, 1953. The Government has reviewed the position in the light of the information so far available and the existing transport capacity. As an interim measure, it has been decided not to alter the existing procedure for the grant of export licences for the export of these ores from ports other than Calcutta and Madras.

Export from the ports of Calcutta and Madras will, for the time being, be allowed on the basis of past performance of the shippers and the eligible shippers would be granted export allocations equal to 25 percent of their best exports during any of the three financial years ending March, 1953. The quotas allotted to individual shippers will be valid for shipment during the period 16th October to 31st December, 1953. Shippers who are able to ship their allotment in full before 31st December, 1953, can apply for additional allotment to the respective Export Trade Control officers.

The Government propose to consider the question of giving mine-owners who are not eligible to receive export allotments as established exporters but would like to enter the export trade, an opportunity to export these ores. Interested mine-owners should submit their applications for export allotments to the Chief Controller of Imports and Exports, New Delhi, with documentary evidence to show:—

- (i) quantities actually mined during each of the three financial years ending March 1953;
- (ii) quantities sold during each year with particulars of sales; and
- (iii) royalty paid to the State Governments. This evidence should be either in the form of cash receipts or treasury chalangas.

With effect from 16th October, 1953, railway wagon allotments will be made only to holders of export allotments. The Railways will register indents in accordance with the usual procedure and make allotments pro-rata in order of registration.

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (base year ended Aug. 1939=100) fell by 0.6 percent to 409.4 during the week ended 22nd August 1953, as compared with 411.9 (revised) for the previous week. The index was lower by 0.1 percent compared to the corresponding week of the previous month but was 4.6 percent higher than that of a year ago. During the week under review, Foodstuffs declined by 0.9 percent to 408.1, as a result of decreases in the prices of tea (-5%), wheat (-4%), gur, dal arhar and baira (-2% each) and coffee (-4%), not-withstanding advances in rice, sugar and salt (+1% each). The effect of higher prices of gingellyseed (+11%), manganese ore (+8%), lac (+2%), Jarilla and Pun. Amr. cotton in Bombay (+1% each) was more than offset by decreases in the prices of raw jute (-4%), Bengal cotton in Bombay, raw wool and castorseed (-3% each), groundnuts, linseed and cottonseed (-2% each) and rapeseed (-1%) and in consequence, the index for Industrial Raw Materials fell by 1.0 percent to 484.6. The index for Semi-Manufactures declined by 0.6 percent to 364.6 from 366.8 (revised) for the previous week. Items which registered noticeable variations during the week were: Gingelly oil and groundnut cake (-5% each), mustard oil (-2%), coconut oil in Calcutta (-3%), coconut cake (-2%), cotton yarn (-1%), copper (+3%), zinc, sheep and goat skins (+2% each). The index for the Manufactures group also moved down by 0.1 percent to 370.4, on account of a fall of 1 percent in the prices of jute manufactures. The Miscellaneous group, however, rose by 0.4 percent to 707.8 because of higher prices of turmeric (+5%), betelnuts (+2%) and chillies (+1%). The price of black pepper declined by 1 percent during the week.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

A DULL WEEK

Wednesday, 9th September.

MONEY remains easy in Calcutta and rates in the interbank market are unchanged at 2½%. There has been no fresh borrowing by the jute mills, advances to the sugar mills are less than half what they were this time last year, and loans to tea gardens are also below the seasonal figure.

There have been some tea bills showing but otherwise the exchange department has been very dull. Remittance has been small. Sterling exchange rates are unchanged but the dollar has strengthened since our last report, and now quotes Rs. 476-12 for \$100.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills amounted to Rs. 1,77,00,000 this week. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 77 percent, the average rate of acceptance being Rs. 2-6-7 percent per annum. Tenders for another Rs. 1½ crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the fortnight ended 4th September, treasury bills for Rs. 4,15,00,000 were sold in favour of the Reserve Bank.

Bullion was quiet last week and prices fell on profit-taking. Silver declined from the previous week's level of Rs. 156-15 to Rs. 156-3, quoted today, while the ready rate fetched a premium of 4 annas. The price, however, continued unchanged at 74d. in London and at 8½ cents in New York. Gold also eased from Rs. 89-8 to Rs. 87-13 in sympathy with silver. The sovereign at Rs. 57-8 also disclosed a loss of Rs. 1-2.

A rise of Rs. 8.57 crores in notes in circulation to Rs. 1,091.50 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 4th September, 1953, while the total note issue was fractionally lower by Rs. 41 lakhs to Rs. 1,116.93 crores. Notes held in the Banking Department consequently diminished by Rs. 8.98 crores to total Rs. 25.43 crores. In the Banking Department deposits of the Government of India and other Government accounts dropped by Rs. 6.56 crores and Rs. 4.04 crores to stand at Rs. 127.62 crores and Rs. 20.24 crores, respectively, while balances of commercial banks at Rs. 50.76 crores showed a rise of Rs. 2.26 crores due to easier money conditions. Balances held abroad rose by Rs. 1.17 crores to Rs. 142.42 crores. Investments at Rs. 87.77 crores were about Rs. 12 lakhs higher than in the previous return. Other loans and advances improved from Rs. 10.73 crores to Rs. 11.38 crores, of which advances to scheduled banks against usance bills were the same at Rs. 49.45 lakhs. Ways and means advances were shown at Rs. 28 lakhs (Rs. 41 lakhs).

The return of the Imperial Bank of India for the week ended 28th August, 1953, shows a fractional rise of Rs. 4 lakhs in total deposits to Rs. 206.70 crores. Investments in Government Securities are up by Rs. 98 lakhs to Rs. 80.25 crores, while other authorised investments remain unchanged at Rs. 10.54 crores. Loans, cash credits and overdrafts have increased by Rs. 28 lakhs to aggregate Rs. 66.42 crores, while bills discounted and purchased have decreased by Rs. 1.60 crores to stand at Rs. 20.43 crores. Cash and balances are, in consequence, shown at Rs. 20.81 crores or Rs. 1.01 crores higher.

The statement of the position of Scheduled Banks for the week ended 28th August, 1953, discloses Demand and Time liabilities at Rs. 528.21 crores (Rs. 12.97 crores on account of borrowings from Banks) and Rs. 321.36 crores (Rs. 2.15 crores) compared with Rs. 528.18 crores (Rs. 12.66 crores) and Rs. 328.52 crores (Rs. 2.10 crores), respectively in the previous week. Cash and balances with the Reserve Bank of India have increased by Rs. 51 lakhs and Rs. 1.83 crores to aggregate Rs. 31.73 crores and Rs. 45.93 crores. There is a rise of Rs. 3.32 crores in investments to Rs. 326.88 crores. Advances and bills discounted at Rs. 473.34 crores reveal a drop of Rs. 3.45 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.0 percent and 55.1 percent against 8.8 percent and 55.7 percent.

MEETING OF IMPERIAL BANK'S CALCUTTA
LOCAL BOARD

At the thirty-third local meeting of the shareholders on the Calcutta Register of the Imperial Bank of India, held in Calcutta on 4th September, Rai Bahadur Sir Badridas Goenka and Sir Asoka Kumar Roy were unanimously re-elected members of the Calcutta Local Board.

RESERVE BANK'S ANNUAL
REPORTFISCAL MEASURES AVERTED
DEPRESSION IN 1952

THE Nineteenth Annual Report of the Central Board of Directors of the Reserve Bank of India makes the following points in the course of a brief review of the economic and financial situation in the country during the year ended 30th June, 1953:—

(a) Timely measures taken by the Government of India helped to avert a likely depression which threatened the Indian economy early in 1952 and contributed to a revival of confidence as well as relative stability in prices; (b) The causes for the rise in prices since December 1952 are not yet clear; at present adequate data are not available for reaching any definite conclusion about the factors responsible for this rise; (c) There is likely to be a surplus on current account in India's balance of payments during the period July 1952 to June 1953, owing mainly to a steep fall in both private and Government imports. There was no need for India to draw on the release of £35 million from the sterling balances available for the period in terms of the Agreement with the Government of the U.K. (d) No quantitative assessment is at present possible, on account of insufficient data, of private industrial investment during the first two years of the five year plan. Although the higher rates of interest prevailing and additional incomes generated by Government expenditure might be expected to stimulate private savings, it is difficult to judge at this stage what investments they are likely to bring about.

The other important feature of the Report is a review of the Bank's activities during the year under four broad heads:—(1) Steps taken to promote sound banking practices; (2) facilities afforded by the Reserve Bank to commercial banks; (3) measures taken to extend banking facilities in the country, especially in the rural sector and (4) provision of training facilities for employees of banks and co-operative institutions.

During the year, money supply was adjusted to seasonal demands in an orderly manner. The seasonal variations conformed to the traditional pattern; a decline of Rs. 111 crores during the 1952 slack season was followed by a rise of Rs. 87 crores in the succeeding busy season. The movement of interest rates during the busy season was also in accordance with expectations and reflected a smooth adjustment of money supply to demand. The banking system was able to meet the busy season demand for funds without resorting to any extensive borrowing from the Reserve Bank.

During the year July 1952 to June 1953, it is expected that there would be a surplus on current account in India's balance of payments, as a result of Government's trade policy. During the second half of 1952, the net surplus on current account was Rs. 43.4 crores, as against a deficit of over Rs. 80 crores in the first half of 1952. Preliminary estimates for the first quarter of 1953 reveal a continuation of the trend, though the current account surplus at Rs. 17.1 crores is smaller than in the fourth quarter of 1952. These surpluses, which were due to a steep fall in imports on both private and Government accounts, were utilised partly to repatriate a large part of the short-term funds borrowed from abroad during 1950-52.

Inspection of Banks

In the sphere of banking, the programme of inspection of banks, which was initiated in 1950 to promote soundness in the financial position and in the methods of operation of banks, was taken a step further during the year. Between July 1952 and June 1953, 24 scheduled and 99 non-scheduled banks were inspected, completing the first round of inspection of all scheduled banks and bringing the total number of banks inspected so far to 374. Of these, 255 banks were inspected under Section 22 of the Banking Companies Act, 1949 to ascertain their eligibility for the grant of licence to carry on banking business, while the remaining 19 banks were inspected under Section 35 of the Act in order to assess their financial position and methods of operation.

In addition, 27 other banks were also inspected during 1952-53, seven in connection with their applications for grant of moratoria, one for issuing a certificate to the Court to the effect that it was unable to pay its debts, one in connection with its scheme of arrangement and 18 with a view to verifying the progress made by them since the previous inspection. The defects revealed by the inspection were pointed out to the banks concerned and suggestions made for rectifying them. Some banks were also asked to submit periodical reports indicating the corrective steps taken by them.

In general, the banks accepted the Reserve Bank's advice and directions for remedying the defects revealed. Wherever the progress revealed was unsatisfactory, the banks concerned were advised to take more effective steps for improving their working. In the case of some banks, the policies pursued by them necessitated a close watch on their day-to-day affairs by an officer deputed by the Reserve Bank; at the end of the year, six banks were under such observation. Deterioration in the affairs of banks was often found to be due to the wide powers vested in

their chief executive officers or due to their ignorance of proper banking practices. Such banks were, therefore, advised to appoint suitable persons as banking advisers, subject to the Reserve Bank's approval.

As regards the enforcement of provisions of the Banking Companies Act, 1949, the Report states that some of the exemptions from the provisions of the Act granted to banks in the previous years were extended for limited periods. Among them, it refers to the granting of exemptions from the provisions in respect of the valuation of investments in Government securities while preparing the balance sheets for 1952. Defaults under Section 18 regarding the maintenance of cash reserves by non-scheduled banks and under Section 24 relating to the maintenance of a minimum of 20 percent of their total demand and time liabilities in liquid assets were generally of a casual nature and there was no occasion to resort to penalties prescribed under Section 46 of the Act.

With respect to the lending policy of banks, except in the case of two banks, there was no need for drastic measures in regard to advances by banks in general or by any particular group. The daily returns of credit limits of Rs. 1 lakh and over sanctioned by scheduled banks to individual borrowers disclosed little evidence of direct speculative lending. For the most part, therefore, the Reserve Bank confined its activities to cautioning banks against maintenance of an over-extended position and advising them to restrict unsecured advances and advances against immovable properties or fixed assets.

The Report also mentions some of the important recommendations for the Banks' Liquidation Proceedings Committee, which was appointed by the Union Government on the recommendation of the Reserve Bank, to investigate the question of expediting and economising the cost of liquidation proceedings and to devise the necessary legislative and procedural changes.

The various measures taken during the year in the direction of extending banking facilities to rural areas are indicated in the Report. These included further extension of the operations of the Reserve Bank to Part B States, opening of more branches of the Imperial Bank in relatively under-banked areas, reform of treasuries, provision of better facilities for remittances and exchange and a move towards reorganising the postal savings bank system on appropriate banking lines.

The Report ends with a statement of the annual accounts of the Bank. The Bank's income for the year amounted to Rs. 16.47 crores and expenditure Rs. 3.97 crores, the net profit available for payment to the Union Government in terms of Section 47 of the Reserve Bank of India Act being Rs. 12.50 crores as against Rs. 7.50 crores last year.

THE progress of the steel industry is so fundamental to industrial aspirations that it is a discouraging sign when the Indian steelmakers are in poor heart. Of the two leading producers, the Indian Iron and Steel Company is totally out of action pending the settlement of an inter-union dispute; while Mr. J. R. D. Tata's speech to the shareholders of the other, the Tata Iron and Steel Company, last Thursday was anything but optimistic. Mr. Tata's review of the basic problems of the Indian economy was sombre, and he followed it with some regretful observations on the relations of Government and business in the "mixed economy". Coming to his own company's affairs in particular, he implied that the results of the profit-sharing scheme had been disappointing. He mentioned the "very large increase in the total emoluments of labour which the company had granted in various forms in the last few years, resulting in a substantial increase in their real earnings, without any corresponding return to the company in the form of greater efficiency or output per capita". A further increment in the proportion of profits shared with workers had recently been granted not so much in return for better production as in recognition of the bare fact "that peace had been maintained in the industry". Though he expressed the hope that "in the course of time" worthwhile returns would be obtained from these concessions, Mr. Tata said we must "face the fact that today the prospects in India of a substantial increase in output per capita are not very promising". That the two steel companies have had such disappointing experience with their labour is especially to be regretted, because it is well known that they have treated their workers with great consideration and have given them every opportunity to increase their earnings by promoting the advance of this basic industry. Looking further ahead, Mr. Tata was able to offer a more cheerful prospect for there is no doubt that the steel industry is launched on a programme of expansion that, while it will leave India still a long way behind the industrial powers, will add a considerable margin to present productive capacity. Tatas have at last brought near completion the rationalisation of their complex capital structure and have an assurance from Government of financial help to the extent of Rs. 10 crores for the purchase of additional plant and equipment. While repeating the assurance that no fresh capital would be sought from investment markets in the near future, Mr. Tata advised shareholders that their company "must continue to expand". The addition of the new State steel plant, with German assistance, will not trouble existing producers in that demand for steel in India will even then exceed production; but precisely how the market for iron and steel manufactures is affected will depend on what and how much the State plant produces. It will be time to judge that when the Government's plans are further advanced than they are now.

Though 200 more lorries on the streets of overcrowded Calcutta will mean further complications for traffic, Dr. Roy's plan to boost employment by giving private transport a freer hand is to be welcomed. His move should be initiated throughout the country, for I see no reason to doubt the usefulness of a programme put forward by a Delhi contemporary a few weeks ago: a revival of private road transport, as a means of improving the carriage of goods where the rail system is inadequate, and as a provider of employment. The pity of it is that the West Bengal Government are apparently restricting themselves to issuing more licences, when in fact the most important thing is to remit some of the present exorbitant taxation on carriers. We saw with the Indian

A DITCHER'S DIARY

airlines that it is worse than useless to issue more and more licences if petrol taxes are high and mail rates low. So with road transport, it will not avail to go from one extreme of limiting private carriers to the other extreme of licensing too many unless the profitability of the business is increased by lowering taxes. The question of profitability is at the crux of the matter here as elsewhere in India's economic problems. Projects that will undoubtedly pay long-term "social dividends", like hydro-electric schemes or more road-building, are all very well in their way, but in the meantime the country needs more enterprises that will pay short-term dividends, and of course these lie mainly in the private sector. Those who want to substitute road-building for the plan to increase private transport miss this point altogether, and belong in the same boat as those who seek to stimulate the economy by constructing more dams; that is, instead of mending matters they will make them worse, at least in the vitally important short run. I think that some people are blinded by their suspicion of "profits" from seeing that the only sure way to galvanise the Indian economy and provide more work is to make profits easier to earn by reducing imposts on industry, and by leaving more profits with their earners by reducing direct taxation.

In a reference to Mr. Krishnamachari's statement on Indianisation last month, I said that the fact that the Minister was speaking from figures sent to him unsolicited should dispose of the belief that the Statistics Bill was a legal instrument required to extract information from unwilling foreign firms. Evidently that belief has not been disposed of, for I see that Acharya Kripalani was declaiming in Parliament last week that foreign firms had refused to supply information about their staff, a situation, added the Acharya, that would not be tolerated elsewhere. "Foreigners who refuse to give figures asked by the Government should be kicked out", declared the Praja Socialist's new leader. I imagine most foreigners would agree with him, provided the figures sought were such as could fairly be asked for from any firm. Not only have foreign firms not refused to supply information, but they have actually provided information that had not been requested, information of which Ministers have made use more than once since Acharya Kripalani has been in the House. There's nothing like getting your facts straight before you start talking about kicking people around.

Freedom First, a little broadsheet put out by the Indian Committee for Cultural Freedom, has been printing a lively controversy between R.H.S. Crossman, the British Labour M.P., and M. R. Masani, the well-known Indian socialist. Mr. Crossman started it with the assertion that "both intellectually and emotionally Communism outside Europe is still a liberative force"—in other words, a doctrine that is all wrong in Europe is all right in Asia. This is only the extreme version of an argument we have all heard at various times: that liberal parliamentary democracy is the best form of government for advanced countries, but the backward countries of Asia need some sort of benevolent dictatorship. I have sometimes heard this superficial observation made by Western visitors in India—people who stay long enough to see the poverty and corruption, but not long enough to sense the deep distaste for centralised bullying that is part of the Indian character. Mr. Crossman

asks, "What is the young Arab to do who sees that Western parliamentary democracy (as practised in his own country) is the facade of a corrupt social revolution? Where is he to turn for his philosophy if not to the writings of Marx and Lenin?" I have no doubt that this sometimes happens, but the point to notice is that Mr. Crossman thinks that any young European who reasoned thus would be a fool, but the young Arab wouldn't be. Mr. Masani very properly slates him for reviving the Kipling-esque "east-is-east" myth, under the modern form that the human values represented by liberalism somehow don't matter east of Suez. Mr. Masani goes the whole length and accuses his adversary of arguing thus because he thinks Asians are "lesser breeds without the law". This is probably unfair, and anyhow would not explain why a number of Indians (especially, I might say, a small class of discouraged business men) incline to the benevolent dictatorship theory nowadays. But Mr. Masani is absolutely in the right when he assails the belief that democracy is "only tolerable when all the real work has been done", that liberalism is something we can only afford when we are "advanced", or that Indians should not worry about freedom until they have exterminated their zamindars by Stalinist methods and industrialised under a police régime. If liberalism has any value at all, he says, it is as true in a backward country as in a rich one. Indians will not get rich by denying themselves freedom first. It is encouraging to see that Indian socialists (Mr. Masani's colleagues in the ICCF are Asoka Mehta and Jai Prakash Narain) can resist the sophistries of the Benavites.

The British counterpart of the ICCF, the Congress for Cultural Freedom which is headed by Bertrand Russell, is about to do something to remedy the decline of the magazine in postwar Britain, while the *Daily Mirror*, an organisation with rather different interests, is going to help too. Since the war the number of London magazines has diminished under the strain of excessive printing and paper charges; we lost *The Strand*, *Horizon*, and *Polemic* and others I cannot now recall, until about the only monthly magazines left were *Lilliput* and *Men Only*. The *Daily Mirror* is to sponsor *The London Magazine* which will be edited by Mr. John Lehmann, who used to run the now defunct *Penguin New Writing*, while the CCF will produce a journal called *Encounter* under the guidance of Stephen Spender. Just as the British are deciding that the economics of the publishing business should not be allowed to kill the periodicals that were once so important a part of middle-class life, the Americans are forecasting even greater changes in publishing. By the use of photo-composing devices, electronic engravers and the leasing of presses it will soon be possible, it is claimed from Washington, to start not just a monthly but a daily paper without a substantial investment. If true (I don't doubt it is true in America, but I mean if it applies to other countries as well) this will remove one of the most common charges against the democracies: that you cannot really practise free speech on a mass scale unless you have a million pounds or so first.

An old Scotswoman was reproaching certain young people for their unseemly behaviour on the Sabbath when a friend, more sympathetic with the high spirits of children, reminded her of what Jesus said in the cornfield on the Sabbath when the disciples plucked the corn. "Aye", said the dour old dame, "I mind that, an' I thoct nane the mair o' Him for't."

**MR. J. R. D. TATA ON ROLE OF FREE ENTERPRISE
IN A MIXED ECONOMY**

But if it were possible, for the next twenty-five or fifty years to keep our population static or at least to reduce the rate of its growth, which, I am convinced, is not beyond the medical, scientific and administrative possibilities of the day, the whole

The Shareholders will note from the balance sheet that, for the first time in many years, the trend towards higher stock figures has been reversed in respect of raw materials. Since the close of the year under review, increased despatches, particularly of old stocks, have further reduced our inventories. We

Deferred Share Conversion Scheme

I hope this is the last annual general meeting at which I shall have to discuss the deferred share

As usual, I have much pleasure in placing on record our appreciation of the good work put in by the management and all employees at Jamshedpur and elsewhere during the year. In our skilled workers and our supervisory staff and in our top management, we have a fine team of men who constitute an invaluable asset to our Company but to the country as a whole. The continued success of the Company's operations is safe in their hands and we extend our thanks and good wishes to them.

LALA KARAM CHAND THAPAR REPORTS BIG INCREASE IN PREMIUM INCOME AND PROFITS

The substantial increase in Nett Premium Income in our Fire account, mainly due to the increase in our Foreign Treaty business, has brought in its wake a very heavy financing charge, the increase in Reserves required to maintain them at 50 per cent. of the Premium being as much as Rs. 4,52,372 or 20 per cent. of the Nett Premium income for the year; it is more than satisfactory to record that in spite of this it has still been possible to make a transfer to Profit and Loss.

I cannot conclude this statement without asking you to join with me in thanking our General Manager, Mr. Sturgess, and his able group of Officers and Staff for the good work they have put in, -without which I should not now be in the position to place before you this satisfactory picture of the Company's progress.

At the same time I would like to thank all our old friends, Principal Agents, Agents and Clients both here and abroad, for their continuous and encouraging support.

The reports and accounts were unanimously adopted and the final dividend of 8 per cent which together with the interim dividend of 5 per cent already paid becomes equivalent to 10½ per cent on the Ordinary stock issued at the end of the year, namely £4,875,000.

The facts were that the plaintiffs, Sri Chandubhai Fulabhai Patel and others had filed six applications in the Calcutta Court of Small Causes, in all of which the facts in issue and the point in dispute were alike. The plaintiffs in all the six cases had sent consignments of goods through the River Steam Navigation Company Ltd.—called from now on, for brevity, the steamer company—to East Bengal, now Eastern Pakistan. In each of the cases there was a forwarding note which was the basis of the contract and clause II was as follows: "The company undertake to carry goods over their own transport system only. Where goods are accepted by the company for carrying beyond their own transport system, and where goods are either wholly or partly

A.I.R. 1953 (August) Cal. 547.)

Prefabrication and pre-stressed concrete will provide the two main features of the exhibition. Every type of machinery and plant used in the building industry will find a place in the display. Many manufacturers will show new or re-designed plant and tools. In addition to the facilities of the Department of Scientific and Industrial Research and the Building Research Station, plant and equipment developed as the result of close co-operation with those organisations will be displayed by a number of leading manufacturers.

Fluctuations were narrow in the jute section and only small lots of shares changed hands. Howrah fluctuated within a few annas to close at

In the past two days there has been a welcome revival of interest in the tea section and this can be attributed to the results of the tea auction in London on Monday, 7th instant, when there was a good demand for all types of tea and prices for best quality registered an advance of up to 2d per lb. In spite of a few months of slack conditions a fair amount of business was reported at higher prices. Dhunseri improved to Rs. 10.4, Dimakushi to Rs. 31. East India to Rs. 16.4 and Grob "A" to Rs. 16.6. Tezpur were also better at Rs. 15 as were Hattikhira at Rs. 9.2, Hansqua at Rs. 13.6 and New Chumta at Rs. 17. There was a good enquiry for Hasimara which improved from Rs. 23.4 to Rs. 25.8. Certain Darjeeling scrip were also in good demand with Gielle changing hands at Rs. 6, Margaret's Hope at the higher level of Rs. 8.4 and Poobong at Rs. 7-12.

During the four years of its working, the Corporation has given considerable help to finance the development of industries at a time when it was not easy to get capital from the market. In the interests of the industrial development of the country, it was necessary that the scope of the activities of the Corporation should be enlarged and that it should be placed in a position to augment its resources.

INDUSTRIAL PRODUCTS DEPARTMENT

session of G.A.T.T. which is meeting at Geneva from 17th September. The Commercial Counsellor in London, Mr. L. R. S. Singh, will be the alternate delegate. The meeting will be an important one. Firstly, it will discuss Japan's admission into the organisation. Secondly, G.A.T.T. is due to expire next year and the meeting will be called upon to decide whether to give it a temporary extension of life. Thirdly, bilateral trade agreements made under the auspices of G.A.T.T. are also due to expire and members will discuss whether to extend them, and if so for what period and in what form. The Indian Finance Commission, it will be recalled, was opposed to India's withdrawal from G.A.T.T.

Publicity for the Plan

State Information Ministers, accompanied by their Directors of Publicity, will meet here on 18th September. The Central Minister, Dr. Keshkar, will preside over the conference, which will discuss the publicity programme for the five-year plan and the Colombo Plan projects. The main object of the programme is to publicise schemes amongst the masses in order to create enthusiasm and popular support. The publicity done so far for the plan has not been adequate, it is felt here. The man in the street is not yet fully aware of what the plan has in store for him. It is proposed to appoint a publicity adviser. Enquiries show that delegates to the Colombo Plan Consultative Committee meeting will be afforded the opportunity to see the progress of the plan in general and inspect some development projects which are in the processing stage. They are expected to visit some of the community projects, river valley projects, and industrial units such as the Sindri fertiliser factory and the machine tool factory.

Broadcasting Development Plans

Satisfactory progress is reported to have been made with the development plan for Indian broadcasting. Buildings to house the 50-kilowatt stations at Bombay, Ahmedabad and Jullundur are due to be ready by December and all three stations are expected to go on the air by March next. Work on the 50-kilowatt stations at Allahabad and Bangalore is progressing satisfactorily and both stations, it is expected, will start functioning next year. Equipment for the 20-kilowatt stations in Madras, Indore and Hyderabad is likewise expected to arrive in India by next year, as also for the 300-kilowatt stations due to be installed in eastern, southern and western India.

Reorganising Public Administration

The problem of reorganising the administration has been engaging the attention of the Government for some time. There are several

schemes in the field such as the reports of the late Mr. Gopalaswami Ayyangar, Mr. A. D. Gorwala, Mr. R. A. Gopalaswami, the Planning Commission and Mr. Paul H. Appleby. The reports of Mr. Gopalaswami Ayyangar and Mr. R. A. Gopalaswami largely deal with the reorganisation of the Central Secretariat, while those of Messrs. Gorwala and Appleby deal with public administration. According to lobby reports, a committee of senior Secretaries, which has examined all these reports, has evolved a plan of reorganisation which is now before the Central Cabinet for final decision.

Wages and D.A. Rise

Wage scales and dearness allowances increased during the first quarter of this year. In the majority of cases, these increases were the result of wage revisions by labour tribunals to whom disputes were referred. In addition, bonuses were granted in a number of industrial units. In the Bangalore Woollen, Cotton and Silk Mills, the basic wage of the lowest paid worker was raised from 14s. 9 ps. per day to Re. 1 per day. About 5,000 workers employed in the jute mills at Nelli-marla and Chitavalah (Madras) were given increases in wages and allowances. The basic minimum wage, which had stood at Rs. 19-8 per month since January 1950, was raised to Rs. 23 per month up to the end of 1953. The award also decreed an increase in the basic wage by Re. 1 each year till it reached Rs. 26 per month. Dearness allowance, which was being paid at an average rate of Rs. 22 per month, was increased to a rate of 2s. 5 ps. per point of rise above 100 in the Visakhapatnam cost-of-living index number. This rate was estimated to neutralise the rise in the cost-of-living index to the extent of about 65 percent. The award also recommended that food concessions valued at Rs. 4-7 per month should be set off against the amount of dearness allowance calculated at the above rate. Similarly, the award of the All-India Bank Disputes Tribunal, which revised the wage rates and allowances of bank employees in 129 banks, prescribed different scales of pay for subordinate staff depending upon the area in which the bank is situated and the class of the bank. Besides increasing the basic wages, the award prescribed a rate of dearness allowance which was to be increased or decreased by 74 percent of the basic pay if the average all-India cost-of-living index for each half-year rises or falls by more than 10 points over 144, which was the average index figure for 1951. Enhanced dearness allowances were also granted to cotton mill workers in Bombay, Sholapur, Indore, Nagpur and Madras.

During this period, there were also a number of awards granting profit bonuses to workers em-

ployed in a number of units in different industries. By an order of the State Government, sugar factories in Uttar Pradesh which produced over 1 lakh maunds of sugar during the 1951-52 season were required to pay bonuses ranging from 1 anna to 3 annas per maund of sugar produced. In the two jute mills at Nelli-marla and Chitavalah annual bonuses for the years 1950 and 1951 were granted at the rate of one-fifth of the basic wage and three-fifths of the basic wage respectively in one unit and at one-fifth and five-sixths of the basic wage respectively in the other unit. In a number of silk mills in Bombay State, bonuses ranging from one-twelfth to three-eighths of the basic earnings in 1951 were granted by awards of industrial courts.

New Appointments

Mr. V. S. Hejmadi has been appointed an Adviser to the Planning Commission, the other two Advisers being Messrs. S. V. Ramamurti and P. N. Thapar. Mr. Hejmadi succeeds Mr. P. S. Rao, who has become the adviser to the Rajpramukh of the Patiala and East Punjab States Union.

Mr. M. P. Pai, at present Managing Director of the Sindri fertiliser factory, is returning shortly to Madras to join the Andhra State Secretariat. Mr. S. Chakravarti, Joint Secretary, Defence Ministry, has already joined the organisation of the Officer on Special Duty, Mr. Chandulal Trivedi.

The question of appointing successors to Mr. M. P. Pai, as Managing Director of Sindri factory, and to Mr. S. N. Mazumdar, as Chairman of the Damodar Valley Corporation, is being considered and an announcement is expected shortly.

Heavy Electrical Equipment Manufacture

Correcting a statement appearing in our New Delhi correspondent's despatch on the "Manufacture of Heavy Electrical Equipment," published in *Capital* on 27th August, Messrs. Associated Electrical Industries state that they remain extremely interested in the heavy electrical plant project. They were in touch with India's Production Secretary when he visited Britain recently and are in correspondence with him on this subject.

According to the Labour Bureau, the working class cost of living index number (base 1944=100) for Delhi during the month of July 1953, appreciated by two points to 142. The index recorded a rise of three points due to an increase in the prices of rice (pure), mustard oil, potatoes, onions, chillies and turmeric. The index number for the clothing group also advanced by four points but this was partly set off by a recession of two points in the miscellaneous group due to a decrease in the entertainment charges. The estimated cost of living index number for Delhi (base 1939=100) was 369 for the month of July 1953.

London

GOLD AND DOLLAR RESERVES RISE IN AUGUST

HOME DEMAND BOOSTS INDUSTRIAL PRODUCTION: RECOVERY IN EXPORTS

(FROM OUR OWN CORRESPONDENT)
5th September.

AUGUST is the month when seasonal influences are most unfavourable to the pound. Commodity sales from the sterling area are at their lowest levels and our tourist spending is at its peak. Despite these adverse factors, the Treasury was able to announce last Wednesday that the gold and dollar reserves rose by another \$13 million during that month, to reach at \$2,469 million the highest figure for 20 months. By comparison with the \$89 million surplus in July and the \$46 million in June, the August figure appears disappointing at first sight. On analysis, however, it proves to be more than satisfactory. The August surplus was arrived at after taking credit for American defence aid of \$19 million, against \$36 million in July, after paying \$6 million to E.P.U. against the receipt of \$2 million in the previous month, and, above all, after allowing for the payment to Canada of \$39 million on the 1942 interest-free loan to reduce its amount to \$150 million. Eliminating all the special credits and debits, the "true" trading surplus in August works out at \$39 million, against comparable figures of \$51 million for July and of \$35 million in June. The August deficit with E.P.U. works out at £10,600,000—half of which will have to be settled in gold by the middle of this month—against only £4 million in July, but if that represents the peak of our spending there is no reason why we should not in coming months witness a return to modest surpluses. It is as well, however, to keep in mind that we still owe well over \$500 million to the European Payments Union, or approximately all that we have been able to add to the gold and dollar reserves since the beginning of this year.

This persistent improvement in the reserves, in spite of unfavourable seasonal influences, is welcome evidence of the growing strength of the sterling area in its dealings with the rest of the world, and more especially with the dollar countries. The importance of maintaining this situation was apparent from even a casual reading of the Douglas report. It has been further emphasised this week in a message from Washington which fills a gap in which Mr. Douglas's report did not cover—American support for a convertible sterling currency in the form of a stabilisation fund. It now appears that the U.S. Administration would be willing to ask Congress to contribute between \$2,000 million and \$3,000 million to a stand-by fund of between \$4,000 million and \$5,000 million, with the balance presumably coming from other sources, including the International Monetary Fund, to back sterling if the British Government and other Commonwealth Governments decided to make the pound convertible into dollars and to relax a large part of the present exchange and trade restrictions in the sterling area. The crucial condition is that we must maintain and improve strength of the sterling currency for at least another eight to ten months. Congress has still to be convinced, of course, and may prove a stumbling block, but at least we are making some progress.

Least one is in any danger of taking too much heart from these favourable developments, a cursory examination of a few current official publications helps to provide a corrective. The latest *Bulletin for Industry*—the Treasury's monthly survey of economic conditions—is not prepared to go further than admit, almost grudgingly, that a little progress is being made. For instance: "In the first half of 1953 industrial production was 4 percent higher than a year earlier and 1 to 2 percent up on the first half of 1951." There follows a qualified warning that this was due mainly to a revival of home demand, "though in the second quarter of this year there was also some recovery in the volume of exports." It goes on to point out that the recovery in output and employment has not been evenly spread. The main increases in output have been in textiles, clothing, leather goods and food, in building and contracting, and in vehicles. What it does not say is that, in most of these export orders have also increased. Production has decreased in the broad statistical group called engineering, though a number of important sub-sections, as is evident from discussions with exhibitors at both the Radio and Engineering and Marine Exhibitions now running at Earls Court and Olympia, respectively, are doing very well.

National Income

Another survey of the economic scene is furnished by the Blue Book on national income and expenditure, though this covers 1952. It shows, however, that inflation was still continuing at a fairly rapid rate last year. The chief influences were a rise of about 9 percent in wages or salaries (£575 million) and increased claims by the Government on the supply of goods and services, mainly due to the rearmament programme. While the total national output declined by about one percent the value in money rose by nearly £1,000 million, or about 8 percent. Consumers' expenditure was over £500 million greater than

in the previous year, but the volume of goods bought was actually slightly lower. Company dividends at £472 million, rose by only £19 million—not a great deal from which to meet labour wage claims! Profits of companies trading in the United Kingdom, in fact, showed a fall of nearly £200 million.

Despite this "official" hesitancy, the Government continues its policy towards liberation. The Treasury has recently announced that the Government has agreed to allow the Japanese Government a further limited addition of sterling, through normal commercial channels.

Cabinet Changes

From 10, Downing Street, on Thursday night, there issued an announcement which at least in part justified the speculation with regard to a Cabinet reshuffle presaged by the numerous discussions which the Prime Minister has had with his principal lieutenants over the last few weeks. Last week's suggestion that Sir Winston was re-adjusting rather than reconstructing the Cabinet has in fact proved correct, though the possibility of the latter taking place at a later date, when a more definite assessment can be made regarding the health of both Sir Winston and Mr. Eden, cannot be ruled out. For the moment, however, the Prime Minister has contented himself with comparatively minor adjustments, which at the same time will have the effect not only of meeting criticism but will also strengthen the Cabinet by increasing its number by two to 19. Cabinet rank is given to three Ministers who up to now have not been in the Cabinet, namely, Sir Thomas Dugdale, Minister of Agriculture and Fisheries; Miss Florence Horsbrugh, Minister of Education; and Major Lloyd-George, Minister of Food. On the other hand, Lord Leathers, Secretary of State for Co-ordination of Transport Fuel and Power, resigns, as do two other Ministers without Cabinet rank, Sir Arthur Salter, Minister of Materials, and Brigadier Mackeson, Secretary for Overseas Trade. Incidental adjustments include Lord Woolton, Chancellor of the Duchy of Lancaster, taking over Sir Arthur Salter's dwindling responsibilities as Minister of Materials, while Mr. Heathcoat-Amory, whose Ministry of Pensions has been merged with the Ministry of National Insurance and been taken over by Mr. Osbert Peck as Minister of Pensions and National Insurance, takes over from Brigadier Mackeson in the newly created office of Minister of State, Board of Trade. The former Parliamentary Secretaries of the Pensions and National Insurance Ministries, Brig J. G. Smyth, V.C., and Major R. H. Turton, respectively, become Joint Parliamentary Secretaries of the merged Ministry. Incidentally, a saving of £9,500 a year is achieved by the changes.

Both Lord Leathers and Sir Arthur Salter have apparently been anxious to resign for some time, and the Prime Minister pays unstinted tribute to the valuable work they have done. At the same time, he indicates that the "Overlord" system has served its purpose and is now to be dropped, which is confirmed by the elevation of the Ministers of Agriculture and Food and the assignment to Lord Woolton of new duties. Neither Lord Alexander nor Lord Cherwell are regarded as falling within the definition of "co-ordinators" since the former has a well-established department of his own while the latter's main value is as an advisor on the statistical and scientific aspects of policy. The considerable importance of agriculture, food and education is recognised by the new changes, which also meet severe criticism in the House of Commons at the absence of the Ministers responsible for these subjects from the deliberations of the Cabinet, while the new appointment for Mr. Heathcoat-Amory not only emphasises the special attention which is to be given to the promotion of exports and to the problem of overseas trade generally, but also brings to the Board of Trade an experienced business man—the lack of which has also often been criticised.

T. U. C. and Nationalisation

Pre-conference developments in both the T. U. C. and the Labour Party are following along expected lines. Extension of nationalisation promises to be the subject which will attract most controversy. A left-wing minority of the T. U. C. General Council tried last Thursday at a meeting of that body to decide its attitude in advance to the 63 resolutions on the agenda to commit their colleagues to supporting a proposal for a "very considerable extension of public ownership embracing the principle of workers' control" which would have placed them in an impossible position in view of their cautious report to which reference was made last week. After a lively two-hour discussion 29 voted firmly for opposing more nationalisation, four supported the resolution and one abstained. There are also likely to be clashes between the platform and the floor on the question of abandoning all wage restraint and on the acceptance by trade unionists of posts on the new Iron and Steel Board. At the Labour Party conference, the main clash will undoubtedly arise over the many resolutions aimed at reducing the power of the trade unions and increasing the authority of local parties.

I.C.C.'s Reduced Profits

Indian Copper Corporation suffered a moderately sharp fall in earnings in 1952. The net profit after tax is shown at £121,833 compared with £159,712, and is struck after a much lower tax charge of £265,347 against £455,000. The company has no difficulty in maintaining its 12½ percent dividend free of tax, which absorbs £114,275.

MR. TATA'S VIEWS ON THE
"MIXED ECONOMY"TOO MUCH PARALYSING
INTERVENTION

(FROM OUR OWN CORRESPONDENT).

7th September.

MR. J. R. D. Tata's speech to the shareholders of the Tata Iron and Steel Company last Thursday, in so far as it dealt with the general aspects of the economic situation reflected the mood of the business community in Western India taking, as it did, a sober view of the future of commerce and industry in general. Mr. Tata voiced the sense of uncertainty which prevails today and which acts as a deterrent to those qualities of creative enterprise which lead to economic expansion and of prudence and forethought which help capital formation and the conservation of national resources. Government policies themselves have, he said, acted as fetters on the private sector of industry. Mr. Tata could not forget the treatment meted out to the air transport companies, and was within his rights as a respected leader of the business community in asking those in authority to clarify their position and to state whether their ultimate goal was a truly mixed economy or a State monopoly of industry under the guise of a mixed economy. His warning to the Government that a mixed economy could function only if there was a balance of forces, with free enterprise operating as one of the autonomous forces, pulling its weight alongside State enterprise, trade unions and other elements, was timely.

"This is not a plea for a return to the old time 'laissez-faire' in economic matters," Mr. Tata said. "The interest of the nation as a whole must prevail over the interests of the few. The State must, where necessary, exercise a reasonable, but not a paralysing, degree of supervision over industry and business. It should also take a positive part in production in such fields as are best suited to its organisation and methods, within the limit of its resources and subject to a realistic assessment of priorities. But it should not lose sight of the primary objective which is to expand production and employment. That object cannot be achieved by discouraging creative enterprise and initiative, inhibiting savings and destroying the confidence of the investor. I earnestly believe that realistic and well thought out policies, free from doctrinaire considerations and aimed at encouraging production, fostering savings, recognising honest and efficient management while deterring anti-social activities, would go a long way towards energising free enterprise. They would also help to instil in the private sector a sense of trustworthiness as advocated by Mahatma Gandhi and would put squarely upon it the responsibility for placing national above sectional and personal interests. Such policies in respect of the private sector combined with State enterprise in appropriate fields, assistance to small scale and cottage industries and to the co-operative movement, land and social reforms and measures to control the growth of our population, would in my humble judgment provide the right kind of programme to revolutionise the economic activity of the country and to make a real success of the concept of a mixed economy." Most business men here feel that this is more or less what they themselves have been troubled about and that

Mr. Tata has expressed in precise terms their own unformulated fears.

It is said that a person does not miss what he did not have but might have had if he had behaved differently. The Government does not perhaps realise the loss the country has suffered in terms of the expansion of industry and commerce which might have taken place had not the private sector been so rigidly controlled and uncertain of its future. This mood, which private industry is experiencing today as a result of the official policy of regarding it with suspicion to the extent of killing initiative and destroying confidence, is all the more dangerous in the context of the ever rising volume of unemployment. Some business men think the Government has made matters worse by the introduction of the Bill to consolidate and revise the company law.

Company Law

The attitude of the business community to this measure is interesting. It cannot and does not take objection to any of the important provisions which bring about a change in the present law. It also admits the necessity for reform in company law, in view of some of the doubtful practices which took place in company management during the war years when moral standards of a section of the community sadly deteriorated. But it feels at the same time humiliated that the Government should regard it as a criminal tribe whose every move has to be carefully watched and circumscribed. If business men have behaved in a manner prejudicial to public interests during the last decade, so have some of the self-seeking politicians, farmers, artisans and workers. Why should the Government, which can tolerate for a length of time anti-social measures such as those at Burnpur, involving the loss of a hundred thousand tons of steel and which arrest the function and growth of a number of industries and other national projects, come down on business men with such severity.

Business opinion in Bombay, while not wholly opposed to this measure, cannot but feel that if the Government had administered the law as it stood in an efficient manner, the malpractices on the part of some of the worst offenders among those engaged in company promotion and management would not have been possible and the need to impose greater restrictions which only hamper initiative and enterprise would not have arisen. It is feared that just as the old law had in many ways remained a dead letter the new law with its more comprehensive and far-reaching restrictions may serve only to cripple those who are law-abiding and create difficulties and complications for them, without in any way impeding those ready to take risks if it serves their purposes.

EUROPE'S DOLLAR GAP

Europe's dollar gap with the USA and Canada was reduced by \$110 million during the first five months of this year as compared with the corresponding period of 1952, according to the Organisation for European Economic Co-operation. An OEEC report prepared for the Council of Europe showed that last year's trade deficit with North America for this period was \$1,713 million, while this year's was \$597 million. Imports from the USA and Canada were 35 percent lower. Exports were 20 percent higher. Europe's trade deficit with the rest of the world in the first quarter of the year was \$1,195 million—\$412 million less than in the first quarter of 1952. The fall in prices accounted for \$300 million of the difference.

DIRECTORY OF BANKING AND
CORRESPONDENCE GUIDE

Indian Banking Analysed: Directory of Banking in India, Pakistan, Burma and Ceylon. By J. P. Jain (Published by The Banking Experts, T. Nagar, Madras. 676 pages. Price Rs. 15).

This is the third revised and enlarged edition of a useful reference book which contains information in regard to the management, financial position, etc. of banks operating in India, Pakistan, Burma and Ceylon. The banks in India which have been surveyed by the author include 93 scheduled banks, 420 non-scheduled banks and about 1,000 co-operative banks. The total number of banks dealt with in the volume is about 2,000.

The book is divided in two parts. In Part I, which is analytical, the author deals with the concept of banking and traces the origin, growth and development of banking on modern lines in the four countries mentioned. This part also contains a chapter on banking legislation in these countries and a chapter on the working of banks abroad. Practical bankers will also find useful the chapter on safety tips to bankers incorporated in this part. Part II of the book, which is statistical, contains information with regard to the directorate of the scheduled and the larger non-scheduled banks and an analysis of the financial position of each of these banks as also of the smaller non-scheduled banks and the co-operative banks, based on their latest available balance sheets. In Chapter 10 the author has given the location of the offices of all the banks, arranged city-wise. According to the information furnished, banks in India had 5,300 offices operating in about 1,800 towns. The work contains a great deal of information on the subject of banking in general and on individual banks and is to be recommended to bankers, business men and all those having dealings with banks.

A Guide To Bank Correspondence. By L. R. Suneja (Suneja Publishers, New Delhi. 472 pages. Price Rs. 10).

Business correspondence in this country is not of a high quality and books written with the aim of improving letter-writing should be welcome. In this book Mr. Suneja, who is well known to students of banking, has dealt with the general principles of bank correspondence. In the preface of the book he has consulted several American banks who have supplied him with useful material which he has incorporated in the text, and its general make-up in Part I of the book and II, the author passes on, in Part III, to a study of bank correspondence in general. This part contains an interesting account of the devices employed by banks in America to improve the standard of bank correspondence. Part IV deals with types of letters which include model letters used by American banks for the training of their staff. Correspondence is to banks the most important medium of public relations and this book will be of considerable help to bank employees and their ability to write effective letters, free from ambiguity and conventional jargon.

U.N. FACTS AND STATISTICS

World Facts and Figures. (Published by the U.N. Department of Public Information. 35 pages. Price, 25 cents or 1s 9d.) The third edition of this excellent little pamphlet contains a selection of facts and statistics gleaned from the *Statistical Yearbook, 1952*, and the *Demographic Yearbook, 1952*—two well known U.N. publications which are said to "comprise the fullest authoritative collections of international data to be conveniently assembled between the covers of two books." Among other things, it points out that there are more human beings and pigs but fewer horses and mules than before the war. The world's population in mid-1951, an average of 18 to the square kilometre, survive can expect to live longer than their grandparents. More wheat, corn, barley and oats are produced than before the war but about as much rice; Indians are eating less than they used more steel. The output of coal, petroleum and mankind's main source of energy, despite the fact that it has been steadily losing ground to the rapidly expanding petroleum and hydro-electric energy industries. World trade has increased markedly in dollar value since the pre-war years international trade, the foundation of are busier than ever carrying freight. The world bettering health facilities for its people, not only remains to be done, but also in the more developed more long or feature films than any other country. leaps and bounds since pre-war years and the United Kingdom is the world's largest publisher of book titles.

The Tariff Commission has prepared questionnaires for producers, importers and consumers in connection with its industry. Copies of the questionnaires can be obtained from the Secretary, Tariff Commission, Contractor Building, Nicol Road, Salim, Bombay. When requests for copies are made, the interest represented, i.e., whether the party is a producer, importer or consumer, should be specified.

MISDIRECTION OF FINANCIAL RESOURCES
IN UNDERDEVELOPED COUNTRIESANNUAL REPORT OF WORLD BANK: THE COMPETING CLAIMS
OF PRIVATE AND PUBLIC ENTERPRISE

The eighth annual report of the International Bank for Reconstruction and Development, presented at the meeting of its Board of Governors in Washington yesterday, contains some observations on "Investment Programming in Underdeveloped Countries"—a subject that is of particular interest and relevance to current Indian economic conditions. These observations are published below, and are followed by a brief survey of the Bank's activities in the year ended 30th June, 1953.

THE International Bank for Reconstruction and Development is now beginning its eighth year of work. Since 1946, it has had opportunities to observe the process of economic development in many countries and on almost every level of effort, from village to Cabinet council. Bank officers and consultants have visited all the Bank's 54 member countries and many overseas dependencies as well. Their business has been carried out for a wide variety of purposes: to make broad economic assessments; to consult on major policies affecting development; to study individual projects and examine the possibility of making loans for them; to assist in dealing with problems of management, engineering and finance arising from the course of project execution; to help in the mobilisation of local capital; and to gain knowledge of or consult upon many other problems of concern to the Bank and its members.

Many observations by the Bank confirm the widely held belief that the resources of most underdeveloped areas are adequate, if effectively used, to support a substantially higher level of production and income. There are many and complex reasons why these areas have not been more developed. Many cultures, for instance, have placed a low value on material advance and, indeed, some have regarded it as incompatible with more desirable objectives of society and of the individual. The character of government incentives; certain forms of social and economic organisation have offered obstacles. In part, the reasons have been physical. Climate and topography have imposed limits on economic growth; distances from centres of technological innovation and capital resources, especially in the past, have been hindrances.

Capital equipment can now readily be sent to most parts of the world; technical skills can be imported. Both the tools and the knowledge needed for development are within reach. But this does not mean, as is too often assumed, that the chief requirement is to finance imports of foreign equipment and to attract foreign technicians. The availability of capital for these purposes cannot, by itself, be expected to remove some of the most important obstacles to economic growth.

Obstacles To Growth

To a greater or lesser extent, these obstacles to growth exist everywhere. In one country or another, they include: the lack of traditions of political responsibility; the weakness of economic initiative; low standards of education and training; and insufficient understanding that economic progress requires patience, effort and self-denial. The consequences may be lack of confidence between a government and its people and frequent changes in government policies and personnel; unsound economic and financial policies, dictated by political pressures and a reluctance of important periods of inflation; a reluctance of important groups to accept necessary economic and social changes; waste of public funds on non-productive activities; and weak administration in government and business. These factors discourage domestic savings, and deter foreign investment.

The interdependence of each aspect of society in the development process is reflected in the fact that, in countries now described as "developed," the era of technological change and rapid economic growth was preceded and accompanied by the changes of great importance. These included the evolution of new ideas concerning man, society and the physical world, and the evolution of new political and economic institutions that made it possible to apply capital productively and share the benefits to technology among large numbers of people. Not only the printing press and the steam engine, but the school house and the joint venture corporation have their chapters in the still unfolding story of economic development.

The institutions that can promote economic growth cover an extremely wide range. Among a great many developments in this field, the remainder of this discussion is confined to one: the establishment, in an institutions to weigh government policy and guide government investment in economic development. This is a comparatively new phenomenon. It has been selected for comment because the Bank believes that, in the underdeveloped countries in which much of its work is now centred, organisational innovations of this kind can enhance the effectiveness with which existing resources are used.

Misdirection of Investment

One of the universal findings of the Bank's missions has been that underdeveloped countries have much to gain from a better direction and balance of investment. The misdirection of finan-

cial resources has taken many forms: the investment of money in commodity speculation or idle land; the construction of factories in the absence of markets; the building of a few monumental projects at the cost of more modest but more pervasive programmes; the use of public funds for purposes that private investors, given proper incentives, would have been willing to pursue; the lack of foresight that has led to the building of hospitals and universities without adequate concern for the availability of trained doctors, nurses or teachers.

The policies of government are no less important in underdeveloped countries than they are elsewhere. The level of government spending, the tax structure, tariff and monetary policies, among other things, influence the total amount of investment, the sources from which it comes, and the purposes to which it is put. The government's own share of investment in an underdeveloped country, moreover, commonly amounts to between one-quarter and one-third of the total. It is not only important in itself, but may have a direct effect on what enterprises are possible and profitable in the private sector.

Controls and Production

The fact that financial and technical resources are limited in underdeveloped countries makes the most effective use of these resources a pressing necessity. It lays on government a responsibility to develop its own policies and investments so that they will help to stimulate the economy as a whole to greater productivity, increased savings and investment and, as a result, higher living standards. This does not imply a detailed blueprinting of the economy or even of the government's role in it. Still less does it imply close and coercive economic controls which are more likely to breed new controls than new production. Nor, finally, does it justify the government's diversion of its own financial and technical resources into enterprises for which private capital and management are available, since that will lessen the resources available for providing basic services and utilities that generally lie outside the scope of private initiative.

But a stringency of financial and technical resources does mean that the government should exercise its influence consciously and consistently, rather than inadvertently and sometimes at cross-purposes with itself. A useful instrument in this regard is a broad development programme which looks ahead for a period of years, sets out major goals in production and investment, and provides a guide to government decisions on policy, on approximate magnitudes of public investment in different sectors of the economy, and on the choice and timing of individual projects.

The formulation and carrying out of a development programme of this kind tries to satisfy five objectives: (a) to review the total of government investment, so that it will neither unduly restrict private investment nor exceed total capital resources and so protect inflation or other unhealthy results; (b) to coordinate development planning within the government, so that projects in one sector will be supported by whatever complementary investment is needed elsewhere; (c) to establish priorities among development objectives and plans to insure the best and most timely use of the finance, manpower and other resources available; (d) to give encouragement by policies and specific measures to the most useful private activities; and (e) to keep fiscal and economic policies consistent with the long-run objective of economic growth.

Programming Units

An increasing number of underdeveloped countries have brought some or all of these functions together in a governmental programming unit. Among the units recently established, some with Bank advice, are a National Bank for Development in Brazil, a National Ministry of Planning and an Economic and Social Board in Burma, a Planning Committee of the Cabinet in Ceylon, a National Planning Council in Colombia, a Planning Commission in India, a Development Board in Iraq, a National Economic Council in Nicaragua and a Planning Bureau in Surinam.

The organisation of programming bodies is not uniform among the governments that have them, and the organisational recommendations of the Bank's general survey missions have differed from one country to another. There has been common agreement, however, on the standards to be met. The programming unit must be situated on an influential level of government, and it particularly must have the right, express or implicit, to state its views on development expenditures before commitments for these expenditures are accepted. Several units meet this standard by having direct

access to the prime minister or the chief executive of the government. The National Planning Council of Colombia is attached to the Office of the President, as is the National Economic Council of Nicaragua. The prime minister is the chairman of the Economic and Social Board of Burma, the Planning Committee of Ceylon, the Planning Commission of India and the Development Board of Iraq.

The programming body cannot function objectively if at the same time it is charged with executive responsibility for carrying out projects in some particular sector of the economy. Generally speaking, governments have tried to achieve impartiality in the planning body either by making it a forum in which the differing views of responsible executives can be reconciled, or by composing it of persons who have no operating responsibilities. In the Ceylon Planning Committee and the Nicaraguan Economic Council, for instance, the programming group is composed of all the ministers concerned with economic matters, so that all may have their views represented. The Nicaraguan Council's membership includes the Minister of Economy (as chairman), the Ministers of Finance, Agriculture, and Public Works, the principal Secretary of the President, and the general managers of both the central bank and the newly created Development Institute; other ministers participate from time to time as matters arise which directly concern them. In the case of the Indian Planning Commission the members, apart from the chairman, have no other responsibilities in the Government.

In any case, the programming body needs to be supported by a secretariat competent to bring it a balanced judgement on the separate plans of the ministries and departments. It is impossible to generalise on the size and composition of this staff. The secretariat of the Colombian Planning Council is small, and is able to rely to a considerable extent on research and staff services of the central bank. The secretariat of the Indian Planning Commission is rather extensive and is divided into the following sections: resource and economic surveys; finance; industry; trade and communication; food and agriculture; resource development; employment and social services. Several programming units regularly have the advice of advisory councils composed of private persons drawn from industrial, agricultural and trade groups.

Some Points of Emphasis

A feature to be emphasised is that the basic process entrusted to these units is programming, and not planning in a detailed sense. Planning, in terms of concrete projects and specific policies, remains the work of other ministries and agencies. The programming unit stimulates planning and fact-gathering where they need to be done; it views plans and policies objectively, measuring them against one another and against the resources available; and it recommends whatever modifications of substance and timing are necessary to bring them together into a coherent whole.

The Bank's general survey missions have frequently stressed that it is an important task of these units to keep informed of progress, and to recommend changes that may be required by circumstance. While the goals themselves may stand, it is only realistic to anticipate that they may be advanced or deferred by events impossible to foresee. The timing and amount of investment may be influenced by unexpected difficulties in the construction of a basic project, by unexpectedly rapid development in some sector, by changes of price levels and costs, by fluctuations in the amount of local and foreign capital available, and by many other factors. Any long-term development programme therefore needs to be kept continuously under review and to be subjected to periodic modification.

It is implicit in the functions of the programming body that it provides a prod to action. In the past, some governments have made the mistake of supposing that they had fulfilled their responsibility by drawing up a programme, and have left promising plans to exist only on paper. But programmes are not a substitute for action; and the existence of a programming unit empowered to review and to report to those in final authority can do much to see that plans are put into effect.

It is also obvious that the establishment of a programming institution is not in itself a panacea. Little purpose can be served by this type of body unless a favourable climate is provided by appropriate fiscal and monetary policies and by other steps to expand investment resources and to steer them into the most productive courses. Nevertheless, in any community where resources are limited and the calls upon them are particularly urgent, a programming institution can help to lift development projects out of the arena of day-to-day stringencies and short-term needs. It can also bring more clearly into view at a time when self-interest will inevitably be called for, the gains to be won by steady pursuit of basic economic improvements.

The Year's Activities

Summarising activities during the past year, the report says that three more countries joined the Bank during the fiscal year: Germany, Japan, and Jordan became members in August 1952. Membership was thus increased from 51 to 54, and total subscribed capital to the equivalent of over \$9,036 million. During the year the Bank made ten loans in nine countries amounting to the equivalent of \$178.6 million. This brought the total of Bank lending to date to \$1,591 million in 29 countries.

Two of the year's loans were made in support of a broad range of economic projects. Agriculture, basic industries and transport benefited from a loan

THE FOREIGN JUTE MARKETS

PRICES TEND TO SAG

(FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.

THE jute markets generally are very quiet and there is a tendency for prices to sag. It is reported that the Indian jute mills are not anxious to sell at the prices quoted meantime, as they only mean a loss. Continental manufacturers are not competing with India and maintain their prices at about 8 percent above Calcutta quotations, while spinners keep on offering jute yarns quite freely to the U.K. market. There is such a wide difference in their terms compared with local spins, however, that they are receiving little or no encouragement. The net price paid by U.K. manufacturers is 15.12d. per lb. yet Continental yarns are anything from 16.95d. to 17.89d. per lb. for common 8 lb. cops and 8 lb. spools, c.i.f. U.K. port. Demand for jute cloth in the Dundee market has fallen off considerably lately and home consumers appear to be content to await further developments. The unsatisfactory state of the American stock markets has had an adverse effect on trade generally throughout the world, causing buyers of all commodities to act with extreme caution.

The raw jute markets in Pakistan are slow and shippers are offering white jute quite freely in both old and new crop. The latter has fallen to the same level as old crop. Business having been done in Mill Firsts at £99 and in Mill Lightnings at £89 per ton, c. and f. U.K. There is considerable irregularity in the prices quoted and Daisee and Tossa appear to be scarce, as few offers are made of either old or new crop. Prices are more or less nominal at £90 for crack Daisee-2/3 and £80 for grade, with Tossa-4 old crop again sold at £88, c.

Calcutta goods have fluctuated to some extent, but are generally lower at 78s. 0d. for 10 oz. 40 in. hessians and 57s. 0d. for 7½ oz. September to December shipment, while "B" twills are today named at 161s. 6d., September, and 162s. 6d. October-December, all f.o.b. Calcutta. These disclose a fall of about 1s. 6d. on hessians and 5s. 0d. on Bees since last week. Values of all commodities in the jute industry in Dundee are maintained at the maxima.

Plantation Topics

LONDON TEA SALES

LAST Monday there was strong and general demand for the 17,636 packages of North Indian and other miscellaneous teas finally catalogued for sale on Monday. Good liquoring Assams were in particular request and prices realised were often several pence above the brokers' valuations according to quality. Better Medium sorts were also higher, while Low Medium and Common descriptions were mostly 1d. per pound and some 1d. per pound dearer. Suitable export types including Broken Pekoe Souehong, Broken Pekoes and Broken Orange Pekoes were cleared at satisfactory rates. Clean Common Broken Pekoe was quoted at 39d. per pound compared with 39d. in the last week. On Tuesday, 8th September, there was a brisk well distributed demand for the 13,022 packages of Ceylon tea offered. Improved quality was sought after. Low grown kinds were generally 1d. to 1d. per pound dearer, especially for Fannings grades. Leaf tea suitable for export sold well. Clean Common Broken Pekoe was quoted at 3s. 3d.; Low Broken Orange Pekoe around 3s. 5d. to 3s. 7d. per pound. 7,184 packages of South Indian growths offered were also well competed for. Brighter liquoring sorts often showed gains of from 1 to 3d. per pound while poorer kind generally quotably unchanged.

In the previous week there was fairly brisk demand for 15,210 packages of Ceylon tea. Interest shown for best liquors was particularly noticeable and prices for these frequently advanced as much as 1d. depending on the quality, which the buyers followed closely. Other sorts apart from brokers grades, up to about 42d per pound, which were inclined to be easier, sold well at fully steady to some times dearer rates, especially fannings. Teas suitable for export met quite good demand, it is believed, on Continental and United States account. Clean Common Broken Pekoe remained unchanged at 39d to 39½d. while Low Broken Orange Pekoe were mentioned around 40½d to 43½d. Low B.O.P. Fannings at 42½d to 45½d and high B.O.P. Fannings at 48 to 58d.

There was ready clearance of 7,000 packages of South Indians. Best kinds tended dearer, while other descriptions sold at steady prices, with the exception of poorer quality teas which were fractionally easier. Results obtained by some of the companies are given below:—

TEA COUNCIL FOR AMERICA

The Government of India has nominated Mr. C. M. Kothari as a Director of the Tea Council of America to represent Indian producers' interests. Mr. Kothari will proceed to America during the third week of this month to attend a meeting of the Tea Council and also to attend the International Tea Convention at White Sulphur Springs (West Virginia) as a Delegate from India.

After the withdrawal of India from the International Tea Market Expansion Board which was in charge of tea propaganda throughout the world, the Government of India set up the Tea Council of America in collaboration with American trade interests. The Tea Council spends annually one million dollars for advertisement and propaganda and India contributes a substantial part thereof. This arrangement it is reported is working satisfactorily but it was felt for some time now that Indian producer interests should be represented on the Tea Council. In pursuance of this suggestion the Government of India have appointed Mr. C. M. Kothari to be the representative of the producers interests on this council. Mr. Kothari also will visit Toronto (Canada) to further the possibilities of such an arrangement being arrived at between the Government of India and the Canadian trade interests.

U.S. SYNTHETIC RUBBER PRICE

Recent moves of the Reconstruction Finance Corporation, says the Financial Times, have created speculation in Washington that the agency is laying the groundwork for a possible increase some months hence in the price at which it sells general purpose synthetic rubber (GR-S). The administrator, Mr. Kenton Cravens, has revealed that the

agency is "rebudgeting" its synthetic rubber operation for the current fiscal year quarter by quarter on the basis of recently made decisions to cut back production.

Sharp cutbacks in GR-S production schedules which may dig deeply into the \$70 million net profit the R.F.C. anticipated only a few months ago are the reasons for the new outlook.

COLOMBO RUBBER PRICES

The following prices are issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers' Association:

	Closing prices on 28-8-53: (Rupees per lb.)	Average prices for this period: (Rupees per lb.)
Sheet:		
Sheet No. 1	1.36	1.36
" " 2	1.33	1.33
" " 3	1.30	1.30
" " 4	1.16	1.16
" " 5	1.11	1.11
Sht. Cuttings No. 1	.65	
do. No. 2	.60	
Crepe:		
R.M.A. 1X	1.08/10	1.121
R.M.A. 1	1.04/06	1.071
		Crepe 2 1.001
		do. 3 .941
Scrap Crepe:		
Sc. Crepe No. 1	Cts .70 Nom.	Cts .711
Sc. Crepe No. 2	.63/66	.661
Flat Bark	.58/62	.611
		Sc. Crepe 3X .631

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

COCHIN TEA SALES

At Sale No. 18 held on 1st September 1953, approximately 11,79,000 lbs. were offered. There was a strong general demand with common descriptions and low mediums about steady. Mediums showed advances of about half to one anna on last rates, and Best Liquoring sorts tended dearer following quality. Whole leaf grades met with less enquiry than in recent sales and were cheaper to

buy, but teas with tip were keenly competed for and sold at several annas above brokers' valuations.

	1-9-53 Rs.As.Ps.	9-9-52 Rs.As.Ps.
Low Grown		
Travancore	B.O.P. 1 9 9	0 14 0 to 1 0 0
Medium	B.O.P. 1 12 0 to 1 12 6	1 7 6 to 1 9 0
Anamallai	B.O.P. 1 14 6	1 13 0 to 1 15 0
Best liquoring		
Nilgiri	B.O.P. 2 4 9	3 1 0
Clean Black	O.P. 2 1 6	2 0 0 to 2 2 0

The export quota market declined during the week to 101 pies, but has now hardened to 12 pies. Buyers. Sale No. 19 will be held on Tuesday 15th September 1953.

TOBACCO PROBLEMS IN ANDHRA

Five Andhra Members of Parliament met Dr. Panjabrao Deshmukh, Union Minister for Agriculture, last Monday and represented to him the difficulties of tobacco growers in their area. According to their information, about 40 million lbs. of tobacco were lying unsold with the growers and traders. Among the suggestions they made to help the growers were the extension of the market yards system to the whole of the producing area, the installation of the tobacco redrying plant, a re-examination of the number of tobacco grades and the sending of delegations abroad to explore the possibilities of finding new markets for medium and low grade Indian tobacco. Dr. Panjabrao Deshmukh gave the delegation a patient hearing and promised to have all their suggestions carefully examined.

GERMAN ELECTIONS REVIVE
DULL STOCK MARKET
GOOD SUPPORT FOR OILS

London, 9th September.

THERE was really no clearly defined pattern in the past week's market but at the same time there was no despondency, despite international news such as the Italian-Yugoslav controversy and Wall Street's erratic behaviour. At one time, however, there was a go slow movement as traders awaited the outcome of the German elections. Final results of these elections gave the market confidence and there was a good closing tone all-round. Naturally German bonds were most responsive to the Christian Democrats' victory and they gained throughout the list, some by as much as three and half points. Other foreign bonds were very much in the background with Japanese tending to ease. During earlier uncertainties gilt-edged derived benefit from safety first buying. Industrials were steady with wage demands in various branches of industry, but they showed up satisfactorily. Oils enjoyed

a burst of activity and up to the close there was selective support for first-class issues, while stores shares were particularly active and higher in the latter stages on various takeover rumours. After earlier uncertainty base metal shares picked up in sympathy with commodity markets but rubbers were quietly steady most of the time. Teas were quietly firmer with small improvements over the period.

Money was much sought after throughout the past week. Conditions were relieved in the early part of the week by interventions of the authorities though at one time, despite the critical nature of the situation, the authorities saw fit not to intervene. In later stages conditions became more critical and for the first time for a considerable period the market had to go direct to the Central Bank to borrow small amounts at penal rates. Applications for a record total of £300 million Treasury Bills totalled £394,575,000 of which the former amount was allotted at the average rate of 4 7/8 7/32 percent. This week £300 million will be offered. There were small movements in the Bank of England Returns. A further £2,136,000 of notes returned from circulation and bankers' deposits showed an increase of £1,193,000 at £278,705,000.

U. S. Cotton Crop

The New York Journal of Commerce estimates the cotton crop at 14,818,000 bales, condition 80 percent and yield per acre 302.9 pounds.

Rubber Market

The London rubber market has been dull and featureless in the past week with only small price movements. Demand was very small and barely sufficient to support values, but restricted first hand offers from the east necessitated sellers to reserve and business was generally difficult to contract. America showed some interest in early shipment of standard sheets, presumably to

replace sales of off grades from the stockpile. The sole crepe section was sluggish and tending easier as buyers were holding off. Thick crepe was purely nominal in the absence of supplies.

Tanned Skin

The East India tanned skin market during the past week was quite active with fair quantities held in the United Kingdom at steady prices. There was some effort on the part of shippers to pay more money but buyers were resisting this forcefully. It seems unlikely that the present quantities will continue to move, if there was any serious upward price movement. So far as can be seen there should be fair business in the near future and steady prices.

Oil and Oilseeds

Generally quiet conditions prevailed in most oils and seeds with prices in most cases notably unchanged. Business in coconut oil has been more restricted due to reserve of sellers following the entry into markets of Germany, Holland and Italy for spot and nearby oil. Ceylon oil was sold at up to £11 1/4 and Straits oil up to £11 1/4 both c.i.f. per ton.

THE KARACHI STOCK MARKET

IN their report on the Karachi stock market for the week ended 4th September, Messrs. Merwanjee Bomanjee Dalal & Son say that lively conditions continued in the gilt-edged section. Business in short-dated loans was brisker. Turn-over in medium and long-dated ones also showed considerable improvement over the preceding weeks. Earlier Provincial maturities also had their share of enquiry; business in KPT and KMC had only three working days during the week, so Rs. 89 National Bonds were available at Rs. 34.4, and both Habib Banks and Muslim Commercial Banks undertone. Insurance shares had a firm registered gains. There was a marked improvement in the demand for Premier Insurance and Eastern less. Rawalpindi Electricity was featureless little below the quotation rate in demand at a trice were dull. Adamjee Cottons rose and in expectation of a very favourable report there was keen demand for Valika Woollens. Valika Textiles also registered substantial gains.

LONDON INSURANCE LETTER
EXPANDING BUSINESS

By Air Mail.

STATISTICS of insurance business are not easily consolidated. The same ground seems to be covered several times, with not always exactly the same result. However, the general picture is always the same, showing in recent years a marked expansion. The Board of Trade investigates the position thoroughly, and its new figures relate to 1951. They record that life assurance funds of UK companies rose by £111.5 million to £1,786.6 million and that total premium income of companies established in the UK exceeded £202 million for the first time, reaching £212.6 million. The total of new life policies issued to persons in the UK increased by 56,000 to 61,000; the sums assured by £57.5 million to £592.9 million; and of new policies issued to persons outside the UK by 11,000 to 97,000, the sums assured by £10.7 million to £93.3 million.

The summary of statements deposited with the Board of Trade shows that in 1951 there was a further narrowing of the difference in value between with-profit and without-profit policies. Compared with prewar, both types have increased, but the increase has been larger absolutely and larger still comparatively in without-profit policies. The latest figures show the amount of with-profit policies as £235.2 million (5,565,000 policies), the amount of without-profit policies as £199.1 million (2,177,000 policies); whereas before the war the value of without-profit policies was less than half that of with-profit policies, their number less than quarter. One element in the steady postwar increase in the proportion of without-profit policies (the wartime figures are not available) is the development of group pension business.

Co-operative Insurance for Farmers

Something which, in this country at least, is entirely new in insurance has been proposed by Mr Colin Clark (returned from Australia to become director of the Agricultural Economics Research Institute at Oxford) in an article published in the *Westminster Bank Review*. It relates to the very topical question whether agricultural prices can be left to take care of themselves, when rapid falls can disastrously affect agricultural communities. Most governments seem to be persuaded that farmers need protection from the hazards of the free market, but not all consumers—whether as such or as taxpayers—are satisfied that regulated markets take care of their interests as well as the farmers.

Mr Clark believes in the free market, but he believes also that farmers need protection from its worst adversities. He suggests that insurance, which has protected so many other interests from so many other adversities, would be appropriate to this case. An insurance scheme operated by the Government is a possibility, but Mr Clark believes that co-operative insurance among the farmers themselves would work better. The risk insured would be a fall of prices below an agreed minimum by an agreed date. The farmer would decide what amount of produce, and what amount of loss, to insure, and would pay premiums accordingly. He could take out policies each year at varying rates of premium or a long-term policy at a fixed rate of premium.

Obviously, like other insurance schemes, this one would have to develop by trial and error. It would probably be necessary at first to fix premiums rather high to provide a margin of safety for the insurance institution. In any case, substantial capital would be needed as a backing—preferably contributed by the farmers but loaned if necessary by the Government. Large sums would be involved; but Mr Clark reminds us that "after all, the insurance of one large ship and her cargo is comparable with the amount which would be involved in insuring the whole of some of the minor crops of Britain."

Perhaps the most serious difficulty in the way of such a scheme is that agricultural prices tend to move together and that a general fall in prices might involve claims by almost the whole farming community. The risk could not really be spread, according to the true principles of insurance. It might ultimately be necessary to rely more on the Government for assistance than Mr Clark envisages. But Mr Clark's concern is not to evolve a new form of insurance, strictly interpreted, so much as to find a compromise solution for a problem which is both national and international—how to provide security for farmers within the framework of a free market. The proposals do not pretend to offer a perfect solution, but they are being studied with something more than respectful interest.

Bad Year for Fires

Every week that passes confirms the accumulated evidence that global fire experience in 1953 will be distressing. In various parts of the world there have been particularly serious outbreaks of fire and losses from associated hazards. The feature of U.K. fire losses in July was the uncommonly large number of major conflagrations: there were five involving damage of £100,000 or more—one as much as £700,000. In consequence, the month's total of £2,528,000 (as estimated by *The Times*) was the highest for the year.

COLOMBO PLAN MEETING

The fifth meeting of the Consultative Committee for Development in South and South-East Asia—the "steering committee" for the Colombo Plan—will be held in New Delhi, at the invitation of the Government of India, from 13th to 19th October. The ministerial meeting will be

preceded by a meeting of officials from 28th September to 8th October. The Council for Technical Co-operation will also meet in New Delhi from 9th to 12th October. The United Kingdom delegation to the Consultative Committee meeting will be led by Mr. R. Maundling, M.P., Economic Secretary to the Treasury, who will be accompanied by Sir Leslie Rowan, also of the Treasury.

All the members of the Consultative Committee are expected to attend the New Delhi meeting. These include, besides the host Government, Canada, Australia, New Zealand, Pakistan, Ceylon, the United Kingdom and the U.K. territories in South and South-East Asia, the United States, Burma, Indonesia, Nepal, Laos, Cambodia and Viet-Nam. Thailand, the Philippines, the International Bank for Reconstruction and Development, the Economic Commission for Asia and the Far East, and the Bureau for Technical Co-operation (Colombo Plan) have been invited to send observers to the meeting.

At the preparatory meeting of officials the U.K. delegation will be led by Mr. A. C. B. Syon, Assistant Under-Secretary of State in the Commonwealth Relations Office. The U.K. delegation will include officials from the Treasury, the Foreign Office, the Commonwealth Relations Office and the Board of Trade, as well as from the Federation of Malaya and Singapore. Mr. Maundling and Sir Leslie Rowan will leave London at the beginning of October and will visit Baghdad, Karachi and Colombo before going on to New Delhi. After the Consultative Committee meeting they will remain for a few days in India to visit important development projects included in the Government of India's first Five-Year Plan.

The Colombo Plan for Co-operative Economic Development in South and South-East Asia had its origin in the meeting of Commonwealth Foreign Ministers held at Colombo in January, 1950 to permit an exchange of views on world problems and in particular to consider the vital needs of the countries of South and South-East Asia. At this meeting the decision was taken to set up a Consultative Committee with the objectives of surveying the needs of the area, assessing the resources of capital and technical manpower available and required, and of providing the framework within which an international co-operative effort could be developed to assist the countries of South and South-East Asia to raise the standard of living of their peoples.

The first meeting of the Consultative Committee was held in Sydney in May, 1950, the second in London in September, 1950, the third in Colombo in February, 1951, and the fourth in Karachi in March, 1952. At the meeting in Karachi the Consultative Committee prepared its first annual report on economic development in South and South-East Asia.

PLANNED
LIGHTING
can increase production

You think it can't? Planned lighting was installed by Philips in one factory which thereafter booked a production increase of 25%. Why? Because good lighting on the job obviously results in greater precision of work, fewer rejects, minimum wastage. But at the cost of high overheads? No, very much the contrary. Philips "T L" Fluorescent Lamps give three times more light than the ordinary bulb for the same current consumption. And... have long and efficient life.

Why don't you consult Philips Lighting Service Bureau for free specialized advice. Address—Philips House*, Calcutta 20.

Engineering and Transport

POONA SHIP-TESTING TANK

AN AID TO INDIA'S SHIPBUILDERS

INDIA'S shipbuilding engineers are to be assisted in their task of building up a modern shipbuilding industry in this country by the provision of important data on constructional features as a result of the tests which will be carried out in the first ship-testing tank to be built in South-East Asia. The tank is used for testing models of hull designs. Five hundred feet long, 12 feet wide and nine feet deep, the test tank gives engineers the facts they need to calculate the horsepower required from ships' engines.

The tank is situated at the Central Water and Power Research Station at Khadakwasla Dam, eleven miles from Poona. The basin was completed last year. Then Alfred Frants Mogenson, a Danish engineer, was sent to India by UNESCO to help install the electronically-controlled carriage which pulls models through the water. The 30-foot carriage was purchased in Europe with a \$30,000 UNESCO grant. There is little margin for error in constructing a ship-testing tank. The weight of the rails at one end of the 500-foot tank at Poona, for example, is precise to the last millimeter to allow for the curvature of the water which follows the surface of the earth.

Experiments in ship-testing tanks are usually made with models of wood or paraffin wax up to 15 feet in length. The carriage at Poona can drive a model at a speed of 16 miles per hour but, in actual practice, it will run much more slowly. Two miles an hour usually suffices to test a scale model of the hull of an 8,000-ton ship. While the model moves through the tank, instruments register its resistance and, at the same time, photographs record its bow wave and wake. Later, the model can be tested with a wave-generating machine in the tank to show how the full-sized ship will behave in high seas.

The tests at the Poona tank are being carried out under the direction of Mr. C. V. Gole, an Indian engineer who has trained abroad.

New Device to Test Ship Structure

Talking of ship-testing, it is interesting to learn that a steel frame for testing the strength of ships' structures is being installed at the Royal Naval Construction Research Establishment, Dunfermline. The device, says the British Admiralty, could crush the bows of a destroyer "like a nut in a pair of nutcrackers." The building containing it was opened by Mr. Thomas, the First Lord of the Admiralty, a few days ago. It is believed to be the first of its kind, and is 85 feet long, 45 feet wide and 51 feet high. It consists of steel cells, each of which can be fitted with hydraulic jacks capable of exerting loads of 500 tons. From each end of the boxlike frame loads of 2,000 tons can be exerted horizontally.

Announcing details, the Admiralty said that it would first be used to test the bow structure supporting the new steam catapults being put into the Ark Royal, the aircraft carrier now being built. Subject to defence requirements, the device would be available for investigating commercial shipbuilding and civil engineering problems.

HELICOPTER FOR U.K. RESEARCH

The British Ministry of Supply has ordered from the Fairey Aviation Co. Ltd., of Hayes, Middlesex, and Heaton Chapel, Stockport, a Rotodyne helicopter which is to be used for research purposes. It will be made at the firm's main factory at Hayes. The firm has been working for some years on helicopter design, and the Rotodyne which is being built for the Ministry will be powered by two Napier Eland propeller turbine engines which have been announced as providing 3,000 horsepower each.

The Rotodyne will incorporate the Fairey patented system of tip-driven jet rotors, and presumably the engines will drive the two air screws and provide the compressed air for the small jet units at the tips of the five hollow rotor blades. The Rotodyne is a development of the firm's earlier piston-engined Gyrodyne, which set up an international speed record for helicopters and which still stands as a British record. The firm claimed that the design meant greater safety because the high cruising-speed produced considerable lift from fixed wings attached to the fuselage which enabled the load on the rotor to be reduced.

A model of the Rotodyne displayed at the Farnborough show last year was designed to carry four passengers. It is intended to meet the requirements demanded by B.E.A. for an economic inter-city "air coach." The model also provided for air freight requirements, and the loading dock was so arranged that three motor cars could be driven up a built-in ramp into the square section cabin.

U.S. DIESEL ELECTRIC LOCOS FOR PAKISTAN

The implementation of the Pakistan Government's programme of diesel electric traction on

the railways has been carried a stage further with the arrival of nine broad-gauge express passenger diesel electric locomotives from the U.S.A. The locomotives, 1,600 Horse Power each, have been manufactured by the American Locomotive Company, New York, and cost the Pakistan Government Rs. 71,00,982 f.o.r. Karachi.

U.K. SHIPYARDS' OUTPUT IN JULY

British shipyards completed 18 new merchant vessels, totalling 110,579 tons, in July this year, according to Lloyd's List. It was the best output for the month since 1949 and was well up to the average of recent months. With deliveries in each of the last five months exceeding the 100,000-ton mark, completions both as regards the number of ships and their total tonnage are now running ahead of the 1952 and 1951 totals. Tanker tonnage was responsible for a large portion of the completions in July. The July total of six tankers of 68,328 tons gross, brought completions of this type of vessel this year to 34, of 412,916 tons. Among other vessels to finish their fitting out were two cargo liners of 15,460 tons, three tramps of 16,371 tons and three colliers of 7,875 tons.

INDIAN RAILWAYS MOVE RECORD NUMBER OF COAL WAGONS IN JULY

An average of 3,679 wagons loaded with coal left the Indian collieries every day during July 1953, bound for consuming centres within the country and for ports, to be exported to foreign countries. The loading was 74 wagons per day above the minimum movement target guaranteed by the Indian Railways, and six wagons per day more than during the previous month. Of the total wagons despatched, 82 percent were from coalfields in West Bengal and Bihar, and the balance from coalfields in Vindhya Pradesh, Orissa, Madhya Pradesh and Hyderabad. The total despatches of coal during the month amounted to 2,404,497 tons.

COAL WASHING COSTS

Mr. Andrew Farquhar, whose article on "The Beneficiation of Indian Coal" was published in our mid-year Survey of Indian Mining Industries, regrets that some errors appeared in the Economic Balance Statement for West Bokaro "Chance" Sand Washing Plant, appearing at the end of page 15. On the left hand side of the Balance Statement, the debit item "Operation Costs," on the basis of 100 tons of coal washed, should be Rs. 50 instead of Rs. 0-8-0 and similarly the Capital Costs should also be Rs. 50 in the same column. On the right hand side, the debit item "Preparation Costs" should be Rs. 200 instead of Rs. 2. This done, the savings in favour of Washing, as against hand preparation, work out to Rs. 5-5-0 per ton.

DOLLAR ORDER FOR BRITISH ELECTRICAL FIRM

An order from the Bonneville Power Administration of Oregon, U.S.A., for a 250,000-kVA three-phase transformer bank for service on the Administration's 230-volt system has been received by a British electrical firm.

The value of this contract is about \$650,000.

Calcutta Markets

STRONG DEMAND IN TEA EXPORT AUCTION

In Export Sale No. 13 held on 7th September, 1953, offerings consisted of approximately 53,000 packages. Demand was strong and general. Commonest sorts were the strongest feature of the sale and were up to 1 anna per lb. dearer to buy. Medium, Low Medium and Clean Common broken were also dearer by half an anna. The best CTC Assams with useful liquors were generally selling well, but when they had only ordinary liquors they were 1 to 2 annas easier. Leaf grades were well supported and these were fully firm and sometimes dearer. The few flavoury Darjeelings offered met with rather less support.

Quotations	1953	1952
Clean Black Pekoe	Rs. 1-12-0 to 1-13-0	Rs. 1-7-0 to 1-7-6
Clean Common B.P.	1-12-0	0-15-0
Medium Assam B.P.	1-12-0	1-3-6 to 1-4-0
Good Assam B.P.	2-4-0	2-4-0 to 2-5-0

At Internal Sale No. 13 held on 8th and 9th September, 1953, Dust offerings consisted of 17,094 packages. There was a good general demand which however lessened as the sale progressed. The commonest offerings were the strongest feature and were about 1 anna dearer. Black leafy types suitable for export were in better demand and received more general enquiry. Mediums and Doors opened fully firm but closed easy. CTC Assams were again the weakest feature of the sale and dropped in price from 1 to 3 annas per lb.

Quotations	1953	1952
Medium Doors Dust	Rs. 1-9-0 to 1-9-6	Rs. 1-1-0
Medium Assam Grainy Dust	1-9-6 to 1-10-0	
Best Assam CTC Dust	1-14-0	2-3-0 to 2-4-0

BETTER TONE IN FREIGHT MARKET MAINTAINED

THE improved tone of last week was maintained and fixtures for grain from Australia to U.K. for October-November were arranged at 85s. per ton. A spot vessel obtained the better rate of 55s. for iron ore from Calcutta to Japan but a December vessel accepted 50s. for coal to the same destination. A vessel was fixed for coal from Durban to Aden, at 37s. 6d. and one from U.S.A. to Japan at 81s.

A 9,053 deadweight oil burner was fixed for 12 months trading at 15s. 6d. with delivery and redelivery U.K., whilst a similar sized motorvessel obtained 20s. 6d. for a Far Eastern round trip delivery Sweden in September. The *Inckelth* was continued for a further 2-3 months for Indian trading at 14/7d on a deadweight of 8200 tons.

FIRST CARGO OF FOREIGN SUGAR ARRIVES

During the week ended 8th September, prices of ready sugar ex-Kantapukur delivery were Rs. 20-14 to Rs. 31-4 a maund for ordinary grain and Rs. 32 a maund for big grain. Sales averaged 3,000 bags a day and arrivals were 2,500 bags a day. Stocks amounted to 28,000 bags of Indian and 63,000 bags of foreign sugar. Ex-mill delivery rates were Rs. 23-12 to Rs. 30 a maund. A further quota of 100,000 tons has been released. The first cargo of 63,000 tons of Java sugar has reached Calcutta. The Government has completed the purchase of 137,000 tons of foreign sugar and intends to buy more. There are enquiries from Madras, Tuticorin and Calcutta, where prices are still high and stocks very meagre. With the latest quota release, rates are expected to decline everywhere in the coming fortnight.

LINSEED

There was no notable change last week and whilst prices were generally well maintained trading was reported on a very limited scale. The local demand was rather poor and crushers were uninterested at higher prices, whilst sellers showed little inclination to discount the market. Small transactions were reported daily mainly for ready delivery. A slightly better demand for oil mainly from Vanaspathi interests helped to maintain prices, and the undertone in this section remained firm. Latest quotations were as follows: Ready Rs. 21 per maund; September-October Rs. 21 per maund.

HIDES AND SKINS

The market was steady and prices were maintained. Stocks were higher than in the previous week.

Bazar Sales

(Between 1st September and 7th September, 1953)

Cowhides:—Wet salted (Ord.) 6,000 pcs. on the basis of Annas 8-6 to Annas 10-6; Wet salted (Ord.) 2,500 pcs. on the basis of Rs. 9 to Rs. 10; Wet salted (Slaughtered) 8,700 pcs. on the basis of Rs. 12-8 to Rs. 23-4.

Goatskins:—Wet salted (Daisee, Killed) 1,06,300 pcs. on the basis of Rs. 225 to Rs. 375; Assam-Dinajpur-Murshidabad Rs. 280 to Rs. 330; Puneah-Kissanganj 21,000 pcs. on the basis of Rs. 285 to Rs. 310; Patna 7,600 pcs. on the basis of Rs. 140 to Rs. 230; Muzafferpore-Darbhanga-Pakur 6,200 pcs. on the basis of Rs. 240 to Rs. 265.

Bazar Stocks

(7th September, 1953)

Cowhides:—Wet salted 1,30,500 pcs.
Goatskins:—Wet salted (Daisee, Killed) 47,000 pcs.; Assam-Dinajpur-Murshidabad 89,000 pcs.; Muzafferpore-Pakur-Patna-Puneah-Kissanganj 3,04,000 pcs.

SHELLAC MARKET REPORT

During the week ended 8th September the market was initially steady but ruled firm at the end and a fair business passed at higher prices. Quotations were as follows:—

Standard Pure Buttonlac	Rs. 115 to Rs. 120 buyers.
Pure Buttonlac	Rs. 118 done & buyers
Lemon No. 1 Shellac	Rs. 113 to Rs. 116 done & buyers
Lemon No. 2 Shellac	Rs. 110 done & buyers
F.O. Std. 1. Shellac	Rs. 108 to Rs. 112 done & buyers
Pure TN Shellac	Rs. 103 to Rs. 109 basis done & buyers
4% I.T.N. Shellac	Rs. 98 to Rs. 103 buyers
No. 1 Kusmi Seedlac 3%	Rs. 110 to Rs. 115 buyers
No. 2 Kusmi Seedlac 3%	Rs. 102 to Rs. 105 buyers
Fine Bysaky Seedlac (Manbhumi)	3% Rs. 97 to Rs. 102 done & buyers
Fine Bysaky Seedlac (C.P.)	3% Rs. 92 to Rs. 99 done & buyers
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 88 to Rs. 94 done & buyers
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 83 done & buyers
Kireelac	Rs. 47-8-0 to Rs. 49-8-0 done & buyers

Shipments during September until the 5th were 6,670 packages.

COMPANY AND PUBLIC NOTICES

THE INVESTMENT & FINANCE CO., LIMITED

NOTICE is hereby given that the One Hundred and Fourteenth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 1st day of October, 1953, at 12 noon, for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 28th February, 1953, declaring the Dividends recommended by the Directors, and for transacting any other ordinary business of the Company.

INDUSTRIAL FINANCE CORPORATION

OF INDIA
KEELING ROAD, NEW DELHI.

Notification

IN pursuance of Regulation 34 of the General Regulations of the Corporation, it is hereby notified for the information of the Shareholders of the Corporation that the following valid nominations of candidates for election as Directors on the Board of Directors of the Corporation are received, namely:—

(1) Nomination for election of one Director representing Shareholders referred to in clause (c) of Section 10 of the Industrial Finance Corporation Act, 1948 (Act XV of 1948), in favour of Sir S. V. Ramamurti, I.C.S. (Retired), "Venkata Vilas", Graemes Road, Cathedral P.O., Madras.

(ii) Nomination for election of one Auditor under Section 34 of the Industrial Finance Corporation Act, 1948, in favour of M/s. S. B. Billimoria & Co., 113, Mahatma Gandhi Road, Fort, Bombay.

As the number of valid nominations so received is equal to the number of vacancies to be filled in, the above candidates validly nominated are in accordance with the said Regulation deemed to be elected at the Fifth Annual General Meeting of the Shareholders of the Corporation convened for the purpose on Saturday, the 19th September, 1953, at 4.00 P.M. (Standard Time) in the hall of the Constitution Club, Curzon Road, New Delhi.

(2) It is further notified that the following valid nominations of candidates for election as a Director representing Shareholders referred to in Clause (d) of Section 10 of the Industrial Finance Corporation Act are received, namely:—

(1) Mr. S. C. Roy,
C/o. Aryasathi Insurance Co., Ltd.,
15, Chittaranjan Avenue,
Calcutta-13.

(2) Mr. C. M. Srinivasan,
General Secretary,
Indian Mount Life Association Ltd.,
No. 10, Mount Road, Madras.

Election of one Director representing Shareholders referred to in Clause (d) of the said Section will take place at the meeting referred to above.

3. No nomination has been received for election as a Director representing Shareholders referred to in Clause (e) of Section 10 of the Industrial Finance Corporation Act.

V. R. SONALKER,
Managing Director.

Dated, 7th September, 1953.

BANKS

H indicates that Share capital is half paid. J, C and Dd, indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE RELAXATION OF COMMODITY CONTROLS IN INDIA

SUCCESS OF FREER MARKETS: CENTRALISING ECONOMIC RESERVE POWERS

THE Government of India "have noted with satisfaction" that the report of the Commodity Controls Committee in general endorses the controls policy the Government has been following in respect of the major commodities. It is hard to say just what this is worth because the chief, and indeed the best, feature of the Government's controls policy for the last year or more is that it has been in a state of flux. At least since March 1952, the tendency has been fairly consistently toward decontrol as and where possible. There has been the customary doctrinaire defence of controls; specific pieces of decontrol have been introduced under the name of "variations" in the controls; and there has been much repetition of the pious formula "you cannot have a planned economy without controls". But behind all this it has been easy to see that the Indian economy, at least those sections of it concerned with the marketing of commodities, has been moving quite distinctly toward more freedom, unregulated markets and less artificial prices. This process has been in line with developments throughout most of the world—even, it should be noticed, in the straitjacket economies behind the Iron Curtain. It can be argued that it has not gone far enough in India, and in fact there are certain controls that could profitably be renounced even now. But the Government of India has a much more open mind on the subject than a few years ago, and is prepared to listen to the case for relaxations here or there, which is all that trade and industry require. No one is likely to make the opposite doctrinaire mistake of arguing that every single control should be cast off forthwith. The important point is that, whatever the Government says about controls in general, it has lost the irrational fear of economic freedom that once paralysed its thinking on commercial matters, and is evidently willing to continue the process of dismantling useless or restrictive controls when it is convinced that no one is going to suffer.

There was clear proof of this in its reaction to the Commodity Controls Committee's report. The Government immediately agreed not to extend the life of the Supply and Prices of Goods Act beyond next February, and in the meantime it lifted the controls over casein, tanning materials and tannery wool. It has also begun an enquiry into the usefulness of the controls over non-ferrous metals, caustic soda, soda ash and sulphur which are exercised under this Act. It has undertaken to consult the States about the controls imposed by the Drugs (Control) Act and the corresponding State laws, with a view to their being withdrawn. None of these is perhaps a major change, but we have seen in the movement back to economic freedom in other countries that it is usually accomplished in such small instalments. Every item of decontrol, even over goods that do not concern us immediately, is another Lilliputian string unwound from one of Gulliver's toes. Every dose of freedom means that the economy can flex another joint. To imagine that decontrol is better accomplished at one fell swoop is to make precisely the mistake the planners always make: they think that an economy can be treated as a global unit, when in fact it is a congeries of markets whose intricate inter-connections are too complex for any one man, or group of men, to oversee at one time.

The Commodity Controls Committee very sensibly avoided dispute about the merits of control and decontrol in general. The debate is endless or at best issues in the formula referred to above, that you cannot have a planned economy without controls—which is either a harmless tautology or a way of begging the question: "which controls?", which is the only question that matters. All that is to be said of complete decontrol is that no one urgently wants it or believes that it is possible in India. All that is to be said of the mass of controls that were in force in India a few years ago is that

everybody was heartily sick of them, they did not work and they bred corruption and inefficiency on all hands. The International Bank for Reconstruction and Development put the middle position clearly in its recent report: "The fact that financial and technical resources are limited in underdeveloped countries makes the most effective use of these resources a pressing necessity. This does not mean a detailed blue-printing of the economy or even of the Government's rôle in it. Still less does it imply close and coercive economic controls which are more likely to breed new controls than new production... But a stringency of financial and technical resources does mean that the Government should exercise its influence consciously and consistently, rather than inadvertently and sometimes at cross-purposes with itself". This probably represents fairly accurately the present opinions of Messrs Krishnamachari and Kidwai, though some of their colleagues might be slower to shed dogma.

The inadvertence and cross-purposes that the World Bank refers to have been very obvious in this country, not because the Government is especially woolly but because controls are exercised by a variety of authorities who often have different objects in view. It is to remedy this that the Commodity Controls Committee has put forward the bold suggestion that multiplicity be reduced to unity by means of an amendment to the Constitution that would transfer all powers of economic control to the hands of the Central Government. Two things to be considered about this proposal are whether unification of power would lead to worse limitations on commercial freedom than we have experienced in the recent past; and whether the States would consent to the surrender of their autonomy. The Committee has recommended that the Centre be vested with powers, not that it actually institute a régime of centralised controls. It refers to them as reserve powers and leaves open the question of which powers the Government should use, and to what extent. Experience suggests that New Delhi is often more easily convinced of economic necessity than the State capitals, and its resort to controls would probably be more rational and consistent than the cumbersome and patchwork system now obtaining. In any event, the Central Government already has the ability to intervene almost wherever it wills, and the only significant differences introduced by centralisation, though they are important ones, are that changes could be made in controls more quickly, and provincialist disruption of economic life minimised.

The Committee's report says on this question: "It is imperative that the control of essential commodities should be regulated on an all-India basis. If the States are left to adopt their own system of intra-State controls, there is the likelihood of controls in one State operating to the detriment

of the neighbouring States. Such a position is amply demonstrated by the Control Orders made by some of the State Governments in relation to foodstuffs, cattle fodder and cotton seed in exercise of their delegated powers under the Central laws or of their powers under the local laws. We feel that it is in the overall interest of the States themselves that controls should be exercised under a Central law". The States could probably be got to agree to this more easily than is thought, especially at a time when the movement is to decontrol rather than to new controls. In the case of a commodity in which a State had peculiar interests, the Centre would work through the State administration. The States would lose no revenue by the change, and would perhaps lose some odium. Regarding at least one group of commodities which the Committee mentions, iron and steel, there is a good case for transferring to the Centre not only the power to exercise controls in the narrow sense but the power to deal with the industry in every respect. Iron and steel are so basic to the country's development that it would be better for the Centre to hold all the responsibility, rather than leaving a State Government have a say just because a plant happens to fall in its territory.

The Committee enters an important warning about price controls, which are usually imposed without proper thought of their long-range effects on production. Price limits are most commonly declared for commodities of vital and general value, and of which therefore it is desired to maintain the supply at the maximum. But by limiting the price, production of that commodity is sometimes made so unattractive that the supply promptly falls and the ultimate object of the control is thereby quite defeated. Before clamping on any control over a price, officials should always recall Sir Winston Churchill's comparison of the American and British economies: "Which is better", he asked, "plenty at high prices or scarcity at low prices?" Governments all too frequently are willing to choke off the supply of a line of goods if only they can record the price of the residual supply at a low figure in their price index. This sort of fraud is perpetrated every week in official cost of living indices throughout the world; officials proudly report that rents have been kept at a figure that anyone can pay, but forget to mention that there are no houses to rent. For years the Indian wholesale price index has been recording the price of rice in the controlled market in Patna, while overlooking the prices actually paid for rice in markets that are illegal, and therefore supposed not to exist. The report of the Commodity Controls Committee says: "In the last analysis, the success of a policy of price control does not depend on the effectiveness of the punitive measures behind it, but on the reasonableness of the prices fixed. All that we can say on the subject here is that whenever it is necessary to control prices by law, every effort should be made to make a thorough examination of all the factors involved, to assess the long-term effects of the policy no less than its immediate effects, and to ensure that the policies followed in allied economic fields are not such as to undermine the effectiveness of the control measures. If price control is to be successful, the prices fixed must be fair not only from the point of view of the consumer but also of the producer and distributor". Since the only really sure way of determining what is the "reasonable" and "fair" price is the free market, this comes very close to saying that price controls can never be effective for very long; and that is probably true.

This valuable report consists for the most part of

ANOTHER PENALTY FOR EFFICIENCY SUGGESTED BOMBAY LEGISLATURE'S PLAN TO HELP HANDLOOMS

MUCH has been heard about the consistent month-by-month increases in the production of cloth in India, but the news of the position of the cotton textile industry from Western India, where a greater part of this cloth is manufactured, is not very reassuring. In fact reports from Ahmedabad, the centre with the largest number of cotton mills, speak of mounting stocks, and fears of production being cut back and shiffts reduced in the near future. According to the President of the Gujarat Chamber of Commerce of Ahmedabad, at least half of the 63 cotton mills there have been definitely affected by over-production. Except for a few select varieties, demand for cotton piecegoods had shrunk appreciably for want of purchasing power. If there were no improvement in this respect, the textile industry, which had so greatly expanded production, would have no alternative but to curtail it; the mills could not go on producing merely to accumulate stocks. The Presidents of the Ahmedabad and Saurashtra Millowners' Associations have spoken in the same vein. The present accumulation of stocks and reduced demand might, at least in part, be due to seasonal causes. But there is more ground for disquiet in a recommendation made by the Bombay Legislature to the Centre that the mills in future be prevented from manufacturing dhosis and sarees up to 40 counts. If this recommendation is accepted, the textile mills will be able to produce only fine and superfine dhosis and sarees, which, because of their high prices, do not command an extensive market. In a statement issued by Mr. Krishnaraj M. D. Thackersey, a leading spokesman of the cotton textile industry in Bombay, the average monthly production of dhosis and sarees by the mills is calculated at 87 million yards, out of which about 64 million yards or 74 percent is of coarse and medium varieties, all of which would come under the ban suggested by the Bombay Government. If the mills were not to leave their looms idle, they would be driven to produce more fine and superfine cloth, which would involve a greater use of imported cotton, or to use these looms for producing cloth other than dhosis and sarees, for which there is no demand even for the quantity produced today. The inevitable result of this policy would therefore be a compulsory reduction in total mill output, leading to greater unemployment and distress amongst industrial workers.

There might be some point in asking the textile industry and the general body of consumers to accept the sacrifice involved in making the proposed reservation in favour of handlooms, if it were to serve some useful purpose. But it is nine months now since the mills were asked to curtail their production of dhosis and sarees to 60 percent of their normal output, and yet the unemployed handloom weavers for whose benefit this limitation was imposed have not been able to seize their opportunity. Since a correspondingly increased output from handlooms is not forthcoming to replace the reduction enforced on the mills, the upshot has been large pockets of artificial scarcity, and higher prices for the distressed consumer. The shortage in West Bengal was so pronounced (in spite of the fact that the restriction on the production of dhosis and sarees by mills in this State was believed not to be enforced as rigorously as elsewhere) that the State Government moved to ban the export of dhosis to other States.

The failure of this retrograde policy was admitted—again—by the Minister for Commerce and Industry in the Council of States last Friday in the debate on a non-official resolution on unemployment. He said that reservations in favour of handlooms had not helped Madras but had pushed up the prices of cloth in Rajasthan, West Bengal, Orissa, U.P. and the Punjab. He did not say how long he expected that this experiment would have to run before even the most ardent advocates of cottage industries in general, and of handloom weaving in particular, were convinced that reservation of fields of production of popular necessities, used by lower middle class and working class people, is no remedy for unemployment. The reductions in output already enforced on the mills have resulted in heavy loss to them and consumers alike, with no corresponding gain for the handloom weavers, but a complete ban on the production by the mills of the cheaper varieties of dhosis and sarees would be bound to cause more widespread distress amongst the poorer classes whose purchasing power is already strained by current living costs.

The Centre has often been under pressure from State Governments in whose territories the cotton textile industry does not form an important part of the economy to embark on policies against its own convictions. But it is surprising that a recommendation of this nature should come from the Legislature of a State where the textile industry forms the backbone of the economy, without

thought being given to the consequences which might follow from such a step. There is hope that this recommendation will not prove acceptable to the Central Government which has begun to realise that the thoroughly reactionary policy of supporting cottage industries at the expense of modern units should be practised, if at all, with moderation. Mr. T. T. Krishnamachari's statements in the course of the debate we have referred to above are a guarantee of that.

CURRENT COIN

Insurance Under Administrators.—The Administrator's report on the Empire of India Life Assurance Co. Ltd. for 1952 (part of which is published on page 389) states that the management has been conducted on the most conservative lines, particularly as regards investments. Almost all new investments were made in Government and semi-Government securities, and steps were taken to safeguard other investments. Head office management expenses have shown a sharp and steady fall since 1950. The overall expense ratio is lower, the rate of interest is "satisfactory" and the mortality experience is "very favourable". The Administrator claims that public confidence in the Company's financial position has grown steadily since it was taken over on 11th July, 1951. Since that date, the market quotation for its shares has risen by more than 50 percent; there has also been a fall in the number and the amount of "surrenders" by policyholders during the year. The valuation of assets and liabilities as on 31st December, 1951, showed that "the Company was intrinsically sound and financially strong." After setting apart Rs. 119 lakhs for reserves, the valuation showed a profit of Rs. 76,54,366. Of this over Rs. 52 lakhs were allotted to policyholders, who got a bonus of Rs. 10 per thousand per annum on whole life assurances and Rs. 8 per thousand per annum on endowment assurances. More than Rs. 4 lakhs were allocated to the shareholders' fund, out of which a dividend of Rs. 20 per share was paid for 1951. The Administrator states that for the success of the five year plan "it is most essential that the flow of savings, through life insurance should be increased so that a good portion of it could be canalised into investments on national development loans." He also considers it "the paramount duty" of the management to invest money in "absolutely safe investments, always keeping in view the interests of the policyholders."

The Administrator of the Jupiter.—General Insurance Co. Ltd. reports that during 1952 there was a net profit of Rs. 3,92,137 in the General Department and an addition of Rs. 24,53,688 to the Life Fund. This result, he says, is satisfactory considering the circumstances in which business was done. 1952 was a "trying" year, in the beginning some attempt was made to reduce rebating and other malpractices but in the latter half of the year "there was a scramble for business at any price and obviously Jupiter could not enter into this race." In the Indian market the company has no tied business, unlike many companies of similar standing. Further, most companies in Britain cancelled their reinsurance treaties with Jupiter, with the result that there was practically no "reciprocal" business from the London market; in fact Jupiter had to pay Rs. 4.25 lakhs as consideration for the withdrawal of the unexpired portfolios in accordance with the usual terms of these treaties. The Administrator says that "the seemingly adverse result of the year, as compared with the previous year, was due entirely to the cancellation of the treaties.... There is every reason to hope that the restoration of the treaties will show good results in 1953." In the Administrator's view, "it is rather unfortunate that the Income-Tax Department insists upon allowing only a reserve of 100 percent under Marine and 50 percent under Fire and Miscellaneous. But I am quite convinced from my experience of income-tax administration for a long time and of insurance for the last two years that this rule of thumb method is not appropriate to all companies and that it is acting detrimentally to the interests of Indian insurance in not encouraging the creation of adequate reserves to meet any emergencies."

Stowing in Coal Mines.—Stowing in coal mines, for safety and conservation, with materials other than sand has been receiving the attention of the Coal Board for some time. A survey has been carried out in regard to the quantity of ash, debris and rejections available in the Jharia coalfield in collieries, railway yards, power plants and at Sindri. It was found that about 24 lakh tons of material were available. Stowing can be carried out with a mixture containing sand, ash, clinker and colliery rejections. Small quantities of combustible material in ash or clinker do not render the material unsuitable. Hydraulic stowing with crushed stone has been carried out successfully in one colliery. In another, properly sized ash and crushed rejections with a high proportion of water were used, but stoppings were built as a precautionary measure to isolate the area stowed if an emergency arose. Some other collieries have stowed successfully with a 50 percent mixture of sand and ash. It is realised that sand is the best

material for hydraulic stowing as its compressibility is low and it ably supports the roof. Sand also allows free drainage of water and is less liable to jam the pipes. But in cases where sand is not easily available and its transportation may be uneconomic, it is possible that a colliery may find it possible effectively to carry out stowing with such materials as may be available near the colliery. It is common practice in England and Germany to use ash, colliery refuse and washery reject for dry stowing. The Coal Board is of the opinion that every encouragement should be given for stowing with materials other than sand and states that it will consider applications for assistance for such stowing.

I.L.O. on Development in Asia.—On Monday the representatives of most Asian Governments met in Tokyo for a conference called by the International Labour Organisation. One of the subjects they are to consider is the report of the Director-General, Mr. Morse, who has arrived at the remarkable conclusion that "little or no capital investment" is required for economic development in Asia. This contradicts most of the arguments which under-developed countries have accepted in regard to their own future. The I.L.O. now maintains that the main task for the Asian countries is "to develop a new type of industry—radically different both from the present cottage and handicraft industries and from the present large-scale factory industries—which for the same amount of capital investment can at the same time produce more than the former and provide more employment than the latter." This is based on the assumption that the methods of production based on high capital investment per unit of labour which prevail in the industrialised countries would be uneconomic for Asia, where labour is plentiful and cheap but capital scarce. An entirely new type of industrial structure is therefore necessary. What this new type should be the I.L.O. fails, however, to specify, and unless something concrete can be evolved at the conference the advice is not likely to be acceptable. A more sympathetic reception may be accorded the other suggestion put forward in the report, namely, that it is necessary to eradicate defects in the existing agrarian structure which have hitherto inhibited the villagers' progress, particularly with regard to land tenure and in some countries the crushing burden of rural debt.

A Warning on Convertibility.—Mr. Lewis Douglas's recent warning that progress towards currency convertibility must be gradual and carefully planned finds support in the third annual report of the European Payments Union, which considers the question mainly from the viewpoint of its 15 member nations. The Managing Board points out that it has been concerned with the problems which would arise from the fact that some European countries would be able to move faster and further towards currency convertibility and complete trade liberalisation than others. It goes on: "It would be greatly to be deplored if a general move to convertibility and worldwide trade liberalisation should result for some member-countries in the necessity to impose new restrictions, probably of a discriminatory character, on their trade relations with others." The Board says it is anxious to discover means of avoiding this so that all countries may continue to benefit, at least to the present extent, from participation in a comprehensive trade liberalisation system. The report lists some of the conditions which must be satisfied before the majority of European currencies could be made convertible. In particular, European countries needed sufficient reserves of gold, dollars, or international credit to enable them to withstand short-term balance of payments difficulties without recourse to quantitative restrictions. Internal financial stability was another prerequisite. The report notes that many member-countries had or were on their way to achieving a substantial measure of such stability. The important exception here is France, where, though prices had remained stationary for nearly a year, they were still relatively high compared to other European countries. Turkey, too, was having great difficulty in relating the rhythm of its development programme to the scale on which internal and external financial facilities could be found. Progress towards freer trade and payments was also being hindered by the inadequacy of monetary reserves. The desire to build up gold and dollar reserves was an important factor in determining the rate at which debtor countries were prepared to agree to the reinstitution of measures of trade liberalisation. Such was the case of Britain. Though the sterling area's central gold reserves had been increasing during the past six months, they were still considerably below the spring, 1951, levels.

Iron Making in Asia.—Recommendations on the use of locally available substitute raw materials for Asian pig iron production were made at a four-day meeting of the ECAFE Iron and Steel Subcommittee in Bangkok recently. Stressing the

importance of iron and steel for economic development, Dr. P. S. Lokanathan, ECAFE's executive secretary, called for an expansion of Asia's iron and steel industry. Though some progress had been achieved, he said that production could be stepped up well beyond its present low level by the effective utilisation of existing resources and by a profitable exchange of products. Proposals to improve production methods and techniques were considered by the 26 experts from 12 Asian and non-Asian countries, on the basis of a detailed report drawn up last year following the visit of an ECAFE-TAA study group to Japan. Many of Japan's operation techniques were considered applicable in ECAFE countries, especially operations concerning exploitation of iron ores, charcoal blast furnaces, sintering, coal washing, utilisation of non-coking coals, electric smelting, electric furnaces, open hearth furnaces, use of oxygen in steel making, etc. Experts who attended the Bangkok meeting noted with satisfaction that India has already decided to expand her iron and steel production by about one million tons in the next five years. In view of the shortage of coking coal in many Asian countries, they drew governments' attention to the possibility of producing charcoal pig iron in countries with large forest reserves. They agreed on the superior quality of charcoal pig iron, and noted that charcoal blast furnaces were being successfully used in Japan, Brazil and Sweden. Charcoal pig iron might also be produced for special purposes in countries possessing sufficient quantities of coke pig iron. Possibilities for charcoal pig manufacture existed, particularly in Burma, Indonesia and Thailand. The use of pyrite cinder as a raw material could be introduced, in the view of the experts, in some countries. Sintering could utilise waste materials such as ore fines, flue dust and coke breeze. Sintering and ore beneficiation would have the further advantage of improving the burden, and this would benefit countries suffering from lack of coking coal. There are proposals for the installation of sintering plants in India and Taiwan. The Sub-Committee underlined the importance and benefits of coal washing. India has already installed two washing plants, and further plants are being contemplated.

World Food Supplies.—In the 1952-53 season, for the first time since before World War II, total world food production caught up with the growth in world population. Very good weather in 1952, continuing generally into 1953, is to some extent responsible, so two or three bad seasons could reverse this trend. Moreover, global estimates tend to give a favourable impression, obscuring the fact that, because of great differences in production between regions and countries, people in many areas have still less than before the war, especially in the Far East. These are highlights from the latest in the series of annual reports on "The State of Food and Agriculture," published by the Food and Agriculture Organisation of the United Nations. This year the report is published in two parts; the first part, just out, reviews the past year on both a regional and a commodity basis, and discusses the immediate outlook. The second part, to appear later this year, will deal with long-term forecasts of possible developments in the world food situation, based on information now being collected in FAO's 68 member countries. The two together will form the basis of a principal part of the discussions during the biennial meeting of FAO's Conference, at Rome, beginning on 23rd November. One of the major problems in the world's food economy, the report points out, is that the Far East has shifted from being a net exporter of foodstuffs to becoming an importer, despite increased production in many parts of that region. At the same time, the fact that large stocks of some basic foodstuffs are now being held in certain areas means that the danger of serious famine is to some extent reduced. Fear of the effects of surpluses, it is pointed out, must not be allowed to lead to underproduction, especially in view of the continued interest in international agreements, necessarily flexible and with adequate safeguards for farmers. These are designed to stabilise production and prices at levels satisfactory to consumer and producer alike. The FAO continues to give all the support it can to efforts in this direction. Main increases in production have been in wheat and maize, but protein foods such as meat and milk have not increased to anything like the same extent, and there has in fact been a reduction, per head of population, in some of the valuable protective foods. As in previous years, the review stresses the need for capital investment in agriculture in the under-developed areas. Such investment is essential if production is to be raised, especially in view of the rising demands for a higher standard of living and as industrialisation spreads in these regions. These problems are referred to specifically by the FAO's Director-General, Mr. Norris E. Dodd, in his foreword to the present report. He names two outstanding features of the current world food situation: one, the vital necessity of raising productivity, per man and per hectare, in the under-developed areas; the other, the fact that the sheer magnitude of the world food problem as a whole is still not properly ap-

preciated in many countries. Whatever standards are taken, some 70 percent of the world's people are living below the present average world diet. To raise their diet to that average (itself far below the best-fed countries' level) would take an additional food supply equal to the total 1952-53 production of North America and Oceania combined. "Compared with the real human needs of the deficit countries, as distinct from what they can afford to buy, food stocks now accumulating shrink into insignificance. Whatever supplies are shipped to those countries, whether in the normal way of commerce or as gifts or loans, can do no more than alleviate their real needs. A basic improvement in their food supply must come primarily from a steady increase in their own production. To help forward this improvement is the main task of the FAO."

World Bank Lends, and Borrows.—The World Bank last week announced loans to Chile, Colombia and to the Industrial Development Bank of Turkey in addition to the recent loans to Iceland and Nicaragua. A loan of \$20 million will help finance the construction of a chemical pulp mill and a newspaper paper mill in Chile. It is for a term of 17 years and carries interest of 5 percent; amortisation payments will begin on 15th May, 1958. The loan of \$14,350,000 to Colombia will help the Government carry forward improvements in the national highway system which were begun in 1951. It is for a term of 10 years and carries interest of 4½ percent; amortisation payments begin on 15th May, 1956. A loan of \$9 million has been given to the Industrial Development Bank of Turkey; it is guaranteed by the Turkish Government, has a term of 15 years and carries interest at the rate of 4½ percent. Amortisation payments will begin on 15th August, 1958. The World Bank gave loans to Iceland and Nicaragua two weeks ago. Iceland got two loans in European currencies. One, in various currencies equivalent to \$1,350,000 will assist in carrying forward a programme of agricultural development. It is for a term of 22 years and carries interest of 5 percent. Amortisation payments will begin on 1st September, 1958. The other, of £90,000 (\$252,000), is to finance the construction of a building to house radio transmitter equipment serving North Atlantic air traffic. It is for a term of 12 years and carries interest of 4½ percent. Amortisation payments will begin on 15th July, 1954. The loans were made to Framkvaedabanki Islands (the Iceland Bank of Development) and are guaranteed by the Government of Iceland. Two loans totalling \$3,850,000 have been sanctioned for Nicaragua: \$3,500,000 for highway construction, and \$450,000 for electric power. The first loan is for a term of 10 years and carries interest at 4½ percent; amortisation payments will begin on 15th March, 1957. The power loan is for the same term and carries the same interest, but amortisation payments will begin on 15th March, 1955. Mr. Eugene R. Black, President, says that the World Bank will be coming to the market with a \$75 million issue of three-year bonds on 29th September. The interest rate will be determined in the light of conditions in the market at the time of the offering. The offering is designed to meet the demand, both in the United States and abroad, from institutional investors and commercial banks for high-grade bonds of short maturity. The Bank expects to sell the issue through an underwriting syndicate under the management of Morgan Stanley and Co., and The First Boston Corporation.

Australian Health Scheme.—The Australian health scheme is thought so much of by that country's Minister for Health, Sir Earle Page, that he has travelled to Europe to outline it to the World Medical Association at its annual meeting at The Hague, where "first class" observers thought it might be "the pattern for the health scheme that democracy is seeking." Describing the scheme at a London Press conference recently Sir Earle explained that it touched every stage of life. Children were provided with free milk and free immunisation, young people prone to tuberculosis were protected, and everyone was provided with free life-saving drugs. Government hospital and medical benefits were made available, and pensioners were provided with free treatment and medicine. The scheme was beginning to pay for itself already in shorter illnesses, shorter "hospitalisation" with a consequent greater turn-over of hospital beds, and a saving of millions of hours of working time. The effect on hospital finance was striking. Many of Australia's large hospitals which had big deficits last year were now showing surpluses. One of its aims, and it is one which will have a particular appeal to health workers in this country, is to wipe out tuberculosis in Australia in a generation. Concealed cases are brought to light by the payment of generous allowances to those acutely infectious. These allowances have "uncovered" 6,000 people who are now being treated, and who have been infecting their families and fellow-workmen. Compulsory chest X-ray is being undertaken, and new tuberculosis hospitals are being built. In 1949 the death rate among tubercular people was 25 in every 100,000. Measures taken under the health scheme have already brought that figure down to 14.9.

Without Prejudice

LOSS AND NON-DELIVERY

A FINAL NOTE ON THE COMMON CARRIER

(FROM OUR LEGAL CORRESPONDENT)

WE conclude this short series of notes on the law of common carriers with a problem which is a word test. If the meaning of one simple English word is interpreted correctly the non-legal reader may come himself to a right solution on a point of law which has recently engaged the attention of a Full Bench of the Punjab (I) High Court and which has been the subject of a good many conflicting decisions in the past. The word is "loss," and the reader is invited to consider its meaning in Section 77 of the Indian Railways Act which reads thus: "A person shall not be entitled to a refund of an overcharge in respect of animals or goods carried by railway or to compensation for the loss, destruction or deterioration of animals or goods delivered to be so carried unless his claim to the refund or compensation has been preferred in writing by him or on his behalf to the railway administration within six months from the date of the delivery of the animals or goods for carriage by railway." The point of law, which is of considerable importance to consignors and railway administrations, arose out of simple facts.

On 18th June 1947 a gentleman, Babu Lal, and his wife purchased two railway tickets at Kalka railway station for a journey from Kalka to Dharampore by the North Western Railway, Kalka-Simla section. The luggage of Babu Lal, the plaintiff, was delivered to the administration to be carried by rail to Dharampore and a receipt for two trunks and one set of bedding was given to him. One trunk and the bedding were delivered to the plaintiff at Dharampore but the second trunk was not delivered to him. Considerable correspondence passed between the parties and on 18th August 1948 Babu Lal instituted a Small Cause Suit for the recovery of Rs. 199-5—the value of the goods not delivered. He lost in the Small Cause Court and appealed to the High Court (Weston C. J. Harnam Singh and Falshaw J.J.)

The reader will note two facts. One is that no notice of claim was delivered to the adminis-

tration by Babu Lal under Section 77, Railways Act; and the other is that he based his claim not on the "loss" of the goods but upon their non-delivery to him. As far as the report goes there was no evidence one way or the other as to what had actually happened to the goods, the only certain thing being that Babu Lal never got them back.

Now on these facts the reader may consider the main point. Had Babu Lal sustained "the loss of (his) goods delivered to be (so) carried?" If he had, he could not obtain a decree for he had not complied with Section 77. If he had not, then Section 77 did not apply to him at all.

It is not at all an easy question, because the noun "loss" and the verb "to lose" may be correctly interpreted in two different ways, the broad and the other narrow, both in the colloquial and in the strict grammatical dictionary sense. If a pickpocket relieves me of my watch, that watch is lost to me. I have sustained the "loss" of my watch. For the verb "to lose" means "be deprived of," "cease to have," and the noun "loss" means "deprivation." Nevertheless—subject to what the insurance reader may have to say about it—if I insure my watch against "loss" simpliciter without a word in the policy about theft I very much doubt whether I should be entitled to any compensation in respect of the pickpocket's felonious act. The watch was not lost. It was stolen. For "to lose" in its stricter and transitive sense means "to mislay" "to go accidentally astray," and a stolen watch certainly has not been mislaid, nor is going astray the same thing as being purloined. In this view of the meaning of the word there being no evidence at all as to what had actually happened to Babu Lal's trunk and it being equally likely that it had been lost, stolen, or delivered to the wrong person or sold by mistake or detained, he seemed to be in rather parlous plight. He based his claim on the undisputed fact of non-delivery and the question referred to the High Court for decision was: "Whether in a suit against a railway administration for the value of goods delivered to the administration to be carried by railway, when the suit is based on non-delivery of those goods, notice of claim is necessary in the manner provided by Section 77, Railways Act?" And the answer to the question depended on the meaning of the word "loss." In short, had Babu Lal by being permanently deprived of his goods by their non-delivery to him sustained "loss" in the sense that that word is used in Section 77?

Harnam Singh J., who delivered the principal judgment of the Full Bench propounded the problem as follows: "The question referred to us for decision has been the subject matter of decision in this and other High Courts. In some cases it was held that the term 'loss' occurring in Section 77 of the Act means pecuniary or other loss suffered by the owner of the goods through being wrongfully deprived of the possession use or enjoyment thereof, while in other cases it was held that the term 'loss' means loss of the goods by the railway administration while in transit. In cases where the term 'loss' was construed to mean pecuniary or other loss suffered by the owner of the goods it was said that notice was necessary to maintain a suit for compensation for non-delivery while in cases where the term 'loss' was construed to mean loss of the goods by the railway administration while in transit it was said that no notice was necessary to maintain a suit for compensation for non-delivery if non-delivery was not the result of loss, destruction or deterioration of the goods. In these circumstances this reference has been made for cases of this nature." In other words previous decisions had given no clear guidance and it was high time this was forthcoming. It was, and the judgments of Harnam Singh J., and Weston C. J., will repay careful perusal in full. We have not space here to reproduce their lordships' elaborate review of various sections of the Railways Act and the Contract Act in support of their conclusion that a suit for compensation for non-delivery of goods is not a suit for compensation for "the loss of" the goods; and must therefore content ourselves with a quotation or two from the previous decisions which supported the view which the Full Bench unanimously decided was the correct one. "It seems to me," said Campbell J., in *Harjaya Cotton Mills Co. Ltd. v. B. B. & C. I. Rly Co.*, "that the case of the relation of Section 77, Railways Act to a suit for damages for non-delivery stands thus. A plaintiff who institutes such a suit without having preferred a claim in accordance with Section 77 takes a considerable risk. In nine cases out of ten the railway comes into Court and pleads that the goods have disappeared out of the railway's sight or control, that they are lost and hence that the suit is barred by the provisions of Section 77. This seems to have been the situation in all the cases cited before us in which it has been held that failure to give notice of the claim under Section 77 bars a suit for compensation for non-delivery and on the authority of those cases the plaintiff might very well fail in his action."

"The present, however, is the tenth case where the Railway does not say either that the goods are lost or that they ever have been lost either by the Railway or to the consignee and where neither has alleged any deterioration of the goods. In such circumstances I cannot see that the terms of Section 77 have any bearing upon the question whether the suit can lie or not."

In another case—*Secretary of State v. Firm Daulat Ram Makhamlal*—the issue was put in this way: "The next question which arises is in regard to notice. No notice was given in this case and the learned Government Advocate contended that notice was required. Under Section 77, Railways Act, notice is required in the case of a claim for compensation for loss, destruction or deterioration of goods. The present claim, however, is one for non-delivery or misdelivery and is not one for loss and we are satisfied that no notice was necessary in the present case though the rulings are somewhat conflicting on the point."

At first sight this viewpoint appears to open an easy way out for the negligent consignee who has omitted till too late to give the statutory notice. It very frequently happens that after a long correspondence with the Railway, the aggrieved consignee, when he eventually takes his case to his lawyer, finds that the prescribed six months has already elapsed. What is to prevent him, where his goods have been actually lost or destroyed, from getting round the Section by filing a suit for non-delivery inasmuch as his goods have certainly not been delivered to him?

Weston C. J., dealt with that possibility in his concurring judgment: "It is of course possible for every consignee who has not obtained delivery to base his suit on non-delivery. It is then open to the Railway administration to plead and prove that there has been loss or destruction of the goods. ... In such event the Railway administration can avoid all liability to pay if a claim to compensation within six months from the date of delivery for carriage has not been made. If, however, the Railway administration is not able to establish that the non-delivery was due to loss or destruction of the goods then it would seem that Section 77 would not apply. ... There seems nothing very logical in this conclusion but Section 77 being restrictive must be construed strictly and, if a particular relief does escape the restrictions of this section it should be allowed to do so."

This decision, as we have said a Full Bench one, settles a point long regarded as debatable; and establishes the principle that in a suit against a Railway administration for the value of goods delivered to the administration to be carried by railway when the suit is based upon non-delivery of those goods, notice is not necessary under Section 77, Railways Act; and that the term "loss" in Section 77, does not include non-delivery of the goods. (A.I.R. 1953. Punjab. 184).

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

DEMAND FOR FUNDS INCREASES

Wednesday, 16th September.

THERE has been an increase in the demand for funds from trade and industry, and credit in the interbank market is reported to be very tight. Tax payments are being made and the jute mills have been buying more than in recent weeks. Rates still quote 2½ percent for good money. It is said in Bombay that funds have been transferred to Calcutta, this being given as the reason for the recent stringency and higher rates in that centre.

The exchange department has had another dull week for, apart from tea, there is little export business going on. The bill of exchange market has had no time yet to reflect the effects of the export duty cut for hessian, if there have been any so far. Remittance has been normal. The dollar has been stronger and the exchange rate is now Rs. 478-8.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills amounted to Rs. 1,85,50,000 this week. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 80 percent, the average rate of acceptance being Rs. 2-6-7 percent per annum. Tenders for another Rs. 1½ crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 11th September, treasury bills for Rs. 9,89,25,000 were sold in favour of the Reserve Bank.

The return of the Reserve Bank of India for the week ended 11th September, 1953, showed rises of Rs. 49 lakhs and Rs. 1.68 crores in the total note issue and notes in circulation to Rs. 1,117.42 crores and Rs. 1,093.18 crores, respectively. Notes held in the Banking Department consequently fell by Rs. 1.20 crores to total Rs. 24.23 crores. In the Banking Department deposits of the Government of India rose by Rs. 19 lakhs to Rs. 127.81 crores, while other Government accounts declined by Rs. 39 lakhs to Rs. 19.85 crores. Balances of commercial banks at Rs. 49.32 crores were about Rs. 1.44 crores less than in the previous week. Balances held abroad were up by Rs. 2.20 crores to stand at Rs. 144.62 crores, while investments dropped by Rs. 1.53 crores to Rs. 86.24 crores. Other loans and advances fell from Rs. 11.38 crores to Rs. 11.27 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 49.45 lakhs. Ways and means advances were shown at the negligible figure of Rs. 4 lakhs (Rs. 28 lakhs).

Bullion ruled steady last week. Silver rose from the previous week's level of Rs. 156-3 to Rs. 157-6 quoted today, chiefly due to bear-covering. The ready price was about 4 annas higher. Silver was unchanged at 74d in London and at 85½ cents in New York.

Gold also improved in sympathy with silver and the price gained from Rs. 87-13 to Rs. 88-4. The sovereign at Rs. 58-12 disclosed a rise of Rs. 1-4.

The statement of the position of Scheduled Banks for the week ended 4th September, 1953, discloses Demand and Time liabilities at Rs. 528.59 crores (Rs. 13.81 crores on account of borrowings from Banks) and Rs. 330.56 crores (Rs. 2.22 crores) compared with Rs. 528.21 crores (Rs. 12.97 crores) and Rs. 331.38 crores (Rs. 2.15 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 20 lakhs and Rs. 3.18 crores to aggregate Rs. 31.93 crores and Rs. 49.11 crores, respectively. There is a rise of Rs. 1.08 crores in investments to Rs. 327.96 crores. Advances and bills discounted at Rs. 473.89 crores reveal an increase of Rs. 55 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.4 percent and 55.2 percent against 9.0 percent and 55.1 percent.

The return of the Imperial Bank of India for the week ended 4th September, 1953, shows a rise of Rs. 82 lakhs in total deposits to Rs. 207.52 crores. Investments in Government Securities and other authorised investments remain unchanged at Rs. 80.25 crores and Rs. 10.54 crores, respectively. Loans, cash credits and overdrafts have advanced by Rs. 1.65 crores to aggregate Rs. 88.07 crores, while bills discounted and purchased have declined by Rs. 2.04 crores to stand at Rs. 18.59 crores. Cash and balances are, in consequence, shown at Rs. 25.30 crores or Rs. 4.49 crores higher.

According to land customs trade returns received in the Department of Commercial Intelligence and Statistics the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of July, 1953, were as follows (in lakh of rupees):

	Exports to	Imports from
Eastern Pakistan	13	249
Western Pakistan	19	7
Other Countries	9	322
Total	41	281

Total trade amounted to Rs. 322 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 240 lakhs.

The directors of the Chartered Bank of India, Australia & China have declared an interim dividend at 7½ actual subject to income tax. The dividend is payable on 2nd October, 1953.

REFUSAL OF BANKING LICENCE

The following Press communiqué has been issued by the Reserve Bank of India: "The Reserve Bank of India has served a notice on the Union Bank of Bengal Ltd., Calcutta, informing the bank that in terms of the first proviso to sub-Section (2) of Section 22 of the Banking Companies Act, 1949, a licence to carry on banking business in India cannot be granted to it. The refusal of a licence makes it obligatory on the part of the bank to cease transacting the business of banking as defined in Section 5(1) (B) of the Act, and it would not, therefore, be in order for it, among other things, to accept deposits of money from the public."

TREASURY BILL MATURITIES

A DITCHER'S DIARY

truisms that have been overlooked for too long, with consequences that are now to be seen.

It must be quite some time since plays were presented at the Globe Theatre, in Lindsay Street, though it was originally designed as a playhouse and functioned as such for many years. From 7th October it will return to its former state for a season, when the American Repertory Company will offer a variety of plays, all modern and all successful in New York and London. Indeed one of the plays they will do here, *The Moon Is Blue*, had its London opening only this season, though it has been running on Broadway for over three years. Their other pieces are equally well known: *The Glass Menagerie* and *The Four Poster*, which we have seen here as films, and *Sleeping Partners* and *The Voice of the Turtle*. This is a brilliant enough list but the company's leader, an Englishman, Eric Elliott who toured India some time ago with a not-so-successful Shakespeare and Shaw repertory, says that he has under consideration "plays by Christopher Fry, Jean-Paul Sartre, J. B. Priestley, J. M. Barrie and Strindberg" and that he will examine the possibilities of presenting a lavish production of *Peter Pan* next autumn. His leading players include Frank Cassidy, Jeanne Tufts and Betty Jensen, all of whom are said to be well known American actors. I don't know what Calcutta has done to deserve all this, for it has been my impression that the drama has not been well supported here since the war, apart from the two-night stands of amateurs in aid of charity. Perhaps the up-to-the-minute list of plays Mr. Elliott has chosen will draw support for what seems to me a very considerable venture.

The higher mysteries of statistics are forever closed to me by an inability to see why certain calculations should work, even on the rare occasions when I can see how they do. I came across such a case this week in a new method that has been discovered abroad for the random sampling of wheat crops, and which I recount here because it may have some application to the estimation of crops in India. If you want to make a reliable guess of the average size of wheat sheaves standing in a field, you can select at random five groups of five sheaves, weigh them and take the average. That seems reasonable enough, although highly fallible. But the new method is not to weigh all your 25 sheaves, but to line up the five groups and from one take what seems to be the biggest sheaf in that particular group, from the next take the second biggest of that group and so on until from the last you take what looks to be the smallest of that group. Weigh that five and the average is, it appears, a much more reliable indication of the mean size of the sheaves. Why? I have not the remotest idea, but they say it works.

"My attention has been drawn to certain remarks appearing in..." must be one of the silliest possible ways to begin a letter. The impression it seeks to give that the author normally dwells in higher regions where the clamour of the world would not reach him were it not for the intervention of one of his many paid retainers is scarcely consistent with what usually follows—a list of denials, disclaimers, complaints and recriminations. I suppose newspaper editors, to whom such letters

are often addressed, are hardened to the further implication, that the author never reads this particular paper and would not touch it with tongs were it not for his durwan having "drawn his attention" to "certain remarks" appearing in it. Now if a maharshi wrote down from the heights of Badrinath saying that his attention had been drawn to a recent quotation for Calcutta Electric Supply debentures, he would undoubtedly be believed. But most people just plain see things. I read a press communiqué put out last week by a chamber of commerce that opened with the words: "The attention of the committee of the chamber has been drawn to statements appearing in the press from time to time in regard to the problem of growing unemployment in the country". A chamber of commerce that has to have its attention drawn to this discussion is not, as they say, on the ball.

I am relieved to hear that the British Labour Party is at last thinking of modernising its party anthem, *The Red Flag*. Even the extreme left wing of the party must have come to feel slightly self-conscious while intoning the passionate verse "It shrouded off our martyred dead", while the peaceable and respectable folk who make up most of the Labour Party's membership must feel positively ludicrous when they sing defiantly of their blood having "stained each crimson fold". As for the part about "cowards flee and traitors sneer", perhaps it had come to remind some supporters of the present divisions within the movement. Anyhow the whole lurid thing sounds as if it had been written by Nye Bevan in his most extravagant mood. Anything that replaces it will probably be just as pathetic, as all party anthems are, but it should be possible in the milder atmosphere of the Welfare State to make it a little less blood-curdling. Perhaps Sagittarius, the versifying satirist of the *New Statesman*, could be inspired by Mr. Kingsley Martin to produce new words—for I assume the party will stick to the same excellent tune. Among Labour Party songs my favourite is one that the British Socialists used to sing to the Communists during the Spanish Civil War, though its ironical flavour makes it unsuitable for general use. It is put to the tune of the First World War song, "Keep the Home Fires Burning", and the stanza I remember went:

Stick to Marx, my hearties,
Scorn the Labour Parties,
Keep the hell-fires burning
For the bourgeoisie.
Keep the Red Flag flying,
All its past denying,
We will win the war
And lose our libertee.

I find the following in Allan Laing's *Laughter and Applause*: "In this country a bishop's wife does not take her husband's title, a fact which sometimes leads to embarrassment elsewhere. It is related that once a certain Right Reverend gentleman was making the Grand Tour of Europe with his wife. He registered at an hotel in Seville as 'The Bishop of Auchtermuchty and Mrs. Smith'. Whereupon the hotel manager called him aside. 'In Spain, my lord', he whispered, 'we do not let such things be known'."

THE JUPITER GENERAL INSURANCE CO., LIMITED, BOMBAY.

REPORT OF THE ADMINISTRATOR DEWAN BAHADUR R. VARADACHARI

The Revenue Accounts and the Balance Sheet annexed to this note along with the Auditors' Report relate to the year ended 31st December 1952, i.e. the 33rd year of this Company. The proceedings started by the Police against certain former Directors and Officers are going on in the Magistrate's Court. I have taken steps to notify to our clients and constituents that the alleged offences relate to 1949 and 1950 and that the management of that period have been divested completely of their powers from the 11th July 1951 and have nothing to do with the present working of the Company.

The accounts of the year have been closed with a net profit of Rs. 3,92,137 in the General Department and an addition of Rs. 24,53,686 to the Life Fund. This result must be considered satisfactory considering the circumstances in which the Company's business was carried on. If the year 1951 was an unhappy and critical one for the Company, the year 1952 was a trying one. In the Indian market "Jupiter" has no tied business, which many other companies of similar standing have. In the beginning of the year there were some indications that the trade had realized the alarming proportions to which rebating and other attendant evils had attained and were attempting to take some steps to reduce the evil, but there was an unfortunate retrogression in the latter half of the year with the result that there was a scramble for business at any price and obviously "Jupiter" could not enter into this race. In regard to the London reinsurance market, the Police action and the proceedings against the ex-Directors in the Magistrate's Court have had the most disastrous effects and most of the English Companies gave notice of cancellation of their reinsurance treaties which took effect from the 1st January 1952, so that during the whole of 1952, there was practically no "reciprocal" business from the London market and, in addition, there was an actual outgo of nearly Rs. 4.25 lakhs which "Jupiter" had to give to these companies as consideration for the withdrawal of the unexpired portfolios in accordance with the usual terms of the treaties. In view of the seriousness of this position, I undertook a visit to London in August 1952 and with the help of our London Agents, Messrs. B. W. Noble Ltd., established personal contacts with the executives of companies with whom "Jupiter" had previously treaty relations. The result of the visit may be summarised in the words of Messrs. B. W. Noble, Ltd., in their letter dated 15-10-1952:—

"Quite apart from the assurance and confidence we gained from many discussions with Mr. Varadachari regarding the present position of the 'Jupiter', an abundance of goodwill has been created by his visit. Already as a result of our being able to introduce Mr. Varadachari to the many important British Companies who are Re-insurers of the Fire Business of the 'Jupiter', the majority of such Companies have freed a share of their reinsurance business to cede as reciprocity for the 'Jupiter' as an earnest of their desire to assist the 'Jupiter' under its present regime to regain the position it formerly held in the Indian Insurance Market. There can be no doubt that the visit of Mr. Varadachari was well timed and the information he was able to give first-hand to the British Insurers of the 'Jupiter' dispelled any remaining misgivings which may have existed in the minds of the Executives of such Reinsurers."

The seemingly adverse result of the year, as compared with the previous year, was due entirely to the cancellation of the treaties which followed the happenings within the 'Jupiter' resulting in a temporary loss for one year of reciprocity and the withdrawal of unexpired portfolios relating thereto. There is every reason to hope that the restoration of the treaties will show good results in 1953.

The total premium during the year amounted to Rs. 77.60 lakhs as against Rs. 88.77 lakhs in the year 1951. The fall of Rs. 11.17 lakhs is almost wholly due to the reduction in the premium in the Fire account. While many companies have recorded an increase in the Fire Department there has been a fall under this head in the case of "Jupiter,"

but the reasons for this have been explained in the previous paragraph. The indications are that the fall has been arrested in the year 1953. The Marine, Miscellaneous and Life Departments have kept up the previous figures more or less.

An analysis of the detailed figures shows that the Fire Premiums amounted to Rs. 18.90 lakhs as against Rs. 28.33 lakhs in the previous year. The account closed with a profit of Rs. 2,43,445 as against Rs. 5,86,327 in 1951. The reserve has been kept at Rs. 10.50 lakhs. The cost of management was pretty high during the year but this was due to the fact that it was considered inadvisable from the business point of view to discontinue the staff though the premiums fell down temporarily during the year.

In the Marine Department the net premium amounted to Rs. 4,47,591 as against Rs. 4,75,230 in the previous year. The profit of this Department was Rs. 1,11,616 as against Rs. 81,920 in 1951. The reserve has been kept at Rs. 7,75,000.

In the Miscellaneous Department the net premium was Rs. 14,85,372 as against Rs. 15,81,800 in the previous year. The account closed with a loss of Rs. 79,636 as against a profit of Rs. 32,456 in the year 1951. The reserve has been kept at Rs. 7,45,000.

It is well-known that this Department has not been profitable all over the world, but in the case of "Jupiter" particularly the unfortunate result is almost entirely due to the disastrous nature of the business done for a short period in Trinidad. For some reason or other which it is not possible to gather from the records, the previous Management opened a Chief Agency in Trinidad in September 1950. Soon after I took over, I found that it was impossible to control this Agency and that it was doing business in an unprofitable manner. I therefore took immediate steps to close that Agency, but within the short time that it was in existence huge claims and litigation in Courts have arisen. With the help of our London Agents I have now appointed a Chartered Accountant of Trinidad to take charge of our office and wind up the agency.

Life Department

The records show that the first Life Policy was written on 21st May 1928 and the year 1953 may be said to be the Silver Jubilee Year of this Department. The New Business completed during the year 1952 amounted to Rs. 1,06,40,350 covering 3,480 policies as against Rs. 1,08,63,050 covering 3,223 policies in the previous year, the annual premium receivable being Rs. 5,70,761 as against Rs. 5,91,716 in 1951. Every effort was made to bring down the cost of this Department and actually the renewal expense ratio during the year works out to 15.2% as against 17.8% in 1951 and 24.4% in 1950. The expense ratio has come within the limits prescribed by the statute. The loss ratio increased in the year by Rs. 24,53,686. The actuarial value of the assets and liabilities of the Company as at the end of 1952 is going on. The gross interest earned on the mean Life Fund during the year was 3.7% while the net yield was 3.1% as against 3.5% and 2.9% respectively in the previous year.

Profit & Loss Account

Including the balance brought forward from last year, the total available profit amounts to Rs. 6,55,010 out of which Rs. 2,50,000 is allocated as taxation reserve and the balance of Rs. 4,05,010 is carried forward. The first charge on the profit is the dividend due to the preference shareholders for the last 3 years. It is, however, not possible to consider any dividend for the ordinary shareholders at the moment. Prudence requires that it is in a year like this that the powerful backing of strong reserves is essential. As will be noticed from the Revenue Accounts, the total of the Departmental reserves has been reduced from Rs. 33.50 lakhs of last year to Rs. 25.70 lakhs because there has been a reduction in the premium, but, if as we hope, the necessity for strengthening the reserves will be all the greater. It is rather unfortunate that the Income-tax Department insists upon allowing only a reserve of 100% under Marine and 50% under Fire and Miscellaneous. But I am quite

convinced from my experience of Income-tax administration for a long time and of insurance in the last two years that this rule of thumb method is not appropriate to all Companies and that it is acting detrimentally to the interests of Indian insurance in not encouraging the creation of adequate reserves to meet any emergencies. Though the figures are the same as those usually adopted by the English Income-tax authorities, the practice is not the same in the two countries. For instance, in the case of Marine accounts, the practice in the U.K. is to allow the Companies to close the accounts of the Department not for the fixed period of 12 months called the "accounting year" in India, but for a period of two years and allow a reserve of 100%. As settlement of Marine claims takes a long time, this acts as a cushion and a reserve of 100% is probably considered adequate in such circumstances. But even in the case of Fire, the U. K. authorities consider any special circumstances that may be put forward. Apart from this, it should be remembered that the English Insurance Companies are giants with a long history of over 100 years and have huge funds at disposal which could stand any catastrophic losses. It is, therefore, inappropriate to judge the comparatively new Insurance Companies in India on the same standard and apply a rule of thumb method. In Continental countries it is the Government departments which insist upon strong reserves being maintained by the Companies. After a careful consideration of all the relevant factors and discussion with our Auditors I have provided reserves the limits of the Income-tax department, but at the same time it is necessary to keep something more as a stand-by in case of sudden necessity and it is for this reason that the balance in the Profit & Loss Account has been carried forward. I do hope that the necessity to touch this may not arise at all and if the business improves and the reinstatement of the treaties produces satisfactory results there is every reason to hope that "Jupiter" would be in a position to pay the usual dividend to its shareholders in future years. It is really unfortunate that for the last 3 years the ordinary shareholders have not received any dividend, but it is entirely due to causes which arose within the "Jupiter" itself between the years 1949 to 1951 and not from any extraneous causes. That the Company emerged from the ordeal successfully is really a tribute to its inherent strength and good organisation.

Capital Reconstruction

It will be noticed from the Balance Sheet that the Company has two classes of shares, preference and ordinary, with different face values and different proportions of paid-up amounts. This favours the provisions of Section 6A (1) of the Insurance Act, 1938 and with a view to bring the capital structure in conformity with the provisions of this Section, a scheme of reconstruction was prepared and circulated to the shareholders. A meeting of the shareholders was held by me on the 7th February 1953 and their opinions taken and sanctioned the scheme with certain modifications to be in force from 31st May 1953. The share capital of the Company is consisting of 2,00,000 ordinary shares of Rs. 100/- each. The necessary steps to implement this order are being taken.

Investments

From 11th July 1951 up to date the amount collected by me out of the investments made by Life and the General Departments in both the Departmental Accounts was Rs. 2,74,139. The amount invested in Government Securities during this period in both the above Departments amounted to Rs. 36,64,717. In addition I have kept on Call Deposit a sum of Rs. 5 lakhs with Securities. Unfortunately the investment portfolio has been affected detrimentally by frequent changes in the management and with a view to safeguard the interests of the policyholders I have deliberately concentrated almost entirely upon investment in Government Securities.

The total assets of the Company as on 31st December 1952 amounting to Rs. 3,35,15,973 were held as under:—

Government Securities	Rs. 1,47,17,632
Municipal and Improvement Trust Bonds	Rs. 24,88,795
Shares and Debentures	Rs. 35,19,952
Policy Loans	Rs. 21,23,003
Loans on Mortgages	Rs. 17,65,113
Buildings & Land	Rs. 24,30,886
Cash and Bank Balances	Rs. 14,41,492
Other Assets	Rs. 50,20,110
Total	Rs. 3,35,15,973

EMPIRE OF INDIA LIFE ASSURANCE CO., LTD.
ADMINISTRATOR REPORTS ANOTHER SUCCESSFUL YEAR

The Accounts of the Company for the year 1952 with the Report of the Administrator thereon have just been published. The management has been conducted on the most conservative lines particularly in the matter of investments. Almost all the new investments have been made in first class Government and semi-Government Securities and adequate steps have been taken for safeguarding the other investments.

The Administrator has been able to reduce the cost of Head Office Management to a remarkable extent without affecting the quality of service to the policyholders, viz., from Rs. 22,803 per mensem in 1950 to Rs. 9,853 per mensem in 1953. The over-all expense ratio has also been brought down. The rate of interest earned is satisfactory and the mortality experience is very favourable. The following is an extract from the Administrator's Report:

Public Confidence

It is satisfactory to note that the confidence of the general public in the improvement of the financial position of the Company consequent upon its management by an Administrator under Government's auspices (this was the first venture of this kind, so to say) has been growing from day-to-day. When I took over the Company on the 11th July 1951, the market quotation for its shares was in the neighbourhood of Rs. 400 per share, but the price improved from time to time and the latest quotation is Rs. 627-8-0 per share. Another pointer in this direction is the fall in the number and the amount of "surrenders" by the policyholders of the Company during the year.

The statutory Valuation of the Company's assets and liabilities as at 31st December 1951 was finished on 23rd September 1952 and this showed that the Company was intrinsically sound and financially strong. After setting apart reserves amounting to Rs. 119 lakhs to meet all contingencies, (which sum very few companies in India would be able to find in a time of stress) the Valuation showed a profit of Rs. 76,54,366. Of this, slightly more than Rs. 52 lakhs were allotted to policyholders as Bonus of Rs. 10/- per thousand per annum on Whole Life Assurances and Rs. 8/- per thousand per annum on Endowment Assurances. Rs. 4,02,093 were allotted to shareholders increasing the shareholders fund to Rs. 7,64,332. The Administrator accordingly declared (after obtaining direction from the Controller of Insurance) a dividend of Rs. 20/- per share for the year 1951.

Importance Of Life Assurance

Life Assurance is a specialised kind of saving; it is not the mere accumulation of money but something more. Field workers usually appeal to prospects by stressing the most compelling motive for any person to go in for Life Assurance, i.e. the desire to discharge his responsibility to his dependents and to make provision for his old age. For the middle-class man there is no better method of saving than by Life Insurance policies, because they combine an element of saving plus a cover in the case of early death. The taking of an insurance policy often amounts to the payment of avoidable expenditure; this not only benefits the policyholder and his family, but it is a matter of national importance at the present day. If the Five Year Plan of the Government of India for increasing the wealth and the prosperity of the country is to be a success, as we all hope, it is most essential that the flow of savings through life insurance should be increased so that a good portion of it could be canalised into investments on a national Development Loans. As the average value of a policy in this Company is only about Rs. 2,200/-, it is a justifiable inference to say that it is the middle-class which provides much of the premium; and this class, which has been very badly hit by the prevailing economic conditions, has every right to expect that the companies which receive their hard-earned savings must render a true and faithful account of their monies.

Management's Duty

As the policyholders are spread over the whole of India and even outside, it is a practical proposition to expect them to take any effective step to control the companies' affairs. It is, therefore, the paramount duty of the management to see that the balances of the premiums received, after meeting all claims and expenses, are invested in absolutely safe investments, always keeping in view the interests of the policyholders. Thus, my most important duty has been the continuous scrutiny, in consultation with our legal advisers, of the investments made in the past in the shape of loans to private parties, debentures of companies, mortgages, etc., and to take steps to call back the loans or to secure them by appropriate action.

Investments

I have been able to recover nearly Rs. 40 lakhs from various parties and have invested the entire sum in Government Securities. In regard to debentures of companies incorporated in India, Rs. 1,08,45,000—representing the investments in four companies made by the previous management, out of which two blocks amounting to Rs. 60 lakhs are redeemable in July, 1957 and the rest, partly in 1959 and partly in 1960. Mr. M. J. Rao, Deputy Administrator, has been nominated, at my instance, as a trustee on behalf of the debenture-holders in one company and Mr. K. B. Pradhan, the Manager, in the other. In addition, Mr. V. Deshpande, I.C.A. partner of Messrs. Balliol & Purohit, has been nominated, at my request, as the Auditor on behalf of the debenture-holders for these two companies. Steps have also been taken to bring down the total of the debentures within the statutory limit prescribed in Section 27A of the Insurance Act, 1938. From the 11th July 1951 onwards up-to-date, the investments made by me out of current receipts (including opening balances), after meeting all expenses, in securities of the Government of India and of the various States amount to about Rupees One Crore and Forty Lakhs so that the total investments in Government Securities made within the last two years amount to over Rupees One Crore and Eighty

as against 27.43% in 1951 and 30.31% in 1950. Every effort is being made to reduce the expense ratio and as a matter of fact the expenses on the pay and allowances of Officers in the Head Office have been cut down ruthlessly as will be seen from the following statement:—

MONTHLY AVERAGE OF PAY AND ALLOWANCES OF THE OFFICERS IN THE HEAD OFFICE.

1950	...	Rs. 22,803
1951	...	Rs. 13,469
1952	...	Rs. 10,717
1953	...	Rs. 9,853

Business In Force

The total number of Policies in force as at 31st December, 1952, is 1,36,928 assuring a sum of Rs. 29,60,56,165 inclusive of bonus, of which Rs. 28,70,158 (inclusive of bonus) is reassured. The total number of Annuity policies in force is 48 with an annual payment of Rs. 63,239.

Claims

The Claims for the year, inclusive of Bonus additions, amounted to Rs. 58,98,062 as against Rs. 61,49,263 in 1951. This reduction was almost entirely due to the fall in the claims by death which amounted to Rs. 15,83,485 as against Rs. 18,31,830 in 1951. The mortality experience of the Company continues to be very satisfactory.

Income and Outgo

The income for the year amounted to Rs. 1,50,33,393 (after deduction of tax at source) of which Rs. 1,17,10,006 was derived from premiums. The Outgo amounted to Rs. 94,61,908. The excess of income over Outgo is Rs. 55,71,487.

Rate of Interest

The rate of interest earned during the year (after deducting income-tax at source but including the refunds obtained) was 3.56%. In the previous year the rate was 3.22% but no refund of income-tax was given in that year. This result should be considered quite satisfactory when it is remembered that nearly Rs. 92 lakhs of the Investments shown in the Balance Sheet, i.e. the loans to two parties at Delhi and the sum lent by the Discount Bank of India Ltd., Bombay in liquidation, have not earned any interest at all.

FIRM UNDERTONE IN DOMESTIC STOCKS MAINTAINED

TEAS A GOOD MARKET

London, 15th September.

It was not until the latter half of the week that any clear pattern emerged in the stock markets. Then gilt-edged staged a sharp upward movement in the face of weakness in the sterling-dollar rate to materially assist in giving a firm undertone to all domestic stocks which previously had been slightly uncertain. A sharp break on Wall Street in the closing stages admittedly caused some short selling in industrial leaders but the persistent firmness of gilt-edged kept selling pressure light and there were no signs of any weakness in the undertone of domestic stocks generally. Elsewhere the feature was foreign bonds. Germans continued to rise, sparked by the results of the West German elections and turnover was quite large, while Japanese put on fairly good gains in sympathy and Austrian improved.

In base metal shares there was practically no movement of note until the closing stages when values moved down in sympathy with Wall Street. Diamonds followed suit for the same reason but tins and rubbers held reasonably steady despite neglect. London's oils also moved in unison with Wall Street and were none too happy at the close owing to the over-bought position in some speculative issues. Gold shares were barely mentioned until near the end of the week when selling picked up, values dropping sharply owing to a tendency in some quarters of the market to curtail carry-over facilities. In an unobtrusive manner teas have been a very good market. Good yields and the absence of American influences which beset

tins and rubbers brought in discerning buyers, with the result that good rises were recorded by the close, despite small profit-taking. Among the Indian, Tinsri gained 1s 6d to around 29s, while Singlo and Empire India put on about 1s to around 20s and 11s 6d respectively. Similar gains were noted among Ceylon issues.

Privilege money had to be taken up or authorities' assistance was required to balance books every day of the past week in the money market. Heavy outside calling persisted from the outset where a number of houses were still recovering from the previous week's shortage. Bill buying by banks was limited owing to low cash positions and the heavy call for tax payments. The position remained difficult up to the close although it tended to ease in the closing stages as the main banks managed to improve their bill purchases. Applications for £300 million Treasury Bills amounted to £387,950,000 of which the former amount was allotted at an average rate of 47s 11.85d percent. This week £280 million will be offered. The Bank of England Return showed a fall of over £3 million in active note circulation to £1,540,000,000 while bankers' deposits also declined by nearly £3 million to around £27 million.

Tea Re-Exports

United Kingdom re-exports of tea in January-July totalled 21,790,000 pounds nearly equal to the total 1952 re-exports of 23,586,000. Following March figures at the peak rate of 4,343,000 monthly re-exports have fallen uninterruptedly to the July rate of 1,598,000. This trend is resulting in the trade a feeling much less hopeful that the total of 1953 re-exports will top 40,000,000 pounds. Improvement in re-exports is expected when bigger supplies of the new season's teas become available but some quarters now feel the year's total is unlikely to be much more than 30,000,000 pounds.

Tea Stocks

Tea stocks in London and provincial warehouses on September 4th totalled 89,899,740 pounds compared with 91,347,804 in week previously. Landings during the period amounted to 7,831,188 and deliveries 8,279,252.

U.K. Exports in August

United Kingdom exports in August totalled £198,100,000, imports £249,200,000 and re-exports £38,800,000 leaving excess imports c.i.f. over exports and re-exports f.o.b. £42,300,000. Exports to North America provisionally total £24,500,000 of which £11,800,000 went to the United States.

New York Cotton Futures

New York cotton futures took the official United States cotton crop estimate of 13,159,000 bales well in its stride although, if realised, it will be the third largest crop in the past 20 years. Prices, however, registered only small losses following the report under a flurry of selling which quickly ran out. The mild reaction was attributed to the fact that values are selling close to Government support levels coupled with expectations that large crop prospects will accelerate the movement of cotton sellers than buyers. As a result of the loan programme, "Free" market supplies are expected to grow tighter as the season progresses and this attracted some buying in old crop, March and May contracts. Meanwhile, the imposition of acreage and marketing controls for 1954 crop is considered a foregone conclusion. The Secretary of Agriculture has until 15th October to proclaim controls of next year's crop. The quotas would require approval by at least two-thirds of the growers voting in a referendum which probably would be held early in December.

Sarawak Pepper Exports

Exports of pepper from Sarawak during August comprised of 139.62 tons of white and 141.87 of black. This compared with 182.90 and 178.97 respectively in July. August shipments included white to the United Kingdom 28.50 tons, Singapore 102.62, Europe 5.50, Canada three and black to Singapore 107.62 United Kingdom 2, United States 302, Canada 17.50 and Europe 23.75.

Iron and Steel Prices

The Belgo-Luxembourg iron and steel market remained quiet in the past week with new orders at a low ebb. For non-dollar countries outside the steel community, prices remained unchanged at 4,650 francs per ton for merchant steel and 4,350 francs for wire rods but were reduced to 5,250 francs for thick plate from 5,750 francs. For exports to the United States, merchant steel was reduced to \$85 per ton from \$91, wire rods to \$84 from \$87 and thick plate to \$105 to \$115.

Specified Currencies

The Bank of England today removed the currencies of Argentine, Brazil, Uruguay, Syria and Lebanon from the list of "specified currencies" which Britons have to surrender to the Government. While they may henceforth hold these currencies if they wish, they may not deal in them except with an authorised dealer (which means an approved bank) and may not make payments in these currencies without official permission. The revised list of specified currencies comprises those of the United States, Canada, West Germany, Switzerland, Portugal, Panama, the Philippines and of the Belgian, Dutch and French monetary areas.

Hong Kong Gold Prices

After ruling easy during the early part of the week, Hong Kong gold reversed the trend and finished firm. The bullism was mainly due to non-arrivals at Macao. At the start of the period values touched a new low at \$259-1/8 Hong Kong per tael and then advanced to close at \$263-1/4. The small stock position here also contributed to the advance. Official offtake amounts to 12,900 taels and unofficial 19,200 taels. Arrivals in Macao were nil. Forward contracts are reported to have totalled 12,800 ounces all at U.S. \$36.25 per ounce, c.i.f.

Stocks and Shares

MILD RECOVERY IN JUTES FOLLOWS
HESSIAN DUTY CUTTEA SHARES ACTIVE: INDIAN IRONS STEADY:
SECURITIES EASIER

Wednesday Evening.

THE share market has fared rather better this week, with the help of optimistic reports of an early re-opening of the Indian Iron and Steel works at Burnpur, and the reduction in the export duty on hessian. Forecasts of an imminent re-opening at Burnpur, which are based on information from Government quarters, were premature and Indian Iron shares, after rising to Rs. 23-1 have come back this evening to Rs. 22-14. The unexpected cut in the hessian duty brought slightly better prices for selected jute shares. Coal shares have been a little better, with Burrakur at Rs. 9-3. Tea shares have been very active and prices are still advancing.

The enquiry for good debentures has been sustained and preference shares are easily sold. Gilt-edged securities have been rather easier, though prices are for the most part unchanged.

Details of the week's trading follow.

The gilt-edged market displayed a slightly easier tendency during the past week. The recent enquiry for short and medium-dated loans appears to have been largely satisfied and at the close there were sellers rather than buyers. Prices, however, showed little variation. Three percent Conversion Loan 1946-86 at one time declined to Rs. 62 but later there were small buyers at Rs. 81-15 ex-voucher. In short-dateds, 2 1/2 percent 1954 was steady at Rs. 98-10 and 2 1/2 percent 1955 had buyers at Rs. 98-6. Three percent 1958 was enquired for at Rs. 98-2 but 3 percent 1957 was offered at Rs. 98-7. In medium dateds, 3 1/2 percent National Plan Bonds 1961 were steady at Rs. 98-6 but prices of other issues in this group were inclined to be a shade easier. Three percent 1959-61 was marked down to Rs. 96 while 3 percent 1963-65 and 1964 had sellers at Rs. 92-8. Two and a half percent 1961 and 2 1/2 percent 1962 were on offer at Rs. 90-9 and Rs. 91-9 respectively while 4 percent 1960-70 was quoted at Rs. 102-2 cum-voucher and later at Rs. 102 ex-voucher. In long-dateds, 1970-75 was taken at Rs. 86-5 while 3 percent 1966-68 met with mild support at Rs. 90-1.

Business in provincials was again restricted to the 4 percent issues although there were more sellers than buyers. Four percent U.P. 1963 was done at Rs. 99-10 and there were buyers of 4 percent U.P. 1964 at the same rate; 4 percent Bombay 1963 was unchanged at Rs. 100-6 while 4 percent West Bengal 1963 had sellers at Rs. 100-5.

Offerings of jute preference shares were absorbed during the week under review and further buyers reappeared for selected shares. Cheviot was placed at Rs. 117-8 ex-dividend and Empire at Rs. 117. Dalhousie which were on offer at Rs. 117 last week subsequently had buyers at this price. Hooghly were the exception with sellers at Rs. 14-4. Hukimchand were marked at around Rs. 112 and Khardah at Rs. 101-8. Lansdowne changed hands at Rs. 116-4 while Reliance were done at their previous quotation of Rs. 118. Shares in particular demand included Birla, Gourepore, Delta, Kamahatty and Kankarnahar. Amongst miscellaneous shares Bharat Collieries were marked again at Rs. 49-8. British India Corporation were quoted at Rs. 145-12 at which price there were further buyers. Burrakur 1st were taken at Rs. 121-8 while British Ceylon Corporation were sold at the low price of Rs. 7-10 cum-rights. Calcutta Electric had buyers at Rs. 12-4 and Dalmia Cement fully-paid were marked at Rs. 74. Gwalior Sugar redeemable preference lost four points and were recorded at Rs. 73. Indian Iron were quoted at Rs. 107 while Indian Cable and Indo-Burma Petroleum were wanted at Rs. 19-4 and Rs. 95. Jardine Henderson were offered at Rs. 81 and Railis at Rs. 78. Martin Burn continued to be scarce at Rs. 105 and a solitary transaction was reported in Smith Stanistreet at Rs. 68. Shares coming in for particular enquiry were Dunlop 1st and 2nd and both classes of Titagur Paper.

There was good enquiry for debentures but in the absence of sellers very few deals were reported. Orient Paper had buyers at Rs. 93-4 and Standard Vacuum were placed at Rs. 103.

Imperial Bank fully-paid and contributory had buyers at around their previous quotations but in the absence of sellers the business completed was negligible. Allahabad Bank contributory were crossed at Rs. 190-8. Hindustan Mercantile were taken at Rs. 10-8 and Hind Bank at Rs. 20. United Bank of India "D" shares and United Commercial Bank were unchanged at Rs. 3-12 and Rs. 35-8. Bank of Bikaner recorded a deal, after a long lapse, at Rs. 14 at which price there were further sellers.

Less interest was shown in railway shares last week and the only deals reported were for small lots of Arrah Sasaram at Rs. 75 and Howrah-Amta at Rs. 70-8. Futwah-Islampur and Bankura Damodar were on offer without attracting buyers.

In cotton, Bowrah were quoted nominally at around Rs. 285 and Dunbar at Rs. 171. Cawnpore

Textiles met with enquiry during the earlier part of the week up to Rs. 8-5 but later turned sellers at Rs. 8-2. Bengal Nagpur were marked at Rs. 14-2 and Kesoram was steady at Rs. 18-10. New Victoria fluctuated narrowly around Rs. 1-1 and a small lot of Muir Mills was sold at Rs. 212.

A slightly better feeling was in evidence in the coal section and business tended to expand. Burrakur were turned over freely improving from Rs. 8-13 to Rs. 9-3. Bengal were a shade better at Rs. 508 as were East Indian at Rs. 23-4. Equitable were steady at Rs. 36. New Beerboom were in demand at Rs. 18-2, Pench Valley at Rs. 21-4 and Standard at Rs. 20-12. South Karanpura also found support up to Rs. 10-6. Amongst the low-priced shares Bhalgora were easier at Rs. 3-8 while Bharat Collieries were taken at Rs. 5-12. Central India, Talcher and Western Bengal were steady at Rs. 4-14, Rs. 2-8 and Rs. 4-5.

The reduction in the export duty on hessians from Rs. 275 to Rs. 120 per ton caused no more than a ripple of interest in the jute section. A handful of shares met with enquiry including Anglo India, Auckland, Orient and Cheviot. The following table shows price fluctuations of a representative list of shares:—

	10-9-53	16-9-53
Rs.	Rs.	Rs.
Anglo India	196	209
Belvedere	197	200
Delta	220	226
Howrah	22	23-3
India	121	123
Kamahatty	174 x.d.	185
Nuddea	44	46
Orient	160 x.d.	171
Reliance	14-4	15-3

Calcutta Electric were steady throughout at Rs. 13-14, Bareilly were marked at Rs. 14-10 and Benares were a shade better at Rs. 18-2. A parcel of United Provinces was placed at Rs. 167. There were buyers of Jubulpore at Rs. 14 and Patna at Rs. 10-6 ex-dividend.

There was some profit-taking in sugar shares and closing prices were lower than the highest levels touched during the week. For example, Belund receded from Rs. 8-1 to Rs. 7-14 and Carew from Rs. 7-4 to Rs. 6-15. In contrast, Balrampur were fairly steady at Rs. 8-10. There were stray sellers of Cawnpore and Champaran at Rs. 36-8 and Rs. 25-8. Dyer Meakin were marked at Rs. 5-15 at which price there were further buyers. U.P., however, continued to be a weak feature at Rs. 14.

In the hope of an early settlement of the labour dispute of the Indian Iron & Steel Company the shares were steady throughout the week at around Rs. 23; tonight's closing quotation is Rs. 22-14-6. Burn & Co. were a shade lower at Rs. 278 while Braithwaite were unchanged at Rs. 11-2. A small lot of Hooghly Docking was placed at Rs. 98. Jessops were steady at Rs. 22-12 as were Indian Steel and Wire Products ordinary at Rs. 61-4 and the debenture at Rs. 36-12. Kumardhubi Engineering changed hands several times around Rs. 7-8 and Marshalls at around Rs. 5-1. The outstanding feature in this section was Indian Standard Wagon which on the announcement of an increase in the ordinary dividend (Rs. 3-12 to Rs. 4-12 per share) and the proposal to issue bonus shares in the proportion of one for one spurred smartly from Rs. 87 to Rs. 105; towards the close, however, there were a few sellers at Rs. 99-8.

In the miscellaneous section, Orient Paper and Star Paper were the feature improving from Rs. 31-6 to Rs. 32-8 and Rs. 8-5 to Rs. 9-1. India Paper Pulp and Titagur Paper were steady at around their previous quotations of Rs. 100 and Rs. 34-6 x.d. Sone Valley Cement weakened from Rs. 6-13 to Rs. 6-8 while Assam Bengal and Dalmia Cement were unchanged at Rs. 3-2 and Rs. 6-10. A deal was reported in Reliance Firebricks at Rs. 15. New Asiatic and Ruby General were dealt in at Rs. 4-3 and Rs. 4-13. Concord were taken in at Rs. 11-4 and Triton at around Rs. 159-8. India Steamship changed hands freely at around Rs. 7-4. There were sellers of India General Navigation at Rs. 76 and buyers of Assam Match at Rs. 21-12 against a previous quotation of Rs. 21. Airways (India) were wanted at Rs. 11-4 but in the absence of sellers, buyers were unable to obtain their requirements. Bharat Airways were a shade better at Rs. 2-8. Baraco Coke were done at their previous quotation of Rs. 17-8 and Britannia Biscuits at Rs. 10. British India Corporation fluctuated narrowly around Rs. 8-8 as did Calcutta Trams around Rs. 13-15. Shares coming in for investment support at slightly higher prices were Dunlop Rubber, Indian Cables, Indo Burma Petroleum, Metal Box, Rhotas Industries and Shaw Wallace. Shares on offer included Ganges Rope, Hoare Miller, Indian

"The Government are almost refusing permission to Messrs. Lever Brothers, India, to limit the modernise their soap manufacturing plant in this country, which would result in the expansion of their capacity," said the Commerce Minister, Mr. D. P. Karmarkar, in the Council of States this week. The announcement raises some fundamental issues. The Prime Minister's policy statement on foreign capital unequivocally declared that there would be no discrimination against such capital, and it is not admitted into the country. The enforced reduction in production of the electric lamp industry and the "almost refusal" of permission to Lever Brothers to modernise their plant are the latest examples of discrimination. Reference is often made in this connection to the Planning Commission's programme of industrial development. The Planning Commission, so far as electric lamps were concerned, was opposed to further expansion but was not in favour of the curbing of the existing production. As for the soap industry, the Planning Commission said: "With a view to bringing down the cost of production of soap and improving its quality and also recovering a valuable raw material required by other industries for essential purposes."

The reason is the proposal of the Bombay Government to allow a small increase in rent of residential and business premises to enable landlords to carry out urgent repairs, which are neglected today. A Bill embodying this proposal is already before the State Legislature meeting at Poona and the earlier hope that the Select Committee to which it was referred would effect important changes in the main provisions of the Bill has not been realised. It has been taken as a good opportunity for a broad-based agitation by the Government, by the Leftist parties. It has enabled them to denounce the Government to a public which naturally has a large preponderance of tenants, who will all be affected to come extent when this Bill is passed. In this they have some sympathy, if not actual support, from several members of the Congress party itself, partly because many of them are tenants themselves and partly because they fear that an increase in rent will lead to a further increase in economic distress due to unemployment is at its height, might lose them a good deal of popularity among their supporters. Urban members in the Legislature are, however, in a small minority, and members from the rural areas are not interested in this issue since the rent restriction Act operates mainly in towns and cities. The Government will be able to carry the Bill through the Legislature without difficulty when presented from its own side, but it will meet with local opposition outside the Legislature. Party allegiances are naturally effaced on this issue and most of the middle class and many of the well-to-do also, who otherwise generally support the Government on broad matters of policy, will support the leaders of the opposition. An effort is being made by the Leftist parties to whip up agitation against this Bill to the point of a mass leaving campaign, or a pattern of borrowed from Calcutta. Some public meetings and demonstrations have been held. A proposal to organise a Central Action Committee to carry on the campaign was made at a meeting last Thursday

Yet another effort is being made in a small corner of the State to challenge the present Government. This is the *satyagraha* started by the Praja Socialist leader, Mr. Asoka Mehta, in the villages of the Pardi Taluka in the Surat District in South Gujarat. There is very little submergence in the cause for which this campaign has been launched. Because of the type of soil and its proximity to Bombay, which offers a lucrative market for fodder, quite a bit of land in this area is being kept under grass instead of being brought under the plough for raising foodgrains. Grass and fodder in general are almost as necessary in this State as foodgrains. Taking advantage of the increasing population and about the problem of unemployment, the Praja Socialist Party has started an agitation to plough up the grass-land for regular agricultural crops, on the view that it would provide greater scope for employment for the local population. Though this is a purely a local problem, the *satyagraha* movement has evoked a good deal of interest and attention, partly because of the personalities of the leaders engaged in the struggle and partly because the place happens to be near the State capital. While it is not likely to disturb the Government, it is bound to be an interesting movement inasmuch as it is being utilised to show how the Ministry up as a friend of large land-owners, just as the campaign against the rent act revision is being used to paint it as favouring owners of buildings, and the proposed change from multi-point to two-point sales tax gives an excuse to designate it a sympathiser of big business firms.

Some of these troubles could have been avoided by the Government. If it had agreed to the proposal of the Food Ministry to supply control and ration wheat in the State. The supply position would have justified such a move and wheat prices would have been lowered considerably in all the districts. Wheat and millets are actually being sold at cheap rates in the non-rationed areas even today. This reduction in the cost of living would have reconciled to a certain extent the large middle class and working class groups to the large middle rents. But the State Government turned down the proposal even though Mr. R. K. Kishore, the Minister for Poonna, where the Government came down temporarily residence, to persuade the State authorities to ration wheat. It appears that the Government is unwilling to take this course because about 100,000 tons, which, in spite of rationing and control in the industrial towns and cities, it finds difficult to dispose of. If wheat is rationed, it is feared that the Government would suffer a heavy loss on its stocks, as the price would slump in accordance with the import of cheaper bajra and jowar from the other parts of the State. The Government has, therefore, decided to continue rationing and the monopoly of wheat, with a ban on its movement to rationed towns and cities until its stock of wheat is exhausted. The only change which is being made with regard to the supply of wheat is that it will be available from all Government stores in any quantity required by the consumer. This, however is not regarded by the people as a concession, because it only shows the anxiety of the Government to unload unwanted wheat of inferior quality on an unwilling public under monopoly trading. This is regarded as a psychological mistake both by the business community and the public at large because (though) rationing and the Government movement of wheat would have incurred the Government in a loss of some lakhs of rupees, the effect on trade and public sentiment of such a step, just at this time when the Government is facing a number of other difficulties, would have been very beneficial.

According to the Labour Bureau, the working class cost of living index number (Base 1944=100) in Monghyr appreciated by four points to 162 during June 1953. This rise was mainly due to an increase in the prices of food articles. There was also a slight increase in the prices of kerosene and mustard oil and in dhotis and sarees.

THE announcement of the long overdue import policy for the current half year is still awaited, (see later news below) but in the meantime it has been confirmed that the responsibility of granting import licences will henceforward be entrusted to a Board of Officials. The chairman of this body is to be Mr. Hadi Hussain, Joint Secretary in the Ministry of Industries, and the members Mr. N. M. Khan, Controller-General of Prices and Supplies, Mr. M. Ismail, Deputy Secretary in the Ministry of Economic Affairs (a former Chief Controller of Imports) and Dr Usmani, the present Controller of Imports. This important change in procedure, Mr. I. and E. figure by a good deal of controversy: those in favour of the old system argued that licensing on the basis of categories was an assured fair deal for all; that the C. C. I.'s office had to do was to take the ceiling figure for each licensable item, compare it with the aggregate of "categories" for the item, fix a percentage accordingly, and issue licences automatically to applicants on that basis. Those in favour of the change contended that this system, with all its virtues, was too rigid: in respect of industrial requirements, in particular, it could not be said that imports in one half year were any satisfactory guide to the needs of the industry in the next, for industries have a habit of expanding; they urged that the Government should be free to grant licences therefore that some latitude should be given to the applications to be considered solely on their merits. The business community, however, not given the opportunity of participating in the controversy until it had been decided on, the whole it is slightly suspicious of the change, but is prepared to judge by results.

At his Press conference yesterday, the Prime Minister disclosed that if the Arab countries decided on an economic boycott of France, as a protest against her handling of the Suez Canal question, Pakistan would go along with them and with the Asian-African bloc. This must have been disturbing news for the officials of the Commerce and Finance Ministries, for France has been a good customer and the loss of her trade would have a depressing effect on the cotton and jute markets. In the decade year* July 1952 to June 1953 France imported goods worth Rs. 7.86 crores from Pakistan and supplied only Rs. 1.6 crores worth in return; her offtake of jute amounted to Rs. 3.7 crores and of cotton to Rs. 1.5 crores. Nearly half of Pakistan's imports from France consisted of iron and steel goods; fortunately supplies of these are at last becoming reasonably plentiful, but even so Pakistan stands in danger of losing a useful source of supply.

The most interesting feature of the year's trade returns is that the United Kingdom has easily regained its position as the leading supplier of Pakistan—a position which last year it lost to Japan. This is seen in the import column, as is follows: United Kingdom (Rs. 27.02 crores), Japan (Rs. 14.36 crores), U.S.A. (Rs. 8.15 crores). Germany, plainly an up-and-coming country, nearly succeeded in tying with Italy for fourth place. As regards Pakistan's exports, Japan was the leading customer with an outtake of Rs. 27.95 crores, followed by U.K. (Rs. 22.71 crores), China (Rs. 10.9 crores) and Germany (Rs. 10.63 crores). Last year, it may be recalled, Japan had earned some odium for having urged Pakistan's balance of payments by deluging her with goods and taking very little in exchange. This year the United Kingdom might be blamed for doing much the same: but if so, the censure will be unfair, for the comparison does not hold water. The Japanese were dumping on the world goods, which Pakistan did not really want, while the British have been supplying machinery (Rs. 7.23 crores), iron and steel (Rs. 2.46 crores) and other goods, which Pakistan wants badly: imports of cotton piece goods from the U.K. amounted to less than Rs. 2 crores.

It is already clear that, despite the Japanese trade agreement, that country is not likely to be such a good customer during the year which has just begun. The Japanese are desperately short of sterling, so much so that the banks are finding them reluctant to open confirmed letters of credit. Nor is Pakistan likely to purchase Japanese machinery to the extent contemplated in the agreement, the difficulty about exchange cover for purchases under the five year credit arrangement has not yet been worked out; on second thoughts the Pakistan Government seems to have decided that only one year's cover should be allowed. If this is the final decision—though negotiations are still in progress—it will render the trade agreement practically inoperative.

With regard to the United Kingdom trade, it is fairly obvious that if Lancashire hopes to find a useful market for cotton goods in Pakistan, in these days of stringent import controls and bilateral deals, spinners must make a gesture and buy far more substantial quantities of Pakistan's raw cotton. And whyever not? It is cheap enough,

The exchange control seems to be now working as smoothly as can be expected in the very difficult conditions. A difficulty has however arisen about remittances for expenses, commission etc. of branch offices abroad maintained by companies incorporated in Pakistan. The State Bank will not allow these, and prefers that branch organisations should include in their invoices a similar charge in the value of the invoices for the goods purchased through them. The object of this is that Government should be able to keep all outgoings of foreign exchange on account of commercial imports within the ceiling allotted for the purpose. This is quite understandable, but unfortunately, additions to invoice values mean increased charges on account of import duty and sales tax, and consequently increased cost to the ultimate consumer.

The new import policy announced by the Pakistan Government for the second half of this year, says a message from P.T.I., permits the import of cotton fabrics and textile manufactures from the non-dollar area. Cotton fabrics can also be imported from Japan. The import of a large variety of articles for common use, including cosmetics, cigarettes, cycles, and watches, has been disallowed. The Government has permitted the import of 184 items in all from the dollar area, the non-dollar area, and France. Restrictions on the import of commodities from the dollar area have been relaxed before, except for drugs and medicines, the total number of items permitted from the area being 40. There will be no Open General Licence.

Except for 30 items of essential consumer goods, the list of commodities allowed to be imported is expected to help in the industrial and economic development of the country. These articles include iron and steel, ferrous and non-ferrous metals, sanitary fittings, tractors, and rubber manufactures of all kinds. Licences valid exclusively for import from France, Japan, and Italy will be issued under the provisions of the trade agreements recently concluded with those countries.

you, as an employer of labour, are aware of the great problem which absenteeism poses in Industry today.

It is, of course, known to you that Malaria is the most common single cause of illness in India, and, therefore, almost directly the cause of all absenteeism due to illness.

The Five Year Plan, for example, says, "Malaria is the most important public health problem in India." Malaria debilitates the worker, affects his efficiency and results in a discernible drop in production.

'Paludrine' prevents Malaria

Employers of labour all over the world confidently rely on regular 'Paludrine' dosage to do just that—prevent Malaria.

'Paludrine' is acclaimed by doctors as being most effective. In your establishment too, 'Paludrine' can produce startling results. Let 'Paludrine' go to work for you today. Given regularly to workers, it will ensure a higher standard of health, a higher rate of daily attendance and a higher level of production and profits.

We shall be happy to co-operate with you in implementing a scheme for 'Paludrine' Protection in your establishment. Special rates are available for bulk purchases. Please write today to the nearest office of :-

YIELD OF JUTE PER ACRE

Since the year 1947-48 the acreage under jute in India has increased from 652,000 acres to 18,34,000 acres in 1952-53. The output in bales has also increased from 16,96,000 to 46,95,000 during that period. This was revealed by Mr. M. R. Bhide, I.C.S., Additional Secretary, Ministry of Food & Agriculture, Government of India and Vice-President of Indian Council of Agricultural Research, while presiding over the Annual General Meeting of the Indian Central Jute Committee in Calcutta last week. Mr. Bhide, in his opening address, pointed out that although there had been considerable increase in the production, the overall yield per acre had not gone up. The average yield which was 2.00 bales per acre in 1947-48 dropped to 2.27 in 1950-51. This aspect of increasing the yield per acre was, according to Mr. Bhide, of vital importance. The question of improvement in quality apart from total production or production per acre also deserved special attention. In that connection Mr. Bhide referred to another aspect, namely retting of jute. "Our success in our plans of benefiting the jute growers and also helping the industry will, to a large extent, be judged by the success we had in improving the technique of retting of jute," Mr. Bhide observed.

The estimated acreage under jute this year, said Mr. Bhide was likely to be much less than the last year and the estimated production would also be much less. There had been many factors beyond the Committee's control operating this year and jute was a crop perhaps affected by climatic factors more than any other crop. The jute industry, Mr. Bhide added, was responsible for the largest amount of foreign exchange India earned and, therefore, of great national importance to the country. There were very many factors which affected this industry both internal and external. He pointed out that the Ministry of Commerce and Industry of the Government of India had recently appointed a Commission which had issued a very detailed questionnaire covering almost all the important aspects of jute. It was hoped that the Commission would produce a report which would guide and help the Committee.

PAKISTANI JUTE PRICE CONTROL

The Pakistani Ministry of Commerce has announced that in view of the improved position of the jute market there will be no control on internal prices of jute and no support scheme for the

jute season, 1953-54. There will also be no minimum export prices in force but the State Bank of Pakistan will continue to exercise the usual check on export prices in consultation with the Jute Board in the light of market trends. There will be no change in export duties on long jute cuttings and hosi jute but an export duty of Rs. 5 per bale of 400 lbs. will be levied on cut ropes. Exports during the 1953-54 season will continue on Open General Licence for countries in the American Account area and for the Argentine. For other countries export licences will be automatically issued by the Jute Board on application. Jute in the border areas will be purchased through co-operative societies.

THE FOREIGN JUTE MARKETS

CURRENT OUTLOOK GLOOMY

(FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.

TAKEN all over, the jute industry is not in a favourable position and the outlook for the future appears to be rather gloomy. Any anxiety which may have been prevalent regarding supplies of the raw material this season seems to have been dispelled by the various statistics that have been published. Though the crops in both India and Pakistan are reported to be drastically reduced, the carry-over from previous crops should be ample to tide the trade over until the next crop becomes available. This should ensure a reasonable level of values of all jute trade commodities and much will depend upon the state of trade as to whether these years past. World conditions are not very promising at the moment, particularly in the United States, and anything affecting business in that largest jute goods consuming country is bound to have an adverse effect on the jute industry.

The intimidation by the Pakistan Government that there will be no control on internal prices for raw jute and no support scheme this season, with no minimum prices, is somewhat puzzling to the trade generally. No doubt sellers of raw jute in Pakistan will be quite pleased to meet any demand for the fibre that may come along from anywhere.

Continental manufacturers are still very reluctant to make any reduction on their prices for jute goods. They certainly refuse to compete with the

low rates which have been mentioned lately for hessian. Down to 72s. 9d. is reported to have been done for 10 oz. 40 in. to the U.K. for September-December shipment, f.o.b. Calcutta. For 7½ oz. the quoted price is 54s. 0d., same shipment, while "B" twills have been reduced to 155s. 6d. for September and 157s. 0d. for October-December, f.o.b. Calcutta. Offers of raw jute are being freely made, Mill Firsts falling to £97 and Mill Lightnings to £87, while crack Daisies—2/3 is quoted at £89 and business done at that figure, c. and f. U.K. Crack Tossa—2/3 is named at £111 and grade at £100, while fours have been sold at £87, c. and f. Jute yarns and cloth are in quieter demand, but prices remain very firm all round.

MODERATE VOLUME OF BUSINESS ON NEW YORK COMMODITY EXCHANGE

Boston, 11th September.

The New York spot market suffered further sharp declines this week. Continued weakness in Calcutta, further levelling off of jute prices, and lower sterling rates are reflected in the lower prices; and many sellers seem anxious to reduce holdings even at the decline. Burlap futures trading on the New York Commodity Exchange was initiated with appropriate ceremonies on Wednesday morning, 9th September. The trading hours are 10.45 a.m. to 3.05 p.m., and at present the delivery positions are November, February, May, and August. The volume for the first three days was moderate, 33 contracts of 50,000 yards each (1,650,000 yds.) on Wednesday, the same quantity yesterday and 37 contracts today. Business has been done in the February delivery position at substantial discounts below the comparable price for November shipment from Calcutta.

I.J.M.A. PRODUCTION IN AUGUST

The Indian Jute Mills Association reports the total production of manufactured goods during August as follows:

(A) Total reported production of manufactured goods exclusive of all Govt. orders.	
Description	Quantity
1. Twist and Yarn	
(a) For sale	1,301 tons
(b) All other including that used in sewing bags	796 tons
2. Canvas	100 tons
3. Gunny Bags (Tonnage exclude sewing twist)	2.5 lakh yds.
(a) Hessian	926 tons
(b) Sacking	38,899 tons
4. Gunny Cloth	7841 lakh yds.
(a) Hessian	29,129 tons
(b) Sacking	11,001 lakh yds.
5. Other Manufactures (including ropes)	1,272 tons
6. Total Production (above figures combined)	37.0 lakh yds.
(a) All kinds	313 tons
(b) Hessian (both bags and cloth)	67,146 tons
(c) Sacking (—do—)	11,369 lakh yds.
(d) Canvas (—do—)	8,211 lakh yds.
(e) Canvas (—do—)	2.5 lakh yds.

(B) Total reported production of goods manufactured on Govt. account.

Description	Quantity
7. Sandbags	Nil
8. Scrub Cloth	23 tons
9. Hessian Bags and Cloth and Canvas	0.7 lakh yds.
10. Sacking Bags and Cloth	687 tons
11. Ropes and Twine etc.	250 lakh yds.
	279 tons
	6.8 lakh yds.
	3 tons

WORLD TEXTILE REVIEW

U. K. IMPORTS OF SYNTHETIC FIBRES

IMPORTANT in principle, if not yet in practice, is the authorisation now granted by the Board of Trade to British textile manufacturers to import synthetic fibres and yarns from the U.S.A. Licensing for this purpose is not entirely new—it has covered so far this year about £30,000 of imports; but it has hitherto been obligatory to use all the imported fibres and yarns for export goods. The new arrangement permits half of the materials to be used to make goods for the home market; but the intention, probably, is to allow the finished goods to be properly tested on the home market before being exported; so the export trade should be stimulated, because manufacturers will have the latest available chemical fibres at their disposal and will be able to gain experience of them locally.

The new policy—affecting primarily Du Pont's "Orlon"—comes at a time when the British synthetic-fibre industry is getting well into its stride. Finished goods made from synthetic fibres have been available to the British public on a reasonable scale for about two years, and in that time, despite the intervening slump, they have developed impressively. Early in 1954 new plants will bring the capacity for nylon up to the planned figure of 30 million lb. a year—a threefold increase in a few years. The objective of 11 million lb. for "Terylene" will not be attained until 1955, instead of next year as planned, but by 1956 capacity should exceed 20 million lb. a year—more than 30 times the present output. Even "Ardil", to which the response was disappointing at first, is now firmly established, and its present capacity of 22 million lb. a year, which at one time seemed too ambitious, is evidently well justified.

Even these expanded outputs are, however, quite small by comparison with the figures for rayon. The outputs above-quoted are annual; figures for rayon are published monthly. Those for July this year reached 37.1 million lb., almost equally divided between continuous filament yarn and staple fibre. This figure, which compared with only 11.7 million lb. when the recession hit production hardest in June last year, is the highest on record.

The increase in production reflects increasing demands; yet it is not quite certain that it reflects the true state of the trade. Prosperity is unhealthily dependent on home trade: British rayon goods are not conspicuously successful in expanding their sales abroad. It is argued that more attention should be paid to medium-quality products; whereas it is concentrated at present on lower or higher qualities, the former mass-produced the latter selective. Tariffs and quotas are a reason as well as an excuse for the slow progress of exports outside of the colonies, but the fact remains that some competing European exporters are doing comparatively well. Expansion of exports is of serious importance, because the public may not easily absorb the increased quantities of finished goods coming onto the home market next year.

Changing Sources of Cotton

A Soviet offer to the Liverpool Cotton Association of 15,000 bales of cotton came at a time when the Lancashire industry was reviewing its sources of supply. In the season beginning this September, it is now confirmed, rather more than half of the cotton to be consumed by U.K. spinners will be bought privately, whereas in the past season the Liverpool and Manchester merchants accounted for only 443,000 bales, compared with the Raw Cotton Commission's imports of 900,000 bales. Private buyers will not necessarily follow the same pattern as the Commission; indeed, the Commission itself has been changing its emphasis in recent years.

Of the total of 1,343,000 bales imported in the season 1952-3, 351,000 bales came from America. That was an appreciably smaller proportion than in 1951-52, when America accounted for 655,000 of a total of 1,926,000 bales. Also much reduced last season were imports from Brazil, Mexico, Peru, Sudan, East Africa. Sudan's position as second largest supplier was taken by West Africa (191,000 bales last season); and more arrived also from Pakistan (112,000 bales), India (21,000 bales), Egypt (55,000 bales). Argentina (97,000 bales)—the U.K. contribution was trifling in 1951-52.

The size of crops, particularly in the case of Sudan, is an important element in the changing pattern of supply; but in the territories covered by the Empire Cotton Growing Corporation the size of crops is itself associated with currency policy. The shortage of dollars has offered good opportunities to sterling and other non-dollar producers, and some of them have made full use of these opportunities by improving their qualities as well as increasing their quantities. Egypt, however, has not nearly regained her former position in the British market, mainly because her prices rose too high.

The Soviet offer fits into the general trend of replacing dollar supplies. But it is more than 20 years since Lancashire used Soviet cotton appreciably and spinners here are not so well versed in Russian terminology as to understand exactly what was offered. They are quite willing, however, to look at samples, as past experience was not unfavourable.

New Season's Wool Prices

The new wool season opened as expected and London and Bradford do not expect any more

fireworks this season than were witnessed last; which, by general consent, was the steadiest since the war. There is, however, a tendency to stress the less favourable influences bearing on demand for wool. Always in the background is the anxiety felt in the U.K. trade lest the higher prices of the raw material, when fully reflected in selling prices of wool goods, will appreciably reduce marginal demand. For this reason and also because it is felt that the raw material may ease gradually downward, the industry in this country will probably operate this season on a rather narrower stock basis.

It is recognised that a good deal of demand last season was for restocking, and that element will presumably be largely absent this season. Countries which are short of sterling, notably Japan and France, will evidently be buying less smelting wool. On the other hand, Argentine supplies—largely traded in advance to Japan, the U.S.S.R., Germany and Italy—will not be available on a large scale to the U.S.A. The U.S.A., relying on imports for a large proportion of wool consumed since the war, may be a dominant factor in the sterling wool markets this season, if the apparel trade becomes more animated.

WHOLESALE PRICE INDEX LOWER

The official wholesale price index (base: year ended August 1939=100), declined by 0.3 percent to 408.3 during the week ended 29th August, 1953. The index was lower by 0.6 percent as compared with that of a month ago but was 4.9 percent higher than for the corresponding week last year. The average for August 1953 stood at 410.4 as compared with 407.7 (revised) for the previous month and 387.4 for August, 1952. During the week under review, foodstuffs fell 0.8 percent to 402.9, owing to lower prices of gram at Hapur and tea (—5% each), dal arhar (—4%), gur (—2%), wheat at Hapur and sugar (—1% each). Prices of gram at Patna (+3%), bajra (+2%), and wheat at Amritsar (+1%), however, moved up. The index for Industrial Raw Materials moved up by 0.2 percent to 405.5 as a result of higher prices of raw wool (+3%), groundnuts and tilsed (+2% each), linseed in Bombay, rapeseed and raw hides (+1% each), notwithstanding decreases in iron ore (—5%), lac (—2%), Jarilla cotton in Bombay, linseed in Calcutta, cottonseed at Amaravati, raw jute, raw silk and castorseed (—1% each). The Semi-Manufactures group fell by 0.1 percent to 364.2, variations being recorded in the prices of coconut cake (—9%), being recorded in the prices of coconut cake (—9%), coconut oil and linseed oil (—3% each), mustard oil and groundnut oil in Calcutta, real Alapat cor yarn, coconut oil, zinc and copper (—1% each), groundnut oil in Bombay and gingelly oil (+3% each), groundnut oil in Madras (+2%), mustard oil at Kanpur and Anjengo superior cor yarn (+1% each). A further fall of 2 percent in the prices of the group brought down the Manufactures group index by 0.3 percent to 369.3 during the week. The index for the Miscellaneous group advanced further by 1.6 percent to 718.8 on account of higher prices of turmeric (+5%), tobaccoleaf (+4%) and black pepper in Calcutta (+3%), cashewnuts (—4%), black pepper at Cochin (—3%) and betelnuts (—1%), however, moved down during the week.

SUGAR PRODUCTION AND STOCKS

The opening stock, production, despatches and closing stocks of sugar in respect of Central Sugar Factories in India during the fortnight ended 15th August, 1953, were 529,751, nil, 56,969 and 472,782 tons respectively, says the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement. The figures for the corresponding fortnight of the previous season were 690,910, 3,533, 42,899 and 651,544 tons respectively. Figures for the current fortnight relate to 125 factories representing 92.93 percent of the total cane-crushing capacity, while the figures of the previous year relate to 129 factories representing 90.17 percent of the total cane-crushing capacity.

The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 1,317,629 and 1,281,849 tons respectively, as against the corresponding figures of 1,487,715 and 927,790 tons during the previous season.

CALCUTTA TEA SALES IN
AUGUST
COMPETITION WANES.

IN the first two sales, say Carritt Moran & Co. Ltd. in their monthly market review, demand was strong and active but in Sale Nos. 10 and 11 competition was less general. Darjeelings, however, sold readily throughout the month and high prices were realised for the best flavoured kinds. Whilst the plainer sorts were well supported. Best liquoring C.T.C. broken and fannings sold very well until the last sale of the month when there was much less demand for these types and prices realised were two to three annas below previous rates. Tippy B.O.P.s and O.P.s. with useful liquors were well supported and whole leaf grades, particularly stylish O.P.s, met with good enquiry. Well made B.P.s., medium and low medium fannings, with useful colour and all clean commons received fair support but thin liquoring broken were a weak feature.

Darjeeling offerings were of a useful standard and included a number of good flavoured second flush invoices. The proportion of best second flush Assam teas were again very limited, but the offerings included a number of useful liquoring C.T.C. invoices and a small supply of tippy teas with good quality liquors. The bulk of the offerings from this district was of the medium and low medium category. Leaf appearance continued to be satisfactory but cun quality showed a seasonal decline. With a few exceptions quality from Cachar was above average both as regards leaf and liquor.

	1953-54	1952-53
	Rs. As. P.	Rs. As. P.
Sale No. 8 Clean Common B.P.	1 11 3	0 13 6
Sale No. 9 " " B.P.	1 11 3	0 13 6
Sale No. 10 " " B.P.	1 10 9	0 13 6
Sale No. 11 " " B.P.	1 10 3	0 14 3

Leaf offerings were again very small and consisted mostly of damaged tea and off-grades. The larger Dust offerings met with a reduced demand and prices for all types declined throughout the month, the drop being most marked in the case of red C.T.C. Assams. Black leafy kinds suitable for export remained fairly steady and any bright liquoring Doonars were well supported.

	1953-54	1952-53
	Rs. As. P.	Rs. As. P.
Sale No. 8 Clean Common B.P.	1 8 9	1 2 0
Sale No. 9 " " B.P.	1 8 9	1 3 0
Sale No. 10 " " B.P.	1 8 0	1 4 3
Sale No. 11 " " B.P.	1 8 0	No Sale

Export sales up to and including Sale No. 11 totalled 331,744 chests at an average price of Re. 1-14-9 compared with 385,319 chests at an average price of Re. 1-8-5 a year ago. Internal sales at 3,219 chests of leaf and 125,112 chests of dust (Re. 1-9-3 and Re. 1-10-7) go against 3,501 and 104,111 chests (Re. 1-2-8 and Re. 1-6-6) in the corresponding period last year.

During the first three weeks of the month the price of Export Quota declined from 20 pias to 15 pias per pound. Following the announcement on 20th August that the Government of India had

decided to increase the export allotment by 7 percent, the price declined still further to 11 pias per pound. The Indian export allotment for the financial year 1953-54 is now 424,860,327 pounds, being 122 percent of India's standard export figure.

The estimated North India crop to the end of July, 1953, was 191,355,007 pounds as compared with 212,422,145 pounds to the same date last year. The average figure at this date for the three years 1950-1952 was 188,763,811 pounds.

Arrivals (in chests) in Calcutta warehouses during the period 24th July to 23rd August, 1953, with the corresponding figures for last year in parentheses were as follows: by rail 122,534 (114,942); by air 10,372 (16,598); by steamer 406,441 (330,374). Since the beginning of the season, 1st April, 1953, and up to 23rd August 1953, arrivals have been 307,624 (276,308) by rail; 37,806 (52,604) by air; and 857,900 (893,505) by steamer; making a total of 1,203,330 (1,222,417) chests.

LONDON TEA SALES

There was a brisk and well distributed demand last Monday for the 17,222 packages of North Indian, Pakistan and Miscellaneous teas. Better liquoring Assams were in particular request and generally sold at above brokers' valuation, while Low Mediums and Best Clean Commons were often 1d to 1d per pound dearer. Export demand was again in evidence. Clean Common Broken Pekoe was indicated at 40d per pound against 39d last week.

At last week's London tea auctions the 34,855 packages on offer realised an average price of 3s 8.73d a pound, against 3s 7.66d in the preceding week and 2s 11.64d in the corresponding period of last year. Clean common broken pekoe is quoted at 3s 3jd; previous week, 3s 3d. Results obtained by some of the companies are given below:—

	No. of	Average
	packages	per lb.
Amalgamated	1,211	3/5
Assam Frontier	744	4/11
Budla Beta	480	4/4
Cons. Tea and Lands	803	3/7

Malayalam	2,042	3/31
Meenglas	492	3/11
Namdang	354	4/7
Scottish Assam	204	4/7
Southern India	586	3/21
United Planters	630	3/10

CHITTAGONG TEA SALES

At Sale No. 6 held on Wednesday, 9th September, 1953, leaf offerings consisted of 8,225 chests. Dust offerings amounted to 3,371 chests and there was a Supplement of 236 chests.

Leaf: There was a very useful general demand for all grades and whole leaf types were the strongest feature of the Sale and were sold up to three annas above valuations—one particularly attractive line of F.O.P. realised Rs. 1-15-9. There was a slightly better enquiry for B.P. and B.P.s. than for

the B.O.P. grades, and the former were approximately two annas dearer. Fannings grades and B.O.P. were approximately 1½ to 2 annas dearer. Tippy Orange Fannings were sold at Rs. 1-11-6, with tippy B.O.P. types realising up to Rs. 1-13-6.

There were no withdrawals.

Dust: The opening lots generally sold six pias to one anna above valuation and all types were cleared without difficulty. There was some slight weakening towards the close. Clean Common Dust may be quoted at Rs. 1-6-0, an advance of half an anna on previous rates with smaller types approximately three to six pias below this figure. Once again best liquoring lots were in keen demand—two lines each realising Rs. 2 per pound.

Sale No. 7 will be held on Wednesday 23rd September, and the catalogues contain 12,288 chests of leaf, 4,285 chests of dust and 358 in the Supplement. After Sale No. 8, to be held on Wednesday 7th October, there will be an interval of three weeks before Sale No. 9 on 28th October 1953.

NORTH INDIAN TEA CROP

The following summary of crop and weather telegrams was received by the Indian Tea Association from different districts for August, 1953.

Upper Assam—Weather generally very hot and dry; cyclonic storm of 13th August damaged shade and buildings in Dibrugarh; in Panitola cyclone very severe affecting all gardens and blowing down numerous shade trees rendering plucking difficult and causing considerable loss of crop; black rot lifting in Sonari; outturn last month poor to about normal; immediate prospects fair to good.

Central Assam—Weather abnormally hot and dry and is interfering with outturn but good rain has fallen generally in Nazira and prospects are now brighter; outturn last month poor to about normal; immediate prospects fair.

Lower Assam—Weather generally hot and dry and is interfering with outturn; outturn last month poor to about normal; immediate prospects fair to good.

North Cachar—Weather abnormally hot and dry and is interfering with outturn but good rain has fallen in Lakhimpur and prospects are now brighter; blight is not so severe in Lakhimpur; outturn last month poor to about normal; immediate prospects fair.

South Cachar—Excepting Longai where good rain has fallen generally and prospects are now brighter, weather is abnormally hot and dry and is interfering with outturn; red spider blight prevalent in Chutla Bheel; Black rot and helopeltis prevalent in Jhalakandi; blight is not so severe in Longai; outturn last month poor but good in Longai; immediate prospects bad to fair.

Eastern Doonars—Outturn last month about normal; the outturn to date is considerably under last year; rainfall for the month has been deficient; rainfall is much below normal for the season; black rot prevalent.

Western Doonars—Outturn last month about normal; immediate prospects fair; weather seasonable; crop prospects generally are favourable; helopeltis prevalent in some districts.

Darjeeling—Outturn last month poor; immediate prospects fair; weather seasonable; helopeltis prevalent; blight blight prevalent.

Teral—The outturn to date is slightly under last year; outlook reasonable; first half month abnormally hot, latter half favourable.

COMPANY AND PUBLIC NOTICES

THE KARANPURA COLLIERIES LIMITED.

NOTICE is hereby given that the Thirty-fifth Ordinary General Meeting of the Shareholders of the KARANPURA COLLIERIES LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 24th September, 1953, at 10.45 A.M. for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 28th February, 1953, declaring the arrears of dividend on the 5½ Cumulative (Taxable) Preference Shares for the period 23rd October, 1946 to 28th February, 1949, electing Directors and Auditors and for transacting any other Ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from the 10th to 24th September, 1953, both days inclusive.

By Order of the Board,
BIRD & CO. LTD.,
Managing Agents.

Calcutta, 27th August, 1953.

THE INDIAN STANDARD WAGON CO. LTD.

NOTICE is hereby given that the Thirty-fourth Ordinary General Meeting of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Monday, the 5th October, 1953 for the purpose of receiving and considering the Directors' Report and Audited Accounts for the year ended 31st March, 1953, and to transact any other ordinary business of the Company. Subject to the Shareholders' approval the Directors have recommended the payment of the dividend on the Preference Share Capital of the Company and payment in respect of the Ordinary Share Capital of the Company of a dividend of Rs. 3/12- per share together with a bonus of Rs. 1/- per share.

The Share Registers of the Company will be closed from the 26th September, 1953 to the 5th October, 1953 both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta, 17th September, 1953.

NOTE—The dividend, if sanctioned, will be paid only to Shareholders whose names appear in the Company's books on the 5th October, 1953, or to their mandatees. No application for warrants is necessary.

HOARE MILLER & COMPANY, LIMITED.

NOTICE is hereby given that the 33rd Ordinary Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 5, Fairlie Place, Calcutta, on Tuesday, 6th October, 1953, at 11 a.m. for the following purposes:

- To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1952.
- To confirm the interim dividend declared on 16th July, 1953.
- To elect Directors.
- To appoint Auditors for the current year and to consider their letter dated 14th July, 1953, in respect of their fees for 1952 and as well as for future years.
- To transact any other competent business that may be brought forward.

By Order of the Board,
For HOARE MILLER & CO., LTD.,
E. LYNE,
Director.

5, Fairlie Place,
Calcutta.
Dated, 10th September, 1953.

THE MYSORE SPINNING & MANUFACTURING CO., LTD.

NOTICE OF EIGHTYFIRST DIVIDEND.

NOTICE is hereby given that a final dividend of Rs. 3 per share and a bonus of Rs. 4 per share on the Ordinary Shares of Rs. 50 each and a final dividend of Rs. 1-2 per share (less income tax) on the 4½ Cumulative Preference Shares of Rs. 50 each for the year ended 28th February, 1953, sanctioned by the Shareholders at the Sixtieth Ordinary General Meeting held on the 9th September, 1953, are made payable at the Central Bank, India, Ltd., Bangalore City, on and after Monday, the 21st September, 1953, to those shareholders whose names stood on the Register of Members on the 25th August, 1953.

By Order of the Board,
N. SIRUR & CO. LTD.,
Managing Agents.
V. N. CHANDAVARKAR,
Managing Director.

Registered Office:—
Temple Bar Building,
70, Forbes Street,
Fort, Bombay.
8th September, 1953.

DEJOO VALLEY COMPANY, LIMITED

THE Forty-sixth Ordinary General Meeting of the Shareholders of Dejo Valley Company, Limited, will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th September, 1953, at 3.30 p.m. for the following purposes:—

- To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to adopt the Accounts for the year ended 31st December, 1952.
- To elect a Director.
- To appoint Auditors and fix their remuneration.

Studebaker Champion
is the only big family
car which is cheaper
than the cheapest car of its class. More and more
people are now turning to Studebaker because of
its low initial cost, lower running expenditure and
comparatively better riding pleasure and lasting
performance.

COAL COMPANIES

O, P, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SLOW PROGRESS TOWARD STERLING CONVERTIBILITY

INDIA'S INTEREST IN THE ABOLITION OF EXCHANGE RESTRICTIONS

THE Colombo Plan meeting in New Delhi next week will bring together financial experts from most countries in the Commonwealth, and though their discussions will not centre on the problems of sterling they will be well aware that the future of that currency is closely connected with Asian development plans. It is to be noticed that the United Kingdom will be represented in Delhi by Mr. Reginald Maundling, Economic Secretary to the Treasury, who has just returned from the meetings of the World Bank and Fund in Washington and who will no doubt be assisting Mr. Butler at the next gathering of Commonwealth Finance Ministers in Canberra in January. The U.K. Treasury is evidently desirous of maintaining some sort of continuity in its approach to the three matters of international fiscal co-operation, Asian development and Commonwealth economic policy; the Government of India may be presumed to have the same object in view. Lay opinion in India, on the other hand, inclines to the belief that India is mainly interested in the straight aid schemes represented by the Colombo Plan and the World Bank; only secondarily concerned with Commonwealth and sterling area problems; and hardly worried at all about the general question of currency convertibility and the expansion of world trade. This is a mistake, for in fact the three subjects can only be properly understood when taken together.

A moment's thought about why anybody should bother to recommend the convertibility of sterling will show why it is relevant to the financing of development programmes: the chief offence of exchange restrictions is that they prevent purchasers from buying in the cheapest market, and this is obviously connected with the progress of Asian development. When an importer is prohibited from spending dollars because his country is short of dollars and needs all it has to buy wheat and cotton, then he must import from another currency area even though the price he is charged in that area is higher than he would have to pay in North America. Though this leads to a good deal of uneconomic expenditure, it might be claimed that basic, State-directed development schemes have not suffered in this way because they have been supported by dollar loans, either from the World Bank or some U.S. institution, which enable purchases to be made in the cheapest market by covering the "dollar component" of the scheme. But it is well known that dollar loans tend to err on the other side; even when not precisely "tied" loans, they incline to favour dollar purchases and dollar transport that might not otherwise have been chosen. Without putting too fine a point on it, it should not be difficult to see that for a developing country the ideal arrangement of the international economy is one in which goods and services can be bought wherever they are cheapest, without regard for the limitations of currency shortages. India is spending a great proportion of her current wealth on development, and anything that ensures that she gets the best value for her money is of very near interest to her.

It should be more generally realised that the advocates of convertibility of currencies are in fact asking for more extensive economic freedoms, especially freedom for purchasers to buy where they want. A world in which exchange restrictions were abolished or considerably abated would be a more competitive and a more efficient world. It is very much to Britain's credit that she has led the demand for this restoration of international trading freedom. That her insistence on the urgency of the question has lately outrun the ardour of the Americans and some others shows that there is full confidence in Britain in that country's ability to hold her own and prosper in a more competitive world economy. Not quite full confidence, perhaps, for voices have been raised against the drive to convertibility—and it is signi-

ficant that they have come from a section of the Labour Party which evidently realises that some of the benefits working people have won in post-war Britain are uneconomic in the sense that they might prove vulnerable if world trade became freer.

Britain has been joined lately in her advocacy of convertibility by another vigorous and confident trading nation, West Germany. A London newspaper said last week: "German impatience about the delays in advancing toward full currency convertibility has now become an important factor in international economic affairs, and the discussions of the Commonwealth Conference in January must be influenced by it. The new German Government is keenly interested in any limited measures for the removal of currency restrictions and the establishment of freer international markets which may be proposed for the interim period before U.S. policy is finally clarified." The reason for this impatience is that as long as the principal currencies are not convertible, Britain and Germany are bound to support the European Payments Union, an excellent stop-gap, but whose galling restrictions now seem more objectionable than the distant dangers of full convertibility.

If convertibility means greater competitiveness and efficiency, the Americans, who have least to fear in this regard, might be expected to show greater haste in achieving it. Indeed in the years immediately after the war they did evince considerable haste, and persuaded the British Government, in return for a dollar loan, to indulge in the disastrous experiment of 1947. The Americans have keenly felt the restriction that inconvertibility places on purchasers, for without exchange controls overseas their exports would have been much higher—for a time. If their anxiety to make progress toward the abolition of exchange controls has relaxed somewhat in the last two years, that is for three good reasons. First, the expanding home market has been able to absorb output (except of agricultural products) without the pressure to export; it is notable that the recent huge gains in U.S. productivity have in fact been accompanied by a decline in exports. Secondly, the soft currency countries have made it clear that although they too want convertibility, they want it on certain conditions—one of which is a substantial dollar loan, either directly or through the International Monetary Fund, to tide them over what are described (optimistically perhaps) as initial difficulties. Thirdly, the freer trade that is the object of convertibility would extend not only to overseas countries but to the American home market itself, and the American business man, who is an ardent free trader abroad, is a confirmed protectionist at home. It was one thing to urge convertibility in 1947 when non-dollar economies had not recovered from the war, were in no position to offer the least threat to U.S.

products and were in fact anxious to import American machinery and primary produce; especially since at that time it seemed that the U.S. domestic market might not absorb all of domestic output. It is another matter to urge convertibility in 1953 when rearmament and rising standards at home have relieved U.S. manufacturers of marketing worries, and when the European economies have recovered, and indeed exceeded, the pre-war vigour.

This is not intended to suggest that the American economy in fact has anything to fear from the return of convertibility. The United States could easily take the conditions requested by the non-dollar countries in its stride, and would be the greatest net gainer. But the same Congress as would have to vote the loan—\$5,000 million has been mentioned as a likely figure—to support sterling, would also have to approve whatever changes in tariffs were needed to permit larger imports from abroad; that is, it would have to put up money when it has resolved to put up no more astronomical loans for anybody, and it would have to suffer some of its powerful minority groups to lose business in the home market. That a Republican President has to move slowly in these circumstances is understandable. But the

ECONOMIC PROGRESS IN ASIAN COUNTRIES.

FOOD SUPPLIES BIGGER: TRADE BALANCES IMPROVE

A SUBSTANTIAL increase in rice production, a slow but uncertain advance in industrial production, and an improvement in trade balances are the main economic developments in Asia reported by the U.N. Economic Commission for Asia and the Far East in its Quarterly Bulletin, covering the period up to March 1953. Within the region (excluding mainland China) production of rice in 1952-53 increased by 7 percent; Asian rice production then exceeded the prewar level by 5 percent. Reliable statistics on foodgrain stocks within the region are not available, but it seems that except in Ceylon, Malaya and Pakistan, foodgrain stocks at the end of 1951-52 were larger than in the previous year. In 1952-53 the increase in the region's foodgrain production was larger than the rate of population growth. As a result, the per capita supply of cereals showed a small increase. The figures quoted by ECAFE (source: FAO) would indicate an increase of the per capita supply of over 2 percent in 1952-53. Higher net imports contributed to this improvement, as they did in 1951-52; but in contrast to the preceding year the increase in output was decisive. Reasons for the increase in rice production—which accounts for about two-thirds of the region's total production of cereals—were favourable weather, higher relative prices of rice (compared to commercial crops), which stimulated an extension of the area under cultivation, and agricultural development programmes which have begun to show results in some deficit countries. With the exception of coconut oil, the prices of the region's principal agricultural raw materials (cotton, jute, other vegetable fibres, rubber) were, in the spring of 1953, below the level ruling at the outbreak of the Korean war. Industrial production in the region—heavily concentrated in Japan, India and China—increased during the period under review. The expansion was rapid in mainland China, where it was promoted by a high rate of public investment. In the other two countries low export demand and uncertainties in markets for particular goods acted as a brake on output but did not prevent an advance in total production. Industrial growth also continued in the smaller and industrially less highly developed countries. Another noteworthy feature was the rise in labour productivity; while employment in manufacturing declined slightly between mid-1952 and the spring of 1953, output expanded. The rise in labour productivity was particularly marked in the textile industries (especially spinning). Money costs of production, however, did not fall to the same extent (because of the rise in money wages) and the competitive position of Japanese industries in world markets remains a serious problem. The high price of coal is a particular handicap, and efforts are being made to bring it down by the rationalisation of coal extraction. It is also planned to sink 73 new shafts in the region in the course of the next five years.

In India industrial production, which had slowed down in the second quarter of 1952, picked up again in the subsequent months. The higher level reached in the last quarter of the year was fairly well maintained in the first three months of 1953. A number of industries recorded declines, however, notably those largely dependent on exports, e.g. jute manufacturing, as well as some industries producing capital goods, e.g. diesel engines or machine tools. Imports of capital goods also showed a fall during the period March 1952 to March 1953, and it seems that not only inventory purchases but also private investment in plant and equipment has in some fields been adversely affected by uncertainties in the trading outlook. Lack of growth in final consumer purchases and stickiness of costs in the face of declining prices of finished manufactures have made for greater caution in private investment decisions. On the other hand, improvements in raw materials supply continue to stimulate industries which in previous years were held back by shortages. The textile industry benefited from relaxations of control over distribution and prices, and the expanding public investment during 1952-53 generally had a stimulating influence.

Production of electricity increased slightly throughout the region, but demand for power continues to outstrip the provision of additional generating capacity. The fall in the total volume of exports from the region continued from mid-1952 to the spring of 1953, but the rate of decline was much slower than in the first half of 1952. On the other hand, total imports of the ECAFE countries diminished more rapidly than before, and the fall in their value was sharper than the fall in the value of exports. In consequence, the combined balance of trade of the countries of the region improved. Price factors as well as a reduction in export volume have contributed to decline in export values. The general decline in export prices ceased after the middle of 1952. Export

prices recovered in some countries moderately (e.g. Pakistan), and in others more substantially (the Philippines and Ceylon), while in others export prices continued to decline (Malaya, India and Japan). Moreover, there was no general trend towards an expansion in export volume.

BRITAIN'S REQUEST TO G.A.T.T.

BRITAIN'S request, at this year's session of the General Agreement on Tariffs and Trade, for authorisation to impose tariffs on some goods from non-Commonwealth sources was foreshadowed in the communiqué from the Commonwealth economic conference last December. The conference agreed that Britain should be supported in an application to "enable the United Kingdom, consistently with the basic provisions of GATT, to continue the duty-free entry for Commonwealth goods, notwithstanding any increases that might from time to time become necessary in duties designed to protect domestic industry and agriculture in the United Kingdom". What the British Government feels to do is to protect British growers of various fruits and vegetables against competition from Continental Europe: mainly the Netherlands, Denmark, Italy and France. These growers, it seems, require protection by import duty instead of—or in addition to—protection by quantitative restrictions on imports, applied seasonally. Some of the produce in question is not even imported from the Commonwealth; but, by pre-war agreements, it is assured of duty-free entry if available, and there would be political opposition, in Britain as well as in the countries actually or potentially concerned, to any move to restrict this freedom. So, if British growers are to be protected, it is necessary to extend the principle of "imperial preference". The matter is not of great importance in terms of Britain's total import trade, still less in terms of the total international trade supervised by GATT. But it involves important principles. Feelings are strong both in favour of and against "imperial preference": the Australian Government has felt strongly enough to dispute the Commonwealth's allegiance to GATT in general. Britain can present a plausible case for exemption from the rule that no new preferences shall be granted; but the fact remains that Britain is seeking new protective tariffs in restraint of international trade.

Britain's position in this particular case is, indeed, exceptional. Tariffs on the goods in question have not been bound by agreements with other signatories to the General Agreement; there is no intention to discriminate in favour of produce from the Commonwealth; yet tariffs cannot be imposed because they would, nominally, constitute new preferences. There are no illusions in Britain about the British Commonwealth, or the sterling area, as a single market. "Imperial preference" is not so popular in the Commonwealth that it can dissuade the Dominions from imposing protective tariffs against British manufactures. When "imperial preference" is used by Britain against, say, Japan the colonial nationalists are quick to retort that their countries' opportunities to obtain cheap imports are restricted. Interest in the preferences is generally confined to the suppliers of the particular commodities to which they relate; they are not a blessing for the importing countries. However, if preferences were used consciously to shape trade the sterling area could be welded—for better or for worse—into a more coherent economic unit.

While Britain and her associates are members of GATT no such policy can be followed. But restraint of the preference principle is not GATT's primary function. It may be hoped that the real objective, to remove barriers against international trade in general, will be kept constantly in view. And against that background Britain's desire to protect her horticulture is not commendable. What may be hoped from this year's session of GATT is a re-assertion of the objective, with some sign that moves towards freer trade are consistent with the development of the "underdeveloped" countries and with the stability of the countries whose economies are already established on a high plane.

It is hardly surprising that on the continent of Europe Britain's move this year has been widely interpreted as concealing an ulterior motive: to obtain more freedom for preferential treatment in general within the framework of GATT, or, failing in that purpose, to withdraw from GATT next year, when its constitution and policy are due for review. There was no hint of any such intention in the Commonwealth conference's communiqué last December; but illusions regarding the rate of progress towards freedom of trade and of currencies have since been dispelled. There is a strong element in Britain's Conservative Party favouring withdrawal from GATT and freedom to "integrate" the Commonwealth economically, but the Government does not at present subscribe to such a policy. However, if the basic principles of GATT are in any way weakened the minority opinion will be strengthened; it may even be accepted by the majority. It has already been necessary to modify

the rule restricting preferences, so that the European Iron and Steel Community can function effectively. Moves to impose tariffs, even nominally preferential, against various foods have threatening implications.

CURRENT COIN

Tax Reform in Asia.—A group of 42 financial experts from 17 Asian and non-Asian countries who attended a six-day conference on the financing of Asian economic development, held under ECAFE auspices in Bangkok recently, expressed the opinion that tax systems in many Asian countries should be overhauled and tax administration simplified and improved. Though Asian tax rates are "not unduly low", tax yields are much below those in developed countries—less than 10 percent of national income as against 25 to 40 percent. Private savings are inadequate to sustain the necessary rate of investment. For some time to come, public finance will have to carry the burden of the financial burden of Asian economic development; but to do this, increased tax revenue will be required. Throughout the discussions considerable emphasis was placed on the "unsatisfactory nature of tax administration and tax enforcement." It was also recognised that an improvement in "tax morale" would raise tax yields. In this connection it was suggested that village development schemes should be clearly linked with local taxation systems so as to demonstrate to the taxpayer as graphically as possible the benefits of tax payments to him and to his community. Better public information on tax matters would be "extremely desirable" and "relatively inexpensive", it was suggested. The experts paid particular attention to the possibility of raising the yield of rural taxes. They felt that agriculture was benefiting from the advance in economic development in the form of higher agricultural productivity, higher incomes, and an increase in land values. They suggested therefore that efforts be made to ensure a larger flow of tax payments from agriculture through land taxes or in some other form of taxation, including the supply of free labour or gifts of land for road building.

Revenue systems in Asian underdeveloped countries are characterised by the comparatively small proportion of national income which they collect. Generally, there is a heavy dependence on indirect taxes—in contrast with most advanced countries where taxes on income and wealth form a large part of revenues. The most important of the indirect taxes have been customs duties. The general opinion concerning income tax was that no large opportunities were likely to arise in the next few years to "extend income tax beyond its present limits." However, income tax yields could be increased substantially by better administration and improved collection. The experts suggested that governments give serious consideration to the question of tax reform and that with this end in view statistical data be prepared and studies made. To encourage private savings, additional incentives should be given and new and better savings institutions established. The experts felt that taxes in most Asian countries were not so high as to discourage foreign capital. ECAFE's working party of financial experts met at a time when almost all governments in the region are keenly interested in the question of how to raise revenue to increase the rate of investment and economic development. It is generally recognised that a considerable increase in private and public savings in Asian countries is necessary to finance the investment activities that are essential to employ the increasing population and to secure a modest rise in incomes without inflation. The importance of public savings is all the greater because of the inadequacy of private savings and the difficulties in the procurement of foreign capital. While it might be possible to increase public savings, mainly through higher tax yields, the prospects for increased private domestic savings and a larger inflow of foreign capital are considered problematical.

State Finance Corporations.—While West Bengal is preparing a bill to establish an Industrial Finance Corporation which it hopes to introduce during the next Assembly session, a commercial body in another State—the U.P. Merchants' Chamber—has drawn up certain tentative proposals for a similar corporation in U.P. Describing the need for such a body as "an inescapable necessity", the Chamber's memorandum states that the resources of the finance corporation should be not only elastic but also large. Its authorised capital could be fixed at Rs. 5 crores but the issued and subscribed capital should not be less than Rs. 2½ crores by the time it is three years old. Provision should also be made for the Corporation to float debentures, with the U.P. Government guaranteeing interest payments and redemption. The latter should also guarantee a minimum dividend of 3½ percent on paid-up capital for some time. The memorandum urges that the Corporation be run as a purely business concern and be subject to no political influences. At least 51 percent of its issued capital should be taken up by the Reserve Bank and the U.P. Government jointly, and they should nominate the managing director as well as four

of the other seven directors. The chairman of the board of directors should be chosen by the State Government from among well-known industrialists. According to the Chamber's proposals, the corporation would give long- and short-term loans to medium-sized industries but the financing of very small industries would be outside its scope. No borrower would be advanced more than 1½ percent of the total resources at any time; a percentage ceiling would also be fixed for advances to particular classes of industries. All advances would be fully secured and if time obligations are not fulfilled the Corporation would have the right to take over the borrowing unit. A final safeguard is that none of the Corporation's directors would have any interest, direct or indirect, in the units it helps.

Electronics Research Institute.—The Central Electronics Engineering Research Institute—whose foundation stone was laid by the Prime Minister, Mr. Nehru, at Pilani on Monday—will be the latest of about a dozen national institutes that have been started under the auspices of the Council of Scientific and Industrial Research during the last five years. This rate of progress, as Maulana Azad said in his speech which was read on the occasion, cannot by any standard be considered slow, "especially if we remember that each of the national laboratories has conformed to the highest standards and compares favourably with similar institutions in any part of the world." Electronics is one of the younger branches of science and technology; it is concerned, Dr. S. S. Bhatnagar stated, "with the free or controlled movement of electrons in an exhausted or gas-filled container or a tube." Its most widely known use is perhaps in radar equipment but it is also employed in other forms of wireless communication: in power engineering and metallurgy; and in making highly accurate physical measurements and calculations. In large-scale industry, electronic devices have facilitated automatic control, mass production of parts and their quick gauging and checking. They form the basis for timing devices and with their aid it is possible to make the whole process of welding automatic. Besides being quicker, electronic control permits uniformity of operation and introduction of refinements. One of the most significant of recent advances that Dr. Bhatnagar mentioned is the development of "transistors" in which the use of tiny flecks of germanium with spider-like wire legs "bids fair to bring within the realm of possibility wrist radios, portable television sets and straight musical instruments. . . . Its has been claimed that with the aid of transistors it will be possible to reduce the size and weight of our familiar communication devices to a fraction of their present size with striking reductions in power consumption and improvements in reliability and length of life." As compared to other countries, Maulana Azad stated, India unfortunately has little to show in this field. Research in radio and electronics has been confined to a few centres like the Calcutta University Institute of Electronics, the National Physical Laboratory, New Delhi, and the Tata Institute of Fundamental Research, Bombay. The Pilani Institute will operate on a relatively modest scale and will conduct research on the utilisation of indigenous raw materials and evolve processes on a pilot plant scale to see if they can be used to make reliable and quality components. It will conduct investigations on the development and application of electronic circuits for use in improving industrial efficiency, build standard electronic instruments for test purposes, develop special radio circuits, make electronic apparatus for medical needs, conduct experiments on communications, radar and other equipment, and develop and build acoustic instruments. The Institute will also undertake projects sponsored by industries or initiate investigations. It will ultimately have sections dealing with electronic circuits; communication equipment; industrial electronics; electronic components; thermionic valves; electronic instruments; medical apparatus; acoustics-audio equipment; theatre and studio equipment; and very high frequency equipment. The Birla Education Trust has donated Rs. 2½ lakhs non-recurring and Rs. 50,000 recurring for the Institute.

Increased U.S. Investment.—Heavy expenditure planned by American industry for plant and equipment reflects increased confidence in the nation's business future, says a U.S. Government report. The Commerce Department and the Securities and Exchange Commission reported last week that investment in plant and equipment during 1953 will reach \$27,821 million. This would be a gain of five percent over last year's previous record high of \$26,455 million. This year's planned investments by American industry also exceed the total contemplated by the same businesses earlier this year. The agencies indicated that American business plans to spend \$14,400 million on plant and equipment during the last half of this year. Public utilities planned to spend \$4,400 million this year. This is 15 percent above the rate for the last six months of last year. Manufacturers are expected to increase their expenditure about six percent to \$12,700 million. Non-durable goods industries show the largest increase in this category. The chemical, electrical machinery and beverage industries showed the

largest gains, ranging 20 percent or more above last year. Significant gains also were shown by non-electrical machinery, paper, petroleum and fabricated metal products companies. Small increases were shown by the mining and commercial companies, while railroads were the only major group expecting a significant decline from last year—about seven percent.

Industrial Disputes in July.—Provisional statistics of industrial disputes for July 1953 show a decrease in the number of disputes, workers involved and man-days lost as compared with the previous month. The total number of disputes was 79, involving 43,713 workers with a resultant time-loss of 108,346 man-days. The average duration of disputes during the month came down to 2.5 days from 3.1 days in June. Five of the disputes resulted in lock-outs, affecting 1,710 workers and accounted for a time-loss of 8,210 man-days. Four of these were in West Bengal and one was in Madras. Apart from strikes and lock-outs resulting from industrial disputes, there were seven work-stoppages not connected with industrial disputes. These involved 60,700 workers and resulted in a time-loss of 150,607 man-days. One of these was in Bombay and the rest were in West Bengal. Sixty-four disputes ended during the month, of which 50 lasted for not more than five days each. Wages, allowances and bonus were the main points of dispute in 21 cases while grievances relating to personnel alone accounted for 31 disputes. Fourteen disputes ended in complete or partial success for the workers and in 18 disputes they were unsuccessful. In 27 cases, the result was indefinite and in five cases it was not known. Among the States, West Bengal, as in the previous month, accounted for the largest number of disputes and the highest time-loss. Compared with the previous month, West Bengal, Bombay and Madhya Pradesh showed fewer disputes and lower time-loss. Though Madras recorded a higher number of disputes, the resultant time-loss was appreciably less as compared with June, 1953. Among industries, cotton textiles accounted for the largest time-loss. Reduced time-losses were recorded during the month in cotton, jute, engineering, iron and steel, food, drink and tobacco, chemicals and dyes, ports, plantations and miscellaneous industries. The jute mill industry, which over 70,000 man-days in June, accounted for a little less than 10,000 man-days during July. Industries which showed increased time-losses were "other textiles", paper and printing and mines.

U.S. Wool Market.—According to an article distributed by the International Wool Secretariat, American raw wool prices during the current season have recovered from the low levels reached in 1951-52 but any further rise is restrained by competition from synthetic fibres. Compared to pre-Korean war rates, fine wool prices are about 20 cents higher on the primary markets while crossbreds are about the same or slightly lower. In the Boston market, fine wool prices are about the same as before the Korean war while crossbred rates are slightly less. Boston is lagging behind the primary markets because the recovery in U.S. consumption, though steady since the middle of last year, has been slower than in other consuming centres. A director of the Wool Bureau Inc. some time ago estimated net import requirements this year at 176 million lbs. of apparel wool and 166 million lbs. of carpet wool, clean basis. The estimate is complicated, however, by the uncertain disposition of the estimated 42 million lbs., clean basis, of apparel wool acquired by the Commodity Credit Corporation under the 1952 loan-support programme. Mill consumption and imports of apparel will continue substantially above pre-war levels. Imports have accounted for an increasing share of mill consumption. In 1951 and 1952 this trend partly reflected the non-competitive price structure of domestic wools under the loan support programme rather than true foreign wool requirements. The rise in imports during the first two months of 1953 was accompanied by a sharp shift from the British Dominions to South American suppliers. Virgin wool and other animal hairs are accounting for an increasing share of total fibres consumed in wool textile mills. This is a reversal of the trend since 1948. Synthetic fibres other than rayon and acetate are being reported separately from "other fibres" for the first time this year. They accounted for 3 percent of all fibres consumed in January and February combined and represented 3.4 million lbs. Manufacturers' new orders for apparel fabrics are rising. These are unsupported by any significant volume of government orders and point to a rise in production of apparel fabrics and consumption of apparel wool in the period ahead. The recent rise in civilian fabric production did not entirely offset the decline in government business, which is expected to continue at fairly low rates. The current rate of wool consumption for both carpets and clothes is not seriously affected by synthetic fibres competition. Men's tailored clothing of all types has increased sharply compared with early 1952. Rayon and other synthetics continue to make sharp inroads in the summerweight suit market.

Without Prejudice

BARGAINING POWERS OF
UNION SECRETARY
COMPROMISE WITH EMPLOYERS
CHALLENGED

(FROM OUR LEGAL CORRESPONDENT)

THIS case relates to an application to quash an award under the Industrial Disputes Act on rather novel grounds and is of interest to all who have dealings with secretaries of trades unions, especially in regard to compromises arrived at between employers and workmen, the latter being represented by their union secretary where an award is made in the terms of the agreed compromise and is subsequently sought to be set aside by aggrieved workmen or a workman alleging that in agreeing to the compromise the secretary exceeded his authority and went beyond the instructions given him by the workmen.

It is an obvious truism to say that the law of Master and Servant has been revolutionised by industrial legislation since 1947. All the same, one has to emphasise the platitude because though the law, as it is today, is becoming more and more clarified, thanks to the Supreme and High Courts, yet in considering any new point not covered by a previous judicial decision one is always dubious about giving any definite opinion, not being certain as to how far the old law has been abrogated in favour of the new and elastic principles stabilised, or in course of stabilisation, by the Industrial Disputes Act.

A secretary of a union is the agent of the union members. That much, at any rate, is clear, whe-

ther under the old or the new dispensation. Whether his powers of binding his principals, i.e., the workmen, by his dealings with third parties are the same now as they were heretofore is another matter which this High Court judgement goes a long way towards deciding.

The general law of India in this respect derives from the old Courts of Equity in England and is, generally speaking, dependent, as to civil liability in dealing with third parties, upon the degree to which what the agent does is within the scope of the authority bestowed on him by his principal. If a principal either holds out or allows his agent, nevertheless, as the late Mr. Noel Barwell puts it in his masterly work on the subject: "The doctrine that a principal is bound by the acts of his agent in the latter's dealings with third parties only applies where what the agent purports to do, either is or reasonably appears to the third party to be, within the scope of the agent's authority." That is what is known as the doctrine of "holding out" which estops a man from avoiding responsibility for acts done in his name by asserting that, in fact, his agent had not the requisite authority. "But where an agent by deliberate neglect of duty to his principal or by some other conduct in fraud of his principal, and for his own purposes, plays into the hands of the other party to a contract which he is instructed to conclude on his principal's behalf, he is *ex hypothesi* acting wholly outside the scope of his authority; and no one dealing with him on that footing can be heard to pretend otherwise. For a man does not employ another to defraud him or to defeat his interests by concluding a collusive contract with a third party."

1. Barwell and Kar on Master and Servant, Vol. 1, 184
2. Ibid, p186

Perhaps, also Section 188, Indian Contract Act, is relevant to cases such as the present one. It provides that an agent having authority to do a particular act, *ipso facto*, has authority to do every lawful thing which is necessary to do such act, from which one concludes that if a union secretary is authorised by his members to bring to an end an industrial dispute by effecting a binding compromise, he would after effecting the settlement be entitled to make it binding by filing records and proceedings and consenting to and securing the registration of an award by the Tribunal without consultation with his principal. But all this reasoning is based upon the pre-1947 law of Principal and Agent and we will now consider in the light of a particular dispute how far it is consistent with the more elastic, *ad hoc*, rough and ready standards which—writing with due respect to most benevolent intention—appear to characterise the law of industrial disputes.

With these preliminary observations intended as a "refresher" on the general law of the land we now come to the facts.

Mr. A. P. Simon, if one may say so without intending any disrespect to him, appears to be one of those gentlemen of whom every club, company, institution or other association of individuals joined together for a common purpose, possesses at least one example. The gentleman who like the late Mr. Stalin possesses the unique faculty of invariably saying "no", who, when the remaining 99 are unanimously agreed upon a certain course of action, raises a lone but resolute voice and hand against it. Mr. Simon purported on behalf of himself and other workmen to object to the compromise, and the subsequent Tribunal award based on it, effected by the secretary of his union between his and some 21 other employers and their employees. But, in fact, not one single other member of his union supported his application and it is to Mr. Simon alone that we are indebted for the elucidation of an important practical point. For Mr. Simon was enabled to employ counsel and his intervention brought in sundry other counsel, including the Advocate General, in support of the secretary and the validity of the award.

We need not concern ourselves with Mr. Simon's allegation that the impugned portion of the award was brought about by the fraudulent representation of the secretary since no particulars of the alleged fraud were given and the charge therefore fell to the ground. What we want to get at is the principle involved. Can an award be quashed by the High Court, if in arriving on behalf of the workmen at the compromise afterwards embodied in the award the secretary to the union acted in excess of the authority conferred on him by the workmen? We will take it for granted, as the Court did (without so deciding and of course it was strongly denied by the secretary), that he did so exceed his authority, though not fraudulently nor with the connivance of the employers or anyone else.

Said S. Iyer J. "Assuming all that is stated by the petitioner in his affidavit is correct, it will only amount to an internal or inter-corporate dispute between the petitioner as a member of the Union and respondent 2 as its Secretary. Such a dispute cannot form the subject matter of an application for a writ in the High Court.... It is not alleged by the petitioner that respondent 2 (the Secretary) was not authorised at all to enter into a compromise of any description. If he was authorised or otherwise entitled to enter into a compromise, the circumstance of his having exceeded the limit of his authority if he confines himself within the subject matter of the compromise and other parties dealt with him as representative of all the members of the Union in ignorance of any limitation placed on the authority of the representative it cannot be contended that the act of the representative is invalid and (that) anything done by him outside the limit of his authority, though relating to the subject matter in which he was authorised to act is *ultra vires* and (that) the adjustment entered into between the employers and the employees under the circumstances would be of no effect.... Whether respondent 2 (the Secretary) acted otherwise than properly in the matter of entering into the compromise need not be considered in this case, because, as stated already, assuming he did exceed the limits, if any, placed upon his action, the other party and the Tribunal not being aware or even alleged to have been aware of any limitation on the powers of respondent 2 their act and the result of their act is good and binding on all alike. The petitioner may, if so advised, seek whatever remedy he may be entitled to against respondent 2 for his grievance whose reality will be the subject matter for consideration in and by the appropriate forum before which it may be raised. There is no ground for interference with the award passed by the Tribunal". [A.P. Simon v Central Government Industrial Tribunal A.I.R. 1953 (September), 380.]

WORLD COCOA CONFERENCE

The seventh World Cocoa Conference organised by the Cocoa Chocolate and Confectionary Alliance Limited, which was held in London, closed on 17th September. The talks which were of a highly technical nature were held in private and were attended by nearly 300 delegates from the major producing countries and from Australia, Belgium, Colombia, Denmark, France, Japan, Holland, New Zealand, Norway, Sweden, Switzerland, the United States, Venezuela and Western Germany. The papers presented included reports on world supply and demand, production in Malaya, New Guinea and Brazil and the preparation and quality of cocoa, production and disease control in West Africa.

September 24, 1953.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

NEW STERLING RATES FOLLOW
BANK RATE CUT

Wednesday, 23rd September.

CONDITIONS have been quiet in Calcutta this past week, with the demand for money slackening somewhat. Rates however are unchanged in the interbank market, at 2½ percent. Sugar advances are still falling satisfactorily, and the jute mills are not borrowing fresh funds on any scale. Easier conditions are also reported from Bombay.

There have been few export bills showing since the reduction in the Bank of England rate was known on Friday, for merchants were awaiting the change in sterling rates that followed in consequence of the reduction of the discount rate in London. The new rate, effective from today, are T.T. and O.D. 1s 5 3/32d; three months' sight bills 1s 6 7/32d and four months' sight bills 1s 6 9/32d.

Sterling has been stronger against the dollar, and the U.S. dollar rate has also been reduced by a half to Rs. 478. Remittance has been small.

Tenders for the offer of Rs. 14 crores of three-month Government of India treasury bills amounted to Rs. 1,95,50,000 this week. Tenders at Rs. 99.66 percent were accepted in full and those at Rs. 99.3-3 percent allotted approximately 69 percent, the average rate of acceptance being Rs. 2.68 percent per annum. Tenders for another Rs. 14 crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 18th September, treasury bills for Rs. 2,89,75,000 were sold in favour of the Reserve Bank.

Silver ruled quiet last week and the price fell from the previous week's level of Rs. 157-6 to Rs. 153-12, quoted today after bouts of intermittent short-covering. The weakness was attributed to long liquidation and larger arrivals. The ready rate was also at par with that of forward. The price was, however, unchanged at 74d. in London and at 80½ cents in New York.

Although gold was comparatively steadier on good offtake of ready stocks the price reacted from Rs. 87-13 to Rs. 87-3 at the close in sympathy with silver. The sovereign at Rs. 58-9 showed a loss of 3 annas.

Sharp falls of Rs. 2.48 crores and Rs. 11.57 crores in the total note issue and notes in circulation to Rs. 1,114.94 crores and Rs. 1,081.61 crores were outstanding features of the return of the Reserve Bank of India for the week ended 18th September, 1953. The contraction in currency was duly adjusted by reducing rupee securities by Rs. 3.48 crores to Rs. 421.42 crores and raising rupee coin from Rs. 94.35 crores to Rs. 95.35 crores. Notes held in the Banking Department, consequently, rose by Rs. 9.10 crores to total Rs. 33.33 crores. Deposits of the Government of India improved by Rs. 9.42 crores to Rs. 137.23 crores due to good tax collections, while other Government accounts diminished by Rs. 2.55 crores to Rs. 17.30 crores. There was also a fall of Rs. 55 lakhs in balances of commercial banks to Rs. 48.77 crores. Balances held abroad were fractionally down by Rs. 11 lakhs to Rs. 144.51 crores. The item of other loans and advances rose from Rs. 11.27 crores to Rs. 11.60 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 45 lakhs. Investments at Rs. 88.62 crores disclosed a rise of Rs. 48 lakhs. There were no ways and means advances (Rs. 4 lakhs).

The statement of the position of Scheduled Banks for the week ended 11th September, 1953, discloses Demand and Time liabilities at Rs. 526.79 crores (Rs. 13.83 crores on account of borrowings from Banks) and Rs. 330.34 crores (Rs. 2.07 crores) compared with Rs. 528.59 crores (Rs. 13.81 crores) and Rs. 330.56 crores (Rs. 2.22 crores), respectively in the previous week. Cash and balances with the Reserve Bank have diminished by Rs. 1.39 crores and Rs. 1.10 crores to aggregate Rs. 30.54 crores and Rs. 48.01 crores, respectively. There is a rise of Rs. 1.19 crores in investments to Rs. 329.15 crores. Advances and bills discounted at Rs. 467.74 crores reveal a drop of Rs. 6.15 crores. The ratios to total liabilities of cash and balances and advances and discounts are, in consequence, shown at 9.2 percent and 54.6 percent against 9.4 percent and 55.2 percent.

The return of Imperial Bank of India for the week ended 11th September, 1953, shows a drop of Rs. 1.81 crores in total deposits to Rs. 205.71 crores. Investments in Government Securities are up by Rs. 1.26 crores to Rs. 81.51 crores, while other authorised investments remain unchanged at Rs. 10.54 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 2.35 crores and Rs. 1.38 crores to aggregate Rs. 85.72 crores and Rs. 17.01 crores, respectively. Cash and balances are, in consequence, shown at Rs. 22.00 crores or Rs. 3.30 crores less.

Grindlays Bank Limited, the old-established bankers with headquarters in Whitehall, London, are to open a branch in Salisbury, Southern Rhodesia, towards the end of October.

The Bank considers that the coming of Federation is a propitious time to commence operations. The branch at Salisbury is the first of a series to be opened in the Rhodesias.

LONDON FINANCIAL LETTER

THE WEAKNESS OF STERLING

ABOUT the middle of September the spot rate for sterling fell below the official parity, \$2.80, for the first time this year. That the rate should still be in the neighbourhood of parity after a decline lasting for weeks was, however, sufficient testimony to the strength built up during the year. To put it another way, it was gratifying that the pound should be much nearer to its middle rate than to its lower limit at a time when it is traditionally at the year's weakest. For the movement of rates is following a seasonal pattern now that most commodities—even those involving dollars—have been returned to private trade. The authorities, confident that the weakness was temporary, could have supported the pound by selling dollars, but their consideration for the dollar reserve is approved in the City.

The decision to pay off the interest-free Canadian loan of 1942 out of the gold and dollar reserve over five years (interest of repaying from the redemption or sale of British-owned Canadian securities, over about 10 years at the recent rate) was welcomed here as a sign that the authorities' anxiety about the reserve was really relaxed. (Besides, it enabled the ban on "switching" Canadian securities to be withdrawn.) The new charge on the reserve, \$39 million this year and \$30 million annually in the subsequent years, is by no means insignificant; and it is charitable to assume that the British authorities would not have committed the sterling area's reserve to this obligation—even in so worthy a cause—if it had not been confident that the reserve was or would soon be adequate for normal purposes—if not as a support for convertible sterling.

Japan's treatment of her sterling problem is in marked contrast. Some months ago it was thought that Japan was reluctant to offend the donors of "aid" dollars by converting them into sterling, but it has since become obvious that Japan has simply no intention of paying with convertible currencies for goods imported from countries whose currencies are inconvertible. Yet her shortage of sterling can no longer be accepted as temporary. The arrangement whereby, in effect, short-term sterling credits were granted against dollars as security was supposed to be reversed from the beginning of August, but it had to be extended to the year-end, with the credit limit raised. Japan is not the only country to turn to the International Monetary Fund for sterling credits—needed in this case not only to repay the London credits but also to cover a further prospective deficit next year. But all this manipulation would be unnecessary if Japan would exchange some of her relatively abundant dollars; as presumably she would be willing to do if sterling were convertible. Sterling would be appreciably stronger in the exchange market if such conversion were affected.

Slow Progress in Washington

London's interpretation of the meetings of the International Fund and Bank in Washington was that the sterling area would have to "go it alone" if serious progress towards convertibility of currencies was intended. The brave plea by the Bank's president that America should relax restrictions as the next move was not supported by the U.S. Treasury's representatives, who seemed surprisingly confident that the outside world could proceed towards the desired objectives without any change in American policies or actions.

London's attitude to the problems is realistic. It is accepted that the thousands of millions of dollars that the Fund has already available will not be used in 1953-4 to support convertible currencies, and that there is not the slightest assurance that these resources will be supplemented, say a year hence,

What is NEWALLS 85% Magnesia?

It is a blended mixture of not less than 85%, by weight, of Pure Hydrated Carbonate of Magnesia. The balance is made up of high quality Asbestos fibre.

Why is NEWALLS 85% Magnesia so efficient?

Because millions of crystals in each cubic inch trap an infinite number of "dead" air spaces. These reduce heat transmission most effectively.

Why is NEWALLS 85% Magnesia cheaper?

Because its covering capacity is very high (one ton applied evenly 1" thick over a flat surface will cover 2,200 sq. ft.) and because its higher efficiency results in a higher saving of heat. And heat costs money!

Manufactured by NEWALLS INSULATION CO., LTD.

by the American Treasury. Interest in convertibility is not diminished in London, but the inclination here is to regard it rather as a desirable achievement for sterling than as an international endeavour to expand commercial intercourse. But it is well understood that the sterling area's gold and dollar reserve, notwithstanding its consistent recovery over nearly a year, is still hopelessly inadequate to bear the strain of fluctuations in the currency. If the sterling area has to "go it alone" it will have to go a long way slowly.

Revival of the Bullion Market

Shortage of sterling has lately been apparent in another, and rather unexpected, quarter. Sale of ores and precious metals by the Soviet Union to supplement earnings from ordinary trade is not a new development, but it has been particularly prominent recently on account of large shipments of silver to London from across the "iron curtain." Now that Russia is buying food as well as raw materials and capital goods from the sterling area, the current problem of "east-west trade" is how to pay for these sterling exports. The importance of the "strategic list" has correspondingly diminished. On the other hand, it appears that if "strategic" restrictions were relaxed Britain could expect a further welcome inflow of precious metals.

These recent imports of silver—their value, evidently, runs into millions of pounds—are approved here for several different reasons. There is no doubt that most of the metal has found its way into the authorities' hands, where it is needed, ultimately, to repay the 88 million ounces of silver acquired from the U.S.A. under lend-lease. (The further 220 million ounces borrowed by India has been guaranteed by Britain, but India intends to repay it herself.) However, a fair quantity of this Soviet silver has been re-exported, particularly to

the Belgian mint. It is clear that London could do again, as formerly, a big entrepôt trade in the precious metals if the bullion market were free to buy and sell on ordinary commercial principles.

There are evident possibilities for a substantial increase in the turnover of gold in this centre, but the market cannot hope to regain its former eminence while it is impossible to buy gold from non-sterling producers or in the free markets. It is possible that in this sense the Soviet Union's shortage of sterling can be turned to good advantage; for there is little doubt that the Russians would be willing to sell gold in London to pay for desirable imports from the sterling area; and the prospect of receiving such gold may induce the authorities to withdraw from the bullion market restrictions which the City considers as outmoded.

LESLIE BERRY, O.B.E., who was drowned in the Teesta near Rungpo last Saturday while rescuing his wife from the same fate, had had a distinguished Indian career that began in 1937 as Calcutta Manager for the United Steel Companies and ended as Calcutta Manager for the Metal Box Company. Berry was a highly qualified metallurgist and he served the Government of India during the war as Deputy Iron and Steel Controller, with a short period as Staff Major attached to the Engineer-in-Chief's Branch in charge of military steel quotas. It was in recognition of these services that he was honoured in 1944. He joined the Metal Box Company in 1947, with whom he had proved a singularly successful executive. Last week-end's tragedy occurred during a fishing trip, when Mrs. Berry was dragged into the river by her dog, which she was holding on a leash. Berry immediately went to her rescue, and no one who has ever seen the Teesta after heavy rains in the mountains will underestimate the magnificent efforts he must have made to get her to safety on a rock in the torrent. By that time, however, he was caught in the current himself and swept away. A courageous death for a man who will be much missed.

India and Asia bulked large in Mr. Adlai Stevenson's report on his recent world tour, made primarily for the benefit of last week's Democratic Party gathering in Chicago but televised and broadcast to the entire American radio public. Whatever suspicions India may entertain over Mr. Stevenson's visit to Kashmir, no one will gainsay his ability to throw a clear light on world problems and his talent for the simple presentation of great issues to his own countrymen. At the moment American stock in India is understandably low and it is perhaps as well that Americans in their own country should understand that it will take quite some time to recover. Few of us here will quarrel with Mr. Stevenson's dictum that there are now three worlds—the Allied world, the Communist world and the "uncommitted world", the last mainly in Asia where people are only too often hungry and poor, sensitive and proud in the midst of civilisations which are old and economies that are shaky. That Mr. Stevenson also added rampant nationalism and weak public administration to his picture of the Asian scene does not invalidate its essential accuracy. That third world, looking directly neither to Moscow nor to Washington, "huge, uncommitted India" was leader among the nations which do not accept the thesis (which seems to be the central point of Mr. Dulles' several foreign policies) that everyone has to choose sides in the present battle of ideologies. Mr. Stevenson recalled America's own persistent record of neutrality and non-involvement in the twentieth century, a condition which few Asians appreciate but of which most adult Europeans have long and mixed memories. "Patient persistence," he said, was the only technique by which peace and stability could be attained. All these things greatly needed saying, and Mr. Stevenson put them over to a vast audience of his countrymen with that eloquence and understanding which has made him the outstanding interpreter of many of the surviving policies of the vanishing New Deal era.

In opening Thursday's foreign affairs debate in the House of the People, Mr. Nehru replied with some tartness to the U.S. Secretary of State's recent misplaced allusion to "the price of neutrality". The Prime Minister's rebuke was no more than the occasion required and if American policy is to

A DITCHER'S DIARY

consist of rewarding political good behaviour by a reserved seat in the stalls at international conferences it will find little support in Asia. It is only too clear that India's exclusion from the Korean peace conference—if and when it ever meets—was not the price of neutrality but a large part of the high price which the State Department has had to pay for the slippery acquiescence of Mr. Syngman Rhee in the military truce and the projected conference. Though it was always clear that Mr. Rhee would drive a hard bargain over the truce and the conference, and that American policy would be heavily strained to meet his demands, it scarcely becomes Mr. Dulles to shelter himself by hectoring India, and no one will be surprised at the asperity of Mr. Nehru's reply. It is this kind of manoeuvre which makes American policy so difficult of understanding in Asia and creates precisely those misgivings against which Mr. Stevenson inveighed with much force at Chicago a few days ago. Put at its lowest—and in the terms of crude power politics—the case for having India at the Korean peace conference is that, if a settlement were happily to be achieved, it would regulate the future relations of the West with a large part of Asia for a long time to come; that being so it would be in every respect a better settlement if it were underwritten, amongst others, by the Asian country which stands in closest relationship with the free world. And, indisputably, that Asian country is India.

The difficulties of carrying on in a blaze of publicity banking operations that are usually transacted in privacy have been realised by the directors of the Industrial Finance Corporation of India, and will no doubt be encountered by the State Corporations that are to be established in the near future. The Corporation naturally maintains privacy in its dealings with individual applicants for loans, but whenever its affairs come before Parliament the sniping begins by critics who imagine that a banking institution can render a public account of why it lends to this party and not to the other. If the Corporation were to announce, as was suggested in Parliament, the names and full details of applications it had rejected it would not stay in business for long, for prospective borrowers would realise that if they failed to get money out of the Corporation, their chances of getting it elsewhere would be gravely prejudiced. The interest Parliament takes in the Corporation's affairs is natural enough, because it is lending public money, but once you put public money to uses normally reserved for private business then you have to respect traditional commercial ethics, or you do more harm than good. I commend the very interesting address of Sir Shri Ram before the shareholders of the Corporation, which is published elsewhere in this issue of Capital, to those who have pondered the complexities of this problem. The Corporation's present difficulties began when it was negotiating a loan from the World Bank which would have greatly increased its usefulness to Indian industry. Formal sanction of the loan required amendment of the Act by which the Corporation was established, and this in turn required approval by Parliament. There followed a string of allegations some of which were worth further investigation but most of which were made by people who just had not realised that when Government goes into business it has to change its methods. The Corporation suggested appointment of a Commission of Enquiry, which has now it seems completed its labours and has

forwarded a report to Government. Meantime of course the loan from the World Bank has been held up, and by the time Parliament has amended the Act it will have been delayed a year, a year in which the large industries that the I.F.C. is meant to serve have been sorely in need of new capital funds. Sir Shri Ram deals very convincingly with the criticisms that have been urged against the institution, and is evidently quite confident that the Commission of Enquiry will find nothing of discredit to the managers of this large new venture.

One meets more American economists in India nowadays than ever before—though you have to be pretty quick to meet some of them because they make those whirlwind visits, flying in on Monday evening and flying out on Wednesday morning, that are part of the American way of life. A World Bank economist who leaves Calcutta this morning is a fair example. He arrived last Saturday and by Wednesday night had completed a study of the tea industry, and was off to "do" the cotton textile industry in Bombay. The surprising thing is that these experts really do succeed in learning a lot about an industry in their short halts, though of course they come well briefed and they are usually men who have given a good deal of thought to the problems of under-developed economies before they left home. But perhaps it is just as well that some of them can afford more time to make a close and leisurely study. We have two such among us now. Mr. Fred Shorter of the University of Stanford, in California, is here to make a study of the jute industry as a Ford Research Fellow, and to judge from the thoroughness with which I see him going about his task he will produce a welcome increment to the exiguous stock of literature that has accumulated about this great enterprise. Mr. John Edisson, who is a Research Associate at the Massachusetts Institute of Technology, is also carrying on economic research under the auspices of the Ford Foundation, and his field is the development of the Indian paper industry. Both these departments of enquiry are richer in new material than you might expect, because Indian and British economists seem to have spent so much time on the general problems that very little has been done on particular industries, with the exception of cotton.

Regarding the last entry in this diary last week I have received the following note from Capital's Legal Correspondent:—"I think Allan Laing has rather spoilt a good yarn by making it fictional. In fact it is a true story but the hero of it was a Scots Judge and not a Bishop, and the place Edinburgh and not Seville. I remember reading the real incident years ago in the Reminiscences of Frank Lockwood, Q.C., who was a genial and witty figure rather on the lines of Noel Barwell. Scottish Judges are given the title of Lord, off the Bench as well as on it, and they may, and often do, make it a territorial title, abandoning their surnames. But the wife's status is unaltered. Lockwood with his wife was visiting Edinburgh and registering at an hotel. He was, or pretended to be, shocked on reading the preceding entry: 'Craigmyle and Mrs. Fraser'. The manager explained that the lady was the judge's wife but did not take her territorial designation. Whereupon Lockwood wrote down his entry: 18 Porchester Terrace and Mrs. Lockwood."

THE DITCHER.

CUMMINS DIESELS make light work of TOUGH JOBS!

No matter what industry you are in—whatever the application—you will get maximum benefit from equipment powered by dependable Cummins Diesels.

Lightweight, high-speed Cummins Diesels (60—600 h.p.) give you engineering that is years ahead. The price you pay is a sound investment in quality... in profitable operation through outstanding performance.

Every engine is backed by an efficient parts and service organization to serve you everywhere. Inquire today!

Chairman's Speech

INDUSTRIAL FINANCE CORPORATION OF INDIA

SIR SHRI RAM REVIEWS A YEAR "OF COMPARATIVE ECONOMIC STAGNATION"

Speech delivered by the Chairman, Sir Shri Ram, at the Fifth Annual General Meeting of the Shareholders of the Industrial Finance Corporation of India, held on the 19th September, 1953.

As the necessary quorum is present, we may now commence the proceedings of this meeting.

The first item on the agenda is the consideration of the annual accounts and of the report of the Board of Directors on the working of the Corporation during the year. As printed copies of the accounts and of the report have been before you for some time, and have been circulated to all shareholders, I shall, if you agree, take them as read, and shall confine my observations today to a few points in the accounts, and to certain important aspects of the working of the Corporation during the year.

The gross profit during the year under review was Rs. 23.16 lakhs as against Rs. 17.48 lakhs in the previous year; and the Corporation has paid for the first time in the five years of its working, the guaranteed dividend of 2½ per cent on its paid-up capital without drawing any subvention from the Government of India. The Corporation is not aware that it will be possible for the Corporation to reduce its rate of interest on loans, at any rate, in the near future. Apart from anything else, the Corporation has to return to Government quite a large sum of money, namely, about Rs. 27 lakhs, received by way of subvention, to enable the Corporation in the past to pay the guaranteed dividend. This alone may take some years, and it is, therefore, premature to devote further thought to the matter now.

The first half of the year under review was, as you are aware, featured by an economic recession, which, from one aspect, may be viewed as the first healthy break from the unhealthy post-war boom. Failure of rains and consequent famine in many parts of the country, curtailment of electric power, and shortages of railway facilities added to the difficulties. Speaking in a general way, however, I would say that the year was one of comparative economic stagnation. A buyer's market had definitely displaced the seller's one; and industrialists were, therefore, hesitant about setting up new industries; on the other hand, they had to make their existing concerns efficient and profitable. They were inclined, therefore, to seek loans mainly for renovation of machinery and for making their units economic by suitable expansion. It, therefore, happened that with the exception of two applications, which covered new lines, all the 74 applications for loans received by the Corporation during the year were for funds for modernisation of machinery or for expansion of existing units. The loans asked for were also for moderate amounts, and the sum of Rs. 25 lakhs. I may mention that the cost to the Corporation is the same whether it deals with an application for a crore or a lakh.

The loans sanctioned by the Corporation from its inception to 30th June 1953, total Rs. 15.47 crores. Of this total, a sum of Rs. 2,30,00,000 has not been utilised for various reasons which I have mentioned in detail in my previous annual addresses.

I shall now deal with some general aspects of our functioning during the past year.

At our last annual meeting, I referred to a scheme we had in mind, viz. to employ, if possible, industrial consultants, each an expert in his own field, on the staff of the I.F.C. It is an ambitious scheme which can be worked up only gradually. Moreover, such specialists have mostly to be recruited from abroad. We have, however, appointed for the time being an Engineer of considerable experience. We are also strengthening our banking and administrative staff.

Some Criticisms Answered

I have tried every year to utilise this occasion to deal with complaints which the general public or our own clientele have voiced in regard to our functioning. One hardy annual in this category, viz., delays in the sanctioning of loans, has now become much of its force. Our clients now realise that, unlike short term loans on commodities and goods by commercial banks, to the procedure of which they are accustomed, our loans, given on the security of fixed capital, have not only to comply with various legal formalities, but should also be satisfactory as regards the merits of the schemes for which the loans are taken. Where an application for a loan furnishes all the requisite information and complies with the various legal requirements, the Corporation is able to arrive at a decision well within two or three months. In fact, the delays cause loss to the Corporation, because money borrowed by it remains idle, and the Corporation is therefore keen to deal with applications for loans as quickly as possible. With better knowledge on the part of borrowers of our requirements, these delays will be considerably reduced.

At this stage, I may, perhaps, refer to some of the difficulties experienced by industrial concerns in this country now-a-days. These difficulties fall under various heads, namely (1) high freight on raw materials generally (2) difficulties in some cases of supplies of raw materials (3) difficulties about supply of coal (4) shortage of electric power, particularly in Bombay and Madras, because of inadequate rainfall and (5) shortage of railway wagons generally and also of road transport. The causes of most of these difficulties are fairly well-known, and I can only hope that the responsible authorities concerned will be fore long to do their best to alleviate the difficulties.

Experience of our first few years' working showed us the need for amending the statute governing the Corporation in certain important respects, and particularly to enable the Corporation to borrow from the International Bank to increase the limit of loans to individual borrowers and to take over borrowers' concerns when necessary. In the course of the passage of the amending Bill through Parliament, certain allegations were made against the Corporation;

and we immediately requested the Government to appoint a Special Committee to enquire not only into the allegations but into the entire working of the Corporation. The Government accepted our suggestion and appointed a Committee of Enquiry, whose report and our comments on it have been for some time before the Government.

It may be asked whether such allegations as those made in the Parliament could not be prevented by publishing all the relevant facts not merely the names and amounts—about each application for loan, both those rejected and those granted, but in my opinion it would be gravely prejudicial to the applicants, whether successful or unsuccessful, to publish such detailed information about them and their business. Persons not familiar with banking may not realise that two seemingly similar cases may, in the end, have to be dealt with wholly differently for some important reason or other, the publication of most of which will be definitely harmful to the borrowers. It would be even more inadvisable to publish only the details about sanctioned loans, withholding information about rejected loans, for it would be easy for interested parties to know that certain applications had been rejected, and their prospects of borrowing from other sources will be jeopardised. From every point of view, the publication of names etc., whether of all cases or only of those in which loans have been sanctioned, will be inadvisable.

On the other hand, we appreciate the desire for close public supervision over an institution of this kind. This is already secured at present in many ways. Firstly, the Government nominates three directors, and the Reserve Bank of India two directors. Secondly, the Managing Director is appointed with the approval of Government. Thus, six out of twelve directors are practically Government nominees; and the other six represent Banks, Insurance Companies and Co-operative Institutions. Thirdly, there are two auditors one of whom is appointed by Government with the approval of the Comptroller and Auditor General. Fourthly, the Comptroller and Auditor General, has the right to inspect and audit, if he so desires. And finally, the Corporation works in the closest touch with Government, and does not, and will not hesitate to furnish to Government any information the latter may require.

Security of Loans

In the last resort, the success of an institution of this kind will depend on the right exercise of banking judgment, viz., its balancing the need for security of its funds against the duty of helping industrial development; and this must depend ultimately on the competence and adequacy of the staff of the Corporation and on the quality of its Board.

My colleagues are busy and important men with other heavy responsibilities; some as leading industrialists, some as banking and insurance men, some as Government servants and others in spheres of no less valuable work. At great sacrifice, they attend to the affairs of the Corporation, both as members of the Board and as members of the Executive Committee, some of them making frequent journeys from far off places. The contribution that they have all made to the work of the Corporation, has been of great value. We have so far been fortunate in having unanimous decisions on all matters, whether in sanctioning or refusing loans.

The exercise of a balanced judgment which is the essence of all banking transactions, and particularly in banking of our type usually leads to the adoption of a middle course. Such a course would always be open to criticism from opposite points of view as being either too lenient or too strict. The Corporation can be thought too niggardly and harsh or too easy-going, according as the critic is overenthusiastic about rapid industrial development or cautious and conservative. Again, it can be accused of charging too low rates on loans and neglecting the interests of shareholders and Government or of charging too high rates in order to pay good dividends. While well informed criticism is always welcome, the Corporation, if it is to survive, must adopt certain minimum standards of strictness in examining the merits of applications for loans and certain legal safeguards; and it is only to be expected that some of those whose applications have been rejected may make a grievance of it in public and make complaints against the Corporation.

As a rule, we tell applicants for loans in what respect their applications are not in order and if their fullest reasons for our inability to assist them, I am sure that if they receive such complaints merely read the correspondence between the applicants and the Corporation, they would get a true appreciation of the position. We have issued circulars to all chambers affiliated to the Federation of Indian Chambers of Commerce and Industry explaining the nature of our loans and in particular that we give loans for expansion and modernisation.

I make it a point during my tours, especially in Calcutta and Bombay, to find out informally from Commercial Bodies and associations whether they have any criticisms of our policy and our standards and have received no complaints so far. I made special enquiries from the All India Manufacturers Organisation at Bombay, which is particularly interested in the small industrialists, apart from its general interest in industrial development, and no specific complaint was made.

I do not, however, claim infallibility for us and our staff. The work that we have been doing is of a new type, at least in India; and we are not ashamed to confess that we have slowly felt our way. In the early stages, perhaps, we were groping, if not in the dark, certainly in feeble twilight. It is even possible that we may have made occasional mistakes, though

we have so far not discovered any. There may be some among the rejected applicants for loans who feel that we have been too strict. While we have throughout endeavoured to help deserving applications to the best of our ability, our main function is to help industrial development, and we have, in many cases, instead of rejecting applications, asked applicants to modify them so as to qualify for loans.

It is a point of the criticism that some members of the Board have interest in industrial concerns assisted by the Corporation in this country, with its limited economic, and more particularly, industrial development, there is a limited number of persons of sufficient status and experience, whether in Industry, Commerce, Banking or Insurance to enable the Corporation at all times to have a Board of Directors, one of whom will in any way be connected, actively or passively, not even as a shareholder with any of the concerns seeking loans from the Corporation from time to time. On the other hand, so far as I can judge, it will not be in the interest of the Corporation to run it without the guidance and counsel of persons experienced in Industry, Banking and Finance. With few industries and financial institutions and not too many persons of experience and standing, it is inevitable that most of these persons should be connected in some capacity or other with one or more of the concerns to which the Corporation is doing so at great personal sacrifice. Institutions of this kind involving the exercise of discretion by those in authority can work properly only in an atmosphere of trust and confidence.

Even as bankers, we have to take some risk; and though no bank will welcome the taking over of a borrower's concern and running it, for management of industry is a specialist and often whole-time job, such a contingency cannot be altogether avoided. Fortunately, we have not had occasion so far except in one case to take over a business concern and run it.

As you all know, we started the Corporation at a time of extreme shortage of capital in the country; and before long, the long drawn seller's market gave way to a buyer's market, which was aggravated by the fall of prices in the country. The Corporation, such a background, it is fairly certain that but for the help rendered by us, many industries which have taken loans from us could not have started the schemes, whether of expansion or of modernisation or of new lines, on which they have launched.

You will see from the Annual Report that we have arranged to sell further bonds of the face value of Rs. 2 crores, making our total bond issue Rs. 7,80,50,000. Together with our paid-up capital of Rs. 5 crores, we are not short of money, since existing commitments amount only to a little over Rs. 13 crores.

With the help of the Government, we arranged for a loan from the International Bank for Reconstruction and Development, and the terms were almost finalised last year by our Managing Director's visit to Washington. The loan, which is in the amount of \$10 million, is to be used in the course of consideration of which by Parliament, the Government has agreed to the Corporation's request for the amendment of the I.F.C. Act. In the course of consideration of which by Parliament, the Government has agreed to the Corporation's request for the amendment of the I.F.C. Act. In the course of consideration of which by Parliament, the Government has agreed to the Corporation's request for the amendment of the I.F.C. Act.

Notwithstanding the definite emergence of the buyer's market, and the gloomy view taken by some as to the possibility of continued trade depression, I have every hope that in India in the coming years there will be both expansion and modernisation of existing industries, and also the setting up of new industries. It is also likely that, having regard to the heavy Government programme, industries will find it difficult to raise capital. I visualise, therefore, increasing scope for the Corporation's activities in the coming years, and I am confident that the experience gained so far by the Corporation will help it in meeting the demands made upon it. It should, I think, be not too difficult for the Corporation to raise funds as it may require from time to time, with the help of the Government and of the Reserve Bank.

Industry's Needs

Some people think that the Corporation has failed so far to take a broad view of the needs of the industrial development of the country, and particularly of industrially backward areas, and that it does not help in the dispersal of industries. But as we are a finance corporation and not a development corporation, we cannot act as promoters of industries, but can only deal with such applications as are made to us for loans against tangible assets. We have, however, not been indifferent to the needs of industries in undeveloped areas. The statement in Appendix A to our Fifth Annual Report will show that our loans are well distributed. Our policy has been in accord with that of Government; till the Five Year Plan appeared, we were guided by the Ministries concerned, and we now adjust our policy to the Five Year Plan. Our close contacts with the Ministries concerned will, however, continue.

Another criticism is that we have assisted only large industries, and have ignored the small and medium scale ones. While it should be remembered that the I.F.C. is meant primarily to serve the needs of large scale industries and that similar Corporations in States are meant to assist the smaller ones, it has also entertained applications from small industries provided they come under the definition of "industrial concerns" given in the I.F.C. Act. The Corporation has, for instance, given a loan of Rs. 50,000 to a small chemical works.

I have already referred to the shortage of capital in the country, to the reluctance of the industrialists to embark on new ventures and to the smallness of the loans applied for. On the other hand, it is

Company Meeting

THE JAY ENGINEERING WORKS, LIMITED

STEADY PROGRESS: SIR SHRI RAM ON THE EXPORT OUTLOOK

The following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of the Jay Engineering Works Ltd., on the occasion of the Annual General Meeting of the Shareholders of the Company, held in Calcutta on Sept 17, 1953.

Gentlemen, I am glad to say that the year ended March 31, 1953 has been one of slow but steady progress. It was a year not so very much of increased production as of consolidation and improvement of quality.

The depression of February-March, 1952 is known to all of you, inasmuch as it affected many industries, particularly engineering industries, adversely. The position of the lantern industry was particularly bad but we brought down our prices suitably and saved ourselves from heavy accumulations and subsequent loss.

I had told you in 1951 that our aim was not merely to make money but that we wanted to serve our country. We realize more than ever before that there are very few rich people in our country who can afford to buy costly things, and if we want to serve India, then we will have to manufacture and supply quality goods at prices which our countrymen can afford to pay.

Sewing Machine Prices

In view of this policy we reduced the price of our sewing machines also in July 1952, although it was not necessary to do so as we had ready sales, but the purchasing power of the people was going down, and we, without any demand from our customers and at a time when all other manufacturers of wellknown makes were, in fact, increasing their prices, reduced the prices of our sewing machines by Rs. 20 per machine. This reduction, I am glad to say, has been very much appreciated both by our sales people as well as by our customers.

During the year under report some unscrupulous dealers started the practice of importing, under the guise of spare parts, complete units of sewing machines to the detriment of the sewing machine manufacturers in this country on the one hand and the manufacturers of spare parts on the other. We are grateful to the Ministry of Commerce and Industry for taking timely steps for stopping the unfair activities of these people.

In said in my speech last year that we are steadily building up our export business and increasing our sales. You must have seen from the report in your hands that the sales that we made in 1951-52 was about Rs. 12 lakhs, in 1952-53 it was more than Rs. 16 lakhs. We are exporting to more and more countries every year, and we hope that the export value this year will be much bigger than what it was in 1952-53. We export our sewing machines, electric fans and hurricane lanterns to about 25 countries.

Shipping Charges

But as we try to get over one difficulty, other difficulties arise, and we now find that the shipping charges for about the same distance from India to various importing countries are much higher than from other exporting countries for the same distance to the countries to which they export. We are collecting figures for this purpose and will then approach the shipping companies, and also the Government to help us out of this new difficulty, so that our competitive capacity in the foreign markets may not be unfairly affected.

I have always held that if quality articles are produced and at reasonable cost, and if the Government, the manufacturers and the workers of this country help the export business with a single-mindedness, I see no reason why the light engineering industry in particular, and engineering industry in general, should not be able to build up a very good export market. To achieve this object it is necessary that the Government, the manufacturers and labour should put their heads together and should make up their minds resolutely to serve the country. The Government can help by carrying out low railway freight rates from the manufacturing centres to the port towns; providing steel, pig iron, etc., of proper quality and at particularly lower prices to the exporting engineering industries so long as these articles are controlled; giving help to the concerns who would produce special kinds of steel, and where import duties on raw materials or semi-finished articles are levied by either abolishing the same or devising quick and easy refund procedure.

Value of Co-operation

While on the one hand every effort is made to improve the quality of our products, every effort has been made and is being made to produce articles at decreasing costs to be able to stand in competition, and our efforts are gradually showing results. This is possible only because every one from the highest to the lowest has co-operated and contributed his might, and this is only due to our continued friendly relations between officers and the workers. In short, between all concerned. While we are striving to reduce the cost of what we make, it is our definite intention that nobody's income in our concern should go down; if anything, it should improve.

With the object of improving the quality of our products and reducing the costs we have installed a number of costly machines; for instance, amongst others, an up-to-date bright bar drawing plant and a die-casting machine.

We have also improved the working conditions in our various sections. In many of our departments the working conditions were not as good as one would have liked them to be, and I am glad that steadily the working conditions are being improved.

The whole assembly section has been thoroughly revised under an expert engineer from Germany. There are already improvements visible and soon things will be even better.

Fan Section

In the fan section the improvements have been indeed very marked and our de Luxe Fan is so much

in demand that, in spite of the increase in production, we have not been able to meet it. More or less the same applies to our other sections, i.e., sewing machines and hurricane lanterns.

Our mechanized foundry and tool room have become so popular, both for quality of work and prices, that we find it difficult to meet the increased demands from our customers.

These days there is great increase in the number of the unemployed. We are glad to say that in spite of our installing from time to time automatic and labour saving machines, we have never reduced the strength but in fact the total number of workers is higher today than at any time in our history.

The unemployment position has aggravated, as due to the lower purchasing power and higher cost of production a number of factories have found that they could not manufacture their goods at prices within the means of the purchaser. It is the low purchasing power and the high cost of production which has caused a number of factories to close down or to curtail production.

Economic Problem

It is not that there is superfluity of manufactured goods. As a matter of fact the consumption of various kinds of goods in this country is lower than in any Western country. The standard of living is far below what it should be, which means that the people cannot buy even the normal requirements. On the other hand there are unemployed people, which means that the work is there and the workless agencies and the two have to be brought together in a properly organized fashion. So far as either reduction in production or complete stoppage of production causing unemployment is concerned, may I suggest that there should not be only two alternatives, i.e., either complete stoppage of work and employment and starvation for the workers and losses to the employer due to closure, or full remuneration to labour and normal return to the employer. Surely, between these two extremes, there must be a via media, where both can make sacrifices so that the factory may not go out of production but produce goods at prices at which the consumer can buy, and to some extent unemployment may be reduced. It is a matter in which it is desirable again that the Government, labour and capital must sit together before damage is done or a particular unit has to close down causing misery and loss to all concerned.

In India generally, and in West Bengal in particular, the distress among the educated classes on account of unemployment is of a very serious nature. We in our own humble way have made a beginning and we already have amongst our workers over 160 who have studied up to and over either the Matric, Intermediate or B.Sc. and over 225 of the middle school standard, not to mention over 200 clerks. We are trying to help this class to an increasing extent.

We are also glad to say that we have devised a system for providing work to those men and women who are carrying out work in the factory camps at their homes. We are now providing work at their homes for over 200 persons, and intend to steadily expand in this direction for the benefit of all concerned.

Other Schemes

I had told you on previous occasions that we had introduced a scheme of getting suggestions from our employees. This has become a regular feature and is working extremely well. Quite a number of the suggestions made by our workers have been accepted and put into practice have helped in solving problems which had been baffling us since long and the Company has given them suitable rewards. We are rightly proud of such men.

Various types of new ideas, such as quality control, training within industry, time and motion study, handling of materials, etc., have been introduced and are being systematically attended to and are showing good results.

On the welfare side, we have built more than 200 additional houses for our workers, and a big theatre and meeting hall with sitting accommodation for over 400 persons. We have also built an up-to-date canteen.

We have various types of outdoor games, and I am glad to say that our football team this year has been an unbeaten group champion in the "B" division inter-office football league under the Indian Football Association. As a result our team has been declared runners-up, and promoted to "A" division inter-office football league.

On the indoor side, we have dramas and religious discourses etc.

Distribution Plans

I have told you on previous occasions that we are expanding our distribution arrangements, and I am glad to say that we have now selling arrangements either in the shape of our own branches or agents or sub-agents in India and outside in more than 600 places, and the network is steadily increasing. So far as our export business is concerned, we are extremely grateful to the Ministry of Commerce and Industry and their officers in India and in foreign countries for the very great help they unstintingly give us.

It is obligatory on our branch managers and agents to send their men to the factory for 2/3 months, where they are trained in the mechanism of our machines, whether sewing machines or fans, so that they may be able to provide efficient service to the customers, and the servicing arrangements are steadily being improved and expanded.

In the end, I thank you and I thank all those, particularly our two General Managers, Mr. B. S. Agarwal and Mr. T. R. Gupta and all my other colleagues, be they technical officers, supervisors or workers or those working in the office or sales, or in other sections, for their co-operation and help, and I hope that we will go on succeeding from one step to another.

WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

HINDUSTHAN GENERAL
INSURANCE SOCIETY LTD.

DR. N. N. LAW'S REVIEW

Gentlemen,

The Report of the Directors and the Audited Accounts and the Balance Sheet for the year ended 31st December 1952 have been in your hands for some time, and with your permission I propose that they be taken as read.

Before I come to examine the year under review I have to record with deep regret the passing away early this year of Sri Nalin Ranjan Sarker, the founder-Chairman of the Society. The many-sided activities of Sri Sarker who rose to an eminent position in both the political and commercial life of the country need not be recounted here. I should, however, like to recall with gratitude and to place on record the guidance and inspiration he provided to the Society from its inception and even in the midst of his multifarious important activities. Although Sri Sarker is no longer with us, his inspiration is there, and the best homage that we can pay to his memory is to put forward our best endeavours towards the fruition of his cherished great hopes about this institution in which each one of us can do his part.

As you may be aware, the year 1952 commenced with ominous symptoms of a post-war recession in business which seriously affected the outlook and prospects of commerce and industry in India, particularly by the suddenness of a slump in prices and its growing intensity during the first half of the year. Prices of a number of commodities in India which occupy an important place in her foreign trade received a serious set-back. In the first half of 1952, the fall in commodity prices was so sharp that the wholesale price index in Calcutta registered a drop

from 491 to 382 between January and March, the worst affected items being raw cotton, jute (both raw and manufactured), tea and oilseeds, the importance of which in the economy of India can be hardly overestimated. Jute faced one of the worst slumps in history and cotton trade met with a veritable crisis. Throughout the year at different points of time the main industries of the country, jute, textiles, mica and tea faced most perturbing reverses resulting, in some cases, in closure of some units. Both the volume and value of India's export trade showed a heavy decline and the tempo of the business activity of the country sank down to a much lower level causing and being caused by increased restriction of credit. It was only after the mid year that the deterioration was found to have been arrested to some extent as a result of the decrease in or abolition of some of the export duties, but on the whole the weakness in the undertone of general trade conditions has persisted almost throughout the year. What made the situation worse was that the level of wholesale prices declining at a rapid rate was not reflected in a corresponding movement of the cost of living indices, which, paradoxically, showed an upward trend. The rigidity of high wages has continued and resultant inflated cost synchronising with a lower level of prices could not but have a depressing effect on industry and commerce, despite the fact that production in certain industries was fairly well maintained and in some even showed an increase.

It was all but natural that such a set-back in general conditions of trade and industry should have its repercussions on the insurance business which thrives on them. It called upon your Society to exert itself to the utmost to overcome the difficulties and it is a matter of gratification to me to be able to say that despite the heavy odds our Society has acquitted itself well in its working during last year, as will be evident from its business figures. Direct business of the Society in India in the Fire Dept. went up from Rs. 6,54,000/- in 1951 to Rs. 6,80,000/- in the year 1952, marine premium income from Rs. 3,90,000/- to Rs. 3,94,000/- and miscellaneous accident from Rs. 4,77,000/- to Rs. 5,32,000/-. The increase is however not pronounced, but it is significant that in a period so difficult, the Society has been able to main-

tain the progress against most competitive conditions which are fostered by an attenuated scope of business.

Looking at insurance business by itself against the general economic background, a gradual stepping down of prices is, of course, a necessary feature of the transition from war-time economy to peace-time level, and insurance, as any other business, must share in this process. It is the adjustment of costs to prices that presents a problem in this transition, and this calls for the greatest circumspection for the avoidance of any steps under a theoretical bias so that the remedy may not prove worse than the disease. In this context the expense provisions of the Indian Insurance Act reveal an obvious lacuna which gives serious cause for anxiety. Following the Amending Act 1950 and Rules framed thereunder, a system has been devised for determining expenses of the insurers. This system for the present is hinged on direct business, and under it a fall in direct business entails a curtailment of permissible expense for the insurance companies. As I have already pointed out, although commodity prices have gone down the cost of living index has not moved accordingly during the year and this has resulted in a maladjustment confronting the insurance companies with an embarrassing and difficult situation in the light of the aforesaid provisions of the Insurance Act & Rules, vis-à-vis the depressed condition of trade and industry for the duration of its continuance. While a set-back in the business of insurance companies under such conditions is all but natural, their permissible limit of expenses has necessarily to go down following a fall in premium on direct business, whatever be the consequences of the application of such a rigorous formula. The question has, therefore, arisen whether the marginal companies which are hard put to it can at all survive, even if they are inherently sound. While insurance business in India has yet a considerable leeway to make up, it will indeed be unfortunate if such companies are forced out of existence for sheer non-compliance with a technical standard the merit and value of which are open to question.

The matter, to my view, calls for critical examination from those who are interested in the well-being of the trade. It seems inequitable to assess the position and prosperity by direct business alone and even that from year to year. The prosperity of a company is linked up with many factors, of which underwriting plays an important part. It will be unfortunate if the present measuring rod is adhered to without taking into account other facets of insurance business, including incoming and outgoing reinsurance. These two sectors consume a sizeable part of the expenses of general insurance, and whilst, therefore, a reasonable proportion of the expenses may be prescribed for direct business, it is both reasonable and a practical necessity that a suitable percentage should also be allowed to cover expenses for the reinsurance business.

Another undesirable consequence which emanates from this factor of linking up expense with direct business alone is the scramble for direct business in the market which it directly fosters. Admittedly, with limited availability of direct business in the context of present trade conditions, this scramble to seize direct business by any means acts to the unscrupulous as a potent inducement to have recourse to malpractices. It is good that the Code of Conduct has been evolved with a view to improve the ethics of the trade and to eliminate malpractices, which, as pointed out by many, vitiate the trade; but the two principles enunciated by the Government about the present business-expense relationship and the Code of Conduct seem to go one against the other, and the matter calls for a basic rectification by a suitable modification of the standard of permissible expense.

In this connection, it is well to point out that at present whilst formulating their plans and programmes at the beginning of the year, the insurance companies have to work on the basis of some presumed conditions, not having any precise knowledge of the quantum of expense for the year, or of any relaxations that may be made in respect of expenses scheduled for the year, for which plans are made. I understand that the Department of Insurance exercises its discretionary authority after reviewing the results, but such post-mortem examination cannot be conducive to sound planning of business progress. Companies require to have a clear and dependable idea in advance of the limit of their expenses, so that they can adjust their programme accordingly, and refrain from taking a gambling chance.

Directly connected with the scramble for direct business is the fall in rates of marine and other non-tariff business in the country. Due to slack export market and scramble for what business is available the Marine rates have already reached the rock-bottom level. It is open to question whether current rates have any statistical relation to claims experience. It is a matter of regret that even under such circumstances a sizeable part of the contract overseas is allowed by authorities to be made on C. and F. basis, which leads to further diminution of business available to Indian insurers.

There would thus appear to be no studied policy to ameliorate the difficult position of the insurers in the country. Their only basis of reliance at present is the discretionary leniency of the Government and the Administrative Authority. It is neither desirable nor honourable for insurers to approach the Government for exercise of such discretionary authority, and it stands to reason whether the Administrative Authority can exercise its authority without subjecting itself to criticism on the score of discrimination. They are not likely to be acquainted with the particular problems facing each insurer, and have, therefore, to evolve a common policy for general application which may not meet the requirements of individual companies. Evidently, this must result in hardship to those companies whose trading conditions may justify special treatment.

My object in dwelling upon these few salient points in the present address is to draw the attention of the Government and the Authorities concerned to some of the outstanding practical difficulties in the working of general insurers. I need hardly stress that these call for a constructive review and re-examination in the light of experience, so that a suitable policy may be evolved conducive to the furtherance of the progress and prosperity of general insurance business in the country on sound lines.

Before I close, I would like to express my appreciation of the useful services rendered to the Society by the field staff, office and the Management of the Company, and their endeavours for establishing the Company on a firm footing. I hope in the years to come their co-operative effort will be available in the same way towards attainment of better results, and steady progress.

Stocks and Shares

DULL SHARE MARKET WATCHES SPECULATION
IN IRONSSTEADY DEMAND FOR LEADING MISCELLANEOUS
AND FIXED-INTEREST STOCK

Wednesday Evening.

THE volume of business put through this week in the Calcutta share market has been small and interest has centred on the rank speculation that is going on in Indian Iron and Steel shares. News from Burnpur has had less to do with it than attempts by the bears to squeeze a prominent bull, who has so far held his own. The price was taken down sharply from about Rs. 23 over the weekend to under Rs. 22 on Monday, but it has recovered just as sharply since to Rs. 22.13. For the moment the bulls are in charge but further attempts to break their hold may be expected before the long puja clearing begins next week. Meantime the plant has been re-opened at Burnpur and we understand that 50 percent of normal production is already being achieved although only about 35 percent of the labour force is back at work, which means that the company is better circumstanced than before the lock-out began in August.

Good business has been done in tea shares at higher prices but this boomlet is now petering out; the recent incursion of speculators into this investment section means that present values might not be secure. Sugar shares have been supported but the enquiry has not been as great as in previous weeks. Jute shares have been very dull indeed, in sympathy with the poor state of the finished goods market. Coal shares have also been quiet.

Genuine investment buying is still going forward, but in common stock it is restricted to heavy engineering, and such leading miscellaneous scrip as Titagur Paper, Indian Cable and Metal Box. Steady demand persists for preference shares, apart from jute, and these issues are now hard to buy.

There is a shortage of gilt-edged scrip and purchasing orders are sometimes difficult to execute. Prices are well maintained.

Details of the week's trading follow.

There was renewed enquiry for most Government loans during the week and the undertone was steady. Demand was again confined to short and medium-dated issues though prices show little variation. Three percent Conversion Loan 1946-86 met with strong enquiry, improving at one time to Rs. 82.4; tonight's closing quotation, however, was one anna lower. Three percent non-terminable Paper met with mild support and the price was taken higher to Rs. 82.1. In short-dated issues, there was an unsatisfied demand for 3 percent 1957 which was traded up to Rs. 98.7-6 and there were buyers of 3 percent 1958 at Rs. 98.2. Two and a quarter percent 1954 was steady at Rs. 98.10 and 2 1/2 percent 1955 was taken at Rs. 98.6. Among medium-dated loans, 3 percent 1959-61 improved to Rs. 96 and there were ready buyers of 2 1/2 percent National Plan Bonds at Rs. 98.6 but few declared sellers. Three percent 1963-65 and 1964 were bought on investment account at Rs. 92.7-6 in each case while 2 1/2 percent 1960 was enquired for at Rs. 93.9. In contrast, 4 percent 1960-70 was easier at Rs. 101.15. In long-dateds, 3 percent 1966-68 improved to Rs. 90.2 due to the approach of the half-yearly interest date while 3 percent 1970-75 was unchanged at Rs. 86.8.

Steady conditions were witnessed in the provincial section though business was confined to the 4 percent issue. Four percent West Bengal 1963 had strong buyers up to Rs. 100.6 with few declared sellers. There was also an enquiry for 4 percent Bombay 1963 and 1964 at Rs. 100.7 and Rs. 100.6 respectively. Four percent Madras 1963 and 1964 were taken higher to Rs. 99.12 but 4 percent U.P. 1963 and 1964 were both inclined to have more sellers than buyers with business passing around Rs. 99.10.

Among debentures, Calcutta Electric were quoted at Rs. 101.8 and a small lot of Carew 1st mortgage debentures changed hands at Rs. 99.8. Orient Paper debentures were reported at Rs. 93.12 and there were buyers of Standard Vacuum at Rs. 103.

In the preference section, there was a good demand for first-class miscellaneous scrip but in the absence of sellers very little business was reported. British India Corporation were crossed at Rs. 145.12. Burrakur 7 percent were taken at Rs. 121.8. Chrestien Mica Industries at Rs. 60, Dunlop Rubber 2nd at Rs. 103 and Equitable Coal at Rs. 119. India Steamship improved from Rs. 94 to Rs. 96 while Indian Iron and Steel were unchanged at Rs. 107. Rohtas "B" preference were dealt in at around Rs. 54.8. In jutes, selected shares were enquired for at their previous quotations. Alexandra were quoted at Rs. 100 and Chitavalah and Dalhousie were taken at Rs. 119 and Rs. 118 respectively. There were sellers of Hooghly at Rs. 14.4 while Ramshwara had ready buyers at Rs. 7.4. A small lot of Reliance was quoted at Rs. 116 and Soorah changed hands at Rs. 106.

Imperial Bank contributory were crossed at the former rate of Rs. 446.8 and the fully-paid improved to Rs. 18.0. Allahabad Bank fully-paid were re-

crossed at Rs. 383.8 and the partly-paid at Rs. 190.8. Punjab National Bank had buyers at Rs. 21.4 and United Bank of India "D" shares were quoted at Rs. 3.12.

Among railway shares, a solitary transaction was reported in Bankura Damoodar which were crossed at Rs. 54.

Cotton shares showed little change. Cawnpore Textiles recorded several deals at around Rs. 8 and a small lot of Dunbar was quoted at Rs. 170. Elgins were dealt in between Rs. 16-15 and Rs. 17.4. Kesoram were marked at Rs. 18-5 and New Victoria at Re. 1-1.

The only feature in the coal section was provided by Pench Valley which on the announcement of an increase in the dividend from 12 1/2 percent to 15 percent improved to Rs. 22 cum-dividend with few declared sellers. Bengal and Burrakur fluctuated narrowly around Rs. 508 and Rs. 9. Bhalgora changed hands at Rs. 3.8, Bharat Collieries at Rs. 5.12 and Katras Jherriah at Rs. 38.8. New Beerhoom were transacted at Rs. 17-15 and South Karanpura moved between Rs. 9.12 and Rs. 10.2. Union were quoted at Rs. 22.9. Central India changed hands at Rs. 4.15, Raneegeunge at Rs. 7.15, Talcher at Rs. 2.9 and Western Bengal at Rs. 4.6.

Jute shares continued to suffer from neglect and whatever business was reported was in respect of small lots. Howrah fluctuated between Rs. 22-14 and Rs. 23.4 to close at Rs. 23.1. Agarpara were marked between Rs. 16-13 and Rs. 17-1 c.d. to close at Rs. 16.6 x.d. Anglo India receded from Rs. 207 to Rs. 199. Barnapore were quoted at Rs. 143 and Budge Budge at Rs. 151. Business was done in Champdani at Rs. 146.8 and Chitavalah at Rs. 28-10. Delta came to hand at Rs. 221 and Hooghly were transacted at around Rs. 34. Other business reported included India at Rs. 118, National at Rs. 23-12, Presidency at Rs. 4-14 and Reliance at Rs. 15-6. Nuddea were easier at Rs. 44.

In the electric supply section, Calcutta Electric changed hands freely around Rs. 13-12. Cuttack were marked at Rs. 7-8 and Jubbulpore at Rs. 14.3. Shahjahanpur were crossed at Rs. 7-8.

In the sugar section, a large parcel of Cawnpore changed hands at Rs. 37 and Champaran after advancing to Rs. 25-12 later reacted to Rs. 25-4. Carew were dealt in at Rs. 6-13, Belsund at Rs. 7-12 and U.P. at Rs. 13-13.

The week under review witnessed a tussle in Irons between the bears and the bulls with the latter emerging victorious; Indian Iron at one time dropped from Rs. 23 to Rs. 21-15 but subsequently recovered at the close to Rs. 22-9. Business was reported after market hours up to Rs. 22-13. There was good demand for Indian Galvanizing at Rs. 101.8 and Indian Standard Wagon improved to Rs. 101.8 cum-dividend cum-rights. Kumardhubi Engineering were recorded at Rs. 7-5, Marshalls at Rs. 5-1 and National Iron and Steel at Rs. 4-14.

In the miscellaneous section, there were sellers of Bengal Paper at Rs. 41.8 and Shree Gopal at Rs. 18. Star Paper were transacted at Rs. 9 and Titagur Paper on investment buying improved to Rs. 55-6 ex-dividend. Dalmia Cement were crossed at Rs. 6-12 and several transactions were recorded at Rs. 6-12. India Steamship were steady at Rs. 7-5. There were sellers of India General Navigation at Rs. 75 but no declared buyers. Alkali and Chemical were taken at Rs. 15.4 as were Angelo Brothers at Rs. 18. Assam Saws were done at Rs. 6-10 British India Corporation at Rs. 8-8 and Calcutta Trams at Rs. 13-6. Dunlop Rubber were better at Rs. 28-12 and F. & C. Osler after receding to Rs. 6-14 recovered at the close to Rs. 7-1. Ganges Rope had sellers at Rs. 170. Hoare Miller were marked at Rs. 10-4 and Indian Cables changed hands freely at around Rs. 19. Indo Burma Petroleum met with good investment demand at Rs. 59 but there were few sellers to meet the market. Indian Wood Products recovered to Rs. 30-8 while Jardine Henderson were easier at Rs. 115. Martin Burn changed hands at Rs. 18 and Metal Box at Rs. 18-8. There were sellers of Rallis at Rs. 65 but Rohtas Industries were steady at Rs. 8-13. Shaw Wallace were crossed at Rs. 11-4 and Textile Machinery came to business at Rs. 6.

In the mining section, there were sellers of Orissa Minerals at around Rs. 34.4 and several deals were reported in Indian Copper at Rs. 3 cum-dividend and later at Rs. 2-12 ex-dividend. Both Non-Ferrous Metals and Tavoy Tin were quoted at 9 annas.

Although there was no recession in tea share prices it would appear that there was slightly less enquiry than last week. Basmatia and Brooke Bond were taken at Rs. 28 and Rs. 11-10 as were Murphuland preferred ordinary and Seajuli at Rs. 28 and Rs. 19 respectively. Betan advanced a point to Rs. 25-15 while there were unsatisfied buyers of Dhalakhat and East India at Rs. 11-12.

Each year during the spring festival, tiny villages nestling among the Naga Hills in Assam resound with the beating of drums and the singing of traditional tribal chants. Decked in full war-paint, Naga menfolk run through a rich repertoire of dances, mostly martial in

character. Slender Naga maidens, liberally adorned with bead necklaces, brass bangles, and amulets, dance before the village chief's house, swaying hand in hand for hours on end to the accompaniment of charming melodies.

Kohima, administrative headquarters of the Naga Hills area gives ready access to the entire region. It is linked by road with Gauhati through Nowgong and Bokakhat. The stretch between Golaghat and Kohima is motorable in the dry season. Kohima has an inspection bungalow, and petrol is also available here.

A visit to the colourful Naga Hills is a pleasure brought within the reach of all by the safety and comfort of road travel assured by John Boyd Dunlop's invention of the pneumatic tyre.

this field also India has got Canadian and under the Colombo Plan. Bombay State has a very large population and very poor transportation facilities, but is trying to improve its road transport system. On its behalf, the Government of India requested Canada for assistance in the form of motor vehicles. The request was approved because Canada recognised the need for better transport, being at the same time aware that it would help solve the food problem by improving distribution facilities. A large part on the Canadian contribution to Bombay consists of trucks which will be used to transport food. In all Canada is contributing 835 trucks, 450 buses and 70 tractors and trailers. Some of these vehicles have already arrived and shipments will be completed within the next month or two. The total cost of the project, including spare parts, amounts to \$44 million. The Bombay State transport project, like all of Canada's Colombo Plan operations in India, was negotiated between the Canadian Government and the Government of India. While the vehicles have been provided as a gift to the India Government, it has been agreed that the Central Government here should in turn supply them to Bombay State on a loan basis according to the principle that a transport system is, or should be, self-supporting. The Bombay State Transport Corporation benefits from the arrangement because the terms of repayment are much easier than could have been obtained commercially. As the loan is repaid to the Central Government, the instalments will be credited to a counterpart fund for use in the rupee financing of economic development projects. This is another Colombo Plan project which serves a three-way purpose. It helps meet a real and urgent need in transportation and food distribution in an exceptionally populous area; it saves India's dollar reserves to the extent of \$4.5 million; and it creates rupee capital for long-term development purposes.

New Zealand's Contribution

The contribution of the Government of New Zealand amounted to £250,000 in 1952. For 1953, a sum of £375,000 has been earmarked.

Indo-British Sterling Balances Agreement

The suggestion made in the Colombo Plan that the accumulated sterling balances of the South and South-East Asian countries should be utilised to finance their development programmes has been implemented by the Government of India and the Government of United Kingdom. An agreement was signed by the two Governments in July 1953 whereby at the end of the Colombo Plan period only that much of the balances would be left which is regarded as an adequate foreign currency reserve of India. The rest will be utilised mainly for development expenditure.

In the sphere of technical assistance, India has received experts as well as training facilities for Indians to study in advanced countries.

Railway Chiefs to Review Regrouping

A meeting of General Managers of Indian railways has been summoned to meet here on 28th September, one of its objects being to review the progress of regrouping. The Railway Minister, Mr. Lal Bahadur Shastri, gave an assurance during the last session of Parliament that he would review the progress of railway regrouping in his budget speech next February. Since then, the Railway Board has been collecting data, which will form the basis of discussion at the forthcoming meeting of General Managers. It is still premature to say that the meeting will discuss changes in the zonal areas of the Indian railways. Such changes require a longer working experience.

It is true that there are transhipment bottlenecks at the broad gauge and metre gauge terminals. But officials deny that regrouping has created these bottlenecks, saying that they existed even before, particularly in Uttar Pradesh. The wagon shortage, they state, is a problem by itself, unconnected with regrouping. The Railway Minister admitted in Parliament this week that transport was not adequate on the North Eastern Railway and in some cases this was because of the wagon shortage. New wagons and locomotives, he added, had been and were proposed to be, ordered. As a short-term measure, proper planning could ease the wagon position. This is what the Railway Board has been doing. The problem will be discussed at the conference of the General Managers.

Revenue from Terminal Taxes

A conference including representatives of State Governments will shortly be held here to discuss the question of Central legislation for the levy of terminal taxes on goods and passengers carried by rail, sea and air. The Local Finance Inquiry Committee, which made its report in 1951, recommended that terminal tax, which is on the Central List, should be transferred to the State List. Under the Constitution, terminal tax is levied and collected by the Centre but assigned to the States. The Ministry of Finance has had under consideration legislation to take power to levy such taxes. Article 277 of the Constitution contains a clause that any taxes which were being levied immediately before the commencement of the Constitution, namely before 26th January, 1950, by any municipal committee, district board or other local authority may continue to be so levied until provision to the contrary was made by Parliament. This raises the issue of contribution to such local bodies in lieu of their existing taxes. This matter will also come up for discussion at the forthcoming conference.

Land Reform and Agriculture

The conference of State Ministers of Agriculture, scheduled to take place here from 24th to 29th September, has a large agenda which includes the question of land reform. The issue, as placed

before the conference, relates to ceilings on holdings, resumption of land by landlords for personal cultivation, minimum holdings and acquisition of land by tenants. As for ceilings on holdings, the Ministers will discuss whether measures for the imposition of ceilings should not be held over till the census of agricultural holdings and cultivation has been completed. In the alternative, the conference will consider whether the rule for fixing ceilings should be relaxed in the case of large proprietary farms run on modern and efficient lines, waste lands reclaimed and brought under cultivation by private parties, and holdings pooled or proposed to be pooled into co-operative farms. As for the resumption of land by landlords, it is feared that permission might result in large-scale displacement of existing tenants. Its denial might also result in hardship to large number of small landlords. The conference will therefore be asked whether a distinction should be made between the various categories of landlords, fixing the limit for resumption of land by different categories of landlords, and whether some compensation should be paid to the tenants to be so ejected from land. As for minimum holdings, it is suggested that any contemplated measures should prevent a diminution in the size of holdings below the prescribed limit and also check the growth of fragmented holdings. The economic consequences of the bhoodan movement, however, are not on the agenda. Two questions are posed in regard to the acquisition of land by tenants: whether such acquisition should be optional or compulsory and whether some distinction is necessary between small and medium tenants and big landlords.

The conference will also discuss whether State Governments should consult the Centre at the formative stage of their land legislation proposals. A note on some aspects of the Chinese economy has also been circulated for the guidance of the conference. This note says: "Confronted with the problem of agrarian over-population, the Chinese have given top priority to agricultural development. The disappearance of feudalism and the creation of millions of peasant proprietors has increased the farmers' will to work and produce more. The State is encouraging the creation of co-operative farms. The formation of co-operative stores has eliminated the middlemen in sales. Scarcity of draught animals has necessitated the use of human beings as draught animals in China. The Chinese have no repugnance to the use of light soil as organic manure. The Chinese have been using horse-drawn agricultural machinery for sowing, harvesting and for land dressing. As regards river valley projects, the Chinese have given low priority to power generation and very high priority to flood control, irrigation, and navigation. Manpower is mobilised and trained for works of public utility. About 2.2 million workers are mobilised for the Huai River Valley Project. For commodities considered essential for domestic purposes or for export, there is monopolistic State trading in China. In the case of other important commodities there are State trading companies operating side by side with private enterprise. To ensure fair prices, Government depot stores have been stepping into the field of retail trade."

Dispersing Offices to Faridabad

The deteriorating position of new townships such as Faridabad is being examined here, it is learned. One suggestion under consideration appears to be to locate the overflow of Government offices in Faridabad. Such a scheme could relieve the pressure on land in New Delhi and would rehabilitate the economy of places like Faridabad. This town is within easy distance of, and on a motorable road from, New Delhi. The plan appears to be to build working and residential accommodation for attached offices, such as the Directorate of Health Services, various survey organisations, agricultural marketing etc. Before launching the plan, a policy decision by the Cabinet is regarded as essential. This is necessary because in the past a decision had to be altered after accommodation to house an office outside Delhi had been reconsidered. A list of offices which could conveniently be moved out of Delhi is under preparation and an early decision to start building operations in a new town near Delhi is expected shortly.

Tungbhadra Project Management Board

Representatives of the Central Government and of the Governments of Madras, Mysore and Hyderabad decided to set up a board of management for the Tungbhadra Project this week. The Board will include nominees of Andhra, Mysore and Hyderabad with a nominee of the Central Government as their chairman.

Estate Duty Bill in Retrospect

The six-week session of the House of the People ended this week. It started with a programme of 28 pending bills and 30 new ones. In 34 sittings it was able to dispose of only four, the principal ones being the Andhra State Bill and the Estate Duty Bill. The rest were left over for the autumn session, which is expected to start about 15th November. The House spent 93 hours on the Estate Duty Bill. There were 21 meetings of the select committee and four informal discussions with members particularly interested in the measure. When introduced, it had 74 clauses, but in its final form it had 85. Of the 756 amendments tabled there were actually moved and 52 accepted; 32 of them were substantial changes and 17 were in the nature of corrections. Ten amendments related to drafting, seven were consequential and three were made to correct printing mistakes. This indicates the interest all sections of the House took in the Bill. The debate throughout was of high standard. The Finance Minister, Mr. Chintaman, Deshmukh,

winding the debate on the third reading, made it clear that the object of the Bill was to bring about greater equality of wealth. He said: "Conspicuous luxury, which is the concomitant of inequalities of wealth, will, I expect, diminish or be discouraged as a result of this measure. I do agree that this will lead to the break-up of large estates. But I am not alarmed at it. That is a consummation devoutly to be wished. I do not expect capital formation, as we progress, from the wealthy. I expect capital formation, which in its essence is saving, from the common man for the good of the common man."

There was an inconclusive debate on unemployment during the session. Policies relating to sugar, automobiles, the steel project and nationalised industries were discussed. Questions in Parliament covered a wide range of subjects.

Steel Expansion Plans

"The Government of India contemplates, in the very near future to go ahead with plans for a new steel plant of half a million tons capacity," the Production Minister announced in Parliament this week. He estimated requirements of steel at two million tons at present and 2.8 million tons in 1957. Present production was 1.1 million tons, but taking into account the expansion plans of private units it could rise to 1.65 million tons. Regarding the new plant, the Minister disclosed that if the value of orders with the German firm equalled \$20 million, the German investment would be 25 percent; up to the second \$20 million, it would be 30 percent; beyond that it would be 33 1/3 percent, subject to a ceiling of \$20 million. German representation on the board of directors of the proposed company would be in proportion to its investment.

Profits Remitted Abroad

The Finance Minister, Mr. Deshmukh, disclosed in Parliament that in 1952 a total sum of Rs. 14.21 crores had been remitted abroad by foreign concerns by way of profits. Of this, Rs. 2.68 crores was to dollar area countries, Rs. 11.13 crores to sterling area countries and Rs. 40 lakhs to non-sterling, non-dollar area countries. The figures for 1951 were: dollar area, Rs. 2.92 crores; sterling area Rs. 13.74 crores; non-sterling, non-dollar area Rs. 1.29 crores; making a total of Rs. 17.95 crores. In 1950, the remittances were dollar area Rs. 4.06 crores; sterling area Rs. 16.12 crores; and non-sterling, non-dollar area Rs. 53 lakhs, making a total of Rs. 20.71 crores. The Finance Minister added that the final estimates of the uncovered debt and interest-bearing obligations not covered by the assets at the end of 1953-54 were Rs. 457 crores and Rs. 689 crores, respectively.

Replacements by Shipping Companies

Mr. O. V. Alagesan, Deputy Minister of Transport, said that Indian shipping companies had, on an average, been carrying larger tonnages per sailing than foreign lines. His conclusions were based on the statistics relating to Calcutta, which was the largest exporting centre in the country. He added that 46 ships of 97,324 gross tons employed in the coastal and overseas trade were over 20 years old and might require replacement in the near future. Thirty-seven percent of the shipping in the coastal trade and about 3 percent of shipping in one overseas trade required replacement. The Government was assisting shipping companies in this regard; Rs. 6 crores would be advanced as loans and the companies would be required to raise Rs. 3 crores. It was estimated that the total cost of replacement would be well within this amount.

Sanction of Capital Issues

During the three-year period, 1950-52, 860 applications for capital issues involving Rs. 174.2 crores were sanctioned by the Controller of Capital Issues. In 1950, the total capital sanctioned in 263 applications was Rs. 74.8 crores. The figures for 1951 and 1952 were 343 applications for Rs. 59.6 crores and 254 for Rs. 39.8 crores respectively.

Use of Soft Coke in Villages

No special steps are being taken to encourage the use of soft coke in rural areas. The present demand for soft coke is much more than the railways can carry. The Government is fully in favour of the popularisation and the extended use of soft coke in rural areas and means to improve the overall transport availability for coal, including soft coke, are constantly engaging its attention, it was disclosed in Parliament.

Retrenchment by General Motors

The Communist leader, Mr. H. N. Mukerji, drew the attention of the Government to the retrenchment by General Motors (India) Limited of 390 hourly-rated and 23 monthly rated workmen on the ground that a drastic reduction in the import licences granted to the firm in 1952 for car and truck assembly material had curtailed operations. Mr. Mukerji demanded that either steps be taken to have these and 87 other workmen reinstated, or compensation should be paid them. The Commerce Minister said in reply that General Motors was expected to close down by the middle of 1954 because no import licences were issued to them in the second half of 1952. "Obviously it will not be possible to take steps to get the retrenched workmen reinstated in the factory." He added that compensation had been paid to the workmen in accordance with the Labour Tribunal Award.

Mr. S. C. Roy of Calcutta, has been elected a Director of the Industrial Finance Corporation of India to represent insurance companies, investment trusts and financial institutions from all parts of India.

London

LOWER BANK RATE GIVES FILLIP TO BUSINESS

SEASONAL DECLINE OF EXPORTS IN AUGUST

(FROM OUR OWN CORRESPONDENT)

19th September.

THE reduction in the Bank of England rate from 4 percent to 3 1/2 percent on Thursday was the biggest, as well as the most pleasant, surprise the City has had for many years. The immediate result was a boom in most sections of the Stock Exchange, with gilt-edged particularly strong heavy dealings, followed by the announcement of a reduction from 2 percent to 1 1/2 percent in the rate of interest which the banks pay on deposits. Keeping in mind that official discount rates have been reduced recently in Austria, Belgium, Germany and the Netherlands, that there has been an easing of credit in the United States, and that the Bank of France announced a similar reduction to that of the Bank of England on the same day, the new move must certainly be regarded as keeping in line with international trends rather than any change in British policy. The cheap money policy which was abandoned in November 1951 when the former rate of 2 percent was raised to 2 1/2 percent, and subsequently increased to 4 percent in March 1952, is not returning. Mr. Butler believes in a flexible money policy under which the Bank of England is allowed to use the traditional machinery of altering the Bank Rate either to curb inflation, which was the purpose of the increases, or to stimulate trade, which is undoubtedly one of the reasons for the present reduction. That there is no change in basic policy is evident in that the official request to the banks to curb advances to certain types of customers has not been withdrawn; on the contrary, it is emphasised that it remains in force and is as important as ever. On the other hand, though personal overdrafts will not benefit, industrial borrowers—and particularly the nationalised industries—certainly will, while cheaper credit for foreign trade should help British exports to compete more effectively in foreign markets.

By and large, the move has been well received, and that it is opportune is evident from the latest quarterly classification of advances issued by the banks. This shows that demands for private bank advances have been declining in the last three months. Compared with May, 1953, advances have risen in the cases of only the steel industry and agriculture. The total for personal and professional borrowers is virtually unchanged, but much less has been lent to engineering, the chemical industry, the "food, drink and tobacco group," retail trade and public utilities. Even more important, perhaps, is that this new freedom has been well received in international markets as a mark of confidence that sterling will remain steady on a somewhat looser rein. The pound, which has been weak in recent weeks because of the large dollar payments which always fall due at this season, actually strengthened after the change in the bank rate became known. Finally, the lowering of the rate may prove to be very convenient to the Treasury for three very different reasons. It will cut the cost of borrowing, make the stock market more receptive to the coming steel issues, and probably help to no little extent in easing the path of the large funding loan which will probably make its appearance later in the year.

Big Drop in Exports and Imports

The normal seasonal decline in exports made itself apparent in August—a month much affected by holidays—but this year rather more than usual. At £198.8 million, they compared unfavourably with the monthly averages for the first and second quarters of the year, £208.5 million and £210 million, though there may be an explanation in the fact that port clearances in July were unusually high and by taking July and August exports together the average is raised to £216.3 million. Imports also showed a big drop, at £249.2 million, so that after taking re-exports into consideration the trade gap for the month was actually reduced from £50 million in July to £42.3 million, which was the lowest figure since February. The cumulative figures for the year so far continue to be reassuring. Over the eight months, imports have totalled £2,232 million, against £2,450 million over the same period of 1951, whereas exports have fallen less sharply from £1,735 million to £1,688 million. The trade gap so far this year stands at £473 million against £608 million last year. Exports to the vital dollar markets in August took a hard knock, being only £24.5 million, against July's figure of £30.1 million. The lifting of import restrictions in Australia, New Zealand and some other sterling area countries is expected to stimulate British exports to these markets in future, and that will certainly help the total figures, but it is to be hoped that this will not lead to any neglect of the dollar markets as it has always had a tendency to do in the past.

Prices Falling

Some explanation of aspects of the above figures, and further encouragement for the immediate future outlook is provided in the wholesale prices index. The Board of Trade index for basic materials in August was 142.8, on the basis 1949=100, which is the lowest figure for three years and compares with 143.7 in July and 157.2 in August last year. The principal contribution to this drop was made by copper, the price of which fell by as much as eight percent, but other materials which cheapened were tin, hides and skins, and rubber, though

this is, of course, the slack season for these commodities. The trend should help British manufacturers to reduce prices of a wide range of goods and to increase their competitive power. What could be even more helpful than the downward trend of basic material prices is the first sign of a substantial fall in food prices. If this were to continue it would lead to a real reduction in the cost of living, which, according to the Ministry of Labour's interim index of retail prices, stood at 140 on 18th August, compared with 141 on 14th July and 137 in August, 1952 (June, 1947=100). The drop is explained as being due to reductions in the average prices of potatoes, cooking apples, bacon, imported mutton, pork and canned ham, partly offset by increases in those of eggs, milk, home-killed beef and fish, while there were also increases in rail and road passenger fares, mainly in the London area.

Commonwealth Finance Ministers' Next Meeting

It was generally agreed after the last Commonwealth economic conference in London last December that there should be another meeting in about a year. Mr. Menzies, the Australian Prime Minister, has now proposed that this should take place in Canberra next January, and it is understood that the British Government has agreed, though it remains to be seen if the other Governments concerned will be able to spare their Finance Ministers at that particular time. There is no doubt much to be said for holding these periodical meetings in different countries in the Commonwealth, thus giving the visitors a better opportunity of seeing and appreciating local problems on the spot, but the Australian invitation has arisen from the practical difficulties attaching to the absence of Australian and New Zealand Ministers from their countries owing to the Queen's Australasian tour. The same problem would affect Ceylon's representatives, though to a lesser extent perhaps.

If it is possible to overcome the practical difficulties and the Canberra meeting is finally arranged, it is understood that Mr. Butler, Chancellor of the Exchequer, will lead the British delegation. Development plans decided at the last conference will be reviewed. Mr. Butler will discuss with his colleagues the outcome of the talks he has had with the leading European trading nations on the Commonwealth proposals for the convertibility of sterling. These proposals of course depend almost entirely on American decisions, so it can hardly be expected that the conference could make much progress in that respect. There have been a few favourable developments recently, but the special committee of Congress and the Administration set up by President Eisenhower to study foreign economic policy is not expected to report before March of next year, and as Congress support is so important nothing definite can be decided before that report is available.

Guaranteed Farm Prices Plan

Earlier this week the Ministry of Agriculture published in a White Paper its plan for guaranteeing prices to British farmers in a free market, so far as cereal grains are concerned. Briefly, it aims at introducing a deficiency payments scheme in respect of the 1954 crops. Standard prices are determined in the light of the agricultural price review. The Ministry of Food will make good the difference between this price and the average price

realised by the farmer for grain of a prescribed quality realised on the open market. For wheat and rye any deficiency payment will be paid on the tonnage sold by individual producers; for barley and oats any deficiency will be converted into an acreage payment. The scheme is a stop-gap and a compromise, but on the whole is reasonable. It meets the main objections of the trade, it is not anticipated that it will cost the Treasury any more than it is now expending by providing a guaranteed market, and it offers an incentive to the better farmer. The National Farmers' Union has accepted the principle of the scheme, while entering a caveat that it guarantees a return to the industry as a whole but not to each individual producer, and that the individual guarantee must be maintained wherever possible. A more permanent solution to the problem of the farmer has yet to be found, and the deficiency payments idea cannot be applied to all his produce.

Meantime, it is perhaps unfortunate that the farmers and the Government have subsequently come to loggerheads over the former's request for a fresh review of farm prices in view of the recent increase in wages awarded to farm workers. This has been refused by the Minister of Agriculture on the ground that the rise in farming costs which this has entailed is offset by the fall in feeding stuffs prices which has resulted from the freeing of the grain market. The N. F. U. Council instructed the President, Sir James Turner, to seek clarification of the Government's intentions with regard to the industry. It remains to be seen if Sir Thomas Dugdale can set their fears at rest.

Brevities

In view of recent rumours, Sir William Currie, the P. & O. Chairman, has issued a joint statement on behalf of his own company and the Union-Castle Mail Steamship Company, denying any foundation for the reports that the former is taking over the latter.

According to Mr. T. Hogarth McLaren, President of the Dundee Chamber of Commerce, the jute industry is extremely busy and in many cases business has been placed beyond the end of the year. The flax industry, however, is not doing so well. Sections which a few months ago were still fairly busy are now almost at a standstill for lack of orders, or are rapidly approaching that condition.

Restrictions on the use of molybdenum in alloy steel, imposed on 2nd June, 1952, owing to scarcity, are to be removed from next Monday in view of the improvement in supplies. Restrictions on the use of nickel in alloy steel will continue for the time being.

From 1st January, 1954, refiners will take over all the remaining responsibilities of the Ministry of Food for exports of refined sugar and syrup. This decision extends the arrangements made in October of last year and in January of this year when refiners resumed responsibility for the trade to a limited number of markets. Export licensing control will continue to operate.

B.O.A.C. are to sell 19 Hermes airliners flying on East African and Middle East routes. The Corporation originally had a fleet of 25 of these aircraft, but five of these are on hire to Airwork Ltd., and one crashed in the Sahara. The fleet is to be replaced by Argonauts.

PLANS FOR NEW STEEL PLANT PRIVATE PARTICIPATION SUGGESTED

(FROM OUR OWN CORRESPONDENT)

20th September.

THOUGH the nation's steel industry is centred in the eastern areas of the country, Western India, and Bombay in particular, has a very large interest in it. To begin with, the original idea of establishing the industry came from Bombay and the first company was registered here about half a century ago. Besides this, a greater part of the capital for the Tata Iron and Steel Co., which was the pioneer in this field, came from Western India. The extent of Bombay's interest in the other important steel manufacturing concern, though incorporated in Calcutta, is fairly large. Though cotton textile production is the most important industry in this State, steel shares still provide the most popular counters in the local stock exchange, with textiles taking second place. In fact, market sentiment is virtually ruled by steel shares throughout the year. Though not a single ton of steel is produced in the State, the industry has caught the imagination of the investing public; in kurb trading, Tata Deferred and Indian Iron shares are dealt with to the almost total exclusion of all others. Because of the steel-mindedness of the investing

public in Bombay, it is only natural that the question of establishing a new steel plant of half a million tons capacity, in collaboration with the German combine of Messrs. Krupp and Demag, should arouse considerable interest here.

Though this question was known to have engaged the attention of the Centre and though various proposals were put forward from time to time, people in Bombay have not paid much attention to this question until now, when the Central Ministry of Production is known to have completed the arrangement for the establishment of the proposed plant. The attention of the public was again drawn to this new project by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Co., at the last annual general meeting of that company a couple of weeks ago. He said that an additional plant of the proposed capacity could be erected at Jamshedpur at a cost of Rs. 48 to Rs. 50 crores against Rs. 72 crores estimated for an independent public owned concern established elsewhere. The cost of production at Tata's also might be lower than that likely to be incurred by an independent unit.

Shareholders Association's Views

The Bombay Shareholders Association has since given careful consideration to this question. Judging by the detailed and lengthy communication the Association has addressed to the Production Ministry at New Delhi, it has not taken a narrow view of this project by confining itself strictly to protecting the interests of investors in the existing units of the steel industry. In fact, the Association has welcomed the Government's move to start a new plant as an independent unit in co-operation with the German combine. But it has urged that the Government should take the public into its confidence by publishing a broad outline of the scheme, dealing with both the technical and financial aspects, including the terms of agreement with the German combine. Knowing the present tendency of the Government to ignore even that part of the private sector of industry most concerned in any proposed development, the Shareholders Association has urged the Government to avail itself of the knowledge and experience of those who are already in the industry, not only for a preliminary examination of the scheme, but also to advise on the erection and management of the plant so that the new scheme may benefit fully from their experience of steel production in India. The Association has stated that the inclusion of representatives of the existing steel producers on the Board of the new concern would assist in erecting the plant at the minimum cost and in minimising any possible error of judgment on the part of the Government and which might involve the loss of public money.

The Shareholders Association opposes the formation of a purely Government-owned concern and suggests that Government should invite the public to contribute equity capital on the same lines as the Reserve Bank of India was first founded, by giving a guaranteed minimum dividend with a right to further participation in profits on a defined basis. The Association considers it probable that the public would subscribe a considerable amount of equity capital with the result that the Government would only have to take up a small balance of unsubscribed capital, after taking into consideration the loan which would be advanced by the World Bank and the small contribution in capital that is proposed to be made by the participating German firms. The Association feels that the development of a mixed economy will only be possible in this country if closer co-ordination is developed between the public and private sectors than at present.

Management of Corporations

It is possible that the Shareholders Association has suggested the formation of a public company of this nature, with the investing public's participation in ownership and control, because of the fear of shareholders in the existing companies that preferential treatment might be given to the State-owned concern. The Association has, therefore, informed the Government that its Committee would welcome an opportunity for further discussion regarding the formation of the proposed corporation so that the terms of issue would be acceptable under present conditions. It has wisely warned the Government that unless details relating to the promulgation of public industrial corporations are worked out in consultation with the public and investing interests, considerable danger would attach to forming industrial corporations which do not give scope for public scrutiny and might in this way defeat the very spirit of a public corporation.

In this context it is worth pointing out that serious complaints were made in the Bombay Assembly last week regarding the affairs of the Bombay State Transport Corporation by several members of the Opposition. In the case of this Corporation, which is owned partly by the State and Central Government, the public whose money has been invested is in no position to exercise any control over its budget or working through its elected representatives in the legislature. The Central Act under which the Corporation has been formed makes the concern wholly responsible to the administration and not to the legislature, thus depriving the latter of any opportunity to control even the general policy underlying its working. It was pleaded during the course of a debate on a supplementary demand for Rs. 1.18 crores to provide loans to the Corporation, that the Corporation had become practically "a State within the State" and members of the House who sanctioned investment in it were denied an opportunity to discuss its administration and budget policy.

Uttar Pradesh

LABOUR UNREST IN KANPUR

DIRECTORS "LOCKED IN" IN BONUS DISPUTE

(FROM OUR OWN CORRESPONDENT)

Lucknow, 19th September.

THE steady deterioration of the labour situation in Kanpur over the past fortnight has been causing grave anxiety, and up to the time of writing there has been no indication of anything like an amicable settlement. The State Government, for its part, seems to confine its concern only to the preservation of law and order, otherwise being content with the rôle of a disinterested spectator. An adjournment sought by an Opposition member in the Council on the labour unrest in Kanpur was disallowed and though the Chairman suggested that the Chief Minister could make a statement later in the House, no such statement by him or by any other responsible official spokesman has so far been forthcoming. The trouble started when labour got wind of the State Labour Tribunal's award granting bonuses to textile mill workers. The Tribunal had given the millowners three months' time to pay the bonus but the workers demanded immediate settlement. The issue was forced by the workers of the Swadeshi Cotton Mills who confined the management and directors for about eight hours and also assaulted some mill officials.

A statement issued by the Chairman of the Employers' Association of Northern India, Mr. D. P. Bell, leaves no doubt where the fault in the present instance lies. "The decision of the Tribunal in this question being appealable," he says, "it was open to both the parties to go up on appeal, if they so desired. In any event, the management who received the award on the forenoon of 1st September could not be expected to put up a notice immediately agreeing to implement the same and fixing a time-table for the distribution of the bonus. This was actually what the management wanted to do and, as usual, a number of outside elements incited the workers to violence and indulge in illegal acts." The workers at one time were so excited that the life of the director seemed to be in danger. Failing to force the hands of the management, they resorted to other tactics to stop work. In the words of Mr. Bell: "Some department would close for some time and as soon as work was resumed the workers of another department would stop work." It is significant that all these tactics have a familiar resemblance to what is happening in some other cities in India today, more especially in Calcutta. The Kanpur incidents also reinforce the conclusion that the agitation is not directed only against foreign-owned concerns but also undertakings which are 100 percent Indian.

The Chairman of the Employers' Association has made it clear that it will not tolerate such acts of indiscipline, violence and rowdiness. But much depends on whether labour intends to force a show-down or wait for a couple of months after which the award would become enforceable in law. If, however, the mills decide to appeal they have to do so within a month. The minimum demand of labour at the moment, is for payment of at least 50 percent bonus within the month; there are, of course, also those who go the whole hog and demand settlement in full, here and now. The alarming feature of the situation is the mood of labour. Even the labour leaders, knowing that their leadership depends upon pandering to the rank and file, have publicly expressed themselves as condoning violence and rowdiness, as should be evident from Mr. Bell's statement: "Other responsible labour leaders express the opinion that the action taken by the workers of the Swadeshi Cotton Mills, although 'contravening the existing laws' are a permissible means of enforcing their demands. My Association considers that such expressions are irresponsible and liable to cause further indiscipline and unruly behaviour in the mills, resulting in serious repercussions on the industry."

Pillaging the Reserves

Meanwhile, the Merchants Chamber of U.P., Kanpur, has also addressed a memorandum to the Government of India urging immediate amendment of the Industrial Disputes Act. These amendments, the memorandum points out, have become necessary in view of the award of the Madras Industrial Tribunal in the case of the Madras Tramways Co. Invoking Section 33 of the Industrial Disputes Act the Tribunal had held that there was a contravention of that section when a closure was effected purely on economic considerations, resulting in the discharge of workmen. The Tribunal, it may be recalled, had also directed in its award that 50 percent of the unused reserve funds of the company should be distributed amongst the workers. In both these respects, the memorandum declares, the Madras Tribunal has created dangerous precedents which should be nullified by necessary amendments to the Act.

The issue of workers' rights to the reserves is not a new one but a revival, in effect, of the controversy which raged at the time of the award in the case of the Kanpur Electric Supply Company. But the question was left undecided, with the result that bad precedents go on accumulating. It is argued that capital and labour are joint partners in industry and that they ought to go halves on the reserve funds. But it is not certain that the law says so. In law the equity shareholders have a prior claim on these funds. In fact, the memorandum of the U.P. Merchants' Chamber contends that the Madras Tribunal's decision actually goes against not only the judicial pronouncements of the Appellate Tribunal but also of certain High Courts in this matter.

BUSINESS FINANCE

A USEFUL GUIDE FOR ADMINISTRATORS

Introduction to Business Finance: by Bion B. Howard and Miller Upton; (McGraw-Hill Book Co., Inc., New York.)

This book, which represents the culmination of about eight years of experimentation at Northwestern University, has gone a long way in establishing a generic and consistent managerial approach to business finance. Apart from not relying exclusively on the limited field of corporation finance, the authors have rightly emphasised the administrative standpoint, for finance is among the major administrative functions in business along with production and marketing. The focal point of attention of the authors has been financial management, the principles, institutions and instruments of which might be transferred to any type of business enterprise and applied to any situation. Unlike other finance textbooks which are more socio-economic in character because of their emphasis on developing the corporation as a social institution, the present authors have not necessarily assumed substantial prior knowledge on the part of the student as to the operation of the individual firm. The book should, consequently, prove useful to students as well as business administrators.

Chapters on financial considerations in the exchange or sale of business properties and remedial action for financial strain or failure contain several illuminating suggestions, which are likely to be of particular significance in this country in the prevailing economic context.

"Although there are many types of value to which individuals might be tied through some psychological attachment, there is only one that offers any really rational basis in the case of a sale or exchange. It is the value," the authors observe, "that is based upon the earning potential of the properties involved and is specifically calculated by discounting a presumed future flow of net income at a given rate of return. This is not to say that the process is without complications and always capable of straightforward mathematical calculations. Both the estimated net income and the appropriate rate of capitalisation are matters of judgment and subject, therefore, to wide variations depending upon the interests and training of the particular calculator. In the final analysis any value ultimately agreed upon will be the product of bargaining by both parties involved. The capitalisation of prospective income, in other words, will serve not as a means of exactly determining the final value to be assigned but rather as the approach to be used in determining the range within which a final figure will seem reasonable."

"To be successful in any relief of a financial difficulty, it is imperative that the basic causes be isolated." The authors emphasise that "unless the plan does not effectively work these sources of trouble, relief will be short-lived and the chances for renewed trouble in the future will be present." Furthermore, in view of the essentially legal character of the subject most action reviewed here should be taken only after consultation with a qualified attorney at law. A businessman, however, should be qualified to judge the extent of the financial difficulty and be able to appraise the financial merit of any procedure submitted for his approval. It is not that he should be a legal authority, merely that he should not be a legal illiterate in his field of endeavour."

MASTER AND SERVANT UP-TO-DATE

Industrial Law Digest. By N. K. Khare and J. B. Bhida. (Published by N. M. Tripathi Ltd., Princes Street, Bombay. Price Rs. 10; 230 pages.) Industrial law after going through a long period of confusion and complexity, during which parties understood neither their rights nor their obligations under the entirely new conception of the relationship of Master and Servant created by the 1947 Industrial Disputes Act, may now be said to be settling down to some sort of uniformity in the light of the principles laid down by the Tribunals, Appellate Tribunal, and still more, by the Supreme Court and the various High Courts of India. The original work, to which the present one is a supplement, was a collection of the decisions and extracts from the findings of the Appellate Tribunal. It was and is a valuable work but suffers from the drawback that it contains no reports of the judgments of the High Courts and Supreme Court, by which many of the Tribunal's decisions were varied or reversed. The defect is remedied by the present volume which not only brings the summaries of the Tribunal decisions up-to-date but contains exhaustive summaries of the judgments of the Courts. It would have been more convenient if this important and indeed essential further information had been incorporated in a second edition of the original treatise; nevertheless both books taken together present us with the whole field of case law and every branch of it. As a practical book of reference, compiled with meticulous care and accuracy, it is of great value. But lawyers dealing with particular specific cases of labour trouble will need to read the actual observations in full of the judges to whose decisions the work refers them; and it is a pity that in the great majority of cases it does not supply them with the references to the full reports in the standard Law Reports, such as All India Reporter, Calcutta Weekly Notes, which are generally the only ones available, at any rate in mofussil Bar Libraries.

The get-up is excellent and the price, for these days, reasonable.

INDIA'S FOREIGN TRADE

Annual statement of the Foreign Seaborne Trade of India for the Five Fiscal Years ending 31st March, 1950, Volume 1. (Published by the Manager of Publications, Delhi. Price Rs. 36). This is a useful statistical publication and is designed to serve reference purposes in respect of figures relating to India's foreign trade.

The statement contains the abstract and detailed tables of imports and exports of each commodity with shares of the importing and exporting maritime States of India in respect of each article. The trade dealt with in the seaborne trade accounts is the trade by sea and air with foreign countries registered at ports in Indian States during a fiscal year April-March. The summary tables in this volume show, firstly, the total value of imports, exports and re-exports as a whole, and secondly, the total value of the imports, exports and re-exports of the principal articles, classified in groups. Imports from and exports to Commonwealth countries are distinguished from those from and to foreign countries, and exports are divided into "Exports of Indian Merchandise" and "Re-exports of Commonwealth and Foreign Merchandise."

The Handloom Weaving Industry, 1952-53 Annual. (Published by M. P. Gandhi & Co., Jan Mansion, Sir Pherozshah Mehta Road, Fort, Bombay 1. Price Rs. 1-8; 50 pages.) A very useful publication on India's handloom industry. It is edited by Mr. M. P. Gandhi, who already has an established reputation, and therefore needs no introduction, as a producer of industrial surveys.

Statistical Outline of India. (Published by Tata Industries Ltd., Bombay. 46 pages.) This excellently produced booklet is quite the best thing of its kind we have seen in this country and contains tables on national income, population, natural resources, industry and transport, industrial labour, foreign trade, banking and insurance, public finance, prices, and the five year plan. We hope Tatas will issue revised editions from year to year.

BOOKS RECEIVED

The Sixth Year. (Published by the Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi. Price Rs. 1-8; 413 pages.)

Annual Report of the Indian Merchants' Chamber for the Year 1952. (Published by A.C. Ramalin-

gam, Secretary, Indian Merchants' Chamber, Lalji Naranji Memorial, Indian Merchants' Chamber Building, Back Bay Reclamation, Fort, Bombay. 508 pages.)

Jute, Canvas and Cordage Year Book and Directory 1953-54. (Published by British-Continental Trade Press Ltd., 222, Strand, London, W.C.2. Price Rs. 20, 218 pages. Obtainable from the publisher direct, or from Lawrence S. Grenyer, Esq., 29, Park Mansions, Park Street, P.O., Calcutta.)

Indian Economic Problems From a Banker's Point of View. Edited by A. N. Bali. (Published by Ram Lal Puri of Messrs. Atma Ram & Sons, Book-sellers, Publishers and Printers, Kashmir Gate, Delhi. Price Rs. 8, 265 pages.)

The United States and India and Pakistan, By W. Norman Brown. (Published by Geoffrey Cumberlege, Oxford University Press, Mercantile Buildings, Lal Bazar, Calcutta. Price Rs. 16, 303 pages.)

THE RESTRICTIONIST EFFECT OF AMERICAN TARIFFS AND QUOTAS

REMOVAL OF U.S. IMPORT BARRIERS CAN ONLY EASE, NOT END, THE DOLLAR SHORTAGE

A PIONEERING study by Dr. Howard S. Piquet of the Legislative Reference Service, Library of Congress, provides factual data by which economists can measure the effects of a temporary suspension of all tariff duties and import quotas in the United States. The study, entitled "Aid, Trade and the Tariff," is published by the Thomas Y. Crowell Company, New York City. Using 1951 as a base year, Dr. Piquet examines in detail more than 220 commodities covering 80 percent by value of all dutiable imports. In each case, he analyses the extent and kind of impact each commodity would have on the American market if it could be imported freely, and then he outlines the types of adjustments necessary to absorb these impacts. His overall conclusion is that U.S. tariffs and quotas, in general, are not as restrictive as generally thought. Among his findings:

1. A yearly increase of \$800 million or at most \$1,800 million of foreign goods would be all that could be expected to enter the United States if tariff duties were temporarily suspended but existing import quotas were maintained. And this increase would be likely to develop only over a period of two or three years during which overseas suppliers were adjusting themselves to the new market situation.

2. Even in the event that all quotas were temporarily suspended at the same time, imports would rise only \$1,200 million or at the most \$2,600 million.

3. Of \$3,800 million of dutiable goods coming into the United States in a typical year, only \$1,500 million represents commodities which, with no tariff barriers, would probably flow into the country in large enough volume to account for as much as 10 percent of total domestic consumption of the individual items.

For the purpose of the study, it was assumed that suspension of import barriers would be for the duration of the dollar gap emergency only, and that all duties would be suspended simultaneously. According to the study, individual industries would be affected in very different ways by the suspension of tariffs. Worst hit by increased competition from imports would probably be manufacturers of earthenware and china, hand-blown glassware, toys and dolls, clocks, optical instruments, leather goods, selected textiles, canned tuna fish, scissors, knives with folding blades, and other miscellaneous items. Import duty rates on these items now range from 14 percent to 184 percent. At these levels imports of most of these products normally amount to less than 10 percent of domestic production. If tariffs were suspended, imports would be likely, in time, to account for 10 percent to 90 percent of total domestic consumption.

Duty-Free Imports

Dr. Piquet's study explains that of the \$10,800 million of merchandise imported into the United States in 1951, approximately \$6,000 million entered free of duty. Broadly speaking, raw materials that are not produced in the United States are admitted into the country free of duty whereas most foreign products that compete with products made or grown in the United States are subject to duty. It is pointed out that suspension of tariffs obviously could have no direct effect upon imports that are not dutiable—e.g., coffee, natural rubber, newsprint, paper base stocks, unmanufactured copper, cocoa, tin, vegetable fibres, unrefined furs, and fertilizer materials.

Of the \$4,800 million of dutiable imports entering the United States in 1951, slightly more than one-half consisted of finished and semi-finished manufactured products, over one-third consisted of agricultural products, and the remainder (slightly over 10 percent) chiefly of mineral products. The increase in imports following tariff (but not quota) suspension would range from a minimum of approximately \$800 million to a maximum of \$1,800 million which would represent an increase of 8 percent to 17 percent in total imports. In terms of dutiable imports alone, the increase would repre-

sent an 18 percent to 38 percent expansion. Or, taking the median between the minimum and maximum estimates, dutiable imports would be larger than they were by 28 percent in the absence of tariffs, and all imports (dutiable and free together) would be 13 percent larger.

Effects of Tariff Suspension

More than 40 percent of the dutiable imports covered by the analysis would not be noticeably affected by tariff suspension, Dr. Piquet says. Included in this group are such large imports as petroleum, cut diamonds, burlap, lumber, nickel and lead. Tariffs are relatively unimportant to the trade in these commodities. With regard to the other 60 percent (aggregating slightly more than \$2,000 million) the study estimated that, on the basis of conditions prevailing in 1951, tariff suspension might make possible a rise in annual volume of between \$674 million and \$1,400 million.

Commodity groups likely to register the most significant increases percentage-wise probably would be in the textile group, including such items as coarse linen towelling and hemmed linen handkerchiefs (from the United Kingdom), linoleum (the United Kingdom and the Netherlands), cotton hosiery (France and the United Kingdom), woollens and worsteds (United Kingdom), and apparel wool (largely from Australia); in the machinery and vehicle group, including hosiery (United Kingdom and Germany), bicycles (United Kingdom and Germany), and in the miscellaneous group, including clocks (France Switzerland and Germany), optical instruments (Japan, Germany and France), and toys and dolls (Japan, United Kingdom and Germany). The commodity groups showing the smallest overall percentage increases in imports would be wood and paper products, vegetable food products and beverages, and metals and manufactures.

Among the individual commodities which would show the largest percentage increases in imports (100 percent to 300 percent, or more), are earthenware and chinaware, hand-blown glassware, leather gloves, leather handbags, fur felt hats, clay tile, clocks, canned tuna fish, linen towels, hemmed linen handkerchiefs, scissors and shears, and knives with folding blades. For the most part, the study said, the commodities in the above group are subject to relatively high duties, and the volume of imports is small compared with domestic production. In other words, they are probably significantly restricted by the U.S. tariff.

Less Competitive Imports

At the other end of the scale, out of the \$3,800 million of dutiable imports analysed in this study, there are:

(1) \$1,800 million consisting either of products that are not produced at all in the United States or of imports which would not increase significantly in the event of tariff suspension—e.g., quebracho tanning extract, handmade Oriental rugs, hardwood lumber, and synthetic rubber.

(2) \$58 million consisting of import specialties, that is, imports which supply 90 percent or more of domestic consumption of like products—e.g., castor beans, edible olive oil, and mica.

(3) \$104 million including imports that probably would account for less than 1 percent of domestic consumption—e.g., live poultry, cotton yarn, linoleum and paints.

(4) \$405 million accounting for between 1 percent and 10 percent of consumption—e.g., pecans, potatoes, canned tuna fish, plywood and shoes.

Thus, in the aggregate, about \$2,400 million of the \$3,800 million of dutiable imports analysed consists of items that appear not to be highly competitive with domestic production. At least, the total displacement of such imports would be small. The other \$1,400 million consists of imports that, in the event of tariff suspension, probably would account for between 10 percent and 90 percent of the domestic consumption of like products. It is this area in which claims of injury would seem to be the most likely to prevail, Dr. Piquet points out.

Effects of Quota Suspension

The quotas in effect in 1951 applied to imports of wheat, wheat flour, sugar, long-staple cotton, short-staple cotton, linseed oil, butter, rice and rice products, peanuts, flaxseed, cheese, and live cattle and dressed beef. If, however, these quotas were to be lifted, imports would increase probably by as much as \$358 million to \$833 million. Imports of the products subject to quota would thus increase by 67 percent to 156 percent by virtue of quota suspension alone. In terms of dollar volume alone, Dr. Piquet says, the most significant increases probably would be in imports of sugar, butter, and live cattle and dressed beef. In terms of percentages, the most important increases probably would be butter, Roquefort and blue-mould cheese, cheddar cheese, peanuts, and either flaxseed or linseed oil.

Thus, suspension of tariffs might result in an 8 percent to 17 percent increase in total imports. If quotas also were to be suspended, the increase would be stepped up to 11 percent to 25 percent. In terms of volume, the increase attributable to quotas would range from \$358 million to \$833 million. The study points out that it is important to note that the quotas now in effect apply only to agricultural commodities, or simple agricultural manufactures; they do not apply to other manufactured goods. The study also says that imports of cattle and beef, wheat and wheat flour, cheddar cheese, rice and rice products, and short-staple cotton, even after suspension of quotas, in all probability would be equal to less than 10 percent of the domestic consumption of each commodity.

The significant items, Dr. Piquet says, are the competitive commodities—meaning by "competitive" any product the imports of which (after suspension of import restrictions) would account for between 10 percent and 90 percent of domestic consumption of that product. Such commodities now subject to quota restriction are sugar, butter, all cheese other than cheddar, flaxseed and linseed oil, peanuts, and long-staple cotton. Imports, which amounted to \$435 million in 1951, would probably show a 72 percent to 172 percent increase (minimum increase \$315 million, maximum \$748 million) if quotas were to be suspended. Thus, suspension of quotas on these few agricultural products would account for almost as great an increase in imports as would the suspension of tariffs on all "competitive" agricultural imports.

Dollar Gap Reduced, Not Bridged

On the "Trade, not Aid" issue, Dr. Piquet observes that although suspension of American trade barriers would certainly reduce the dollar gap in U.S. trade with the rest of the world, it would by no means be permanently or completely eliminated. He indicates that the tendency of other countries to suffer periodic dollar shortages arises less from artificial impediments to trade with the United States than from profound and apparently irreversible changes in the world economy over the past 50 years. Dr. Piquet points out that policy prescriptions based on an idealized picture of the freely trading world economy of the 19th century underestimate or overlook some of the main institutional features which made the 19th century system work—the special economic position of Britain; European control over vast raw material producing areas; general willingness to subordinate domestic welfare to international solvency and acceptance of automatic balancing mechanisms, such as the gold standard, even when they exposed countries to depressions and other unfavourable developments originating in other parts of the world.

In the absence and unlikely restoration of such attitudes and institutions, Dr. Piquet implies that doctrinaire free trade policy is doomed to continued frustration. He also argues that a narrow protectionist policy is equally obsolete as the basis for an effective American foreign economic policy in the 20th century. The United States, he says, must follow policies which bolster the economic health of the free world by integrating the American economy more fully and constructively with other friendly countries. Though he concludes that possible injury to domestic producers would be less than generally claimed, Dr. Piquet argues that equitable compensation and readjustment assistance should be provided for domestic manufacturers, workers, and farmers who can demonstrate legitimately that their special interests are being sacrificed in the national interest.

Jute

A RAW JUTE FUTURES MARKET

WE have received a copy of the bye-laws of the Calcutta Jute Exchange, Ltd., as passed by the Board of Directors on 10th August, 1953. These bye-laws have been drawn up to regulate the operation of the jute futures market in loose jute conducted by this Association. From a cursory examination of the bye-laws they appear to cover the main matters in connection with a futures market. Only experience will show whether they fully meet the requirements of such a market. It is, of course, impossible to legislate for all the contingencies which may arise and every association connected with trade has to alter its rules from time to time to meet developments.

The difficulty in regard to futures markets is not, of course, in the drawing up of rules. The difficulty is in enforcing the rules and, in Calcutta, in the past, we have had experience of this. There have also been cases where it has been alleged that the rules have been changed suddenly to assist influential parties out of their difficulties, especially in cases where the parties concerned had a majority on the Committee or Board. If a futures market is to command confidence it must be above any suspicion of that sort of thing.

Another and very important difficulty is to limit operations as far as possible to the need for hedging. It is because it has never been possible to do so that futures markets have become a menace to genuine traders. Operators in futures markets, with the object of making quick profits, very often sell or buy quantities far in excess of their need to hedge. In doing so they cause the futures market to magnify trade movements out of all proportion. These movements are also exaggerated by the operations in futures markets of persons who have no connection with the trade in question and are only having a gamble in the hope of making a profit. It would, of course, be possible to pass laws to prohibit both these forms of gambling but the problem is how to enforce them. In Calcutta, where no official control yet imposed has ever been successfully enforced, it would be quite impossible.

A quarter of a century ago the International Chamber of Commerce conducted an enquiry into futures markets. One of the findings of the enquiry was that futures markets tended to enable the ultimate consumer to obtain his goods at rather under the total cost of producing them and delivering them to him. The loss was borne mainly, if not entirely, by the producing country. We have an example of this before us every day. B Twills are the counter in the katni market and, though it is not a recognised market, it may serve as an example. For a long time—probably as long as katni has been in action—B Twills have been quoted at lower prices than heavy Cees though B Twills cost more to manufacture than heavy Cees and though they are both the same size and weight. In other words, the katni market depresses the price, the ultimate consumer benefits and the country loses.

Raw Jute Arrivals

Imports of raw jute into Calcutta and mills' stations during August were 4,61,400 bales compared with 4,48,300 bales in July. The total imports for July and August were 9,09,700 bales. Of the August total, 1,94,000 bales came from Pakistan compared with 1,91,700 bales in July, whilst 2,67,400 bales were of Indian origin compared with 2,56,500 bales in July. The total imports from Pakistan in July and August were 3,85,700 bales, and from India 5,23,900 bales. In July and August, 1952, the total arrivals were 5,86,500 bales of which only 80,200 bales were of Indian origin. Pakistan and 5,06,300 bales were of Indian origin. Two facts stand out in these figures. The first is that this season's arrivals to date are nearly double those of last season in the corresponding two months. The reason for that is, of course, that last year mills had restricted their purchases in the latter end of 1951-52 season because of the prospects of much bigger crops and lower prices in 1952-53. The second is that the arrivals from Pakistan are more than 3 lakhs bales more than in July-August, 1952. The reason for that is the sale by the Pakistan Jute Board of large quantities of their stocks at very low prices. It is interesting to note also that the arrivals of jute in July and August exceeded the mills' consumption by about half a lakh of bales. All the jute imported, however, did not go to mills; a large proportion of the Pakistani jute is still lying unsold in Cossipur godowns.

THE JUTE MARKETS

DECLINE IN ALL SECTIONS

The mild steadiness which developed last week after the announcement of the reduction in the export duty on hessian was shortlived. Prices of hessian had been raised locally and prices of sacking and of raw jute went up in sympathy but foreign demand was not stimulated and all sections of the market have relapsed during the week just closing into a state of depression.

Manufactured Goods: At the time of writing last week B Twills, which are the barometer of the market, were quoted at Rs. 95 for September. At the time of writing on Wednesday they were quoted at Rs. 89-4. That may not be the measure of actual values but it is a measure of the sentiment prevailing in the bazar. While the market was steady

mills sold fair quantities of both hessian and sacking and continued to offer at declining prices until the market could absorb no more. Nervous bulls also attempted to unload which caused a further weakening. On Saturday there was some bear covering for September hessian but not enough to have any lasting effect and on Monday and Tuesday there was a further relapse. Heavy goods have been neglected. It is reported that shipping instructions received this month for hessian are very good but those for sacking are not so good. Shippers say that enquiry from overseas for both hessian and sacking is very poor. The U.S.A. appears to be taking a gloomy view because of nervousness as to the effect of the Korean armistice on industrial activity.

On Wednesday morning the market opened weak with quotations as under:

	Sept	Oct	Oct-Dec.
40" 8 oz.	Rs. 33-12	33-6	33-2
40" 10 oz.	Rs. 41-12	41-8	41-4
B Twills	Rs. 89-6	89-10	90-0
Heavy Cees	Rs. 92-0	92-0	21-12
Corn sacks	Rs. 91-0	91-0	91-0

Raw Jute: Even in the off-season the volume of business transacted in the past two months would have been considered poor. For the so-called busy season it is negligible. Mills have received no encouragement from the market for manufactured goods and the disparity between the prices of raw jute and those of manufactures has caused them to delay purchases of raw jute as long as possible. In consequence sales made by mills have not been followed by purchases of jute. The time will come, of course, when mills will have to buy to keep their machinery running—if for no other reason—but meantime jute markets will continue dull. Until lately there had been some resistance to lower prices for raw jute especially in the mofussil and sentiment had been more towards bullishness than bearishness because of smaller and later crops; but there have recently been signs of nervousness among bulls, some of whom are still holding stocks of old crop. In the absence of any business of importance, prices have declined during the week by fully two rupees per maund. Meantime mills are buying daisee jute at the jetties and, though imports are as yet small, they are increasing. Quality is, however, disappointing.

Business was reported in Tops alone at Rs. 31-8 to Rs. 30-8 and in Tops and Middles at Rs. 30-8 and Rs. 28 for Dhubri and Northern for Sept-Oct. shipment. Northern Middles alone were sold at

Rs. 28-12 to Rs. 28-4 for Sept-Oct. while Dhubri Middles and Bottoms were done at Rs. 26-8 basis Bottoms. Daisee was done at Rs. 27 to Rs. 25 basis Bottoms for Sept-Oct. shipment.

Small business was done in Old Crop Reds at Rs. 180 per bale for Sept-Oct.

On Wednesday morning quotations were as under:

Indian Jute:	New Crop	Shipment
	Landed at Mills.	
	Rs. per md.	
	Basis Bottoms	Sept-Oct.
Lower Assam	24-8	
Upper Assam	24-0	
Northern	24-0

Dundee Daisee 2/3 SG	150-0	
Dundee Daisee 2/3 LG	135-0	

Pakistani Jute:	Landed at Mills.	Shipment
	Rs. (1) per md.	
	Basis Bottoms	Oct-Nov.
Jat	26-8	
District	25-8	
Northern	24-8	
	Rs. per bale	
Cuttings NC	62-0	
Cuttings Mixing	60-0	

Mofussil: Imports in Indian markets are reported to be increasing slowly and are expected to increase further before the Pujahs. On the other hand because of inability to sell in Calcutta, buyers in mofussil markets are inclined to hold off and are offering lower prices which may cause imports to be held back. Prices at present are well above Calcutta parity and, with little demand from Calcutta, local dealers are likely to be discouraged unless they have previous sales to cover. In most districts quality is disappointing and condition is not satisfactory. Arrivals in Cossipur have been less in the past week and it is reported that many commission agents have sent instructions unconditionally to stop dispatches.

In Pakistan there has been very little enquiry from abroad and overseas buyers appear to be waiting to see what effect the reduction of India's export duty on hessian will have on Pakistani jute prices. There has been a definite change of sentiment in Pakistan which is attributed in part by some to the Government announcement that they will not do anything to support the market. Speculators who bought for forward deliveries are now trying to cut their losses by re-selling. In big

STRUCTURAL STEELWORK

The Steel frame work for the Bank/City Automatic Telephone Exchange Building, Calcutta, covers an area of approx. 30,000 sq. ft. The structure is 11 storeys high and comprised 3375 tons of Steelwork, fabricated and erected in contract time.

Wagons for Jute

In spite of the Railway Board's recent statement that there are more wagons than can be utilised there are at present no wagons available for jute in Northern Bengal. In consequence, there has been a sharp fall in jute prices as buyers have been forced to withdraw from the market.

JUTE ENQUIRY COMMISSION IN CALCUTTA

MR. K. R. P. AIYANGER, Joint Secretary to the Government of India, Ministry of Finance, and Chairman of the Jute Enquiry Commission, accompanied by Mr. P. S. Gupta (Deputy Director-General of Supplies and Disposals) and Mr. D. Sandilya (Joint Director, Finance, Railway Board), members of the Commission, arrived in Calcutta early this week. The Commission, which has recently been appointed by the Government of India to make a thorough enquiry into various factors that affect the prices of raw jute and jute goods, had discussions with the Secretaries of the Agriculture as well as Commerce and Industry Departments of the Government of

West Bengal. It also met the Committees of the Indian Jute Mills Association and Bengal Jute Balers Associations. The discussions at these meetings were based on the questionnaire issued earlier by the Commission to various organisations connected with the jute trade.

The Commission visited Sheoraphuli to study the factors involved in jute trading and the interests associated with it. Kutchha balers, commissioned agents, and aratdars (stockists) working in this centre, who between them buy, sell and store all the jute grown in this predominantlv Daissee area before the fibre is finally disposed of in the terminal market in Calcutta, were individually examined. The Commission later watched the processes of assortment of fibre and its subsequent transformation into kutchha bales. It also visited Dankuni, about 12 miles from Calcutta, to see the operations of harvesting and bundling of jute, steeping, retting and extraction of fibre. Discussions were held with jute growers working on the fields, and the Commission also saw the standing crops of line-sown jute raised by cultivators under the guidance of the Indian Central Jute Committee.

The Commission, which has been asked to submit its report to the Central Government by December 1953, will ascertain the extent to which the prices of jute and jute goods are influenced by speculators and make recommendations to the Government on the measures necessary to (a) secure for the grower as well as the industry a fair price of raw jute and jute goods; (b) eliminate the malpractices engaged in by certain sectors of the jute industry in order to rig up or depress prices for their own ends; and (c) ensure that the jute export trade is not affected by frequent manipulations of the market by interested persons.

THE FOREIGN JUTE MARKETS

(FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.

CONTINENTAL manufacturers are naturally not overjoyed on hearing this week that the Indian Government has reduced the export tax on hessians to Rs. 120 per ton. This drop, which is equal to 6s 6d per 100 yards on 10 Oz. 40 in.,

should make competition even more keen, as the bulk of it has been passed on to the consumer. For some time, buyers of jute cloth and bags have been expecting such an event, and there has been a paucity of business. Prices are being kept down to still low and uneconomical levels, with shippers offering to sell to the U. K. at 70s 0d for 10 Oz. and 52s 3d for 74 Oz. to the end of this year, f. o. b. Calcutta. "B" twills were advanced in sympathy with hessians on Monday and Tuesday of this week, but they have lost much of the rise at 156s 6d for September and 158s 0d for October December, f. o. b.

With the prices for raw jute in Pakistan being more or less maintained, producers outside of India cannot afford to make reductions on their rates for yarns and cloth. So far as Dundee is concerned, there is no change in the position, and, though values of Calcutta goods are far below those quoted by Dundee manufacturers, no revision of the fixed maximum prices can take place until the raw material falls, at least a few more pounds per ton. It is reported that Continental spinners are virtually out of the market for raw jute from Pakistan, but the Jute Controller in Dundee has been buying steadily where suitable material has been offered. Mill Firsts have come down to £97 and Mill Lightnings to £87, while crack Daissee-2/3 has been bought at £89 and grade at £80, crack Tossa-4's at £111 and grade at £100, with Tossa-4's sold at £87, all c. and f. U.K. Little is now being heard regarding any shortage of the raw material this season and it seems to be taken for granted that the available quantity will be sufficient to meet all requirements.

Both spinners and manufacturers in Dundee are still very busy, and prices are firmly maintained. Demand for yarns continues to exceed the supply and buyers of the hessian qualities and twist-are grateful for any little lots they can pick up for reasonably early delivery.

Dr. B. V. Narayanaswamy Naidu has assumed charge of the Office of the Chairman Forward Markets Commission, which has been established under the Forward Contracts (Regulation) Act 1942. The office of the Commission is located on the 3rd floor of Harawala Building, Witter Road, Ballard Estate, Bombay. Communications to the Commission may be addressed to the Secretary to the Commission.

Commodity Markets

OPEN GENERAL LICENCES

CENTRE REVIEWS IMPORT POLICY

THE Government of India has reviewed the import policy for the items covered by the five Open General Licences which expire on 30th September, 1953. Licence No. XXVI is for imports from Pakistan while Licence No. XXVII regulates the imports from Persian Gulf Sheikdoms and Portuguese Possessions in India. The Open General Licences No. XXVIII and XXX relate to imports from the soft currency area while Open General Licence No. XXIX regulates imports from all countries in the world except South Africa. The validity of the Open General Licence relating to imports from Pakistan has been extended by one month and no change has been made in the items covered by this O. G. L. The Open General Licence regulating imports from Persian Gulf Sheikdoms and Portuguese Possessions in India has been re-issued. The re-issued licence is valid till 30th September, 1954. No change is made in the commodities covered by this licence also.

The Open General Licence No. XXIX which permitted the import of 86 items from all countries in the world except South Africa has been replaced by Open General Licence No. XXXI. The new licence continues to permit the import of certain metals, generators, electrodes, other than iron and steel electrodes, certain drugs and medicines, unexplosives, sulphur, wood and timber, wood pulp, newsprint, certain laboratory instruments, apparatus, etc., and flourspar. No new items have been added to the licence but 17 new items were included in the expiring Open General Licence have been removed from the O. G. L. and given import quotas. The more important of these items are: wrought copper; brass, bronze and similar alloys unwrought; certain diesel engine spares; parts of power driven pumps and agricultural tractors; thermocouples and pyrometers; certain chemicals; hosiery needles; and scientific instruments and microscopes.

The two Open General Licences for imports from soft currency area, namely, O. G. L. XXVIII and XXX have been merged into Open General Licence No. XXXII. A few items have been added to this licence. These are seedlac, postage stamps, certain chemicals, sulphate of potash and vaslinizers. A few items like iron and steel chains other than ship chains, iron and steel buffers for locomotives, iron and steel electrodes, hacksaw blades and certain textile mill stores have been deleted from the O. G. L. and will now be imported under import quotas announced separately in a Public Notice. Bifurcated rivets, iron and steel wire rope, pneumatic plants, compressors, some textile chemicals, cashewnuts, dates, dyeing and tanning substances, raw wool, printing machinery and certain plastic raw materials continue to be included in this licence.

The new licences will be valid till 30th September, 1954.

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (base: year ended August 1939=100), fell 0.4 percent to 406.5 during the week ended 5th September, 1953. The index was lower by 1.3 percent compared to the corresponding week of the previous month but was 4.0 percent higher than that of a year ago. During the week under review, Foodstuffs remained almost unchanged at 402.7, as the effect of decreases in the prices of dal arhar (-9%), jowar and bajra (-2% each) wheat, gram, sugar and gur (-1% each) was neutralized by an advance of 12 percent in the prices of tea. The index for Industrial Raw Materials fell by 0.7 percent to 482.2 from 485.4 for the previous week, owing to lower (revised) for the previous week, raw silk at Malda prices of gingelly seed (-11%), raw silk at Malda (-6%), raw jute (-3%), rapeseed and copra (-3%

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August, 1953. As compared with July, the August Index for Food shows a rise of 6 points, while that of Fuel and Lighting, and Miscellaneous remain unchanged at 239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 3 points during August, 1953.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100		GROUP INDICES

STRONG, GENERAL DEMAND IN TEA EXPORT SALE

DUSTS ALSO IMPROVE

At Sale No. 15, held on 21st September, offerings in the Export auction consisted of 56,300 chests. There was a very strong and general demand for most descriptions. Assam BOP's and OF's with tip were in good demand and were dearer by about two to four annas. Clean Common Broken Pekoes were half an anna dearer, while Common and Low Medium Fannings were one anna and sometimes more dearer. Low Mediums, Medium Broken and Leaf grades remained steady. There was more support this week for C.T.C. Broken and Fannings grades and these were fully firm. Darjeelings were the weakest feature of the sale and generally these sorts were sold under valuations.

Quotations		1953	1952
Clean Black Pekoe	1-10-0	1-7-0	
Clean Common B.P.	1-12-0	6-12-0	
Medium Assam B.P.	1-13-6	1-10-0	
Good Assam B.P.	2-2-0 to 2-3-0	2-1-0 to 2-3-0	

At the Internal auction on 22nd and 23rd September, the offerings of Dusts consisted of approximately 13,908 packages. There was good general demand for all sorts. Commons, Mediums and CTC types improved by half an anna while the very commonest grades registered advances of an anna per pound. All other kinds remained fully firm. Only 672 packages of other grades were on offer and sold well.

Quotations		1953	1952
Medium Doars Dust	1-10-0	0-15-0	
Medium Assam Grassy Dust	1-10-0		
Best Assam CTC Dust	1-14-6 to 1-15-0	2-0-0 to 2-1-0	

FREIGHT MARKETS DULL: ORE ENQUIRIES DUPLICATED

A NEW LOW IN COAL RATES: TRAMP FREIGHT INDEX UP

THE recent broadening in enquiry has diminished and it is obvious that many of the enquiries for Indian ore particularly are being duplicated giving Owners a false idea of the amount of business available.

Very little business has been concluded in the last week and the only bright spot was the fixture of eight vessels from the River Plate to Continent for loading positions up to December on a basis rate of 67s. 6d.

A new low rate for coals from Hampton Roads to Rotterdam was established with the fixture of a motorship at 27s. 6d.

The tramp freight index for August showed a slight decline over July and at 73.9 is only 0.1 better than the June figure which was the lowest for almost a year. On the other hand the time charter index was fractionally higher and some Charterers appear to be taking advantage of the present low rates to take vessels up for lengthy periods.

HIDES AND SKINS

The market was almost unchanged. Stocks were less than in the previous week.

Bazar Sales

(Between 15th and 21st September, 1953).
Cowhides:—Wet salted (Ord) 5,000 pcs. on the basis of Annas 8-6 to Annas 10-6; Wet salted (Ord) 20,000 pcs. on the basis of Rs. 9-4 to Rs. 10; Wet salted (Slaughtered) 10,700 pcs. on the basis of Rs. 13-4 to Rs. 22-12.

Goatskins:—Wet salted (Daissee, Killed) 45,800 pcs. on the basis of Rs. 225 to Rs. 400; Assam-Dinajpur 17,970 pcs. on the basis of Rs. 265 to Rs. 330; Purneah-Kissenganj-Maldah 15,000 pcs. on the basis of Rs. 280 to Rs. 310; Patna 21,000 pcs. on the basis of Rs. 150 to Rs. 225; Muzafferpore-Darbhanga-Pakur 9,500 pcs. on the basis of Rs. 240 to Rs. 265.

Bazar Stocks

(21st September, 1953).

Cowhides:—Wet salted 1,34,500 pcs.
Goatskins:—Wet salted (Daissee, Killed) 39,000 pcs.; Assam-Dinajpur 89,000 pcs.; Muzafferpore-Pakur-Patna-Purneah-Kissenganj 3,03,000 pcs.

MORE FOREIGN SUGAR ARRIVES

During the week ended 22nd September, sugar prices for ready ex-Kantapur delivery were Rs. 30-8 to Rs. 30-12 a maund for ordinary grain, and Rs. 31-8 for big grain. Java sugar was released for distribution to wholesalers at Rs. 30 a maund. About 50,000 bags of foreign sugar arrived during the week, so stocks were 105,000 bags. In addition, 2,000 bags of Indian sugar arrived daily and stocks of this amounted to 25,000 bags. Ex-mill delivery rates were Rs. 28-12 to Rs. 29-12 a maund. Java sugar was selling at Rs. 88 a bag in Madras. No foreign sugar had arrived in Bombay but the Indian product was selling there at Rs. 92 a bag. A ship carrying 12,000 bags for Tuticorin, Cochin and Calcutt sailed from Calcutta.

FINISH WITH FALSE ECONOMY...

It is false economy to use cheap finishing materials. TRUE ECONOMY lies in using good quality finishes and using them correctly. A good finish will

LOWER BANK RATE A TONIC
TO STOCK MARKETSOME REACTION FOLLOWS EARLY
BRIGHTNESS

London, 22nd September.

SELDOM has the London stock market been blessed with such a timely operation as this week's lowering of the bank rate from four to 3½ percent. All groups were beginning to wilt under the influence of Wall Street's recent setback, the weakness of sterling and mounting wage claims. Additionally, yields on all the first-class fixed interest stocks had reached a position bordering on stalemate. The lowering of the bank rate was generally welcomed as an encouragement to a fresh flow of business and the immediate effect was the sharp upward adjustment in prices of gilt-edged and leading industrials. Later, however, the market began to suffer from profit-taking—particularly noticeable in gilt-edged—and turned dull. Foreign bonds, the other hand, which initially suffered from the diversion of attention to domestic stocks, steadied later in the week.

Tea issues also were rather neglected in the excitement over the new money rate but firmed up somewhat at the end of the week following good results and the tea sales. News that India and Ceylon are hoping to launch a tea promotion drive in Canada did not have any visible effect on prices. Other Far Eastern commodity prices closed the week about unchanged though United Sua Betong, for instance, lost 6d to 39s.

Credit conditions were again difficult in the money market during the past week and authorities had to engage in smoothing operations each day to bring books into balance. The assistance varied from a considerable amount early in the week to only a small amount of direct assistance at the week's end. Bill buying by banks was again limited and heavy calling made for shortage of credits. The feature of operations following the reduction in bank rate was the further reduction in rate for bank bills on Friday and the revival of double quotations for bank bills for the first time since 1939. The Bank of England Return shows a further reflex of notes from circulation amounting to £2,373,000. This compares with £5,189,000 in the corresponding week a year ago and brings the reserve of notes up to over £37 million. Active

circulation now is £1,538 million. Bankers deposits increased to £285½ million.

Single Yarns Output

Total United Kingdom output of single yarns (including qualities spun from cotton waste, rayon staple and other materials as well as from raw cotton) during the week ended 29th August was the highest weekly output for 19 months. The Cotton Board's latest return puts output during the week at 19,810,000 lbs. compared with 14,160,000 lbs. in the previous week and 15,060,000 lbs. in the same week a year ago. Breakdown of the various kinds of yarn are given as cotton 14,340,000 lbs. cotton waste 4,040,000 lbs. spun rayon 260,000 lbs. cotton and rayon mixtures 700,000 lbs. other cotton mixture 50,000 lbs. and waste 220,000 lbs. The return shown also that during the week ended 29th August, recruitment of full time workers in spinning exceeded wastage by 397—a figure exceeded only three times in the past five years.

U. S. Economic Prospects

A healthy atmosphere is essential for the economic well-being of the United States as a whole, according to the American Stock Exchange President, Mr. Edward McCormick, and tax reduction is said to be necessary if the U.S. is to enjoy sound business conditions. Disagreeing with "growing numbers of pessimists who conclude that the United States economy is skidding and a severe reaction or depression is in prospect" he said that while there may be shakeouts from time to time and periods of rolling adjustment, long range prospects are fundamentally sound. He felt that prospect of income tax cut coupled with relief from double tax on corporate dividends and a more equitable capital gains programme would go far towards levelling off the ruts in the business road and accelerate on long run to prosperity.

U. S. Federal Reserve

The Federal Reserve Return for the week ended 16th September shows gold stock unchanged. Foreign deposits fell \$62,000,000 to \$507,000,000. Foreign investments rose \$26,000,000 to \$2,602,000,000. The Federal portfolio of Government Securities rose \$81,000,000 as it bought 50,000,000 dollars bills and \$31,000,000 under repurchase agreements. (It also switched \$856,000,000 of maturing bonds into certificates). Member bank borrowings fell \$150,000,000 to \$311,000,000 while their excess reserves jumped \$536,000,000 to \$918,000,000. The reserve ratio fell 0.3 percent to 44.6 percent.

Plantation Topics

IMPROVED PROSPECTS FOR
TEA PRODUCERS

CAUTIOUS DIVIDEND EXPECTATIONS

IN an editorial last week the Financial Times said "with the gradual recovery in prices this year, a good part of the Indian tea industry—certainly the better-quality producers—should be back to a profitable working basis. Much depends, of course, on how successfully individual companies have been able to weather the difficult conditions of 1952 with their finances in sufficient order to take advantage of the recovery in the market. As indicated by the latest accounts of such a strong concern as the Assam Company, the strain on working capital was considerable. This company experienced a net deterioration in its liquid funds of nearly £640,000. It is fortunate in that most of its post-war re-equipment and estate rehabilitation is done, so that future capital commitments can be scaled down easily. But other gardens may be less satisfactorily placed."

"The reopening of the London auctions has given producers direct access to the main consuming market—but this, too, entails an additional strain on resources. The Assam Company, for example, estimates that some £350,000 of the depletion of its liquid funds last year was due to the delay in receiving the cash proceeds of its offerings here. At the same time, the company obtained a definite gain from the disposal here of 6 million lbs of its tea, or more than half the crop. Although the weakening of the market was common to both centres, London prices showed on average a moderate increase, whereas in Calcutta the export price recorded a fairly sharp fall. The Assam Company's total sales proceeds for 1952 were not significantly less at £1.7 million."

"The importance to producers of reaching the best market is brought home readily by reference to the cost problem, which does not grow any smaller. Much of the estate expenditure is bound up in the increased wages and social legislation charges which the new India imposes on the industry. This part of it is unlikely to decrease. There is, admittedly, some encouraging evidence that concession costs—which arise from the subsidised provision of food and clothing to the estate workers—are beginning to ease, but the maintenance of this trend will depend on a continued improvement, as at present, of supplies. In general, it seems unwise to look for any marked increase in the level of profits at present price levels—though the policy of crop restriction by selective plucking may well have an increasingly beneficial effect."

"So far as dividends are concerned, the policy outlined by the chairman of the Assam Company for that concern is illustrative. Last year it reduced its payment to shareholders from 13 percent to 4½ percent. The bulk of future profits, even if these show a marked recovery, will be used to restore the financial position. This could probably be taken as a general outline of the industry's financial policy, in which event dividend expectations would need to be cautious."

LONDON TEA SALES

KEEN AND GENERAL DEMAND

BIDDING in last week's auctions was keen and general for the 6,921 packages of Ceylon teas. The improved quality descriptions attracted particular attention and prices showed advances from 2d to 6d per pound over brokers' valuations. Other kinds except thin liquoring Broken Pekoes, which sometimes were inclined to be easier, were generally steady with Fannings showing a firmer tendency. The available suitable export types sold well reportedly on Continental account. Clean Common Broken Pekoe was indicated at 39½d. nominal per pound, while Low Broken Orange Pekoe was around 42d. to 44d. and Low Broken Orange Fannings at 44d. to 46d. Southern Indian growth 8,046 packages met ready clearance at advances 1d. to 1d. per pound especially for better qualities. Thin liquoring Broken grades were exceptionally slightly easier. There was no sale last Wednesday. This week's auctions were held on 21st, 22nd and 23rd September.

Results obtained by some of the companies are given below:—

	No. of packages	Average per lb.
Amalgamated	1,211	3/5½
Assam Frontier	294	4/6½
Budha Beta	132	4/5½
Buxa Doars	26	4/2½
Central Province	311	3/10
Chubwa	132	3/11½
Chulsa	358	3/7½
Cons. Tea and Lands	420	3/6½
Doloo	216	3/4½
Imperial	1,492	3/10½
Jhantzie	426	4/0½
Jokai	274	4/4½
Kanan Devan	1,458	3/5
Lungla	1,187	3/3½
Majuli	360	4/2½
Makum	371	4/5½
Malayalam	1,990	3/3½
Moabund	204	4/7½
Scottish Assam	144	4/5
Southern India	324	3/3½
United Planters	558	3/10½

India produced 622,466,627 lbs. of Tea and exported 427,565,465 lbs. in 1952. Exports represent 68.7 per cent of the total crop.

1,250,000 workers are employed in the Indian Tea Industry.

India earns an equivalent of Rs. 930,000,000 in foreign currency from her Tea exports.

About 170,000,000 lbs. of Tea are consumed in India.

Over Rs. 730,000,000 have been invested in India's Tea Industry.

Engineering and Transport

CALCUTTA PORT COMMISSIONERS'
ANNUAL REPORT

1952-53 FINANCIAL RESULTS

THE total income for the financial year 1952-53 amounted to Rs. 8,68,29,843 against the revised estimate of Rs. 8,64,32,313 showing an excess of Rs. 3,97,530. The excess is mainly accounted for by an increase of Rs. 3,88,629 from Income from Goods, Rs. 1,75,483 from Income from Vessels and Rs. 2,11,365 from Income from Railway and Rs. 66,807 from Income from Sundries and a decrease of Rs. 1,52,751 from Income from Lands and Buildings and Rs. 2,92,003 from Income from Miscellaneous Receipts.

The total expenditure during the year amounted to Rs. 8,31,40,064 against the revised estimate of Rs. 8,34,49,861 showing a saving of Rs. 3,09,797. The expenditure under the head, Establishment was about Rs. 4.82 lakhs in excess of the estimated figure and expenditure on Stores exceeded the estimated amount by about Rs. 2.86 lakhs. Other increases worth mentioning are Rs. 72 lakh under Labour, Rs. 1.34 lakhs under Workshop, Rs. 13 lakh under Municipal Taxes, Rs. 34 lakh under Police and Rs. 67 lakh under Dearness Allowance. These increases were to some extent offset by a saving of Rs. 7.2 lakhs under Maintenance and Repairs, Rs. 75 lakh under Miscellaneous, Rs. 2.33 lakh under Dredging, Rs. 29 lakh under Unforeseen Expenditure and Establishment, Rs. 2.15 lakhs in respect of Contribution from General Revenue to meet the deficit for the year in the Pilotage Account and Rs. 21 lakh under P. T. O. Concession and Rs. 1.12 lakhs under Minor Works chargeable to Revenue.

The result of the year's working was much better than was originally expected. The expected deficit for the year according to original estimates and the anticipated surplus as per revised estimates were Rs. 48,455 and Rs. 29,82,452 respectively. After providing for minor works chargeable to Revenue the year actually ended with a surplus of Rs. 36,89,779. With the balance brought forward from the last financial year, the balance available for appropriation in the Revenue Account amounted to Rs. 37,37,575. Out of this amount, a sum of Rs. 37 lakhs was appropriated to the Vessels Replacement Fund as provided in the net risk figure at the beginning of the financial year 1952-53 were further depleted during the year in meeting the cost of major repairs to the Dredger Gunga. After this contribution the Fund amounted to Rs. 93,22,772 on the 31st March 1953. The Revenue Reserve Fund had a closing balance of Rs. 4,33,79,450 on the 31st March 1953 and the balance in the Fire Insurance Fund on that date amounted to Rs. 60,00,517.

Capital Expenditure

The year opened with a credit balance of Rs. 42,29,812 and closed with a debit balance of Rs. 5,77,287. The Commissioners did not raise any loans during the year to finance their Capital expenditure programme.

The Capital expenditure on new works and works in progress amounted to Rs. 50,25,528 the main items costing over Rs. 1 lakh being construction of 12 first class and 24 second class mooring buoys (Rs. 1,26,590), purchase of a bucket dredger with three hopper barges (Rs. 9,48,251), purchase of two dock tugs (Rs. 2,59,112), construction of the new despatch vessel Nadia (Rs. 2,38,077), purchase of two survey launches (Rs. 2,05,681), purchase and installation of new mechanical coal chaise and installation of new mechanical, coal loading plant (Rs. 3,09,894), development of the Old Alipore aerodrome area (Rs. 1,65,122), construction of new sale tea warehouse and tea transshipment of quarters on Nimak Mahal Road (Rs. 1,56,832), construction of six 3 storeyed blocks of quarters on Nimak Mahal Road (Rs. 6,47,977), extension of workshops including purchase of new machinery (Rs. 1,31,589).

Hooghly Pilotage

The income from Pilotage during the year amounted to Rs. 22,95,918 and the expenditure to Rs. 31,49,699 showing a deficit of Rs. 8,53,781 in the pro forma account maintained separately under this head. In order to meet the deficit, a sum of Rs. 8,55,000 had to be appropriated from the General Revenues with the sanction of Government under the Calcutta Port (Pilotage) Act, 1948.

Port Charges

With a view to balancing the deficit in the revenue budget, charges on goods and for certain services rendered had to be increased during the year so as to yield an additional income of about Rs. 54.12 lakhs per annum. The increases were confined to local haulage charge on coal from the 1st pies to 6 pies per maund with effect from the 1st May 1952 and to river due and other charges on certain commodities with effect from the 10th April 1952. The increases did not have any adverse effect on the volume of traffic passing through the Port.

Trade and Traffic

The budget estimates for the year were framed on the assumption that imports of salt would amount to 550,000 tons, foodgrains to 1,200,000

tons, petroleum to 885,000 tons and other cargo to 1,200,000 tons. Exports of coal were expected to amount to 3,376,000 tons, gunnies and jute to 920,000 tons and 60,000 tons respectively, tea to 160,000 tons and ores to 550,000 tons.

Actually imports of salt amounted to 468,161 tons, foodgrains and petroleum to 1,066,534 tons and 870,571 tons respectively and other cargo to 913,752 tons. The tonnage of imports discharged in the Port was 3,319,018 as compared with 4,093,088 during 1951-52 the principal decreases in tons being cement (31,961), chemicals other than soda (22,173), foodgrains and flour (594,235), manure (36,042), oils other than lubricating and petroleum (17,507), salt (34,383) and timber (22,087). These decreases were to some extent offset by an increase in tonnage under asphalt, bitumen etc. (52,873) and petroleum (45,222).

Exports of coal amounted to 3,608,294 tons, gunnies and jute to 765,811 tons and 2,646 tons respectively, tea to 175,222 and ores to 945,417. The total tonnage of exports during the year was 6,344,058 as compared with 5,469,914 during 1951-52 the principal increases in tons being coal (248,267), manure (22,199), ores (503,741) and scrap (339,435). These increases were however offset to some extent by a fall in tonnage under bones and bone meal (19,798), gunnies (164,958) and jute (53,039). The total tonnage of sea borne traffic amounted to 9,673,076 as compared with 9,582,982 during 1951-52. Out of this 7,512,845 tons or nearly 77.7 percent, passed over the Commissioners' quays as against 78.1 percent during the previous year.

Port and Port Approaches

During the year 1,503 vessels with an aggregate gross tonnage of 8,873,891 entered the Port as compared with 1,460 vessels with an aggregate gross tonnage of 8,774,606 during the previous year. The deepest draft ship to enter the Port was the s.s. Hughli drawing 27'-9" for'd and 27'-6" aft and the deepest draft ship to leave the Port was the s.s. Steel Vendor drawing 27'-8" for'd and 27'-8" aft. There were seven casualties to vessels in charge of Assistant Harbour Masters and one casualty to vessel in charge of Berthing Masters but no casualty was sufficiently serious to necessitate a Government enquiry.

Model Experiments

Experiments on the Port model for the improvement of the Sankrail and Muraiali Reaches were completed during the year and experiments taken in hand for the improvement of the King George's Dock lock entrance, Garden Reach Jetty and the Cossipore Reach are still in progress. On the Estuary model, experiments for the improvement of the Fulta-Hooghly Point area are being continued in addition to the following new experiments—

- Determining the quantity of head water discharge required to neutralise the salinity of the River Hooghly.
- Studying the river conditions which are likely to present themselves over a period of years in the event of the execution of the ship canal scheme which will involve abandoning the maintenance dredging of bars and the river training works now under contemplation.

The Hooghly Expert Committee appointed by Government endorsed the conclusions reached on the model experiments as being reliable and ac-

ceptable with confidence. They also recommended the construction of a new repelling spur at Sankrail with the least possible delay.

Port Development Scheme

The Commissioners sanctioned during the year a scheme for improvement of the existing port facilities involving an expenditure of Rs. 8 crores. The scheme covers projects like construction of new vessels, River training works, purchase of new railway wagons and locomotives, provision of a 200-ton heavy lift crane, reconstruction of No. 1 Garden Reach Jetty Shed, development of a mechanical ore berth, construction of new pontoons, modernisation of some of the berths at Kidderpore Docks and construction of quarters for Class IV staff including improvement of existing hospital facilities. For the execution of these projects the Government of India promised to render assistance to the extent of Rs. 4.92 crores in the shape of interest free loans (interest payable after the first seven years at 4½%), the balance being found by the Commissioners.

The projects covered by the scheme have been assigned high priority and the necessary machinery has also been set up for their speedy execution during the five year plan period.

The s.s. Terushima Maru which was proceeding to Calcutta with the assistance of tugs following an accident on the 19th August 1952 in which her rudder was damaged ran aground on the 21st August 1952 off Poojali Crossing and was a total loss. In the Port Approaches, the Balari Bar controlled the draft of ships for 163 days as against 240 days during the previous year. The Easton Gut was the controlling bar for 112 days as against 113 days during the previous year. The Nurpur Bight controlled the draft of ship for 73 days, the Ninan Reach for 11 days and the Fulta Reach for six days. The controlling bars were thus above Diamond Harbour for 202 days as against 126 days during 1951-52 and 218 days during 1950-51.

The income derived by the Railways during the year amounted to Rs. 1,37,65,565 as against the estimated figure of Rs. 1,35,54,200. This includes earnings from local traffic and other miscellaneous services rendered amounting to Rs. 39,11,291.

River Drafts

The drafts allotted to shipping during the year were satisfactory and showed a slight improvement in the overall position as compared to the previous year.

The value of stores and building material purchased by the Stores Department during the year for use on maintenance and Capital works amounted to Rs. 1,34,85,586 of which Rs. 7,51,515 represented the value of stores purchased from overseas through the Commissioners' London Agents.

The only important change in the administration was the appointment of Sri R. Gupta, I.C.S., as Chairman with effect from the 17th January 1953, in place of Sri N. M. Ayyar, I.C.S., who was appointed as Secretary to the Government of India, Ministry of Transport.

H—Held by the Commissioners.
E—New Howrah Bridge Loans.
D—This is a Domestic Loan, not subscribed for by the Public.
B.—A Sinking Fund has been established for the liquidation of this loan in May, 1953.

A—Held by Govt. of India.
E—Held by Govt. of Madras.
R—Interest reduced from 6% to 3% from 1-6-44.
Y—Interest reduced from 6½% to 4% from 1-4-25.
Z—Interest reduced from 4½% to 3% with effect from 1-7-38.

N—Nominal.
*Loans held by Govt. are not shown here.
*Free of Income-Tax.
†Loans held by Govt. are not shown here.
†Free of Coochin Govt. Income-tax.
‡Free of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividend.

COAL COMPANIES

O, P, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other Funds	Acreage under Tea	Outturn and Average Price per lb realised for crop.				Estimate	NAMES. THE GOVERNMENT'S DEFENCE OF THE PLAN IN PARLIAMENT

UPSHOT OF THE ECONOMIC DEBATES: PUBLIC AND PRIVATE INVESTMENT

THE session of Parliament that ended last week was naturally much occupied with the economic questions connected with unemployment, and the Government was, in several lengthy debates, called on to explain why things seem to be getting worse in the middle of a plan to make them better. It cannot be said that the Ministry gave any coherent reply to that question, except the general one, that things often do get worse before they get better. Most of the explaining of course had to be done by Mr. Deshmukh and his explanations were patient and sincere, if not always convincing. Mr. Deshmukh's own development since he has been at the Finance Ministry is not too small a point to dwell on at the beginning of a discussion of the Government of India's policies, for his part in framing them and in defending them before Parliament has become increasingly important. Mr. Deshmukh joined the Ministry as a "sound" economist but he has shown signs of becoming a collectivist politician. His views on economic matters these days are more like Mr. Nehru's than they were a few years ago. In this way his Cabinet career contrasts with that of Mr. Rafi Ahmed Kidwai who has shown a happy ability to retain his independent ways of thinking about complicated questions in a Cabinet that was at first plainly hostile to them. Mr. Deshmukh himself marked the change in his last address in Parliament, in the Council of States on Wednesday, when he rose to reply, as he stated explicitly, "not as an economist, orthodox or otherwise", although the debate he was replying to had been concerned only with economic matters. This may have been intended merely to disarm criticism, especially from a certain "very experienced and important quarter"—behind which description we can easily recognise Dr. John Matthai. But it also signalled the shift in Mr. Deshmukh's attitude to economic questions, away from the preciseness and brilliance that once made him a sarcastic and rigid controversialist, toward the vaguer tenets of the party line.

The change is not necessarily a bad one, for we would be the last to assert that the economists have all the answers to the problems the Government of India has to deal with today. The present discontent about unemployment, for example, does not permit of analysis (even at the technical level) in purely economic terms, and Mr. Deshmukh was perfectly right to refer in the course of the various debates to political and moral factors which cannot be ignored in considering the progress of India's development plans. He would be entitled to say, furthermore, that even if he did not give a convincing diagnosis of the economy's current ills in his new rôle of Congress politician, nor did the purist economists outside the House who have done so far as to throw out suggestions, which we can only hope Mr. Deshmukh will now consider more earnestly than he was able to do during the last session. His positive contribution to the nation's enlightenment apart, the Finance Minister's summary rejection of some of the arrogant nonsense that was offered from one side of the House was valuable. His brief No to the suggestions that Rs. 50 crores be dissipated in free doles, that certain classes of business be confiscated, or that lightning Indianisation of foreign concerns would solve the unemployment problem, could not be improved upon. Further argument with the advocates of these irrelevant proposals would have been vain.

Mr. Deshmukh's speech in the Council of States on Wednesday is worth particular study as indicating the Government's mind on economic problems after the full Parliamentary discussions of recent weeks. Summarising it so briefly as to be the risk of satirising it, that mind appears to be: the Plan is still our hope for years to come even if it has not been our help in ages past. So far we

have not much to show the people for the two and a half years of the Plan, but then it has barely got going and the economic scene has changed greatly since it was devised. Some things seem to have gone so badly wrong that we must admit that the Plan needs overhauling, but a patch here and a patch there and it will still see us through. One Plan will not bring in the golden age and it will not even do much to reduce unemployment, which will be with us as long as the population continues to grow at such a disturbing rate. Public works must still form the main part of the Plan, and if private industry suffers meantime, it should not have long to wait before the beneficial effects of heavy Government spending begin to show themselves; why they have not begun to do so already we have no idea.

The one thing that is missing from this attitude is what Dr. Matthai lately called for: "a comprehensive recasting of the structure and underlying assumptions of our economy". Although the former Finance Minister feels that "the logic of events will leave us no choice in the end", the present incumbent sees no need for revolutionary change. He confessed himself unable to see the point of the most weighty suggestion proposed from the "experienced and important quarter", namely that expenditure in the public sector should be scaled down in order to release resources for investment in the private sector. "Whatever may be the general case for stepping up private investment," said Mr. Deshmukh, "and we certainly admit that there is a very good case, it is difficult to see in the context of unemployment how a given amount of investment in the private sector could create more employment than the same amount of investment in the public sector". But certain other parts of his speech showed that he was quite well aware of features of the economy that support Dr. Matthai's case.

He said, for example, that the unemployment that worried the Government most was urban unemployment, and he pointed to the drift to the towns and cities that is a secular feature of the economy and which has been assisted lately by food rationing. It should have occurred to him then that private industry in India is mostly urban, while Government projects, precisely because the Plan has an agricultural bias, are mostly rural. On the face of it, and from the point of view of employment policy, it would appear that money is being spent in the wrong places, especially since decontrol has thrown out of work large numbers of young men who ran the rationing machinery which was concentrated in cities and large towns.

If and when the Plan succeeds to the extent Mr. Deshmukh expects, this tendency will be much more marked because the improvement of agricultural methods, higher yields and the disappearance of uneconomic small-holdings will all release more people to drift to the cities. We could exaggerate the point we want to make in order to put it more clearly by saying that the Plan will hasten the movement of the growing population toward cities and conurbations, but will ensure that there will be no work waiting for them when they get there by hampering the development of private urban industry. Any hope that cottage industries will absorb the millions released from rural labour is quite utopian, and even Mr. Deshmukh did not seem to put much trust in it. The ancient handicrafts are decayed, many of them quite beyond salvation, and although there are good aesthetic reasons for reviving and assisting them, they will never be able to contribute to the employment problem.

This was not the only place where the Finance Minister revealed the weaknesses in his own case. Replying to "the most ardent advocates of socialism," he put forward arguments that can

just as well be urged against his own preference for public projects over private industry as a stimulant to the economy. He said, for instance, "In my experience of Government I find it impossible for the very thin layer at the top level to keep control over the thousand and one matters that come up for decision. The capacity of the official machinery to stall, not necessarily viciously but on account of inexperience, on account of their special attitude to things, is immense". Exactly, and this is one of the most important reasons why money taken from industry's pocket in the form of taxes and then set aside for Government spending does not fructify as readily as money left with the taxpayer. The high level of the Central Government's cash balances half-way through a year in which it was planned to run them down to the bare minimum is a good illustration; while Dr. Matthai has already referred to the investment in State Government loans of unspent balances lying with local bodies. Left in the hands of private producers and consumers these funds might have been spent many times over, with consequent increases in the output of goods and in employment, and perhaps with very little ultimate loss to the Treasury.

Mr. Deshmukh repeated the familiar argument that public expenditure must eventually stimulate development in the private sector. This no one has denied, but the essence of the matter is time, and the Government has little to show by way of stimulation of private enterprise for several years of heavy spending. His words last week were, "This investment is certain over a period of years to assist development in the private sector, and that is the important point. It is just the kind of investment which will, in course of time, expand employment opportunities in the entire economy because, in short, it is directed towards creation of additional social capital". One could as well maintain that greater investment in the private sector would eventually support the creation of social capital—and it would provide many more interim benefits into the bargain. The planners are fond of recalling, when the results achieved to date are criticised, that the Plan has only just got into its stride—but after all it has run half its life, expenditure has been raised this year to 178 percent of the 1950-51 figure, and the total outlay of the Centre and the States in 1953-54 will be Rs. 400 crores. Yet it is just in this current year that markets have contracted and employment opportunities shown themselves quite inadequate for the rate of increase in the population. We do not conclude from this that the Plan "has failed" and we are far from what Mr. Deshmukh called "a mood of defeatism", but we do suggest that these results show that the planners have leaned too far in one direction and the time has come to redress the balance by giving private enterprise more leeway to show what it can do to increase employment and lower costs.

The Government deserves full credit for rejecting the inflationist advice that has been pressed upon it in the last 15 months, though there were a few hints in the Finance Minister's speech last week that some easing of credit might be necessary before long. But to judge from his present mood, one would expect that if and when it comes it will be a selective relaxation of credit for industry, and not a general return to cheaper money nor a reckless stimulation of purchasing power such as has been urged from some quarters. Mr. Deshmukh fortunately still holds firm to the belief that "the malady is...that investment in the economy as a whole is not high enough to sustain increasing economic activity and employment". With this we agree, but we point out that this situation is still consistent with relative over-investment in public projects at the expense of private industry. It is not the case that any increase in private investment could only be at the expense of public projects, except at first. Greater encouragement of private investment, which would best be achieved by discriminating tax remissions, would in fact lead to an increase in the total sum of investible funds, public and private together. This is the common aim of the Government and what would probably be called its right-wing critics, and we hope that the further examination of the matter which Mr. Deshmukh has promised will lead him to see the validity of the case for an initial diversion of resources from the State to private enterprise.

A NEW EXPERIMENT IN SUGAR POLICY

BIHAR AND U.P. WIN HIGHER CANE PRICE

THE outstanding characteristic of the sugar policy for 1953-54 announced by the Government of India last week is that it continues the process of experimentation, of trial-and-error adjustment, that has been going on for years in an attempt to equate demand and supply at a level of comparative stability. Even in the chequered history of India's sugar industry, 1952-53 has been a year memorable for its record of sharply changing circumstances and policies. The season began with both industry and the Government worried about how to dispose of a surplus of four to five lakh tons of sugar, but as it ended supplies are said to be short of demand and prices are higher than they should be. A year ago, there was much clamour about the need to increase exports so that the burden of the carry-over might be reduced, but less than four months later exports were banned because prices had risen and scarcity was expected; and today imports are flowing in. The contrast between the circumstances prevailing today and those prevailing a year ago explains the central point of difference between the two policies—on the question of sugarcane price. The price of sugarcane payable by vacuum pan factories was reduced from Rs. 1-12 a maund in 1951-1952 to Rs. 1-5 a maund in 1952-53 because it was felt that if cane cost less, sugar would become cheaper and its consumption would rise. It was, of course, expected that the price reduction would cause less cane to be grown and therefore less sugar to be manufactured; but the Government seemed to have assumed that production would fall, and consumption would rise, to a level where the two would be in approximate balance. Developments during the current year clearly show that this has not happened; in fact, as is now officially admitted, demand has risen far above production, and the latter is to be encouraged by offering cultivators a higher cane price.

For the greater part of the season, the spectacular increase in offtake was not realised. The honeymoon of Government-industry co-operation (which ended with the ban on exports in January 1953) was followed by a period of mutual recrimination during which the Government alleged that the industry was holding back stocks and artificially raising prices, while industry said that it was not being given enough wagons to send sugar to the consuming centres. For months, the controversy continued and a mass of statistics was produced by both sides; by the mills to show that despatches had fallen short of sales because there was no transport; and by the Government to show that prices were high even in producing centres because mills would not put enough sugar on the market at lower prices. Only a few weeks ago did the Central Food and Agriculture Minister, Mr. Kidwai, retract, with the admission that sugar was expensive not because the market was being manipulated but because there had been a sharp and unforeseen increase in consumption. Although the realisation should have come much earlier, it has nevertheless been timely in its influence on the formulation of the new sugar policy. Mills and the Government are clearly on more amicable terms than they have been for some months past, and both realise the need to balance demand and supply by means other than imports. Many mill interests have in recent weeks been urging an increase in the minimum price for sugarcane—a step that one would normally expect them to oppose because it would push up the cost of production of sugar. Cane accounts for 60 percent of the cost of sugar, but they realise that more sugar cannot be produced unless more cane is grown, and the only way to do this is to provide the cultivator with the incentive of a higher price. The Government has therefore responded by raising the price of cane to Rs. 1-7 a maund during 1953-54 (two annas higher than in 1952-53), in the hope that mills will now be offered enough cane to enable them to satisfy the demand for sugar.

The Government claims that the price of cane has been fixed "after taking all relevant factors into consideration such as the trend of sugar production, prevailing prices of sugar, gur and khandasari and the returns to the cane grower from alternative crops." However, it is difficult to avoid the conclusion that the price increase is essentially experimental in nature and intent. The decision to maintain the price of cane at Rs. 1-7 a maund during the season after next also (that is, in 1954-55) might be welcomed on the ground that it would impart a certain stability to ground that the Government's wavering sugar policy; but the Government's wonder what is proposed to be done many must wonder what is proposed to be done if cane production does not increase to the extent necessary to satisfy sugar consumption. The question is not as hypothetical as it might at pre-

sent seem, for during the present season Mr. Kidwai has learnt better than most people that the Government has no reliable statistics to go by, and in no sector of the economy are its estimates more fallible than in regard to sugar consumption. If the new cane price fails to boost sugar production sufficiently, will the price of domestic sugar be allowed to rise to its natural free market level or will imports be renewed? Further, if imports are necessary next season will they be continued during 1954-55, as might well prove necessary if the cane price is left unchanged? Admittedly, these are questions of the future which it would be unfair to expect Mr. Kidwai to answer now, but they constitute qualifications that must be borne in mind in any appreciation of the new sugar policy.

Some time ago, we stated in these columns that a number of factors go to make up the sugar equation, the chief of these being cane price, cane production, sales of cane to the mills and the demand for sugar; when the Government claims that it has taken "all relevant factors into consideration", it is as well to remember that only the first of these is determinate and the remainder are merely imponderables whose impact has so far rarely been gauged in time. The succession of glut and scarcity that constitutes the greater part of Indian sugar's post-war history testifies to the failure of official attempts to adjust these factors in order to produce a satisfactory result in the form of cheap and plentiful sugar. Before the new policy was announced, many (including this journal) suggested that sugar production be entirely freed and the various factors of "the sugar equation" allowed to find their own natural balance. But the Government apparently feels that in a free market cultivators would be paid too little for their cane, production would fall and there might be a scarcity of sugar. The risk is there, but as Mr. Kidwai knows the mills are aware that if less cane is grown because the price incentive is insufficient they will be the chief sufferers, not the cultivators who can take to producing other crops. Another fear—that the sugar trade has

the cane itself is usually of poor quality and has a very small sucrose content. Yields are estimated at 250 to 300 maunds of sugar-cane per acre, as against about 1,500 maunds in other important sugar producing countries; but it has been demonstrated that they can be more than doubled if intensive cultivation is undertaken with improved seeds, fertilisers, etc. More serious efforts should also be made to encourage the cultivation of cane with a higher sucrose content; sugar recovery figures for Indian cane have fluctuated from year to year and are still well below the Australian, Java and Cuban figures. Except in Bombay, where factories run their own farms, very little has been done for cane development, although State Governments have regularly squeezed large sums out of the industry in the form of cane cess and mis-spent it for other purposes. The Tariff Board pointed out in 1950 that "during the last eleven years the U.P. Government collected Rs. 172 lakhs for cane development work; similarly, the Bihar Government collected Rs. 297 lakhs and spent only Rs. 145 lakhs for such work. Judging by these figures of collection and expenditure of cane cess on cane development, we consider that the provincial Governments can, and should, contribute larger amounts for development work in their own areas." The advice has not only been ignored, but the burden of fiscal imposts continues to rise. The Centre has usually excused itself from doing anything about the States' misuse of cane funds by saying that agriculture is a State subject under the Constitution so it cannot interfere and indeed, if the States were approached they might well reply by enquiring into the need for such a high Central excise duty. The sugar industry's problems call for some fresh thinking if it is to be rescued from the constant swings between glut and scarcity that have been going on for years. Tinkering around with the sugarcane price (often on political considerations) in an otherwise uncontrolled sector of economy might bring about a balance one season, possibly also the next, but is never likely to yield longer results until the fundamental causes of the industry's ill-health are attacked.

attracted a number of hoarders and profiteers—seems much less tenable in the conditions of a buyers' market, especially if the Government makes clear its intention to maintain large stocks.

An official Press Note last week stated that "as a result of the increase in the minimum price of cane by two annas a maund, there should normally be an increase of Rs. 1-4 a maund in the price of sugar." But the consumer, it added, will not pay more since the additional excise duty of Re. 1 a maund (imposed last year to cover the loss involved in reducing the price of controlled stocks which were carried over from the 1951-52 season) will be discontinued. This is no more than a pretence of generosity because the additional duty was to be removed in any case as soon as the loss had been covered; it presumably has been by now. To supplement the duty reduction, adds the Press Note, "the sugar mills have agreed to forgo the remaining four annas a maund from their margin of profit." In sum the financial intentions of the new policy are: more money for the cultivator and less for the industry, with the States' imposts unharmed and selling prices (New Delhi hopes) unchanged.

This familiar use of industrial earnings as the sacrificial goat in a period of economic difficulty might have been more supportable if it had been accompanied by a determined and concerted attempt to place the domestic sugar economy on a healthier footing. Neither the new policy announcement nor Mr. Kidwai's statements during the past year suggests that any long-term measures are being contemplated to reduce the price of Indian sugar, whose costliness was sharply emphasised during last year's still-born "export drive." Official pronouncements regarding the industry are notorious for the manner in which they evade the one problem that is fundamental to its future stability—cane development. In India, not only are yields of cane per acre low but

CURRENT COIN

Competition in Hemp.—Hemp is among the large group of commodities which is meeting with increasingly competitive markets. Abroad, the fizzling out of the Korean boom has been accompanied by a recovery in world production, and at home jute mills, for instance, have bought less of the substitute since the supply of raw jute eased last year. Exports rose from 13,556 tons in 1950-51 to 20,850 tons in 1951-52, but fell to 16,800 tons in 1952-53; this fall has not been offset by local consumption. The burden of Mr. G. S. Poddar's presidential address at last Friday's meeting of the Indian Hemp Association in Calcutta was that if transport could be improved and regular supplies assured, the competitive strength of Indian hemp would be greatly increased. Mr. Poddar complained that hemp is given too low a priority in rail movements; in reply to representations, the railways had stated that "booking from mofussil stations to baling centres for baling prior to export could not be given priority because the rules of administration said such priority was available only to traffic booked to a port for direct export." He pointed out (no doubt with the jute industry's experience in mind) that if regular supplies are not assured to foreign countries they would turn to substitutes. Tissue paper manufacturers, who are the main consumers of Indian hemp, could for instance use substitutes such as wood pulp, flax waste and flax tows which are now easily available and whose prices are competitive. Britain has been India's chief customer for hemp, followed (in 1952-53) by the United States, France and Italy. Mr. Poddar pointed out that France is one of many countries that have begun to use local fibres. In Italy, production is expected to recover to 70,000 tons this year as against just over 64,000 tons in 1951; besides, she has a carryover of 30,000 tons and has experienced a big price fall. A similar increase in output has taken place in East Africa, the Philippines and Indonesia, where also prices generally are declining. Although a buyers' market is fully established, the Government is not helping the industry to reduce costs; on the contrary, it has proposed an increase in Agmarking charges from 12 annas to Re. 1 per bale. A grading scheme submitted by the Association was rejected by the Government on the ground that it was no better than the present one; but in Mr. Poddar's opinion "it would most definitely have secured the trade against such rising costs of the control scheme, and recognised the fact that after years of Government grading it is still the shipper's mark that holds. The field control schemes have a habit of multiplying costs of administration, and I should only plead that the Government should even now consider the feasibility of entrusting the administration of the schemes to our Association." Mr.

Poddar also suggested some changes to remove difficulties of transhipment between metre gauge and broad gauge wagons.

Credit Conditions in the Commonwealth.—The steady improvement in the dollar exchange position of the sterling area over the first half of this year forms the subject of an interesting review of trade and balance of payments prospects for Commonwealth countries generally which appears in *Foreign Trade*, a Canadian Government publication. It is addressed, of course, to Canadian exporters—who are told that although transfer deposits have never been a problem for them, the favourable trend of gold and dollar holdings gives even greater assurance of continuity of trade and promptness of dollar remittances. The review will no doubt prove of interest to exporters and importers in other Commonwealth countries. Despite the improvement, we learn, the dollar problem is certainly not a thing of the past for the sterling area. Convertibility has been delayed indefinitely and the trade and exchange limitations on imports from Canada will persist in the immediate future. Not all countries and territories have shared in the general recovery; the weakness that has developed in most primary commodity markets has seriously and adversely affected the trade and income of some of the less developed members of the Commonwealth. Malaya suffers most acutely because her economy and export trade are identified with the two commodities in which the price reversal has been most marked and for which the outlook is least promising—tin and rubber. Ceylon's favourable trade balance and strong dollar-earning position have disappeared because of the softening of the rubber market. Pakistan's earnings have fallen sharply, reflecting difficulties in marketing cotton, and lower jute prices—and cotton and jute are her economic mainstays. A poor wheat crop has forced imports rather than the normal exports. The terms of trade have turned against these three, bringing the unaccustomed problem of a trade deficit. They have adopted more restrictive import control measures as a short-term corrective. Probably more disturbing to the foreign supplier than the weaker exchange position of these sterling area members is their internal economic weakness, with consequent credit uncertainty. Domestic business conditions in most countries reflect the degree of prosperity or difficulty of external trade. This is peculiarly true of many members of the Commonwealth because they depend so much on export markets and on imported materials. For this reason, the internal business situation has gained strength to various degrees in all but the areas of difficulty. Fortifying this strength derived from high export trade and the resulting economic activity, was the stronger monetary position of the principal countries. The notably successful Commonwealth effort at self-help entailed not only concerted measures to improve the balance of payments of the sterling area, but also individual effort to establish a sounder basis of internal financial stability. A fair degree of success has been achieved in the domestic monetary field. Reasonable prosperity that is not built on the false base of inflationary policies makes for reassuring credit conditions. Now that the fires of inflation have been dampened, banks have been able to relax some of the more limiting restraints on money and credit supply. These easier conditions contribute to the stronger credit standing of buyers in these countries. The Export Credits Insurance Corporation, whose experience on collections throughout the world is very extensive, reports that experience in the British Commonwealth continues to be particularly favourable. Delayed remittances reported for British West Indies, Ceylon, India and the Union of South Africa amount to only a minor percentage of the total volume of accounts sent for collection. The table below summarises existing conditions and any changes for individual countries in the Commonwealth:

Country	Trade Balance	Business Conditions
Australia	Improved	Improved
British West Indies	Improved	Somewhat better
India	Improved	More difficult
Ceylon	Little change	Little change
East Africa	Slight gain	More uncertain
Hong Kong	Improved	Improved
Malaya	Improved	More difficult
New Zealand	Improved	Improved
Pakistan	Improved	More difficult
Rhodesia	Improved	Less active
Union of South Africa	Improved	Stabilising
United Kingdom	Improved	More satisfactory
West Africa	Little change	Somewhat slower

Insurance Expense Ratios.—The heavy burden of management expenses has long been recognised as one of the major weaknesses of Indian insurance, and although the Insurance Act of 1938 as well as the Amendment Act of 1950 specified remedial measures there is a long way to go before expense ratios generally are down to a satisfactory level. Last year's recession in trade and

industry restricted the scope for new business but many companies could not adjust themselves to this development by reducing expenditure; as Dr. N. N. Law pointed out in his address from the chair at last week's annual meeting of the Hindustan General Insurance Society Ltd., they are now finding it difficult to conform to the expense restrictions imposed by the Amendment Act of 1950. The Act prescribes "a rigorous formula" under which expenses must be reduced if there is a fall in premium on direct business. But Dr. Law wondered whether, in view of this, "the marginal companies which are hard put to it can at all survive, even if they are inherently sound. While insurance business in India has still a considerable leeway to make up, it will indeed be unfortunate if such companies are forced out of existence for sheer non-compliance with a technical standard the merit and value of which are open to question." The Government does, of course, have the right to relax the restriction on expenses after reviewing a company's results, but Dr. Law said a difficulty here is that the precise extent of the relaxation must be known well in advance if the subsequent year's expenses are to be planned properly. He urged that allowance be made for expenses incurred in re-insurance, which form a "sizeable part" of the expenses of general insurance; and called for a change in "the standard of permissible expense." The linking of expenses to direct business, he thought, has positively encouraged malpractices in insurance, and thus reduced the scope for improvement opened by the Code of Conduct.

It is a measure of the importance this problem is assuming that two days later Mr. B. M. Birla returned to this theme and expressed precisely the same opinions as Dr. Law in his address to shareholders of the Ruby General Insurance Company Ltd. (published on page 430).

The issue of CAPITAL for the week after next will appear on Wednesday, 14th October, because Thursday, 15th October, is a public holiday. There will be no issue in the following week because of the puja holiday. Thus the issues for this month will be dated 1st, 8th, 14th and 29th.

Mr. Birla said that limitation of the expense ratio "has increased the scramble for business because every insurance company has to try its utmost to obtain that quantum of business which is necessary to keep its expenses within the limit and this limit ultimately leads to malpractices and unprofitable underwriting." The linking of expense ratio to direct premium income, he declared, is not a healthy principle. Referring specifically to life insurance, he said that it was unjust to expect younger and medium-sized companies to work within the same expense ratio as big companies. "When the rules were framed, it was pointed out that the limits were the ceilings, and older and bigger companies will be actually working at a much lower expense ratio. The experience of the last few years has shown a tendency amongst the bigger companies to increase their expenses and to pursue an unhealthy and aggressive policy of new business procurement to the severe detriment of others." Both Mr. Birla and Dr. Law referred to the rate war that has been going on in the non-tariff sector of insurance; in marine insurance particularly, the slackness in export markets has combined with unhealthy competition to bring rates down to "rock bottom level", but the scope of marine cover has broadened considerably in recent years and underwriters are being asked to bear losses which are normally of a trade nature.

Electricity Advisory Board.—The Union Government has set up an eight-member Advisory Board to consider and suggest amendments to the Indian Electricity Act, 1910. A notification states that the Government has had under consideration for some time the revision of the Indian Electricity Act to remedy shortcomings in its working and administration and bring it in line with the developments in the electricity supply industry. The Board, in making its recommendations regarding the amendments to the Act, shall take into account the views of various institutions and State Governments, the proceedings of the Electrical Inspectors Conference held in December, 1952, the action taken by State Governments to amend the Act, the comments of the State Governments on the draft amending bill circulated by the Labour Department in 1938, similar legislation abroad, and the Electricity Supply Act, 1948. The Board is empowered to regulate its own procedure and to determine any matter with the aid of qualified assessors nominated by the Central Government. It is expected to submit its report in six months and the appointment of the members has been made for the same period. The Chairman is Dr. K. P. P. Menon, Utilisation Member, Central Water and Power Commission.

MR. K. D. JALAN REPORTS STEADY INCREASE IN DEMAND FOR GAS

There is no easy road to industrial progress. What is needed is that we must create a cycle where production is increased and the increased production gives rise to purchasing power and newer demands and raises the consumption level. Production and consumption are complementary. I have no ready

Steps in these directions, together with the directives to all Government and semi-Government bodies not to place any orders for engineering materials of imported origin without certification by a high-powered committee of the non-availability of such materials from the indigenous sources, will not only develop the industry, but open new employment opportunities so badly needed to relieve the unemployment situation.

After since the recommendations of the first Gas Advisory Committee appointed in 1947 were given effect they have been dealing with the question of gas price at length. The appointment of the second Committee in 1951, at the Annual General Meeting, was a recognition of the fact that the gas industry last year gave rise to new hopes of getting a fair deal for the investors. While I would not be justified in saying until they are considered the recommendations of the Committee falling in my duty it is known to us, I think I will be of discussions between the representatives of the Company and the Committee towards the end of their deliberations was such as gave us a feeling that some of the outstanding items of expenditure or provision might be disallowed, or the carrying of an industrial undertaking. While I would sincerely hope the price of gas would be set at a level which would not be so grossly unfounded, I cannot help mentioning my fears that the attitude taken in this matter is not only difficult to appreciate but that what is more is that it might prove a great hindrance in our way in expanding the capacity of the plant. It is often been explained for stating that without an increase in price no expansion is possible. In making any statement of this kind our wishes are not fully realised. Money must be invested if the capacity of the plant is to be increased as it is with the proposals before us. No funds are available for the Company itself for this purpose and therefore investors must come along with them. They will not do so until they are satisfied that their investment which might not be in any way matter of interest could get elsewhere. It is some forth, if it is possible initiative and these cannot be denied. The right of the investors to a reasonable return will be followed by a reasonable return and statements given. I therefore, submit that the difficulties appearing to me to be misunderstood, but that the industrial development of the country and the necessity of creating a credit of the country and the statements of this objective and that would be the case that the requirements are needed in no less a degree in the case of the gas industry than elsewhere.

(More to follow)

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in India during the month of March 1935 amounted to Rs. 13,302 lakhs as compared with Rs. 17,873 lakhs in the corresponding month of the previous year. The following comparisons should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 940 lakhs as against Rs. 1,201 lakhs, export duties for Rs. 339 lakhs against Rs. 552 lakhs and land customs and miscellaneous for Rs. 23 lakhs as against Rs. 10 lakhs. The total gross collection of Union Excise duties amounted to Rs. 769 lakhs as compared with

Secretary.

(Continued on page 458 col. 1)

Rs. 701 lakhs. During the twelve months, April 1952 to March 1953 the grand total of gross Customs and Union Excise Revenue realised was Rs. 26042 lakhs as compared with Rs. 32389 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 11843 lakhs as against Rs. 14176 lakhs, export duties for Rs. 5538 lakhs as against Rs. 3075 lakhs, land customs and miscellaneous for Rs. 377 lakhs as against Rs. 434 lakhs and Union Excise duties for Rs. 8284 lakhs as against Rs. 8704 lakhs.

The provisional figures of foreign Sea and Air-borne trade of India on private and Government accounts during August 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows. Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 3783 lakhs, re-exports Rs. 27 lakhs (transit trade—nil); imports Rs. 4844 lakhs (transit trade—negligible). Total trade Rs. 8654 lakhs. Treasury: Exports (including re-exports) of Currency Notes Rs. 7 lakhs; others—nil. Imports of gold and silver Rs. 1 lakh; of Currency Notes Rs. 115 lakhs; others nil. The total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 1035 lakhs.

Company Meetings

NATIONAL INSURANCE CO., LIMITED

MR. LAKSHMIKAT SINGHANIA REVIEWS A YEAR OF PROGRESS

THE Estate Duty Bill which is about to be placed on the statute book may, in the opinion of many, disintegrate the long-standing economic structure of our society, it should also be considered, in this context, if the small revenue of Rs. 10 to 15 crores which the Government estimates to get out of this, is at all going to be helpful, considering the other repercussions of the measure on the social and economic structure of the country, said Mr. Lakshmi Kat Singhanian in the course of his presidential address at the 46th Annual General Meeting of National Insurance Co. Ltd., held in Calcutta on Sept. 29, 1953.

So far as insurance was concerned, he said, not only had the Bill given scanty relief but the limits of exemption prescribed were so low that it might act as a deterrent on insurance and might even neutralize the incentive to insurance provided by the income-tax rebate. It would, he observed, certainly kill the incentive for taking bigger policies by the higher income group, and it was extremely doubtful if anyone among them would now be interested in taking life policies for more than the minimum.

Reviewing the progress of the Company, Mr. Singhanian said that he was happy to announce that the National had scaled a new height by completing a new life business of Rs. 10,08,97,031 as against Rs. 9,62,90,815 in the previous year. The Company, he said, had reached the double figure in crores in respect of new business, and he hoped that it might be the beginning of bigger things for the Company. The total business in force of the Company at the end of 1952 stood at Rs. 50,44,24,171, which was an increase of Rs. 3,97,19,755 over that of the preceding year. The total premium income in the Life Department of the Company had increased to Rs. 2,28,47,323 in 1952, while the Life Fund stood at Rs. 10,60,92,792. The position of claims was also very pleasing over a number of years, and at present, the ratio of actual to the expected deaths was only 50%.

The National had thus concluded another successful year and had thrived on a spirit of service, which had brought the Company closer and closer to the nation. As a matter of fact, inspired with the spirit of service, the National had now embarked upon a programme of having new buildings of their own, which would serve as service centres of the Company and as a projection of their personality among the people of those areas. They had actually started construction in Nagpur. Designed on the most modern lines, to combine beauty and utility, the National's building in Nagpur would be a concrete expression of dignity and stability of the Company. Mr. Singhanian said: "This building is not intended to be a show of the pomp and power of National Insurance Co., big though the institution is. It is intended, instead, as a concrete emblem of our desire to serve the country through insurance and as a symbol of the solidarity and security we offer. I like to think that this building of ours will really help us to give better and varied service to the members of the nation. I also like to think that this building will be a standing testimony of the inherent strength of the Company, being an outward manifestation of its unassailable assets."

General Conditions

Referring to general conditions Mr. Singhanian said that anything which went to make a change in the economic pattern of the country and living standards of the people was of the utmost importance to the insurance companies. Such a one was the First Five Year Plan, which hoped to raise capital formation by about 20% of the additional income each year. The first two years of the Plan had been mainly a period of preparation, though they had shown signs of improvement in domestic output. But the increase in production did not reflect a corresponding increase in incomes available for consumption. It would, therefore, appear to be essential, according to Mr. Singhanian, that, in the implementation of the Five Year Plan, emphasis should be given on new production, which again should be within the reach of the consumers. "Merely producing to replace what we have is not going to help, and even production of new

goods will be of no avail if there is no corresponding increase in consumption."

Referring to the difficult condition of working of insurance, Mr. Singhanian felt that even when the bigger companies were finding it so hard to work within the limited liberty allowed to them under the Act, one could easily appreciate how difficult it would be for the smaller units to manage their affairs. He suggested that it should be the duty of the bigger and stronger companies to come forward as sustaining props. Amalgamation of the uneconomic with the economically-stronger units would seem to be the only answer to this problem. He hoped that the bigger companies would realize their responsibility in this regard, and was glad that the National had given concrete proof of this responsibility by agreeing to have the National Mercantile Insurance Co. (India) Ltd. amalgamate with them.

Postal Insurance

Speaking about the recent proposal of the Deputy Finance Minister regarding the extension of the scope and the raising of the maximum limit of the Postal Insurance Scheme, Mr. Singhanian desired it to be clearly understood that the private sector of insurance was not afraid of any intrusion. But he was of the opinion that Postal Insurance should be made to bear all the expenses incurred by it for running its business, asked to pay income-tax on its income, as every other insurer had to, and to otherwise comply with the Act as any other private insurer. It should be as a matter of fact, fair play and no favour if the benefit of the Postal Insurance Scheme was to be extended to include other people as well. But it would be unfair protection if Postal Insurance were allowed to enter the field free from all irksome restrictions.

Reviewing the position of business in the General Department which was only of recent origin, Mr. Singhanian said that the National had written a net premium of Rs. 14,82,107 in 1952 as against Rs. 11,43,279 of the year previous. While talking about general business, he drew attention to the recent discussion in the Council of States about the formation of a Reinsurance Corporation being under their active consideration. He said that he himself had been stressing, over the last few years, the need for such a Corporation which was a must for conservation of premium income inside the country and for conservation of India's foreign currency. He sincerely hoped that the Government would appreciate that if such a Reinsurance Corporation must fulfil its purpose, it should be managed by private enterprise. Insurance in India was in the hands of private enterprise and nobody would deny that they have done a wonderful job. The Reinsurance Corporation, too, should be under their fostering care so that the two might work in the closest co-operation.

NATIONAL FIRE & GENERAL INSURANCE CO., LTD.

"I AM wondering whether the good work that is being done by the insurance industry is getting that amount of publicity that it should have. Where public insurance is so small, giving increasing publicity to the virtue of insurance should be one of the primary concerns of insurers," declared Mr. Lakshmi Kat Singhanian, President of the National Fire and General Insurance Co. Ltd., in the course of his address to the shareholders of the Company at the Company's Annual General Meeting, held in Calcutta on Sept. 29, 1953.

He urged the different Indian insurance associations to emulate the example of the British Insurance Association, and erect insurance stands in the various exhibitions that were arranged from time to time in this country and through them broadcast the message of insurance. He also urged the Indian Government to bring out suitable documentary films on insurance smaller places, not only in the cities but also in amongst those who had as yet not the faintest idea as to what insurance was.

Mr. Singhanian said that in the course of such annual addresses he had been bringing to the notice of all concerned the vital necessity of the country having a professional Reinsurance Company of its own; and he expressed gratification at the statement made by the Finance Minister of India, Mr. Deshmukh, that the proposal to establish Reinsurance Corporation was under the Government's active consideration. He remarked, however, that the subject being extremely technical and international in character, the insurance industry might advisably be left to themselves to evolve a suitable scheme on their own.

The Year's Results

In reviewing the Company's results during the year 1952, Mr. Singhanian said that while the Fire and Marine Departments showed profits, unfortunately the same could not be said about the Miscellaneous Department—the principal Section contributing to the loss of the department being the Motor section.

He was happy to record that the various Regional Insurance Councils of India and realized the serious rationalized the motor rates by increasing the private car comprehensive rates and decreasing the Act and third party rates effective from Jan. 1, 1953.

The result of the Company's operations for 1952 were, he said, as follows: The net premiums this year amounted to Rs. 38,26,903 as against Rs. 41,50,029. There was a fall of about Rs. 3,23,000 in the net premium which was mainly accounted for by the Fire Department, the Fire Premium being Rs. 19,73,254 due to trade depression. The fall was mainly showed also a small reduction in premium as compared with last year. The net premium in 1952 was Rs. 6,61,632 as against Rs. 7,37,464 in 1951.

The Miscellaneous Department showed a small increase in premium from Rs. 11,86,686 in 1951 to Rs. 7,13,088 this year as against Rs. 6,65,900 in the previous year.

The expenses of management and commission were within the limits prescribed under the Insurance Amendment Act, 1950, and the Reserves in the different Departments had been maintained at the same percentage as in the previous year.

MR. Fergus Innes, C.I.E., O.B.E. left Calcutta on Tuesday after a brief farewell visit to the city where he served as Collector of Customs during the war, and has now returned to Karachi where he has been an adviser to British business houses in Pakistan and from where he retires in a few weeks' time. His departure from the sub-continent brings to an end a family connection that goes back to John Company's days, for his grandfather was in Nicholson's flying column that fought its way down from the Punjab to the relief of Delhi. His father was the Governor of Burma, and his brother, now Sir Charles Innes, was till the beginning of this year chairman of Andrew Yule and Company Limited and was President of the Bengal Chamber of Commerce and Industry in its centenary year. Fergus himself joined the ICS in 1926 and spent 12 years in the Punjab before joining the Finance and Commerce department of the Government of India. After his four years in Calcutta, he went to Delhi where he was successively Chief Controller of Imports, Joint Secretary of the Commerce Department and member of the Central Board of Revenue. His six years in Pakistan have been very busy, but he found time to organise the United Kingdom Association of Pakistan, which corresponds to our U.K.C.A., and to preside over it since its inception. Even apart from his official duties there, he has been the best informed observer and commentator on the affairs of Pakistan to the outside world for in addition to being Capital's Karachi correspondent he has worked as Pakistan correspondent for the Economist and the Round Table. I understand that after a brief holiday he will be going into business—with a firm whose connections lie not with India or Pakistan but with Malaya.

Mr. Deshmukh has made extensive, and sometimes curious, use of the Government of India's official wholesale price index, and so it was encouraging to see last week in Parliament, when use was made of the index against him, that he admitted that it is in fact inadequate. The Minister has produced the index during debates on inflation, on credit policy, on price controls, on food subsidies and any number of other subjects, always with the intention of showing that what the Government was doing was right. Economic indices are among the new-fangled instruments of the science and their proper use is not yet widely understood among the general public, so by brandishing this unfamiliar weapon he was usually able to quiet his critics. But during the recent discussion on unemployment, the same index has been moving in the opposite direction to the one expected and intended by the Government. To which Mr. Deshmukh replied, "But on analysis one finds that there are certain limitations in the present series of index numbers and I think it may not be altogether safe to infer the course of action to be taken in the matter of employment merely from a reading of these series of indices over a short or over a long period of time." Well said, and if the index is not good enough for employment policy it is not good enough for other policies either. The Minister having thus aspersed this weekly effort of his officials, the department concerned might get down to revising it.

"British interests in China are strictly commercial, or at all events only so far political as they may be for the protection of commerce". This was not said the other day in

A DITCHER'S DIARY

reply to the China lobby in Washington nor in response to Senator McCarthy's demand that Britain receive no more American aid because she persists in trading with China. It was said by Lord Clarendon in 1870 when he was Foreign Secretary in Palmerston's Cabinet, and I just happened to read it on the day Mr. Eisenhower refused the Senator's demand. It remains an apt description of British policy in the Far East. That policy is no doubt regarded as a very vulgar one by ideologues whose interest in China is political first and last, but to others who do not share the passion to liberate countries that have adopted another form of governance it must appear quite reasonable. Perhaps the Chinese too, although they suffer from periodical revulsions from foreign trade, would regard this as the best form of long-term relation with the West. I came across Lord Clarendon's statement in a study designed to show that the British, even at the height of imperialist expansion, soon realised that it was hopeless to attempt to force any form of government on the Chinese from the outside, and as long as they were willing to trade it was better to confine relations with them to the peripheral ports, even if that meant sometimes reluctantly supporting a Government in Peking that one did not like. Senator Wiley, unlike another famous Republican from Wisconsin, apparently understands that, for I see he told the International Tea Convention in White Sulphur Springs this week that "to trade with a particular land does not, of course, imply sanction for any of its internal and external problems". Since the gathering he was addressing included representatives from India, Indonesia, Ceylon and Japan he may have meant his remark to apply only to them, but as it stands it would cover China just as well.

There seems to be a good deal of disagreement within the Indian aluminium industry about the targets the Planning Commission has set for it. There are only two producers, and they evidently hold quite contradictory opinions about the prospects for their product. They now produce about 4,000 tons and are expanding to produce 10,000 tons. The Plan calls for installation of 20,000 tons capacity by 1955-56. In a speech before the meeting of the Aluminium Corporation of India in Calcutta the other day Mr. Lakshmi Kat Singhanian shot some rather big holes in the Planning Commission's estimates and ended up by declaring that "new plants of large capacities are entirely unnecessary". On the other hand, Mr. K. C. Mahindra, who is the chairman of the other producing concern, the Indian Aluminium Company, said in a speech last April, which was also published in this newspaper, that there had been "a certain amount of criticism over the forecasts and anticipations of the Planning Commission", and went on to assert: "It has been stated in certain responsible quarters that India will not be able to consume as much as 20,000 tons of primary ingots by the year 1956. Such pessimism, possibly promoted by short-sighted self-interest and certainly by very inadequate market appreciation, does great harm to the development of an infant industry". When the experts disagree so blankly, it is not for me to venture an opinion but I recall having heard that how much you sell of anything depends on how much you charge for it—and unfortunately the question of costs is dealt with in neither of the speeches I have referred to. Just looking at the question in general and without knowing the first thing about aluminium.

I would think that Mr. Mahindra might be right if he thinks that expansion of the industry would enable costs to be cut and vigorous efforts made to find new industrial applications. But then, remembering more than one instance of unbridled optimism in industrial forecasting in this country, Mr. Singhanian's scepticism has a realistic ring. At present the industry depends on pots and pans for its market, and Mr. Singhanian is no doubt correct when he says that people do not go on buying new aluminium for pots and pans; they buy scrap and use that, so that after a time you need very little virgin metal to keep the pots boiling.

Venturing outside Calcutta on a recent weekend I found myself bumping along one of those shocking relics of a road that feed the few macadamised highways converging on this city. Within a few hours' drive of Calcutta and still in a populous area, we might as well have been in the lost heart of a never-never that had not yet known modern transport, and I realised what the Germans must have felt when they sent a mechanised army into the roadless wastes of Russia. But mighty armies have marched across the Gangetic plains of India too, and some of them were bigger than most modern European armies—Akbar had more than four million men under arms at one time. How did he move them about? I find an answer in Major Alfred David's new book *The Indian Art of War* (Atma Ram, Delhi, Rs. 4). Describing the progress of a Mughal host he says, "When the army was marching, the heavy artillery formed the advance guard. The baggage followed next in good order. First the camels bearing imperial treasure. Then the hunting establishment—there were a good many dogs. Then the official records. Then fifty camels carrying water... then came the imperial kitchen. Then the wardrobe of the Emperor and the harem. In front of the baggage train and the artillery two thousand pioneers marched with spades to smooth the ground. There were another thousand who followed to repair pits made by camels and elephants." If monsoon and bullock cart are permitted to wreak their devastation on Indian roads for another decade or so, perhaps we will again have to transport goods in convoy with two thousand pioneers going on before and a thousand coming after. The Nagpur Plan would probably be cheaper.

The departing Rugby teams that participated in the All-India Tournament so valiantly last week leave behind them something of a vacuum in Calcutta's social life. The tournament comes to us only once in three years and many of us are glad of the opportunity to renew old acquaintance with friends scattered about the sub-continent—and to many of them Calcutta, I gather, seems to be, quite literally, an oasis in a dry, dry desert. The C.F.C. team is to be congratulated on a remarkable performance in the final. The team from Ceylon had sent its reputation before it and its display in the earlier rounds left no doubt about what it intended to do in the final. It would be unjust to say that the rain saved the day for Calcutta, for the weather is a factor that has to be taken into account as much in Rugby as in any outdoor game. But it was no secret that rain had been prayed for and its arrival must have been of some assistance to the morale of the local XV. The sharing of the cup between Ceylon and Calcutta was in every way a suitable conclusion to an excellent tournament.

THE ALUMINIUM CORPORATION OF INDIA, LIMITED

MR. LAKSHMIPAT SINGHANIA ON PLANS FOR EXPANSION

ADDRESSING the shareholders of the Aluminium Corporation of India Ltd., at the 15th annual general meeting, held at Calcutta on the 25th September, 1953, Sri Lakshmipat Singhania made out a strong case for restricting the expansion of Aluminium Industry to a capacity of only 10,000 tons per annum, for the present. He argued that the industrial use of aluminium in India had yet to develop and that the important role played by the secondary metal to meet the demands of the aluminium utensil industry had been completely overlooked by the Planning Commission while formulating plans for the expansion of the aluminium industry in India. He deprecated any talk of handing over of key industries to foreign interests for the so called 'know how' but made an urgent plea for the establishment of a national non-ferrous metal research laboratory in order to create technical talent in the country which was very essential.

Sri Singhania said: "The Planning Commission have estimated the current consumption at 16,000 tons of primary metal per annum as under:

10,000 tons for utensils
2,500 tons for A.C.S.R. cables
2,000 tons for industrial sheets
1,500 tons for defence requirements and miscellaneous purposes.

16,000 Tons

They have planned, however, for an installed capacity of 20,000 tons by 1955-56, and almost the entire increased production is expected to be consumed industrially as the Planning Commission themselves admit that 'the amount of aluminium required for utensils may not show any appreciable increase'. In other words, the Planning Commission estimate that by 1955-56 the utensil consumption will remain static at 10,000 tons of primary metal per annum while the industrial use will go up from 6,000 tons to 10,000 tons per annum. This estimate on surface does not look impossible at all but on analysis it will be found that facts are entirely different.

Supply Position

The estimate of 16,000 tons of primary metal per annum is not supported by actual figures. From the table given below the indigenous production and import in all forms year after year after partition, it will be seen that in no year has the total requirement of the metal, both utensil and industrial, exceeded 12,700 tons, while the average comes to only 10,872 tons.

Year.	Indigenous production.	Imports in all forms.	Total metal available.
1948	3,372	9,327	12,699
1949	3,516	8,300	11,816
1950	3,590	5,767	9,357
1951	3,876	8,677	12,553
1952	3,866	8,833	12,699
1953 (6 mths.)	1,682	2,291	3,973

When it is remembered that the markets had been completely starved of the primary metal during the War and imports were possible only from the year 1946 onwards, the heavy import of 1948 will be understood as abnormal and only for meeting back demands. Similarly, the expected World shortage of aluminium at outbreak of Korean War and the placing of aluminium under C.O.L. by Government, are the causes for the abnormal imports during 1951. In other words, the requirement of the country in all forms is actually much below even 10,872 tons, the average figure. This is further substantiated by the fact that today we have a surplus of metal as the Government has decided to licence exports freely.

Consumption Figures

"In my opinion, therefore, there is no justification for estimating the primary metal consumption at more than 9,000 tons per annum. If, out of this, we deduct 6,000 tons of primary metal estimated as being put to industrial uses, we get only 3,000 tons of primary metal for utensils. Where then does the balance of the requirements for utensils come from? From secondary metal, which has been entirely overlooked by the Planning Commission. From 1944 onwards in all about 96,000 tons of primary metal have been put into use. If even 10% of this comes back as secondary metal, more than 9,600 tons of metal is available and is today being used by the utensil industry which shows preference for the secondary metal, in order to meet the competition in the utensil

market. This is proved by the fact that the scrap price which was only 50% of the primary metal price has now risen to 80% and is steady at this level and there is dearth of scrap. Every year the quantity of secondary metal will be augmented by about 1,000 tons and soon there can be no doubt that all the requirements for utensils will be met from this source. So if the programme of expansion of the Planning Commission, i.e., to produce 20,000 tons of primary metal by 1955-56, is carried out the whole of this metal has to be consumed for industrial uses only as all the demand of 10,000 tons for utensils would have been met from the secondary metal. There is no possibility of any appreciable quantity of virgin aluminium being used for manufacture of utensils as even in countries like the U.S.A. where aluminium utensils are used in each and every kitchen, the quantity of metal used for the purpose hardly exceeds 2 to 3%".

Industrial Use

On the industrial use of aluminium in India, he observed "But the question remains if any of these industries exist in India today and if there is a likelihood of using any appreciable quantity of aluminium for same in near future. It is a common knowledge that large quantities of aluminium are required for construction of aeroplanes, but have we an aircraft industry which can consume even 5,000 tons of metal per annum? The only aeroplane factory in India, i.e., the Hindustan Aircraft Limited, Bangalore, hardly uses any aluminium of indigenous produce for construction of aeroplanes and their parts. Similar is the case of other aluminium consuming industries, too. It is well known that, for industrial uses, aluminium has to be alloyed and extruded into various shapes. For this purpose high degree of technical skill and elaborate equipments are necessary. These equipments are themselves so costly that there is hardly any possibility of private industries installing the same unless the demand is large enough to justify huge capital expenses."

He pointed out that, due to lack of technical knowledge there were no independent fabricators in India as in other countries, to cater to the industrial uses of aluminium and explained the enormous difficulties in training Indian personnel—"Even our own Government have been trying for many years to get some of our technicians trained in aluminium industry abroad but they have met with no success. Only last year one of our technicians was selected for training in manufacture of alumina in West Germany for a period of two years under the Indo-German Industrial Co-operation agreement. But after a stay of only six months the German firm terminated the training on the ground that the trainee was an employee of an aluminium firm in India; all further efforts of the Indian Embassy to prolong the training failed. If such are the difficulties in the way of technical training of our nationals in the manufacture of alumina, which is, after all, not so very much of a secret, it is obvious that we cannot expect any extensive and thorough training in manufacture of different alloys of aluminium for industrial uses, which alone can justify further expansion of aluminium production in this country. In the last 2 or 3 years there has been a large exodus of Indian students to Europe, Canada and the U.S.A., and the Colombo Plan, President Truman's Point Four Programme and a few other educational schemes, but so far not one country has agreed to give training to any of our technicians in the aluminium industry."

Further Steps Needed

In view of the above facts and circumstances Sri Singhania expressed unreserved concurrence with the first recommendation of the Planning Commission to expand the existing plants to produce a total of 10,000 tons of aluminium per annum but suggested that the further steps for developing the industry should be only—

- (1) To establish a national non-ferrous metal research laboratory and to start immediate research and training in manufacture of various alloys of aluminium and other non-ferrous metals;
- (2) To encourage start of aluminium foundries, die-castings and extrusions;
- (3) To encourage use of indigenous aluminium in all defence, transport and building programmes of the Government; and
- (4) To make full use of all the extrusion and fabricating capacities in various ordnance factories."

and opined that "If the money which would have gone out by way of interest, etc., to foreign capital is earmarked for these purposes, we shall be having invaluable technical talent and a profitable fabricating industry in the country which in turn would make the aluminium industry pay its way and at the same time remain in Indian control."

Working Results

Reviewing the working of the Corporation for the year, he pointed out the difficulties which industries were facing due to political rivalries between labour unions and irresponsible labour leadership and uttered the warning that "Trade Unions are following a suicidal path in allowing politics and indiscipline to pervade it and in adopting strike as a weapon for every occasion, just or unjust, frivolous and serious."

The Corporation's expansion programme on hand at a total cost of Rs. 80 lakhs was progressing well and was hoped to be completed by March 1954 and the Corporation had also submitted to the Government complete plans for expansion as recommended by the Planning Commission.

Sri Singhania concluded by drawing attention to the selfless sacrifices made during the last 15 years by the shareholders and the managing agents in building up this industry and explained that the directors were paying one year's arrears of dividend to the Preference Shareholders in spite of low profits, only to maintain continuity and to clear the arrears as early as possible.

RUBY GENERAL INSURANCE COMPANY LIMITED

Review by Mr. B. M. Birla, Chairman, Ruby General Insurance Company, Limited, at the Seventeenth Annual General Meeting of the Shareholders of the Company on Friday, the 25th September, 1953.

TABLE A.

	1952.	1951.	1950.
	Rs.	Rs.	Rs.
Fire	25,94,000	22,52,000	21,17,000
Miscellaneous	34,69,000	39,08,000	34,79,000
Marine	9,75,000	12,64,000	10,40,000
	70,38,000	74,24,000	66,36,000

TABLE B—LIFE.

	1952.	1951.	1950.
	Rs.	Rs.	Rs.
New Business	2,49,00,000	2,59,00,000	3,27,00,000
Life Assurance Fund	2,02,78,000	1,68,39,000	1,33,71,000
Premium Income	56,07,000	55,97,000	52,42,000

There has been a fall in the total premium income in the General Business but examining the figures section-wise you will find that there is a satisfactory increase in the Fire Premium income, in spite of the lower commodity prices and the general business slump prevailing during the year under review. The decrease in the Marine Premium has been mainly due to the serious competition which this Department has to face resulting in severe rate cutting. The scope of Marine Cover in recent years has become much broader and sometimes the Underwriters are called upon to bear the losses which normally are of trade nature. It is, therefore, imperative that the Premium rate should be maintained at a reasonable level to commensurate with the Underwriters' liabilities. The reduction in the Miscellaneous Premium Income has been due to the more cautious policy your Company has pursued in underwriting Automobile and other Accident risks. The Automobile Insurance has fared unfavourably all over the world in recent years and it is only by adopting a very cautious underwriting policy that heavy loss in this Department can be avoided. It is a matter of satisfaction that the loss in this Department is considerably lower as compared to that of previous years.

Aviation Insurance

Your Company is doing considerable business in Aviation Insurance and is trying to establish itself as Aviation Underwriters in the International Market. The Government has recently nationalised the Indian Airlines. I, therefore, reasonably expect that the Indian Companies who have established regular Aviation Departments would continue to get Government support to sustain their departments sufficiently so that they may be counted as Aviation Underwriters of good standing in foreign countries.

The Company has maintained its satisfactory progress in the Overseas field but sometimes it cannot expand its activities according to the programme due to the rigid policy of the Insurance Department as well as of the Exchange Control Authorities.

The business of Life Department has been slightly less this year than the previous years but in the last brought down. Both in the years 1951 and 1952 the Life Department Fund increased approximately by Rs. 35 Lacs annually as against Rs. 25 Lacs in the year 1950. The renewal expense ratio has shown further improvement. The interest yield has also increased and it is 3.43% in 1952 as against 3.02% in the previous years.

The Valuation of the Assets and Liabilities of the Life Department as on 31st December, 1952, is now complete and there is a substantial surplus which will enable the Company to declare a good Bonus.

In this context I wish to remark that the provision for expense limitations of the Life Department as laid down in Rule 17(D) of the Insurance Rules is grossly unfair. The same expense ratio is provided for the Companies having business in force of just over Rs. 200 Crores and those having a business in younger and middle-sized Companies to work within the same expense ratio as provided for big Companies. I am not pleading for allowing a higher expense ratio for Companies such as ours, but I would like to point out the older and bigger Companies should not be permitted to spend the same percentage of the premium as medium-sized Companies. When limits were the ceilings and older and bigger Companies will be actually working at much lower expense ratio. The experience of the last few years has shown a tendency amongst the bigger Companies healthy and aggressive policy of new business procurement to the severe detriment of others.

The far reaching Amendments to the Insurance Act which came into force in the year 1950 though extent, have also created new problems. The linking of the Expense Ratio to the Direct Premium Income of principle. The Expense Ratio was fixed in the year 1950 on the prices and the values ruling at that time. While the premium income is going down the expenses have remained practically the same and in some cases even higher. This has increased the scramble for business because every Insurance Company has to try its utmost to obtain that quantum of within the limit and this ultimately leads to malpractices and unprofitable underwriting. The Companies who try to work strictly in accordance with the Code of Conduct always suffer.

The Commerce Minister's advice to the foreign Business-houses and Banks to patronise Indian Insurance Companies also is welcome and I hope it will bear fruit.

Stocks and Shares

BURNPUR STRIKERS RETURNING TO WORK

IRONS FIRM AT CLOSE: FLUTTER IN OIL SHARES: PROFIT-TAKING IN TEAS: SECURITIES STEADY

Wednesday Evening.

THE most important news of the week for the share market came this evening after the close when it was learnt that the Action Committee at Burnpur had called off the strike and advised its members to return to work at the Indian Iron and Steel Company and at the Indian Standard Wagon works. Notice of this strike was served about the time the lock-out began at Burnpur at the end of August, and supporters of the Action Committee had not gone back after the lifting of the lock-out. The chairman of the Committee, Mr. C. L. Vyas, has told his followers that the State Government has given satisfactory assurances about the settlement of the dispute over control of the union. Production at the Indian Iron and Steel works had already reached 50 percent of normal when only one-third of the labour force had returned, and now that the entire staff is returning better results can be expected. The share market is now free to speculate on whether the Tariff Commission will allow the company a higher retention price for its steel to compensate for the loss caused by the dispute.

The news of the end of the strike had been discounted before this evening, so Irons which closed at Rs. 23-3 were reported later at Rs. 23-1. The bulls are now well placed to face tomorrow's clearing and it is not surprising that there has been some heavy bear-covering and even some fresh bull support this evening.

The rest of the market has been dull with very little business being done. Teas have had another good week, but have gone off the boil today. Jutes are quiet with the exception of Birla Jute which gained Rs. 2 on rumours of a bonus issue. There has been flutter in oil shares with Indo Burma Petroleum gaining Rs. 11 and British Burma Petroleum improving in sympathy.

Central Government securities are unchanged and provincial issues are very well supported in the absence of scrip.

Details of the week's trading follow.

The gilt-edged market ruled steady throughout the week with interest centred on short and medium-dated loans. Provincial loans, however, provided the feature of this section. Three percent Conversion Loan 1986 was unchanged at Rs. 82-3 while 3 percent non-terminable Paper had buyers at Rs. 82-1. In short-dated loans, 21 percent 1954 was enquired for at Rs. 98-10 while 21 percent 1955 was traded up to Rs. 98-6-6. Three percent 1957 was steady at Rs. 98-2 and 3 percent 1957 was marked at Rs. 98-7. In the medium-dated group, both 3 percent 1959-61 and 31 percent 1961 were marked up one anna to Rs. 96-1 and Rs. 98-7 while 3 percent 1963-65 and 1964 were also better at Rs. 92-8 in each case. Two and a half percent 1961 and 21 percent 1962 were unchanged at Rs. 90-9 and Rs. 91-9. Four percent 1960-70 changed hands at Rs. 101-15. Among long-dated loans, 3 percent 1966-68 continued to meet with good enquiry at Rs. 90-2 cum-voucher and 3 percent 1970-75 was quoted at Rs. 86-8. There has been a good enquiry for 4 percent Provincial Loans which will be completed, shortage of scrip little business was done in particular. Four percent Bombay 1963 and 1964 were in particular demand, both improving by six annas to Rs. 100-12 while 4 percent Madras 1963 and 1964 rose by 3 annas to Rs. 99-4. Four percent West Bengal 1963 and 1964 also found support and improved from Rs. 100-6 and Rs. 100-4 to Rs. 100-8 and Rs. 100-7 respectively. Four percent U.P. 1963 staged a mild recovery to Rs. 99-11.

Short-dated industrial debenture issues were in keen demand but no sellers were forthcoming. A transaction was reported in Calcutta Electric at Rs. 101-8 and a small lot of Dunlop Rubber changed hands at Rs. 102-4. Empire Jute and Orient Paper debentures were transacted at Rs. 95 and Rs. 93-12 respectively.

Once again there was keen demand for selected jute and miscellaneous issues but sellers held off the market. Bally were recorded at Rs. 118, Belvedere were absorbed at Rs. 123-8 cum-dividend and Birla at Rs. 101-4. There were sellers of Hooghly Jute at Rs. 14-4 while Reliance and Soorah were taken at Rs. 116 and Rs. 106. Kelvin and Khardah came to hand at Rs. 120-8 and Rs. 101-8. In the miscellaneous group a small lot of Alkali and Chemical changed hands at Rs. 108 cum-dividend. British India Corporation were wanted at Rs. 145 and Burrakur 1st were quoted at Rs. 120-8. Chrestien Mica Industries were taken at Rs. 60 and Burn 7 percent at Rs. 135. A small lot of Dunlop Rubber 2nd preference changed hands at Rs. 102. Godfrey Phillips were done at Rs. 80-3 and India General Navigation were steady at around Rs. 72-10. India Steamship were steady at around Rs. 96 and Indian Iron and Steel were freely dealt in at around Rs. 107. Indo Burma Petroleum were scarce at Rs. 95 while Jardine Henderson were offered at Rs. 85 cum-dividend. There were ready buyers of Kumardhubi Engineering at Rs. 96-8 but no declared sellers. Kesoram were marked at Rs. 131 and Orient Paper were on offer at Rs. 103. Rohtas Industries were in demand at Rs. 106.

POWER IN INDUSTRY

The Thermal Power Station at Bokaro is the largest of its kind in Asia, with an initial capacity of 150,000 k.w. expandable to 200,000 k.w. Built at a cost of Rs. 13.8 crores the Bokaro Power Station represents one of the major triumphs of India's industrial progress.

STEEL played one of the most important roles in the construction of this giant station, no less than 6,500 tons of the heaviest rolled steel ever used in India going into the building and equipment.

From the cranes and draglines of the early stages to the final installation of massive boilers and generators STEEL has made an essential contribution to the generation of power—the driving force of industry.

FUNCTIONS OF INDUSTRIAL FINANCE CORPORATIONS

NEED FOR A NEW APPROACH

By R. N. Mitra.

THE Industrial Finance Corporation of India was inaugurated in 1948 under the auspices of the Government of India acting in co-operation with the Reserve Bank, scheduled banks, insurance companies, investment companies and co-operative societies. The Corporation has an authorised capital of Rs. 10 crores, but it has issued shares to the extent of Rs. 5 crores only and raised additional funds in the form of bonds aggregating about Rs. 5.8 crores. The resources of the Corporation have been employed in making loans and advances to industrial companies and investments in Government securities. Loans and advances made by the Corporation and outstanding as on 31st March, 1953, aggregate Rs. 8.6 crores and its holdings of Government securities total Rs. 2 crores. Though the Corporation is also authorised to guarantee publicly floated loans of, and underwrite securities issued by, industrial companies, it has not yet found conditions favourable enough to undertake these functions.

Another legislative measure has since been passed to enable States to set up financial corporations with a view to providing finance to small and medium-sized industries. This measure, the State Financial Corporations Act of 1951, has already been availed of in Madras and Punjab; and it is reported that West Bengal, Bombay, Uttar Pradesh, Hyderabad, Mysore and Travancore-Cochin have also been considering proposals to establish financial corporations.

Meanwhile, the activities of the Industrial Finance Corporation of India have been subjected to close examination and have invited unsavoury criticism from responsible quarters. The usefulness, adequacy and even impartiality of its operations have been called into question, and a committee was appointed in 1952 to investigate the relevant issues. It is understood that the committee has since completed its work, but its report does not appear to have been published.

Genesis of State Finance

It was long before the idea of a welfare State began to take shape that responsibility for promoting and maintaining what are known as "key industries" had been recognised as properly a function of the State. But until recently both financial and organisational responsibility for industrial activities in the wider sphere outside "key industries" was regarded as rightly belonging to private enterprise.

In a properly organised money market, private enterprise raises long-term finance by the issue of share capital, medium-term finance by the issue of debentures, and short-term finance by arranging credit facilities from commercial banks and other sources. But this apparently well-knit monetary organisation leaves a gap which has failed to be covered by private agencies. A Committee on Industry and Trade, appointed in Britain in 1929 with Mr. H. P.

Macmillan as Chairman, enquired into the question of adequacy of financial facilities for British industry. It found that proper facilities were not available to finance (a) such "medium-term" credit needs as were too "short" for the issue market to be interested in and yet too "long" to meet the criteria of banking finance, and (b) those small industries whose capital requirements were not large enough to be economically handled by profit-earning institutions like banks and issue houses (but which industries played a useful rôle in maintaining employment and widening the distribution of purchasing power).

The growing complexity of the industrial structure has also created new difficulties by lengthening the distance (in time and place) between producer and consumer. It is not necessary here to examine the theories of "shiftability" or "exchangeability" which centre on the needs of longer-term finance associated with this increasing distance between producer and consumer. It will perhaps be sufficient to note that this development in the sphere of industrial finance has given rise to the necessity for a type of credit institution which would operate as "lender of the last resort" in respect of long-term industrial finance, just as the central bank of a country operates in respect of short-term banking finance.

State-Sponsored Credit Institutions

It will appear, therefore, that there is a fairly strong case for the creation of State-sponsored institutions to cater to such industrial credit needs in the private sector as are not capable of being adequately handled by private agencies. These needs, as mentioned above, are briefly (a) to fill in the "Macmillan gap", and (b) to act as "lender of the last resort" to ensure exchangeability of loan portfolios of private financial organisations.

It is not enough, however, to set up an organisation to deal with these special needs of industrial finance. Experience of State-aid to industry in India, and for the matter of that anywhere else, shows that unless it is properly planned, administered and co-ordinated, State-aid results in disaster. It would of course be too early to draw any conclusions from the recent action taken by the Industrial Finance Corporation in taking over the management of a concern under Section 28 of the Industrial Finance Corporation of India Act, but it should be useful to draw lessons from previous history and emphasise that State-sponsored finance requires to be so designed as to be able effectively to deal with its peculiar problems and difficulties.

It is not an unusual experience that an absence of equilibrium between the short-term and long-term credit structures of an industrial unit leads to its collapse even if it is otherwise well managed and conducted. Long-term finance provided by a State-sponsored corporation may, therefore, prove wasteful if there are no proper arrangements for short-term working capital.

Published reports disclose that financial activities influenced by an official outlook seldom succeed in achieving the purpose they intend to serve. Loans granted by an official organisation often fail to be related to a proper consideration

of the business aspects of a transaction. These loans are frequently either too small or far too big. Again, sanctions of loans are reported usually to be available long after they are applied for; and meanwhile, conditions for business success may have materially altered.

Planning and Financial Corporations

The Indian Planning Commission has made it clear that industrial finance in the private sector will not at present form a part of State responsibility but that the State will so conduct its functions and regulate its activities that disturbances in the sector of private enterprise may not result in disruption of (a) production, (b) distribution, and (c) the ordered supply of finance.

The five-year plan envisages that as against an investment of Rs. 94 crores in the public sector, industrial finance in the private sector will involve a total of Rs. 613 crores which (according to the plan) will be raised through private sources to the extent of Rs. 588 crores, the balance of Rs. 25 crores being met mostly by the financial corporations (Rs. 20 crores) and partly by direct State assistance (Rs. 5 crores).

It is evident that the sum of Rs. 20 crores proposed to be advanced by financial corporations, if utilised as direct loans, can hardly make any contribution worthy of the high-power effort. In order that these corporations may perform a useful function, it seems necessary to arrange that the resources at their disposal are used not for loans granted in the same way as by private financial institutions, but so to stimulate the private investment market as to assist emergence of private finance on the grand scale contemplated by the Planning Commission.

Having regard to the difficulties and problems which face State-sponsored institutions (as indicated above), and also to their limited resources, it appears that the State-sponsored financial corporations might advantageously confine their normal activities to indirect assistance to private industry in close collaboration with issue houses, insurance companies and commercial banks. Such activities may take the form of financial operations of underwriting issues, and guaranteeing loans from insurance companies, commercial banks and other lending institutions; and may further be directed towards facilitating the development of markets and promoting technical and organisational improvements.

When development, reorganisation or the continued functioning of an industrial unit is considered necessary in the national interest, so that try may not be adversely affected (as in the recent case of tea and jute industries), it may prove a vital function for the State-sponsored corporations to offer to guarantee that part of essential industrial loans which existing lending institutions may not be prepared to extend in the absence of such guarantee, or (if the situation so requires) to underwrite issues of securities for raising long-term or medium-term finance. An effectual extension of these activities may consequently relieve financial difficulty, or comes to private industrial portfolios (if belonging to approved corporations) may be taken over by the financial corporations, in order to prevent disruption of production and distribution and to maintain financial stability.

Co-ordination of Activities

It will of course be a necessary assumption that in order to be able to carry out their functions properly, the financial corporations will co-ordinate their activities with those of issue houses so that ready sale or smooth resale of securities with those of banks, so that there may be no conflict or lack of equilibrium between long-term and short-term finance, and further that loan portfolios acquired by the corporations may, if so required, be redistributed among operative banks. It may, however, require to be observed that while there should be close co-ordination between activities in the public and private sectors, and provision for consultation and exchange of information between financial corporations, State Government, the Reserve Bank, commercial banks, the Industries (Development and Regulation) Act of 1951, the financial corporations should avoid involvement in projects belonging to the public sector (including "key industries"), and it should be recognised that the object of these corporations is to promote, stimulate and sustain activities in the private sector.

In conclusion it may be noticed that provisions for guarantee by State-sponsored institutions of industrial loans, especially those granted by banks, Finance Corporation of the U.S.A. and the Industrial Development Bank of Canada, and that such provisions are also contained in our State Aid to Industries Acts. The guaranteeing of banks' loans under a programme known as "participation" I. C. F. C. and F. C. I. of Britain that in the absence of a suitably evolved understanding (whether resulting in guarantee or not) between banks and assets mortgaged to the Corporations with fixed difficult to secure working capital from banks. Finally, it is worth recording that the services rendered by the R. F. C. of the U. S. A. in taking over assets of failed banks constitute a notable contribution towards stabilisation of the banking structure in the U. S. A. Some of the problems which face the liquidators and depositors of failed banks in India could successfully be dealt with if such services were available here.

New Delhi

PLANS FOR AN INDUSTRIAL DEVELOPMENT CORPORATION

TENTATIVE DECISION REACHED

(FROM OUR OWN CORRESPONDENT)

26th September.

A TENTATIVE decision, it is believed, has been reached on the establishment of an Industrial Development Corporation. In its initial stages, it may be composed of the representatives of the Government of India, engineers and scientists connected or unconnected with the Government, and well known industrialists. Close consultation and liaison between the Corporation and the Government is envisaged. In the nature of things, the Planning Commission, the Licensing Committee under the Industries (Development and Regulation) Act and the Government should have the final say in the policy matters of the Corporation. The day-to-day working of schemes and negotiations with banks and private business will naturally be left to the Corporation.

The Corporation will determine what lines of development it should take up. It will decide the location of projects and appointment of their managers. To start new industries, the Corporation may guarantee a stipulated rate of return for a specified period or start industries itself. It will also decide at what stage of development a particular unit should be handed over to private enterprise or private investment permitted in it. In the case of units where private enterprise is not likely to be attracted, the Corporation will set up machinery for their permanent management. It will also advance loans to existing units on conditions more liberal than those prescribed by the Industrial Finance Corporation. Fuller details are now being worked out and an official announcement is expected at an early date. As already reported, the Government plans to build another steel plant, and start or help in starting such industries as heavy electrical equipment, soda ash, caustic soda, dyestuffs, wood pulp, raw films, photographic materials, synthetic oils, and others connected with the basic requirements of pharmaceutical industries.

Operation of State Enterprises

There has been much criticism of State enterprise recently, not all of it fair. One aspect of it was dealt with by the Finance Minister in the Council of States this week. Replying to the criticism that the scale of investment visualised for the public sector came in the way of private investment and therefore retarded employment, the Finance Minister said that it was difficult to see in the context of unemployment how a given amount of investment in the private sector could create more employment than the same amount of investment in the public sector. Economists might not agree that it is so "difficult," but if Mr. Deshmukh was thinking only of the number of men actually employed on one job no doubt the public sector, because of political considerations, offers larger employment than the private sector. The case of the Air Corporations should illustrate the point. The principal reason advanced in favour of having a single operator was economy in working costs, to be achieved partly by reducing the number of employees. Even before the Corporation was inaugurated, the Minister in charge gave a categorical assurance against any reduction in staff employed by the various air companies. The Finance Minister added that "investment in the public sector, at this stage and for many years to come, is of the highest importance, for the development of the country's economy."

The managerial aspect of State enterprise was also criticised in the Council of States. Replying to a question, the Production Minister said that as the Sindri fertiliser factory was a private limited company, the Government did not think it appropriate to disclose either the cost of production in the factory or the details of agreements entered into with the Associated Cement Companies for the establishment of a cement factory and with Messrs. Carl Stoll of West Germany for a coke plant. The stand taken by the Minister is regarded as correct, but not the arguments he advanced. The Speaker of the British House of Commons once ruled that questions could be asked on matters involving ministerial responsibility or where they were of sufficient public importance, adding: "The Government, in their desire not to interfere in the day-to-day activities of the boards of nationalised industries, have by what might be termed a 'self-denying ordinance' refused to answer many questions on subjects, which, by a strict interpretation of the Statute, might be held to fall within their responsibility. They are fully entitled to do so; that is a matter for their discretion." It will thus be seen that the question could not be answered, not because the Sindri factory is a private limited company, but because it relates to the day-to-day activities of the company.

The third attack has been on the negotiations and the agreement for a steel plant. One section is opposed to the project itself, because it does not approve of the State entering the steel enterprise. The other group has objected to the "high fees" proposed to be paid to the German combine as consultants. The issue, however, is what fees were paid and are still being paid to

their consultants by the existing steel manufacturers? Officials here feel that some Indian industrialists are doing their best to discredit State enterprise and make it appear uneconomical. It is for instance often urged that State enterprise should use Indian manufactured articles, irrespective of their price and quality. But the persons making this demand often crowd the offices of the Chief Controller of Imports seeking import licences even for a table for a canteen. The employment of officials in State industries is often criticised by men who pay high salaries to retired Government servants.

Here is an interesting case. An industrial plant in the private sector depended on a large supply of water for which the plans included suitable provision. Half way through the plan it was discovered that the provision made for water supply was not adequate and the plant would not operate unless additional water supply was secured. Experts were called and a nearby river had to be dammed to arrange for the extra supply. All this meant additional expenditure. If the same undertaking were in the public sector, there would have been parliamentary debates and the Public Accounts Committee's examination to fix final responsibility for the mistake. Meanwhile, the work would have been at a standstill. This is not mentioned to defend the waste of public money or to oppose control over expenditure. It is only intended to show that one set of rules is prescribed for the public sector and another for the private sector.

Regarding the steel plant, the Government did consult Sir Jehangir Ghandy before finalising the deal. As for the charge that he was consulted only at the end of the negotiations, if he had been consulted earlier critics would have said that he was consulted at a stage when there was nothing to consult about. The Government, I understand, is fully satisfied that the terms secured from the German combine were the best that could be had. In regard to the Japanese claim that they are discussing a new steel project with the Government, the facts are that the Planning Commission has informed the Japanese industrialists that they could, if they so desired, submit their alternative proposals. There have been no negotiations as such so far.

New Sugar Policy

The Government of India's sugar policy for 1953-54 was announced during the week. For two years, beginning with the next cane season, the minimum sugarcane prices are fixed at Rs. 1-7 per

maund for gate deliveries and Rs. 1-5 per maund for deliveries at rail centres. This increase by two annas a maund in cane prices will increase sugar prices by Rs. 1-4 a maund. The Government has, however, decided to retain the existing price of sugar by forgoing the additional excise duty of Re. 1 per maund imposed last year, the sugar mills meeting the remaining four annas a maund from their profits. It is a matter for some regret that the Governments of Uttar Pradesh and Bihar, who combined to have cane prices raised, have not come to the consumer's rescue by reducing their excise duty on sugarcane. As reported earlier the Uttar Pradesh and Bihar Governments received Rs. 4,26,22,772 from excise duty on sugarcane in 1951-52 and the Tariff Commission had recommended the reduction of this duty from three annas to one anna per maund.

Assam-Pakistan Border Trade

The Indo-Pakistan conference meeting in Calcutta from 30th September will discuss the question of border trade between East Pakistan and the adjoining areas in Assam. An agreement on broad principles to facilitate border trade was reached at the Indo-Pakistan trade talks held here in March last. There was no difference of opinion between the two Governments in regard to the desirability of restoring such trade. It was felt that it would reduce smuggling across the border. Both the Governments, however, wanted to introduce safeguards against abuses which the resumption of border trade might entail. The first objective of the Calcutta talks, therefore, will be to evolve a pattern for balanced trade which may avoid any expenditure of foreign exchange. One method suggested is to divide the area into five sectors, after taking into consideration the topography of the place and the basic needs of the population. In such a set-up, holders of an "A" visa could be permitted to trade without passing through customs points or paying customs duties. To avoid abuses, quantities of goods could be limited to what one could carry on his person across the border. As a further safeguard, the articles entering this trade could be confined to local produce, some exceptions being kerosene and salt. It is possible that seasonal produce may be in excess of an individual demand for the necessities of life. The present provision to permit persons to carry money not exceeding Rs. 50 could cover such cases. As for rice, if any sector imported it, equal quantities may be exported by the other sector. It is expected that agreement may be reached along these lines. So far as the Indo-Pakistan Trade Agreement is concerned, it is due to expire at the end of this month. No approach has

University Grants Commission

The Government of India has decided to set up a University Grants Commission and has selected an eminent scientist as its first chairman. A University Grants Committee was constituted in 1945 to deal solely with the three Central universities of Aligarh, Benaras and Delhi. In 1947, its membership was enlarged and also its powers to deal with all the universities. Neither its chairman nor its members are whole-time. There has been a good deal of discussion about the functions of this Committee, which has no funds at its disposal. The University Commission, which made its report in 1949 regarded the University Grants Commission as essential to the framework of its recommendations. It was urged that the Grants Commission should allocate both recurrent and capital grants from the Centre instead of merely recommending their allocation to the Ministry of Finance. The University Commission added: "The decision of how much public money can be spent on university education ought to be made only by the Government, but once the decision is made the detailed allocation of the money must be left to an expert body, not merely non-political but as rigidly protected from political or personal lobbying and pressure as the Constitution of the country can make it".

It was also recommended that the Central grant, once determined, must not be reduced in subsequent years. As a short-term goal, the Centre should make itself responsible for an overall total amounting to 50 percent of the cost of post-graduate and research work, without in any way reducing the State contribution. It was also suggested that the sums at the disposal of the University Grants Commission for recurrent and capital grants respectively should be kept separately in the budget. As for the latter's size, it was recommended that it should consist of five members including three whole-time members, one of whom was to be a scientist and one a humanist, in addition to a secretary and office staff. The other two members were to be the Secretaries to the Ministries of Finance and Education. The three whole-time members were to be debarred from the subsequent holding of university office.

Reorganisation of Central Government

Important decisions are believed to have been reached for the reorganisation of the machinery of the Central administration. In reaching the decisions, the Government was guided by the valuable work done by Mr. R. A. Gopalaswamy and the Ford Foundation consultant, Mr. Paul Appleby. According to these decisions, there will be a whole-time principal of the Administrative Service School, who will be responsible for the training of the Central Secretariat Services. Various enquiries suggested by Mr. Appleby are also being instituted. Meanwhile, an "organisation and management" division is being organised. To quote Mr. Appleby the "division will be charged with the responsibility for giving both extensive and intensive leadership in respect of structure, management and procedures. At one level of a highly technical and specific sort, it will give attention to work management, work flow, office management, filing systems, space arrangements and the like; at another level it will be charged with general governmental structural studies and proposals." A proposal to start an Institute of Public Administration is also under examination.

Administration of Joint Stock Companies

With effect from 1st October, the administration of joint stock companies will be taken over by the Government of India. The Registrars of Joint Stock Companies, at present under State employment, will become employees of the Government of India. The Central organisation to deal with joint stock companies will also be instituted.

London

SIGNIFICANT INCREASE IN TEXTILE EXPORTS

WAGES AND PRODUCTIVITY

(FROM OUR OWN CORRESPONDENT)

26th September.

THE importance of Australia as a market for British exports is made evident by the detailed figures of August trade released by the Board of Trade this week. Since taking August by itself, for reasons which were explained in last week's despatch, would present an erroneous picture, the Board combines the July and August figures and relates them to those of the previous two quarters of the year on an average basis. From that point of view, exports to Australia are 20 percent higher than in the second quarter, with cars, motor cycles, clothing and agricultural tractors representing the main items. Australia thus helped considerably towards maintaining exports at a reasonable level, for the overall picture shows declines of varying degrees in most categories of exports rather larger than would be justified by the fewer working days in August. On the average basis mentioned above, however, total exports were 3 percent greater than in the second quarter and 4 percent greater than in the first. The authorities estimate that most of this expansion reflects an actual rise in volume and not simply higher prices, although the terms of trade index (1952=100) recorded a rise of a point in export prices during August after the figure had remained stationary at 96 for the three previous months. Import prices remained steady at 87, with the result that the ratio moved down and in favour of this country from 91 to 90. Textile exports showed the most significant increase, and at an average figure of £33 million a month for July and August, were 11 percent higher than those in the second quarter. Refined petroleum and non-ferrous metals are also being shipped in increasing quantities, but over the rest of the field decreases are shown, though totals stand higher in most cases than in August, 1952. Most disturbing of all, perhaps, are the coal figures. Exports declined between the first and second quarters of this year, and show a further drop of £600,000 a month over July and August.

This last fact goes a long way to counteract the jubilation of the Socialist press on the results recorded in the second quarterly report of the working of the National Coal Board which has just been released. This shows an estimated profit of £808,187, against £541,133 for the first three months of the year, and a loss of £272,563 for the corresponding period of 1952. Nationalisation, these papers say, is at last producing dividends—but the price increases made in March, which enabled this larger profit to be earned from a smaller output, as well as the effect they had on the cost of living, are ignored. Output for the second quarter fell to 48,281,612 tons from 50,957,712 in the first quarter, compared with 48,530,091 tons in the June quarter of 1952. The average selling price, on the other hand, rose to £3 1s. 7.9d., against £2 19s. 3.5d. and £2 17s. 5.8d., respectively. The coal position is certainly far from satisfactory. So far this year production is over 2½ million tons down on last year and stocks are more than 1½ million tons lower—and this in the face of rising demand in this country as well as an urgent need to increase coal exports. Absenteeism is on the increase.

Workers' Weekly Earnings

That is the situation although, as figures published in the Ministry of Labour Gazette show, miners are at the top of the wage list, with an average of £12 6s. 1d., plus 11s. 9d. allowances in kind for adult men per week. It is surprising that the trend of wages, and the many pending claims for increases, are being watched with some anxiety, especially when the world market for our exports is becoming so much more competitive? Miners are not included in the Ministry's half-yearly report of actual earnings of workers. Since the war wages have risen much faster than productivity, though the effect was offset for a time by the devaluation of the currency. Average hourly earnings last April were just three times those of October, 1933. In manufacturing industries alone they had risen rather more, by 215 percent. The actual figures are interesting. The weekly earnings of 6½ million workers give an average of £7 17s. 7d. in April, 1953, against £2 13s. 3d. in October, 1933—an increase of 196 percent. The average man in industry earns £9 5s. 11d., compared with £3 6s. pre-war; and the woman £5 0s. 3d., compared with £1 12s. 6d. Among industrial workers the highest paid men include iron and steel rolling (£10 17s. 4d.); motor and motor cycle manufacture (£11 7s. 4d.); aircraft manufacture and repair (£11 6s.); and printing and publishing of newspapers and periodicals (£11 6s. 2d.). At the other end of the scale come women in laundries (£4 2s. 9d.) and linen (£3 18s. 7d.). It is believed that the earnings figure for last April would probably understate present labour costs, which is why so much depends on the outcome of the important wage claims now pending. Related to this question is how these increased earnings compare with rises in the cost of living. According to the London and Cambridge Economic Service, the retail price index over the same period has risen by 129 percent—or a lot less rapidly than the rise in earnings.

All these factors, and no doubt many others, were at the back of the mind of Lord Bruce when, as Chairman, he presented a definitely pessimistic

view of the future outlook to the annual meeting of the Finance Corporation for Industry. He does not deny that the past year has produced a considerable improvement in the situation. He points out, however, that the sterling area's gold and dollar reserves are still barely equal to the amount in hand at the end of 1945 and that, the slightest adverse change in trading conditions could wipe them out completely. Furthermore, the post-war reconstruction is over, the additional demands set up by the Korean war have been satisfied, and industrial production is increasing all over the world. Where are the markets for expanding exports to be found, for Lord Bruce does not believe that America will provide the answer in the near future? He warns against too ready an acceptance of the "soothing statements" with regard to progress at home and development in the Commonwealth. The outlook, in fact, is still "desperate" and that is why he suggests that the development of dollar-earning or dollar-earning primary production in the sterling area is more important than the effort to sell more industrial manufactures direct to the United States.

Transport Commission's Interim Plans

With Sir Brian Robertson away in Egypt, it fell to Sir John Benstead, Deputy Chairman of the British Transport Commission, to make known the interim plans drawn up to ensure continuity of service pending the completion of the reorganisation of the railways under the new Transport Act. The changes are really very few. In name the various Executives, except that of London Transport—to the Chairman of the Railway Executive, has been appointed in succession to Lord Latham—will disappear, but their members are mostly being retained to carry on their former tasks under different designations. The Commission itself will concentrate on and control major policy, while the present Chief Regional Officers will become Chief Regional Managers with increased responsibility for all railway matters (commercial, operating, and technical) in their regions, the boundaries of which for the present will remain unaltered. No changes are to be made in the machinery for dealing with labour relations. The biggest practical change is that the Commission moves from its present headquarters to that of the Railway Executive.

B.O.A.C. Profits Fall

It will be instructive to see what difference the fuller utilisation of jet aircraft—not expected for another three years—will make in the financial results of the British Overseas Airways Corporation. Although it carried more passengers and its revenue increased last year, higher costs resulted in a heavy fall in profits. Before payment of interest, the figure for the year ended 31st. March, 1953, was down to £103,875, against £1,233,722 in 1951-52. This was not enough to pay interest on capital, so the deficit was increased by a further £292,718 but it was sufficient for the Corporation to do without an Exchequer grant for the first time since the war. It will be remembered that the Corporation made its first profit in 1951-52 when it reduced the accumulated deficit by £2.4 million with the aid of a grant from the Treasury of £1,500,000. Taking into account a number of special circumstances—the "normal hazards of an international commercial organisation" is how Sir Miles Thomas describes them—including rising costs, the American oil refinery strike, a slowing down of world trade, an unexpected fall in mail revenue, the temporary withdrawal of the Stratocruiser fleet, and more than normal fog, B.O.A.C. may indeed be considered as having done reasonably well. The vital factor in the running of any more ton-miles were flown and gross revenue actually rose from £33.6 million to £36.2 million, the load factor fell from 65.7 percent in 1951-52 to 64.5 percent in 1952-53.

Prospects at the moment are brighter. For the last couple of months the load factor has been "over 80 percent" and "business is good," but Sir Miles was not prepared to go further than that in anticipating results for the current year. On the other hand, the Corporation is negotiating with the Government on the reimbursement of aircraft development expenditure. It maintains that it is unduly burdened with the heavy cost of introducing new British aircraft types into safe commercial service. The Corporation does not complain about this responsibility, nor about the financial sacrifices which it has made in the past in order to employ British-manufactured aircraft, but with the heavy cost of the larger machines now being developed it feels that it is entitled to some assistance in meeting these special costs. If the negotiations are successfully it might well make a considerable difference to the financial situation, looking forward to which the Corporation is London airport which would minimise the losses confidence for the future, however, appears to rest in the introduction of the Bristol Britannia.

Brevities

In the first week of next month B.O.A.C. begins a widespread extension of tourist facilities at reduced fares on services operating to India, Pakistan, Ceylon, the Persian Gulf area, West Indies and various parts of Africa. The new tourist 20 percent on standard fares.

Lord Swinton, Secretary of State for Commonwealth Relations, left London by air on Thursday for a tour covering New Zealand, Australia, India, Pakistan and Ceylon of some ten weeks' duration. The last three countries will be visited during the second half of November.

Bombay

MR. KIDWAI'S DISCUSSIONS WITH BUSINESS LEADERS

SPECULATION ON CHANGES IN CENTRAL CABINET

(FROM OUR OWN CORRESPONDENT)

27th September.

THIS week started with strong rumours of an impending important change at the Union Ministry of Commerce and Industry. It was noticed that Mr. R. A. Kidwai, Central Minister for Food and Agriculture, during his visit to this city in the preceding week, had been in touch with several important leaders of the business community. He was reported to have held long conferences with them to ascertain their views on outstanding economic problems and the constructive contribution they could make in an active drive to reduce unemployment. This, if true, makes a welcome change from the policy of ignoring the private sector and, coming from one who has little if anything to do with business and industry in general, except that small section relating to sugar, it is being interpreted here as a sign of a change both in the attitude of the Government towards this community and in the Minister in charge of these affairs. Speculation on this topic continued in business circles, especially as Mr. T. T. Krishnamachari is once again being mentioned as a likely successor to Mr. B. Ram Rau, the present Governor of the Reserve Bank. This rumour may of course just be wishful thinking since Mr. Krishnamachari appears to have incurred the displeasure of the Bombay business men both by his policy and by his general attitude towards them.

A Tilt at State Policy

The week was further enlivened by a broadside from Mr. S. K. Patil, the President of the Bombay Pradesh Congress Committee, directed at the State Government. He is definitely becoming more sympathetic towards the business community, which could not hope to have a better spokesman. This time Mr. Patil's platform was the Hotel and Restaurant Owners' Congress which met here last Friday. Inaugurating this function Mr. Patil accused the State Government of being responsible for the increase in unemployment. Attacking certain unnamed "Victorian conservatives with kill-joy tendencies" in the State Cabinet, he criticised its recent order asking all hotels and restaurants to be closed an hour before midnight as from 1st October. He tilted his lance also at the prohibition policy of the Government, asking why so many should sacrifice so much for so few anti-social people. But of more interest to the business community was his criticism of the recent tendency on the part of workers to press for more pay and he described the haste with which the Minimum Wages Act was being applied to various industries as ill-advised. Marginal establishments in any industry, he said, could never afford to pay minimum wages to workers as at present fixed, with the result that whenever the workers won their demand for minimum wages such firms were forced either to resort to retrenchment or to close down, thus intensifying unemployment just at a time when the volume of employment has to be maintained, even at some sacrifice. Instead of hammering such units State policy should aim at giving them more incentives and assistance.

Attack on Capitalists

Just when Mr. Patil was pleading for a more realistic industrial policy, Mr. N. V. Gadgil, an ex-Minister and a Member of Parliament, free from his duties in the House at New Delhi, was speaking against the propertied class, the landlords and the capitalists, at a public meeting in Poona. He said that the Government must "deal more firmly and effectively" with these people and reconsider the extent to which it should leave the industrial field to private enterprise. He appeared to want a more drastic and immediate change in the present economic structure and doubted if the ideals of the Congress could ever be achieved within the framework of the present economic structure. Both Mr. N. V. Gadgil and Mr. S. K. Patil are leaders of the same political organisation and the business community is intrigued at the fact that the same political party should harbour men with such diametrically opposed views on present-day economic problems.

In the meantime, the Pardi Satyagraha in connection with the demand of unemployed people in the rural areas to bring uncultivated grasslands into cultivation, led by the Praja Socialist Party, is gaining in strength, in spite of its purely local character. The campaign has been intensified further by the visit of Acharya Kripalani, the leader of the party, to Gujarat and Bombay. It is feared that the movement will spread to some of the neighbouring areas where the proportion of grasslands to land under cultivation and the incidence of unemployment amongst tenants and agricultural workers are even worse than at Pardi, the present base of the Satyagraha. While the position has become increasingly embarrassing to the Government, it is not possible to give adequate attention to this problem when the legislature is in session and the Ministers are too busy with important legislation

which has to be pushed through within a limited time.

New Sugar Policy

The new sugar policy has on the whole been well received in Western India. Though the sugar industry in this State is responsible for only 10 percent of the total production of sugar in the country, it is an important industry in Maharashtra and is next in importance to the textile industry in Bombay. The new policy will not materially affect the prospects of the sugar factories here because the price of sugarcane, unless it is correlated with the price of sugar, is only of theoretical importance to them; most of them grow a large part of the cane they crush and little cane is purchased from private cultivators—the reverse of the position in U.P. and Bihar. The price of sugar will remain more or less at the same level as last year, but the factories in Bombay will benefit to the extent that they will be saving a rupee per maund of sugar by way of excise duty. The fixing of the price of sugarcane one year in advance is considered as a move in the right direction. The first instalment of imported sugar is expected to be landed here today and people have been looking forward to it in the hope that it will help to bring down the present high prices of sugar. In fact, prices during last week were on the down grade, in the expectation that imported sugar would be made available soon at a slightly lower rate. The Sugar Merchants' Association here has decided to suspend forward trading in sugar in view of shortage of stocks of indigenous sugar and the uncertainty attending the supply of imported sugar. This step is also expected to keep sugar prices within reasonable limits.

West Pakistan

MORE LIGHT ON IMPORT POLICY

EXPORT INCENTIVES PROPOSED

(FROM OUR OWN CORRESPONDENT)

Karachi, 24th September.

ON the eve of the commencement of the current session of the Legislature, the Prime Minister, Mr. Mohammad Ali, presumably in his capacity as Commerce Minister, was the guest of honour at the annual dinner of the Pakistan Chamber of Commerce in Karachi. His speech in reply to the address delivered by the President of the Chamber, Mr. M. A. Rangoonwala, contained several pronouncements, important to commercial interests, which had the effect if not of clarification at least of indication of the policy lines being pursued by the various departments concerned. As suggested in the President's remarks, there had been considerable concern about the reported intention of the Government to modify in some way the basis on which, hitherto, licences had been issued, on which, the past performance of importers. The Prime Minister stated emphatically that there was no intention of doing away with the system of licensing on the basis of categories, although there might be some measure of revision of the importers' categories already fixed wherever these were proved to be wrongly determined.

In passing, it may be mentioned that there has been no statement by the Commerce Ministry giving the terms of reference or delineating the powers of the newly constituted Licensing Board to which reference was made in the previous despatch. There has, however, been an alteration in the constitution of the Board, and now Mr. Ghulam Faruque, Chairman of the Pakistan Industrial Development Corporation, has been brought in, and, it is understood, will act as Chairman of the Board instead of Mr. Hadi Hussain, Director-General of Supplies and Development, as previously announced. The Prime Minister further made reference to the fact that the question of allowing Pakistan exporters, as an incentive to increased efforts, to retain a certain percentage of foreign exchange earned from the export of certain scheduled items was under examination. The Department of Trade Promotion and Commercial Intelligence has recently investigated the various methods adopted in several countries to provide incentives to exporters; these incentives differ considerably from country to country, taking the form of concessions in taxation, retention of a fixed percentage of foreign exchange earnings for advertising and promotion purposes abroad, for financing of imports of freely imported merchandise or authorised contingents, and so on. For instance, as an inducement to trading in the hard currency areas, Italian exporters are permitted to employ up to 50 percent of dollars earned in their transactions in financing the importation of certain items, within a time limit of 60 days. The export market is of such paramount importance to a country like Pakistan whose economy is so largely dependent on the disposal of its raw material—and of course in the not too distant future its finished goods, such as hessian—that it would be interesting to see what, if any, inducements the Pakistan Government are prepared to concede.

Capital Goods Purchase

Although no official directive has been issued by the State Bank it would appear that the differences of interpretation between the two countries

regarding the operation of the deferred payment system under the Japanese Trade Agreement have now been resolved. It will be recalled that Article 1 of the Agreement provided for facilities being given by both Governments in the conclusion of contracts for the supply of capital goods on the basis of deferred payment; for the implementation of this aim the price of capital goods was fixed in sterling and two alternative methods of payment were laid down. Pakistan will now agree to the necessary cover for foreign exchange for periods of from two to five years; this cover will no doubt also extend to other countries who are prepared to provide Pakistan with capital goods on the deferred payment system. An A.P.P. report states that the Pakistan Government have already issued licences for the import of capital goods from Japan to the value of about £5 million, mainly in textile machinery. According to Schedule B of the Agreement itself, Japan falls to be issued with single country import licences up to £6 million for capital goods against deferred payments and a further estimated value of imports in that category of £4 million.

Trade Agreement with Italy Published

The Trade Agreement concluded between Pakistan and Italy in Rome on 11th July, 1953, has now been ratified and the text has been published. The pattern of the agreement is similar to the one which was in operation during 1952 although the amounts involved have been scaled down. The main export items, namely jute and cotton, were in quantity in the 1952 agreement—Jute 60,000 tons and cotton 50,000 tons. In the 1953 agreement the figures are jute 60,000 and cotton 20,000 tons. A new article in the 1953 agreement refers to the promotion of the shipping of the two countries and the joint endeavours of the two countries to give fair and equitable treatment to all questions arising in this connection. In the connected correspondence there is a reference to "the eventual constitution of Italo-Pakistan joint companies employing Italian skilled personnel, machinery and other instrumental goods, and aiming at the study and consideration of industrial plants and public works as well as to the improvement of communications and electrification."

Trade agreements in Pakistan in the light of the withdrawal of all articles from the Open General Licence now merit very careful attention and study. Hitherto there were quite a number of articles mentioned in the agreements which were on O.G.L. and the appearance of these items on the schedules really amounted to a pious aspiration, that such an exchange of goods would take place. Now it would seem that it is incumbent on Pakistan to issue licences for such items, and in a country where licences are considered as highly desirable things there is little doubt but that they will be taken up. Yesterday during the Question hour the Minister of Commerce stated that trade agreements had been signed with the following countries: Belgium, The Peoples Republic of China, France, India, Indonesia, Italy, Japan, Poland, Spain and the U.S.S.R. (barter agreement), and that proposals to have trade agreements with the following countries were under consideration: Australia, Austria, Ceylon, Czechoslovakia, Egypt, Federal Republic of Germany, Hungary and Iraq. It is known that the U.K. Government, and some other countries, while realising the inherent difficulties of those countries whose economy is heavily dependent on the disposal of their raw materials, does not view bilateral trade agreements with any particular enthusiasm on the grounds that the much desired return to multilateral trade is greatly impeded thereby. Be that as it may, in a country whose imports are all "on licence" and whose "ceilings" are greatly reduced owing to financial stringency, when the importers' cake is cut and the appropriate segments dished out to the High Contracting Parties there must inevitably be only a somewhat unsubstantial meal of crumbs for the others.

ISSUES BEFORE THE G.A.T.T. CONFERENCE

JAPAN'S APPLICATION: BRITAIN AND COMMONWEALTH TRADE

THE eighth session of the contracting parties to G. A. T. T. is in session at Geneva, and is expected to last for six weeks. This is the regular annual business meeting of the representatives of the governments which are members, but other governments and several inter-governmental bodies have sent observers. There are now 33 countries which are contracting parties, namely, Austria, Belgium, Brazil, Burma, Canada, Ceylon, Chile, Cuba, Czechoslovakia, Denmark, Dominican Republic, Finland, France, German Federal Republic, Greece, Haiti, India, Indonesia, Italy, Luxembourg, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Peru, Southern Rhodesia, Sweden, Turkey, South Africa, United Kingdom, and the United States, while three other governments have undertaken tariff negotiations with a view to acceding to G. A. T. T., namely, Uruguay, Philippines, and Korea, but have not yet acceded. The session is being held against the background of virtual standstill arrangements in the United States on matters of commercial policy, pending the new Administration formulating its views, and since the last meeting the British Commonwealth countries in London in November 1952 decided not to seek closer preferential arrangements but to support proposals for a free, multilateral worldwide trading system. The discussions, as they proceed, will provide indications of any alterations in the views of the contracting parties, if any have occurred in the interim, as also of the prospects of G. A. T. T. achieving more than the limited success which has so far evolved from earlier sessions. So that the daily reports can be evaluated properly it is necessary that the background should be known. It is that, based on the agenda of the present session, which this article aims at presenting.

Japanese Association

The request of the Japanese Government to accede to G. A. T. T. dates back to July 1952. The Japanese Government has always stated that it was willing to enter into tariff negotiations and that, although its new postwar tariff is a moderate one, it was willing to reduce tariffs on a substantial number of items. The contracting parties have recognised that it is desirable for Japan to take her rightful place in the community of trading nations and her need for increasing participation in world trade in view of her large population and shortages of food and industrial materials. The seventh session and inter-session meetings have examined Japan's application in the light of prewar experience (the sudden flooding of markets and the disruption of trading conditions) with a view to devising safeguards against a recurrence of such circumstances. Disruptions of this kind are not specifically covered in G. A. T. T. but a formula has been worked out which, if adopted, would allow contracting parties to take retaliatory action without delay should these disruptions occur again.

At this session Japan's application will be viewed against the fact that it is not possible at present to arrange for tariff negotiations (the United States, which is Japan's most important trading partner, cannot undertake tariff negotiations during the standstill period referred to above); therefore, the contracting parties cannot proceed with Japan's application for formal accession. The Japanese Government, however, has put forward a proposal for provisional associate membership under which Japan's commercial relations with contracting parties would be regulated by G. A. T. T. during the period before tariff negotiations can be arranged. During this period the general provisions of G. A. T. T. would apply to the trade between Japan and other contracting parties. Existing tariff concessions covered by G. A. T. T. would be extended to Japan in exchange for a commitment by Japan with regard to its tariff. Under this proposed arrangement, on which public hearings have been held in Washington earlier this month, contracting parties which wish to

withhold, bilaterally, the temporary application of G. A. T. T. to Japan would be free to do so.

Britain's Difficulties

G. A. T. T. member countries have bound against increasing the tariff duties contained in the G. A. T. T. schedules; they are free to increase import duties on items which are not contained in those schedules. Article I of G. A. T. T. is the basic provision which requires the exchange of most-favoured-nation treatment by the contracting parties; with regard to import duties any "advantage, favour, privilege or immunity" granted to any country must be accorded, unconditionally, to all other contracting parties. Article I recognises existing preferential arrangements in respect of import duties, but does not permit the "margin of preference" (i.e. the difference between the full tariff rate of duty and the preferential rate) to be increased.

The United Kingdom is one of the countries which enjoys preferential arrangements with certain other countries, namely, the Commonwealth countries. The United Kingdom wishes to raise the protective tariff duties on a very limited range of goods from non-Commonwealth countries—items which are not bound under the G. A. T. T. At the same time, the United Kingdom wishes to obtain a waiver from the requirement under G. A. T. T. to impose corresponding duties on imports of these items from the countries which form part of the Commonwealth preferential area.

The United Kingdom has made it clear that they seek a solution of this problem which is consistent with basic G. A. T. T. provisions. The purpose is to give increased protection to domestic industry and agriculture, where this is judged necessary, and not to increase the preferential advantage enjoyed by Commonwealth goods over foreign goods in the United Kingdom market. An assurance will also be given to the contracting parties that the United Kingdom has no intention of embarking on a comprehensive or widespread upward revision of the protective tariff. The matter is viewed as an essentially technical problem of placing the United Kingdom on the same footing as other G. A. T. T. members, so far as items not bound under the G. A. T. T. schedules are concerned. Further, the United Kingdom—in submitting this request—has made it clear that it is not their intention to divert trade from non-Commonwealth to Commonwealth suppliers and that, on this point, they are willing to participate in appropriate procedures for consultation and arbitration before taking action on any item.

It is generally understood that, in this application, the United Kingdom is mainly concerned with affording increased protection to certain branches of British agriculture, as and when it is judged in the national interest. At present some degree of protection is given by quota restrictions but, according to Press reports, the United Kingdom Government intends to reduce quantitative import restrictions to a minimum and thus to give greater stability of markets both for domestic producers and overseas suppliers.

Extension of Concessions

The tariff concessions contained in the original schedules annexed to G. A. T. T. entered into force in 1948 with an assured life until the end of 1950. After that time the contracting party could modify or withdraw any concessions by negotiation and agreement with the government with which it had been negotiated. If no agreement could be reached on compensatory adjustments on other products, the contracting party would be free to modify or withdraw the concession and, in that event, the other contracting party could withdraw equivalent concessions. To avoid the possibility of extensive re-negotiations and the gradual unravelling of the network of concessions (there are some 55,000 items bound under the G. A. T. T.), action was taken at the Torquay Conference in 1950 to extend the assured life of the schedules (comprising the concessions negotiated at all three tariff conferences) until 31st December, 1953. The United States has already made a (public) proposal, "in view of the fact that a substantial increase of world tariffs could take place after the end of 1953," to extend the firm validity of the G. A. T. T. tariff schedules for a temporary period, perhaps with a limit of 12 to 18 months.

Complaints of Violations

As in previous sessions there are a number of items arising from complaints of violations of G. A. T. T. provisions which fall under the Article XXIII—Complaints Procedure. In previous sessions the United States restrictions on dairy products imports received considerable publicity. At the seventh session the contracting parties authorised the Netherlands to reduce, during 1953, from 72,000 tons to 60,000 metric tons the upper limit on imports of wheat flour from the United States, to compensate for the damage suffered by Netherlands exports from U.N. restrictions. Since the last session, section 104 of the United States Defence Act, under which the restrictions were imposed, has been replaced by different legislation, namely, section 22 of the

Agricultural Adjustment Act. But there are still severe quotas on imports of certain dairy products, fats and oils, and in some cases they appear to be more stringent than they were in previous years. There are other complaints against United States import restrictions and also concerning United States export subsidies, but it would not be fair or accurate to imagine that the United States is the only country which is the subject of complaints. At this session complaints (some new, some of long standing, and some of them satisfactorily settled) will be discussed affecting Belgium, Brazil, France, Germany and Greece, and possibly other countries.

Balance of Payments Restrictions

G. A. T. T. contains a general ban on the use of prohibitions or quota restrictions on imports and exports. However, certain exceptions are provided to permit the use of restrictions in defined circumstances, of which the most important is the need to safeguard a country's external reserve position and balance of payments. This exception is contained in Article XII. G. A. T. T. also contains a provision that where quantitative restrictions are imposed they shall in general be applied without discrimination as between the contracting parties. Special arrangements are, however, provided in Article XIV for the discriminatory application of balance of payments restrictions during the so-called postwar transitional period.

Under Article XIV: 1 (g) the contracting parties are required to report annually on all such measures in force. Three such annual reports have been made and the fourth report will be drawn up at this session. The contracting parties are also required to hold consultations each year with those governments which maintain discriminatory restrictions under certain provisions of the Agreement, which are not directly related to analogous provisions of the Articles of Agreement of the International Monetary Fund. Such consultations have been initiated with seven governments. Quite apart from the question of discrimination, the contracting parties may, under the terms of Article XII: 4 (b), invite any government maintaining such restrictions to consult, especially when there is a question of intensification. Consultations of this nature have been instituted with nine governments and these may also take place at the eighth session.

Reduction of Tariff Levels

The reduction of customs tariffs is one of the principal means of attaining the objectives of the G. A. T. T. But it has become evident in recent years that the method of reducing tariffs on a basis of strict reciprocity (as carried out at the Geneva, Annecy and Torquay Conferences) would not yield substantial results in the future, largely owing to the difficulties encountered when so-called high-tariff countries negotiate with so-called low-tariff countries, which have exhausted their possibilities of reducing their tariffs in the preceding tariff conferences. New methods and new techniques had to be sought.

Two suggestions for alternative methods of tariff reduction were suggested in 1951: (a) the Benelux proposal for the reduction of high tariff rates, so as to reduce the disparity in the customs tariffs of Europe, and (b) the French plan for a worldwide reduction of the incidence of tariffs by 30 percent in three annual stages of 10 percent each.

A working group of European countries, Canada and the United States have examined the technical aspects of the French plan. Preliminary results were submitted to the seventh session, when the French Government submitted a revision of the plan; the revision attempted to reconcile the views expressed in the course of the discussion of the working group. As a result of unofficial talks between a number of countries, the French Government, supported by other European Governments, submitted an elaboration of its revised plan. The working group of European countries, Canada and the United States is considering the revised French plan and will report on the technical aspects of that plan. It is expected that, when the contracting parties consider that report, they will examine questions of principle raised by the French plan against the background of the broader question of the adequacy of the proposed negotiation procedures and establish an inter-session body to pursue this examination after the session.

Recurring Items

Among the items of a recurring character the contracting parties will consider reports on the South Africa—Southern Rhodesia Customs Union, the Nicaragua—El Salvador Free Trade Area and from the six countries of the European Coal and Steel Community, following the waiver from G. A. T. T. obligations which was granted to them at the seventh session. Reports from Italy and Libya concerning their preferential régime will also be considered.

Further work will be done at this Session in tackling administrative barriers to trade, notably an investigation of the possibility of drawing up a standard definition of value for customs purposes and a common definition for determining the value of imported goods. These proposals have been put forward by the International Chamber of Commerce. The status of the Convention to facilitate the importation of samples and advertising material which was opened for signature in February, 1953, will also be considered.

THE RIDDLE OF THE MARKETS

REASONS FOR PRESENT LOW PRICES

lute

IT would be a platitude to say that almost everyone—if not without exception—in the jute trade has been bewildered by the course of the markets for the past two months. With smaller jute crops in India and Pakistan, with the mills' books well filled with hessian orders for the Argentine, with the output of heavy goods very substantially reduced from that of last year, with a reduction in the hessian export duty by more than half and with dispatches roughly keeping pace with mill output, everything would seem to have been pointing towards steady business and steady markets. Why then are there complaints on all sides of lack of business and why have the prices of manufactures slipped down to the levels of the middle of April?

Taking the case of raw jute first, it is generally agreed that it was the reduction in jute sowings and the long drought during and after sowing time that started the upward movement in raw jute prices, from which followed the rise in gunny prices. Reports regarding the probable size of the crop were then very pessimistic and there were predictions of a squeeze for raw jute before the end of the season. The propaganda of the Pakistani Government encouraged this belief and, with the knowledge that the crop would be late, there is no doubt that mills did a good bit of buying to build up bigger stocks than they had held for some time, just to be on the safe side. In consequence, mills have been able, when prices of manufactures became unremunerative, to restrict their purchases of raw jute to quantities which have been exceedingly small for what is generally known as the "busy season." In the meantime most people have become convinced that the crop is not as small as was originally expected, while there have been ample supplies from last year's carry-over, especially of Pakistani jute. Hence the fall in raw jute prices which in turn has affected the prices of manufactures.

The fact that mills were able to book large orders for the Argentine looked like being a bull factor but it has turned out otherwise. The Argentine is believed to have bought much more than its normal consumption for a year. Consequently other consuming countries know that the Argentine is out of the market as a competitor for a long time ahead so they can bide their time. This probably applies forcibly to the U.S.A. where the tendency, in any case, since the Korean armistice, is to cut down stock-piles. No doubt the business will come and is coming but, with the field cleared of the biggest potential competitor, there is no incentive to buy for far forward shipments and mills will have to content themselves with more or less hand to mouth business. Another thing is that, since the war and especially since partition and as a result of controls and quotas, much business has been diverted to new channels and is not done *coram populo* as was formerly the case. That is evident from month by month as fast as they are being produced in spite of complaints over a long period of lack of business. That also accounts to some extent—apart from the grievous losses of 1952—for the decline of "the bazar."

The reduction in the export duty on hessian was also expected by many to bring about a recovery in the hessian market and they have been disappointed. Actually it was not intended that the cut in duty should raise prices here but that it should lower them abroad, make Calcutta goods more competitive and so stimulate demand. Some time must elapse before it can be seen whether lost markets can be recovered but, in the U.S.A. alone, there is a large amount of leeway to be made up. Nearly one quarter of Calcutta's trade in hessian with the U.S.A. has been lost and must be recovered if the industry is to get back its old prosperity. The reduction in the duty is only a tinkering with the problem. The duty must be abolished entirely.

Outlook for Sacking

The case of sacking is very different from that of hessian. Some of the consuming markets, up to the spring of 1952, bought heavily at high prices and still have stocks of these stocks to consume. They are not, however, like the widow's cruise, inexhaustible. Other big markets for heavy sacking are in a state of political and financial chaos which keeps them out of the market. Not only do they not have the money or credit with which to buy but, because of their unsettled internal conditions, they are not producing and exporting the goods for which they formerly used jute bags. It was thought, at one time, that the mills' switch from sacking to hessian would effect such a reduction in the output of sacking that there might even have been a shortage of sacking but, as yet, there is no sign of that. The switch may, in fact, account to some extent for the dullness of the hessian market though hessian is not actually being over-produced if the American market can be held and more of it won back.

Taking all these things into consideration it would seem that, though they have not turned out to be the strong bull factors which they were originally thought to be, there is nothing in their failure as bull factors singly or collectively to account for the present mood of depression. We must, therefore, look for the answer elsewhere

and it would seem to be that we are in the midst of a big change in the methods of marketing jute manufactures. Formerly the bazar was a powerful influence and used to buy the bulk of the mills' production for months ahead and take up and hold Delivery Orders if they were unable to sell the goods at profitable prices before due date. As a result of the losses sustained last year the bazar does not have either the holding power or the nerve. The bazar is afraid to hold and, at the slightest sign of weakening, there is a rush to unload even the small amounts which are held. Mills are, therefore, unable to sell, as they used to do, large quantities for deliveries many months forward and are, therefore, bemoaning the lack of business. But, as was remarked above, the business is there, the goods are being exported and consumed and, though the orders are for near-at-hand goods instead of far-forward goods the orders will come. Where then is the justification for the present mood of pessimism?

THE JUTE MARKETS

DULL conditions have continued in all sections of the market. Even the knowledge that there would be a substantial reduction in mills' stocks of manufactures at the end of the month and bear covering against August commitments failed to instil any liveliness while the expectation that mills would have to buy raw jute in September in order to ensure a steady flow of supplies failed to materialise. Altogether a depressing week.

Manufactured Goods. Business has been reported during the week in New Zealand consacks at Rs. 96 and in Heavy C's at Rs. 95 for October-December shipment. There has also been a considerable amount of local covering in 10 oz 40" hessian for September. These features have helped to prevent the market from falling further. Mills are still showing some keenness to get business on their books in both hessian and heavy sacking for 1954 shipments but foreign buyers are not showing any interest. Burma is reported to be likely to place an order for Heavy C's and B Twills but, so far as is known, the business has not yet been concluded. Katni, as usual, has exercised considerable influence on prices but fluctuations have not been very wide. The highest for B Twills for September was about Rs. 92.2 and the lowest Rs. 89.4. Prices of 40" 10 oz. have varied between Rs. 41.12 and Rs. 43.6.

It is reported that shipping instructions received in September have been very good and that, though the month has almost the maximum number of working hours possible under the present agreement and production will therefore be heavy, there will be a big reduction in stocks. On the other hand some of the goods for which shipping instructions have been received may not be shipped before the end of the month because of a shortage of boats to transport the goods to sea-going ships.

On Wednesday morning the market opened steady because of the expected reduction in stocks and quotations were as under:—

	Ready.	Oct.	Oct.-Dec.
40" 8 oz.	Rs. 34.8	34.0	33.8
40" 10 oz.	Rs. 43.2	42.8	42.0
B Twills	Rs. 91.12	92.2	92.10
Heavy C's (plain)	Rs. 94.4	94.4	94.0
Cornacks	Rs. 93.6	93.8	93.8

Raw Jute. With mills complaining that they are unable to find buyers for their manufactures and that prices of raw jute are out of parity with those of

manufactured goods there has been very little business passing in the jute market. Business was reported in Birni F.A.Q. at Rs. 20.8 for Old and New Crop and later business was done with sellers over at eight annas less. Mesta X Bottoms were sold at Rs. 15 and White jute X Bottoms at Rs. 16. Daissee was sold at Rs. 23.8 down to Rs. 22.8 basis Bottoms but mills also paid Rs. 24.8 basis Bottoms for picked marks of daissee. A fair quantity of Pakistani MC/TC cuttings was done at Rs. 60 per bale and Pakistani Jat NC cuttings at Rs. 63 per bale for shipment ex Pakistan on C.O.D. terms. There are sellers over at these prices and sellers are also offering Pakistani cuttings ex Calcutta godown. Buyers are, however, inclined to be suspicious of these cuttings and, in any case, are not prepared to pay the premium asked for them by the holders.

Sellers are keen for business and, though nervous of selling at prices so much below the parity of prices in the jute districts, they are equally nervous of holding stocks. In consequence there are always some sellers at every fall in prices and the disparity in some districts is now less because of the fall of prices due to lack of wagons.

Pakistani jute has been neglected, mills being unwilling to pay the premium over the price of Indian jute.

Imports into Cossipur have been larger but are expected to fall off again because stocks have been accumulating and commission agents have sent instructions to stop dispatches. Quality is disappointing for this time of year and there is a scarcity of jute of good colour.

On Wednesday morning quotations were as under:—

New Crop.		Landed at Mills.	
	Rs. per md.	Rs. per md.	Shipment.
Lower Assam	23.0	Oct. &/or Nov.	
Upper Assam	22.8		
Northern	23.0		
Murshidabad Toss	22.8		
Daissee (Sheoraphuli)	21.0	October	
Daissee (ex Calcutta)	22.8		
Daissee Mesta	21.0	Oct. &/or Nov.	
Western Mesta	18.8		
Birni	Rs. 29 F.A.Q.	Oct. &/or Nov.	
Mill Firsts	14.0	October	
Mill Lightnings	125		
Dundee Daissee 2/3 SG	140		
Dundee Daissee 2/3 LG	125		

Pakistani Jute:—		Landed at Mills.	
	Rs. (l) per md.	Rs. (l) per md.	Shipment.
Jat	25.8	Oct. &/or Nov.	
District	24.8		
Northern	23.8		
Cuttings NC	62.0		
Cuttings mixing	60.0		

Mofussil. Pre-pujah imports are now coming into the markets and, with less interest being shown by buyers and reduced dispatches to Cossipur, stocks are accumulating. Prices in consequence have fallen and the position has been further weakened by the lack of wagons in North Bengal so that even those who want to dispatch jute against contracts already made cannot do so. In Upper Assam quality is reported to be poor, in North Bengal only fair, but present imports into Dhubri are good. Quality of daissee imports has improved and the condition is better. Most mills are now buying at the mill gates and over the jetties at prices above the parity of quotations in Calcutta for contract business. Daissee markets are, therefore, steadier than any others.

In Pakistan prices have declined further during the week owing to absence of enquiry from abroad. In Narayanganj there is practically no business passing in kutcha bales. Pucca bales have been buying loose jute slowly on the basis of Rs. (P) 18 to Rs. (P) 16-8 for balers' Bottoms. Kutcha bales are quoted at Rs. (P) 20 to Rs. (P) 19 for jat Bottoms. The local mills have been buying loose jute

MORE PROMISING OUTLOOK

(FROM OUR OWN CORRESPONDENT)

Dundee, by Air Mail.

CONDITIONS in the jute industry at the moment are more promising, but during the recent spell of paucity of business and a declining tendency in prices the position was very depressed. Buyers appeared to be awaiting still lower values, but the situation is very sensitive and it is not surprising that more interest is again being displayed by consumers. The firmer tone was at first reported to be due to speculators covering their sales owing to the probability of a good fall in the stocks of goods held by the Indian jute mills at the end of this month. Prices for jute goods are considered to be quite reasonable. Continental manufacturers are still unwilling to reduce their terms to the levels that have been quoted by Calcutta. Down to 68s. 6d. was mentioned for 10 oz. 40 in. hessians and 49s. 3d. for 7½ oz. for October shipment, but the prices today are 69s. 9d. and 50s. 6d. respectively, f.o.b. Calcutta. "B" twills were down as far as 151s. 9d. for September and 152s. 9d. for October-December, but a recovery has been made to 155s. 6d. and 156s. 6d. respectively, f.o.b. Calcutta.

Raw jute shippers are reluctant to reduce their terms further and Mill Firsts have remained unchanged all this week at £95 and Mill Lightnings at £85, with crack Daissee—2/3 offered at £88 and grade at £80, crack Tossa—2/3 at £108 and grade at £97, with grade fours at £85, all c. and f. U.K. Jute yarns and cloth continue in demand in Dundee and there is no weakening in prices. Both spinners and manufacturers are well booked up and it is practically impossible to purchase for delivery this year. Common 8 lb. cops and 8 lb. spools are firm at 15.58d. per lb. and 10 oz. 40 in. hessian at 13.21d. per yard and 8 oz. at 10.80d. Imports of jute manufactures from goods, into the U.K. from India to 31st August this year were 81,864,000 square yards (£2,991,568) against 98,922,000 square yards (£7,887,763) same eight months last year, with imports from other countries 1,934,000 sq. yds. (£62,059) and 20,236,000 sq. yds. (£1,835,707) respectively. Imports of raw jute were 700,705 bales (£9,960,305) and 388,275 bales (£11,210,928).

U.S. CONSUMPTION AND STOCKS

Appearing below are two tables which include the August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

Engineering and Transport

SOURCES OF POWER IN THE U.K.

OVER-DEPENDENCE ON COAL

SEVEN years ago—though she did not know it at the time—Britain was heading for the fuel crisis that nearly broke her economy in 1947. Every year since, as the "coal winter" beginning in October is approached, the outlook is surveyed with varying degrees of apprehension, in relation to coal stocks and weather prospects. This year the stock position is bad. If the weather is reasonably kind there will be no industrial crisis due to shortage of coal, but the general public is already resigned to the prospective shortage of household coal as though it were a dispensation of nature. Fuel technologists are not so fatalistic. They refuse to believe that a country which was formerly the leading exporter of coal, which has still large reserves of coal and the industrial means for extracting it, which, moreover, has no other important primary source of power, can so squander its resources that there is never quite enough coal. For the technologists have no doubt that the trouble is due to extravagant consumption. It may be disappointing that output increases so slowly, but the current rate of output, around 220 million tons a year, would be abundant if the coal were used efficiently. In fact, about four-fifths of its heat-potential is wasted.

The Anglo-American Productivity team which has been investigating conservation of fuel has published a report which emphasises at every point the need for fuel economy. Other investigators have stressed the damage to health and property caused by the belching of soot-laden smoke over the cities and industries of Britain. Scientists and technologists have discussed the subject from all angles at the annual meetings of the British Association.

That the experts, and some sections of the public, are aware of the problem does not mean that anything will necessarily be done about it. But while the principles have been debated the industrial designers have tackled the problem practically. They have evolved equipment, both industrial and domestic, which burns fuel with much less waste of heat, and equipment for processing waste fuel into usable forms. It remains to formulate a policy which will induce—or compel—consumers to use this new equipment in place of inefficient appliances. That the capital cost can soon be saved by reducing the cost of fuel consumed does not seem to be sufficient inducement. Perhaps it will be necessary to make coal even dearer, so that the need to economise will be imperative.

Coal Board Programme

The immediate problem is evidently not insoluble, but the expert care still unhappy about the long-term prospect. They feel that in this new age of power, Britain is too dependent on her coal. The National Coal Board has an ambitious shaft-sinking programme in hand, but it is costly, and the capacity available in Britain is not sufficient to fulfil it within a reasonable time—important contracts have been placed this year with German firms. Some existing coal-seams have already reached the point of economic exhaustion, and new schemes cannot reach fulfilment until years hence. On a broader perspective, the United States Materials Policy Commission has estimated that Britain's coal resources are sufficient for only 250 years, whereas America's though prodigally worked, are sufficient for ten times as long; and reserves already proved in China—where geological surveys are far from complete—would sustain the current rate of British output for nearly 2,000 years.

Oil and Atomic Energy

Britain has developed since the war a big oil-refining industry to supplement her coal and to provide an important new export. But various authorities have estimated that the world's resources of crude oil may be exhausted well within the present century. Water-power is inexhaustible; but Britain's hydro-electricity potential is meagre. Within the past year Britain has begun seriously to develop atomic energy for industrial purposes. Experts have addressed the British Association on the subject recently in terms which suggest that this is a practical mode of power, but not a cheap one. That there is tremendous energy in the processes employed in the atomic bomb and the hydrogen bomb is painfully obvious, but this energy is used more easily for destructive than for creative purposes. Nonetheless, the president of the British Electrical Power Convention, Sir John Hacking, suggested recently that the potentialities of nuclear power were more promising than the potentialities of underground gasification of coal, or of the power from oil, water, the winds or the tides.

A Wasting Asset

It is not irrational to suppose that when unlimited energy is available in nature, human science will be able to harness it for human progress. A generation hence we may look back and wonder that in the middle of the 20th century we were so concerned with coal. Even so, in a relative sense, coal is of vital importance to Britain. The two biggest industrial powers, the

United States and the Soviet Union, are richly endowed with oil and water-power as well as with coal. All over the world there are local sources of energy—especially hydro-electric energy—awaiting development; while Britain's source of energy is diminishing, becoming relatively costly, perhaps becoming outmoded. Application of cheap nuclear energy to the under-developed regions—if the necessary technique can be evolved—will deprive Britain of any advantage with which nature may have endowed her.

Yet there is no magic in science. Scientific and industrial technique is an acquired advantage, which can be retained. It is essential to the evolution of power.

LOW-COST GRADING WITH NEW LIGHT EARTH-MOVER

A light maintenance grader which, it is claimed, will handle many of the smaller jobs on which larger earth-moving machines have, until now, had to be uneconomically employed, has been introduced by a British firm. The new machine, with a working weight of 8,000 lb. and a big 42-bhp motor, is capable of moving large amounts of earth—and because of its sensitive hydraulic controls, which give quick, easy response to fingertip touch—of grading to fine limits.

To withstand the shock inherent in grader usage, the machine is very robustly constructed. With the fact that many of the graders will have to work in remote parts of the world—often in the hands of unskilled drivers—in mind, operation and maintenance have been made exceptionally simple. The operator, comfortably seated, has all the controls within easy reach and the work in progress always in view; loss of efficiency due to operator fatigue is thus cut to a minimum.

T. W. A. LAUNCHES NEW SERVICE

Trans World Airlines will bring its Constellation Sky Tourist service to India for the first time 4th October, 1953. The new flights will leave Bombay eastbound for Colombo at 11-35 hrs. every Thursday, commencing 8th October, 1953; and westbound at 21-30 and 21-15 hrs. every Friday and Monday respectively, commencing 5th October, 1953. These flights will serve all points on TWA's International network, and link-up with similar flights to Hong Kong and Tokyo on routes for which TWA has applied. TWA will operate Constellations; omitting a few of the luxuries, and carrying a greater number of passengers.

NEW CARGO SHIP FOR U. K.-INDIA RUN

The first steamer of a new cargo fleet designed primarily for service between the U.K. and India has been launched for the British India Steam Navigation Company at the Whiteinch (Glasgow) yards of Barclay Curle and Company Limited. She is the turbine cargo steamer *Nuddea*.

The *Nuddea* is 514 ft. long, 67 ft. broad, and 42 ft. deep. She has a gross tonnage of 9,800, and her main engines are a set of Parsons steam turbines. The 67th ship taken over by British India from the first of the new class of cargo liner designed and developed by the two companies in co-operation for the U.K.-India run of any alternative route required by world trading conditions.

The British India Steam Navigation Company's chairman, Sir William Currie, said at the launching that his group was concentrating on making good the ravages of the war and re-placing ships that were now becoming obsolete. Since 1945 the company had had built 38 ships and had bought five.

ASSAM PETROL PRICES REDUCED

FOLLOWING discussions with the Government of India, the Burmah Oil Company (India Trading) Ltd. announced from Digboi on Tuesday that the retail price of petrol in Assam will be reduced by four annas a gallon in Shillong and two annas a gallon elsewhere in the State. The new prices are effective from Thursday, 1st October. In Shillong the new price will be Rs. 2-14-0 per gallon.

The retail price of every gallon of petrol sold in the State, whether made in Digboi or imported, includes the following non-company charges:

Excise Duty/Import Duty	As 15-9
Assam Sales Tax	As 3-0
Agents' Commission	As 2-0

These charges, in the case of petrol bought in the plains, account for more than 43 percent of the new retail price, the Company's statement said. Petrol prices in distant hill stations are higher by an anna or two because of the long and difficult haul by road tanker fleets from storage bases in the plains.

WHOLESALE PRICE INDEX DECLINES

The official wholesale price index (base: year ended August 1939=100), declined by 0.1 percent to 405.9 during the week ended 12th September, 1953. The index was lower by 1.5 percent compared to the corresponding week of the previous month but was 4.3 percent higher than that of a year ago. During the week under review, Foodstuffs witnessed a fall of 0.5 percent to 400.5 owing to lower prices of tea for internal consumption (—14%), rice at Patna and wheat at Hapur (—2% each), notwithstanding advances in dal arhar (+3%), wheat at Amritsar, tea for export, sugar and salt (+1% each). The index for Industrial Raw Materials, however, moved up by 0.4 percent to 484.3 on account of increases in the prices of castor seed (+12%), copra (+5%), groundnuts and lac (+4% each), raw silk (+3%), gingelly seed (+2%), Bengal cotton and raw wool in Bombay (+1% each). The export price of manganese ore (—18%), raw wool at Kalimpong (—5%), raw jute, linseed and rapeseed (—1% each) registered decreases during the week. The Semi-Manufactures group index also rose by 0.5 percent to 366.6 because of higher prices of coconut cake (+2%), groundnut oil (+4%), gingelly oil (+3%), coconut oil at Cochin (+2%), coconut oil in Bombay, cotton yarn and coir yarn (+1% each) although coconut oil in Calcutta and zinc (—3% each), brass and linseed oil (—2% each), cow hides and castor oil (—1% each) showed decreases during the same period. Lower prices of jute (—4%) and woollen (—3%) manufactures were responsible for a further fall of 0.5 percent in the index for Manufactures which stood at 363.3. The index for the Miscellaneous group fell by 0.1 percent to 718.5 as a result of declines in the prices of cashewnuts at Mangalore (—6%) and vanaspathi (—1%). Prices of turmeric (+2%), cashewnuts at Quilon, black pepper and betelnuts (+1% each) however moved up during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

PACKING CHARGES FOR CEMENT

On 26th November, 1952, the Government of India announced that packing charges for cement would be fixed every quarter on the basis of the average market price for packing material ruling on the first day of each month during the immediate preceding nine months plus Rs. 1-4 per ton to cover incidental charges. On this basis, the packing charges for the current quarter worked out to Rs. 11-4 per ton

and for the quarter commencing from 1st October, 1953, they worked out to Rs. 11-9 per ton. The Government of India have informed all the State Governments of the revised packing charges.

These are the charges applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller, but should not exceed the charges fixed for new bags.

GROUNDNUT ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India First Estimate of groundnut, 1953-54 puts the area at 6,822,000 acres as against 6,119,000 acres in the corresponding estimate of last year, thereby showing an increase of 703,000 acres or 11.5 percent in area. The increase in acreage over last year, shared mainly by Hyderabad, Saurashtra, Madhya Pradesh, Mysore and Rajasthan, has been reported by almost all States except Bombay and Madhya Bharat and is due to good rainfall at sowing time.

This estimate does not cover the total area sown to this crop during 1953-54. The area reported at the Final Estimate stage is generally higher than that in the First Estimate.

PAKISTAN COTTON TO BE EXPORTED

About 15 lakh bales of cotton will be exported from Pakistan during the calendar year 1953, said Mr. Mohammed Ali, Minister of Commerce, in reply to a question in Parliament last week. He said about 10,000 bales were expected to be exported to the dollar areas. He added that the estimated total earnings of foreign exchange on the export of cotton during 1953 would be approximately Rs. 56 crores.

Calcutta Markets

GOOD DEMAND MAINTAINED IN EXPORT SALE

DUST PRICES STEADY

AT Export Sale No. 16 held on 28th September, the offerings consisted of 60,800 packages and again met with a strong general demand for most types.

Good liquoring Assam BOP's and O.F.s. with tip were keenly competed for and sold at dearer rates. Fannings from all districts were a strong feature and were from 1 to 1 anna dearer. Common and Low Medium Broken were again 1 anna and 1½ anna dearer. There was also much less demand for few Darjeelings on offer.

Quotations	1953
Clean Black Pekoe	Rs. 1-13-6
Common B.P.	1-12-0 to Rs. 1-12-6
Medium Assam B.P.	1-13-6
Best Assam CTC B.P.	2-2-0 to 2-3-0

At Internal Sale No. 16 held on 29th and 30th September, 18,691 packages of Dusts were on offer. There was again a strong and general demand for all types and prices for most descriptions were fully firm but the markets eased a little towards the close. Quotations however remain unchanged. Commonest sorts were keenly competed for and were one anna and sometimes more dearer.

Quotations	1953
Medium Double Dust	Rs. 1-10-0
Medium Assam Grainy Dust	1-10-6
Best Assam CTC Dust	1-14-6 to 1-15-0

DULL TONE PREVAILS IN FREIGHT MARKETS

DELAY IN ORE ARRIVALS AT CALCUTTA PORT

THERE is little change to record in the dull tone of markets and the only apparent firmness is in the local market.

A spot vessel of 8,800 tons secured 62s 6d for ore from Calcutta to Hamburg but in view of irregular ore arrivals and the already overstrained capacity of the Port to handle this commodity she is likely to be detained here until November. A small vessel was chartered for coals to Hong Kong at 45s for October loading on usual Calcutta terms which represents a slightly poorer return to Owners than the last fixture at 44s f.i.o.

While Indian coal exporters are finding great difficulty in concluding Japanese business a contract of 12,000 tons monthly, January-June 1954, has been arranged from U.S.A. to Japan at \$8.35.

Further evidence of the weakness of the market is the abandonment of the fixed rate for sugar from the Philippines by the Lines serving that area. Open rates are now in force to enable liners to compete with tramp tonnage.

In the Time Charter section a 10,000 ton British oilburner was fixed for the voyage out to India via U.S.A. at 13s 6d with delivery U.K. and a 10,000

SUGAR MARKET STEADY

During the week ended 29th September, sugar prices for ready ex-Kantapukur delivery were Rs. 29-10 to Rs. 30-2 a maund for ordinary grain, and Rs. 31-8 for big grain. Java sugar was released for distribution to wholesalers at Rs. 30 a maund. Sales averaged 3,000 bags daily and arrivals were 2,500 bags a day. Stocks amounted to 25,000 bags of Indian, 95,000 bags of foreign sugar. Ex-mill delivery rates were Rs. 28-12 to Rs. 29-10 a maund. A steamer of Mexican sugar has arrived in Bombay where the prices have fallen from Rs. 92 per bag to Rs. 86-8 per bag. The price of Java sugar in Madras is still Rs. 88-8 per bag. S.S. *Jaladuta* will load for Tuticorin, Cochin and Calicut in a few days. It is hoped that about 12,000 bags of Free Market sugar will be exported. With fairly good arrivals of free market Indian sugar, prices have now declined and are ruling in the neighbourhood of Fair Price of Rs. 30 per maund, which is the wholesale selling price of Sugar Distributors Ltd. who are working the West Bengal Government Scheme of selling sugar at As. 12-6 per seer.

LINSEED

The market weakened further last week and prices recorded a sharp down-trend. There were keener offerings from sellers, particularly for forward delivery, but millers adopted a cautious attitude and trading was reported on rather a small scale. In the oil market much lower levels were reached in sympathy with the sharp decline in groundnut oil, and also owing to the poor offtake and lack of enquiries which resulted in an excess of sellers over buyers. Despite the present decline, no immediate prospect of export business was apparent with world prices still at a lower parity. Latest quotations were as follows: Ready Rs. 18-8-0 per maund; October-November Rs. 18-4-0 per maund.

HIDES AND SKINS

The market ruled steady and prices were maintained. Stocks were less than in the previous week.

Our City Cable

FIRST CONSIDERED REACTION
TO LOWER BANK RATEBIG SWITCHING OPERATION IN
GILT-EDGED

London, 30th September.

A VERY heavy switching operation in gilt-edged—£5 million or more was mentioned—with which the week opened, provided the first really considered reaction to the lowering of the bank rate. The fall in gilt-edged naturally enough caused some heavy marking down of industrials but this was soon remedied by the effect on sentiment of the increase in the interim dividend of Imperial Chemical Industries and by a succession of good company reports. Oil shares took rather longer to recover, though they were very firm by the end of the increase in the interim dividend of Imperial all through. South African gold mines also managed to shake off at least some of the malaise from which they have been suffering of late. In the latter part of the week the feeling that new Government financing was imminent tended to restrict business everywhere and also diverted attention away from non-domestic issues in particular. Only Germans were anything of a feature on their continued firmness. The change in the Far Eastern issues was negligible, though Japanese were a little higher on week if anything. Teas were maintained by good results from tea sales but there were no outside influences.

The money market opened the week more stabilised to the new monetary conditions and began by financing a heavy uptake of new bills. For most of the week credit conditions were tight and the authorities frequently had to intervene to conduct smoothing out operations. At the end of the week, however, conditions became very easy and money was in ample supply. A feature of the week was the reduction in two stages of the discount rate for two and three months Fine Bank Bills to a single quotation of 2½ percent. Fine

Trade Bills were unchanged with the rate for three months of 3½ to 4½; for four months 3½ to 4½; and six months of 4 to 4½. Applications for £270 million of Treasury Bills totalled £362,150,000—of which the former amount was allotted at an average rate of 42s. 8.05d. percent. This week £280 million will be offered. The Bank of England in its turn records a further decline of £6,389,000 in its circulation. Note reserve is now nearly £44 million. Bankers' deposits have risen by another £13 million.

Heavy Steel Plate Prices

The British Iron and Steel Federation announced a reduction in the minimum export prices for heavy steel plates. Base grade will be quoted at £43 per ton compared with £46 3s. previously. The new prices, effective from 28th September, reflect efforts being made to compete against cheaper foreign offers in the overseas markets. Traders also consider the domestic market supply position to be showing signs of improving although conditions are still difficult.

Oilseeds

Rather featureless conditions existed for linseed oil and it was with difficulty that prices were maintained. While near shipment positions held reasonably steady, forward months were discounted. Indian oil is still too dear priced at £112 per ton in bulk for early shipment, and buyers are not attracted by offers of February-March subject to export licence at £95. For Indian castor oil for shipment easier values were the rule, with business slow. B.S.S. was offered at down to £151 and commercial number 2 at £142, in drums, cost and freight. There was talk that Brazilian could be bought at £132, c.i.f. in close and for October-November shipment in bulk £116½ was wanted, and £119½ for Ceylon or 30s. better than a week ago, this following early business in September-October Straits at £115 and in there were reputed offers of Indian, January-ruled for tobacco seed oil for October-November at £121 for Indian crude with buyers in the region of £120 c.i.f. Tung oil prices again dropped sharply but recovered just a little at the finish after spot had sold down to £129 and November delivery to £123.

U.S. Lead and Zinc Enquiry

The Tariff Commission announced that public hearings will begin on 3rd November with respect to lead and on 5th November with respect to zinc on whether imports of these metals are damaging or threatening to damage domestic industries. The Commission said hearings would cover the application of the National Lead and Zinc Committee and the Senate Finance Committee have asked for a general investigation. They will be given reports of the hearings for use in studying the tariff legislation.

Hong Kong Gold Prices

Hong Kong gold moved lower in the past week owing to arrivals in Macao, lower international prices and lower American dollar rate in Hong Kong. Opening the period at \$263½, values touched a high of \$264 and thereafter slipped to \$261½ before showing recovery. The advances, however, met short selling and profit-taking and final prices were lower than the opening. Early steadiness was owing to non arrivals in Macao but when it was reported that around 40,000 ounces reached Macao, prices dipped. Official offtake was 4,940 taels and unofficial 13,150. Future contracts totalled 19,000 ounces at U.S. \$38.43, c.i.f. Macao.

Tea Stocks

Stocks of tea in London and Provincial warehouses on 18th September totalled 90,201,924 compared with 90,406,908 pounds in the previous week. Landings during the week totalled 9,311,112 pounds and deliveries 9,516,096.

Platinum Rules Steady

Platinum ruled steady at \$92 to \$93. Defence requirements have been reduced slightly. On the other hand jewellery interest showed small improvements as black market purchases are now finally becoming liquidated, enabling jewellers to replace their inventories at current prices which are far below previous black market levels. Supplies were fairly good and appear adequate to meet all current trade demands.

Transshipment Licensing Control

The Board of Trade has announced certain changes in transshipment licensing control. Certain further goods of strategic importance are added to the list of those which may not be transhipped without individual licences to countries outside the Commonwealth (except Hong Kong), the United States and Irish Republic. At the same time fats and oils, rabbit skins and oil bearing changes are effective from 21st September, 1953. Among the new items included under control are percent aluminium and semi-manufactures, some other chemicals, moulds and pouring rods, furtrifuges. Also included are electroscopes and elements of importance in nuclear physics research. All these items are already subject to export licensing control.

Plantation Topics

GOOD LONDON TEA SALES

AT last week's London tea auctions, 62,626 packages were on offer, compared with 29,416 in the previous week. The average price realised was 3s. 11.86d. a pound, against 3s. 8.94d. secured in the previous week and 3s. 0.01d. in the corresponding week of last year. Clean common broken pekoe rose 1d. further during the week to 3s. 5d. a pound. Results obtained by some of the companies are given below:—

	No. of packages	Average per lb.
Amalgamated	1,164	3/6d
Assam Company	2,313	4/2d
Assam Frontier	1,187	4/5d
Buxa Doars	630	3/11d
Chubwa	450	4/0d
Cons. Tea and Lands	1,515	3/9d
Darjeeling Company	546	4/1d
Darjeeling Cons.	46	10/5d
Doors	545	3/11d
Eastern Assam	1,243	4/5d
Imperial Tea	1,572	3/10d
Jhanzie	501	4/2d
Jokai	1,794	4/3d
Jorehaut	1,918	4/3d
Lungla	1,079	3/5d
Majuli	246	4/6d
Makum	736	4/5d
Malayalam	1,934	3/5d
Pabbolan	378	4/6d
Upper Assam	930	4/3d

COCHIN TEA SALES

At Internal Sale "S" held on 22nd September 1953, approximately 187,000 lbs. of Dusts were catalogued. There was a strong general demand with Best Liqueuring kinds keenly competed for at prices which were one or two annas dearer. Poorer sorts were also well supported, at rates which were fully firm to dearer.

The export Quota market has hardened to 19 pies with sellers scarce.

Dust Sale "T" will be held on Tuesday, 6th October 1953.

CHITTAGONG TEA SALES

At Sale No. 7 held on Wednesday, 23rd September, leaf offerings consisted of 12,288 chests, dust offerings amounted to 4,285 chests and there was a Supplement of 360 chests.

Leaf: The market opened easier with earlier Lots about one to 1½ annas below valuations and this was rather in the line of market expectations. Fairly soon, however, a strengthening was noticed and, by the time a third of the catalogue had been disposed of, the market was fully firm to slightly dearer. This improvement continued and the sale closed with many lines selling at a full anna above Brokers' valuation. It must be recorded that in spite of the very large quantity on offer there were no withdrawals. Bazar buyers operated freely and a large quantity of the teas on offer was purchased for West Pakistan.

Quotations

Sale 7—23rd September, 1953.	Sale 6—9th September, 1953.
O.P. Rs. 1-12-0	Rs. 1-10-0 to 1-12-0
P.E. Rs. 1-10-0 to 1-10-6	Rs. 1-10-0
B.O.P. Rs. 1-10-0 to 1-11-0	Rs. 1-10-3
B.P. Rs. 1-4-6	Rs. 1-8-3
B.P.S. Rs. 1-8-9	Rs. 1-8-3
O.P. Rs. 1-11-0 to 1-11-6	Rs. 1-10-0
P.P. Rs. 1-6-3	Rs. 1-7-0

Dust: The opening prices were fully steady to slightly stronger and whilst there were minor fluctuations most Lots realised fractionally more than valuation. Clean Common Dust may be quoted at Rs. 1-6-6, an advance of half an anna on previous rates with smaller types approximately 6 pies below this figure. Once again best liquoring Lots were in major demand with Rs. 2 paid for each of three lines. There were no withdrawals.

OFFICIAL STATEMENT ON COFFEE PRICES

The Government of India denies recent statements by some coffee interests that it has been treating them unfairly in the matter of coffee prices. The basic prices for the various types of coffee are, it is stated, fixed by the market-committee of the Coffee Board, which is pre-dominantly a growers' body. For the crop season 1946-47, the basic price fixed for Plantation 'A' was Rs. 90 per cwt. This price was progressively raised to Rs. 100 per cwt. for the crop season 1951-52. Similar increases have taken place in regard to Arabica Cherry Flat and Robusta; these do not represent the amount that the grower gets, but only the minimum he is entitled to get. The grower gets all the profits made by sale at the auctions or by exports, so much so that in 1947-48, as against a basic price of Rs. 120 per cwt. for Plantation 'A', he got Rs. 150-4-9 per cwt. In 1949-50, as against a basic price of Rs. 135 per cwt. for Plantation 'A', he got Rs. 162-3 per cwt. and in 1951-52, as against a basic price of Rs. 180 per cwt., his realisation was between Rs. 215 and Rs. 220 per cwt. Thus, while the Marketing Committee fixes a price based presumably on the cost of production, it is stated that the grower makes a considerable profit every year.

COMPANY AND PUBLIC NOTICES

JUBBULPORE ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that the Thirty-third Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, 26th October, 1953, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 31st March, 1953 and the balance sheet as at that date and to transact any other ordinary business of the Company.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, P, F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A PIONEER STUDY OF THE SMALL ENGINEERING INDUSTRY

SURVEY OF THE HOWRAH WORKSHOPS: THE VALUE OF INDUSTRIAL STATISTICS

THE first obstacle to any reading of trends in the developing Indian economy is the virtual absence of reliable information about vast sectors of the country's industry. The business man, whose function is precisely to anticipate trends, is constantly aware of this lack of data, but he gets by because he takes only a small section of the economy as of immediate concern to him, and he finds his way about it by trial and error—a method that is satisfactory as long as the range of his operations is limited, which is of course the case in most Indian businesses, but which nevertheless often fails him. For the planner, the absence of information is much more serious, for he does not take a small field of the economy, but whole sections of it, and his operations must be, if they are to be significant at all, on such a scale as to make trial and error a quite inadequate technique. This explains why so much planning here is just a shot in the dark and occasionally produces unexpected results. Obviously a good deal is known about the large-scale, organised industries—jute and cotton textiles, tea, steel and the like—but below these pinnacles of the economy there are whole ranges of productive endeavour on which Governments—local, State and Central—as well as other sections of business men, are very ill informed; what little data are available are usually out of date and unreliable.

While conceding that in general this is an unsatisfactory state of affairs, many private business men are apt to feel that it still does not concern them vitally. Industrial statistics might be useful to officials who want to collect taxes or frame controls or devise global plans, but general information of this sort, just because it is so general, is of limited utility to the individual business. This way of thinking is merely another index of the primitive development of the Indian economy and of the old-fashioned notions of Indian entrepreneurs. No large-scale efflorescence of Indian industry and commerce will be possible without much fuller and more accurate knowledge of markets and sources of supply than we have at present. The high state of development of such industrial economies as the American or British is not simply the product of more capital and greater labour output, but also and just as importantly of fuller and more sustained intelligence concerning the structure and growth of national industry. Money and workers will not build great enterprises if the managers lack information about the markets they hope to serve and the suppliers they must rely upon for their materials. Doubtless can refer to two essays on the new technique of "input-output analysis" in the Economist last month which indicate how much effort is still being spent in this direction in Britain and the United States. It will be many years before any such analysis can be attempted here in India, and in the meantime we have to be content with much humbler beginnings.

Any such beginning is bound to be humble, and may even appear unimportant. The fruit of a pioneer investigation into the organisation of one small section of Indian industry will be exiguous, except of course for business men who happen to deal directly with just that industry; others may feel that so little of use to them has come out of it that it is a waste of time. But valuable information of this sort must be acquired piecemeal. A study recently published in Calcutta* is an excellent example of the way the job should be tackled, and the fact that it reports the findings of an enquiry that was financed by a grant from the Tata Iron and Steel Company should suggest that it is more than an academic exercise. It is a survey of the small—in fact, the very small—engineering establishments situated around Cal-

cutta. There are almost 2,000 such small firms in the suburbs of the metropolis, so even if each is petty their total is considerable, regarded either as a source of industrial equipment or as a provider of employment. About three-quarters of them are concentrated in 10 square miles in Howrah, tucked away in the lanes leading off the Grand Trunk Road in the main industrial area. They manufacture and process a wide variety of products from castings to screws, from bolts and nuts to mill and colliery stores. The most important groups are (1) machine parts and tools and engineering stores (2)

Government restrictions in the last few years have hampered it considerably. The most prosperous section of the industry is that engaged on making nuts, bolts and rivets which are the nearest among its products to consumer goods; the market for small producers' goods is still primitive though it will obviously develop with the expansion of the larger engineering industry—motor cars, farm equipment, radios, pumps, electric motors and the like.

To the untutored eye, this recital of statistics relating to a host of petty workshops in Howrah will look like so many scraps of information of no special use to anyone. But the fact is that this stratum of an industrial economy is of vital importance to the larger and more spectacular layers above it. If the small engineering industry centred on Howrah looks like a collection of back-garden toolsheds that fact is necessarily connected with the small progress so far made by the industrial establishments that are more often before the public eye. The Bureau's investigators remark: "The small engineering industries are poor in organisation and capital structure... but nonetheless they exist and form a vital part of the industrial organisation of the country. Properly organised they can make a substantial contribution to the industrial development envisaged in the Five Year Plan and help solve the problem of middle class unemployment." They suggest the establishment of a small engineering industries development committee representing Government, industry and consumers, with arrangements for long and short term finance, together with an inspectorate to enforce standardisation of quality products. Whether or not these things are done, the possibility of doing them is opened up by this first study of the industry's structure. When further and more detailed studies have been made of the much larger sections of Indian industry about which so little is now known, it will be time to speak more confidently of planned progress toward industrialisation.

SMALL SAVINGS FOR INDUSTRY PENNY SHARES AND UNIT TRUSTS

TO Lord Birkenhead, 25 years ago, is attributed the first clear recognition that "the industrious and successful working man" would have to make up "the deficiency in the national aggregate of saving" due to the decline in the saving-power of the wealthier classes. Interest in this question revives from time to time, and it has been under discussion again recently. The problem is long-range, to be regarded in terms of generations rather than years; but it is felt that the present, when conditions of living are more or less back to prewar normal in most parts of the world is a suitable time to deal with it seriously. This is not a question of saving for the sake of saving—as in the war, when the authorities were urging the public to refrain from spending. Savings may be inadequate, but the problem under discussion now is how to direct a reasonable proportion of savings into industry. It is true that some stock exchanges have been on a rising trend this year, partly because industry is relatively liquid, sells less securities to finance its operations and requires less assistance from the banks, which are therefore more inclined to invest in securities. But even in countries where this is the case, every far-sighted industrialist knows that the shortage of capital is only temporarily eased, by the release of capital from stocks, and that the major re-equipment programme which many industries ought to undertake could not be readily financed. Especially is this true in India where even the "normal" source of investment—the stock market—is still moribund. Contemporary thought on the subject, in both London and New York, favours small investment through the stock exchanges. The American capital market seems to have been more successful than the British capital market in attracting the small investor. There are American companies in which individual sums of only a few dollars are invested, but in British companies shareholdings of less than, say, £50 are rare. The first impediment is the cost of buying and selling shares. The duty and commission are disproportionate to the value of the capital involved in a small transaction—and the work involved in the stockbrokers' offices is disproportionate to the commission. Mainly for that reason, the London Stock Exchange, which has been publicising its services by pamphlet and other media recently, has not made much effort to attract the really small saver. By contrast, the American stock exchanges have appealed to a wide range of potential investors.

To rationalise the process of investment the unit trust came into vogue in Britain in the 1930's. The investor through this medium buys a unit which represents a small individual interest in numerous companies; a capital sum that would normally be regarded as sufficient to buy shares in only one company can be widely spread. Even so, the unit trust was not designed primarily for savings so small that they would not find their

way through the stock exchanges at all; and its "underlying securities" are generally shares of well-established undertakings, so that it is not a new medium for providing "risk capital" to finance new industrial ventures. The unit trusts in Britain have for many years been denied the right to increase their capital, but that right is now being restored to them. It is possible that, taking advantage of their new opportunities, they will evolve a formula for transmuting wage-earners' savings into capital for industrial enterprise. One of these trusts has lately approached many large industrial concerns inviting them to co-operate in savings schemes whereby employees could buy the trust's units by instalment payments. However, of 50 concerns approached only 10 committed themselves to "consider" the idea. There are psychological as well as practical obstructions to such a proposal. Many companies, reducing the technicalities to the minimum, make their shares available to their employees, not so much to raise new capital as to give the workers a financial interest in the business. These companies have no such individual incentive to induce their employees to invest in industry generally, whether through unit trusts or otherwise. Nor have the workers the same interest in abstract investments in companies whose works they have never seen.

There is a more fundamental difficulty, which no proposal relating to small savings has ever completely overcome. The special characteristic of small savings is that, however large they may be in the aggregate, they are small individually. Large savings may be smaller in the aggregate, but they belong to people who can afford to take a risk. But the small saver's primary consideration is security. It is for security, as well as simplicity, that he accepts a relatively low yield from a form of saving which virtually guarantees his capital against depreciation. (That is in terms of money; in an era of inflation his capital

would theoretically be safer in industrial ordinary shares!) It is significant that the insurance companies and the banks and other financial institutions where small savings are gathered do not feel themselves free to invest a large proportion of their funds in shares whose capital-value and dividends may fluctuate. Substantial amounts of employees' pension and provident funds are invested in such shares, but still only a small proportion of these funds. Neither small savers themselves nor the experts who administer small savings are willing—nor should they be willing—to take risks. New channels may be opened to make the wealth of the multitude available to industry, but the wealth will not automatically flow. The case is more complicated in India, or rather it concerns a different class of society. Here there is little real possibility of obtaining investment funds from the working class, but the lower middle class, richer peasants and the growing stratum of petty managerial and technical workers might respond to the same offers as have borne some fruit among Western workers.

CURRENT COIN

Aspects of Employment Policy.—An ad hoc enquiry to ascertain how long various groups of applicants (unskilled, clerical and "others") usually have to wait for a job after they get themselves registered has yielded some interesting results. It relates to the quarter January to March, 1953, and shows that 44 out of every hundred people who were found employment waited no more than a month. Outside the unskilled group, 70 percent of the applicants who got jobs did so within four months of registering. Fifty-three percent of the unskilled group, but only 15 percent of the clerical group, managed to get employment within the first month. Twenty-five percent of the clerical group, but only seven percent of the unskilled group and 12 percent of the "others", had to wait for six months or more. These figures support the widespread belief that clerical jobs are probably the hardest to get; although they suffer from the obvious limitation that employment exchanges cover only a fraction of the labour market, they do give a more precise definition to the problem of

urban middle-class unemployment. At his Press conference in Calcutta last Friday, the Finance Minister, Mr. Deshmukh, described this type of unemployment as among the Government's greatest headaches but did not say whether the current emphasis on National Extension Service schemes and on expanding rural education is likely to relieve it. Apparently he did not think so, for he said that town-dwellers do not like to go to the villages. Some are also wondering whether, in the scramble for short-term remedies, altogether too much importance is not being given to educational programmes. Economically, they are not very "productive", whatever one may think of their social merits. It is interesting to recall that when the Planning Commission's famous 11-point programme to relieve urban unemployment was released two months ago, the two proposals that seemed most promising from the point of view of production as well as employment were increasing electricity supply and improving road transport. Both remain in cold storage. It is a measure of the change in national priorities that has taken place this year that employment programmes have begun to pay relatively little attention to the need for higher production.

Latest statistics based on employment exchange returns for August this year show there has been no improvement in the employment situation. Although the number of fresh registrations declined seasonally by over 22,000, there were 5,483 more names on the Live Register (making a total of 498,891) at the end of the month than at the end of July. Fewer vacancies were notified (3,940 as against 4,521) and fewer placements were made (13,114 as against 14,487). Vacancies in the private sector continued to decline, but a notable feature was the sharp fall in the public sector, although the latter still accounted for about two-thirds of the placements. There was a widespread shortage of highly skilled compounders, electricians and technicians. Clerks, as usual, were surplus everywhere and a number of exchanges reported unemployment among motor drivers, carpenters and semi-skilled technicians. The official review says that 93 surplus tea garden workers were found jobs by the Silchar exchange and vacancies were available for more but applicants could not be found.

Depression in the Foundries.—Never before, said Mr. Monilal Atta in his presidential address to the Indian Foundry Association in Calcutta last Saturday, has the foundry industry been confronted "with so serious problems as at present." The main reason is poor demand, a result of the decline in economic activity and of the disruption of trade with Pakistan, particularly East Pakistan. Almost as important is the fact that the chronic shortage of pig iron has become even more acute, because of labour trouble at the Indian Iron and Steel Company's works in Burnpur. According to Mr. Atta, at least 400,000 tons of pig iron are needed but only 160,000 tons are available; average monthly despatches have fallen from 16,425 tons in 1951 and 11,535 tons in 1952 to 7,750 tons in January-July, 1953. "These facts are too clear to need any further emphasis. In the circumstances, the difficulties of the foundry industry in regard to supplies of pig iron due to the irreparable loss in production at IISCO's factory can better be imagined than described." Against this background "I see the next few months with the greatest amount of apprehension for the foundries. You cannot keep an industry running for any indefinite length of time with only 25 to 30 percent of its capacity utilised." Another of the industry's complaints is that it is getting an increasing proportion of off-grade pig iron (containing too little silicon and manganese and too much sulphur.) It is stated that more off-grade pig iron is being produced because low-grade iron ore is used, supplies of coking coal are irregular and insufficient, and furnaces operate at more than their rated capacities. But Mr. Atta believed that the price structure offers a direct incentive too: basic off-grade pig iron costs 109 percent more than in 1939 whereas the price of other grades (excepting specials) has risen by only about 60 percent. He thought that this disparity should be narrowed and the Government should ask producers to manufacture more graded pig iron. Discussing the foundries' marketing difficulties, Mr. Atta made some familiar suggestions: reorientation of the nation of competition from Government factories, ban on imports, and encouraging exports by including foundry products in bilateral trade agreements and abolishing the export duty on them. The export duty on a number of iron and steel products was removed yesterday. But it was clear from his speech that the foundries showed more enterprise by adapting techniques to present-day needs. To determine the precise nature of these adaptations is not a suggest, but a challenge to the industry's competitive strength. The Government will however need to remember that if the challenge of greater competition is to be met (and not by the foundries alone but over a whole range of Indian industry) there must be no repetition of the Burnpur fiasco

that has conclusively testified to the failure of political labour unionism.

Business with West Germany.—The volume of trade between India and West Germany during the first half of this year was 25 percent higher than in the same period of last year. Exports from this country rose from DM 49.1 million to DM 92.5 million, while imports increased from DM 106.5 million to DM 114.2 million. West Germany's main purchases (in million DM) were manganese ore (14.9), iron ore (12.6), cotton (9.8), copper (8), leather (7), and vegetable oils and fats for human consumption (5.5). Her main exports to India (in million DM) were machines (30.2), vehicles (13.1), electrical products (10.2), ironmongery (10.1), chemical semi-finished products (7.7) and tar dyestuffs (7.6). The Rheinisch-Westfälische Bank, Düsseldorf, reports that West Germany's surplus in her trade with all countries increased from DM 159 million in the first half of 1952 to DM 838 million in the first six months of this year because of a big improvement in the terms of trade. The value of imports fell from DM 7,898 million to DM 7,633 million, but exports rose from DM 8,056 million to DM 8,471 million. Finished industrial products now constitute a larger proportion of West German imports, while the proportion of food, raw materials and semi-manufactured goods has declined. Raw materials and semi-manufactured goods have gained in importance amongst exports at the cost of finished goods. A fall in the export of rolling mill products and finished textiles has been accompanied by a rise in the case of rayon and staple fibre, and finished chemical products. Economic expansion in West Germany continued during the first six months of this year and the rising number of orders indicated an improving prospect. The index of industrial production (base year 1936 equals 100) rose from 141 in January this year to 156 in July, and employment during these months was considerably higher than a year previously. During the first half of this year, production rose in the capital goods industry, was maintained in the consumer goods industry, and there was a sharp recovery in the building industries. The Bank reports that there has been no notable change in prices as

The next issue of CAPITAL will appear on Wednesday, 14th October, because Thursday, 15th October is a public holiday. There will be no issue in the following week because of the Pujah holiday. Thus there will be two more issues dated 14th and 29th in this month.

compared with the previous year, apart from a small decline in iron and steel. The slightly easier state of world markets has not yet had any decisive influence on German domestic prices, but should this trend continue the latter are not likely to remain unaffected.

Russian Bullion Sales.—For the first time since the end of World War II, considerable and planned sales of large quantities of Russian silver, gold and platinum have been taking place in free world markets. The October issue of Pick's World Currency Report publishes an extensive study on these recent sales, which it estimates as follows: 20,000,000 ounces of silver totalling about \$16,800,000; 250,000 ounces of gold totalling about \$8,200,000; 80,000 ounces of platinum totalling about \$7,200,000. Platinum sales were handled by a British-Swiss consortium. Part of the grey metal has already found its way into the United States. Silver sales were made directly to Great Britain, who, in turn, resold 1,250,000 ounces to the Royal Mint in Brussels. Most of the remaining silver acquired by England is believed to be repaid to the U.S.A. for Lend-Lease shipments of the metal to Britain during World War II. The gold sales were made to a highly reputable French-Swiss banking group, which bought the yellow metal to resell it in the world's premium markets. The proceeds of these precious metal deals, slightly short of £9,000,000 at the transferable sterling rate, are destined to pay for Russian imports of Australian lead, Malayan tin and Rhodesian copper, all from the sterling area.

World Bank Bonds Sold.—The World Bank met with the expected success in marketing its \$75 million three-year, three percent dollar bonds last week; the underwriting managers (Morgan Stanley and Co. and The First Boston Corporation) have announced that the offering was oversubscribed and books closed on the first day, 29th September. The bonds were offered at 99 5/8 percent and yield approximately 3.13 percent on maturity, 1st October, 1956. The proceeds are to be used for the general operations of the Bank. Among the most notable features is that for the first time foreign banks and other interests have bought substantial amounts of a dollar bond issue by the World Bank; the increased supply of dollars outside the United States is clearly widening the international market for such securities. Special funds in 12 Latin American and Asian

countries have been used to buy \$21 million of the new issue, the buyers mainly being the central banks of these nations. Banks in Switzerland, Britain, Sweden and Belgium have taken about \$15 million of bonds while the Netherlands Trading Society in Holland underwrote \$5 million. The bonds have the shortest maturity of any of the seven issues previously marketed in the United States by the Bank since the initial offering in 1947. The latest offering is the third issue of World Bank bonds to be brought out in the United States on a negotiated underwriting basis. Previous financing under such arrangements consisted of \$50 million in 23-year 3-3/8 percent bonds in May 1952, and \$60 million in 19-year 3 1/2 percent bonds in October of the same year, both issues having been successfully sold through underwriting groups headed by the same firms managing the latest offering. Total funded debt of the Bank, giving effect to issuance of the new bonds, consists of \$643,008,673 expressed in U.S. currency.

World Bank Loans to Panama.—The World Bank has made two loans for agricultural development in Panama: \$1,200,000 for the purchase of agricultural machinery and \$290,000 for a grain storage plant. The borrower is the Instituto de Fomento Económico (IFE), an autonomous Government agency, and the loans are guaranteed by the Government of Panama. The loan of \$1,200,000 is for a term of seven years and carries interest of 4-5/8 percent; amortisation payments will begin on 15th November, 1955. The grain storage loan is for a term of eight years, carries the same interest and amortisation payments will begin on the same date.

CORRESPONDENCE

JUTE AND JUTE GOODS FUTURES TO THE EDITOR OF "CAPITAL"

Sir,
The following extract from a letter, received by me from one of the biggest dealers of hessian in the U.S.A., regarding the Burlap Exchange which has recently been started in New York, may be of interest to your readers.

"Almost since its inception, the new Burlap Exchange has discounted both the spot and shipment markets. At first it was assumed that this discount was in anticipation of a reduction in duty but after the duty was reduced the market continued to sell at the same discount. The only reasonable explanation that we can see for this is the fact that conditions of delivery under the Exchange Contract are not too favourable to the buyer since he can be forced to take delivery either in New Orleans or in New York and in either 10 oz or 7 1/2 oz Burlap, at the seller's option."

Isn't it rather strange that, whilst a Futures market for hessian is functioning in New York with terms favourable to the sellers, no organised Futures market for jute or jute goods is functioning at present in the primary centre of production?

In the last one month or so, many people have wondered as to why the price of jute and jute goods is going down in spite of the fact that recently there was a substantial reduction in the export duty on hessian and the consumption figures of the United States for the month of August were very encouraging. This question was put to me by a New York party and I have sent to them a longish reply. The sum and substance of the reply is that what is lacking today is holding power. How complete the change has been in this respect can be seen from the fact that whereas in the past, there were a large number of dealers in Calcutta who bought all that the mills had to sell and then waited for the shippers to come out as buyers, today a large number of shippers have grown up who first sell to the foreign buyers, in many cases considerably below the current Calcutta levels, and then wait for some nervous mill or holder to come out as a seller. The late Sir Adamji, who always used to hold a large quantity of jute goods ready and forward, never in his life gave a selling order to his brokers. He sold only when a closing order was made to him by the buyer at the price quoted by him.

The jute industry of Calcutta either have to content themselves with selling after the goods are ready, or they have to create in Calcutta a market which can absorb forward sales whenever the mills want to sell. Call it whatever you like, a Futures market, or a Forward market, a market with rules fair both to sellers and buyers, and wherein the sellers and buyers can be depended upon to carry out their obligations, has to be brought into existence. There is no reason why an organisation on the lines of the East India Cotton Association of Bombay cannot be brought into existence for jute and jute goods.

Yours etc.

H. P. BAGARIA,

Calcutta 5th October, 1953.

CHEERFUL WEEK ON LONDON STOCK EXCHANGE

FOREIGN BONDS BRIGHT

London, 6th October.

THE past week was the best for several months and brokers reported increased business of every kind. The much talked of Government financing operation was announced in the early part of the week and relieved the gilt-edged section of its recent uncertainty. Applications for the new Government stock were well above most expectations and enabled the week to close with sentiment very cheerful. Industrials saw an all round advance, bringing into line not only first grade issues but also most of the speculative stocks with interest sustained the week through by a succession of very good company reports. Oils, however, enjoyed only a very brief spasm of popularity and mines, though out of the doldrums experienced in recent weeks, were still inclined to be neglected.

Foreign bonds provided some good features with Germans persistently to the fore. In the Far-Eastern section Japanese had a good burst of activity in mid-week but closed with a slight predominance of losses. Chinese issues were, however, a little up if anything. Teas at times came in for

some investment inquiry and were well maintained in sympathy with satisfactory tea sales results. Rubbers, however, dropped back a little in the later stages in sympathy with the rubber price. The fall of 6d. on the week to 38s. 3d. in United Sua Betong was fairly typical.

There was no unlendable money in Lombard Street on any day this week. Credit was in considerable demand all through and the Authorities had once more persistently to intervene to keep houses out of the Bank. Commercial bill rates continued weak.

U. S. Export Relaxations

United States exporters can now ship ammonium sulphate, power hacksaw blades and broad woven plastic fabrics based on nylol or vinylidene chloride, rosins and copolymers under general licence to all countries except Hong Kong, Macao and Iron Curtain countries, the Commerce Department announced on 1st October. Individual export licence would continue to be required for shipments to Hong Kong, Macao and the Iron Curtain countries. The Department said exports on these items were relaxed because they were no longer required for strategic or supply reasons.

Raw Cotton Arrivals

Arrivals of raw cotton at United Kingdom ports this week totalled 20,646 bales comprising Sudan 5,933, United States 5,309, Brazilian 4,190, West African 2,150, Peruvian 1,741 and Argentine 1,323. The quantity of cotton presently afloat to this coun-

try amounts to 38,557 bales mostly Sudan, East and West African, Argentine, Egyptian, Mexican and Pakistan.

Italian Quicksilver Prices

Italian quicksilver is now quoted at a uniform price of 63.16 s. per flask c.i.f. United Kingdom or 64.15s ex-warehouse, London metal circles report. Recently one of the leading Italian producers lowered his selling price to that level without a similar action being taken by the other, it is understood the other producer is now prepared to accept business at a lower price to meet the prevailing competitive conditions.

Market Newsletter

According to the Investor's Chronicle market newsletter, the outlook for the London Stock Exchange is fair. There is a steady flow of significant scrip issues (bonus issues). Uncertainty over the Treasury's financing should soon be resolved though it will mainly concern institutions, unless the Government also makes a long term issue. Industrial shares may be influenced by Wall Street but Washington is likely to take further steps, if needed, to cushion a recession. Ultimately this happy condition must percolate to commodities. The ending of the United States excess of profits tax and the cut in income tax suggests that Washington may favour other tax reliefs next spring. It is a platitude that the Republican party dare not risk a slump. The main beneficiaries from end of E.P.T. are motors, chemicals, electrical equipments, industrial machinery, metal fabricating paper and rail roads equipment. The least affected are textiles, clothing, retail stores and motion pictures.

Oilseed Prices

Coconut oil continued to be firmly held at £125 c.i.f. for Ceylon and £121 c.i.f. for Straits oil but demand was small and the market was largely influenced by the strength of the Far East. British East African castorseed was easier on more plentiful supply but the price steadied around £52 c.i.f. Palm kernels still firmly held with Portuguese West African at 5.10 (5.10) escudos and Belgian Congo 8,900 Belgian francs both c.i.f. per ton.

Raw Silk Market

In the past week the raw silk market has been extremely quiet and prices remained unchanged for 20 to 22 denier with dupion a shade lower. Mills have withdrawn following a good flurry of buying in the previous week. Trade sources say that the poor situation is attributed to the high price for raw material together with the fact that business at manufacturing end is not up to par. The latest prices for 20 to 22 denier single grade "A" is 522 cents and dupions 400 cents per pound.

U. K. Industrial Production

The index of industrial production (1948=100) is estimated provisionally at 110 for July, compared with a revised figure of 118 for June. In July 1952 the figure was 102 and in June 112. The index for August is expected to fall to 105-106 owing to holidays. The Manchester Guardian, however, queries the official caution in not publishing a corrected table of its own which indicates that industrial production has not merely risen far above the recession level of 1952 but has been running above the 1951 level in every month this year except June and July. For June, July and August the corrected figures given are 117, 117 and 119 for 1953, 112, 109 and 111 for 1952, and 118, 118 and 118 for 1951.

THE CALCUTTA MONEY MARKET

QUIET CONDITIONS PREVAIL

Wednesday, 7th October.

THE Calcutta money market has been closed on two normal working days in the past week, last Friday and today. On the other days there has not been a lot doing. Banks report that there is slightly more money about but not enough to enable the demand for funds to be met at lower rates of interest; the interbank rate still stands at 2 1/2 percent. Money has been easier in Bombay but none has been transferred across the country.

The bill of exchange department has also been quiet, with only small export documents showing. Remittance is normal. Sterling exchange rates are the same as last week but the dollar has strengthened a half and the rate is now Rs. 478-8.

Tenders for the offer of Rs. 1 1/2 crores of three-month Government of India treasury bills fell to Rs. 2,01,50,000 this week. The average rate of acceptance was unchanged at Rs. 2-6-8 percent per annum, tenders at Rs. 99-6-6 percent having been accepted in full and those at Rs. 99-6-3 percent allotted approximately 99 percent. Tenders for another Rs. 1 1/2 crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 2nd October, treasury bills for Rs. 4,66,00,000 were sold in favour of the Reserve Bank.

Bullion was quiet last week and all prices fell. Contributing to the weakness was the absence of upcountry support, followed by larger arrivals. Silver declined from the previous week's level of Rs. 151-14 to Rs. 150-15 quoted today. There was also no premium for the ready rate due to the lack of demand. The price was, however, unchanged at 74d. in London and at 85 1/2 cents in New York.

Gold also eased from Rs. 86-12 to Rs. 84-12 owing to suggestions of arrivals of smuggled gold. The sovereign at Rs. 57-12 showed a loss of 8 annas.

There was a rise of Rs. 1.86 crores in notes in circulation to Rs. 1073.34 crores according to the return of the Reserve Bank of India for the week ended 2nd October, 1953. The total note issue was also up by Rs. 39 lakhs to Rs. 1116.45 crores. Notes held in the Banking Department consequently declined by Rs. 1.47 crores to total Rs. 43.10 crores. In the Banking Department deposits of the Government of India fell by Rs. 11.87 crores to Rs. 124.98 crores presumably due to month-end disbursements and payments to the States. Other Government accounts were, therefore, Rs. 7.97 crores higher at Rs. 29.29 crores. Easier money conditions again led to a rise of Rs. 3.17 crores in balances of commercial banks to Rs. 55.63 crores. Balances held abroad improved by Rs. 1.71 crores to stand at Rs. 142.51 crores. While investments at Rs. 86.10 crores showed a fall of Rs. 28 lakhs. Other loans and advances increased from Rs. 11.48 crores to Rs. 11.93 crores, of which advances to scheduled banks against usance bills at Rs. 49.45 lakhs were the same as before. Other features showed little change.

The return of the Imperial Bank of India for the week ended 25th September, 1953, shows a rise of Rs. 2.01 crores in total deposits to Rs. 207.22 crores. Investments in Government Securities are up by Rs. 1.18 crores to Rs. 63.99 crores, while other authorised investments remain unchanged at Rs. 10.54 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 44 lakhs and Rs. 13.44 crores, respectively. Cash and balances are, in consequence, shown at Rs. 24.98 crores or Rs. 2.96 crores higher.

The statement of the position of Scheduled Banks for the week ended 25th September, 1953, discloses Demand and Time liabilities at Rs. 524.69 crores (Rs. 13.40 crores on account of borrowings from Banks) and Rs. 330.23 crores (Rs. 2.32 crores) compared with Rs. 521.78 crores (13.36 crores) and Rs. 329.76 crores (Rs. 2.37 crores), respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 4.46 lakhs and Rs. 2.89 crores to aggregate Rs. 31.23 crores and Rs. 49.84 crores, respectively. There is a rise of Rs. 71 lakhs in investments to Rs. 333.87 crores. Advances and bills discounted at Rs. 460.12 crores reveal a drop of Rs. 3.54 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.5 percent and 53.8 percent against 9.1 percent and 54.4 percent.

The article entitled "Functions of Industrial Finance Corporations" which appeared on page 464 of Capital last week was by Mr. R. M. Mitra, not Mr. R. N. Mitra.

RESERVE BANK ENQUIRY ON FINANCE FOR PRIVATE SECTOR

The Reserve Bank has decided to appoint a committee to examine how increased finance might be made available to the private sector to implement the Five Year Plan. Mr. A. D. Shroff, Director of Tatas, will be chairman of the committee.

Announcing this, a communiqué issued by the Bank said: "The Planning Commission has assigned an important rôle to the private sector in the implementation of the National Plan. Investment in this sector has not, however, reached the level envisaged in the Commission's report. The Taxation Inquiry Commission is investigating the effects of the structure and level of taxation of income on capital formation and on the maintenance and development of productive enterprise. There are, however, other factors which influence investment in the private sector. With the approval of the Government, the Reserve Bank has decided to appoint a committee to examine how increased finance could be made available to this sector through sources other than those which are under the consideration of the Taxation Inquiry Commission. In particular, the committee will examine the possibility of providing on a larger scale bank finance for development in the private sector."

The other members of the committee are: Mr. Joshi, Executive Director, Reserve Bank, Bombay; Mr. Smanantha Ramakrishnan, Member, Local Board, Reserve Bank, Madras; Mr. Middleton, Secretary and Treasurer, Imperial Bank of India, Bombay; Mr. Thakur, General Manager, United Commercial Bank Ltd., Calcutta; Mr. Sonalkar, Managing Director, Industrial Finance Corporation of India, New Delhi; and Mr. B. K. Dutta, General Manager, United Bank of India Ltd., Calcutta. Mr. Nadkarni, Department of Banking Develop-

O.E.C. VIEW ON CURRENCY CONVERTIBILITY

M. Marjolin, Secretary-General of the Organisation for European Economic Co-operation (O.E.C.), said recently that it was desirable to achieve free convertibility of currencies as soon as possible—but the time was not yet ripe for such an operation. In an interview with Paris Press about the British plan for free convertibility of currencies, M. Marjolin said that the British Foreign Secretary, Mr. Eden, and the Chancellor of the Exchequer, Mr. Butler, "have informed us of the British ideas about convertibility. 'These ideas' correspond to the objectives which have been always held by the O.E.C. and the European Payments Union.

"It is desirable for us to progress together in this direction as quickly as possible and to realise as soon as possible the commercial and monetary unit of the free world. I must say, however, that convertibility of currencies presupposes the realisation of a series of conditions—some of which have not yet been carried into effect," M. Marjolin added.

He described France as "the black spot" in European economy. "France holds the key to European progress in all respects—if she does not take the lead, or even does not participate, everything appears compromised."

JAPAN'S TRADE WITH STERLING AREA

Mr. Takeji Tojo, Exchange Director of the Japanese Finance Ministry, said in Tokyo that the Japanese Government hoped to have financial and trade talks with the British authorities shortly—preferably by the end of this month. The talks would probably deal with the question of whether the present Anglo-Japanese overall payments agreement, which expires at the end of the year, should be extended or revised, he added.

Mr. Tojo said he believed the effects of relaxation of import restrictions by sterling nations would also be reviewed in relation to Japan's sterling balance and the future development of trade between Japan and the sterling area. A spokesman of the Finance Ministry here confirmed reports that Japan's sterling balance has declined below £25 million. He refused, however, to confirm or deny reports that Japan is planning to buy another £5 million from the International Monetary Fund.

U.S.-WEST GERMAN CURRENCY EXCHANGE RATE

With a dollar rate of 17.75, blocked marks have now passed their previous high level of \$17 per 100, recorded in April, 1952. The rise has amounted to 27 percent during the last four weeks. Banking circles in Dusseldorf, says the *Financial Times*, attribute the improvement to the following reasons:—

1.—Considerable blocked mark holdings have recently been invested in steel, electrical and dye shares on the Frankfurt and Dusseldorf Bourses—mainly from Swiss sources; 2.—Speculative purchases of blocked marks have been made in the hope of further relaxation of the transfer ban; 3.—German bonds have been re-purchased abroad out of blocked marks.

According to authoritative German sources this may have happened in one isolated instance, but it would be wrong to think that similar cases would happen in the future. On the contrary, it is affirmed, such buying of bonds at cheap rates remains contrary to German policy.

References to further relaxations of transfer regulations are described as "mere speculation." The transfer of current earnings of property invested prior to July, 1931, requires an annual amount of DM.240 million. The next category, which would comprise "other property excluding blocked marks, and excluding such property as has been bought from acquired blocked marks after May 5, 1930" would require an additional amount of about DM.100 million in foreign currency.

WHATEVER the difficulties of the Indian troops in Korea may be, I hope there is no truth in reports that they might be withdrawn if agreement cannot be easily reached on the implementation of the armistice. It would seem to follow from Mr. Nehru's statements on India's foreign policy for years past that her contingent in Korea will stick it out through every reverse and not admit that mediation is impossible until the two principal parties to the armistice indicate that they do not want the armistice to work. What I mean is that India has chosen for herself the rôle in international affairs of mediator, go-between, promoter of agreement or what you will, and I assume that she has chosen that rôle knowing full well that it is often as trying and as dangerous a part as that of the antagonists. I have understood Mr. Nehru to be saying since 1947 that India chooses neutrality not because it is easier, or cheaper, or safer but because she believes it is right. The practice of that policy therefore must frequently call for as much tenacity and obduracy as the practice of any other consistent international policy. A mediator who only mediates when the antagonists are in a sweetly reasonable frame of mind, or who lends his good offices on the strict understanding that while he is involved everybody must try to keep the party clean, is just being unrealistic. The dismay and astonishment that have been expressed at the hysterical swashbuckling of the South Koreans, and their threats to the Indian troops, seem to me rather silly. We all knew what these Korean and Chinese prisoners were like; we saw what trouble the Americans had to control them, let alone repatriate them and separate the sheep from the goats. Were they expected to turn into angels of goodness when neutrals appeared on the scene? Of course not. War and international politics are always complex and frequently dirty, and anyone who chooses to play a part in them, no matter whether he calls his part that of mediator, must reckon with that. The only alternative is not to play any part at all, that is, complete isolationism; and if I have not misunderstood Mr. Nehru altogether India's policy has nothing to do with isolationism.

I read in an Indian newspaper the other day the extraordinary statement that "...some may cynically wish that all the prisoners had escaped when Dr. Rhee connived at the release of about 30,000, instead of remaining to plague those who are trying to do their duty in a decent and responsible manner". That looks to me like saying that if only there were no nasty problems in the world, a mediator could have an easy time—though what his "duty" would be in that case I cannot understand, unless it were to enjoy a feeling of high-minded superiority. The assignment in Korea has been the first real test of India's active neutrality and it is a matter of pride that so far her troops have conducted themselves with vigour and realism. I hope that they are not to be withdrawn because it appears as if their task is going to get really tough; it would be hard to distinguish such a course from an admission that active neutrality is something reserved for political speeches, not for the rough world of action. Of course if both major parties say that they do not want Indian assistance in Korea, that would be another matter and then India could only withdraw. But the one thing that is clear about the prisoner of war tangle is that both sides do want help in clearing it up. Granted that, then cussedness and misunderstanding are things that the mediator has to expect in the course of doing his job.

The committee that the Reserve Bank of India has appointed to study ways of increasing the flow of private savings to industry is composed of some

A DITCHER'S DIARY

very distinguished business men and administrators, and it has as its field of enquiry a subject on which there are many things to be said. But one cannot avoid the suspicion that the Bank and the Government are under the illusion that there is some trick, some knack, some little adjustment which only requires to be learnt and practised for the money to flow as freely as the water did for Aaron's rod. Committees are all very well and I have not the least doubt that this one will produce a valuable report, but the real question, and the only one that matters, is: what would the Government do if a committee turned in a report saying that the reason for the slow progress of private industry in this country was that official economic policy had been on the wrong track from the start? Supposing that the remedy were not some simple piece of fiscal dexterity, some brilliant wizardry that changed the scene in a twinkling; supposing that the only way to get savings flowing to private industry is to renovate the whole atmosphere in which enterprise is required to function—what then? And in fact these are not suppositions, but certitudes. The organisation of a polity in which people save, and direct their savings to a class of entrepreneurs who have the vision and the freedom to build productive industries, is not a simple matter and yet it does not need committees to study it. I have just been reading an article in the last number of *Lloyds Bank Review* on "Savings and Planning in Asia", by Geoffrey Tyson. The mere sub-headings to his article—"The redistribution of income", "Old prejudices", "The climate of opinion", "The redistribution of income"—tell a good deal of the story, and yet it is exactly on these points that politicians are hardest to convince. As Mr. Tyson remarks: "At the same time as the flow of private enterprise from West to East has been seriously curtailed, the successor governments of South-East Asia have shown no great concern for the susceptibilities of their own limited investing public". If the Reserve Bank's committee can emphasise the urgency of restoring that general concern for the whole climate of investment, it will have done as much as we can hope for.

The practice of locking in employers seems to be getting more popular every day and there has been little response to Dr. Roy's two statements on the question—neither to his first stern one nor his second weak one. Meantime the height of audacity was reached in a dispute, which I have had described to me at second hand, at a factory some little way down the river. In this case senior staff were locked in their offices and prevented from leaving until 10 o'clock at night. After they had eventually been released they were met by a new deputation from their employees with one last request—that the company turn on a launch to take them home because they had been detained at work so late they had missed the normal transport! The answer they got has not been recorded but I am assured that it wasn't fit to print anyhow.

Now that the change of seasons is upon us and the days are drawing in, we in Calcutta realise again how unwise it is for Indian Standard Time to be applied to the whole of this vast country. Through the summer it scarcely matters, because the days are so long that little would be gained by fiddling about with our clocks. But now that the days are shorter we notice how unevenly the span of daylight falls on our Indian Standard clock-day. In order to be out and about before the sun these days you need to get up at 5-15, while in order to

get home before dark you need to pack up at 5. The mere loss of an evening walk for those of us who have electric light is a small matter, but for the industrious poor who have all their domestic chores to get through in the dusk the waste of light must be a considerable inconvenience. Until Standard Time was introduced here during the war, Bengal had a local time that was 36 minutes ahead of the western provinces, while points east were even further advanced. The tea gardens in Assam still observe their own time which is, I think, as much as an hour ahead of the time followed by the other inhabitants. Periodical variation of timings with the change of season, as is practised in "summer saving time" elsewhere, would probably cause hopeless confusion here, but there is no good reason that I have heard why West Bengal and Assam should not get ahead of the rest of the country and stay there.

If I were Donald Maclean (which, I should assure Whitehall, I am not; my pseudonym has concealed a variety of characters in the last sixty years but never, I think, an official of the Foreign Office), if I were he, I say, what I would do now is—reappear. Having reappeared, I should sue every newspaper in the Western world and sit back and watch the damages roll in. In the last few years Maclean and his companion Burgess have been called, either directly or by implication, every nasty name in the book, all without the least court-of-law evidence that they have done anything more than go off without telling their friends and employers where they were going. The vanishing trick is not yet against the law in Britain or anywhere else that I know of. Absence without leave, especially on the part of a senior official, is no doubt highly improper but that is a matter to be settled with one's employer. There are all sorts of reasons for keeping quiet about oneself apart from political defection, and indeed most people who abruptly change their political loyalties are anything but silent thereafter. Some readers might remember John Peet who disappeared behind the Iron Curtain a few years ago after being Reuters' chief correspondent in Berlin. Every week since he went there has lobbed on my desk a copy of a propaganda broadsheet he turns out in English for the East German Communists, with articles signed by Peet and catty messages to old journalistic friends he left behind. This is the more usual behaviour of political renegades, unless, like Pontecorvo, they have secret technical work to do. Once you accept the curious ideological atmosphere of our age, it seems plain that anyone who disappears and forgets to say where he is going, has become a traitor; our grandfathers would have thought this an extraordinary assumption, and would have first suggested ringing up his bank manager or digging up his cellar floor. But, our age being what it is, I am as sure as anybody else that the Macleans and Burgess will not reappear to claim those damages, because they know they wouldn't get them.

Fair and honest newspaper reporting has been so much the subject of discussion lately, both in Calcutta and London, that I feel this is a suitable time to propose the *Daily Express* for a prize for the year's most honest piece of journalism. That paper lately asked Lady Violet Bonham-Carter for a statement about something or other and then printed in full her brief reply. It is only a pity that the poor resources of ink and newspaper could not reproduce the tones of Lady Violet's voice. "Nothing," the *Daily Express* reported her ladyship as saying, "nothing would induce me to say a word. I loathe the *Daily Express*."

Without Prejudice

A POINT OF BANKING LAW

THE DEFINITION OF A CHEQUE

(FROM OUR LEGAL CORRESPONDENT)

THIS is rather an unusual point of banking law. The facts were simple. The U.P. Union Bank Ltd., was in liquidation and a suit was brought by the official liquidators of the bank to recover a sum of Rs. 2,677-5-8 from Messrs Dinanath Raja Ram, a firm of cloth merchants at Budaun, within the jurisdiction of the Allahabad High Court. The defendant had a current account with the bank when it was a going concern and had overdrawn that account. The liquidators sought in the suit to recover the amount of the overdraft; and that part of the defence with which we are concerned was that the bank had wrongly refused payment of a cheque for Rs. 1,500 to the defendant firm and that the amount of that cheque should be set off against the bank's claim. In order to appreciate this contention it should be added that one S. Z. Ali Razmi had drawn a cheque for Rs. 1,500 in favour of the defendant firm and delivered it to it. The defendant presented the cheque to the plaintiff bank but it was dishonoured. The reason given in the memo, attached to the cheque by the bank while returning it was that: "Payment cannot be made due to shortage of funds." At the hearing of the suit it was conceded by the bank that the drawer of the cheque had sufficient funds in his account to enable the bank to make payment. In other words there was no dispute about the fact that the cheque was wrongly dishonoured by the bank; and it was the amount of that cheque which the defendant sought to set off against the bank's claim, the argument of the defendant being that wrongful refusal to pay the amount of the cheque gave rise to a claim—(note that word "claim.") the High Court had something to say about it later)—in favour of the defendant and the amount of this claim should be deducted from the bank's claim against him.

Now the winding up of insolvent companies is regulated by certain rules. And the defendant relied mainly on one particular rule, embodied in Section 46 of the Provincial Insolvency Act. This is it: "46. Mutual dealings and set-off. Where there have been mutual dealings between an insolvent and a creditor proving or claiming to prove a debt under this Act, an account shall be taken of what is due from the one party to the other in respect of such mutual dealings and the sum due from the one party shall be set off against any sum due from the other party and the balance of the account, and no more, shall be claimed or paid on either side respectively."

"It follows, that if a debtor has a counter-claim against a bank in liquidation, the bank cannot insist on demanding full payment of its claim without reducing it by the amount payable to the debtor. If the debtor is reduced to the necessity of filing a claim against the bank he will be given a pro rata payment along with other unsecured creditors. But, if he is allowed to deduct the amount of his claim from the amount payable by him to the bank, he will be entitled to deduct the full amount of his claim from the amount due from him to the bank. Therefore the defendant insists on taking advantage of this rule of insolvency law. Needless to say, he can take this stand." (Per Brij Mohan Lall J.).

We have emphasised the word "claim." It is not, perhaps, an altogether happy word to use in this connection for it has two meanings. It may mean a mere demand not necessarily connoting any legal right or it may mean an actual legal right or title. Nevertheless it is obviously not the vaguer meaning which is intended here but a specific enforceable legal right. "He can take this stand," his lordship had admitted, but immediately added: "But this presupposes that he must have a valid claim. The official liquidators contend that by wrongly refusing to make payment

the bank did not incur any obligation towards the defendant. Their contention is that the bank did become liable to compensate the drawer but not the defendant who was the payee. Therefore the whole dispute between the parties to this litigation narrows down to the simple question whether a bank possessing sufficient funds in a depositor's account incurs a liability towards the payee of a cheque by wrongly refusing payment to him."

The relationship between the drawer of a cheque and the bank on which it is drawn is one of contract; but this is not so as between the payee and the bank. There is no privity of contract between them. "The payee is only an agent or messenger of the maker of the cheque to whom payment is made by the bank at his (maker's) request." (Brij Mohan Lall J.). If therefore the bank makes default it is guilty of breach of contract and liable to pay damages to the maker who is the contracting party and not to the payee who is the agent of the maker. The agent has no right of suit. No right of suit, that is, as agent or as a contracting party. But can he claim as under a trust? Can he say that the proceeds of the cheque were a trust fund and that he was the beneficiary under it? If so, he would just about scrape home in his suit, for under Section 56 of the Trusts Act a beneficiary has been given a right "to have the intention of the author of the trust specifically executed to the extent of the beneficiary's interest." In other words a right to enforce a contract may, in the case of a trust, be enforced by a person who is not privy to the contract. The Court decisively rejected the existence of any trust. ".....It cannot be contended that the bank is trustee for the payee. By no stretch of imagination can the provisions of the Trusts Act be made applicable to deposits held by a bank."

Not being a beneficiary under a trust, could the payee of the cheque claim to be an assignee of money in the hands of a banker?

The claim was made in this case. It was also made just 80 years ago by one the late Mr. Septimus Hopkinson in *Hopkinson v. Forester*, and unless Brij Mohan Lall J. was prepared to dissent from Jessel M.R.'s decision in that venerable case we have here an excellent example of the forensic flogging of a juridical dead horse. His lordship was not prepared so to dissent. On the contrary he quoted Lord Jessel with approval: "A cheque is clearly not an assignment of money in the hands of a banker..... The banker is bound by his contract with his customer to honour the cheque when he has sufficient assets in his hand; if he does not fulfil his contract he is liable to an action by the drawer, in which heavy damages may be recovered if the drawer's credit has been injured. I do not understand the expressions attributed to Byles J. in the case of *Keene v. Beard* but I am quite sure that learned Judge never meant to lay down that a banker who dishonours a cheque is liable to a suit in equity by the holder."

Keene v. Beard was decided in 1860 and it is remarkable that in Allahabad nearly a century later the same contention, rejected then, should optimistically be raised again.

The fact is that people do not realise what a cheque is. Held on *Law of Banking*, 4th edition, p. 445, makes it quite clear: "A cheque in itself is merely a request to the banker to pay a certain sum. It does not purport to be and has not the effect of an assignment to the payee of money in the hands of the banker. Nor is it accepted by the banker like a bill of exchange. Accordingly, the payee has in general (our italics) no right of action for its dishonour against the banker on whom it is drawn. His only remedy, if it is dishonoured, is against the drawer or an indorser."

Note the qualifying words "in general." They would seem to imply that there may be exceptions to the general rule, or, at any rate, an exception. And Halsbury's *Laws of England*, Hartsham Edition, Vol. 1, page 827 elaborates the point: "If a banker without justification dishonours his customer's cheque he is liable to the customer in damages for injury to credit.....The holder has no remedy against the banker unless the banker has admitted to him that he holds money especially to meet a particular cheque." Turning to the Negotiable Instruments Act one finds in Section 31 implied authority for the general proposition that the payee has no right of action against the bank, the reason being the well recognised rule of law that a person who is not privy to a contract cannot enforce any right under it.

Section 31 reads: "The drawee of a cheque having sufficient funds of the drawer in his hands to do, and in default of such payment must compensate the drawer for any loss or damage caused by such default." "Compensate the drawer." Not a word about the payee. And as Brij Mohan Lall J. put it: "Had it been the intention.....to drawee, the legislature would not have failed to say so."

Judgment for the bank. [U.P. Union Bank v. Dina Nath Raja Ram, A.I.R. 1953 (September) Allahabad, 637.]

LONDON INSURANCE LETTER

CHANGING SOCIAL INSURANCE

By Air Mail.

WHATEVER may be the implications of the lowering of the London Bank rate in September, it cannot be seen as a move to counter deflation. On the consumer's side particularly, prices in general, led by derationed foods, are still inclined to rise. Lord Beveridge, who was mainly responsible for evolving during the war the social security plan which Parliament adopted after the war, has warned from time to time that the basis of this plan is being undermined by inflation. He has renewed this warning quite recently. He would not be satisfied to see the cost of living stabilised; it seems to him necessary to reaffirm the principle of freedom from want by raising benefits to catch up with the cost of living at the point to which it has already risen.

Lord Beveridge is everywhere respected, but his remedy for what is undeniably a serious social problem is not generally accepted in actuarial circles. It is arguable that if military expenditure can be reduced the community can afford to increase expenditure on the social services—though most economists incline to the idea that all governmental spending should be curtailed. The point that is now being more thoroughly discussed is whether an ageing community can afford to subsidise retirement, at full rates of benefit, before it is genuinely necessary.

Fabian Publications has entered this controversy with a pamphlet by Brian Abel-Smith, *The Reform of Social Security*. The author is in agreement with Lord Beveridge on the principle of relating benefits to the cost of living; but he would like to break down "the artificial division of life into so many years of work and so many years of retirement," by substituting flexible superannuation benefits for rigid retirement pensions. These benefits would be payable to workers and non-workers alike. They would begin at a low level, at an age when most recipients would still be able to work, and rise to a level that would be adequate for civilised existence without other means of support. National insurance differs in important respects from private insurance, whether group or individual; but the change in the age-composition of the nation poses a problem for life assurance as a whole. It is hardly the function of the life offices to encourage people to stay in work as long as possible, but they have an obligation to make group pension schemes as flexible as possible, so that employers are not actively discouraged from giving work to ageing people.

Deals in Property

Even in Britain, where financial institutions generally adopt a more cautious attitude towards real property than their counterparts abroad, insurance funds find their way into property in considerable amounts. The sums so invested are not, however, large in relation to investments in more liquid form, and they are recognised as a normal business risk. The use of insurance funds not for normal steady investment but for "property deals" is more questionable. Financial transactions can be judged on their merits, but the provocative columnist of *The Financial Times*, sees a serious snag in the acquisition of chains of stores which the insurance companies have from time to time assisted.

The method, says that newspaper's "Observer", is to pick on an old-established group of properties whose shops are let at modest rentals and the value of which has been written down almost to zero. The negotiation then interests an insurance company, which backs an offer for the property at a persuasive price. The insurance company recoups itself by leasing the property to retail; and the financial backers of the scheme get effective control of the business. The snag, "Observer" points out, is the local rating authority. Long have the local authorities prayed for a revaluation of rating which will enable them to take advantage of the higher rents paid for business premises; now "the recipients of newly-soared rents will have to look out."

Adapting Casualty Risks

There is some hope that casualty experience, particularly in the USA, is on an improving trend. There was a small underwriting profit on US casualty business in 1952, compared with a substantial underwriting loss in 1951. Motor risks still showed a loss, but, thanks to adjustment of premiums, a more moderate loss than in 1951. An intensified campaign in Britain to reduce the number of road accidents is naturally approved by the insurance companies; but latest figures for the USA, France, and other countries, show that the problem is even worse abroad. According to the Royal Society for the Prevention of Accidents, there were last year 10 road deaths for every 100,000 inhabitants in Britain, 24 per 100,000 in U.S.A.

In Britain, unlike most states of the USA, third-party insurance is compulsory for every driver of a motor-propelled vehicle. The business here is not uniform: some very favourable rates are now being quoted for motorists who have never made a claim. But there is nothing like the elaboration of categories worked out successfully in America by the Allstate Insurance Company and now extending, in modified form, over the range of automobile insurance. The differentiation between youthful and mature, between those married and young unmarried, between those who drive habitually and those who drive occasionally, and so on, is being observed from here with interest.

Stocks and Shares

SHORT TRADING WEEK ENDS ON STEADY NOTE

SELECTED JUTE SHARES BETTER: TEAS FIRM AFTER PROFIT-TAKING: SHARP RISE IN IRONS

Wednesday Evening.

THE past week has included only four days' trading, since the share market was shut last Friday and again today. The close yesterday was distinctly steadier than for some time, with much better feeling about industrial shares and with the bulls in complete control of the leading speculative counter. Selected jute shares have been supported, in sympathy with the improvement in the finished goods markets, but the turnover in this section is still very limited. Tea shares are fully steady but there has been some abatement of activity. Miscellaneous shares have been sought after by discriminating investors. In general the volume of business has shown some increase but is still relatively small.

Indian Irons have been very strong following the restoration of near-normal production at the works. Bears have been covering energetically and premature rumours of a dividend announcement for 1952 have assisted sentiment.

Gilt-edged securities have been steady at last prices but turnover in Central loans has been small. The 4 percent State loans on the other hand have been very firm and prices have advanced in the absence of sellers.

Details of the week's trading follow.

The gilt-edged market continued steady with short and medium-dated loans still the focal point of attention. Four percent provincial loans were again the feature of the week's trading and the enquiry for Central Government loans has also spread to long-dated issues. Three percent Conversion Loan 1946-86 was quoted at Rs. 82-1 with buyers rather than sellers unchanged at Rs. 82-1. In short-dated 3 percents 1957 and 1958 had buyers at Rs. 98-7 and Rs. 98-2 respectively while 2½ percent 1954 was taken up to Rs. 98-10-6. Two and a half percent 1955 recorded a small rise to Rs. 98-5 ex-voucher. In the medium-dated group, 3 percent 1959-61 was unchanged at Rs. 96-1 but 3½ percent 1961 met with good enquiry up to Rs. 98-7-6. Both 3 percents 1963-65 and 1964 were supported at Rs. 92-8 while 4 percent 1960-70 was marked around Rs. 101-15. Two and a half percent 1961 was traded at Rs. 90-9 and 2½ percent 1962 was quoted at Rs. 91-9. Long-dated issues attracted rather more interest than for some time, with 3 percent 1966-68 improving to Rs. 90-1 and 3 percent 1970-75 to Rs. 86-9. The demand for provincial loans has been maintained but little business was recorded due to the absence of sellers. Four percents Bombay 1963 and 1964 advanced further to Rs. 100-14 while 4 percents Madras 1963 and 1964 had unsatisfied buyers at Rs. 99-14. Four percents U.P. 1963 and 1964 were steady at Rs. 99-11 while 4 percents West Bengal 1963 and 1964 were unchanged at Rs. 100-8 and Rs. 100-7. There was an enquiry for 3 percent Bombay 1960 and 3½ percent Bombay 1962 at Rs. 95 and Rs. 98-2 respectively.

"Approved" debentures of joint stock companies were difficult to obtain and in consequence very few transactions were recorded. Small lots of Kumardhubi Engineering, Orient Paper and Reliance Jute were done at Rs. 85, Rs. 94 and Rs. 95 respectively. Katakhal Lala Bazar railway were taken at Rs. 96. There was an enquiry for Standard-Vacuum at Rs. 103-2 but scrip was in short supply.

First-class jute and miscellaneous preference shares continued to be in good demand though offerings were negligible. Amongst jute, Delta were crossed at Rs. 103, Gourepore were better at Rs. 107 and Hukumbhand were quoted at Rs. 111-8. Other transactions included Howrah "A" at Rs. 118, Kelvin at Rs. 119, Lothian at Rs. 106 and Soorah at Rs. 106. In the miscellaneous group, Bharat Collieries were quoted at Rs. 49-8, Calcutta Electric were offered at Rs. 11-14 and a few deals were reported in Indian Iron and Steel at around Rs. 107. Indo Burma Petroleum were steady at Rs. 96 as were Rohtas "B" at Rs. 55. Shaw Wallace were dealt in at Rs. 80.

In the banking section, Imperial fully-paid and contributory remained steady at around Rs. 1,830 and Rs. 445. Hind Bank was a feature recording a sharp rise from Rs. 22 to Rs. 26 with few shares offering. After a long lapse United Bank of India Rs. 25 paid-up shares were done at Rs. 8-6.

No business was recorded in railway shares.

With the exception of Kesoram Cotton which were steady at Rs. 19-9 most other shares in this section were dull and neglected. Business was reported in Cawnpore Textiles at Rs. 8 and a small lot of Dunbar was sold down to Rs. 166. New Victoria were unchanged at Rs. 1-11.

Coal shares were featureless and business was restricted. Burrakur fluctuated narrowly around Rs. 9 as did Bengal at around Rs. 506 cum-dividend. Borrea were taken at Rs. 25-3 and New Beerbhoom changed hands at Rs. 17-6 ex-dividend. Rewa were

crossed at Rs. 20-6 and South Karanpura at Rs. 9-15. Central India were steady at Rs. 5-1 as were Western Bengal at Rs. 4-9. Bharat Collieries were marked at Rs. 5-10.

After a dull opening a mild enquiry was noticeable for a few selected jute shares following the improvement in the jute goods market. Howrah after opening at Rs. 22-13 improved steadily to Rs. 23-4.

The following table illustrates the improvement which has taken place in this section:—

	Opening	Closing
	1-10-53	6-10-53
Birla	Rs. 38	Rs. 41
Barnagore	138	144
Delta	216	222
India	118	122
Kamarhaty	173	178
Megna	90	96

Jubbulpore Electric provided the feature in this section with buyers at Rs. 14-2 but no declared sellers. This enquiry may be attributed to the fact that the directors have recommended an increased dividend of 5½ percent for the half year compared to 4 percent for the previous period. Calcutta Electric wilted under selling pressure from London and closed quiet at Rs. 13-6. Patna Electric were subdued at Rs. 10-11 following the news of the strike at the Company's works. Upper Ganges were unchanged at Rs. 15.

Sugar shares ruled steady. Belsund were done at Rs. 8, Bharat at Rs. 16-6, Carew at Rs. 7, Darbhanga at Rs. 11-12 and Ramnugger at Rs. 18-12. Dyer Meakin Breweries were crossed at Rs. 6-2.

Under the influence of bear-covering and rumours of an impending dividend, Indian Iron and Steel shares moved from strength to strength improving steadily from Rs. 23-3 to Rs. 23-11. Bharat Electric Steel were quiet at Rs. 9-15 and Burn were steady at Rs. 285. Several deals were reported in Indian Galvanizing at Rs. 14-8 and Indian Steel and Wire Products contributory at Rs. 14-9. Kumardhubi Engineering were steady at Rs. 7-8 while Marshalls were unchanged at Rs. 5.

In the miscellaneous section India Paper Pulp improved to Rs. 165 and Shree Gopal to Rs. 18-6. Titaghar Paper were unchanged at Rs. 38. Other shares coming in for business included Sone Valley at Rs. 6-10, Ruby General at Rs. 4-15 and India General Navigation at Rs. 70. Indian Steamship were popular at Rs. 7-9 as were Calcutta Landing and Shipping at Rs. 12. Alkali and Chemical were steady at the higher rate of Rs. 16. Assam Match were taken at Rs. 22 and Bararee Coke at Rs. 17-2. Bengal Flour were a feature improving from Rs. 17-12 to Rs. 19-10 but closed slightly below the best. Birds Investments were placed at Rs. 15-8. Britannia Biscuits were taken at Rs. 10-1 and Indian Cables at Rs. 19-2. Indian Wood Products met with investment support at Rs. 31 and Indo-Burma Petroleum after improving to Rs. 69-8 turned sellers at the close at Rs. 69. Midnapore Zemin-dary were offered at Rs. 34 and Rallis at Rs. 62. Rohtas Industries were steady at Rs. 8-11 as were British Burma Petroleum at Rs. 1-11.

In the mining section Indian Copper changed hands on several occasions at around Rs. 2-12 while Chrestien Mica Industries were better at Rs. 10-6. Burma Mines were quoted at 15 annas and Orissa Minerals found sellers at Rs. 32-12.

Tea shares after meeting with slight profit-taking appear to have settled down again and at the close there was renewed enquiry for the more popular shares. Betjan were taken at their previous quotation of Rs. 27-2 as were Bishnauth and Dhelakhat at Rs. 29-8 and Rs. 32. Dimakusi jumped to Rs. 34-4 at which rate there were further buyers. Nambardadi and Seajuli were unchanged at Rs. 6-10 and Rs. 22. East India were a weak feature at Rs. 19-6 and Jutibari were lower at Rs. 10-11. Amongst Doars scrips, Hasimara were better at Rs. 28 and Jaybirpara improved two points to be quoted at Rs. 23-6. New Doars were better at Rs. 333 while Huldibari were slightly easier at Rs. 20-4. Amongst Darjeeling gardens, Darjeeling Tea and Chinchona were the feature recovering from Rs. 72 to Rs. 78 with unsatisfied buyers at the close. Singell were marked seven points higher at Rs. 42-8 and Runglee-Rungliot and Margaret's Hope had buyers up to Rs. 250 and Rs. 10 but in the absence of sellers no business was recorded. Amongst other scrips, Baitakhal were crossed at Rs. 5-12 and Eastern Cachar and Kunchunpore were taken at their previous quotations of Rs. 3-1 and Rs. 6 respectively.

Reports of the McLeod Group of Tea Companies for the year ended 31st December, 1952, make disappointing reading. Except Telojan, all companies incurred losses and dividends have been passed. Dhanuagarh shows a loss of Rs. 49,432 and after making all adjust-

Books and Publications

A BANKER'S VIEW OF ECONOMIC PROBLEMS

Indian Economic Problems from a Banker's Point of View. Edited by A. N. Bali. (Atmaram & Sons, Delhi, 1953. Price Rs. 8, 265 pages.) This is a book containing the views of Lala Yodhraj, Chairman and General Manager of the Punjab National Bank Ltd., on Indian economic problems. The book has been edited by Mr. A. N. Bali, Economic Adviser to the bank, who has given brief introductory remarks on the various topics on which Lala Yodhraj has from time to time expressed his views at the invitation of public men, newspapers and the Government and on other occasions such as shareholders' meetings, public functions, etc. A period of about 8 years is covered by the contributions, from 1944 to 1952. Bankers generally abstain from expressing views on subjects which do not fall directly within their own domain but Lala Yodhraj is an exception. While his principal contributions are in the sphere of currency, banking, rates of interest, capital formation and taxation, he has also given his views on various other subjects which do not fall within the purview of banking and finance.

The book is divided into 8 sections. The first section deals with development plans, the second and the third with banking and currency problems and the next two with economic problems and economic relations. The problems arising out of partition are dealt with in the sixth section, the food situation in the seventh section and miscellaneous topics such as the regulation of the stock exchanges, housing shortage, increase in population, the implications of the Moscow Economic Conference held in 1952, in the last section.

The author has, at several places, given free expression to his predilections. He is a severe critic of Government's long-term development plans which he suggests should be "scrapped" and a one-year plan for food self-sufficiency adopted in its stead. He believes in short-term production plans and is opposed to multi-purpose schemes work on which, he once asserted, would ultimately have to be stopped. However, while addressing the annual meeting of the bank's shareholders, in 1950, he doubted whether it would be desirable to divert funds from multi-purpose schemes to the granting of subsidies for rural banking. Such statements give an impression of lack of consistency; this may be because they were made at different times to suit different occasions. In 1948 he was of the opinion that the bait of a higher rate of interest would not attract the investors, who, he said, had ceased to be interested by the lure of interests or yield. On other occasions, however, he repeatedly advocated the abandonment of the cheap money policy and held that a rise in the rate of interest was one of the most important factors that would revitalise the economy and was a condition precedent to greater capital formation. Speaking at a function in July 1946 when he met leaders of the I.N.A., he said that a national plan of "socialist planning" was needed

for the country and urged that after the attainment of independence "socialist production" should be created and maintained on a vast magnitude. In his subsequent utterances he has firmly upheld the system of private enterprise and has advocated that free enterprise be given the fullest scope. He was opposed to the devaluation of the rupee and thinks that devaluation has created more problems than it has solved. He believes in the maximum utilisation of foreign capital and has suggested that steps be taken to interest not only the U.S.A. but also the U.S.S.R. in extending help to India. He is an admirer of the U.S.A. and is opposed to a controlled economy. He is at the same time effusive in his praise of the U.S.S.R., and looked upon the Moscow Economic Conference as "a gesture of peace to help India and humanity".

This collection of views reflects the reactions of an alert banker to all such things happening in this country or outside as have a bearing on the economy of India. The portions dealing with banking reveal the author's knowledge of the subject and will be read with interest by bankers and economists.

UNEMPLOYMENT, INFLATION AND PAYMENTS BALANCES

Governmental Policies Concerning Unemployment, Inflation and Balance of Payments, 1951-52. (Published by the Economic Department of Economic Affairs. Price \$1 or 7s 6d, pp.viii+139.) Replies to a U.N. questionnaire dealing with domestic conditions of more developed private enterprise economies indicate that the rates of increase in real gross national product at 1950 prices were 5 percent to 9 percent for Australia, Belgium, Canada, France, Italy and the United States, while there was only a slight increase, or none at all, in the United Kingdom, the Netherlands and the Scandinavian countries between 1950-51. In the former set of countries increased national products were associated with higher levels of both employment and output per person in 1951. In 1952 employment in Canada and the United States was expected to rise less than gross national product on account of higher productivity of labour, whereas in the remaining countries no appreciable increase in employment was forecast. There were substantial increases in the quantum balance of exports and imports except in Australia, France, Sweden and the United Kingdom where these balances deteriorated in 1951. In this period rising military expenditure in the form of current and future goods and services had to be offset by reduced government expenditures on civilian goods and services and also by restricting building activity.

Real consumption declined in most countries except Australia, France and Italy. The result was a check in the rate of growth in real national product. This has been roughly reflected in the anticipated moderate increases in 1952 of 2 percent to 5 percent in the real national products of most countries over 1951. This happened in the following manner. In the United States and Canada the increase in taxation and the rate of saving hampered personal consumption. Increased taxation reduced personal consumption in certain European countries, whereas in other countries the increased rate of saving was responsible for a fall in the consumer demand. In the majority of European countries, however, consumption had to be curtailed because of a deterioration in the terms of trade. In 1952 Norway and Sweden expected a decline in the quantum balance of exports and imports, whereas Canada anticipated an increase. Britain curtailed imports for improving the balance of payments position. In all countries except the United Kingdom where the level of consumption was to remain unchanged, the total volume of consumption was expected to rise by 1 percent to 4 percent.

This decline in consumer demand was responsible for the accumulation of inventories, sales falling below expectations. But business adjusted its rates of operation to the lower demand so that industrial production in the first half of 1952 was below or level with that of 1951 except in France where it registered a rise of 7 percent. Living costs rose substantially in all countries in 1951 over 1950. But in spite of higher living costs, real wages in most countries except Denmark, Italy, the Netherlands, Norway and Switzerland, where they declined below the 1950 level, were at the same level as in 1950 or even higher. Only in France was the level of real wages below that prevailing in the latter part of 1951. This was possible because of increased productivity of labour, especially in Belgium, Canada, France and the United States.

AIR Selections, a quarterly, Vol. 1, No. 1. (Published by the Publications Division, Government of India. As. 12.) It is well known that a very considerable portion of the B.C.C.'s revenue is derived from its publications, chiefly the *Radio Times*, and the *Listener*. It is improbable that All India Radio can make a similar claim, and the issue of the quarterly under review suggests why. Neither a book nor a magazine, it is badly produced; and the editing is not much better, for some of the pieces, J. B. Auden's interesting discourse on the Himalayas for instance, read far from smoothly, the obvious reason being bad cutting. All the names are there—Jawaharlal Nehru, S. Radhakrishnan, C. Rajagopalachari, Acharya Narendra Dev, Verrier Elwin and Alain Danielou—but the whole selection suffers from the familiar deficiencies of the Publications Division: it can never make

up its mind whether its efforts are meant primarily for home consumption or for readers abroad; it can never rise above the temptation of preferring a Minister to a broadcaster; it can never entertain the mildest controversy, which is the very essence of free journalism. For the majority of these defects it will be unfair to blame Mr. D. Raghavan, the editor; they are the inevitable evils of a government monopoly of broadcasting.

History of Koh-i-Noor, by N. B. Sen. Published by the New Book Society of India, New Delhi. Rs. 3-12. For this book, "The Story of Koh-i-Noor" would have been a more appropriate title. The author's approach is only intermittently historical, and the gullibility with which he appears to have accepted legends and myths about the diamond shows little respect for the two essential qualities of a historian: caution and discrimination. The story itself is not without some interest; the Koh-i-Noor's origins are obscure, its present safekeeping with the Queen of England seems to be satisfactory to all parties concerned, but in between it was the subject of much adventure and intrigue, all of which is recalled by Mr. Sen in some detail. The upshot of the debate, however, is perhaps best summed up in a question asked by Victor Thompson in the *Daily Herald* and quoted on page 148: "So, who owns what?" Mr. Sen has convinced himself that the diamond is India's property, although it must be a matter of some disappointment to him that his passionate demand for its immediate return to India is not more widely shared. The production does little credit to the printer, the writing is not above that level.

Indian Railways is a new monthly magazine which hopes "to keep the railway user informed currently of the developments in railway commercial working and practice in this country, as well as abroad, with which he is intimately concerned, so that his well-informed and constructive suggestions will be helpful to the Ministry, in the formulation of their policy." Edited by Mr. G. Runga Raju, and published from 73, Dr. Alagappa Chettiar Road, Vepery, Madras, it is priced at Re. 1 a copy. The first issue contains articles discussing the need for a railway users' council, a historical review of the railway rates tribunal, notes on construction programmes such as the Khandwa-Hingoli link and the Renigunta-Madras metre gauge line, and an assortment of official edicts issued in recent months.

The Petroleum Story is a series of five booklets published by the Burmah-Shell Oil Storage & Distributing Co. of India, Bombay. "History" is the first and it deals with the early story of petroleum, how it was formed and what modern methods are being used to locate oil bearing strata underground. The second booklet entitled "Production" explains the techniques employed by oil men to pump oil out of the ground. "Refineries"—the third in the series—gives a comprehensive review of the working of an oil refinery and points out how modern research is helping to improve the existing methods. The fourth concerns "Transportation." It tells the story of how oil is carried from one end of the world to the other. "Distribution", the fifth and the last booklet, explains how the chain of distribution is kept moving and how important are the links in the chain for inland distribution.

Textile Industry in South India: Dalal & Co., Madras-1. Price Rs. 2. The booklet contains interesting particulars in respect of the working of South India textile mills in 1952. Summaries of the latest balance sheets of each company have been given indicating the capital, reserve, bonus issue, capitalisation per spindle or loom, profit per spindle or loom, etc.

RAILWAY EXPANSION PLANS DISCUSSED

UNCERTAINTY ABOUT TRANSPORT NEEDS UNDER FIVE YEAR PLAN

(FROM OUR OWN CORRESPONDENT)

A SPECIAL conference of General Managers of railways was held here this week. Some aspects of regrouping were reviewed and short and long-term projects to increase carrying capacity, including priorities for the second five year plan, were discussed in detail. Railway plans seem to be limited more by the shortage of materials than of money. There is another difficulty. While the Planning Commission has fixed targets of production for industries in the private sector, no precise indications are available in regard to the sources of supply of raw materials and the destinations for finished goods. With this basic uncertainty, it is proving very difficult for the railways to plan their future expansion. The steel expansion programmes, additional facilities to move coal and the north-south traffic bottleneck at Bezwada were discussed by the conference. The General Managers have been asked to put forward definite schemes of development for these and other requirements under the five year plan when they come for their usual autumn conference here in November. They have been asked to specify their requirements of money and materials and to say which projects they can complete within the remaining two years of the plan. As far as long-term plans are concerned, the linking of the metre gauge systems of north and south through Khandwa-Hingoli, a 180-mile project, has been given top priority. The Ahmedabad-Mesara line is being used to co-act and plans are in hand to double the track. Electrification of the Calcutta railway system, which may take 15 years to complete, is the third project on the list. A number of other surveys are also being prepared. The railways, however, are waiting for the Planning Commission to finalise its various industrial and river valley projects before they plan their expansion accordingly. Similarly, an indication in regard to the site for the new steel works has been sought from the Production Ministry. As far as track renewal is concerned, the railways have so far been working at the rate of 700 miles a year against a target of 800 miles. Progress has been slow because of the shortage of rails. Plans are also being considered to introduce diesel engines in areas where the water supply is short or unsuitable.

Lever Bros. Expansion Plans

Further details of Lever Brothers' expansion plans are now available. In July 1951, the company asked the Government of India for permission to import a continuous soap process plant with an annual capacity of 10,000 tons, which would enable more economical manufacture. The consumption of soap in India is low—only 12 ounces per head per year—because its price is high: a lower price would increase consumption substantially. Soap prices are high largely because of the dearth of raw materials and the use of old and wasteful manufacturing plants and soap-making processes. Contrary to expectations the recent reduction in import duties on vegetable oils, used in soap manufacture, did not result in lower soap prices. One hundred tons of moisture-free crude oil, containing ten percent glycerol, produces:

- (1) By the old method and with no glycerine recovery—150 tons of soap.
- (2) By the old method but with glycerine recovery—155 tons of soap.
- (3) By the modern continuous method—156 tons of soap.

The amount of glycerine recovered by the modern method would be 114 tons, as against 91 tons by the old method. In terms of money, one and three-quarter tons of glycerine is worth about Rs. 3,937-8. The modern plant would thus increase production, enable a higher money yield from glycerine, and thus make soap manufacture more economical. Lever Brothers' application, although "still under examination," has "almost been rejected" by the Government.

Parliament's Next Session

The next session of Parliament will commence here on 16th November. The last session opened with 28 Bills pending, of which 16 were put down for disposal and four for reference to select committees. Of these, only three Bills were passed—the Estate Duty Bill, the Collection of Statistics Bill and the Silk Board Bill. The coming session, therefore, will have 25 Bills pending for disposal from its budget session. During the last session, Central Ministries said that they intended to sponsor 34 new Bills, but only 12 were given priority for disposal or reference to select committees. Of these only two—the Andhra State Bill and a Bill to fix rates of estate duty—were passed and several were not even introduced. Among the Bills which were introduced were the Indian Companies (Amendment) Bill and the Children's Bill; the former is due for reference to a joint select committee. Meanwhile more bills are being prepared. Although definite indications are still awaited, the duration of the coming session is not likely to be more than six weeks. It is evident that only very urgent legislation will be taken up and most of the pending or planned

Bills will have to wait until the budget session which is expected to commence early in February.

No Decision at Agriculture Talks

The conference of State Ministers of Agriculture concluded here this week after passing resolutions containing for the most part only pious recommendations. Similar conferences are organised periodically by the Ministries of Education and Health and also, but many wonder whether they are of much use. It is asked, for instance, why a conference of responsible Ministers is unable to reach decisions which would be binding on their Governments. In the nature of things, such conferences make recommendations which are not binding and are generally not implemented. Apart from the waste of public money, they often raise false hopes which end in frustration. Despite the publicity given it, it is not clear whether the main aim of the conference was to discuss removal of the food deficit or improving the economic condition of the peasantry. It may be argued that the two are interlinked. The removal of the food deficit is an immediate need, but unless the peasantry is persuaded to invest its savings and improve its standard of living, its production might have an adverse effect on production. It is said that the United States distributed large quantities of fertilisers in order to increase rice production in a particular area in the Far East. At the end of the crop season, however the output of rice was unchanged because cultivators, knowing the value of fertilisers, sowed only 50 percent of the rice acreage.

Land Reform Policies

The record of land reform legislation in India might seem impressive judged by the far-reaching character of the changes, the areas and populations involved, and the time and manner in which reforms have been carried out. But discontent prevails because millions of agriculturists find that the benefits promised them are not yet evident.

Over large areas, tenants continue to pay the Government the rents they formerly paid to zamindars. They ask, "What have the reforms done for us?" To some extent indeed conditions are worse, as collections under the Government are stricter and more rigid and less affected by "humane" considerations. The setting up of the administrative and development machinery to implement these reforms needs to be expedited. The Planning Commission has prepared a note for Bihar suggesting that simultaneously with the taking over of estates a co-ordinated administrative-cum-development organisation should be set up. This should be done as quickly as possible. The Planning Commission points out that land reforms should be followed immediately by the establishment of a national extension service, which would give agricultural families all the assistance they need for increased employment and production, with short and medium term credit on an increasingly large scale. Only thus can the benefits of land reforms reach the people they are intended for. This programme, including the training and other arrangements, will take about five years to carry out if States devote their full energies to it and give it the highest priority in their annual budget. Such an organisation will also (i) see whether tenants actually obtain the benefits of lower rents conferred on them by law and (ii) assist them in increasing production and obtaining credit to buy out their landlords. Landless labourers will also benefit from increased production in the villages. Experience suggests that land reform measures have succeeded only in countries where efficient agricultural techniques have also been introduced and practised on the widest possible scale.

The laws passed in various States suggest that there is agreement on the main issues that arise out of zamindari abolition. One State, West Bengal, has yet to enact its Bill and this is being examined; the State presents problems different from those met with in other parts of India. In regard to tenancies all legislative proposals are agreed on the following:

- (1) The proportion of rent should be reduced to one-fourth or one-fifth (the old rent was usually half).
- (2) All tenants should be given permanent rights. In some States there is a feeling that the landlord should be enabled to resume a minimum holding for self-cultivation within a limited time. This is not considered necessary in others. States are left to deal with this particular issue according to their own conditions.
- (3) All tenants should be permitted to buy out their landlords on payment of moderate compensation spread over a period of years. On this point there is agreement on such questions as the amount of compensation, instalments etc. But views differ as to whether the acquisition of this right should be compulsory or left to the option of the tenants. Here, again, States are free to come to their own decisions, as long as the compensation fixed is moderate and the instalments given are liberal.

Many States have prescribed ceilings on holdings varying according to local conditions. In Uttar Pradesh the ceiling is 30 acres. This applies to future acquisitions, and on this point there is no difference of opinion. The question whether a ceiling should be made applicable to existing holdings has been discussed at great length with State Governments, representatives of political parties etc. It is in this field that differences exist. There are no accurate figures for the number of such holdings and their total extent. A rough estimate, made on the basis

of available data, is that with a 30-acre ceiling, about eight percent of the entire cultivated area would be included in such holdings. From this, the areas belonging to landlords who sublet their lands should be excluded as under tenancy laws their tenants are entitled to permanent rights and also to buy them out. No data is available on the proportion of this area. Very rough estimates are that they may be from 50 to 60 percent. Thus about four percent of the area—this will be less if the permissible 30 acres from each holding is excluded—remains to be dealt with. In regard to such lands, the Constitution requires payment of adequate compensation. For such lands, the Planning Commission proposes: (i) an interim solution; (ii) an ultimate solution to be devised for each State after a census of lands falling under this category has been conducted.

The interim solution is that each State should enact land management legislation prescribing standards of cultivation and management, and the obligations to be observed by all landlords, and also setting up the necessary machinery for land management. Farms above a limit to be fixed (which may be the limit for resumption of personal cultivation) should be divided into two groups, namely, those which are so efficiently managed that their break-up would lead to a fall in production, and those which do not meet this test. In the case of the second group of farms, which will form the vast majority, the Government should take over management for the settlement of landless cultivators in co-operative groups and otherwise. Where assumption of management is a penalty for failure to maintain prescribed standards of cultivation, settlement of tenants can be made without payment of compensation. There will thus be left only those large holdings which are well managed and which under the legislation should be made to serve social and economic purposes—grow good seed for distribution and in other ways assist in the spread of good agricultural techniques. This in any case will only be a very small area in the aggregate—possibly 2 million acres in all—and their number will steadily diminish under the operation of Hindu Law, the Estate Duty Act, etc. As an ultimate solution, the Planning Commission has suggested that if, after a regular census of lands has been taken, any State finds that public interest demands the acquisition of such efficiently managed holdings, and their redistribution, it can then undertake legislation. The Planning Commission will shortly address a letter to the States suggesting the lines on which such a census should be conducted.

The areas available for distribution in the whole country will be so small and the numbers wanting lands so large that, unless a careful scheme is formulated beforehand, there might be abuses on such a scale as would discredit land reform altogether. What has happened in some areas should serve as a warning in this respect. For landless labour, the following measures are suggested: (i) minimum wages; the fixation will be completed by the end of this year for several areas and classes of employment; (ii) priority for assignment of waste lands and arrangement for cultivating these by co-operatives of landless labourers; (iii) special ameliorative measures—housing, sites etc.; and (iv) labour colonies.

A provision of Rs. 2 crores has been made in the five year plan for co-operatives of landless labourers and labour colonies. One scheme of colonisation in Bhopal has been worked out and accepted. The following programme of work will be taken up in coming months:

(i) Objective studies by research groups of the steps taken in States to implement the reforms and the results of such implementation; these will be conducted in close consultation with the State Governments.

(ii) Publication of the laws passed in States on land reform, rules etc. (one volume has been published by the Agriculture Ministry).

(iii) Publication of a small compact volume describing clearly the laws passed in States.

The setting up of an advisory panel of non-officials interested in land reforms is also being examined.

Civil Pilot Training Report

Printed copies of the report of the committee on the training of civil air pilots were released to the public this week. The report contains the observations of Mr. T. P. Bhalla, a member of the committee, on its terms of reference. The inclusion of these observations in the body of the report raises an important issue. Mr. Bhalla is a former Director-General of Civil Aviation who was a member of the committee but was reverted back to Uttar Pradesh as Inspector-General of Police before he could sign the report. The committee says that Mr. Bhalla was not available at the time of signing the report, so it unanimously decided to submit the report without his signature. The issue is whether it was procedurally correct to include Mr. Bhalla's note in the report without any reference to the committee, which included one of Mr. Bhalla's deputies. Notes of dissent are a common feature but they are incorporated in the report of a committee after it has been given the fullest opportunity to discuss and offer its comments on them. The procedure, adopted by the Government has deprived the committee of an opportunity to have its say on Mr. Bhalla's observations. The fact that the committee had dispersed by the time Mr. Bhalla's observations were available does not justify this procedure. Furthermore, Mr. Bhalla in his note says that he had nominated Mr. D. Chakravarti to represent his views to the committee.

London

HALF-YEAR'S FINANCIAL RESULTS ENCOURAGING SPENDING CUT COMPENSATES FOR TAX REDUCTIONS

(FROM OUR OWN CORRESPONDENT)

3rd October.

THE latest Treasury returns present the financial picture for the first half of the current year to 30th September and on the whole this is encouraging. There was a shortfall of revenue from ordinary expenditure £277 million, against a deficit at the same stage last year of £293 million. Ordinary revenue (including self-balancing items) for the six months was £1,821 million and ordinary expenditure (including self-balancing and sinking funds) £2,098 million, against comparable figures for the same six months of the previous year of £1,854 million and £2,147 million. In this period, therefore, the Government has cut its expenditure by £49 million and taken £33 million less in taxes, with the principal falls in income tax and profits tax. For the full fiscal year the Chancellor expects to be £21 million better off, with a surplus of £109 million against a realised surplus of £38 million last year. Taking in the capital accounts "below the line" where expenditure is mainly on such items as loans to local authorities which tended to get out of hand last year, there is evidence of much closer control. The deficit to date is £224 million against £296 million in March-September, 1952. With the deficit on ordinary revenue, this gives an overall deficit of £502 million for the six months, against £589 million last year. Just to complete the picture, it may be mentioned that last year's "below the line" deficit amounted to £524 million for the full year, and this is estimated to rise to £549 million by the end of the current fiscal year.

As expected, details were announced this week of the large financial operation which the Treasury embarks upon next week to deal with the outstanding £577 million of 1½ percent Serial Funding Stock, 1953, which matures on 14th November and a large proportion of which is believed to be held by the banks and discount houses. It is in two parts. In the first place holders are being offered conversion into either equal amounts of 1½ percent Serial Funding Stock, 1954, coupled with a cash payment of 7s. for every £100 they hold, or equal amounts of a new 2½ percent Serial Funding Stock, 1957, coupled with a payment of 15s. for every £100 of stock held. The offer remains open until next Saturday, after which unconverted holdings will, of course, be allowed to mature and be paid off in cash. The second part of the operation consists of an offer for cash of a new 3 percent Exchequer Stock, 1962-63, at a price of £99½ percent, payable in full on application and with the novel feature that no limit has been set to the amount of this stock which may be issued. Application lists open and close next Monday. The operations, which are obviously technical, have been carefully gauged and are expected to prove successful. A substantial part of the 1953 stock is likely to be converted, while the cash loan should produce enough from the banks and institutional investors to provide funds for the redemption of the rest and, in the event of a response from the general public as well, leave the authorities with a small balance to set against their quite heavy borrowings in recent months against Treasury Bills. It is apparent that no serious attempt is being made at the moment towards Treasury Bill funding, while the £413 million of National War Bonds which fall due for repayment next March are to be dealt with in a further operation later on.

The Labour Party and the T.U.C.

Margate is very much in the public eye at the moment. The Labour Party Conference has been meeting there during the past week. The Conservative Party Conference moves in for the week ahead. The outstanding features of the Labour Conference, from the economic standpoint, were, firstly, the convincing defeat of the extreme Left view favouring widespread expansion of nationalisation and adherence instead to the more cautious approach recommended by the National Executive's programme as outlined in *Challenge to Britain* and demanded by the Trade Unions; and, secondly, Mr. Tom O'Brien's suggestion, when offering fraternal greetings from the T.U.C., that the time had come to alter the constitutional structure of the Labour movement so as to separate the activities of the T.U.C. from those of the Labour Party without destroying the underlying unity of the movement. The latter can only mean that the T.U.C. should divest itself of its present political activities and concentrate entirely on industrial affairs, thus leaving it free to deal without embarrassment with the Government of the day and also with industrialists. Such a move, if Mr. O'Brien can carry his colleagues with him, would not only enhance the standing of the T.U.C. but also go a long way towards easing industrial relations in so far as they are embittered by political considerations.

It would be as well, perhaps, not to anticipate the Conservative discussions next week. With Sir Winston Churchill and Mr. Eden both back from their enforced absences, speculation runs to all sorts of dramatic developments. A distinct possibility, however, is some announcement as to

the possibility of all rationing coming to an end next year. Sugar came off the ration this week after almost 14 years, bringing a saving to the taxpayer of more than £200,000 a year and the elimination of about a million forms which hitherto had to be filled in. Wholesale prices will still be controlled, but with world prices on the downgrade it is not expected that retail prices will be affected to any great extent. Still on the ration are meat, bacon, butter, margarine and cheese, and of these commodities only butter is in short supply and is likely to remain so. The others are all in plentiful supply, at a price. That is one problem which has to be solved, and the others are the distribution of welfare foods, and the payment of guaranteed prices to farmers while keeping down subsidies.

Second Iron and Steel Deal

A second deal has been put through by the Iron and Steel Holding and Realisation Agency prior to the first public offer of steel shares. This is the sale to Tube Investments of all the shares of the Round Oak Steel Works, of Brierley Hill Staffordshire, for £1,603,574 (against the £1,489,938 in Iron and Steel stock which was paid for the undertaking on nationalisation, on the understanding that the Round Oak Company repays within one month the secured loan of £3.2 million from the Finance Corporation for Industry and the unsecured loan of £1 million from the Iron and Steel Holding and Realisation Agency. Once again there is little in the transaction to guide the market. Tube Investments have repeatedly drawn attention to their inability to use their fabricating works to full capacity owing to shortage of suitable steel supplies. They intend to expand the capacity of the Round Oak Works to meet all or part of this deficiency while permitting them to continue producing the types of steel with which they have long served their existing customers. The special factors involved may well have influenced the negotiations.

B.E.A.'s Accounts

British European Airways suffered a not dissimilar experience to that of British Overseas Airways during the year ended last March. Revenue was up by 21 percent at £13,128,080 against £10,817,687 in the previous year. Unfortunately, however, expenditure rose to £14,283,724 against £12,059,665, or by 18 percent. The loss on operations was £1,155,644, which was 7 percent less than the loss in the previous year, but the addition to this of the interest on increased stock issued and inclusion of the results of associated companies increased the net loss for the year to £1,489,131, which was 21 percent higher than the year before. During the year B.E.A. carried 1,400,122 passengers for 373 million passenger miles, which is pointed out, "are, by a large margin, the highest passenger carryings of any airline in the world outside the United States," while in the matter of the number of passengers carried the Corporation is to-day the seventh largest airline in the world. The number of passengers carried was 23 percent higher than in the previous year and the passenger mileage 20½ percent higher. Freight also showed an increase of 14½ percent. Once again it was the load factor which served to upset the apparent. This dropped from 64.7 percent to 62.9 percent. To cover operating costs it would need to rise to 86.4 percent. The report, itself, does not expect any startling improvement in the financial position in the near future, but Mr. Peter Massfield, the Chief Executive, who explained it to the Press, said that relief of such burdens as the fuel tax, low mail rates, high landing fees and the need to run unprofitable lines as a social service, from which the Corporation now suffered, would go a long way to change the outlook, which was already improved by the profitable operation of the new Viscount aircraft with gas turbine engines and the possibility of utilising a new version of the *Elizabethan* (originally the *Ambassador*) to be fitted with Napier Eland turboprops.

Nationalised Electricity Profits

The report of the National Coal Board has been followed this week by that of the other B.E.A., the British Electricity Authority. This shows that it earned a surplus of £7,280,823 in the financial year ended last March—the biggest surplus earned in any of the five years since nationalisation—to bring the aggregate of the central authority and the fourteen area boards to over £28 million. The central authority's surplus was £5.8 million, compared with £4.3 million in 1951-52, and the area boards contributed £1.5 million, compared with a deficit of £1.3 million in the previous year. As in the case of coal, the improvement in the financial results was due mainly to higher charges. Lord Citrine, the Chairman, reviewed the working of the Authority for the benefit of the press, and after paying tribute to the "young and virile industry" which had been taken over, said that compared with five years ago 2,171,000 more consumers were being supplied to bring the total to nearly 14 million, while the consumption had increased by 47 percent to 52,250 million units, equivalent to 1,100 units per man, woman and child in Great Britain. Looking forward, on the other hand, he anticipated development falling in arrears of demand unless the capital programme was increased substantially—and that could not be done out of revenue!

Tinplate Prices

The Minister of Supply has made an order which increases the basis prices for tinplate and temperplate by 1s. 8d. and 6d. a box, respectively, and for the appropriate extras by corresponding amounts, but maximum prices remain unchanged.

Uttar Pradesh

DISSATISFACTION ABOUT CANE PRICES

DIVERSION FROM SUGAR TO GUR MANUFACTURE

(FROM OUR OWN CORRESPONDENT)

Lucknow, 3rd October.

ALTHOUGH the Government of India has fixed the minimum price of sugarcane for the next two seasons, growers in U.P. are hoping that the matter will not end there. During his brief visit to Lucknow last week, the Union Food Minister, Mr. Rafi Ahmed Kidwai, was questioned by representatives of the sugarcane growers on the prospect of a further upward revision of prices. Mr. Kidwai said that the Centre was committed to the present rates although the States were at liberty to secure a higher minimum, if they could. He drew attention to the case of Madras where the growers last year, owing to the efforts of the State Government, shared in the increased earnings of the factories, despite the minimum prices for cane. He also said that cultivators, if they so desired, were free to make gur and thus secure better prices. It may be recalled that last year the minimum price of cane was reduced by As. 7 per maund. The growers here say that cane production will not be economic until this cut is restored in full. The new price fixed by the Centre has restored only As. 2 of the original cut.

By shifting the onus for a further increase, if any, to the State Government—not to mention the encouragement he has given to the diversion of cane for gur manufacture—Mr. Kidwai has raised a few inconvenient questions both for the State Government and the sugar industry. U.P.'s Chief Minister, Pandit Pant, has repeatedly told cane growers in the State that unless they supplied the bulk of their production to the factories, a move by the industry to other parts of the country would be inevitable. How serious this problem of diversion of cane to gur manufacture has become should be clear from a statement by Bihar's Minister for Industries, Mr. Mahesh Prasad Sinha. He said that whereas in Bihar three-fourths of the cane grown was sold to the mills and only one-fourth found its way to the gur industry, in U.P. exactly the converse was the case. Mr. Kidwai himself recently stated in the Council of States that the problems of the Indian sugar industry could only be solved by a re-distribution of the existing factories. Uttar Pradesh and Bihar would find their economies seriously upset if this were to come about and they have joined in denouncing the move.

Balance of Cash and Food Crops

The main argument against any further increase in cane prices is that it would disturb the equilibrium that should exist between cash crops and food crops. Some statistics have been compiled by the growers to show that this fear is baseless, but it should be remembered that these figures, together with the conclusion, are not exactly free from partisanship. As it is, a certain disparity exists and the case for an increase in cane prices derives from the fear that otherwise the cane would be diverted in ever increasing quantities to gur production. During the 1952-53 season, nine factories in U.P. did not work at all. Gur, it would appear, has been finding favour not only with the cultivators but also at the official level. For instance, a proposal is said to be under active consideration at the Centre to hand over the gur and khandasari section of the Indian Institute of Sugar Technology to the Khadi Board. The sponsors of the move think that gur and khandasari fall in the category of cottage industries. The Government of India is also said to be considering a proposal to take over the Institute which was recently shifted from Kanpur to Lucknow from the Indian Central Sugarcane Committee and to run it as a Government concern, enlarging its scope and activities.

Industry's Complaints

At the last meeting of the Joint Control Board at Ranchi, U.P. and Bihar subscribed to the view that the basic price of sugar should be fixed at Rs. 30 instead of Rs. 27, and that the price of cane should be fixed in relation to that of the finished product. The sugar industry has been urging that Rs. 27 is not an economic price for units crushing below 30 lakh maunds of cane, and that if an increase of Rs. 3 is accepted Rs. 2 will go to the cultivators and Rs. 1 to the industry. At this rate, and if gur prices do not also rise in sympathy, it is argued, there is a fair chance not only of maintaining but even increasing sugar production in the coming seasons. The decision of the Railway Board that the freight on cane moved by rail will in future enjoy no privileges and will go at the ordinary rates, which come to an additional As. 1 per maund, has also been criticised.

Sugarcane growers, however, are not prepared to wait for an increase in sugar prices as they or down they lose in any case. A deputation told Mr. Kidwai that though the official price of sugar was fixed at Rs. 27 the actual price ranged between Rs. 29 and Rs. 33. The growers did not benefit by this increase and there is no guarantee that the official price will not be ineffective in that an increase in cane price should be unconditional. In recent years, in U.P. and Bihar there has been a decrease in cane acreage but also in the percentage of sugar content of cane. In both these respects, Bombay and the Deccan.

Bombay

COMMUNITY PROJECT PLANS IN BOMBAY

NEW STATE OF UNITED MAHARASHTRA MOOTED

(FROM OUR OWN CORRESPONDENT)

5th October.

THE creation of linguistic States and the celebration of Mahatma Gandhi's birthday overshadowed economic activities here this week. The latter was marked by the inauguration of 20 national extension service blocs and six community projects in Bombay and three blocs and one project in Saurashtra. More will be created in 1954-55 and 1955-56. In Bombay the work on the projects started last year was most intensive in Gujarat where the emphasis is on educational and agricultural activities. The authorities claim that these projects have already gone some way to overcoming the natural unco-operativeness of the peasants. The achievement, though not spectacular, gives promise of improved economic development in the rural areas. Small-scale bunding for irrigation has been a prominent feature of community project plans in Bombay. Sixty such bunds have been designed at a cost of about Rs. 15 lakhs and will help to irrigate about 12,000 acres of land. One-third are to be financed by the Central Government and five, which are nearing completion, will be ready before the next agricultural season. Another line of attack on rural backwardness through these community projects is the forming of co-operatives which, besides stepping up food production and the development of cottage industries, undertake other contributory schemes such as the distribution of seeds and fertilisers, grain banks, rural housing, Khadi, medical aid, pest control and similar welfare activities. Money is being spent lavishly on these selected areas and some response from the people living there has been in evidence, though some observers doubt whether many of the activities sponsored at present by officials and financed from Government funds will survive after their assistance is withdrawn at the end of the project period. There are also complaints that these projects are being used for party purposes.

United Maharashtra

It is, however, talk of a new State of United Maharashtra or Marathi Pradesh, with Bombay as its capital, which has attracted most attention here. While there is no open hostility to the creation of separate States for Maharashtra and Karnatak, the business community in Bombay is naturally apprehensive of its fate, should this come about. Dr. Punjabrao Deshmukh, Central Minister for Agriculture, has been openly advocating—in the opinion of many, too freely for a Central Minister—a new State of United Maharashtra, with Bombay as its capital. On the other hand, Mr. S. K. Patil, Congress leader in Bombay, has adopted a very cautious and discreet attitude regarding the fate of the city. The Bombay Legislative Assembly which debated a non-official resolution demanding the formation of a United Maharashtra State, including Bombay, is definitely postponed. The consideration of this question at the instance of Mr. Morarji Desai, Chief Minister, Mr. Desai argued, in moving his motion for postponement of the question, that any discussion was bound to bring in its wake controversy not only in the Assembly but in the State as a whole. He advised the Assembly not to disturb the even tenor of administration by initiating a debate on the subject.

Complacency about Unemployment

The Assembly also discussed this week another non-official motion expressing grave concern over growing unemployment. Speaking on behalf of the Government, Mr. Shantilal Shah, State Minister for Labour, took a line which, in the opinion of many, was more complacent than realistic. Speaking in the Assembly a few weeks ago, Mr. Shah virtually admitted that there was increased unemployment in the State, though he qualified this remark by stating that actually more employment was being provided by industry than in 1939 and that though the number of unemployed was greater now, it was because of the growth in the population. Last Thursday Mr. Shah changed his ground and denied that there had been any increase in unemployment in the State during the last few years. He attributed the belief in growing unemployment to propaganda carried on by industrialists for their own benefit. He also accused the Opposition parties in the Legislature of creating panic amongst workers by raising the bogey of unemployment. The Labour Minister claimed that the Government had taken all necessary steps in its power to afford scope for wider employment. His Government had given a price premium of 25 percent to products of cottage and handloom industries. The Government had also issued instructions to all its departments to use indigenous goods in preference to foreign goods and announced that work to relieve distress caused by unemployment would be started in due course in the rural areas.

Unbusinesslike Methods

The usual complaint of the business community that some of the Ministers, even Finance Ministers, entertained fantastic ideas about busi-

ness methods was amply proved by some of the things said by two Ministers of the State Government in all seriousness this week in the Assembly, in the course of a debate on the Public Accounts Committee's report for 1949-50. This is the latest report to be presented to the Assembly—which in itself constitutes evidence in support of the charge of unbusinesslike methods on the part of the Government. But the Finance Minister, Dr. Jivraj N. Mehta, confirmed what up till now was only a suspicion on the part of the public and the business community. Denying that the Government attempted to gloss over mistakes or deficiencies, Dr. Mehta disclosed that the losses suffered by his Government on account of State-trading amounted only to Rs. 12 in every Rs. 1 lakh. He gave himself away when he said that any business firm would be proud of such an achievement.

The keeping of proper accounts whether there be a profit or loss in any business undertaking is accepted as a *sine qua non* of any good business concern. That this is not regarded as of serious import was revealed by another member of the Government, Mr. B. J. Patel, who is Deputy Minister for Public Works, and who is in charge of the Bombay State Transport Corporation. Replying to the criticism that the Corporation did not try to maintain accounts from its inception, Mr. Patel disclosed the value he attached to this matter by airily admitting that though this was the case in 1949, his Government and the Corporation were making progressive efforts now to maintain the accounts as perfectly as possible.

Madras

CRITICISM OF PLANTATION POLICIES

SUGARCANE PRICES AND YIELDS IN SOUTH INDIA

(FROM OUR OWN CORRESPONDENT)

By Air Mail.

THE difficulties of the three major industries of South India—plantations, textiles and sugar—have received considerable attention recently. Plantation problems were discussed at a conference convened by the Madras Minister of Industries and Labour, where coffee, tea and rubber planters and representatives of the Governments of Madras, Mysore, Travancore-Cochin and Coorg met. Planters criticised the Coffee Market Expansion (Amendment) Bill, and particularly the nomination of a cost accountant to study factors affecting the cost of production with a view to fixing the price of coffee. They thought that an enquiry into the cost of production was properly a function of the Tariff Commission; they also urged that the revenue should be specifically earmarked for the development of the coffee industry. Regarding the future of the Coffee Board, they expressed the view that the existing agencies should not be disturbed though it might be possible to improve them in certain details. As for the basic price of coffee, the planters argued that for a crop with highly variable yields, the cost of production should be based not on only one year but on a series of years.

The Rubber Production and Marketing (Amendment) Bill was also criticised on similar grounds. It was suggested that surplus rubber should be bartered with goods from other countries. The planters also made the point that several provisions in the Coffee and Rubber Bills reduced the importance of State Governments. It was later decided, during talks between the Madras Industries Minister and the Chief Minister of Coorg, that in view of the crisis in the coffee industry, particularly the heavy accumulation of stocks, the Government of India should be requested to consider the decisions reached at the conference. The Chief Minister of Coorg told the conference. The Chief Minister of the Indian Coffee Press that but for the action of the Indian Coffee Board the price of coffee, now about Rs. 200 a cwt. for Plantation A, might have shot up to Rs. 300 a cwt. The price of coffee in the retail market sometimes rose to Rs. 3-4 a lb. although members of co-operative stores were still able to get supplies at approximately the Board's sale price; a member of the Board revealed that there was a proposal to issue notifications about the correct retail prices of coffee, as was done in the case of cigarettes.

Coffee Dealers' Reply

The Registered Coffee Dealers, Bangalore, stated that they were fully co-operating with the Coffee Board. If the price structure of the different sectors of releases by the Coffee Board were examined, it would show that the coffee dealer who bought in the pool auctions found it hard to make even a nominal profit of one percent on his investment; sometimes it was difficult even to cover costs because of competition from the other three sectors of the coffee trade. Some dealers did not tender bids because they genuinely feared that they might not be able to sell the coffee they purchased at the pool auction. They said that it was strange to learn from the Minister of Commerce and Industry, who accused dealers of not co-operating with the Board in the matter of pool auctions, that propaganda units and co-operative societies were not lifting their allotments in spite of the preferential basic rates fixed for them and the huge margins they are allowed. Coffee dealers expected a reduction in prices but

were unable to guess what new "fair price" might be fixed for the internal market, so they were adopting a cautious policy lest they suffer as they did in October 1952. The Registered Coffee Dealers also stated that the large stocks of coffee would lower the consumer's price only if there was no floor release price. They urged the Union Commerce Minister to evolve a suitable marketing policy so that the different sectors might serve the consumer properly without acting as a restraint on one another. A final decision on the basic prices for the 1952-53 and 1953-54 crops was necessary to revive confidence in the market.

Sugar Prices and Cane Yields

Two long-standing problems of the South Indian sugar industry—reconciliation of the interests of cane growers and sugar producers, and the low sucrose content of sugarcane—were referred to when prizes were distributed under the Sugarcane Crop Yield Competition. The Minister of Agriculture, Madras, appealed to growers and mills to produce cane and sugar more economically. The Director of Agriculture was glad that growers and factory owners had come to an agreement early this year recognising the South Indian Sugar Mills' Association formula to determine the price of cane according to its sugar content. This formula, he said, was likely to find acceptance in other States. He hoped that the next competition would lay stress on the sugar content of cane. A sugarcane specialist, referring to the charge that the cost of cane in this State was higher than in other centres, said that the results of the Competition showed that the cost of production could be lowered by increasing yields through scientific techniques of cultivation. He regretted that the financing of research in this State had been on a restricted scale. Incidentally, the farmer who got the first prize achieved the remarkably high yield of 107 tons 270 lbs. of sugarcane per acre. The average length of the millable cane was 18 to 19 feet. He had used 20,000 three-budded sets three links (nine inches each) apart per acre, and had applied large quantities of bulky organic manure, 25 cartloads of farmyard manure and 25 cartloads of press mud before planting. About 230 lbs. of nitrogenous manure was also used in three doses.

The Managing Director of Parry and Co. some time ago said that a considerable amount of sugar produced in South India came from refining palmyra jaggery. Today there were 12 sugar factories in Madras State which during their best years produced 91,000 tons of sugar. He regretted that there was not much co-operation between the cane-growers and mills. The latter, he said, could only give growers a certain percentage of the value of the sugar content of the cane. The better the quality of the cane, the higher the price cultivators would receive. Unfortunately, he added, no machinery had yet been devised in India whereby the quality of the cane delivered by the grower could be assessed. It still paid the grower, by the application of large quantities of nitrogenous fertilisers to produce large quantities of cane with relatively little sucrose content. The future of the sugar industry in South India therefore depended on finding a method of reconciling the interests of the cane growers and sugar producers. As growers usually were smallholders, he suggested that they be persuaded to combine into groups so that 20 or 30 groups could be treated and handled as one unit; the factory would then be able to pay each such unit according to the quality of the cane supplied. This looks like a variation of the proposal advanced by Sir T. S. Venkataraman long ago. "The manufacturer," said the Managing Director of Parry and Co., "now stands Alone between the Scylla of the grower demanding high prices for cane and the Charybdis of the consumer wanting low prices for sugar. He cannot hope to win the consumer to his side, but he can and must win the grower." For this, he urged growers to concentrate on quality instead of quantity.

Compensation for Textile Workers

The Industrial Tribunal is just investigating the question of compensation for involuntary unemployment in the textile industry as a result of the power cut which was in force before the monsoon this year. The monsoon fortunately has brought abundant water to the hydro-electric reservoirs of the State and any power cut therefore is now improbable. Under the circumstances, workers might receive generous relief for their former period of involuntary unemployment.

EXPORT OF WOOL WASTE

In a Press Note dated 27th March, 1953, it was announced that exports of wool waste would be licensed freely for shipment up to 30th September, 1953. As a result of a further review, the Government of India have decided to extend the free licensing of wool waste for shipment up to 31st December, 1953.

TAX COMMISSION'S ENQUIRIES ON EXPORT DUTIES

IN the questionnaire issued by the Taxation Enquiry Commission set up by the Government of India several questions are included on the subject of export duties, the circumstances in which they should be imposed, measures to give them greater flexibility to meet changing conditions, the use of their proceeds for promoting export trade and so on. In their reply the Bengal Chamber of Commerce and Industry are very emphatic in the condemnation of export duties in general and they make special reference to the export duties on jute manufactures. In the first paragraph of their reply they say: "Export duties are a menace to the country's existing export trade and to its future prosperity. Even in the case of a few material or manufactured articles in which the exporting country has a monopoly, the recourse to export duties causes resentment on the part of the foreign consumer and a search for substitute materials. If, on the other hand, the goods concerned are not a complete monopoly, but represent a very large portion of the total world supply, the export tax can still probably be passed on to the consumer, but the rise in prices will act as a bounty to competing manufacturers from other countries who will in addition by undercutting always be in a position to sell their total production. The increase in prices may also lead to the forfeiture of goodwill and will stimulate attempts to find cheaper substitute materials. Finally, in the case of export goods in which there is considerable world competition, the export tax will probably not be passed on, will become in fact a tax on the exporter and will in the long run reduce exports."

In the case of the export duties on jute manufactures the duties did indeed become a bounty to foreign manufacturers who were thus enabled to modernise and expand their plant. Also they were able to increase their production and sell their total output while Indian mills have had to curtail production and have lost ground in foreign markets.

In the second paragraph it is stated that "in many cases it has been claimed as a justification of export duties that they are a temporary measure to deal with a temporary situation". That claim was made when the export duties on jute goods and raw jute were first imposed in 1916. The Chamber go on to say that "it is general experience, however, that, once such duties have been imposed, it is a matter of great difficulty to ensure their withdrawal and that they tend to continue long after any economic justification there might have been, originally has disappeared". That again is the case with the export duties on jute manufactures. The Chamber thereafter goes on to discuss the question with particular reference to the effect of the export duties on jute manufactures but readers of *Capital* are familiar with the arguments for the total abolition of the duties so they need not be repeated here. The Chamber, however, state that they are strongly in favour of the complete withdrawal of all export duties and particularly those on the export of jute goods.

Exports "on Consignment"

In recent notes we have referred to the continuation of the export of jute manufactures to the United States "on consignment". That practice is understandable in a rising market when the exporter hopes that he will get a better price by delaying the sale or if he is endeavouring to take advantage of a temporary shortage in the importing country to get a premium price for the goods. People have, however, been puzzled by the shipment of goods to the U.S.A. when the market was falling. An explanation is now offered that this is being done because of the interpretations being put on certain sections of the Indian Income Tax Act by which the Indian income tax authorities are attempting to make non-resident buyers liable to Indian income tax and to treat the exporters as the agents for income tax purposes of the buyers. Foreign buyers are, therefore, showing a preference for arranging their transactions so that the title to the goods is obtained in their own country and not in India. It is said that this is also causing some diversion of business from normal channels and it may also influence consumers towards buying hirlap manufactured in Europe rather than in India.

Pakistan Jute Forecast

The official final forecast of the jute crop in East Bengal gives the acreage sown as 760,245 acres and the estimated yield at 25,02,865 bales. Even in Pakistani circles no credence is given to these figures and they are put down as Government propaganda.

THE JUTE MARKETS

PRICES IMPROVE: GENERAL
OUTLOOK MORE CHEERFUL

Since our last report the market has undergone a considerable change. After the usual end-of-the-month steadiness in the market for manufactured goods there was a mild relapse, and for a time it looked as if conditions similar to those at the beginning of previous months were to prevail in October. Bazar sentiment appeared, however, to

have changed and bears were reported to be actively covering. Various reasons were given for this, such as expected short production because of strikes, expected big reduction in the end-of-October stock figures and more interest being taken by mills in raw jute while at the same time some resistance to lower jute prices began to show itself. It is said that some groups have been refraining from buying jute because of the half-yearly closing of their books at the end of September and that, in consequence, they will be in the market in October. It seems, in any case, fairly certain that mills must buy in the near future more than they have recently been buying if they are to ensure a steady flow of jute to the mills. Whatever may be the reason the general outlook is certainly more cheerful than it has been for some time.

Manufactured Goods: On the last day of September the market opened steady but under selling pressure from mills for heavy goods for forward shipment closed easier. On the first day of the new month, when it was expected that the market would fall further, some enquiry from overseas coupled with bear covering produced firmer conditions in spite of selling pressure from mills for January-March. Mills were reported to have sold fair quantities of B Twills, heavy Cees and Cornsacks as well as hessian but were still sellers. Demand for hessian for near delivery was active, especially for 40" 10 oz. which is in short supply. The market continued firm over the week-end and mills were able to sell considerable quantities for October-March. It is reported that some local dealers have covered their bear accounts and gone on the bull tack but it is also stated that it is difficult to get dependable local buyers for forward shipments. At the time of writing the market is firm and prices show a substantial rise over those of a week ago though at the close on Tuesday they were below the best. After the close prices fell further on rumours in the Katni market that Pakistan had decided to abolish the export duties on raw jute.

On Wednesday morning quotations are irregular because of the holiday but may be given as under and the market is steady.

	Ready	Oct.	Oct.-Dec.	Jan.-Mar.
40" 8 oz.	Rs. 35-5	35-4	34-8	33-8
40" 10 oz.	Rs. 44-4	44-0	43-2	42-0
2 Twills	Rs. 93-12	93-12	94-8	94-0
Heavy Cees	Rs. 96-0	96-0	95-8	95-0
Cornsacks	Rs. 112-0	112-0	111-0	110-0

Raw Jute: At the beginning of the week under review the market was quiet with mills indifferent and sellers pressing for business and prepared to accept any price approximating to their quotations. With evidence of changing sentiment in the market for manufactures, sellers began to show reluctance to make any further reductions in jute prices which were already below the parity of mofussil prices. Reports from the mofussil also indicated resistance to lower prices there and a contraction of imports. With mills able to sell fair quantities of manufactures they became more actively interested in the raw material and good business has been transacted in the past few days in all classes of jute at rising prices.

The following business has been reported:

	Rs. 22-0 to Rs. 24-0 basis Bots	Oct.-Nov.
Northern	Rs. 22-8 to Rs. 24-0	Do.
Dhubbri	Rs. 21-8 to Rs. 23-8	Do.
Assam	Rs. 23-0 to Rs. 24-3	Do.
Daissee	Rs. 22-0	Do.
Murshidabad	Rs. 19-8 F.A.Q. Old and New Crop	Do.
Tossa	Rs. 175 per bale	Do.
Mill Reds	Rs. 130	Do.
Dundee Daissee	Rs. 58-0 to Rs. 59-0 for Pakistan NC's	Do.
2/3 L.G.		Do.
Cuttings		Do.

Imports into Cossipur show signs of falling off and, in sympathy with the mill market, prices are fully one rupee higher. Quality of the arrivals is poor and good quality is difficult to obtain.

Sellers in the Calcutta market are now reserved and asking for higher prices. Quotations on Wednesday morning are as under:

	Rs. per md.	Oct. and/or Nov.
Lower Assam	24-8	Do.
Upper Assam	24-0	Do.
Northern	24-0	Do.
Purnea	23-8	Do.
Murshidabad Tossa	23-8	Do.
Daissee (Sheoraphuli)	24-8	Do.
Daissee (ex Calcutta)	24-0	Do.
Daissee Mesta	20-8	Do.
Western Mesta	22-8	Do.
Bimil	F.A.Q. 21-0	Do.
Mill Firsts	150-0	Do.
Mill Lightnings	135-0	Do.
Dundee Daissee 2/3 SG	150-0	Do.
Dundee Daissee 2/3 LG	135-0	Do.

	Rs. (1) per md.	Oct. and/or Nov.
Jat	26-0	Do.
District	25-8	Do.
Northern	25-0	Do.
Cuttings NC	62-0	Do.
Cuttings MC/TC	60-0	Do.

Branches in Orissa—Balasore, Sambalpur.

Mofussil: Imports are reported to have begun to decline. As a result of the improvement in the Calcutta market kutcha balers have resumed buying and prices are reported to have risen by one rupee per maund in most districts. Quality is poor. In north Bengal districts the bulk of the imports consist of samla jute while in Upper Assam most of the jute carries exceptionally heavy root and the fibre is coarse and broken. In the daissee districts the quality of present arrivals is good but there is excessive moisture. Mills are buying heavily at the jetties and mill gates and paying full prices for daissee in good condition.

In Pakistan the market has been easy most of the week with little demand from abroad and local business very poor. In the last day or two there has been a steadier tone in sympathy with Calcutta and prices are quoted higher, though, as yet, there is no response from overseas. Imports are smaller. The quality of present arrivals is very poor and, in the opinion of many of long experience, this is the poorest crop for years. In the main markets business is hampered by lack of storing accommodation. There have been rumours of the fixing of minimum prices and that has also tended towards steadiness but it is understood that the Government have been advised by the trade that it is no use fixing minimum prices unless the Government are prepared to support the market by buying jute. Because of the holiday in Calcutta quotations are irregular but may be taken on the basis of £94 for Mill Firsts f.o.b. Chittagong.

IMPROVED OUTLOOK FOR PAKISTANI JUTE

PRIME MINISTER'S STATEMENT

WINDING up the debate on Pakistan's jute policy in Parliament on Tuesday, Mr. Mohammed Ali, Pakistan's Prime Minister, said he thought that the position was sound. He was confident, he said, that the grower would get a reasonable and economic price and that it would not be necessary for the Government to intervene. Moving a resolution in Parliament the previous week, Mr. Mohammed Ali said: "For a correct appreciation and appraisal of Government's policy, it is necessary to review the position of jute and jute prices as obtained in this country last year. The year (1952-53) started with a large carry-over with the prospect of a substantial crop estimated at 68 lakh bales. Pakistan's supply position, therefore, last year stood at 86 lakh bales, India's crop was officially estimated at 46 lakh bales. Therefore, the total world supply stood at 132 lakh bales. This was the position that obtained

last year. There was a total world supply of 132 lakh bales as against the world demand of 90 to 100 lakh bales. Therefore, there was a surplus of anything between 32 to 42 lakh bales and so the price of jute collapsed last year.

"As a result Government had to introduce very strict measures in order to help the growers to get an economic price. In spite of the adoption of these measures it was apprehended that the year would naturally close with a substantial carry-over. In order to dispose of this surplus, it was decided to limit production this year to a maximum of 42 lakh bales. With this object in view the licensable area in East Pakistan was fixed at 10 lakh acres. Special measures were taken by the Provincial Government to ensure that this decision was rigidly enforced.

"The entire supply of jute in the sub-continent is expected to be in the neighbourhood of 92 lakh bales, i.e. 57 lakh bales in Pakistan and 35 lakh bales in India. There will thus be a total production of 92 lakh bales as against 132 lakh bales which were available last year. Therefore, there is going to be a short supply of 40 lakh bales—about 40 lakh bales from the quantity available last year. This year India's demand for Pakistan's jute is likely to be 22 to 25 lakh bales and the demand from overseas countries is likely to be between 30 and 35 lakh bales. Therefore, with a total prospective demand of 60 to 65 lakh bales of Pakistani jute and the availability in Pakistan of only 57 lakh bales, the jute market is assured of a firm position.

"All exports of jute, except to the American account area, are subject to licensing by the Jute Board. It has been decided to continue this policy during the current year. Licensing system enables the Board to keep an eye on export prices and the performance of individual shippers. It supplements the export price check exercised by the State Bank of Pakistan and enables the curbing of malpractices indulged in by the trade. It also helps us to control the under-invoicing of our jute which leads to a loss of foreign exchange. As a result of this measure the State Bank can watch the prices at which jute is exported from Pakistan. We are, however, making every effort to see that the procedure involved in the issuing of licences is as simple as possible. It is the intention of Government to ensure fair prices to the growers. Therefore, besides maintaining the export duty at a reasonable level, every important factor in the export price of jute is reviewed from time to time in order to ensure that our agriculturists and farmers and growers get as fair a return as possible for their products. But we must remember one important factor and that is that we are situated as it were between Scylla and Charybdis. We

have to ensure that on the one hand our growers get a fair and reasonable price for the jute, and on the other prevent an abnormal rise in prices of jute which would result in substitutes coming in. As a result of the latter factor we may lose our market.

"Now with regard to jute manufactured goods the development activities are going on at a rapid pace and jute processing industry, I may inform the House, has also made rapid progress in the country. The Pakistan Industrial Development Finance Corporation is engaged in establishing six jute mills aggregating 600,000 looms. This target is expected to be completed up to the end of 1955. When completed the industry will consume about 12 lakh bales of jute and will have the capacity of manufacturing goods of the value of Rs. 25 crores. The installation of 2,000 looms has already been completed. With the present capacity of about 38,000 tons per annum we are not only able to meet industrial requirements of jute manufactures but have also been able to make token exports of our manufactured goods. When I was in the United States I went to New York to receive the first consignment of jute—burial—manufactured by our mills. The other day there was another shipload of manufactured jute that went out to the United States. So our manufactured goods are also having a market abroad now. So far as jute baling industry is concerned it may be said that we now have adequate baling capacity to handle our entire crop. So, we are going ahead with our manufacturing capacity so that all our requirements may, as far as is possible, be met from our own internal supply.

"Now there is one point about which I would like to speak and that is, that so far as the Government are concerned, I can promise the Members of this House, we propose to be ever vigilant and we want to watch the trend of the recent fall of price level. Only two weeks ago the prices had fallen as a result of the repercussion of the lowering of export duty on jute in India and, therefore, purchasers were able to get that commodity from the Indian market at lower rates than from our own market, with the result that the prices fell down. But our position is very much better now because our growers have got sufficient money and sufficient funds out of other crops because of the reduction of the area under jute cultivation and they have now got power of resistance much more than they had in previous years. They can now retain stocks and as a result of that they are not coming forward even now to sell jute at Rs. 17, which is the present price. I may inform the House that the price of jute had fallen to Rs. 15 but it has now improved and the present price—yesterday's price—in Narayanganj for jute is coming forward to sell their goods. They have got that resistance or holding capacity because they expect a still further rise in prices. We in the Government are quite confident that the jute prices will continue to improve because, as I have explained, the total supply of jute in the sub-continent is less than the world demand. Therefore, the jute market is bound to improve if only we are a little patient."

THE FOREIGN JUTE MARKETS

SHORTAGE OF HESSIAN YARNS FOR WEAVING

(FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.
PROSPECTS for improvement in the jute industry, outside the United Kingdom, are anything but bright at the moment. Prices for Calcutta goods are still dragging along at low levels and it is being said here that the Indian jute mills cannot be making any profits. Certainly, Continental manufacturers are still very unwilling to reduce their terms to a competitive basis and they are receiving very few fresh orders. Spinners also on the Continent are anxious to sell, but they are quoting cheaper prices, though still too high to the U.K. to be attractive to local manufacturers. The carpet industry is still interested, however, and quiet steady business is being done because Dundee spinners are still unable to produce sufficient to meet all requirements. It is almost impossible to buy hessian yarns for weaving and twists for delivery before February next year.

With raw jute prices displaying weakness and those for Calcutta goods still showing a very wide difference from the rates ruling in the U.K., many are under the impression that a revision of values of all jute trade commodities in this country should be made. The position, however, is so uncertain and sensitive that anything may happen to bring about a change in sellers' ideas. The possibility of raw jute becoming scarce this season cannot be lost sight of, while the demand for jute goods has been quiet for such a long time that buyers must prices are out of all proportion in comparison with those ruling a year ago, when Pakistan shippers were quoting £81 for crack Daissee-2/3 and £93 for today. At that time 10 oz. 40 in. hessians and 7½ oz. 40 in. were 20s. 0d. per 100 yards higher than they are today, while "B" twills were 60s. 0d. dearer. In the interval, consumers of raw jute have not had the opportunity of purchasing at cheaper prices and it appears to be obvious that the Indian mills must be having a lean time. Prices have dropped at 70s. 0d. for 10 oz. 40 ins. and 51s. 9d. for 7½ oz., October.

Commodity Markets

COTTON CLOTH EXPORTS IMPROVING

INDIA AND JAPAN LEAD EXPANSION IN SECOND QUARTER

FROM the incomplete information so far available, the Cotton Board's Quarterly Statistical Review says it appears probable that cotton yarn production in the main manufacturing and exporting countries of the non-Communist world in the second quarter of 1953 was rather greater than in the preceding quarter, having recovered to something like the fourth quarter 1952 level. Significant expansions in output in India and Japan are the main reasons for this increase. The contrast with 1952 is striking. Whereas yarn output in the first quarter was still about 2 percent below the level of a year ago, in the second quarter it was roughly 12 percent greater than in the second quarter of 1952 when, of course, the recession was at its worst. Almost all the main manufacturing countries are now producing at a substantially greater rate than a year ago.

Exports of cotton piecegoods from the main exporting countries also showed a substantial increase in the second quarter of 1953, being roughly back to the level of the fourth quarter of 1952. Exports from India, Japan and the United States were all at an appreciably greater rate than during the preceding quarter, the United Kingdom being one of the few countries to export less. Japan remained the largest exporter of cotton piecegoods. World trade in cotton piecegoods so far this year has been at a lower level than during 1952. However, the more encouraging figures recorded in July for the United Kingdom and Japan perhaps indicate a further expansion in exports in the second half of the year, to which increased imports into countries such as Australia and Pakistan should contribute.

Whilst world trade in cotton piecegoods remains at a fairly low level, trade in rayon piecegoods rose to record heights in the second quarter of the year. This was largely because of a spectacular increase in exports from Japan, which is much the largest exporter of such fabrics, but Italian exports have recovered well from the low levels of 1952, and Germany has also become an important factor in this trade.

U.K. Output and Exports

Total output of yarn and cloth in the United Kingdom cotton industry was greater in the second quarter of 1953 than in the first, despite the fact that the normal seasonal movement is downwards. Compared with the corresponding period of 1952 yarn output showed an increase of 48 percent and cloth output one of 23 percent. When allowance is made for the effect of holidays, output has expanded steadily month by month so far this year until in July activity was at about 86½ percent of the peak rate reached in November, 1951, in the case of spinning, and 84½ percent in the case of weaving. The shortage of labour is currently the most serious brake on any further expansion of output. Recruitment to the industry continues at a steady but inadequate rate.

Exports of cotton piecegoods from the United Kingdom showed a further slight reduction in the second quarter of the year. The reduction in shipments to British West Africa was more than sufficient to account for this decrease, though these colonies remained the largest single market. Of particular significance was the welcome increase in exports to Australia, following the easing of import restrictions in that market. Trade with South Africa, British East Africa and Canada remained at a fairly high level by recent standards, but shipments to Pakistan dwindled to negligible proportions. The July figures are more encouraging, the total exports of 67 million square yards being the highest for any month since March, 1952. The main feature was another substantial increase in shipments to Australia. Exports of rayon piecegoods showed a moderate expansion in the second quarter of the year, but remained well below the level reached in 1950 and 1951. Here also an expansion of exports to Australia was a feature of the trade; exports to South Africa also increased, but shipments to British West Africa were reduced.

Exports of cotton yarn from the United Kingdom have remained fairly steady at a low level so far this year. The Irish Republic, Australia and Canada have been the main markets, whereas demand from Europe has been small. Imports of cotton piecegoods into the United Kingdom showed a further moderate increase in the second quarter of the year. The increase is accounted for by imports of grey cloth from Japan for process and re-export; these imports are now almost back to the 1951 level.

U.S. Cotton Consumption

Although cotton consumption in the United States in the second quarter of 1953 was slightly less than during the preceding quarter this appears to have been largely a seasonal effect. Compared with the second quarter of 1952 cotton consumption showed an increase of 7 percent. Cotton cloth production in the first quarter of 1953 (the latest figures so far available) was about 8 percent greater than in the corresponding period of 1952, and rayon cloth production about 15 percent greater. While activity has been continuing at this

high level, stocks of goods at mills have been run down and order books have lengthened. In these circumstances it is rather curious that the margin between grey cloth prices and raw cotton prices should have remained so moderate; in July the margin was no greater than it was in October, 1952.

The monthly rate of exports of cotton piecegoods increased somewhat from 52 million square yards in the first quarter of the year to 59 million square yards in April and May. This level is still, however, below the 1952 average. A moderate decline in deliveries to Canada was more than counterbalanced by increases to Indonesia, Venezuela and the Philippines.

Expanding Japanese Production

Activity in the Japanese cotton and rayon industries has been expanding rapidly in the last few months. Compared with the first quarter of this year output of cotton yarn in the second quarter showed an increase of 13 percent, spun rayon yarn one of 14 percent, cotton cloth 21 percent and rayon cloth 17 percent. Cotton yarn output has responded to the removal of the official ceiling, and it is reported that a new post-war record was set up in July. Meanwhile the increase in spindleage has been restrained by Government action; the number of operable spindles has increased by no more than about 50,000 in the first six months of this year, bringing the total up to 7½ millions. Even in June, however, with its high rate of output, more than one million spindles on average were not running.

It is reported from Japan that the new system of linking the allocation of currency for raw cotton with the export performance of the firm in question has not as yet succeeded in its object of expanding exports, for with domestic prices so high firms are more interested in the home market. Be this as it may, exports of cotton piecegoods increased from 187 million square yards in the first quarter to 206 million in the second quarter, whilst figures of 76 million square yards in July and 82 million square yards in August are the highest totals since the early months of 1952. The expansion in the second quarter was, however, virtually confined to two markets, viz., Indonesia, which took the extremely high total of 74 million square yards as compared with 26 million in the previous quarter, and Hong-Kong, which took 14 million square yards against 1 million, and became Japan's second largest customer. Exports to almost all Japan's other principal markets, in particular Thailand, Iran, U.S.A., U.K. and the Netherlands, were substantially reduced, whilst shipments to such normally important markets as Pakistan, British East Africa and Aden remained negligible.

Japanese exports of cotton piecegoods seem likely to expand considerably judging by the latest figures of export contracts, which totalled 114 million yards in May and 115 million yards in June. Indonesia remains easily the largest customer, followed by Hong Kong and Thailand; it appears that Pakistan has still not issued any import licences for Japanese cotton piecegoods.

Japanese exports of rayon piecegoods increased from 78 million square yards in the first quarter of this year to 116 million square yards in the second quarter, the highest quarterly total since the war. Almost all the major markets shared in the increase, in particular Indonesia, which took 27 million square yards as compared with 12 million in the previous quarter.

Indian Cotton Piecegoods Exports

Mill production of cloth in India has been at a very high level so far this year, and has been expanding month by month. The July total of 435 million yards is understood to have been an all-time record. The increased supply of cloth was presumably one of the factors which influenced the Government in its decision to abolish all controls over the price and distribution of yarn and cloth.

Exports of cotton piecegoods by sea from India declined from 150 million yards in the final quarter of 1952 to 130 million yards in the first quarter of this year. The biggest reduction was in shipments to Singapore, whilst the Sudan also took appreciably less and exports to Pakistan shrank to negligible proportions. In contrast deliveries to Aden showed a substantial increase, this becoming India's main market, followed by Singapore, Burma, the Sudan, British West Africa, Ceylon and British East Africa. It is reported that in the second quarter of the year exports of cotton piecegoods expanded to 196 million yards.

Western European Output

If the Western European cotton industries are considered as a whole there appears to have been no very strongly marked upward tendency in production in the first part of the year. In the second quarter output was in general greater than in the corresponding period of 1952, but remained well below pre-recession levels. In this respect continental experience has been similar to that of the United Kingdom, and in contrast to that of Japan, India and the United States. Exports of cotton piecegoods from the main Western European exporting countries have in general been running at less than the 1952 rate so far this year. The main exception is Switzerland, thanks to greatly increased deliveries to Germany, traditionally much the

largest market. Swiss exports to Italy have also increased substantially. Exports from Belgium have also recovered fairly well from the low levels of the latter half of 1952. The Netherlands and the United Kingdom are the most important markets, but deliveries to France remain small.

Exports of cotton piecegoods from Italy show few signs of recovery from the extremely low level to which they have fallen. As in 1952, Turkey has been the most important market so far this year, but deliveries to this market, in common with most others, have been below last year's levels. In contrast, Italian exports of rayon piecegoods have been expanding steadily ever since the middle of last year. Markets taking increased quantities this year include the three most important, viz., South Africa, British West Africa and the United Kingdom, whilst Hungary and Belgium have also been important outlets. Cotton yarn exports remain small; the heavy shipments to Hong Kong in the latter half of 1952 have now ceased, and Israel has become the most important customer.

Exports of cotton piecegoods from Germany have been fairly steady for the last twelve months. Sweden has been more important as a market this year and the United Kingdom rather less important. Germany's chief markets for cotton piecegoods in the second quarter of 1953 were Sweden, Denmark, the Netherlands, British West Africa, and Morocco. Exports of rayon piecegoods from Germany have expanded notably in the last year; British West Africa and Iran are currently the most important markets.

MARWARI SHEEP SHOW AND WOOL EXHIBITION

A wool spinning competition, a sheep show with prizes for the best Marwari ram and ewe and an exhibition of hand woven wool fabrics were some of the highlights of the first Marwari Sheep Show

and Exhibition held on 27th and 28th September at Ban-Ganga near Bilara in Jodhpur district. The Exhibition, sponsored by the Sheep and Wool Improvement Department, was inaugurated by the Minister for Industries and Commerce of the Rajasthan Government. Substantial prizes were awarded for the winners of wool spinning and sheep competitions. On the first day of the programme, a sheep breeders conference was held where departmental officers spoke on scientific and improved methods of sheep rearing and farming. Films on sheep and wool industry supplied by the International Wool Secretariat were shown to sheep farmers and other visitors.

PAKISTAN COTTON CROP FORECAST

The first all-Pakistan forecast of the area under cotton for the year 1953-54 is 3,067,000 acres (American and Desi Varieties 2,686,000 acres and 381,000 acres respectively) as against 3,071,000 acres (American and Desi Varieties 2,644,000 acres and 427,000 acres respectively) reported in the first forecast of the previous year, and shows a decrease of 0.1 percent. There has been an increase in American Varieties by 1.6 percent, but a decrease in Desi Varieties by 10.8 percent.

Except in N.W.F. Province, Punjab and Khairpur State, there has been a slight decrease in the acreage of this crop in Pakistan, which is attributed partly to "Grow More Food Campaign" and partly to inadequate supply of canal water. Sowing commenced on normal dates. The condition of the crop is normal.

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (base: August 1939=100), fell by 0.5 percent to 404.0 during the week ended 19th September, 1953. The index was lower by 1.3 percent compared to the corresponding week of the previous month but was 3.9 percent higher than that of a year ago. During the week under review, Foodstuffs declined further by 0.5 percent to 386.0 as a result of decreases in the prices of bajra at Hyderabad (-8%), rice at Patna (-4%), wheat at Hapur (-2%), gram at Hapur and gur tea (+8%), notwithstanding higher prices of oil (-1%). The index of Industrial Raw Materials moved down by 1.5 percent to 477.3 as compared with 483.9 (revised) for the previous week. Items, which recorded noticeable variations during the week were: raw jute and iron ore (-5% each), groundnuts and gingelly seed (-4% each), rape seed (-3%), raw silk at Bangalore and linseed (-2% each), export price of manganese ore (+15%), raw wool (+10%) lac (+5%) and raw silk at Malda (+4%). The index for Semi-Manufactures also fell by 0.4 percent to 364.5 from 365.0 (revised) for the previous week, on account of Bombay (-9%), zinc (-7%), gingelly oil (-4%), mustard oil (-3%), groundnut oil in Madras, linseed oil in Calcutta, anjengo superior coir yarn and cow hides (-2% each) and sheep skins (-1%). Prices of coconut cake (+11%), linseed oil in Bombay (+2%), groundnut oil in Calcutta, real Alapat coir yarn, and castor oil (+1% each), however, advanced during the week. The Manufactures group index remained almost unchanged at 363.9 as compared with 364.0 (revised) for the previous week, while variations were recorded in the prices of rayon and silk manufactures and paints (-4% each). The index for the 'Miscellaneous' group declined further by 0.3 percent to 716.6 owing to lower prices of blackpepper in Calcutta and betel nuts (-3% each) and chillies (-1%), although black pepper at Cochin and turmeric advanced by 2 percent each during the same period.

EXPERIMENTS IN THE USE OF SOLAR ENERGY

ADVANCES IN U. S. A. AND RUSSIA

THE experiments carried out by the Ministry of Scientific and Natural Resources to develop a solar cooker in India, though they have proved technically successful, have but skimmed the surface of the immense potentialities in utilising the heat of the sun. Though the harnessing of solar energy the world over is yet in its infancy, in at least two countries, the United States and Russia, experiments are fast approaching the stage of commercial and domestic use, although by all reports, on rather different lines. The urgency for continuing research on solar energy, says the New York correspondent of the Financial Times, was emphasised by a speaker at a recent secret conference on the utilisation of solar energy, held in the United States and organised by the National Science Foundation and the University of Wisconsin. In a report prepared for the U.S. Atomic Energy Commission, Mr Palmer Putnam said that within 245 years the human family must be prepared to capture one percent of all incoming rays from the sun for heat and power. Usable supplies of coal, gas and oil will be exhausted by the year 2023, he predicted. Usable supplies of uranium and thorium would last an additional 175 years.

One of the most interesting disclosures at this conference was the statement by Dr. C. G. Abbott, of the Smithsonian Institution, that engines using the heat of sunlight to generate two to five horsepower will be tested for large-scale commercial use. On the more complicated subject of how to harness solar energy for large-scale commercial use, University of California researchers had a suggestion for a half-way stage development. This was based on tapping the sunlight absorbed by tiny marine growths in fresh and ocean waters. It would not be economical to dry these growths and burn them as fuel, but experiments are being conducted on the fermentation of the alkalis while wet with the addition of micro-organisms. This would generate methane, ethane and other commercially combustible gases.

Space heating by solar energy is already an accomplished fact at Cambridge, Massachusetts, though the process is by no means economically feasible at this stage. A new process, says the Financial Times, for space heating is envisaged by scientists. It is thought that sunlight could be stored in tanks containing chemicals which are in a liquid state at solar temperatures. At lower temperatures, they would solidify, and their heat would be released to warm a house.

Russian Developments

Information is now available regarding the use of solar power in everyday life and for technical requirements in Russia. Soviet scientists are believed to be investigating the potentialities of solar power at the Heliotekhnical Laboratory of the Power Institute of the U.S.S.R. Academy of Sciences. A three-stage de-salter, which has a sun heated boiler, has been tested at a Tashkent laboratory. It produces a thousand litres of de-salted water per day from saline subsoil water. The production of this water is 30 to 40 percent cheaper than at present and the invention has made possible the construction of watering places in distant and inaccessible parts of the Kara Kum desert. Ice is produced by using a solar absorption refrigeration plant. This installation produces about 44 lbs. of ice every hour.

Experiments have been carried out in Russia with solar smelting and welding. A paraboloidal mirror 6.56 feet in diameter has been used to weld band iron. It takes only five seconds to solder a 3.5 m.m. potted plate and the process is very simple. Similar plants designed for temperatures up to 3,000 degrees centigrade will be used to make pottery.

Similar experiments to those carried out in this country have proved the feasibility of solar kitchens, which give service equal to a 500-watt electric stove, for individual use. A concave mirror over a metre in diameter focuses the sun's rays on the plate to be heated and a special device fastens it to the spot where the rays are most highly concentrated. Simple and cheap solar water heaters are extensively used for public baths, laundries, showers, etc., to heat water up to 50-55 degrees centigrade. Experiments are also being carried out to produce steam from solar energy.

UNIFIED SCREW THREADS

The unified screw threads system evolved by the U.S.A., Britain and Canada in 1949, after many years of joint endeavour, has now been accepted as the national standard in India by the Indian Standards Institution. The British standard BS: 1580-1949 which contains the unified specifications for screw threads has accordingly been endorsed as Indian standard IS: 488-1953. India was partly influenced in this step by the fact that the basic screw thread profile accepted by the 34-nation International Organisation for standardisation (I.S.O.) is identical with the unified screw threads profile of the U.S.A. Britain and Canada. The efforts of the I.S.O. to coordinate the various metric screw threads have also resulted in agreements on a number of points including pitch-diameter series below 5 mm.

While the Indian Standards Institution has endorsed the unified screw threads system of the above mentioned countries as the inch series of threads for India, it has reserved the right to judge on merits the various additions that may be made to this system as a result of the studies at present being conducted in those countries.

CUTTING MACHINES FOR CONCRETE IRON

A factory at Overschie, near Rotterdam, manufactures cutting machines for concrete iron, which are switched on and off by means of either a hand or a foot lever. The machines are protected against rain ('drip-proof'), so that they can also be used when constructions are being erected in the open air.

The cutters are placed obliquely to facilitate the introduction of the concrete iron. The feed rolls consist of four small rolls, one of which is shaped like a diabolo for a better guidance of the concrete iron. The operator's hand is protected by a special guard.

U.K. POPULAR CAR MARKET

PRICE competition among U.K. motor-car manufacturers, says the Financial Times, is spreading both in the prices of new models and in reductions in prices of existing models. In some cases prices will not be disclosed until the Motor Show on 21st October. Latest price cuts concern models of the British Motor Corporation—the Austin A40 and A70 and the Nuffield group's Wolseley "Six-Eighty." These reductions follow those announced in the Rootes group's Humber Super Snipe and Hawk and Sunbeam-Talbot "90." The Austin Company says that the cuts in the prices of the A40 and A70 have been made possible by listing certain standard equipment including hide upholstery and bumper over-riders as optional extras. Prices of the A40 Convertible and the A70 Countryman have also been reduced.

The Rootes group is delaying any announcement regarding the Hillman Minx until the eve of the Motor Show. Likewise, it is likely that statements about additional new models by other manufacturers of cars in the "popular" ranges will be held up as long as possible. It would seem, therefore, that something of a battle over prices is proceeding among the manufacturers, the object being to secure the market of that large section of the public which is primarily concerned with pleasure motor-

ing. It is, however, in the small cars where intense competition is likely to develop. The new Standard Eight has set a new example, taking from Ford the position of the manufacturer of the lowest-priced car. But Ford is believed to have another model ready for introduction before the Motor Show opens, and it is widely believed that this will be even cheaper than the Standard Eight.

The rivalry between Standard and Ford may not end there, for it has been suggested that Standard may decide to introduce a de luxe version of the new car but with a larger-capacity engine, so that the new car would encroach upon the market for the latest versions of the Anglia and Prefect models. The whole car market is in a state of flux and it is not likely to settle down until the Motor Show starts. This state of affairs is having its effect upon the second-hand car market, where prices are dwindling in anticipation of cheaper new cars.

In France, too, a car price war appears to be developing. Reuter reports that the nationalised Renault concern has announced at the Paris Motor Show reduction in the price of the 4 h.p. (metric) model by Frs.15,000 to Frs.414,500 and the 11 h.p. Fregate by Frs.15,000 to Frs.784,300.

LABOUR LIVING COSTS

According to the Labour Bureau, the working class cost of living index numbers (base: 1944=100) advanced in Bihar's industrial towns during July, 1953. In Monghyr and Jharia it rose by five points respectively whereas in Dehri-on-Sone it advanced by four points and Jamshedpur by two points. In Monghyr, the index number appreciated to 167, largely owing to an increase in the food group by seven points. The fuel and lighting group index advanced by three points. This was partly offset by a fall in the miscellaneous group by four points.

The index number in Jharia advanced to 184. Owing to an increase in the prices of wheat flour, rice, potatoes and onions, the food group advanced by six points, but there was recession by one point in the miscellaneous group index. In Dehri-on-Sone, the index number appreciated to 185 points. The food group index rose by five points owing to higher quotations for rice; the fuel and lighting group by three points; and the clothing group by two points. In Jamshedpur, the index number appreciated to 158. This was largely due to an increase in the food index. The fuel and lighting group index also appreciated by one point.

The Indian craftsman who made this light-piece combined design with mythology by casting as the central figure, a Naga, about whom there are many heroic stories. In one tale it is said that when Lord Krishna was a child he fell asleep in the shade of a poisonous tree which had been planted there as part of a pre-conceived conspiracy to destroy

him. As he slept the tree dripped its poison onto his face. A Naga gliding by realized that murder was being perpetrated, and spreading his hood as a shield to protect the child-god, collected to himself the venom falling from the tree. In the light-piece, the spread hood of Naga forms a reflector for the flames in the five beautifully shaped dipaks.

Philips in India are stimulated by the knowledge that they are carrying forward India's heritage of fine lighting by producing, as the result of ceaseless research, fine lighting for all needs of the present age.

PHILIPS FOR LIGHT

News from SKF

For over thirty years, SKF spherical roller bearings have remained unchanged and unsurpassed. Now, however, another important advance in rolling-bearing design has been made by SKF with the introduction of a new type of spherical roller bearing.

With up to 40 per cent more carrying capacity than the old design, this new spherical roller bearing will be found particularly useful for heavily loaded bearing arrangements where space is limited. For three years this new bearing has been tested and proved in rolling mills and railway axleboxes under the most arduous conditions of service. From these tests it has emerged with flying colours.

It is now being included in the SKF manufacturing programme, and will be made together with the old design.

Already a number of sizes are available, and this number will be steadily increased.

TECHNICAL DATA

There are no fixed flanges on the new bearing. Instead, the rollers are guided by a comparatively high, loose guide ring between the rows of rollers, and by the roller cage.

The length of contact between the rollers and track is considerably greater—the roller length is increased, and there are no grinding reliefs on the inner ring.

The rollers are symmetrical. Independent of the direction of the bearing load, they automatically adjust themselves in an axial direction so that the resultant bearing load always acts at the centre of the roller. Since the rollers adjust themselves automatically, the bearings can be made with such close conformity between rollers and tracks that the load is distributed evenly over the whole roller length and material stresses are kept as low as possible.

The design of the roller cage permits an increase in the width of the bearing, which is of value when radial space is limited.

Shakomato	522	4/2 1/2
Surmah Valley	216	3/8 1/2

COCHIN TEA SALES

At Sale No 20 held on 29th September, 1953, offerings amounted to approximately 10,88,000 lbs. There was again a fair selection on offer, with Nilgiris quality irregular but Travancore teas generally showing improvement. There was a very strong demand, with both Exporters and Internal Buyers active. Commons and Low Medium kinds were a full 2 annas dearer, while Medium descriptions showed advances of 1 to 2 annas. Best liquoring sorts met with a keen enquiry and were an irregular 2 annas dearer following quality.

Whole leaf grades were again well supported and showed increases of 1 to 2 annas on last prices.

Quotations	1953	1952
Rs. As. Ps.	Rs. As. Ps.	Rs. As. Ps.
Low Grown Travancore B. O. P.	1 12 6	0 14 0 to 1 15 0
Medium " B. O. P.	1 13 6	1 10 6

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN AUGUST

Indian rubber output in August was 1,894 tons, according to the Indian Rubber Board. Exports amounted to nil; the quantity of rubber imported during the month was 224 lbs. Consumption by manufacturers was 1,986 tons of which 7 tons were imported. Stocks with estates and dealers on the last day of August totalled 4,747 tons including 1,416 tons in transit. Stocks with manufacturers at the end of the month were 2,668 tons of which 24 tons were imported. Manufacturers also used 192 tons of reclaimed rubber, the month-end stock being 244 tons, and consumed 1 ton 1,513 lbs. of synthetic rubber, of which manufacturers held a total stock of 8 tons 1,733 lbs.

MR. IENGAR MEETS COFFEE BOARD

Mr. H. V. R. Iengar, Secretary, Ministry of Commerce and Industry, recently had informal discussions on the various problems facing the coffee industry with the Marketing Committee of the Indian Coffee Board and also the full Board.

The Marketing Committee decided to hold pool auctions at Coimbatore and Mysore on different dates instead of on the same date as hitherto.

Mr. Iengar has gone to Coorg to see typical coffee areas and also the Coffee Research Sub-Station at Chethalli. In the unavoidable absence of Hon'ble Mr. H. Siddaveerappa, Mr. S. N. Ramanna, Vice-Chairman, presided.

PAKISTAN TEA EXPORTS AND IMPORTS

The Hon'ble Mr. Mohammad Ali, Minister of Commerce, replying to a question by Mr. Ahmed E. H. Jaffer, in Parliament recently, placed on the table of the House a statement of exports of Pakistani tea to other countries and imports of tea into Pakistan from other countries during 1951, 1952 and 1953:

	1951 (January-December)	1952 (January-December)	1953 (January-June)
Exports			
Afghanistan	—	1,375,265	886,966
Argentina	10,500	—	—
Burma	—	9,623	—
Canada	584,882	20,394	—
Chile	1,308,692	685,075	—
Egypt	179,480	5,250	56,800
France	—	—	6,720
Germany	145,234	—	5
Iran	67,245	33,000	10
Iraq	56,732	11,000	8
Japan	—	—	135,359
Netherlands	153,865	—	—

Morocco	—	—	55,000
U.K.	43,858,690	23,103,861	5,747,089
U.S.A.	537,409	12,000	20,400
All other countries	263,940	99	—
Total	47,166,669	25,346,667	6,908,359
Imports			
Ceylon	343,140	478,529	103,022
China	—	1,600	—
Hong-kong	96,980	—	—
Indian Republic	239,134	540,084	15,847
Iran	—	330	—
Japan	93	—	—
United Kingdom	500	1,216	2,000
Total	679,867	1,021,159	120,869

The Minister informed the House that the annual production of tea in Pakistan during calendar years 1951, 1952 and 1953 was: 53,425,804 lbs.; 53,146,236 lbs.; and 22,281,432 lbs., respectively. He said that Pakistan Tea Board had set up a sub-committee to investigate how production could, within 10 years, be increased from approximately 52 million lbs. as at present, to 80 million lbs.

Calcutta Markets

GENERAL DEMAND IN TEA EXPORT AUCTION

DUST SALE EASIER

AT Export Sale No. 17 held on 5th October the offering consisted of 58,000 packages. Demand was good and again general and the sale became stronger as it progressed. All Fannings were well supported and were fully firm and sometimes dearer. Clean Commons and Low Mediums were firm, but Medium Assam Broken Pekoes were up to half an anna easier. Leaf grades were generally fully firm and if they were stylish sometimes a little dearer. The demand for the larger amount of CTC Assam teas catalogued this week was irregular and they were barely steady.

Quotations	1953	1952
Clean Black Pekoe	Rs. 1-15 1/2	1-6 1/2 to 1-7 1/2
Clean Common B.P.	Rs. 1-12 1/2 to Rs. 1-12 1/2	0-12 1/2 to 1-0 1/2
Medium Assam B.P.	Rs. 1-13 1/2	1-0 1/2 to 1-0 1/2
Good Assam B.P.	Rs. 2-2 1/2	2-0 1/2 to 2-2 1/2

At Internal Sale No. 17 held on 6th October, Dust offerings consisted of 17,445 packages. There was a fair general demand though an easier tendency was noticeable towards the end of the sale. Black, leafy Dusts suitable for Export were keenly competed for and often realised half anna above last rates. Clean Commons and good Mediums also received good support and were fully firm but C.T.C. sorts were irregularly easier from half to one anna per lb. Few Darjeelings with flavour sold at higher rates.

Quotations	1953	1952
Medium Doars Dust	Rs. 1-9 1/2 to Rs. 1-10 1/2	1-0 to 1-0 1/2
Assam Grainy Dust	Rs. 1-10 1/2 to Rs. 1-10 1/2	1-0 1/2 to 1-0 1/2
Best Assam C.T.C. Dust	Rs. 1-14 1/2	2-2 1/2 to 2-3 1/2

Export Sale No. 18 will be held on Monday, 12th October and Dust and Internal Sale No. 19 on Tuesday, 13th October. There will be no sale for the week beginning 19th October.

LOCAL FREIGHT MARKET FIRMER

THERE has been an increase in the firmness of the local market and with the falling off in grain arrivals towards December, it seems fairly certain that the market will rise then. The

Rosa M, 5,000 tons 5 percent has been fixed for coal Calcutta-Cuddalore 3,000 tons at 38s plus 2,000 tons to Colombo at 42s 6d for October loading.

In the time charter section a British 10,000 ton motorvessel accepted 17s for 12 months trading, delivery Japan December-January, redelivery Australia whilst an interesting line on Owners views of the future was the fixture of a 10,800 ton oil-burner for prompt delivery Continent at 12s 6d per d.w. ton to January, 1954 thereafter 16s 6d per d.w. ton to December, 1954.

The latest Sale and Purchase report from Messrs. Harley Mullion & Co., Ltd. of London shows a distinct drop in prices of second hand tonnage. A Liberty ship in June fetched £237,500 against a September sale of a Liberty at £180,000. The Diesel vessel London Artisan has been sold to Indian buyers at £200,000, and a sistership at the same figure to British buyers. The breaking up market is active with British buyers paying £5 per gross register tonnage compared with £7 from Continental buyers and £11 from Japanese buyers.

MORE SUGAR RELEASED: KANPUR MILL RATES DECLINE

During the week ended 6th October, prices of sugar per maund were Rs 30 for the Java and D28 Indian varieties, Rs 31.4 for big grain, and Rs. 29.2 for small grain. Arrivals of Indian sugar were 2,000 bags a day. Stocks amounted to 22,000 bags of Indian and 75,000 bags of Java sugar. Mill delivery prices in Kanpur declined by 6 to 8 annas a maund, and a further quota of 100,000 tons of Indian sugar was released. Steamers carrying Java and British refined sugar have reached Bombay, and the price of Mexican sugar which arrived there last week has come down to Rs 83.8 per 224 lbs. There has been good enquiry from the south, and sugar is being sent by rail to Andhra districts and by steamer to Tuticorin and Malabar.

LINSEED

Although the week commenced on a quieter note a fairly sharp reaction set in towards the latter part and prices regained their earlier losses, with activity reported on a fair scale. Millers were not operating for forward delivery, although speculative enquiries were received for these positions. The turnover for near deliveries was rather limited, mainly owing to the absence of sellers. The oil market firmed up quite appreciably owing partly to the report of some export sales to Australia and partly to the firmer trend in groundnut oil. The local demand however was poor. Latest quotations were as follows: October Rs. 18-0 per maund; November-December Rs. 18 per maund.

HIDES AND SKINS

The market was quietly steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 29th September, and 5th October, 1953)

Cowhides:—Wet salted (Ord) 25,000 pcs. on the basis of Rs 9 to Rs. 10; Wet salted (Slaughtered), 10,850 pcs. on the basis of Rs. 12-8 to Rs. 22-12.

Goatskins:—Wet salted (Daisee, Killed) 45,300 pcs. on the basis of Rs. 245 to Rs. 375; Assam-Dinajpur-Murshidabad 9,050 pcs. on the basis of Rs. 260 to Rs. 305; Dacca 8,500 pcs. on the basis of Rs. 455; Purneah-Kissenganj 16,300 pcs. on the basis of Rs. 275 to Rs. 315; Pakur 1,800 pcs. on the basis of Rs. 245; Muzafferpore-Darbhanga-Patna 17,000 pcs. on the basis of Rs. 210 to Rs. 235.

Bazar Stocks

(5th October, 1953)

Cowhides:—Wet salted 99,100 pcs.

Goatskins:—Wet salted (Daisee, Killed) 79,700 pcs.; Assam-Dinajpur 90,000 pcs.; Muzafferpore-Darbhanga-Patna-Pakur-Purneah-Kissenganj 2,54,000 pcs.

SHELLAC MARKET STEADY

The Shellac market during the week ended 5th October ruled steady and the volume of business was not great. Quotations were as follows:—

Standard Pure Buttonlac	Rs. 115 value
Lemon No. 1 Shellac	Rs. 110 value
Lemon No. 2 Shellac	Rs. 110 to Rs. 108 value
P.O. Std. I. Shellac	Rs. 104 value
Pure TN Shellac	Rs. 98 buyers
4% I.T.N. Shellac	Rs. 83 to Rs. 95 basis
No. 1 Kusmi Seedlac	done & buyers
No. 2 Kusmi Seedlac	Rs. 90 to Rs. 87 buyers
Fine Bysaky Seedlac	Rs. 104 value
(Manihum)	Rs. 98 value
Fine Bysaky Seedlac	3% Rs. 84 buyers
(C.P.)	3% Rs. 90 buyers
Ordinary Bysaky Seedlac	3% Rs. 85 done & buyers
(C.P.) Under	5% Rs. 81 to Rs. 80 buyers
Ordinary Bysaky Seedlac	5% Rs. 47 done & buyers
Kireelac	5%

Shipments during September were 30,646 packages.

COMPANY AND PUBLIC NOTICES

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LTD.

NOTICE is hereby given that the One hundred and fourteenth Ordinary General Meeting of the above-named Company will be held at Registered Office, No. 12, Mission Row, Calcutta on Tuesday, the 3rd November, 1953, at 11-9 a.m. for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1952, and the Balance Sheet as at that date.
- (2) To declare a Dividend.

The Share Transfer Books of the Ordinary Shares of the Company will be closed from the 24th October to the 3rd November, 1953, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta, the 5th October, 1953.

THE HOWRAH-SHEAKHALLA LIGHT RLY. CO. LTD.

NOTICE is hereby given that the One Hundred and fourteenth Ordinary General Meeting of the above-named Company will be held at Registered Office, No. 12, Mission Row, Calcutta on Tuesday, the 3rd November, 1953, at 11-12 a.m. for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1952, and the Balance Sheet as at that date.
- (2) To declare a Dividend.

The Share Transfer Books of the Company will be closed from the 24th October to the 3rd November, 1953, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta, the 5th October, 1953.

AGRA ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that the Fifty-sixth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 30th October, 1953 at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 31st March, 1953 and the Balance Sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 24th October, 1953 to the 30th October, 1953 both days inclusive.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN AUGUST

Indian rubber output in August was 1,894 tons, according to the Indian Rubber Board. Exports amounted to nil; the quantity of rubber imported during the month was 224 lbs. Consumption by manufacturers was 1,986 tons of which 7 tons were imported. Stocks with estates and dealers on the last day of August totalled 4,747 tons including 1,416 tons in transit. Stocks with manufacturers at the end of the month were 2,668 tons of which 24 tons were imported. Manufacturers also used 192 tons of reclaimed rubber, the month-end stock being 244 tons, and consumed 1 ton 1,513 lbs. of synthetic rubber, of which manufacturers held a total stock of 8 tons 1,733 lbs.

MR. IENGAR MEETS COFFEE BOARD

Mr. H. V. R. Iengar Secretary, Ministry of Commerce and Industry, recently had informal discussions on the various problems facing the coffee industry with the Marketing Committee of the Indian Coffee Board and also the full Board.

The Marketing Committee decided to hold pool auctions at Combaratore and Mysore on different dates instead of on the same date as hitherto.

Mr. Iengar has gone to Coorg to see typical coffee areas and also the Coffee Research Sub-Station at Chethalli. In the unavoidable absence of Hon'ble Mr. H. S. Sivasubramanian, Mr. S. N. Ramanna, Vice-Chairman, presided.

PAKISTAN TEA EXPORTS AND IMPORTS

The Hon'ble Mr. Mohammad Ali, Minister of Commerce, replying to a question by Mr. Ahmed E. H. Jaffer, in Parliament recently, placed on the table of the House a statement of exports of Pakistani tea to other countries and imports of tea into Pakistan from other countries during 1951, 1952 and 1953:

	1951 (January-December)	1952 (January-December)	1953 (January-June)
Exports			
Afghanistan	—	1,375,265	886,966
Argentina	10,500	—	—
Burma	—	9,623	—
Canada	584,802	20,394	—
Chile	1,308,692	685,075	—
Egypt	179,480	5,250	56,800
France	—	—	6,720

Japan	93	—	—
United Kingdom	500	1,216	2,000
Total	679,867	1,021,159	120,869

The Minister informed the House that the annual production of tea in Pakistan during calendar years 1951, 1952 and 1953 was: 53,425,804 lbs.; 53,146,236 lbs.; and 22,281,432 lbs., respectively. He said that Pakistan Tea Board had set up a sub-committee to investigate how production could, within 10 years, be increased from approximately 52 million lbs. as at present, to 80 million lbs.

Calcutta Markets

GENERAL DEMAND IN TEA EXPORT AUCTION

DUST SALE EASIER

AT Export Sale No. 17 held on 5th October the offering consisted of 53,000 packages. Demand was good and again general and the sale became stronger as it progressed. All Fannings were well supported and were fully firm and sometimes dearer. Clean Commons and Low Mediums were firm, but Medium Assam Broken Pekoes were up to half an anna easier. Leaf grades were generally fully firm and if they were stylish sometimes a little dearer. The demand for the larger amount of CTC Assam teas catalogued this week was irregular and they were barely steady.

At Internal Sale No. 17 held on 6th October, Dust offerings consisted of 17,445 packages. There was a fair general demand though an easier tendency was noticeable towards the end of the sale. Black, leafy Dusts suitable for Export were keenly competed for and often realised half anna above last rates. Clean Commons and good Mediums also received good support and were fully firm but C.T.C. sorts were irregularly easier from half to one anna per lb. Few Darjeelings with flavour sold at higher rates.

Export Sale No. 18 will be held on Monday, 12th October and Dust and Internal Sale No. 18 on Tuesday, 13th October. There will be no sale for the week beginning 19th October.

Export Sale No. 18 will be held on Monday, 12th October and Dust and Internal Sale No. 18 on Tuesday, 13th October. There will be no sale for the week beginning 19th October.

LOCAL FREIGHT MARKET FIRMER

THERE has been an increase in the firmness of the local market and with the falling off in grain arrivals towards December, it seems fairly certain that the market will rise then. The

Rosa M, 5,000 tons 5 percent has been fixed for coal Calcutta-Cuddalore 3,000 tons at 38s plus 2,000 tons to Colombo at 42s 6d for October loading.

In the time charter section a British 10,000 ton motorvessel accepted 17s for 12 months trading, delivery Japan December-January, redelivery Australia whilst an interesting line on Owners view of the future was the fixture of a 10,800 ton oil-burner for prompt delivery Continent at 12s 6d per d.w. ton to January, 1954 thereafter 16s 6d per d.w. ton to December, 1954.

The latest Sale and Purchase report from Messrs. Harley Mullion & Co., Ltd., of London shows a distinct drop in prices of second hand tonnage. A Liberty ship in June fetched £237,500 against a September sale of a Liberty at £180,000. The Diesel vessel London Artisan has been sold to Indian buyers at £300,000, and a sistership at the same figure to British buyers. The breaking up market is active with British buyers paying £5 per gross register tonnage compared with £7 from Continental buyers and £11 from Japanese buyers.

MORE SUGAR RELEASED; KANPUR MILL RATES DECLINE

During the week ended 6th October, prices of sugar per maund were Rs. 30 for the Java and D28 Indian varieties, Rs. 31.4 for big grain, and Rs. 29-2 for small grain. Arrivals of Indian sugar were 2,000 bags a day. Stocks amounted to 22,000 bags of Indian and 75,000 bags of Java sugar. Mill delivery prices in Kanpur declined by 6 to 8 annas a maund, and a further quota of 100,000 tons of Indian sugar was released. Steamers carrying Java and British refined sugar have reached Bombay, and the price of Mexican sugar which arrived there last week has come down to Rs. 83.8 per 224 lbs. There has been good enquiry from the south, and sugar is being sent by rail to Andhra districts and by steamer to Tuticorin and Malabar.

LINSEED

Although the week commenced on a quieter note a fairly sharp reaction set in towards the latter part and prices regained their earlier losses, with activity reported on a fair scale. Millers were not operating for forward delivery, although speculative enquiries were received for these positions. The turnover for near deliveries was rather limited, mainly owing to the absence of sellers. The oil market firmed up quite appreciably owing partly to the report of some export sales to Australia and partly to the firmer trend in groundnut oil. The local demand however was poor. Latest quotations were as follows: October Rs. 18-8 0 per maund; November-December Rs. 18 per maund.

HIDES AND SKINS

The market was quietly steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 29th September, and 5th October, 1953)

Cowhides:—Wet salted (Ord) 25,000 pcs. on the basis of Rs. 9 to Rs. 10; Wet salted (Slaughtered) 10,650 pcs. on the basis of Rs. 12-8 to Rs. 22-12.

Goatskins:—Wet salted (Daisee, Killed) 45,300 pcs. on the basis of Rs. 245 to Rs. 375; Assam-Dinajpur-Murshidabad 9,050 pcs. on the basis of Rs. 260 to Rs. 305; Dacca 8,500 pcs. on the basis of Rs. 455; Purneah-Kissenganj 16,300 pcs. on the basis of Rs. 275 to Rs. 315; Pakur 1,800 pcs. on the basis of Rs. 245; Muzafferpore-Darbhanga-Patna 17,000 pcs. on the basis of Rs. 210 to Rs. 235.

Bazar Stocks

(5th October, 1953)

Cowhides:—Wet salted 99,100 pcs.

Goatskins:—Wet salted (Daisee, Killed) 79,700 pcs; Assam-Dinajpur 90,000 pcs; Muzafferpore-Darbhanga-Patna-Pakur-Purneah-Kissenganj 2,54,000 pcs.

SHELLAC MARKET STEADY

The Shellac market during the week ended 5th October ruled steady and the volume of business was not great. Quotations were as follows:—

Standard Pure Buttonlac	Rs. 115 value
Pure Buttonlac	Rs. 110 value
Lemon No. 1 Shellac	Rs. 110 to Rs. 108 value
Lemon No. 2 Shellac	Rs. 104 value
P.O. Std. I. Shellac	Rs. 98 buyers
Pure TN Shellac	Rs. 83 to Rs. 95 basis done & buyers

4% I.T.N. Shellac	Rs. 90 to Rs. 87 buyers
No. 1 Kusmi Seedlac	3% Rs. 105 value
No. 2 Kusmi Seedlac	3% Rs. 98 value
Fine Bysaky Seedlac (Manhum)	3% Rs. 84 buyers
Fine Bysaky Seedlac (C.P.)	3% Rs. 90 buyers
Ordinary Bysaky Seedlac (C.P.) Under	5% Rs. 85 done & buyers
Ordinary Bysaky Seedlac (C.P.)	5% Rs. 81 to Rs. 80 buyers
Kireelac	5% Rs. 47 done & buyers

Shipments during September were 30,646 packages.

</

Freight rates are only part of your total shipping costs. You have to think of many other things too—packing, insurance, loading charges, dock dues, etc.

When you fly your cargo, these charges are either reduced or avoided altogether; so you start with a substantial saving.

Insurance, for instance, is based on the time your goods are travelling. By air, they take only hours instead of weeks; so you save 90 per cent or more on the premium. You save on handling costs, too. No warehouse charges, no dock dues, and the minimum delay in Cypsons.

Packing costs are cut right down, because your goods need less protection by air. They mostly travel with light cargo, and they are treated gently. A simple cardboard carton is enough, even for perishable goods.

Finally, we make standard reductions for bulk shipments of 100 lb. or more. And for many types of goods, we offer special reduced rates.

It's worth while to find out how much you save, when you fly your goods by A.I.I. Why not write to us today? Or give us a ring, and our representative will call on you.

IT COSTS LESS...

NO CARGO IS STRANGE!

35 MVA rupturing capacity

Modern electrical distribution systems require H.R.C. protective gear capable of safely interrupting heavy fault currents.

For more than two decades the 'ENGLISH ELECTRIC' H.R.C. cartridge fuses have established their reliability under severe fault conditions.

Originally rated at 25 MVA, the 'T' type cartridge fuses have now passed the ASTA tests for rupturing capacity of 35 MVA.

'ENGLISH ELECTRIC' cartridge fuses are available over a wide range of 2-800 amps.

EXPORT DUTY ON IRON AND STEEL PRODUCTS ABOLISHED

The Government of India has abolished with effect from 7th October the export duty on iron and steel bars, heavy structurals (including heavy sections of joists, channels and angles), tinplate and baling hoops. The Finance Ministry has announced. A Press Note issued by the Ministry says: "In accordance with their policy of keeping under constant review all export duties, the Government of India have examined the effect of the present export duty on iron and steel. They consider that trade and in order to improve their competitive position in foreign markets, they have decided to abolish with effect from 7th October, 1953, the export duty on iron and steel bars, heavy structurals (including heavy sections of joists, channels and angles), tinplate and baling hoops".

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to August, 1953. Compared with July, the August index for Preference Shares shows a drop of 0.1 point, while that of Government Securities remains unchanged at 97.6 points.

There were decreases in Bank (1.1 points), Cotton (1.6 points), Coal (16.3 points), Jute (5.1 points), Mining and Oil (1.9 points), Cement (2.6 points), Engineering (2.6 points), Tea (14.8 points) and Paper (11.2 points). Indices for Sugar and Miscellaneous shares increased by 1.4 points and 2.0 points, respectively.

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 3.5 points during August, 1953.

Weights	Index of Govt. Securities	Index of Preference Shares	Variable-Yield Securities											Combined Index
			Banks	Cotton Mills	Coal	Jute Mills	Mining and Oil	Cement, Lime etc.	Eng. and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, P, F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

HOW NOT TO OBTAIN PRIVATE INVESTMENT FROM ABROAD

ESTATE DUTY ON NON-RESIDENTS: TAXING STERLING DEBENTURES

IT is curious that while the Government of India professes its anxiety to promote foreign investment in this country, the financial capitalists of the world accuse India of having adopted in the last few months a policy of "getting tough" with the foreign investor. This is a new accusation and has nothing to do with estimates of the nation and has nothing to do with estimates of the general investment outlook in India, but with certain specific actions of the Government in the recent past. The tendency of these actions has been to make India appear an unreliable borrower. The Statesman's correspondent in London remarked in a recent "U. K. Economic Review" that "a feeling has developed in Britain that India's interest in foreign capital is diminishing, although the Five Year Plan appears to need hundreds of millions of pounds of foreign capital." It would be most unfortunate if this impression were to make any further progress, for India has not by any means lost interest in foreign capital. We in India know that the Government is still genuinely anxious to attract investment from abroad, provided of course it comes on the terms and conditions made plain some years ago. But it has succeeded in giving the contrary impression overseas just lately.

There has been some discussion of a section of the Estate Duty law—Section 85—which has encountered considerable criticism abroad. This is the attempt to collect estate duty on the death of people who have never been to India and to whose only connection with the country was a purchase in their home country shares in a company that operates in India. The intention to collect the duty not directly from the heirs of the shareholders but from the company makes it more defensible but less, and will probably give rise to legal difficulties. However there has been another move which has impaired India's credit as a borrower of foreign capital, and this concerns the interest on debentures floated abroad. On 9th September all dealings in the sterling debentures of the London Stock Exchange when it became known that the Commissioners had begun to deduct income tax and super-tax before remitting interest. This was followed on 28th September by the removal of another two Indian debentures from the official list in London; these were sterling loans of the Bombay Improvement Trust. There are now five Indian loans in which dealings are suspended in London and more may be suspended when interest falls due and tax is deducted. The issues so far affected are:

Amount.	Interest.	Issued.	Repayable.	Quotation.
Calcutta Port Trust				
£892,600	5%	1923	1953-83	£86 1/2
£901,000	5%	1924	1954-84	£86 3/4
£835,000	5 1/2%	1932	1962	£96
Bombay Improvement Trust				
£566,600	4%	1909	1969	£95 1/2
£333,000	4%	1910	1970	£95 1/2

This is clearly a serious situation for a prospective borrower of foreign funds. A borrower whose loans cannot be bought and sold abroad because lenders hold that the terms of the loan have been deliberately infringed is, in no condition to obtain further money. The background to these developments is that the interest on the five sterling debentures in question has always been paid free of tax, but the Indian tax authorities recently decided that as from 1st August both income tax and super-tax should be deducted at source from any interest payable on sterling loans issued for public subscription before 1st April 1938. This means that a holder of, for example, the Calcutta Port 5 1/2 percent loan 1962

tax authorities have now cancelled the "concession" granted early in the war.

But if the recent decision is not entirely arbitrary, it does violate a convention that has been observed for many years and it has created dissatisfaction in the centre from which this country will still have to borrow capital funds. The Government's need of revenue hardly provides an explanation for this new policy, because the revenue it will gain is very small. The total value of the five debentures mentioned is well under £4 million and of that much must be held by the sinking fund. So the sums obtained from taxing the interest must be trifling, and certainly too little to be worth the trouble of having the loans barred on the London Stock Exchange.

"Lex" of the Financial Times offers his own explanation: "The cancellation of this concession accords with a general policy of the Indian tax authorities of taking a tough line with U.K. investors and with the U.K. Inland Revenue, which may well be in preparation for the next negotiations for a double tax agreement. Up to the present all attempts to reach an agreement avoiding double taxation in the two countries have been blocked by an Indian attitude which demanded all concessions and gave none." This account of the reasons for slow progress in negotiating a double tax agreement between India and Britain is certainly too simple; the matter is complex and one party has so much more to gain than the other that disagreement was to be expected. But it is not too far-fetched to believe that India is equipping herself with a few bargaining counters before the next round of negotiations.

Whatever the explanation, it is to be hoped that these disincentives to foreign investment will not be allowed to persist. The sums of revenue involved, both in the estate duty on non-resident shareholders and in the tax on debenture interest, are not large but the principles involved are important. An administration that seeks to promote investment from overseas will lose no time in restoring its reputation for fair dealing. We have lumped these two separate matters together, estate duty and tax on debentures, although there may be no connection and nothing the Government has said suggests that they are both pieces of some new policy toward foreign investors. But the important thing is that they have been taken that way overseas and it is the foreigners' view of the investment prospect in India that now has to be considered. It is not implied that that is all that has to be considered, but the Government of India has spent enough time and energy in the last few years considering safeguards for the borrower. It is not before time it gave some thought to the interests of lenders and potential lenders.

It will be for the economic historian of the future to assess in detail the part that shocks to confidence have played in the decay of international capital transactions over the last 40 years, but it is already clear that it has been a much larger part than the newly independent countries of Asia think. The Americans are often upbraided today for their unwillingness to invest abroad on the scale Britain did in the 19th century, but critics do not always take full account of the vast change in the investment climate that has taken place since the United States rose to pre-eminence as a possessor of capital resources. Nor do they always recall the large-scale American lending that went on between the wars—and the disastrous consequences of it for the lenders to Germany and Mexico, to mention only two examples. Asian Governments are fond of recalling their countries' unhappy experience with foreign capital, though in fact it was not often as unhappy as the ignorant make out and its results are welcome enough to those governments today. But if Asia has borrowed and been bitten, the capital-exporters of the West have lent and been bitten too. The shyness of private capital when it comes to crossing borders is therefore not surprising. It is for would-be borrowers to

LEADER... IN ELECTRICAL PROGRESS

75 YEARS OF ELECTRICAL PROGRESS

On October 15, 1878, Thomas A. Edison organized the first of the companies which, in 1892, became the General Electric Company. Brilliant accomplishments of scientists and engineers over the years have helped to improve our standard of living. A few of the milestones are portrayed here... they were developed by General Electric men and women, who can be counted upon to find tomorrow's ways to brighten our lives and lighten our labours.

THE CALCUTTA MONEY MARKET MORE BORROWERS THAN LENDERS

Tuesday, 13th October.
DEMAND for funds is still strong, relative to the credit available, and there are more borrowers than lenders. The rate in the inter-bank market remains at 24 percent.

The bill of exchange market has been quiet, with only a few tea documents showing. Remittance has been normal. Exchange rates quote: sterling T.T. and O.D. 1s 5 31/32d; three months' sight bills 1s 6 7/32d; four months' sight bills 1s 6 9/32d; and U.S. dollars Rs. 478.

The Calcutta money market will be closed on Thursday, Friday and Saturday of this week.

Tenders for the offer of Rs. 14 crores of three-month Government of India treasury bills fell to Rs. 1,81,00,000 this week. The average rate of acceptance was unchanged at Rs. 2-8-8 percent annum, tenders at Rs. 99-6-3 percent and above having been accepted in full and those at Rs. 99-6-0 percent allotted approximately 38 percent. Tenders for another Rs. 14 crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 9th October, treasury bills for Rs. 1,52,00,000 were sold in favour of the Reserve Bank.

Bullion was steady last week and prices improved on renewed support. There was also a good deal of bear-covering in silver which improved from the previous week's level of Rs. 150-15 to Rs. 152-12 quoted today. The ready rate was done at a premium of 4 annas. The price was, however, unchanged at 74d. in London and at 85¢ cents in New York.

Gold also moved higher from Rs. 83-12 to Rs. 84-8 in sympathy. The sovereign at Rs. 58 showed a gain of 4 annas.

The return of the Imperial Bank of India for the week ended 2nd October, 1953, shows a rise of Rs. 1,81 crores in total deposits to Rs. 209.03 crores. Investments in Government Securities remain unchanged at Rs. 83.99 crores, while other authorised investments are up by Rs. 10 lakhs to Rs. 10.64 crores. Loans, cash credits and overdrafts have increased by Rs. 1.24 crores to aggregate Rs. 87.78 crores, while bills discounted and purchased have decreased by Rs. 3.11 crores to stand at Rs. 10.33 crores. Cash and balances are,

in consequence, shown at Rs. 28.04 crores or 3.06 crores higher.

The statement of the position of Scheduled Banks for the week ended 2nd October, 1953, discloses Demand and Time liabilities at Rs. 526.85 crores (Rs. 14.75 crores on account of borrowings from Banks) and Rs. 329.80 crores (Rs. 2.37 crores) compared with Rs. 524.89 crores (Rs. 13.40 crores) and Rs. 330.23 crores (Rs. 2.32 crores) respectively in the previous week. Cash has declined by Rs. 1.37 crores to aggregate Rs. 29.86 crores, while balances with the Reserve Bank have advanced by Rs. 4.35 crores to stand at Rs. 54.19 crores. There is a drop of Rs. 30 lakhs in investments to Rs. 333.57 crores. Advances and bills discounted at Rs. 461.16 crores reveal an increase of cash and balances, and of advances and discounts are, in consequence, shown at 9.8 percent and 53.8 percent against 10.6 percent and 54.4 percent.

According to land customs trade returns received in the Department of Commercial Intelligence and Statistics the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of August, 1953, were as follows (in lakh of rupees):

	Exports to	Imports from
Eastern Pakistan	21	231
Western Pakistan	62	13
Other Countries	8	26
Total	91	270

Total trade amounted to Rs. 361 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 179 lakhs.

TREASURY BILL MATURITIES

December, 1953	4,50,00
January, 1954	4,50,00
Total	18,00,00

FIRST COTTON ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food & Agriculture, the all-India First Estimate of Cotton, 1953-54 puts the area at 11,708,000 acres as against 10,775,000 acres in the adjusted corresponding estimate for last year, thereby showing an increase of 833,000 acres or 8.7 percent over 1952-53. Details according to trade descriptions for the current and last year are given below:-

Variety	Area (Thousand acres)	1953-54	1952-53
Bengals	1,033	1,116	605
Americans	768	5,055	486
Oomras	5,477	11	9
Broach	492	539	2,965
Surti	11	11,708	10,775
Dholeras	726		
Others	3,201		
Total	11,708	10,775	

The increase in acreage, shared mainly by Bombay, Madhya Pradesh and Saurashtra, has been reported by almost all the cotton growing States except U.P., Mysore, Kutch and Vindhya Pradesh and is due partly to favourable weather conditions at sowing time and partly to the efforts made to grow more cotton under the Five Year Plan. The information given in this estimate relates to the period generally up to the end of July, 1953. Till then, the condition of the crop was reported to be, on the whole, satisfactory. The estimate does not cover the entire area sown to this crop during 1953-54. Past experience shows that the area at the First Estimate stage forms roughly 15 percent of the area under the crop finally reported.

SUGAR PRODUCTION AND STOCKS

The opening stocks, production, despatches and closing stocks of sugar in respect of Central Sugar Factories in India during the fortnight ended 15th September, 1953, were 401,384, nil, 60,843 and 340,541 tons respectively, reports the Director of the Indian Institute of Sugar Technology, Kanpur, on the basis of returns received under the Sugar Production Rules, 1935. The figures for the corresponding fortnight of the previous season were 596,732, 3,698, 39,337 and 561,094 tons respectively. Figures for the current fortnight relate to 123 factories representing 92.22 percent of the total cane-crushing capacity, while the figures of the previous year relate to 127 factories representing 89.62 percent of the total cane-crushing capacity. The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 13,17,650 and 14,22,084 tons respectively, as against the corresponding figures of 14,88,858 and 10,26,534 tons during the previous season.

A DITCHER'S DIARY

THE Pujahs, like Christmas and Punch and most of the other good things in life that reappear regularly, do not seem to be as good as they used to be. Perhaps this is just the effect of a human failing, like the fool's eyes that are at the far end of the earth. When someone said that Punch wasn't what it used to be, Punch remarked: "It never was". But there is more in it than that, in the case of the Pujahs in Bengal, for there is no denying that fewer of the material embellishments of the festival have been bought and sold this year, fewer sarees and new shoes, fewer gramophone records and a smaller outlay on entertaining friends and worshipping the goddess. I could expand this, and recall the things that were bought in abundance in years gone by but which seem too dear today; on the other hand, I could point to the things that can be obtained now—like sugar for sweets—that had to be gone without not so long ago. But this sort of reckoning up of gains and losses would miss the point of the festival. The important thing about Punch or Christmas is not to compare this week's jokes with last week's, or this year's presents with last year's, but to compare them with all the things we have heard said in the intervening six days that weren't funny, all the transactions of the intervening year that were not made in the spirit of charity. And I suppose it is the same with the Pujahs. We enjoy festivals as our present situation allows us, which might be more or less than in other years, but there is no mistaking them when they come—as seasons that differ from the surrounding days in a quality of charity and cheerfulness that we are not good enough men to maintain throughout the livelong year.

Half a dozen new plays and two ballet programmes all in the space of a few weeks—has Calcutta ever been so well served before? But if the visitors are being very good to us, are they being quite fair to themselves? For both companies to be here at the same time makes us feel very rich, but it must have another effect on box office receipts. I have met more than one anxious ditcher these last few days weighing up the imponderable attractions of dance and drama that could not both be taken in at the same time. And then the season, even if only one company had come, is not the most suitable. It is still rather too warm to present a play under fans when dance and film can be seen in a cooler atmosphere. The Pujah holidays, too, must be reckoned a competing attraction, when those who can be planning to get out of the city and those who stay have other occupations. As far as I can judge, the ballet has conquered all this competition most successfully: the players rather less so. But then the former had the advantage of combining names better known by repute in a medium less familiar locally. The saying that people get the government they deserve went out of date with the invention of the machine gun, but the proposition that a city gets the entertainment it deserves is as true as ever. So even if the timing of our visitors could have been more astute, how much more of this fare we are offered in the future will depend on how well we support it now.

The Government of India has wisely been sending out officials to study financial arrangements between States in other federations around the world, a subject on which a British-trained civil service naturally has something to learn from countries with constitutions like the American, Canadian and Australian. A brief reference to the report of Mr. O. K. Ghosh, Deputy Secretary to the Planning Commission, after a tour of Canada and the United States is made elsewhere in Capital today. On this subject, I hope that note is taken

of a first-class row now in progress between two Australian States over which of them should benefit from a substantial source of revenue—Tattersalls' lottery. This is a sweepstake run by a private trust for the last 70 years in Tasmania, selling tickets throughout the federation but paying taxes only to its home State. It appears that the Victorian Government lately decided to imitate its sister States in New South Wales and Queensland by starting a lottery of its own. The trustees of Tattersalls, realising that this would deprive them of many sales in Victoria, thereupon negotiated secretly with the Victorian Government to transfer their domicile from the less populous to the more populous State. This piece of intelligence was received in the States concerned as a "sensational bomb-shell". The Premier of Victoria claimed a famous victory and promised to rush legislation through Parliament legalising the transfer. His Opposition leader said it was a sensational coup. Church leaders described themselves as "staggered". And the Premier of Tasmania accused Victoria and Tattersalls of treachery, and lamented: "The transfer of Tattersalls to Victoria will have a most detrimental effect on Tasmania". This deep emotion might seem misplaced, but the fact is that the Australian States, just like the Indian, are forever short of money and squabbling about the allocation of revenues—and stamp duty and taxes on ticket sales from Tattersalls are worth £2 million a year. Even that is probably much less than the northern States make out of lotteries, for they do not simply tax a private lottery but run their own. The £2 million which Victoria will now receive will be devoted, said the Premier, to hospitals and mental institutions. The Tasmanian Premier has since announced that having lost Tattersalls, his Government would lose no time in starting a public lottery of its own, the revenues to be devoted to similar purposes. The next time the Indian Finance Ministry sends out an official to study sources of revenue in federated States, it might be worthwhile to enquire into the substantial benefits that accrue from lotteries, to judge from the passion with which the Australian States dispute the right to tax them.

While we in Calcutta are still acquainting ourselves with the "panoramic screen" and have only just seen the latest in 3-D, in New York filmgoers are having a taste of the next stage in the film industry's fight against television. This is CinemaScope, a technique used so far in making one full-length movie and a few shorts and cartoons. All I know of it is that it was invented in France, developed in the United States, looks three-dimensional, does not require to be viewed through spectacles and uses a wide screen. The film that has been taken as subject for this experiment is Lloyd Douglas's *The Robe*, and first reports do not make clear whether the attendance records now being set up by it in New York are due to the technical innovation or to the colossal sentimentality that made the book a best-seller.

The Colombo Plan officials, who have been meeting in Delhi in preparation for the session of the Consultative Committee that opened yesterday, are thought to have discussed the admission of Japan to the Plan. The Japanese have expressed their willingness to take part, but the proposal has been authoritatively described as "controversial", the implication being that some member nations would be opposed to this extension of the scheme for the sharing of capital and technical resources. What the grounds of that opposition may be has not yet been revealed, and I am puzzled to think what it could be. The Colombo Plan ceased to be a Commonwealth

effort some time ago, when Indonesia and Viet Nam were admitted as recipients and the Americans began to take a close interest as donors. Burma hesitated for some time longer, no doubt because of her extravagant suspicions of revivals of imperialism in other forms, but she too is now a full member. There is no love lost between Japan and some of the present members, for good historical reasons, but then a variety of nations have sunk old differences, and even current differences, in this common effort. There is no reason why they should not do the same with Japan. The Colombo Plan is not a political alliance, or even an organisation like GATT; it is a clearing house for assistance between nations interested in economic progress in South-East Asia. In such a body Japan could play a useful rôle. South Asia has ample grounds to be thankful that Japan's own plans for "prosperity" in the region were brought to nothing by force of Commonwealth and American arms some years ago, but that is no reason to exclude her from a prosperity plan that is now being run on different lines. Japanese commercial practice, even since the war, has not been to everybody's satisfaction but the Colombo Plan has nothing to fear in that direction. In fact the most serious complaint we can make about Japanese economic policies is that they have been so little directed toward assisting development in the countries of South Asia that form Japan's best markets. There seems to be no sense in refusing to allow Japan to contribute to raising living standards in Asia, when it is Japanese industry that will probably reap the best dividends from whatever improvement is achieved.

A colleague, who does not always allow work to interfere with his writing and is pseudonymously known in Bengali letters, went along to the meeting of writers and artists at Writers' Buildings last Friday. He tells me that after being lectured for three hours by Dr. B. C. Roy on the development plans of West Bengal he was still unsure about just what use he could make of this newly acquired wisdom in his next novel or short story. I am not surprised. This courting of writers by Authority "for popularising the five year plan" betrays a complete misconception of the nature of a writer's work. At its worst, the Government's move is ominous, for this is the way to People's Plays and Stalin Prize Novels. Dr. Roy's concluding announcement that he proposes to spend a lakh of rupees in the next five months for what the writers will do for his Government (with the bait that it will be two lakhs next year) will not inspire great writing, but it may well encourage a form of corruption, the effects of which on a set of people who are by definition sensitive can be unfortunate. With a small market further reduced by partition, the Bengali writer can hardly be a rich man, and a lakh of rupees, or part of it, is a lot of money to him. Still, it is doubtful if largesse from the State is what he needs to produce an epic on the Mayurakshi barrage. It is possible to catalogue the Enemies of Promise, but none of us can yet define with precision and certainty the circumstances most conducive to creative writing. Government subsidies are scarcely among them. More important from my readers' point of view, which is that of the taxpayer, hence of the buyer in Dr. Roy's proposed transaction, why should anybody think of buying writers? Plato knew of the inherently subversive character of their calling, and was so suspicious of the tribe as to exclude them from his dreary Republic. But he did not suggest wooing or buying them because, being one himself, he knew that you never get your money's worth. The man to whom you make an offer may be a writer, but the man who accepts it will assuredly be a hack.

Without Prejudice

THE OBLIGATIONS OF A JUDGE

QUESTIONS RAISED BY PREVIOUS CONNECTION WITH LITIGANTS

(FROM OUR LEGAL CORRESPONDENT).

A JUDGE is not expected to live the life of a hermit or that of a cloistered monk. With the odd exception of the Lord Chancellor of England who is the head of the whole judiciary there, but who nevertheless takes an active part in the party politics of the day, the judges throughout the British Commonwealth are by tradition and not through any express statutory or other prohibition, obliged to abstain from politics. It is also expected of them that they will not belong to political or controversial associations; further, without the imposition of any legal obligation it is regarded as incumbent upon them to use every endeavour not to become personally involved as litigants. And one would be more surprised to see a judge than one would be a clergyman in a night club or at the Folies Bergères. In return for these compulsory and voluntary abstentions a judge and his office are accorded a respect, and a complete confidence altogether unparalleled in any other walk in life. We have once or twice over a long period of years heard a dissatisfied litigant dismally complain that the judge was a fool; but never once have we heard or seen reported, though life and liberty may have been forfeit by the judicial decision, a case in which a litigant or convicted prisoner questioned the absolute impartiality of a High Court judge who tried his case or him. On the contrary, those who read the Notable Trials series must have noticed occasions on which the most remarkable compliment that it is possible to pay to a judicial system has been forthcoming; that is, when a convicted hangman next appointment is with the public hangman has spontaneously remarked that he has had a fair trial. It was not always so. Far from it. West-country men and particularly Somerset men will never forget George Jeffreys and his Bloody Assize; and Coke, Bacon and their colleagues and the obsequious judges of James II were not much better. The tradition of respect, affection and confidence has taken centuries to build up in the form in which it exists today in India towards the High Courts.

It has to be jealously guarded. And it is against this background and bearing in mind the noble maxim that "Justice must not only be done but manifestly done," that the reader will consider the sympathetic but trenchant observations of the learned Chief Justice of the Calcutta High Court which are set out below.

A judge, as we have said, is neither a hermit nor a recluse. He makes social contacts like anyone else; moreover on the bench he must from time to time come across cases in which litigants, through their solicitors, may have been his clients in his days at the bar. What is a judge to do when he is about to try a case and suddenly realises that one of the parties is a personal acquaintance of his own?

There is a story which went the rounds when to the sorrow of his friends here the late Mr L. P. E. Pugh retired from the Calcutta bar to practise as a K.C. before the Privy Council in England. The anecdote is probably completely untrue but might easily have happened. Mr Pugh was the leader of the Bar and a tremendously busy man; also the non-legal reader must realise that once a lawyer has done his job, received his fee and packed up his papers, generally speaking the whole case is wiped out of his mind for good and all. Moreover, as men who have to concentrate deeply often are, Mr Pugh was inclined to be absent-minded. He was justly held by bench and bar and by everyone who knew him in great affection and trusted universally. For a short time

at one period in his career he was an officiating High Court Judge, and was trying a civil suit. The case had proceeded for some little time when Pugh remarked that there was something familiar to him in the fact and then a little later announced that he now remembered that he had as counsel advised the plaintiff on evidence and no doubt the defendant would wish the case tried before another judge. The defendant through his counsel said he wished nothing of the kind and the suit proceeded. Later on the defendant's written statement was being read. "Excellent drawn," said his temporary lordship. "I could not have done it better myself." And then: "Good gracious me, I remember now I did draw it myself. No doubt the plaintiff will wish the case tried by another judge." Such was the regard in which Pugh held that the plaintiff like his opponent wished nothing of the kind and the case eventually came to an appropriate conclusion by way of an amicable compromise arrived at in the judge's room.

The story is probably apocryphal but it illustrates what one has hitherto believed to be the duty of a judge in such a case and the limits of such a duty. His duty is to the public and to the litigants. To the public to see that public time and money are not wasted and parties, witnesses and juries inconvenienced by unnecessary adjournments. To the litigants to see that justice has manifestly been done. Where a judge, knowing perfectly well in his own mind that he will be quite impartial, is nevertheless acquainted or has had professional relations to his own profit, with one of the parties to the case before him his duty, as one has conceived it up to now, is to inform the other party of the fact and to suggest that the case be transferred for trial before another judge. And there, one thought, his duty ends. The matter then becomes one for the affected party and his lawyers. If they want the judge to proceed with the case he should do so. If not, he should and must retire from it. But it seems that his duty may go further than this, as we shall now see.

The case arose out of the tragic death of a distinguished retired officer, Col. S. C. Mitra, on 11th August 1950, as a result of which various persons were charged with various offences ranging from murder to trespass and simple hurt. After an unsatisfactory trial by the then Additional Sessions Judge at Alipore, two of the accused persons eventually came before Mr Justice J. P. Mitter and a special jury on retrial with charges against them of grievous hurt, simple hurt and trespass, the third accused having been acquitted. The two were convicted and sentenced to long terms of imprisonment and a fine. They appealed and we are concerned here with one only of the several grounds of appeal and the interesting and important observations of the learned Chief Justice thereon.

Said Chakravarti C.J.: "The first point taken was that Mitter J. should not have presided over the trial at all and that by his so doing the principles of natural justice had been violated. The basis alleged for that contention was that the learned judge was privately acquainted with the Mitras, particularly with Dr Lalit Mitra, the eldest son of the Colonel, and had even called at the Colonel's house to express his condolence and it was said that in those circumstances he could not be expected to bring a dispassionate mind to bear on the case, as the events showed he could not.... Having referred to the orders recorded by the learned trial Judge I am clearly of opinion.... that it is not open to the appellants to take any ground of personal disability against the learned Judge. He did not keep back from the Appellants such acquaintance as he had had with the Mitras but on the other hand informed their counsel of it and of the visit of condolence, of his own accord, before he fixed a date for the trial. He even offered to ask to be relieved of the case if the accused did not wish that he should try it. The learned counsel, having taken time to consider the matter, informed the learned Judge that his clients, who had already been aware of the facts communicated to him by the learned Judge, desired that he should

try the case and do so without any further postponement.... On the day the trial started he (Mitter J.) called up the accused before him after the jury had been empaneled and asked them if they had any objection to his trying the case. They said they had none.... If a Judge who has made his acquaintance with one of the parties known is asked to go on with the case and then attacked on the ground that he did so, he is not reasonably treated. No objection to his having held the trial at all can be entertained at the stage of appeal."

The objection therefore failed, as one would expect it to do. But the learned Chief Justice proceeded to make some further observations which are important and interesting for future guidance: "I cannot, however, help observing that it would have been more in conformity with the correct judicial practice if the learned Judge had acted in accordance with his first impulse and not taken upon himself to try the case.... (But) as regards a Judge, he will serve the cause he has at heart better and maintain more successfully the appearance of a trial by an impartial tribunal being provided, if he does not at all enquire if the accused will object to be tried by him but shuns the case altogether. I have not the slightest doubt that in the present case the learned Judge went out of his way to inform the accused of such slight acquaintance as he had had with the Mitras in order to avoid all possibility of their being tried by a tribunal which they might be unable to regard with a feeling of full confidence. But he would have made the better choice and done better justice to himself if he avoided the case altogether and excluded all possibility of misunderstanding whether genuine or purposefully created."

"I have again no doubt that what little the learned Judge knew of the Mitras did not have the slightest effect on his mind in regard to the conduct of the trial, but for those who are charged with the administration of justice on behalf of the Courts it is not enough to see that justice is in fact done in the instant case before them, but it is also their responsibility to see that nothing is allowed to occur which might affect the appearance of justice being done and thereby impair the credit of the judicial system of the country of which they are the guardians and custodians for the time being.... Having read the very unpleasant record I feel bound to point out the risks of the procedure adopted by (the learned Judge) both to himself and to the cause of justice which he undoubtedly intended to serve and on the other hand the embarrassment caused by such procedure to the party concerned. More I do not desire to say on a point which has been an embarrassing one to deal with for this Court as well." The appeal was allowed on other grounds and a retrial ordered. (Sunil Chandra v The State. C. W. N. 14th and 21st September 1953).

Stocks and Shares

MARKET CLOSES FOR HOLIDAYS ON FIRM NOTE

PRICE RISES OVER WIDE RANGE: STRONG SUPPORT FOR INDUSTRIAL SHARES

Tuesday Evening.

THE share market closed this evening for the puja holidays on a very firm note. Today and yesterday all sections were more active and prices advanced over a wide range, the most notable rises being in engineering, mining and miscellaneous shares. This marked improvement on the eve of the holidays gives promise of a rising market when trading is resumed, though it is to be noticed that much of the buying this week has been on interbazar speculative account; outside investors have not been buying. Investment demand, from institutions, is still mainly directed to debentures and preference shares in better-class companies, the supply of which is now running short.

Steady conditions continued in the gilt-edged section but there was no real increase in the volume of business owing to shortage of scrip. Three percent Conversion Loan 1946-86 improved from Rs. 82-1 to Rs. 82-3 while 3 percent non-terminable Paper was taken at Rs. 82-1. In short-dated issues, 24 percent 1954 was better at Rs. 98-11 with few declared sellers and 21 percent 1955 was supported at Rs. 98-5. There were buyers of 3 percent 1958 at Rs. 98-2 but 3 percent 1957 was on offer at Rs. 98-7. In the medium-dated group 3 percent 1959-61 and 31 percent 1961 moved up by one anna to Rs. 96-2 and Rs. 98-8. Business was reported in 4 percent 1960-70 at Rs. 101-13. Three percents 1963-65 and 1964 were both dealt in at Rs. 92-8 and 21 percent 1961 was taken at Rs. 90-9. Among long-dated loans there was an unsatisfied demand for 3 percent 1966-68 at Rs. 90-2 while 3 percent 1970-75 was unchanged at Rs. 86-8.

Once again provincial loans provided the feature of this section. Four percents Bombay and Madras 1963 and 1964 improved by 4 annas to Rs. 101-2 and Rs. 100-2 respectively. Four percent U.P. 1963 and 1964 were also better at Rs. 99-13 and Rs. 99-12. Four percent West Bengal 1963 and 1964, however, were unchanged at Rs. 100-8 and Rs. 100-7 with small buyers at these levels.

Short dated debentures of joint stock companies met with keen enquiry but sellers were scarce. Calcutta Electric were taken at Rs. 101-12 and a small lot of Bengal Nagpur Cotton changed hands at Rs. 97-4. Orient Paper debentures improved to Rs. 94-4 and Standard Vacuum were quoted at Rs. 103-4. Katakhal Lala-Bazar railway were taken at Rs. 90.

Selected jute and miscellaneous preference shares maintained their popularity but on account of scarcity of sellers little business was put through. Among jutes, a small lot of Agarpara changed hands at Rs. 118. Both Bengal and Birla were taken at Rs. 102 as were Fort Cloister second at Rs. 88. A small lot of Courapore changed hands at Rs. 112 against a previous quotation of Rs. 107. Deals were recorded in Hooghly at Rs. 14-8, Howrah 7 percent at Rs. 122 and the "A" preference at Rs. 117. Lansdowne changed hands at Rs. 116-8, Northbrook at Rs. 95 and Soorah at Rs. 106. Among miscellaneous industrials, Alkali and Chemical were scarce at Rs. 105-8. Burrakur 7 percent were quoted at Rs. 120-8 and Chrestien mica Industries were crossed at Rs. 60-8. Calcutta Electric was sold on London account down to Rs. 11-9. Indian Iron were dealt in at Rs. 107 and Indo Burma Petroleum was steady at Rs. 96. A small lot of Kumardubi Engineering changed hands at Rs. 98. New Victoria Cotton were done at Rs. 3-2 and Metal Box at Rs. 99. Rohtas "B" preference were in demand at Rs. 55 and Shaw Wallace were marked at Rs. 80-4. Waverley were wanted at Rs. 42-8.

Among bank shares, Imperial Bank fully-paid and contributory were steady at Rs. 1836 and Rs. 445. Hind Bank improved to Rs. 26 from Rs. 22 on buying by interested parties. United Bank of India Rs. 10 paid-up shares were quoted at Rs. 3-12.

For the second successive week no business was reported in railway shares.

With the exception of Kesoram Cotton which was steady at Rs. 19-12 cotton shares were neglected. Bengal Nagpur were easier at Rs. 12-15 and a small lot of Dunbar changed hands at Rs. 174. Muirs were taken at Rs. 208 and several deals were reported in New Victoria at Re 1-1.

Selected coal shares met with enquiry though the overall volume of business was of a retail nature. Burrakur improved from Rs. 9 to Rs. 9-5 and Bengal from Rs. 500 to Rs. 510. Equitable Imborrea were scarce at Rs. 26-8 and Equitable improved from Rs. 35-6 to Rs. 37. Business was reported in Bharat Collieries at Rs. 5-12 and Dhemo Main at Rs. 8-12. After a long interval Katras Main was placed at Rs. 37-15 and later at Rs. 38-4. New Manbhoom improved slightly to Rs. 8-8 and South Karanpura were firm at Rs. 10-12. Central India were a feature improving from Rs. 5 to Rs. 5-9 and Western Bengal were a shade better at Rs. 4-14. New Beerboom were steady at Rs. 19.

There was a mild recovery in jute shares. Howrah fluctuated narrowly between Rs. 23 and Rs. 23-7

to close at the latter rate. The following chart illustrates the more important price movements of the week in this section:—

	Opening	Closing
Anglo India	8-10-53	13-10-53
Bally	200	203
Birla	150	160
Budge Budge	41-8	43
Chitavalah	152	155
Hukumchand	30-10	33
National	44	46-8
Nellimaria	23-2	23-4
Presidency	34-8	36-8
Reliance	4-7	4-13
	15-1	15-6

Calcutta Electrics continued to meet with selling pressure on London account and were quiet at Rs. 13-7. Banares were shaded at Rs. 17-9 while Jubulpore were well maintained at Rs. 14-5. Patna Electric were done at Rs. 10-10 and Shah-jahanpur were crossed at Rs. 7-14.

Sugar shares tended to ease, the exception being Carew which on expectations of an ordinary dividend improved from Rs. 6-14 to Rs. 7-10. The passing over of the Balrampur dividend resulted in the shares being marked down from Rs. 8-12 to

ANXIETY ABOUT U.K. DOLLAR RECEIPTS DANGER OF RECESSION IN UNITED STATES

(FROM OUR LONDON CORRESPONDENT.)

DOLLAR receipts in the next three months will be watched with particular anxiety as a result of the unfavourable trend disclosed by the Treasury announcement of the gold and dollar figures for September. There was further increase during the month of \$17 million, or rather more than the \$13 million rise in August; but whereas "special factors" were against us in August with the payment of \$39 million to Canada and the receipt of only \$19 million in defence aid from America, in September defence aid was higher at \$28 million to offset the \$15 million paid to E.P.U. (against only \$6 million in August), and no other "special factors" came into play. Eliminating all special debits and credits, the "true" surplus in September amounted to \$4 million, against a similar figure of \$39 million for August, \$51 million in July, and \$35 million in June. These figures disclose a deterioration in the earnings position which cannot be ignored even though the third quarter of the year is normally one of poor dollar receipts. The fourth quarter should reflect the resumption of sterling area raw material exports to dollar countries, and especially of wool, but hopes that the prices for these had reached bottom and might in fact move upward a bit have been shaken by the latest fall in the price of rubber. The October figures will be assisted by an E.P.U. surplus for September of about \$12 million, half of which will be paid in gold during this month, but this favourable position has been gained by the receipt from France of \$24 million as an annual instalment in settlement of the post-war debt to Britain—another "special factor."

The total gold and dollar reserves of the sterling area stood at \$2,486 million at the end of September. That looks quite an impressive figure compared with the \$1,662 million at which they stood at the critical point in April of last year. Ten months prior to that, however, in June, 1951, they stood at \$3,867 million. It has taken seventeen months to recover \$2,486 million of that \$1,381 million drop, and although the road was slightly easier earlier this year it has grown increasingly hard in the last few months. Faced with the possibility of an American recession—even though it may not be more than a slight recession—and industry there beginning to run down stocks instead of continuing purchases of sterling area raw materials, even at the present low level of prices, the present size of the reserves, encouraging as it is from one point of view, is certainly not such as to justify too great a confidence in the immediate future.

Engineering Orders Fall

Some confirmation that the trading position is not quite as buoyant as it was is to be found in some interesting figures given by the Engineering and Allied Employers' National Federation in a statement explaining their rejection this week of the claim for a 15 percent wage increase by the engineering unions. It appears that in the year ended May, 1953, the volume of orders received by the British engineering industry was 25 percent lower than in the previous year, following a decline of 8 percent the year before. Finally, it is stated that current production is in excess of the inflow of new orders, and this is still applicable although there has been "a slight improvement" in the receipt of orders since the end of May. These figures are based on returns made by range of industries from heavy electrical engineering to light durable consumer goods, but excluding shipbuilding. They are, therefore, a simplified generalisation applicable to the circumstances of the case and do not necessarily represent the position in each branch of the industry. Nevertheless, with competition getting keener, the price factor increasing in importance, and the impossibility of offering cost-plus contracts when other countries offer firm-price contracts, the effects of wage increases on costs must be made clear to the workers. The Federation points out that in most cases the industry did not put up prices to cover the last wage increase (of 2d. an hour more, granted last November) and indeed many prices had to be reduced to secure business and to meet growing foreign competition. It states quite unequivocally that this could not happen again.

As to the unions' contention that earnings had not kept pace with the rise in the cost of living, the Federation points out that in January, 1948, the retail price index was 104 and by July, 1953, had reached 141, a rise of 35.6 percent. In the same period average weekly earnings of adult time workers rose by 48 percent, and of payment-by-result workers by 47 percent. Since the last claim was considered the price index had risen six points, or 4.4 percent, but average weekly earnings of adult male workers showed an increase of more than 6.4 percent. Leaders of the Confederation of Shipbuilding and Engineering Unions are "not satisfied" with the employers' reply and met at York yesterday to consider their next step. At this stage no drastic action is contemplated, and the leaders are hopeful of another joint meeting being held in the near future, although they were informed that this was the employers' "final word."

Smooth Refunding Operation

As expected, the first part of the Treasury's debt refunding plan turned out to be a complete

success. When the lists for the unlimited issue of 3 percent Exchequer Stock, 1962-63, were closed at 3 p.m. last Monday, applications, which are being allotted in full, reached the most satisfactory total of £341 million. How much of this cash will be needed to meet payments against unconverted 14 percent 1953 Funding Stock it is not possible to say, for the conversion offer in connection with the latter remains open until Saturday, but the lowest estimate is that two-thirds of the £577 million outstanding will be converted, leaving the Treasury with the best part of £200 million in cash which to fund Treasury Bills if it is desired to reduce the high liquidity of the banking system, though the latter position might well suit the authorities with steel floatations in prospect. Well informed circles understand that plans have been practically finalised for the public marketing of something like £15 million of United Steel Companies with interesting feature of the cash part of the official operation was that for the first time in recent history there was no official "pressure" exercised to enforce success. On the contrary, word went round the City emphasising the "freedom" of the operation and this might well have had a considerable effect on the very welcome result.

Magnesium to be Freed

The freedom movement is also continuing in the commodities sphere. With effect from 1st January, 1954, the Ministry of Materials will cease to import or sell magnesium, except for minor contracts which remain to be completed next year, and the whole trade will be handed back to private hands. Ministry stocks will go into the stockpile, as will their purchases next year. This is not, perhaps, a very big freedom, for present demand is in and Norway, at a cost of about £1,000,000, but it the price British buyers will have to pay and is those which have been freed. In effect only three fly, tungsten, jute and sulphur, apart from rationed foodstuffs which present a more complicated problem. The current issue of *The Banker* publishes and restored to private trade since the present Government came in: All cereals and animal coffee, fertilisers, copper, zinc, lead, aluminium, hemp, softwood, plywood.

Nationalised Transport

Nationalisers as well as denationalisers had something to learn from the Presidential address of Mr. John Elliot, until recently Chairman of the Railway Executive and now Chairman of the London Transport Executive, to the Institute of Transport. In "a word of friendly advice to our legislative differences as to how the nation's transport system should be organised, the responsibility for frustration at all levels, would be largely on their shoulders. In spite of all the problems, British Railways had set up a good record over the past six years, and time would prove the value of the less that they had failed to make either the staff or public happy. The two main faults of nationalisation, he thought, were the creation of separate and docks so as to avoid over-centralisation at the ports to be what they should be in this modern age—transport men; and in plunging the railways into a system of departmental or "functional" control to which they had not been accustomed, were not ready. Looking at the picture under the new Act, Mr. Elliot thought transport history would remember in gratitude the present Minister for making competition fairer than it ever was, but by itself, did not think that was enough. If the State enterprise, with its obligations to staff and the nation, failed to make ends meet, would there then be subsidies, followed inevitably by restrictive legislation against private enterprise transport which had made subsidies to 1947 or would Parliament try to cut its losses for the railways in such an auction? "Let no one say this is a fantastic adventure in pessimism," he said, "because it could happen."

Brevities

Members of the Liverpool Cotton Association this week discussed the technical problems which will arise when the futures market is reopened, will make an announcement when Government assemblies on 20th October.

The Bank of England and the Treasury have taken another step towards freer currency dealings. The European exchange scheme, introduced last May, is being extended to allow arbitrage to take place automatically in forward dealings up to three months instead of requiring the approval of the monetary authorities.

After a lapse of two and a half years, South Africa is to resume exports of sugar to the United Kingdom. It is expected that by the end of this year approximately 75,000 short tons of sugar will be shipped to this country under the Common-wealth Sugar Agreement, and that this quantity will be considerably exceeded in the next season.

British aircraft exports by early in September year, £44 million. They are now running at an annual rate of £65 million—four to five times those of 1946, and nearly double those of 1950.

New Delhi

T. T. KRISHNAMACHARI NOT LEAVING CABINET NEGOTIATIONS ON WIRELESS AND AERO-ENGINE PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT.)

10th October.

THERE is no truth in reports that the Commerce Minister, Mr. T. T. Krishnamachari, is shortly leaving the Government of India. The reports are described here as "wishful thinking." On the contrary, as the originator of the Industrial Development Corporation idea the Commerce Minister is at present engaged in settling formalities in order to launch that scheme soon. The Corporation will be a private limited liability company with an authorised capital of Rs. 1 crore and is likely to be registered at an early date. Meanwhile, the authorities are considering what industries it should deal with in its initial stages. As soon as these preliminaries are settled, the Government will recruit technical personnel for the industries to be taken up.

Wireless and Radar Factory Project

Mr. A. K. Ghose, General Manager-designate of the wireless and radar factory project, has gone to Paris for discussions with the French firm, Compagnie Générale de Télégraphie Sans Fil, regarding the establishment of the factory. A machine tool expert is accompanying him. The Government recently signed an agreement with this firm about the project. While in France, Mr. Ghose will order equipment for the factory, it is learned.

Aero-Engine Factory Project

The General Manager of the Hindustan Aircraft Company, Mr. Srinagesh, and Air Vice-Marshal S. Mukherji, both of whom are in Britain at present, are having discussions with the Rolls Royce Company on establishing an aero-engine factory in India, it is learned. The Government recently decided in principle to set up the factory, and it is expected that the Rolls Royce Company will send a team to India next winter to prepare a project report.

National Development Council Meeting

The second two-day meeting of the National Development Council was held here this week. The Prime Minister presided. The emphasis of the Planning Commission has shifted from food self-sufficiency to employment, so the plan has to be adjusted in order to provide for more jobs than were contemplated a year or two ago. The total outlay under the plan, at present estimated at Rs. 2,069 crores, will therefore now be raised to over Rs. 2,200 crores to reduce unemployment. The broad outlines of the new proposals were given to the Council. They include extension of the rehabilitation programme for the five-year period, setting up of an Industrial Development Corporation, assistance to States for schemes which could meet the needs of scarcity-affected areas, assistance to road-building activity and small power projects, provision for technical training and certain general activities.

The crux of the problem, as far as the implementation of the plan is concerned, is mobilisation of resources by the States. The Planning Commission, in a memorandum circulated among members of the Council, emphasised that "of all the elements that enter into the financing of State plans there is none which is more within the powers of a State Government than the allocation of its current revenues between development and non-development expenditure and its ability to augment the tax resources in howsoever limited a measure." State Governments were to raise additional revenue of about Rs. 230 crores and to reduce expenditure on non-development items. Since then, the Finance Commission's award has transferred to the States about Rs. 21 crores annually, or Rs. 83 crores over the four-year period. Despite this additional income, the States in the first three years of the plan have made available only Rs. 186 crores, as against Rs. 407 crores needed for development. According to the original estimates, the States have to find Rs. 220 crores in the next two years of the plan. Thus, of the total additional Rs. 230 crores they were supposed to raise, the States have found only Rs. 28 crores so far. The present measures taken will, during the period of the plan, yield about Rs. 63.5 crores, leaving a balance of a non-developmental character has increased. Two results follow if development schemes are taken up without additional resources being available and without their being formally included in the plan. In the first place, the implementation of the plan suffers because of programmes included under it are deprived of money either because it is not raised or because it is transferred to new items. Secondly, the importance of the plan suffers before the public and the administration.

State Ministers apparently recognised the logic of these arguments but gave their own explanations. Some said that the non-development items consisted mainly of postwar development schemes which remained to be completed. Others blamed the good monsoon for having deprived them of revenues from irrigation. The fact however remains that for political reasons States are on the whole reluctant to enhance direct taxes, particularly on cultivators. Their attitude, in brief, is

that development may be good, but a majority at the elections is better. At the end of the session, Mr. V. T. Krishnamachari discussed some possible new sources of revenue: estate duty (to be collected by the Centre), betterment levy (still to be imposed by the States), enhancement of water rates wherever they were low, and loans. The Council was then adjourned sine die.

Second Five Year Plan in Prospect

The first five year plan included a large number of development projects on which work had been started during the postwar years, so the scope for new schemes was restricted. As the country is now half way through the period of the first plan, it is necessary to give attention to some of the broad principles and priorities which may influence the magnitude and composition of the second. Obviously, these will depend to no small extent on the success achieved in reaching current targets. In preparing the present plan, the following factors were important:

(1) In the main, in the public sector the plan had to provide for development schemes which had already been begun or were more or less ready for implementation, so that scrutiny and examination rather than prolonged preparation and investigation were called for;

(2) The plan being modest in its aims, shortages of trained manpower and of material resources were on the whole not such as to come in the way of its fulfilment;

(3) On the industrial side also, most programmes which had already been begun or were being considered for implementation both in the public and in the private sectors were taken into the plan.

In terms of physical results, the main contribution of the first plan is likely to be in the following directions:

(1) Extension services will have been firmly integrated with the normal administrative machinery in the States, and in the less developed parts of the country the essentials of a sound administrative structure established.

(2) Development schemes begun before the plan, some of which might have suffered for lack of resources or of planning, will have been carried out substantially in accordance with the plan.

(3) With the completion of projects for irrigation and power, certain parts of the country will acquire a new potential for development which will doubtless be realised more fully during the next plan period. Similar projects will have been begun for other regions and will be completed during the second plan.

(4) The food problem may be substantially solved.

(5) Basic services in respect of transport and communications, especially railways, and power will have been augmented, so that more rapid development can be undertaken in the future.

(6) The achievement of steel targets, both in the public and the private sectors, will further stimulate agricultural and industrial development.

(7) A certain measure of levelling up between the more and the less developed parts of the country will have been achieved.

(8) Because of irrigation projects (multi-purpose, medium and small) and special works undertaken for scarcity affected areas, there will be greater security against the vagaries of the monsoon.

Creating a Million Jobs a Year

Even if these aims are realised fully, the gain in national and per capita income will be relatively small (the plan expected an increase of 11 percent only). Also, the increase in the standard of living will still not be sufficiently widespread. In the meantime, the population will have grown by about 20 million and, in particular, the number of persons passing out of schools and colleges, which has doubled during the past five years, will have increased still further. With the migration to urban areas of persons who have received some education and training, as well as others who have only their labour to sell, the problem of urban unemployment may well assume larger proportions and will at any rate continually press for attention. The central task of planning will therefore be to develop resources and promote their utilisation, and at the same time attempt to attain high levels of employment. To achieve results, it is perhaps necessary to think in terms of programmes which will provide each year, to begin with, half a million new jobs, urban and rural,

rising steadily to a target of one million new jobs a year.

If this is conceived as the major goal to be reached during the coming years, it follows that whereas the first plan was designed to lay the foundations for rapid development in the future, the second plan—and indeed even the first plan in its closing stages—must give special attention to the development of large-scale and medium-scale industry, and to the development of small-scale industries which are integrated with the larger industries. It will also be necessary to provide substantial resources for what may be described as rural industrialisation, that is, the development of cottage and small-scale industries which are related directly to the processing of raw materials and which meet the particular needs of the rural population. To achieve a rapid rate of industrial development it will be necessary both to organise public investment on a large scale and also to give encouragement and support to private industry and to industries organised on a co-operative basis. In an expanding economy, public and private enterprise may be viewed broadly as complementary agencies in a single, co-ordinated programme of national development. The development and utilisation of hydro-electric power and the expansion of thermal power become matters of paramount importance in this context. Programmes of industrialisation call for planning of a detailed and comprehensive character in two other directions, namely, in the training of manpower on a scale measured by the tasks to be attempted and in conserving, using and allocating material resources in a manner advantageous to the economy as a whole.

On the rural side, it will be necessary to push forward vigorously programmes of rural community development through the National Extension Service, covering the whole country, organising village panchayats and co-operatives, and giving the maximum scope and opportunity to local initiative and co-operative effort. The first plan was based largely on programmes drawn up by State Governments, which they subsequently attempted—with incomplete success—to break up into district plans. One of the major tasks to be undertaken during the remainder of the present plan is to develop agencies which would assume increasing responsibility for framing programmes for districts and smaller units within the district. It is

also necessary to work out regional schemes in such a manner that the various physical resources in each region are brought together, balanced against one another and developed as parts of a well-knit national plan. Every effort should also be made to ensure that the next plan will be one built up from below.

Possible Priorities for New Plan

The present plan hoped over 15 or 20 years to double the irrigable area and to increase the supply of power to over 7 million kilowatts. With the development of a surplus agricultural economy secured through the national extension services, the development of irrigation and power and the use of power for industry constitute the foundations of future advance. It is against this background that the first plan suggests certain conditions and procedures for including new irrigation and power projects in future plans. The conditions proposed are:

(1) A project for inclusion in a plan must have been investigated in sufficient detail from the technical, financial and economic points of view. On other aspects also—such as (a) in the case of irrigation projects, the availability and suitability of land for irrigation and ability of landowners and cultivators to pay the proposed betterment contribution and water charges; and (b) in the case of power projects, the probability of finding load for the power to be developed and the necessary machinery for its utilisation—State Governments should be fully satisfied before the projects are approved.

(2) Projects which raise food production should receive priority over projects relating to other uses of river waters.

(3) Projects which are more remunerative, in terms of cost of irrigation per acre or per unit of power generated and in their total benefit to the community, and those which are likely to yield quick results should be given preference.

(4) In any power project based on the use of coal, the possibility of using low-grade coals, if available in the neighbourhood, must be examined.

(5) Region-wise requirements of food and power must receive due consideration, and also the needs of backward areas.

To assist the Planning Commission in determining priorities for individual projects in accordance with these broad principles, an Advisory Committee for Irrigation and Power Projects is being set up. Its chairman will be appointed by the Government of India, and members will be the Chairman of the Central Water and Power Commission, a representative of the Ministry of Finance, the President of the Central Board of Irrigation and Power elected for the year, and two engineers not in the service of the Central or State Governments. The Chief of the Natural Resources Division of the Planning Commission will be secretary to the Committee, and a director of the Central Water and Power Commission its additional secretary. In considering proposals pertaining to any State, the Chief Engineer concerned will be invited to take part in the Committee's deliberations. Before recommending a project for inclusion in the second plan, the Committee will satisfy itself that all investigations have been carried out, estimates of expenditure are reasonably correct and estimates of revenue are based on adequate data. The Committee will also consider and recommend the types of projects and the financial limits in respect of projects which should be sent to the Planning Commission for advance examination along the lines mentioned above.

Publicity for the Plan

Details are now available of the integrated publicity campaign for the five year plan which will shortly be launched by the Government of India. The campaign is estimated to cost Rs. 11 crores until 1955-56 and will cover the following:

Film publicity for the plan, including river valley and industrial projects	Rs. 46 lakhs
Mobile Vans	Rs. 34 lakhs
Publications	Rs. 20.5 lakhs
Posters and Folders	Rs. 10 lakhs
Exhibitions	Rs. 9 lakhs
Press Information	Rs. 8.05 lakhs
Central Unit	Rs. 4 lakhs
All India Radio	Rs. 2 lakhs
Reserve for schemes connected with songs, dramas, display of advertisements and lantern slides etc.	Rs. 14 lakhs

Compulsory study of the five year plan is proposed to be made a part of the curriculum in the middle, high school and university grades, it is learned. A compulsory paper on the plan in competitive examinations for the Indian Administrative Service and the Indian Foreign Service has also been suggested. It is intended that a permanent exhibition relating to the plan should be maintained in New Delhi. In addition, museums also of all-India interests are proposed to be set up at the headquarters of each State. The scheme and its details were recently discussed at a conference of the State Information Ministers.

Officers for Development, Economic Administration

The Establishment Officer of the Central Government has been given the responsibility for co-ordinating and expediting the implementation of the Planning Commission's recommendations relating to the establishment of development cadres and the provision of the personnel of economic administration, it is learned. It is suggested that, in the first instance, cadres may be considered in the following:

1. Public works, roads and buildings.
2. Irrigation and power.
3. Cottage and small-scale industries.
4. Forests and soil conservation.
5. Medical and public health.

A proposal to constitute a cadre of industrial managers has also been under consideration for some time. Meanwhile, the Ministry of Home Affairs is examining the working of the present arrangements for the recruitment of personnel. It is considering proposals to ensure that the arrangement to provide adequate encouragement in the case of good work and punishment in the case of bad work are made more sound.

RECORD U.S. IMPORTS

United States imports during the first half of 1953 rose to record proportions by volume, although dollar value of receipts fell short of the peak achieved in the first half of 1951, the U.S. Department of Commerce reported recently. In the first half of 1951, the department noted, unit prices of imported merchandise were extremely high, reflecting the boom brought on by the Korean situation. The \$6,000 million record prices averaging about nine percent higher than those of 1953 to date. As a result, the \$5,600 million U.S. import figure for the first half of 1953 actually represented a larger volume of goods. This in the first half of 1952.

West Pakistan

CONSTITUTIONAL SETTLEMENT IN PAKISTAN

EMBARRASSMENT OVER U.S. WHEAT GIFT

(FROM OUR KARACHI CORRESPONDENT.)

THE new Constitution has been almost the sole topic in Karachi during the past fortnight. The problem, of course, was to find a formula which would be satisfactory to both East and West Pakistan, and a very difficult problem it was. At the beginning of the month the situation appeared to be extremely unpromising and many members of the Constituent Assembly were being reluctantly driven to feel that the difficulty of reconciling the claims of the two wings was so insuperable that the ultimate solution must lie in a Confederation of East and West under which each wing would be autonomous except in respect of foreign affairs, defence and currency. This however proved to be the darkest hour before the dawn, and when the Prime Minister was able to announce that the intensified efforts of his colleagues and himself, and of the Chief Ministers of the Provincial and Federal Governments, had resulted in complete unanimity and an acceptable formula, there was great joy and relief throughout the country.

For the Prime Minister himself this represented a supreme achievement, for he has succeeded where his two predecessors had failed. It might be possible to criticise the formula on the ground that it would tend to perpetuate the split between the two wings; but on the other hand it could be said that the virtue of the new proposals is that they involve a realistic recognition of inescapable facts. As the Prime Minister pointed out, Pakistan, consisting of two parts separated by a thousand miles of foreign territory of which one is a single province with a population exceeding that of all the other provinces and states put together, is a phenomenon without parallel in the world. It was inevitable that special treatment would have to be devised to meet such a special situation.

Parity Maintained

Although the proposed structure of the federal legislature differs from that proposed by the Basic Principles Committee, the essential principle of parity has been maintained. In the Upper House there will be 50 seats divided equally among the five units, while in the Lower House there will be 300 seats divided among the units in accordance with their population. East Pakistan will thus have 165 seats in this House out of the total 300; yet East and West Pakistan will share equally in the aggregate membership of both Houses. Each House will have equal powers and even money bills will have to be passed by the Upper as well as the Lower House. If there is any difference of opinion the measure will have to be placed before a joint session and can then be passed by a majority vote; but the majority vote must include at least 30 percent of the members present and voting from each of the two zones.

As a further safeguard to maintain the balance between the two zones it has been provided that a vote of confidence or of no-confidence may be moved only in a joint session and may be passed by majority vote only if the members voting for it include at least 30 percent of the members from each zone. Broadly speaking this means that no controversial measure can be passed in the legislature unless it receives substantial support from both East and West Pakistan. Yet another provision is made to preserve the balance, in that it is laid down that if the Head of the State, i.e. the President, comes from West Pakistan, the Prime Minister must come from East Pakistan and vice versa. The upshot is that there will be no danger of the country being dominated by either wing, and both will be inter-dependent. In all the circumstances it is difficult to see what more satisfactory arrangement could have been made.

In explaining the agreed proposals to the Constituent Assembly, Mr. Mohammad Ali dealt fully and in considerable detail with the question of representation at the Centre, but was much less specific on the almost equally controversial question of the so-called mullah boards. The establishment of these boards had been proposed by the B.P.C. as a means of ensuring that neither any laws nor Provincial Legislatures should enact any laws repugnant in any particulars to the Quran and the Sunnah. Most intelligent Pakistanis had resented this proposal, not because they disagreed in any sense with the proposition that the laws of the State should be in accordance with the spirit of the Islamic scriptures, but because they felt that it was undemocratic and regressive to provide for the nomination of so-called religious experts to the virtual power of veto; and they claimed that the members of the predominantly Muslim parliament themselves would be perfectly capable of seeing that the measures on which they were required to vote were not repugnant to holy writ. The mullahs however do not intend to yield without a struggle and it is possible that there will be an acrimonious debate on this subject when the Assembly comes to take up consideration of the B.P.C. Report chapter by chapter.

Economic Improvement

In the economic sphere, too, there has recently been a lifting of the clouds. The primary cause of

the economic collapse was of course the severe and unexpected shortage of foodgrains, and recent events have shown that this was to a large extent the result of psychological causes. It can readily be understood that as soon as the slightest threat of shortage develops hoarding begins; equally, as soon as the rumour of an impending surplus begins to circulate stocks are rapidly thrown on the market. The American gift of a million tons of wheat (the last 300,000 tons of which may never be needed) was enough to discourage hoarders, and arrivals of these supplies have coincided with favourable crop prospects. Conditions for sowing of early wheat, which will begin this month, are good, and the last harvest was sufficient to enable the provincial procurement targets to be reached and even exceeded. The consequence is that the Pakistan Government are already beginning to wonder whether they will be able to sell the American wheat at the expected prices. Top priority is being given to construction of storage godowns to enable surplus stocks to be kept in reserve as a caution against any future shortages. All this is very satisfactory and has helped to raise the morale of the country.

With regard to the awkward condition laid down by the Americans that the wheat should be distributed free of charge to persons who were unable to pay for their requirements, the Pakistan Government at first devised an excellent scheme which, it was thought, would satisfy at least the spirit of the condition. Arguing that free distribution would be demoralising and would leave no permanent benefit behind (apart from the fact that it is almost impossible to keep it free of malpractices) they decided that substantial sums from the sale proceeds should be allotted to selected distressed areas in which relief works should be started, somewhat on the lines of the relief works provided for in the old famine code. These works would provide labour for the inhabitants of these areas, who would thus be able to earn enough money to pay for their food requirements. In deference however to the insistence of the American authorities, Government have had to drop this scheme and have announced that 210,000 tons of wheat are to be distributed free. This will create a difficult administrative problem. All that will result will be a few free meals for a large number of indigent persons, without any residual benefit. Moreover the country will lose the Rs. 6 or Rs. 7 crores which would have been earned by the sale proceeds of this wheat and would have been earmarked for development work.

A boring bar
in need of
lubrication...

... stood deserted save for the machine shop foreman crying into his empty glass. "How can I stop my machines breaking down?" he sobbed. The barmaid glumly surveyed the row of bottles he had emptied. "You may not be an authority on machinery," she observed, "but you are certainly an authority on lubrication!" A wild light of hope appeared in the foreman's eye. "That's it," he shouted, "authority on lubrication..." Tecalemit... AUTOMATIC LUBRICATION!" He fled from the room. "Well," complained the barmaid, "perhaps, in future, he'll have the grease to say goodbye to!"

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly... unfailingly... efficiently. A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

GOODS STOCKS FAIL

The Indian Jute Mills Association announces the total reported stocks of manufactured goods, exclusive of Government orders, at the end of September 1953 as follows:

Description.	31st August 1953 (Lakh (Tons) Yds.)	30th Sept. 1953 (Lakh (Tons) Yds.)
Hessian Cloth and Bags	16.75	41.468
Standard Hessian (included in above)	12.94	30.907
Sacking Cloth and Bags	21.62	88.938
Standard Sacking (included in above)	18.79	76.027
Rope, Rope, Twine, etc.	1.834	2.162

Told reported stocks of manufactured goods held on Government a/c.

Description.	31st August 1953 (Lakh (Tons) Yds.)	30th Sept. 1953 (Lakh (Tons) Yds.)
Sandbags	1	27
Scrim Cloth	3	88
Hessian Bags and Cloth and Canvas	16	402
Sacking Cloth and Bags	18	699
Rope, Rope, Twine, etc.	3	347

Summary	31st Aug 1953 (Lakh (Tons) Yds.)	30th Sept. 1953 (Lakh (Tons) Yds.)	Increase over from last month*
Hessian	16.75	41.468	-2.21
Civil	21.62	88.938	-2.49

THE FOREIGN JUTE MARKETS

RAW JUTE PRICES REDUCED IN U.K.

(FROM OUR DUNDEE CORRESPONDENT).

THE Ministry of Materials announced that the controlled selling price of all grades of raw jute had been reduced by 20 a ton. The Ministry said the reduction followed decreases in the Pakistan export price of raw jute. Selling prices of imported jute goods were correspondingly reduced.

The whole industry took on a better tone in the early days of last week, with an advance in prices for both raw jute and goods. While values of the fibre have been more or less maintained and firm since, those for Calcutta goods have gone easier again. It is reported that the Calcutta market is virtually in the hands of speculators and that there is very little actual consuming business taking place yet. Latest prices for Calcutta hessians are 71s 9d for 10oz 40 in., October shipment, and 70s 9d for 10oz 40 in., October while "B" twills are quoted at 156s 6d and 157s 3d for the respective positions, f.o.b. Calcutta.

Raw jute shippers have raised their prices by anything from £3 to £4 per ton, Mill Firsts being lowest at £95 and Mill Lightnings at £85, with crack Daisies—2/3 now up to £89, and grade TUSA—2/3 at £96 and grade fours at £85, c and f. Any prices mentioned for crack Tossa—2/3 and fours are considered to be too dear at about £110 and £98 respectively. There has been some talk of the Pakistan Government re-imposing minimum prices for raw jute, but it is believed that this proposal has fallen through. The latest estimate of the Pakistan jute crop at 2,502,865 bales for this season is considered to be so ridiculous that no attention is being paid to it. As one man remarked, "they could gull the public at one time, but not now."

PAKISTAN JUTE EXPORTS IN 1952-53
The following quantities of long jute and cuttings were exported from Pakistan during 1952-53:

	(Bales)
Long jute	43,58,000
Cuttings	9,17,000
Mesta fibre	25,000
Total	53,00,000

About 5,78,000 bales were exported to dollar areas. The total amount of foreign exchange was Rs. 53,76,00,000.

Engineering and Transport

PROGRESS OF THE GAS TURBINE

RECENT APPLICATIONS IN TRANSPORT AND INDUSTRY: EXPANDING POTENTIAL MARKETS

THE gas turbine is a recent technological development in prime movers which has been developed to the point of commercial practicability in many fields. A survey prepared by Political and Economic Planning (PEP), extracts from which are published below, explains in simple terms the principles of its working and examines its application and potentialities in particular fields. It discusses primarily the impact of this development on industry.

The turbine is simpler mechanically than the reciprocating engine in that it has fewer moving parts. A simple rotary movement is substituted for the complex of machinery which, in the piston engine, is starting, stopping and changing direction many times a second. The principle is well known. A stream of fluid under pressure is directed through a nozzle at a series of blades on the periphery of the turbine to revolve and the power is transmitted via the driving shaft either directly or indirectly through gears. Water, steam and gas are the fluids used for driving turbines. Where water under sufficient pressure is available this principle is used in the generation of electrical power. Steam turbines are used mainly in the generation of electrical power where water cannot economically be harnessed, and for propelling ships. In the steam turbine, steam at a pressure of sometimes over 1,500 lb. per square inch and at a temperature of over 500 degrees Centigrade is passed to the turbine. The generation of steam at such temperatures and pressures naturally requires massive boiler and ancillary equipment. In marine applications, pressures and temperatures are usually somewhat lower, generally in the range of 500 or 650 lb. per square inch and 300 to 450 degrees Centigrade.

The gas turbine system is a further application of the turbine principle. Instead of steam, high temperature compressed gas is directed at the turbine blades. The steam generators are replaced by air compressors and heaters. Basically the cycle of operation is straightforward. Air is drawn in at one end of the system and compressed. After compression it is heated, either directly by being burned with the fuel in a combustion chamber or indirectly by being passed through an air heater, i.e. an externally heated chamber. The hot expanding gas is then directed on to the turbine blades. The turbine is connected to the compressor and a large part of the power output of the turbine is required to drive this. The remainder is available for useful work.

The chief obstacle, in practice, to attaining maximum theoretical efficiency from a gas turbine is the problem of finding a satisfactory material for the turbine blades. A gas turbine designer must make his choice—according to the application for which his turbine is designed—somewhere between the range of the relatively low-priced materials which will not enable very high temperature to be used and those expensive materials which will. The scope for using the materials, either through reducing its first cost or increasing its efficiency without raising the cost disproportionately has been determined very largely by the ability to produce suitable materials and methods for the production of turbine blades.

Recent Development and Application

The development of the open cycle gas turbine as a power producer really dates from 1938 when the Swiss firm of Brown Boveri installed a generating set of this type at Neuchâtel. This application of the turbine was an outcome of the firm's interest in turbo superchargers for diesel motors. Superficially the rotating member of such a turbo supercharger resembles those of the early gas turbine engines developed for aircraft in Britain by Sir Frank Whittle and his team. Sir Frank Whittle filed a patent for an aircraft gas turbine in 1930 but at that time its development was impracticable since materials did not exist capable of withstanding the combination of high temperatures and stresses referred to above. By 1935 sufficient interest had been aroused to form, with the assistance of a firm of investment bankers, a small private company called Power Jets Limited.

The contracts for building the first engines were placed with the British Thomson-Houston Company, but, largely owing to lack of adequate finance, development work was slow and it was not until May 1941 that the first flight of a British gas turbine-engine aircraft was made. The world's first jet aircraft was built and flown in Germany, but owing to difficulties with turbine blade materials this experiment was abandoned; nevertheless the Germans had operational gas turbine aircraft in service in 1943.

There is little doubt that the challenge which the gas turbine offers to other prime movers is due to the efforts of Sir Frank Whittle and those who worked with him. It was in the aircraft industry that the gas turbine was first developed on a large scale and the urgent problems of military flying ever more powerful versions for military aircraft have accelerated the development of

other applications of this prime mover. It is almost certainly true that for several years to come the aircraft industry will be the proving ground for many other major developments. All the firms in the aircraft gas turbine industry in Great Britain have had previous experience in the manufacture of piston engines. Indeed, with the single exception of Alvis, who are manufacturing piston engines in the horse power range for which no gas turbine has been developed, all the engine manufacturers now produce gas turbines. One firm, however, is not building gas turbines of its own design but is manufacturing the small French "Turboméca" engines under licence.

Jet and Turbo-prop Aircraft

There are two basic types of aircraft gas turbine: the "prop-jet" or "turbo-propeller" type in which the turbine is coupled to a propeller which provides the propulsive force, and the so-called "pure jet" in which the still expanding gases, having passed through the turbine, are led through exhaust ducting to atmosphere and in doing so provide the propulsive thrust to the aircraft.

The Comet is a triumphant vindication of the economy of the pure jet on the route which can be flown at high altitudes. British European Airways' operating experience with the Vickers Viscount turbo-prop air liner has been particularly satisfactory on shorter stage routes, where the climb to such high altitudes is not justified and the proportionate time saved between city centres by higher speeds is considerably less.

Marine Applications

Many marine engineers are developing gas turbine units, including W. H. Allen Ltd.—who have an agreement to exchange information with the Bristol Aeroplane Company—John Brown & Company, Harland and Wolff, and Metropolitan-Vickers; not all of these manufacturers are building marine propulsion units, however, while in this field manufacturers whose principal interest is outside marine engineering have acquired notably Rolls-Royce, Rover and British Thomson-Houston.

In merchant marine applications, however, the use of the gas turbine is to some extent inhibited by the present regulations governing the calculation of the net tonnage of merchant ships. Harbour dues and port handling fees are based upon net tonnage. The gross tonnage of a ship is estimated by allowing each 100 cu. ft. of enclosed space to represent one gross ton. To arrive at the net tonnage that part of the enclosed space not available for pay load is deducted: where the engine room exceeds 13 percent of the enclosed space, however, a deduction of 32 percent from the net tonnage is allowed. Thus there is little inducement to prove satisfactory that it is estimated that a fuel saving of 50 percent might permit about four or five times the present annual expenditure on capital charges.

The gas turbine can be designed so that it will develop high power at comparatively low engine revolutions; hence it is possible to construct a gas turbine locomotive which does not require the weighty and expensive electrical transmission. One has already been built in France and should the technique prove satisfactory it will both enhance the already considerable power-to-weight advantages of the gas turbine locomotive and substantially reduce its first cost.

The development of gas turbines for railway traction has made more headway in the United States than in Britain. General Electric, and Westinghouse have each built locomotives. The main problem with gas turbines as at present applied to railway traction is their loss in thermal efficiency at less than optimum load. They offer considerable advantages where a high power output is required, such as in climbing gradients or accelerating away from signal checks, but once a train is at normal running speed, the average demand for power is low and the gas turbine consequently runs for long periods at well below its maximum efficiency. The two gas turbine locomotives operating on British Railways are still in the experimental stage.

A British manufacturer, the Rover Company of Solihull, Birmingham, demonstrated the world's first gas turbine motor car in 1950, but it is understood that at present the company has no intention of manufacturing for general sale. It is unlikely that the "Big Six" of motor car manufacturers are wholly without interest in the gas turbine for road vehicles, but the main developments in civilian vehicles are likely to take place in the heavy commercial field.

The range of duties for which stationary engines are used is so wide that it is not surprising that here the most diverse experiments in the gas turbine applications are being carried out. Firms known to be building or to have built stationary gas turbines include John Brown and Company, British Thomson-Houston, Brush Electrical, English Electric, Harland and Wolff, Metropolitan-Vickers, C. A. Parsons, and Ruston and Hornsby.

Generation of Electricity

Many of the gas turbines built or on order are intended as stand-by electricity generators, for which purpose they are particularly suited. As a bare load generator the gas turbine in its present state of development, and running on relatively expensive distillate fuels, is not an attractive proposition in Britain. Such a generator must be able to function 24-hours a day throughout the year with the minimum time out of service for adjustment and overhaul. On such work one of the largest items of cost is fuel. An average steam turbine generator having a 30 percent thermal efficiency will generate electricity at a cost (fuel and capital charges only) of about one half penny per unit. A gas turbine burning distillate oil would require an efficiency of over 40 percent to equal this cost on fuel alone (i.e. neglecting all capital charges).

In places such as the Middle East, where coal is more expensive than distillate oil, the cost position is, of course, radically different, but in most large industrial countries coal is indigenous and generally cheaper. For stand-by work, however, a gas turbine of relatively simple design, able to come on loan quickly and semi-automatic in operation, is well suited, although it has been estimated that the gas turbine would not be economic for a public supply plant which had to operate for more than 1,000 hours per annum. Other stand-by uses for which the gas turbine appears to be suitable are water pumping stations (the Metropolitan Water Board has three such units on order or delivered) and the driving of experimental equipment in large-scale research establishments whose large and irregular demands on the public electricity supply would be unwelcome. It is interesting to note that a gas turbine built by W. H. Allen for the Admiralty Research Establishment is in fact a marine gas turbine which could, if necessary, be installed in a ship.

The stationary gas turbine's greatest potentialities are perhaps in what is generally known as "process" use. This term is somewhat difficult to define closely, but generally it may be said that in process use the gas passing through the turbine is either generated by, or passed through, some other industrial plant which is itself the major part of the installation and not merely an auxiliary of the turbine itself. Thus, for example, the 700-hp. gas turbine on order for the West Midlands Gas Board, designed to operate on waste gases from the vertical retorts, could be described as a process turbine. On the other hand using the waste heat from the turbine to raise steam could not truly be described as process use.

Strictly, an exhaust turbo-supercharger for diesel engines is a process use on this definition, and this probably constitutes the largest potential market at present. For other process uses the design would frequently need to be individual to the particular application. The Ministry of Fuel and Power, for example, have ordered an experimental unit to burn methane from the updraught of colliery shafts. Another possible application is in blast furnace work.

There is a wide potential market for small gas turbines as light-weight or easily portable generators which are not under continuous load. Examples of this type of application are portable fire pumps and aircraft auxiliary generators. The first of the Blackburn & General Aircraft-built Turbomeca designs will probably be for industrial use of this kind.

Potential Markets

From the foregoing summary of various applications it will be apparent that the gas turbine is capable of burning a wide variety of fuels and that price differentials in particular fuels may often be critical in determining its use. At present, in almost every application, the gas turbine burns more fuel than its established competitor—that is to say it is thermally less efficient. In aircraft this factor is less important since the gas turbine provides a service which no other prime mover can. In railway locomotives, although thermally more efficient than the steam engine it has not yet been successfully developed to burn pulverised coal, and the cost of distillate oils in this country at present offsets the greater efficiency. In road vehicles the fuel consumption at present is higher than that of piston engines. In marine applications the outcome is not yet determinate whilst in stationary engines the need for a cheap fuel is very apparent.

A feature of the gas turbine, however, is its ability, thermally if not yet mechanically, to exploit such a wide variety of fuels. Several have already been mentioned such as distillate oils, residual oils, pulverised coal, waste gases and so on. Experiments are being carried out with pulverised peat and in Oregon, U.S.A., one turbine is running on sawdust.

Whilst, therefore, the U.K. market applications of the gas turbine may at present appear somewhat limited it should not be forgotten that the fuel cost differentials overseas are often not the same. In Switzerland, for example, the cost per B.T.U. of coal and fuel oil is not markedly different. In the Indian sub-continent the cost of fuel varies appreciably and the gas turbine might be

kandi and severe in Longai; helopeltis less than usual in Hailakandi; outturn last month about normal to good; the outturn to date is under last year; immediate prospects fair to good.

Eastern Doars—Outturn last month about normal; the outturn to date is considerably under last year; rainfall is much below normal for the season to-date; weather seasonable; immediate prospects fair; black rot prevalent.

Western Doars—Outturn last month about normal; immediate prospects fair; weather dry and too hot for the time of year and rain is much wanted; rainfall is much below normal for the season to-date; unless rain falls shortly the season must close early; the crop is coming forward slower than usual; the outturn to date is slightly under last year; black rot prevalent in some districts.

Darjeeling—Outturn last month about normal; immediate prospects fair; weather seasonable; helopeltis prevalent; blight blight prevalent.

Tera—Crop slightly below normal; outlook fair to good; unevenly distributed; helopeltis in evidence.

CHITTAGONG TEA SALES

At Sale No. 8 held on 7th October, 1953, leaf offerings consisted of 7,736 chests. Dust offerings amounted to 1,992 chests and there was a Supplement of 291 chests.

Leaf: There was a strong general demand for all types with Karachi buyers extremely active. Whole leaf grades were eagerly sought after and were sold at 2½ annas above valuation. All broken grades were about 1½ annas dearer and fannings 1½ to 2 annas dearer. One line of stylish B.O.P. realized Rs. 2-0-6. There were no withdrawals.

Dust: There was a good selective demand and better liquoring sorts frequently sold at two annas above valuation. Clean Common Dust was indicated at Rs. 1-8-0, an upward change of 1½ annas on last sale prices. Every lot was sold.

Quotations

	Sale 8—7th Oct. 1953	Sale 7—23rd Sept. 1953
O.P.	Rs. 1-14-0 to 1-15-0	1-12-0
Pek.	Rs. 1-12-6 to 1-13-0	1-10-0 to 1-10-6
P.O.P.	Rs. 1-11-6 to 1-12-6	1-10-0 to 1-11-0
B.P.	Rs. 1-9-6 to 1-10-0	1-8-6
B.P.S.	Rs. 1-10-0	1-8-9
O.F.	Rs. 1-13-0 to 1-14-0	1-11-0 to 1-11-6
P.F.	Rs. 1-10-0	1-8-3

Sale 9 will be held on Wednesday 28th October. Arrivals from up-country are below expectations but it is hoped that catalogues will total 11,000 leaf and 3,000 dust.

Calcutta Markets

RATES SLIGHTLY REDUCED IN TEA EXPORT AUCTION

FAIR DEMAND AT INTERNAL SALE

AT Export Sale No. 18 held on 12th October, the offerings consisted of 60,800 packages. There was a good general demand at slightly lower rates; Medium BP's were ½ anna easier while BOP's often sold 1 anna under last rates. Commons and Low Mediums also showed an easier tendency and Broken grades in this category were up to ½ anna easier. C.T.C. sorts also declined by ½ anna in price.

Leaf grades were a strong feature of the sale and were ½ anna and sometimes 1 anna dearer. There was also more enquiry for the very tiopy teas which sold at dealer rates. Well made BP's were once again well supported. There were fewer Darjeelings on offer which were irregularly easier.

Quotations

	1953	1952
Clean Black Pekoe	Rs. 1-13-6 to 1-14-0	1-6-0 to 1-7-0
Clean Common B.P.	Rs. 1-12-0	1-12-0 to 0-13-0
Medium Assam B.P.	Rs. 1-12-6	1-0-0
Best Assam CTC B.P.	Rs. 2-1-0 to 2-2-0	

Internal Sale

At Internal Sale No. 18, held on 13th October, offerings consisted of approximately 17,000 chests. There was a fair though rather irregular demand. Commonest sorts however were the strongest feature. Black Dusts suitable for Export were fully firm, but Medium Assams were a shade easier. The very best C.T.C. Assams were well supported and were a little dearer but the fibrous sorts were barely steady and at times a little easier.

Quotations

	1953	1952
Medium Doars	1 9 8 to 1 10 0	1 1 0 to 1 2 0
Medium Assam	1 10 0 to 1 10 6	1 7 0 to 1 8 0
Grainy Dust	1 14 6 to 1 15 0	
Best Assam CTC		

The usual quantity of Internal Leaf teas offered sold at about the last rates.

FREIGHT MARKET DULL

THE freight market has been featureless over the past week and there is little of interest to report. Japanese Coal Charterers are in the market at 50s. for November and December but so far have failed to attract tonnage at that rate. Ore Charterers continue active and Mormugao-Continent from America to Pakistan and two November steamers accepted the lower rates of 67s. and 68s. from Northern Range, whilst a Greek steamer secured 72s. 6d. for grain from Vancouver to Bombay in October.

Coal was fixed from Hamilton Roads to Antwerp at 30s. and to Japan at \$8.75 both rates being a slight improvement on recent fixtures. A British motorship was time chartered at 17s. 6d. delivery Mormugao redelivery Continent for the trip home.

HIDES AND SKINS

The market ruled almost unchanged. Stocks were less than in the previous week.

Bazar Sales

(Between 6th October and 12th October, 1953.)
Cowhides—Wet salted (Ord) 6,000 pcs. on the basis of Annas 8-3 to Annas 9-6; Wet salted (Slaughtered) 8,200 pcs. on the basis of Rs. 13 to Rs. 14.

Goatskins—Wet salted (Daisee, Killed) 59,950 pcs. on the basis of Rs. 245 to Rs. 373; Assam-Dinapur 21,000 pcs. on the basis of Rs. 270 to Rs. 330; Purneah-Kissenganj 12,100 pcs. on the basis of Rs. 280 to Rs. 310; Patna (Ord) 9,900 pcs. on the basis of Rs. 155 to Rs. 170; Pakur 3,150 pcs. on the basis of Rs. 270 to Rs. 280; Muzafferpore-Patna-Darbhanga 37,000 pcs. on the basis of Rs. 205 to Rs. 230.

Bazar Stocks

(12th October, 1953.)
Cowhides—Wet salted 1,00,200 pcs.
Goatskins—Wet salted (Daisee, Killed) 55,000 pcs.; Assam-Dinapur 80,500 pcs.; Muzafferpore-Pakur-Purneah-Kissenganj 2,65,000 pcs.

SUGAR ARRIVALS FALL. PRICES RISE

During the week ended 13th October, arrivals fell to 1,000 bags a day so prices recovered from the low level of Rs. 29-12 a maund reached a fortnight ago. Sugar distributors and the State Govt. have however made joint efforts to stabilizing smoothly. Sales averaged 4,000 bags a day in 16,000 bags of Indian and 55,000 bags of Java sugar. The wholesale rate for Java sugar was Rs. 30 a maund and the retail rate Rs. 30-5 a maund. delivery cost Rs. 30 to Rs. 30-5 a maund. Ex-mill and there were some enquiries in this market because Diwali is approaching. The Assam market was active and there was good demand from the rail centres of Orissa and Andhra.

COMPANY AND PUBLIC NOTICES

THE SWADESHI COTTON MILLS COMPANY LIMITED.

KANPUR.
NOTICE is hereby given that the Thirty-second Ordinary General Meeting of Shareholders of The Swadeshi Cotton Mills Company Limited, will be held at the Registered Office of the Company at Kanpur on Thursday, the 29th October, 1953, at 2-30 P.M., to transact the following business:—

NOTICE

THE Hundred and Eightieth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Fairlie Place, Calcutta on Friday the 30th October, 1953, at 3 p.m., for the purpose of receiving the Directors' Report, passing the Accounts for the half-year ended 30th April, 1953, declaring a Dividend and transacting any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 14th to the 30th October, 1953, both days inclusive.

GLADSTONE LYALL & CO., LTD.,
Managing Agents.

Calcutta,
The 12th October, 1953.

THE CALCUTTA TRAMWAYS COMPANY LIMITED.

IN view of the unsettled conditions in Calcutta at the present time and the losses incurred during the disturbances and strike in July 1953 and taking into account that the finding of the Tribunal set up to investigate the increase in tram fares will still not be known for some time the Directors feel that it is of paramount importance to conserve the remaining cash resources of the Company. They therefore regret that they are unable to recommend the payment of a final dividend on the Ordinary Shares for the year ended 31st December, 1952.

A. SMITH,
Acting Agent.

P. 4 Mission Row Extension,
Calcutta, 8th October, 1953.

THE WESTERN INDIA MATCH COMPANY, LIMITED.

5% Calcutta Electric Supply—Rs. 101-10-101-12-101-10-101-12.
5% Reliance Jute—Rs. 95-12-95-12-95-12-95-12.

LINSEED

The upward trend in prices was maintained throughout the last week and values regained most of the losses sustained during the recent decline. Trading was very limited chiefly owing to the lack of sellers for forward delivery and the shortage of supplies prevailing locally. A very keen interest was shown by crushers, chiefly for early delivery and speculators were also active with enquiries for forward delivery. The oil section was notably firmer with short-covering taking place and enquiries from shippers as well as local buyers. Latest quotations were as follows: Ready Rs. 19-12-0 per maund; October-November Rs. 19-8-0 per maund.

Firestone TRUCK BUS TYRES

Are the Lowest Cost-Per-Mile Tyres you can use today!

Let your own Mileage Records Prove It!

GIVE Firestone Truck Bus Tyres a true mileage test... a test in your own fleet operation with your own service. Your mileage records will prove

that Firestone Truck Bus Tyres are the lowest cost-per-mile tyres you can use today!

Only Firestone Tyres give you the extra advantages that result in lower original mileage costs and lower costs through additional tread service.

Let tyre performance be your guide for the best Truck Bus Tyre buy.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CONFLICTING SIGNS AND PORTENTS FROM AMERICA

CHANGING ECONOMIC CLIMATE: NEED FOR CAUTIOUS POLICIES IN ASIA

HERE and now, two things may be said about an American recession if one should develop in the few remaining weeks of this year or, as some business analysts more probably predict, in the spring of next year: in the first place it should take no one by surprise, for the gloomy prospect has been actively canvassed for several months; and in the second place it is most improbable that any recession would follow the pattern of the headlong slump of 1929. Such warning signals as there are indicate no more than a gradual change of business tempo in the U.S.A. Thus for the first time since 1949 total U.S. national income for the third quarter of the year showed a trifling fall on that of the previous quarter. The seasonally adjusted Federal Reserve Board index of production receded from its peak of 241 in June to 234 at 30th September. Against this may be set the upturn in commodities futures in the last few days. Other flickering signals can also be seen, but diagnosticians are still very much in the dark and none of them will go beyond the tentative assertion that a recession of sorts might already have started. The needles on the economic dials are being watched as attentively abroad as they are in America itself, which is understandable enough having regard to the consequences for the rest of the world of any changes in the U.S. economy. The Great Depression, which was inaugurated by the Wall Street crash of 1929, is not merely an historical fact; it is an historical fact well within the memory of many adults alive today.

On the evidence at present available perhaps the most that we are justified in saying is that American business activity is showing signs of faltering, which is a very different thing from announcing the onset of a recession. Nonetheless, even a mild decline in U.S. purchases and imports, combined with other reviving influences in world trade, must make the task of those countries which live in precarious dollar balance even more difficult than it has been in recent years. The reviving influences in question are the increasingly aggressive competition in world markets represented by the industrial recovery of Germany and Japan, both of whom will expect to receive a larger slice than heretofore of that diminishing volume of international trade which any reduction in U.S. business activity necessarily postulates. It is the juxtaposition of these two different sets of circumstances which calls for some rethinking, on the most cautious lines, of the immediate or middle distance economic prospects for both Asian and European countries.

By itself a gentle recession, operating as a corrective of some of the more obvious distortions of the American economy, would be no bad thing—either for the U.S.A. itself or for those whose trade is closely bound to hers. But if the falling curve of U.S. demand should get seriously entangled with the rising spiral of German and Japanese competition and world overproduction the consequences might, to put it no higher, be highly inconvenient to those other countries which, during the post-war years, have painfully and only recently achieved a somewhat insecure solvency—some of whom are but half-way through ambitious economic plans and the creation of a new social order. There is no reason to paint the picture in the darkest hues; but it needs to be emphasised that economic planning, of itself, will not insulate an economy from the severe stresses and strains of world trade movements. The logical corollary of national planning over large parts of the intensify now practised over large parts of the free enterprise world is the regulation of international trade. And that is precisely what we have not got. It was the American economist

Jacob Viner who some years ago wrote about the "intractability of foreign trade to the disciplines of national Five Year Plans."

There is a tendency to assume that if only American trade policy were liberalised (by which is meant if only U.S. tariffs were substantially reduced) the sharp edge would be removed from any depression that might originate in that country and spread to the rest of the world. This is only partly true, and indeed hardly relevant at all for the primary producers and raw material supplying countries—within which category are most of the Asian nations—who stand back from the periphery of the vast and highly industrialised economy of the U.S.A. In so far as a reduction of U.S. tariffs would benefit other manufacturing countries, and thus enable them to earn more dollars to fortify their foreign exchange resources, all would benefit from what is euphemistically called "liberalisation" of U.S. trade. But the real need is for the maintenance of American consumption at a level high enough to ensure a steady intake of the limited range of commodities which that country is obliged to seek outside her own borders. Her own resources are so vast and diverse that the things she must import from the rest of the world are relatively very few in proportion to the total she uses in keeping the wheels of trade and industry turning. But trifling though they may be in the sum total of America's gross national product, these imports of raw materials and commodities, bulk very large in the calculations of the selling countries. Were it not so we should not have experienced the series of balance of payments crises which have bedevilled post-war recovery and perpetuated a chronic dollar shortage over nine-tenths of the trading world.

We may assume that neither the U.S. Treasury nor the Federal Reserve authorities are likely to be caught napping if it proves in the next few weeks that a trade recession has in fact established itself and is showing the traditional signs of intensifying. For one thing the Republican Party, which has only just returned to power after 20 years in the wilderness, could hardly afford to permit things to drift aimlessly until a situation was reached which might be comparable to that which first brought Mr. Roosevelt to power. If the evidence seems to justify it, we may therefore expect vigorous action to be taken long before a mild depression gathers sufficient momentum to degenerate into a slump. If only as a measure of Republican Party self-preservation. Though volatile, the U.S. economy has immense reserves of hidden strength and the Eisenhower administration has the great advantage over the first Roosevelt administration that Federal expenditure on public works (using those two words in their broadest sense) would, in the context of the Cold War, look much more like real expenditure in the interests of the nation than did the Democratic public-works programme of the early 'thirties. The cherished Republican objective of lower taxation and a balanced Budget in 1954-5 would almost certainly have to be abandoned, but that would be no great price to pay for holding the line against a sharp economic recession 'which might well bring a Democratic majority back to the legislature after next year's Congressional elections. A recent by-election in Wisconsin where, for the first time in its history, the ninth district constituency returned a Democrat to the House of Representatives came as a considerable shock to the Administration.

There is the further fact that an American recession, induced by indifference or encouraged by the time-honoured Republican *laissez-faire* philosophy, would make complete nonsense of the

foreign policy which the State Department has been seeking to implement under the direction of Mr. Acheson and Mr. Dulles. There would seem to be little merit in letting what has been so laboriously built up by political means crumble away for want of effective action on the economic front. For any serious fall in the tempo of U.S. business would quickly communicate its effect to America's friends and allies in both hemispheres. It has taken nearly ten years to put some of them on their feet and although America cannot be expected to carry the burden of European recovery indefinitely, or to raise the standards of the underdeveloped world by her single-handed efforts, it would clearly be against self-interest to be too complacent in the face of unfavourable changes in her own economic climate. Planning may be anathema to the Republican tradition, but failure to foresee and assess the beginnings of a depression would be fatal to party and nation alike. Thus we may rest assured that the warning system is set ready, if need be, to alert the Administration. All this may seem to breathe the spirit of economic defeatism, but it would be contrary to all the known facts of human experience—and therefore sheer foolishness—to assume there can be no slackening of the rhythm of the U.S. economy which, during and since the war, has been operating under something like boom conditions.

Nor can the responsibility for taking anticipatory or precautionary action be left completely to the Americans. At the very least there is a case for those other countries which would be likely to be hit to put themselves in a state of readiness to meet the contingency of an American depression. This, incidentally, would seem to have been the inner meaning of the Governor of the Bank of England's recent statement that nobody could be sure in which direction, if at all, the influence of monetary policy might be needed in coming months. Mr. Cobbold was addressing an audience at a City banquet to whom he put forward the proposition that recent changes in the Bank rate had created a more realistic position from which, if it was necessary, the rate could be brought into increasingly effective use. To this proposition he carefully added two riders; one was that the reduction in the rate made in September could not be taken as a pointer to the future and the other that there was a danger that too much might be left to, or expected of, monetary policy. And yet the monetary weapon must always provide the first corrective measures in a mild but perceptible recession or constitute one of the main ramparts of defence if, and when, a full-fledged depression develops. It was the chief (and valid) criticism of the handling of the great depression of 1931 that the monetary steps taken to meet a deepening crisis were always too little or too late. Rightly or wrongly, the blame was laid at the doors of the central banks of the countries involved and there began an outpouring of monetary doctrine unique in the growth of economic literature. As a result we now know a great deal more than we did about the rôle of monetary policy, and its efficacy in periods of declining trade whilst, in every country, final decisions in the management of monetary policy now rest in the hands of political authorities who, because they may be presumed to be cognisant of the needs of all their subjects, do not lie under the suspicion that they merely serve the interests of some limited financial class. This furnishes no guarantee that trade recessions will not recur, but at least if they do it is some assurance that they will be met with concerted action along the whole of the economic front.

What has been written above should not be taken as an indication that this newspaper believes an American recession to be imminent, but rather as a warning that the moment has come when the available signs and portents should be scrutinized with particular care. We may reasonably hope that we shall never again experience a world depression on the 1931 pattern. If it presages anything, the present economic pause, of which there is some evidence both in America and Europe, suggests nothing more drastic than the setback which occurred in the American economy in the autumn of 1949. Nonetheless, a permanent drift to a lower level of world trade would create many difficult problems for countries which have based their calculations on the continuance of a fixed

level of export demand. It is, of course, an indisputable fact that the volume of international trade has failed to grow proportionately with world production and indeed, with the prevailing bias in favour of a high degree of national self-sufficiency, this is not surprising. But many countries are still far from self-sufficient, even at a low and depressed standard of life, and they are no more immune from the cyclical fluctuations of international trade than their wealthier and economically more advanced neighbours. Although their import needs are less, their dependence upon a small range of exports increases their vulnerability to even small changes in the volume or direction of world trade. If, at the same time, they are at a critical point in the execution of a national plan or project, their dependence upon external factors is increased. Reliable economic prediction becomes of the highest importance. But it remains the most perplexing of all the tasks which confront business men, administrators and politicians. That is why it is both difficult and hazardous to attempt to pass final opinion on the tentative data so far available from the U.S.A. But all the evidence points to the need for watchfulness and a cautious assessment of the trends of international trade as they reveal themselves.

TIMELY ACTION ON COTTON TEXTILES

COMPENSATION PLAN FOR RETRENCHED WORKERS

THE best thing about the reductions in taxes on cotton textiles announced last week-end was that they were made while it was still possible for some honest observers to doubt whether the industry was in fact facing an overproduction crisis. In other words, looked at from Bombay (though perhaps not from Ahmedabad) the Government's action contained an element of anticipation—and anticipation is the most important factor in economic policy as well as the one most often missing from official action in recent years. So quite apart from the evident benefit to the cotton textile industry, last week-end's decision might be taken as a welcome sign that the Government of India is on its toes and that its repeated assurances that it is "carefully watching developments" might mean just what they say. Hitherto, the Government has all too often waited until overproduction was staring it in the face before it moved; at times it has seemed that Delhi waited until it was clear that no one wanted to buy jute bags at any price before it reduced the export duty on them. Up to last Saturday it appeared that the Government was going to adopt a similar line on cotton textiles, for all its statements in recent weeks were to the effect that stocks of textiles were not disturbingly large and that Ahmedabad was being unnecessarily "panicky." In fact it repeats this assertion in the Press Note announcing the changes in taxes. There is nothing inconsistent in that of course; panic within an industry might be completely "unnecessary" in some theoretical sense, but once purchasers hold off for lower prices and once producers begin cutting back production, there is no alternative but to bring prices down as quickly as possible, and in India today that usually means reducing taxation. The Government is learning to submit to this necessity, though still nursing the feeling that it is being "bullied" or "black-mailed" into action. This illusion that, whenever the market turns against you, you are the victim of sinister pressure groups is common among those unfamiliar with the operation of anonymous free markets.

Though it hints at bullying by the Ahmedabad mills, the Government also gives full credit to the industry for cutting its prices when stocks began to accumulate. There can be no doubt that this action by groups of mills in Bombay and Ahmedabad made Government action much easier, both by convincing the Ministry that the mills were finding stocks hard to move and by enabling the Government to defend its concessions from sections always suspicious of soft treatment of the textile industrialists. This is a point that should be carefully noted by private enterprise, that Government co-operation is much easier to obtain when industry has itself made some sacrifice. The Press Note issued on Saturday makes the connection plain when it says: "In view of the perceptible reduction in the prices of superfine cloth, Government feel that there is a case for reduction in the excise duty on this category of cloth," and goes on to announce a cut from As. 3.3 to As. 2 per yard on superfine cloth.

The abolition of the export duty on medium cloth will have a useful effect on exports. In fact, the apparent effect will be much more marked than is justified because there is a large accumulation of cloth—estimated at 40 million yards—that has been held up in the expectation of a reduction in the duty. (Was this "bullying," too?) The withdrawal of a duty that has long since ceased to be warranted, together with the

drawback concession on imported cotton used in exported cloth, will assist Indian textile exports but it is out of the question that this year's exports will reach 1,000 million yards, the figure set at the Buxton conference last year. This 1,000 million yards has come to be spoken of as a "target" but it resembles many of the targets in the five year plan in being something that everyone would like to see happen but which no one has any right to expect to see happen because no way of reaching it has been planned or calculated.

The simultaneous issue of ordinances concerning payment to workers for lay-offs and retrenchment is probably the consequence of bargaining within the Cabinet, rather than of any real connection between the two subjects. The Labour Ministry appears to have been impressed by the unemployment in the textile centres before the other departments were convinced that cotton textiles were becoming hard to sell. Demands to implement the compensation scheme for workers thrown out of employment could not be accepted, the Commerce and Finance Ministries realised, without some concession to the mills. Last week-end's batch of ordinances were the compromise result. The Labour Ministry has scored a victory in having the compensation scheme applied to other industries besides cotton textiles, including many industries that are perhaps equally badly placed and have not been offered any reduction in taxation on their products. Even those industries would have gladly received the new plans for retrenchment and lay-offs as making possible—although at a price—some rational control over the size of their labour force, but it is disturbing to notice that even when an establishment has complied with all the requirements of the ordinances when dispensing with workers, its decision is still open to argument before a tribunal. If the Government is satisfied that its scheme is just to retrenched workers, and since it is obvious that the cost to the employer is too great to allow its being used lightly, then no further appeal should have been permitted. Still, everything

will depend on how the system works in practice. If it enables industry to reduce its labour force in time of need, protects the worker from being suddenly turned out without money to tide him over the search for new employ, and does not lead to endless litigation, it will be a welcome advance in the present position.

MISUNDERSTANDINGS ON TRADE WITH THE COMMUNISTS

A RECENT speech by Britain's Ambassador to Washington to an American university audience set down with admirable clarity some of the basic facts about western trade with the Communist countries—a subject on which there is much misunderstanding, not by any means confined to Senator McCarthy's investigating staff. Sir Roger Makins told his listeners that before the war Western Europe's imports from Eastern Europe amounted to \$3,000 million; since the war, even allowing for the sharp rise in prices, they have not risen above \$1,000 million. Among the basic assumptions of the Marshall Plan (indeed, it was in such terms that the Administration commended it to Congress) was that in the four years of the Plan's duration imports of Soviet-grown cereals into Western Europe would return to the pre-war level and that imports of timber would reach 75 percent of the pre-war figure. In fact East-West European trade actually diminished during the Marshall Plan period, because of the introduction of controls over the export of strategic materials to Russia and China, the administration of which has been a fruitful field for the misrepresentation of British and Commonwealth activities by Senator McCarthy and others. Sir Roger Makins pointed out that although the USA operates a complete embargo on exports to China, the agreement with America's allies is that trade with the Communist bloc in agreed commodities of strategic importance should be prohibited or controlled and that trade in all other goods should be permitted. That policy, said the Ambassador, had been accepted and rigorously enforced by Britain and "no infringements by any person under the jurisdiction of the British Government have

been authenticated." This needed saying because too many people in the USA have been misled by the antics of McCarthy to believe that Britain has observed the embargo mostly in the breach. This is not so, and it cannot be too often stressed that losses of business consequent upon the restrictions upon trade with China have fallen most heavily upon U.K. traders.

Sir Roger Makins listed for the benefit of his American audience some of the practical arguments for maintaining the flow of East-West trade at as high a level as is compatible with the denial of vital strategic materials to an aggressor—actual or potential. Boiled down to the simplest formula there are certain things which the Western European countries regard as of great importance to their own economies; Sir Roger pointed out that they cannot get them from the eastern bloc for nothing and they have therefore to be paid for in a currency which is acceptable to the Communist countries, i.e. in other goods. Secondly, each contraction of trade with the eastern bloc intensifies the already serious unbalance of trade in the Western world and aggravates the dollar shortage. Thirdly, the more the West restricts its trade with the East, the closer Russia and China would draw together, a movement which would tie China's economy to Russia and which would hardly be in the interests of freer world trade or the proclaimed objectives of the State Department. In the long run, said Sir Roger, there are certain countries which depend for their livelihood on trade with the Soviet bloc. One is Japan which, throughout the Korean war, has continued to trade in non-strategic goods with Red China. The Americans are very properly much concerned about the economic future of Japan. The same arguments which point to the ultimate inevitability of a restoration of Sino-Japanese trade apply in greater or less degree to China's traditional trade with the Western world.

CURRENT COIN

Asia's Electricity Supplies.—Delegates from 17 countries who attended the meeting of the ECAFE electric power sub-committee in Bangkok earlier this month reached the incontrovertible and familiar conclusion that the countries of the region should give much more attention to the development of electric power, including rural electrification. They began their discussions in the knowledge that although more electricity is being produced than ever before, requirements continue to increase at a faster rate than generating capacity. In many areas, supplies have had to be severely restricted during peak periods of demand and also when the flow of water at hydro sites decreases. Not all urban areas can get the electricity they need, while rural electrification in ECAFE countries has hardly yet begun. Considering that these were the major preoccupations of the sub-committee and that they apply as much to India as anywhere else it is surprising, and regrettable, that a representative from this country did not attend the meeting. The first issue of a commendable new ECAFE venture, the *Electric Power Bulletin for Asia and the Far East*, was presented to the sub-committee, and it contains valuable information on progress hitherto has neither been uniform nor very impressive; ECAFE itself recently pointed out in another publication that except in the case of mainland China, India, Japan and Malaya, there has not been any marked increase in generating capacity. There are many hydro-electric schemes in the region but few of them have so far been completed. Considering that most power plants have since the end of the war been working at full capacity, the only way to increase the output of electricity is to install more generating plant. The difficulty here is mainly financial, but an official summary of the proceedings suggests that the sub-committee paid hardly any attention to this problem. Admittedly, questions of general financial stringency were outside the scope of its discussions, but comment on how official policies have hampered electricity development, in India for instance, would not have been out of place. As it is, progress with electricity schemes in India recently has been mainly in the public sector—the 80,000-kilowatt thermal station at Bokaro and the 150,000-kilowatt plant at Sindri being two outstanding examples. This has tended to shadow the fact that the private sector also offers great scope for progress. Threats of nationalisation, inadequate returns on investment, heavy taxation, and shortage of capital are some of the difficulties private electricity producers in this country face; to this may be added the Bombay Government's attitude toward the Tata hydro-electric companies' expansion schemes. No complete without mentioning handicaps such as these; nor if it fails to contrast them with the encouragement given to private producers in such countries as Japan.

Two-Point Sales Tax.—The Indian Merchants' Chamber of Bombay has in a recent memorandum

amplified the views it expressed two months ago on the Bill to amend the Bombay Sales Tax Act which, it is claimed, would convert the present multipoint sales tax into a two-point levy. The Chamber reiterates its earlier opinion that the measure is extremely complicated and an official clarification of some of its provisions has not been forthcoming. A multiplicity of levies is proposed in the Bill; as many as six imposts are to be levied—sales tax, general sales tax, outside goods purchase tax, purchase tax, special goods sales tax and special goods purchase tax. The suggestions of the Merchants' Chamber are: The purchase tax and the special goods purchase tax are new levies and should not be imposed. The number of schedules should also be reduced by exempting articles listed in schedules B, C and D which include either essential consumer goods or raw materials for industries. No tax should be collected on sales of essential raw materials, components and accessories to manufacturers and processors. The Chamber points out that some industries such as vanaspati, sweetmeats and confectionery will have to pay more under the new sales tax scheme than they do under the multipoint system. It urges that exports to other States and to foreign countries should be completely exempt from sales tax at any stage, and that the conditions for exemption should be simplified. If goods sent to other States are not wholly exempted, outside purchasers will be inclined to deal directly with manufacturers or importers in Bombay State, thereby eliminating the intermediary traders. Similarly, the condition in the case of goods for export that the seller must give delivery to the purchaser on an f.o.b. or f.a.s. basis will lead to serious practical difficulties. The Chamber also considers that the conditions laid down at present for exemption of transactions made by commission agents in the sphere of exports outside the State are too rigid. It suggests changes in the sales tax on cloth, bullion and specie, medicines, and cinematographic equipment, and asks that the memorandum be placed before the select committee which is considering the Bill.
