BURMESE RICE PRICES AND TRADE
WITH INDIA

SCOPE FOR ECONOMIC CO-OPERATION IN THE
DELHI NEGOTIATIONS

THE trade talks now going on between India and Burma in Delhi will be the occasion for some delicate negotiating. Both countries stand to gain very considerably from an expansion of Indo-Burmese trade, and yet neither urgently requires that this trade be increased. This situation will obviously lead to hard bargaining, and indeed the talks have only begun after a good deal of sparring and some beating about the bush. An Indian delegation, led by a Central Minister, visited Rangoon some time ago not, it was emphasised, to do a deal in rice but just for general discussions on trade. Evidently the discussions were very general, for no news was forthcoming after the visit and the Minister concerned withdrew to an Indian hill station to await a return visit from the Burmese. He waited a long while but the Burmese postponed their tour repeatedly, and only last weekend did their mission arrive for serious trade talks. The reasons for the two countries' simultaneous interest and lack of eagerness with regard to mutual trade are not far to seek. Firstly, 80 percent of Burma's exports consist of rice, a commodity that has been in acutely short supply in Asia for years and which is not at all difficult to market. India could plainly do with more rice, especially if it were relatively cheap, but according to her Food Minister she is now very nearly self-sufficient and there has even been some brave talk of rice exports. Burma has been running a favourable balance of payments and, alone of the countries in this part of the world, has had no experience of the runaway inflation caused by the Korean boom nor of the sharp deflation and fall in export earnings that has taken place since. She can look on her foreign trading position with much more equanimity than India, and is entirely free of anxiety about finding markets for her principal exports. On the other hand, the slow recovery that has put her in this fortunate situation will be arrested unless development work can be speeded up, and for that she will need substantial imports of basic industrial materials, of which India is the most convenient if not always the cheapest source.

Another factor that decides the atmosphere of the discussions is that we have here two Government monopolies face to face. The Government of Burma is the monopoly procurer of rice for export, a privileged position that it has been using—as we shall show—very well, so well in fact that similar tactics employed by a private business would be called by some hard names. The Government of India is similarly a monopoly importer of rice. The peculiar conditions under which trade negotiations are carried on between two Government monopolists have been made familiar to us by the dealings between Britain and the Argentine, especially when the commodities involved are "political", like meat or rice. But relations between Delhi and Rangoon are friendlier than in that instance, and it is to be hoped that a comprehensive trade pact which will advantage both countries equally will issue from the present negotiations.

The production of rice in Asia has been gradually increasing in the last few years, though it still below the pre-war output. The average Asian rice crop (excluding China) in the years between 1934 and 1938 was 100.6 million tons; in 1949-50 it was 98.2 million tons, falling to 97.5 million tons in 1950-51 and recovering to 98.3 million tons in 1951-52. The largest contribution to this increase was made by the traditional rice exporters of the region, Burma, Thailand and Indo-China. In Burma the main cause of the improved rice crop was not higher internal prices, as in Indo-China, but the restoration of law and order and the maintenance of secure communications

as a result of the gradual failure of the insurrection. As disorder is mastered, the best agricultural land is put under rice first; Burma is today cultivating 23 percent less rice land than before the war but the yield is far higher, and thus almost as much rice is being grown, and more cheaply. The chronic deflation that Burma has suffered from, while most of the rest of Asia was inflating, has kept her internal prices right out of line with those obtaining in consumer countries. This discrepancy the Government of Burma has used for its own benefit by maintaining a procurement monopoly for export, keeping internal prices down and collecting the difference between Burmese prices and international prices for itself.

Meantime international rice prices have been rising, and Burmese prices and the internal cost of living have been falling. From 118 in 1949, the working class cost of living in Rangoon fell to 100 in the first half of 1950 and then to 89.8 in 1952. This fall in Burmese prices was partly the consequence of deflationary policy—the neutralisation of profits earned by the Government boards' external trading monopolies—, partly of heavy imports of consumer goods, especially in 1951, and partly of higher productivity and lower transport and distribution costs following on the quelling of the rebellion. The price of rice in international trade has gone on rising, advancing by about 11 percent early last year. The output of wheat in Asia has recovered much more rapidly, so the differential in wheat and rice prices has increased even faster. Given the strong preference throughout much of the Orient for rice over wheat, a cheap producer of rice has been in a very favourable position. Taking Burma's internal rice price as 100, the ECAFE has drawn up the following rough comparison with other internal prices:

Burma	...	100
Thailand	...	230
Egypt	...	280
India	...	310
Italy	...	330
U.S.A.	...	390
Japan	...	440
Indo-China	...	460
Pakistan	...	550
Brazil	...	740

Yet the international price of rice, the world market price, is the same for all these countries. The ECAFE, which has to be careful about treading on the toes of member Governments, comments: "The disparity between the internal and the external rice prices in Burma and Thailand suggests that, even if the international price should fall, at some future date, neither cultivators' incomes, nor production would suffer immediately. To the extent that government revenues are dependent in these two countries on profits from rice

marketing, the Government's financial position would be affected." To put the matter more bluntly, the Government of Burma has been making a very good thing out of its rice exports, and what India is now asking is that it supply rice at prices nearer its true value in Burma.

It is not only in government-to-government transactions in rice that Burma has been making handsome profits. The ECAFE says in its latest report: "Two-thirds of 1952's exports will be undertaken by the Government and one-third by private traders, as compared with 90 percent and 10 percent respectively in 1951. The export prices for rice on a government-to-government basis were fixed for each half-year, and in the first half of 1952 they were about 11 percent higher than in the second half of 1951. Rice for export by private traders is also provided, through tenders, by the State Agricultural Marketing Board; the price paid by traders may change from time to time depending on bids by those submitting tenders in foreign exchange. Under present conditions this price is always higher, usually by about 10 percent, than the Government trade agreement prices, thus bringing the State Agricultural Marketing Board a larger profit per ton from its supply to private traders than from its direct sales to foreign countries."

The only important rice exporter in Asia which has not isolated its internal market by one device or another is Indo-China, where of course there has been serious inflation. Thailand operates a penalty exchange rate for rice exports and Burma uses a marketing monopoly, in both cases with the result that the peasant cultivator is denied the incentive of higher prices which reflect Asia's great need of his produce, while his Government collects the profits brought in by the scarcity of rice, the staple food of Asia's millions. This is not a very elevating spectacle for those who hoped to see closer co-operation among the newly independent nations of the region; but, more important, it means that the high prices paid by hungry people do not even have the effect we expect of high prices in free economies, the effect of eventually increasing the supply. In Burma it is also connected with the persistence of deflationary policies which are hindering the country's full recovery from years of civil unrest.

Substantial two-way trade between a country where prices are inflated and still rising, like India, and another where prices are deflated and still falling, like Burma, would normally be uncertain and unbalanced, but the Burmese Government has lately shown signs of beginning works on the development plans that have been so long delayed by the insurrection. After some years of stagnation at a deplorably low level of economic activity, Burma is trying to re-activate the resources neutralised by the Government and to promote new productive endeavour. Imports have been expanded, not only—like exports—in value, but in volume too. There has been an increase in imports of capital goods and technical services under foreign assistance programmes. With ample stocks, better productive equipment and large foreign exchange reserves (especially sterling), the country is favourably placed to launch extensive development plans. Capital and enterprise from overseas are now being looked upon with less suspicion than in the years after independence and the Ministry of National Planning last year announced that foreign investment in Burmese enterprises would not be nationalised for 25 years. The assistance that India can give by way of trade to the restoration of the Burmese economy is considerable; the contribution of assured supplies of cheap Burmese rice to India's further progress, and particularly to the lowering of Indian industrial costs, is just as great. The negotiators in Delhi this week therefore have the opportunity to promote international economic co-operation in Asia along the lines we have heard about so often since the war. India's food shortage has had so much publicity and Burma's rice supplies are so plentiful, that it might at first appear that this country stands to gain more than her neighbour from a trade pact. But if Burma wishes to do more than make big trading profits in the sellers' market for rice, if she wishes to renovate her industry and raise her living standards, she has as much interest as India in increased trade across the Bay of Bengal.

SUGAR IMPORTS DURING A SUGAR GLUT (1952-53) GOVERNMENT IMPOSTS AND SELLING PRICES

BARELY six months ago, the sugar trade, whose unreliability compares only with the meteorologists', said that the Indian consumer could confidently look forward to cheapness and plenty. Much was made of a burdensome glut of sugar that would bring about a collapse in its prices; the Government was urged to help sell sugar abroad and it responded by shyly offering to subsidise exports. The honeymoon of Government-industry co-operation did not last long, because prices began to rise for no evident reason. After months of clamour about the need to boost exports, it was decided at the end of January 1953 not to allow any. It was explained that this was because sugar production was expected to decline in the current season and there might be a shortage, but even the official statistics did not support this explanation. The sugar industry rejoined by charging that prices had risen not because mills were manipulating the market by holding back stocks, but because the Government would not give them enough wagons to send sugar to the consuming centres. Statistics were produced by both sides; by the mills to show that despatches had fallen short of sales because there was no transport; and by the Government to show that prices were high even in producing centres because mills would not put enough sugar on the market at lower prices.

That, briefly, is the background to the debate that culminated last week in the decision to import sugar and to reduce the import duty on it from Rs. 14.34 per cwt. to Rs. 7 per cwt. The Government feels that the industry and the trade have not played fair inasmuch as prices have remained high despite a substantial improvement in the transport of sugar. Statistics show that despatches during the current season, until the end of May, amounted to 911,541 tons as against 668,895 tons in the corresponding period of the last season. Consumption has almost certainly increased, because sugar is more easily available and because khandari, gur and shakkar prices have risen recently. It is possible that dealers have gradually increased their stocks as earlier apprehensions of a fall in prices receded. The industry believes that supplies have been reduced by large-scale smuggling to Pakistan; the Government has taken measures to ensure stricter vigilance in the border areas, but does not think that smuggling has been on as large a scale as the industry implies. It apparently feels that these three factors—higher consumption, a reasonable increase in stocks, and smuggling—cannot together fully account for the combination of high prices and the extraordinarily large quantity of sugar that has been despatched. It is suspected that large amounts of sugar have found their way into the hands of hoarders, profiteers and speculators.

In these circumstances, the decision to import sugar is to be welcomed. A week before it was announced, Mr. Kidwai said that he would flood important markets such as Bombay, Calcutta, Kanpur and Delhi by arranging special sugar trains, and also allow sugar at the statutory ex-factory price of Rs. 27 a maund to State Governments and other agencies for distribution through fair price shops. His accompanying hint that he would even be prepared to import sugar was then discounted in the markets. Even now the announcement regarding imports has not had its full impact. Prices in the major markets have declined but are still higher than the Government intends them to be and also higher than the probable landed cost of imported sugar. One reason for this is that it will be some time before foreign sugar begins to arrive; the Government said last week that "licensing will be done on merits and the main test will be the ability of the importer actually to bring in a shipload (5,000 tons) of sugar within a period of two months." Since imports are allowed into Bombay and Madras only, the scope for trade is restricted, and in any case not many importers, traders or consuming establishments will be able to finance shiploads of 5,000 tons (estimated to be worth over Rs. 40 lakhs). There is much to be said for the view expressed in Bombay that the Government should permit the importation of smaller quantities by more people and thus ensure greater competition in the sugar import trade.

Another point that will have to be carefully watched is transport, and it is interesting to note that Mr. Matadin Khaitan, while welcoming the decision to import, laid special stress on this problem in his presidential address to the Dengal Sugar Merchants' Association in Calcutta last Saturday. He said that there had been no hoarding in the Calcutta market and until the end of May prices had been low. Prices had risen since because arrivals were poor and stocks depleted; arrivals had amounted to between 1,600 and 2,500 bags a day as against a requirement of 6,000 bags

a day (2,500 bags for local consumption and 3,500 for despatch to other States). The trade should be consulted before sugar movements were planned, particularly in the eastern zone which got its sugar from factories on the North-Eastern Railway. Mr. Khaitan said that transport on this railway was not satisfactory and transshipment points were very often bottlenecks. Although he favoured cheap sugar, he thought that price fluctuations of up to 10 percent either way should not be considered abnormal; he also thought the cane price of Rs. 1.5 a maund should be increased to encourage growers.

A higher cane price however would mean an increase in the price of sugar, which is the crux of the industry's problems. In the case of western Uttar Pradesh factories, for instance, it has been calculated that cane constitutes 61 percent of the statutory ex-factory sugar price of Rs. 30.8 a maund. The dilemma of the Government and the industry alike for years has been to reduce the price of sugar but yet to pay the cultivator so much for his cane that he grows enough of it. The dilemma is not as obstinate as it might at first seem. Governments, Central and State, have failed to resolve it because they would have to lower their imposts on the industry, imposts which in the last analysis are paid largely by the consumer. In western Uttar Pradesh, these amount to Rs. 5.2 per maund, or 17 percent of the total cost of sugar (six or seven years ago they were only Rs. 2-15-6 a maund). Mr. Kidwai might continue his campaign on behalf of the consumer by seeing what can be done to lower the excise duty; and by persuading State Governments to use the money they mult from the industry and its patrons on cane development, for which it is intended.

CURRENT COIN

Import Policy Plaudits.—The Ministry of Commerce and Industry has repeated its success of six months ago by announcing last week an import policy, for the half-year July-December, 1953, which has been widely approved. The policy has two clear merits. Firstly, the punctuality with which it has been announced is one of the more praiseworthy aspects of Mr. T. T. Krishnamachari's vigorous conduct of the Commerce and Industry Ministry's affairs. The announcement covers the whole of the import trade control schedule and on no item has a decision been postponed; in fact, the policy for four goods—caustic soda, soda ash, art silk yarn and sugar—was announced earlier because shortages were said to have developed. Secondly, the import trade continues to progress towards stability; this has been made possible by the improved balance of payments resulting largely from the decline in food imports and sustained foreign assistance. The quotas for a large number of items remain unaltered but small cuts have been made in a few cases because domestic supplies have improved. Among the latter are certain manufactures of iron and steel such as bolts, nuts, screws, rivets, sheets and castings, manufactures of brass and bronze, sewing machines and brake fluid. The quotas for machinery which is not manufactured locally and for industrial raw materials have been liberalised. It will also be possible to import more of the essential consumer goods, including spices, oats, fruits, currants, condensed milk and feeding bottles. An interesting innovation is that importers of certain classes of goods will be allowed to import allied stores: rubber erasers and pencil sharpeners can come in under an import licence for lead pencils; fountain pen ink can accompany fountain pens; and hand-sewing needles can enter with buttons. Token imports of a few more items will be allowed and a few token quotas have been increased. The official summary of the policy indicates no spectacular quota changes; rather it suggests that certain adjustments have been made which are intended to reconcile better the interests of consumers, importers and local industries.

The measures which are being introduced to simplify licensing procedure deserve at least as much attention as any other feature of the new import policy, and have been made possible by the quite remarkable progress in working off arrears. The majority of licences will now be issued on the basis of import licences granted in the preceding half-year or of valid quota certificates. Re-establishment of quotas or revision of quota certificates, which held up licensing in the past, will not ordinarily be permitted. The work of licensing has been further decentralised. Previously, licences for some items could be obtained only from one central licensing office at headquarters, in Bombay or Calcutta. Licences for these items will henceforth be issued by the port authorities also, provided applications are made on the basis of quota certificates or previously-held licences. An old demand of the trade has been partially met by extending the period of validity of licences for over 50 items from six months to 12 months. A minor concession has been extended to small importers. Hitherto when the quota percentage of any article

was 20 percent or less, licences were granted only to those who, on this basis, would be entitled to a licence for Rs. 250 or more. This figure has been reduced to Rs. 100, but the minimum value of a licence will remain at the level of Rs. 500. The period of validity for licences of the value of Rs. 1,000 or less has been fixed at 12 months. This will help small importers put together their quotas for two licensing periods and obtain goods more economically. The procedure for issue of licences to actual users, especially those registered with the Industrial Advisers of the Ministry of Commerce and Industry, has been streamlined and the list of items licensable to actual users has been expanded. Strict measures will be taken to ensure that imports under these licences are meant solely for use by the licensee and not for sale. New-comers will be eligible to apply for licences for as many as 41 items. A new item which has been thrown open to newcomers is "wires and cables." The minimum turnover prescribed for a number of items has been scaled down so that more dealers may be able to participate in the import trade.

Insurance Funds for Industry.—In his chairman's address at the annual general meeting of the New India Assurance Co., Ltd. in Bombay last week (a summary of which appears on Page 8), Mr. A. D. Shroff discussed the problem of increasing the flow of insurance funds for industrial development. Although there were defects in the management of many insurance companies, he thought the restrictions on investment imposed by section 27A of the Indian Insurance Act should be relaxed so that insurers could provide more financial assistance to industry, particularly to small industries. It was important that Indian insurance should be placed "on a healthy, sound and profitable basis" and Mr. Shroff emphasised the need "to maintain proper standards of conduct in compliance with the provisions of the Insurance Act." The Executive Committee of the General Insurance Council had formulated a Code of Conduct for all insurance companies primarily to enforce the Act, and had also set up voluntary machinery to inspect the working of companies. A number of companies had resisted this move; Mr. Shroff said their opposition was difficult to understand because those companies which complied with the Act had nothing to fear. On the contrary, the inspection machinery could help "in drastically reducing, if not entirely eliminating, the abuses and malpractices which prevail at present." Mr. Shroff welcomed the appointment of the Taxation Enquiry Commission and hoped it would "lay greater emphasis on providing conditions for accelerating capital formation rather than on eliminating inequalities of income and wealth." He thought that the limit for exemption of life policies from estate duty should be substantially raised. An outstanding feature of New India's development has been that arrangements have been made to underwrite hull insurance, machinery insurance and cattle insurance. Mr. Shroff said that "in the development of these new lines of business we are offering a partnership interest to a number of Indian insurance companies without reserving any special advantage to ourselves and I am glad to say that some insurance companies have already availed themselves of our offer." New India has also selected 15 apprentices for training in insurance and organised a management research department. The Company's results for the year ended last December are satisfactory. The total premium income rose from Rs. 74.9 crores in 1951 to Rs. 81.0 crores, to which the General Department contributed Rs. 3.63 crores (Rs. 3.61 crores) and the Life Department Rs. 4.24 crores (Rs. 3.83 crores). The profit of the General Branch was Rs. 41.55 lakhs or 10.9 percent of its premium income. Fire premia totalled Rs. 22.9 lakhs (Rs. 23.3 lakhs) and there was a profit of Rs. 3.54 lakhs in this department. Premia in the Miscellaneous Department were Rs. 65.5 lakhs (or about Rs. 7.8 lakhs higher than in 1951) and the profit was Rs. 13.97 lakhs. Marine premium income aggregated Rs. 81.15 lakhs, thus showing a rise of Rs. 8.45 lakhs. The profit in this department totalled Rs. 39,531. New life business was Rs. 18.04 crores and the total premium income in this department Rs. 42.1 crores (Rs. 3.85 crores). The life fund aggregated Rs. 17.01 crores and the overall financial resources of the company were strengthened by Rs. 2.9 crores to Rs. 23.2 crores. The dividend has been maintained at Rs. 2 per share.

Iron and Steel 'Essential.'—Last week-end the West Bengal Government, under the provisions of the Security Act, declared iron and steel essential for the life of the community. The Government has thereby strengthened its powers, at least in theory, to deal with black marketers, who are, currently quoting well above legal rates. The rise in prices has followed the prolonged "go-slow" at the Indian Iron and Steel Company's works at Burnpur which has severely restricted output, particularly of sheet steel, though naturally imports also contribute to local supplies. The declaration also gives the Government a new

status in relation to the parties involved at Burnpur; both a lock-out by the company and a strike are now illegal.

Paper Traders.—In his presidential address to the annual general meeting of the Calcutta Paper Traders' Association last Saturday, Mr. C. C. Mukharji said that "there has been a scramble among dealers to sell their stocks and price-cutting has become the order of the day." The normal margin has been peeled off to the core, while we have to incur huge overhead costs for the maintenance of our establishments." With poor sales and the "indifferent behaviour of mills, paper dealers were now "eking out a precarious existence." The fact that production had reached a record did not encourage them, because a considerable portion of it would not flow through the established and normal trade channels. "Uneven distribution often leads to scarcity," for which dealers were wrongly blamed. Mr. Mukharji said that all mills were producing heavy varieties of paper "and thus the production in tonnage figures is high though the actual production in quantity falls." In the interests of mass literacy, said Mr. Mukharji, the import of newsprint should be allowed without restriction and "at the most preferential duty"; its definition should also be revised soon. He asked the Government "to be specially vigilant in allowing licences to actual users, for if there are ignorant among newcomers there are a greater number of delinquents among these actual users. In fact, they are but another set of dealers under a different garb." Mr. Mukharji thought that paper and paper products should be considered essential goods and exempted from sales tax; if the tax had to be imposed, it should be collected at source.

More Registered Unemployed.—The employment situation continued to be "unsatisfactory" during May, says an official note. In spite of a small increase in the number of vacancies notified to employment exchanges and a fall in the number of new applications for employment assistance, the number of unemployed registrants still requiring assistance at the end of the month was 466,223 against 455,417 at the end of the previous month. The number of persons placed in employment during the month was 16,295, against 16,233 during April. Under the training schemes of the Ministry of Labour, 9,893 persons, including 398 women and 2,133 displaced persons, were receiving training at various institutes. In addition 95 instructor-trainees were being instructed at the Central Training Institute at Koni-Bilaspur, and 437 apprentice-trainees were receiving instruction in production work in Uttar Pradesh and West Bengal.

Labour and Protection.—At the recent meeting at Geneva of the International Labour Conference there was an interesting contribution from Mr. Eric Wyndham White, Executive Secretary of the Interim Commission for the International Trade Organisation and of G.A.T.T., who underlined the fact that it depended upon commercial policy whether, when more goods were produced, they could be sold in world markets. "Protectionism and restrictions on trade," he said, "are often advanced as effective ways of protecting domestic employment, but a liberal trade system alone can ensure that the benefits of increased productivity can be garnered." National employment problems could not be solved by being exported to other countries. Where national employment levels suffered setbacks it was a "manifest absurdity" to shut out the foreigners' goods and try to preserve the home market for the products of domestic labour. "The months ahead," said Mr. Wyndham White, "are particularly critical." Great progress had been made in the last few years in restoring production from the reduced levels following the war and in moving towards a new trade equilibrium. This had been achieved by increases in productivity and the adoption of sound monetary policies in the deficit countries, accompanied by generous financial and technical assistance from the creditor countries. As a result "we now stand on the threshold of great possibilities." There was no reason why, in the comparatively near future, it should not be practicable to restore convertibility of currencies, which would lead in turn to the removal of restrictions on trade and payments that were at present necessary because of balance of payments difficulties. What was needed to achieve this was that the deficit countries should be ready to continue sound production and fiscal policies, and to face the problems of dismantling the restrictions which had sheltered, in effect if not by intention, their industries from the impact of foreign competition. On the other hand, said Mr. Wyndham White, with the United States no doubt in mind, "creditor countries will have to help both by assisting in the creation of adequate reserves to support the trading system to cope with temporary fluctuations without recourse to new restrictions," and also by opening their markets to the exports of other countries which need to

earn the means for paying for their essential imports." With the removal of restrictions, some less-efficient industries would suffer, and there might be some measure of unemployment. This should be temporary, and "labour which became redundant in one place should be absorbed in other industries which would benefit from a generally higher level of economic activity. Even a little unemployment, however, could bring hardship and suffering to individuals, and "I would like to see both Government and trade unions giving serious study to all possible means of easing these adjustments."

U.S. Investment Abroad.—Practically every document concerning the future of world trade or the development of Asia contains some reference to the indispensability of American aid in one form or another, with special mention of the need for U.S. investment abroad. It is interesting to learn, therefore, that in spite of the frigid response of the American administration to Mr. Butler's "trade not aid" plan, the U.S. Department of Commerce is in fact launching a campaign to arouse the American business community to a greater awareness of the need for investment abroad and that it intends as a start to publish a review of present obstacles to such investment. This scheme is the outcome of a recent private conference in Washington between Government officials and leading business men, when the whole question of the means by which the dollar gap might be reduced was gone into. Since it is always well to keep the other man's point of view in mind, the outcome of these discussions, as reported by *The Manchester Guardian* correspondent, are worth summarising. It was conceded at the start that direct investment by the U.S. Government should be kept at small figures. The real problem was to create conditions of economic and political stability that would encourage private investors to risk their capital on long-term projects in other countries. Many business leaders advised that earnings from foreign investments should be made tax-free, at least for a considerable period. A related suggestion, which has some support in Congress, was accelerated tax benefits for any plant expansion designed to meet the needs of foreign investment. The model for this arrangement would be the defence programme, which allows a part of the investment to be written off in five years instead of the normal period of something like 25 years. It was also agreed that large-scale financial assistance should come not from the U.S. Government but from the International Bank for Reconstruction and Development, which has unusual experience and competence in this field. Moreover, the use of the International Bank would shield the U.S.A. against charges of "dollar imperialism." A further point of agreement was that American investment should be directly related in volume to the guarantees received from foreign Governments that profits could be freely taken home to the U.S.A. This would require a pledge of fair exchange rates together with an absence of restrictions on the movement of capital. A recommended change would allow tourists to bring back \$1,000 of goods without payment of duty instead of the present \$500.

CORRESPONDENCE

FOOD IMPORTS

TO THE EDITOR OF "CAPITAL"

Sir,

I see from your interesting leading article of June 18th that you rather disapprove of the effort made by the Employers' Association to save foreign exchange by the production of those materials in India which can be produced in this country. Your argument is that the populace judge the value of industry by the standard of living which it can produce.

Surely, Sir, in a country which has something like 100,000,000 people more than it can support off its own soil, the most important item in the standard of living is the food supply; with a consequence that in order to maintain the pre-war standard of feeding, India ought to import approximately 12,000,000 tons of grains per annum at a cost of about £600,000,000, or the equivalent thereof. Surely, therefore, any foreign exchange which can be saved for the purpose of assisting in the purchase of this large quantity of foodstuffs would be helping to raise the standard of living, would it not?

As things are at present, India is only able to import about 3,500,000 tons of foodstuffs and the efforts made to increase agricultural yields have so far not been able to keep pace with the natural increase of the population of about 5,000,000 per annum. It would, therefore, appear that the Employers' Association are correct in their assumption.

Yours faithfully,
ERIC HAYWARD.

Kodaikanal, 24th June.

SHARP JUDICIAL CRITICISM OF THE LEGISLATURE

THE MUDDLE OF RENT CONTROL

(FROM OUR LEGAL CORRESPONDENT)

DESIROUS, as always, of avoiding the use of exaggerated language, we nevertheless suggest with confidence that the following is about one of the most forthright and trenchant judicial criticisms of an Act of the legislature that has ever been printed; wherefore, agreeing respectfully with every word of it, we think it should be rescued from the comparative obscurity of the Law Reports. Looking back down the long years, the only parallel instance we can think of is the famous denunciation of the divorce laws of England by the celebrated Maule J. more than a century ago when convicting and sentencing a poor wretch accused of bigamy. That onslaught was one of the main causes of the reform of the divorce laws. But whereas the old English judge relied on polished sarcasm and ironical praise of the existing law as perfect (admonishing for instance the farm labourer whose wife had become a prostitute to the effect that he had not the means to do so as "the law is no respecter of persons"), his Indian successor relied on direct reasoned assault, which one hopes will be equally effective. The bludgeon can be as useful as the rapier. This is what P. B. Mukherji J., in the Calcutta High Court had to say about one of the Rent Acts which has resulted in such incredible muddle and confusion that neither judge, lawyer, landlord nor tenant knows where he stands as regards its interpretation.

"To the West Bengal Premises Rent Control Act belongs the signal distinction in this age of being the most misunderstood Statute of the State. On the interpretation of all its important sections, Courts and judges have widely and frequently disagreed. Its meaning lies in the lap of the clouds of heavens beyond the ken of the astutest judicial vision. In the struggle for construction, judicial heroism has valiantly battled in difficult situations to produce swans out of reeds. One such situation is now before this Full Bench. The goose is the proviso of Section 14(3) of the Rent Act of 1950. Landlords and tenants are condemned by this

Statute to the vaguest speculation of their essential rights in an atmosphere of needless uncertainty. Frequent Full Bench and Special Bench had to be constituted to discover and rediscover the meaning of the Act over which other learned judges had differed. Those unfortunate enough to have to receive the impact of this Act have the unenviable task of finding their way in a perilous voyage through an ocean of bewildering and conflicting judicial opinions, Full Bench and Special Bench constructions, not to speak of the shoals of bad drafting that swim all over and across the Act.

"Notwithstanding such divergence of judicial opinions on almost all its significant provisions, the legislature in its swift wisdom has just recently ordained that this state of oppressive uncertainty shall continue for another year. In not understandingly conscientious and not appreciably laborious discharge of its duties, the State Legislature by asking the people of the State to read 1954 for 1953 has chosen to continue this Act as it is, with all its manifest and repeatedly declared uncertainty for thousands of people whom this Statute affects. At this moment, public time of this Court is being taken in this Full Bench of five judges for discovering the meaning of Section 18(5) of the Act as amended and over which five other judges have expressed themselves differently. The heavy pressure on the Courts today to do what ought to be the work of legislatures is a growing hindrance to normal administration of justice. All normal judicial work is frequently held up to find meaning of Statutes which should have been plain, and on that ground alone today there is a colossal waste of judicial time. Unless a much greater care than so far evinced is exercised by those solemnly charged by the Constitution with the responsible task of framing the Statutes of the land, the Courts will soon be reduced to become suburban adjuncts of an inadequate legislature, for publishing commentaries on ill-drafted and immaturely expressed Statutes in the vain hope of injecting meaning into the meaningless and of explaining the inexplicable."

This is plain speaking indeed; plainer by far than any that it has hitherto been our lot to come across in the way of judicial criticism of the legislature. It is not proposed here to discuss the point of law referred to the Full Bench for decision beyond saying that on the face of it it related to what should have been a simple practical problem of great importance to landlords and tenants. It would be in the nature of an anti-climax to do so and, moreover, the Full Bench following in the wake of a host of conflicting previous decisions were not unanimous.

The point is that the various Rent Acts as they stand have resulted in hopeless muddle and confusion. They were originally intended to be, and still officially are, temporary measures framed to meet what was expected to be temporary economic and social dislocation. But, so far as can be at present foreseen, they will be not temporary but permanent enactments, and must be treated as such.

The attempts to patch up an imperfect Act by so-called amending and explanatory additions to and alterations in it has resulted in a mass of litigation and consequent waste of judicial time of which P. B. Mukherji, J.—and not his lordship alone—has so forcefully complained. And the time has come for one consolidating Act drawn by competent draftsmen. (57 C.W.N. 627).

Our City Cable

APATHETIC STOCK MARKETS

TEAS THE BEST FEATURE

A PART from sudden firmness of gilt-edged on the last day of the period, the stock market suffered a week of apathy engendered by the counter attractions of big sporting events in London and uncertainties in Korea. Gilt-edged themselves were dull most of the time with prices drifting lower but the last day being near the end of the half year found institutions with funds available for investment and this resulted in rises. Another favourable factor was that jobbers have been building up their books after the depletion suffered in the recent shake out. Industrials moved irregularly. At first they hovered around opening levels but during the middle of the period some investment support gave brighter appearance, particularly in textiles. However, this state of affairs did not hold and the interest fell away towards the close as operators occupied themselves with end-of-account operations. Foreign bonds were also mixed. Japanese firming, eased and then turned dull with price movements always small. Germans were undecided most of the time and finally gave ground but Chinese after uncertainty closed firm.

Tins and rubber have been quiet with price alterations few and far between but teas were higher on the week as there was more confidence expressed on the market about the future of industry. Even so business was on the small side and interest waned as the week closed. The oil section hardly changed over the period apart from small fluctuations while among mines, Kafirs were generally unchanged but with uranium issues showing slight gains. Here too business has been extremely light.

Following patchy start when some houses were obliged to seek official assistance to balance their

books, the position in the London money market became quite comfortable. Credit supplies were plentiful and outside calling for funds was light with money at times in surfeit supply. The Bank of England disclosed that active note circulation rose about £1 million to £1540 million, while banker's deposits increased around £8 million to £276 millions. Applications for £250 millions of Treasury Bills totalled £327,370,000 and the former amount was allotted at an average rate of 4½-3.75d. percent. This week's offerings are £250 millions.

Market Newsletter

The Investor's Chronicle market newsletter states: The Stock Exchange markets appear to have adjusted themselves for the time being to the many political and industrial uncertainties. They hold up well with little stock offered. New York also has been behaving well considering that "peace is on the doorstep." Fixed interest stocks still seem to be better than equities which are likely to be depressed by the difficulty of maintaining profits and by what will evidently be the protracted denationalisation of steel.

Japanese Steel Mission to Pakistan

Three representatives of the Japanese steel industry will leave Tokyo on 26th June for Pakistan to negotiate sales of Japanese iron and steel, according to a spokesman of the Yawata and Fuji Iron and Steel Companies. The mission would discuss specifically with the Pakistan authorities steel import licensing. The prices suggested by Pakistan are too low to enable large Japanese iron and steel exports, he added.

French Jute Goods Prices

French jute goods manufacturers now have to pay 94 francs per kilo for jute basis grade L.J.A. first 2/3. This compares with 96 last week. The downward adjustment reflects lower Pakistan jute prices.

Grain Market Scheme

The Bank of England has issued details of the exchange control regulations for participants in the U.K. grain markets scheme which provides for the operation of a futures market at an unspecified date. Private imports of grain have been permitted since the beginning of May. No wheat is expected to be imported until after 31st July when Britain's membership of the International Wheat Agreement is due to lapse. Dealings with buyers and sellers in any part of the world are permitted to persons and firms having a continuing interest in import or marketing of grain subject to the exchange control arrangements as announced on 24th June.

Aluminium Private Trading

The British Ministry of Materials announced on 22nd June, that private trading in aluminium will be restored from 1st July. The Aluminium Company of Canada, which has been supplying 4/5ths of Britain's needs in recent years, has agreed to a reduction in price of 3/4 of a cent per lb. (about £6 per ton). The Ministry said that effective 1st July, the Company will sell direct to the trade instead of through the Ministry. The current price of aluminium is £161 per ton. The stock position is described as comfortable. Following the announcement of decontrol of aluminium the Board of Trade is now prepared to consider applications for licences to import primary unwrought aluminium in blocks, billets, ingots, slabs, notches, bars, sires, sticks and granules. Imports of secondary aluminium and aluminium alloys may already be made without individual import licence from certain countries excluding most of the iron curtain countries, the United States, Canada and most South American Republics.

Tea Stocks

Tea stocks in London and provincial bonded warehouses on 19th June totalled 107,220,240 pounds compared with 104,475,468 pounds on 12th June. In the period June 13th to 19th landings totalled 7,678,692 lbs and deliveries 10,933,920 lbs.

Heavy Steel Product Prices

Britain will cut export prices of certain heavy steel products such as joists and beams by about £7 a ton on 1st July, it is authoritatively learned. The new prices will be around £38 a ton. The reduction reflects increasing international competition in these products but which forms slightly less than 6 percent of Britain's total steel exports.

Rubber Market

On the London rubber market values have been at a standstill in the past week, apart from one day of fair activity when the home trade and Continental buying was in evidence. Trading was extremely thin and insufficient to test values. Sole crepes were also neglected but with sellers holding for firm rates in narrow thickness due to scarcity. Traders are generally tired of the sharp fluctuations following Korean developments and now have adopted a wait and see attitude.

Raw Cotton Arrivals

Arrivals of raw cotton in United Kingdom ports in the past week amounted to 29,879 bales against 29,937 bales in the previous week. The total comprised of 9,176 Egyptian, 6,083 West African, 4,609 Argentine, 3,981 Brazilian, 3,183 Syrian and other growths. The quantity at present afloat to the United Kingdom is 49,238 mainly Sudan, Peruvian, Brazilian, Pakistan, Mexican, Egyptian, East and West African.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

TIGHTNESS AT HALF-YEARLY CLOSING

MONEY was very tight on Monday just before the banks' half-yearly closing, although late in the day substantial lenders appeared who could not place all the money they offered. When the short-term money market opened again today, the position was somewhat easier, possibly because cash that had been withdrawn for "window-dressing" was again available. In the interbank market rates are still higher than in Bombay, at 2½ percent for overnight money and 3 percent for call money, but it is doubtful whether the difference, between the two centres is enough to draw funds across the country.

There were some tea and small gunny bills passing on Monday, but nothing much has been reported since. Remittance has been normal this week, though it was heavy before the end of the half-year. The principal exchange rates are unchanged.

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills were opened on 1st July and amounted to Rs. 2,70,50,000. Tenders at Rs. 99-6½ percent were accepted in full and those at Rs. 99-6½ percent allotted approximately 23 percent, the average rate of acceptance remaining unchanged at Rs. 2-6½ percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Delhi and Kanpur. During the week ended 26th June, treasury bills for Rs. 3,25,00,000 were sold in favour of the Reserve Bank.

The bullion market was quiet last week and prices fell on larger arrivals in the face of the absence of support. Silver met long liquidation, and the price fell from the previous week's level of Rs. 159-8 to Rs. 154-4. The ready rate fetched a premium of 6 annas. Silver was unchanged at 74d. in London and at 85½ cents in New York.

Gold also eased in sympathy, the price reacting from Rs. 92-12 to Rs. 89-10. The sovereign at Rs. 58-8 showed a loss of 12 annas.

Sharp falls of Rs. 19.25 crores and Rs. 16.27 crores in the total note issue and notes in circulation to Rs. 1,174.56 crores and Rs. 1,138.10 crores were the outstanding features of the return of the Reserve Bank of India for the week ended 26th June. The currency contraction was duly covered by reducing foreign securities by Rs. 20 crores to Rs. 593.15 crores through a transfer to the Banking Department. This explained a rise of Rs. 17.96 crores in balances held abroad to Rs. 120.03 crores. Notes held in the Banking Department consequently diminished by Rs. 2.98 crores to total Rs. 36.46 crores. Deposits of the Government of India fell by Rs. 40 lakhs to Rs. 130.43 crores, while other Government accounts rose by Rs. 3.51 crores to stand at Rs. 16.85 crores. Balances of commercial banks at Rs. 43.02 crores were about Rs. 76 lakhs higher than in the last return. The item of other loans and advances dropped from Rs. 32.52 crores to Rs. 22.28 crores, of which advances to scheduled banks against usance bills totalled Rs. 11.44 crores, against Rs. 17.84 crores. Investments improved by Rs. 87 lakhs to Rs. 90.60 crores. Ways and means advances were shown at Rs. 3.43 crores (Rs. 3.30 crores).

The return of Imperial Bank of India for the week ended 19th June, 1953, shows a fall of Rs. 1.51 crores in total deposits to Rs. 207.13 crores. Investments in Government securities are down by Rs. 13 lakhs to Rs. 75.49 crores, while other authorised investments are up by Rs. 13 lakhs to Rs. 10.70 crores. Loans, cash credits and overdrafts have declined by Rs. 3.23 crores to Rs. 103.52 crores, while bills discounted and purchased have advanced by Rs. 91 lakhs to Rs. 28.18 crores. Cash and balances are, in consequence, shown at Rs. 15.25 crores or Rs. 46 lakhs less.

A Press note states that the outstanding balance of the 3 percent loan 1953-55 (Fourth Defence Loan) will be repaid on 15th July, 1953, and no interest will accrue on it from that date. To facilitate discharge of the loan on the due date, holders may tender their securities at the Public Debt Office, Treasury or branch of the Imperial Bank of India at which they are encased or registered for payment of interest on or after 6th July, 1953.

WHOLESALE PRICE INDEX
RISES

THE official wholesale price index (base: year ended Aug., 1939 as 100) advanced by 0.2 percent to 406.1 during the week ended June 13th, 1953, compared with 405.1 (revised) for the previous week. Compared to the corresponding weeks of last month and a year ago, the index was higher by 2.1 and 9.1 percent respectively. During the week under review, Foodstuffs rose 1.3 percent to 400.9 on account of increases in the prices of bajra (+14%), rice (+2%) and gur (+3%), despite declines in coffee (-2%), wheat, gram and dal arhar (-1% each). The index for Industrial Raw Materials fell by 0.2 percent to 482.5 from 483.3 (revised) for the previous week, owing to lower prices of Karungani cotton at Tirupur, linseed and rapeseed (-2% each) castorseed in Madras (-5%), Punjab-American cotton in Bombay, jute, cottonseed in Bombay and gingelly seed (-1% each). Prices of silk (+6%), manganese ore (+5%), lac (+4%), castorseed in Bombay and cottonseed at Amravati (+2% each), Bengal cotton in Bombay and raw hides (+1% each), however, advanced during the week. The Semi-Manufactures group also declined by 0.3 percent to 363.2 as compared with 364.4 (revised) for the previous week, as a result of decreases in coconut cake (-5%), linseed oil and zinc (-3% each), mustard oil and copper (-2% each), groundnut oil in Madras, coconut oil and castor oil (-1% each). Coir yarn and brass (+2% each) and goat skins (+1%) increased. A fall of 2 percent in rayon and silk manufactures, brought down the Manufactures group index to 370.6 from 371.1, notwithstanding a rise of 1 percent in the prices of glass. The index for Miscellaneous moved up by 0.3 percent to 659.7 owing to higher prices of turmeric (+6%), black pepper at Coochin and chillies at Patna (+2% each), although chillies (-5%) and blackpepper (-2%) in Calcutta declined during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August, 1939=100)

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to May, 1953. As compared with April, the May Indices for Food and Clothing show rises of 7 points and 9 points, while those of Fuel and Lighting, and Miscellaneous remain unchanged at 239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 6 points during May, 1953.

INDO-PAKISTAN TRADE AGREEMENT

The Indo-Pakistan Trade Agreement which was concluded in August, 1952 was due to expire on 30th June, 1953. Pending the completion of negotiations for a new Agreement between the two countries, it has been decided by the Government of India and the Government of Pakistan to extend the operation of the Agreement of Pakistan to extend the operation of the Agreement up to 30th September, 1953.

PROTECTION FOR GLUCOSE PRODUCTS

The Government of India's resolution on the Tariff Commission's report on the continuance of protection to the Glucose industry was published last Saturday in the Gazette of India dated 27th June, 1953. The Government has accepted the Commission's main recommendation that the existing rate of protective duty at 31½ percent ad valorem (inclusive of surcharge) on non-medical Glucose should be increased to 50 percent ad valorem (inclusive of surcharge), and that the enhanced rate should remain in force until 31st December, 1954.

The Government has also accepted the other ancillary recommendations of the Commission including the following:

(1) The present arrangement under which the indigenous starch industry is allowed to utilise a portion of its starch production for the manufacture of glucose should be terminated and those starch factories which have glucose plants should be given separate quotas for imports of maize exclusively for the manufacture of glucose. The manufacturers should experiment with tapioca as an alternative raw material and should from time to time report to the Commission the progress made by them in this direction. (2) The industry should continue to strive for a further improvement in the quality of its products, particularly in reducing the protein content of their starch which is at present somewhat higher than that required for production of good quality glucose.

The Government of India has noted with concern that the production of glucose in the country has been declining during the last three years. They expect that the measures now adopted on the Tariff Commission's recommendations will result in a substantial increase in the output over the next 18 months. If, however, the industry does not make good use of the opportunity for development and of protection now afforded to it, it may not be possible for Government to continue to give any kind of protection to the industry in future.

CEMENT PACKING CHARGES

On 26th November, 1952, the Government of India announced that packing charges for cement would be fixed every quarter on the basis of the average market price for packing material ruling on the first day of each month during the immediately preceding nine months plus Rs. 1-4-0 per ton to cover incidental charges. On this basis, the packing charges for the current quarter worked out to Rs. 12-4-0 per ton and for the quarter commencing from 1st July, 1953, they work out to Rs. 11-14-0 per ton. The Government of India has informed all the State Governments of the revised packing charges. These are the maximum charges applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller subject to the maximum indicated above.

A standard 'or Coal Tar' Paint has been issued by the Indian Standard Institution. This standard prescribes the requirements and methods of test for the material commercially known as Coal Tar Black Paint. This paint when applied as a film over iron and steel surfaces and timber provides substantial protection against corrosion. The need for this standard was pointed out by the wide use in India of Coal Tar in the unsuitable cold form. The tests included in the standard lay down procedures for the determination of potability and resistance to salt water. This standard has been formulated by ISI's Paints and Allied Products Sectional Committee which includes nominees of Indian Paint Manufacturers' Association, Calcutta, The Paint Industry Association, Calcutta, The Imperial Chemical Industries and other important paint interests as also experts drawn from the Ministry of Commerce and Industry, Military Explosives, the Ministry of Railways. This standard, priced at Re. 1, is now available for sale at the office of the ISI.

MR. J. R. D. Tata's farewell address to shareholders in the two aviation companies of which he has been chairman said just about all that needs to be said on the question of airways nationalisation. The whole business has had some disturbing implications for private enterprise in general, but it now only remains to join Mr. Tata in wishing the new Corporations every success. If they manage their affairs with as much credit as Tatas have gained in connection with their two companies, they will do well enough. If any one man were to be singled out for praise from the many thousands who have contributed to the development of commercial aviation in this country, it would undoubtedly be Mr. Tata himself, and it was proper that Mr. Jagjivan Ram, at the first meeting of the Corporations in Delhi this week, should have offered his name as guarantee that the best talents were being sought by the new State concerns. It is a measure of the futility of the nationalisation of Air India International that the best we can hope for is that the Corporation which is to bear the same name should leave matters alone as far as possible. This would have been more certain if, in addition to retaining Mr. Tata as chairman of the new Board, greater representation had been given to business men with experience of what Mr. Tata called "flexible management, able to take quick decisions and calculated business risks." An example of the sort of crucial decision required in the air transport industry is that taken by Mr. Tata's company before nationalisation was certain—to order two Mark III Comets for 1957 and Super Constellations for next year. On the correctness of this decision, involving the outlay of several crores of rupees, will depend the success of the external airways corporation over the next decade—though when the nationalised concern is reaping the profits of this bold foresight we cannot be expected to be reminded of that. But the need for similar decisions will arise again in the future, and it is essential that the Act be administered in the spirit that Mr. Jagjivan Ram described when he said that Government intervention would be kept to a minimum and the Corporation left to manage its own affairs as it knew best.

The strictures passed by the Mayor of Calcutta on the Improvement Trust at a meeting last Sunday will probably draw ready support from those who see that the city is not showing many signs of improvement but do not care to enquire into the reasons for slow progress. In the latest report on the Trust's work, the Chairman, Mr. S. K. Gupta, points out that "it is easy to write on a clean slate, but it is more difficult and infinitely more costly to replace the haphazard growth of years by a better plan, especially with our existing emphasis on the rights of private property which sends costs up, and the procedural delays which widen the gap between formulation of a plan and its execution. A change in the law relating to both these points is overdue." The Mayor's claim that the Corporation would have done a much better job may be justified, but before we could be certain we would need to know what the Corporation proposed to do about that "emphasis on the rights of private property" which Mr. Gupta mentions as a hindrance to slum clearance and road building. From the Trust's accounts I see that the larger fraction of its expenditure is on land acquisition, and that its "hands are full and its resources strained to the limit." Anyone who wanted to do better would presumably have to raise a lot more money or find some way of acquiring land that circumvented the "rights of private property." Both these things might be possible, even necessary, but be-

A DITCHER'S DIARY

fore we sack the Trust and give the job to the Corporation the latter would have to elaborate its proposals in regard to new taxes and to private property. Not that we should be satisfied with the achievements of the Improvement Trust; indeed, the city sometimes seems to be getting shabbier rather than improving. Much more vigorous action is required no doubt, but in the meantime the Trust's methods appear to be the right ones.

Members of whichever of our public bodies is responsible for the condition of Strand Road might usefully be condemned to a daily car journey along its length, as so many ratepayers are. The permanently debilitated state of this road, which is one of the principal commercial thoroughfares of the city, is a standing disgrace to our civic authorities. Its most used section, along by the river-side warehouses from the Imperial Bank to Clive Ghat Street, is little more than a waste of potholes and loose paving bricks. The heavy traffic it carries—trams, handcarts and laden motor lorries—is no doubt the cause, but it is also sufficient reason to keep it in good repair. The cavities in the side of the road oblige the unfortunates who push handcarts to keep to the crown of the road, with consequent congestion of trams and trucks, and the pandemonium at the foot of Hastings and Hare Streets on occasions has to be seen to be believed. This is an opportunity for competing improvers to show their talents.

There have been rumours in the share markets lately that a well-known and old-established business house—not in Calcutta—had changed hands, or was about to. I have no "inside information" on this particular case, and only mention it to recall that similar rumours were current about another firm—this time in Calcutta—a few weeks ago. In both instances there were sharp movements in the prices of shares in these companies, or in companies managed by them, but in neither case was any information or reassurance vouchsafed to shareholders. The reluctance of company officials to make any sort of public pronouncement in such cases in India contrasts with the prompt issue of denials or confirmations during the recent orgy of "bids" in the United Kingdom. Naturally, if negotiations or enquiries concerning the sale of a company are in progress officials cannot be expected to prejudice them by public statements; sometimes—and this may be the case in the two recent examples I refer to—even senior company officials honestly do not know whether a deal is in train for the transfer of a decisive block of the shareholding. But by the time rumours have exercised any marked influence over the market value of a share, and hence involve the interests of shareholders, to whom directors owe their first duty, every attempt should be made to enlighten holders of the company's stock. I realise that if directors had to put out formal denials of every baseless rumour that arose in the stock market, they would have their work cut out. But if it were known that fabrications would swiftly be scotched by the company itself, these canards would become much less frequent. The present lapse of two or three weeks between the origin of a report and its eventual confirmation or repudiation is quite long enough for some parties to make money, and they usually are not genuine shareholders. Fortunately this does not appear to have happened in the most recent cases, which is just why they give me an opportunity to make my point in a general way. We had a case not so long ago of a share which rose in value by several hundred

rupees before an official statement was put out that shareholders could obtain an even higher price if they waited, by which time perhaps some had sold for less than their deserts. The daily Press and the commercial weeklies are quite willing to publish information of this sort as news, once all company officials accept the position—as most of them already do of course—that shareholders are anxious to know, as soon as practicable, whether their company is or is not about to pass "under new management".

Amid the political controversy about sponsored television in England, those who are likely to be responsible for it, if it comes, are getting down to their preparations in a businesslike way. The advertising agency fraternity have produced a "code" to regulate entertainment and advertising in the hope of avoiding the abuses of the American system, whose unfortunate example provides so much ammunition to the British opposition. The code is a sensible one, but whether it is adhered to will depend on official control being sufficiently comprehensive. A correspondent in London tells me that at the Savoy Hotel recently sales directors of eleven companies with total sales worth £100 millions a year met to discuss selling problems. They heard a television producer say that if commercial television came, the technique would be "something akin to the present form of cinema advertising, with one important difference"—namely that television went into people's homes, and the advertising matter must not compete with the many social and domestic excuses that viewers could use to avoid watching something that had not caught their interest. He must have given his audience a shock when he turned to costs, for he declared that one of his own most popular shows cost £900 for a programme lasting one hour, excluding technical and production staffs. "I estimate that before it reaches your home screen it has cost, including maintenance, power, and administration, roughly £5,000." The reaction of the sales directors was not reported, but it is obvious they would look for a lot of advertising for figures of that magnitude. Therein lies the danger.

On Wednesday next, the Dramatic Club of Calcutta will stage *On Monday Next* at the New Empire; there will also be performances on the following Friday and Saturday. To judge from the dress rehearsal that I looked in on, this popular comedy will be produced well up to the standard of our best local amateur talent; performances are in aid of Dr. Graham's Homes, Kalimpong. The enthusiastic band of players whom I saw rehearsing have the advantage of acting as themselves, for the play is about a repertory company working on a new play, and we know from Molnar's *The Play's The Thing* what comic possibilities there are in the play-within-a-play. *On Monday Next*, which was written by Philip King, was thought worth the trouble of filming, so we may assume it has theatrical merit other than by amateur standards. These scraps of information might help you decide to set aside an evening next week for your own entertainment and the support of a good cause. The performance on the 8th, incidentally, is at six, on the 10th at nine and on Saturday the 11th at nine fifteen.

An American friend the other evening told me the story of a squirrel who met a rabbit running for dear life from a hunter called Joseph McCarthy. "Why are you running away from him?" asked the squirrel, "McCarthy doesn't hunt rabbits. He only hunts kangaroos." "I know," said the rabbit. "But how can I prove I'm not one?"

Company Meetings

THE NEW INDIA ASSURANCE
COMPANY LIMITED

MR. A. D. SHROFF'S SPEECH

Presiding over the 34th Annual General Meeting of the New India Assurance Company Limited held in the Company's Head Office in Bombay on 24th June 1953, Mr. A. D. Shroff, Chairman, reviewed the general economic situation and dealt with a number of problems facing Insurance Business in India. He said that the economy of the country had been comparatively stable during the last year. Referring to the Five-Year Plan, he said, although no spectacular results had been achieved definite progress had been made on long-term projects. The Government had definitely accepted the principle of deficit financing to augment their resources for financing the Plan, and he was of the opinion that, within limits and under expert control, this should stimulate further economic development.

Welcoming the appointment of the Taxation Enquiry Commission under the distinguished Chairmanship of Dr. Mathai, Mr. Shroff observed that the future taxation structure of the country should in the context of present economic needs of the country, lay greater emphasis on providing conditions for accelerating capital formation rather than on eliminating inequalities of income and wealth. With the ever-widening scope of the public sector, a larger and increasing part of the national savings was being diverted in recent years to expenditure in the public sector with the result that the private sector had been finding it difficult to raise new capital both for expansion of existing industries and for the promotion of new ones.

Estate Duty Bill

Referring to the Estate Duty Bill which proposes to exempt Life Policies from the estate of a deceased to the extent of Rs. 5,000 only, which may prejudicially induce persons to reduce the amount of life insurance carried by them for the protection of their dependents, he entered a plea to the Government for substantially raising this exemption limit.

Mr. Shroff then proceeded to emphasise the role of Insurance as an effective instrument for mobilising savings in the country. As an agency for capital formation, Insurance in India was making substantial contribution towards the implementation of the Five-

Year Plan. Although he would be the last to assert that the working of all Insurance Companies in India was on a solid and unimpeachable basis, he affirmed that they were actuated by a strong desire to make Indian Insurance a part and parcel of the national effort to raise the standard of living of the people. In this context, he requested the Government of India to

amend some of the restrictions imposed by Section 27A of the Insurance Act so that Indian Insurance Companies can be a source of financial assistance, particularly to small industries.

Machinery Insurance

Mr. Shroff made a reference to the New India's enterprise, in providing Insurance facilities against types of risk which have not so far been covered in this country. He mentioned, in particular, Hull Insurance, Machinery Insurance and Cattle Insurance.

In regard to Hull Insurance, he expressed the gratitude of Indian Companies to the patriotic and far-sighted decision of the Directors of the Scindia Steam Navigation Company to place with them for the first time their entire Hull Insurance Business. With regard to Machinery Insurance which is comparatively new to the country, he revealed that the New India had secured the assistance and co-operation of Munich Reinsurance and Allianz & Stuttgarter who have placed at the Company's disposal a team of technical men and their 50 years' experience in this line of business.

Continuing Mr. Shroff observed that the progress made by the Company in the field of operations abroad had been satisfactory. The Company is now represented in 36 different countries either through its own branches or through agencies. Nearly 40 percent of its direct business in 1952 was secured from its operations abroad. The company's Branches in Rangoon, Bangkok, Singapore, Hongkong and Tokyo which he visited recently, had established valuable contacts in Far East and South East Asian Countries. The Company had been investigating the possibility of opening branches at Manila and Djakarta.

Mr. Shroff pointed out that a part of the increased expenditure in 1952 reflected the larger organisation that was being built up in various countries on account of securing suitable offices and housing facilities for the Company's staff. This immediate burden was, he said, essential in order to provide adequate and efficient service for the Company's clientele.

Reviewing the working of the company in 1952, Mr. Shroff said:—The results of our operations during the year 1952 were on the whole satisfactory. We secured a total premium income of Rs. 8.10 crores, of which Rs. 3.86 crores were in the General Department and Rs. 4.24 crores in the Life Department as against a total premium income in 1951 of Rs. 7.49 crores made up of Rs. 3.64 crores and Rs. 3.85 crores in the General and Life Departments respectively. The profit of the General Branch amounted to Rs. 41.95 lacs, being 10.9 percent, of the total premium income of that branch.

Fire premiums totalled Rs. 229 lacs as against Rs. 223 lacs in 1951. After bringing interest into account, the Department showed a profit of Rs. 36.4 lacs equal to 15.9% of the premium income. Premiums in the Miscellaneous Department amounted to Rs. 65.5 lacs registering an increase of Rs. 7.8 lacs over last year. The profit shown by the Department after taking credit for interest is Rs. 10.97 lacs which is equivalent to 16.7% of the premium income. The premium income of the Marine Department was Rs. 91.15 lacs showing an increase of Rs. 8.45 lacs over the previous year. After taking credit for interest and providing a reserve on 99.8% basis, the Department showed a profit of Rs. 30,584.

Progress of Life Department

The progress of Life Department continued to be satisfactory. New Business written during the year totalled 53,275 policies assuring Rs. 18.04 crores. The premium income of the Department inclusive of consideration for Annuities amounted to Rs. 4.24 crores as against Rs. 3.85 crores last year. The interest income after deducting income tax was Rs. 56 lacs. The Life Fund had now reached Rs. 17.01 crores.

The overall result of operations in 1952 was reflected in a strengthening of the Company's financial resources by Rs. 2.9 crores which now stood at Rs. 23.2 crores. From the year's profits, the Board recommended the payment of an income-tax free dividend of Rs. 2 per share.

Scope for Further Development

Dealing with some of the other problems facing the company, and Indian Insurance generally, Mr. Shroff observed that there were immense possibilities for further development for Indian Insurance and for New India. For this development, it was necessary to have well-trained men, both on the development and administrative sides of our business. Mr. Shroff then gave details of the various Training Schemes, such as the Model Office and the Mobile Training Unit which are now actually in operation for the intensive training of Apprentice Officers and Development Personnel on the theoretical and practical sides of the business. He also made reference to the setting up of a Management Research Department whose functions include the preparation of Operational Manuals, conducting of operational audits and more generally research into administrative procedures with the object of simplification and mechanisation.

Mr. Shroff concluded by saying that the present set up of the Insurance Act was sound and practical, and strict and scrupulous compliance with its provisions was bound to place Insurance business in the country on a sound and healthy basis. The Code of Conduct and voluntary machinery for inspection evolved by the Executive Committee of the General Insurance Council, would help in reducing, if not entirely eliminating the abuses and malpractices which are prevalent at present.

AIR-INDIA INTERNATIONAL LIMITED

MR. J. R. D. TATA'S FAREWELL ADDRESS TO SHAREHOLDERS

"As our Company's existence draws to a close, we may look back upon our brief but impressive record with some satisfaction," said Mr. J. R. D. Tata, presiding at the final Annual General Meeting of Air-India International Limited on Monday, June 29, 1953. "In the five years of our existence," he continued, "we have doubled the scale of our operations and the value of our assets. Although the actual return on the capital has been small, we have set aside from profits over a crore and a quarter to depreciation and reserve, exclusive of a capital profit of Rs. 44 lakhs. We have thus, in a very few years, built up an exceptionally strong financial position. What is more important, in the brief period we have been permitted to exist, we have established a reputation for efficiency and safety which has redounded to the credit of Indian enterprise and added to the prestige and goodwill of our country abroad."

Reviewing the accounts for the year, Mr. Tata said that the Company would have made a good profit if, apart from inadequate mail rates, it had been spared the continued handicap which the excessive capacity offered by foreign operators on their main route unfairly imposed upon them in violation of the spirit at least of the Bermuda Convention. Mr. Tata explained that under the Bermuda Convention an international carrier could carry traffic between any two countries other than his own along his routes, provided that such traffic was treated as "fill up" traffic (termed under the Convention "fifth freedom" traffic), and it did not form a disproportionate part of the total loads carried. As an instance he cited what was happening over the India/U.K. route which was primarily traffic to the British and the Indian carriers, but "fill up" traffic to others. Yet some of the foreign airlines operating over the route offered capacity far in excess of the needs of the traffic originating from or destined for their own countries, with the result that nearly 90% of the loads they brought and took out of India consisted of fifth freedom traffic.

Continuing, Mr. Tata said, "I have always been an advocate of voluntary limitations on the part of the carriers themselves in preference to Government regulations of international air transport. My appeals and suggestions to that effect to the International Air Transport Association have unfortunately met with no response with the result that the problem has now been taken out of the hands of the operators. I hope that the present international negotiations will lead to a satisfactory solution."

Tourist Services

Mr. Tata informed the shareholders that low fare tourist services would shortly be introduced over the India/Europe route. They had already been started by Air-India International on the Bombay/Nairobi sector with excellent results. "While such services," Mr. Tata said, "lack many of the comforts and refinements provided by first class services, they offer a substantial reduction in fares varying from a fifth to a third, and have thereby attracted a good deal of additional traffic."

Mr. Tata then referred to the placing by the Company of an order for two De Havilland Comet Mark III jet aeroplanes for delivery in 1957 at a total cost exceeding three crores, including spares. These two Super Comets, together with the order placed for Super Constellations for delivery early next year, would enable Air-India International to State Corporation to remain abreast of technical development and to retain its ability to compete on equal terms with other international carriers.

Adverting to the subject of nationalisation, Mr. Tata said, "I feel that apart from the basic principle involved two aspects of Government's decision give cause for regret."

"The first was that, despite Government's close association with your Company since its inception, in both its capital and direction, your Directors were at no time taken into confidence or consulted, nor were Government willing even to discuss alternative proposals which we were prepared to place before them. The other is that the basis of valuation on which your Company is to be taken over is unfair to the shareholders and violates an important principle."

"This Company has provided a remarkable example of the practicability of joint State-cum-private enterprise. The smoothness and efficiency with which this major venture was brought into existence, after an exceptionally short period of planning and preparation, and its excellent record since then testify to the workability of such a form of joint enterprise, at least in certain fields. It is all the more unfortunate that Government should have been in a hurry to discard such a successful experiment."

"In my view, the grounds on which Government have sought to justify the nationalisation of the domestic airlines do not apply at all to your Company. If Government felt that the retention of a minority status in the international sector of the industry would have been inconsistent with the nationalisation of the domestic sector they could have achieved their object by exercising their contractual right to acquire from Air-India Limited the number of your Company's shares required to give them majority control. Further, in view of the need for additional capital to pay for the Super Constellations and later for the Super Comets, they could have provided the required funds, as they will in any case have to do under nationalisation, and directed that additional shares be issued to themselves, thus increasing further their majority interest in the capital of the Company. Every advantage in the way of control over the Company's policies and operations which nationalisation will furnish would thus have been secured. In addition, the valuable advantages inherent in business management would have been retained and many complications and repercussions on morale, arising from a drastic change of status, would have been avoided."

"I believe that if Government had given us an opportunity to discuss this and other aspects of the question before they came to an irrevocable decision in favour of nationalisation, there would have been a good chance of our convincing them of the soundness of our alternative proposals. Although Government did not give us that opportunity and rejected what I still believe would have been the better course, they were good enough to accept our suggestion that a separate corporation should be set up to conduct long-range international operations and that it should bear the name of Air-India International."

"I am grateful to Government, and particularly to the Minister for Communications, for recognising that our recommendation was not motivated by personal considerations, as seems to have been thought by some members of Parliament, but was made in the interests of the new Corporation itself. The creation of a separate Corporation called Air-India International will fulfil many desirable objectives. It will simplify the transition to State ownership; it will help to maintain, uninterrupted, the present high standard in technical efficiency, safety, service to passengers, etc., all of which might have been affected by the dislocation inevitable, to some extent, in the process of integrating the whole of the Indian air transport industry into one corporation. But even more important, it will retain intact, for the benefit of the new Corporation, the valuable goodwill and prestige of your Company which are, today, clearly identified with its name. Over half of our Company's passengers are non-Indians. By patronising Air-India International in preference to their own national carriers, they have shown their confidence in the efficiency and safety of our operations and their appreciation of the exceptional care and service which they receive at our hands. The transformation of your Company into a separate corporation under an entirely new name would almost surely have resulted in the loss of some of this valuable foreign clientele, to the great detriment of the new Corporation and the taxpayer."

Composition of the Board

Commenting on the composition of the Board of the Corporation, Mr. Tata expressed the wish that greater representation had been given to the business point of view. "International air transport," Mr. Tata explained, "is a fiercely competitive business. Dependent to an exceptional extent on the goodwill and loyalty of the travelling public, and subject to rapid change on the technical and operational sides, it requires a business outlook and a flexible management able to take quick decisions and calculated business risks."

"While on the subject of the composition of the Board of the new Corporation, I should," said Mr. Tata, "like to refer to a personal matter. As you are aware, I have agreed to remain at the head of Air-India International as Chairman after nationalisation. This has given rise in some quarters to the criticism that in thus agreeing to remain associated with an industry after its nationalisation I have let down private enterprise. Whatever validity there may be in this contention as a general proposition, it can hardly apply in the case of Air-India International as Government already have a dominant participation in its capital and direction. The main consideration, however, which weighed with me was that I would be lacking in a sense of duty if I refused to continue to make whatever contribution I could to the maintenance of the high standards and prestige which Air-

India International has established in India and abroad. This consideration acquired greater force, when I found that, in the face of considerable opposition, Government had accepted the recommendation I had made to them on grounds of efficiency and administrative convenience, to keep the international airline as a separate Corporation and to retain intact the name of Air-India International. In the circumstances, and having regard to the Minister's assurance that the Board of the Corporation would have the required freedom to manage its activities on business lines and that the interests of the staff would be adequately safeguarded, I believe you will approve of my decision to assume, in an honorary capacity, the somewhat onerous duties of Chairman of the International Corporation."

Commenting on the basis of valuation on which the Company was being taken over by Government, Mr. Tata considered that the terms on which the Company was being compulsorily acquired were unfair to the shareholders and not in keeping with generally accepted principles governing the compulsory acquisition of property. In the case of aircraft taken over, Mr. Tata observed that they were modern and of a type in wide use on the main international routes, their average age being less than three years; by approving in 1951/52 the sale of the original Constellations at a substantial profit and their replacement by new aircraft, Government had clearly recognised the existence and legitimacy of the world market price. "The high price of second-hand transport aircraft," said Mr. Tata, "is not a speculative one; it is based on the world demand and is the price at which the hard-headed and cost-conscious managements of the world's leading airlines are today buying aircraft. Despite all these cogent considerations, Government declined to take such prices into account in fixing the terms on which it will take over your Company's assets. As a result they will acquire our Constellations at about half their real value."

"The fact," he continued, "that the shareholders will get a premium on the face value of their shares is wholly irrelevant to the issue as the amount of this premium is less than the revenue and capital profits actually booked and set aside by the Company in past years."

Concluding his speech, the Chairman said, "Our success has been largely due to the skilled management provided by Air-India, our technical managers, and to the hard and devoted work put in by all ranks in the organisation of both Companies in India and abroad. To them all we are deeply grateful. On your behalf I thank them and wish them all happiness and prosperity."

"Finally, my personal thanks go to you, shareholders of the Company, for your support to our venture and the confidence and courtesy you have always extended to me and to my colleagues."

"While it is a wrench for us as a Company to give up this national enterprise, we may take comfort from the thought that the pioneering work we have done abroad, that the reputation of Indian aviation, India's flag over the international routes of the world will bear our name. We wish the new Corporation the fullest success in the years to come."

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to May, 1953. Compared with April, the May Index for Preference Shares discloses a rise of 1.3 points, while that of Government Securities remains unchanged at 98.1 points.

There were increases in Bank (0.8 points), Cotton (5.0 points), Coal (2.0 points), Jute (4.0 points), Mining and Oil (4.3 points), Cement (2.2 points), Engineering (4.7 points), Paper (20.6 points), Sugar (11.0 points) and Miscellaneous

(3.6 points), while Tea decreased by 13.1 points. Correlating all the factors the Capital variable yield securities index shows that the Index for stock prices in the above classes of shares advanced by 4.4 points during May, 1953.

Stocks and Shares

VOLUME OF BUSINESS SHRINKS FURTHER

GILT-EDGED TURN QUIET: IRONS STILL DEPRESSED

Wednesday Evening.
THE share market has continued its lifeless course this week, with the interruption of a holiday on Tuesday. The amount of business passing is very small indeed and brokers report themselves largely unemployed. Irons have stayed at the lower level of Rs. 24-10 most of the week, since the labour trouble at Burnpur shows no sign of settlement. Rumours regarding the ownership of British India Corporation have faded, but the share is still depressed at Rs. 8-3. Alkali and Chemical shares have been in demand, no doubt in consequence of the news that the factory at Khehra has been successfully disposed of. Debentures and preferences are still the brightest spot in the market.

Gilt-edged are quiet and make a narrow market. The Reserve Bank is not active and business is difficult to complete. National Plan Bonds have sellers at Rs. 98-5. Details of the week's trading are found below.

Idle conditions returned in Government securities and the market closed on a dull note. The recent enquiry appears to have been satisfied, and at the close there was a predominance of sellers. Three percent Conversion Loan weakened under selling pressure from Rs. 83 to Rs. 82-11, while 3% Nonterminable Paper, after being marked up to Rs. 82-12 cum-voucher, closed at Rs. 82-10 ex-voucher. In short-dated loans, 2½% 1954 continued in demand at Rs. 98-9, without attracting sellers. Other short-dated issues were unchanged at their previous levels though there were inclined to be sellers rather than buyers. In the medium-dated section, 3% 1959-61 and 3½% 1961 shed an anna at Rs. 96-3 and Rs. 98-5, while both 3% 1963-65 and 1964 were on offer at Rs. 92-7. Four percent 1960-70 was taken lower at Rs. 102-5, and 2½% 1961 and 2½% 1962 had sellers at Rs. 90-9 and Rs. 91-9. Among long-dated issues, 3% 1966-68 was steady at Rs. 90-3, but 3% 1970-75 was on offer at the lower rate of Rs. 86-6. Except for a small enquiry for 3% loans maturing in 1955 and 1956, no interest was shown in the provincial section.

Preference shares continued to be absorbed on investment account, but business was again on a limited scale. In Jutes, Reliance were taken at Rs. 115, and Clive 'A' were marked at Rs. 98. A parcel of Port William changed hands at Rs. 115, Albion were done at Rs. 105. Lansdowne were quoted at Rs. 114-12, and Lawrence 2nd were placed at Rs. 96-8. Among miscellaneous scrip, Indian Iron came to hand at Rs. 106, and Orient Paper 2nd were recorded at Rs. 72. Bharat Collieries were unchanged at Rs. 49-8, and a small lot of Associated Hotels was crossed at Rs. 61. Carew's were scarce at Rs. 95-8, but Jardine Henderson were on offer at Rs. 86.

Bank shares continued steady with Imperial Bank Fully-Paid and Contributors being marked up further to Rs. 1860 and Rs. 453-12 cum-dividend. United Bank 'B' and 'D' shares were quoted at Rs. 8-8 and Rs. 3-13 respectively, but United Commercial were a shade lower at Rs. 35-12.

In railways, business was reported in Baraset-Basirhat at Rs. 17. There were buyers of Shahdara (Delhi) Saharanpur, Howrah-Amra, and Arrah-Sasaram at their previous quotations, but few declared sellers.

Cotton shares were depressed. Elgins encountered selling pressure to decline from Rs. 17-4 to Rs. 16-4, but closed better at Rs. 16-10, while Cawnpore Textiles, after being marked down from Rs. 9-1 to Rs. 8-13, also recovered to Rs. 9-4. Kesoram and New Victoria were done at Rs. 19-4 and Rs. 1-4 respectively, at which rates there were further sellers. Dunbar and Bowreah were, however, steady at Rs. 285 and Rs. 182.

Coal shares showed little change, but extremely dull conditions prevailed in this section. Burakur were dealt in at around Rs. 10-2, and Bengal were steady at Rs. 540. East Indian were unchanged at Rs. 24, and Standard were taken at Rs. 20-12. Bokaro & Ramgur were marked at Rs. 9-14, and Raneeunge changed hands at Rs. 8-6. Hurriladih were quoted at Rs. 16-2, and Ghusick & Muslia changed hands at Rs. 17. Kataras & Jheriah were a turn lower at Rs. 42-8, and Borra were crossed at Rs. 30. Western Bengal improved slightly from Rs. 4-13 to Rs. 5, while Central India were done at Rs. 4-13. Talcher continued to meet with enquiry at Rs. 2-14.

Despite favourable advices from the jute goods market, jute shares displayed an easier tendency owing to the lack of support. Howrah fluctuated between Rs. 24 and Rs. 24-4, to close at Rs. 24-3. Agarpara were quoted at around Rs. 18-11, and Hooghly were taken at Rs. 30-2. Nellimarla met with some enquiry at Rs. 35-8, and National were placed at Rs. 25. Reliance were recorded at around Rs. 15-14, but Nuddea were lower at Rs. 46-8. A parcel of Lawrence changed hands at Rs. 181, and Lansdowne, after being marked down to Rs. 135, recovered to Rs. 140. Auckland were taken at Rs. 126, Barnagore at Rs. 157, and

Champdany at Rs. 159. Fort Gloster were unchanged at Rs. 345, and Kelvin were recorded at Rs. 235. Kamarhaty 'B' were dealt in at Rs. 185, and Kankannarrah 'B' were quoted at Rs. 142. India were marked down to Rs. 129, and Standard were also lower at Rs. 144. Empire were recorded at Rs. 20-12, but Northbrook eased to Rs. 21-4. Among small-priced shares, Waverley changed hands at Rs. 5-11, Presidency at Rs. 5, and Rameshwara at around Rs. 5-14.

In electric supply scrips, Calcutta were freely turned over between Rs. 13-7 and Rs. 13-9, and Muttra were marked at Rs. 9-12. A small lot of Agra changed hands at Rs. 162, and Dishergarh Power were crossed at Rs. 97.

Rather less interest was shown in sugar shares during this week, and prices were inclined to be easier in sympathy with the fall recorded last week, in the shares of the Begg Sutherland Group. Dyer Meakins were a shade lower at Rs. 6-3, and Carew, after being done at Rs. 6-10, had sellers at Rs. 6-7. Belsund were, however, steady at Rs. 8, while Ramnugger and Samastipur had small buyers at Rs. 18 and Rs. 16-12 respectively. Balrampur, Champaran, and Cawnpore were marked down further to Rs. 6-12, Rs. 22-12, and Rs. 30-2, at which rates small buyers appeared, and prices recovered slightly to close at Rs. 7-5, Rs. 23, and Rs. 31-4, respectively.

Because of the continuance of labour trouble at Burnpur, Indian Iron & Steel shares declined from Rs. 24-14 to Rs. 24-10, at which rate they were quoted throughout the week. Other engineering shares were, however, steady. Braithwaite were taken at Rs. 11-8, and Britannia Engineering were steady at Rs. 19-14. Jessops were marked at Rs. 24-2 ex-dividend, and Indian Galvanizing Old were a turn lower at Rs. 13-12. Kumardhubi changed hands at Rs. 7-12, and Marshalls were done at Rs. 5-8. National Iron & Steel were recorded at Rs. 5-1, and Textile Machinery were taken at around Rs. 6-2, Britannia Building were placed at Rs. 6-5, and Saran were crossed at Rs. 9-6 ex-dividend.

The miscellaneous section was devoid of any special features, and prices were inclined to be easier in sympathy with the general trend. In paper, Shree Gopals were steady at Rs. 18-4 ex-dividend, and Titagur were quoted at around Rs. 35-14. Star were marked at Rs. 8-6, but Bengal Paper had sellers to shed a rupee at Rs. 43-8, while India Paper were a shade easier at Rs. 167. In cement, Assam Bengal were unchanged at Rs. 4-2, and Dalmia were dealt in at Rs. 6 ex-dividend. Sone Valley fluctuated narrowly around Rs. 7-8 cum-dividend. In insurance scrips, a solitary transaction was reported in Ruby General at Rs. 4-12. Among shipping shares, India Steamships were unchanged at Rs. 6-8, but India General Navigation receded further to Rs. 86. Port Shipping were crossed at Rs. 12-10, and Fraser & Company had buyers at Rs. 11-4, without attracting sellers. Alkali & Chemical were initially marked at Rs. 13-8 to improve to Rs. 13-14, with buyers over, and Bararee Coke were dealt

Head Office: Hindusthan Buildings, CALCUTTA.

In at around Rs. 18-2. Dunlops were quoted at Rs. 28-8, and Assam Saws were unchanged at Rs. 6-7. Indian Cables were recorded at Rs. 19, but Calcutta Trams were a shade easier at Rs. 15-8. Indian Wood Products lost further ground to Rs. 33-7. Airways (India) were quoted at Rs. 11-6, and Indian National Airways were marked around Rs. 3-12. Jardine Henderson had several buyers at around Rs. 129, and Martin Burn also met with enquiry up to Rs. 18-10. Shaw Wallace were a shade better at Rs. 11-10 ex-dividend, and British India Corporation recovered slightly to Rs. 8-3. Metal Box were offered at Rs. 19-7 ex-dividend, and National Tobaccos were weak at Rs. 9-12. Rohtas Industries were quoted at Rs. 8-8 ex-dividend, and small lots of Indian Aluminium changed hands at Rs. 110-8.

In mining, Karanpura Development continued to meet with speculative support at around Rs. 15, and Orissa Minerals were done at Rs. 35-8. Both Burma Mines and Non Ferrous Metals were better at Re. 1 and annas 12, respectively, and Indian Copper were unchanged at Rs. 2-15.

Considerably less business was reported in tea shares over the past week, and prices were generally a shade easier. Dhelakhat came to hand at Rs. 10-6, and Namburnadi were marked at Rs. 8. Brooke Bonds were fully steady at Rs. 11-8 and Gillipukuri were taken at Rs. 18. Bhatkora were recorded at Rs. 26-1, and Hantapara changed hands at Rs. 153. Hasimara were steady at Rs. 28-8, but Nagasoree were slightly lower at Rs. 138-8. On the other hand, Killcott met with renewed enquiry to improve to Rs. 12-8, while New Terai were also a shade better at Rs. 10-2. Dauracherra were quoted at Rs. 6-12 and Telipara were done at Rs. 15-4. Loobah were easier at Rs. 2-12, as were New Samanbagh at Rs. 6-12, and Eastern Cachar at Rs. 3-6. A parcel of Baitakhal was crossed at Rs. 5-8. Sungma were in good demand and were marked up to Rs. 6-2, while Tukvar were crossed at Rs. 6-7.

The decline in sales from Rs. 4 crores to Rs. 3.44 crores of the METAL BOX COMPANY OF INDIA for the year ended 31st March, 1953, as compared with the previous year reduced the profit sharply from Rs. 57.43 lakhs to Rs. 30.76 lakhs, depreciation absorbing Rs. 8.31 lakhs (Rs. 7.94 lakhs). The final dividend has been, however, maintained at 5 percent making 10 percent (same) for the year. Taxation absorbs Rs. 12.85 lakhs (Rs. 26.05 lakhs). General reserve has been halved to Rs. 2 lakhs, while replacement reserve is slightly lower at Rs. 3.05 lakhs against Rs. 3.25 lakhs. The carry-forward is at Rs. 12,89,212 (Rs. 12,85,413).

A smaller crop and reduced average prices explained a loss of Rs. 1.97 lakhs of the OODLABARI TEA COMPANY for the year ended 31st December, 1952, as compared with the previous year's profit of Rs. 1.31 lakhs. The crop was 7,928 maunds (8,151 maunds) and the average price received was annas 15-1 per lb. (Re. 1-6-5). Bringing in Rs. 30,883 and transferring Rs. 1.70 lakhs from reserve, there remains Rs. 3,941 which is carried forward. The dividend has been passed against 27 1/2 percent. Estimates have been made for a crop of 7,206 maunds at a cost of Rs. 6.35 lakhs.

The working of MURPHULANI (ASSAM) TEA COMPANY for the year ended last December has produced satisfactory results. The profit is up from Rs. 85,695 to Rs. 1,14,972. Allowing Rs. 43,881 (Rs. 31,492) for depreciation, bringing in Rs. 32,644, providing Rs. 39,000 (Rs. 23,000) for taxation and making other adjustments, there is a balance of Rs. 97,518. The preferred ordinary and ordinary dividends have been maintained at Rs. 2-8 and Rs. 2 per share, respectively. The carry-forward is Rs. 37,518. The crop was 4,353 maunds (4,543 maunds) and the average price Re. 1-11-10 per lb. (Rs. 1-13-10). Estimates for the current year have been framed for a crop of 4,050 maunds at a cost of Rs. 4.46 lakhs.

MIM TEA COMPANY made a loss of Rs. 38,763 for the year ended 31st December, 1952 as against a profit of Rs. 1.31 lakhs in 1951. Providing Rs. 16,333 (Rs. 16,741) for depreciation, bringing in Rs. 37,600 and making other adjustments, there is a debit balance of Rs. 3,160 which is carried forward. The dividend has been passed as against 25 percent. The crop was 2,307 maunds (2,157 maunds) and the average selling price was Rs. 2-6-3 per lb. (Rs. 3-4-0). Estimates have been made for a crop of 2,123 maunds to cost Rs. 3.42 lakhs.

The loss of the ENGO TEA COMPANY for the year ended last December was Rs. 86,363 against a loss of Rs. 11,660 in the preceding year. Allowing Rs. 19,332 (Rs. 15,002) for depreciation and making other adjustments a debit balance of Rs. 85,600 has been carried forward. The dividend has been passed against 5 percent. The crop was 3,075 maunds (2,726 maunds) and the average price Re. 1-6-10 per lb. (Re. 1-10-5). Estimates for 1953 have been made for a crop of 3,075 maunds to cost Rs. 2.89 lakhs.

MANABARRIE TEA COMPANY incurred a loss of Rs. 249,129 for the year ended last December, as against the previous year's loss of Rs. 212 lakhs. Transferring Rs. 37,613 from reserves and making other adjustments, a debit balance of Rs. 2,10,574

has been carried forward. The dividend has been again passed. The crop totalled 5,337 maunds (7,069 maunds), but the average price was higher at Rs. 1-0-10 (annas 15-2) per lb. due to better quality of tea. Estimates have been framed for a crop of 6,200 maunds at a cost of Rs. 5.84 lakhs.

The first year's working of the DALMIA CEMENT (BHARAT) LTD., which took over the Dalmia Cement Ltd. showed a profit of Rs. 25.83 lakhs for the year ended last December. Tax absorbs Rs. 12 1/2 lakhs. The ordinary dividend has been declared at 6 1/2 percent and general reserve receives Rs. 4 lakhs leaving Rs. 39,834 to be carried forward.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate: Opening Quotation—Highest for the week—Lowest for the week—Closing Quotation—Quotation for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available).

PAKISTAN ESTATE DUTY ACT EXEMPTIONS

In his last Budget Speech, the Pakistani Finance Minister stated that he proposed to exempt from estate duty all investments made in approved industrial undertakings. A notification has been published in a Gazette of Pakistan Extraordinary under section 35 of the Estate Duty Act, 1950 giving effect to this proposal. The exemption applies to the property belonging to a person dying on or after 1st April, 1953 being property invested in any of the following industrial undertakings:—

(1) Cement (excluding cement products); (2) Edible oils, hydrogenated or otherwise; (3) Generation of electric power; (4) Electrical equipment, transmitters and switchgears; (5) Glass; (6) Heavy soda ash and fertilizers; (7) Iron and steel mills and rolling mills; (8) Machine tools and precision tools; (9) Coal mines; (10) Paper mills; (11) Pharmaceuticals, drugs and light chemicals; (12) Sugar mills and power and industrial alcohol manufacture; (13) Leather-tanning; (14) Cotton spinning mills and weaving mills; (15) Woollen spinning mills and weaving mills; (16) Jute spinning mills and weaving mills; (17) Silk and rayon spinning mills and weaving mills; (18) Manufacture of cigarettes; (19) Flour mills; (20) Plastics.

New Delhi

HEAVY AGENDA FOR NEXT SESSION OF PARLIAMENT

CORRELATION OF IMPORT DUTIES AND QUOTAS SUGGESTED

(FROM OUR OWN CORRESPONDENT).

27th June.

THE monsoon session of Parliament, which commences early in August, will have 27 working days for the House of the People and 16 for the Council of States. The legislative programme, as proposed by the various Ministries, consists of 62 Bills, including 23 carried over from previous sessions. Three Bills—the Estate Duty Bill, a Bill to fix rates of estate duty and the Andhra State Bill—have been given top priority and are expected to take up at least 20 days, leaving seven days for the remaining business. Knowledgeable sources believe that at the most about 12 Bills will be passed, and the others will have to wait until the November session. Following is the provisional list of Bills which the various Ministries propose to sponsor.

In addition to five pending Bills, the Ministry of Commerce and Industry has six others: (1) A Bill to amend Section 23 C.C. of the Indian Patents and Designs Act in order to include substances capable of being used as insecticides, fungicides or germicides etc. (2) A Bill to amend the law relating to patents as contained in the Patents and Designs Act. (3) The Indian Tariff (Second Amendment) Bill. (4) A Bill to amend the Forward Contracts Act. (5) The Iron and Steel Control Bill (6) A Bill to control the payment of royalties.

The Ministry of Finance has five Bills—the Banking Companies Act (Amendment) Bill, the Sea Customs (Second Amendment) Bill, the Medicinal and Toilet Preparations (Excise Duty) Bill, the Indian Company Act (Amendment) Bill, and a Bill to fix the rates of Estate Duty. Five Bills of this Ministry including the Estate Duty Bill, the debate on which began during the last session, are pending.

The Railway and Transport Ministry has four new Bills: (1) A Bill to amend Chapter VIA of the Indian Railway Act in order to incorporate therein the recommendations of the adjudicator in the trade disputes between the former nine Indian railway administrations and their workers. (2) A Bill to amend the Motor Vehicles Act with a view to facilitate the reorganisation schemes of State Governments and to meet other developments in the field of motor transport. (3) A Bill to provide certain obligations incurred by the Central Government prior to the establishment of the Delhi Road Transport Authority. (4) Marking of Heavy Packages Act (Amendment) Bill.

The States Ministry has Bills to provide for the merger of Bilaspur with Himachal Pradesh and a Bill to amend the Government of Part C States Act. Two other Bills introduced by this Ministry are pending before Parliament.

The Rehabilitation Ministry has Bills to provide for the compensation and rehabilitation of displaced persons and to create a Displaced Persons Trust. Introduction of these Bills depends on the Indo-Pakistan talks.

The Law Ministry has a Bill relating to the prevention of disqualification of members of legislatures in Part C States. In addition, it has four pending Bills.

The Labour Ministry has Bills to amend the Factories Act and the Employers' Provident Fund Act. The Minimum Wages Act (Amendment) Bill is already pending before Parliament.

The Ministry of Defence has a Bill to amend the Territorial Army Act; the Cantonment Act (Amendment) Bill is pending.

In addition to four pending Bills, the Ministry of Home Affairs has the Andhra State Bill and the Indian Citizenship Bill.

The Education Ministry, in addition to a pending Bill, has the University Grants Commission Bill, the Copyright Act (Amendment) Bill, and the Children's Bill.

In addition to two pending Bills, the Health Ministry has a Bill to control drug advertisements.

The Food and Agriculture Ministry has a Bill to amend the Agricultural Produce (Marketing and Grading) Act; one of its Bills is already pending before Parliament. The Information and Broadcasting Ministry proposes to introduce a Bill to implement certain recommendations of the Film Enquiry Committee relating to the production of films.

Amongst the pending Bills one is sponsored by the Ministries of Communications, and one by the Ministry of Works, Housing and Supply.

In addition to this legislative programme, there will be supplementary demands for grants in respect of General Administration and Railways and their appropriation Bills.

will follow nationalisation and the State will have to bear the burden of uneconomic traffic during the monsoon. This may affect the financial results.

"New Look" Drive in Secretariat

A "Clean Up the Secretariat" drive will soon be launched by the Works Ministry, it is learned. Visitors to the Secretariat often complain about the fall in standards of cleanliness and discipline since independence. The army of chapparis squatting outside office rooms generally have a dirty and unwashed appearance. They often have their meals and tea on their benches. Children are brought in and play in the corridors. Window panes, which used to be spotlessly clean years ago, are dirty and office rooms present an untidy appearance. Restaurants where food is served during office hours smell badly. Corridors are crowded with cycles, almirahs and even charpays. Soon after he joined as Works Secretary, Mr. M. K. Vellodi, brought these facts to the notice of his colleagues in other Ministries, but did not meet with much success. His plan envisages the appointment of a number of retired Army men who will move about the Secretariat and enforce proper dress and proper behaviour among chapparis. It is also proposed to clean every office room once a month and caretakers will see that window panes and office furniture are kept clean. Secretaries will be asked to nominate an Under Secretary from each Ministry to maintain the proper standards of cleanliness and discipline and to assist the supervising staff generally. The Prime Minister might be asked to help persuade Secretaries to visit their offices regularly. Meal hours in the restaurants are also expected to be regulated so that no food can be served during office hours. It is thought that the Secretariat might have a "new look" by October next.

Bombay

CHANGING PATTERN OF INVESTMENT PUBLIC-PRIVATE COMPETITION FOR NEW CAPITAL

(FROM OUR OWN CORRESPONDENT).

29th June.

WITH the onset of the monsoon and the termination of the busy season in the commodity markets, when money is in greater demand to finance the marketing of important crops, the investment market in Bombay has once again begun to attract attention. In the past, this transition used to be more clearly marked than in the last few years. The bulk of imports from abroad used to be concentrated during the busy season, but now because of import controls and the system of import licensing, the demand for finance for foreign trade is more evenly distributed over the year. Even so, the line between the busy and the slack season for the money market, though a little blurred, is still fairly clear.

In past years the change was marked by increased inquiry for industrial equities, but for various reasons this is not much in evidence this year. In the opinion of many business men, one of the most important causes for the change is the hold that purely speculative interests have acquired over the stock markets since the depression of March-April 1952. While there may be some truth in this, the new attitude of genuine investors towards industrial equities cannot be entirely attributed to this factor. There has always been speculative interest in the share market.

While the increase in the risk of depreciation of capital may, to a certain extent, be responsible for both large and small investors keeping away from the market in Dalal Street this year, those intimately connected with the operations of the share market are now convinced that the whole pattern of private investment is changing. They aver that in the first place fewer people today have savings available for long-term investment. But they are equally certain that even if saving on a bigger scale were possible, it would not be directed to industrial shares in the same proportion as in earlier years. A couple of years ago, leading share brokers believed that the prospects were bright, because land and buildings had ceased to invite fresh investment and much of what used to go in these directions would naturally be diverted to investment in industrial stock. Now these very people are wondering if the Bombay Stock Exchange may not shrink considerably in size and importance in a few years.

End of Cheap Money

Their reading of the situation is that the State is emerging rapidly as a competitor for attracting investments. They point to the abandoning of the cheap money policy by the Ministry of Finance under the guidance of Mr. C. D. Deshmukh. The attractions offered to investors in gilt-edged securities are being gradually stepped up, as in the case of the National Plan Bonds. As more and more money is required for the public sector, the yield on gilt-edged is bound to increase though perhaps not rapidly. The Finance Minister is also known to favour greater effort to rope in private savings through his campaign to mobilise small savings. Almost all the States are clamouring for greater accommodation every year from the money market and when the flow of money is found to be insufficient for the requirements of the Central and State Governments, more attractive terms are bound to be offered by Government borrowers.

This mood in the investment market here has been induced by the large issue of the first series National Plan Bonds. In the opinion of the market and of the Government, the response to this issue, though it is now quoted in the market at a small premium, has not been very enthusiastic. At the same time it has been "satisfactory," as Mr. Deshmukh chose to put it. While it is not known what part of this issue had to be absorbed by the Reserve Bank, it is believed in the market that it must have been quite a large portion. According to market expectations, the second series of these bonds, for quite a substantial amount, might be forthcoming this year and it is believed that it was because of this that the Government came into the market with the first series unusually early. Considering the Government's need, a fresh loan this year, perhaps on a more modest scale, is regarded by some financial observers here as a certainty.

State Loan Flotations

In the meantime, there is speculation in the long term money market about the aggregate size of the various State loans. These are expected to be issued about the middle of this month. The total amount of the five issues is placed by the market at somewhere between Rs. 15 and Rs. 20 crores. The State Governments are naturally pressing the Central for more but an already depleted market may not be able to absorb, so soon after the last big issue, a bigger amount. It is taken for granted that the rate of interest on all these issues will be 4 percent, with varying rates of discount, for each State. There may be no discount in the case of Bombay and Bengal.

These heavy flotations in the money market are causing a certain degree of uneasiness among industrialists in the State. They complain that, on the one hand, the authorities are doing everything they can to lower the yields that can be offered on industrial equities by placing fresh burdens and restrictions on industry and, on the other hand, they are absorbing more and more of the available funds for investment by offering more attractive terms. In addition to this double attack on the sources of finance for the private sector, they have already undermined the confidence of the investing public with hints of nationalisation. To the business community it seems a paradox that the same Government which is asking for rapid industrial expansion in the private sector and expressing its displeasure because it is not forthcoming at the rate desired, should at the same time proceed in a manner calculated to render investment by the public in industry less attractive and more hazardous, besides appropriating as many sources for the flow of capital as possible for its own requirements.

Madras

TUNGABHADRA PROJECT WELL ADVANCED

COST OF SOCIAL SERVICES

(FROM OUR OWN CORRESPONDENT).

29th June.

THE near-completion of the Tungabhadra Project, with a reservoir capacity larger than that of the existing Mettur Project in Tamil Nad, is an event of great significance for both Madras and Hyderabad. It has the distinction of being the first major irrigation project to come to fruition since independence. The Madras side canal is completed to a length of 175 miles out of a total 225 miles, and water will be let into it in early July to irrigate 200,000 acres. At the same time the Hyderabad side canal will carry enough water to irrigate 6,000 acres in the first instance, as it has been excavated to a length of 70 miles only. It has been said that "the future of India is in the hands of her plant breeders, engineers and technicians—plant breeders before, engineers who can grow two sheafs of corn where one grew before, engineers who can achieve marvels of irrigation and electrical engineering, and technicians who can man and master the machines. What they need, above all else, is peace—peace inside as well as outside the country's borders." That peace was guaranteed to Mr. M. S. Thirumala Iyengar, Chief Engineer for the Madras side, and Mr. P. Papiash, Chief Engineer for the Hyderabad side, and to their able teams of skilled men. The result was expeditious work on a project which was inaugurated in 1945 by the then British Government, but held up in the years 1947-48 on account of disturbed political conditions in border areas.

Cost of Rs. 35 Crores

It has a fascinating history—this huge irrigation system designed to command a total area of two million acres in a region which has been subject to periodical famine. The barren lands in the districts on both sides of the river will soon blossom forth into green fields growing paddy, sugarcane, cotton and millets. The power that is to be generated from the hydro-power stations on the Hyderabad and Madras canals will give a fillip to industrial development of this region. As the Mysore Government has taken on two large irrigation projects, one each on the Tunga and the Bhadra which unite to form the Tungabhadra, and as the Tungabhadra Project itself will fall in Mysore State when Andhra State is established, an entire river basin, along with its tributaries, will receive integrated development. The immediate capacity of the Project's storage reservoir will be 113,000 million cubic feet, the area of water spread being 133 square miles. The length of the dam including its

concrete spillway section is 8,000 feet. The Madras side canal has an aqueduct measuring 2,287 feet which is the longest in South India and the most important among the many marvellous cross drainage works in the canal system of the Tungabhadra Project.

The cost of this Project is Rs. 35 crores, the share of Madras State being a little more than half. There is also the additional cost of rehabilitating displaced persons from 65 submerged villages in the Hyderabad, Madras and Bombay States. The completion of the project is the result of a bold policy of development expenditure on the part of the Madras Government well in advance of the five year plan. It may be recalled that the State Government had spent Rs. 15.61 crores on the Tungabhadra and other projects in the years 1949-51. Work already begun had to be continued as part of the five year plan, although the increased development expenditure was at the expense of social services.

The following figures of expenditure on security services, development services and social services bear out this point:—

	Expenditure on Revenue Account in Rs. crores			
	1946-47	1951-52	1952-53	1953-54
Security services	14.65	21.15	20.54	20.18
Development services	9.05	16.95	22.23	20.76
Social services	10.01	18.02	19.64	18.83

The following figures represent approximate capital expenditure outside Revenue Account in respect of development services:—

1951-52	...	Rs. 17.96 crores
1952-53	...	Rs. 19.02 crores
1953-54	...	Rs. 16.28 crores

The five year plan expenditure included in the above figures is as follows:—

	1951-52	1952-53	1953-54
	Rs. crores.		
Development services	22.69	23.67	20.09
Social services	4.82	5.15	4.90

Assuming that there will have been in the years 1951-54 a uniform 40 percent increase over the level of 1946-47 costs and prices, it will be seen that although money expenditure on account of security services in the years 1951-54 has increased, real expenditure (in terms of 1946-47 level of costs and prices) has remained practically the same. After deducting the figures of capital expenditure outside Revenue Account in respect of development services from the corresponding figures of five year plan expenditure, it is found that Rs. 4.92 crores, Rs. 4.65 crores and Rs. 3.81 crores respectively were plan expenditure in respect of development services. After deducting these figures in development services. The following are the normal development services expenditure in the three plan years:—Rs. 14.02 crores, Rs. 17.58 crores, Rs. 16.95 crores. These figures represent more than a 40 percent increase on 1946-47 expenditure. In other words, after allowing for the increased level of costs and prices, it may be concluded that there has been a real increase in normal development services expenditure. But this real increase includes famine relief work, which falls under development services, and expenditure on famine relief has been mostly responsible for the last two years' deficits, which have been left uncovered by revenue.

Social Services Suffer

But this picture of steady progress as revealed by the large outlays on development projects under the plan is not true in the case of social services. After deducting social services' expenditure under the five year plan from the corresponding figures in the first table above, it will be seen that only Rs. 13.20 crores, Rs. 14.49 crores and Rs. 13.93 crores respectively were spent in the first three plan years. These figures, after allowing for the 40 percent increase on the 1946-47 level of prices and costs, represent no more than the normal expenditure on social services. In other words, what should really be a normal increase in non-developmental expenditure has been brought under the social services head in the five year plan. As this increase is only just sufficient to keep up with the annual net increase in population, the actual position could not have materially altered. The obvious conclusion is that, like the Tungabhadra Project, all other development projects will have to be completed to schedule so that social services may receive greater attention in the second five year plan.

The Labour Bureau Working Class Cost of living Index Number (base: 1941=100) for Delhi for the month of May, 1953 compared to the index number for the preceding month, appreciated by 2 points to 139 and thus kept up the slowly rising seasonal trend observed since January, 1953. The food index registered a rise of 2 points mainly due to a rise in the price of milk, mustard oil, potatoes and sugar. The fuel and lighting to appreciate by 9.3 points. The index for the clothing group remained at 145. The miscellaneous group index number advanced by 1 point due to a slight increase in the entertainment charges. The estimated cost of living index number for Delhi on base August, 1939=100 was 361 for the month of May, 1953.

The American Cyanamid Company recently demonstrated a chemical additive, which when mixed with paper pulp strengthened the finished paper product up to five times even when wet. The additive, it was explained, is a melamine resin that binds the fibres closer together thus creating a strong, lintless paper.

London

U.K. INDUSTRY'S CAPITAL SPENDING RESUMED

OVERSEAS TRADE IN MAY

(FROM OUR OWN CORRESPONDENT).

27th June.

WITH only one late sitting, and without giving way on any essential points, Mr. Butler surmounted the Committee stage of the Finance Bill during the week. The Opposition fought a rearguard action all the way, but with little hope of shaking the Government's majority. One subject which took up much of the time during the debates was the pressure on the Chancellor of the Exchequer to reduce interest rates. Industrial capital expenditure has certainly been restricted over the last couple of years, and from the Treasury viewpoint a reduction would cut expenditure on debt service. On the other hand, the dividing line between deflation and inflation is difficult to define, while the risk of stimulating home demand at the expense of exports is only too apparent. At the same time, numerous other factors go to suggest that Mr. Butler is justified in his refusal to give way on this point just to secure an immediate—and perhaps transitory—benefit, for in the long run his policy may well lead to much healthier and more enduring recovery.

As regards the other factors to which reference is made above, the quarterly classification of bank advances issued by the British Bankers' Association helps to confirm that industry is resuming postponed capital projects, though still with some caution, and high interest rates have not really been so potent a factor as the recession in trade and the fall in commodity prices. Though the overall total showed comparatively little change, its composition showed some striking variations. Advances to public utilities are £40 million lower than in February—mainly on account of repayment of an overdraft by the British Electricity Authority from the proceeds of its new loan—and private persons, professional people, churches, charities, hospitals and the entertainment industry all show steadily declining figures. Borrowing increased elsewhere in industry, however, and more especially in iron and steel, shipping and shipbuilding, textiles, retail trade and in the food, drink and tobacco industries. Simultaneously, the Treasury's *Bulletin for Industry* records that "the recovery of industrial production as a whole from last year's setback is still below the levels of 1951." The index of industrial production is expected to be 119-120 (1948=100) for May, against 117 in May, 1952. For April a provisional figure of 118 is given, and the revised figure for March is 124, compared with 110 and 123 for the same months last year. Much of this revival is undoubtedly due to the motor industry, whose output in May created a new record. Steel production is also setting new records, while the wool and cotton industries are showing improvement.

Greater Price Competition

All this makes pleasant reading, and it is reinforced by the detailed figures of Britain's overseas trade in May. It would appear that there has been an increase of something like 10 percent in the volume of imports as opposed to their value, and as bigger consignments of food and tobacco (whose prices show no signs yet of easing) might well account for the rise in the total value, it would seem that raw material stocks are being increased quite substantially. Even more important, however, is the fact that the terms of trade are still moving in our favour. The index, with 1952 as the base, improved to 91 in May, against 93 in April and 102 in May of last year. In this connection the *Bulletin for Industry* offers a warning. The lessening of international tension has led to sharp falls in world prices of some raw materials and these have largely worked out the effects of the subsidy cuts. The future course of prices, it points out, will depend on internal costs rather than the cost of imported materials, and home-produced material prices are rising. Coal, for instance, is six percent dearer than at the end of 1952 and will rise a further two percent with the introduction of winter prices, and steel is also one percent dearer. "The latest figures (imports rising and exports being no more than maintained) leave no doubt that more exports are needed and that they will be difficult to get." In consumer and capital goods, alike, "evidence has grown in recent months of intensifying price competition from a number of other manufacturing nations."

It is true that a small step towards meeting this competition in a limited sphere is to be made by reducing the export prices of certain types of heavy steel, such as beams and joists, by £7 to £38 a ton with effect from 1st July. This reduction will affect about six percent of British steel exports, and as there is no shortage now of home market and as there is no shortage of one or two special supplies other than of plates and one or two special categories, it is hoped that they can be expanded with increased production. There are still doubts created by the difficulties of wage demands, while this recovery in production throughout industry must surely be presenting quite a few headaches to the Coal Board. The gravity of the situation has been made clear in the annual report of the Executive Committee of the National Union of Mineworkers, which records that in January last Sir Hubert Houldsworth warned the union leaders that "nationalisation could be destroyed if coal that the miners have agreed to continue Saturday

working this year and to share in a joint "efficiency campaign" in all coalfields, results so far are not particularly encouraging. In the first 24 weeks of this year the industry has raised from the mines less than 100,000 tons more coal, but with a falling off in opencast production the total output of coal up to 20th June is rather less than last year's figure. Stocks are already less than they were a year ago, and if the demand from industry increases they might well be at a critical level as winter approaches.

State Trading Monopolies

The risks attaching to State trading monopolies is exemplified in the report of the Raw Cotton Commission for the year ended 31st August, 1952. This showed a net loss of over £25 million. This compares with a loss of £131,011 in the previous year and a profit of £4½ million in the year before that. The report covers the Commission's first year of trading during a depression, and fortunately it had the satisfactory results through the inflation period to draw upon. Even so, total reserves and surpluses are now down from £36 million to £11½ million, involving the loss of all the Commission's accretions thereto as well as more than half of what it took over from its predecessor, the Cotton Control. Despite the many unfavourable circumstances with which it was faced, the Commission continued to give its customers—who then included all users of cotton in this country—satisfactory service. The report will be studied very keenly by the industry, for it contains much which will be of value in the future, and not least of all some words of advice to the industry with regard to the interim period before the cotton trade is returned to private hands and the relationships between the Commission and its customers.

Private trading in aluminium is to be restored on 1st July and applications have already been invited pending the publication of arrangements in that connection. The metal trade hopes that when the latter are drawn up by the Board of Trade it will enable them to compete for export business, since fabricators in this country usually obtain their supplies from a small circle of primary producers and their representatives rather than from the market. The interesting thing about this new "freedom" is that the Government has been able to get out of its long-dated obligations to the Canadian industry with goodwill on both sides. It accepts responsibility for purchasing up to 1955 any of the contract quantities not absorbed by the industry here and for the following five years to buy up to 20,000 tons a year. The producers undertake not to charge industry more than the Government would have charged and have reduced the maximum price by about £6 a ton, so that consumers may in fact be better off than under Government trading.

Sponsored Television

The full flush of the controversy over sponsored television has yet to come, for the Government has put off its proposed announcement on the subject until at least next week, and maybe for even longer. This has enabled Sir Ian Jacob, Director General of the B.B.C., to get in his plea on behalf of the Corporation's need for more funds to carry out its plans for the years of its new charter. Though he may not have been uninfluenced by the controversy in selecting the timing of his announcement he made no reference to it, of course, but the plan is of such a nature that it must influence all who are interested in one way or another. Briefly, the Corporation plans: extension of the present national television chain to 18 transmitters capable of reaching 97 percent of the population; building of a second network of about 18 transmitters, providing an alternative television programme; increasing this autumn the television programme hours from five to seven daily; the gradual introduction of colour when a perfect system allowing of both black-and-white and colour reception is developed; and the maintenance of a full and comprehensive sound service. The problem, of course, is money. For Sir Ian disclosed that the B.B.C. had recently been spending £2 million a year out of reserves on capital development, and the balance of some £1,700,000 would be exhausted by the end of next year. To carry out the plan would call for the spending of some £3 million a year. Seeing that the bulk of the new capital expenditure is to go to television, it is perhaps only fair that Sir Ian should visualise it being found by an increase of £1 for the television licence, making it £2, or £3 for the combined sound and television licence. It is interesting to find, from the figures Sir Ian Jacob gave, that the present licence fees would suffice if the whole amount were handed over to the Corporation.

Brevities

The P. & O. liners *Strathnaver* and *Strathaird* are to become one-class ships next year, carrying 1,200 tourist-class passengers against the present 570 first class and 470 tourist. This will coincide with the entry into the service to India, Ceylon and Australia of the new liners *Arcadia* and *Iberia*.

A number of British manufacturers are to supply capital goods and machinery to Pakistan under an arrangement whereby they will be paid for over a period of five years.

It is estimated that about 200,000 people from overseas were in Britain for the Coronation. Nearly 100,000 arrived in May, an increase of 37 percent over May of last year. Of the total between 30,000 and 40,000 were Americans.

Sir Edwin Plowden, Chief Government Planning Officer and Chairman of the Economic Planning Board, appointed by the Socialist Government in 1947 and who was persuaded to continue in office for a limited period when the Conservatives took office, is leaving the Government service shortly to resume his directorships in private industry.

Uttar Pradesh

RAILWAY RE-GROUPING AND THE WAGON SHORTAGE

U. P. STATIONS NEGLECTED WHILE EMPTY BOGEYS PLY

(FROM OUR OWN CORRESPONDENT).

Lucknow, 27th June.

AN acrimonious controversy has developed in recent weeks over the question of the supply of railway wagons to Uttar Pradesh, the chief complaints being raised by the sugar industry. It may be recalled that when Mr. Kidwai, during his recent visit to Nani Tal, blamed rising sugar prices on the industry, the manufacturers retorted that the inadequate supply of wagons to move sugar to scarcity areas was the real cause. "Sugar Specials" were then arranged by the Railway Board for a period of 10 days, but immediately afterwards it was reported that the Specials have been running with a number of empty wagons. For example, it was stated that the sugar mills in Moradabad had utilised only 40 wagons out of 61 to despatch sugar to Delhi and 21 out of 45 for despatches to Bombay. How far the factories concerned have been guilty of deliberately withholding despatches it is not possible to say on the evidence available, but the phenomenon of empty wagons plying in Uttar Pradesh simultaneously with a complaint of a wagon shortage is not new, and the commercial and trading community sees in the railway re-grouping a prime cause of this strange situation.

Priority for Coalfields

The re-grouping of the railways in Northern India has been in force for over a year now. It is no secret that right from the beginning many senior officials thought that it would be better if the East Indian Railway organisation were left intact. For Uttar Pradesh especially, Calcutta was always a natural port both for outward and inward traffic, and the development of the railways only emphasised this. Now the re-grouping, under which the broad gauge section west of Moghalsarai has been tacked on to Delhi has affected the requirements of trade and industry to a considerable degree, and empty wagons on railways in the U.P. are being moved up almost daily to Moghalsarai while traders at stations en route are short of them. This is being done, according to spokesmen in the U.P., to honour the Railway Board's commitment to the coal industry, which had protested at the time of re-grouping that it would create a serious shortage of wagons in the coalfields. If empty wagons are detained at intermediate stations for loading or unloading, their arrival at Moghalsarai would be delayed. It would appear that the coalfields have been getting priority at the expense of small traders and the industrialists of U.P.

Priority for coal, in view of its importance to the economic life of the country, is understandable and is not grudged, but small traders and industrialists are also of great importance to the economy. Their complaint is that they are not getting even half their requirements at the various railway stations, although a railway officer has been attached to the U.P. Government. The number of empty wagons passing daily through all the railways in the U.P. is estimated, according to one source, in the neighbourhood of a thousand. These complaints cannot of course be verified unless the Railway Officer on duty with the State Government compiles statistics of wagon loadings and of the demand which was not met in the Kanpur area and on the Allahabad, Lucknow and Moradabad sections during the months November to May, which is the busy season for Northern India. Evidently the reorganisation empty wagons had been running through U.P., and it may be asked whether re-grouping has made any difference. It is pointed out in reply that for three years before the division of the E.I. Railway in June 1952, there had been no restrictions on loadings in railway stations in U.P. except to junctions controlled by "foreign" railways.

Control from Calcutta Needed

These stations were previously the responsibility of the E.I. Railway which ensured that wagon requirements were met, but at present, while the Northern Railway is charged with keeping up the wagon supplies to the coalfields, it does not bother to meet the requirements of stations in U.P. en route. Though re-grouping is now an established fact, it is believed by many that the present state of affairs can only be ended by restoration of the control by Calcutta headquarters on railway stations in U.P. In other words, the restoration of the old East India Railway, which before re-grouping its admirers had compared to a self-contained body—the lines west of Moghalsarai serving as its legs and the lines east as its trunk. It is the contention of the opponents of re-grouping that the legs have been cut off from the trunk, thus seriously reducing its efficiency. Assurances had been given by the Railway Board that the division of the E.I.R. at Moghalsarai would not affect U.P. and it has been suggested that an impartial inquiry, if ordered, would reveal exactly how these assurances have been discharged. To ensure that witnesses give evidence without fear or favour it would be a good idea if the Railway Board authorised a committee to interview general managers and serving officers in camera. It has been recommended in support of this plea that a similar directive was given by the Board to officers working with the retrenchment committee of the legislature in 1931.

Engineering and Transport

PORT FACILITIES IN THE EAST
COLOMBO PLAN DEVELOPMENT

ONE of the published aspects of the Colombo Plan, but one which promises to aid the development of the countries-concerned perhaps more than any other, is the assistance being afforded thereunder for the construction or reconstruction of ports and shipyards in South-East Asia. Some idea of its importance may be gained from a brief survey of developments that are taking place in this sphere in the Far East. In India, a development programme for shipping is to raise gross registered tonnage to about 600,000 by 1955-56. The five year plan provides Rs. 15 crores to help shipping companies to buy ships; Rs. 12 crores for modernising and developing the five existing major ports of Calcutta, Bombay, Madras, Cochin and Visakhapatnam; and a new port at Kandla is being built at a cost of Rs. 12 crores to reduce pressure on Bombay.

At Karachi, in West Pakistan, a shipyard is to be built which will have a building capacity of 40,000 tons a year. It is hoped to start shipbuilding in 1954. At Chittagong, in East Pakistan, immediate and long-term plans for the expansion of the port have been formulated. The immediate plan has been executed, and the port has been expanded: 15 berths can now handle 15 ships at a time and can deal with 2,500,000 tons of cargo a year. In 1948 there was jetty accommodation for four ships only. At Chalna, in East Pakistan, a new port is being built and the anchorage has been developed to handle half a million tons of cargo a year. It can take four ships at moorings, and more can lie to their own anchors. The Chalna Anchorage was opened to international traffic in December, 1950, with one set of moorings; the second set was laid in March, 1951; two additional sets were added in October, 1951 and March, 1952, respectively. The ports of Rangoon, Akyah, Bassein, Moulmein, Mergui and Tavoy are being rehabilitated. Aid has been allotted by the United States Economic Co-operation Administration (succeeded by the Mutual Security Agency) to pay for transit sheds, steel pontoons and harbour buoys. A modern sea-going dredger for use in improving the ports is being built in Scotland; it will be delivered in March, 1954. A buoying ship and two cargo and passenger vessels for coastal services are being built by the same U.K. firm, but without E.C.A. aid.

Work on the development of the port of Colombo is under way. It is being carried out in four stages—(1) and (2) construction of berths for cargo ships and an oil dock, (3) construction of six additional berths for passenger ships and for bunkering, and (4) extension of the existing breakwaters to increase the area of the outer harbour. The lighter fleet is also being increased. An I.B.R.D. loan of \$3,000,000 was granted to Thailand in 1950 for railway development and one for \$4,400,000 for developing the port of Bangkok. To enable larger vessels to enter the port, a channel will be dredged through the sandbar at the mouth of the Chao Phya river. In Indonesia work has begun on extending facilities at Djakarta. Prefabricated warehouses have been bought with loans from the U.S. Export-Import Bank, and money from the same source is to be allotted to finance the purchase of marine engines for coastal cargo and passenger vessels, hulls for which have been ordered in Western Europe. Port development is also going on at Kuching and Sibul, Sarawak.

LLOYD'S REGISTER REPORT

The annual report of Lloyd's Register of Shipping for 1952 points out that although world tonnage is 30 percent greater than it was in 1939 by gross tonnage, in numbers of ships the increase was only about 6 percent, which emphasises the growth in unit size. The fall in tramp production and the greatly-increased size of tankers contributed largely to this result. About 60 percent of world tonnage completed last year was classified by the society, a total of 524 ships of 2,500,000 tons gross. Plans approved up to the end of the year amounted to 773 ships of 4,100,000 tons gross, a figure only

once exceeded, the peak year of 1918 being higher. In June last year no less than 37,600,000 tons of shipping was under the society's classification—41.5 percent of the total tonnage afloat. Commenting on developments in ship design, the report states that the tendencies towards specialised designs, higher speed and larger cubic capacity for dry cargo ships continue. Several cargo ships of about 8,000 tons deadweight with propelling machinery aft are coming into service, and one large passenger ship with the machinery situated towards the after end is under construction. This arrangement offers advantages in cargo stowage and handling; in passenger ships the planning of accommodation may be simplified, and the position of the funnel may reduce smoke nuisance on passenger decks.

Developments over recent years in the design of cargo ships with machinery amidships have tended to increase appreciably the hogging bending moments in the loaded condition. The change from the poop, bridge and forecastle ship to the shelter-decker with provision of increased cargo space at the ends of the ship, concurrently with increased speeds requiring finer underwater forms, results in greater weight and less buoyancy at the ends of the ship. In tankers, however, where the sagging bending moment is the more critical, increase in length of cargo space relative to length of ship has a beneficial effect. In the structural design of modern tankers longitudinal framing, either complete or at bottom and deck, is now universal. Bulkheads of the trough or corrugated form are common, but in some of the large tankers plain bulkheads are favoured, particularly for the longitudinal divisions. In dry cargo ships of welded construction longitudinal framing at bottom and deck is being incorporated in many designs.

Oil engine development in the past year has been largely concerned with increase of output by supercharging both four-stroke and two-stroke type engines. By this means the two-stroke oil engine will compete with the steam turbine for single-screw cargo liners and tankers of 10,000 to 15,000 s.h.p. Powers of this order are obtainable for single-screw ships with a direct-coupled slow-running oil engine, or from two medium-speed engines through reduction gearing. Among turbine-driven ships are a few with engines designed to operate at 950 deg. Fahr., but in general 850 deg. Fahr. is the rule.

Calcutta Markets

LESS DEMAND IN TEA EXPORT AUCTION

AT Sale No. 3, held on 29th June, offerings in the export auction consisted of approximately 21,260 chests, including a small quantity of old season's manufacture. Demand was less than in the last sale and common and low medium broken and fannings sold generally at prices half an anna below the last rates. The few bright liquoring Doors and Assams catalogued were in good demand and were fully firm and often dearer. Whole leaf grades were in good demand and were usually selling at prices around the last rates. Once again plain liquoring Darjeelings proved difficult to sell, but when teas from this district had flavour they sold well. There was rather less demand this week for Fannings grades.

Quotations	1953	1952
Clean B. P.	1 12	1 5 to 1 6
Clean Common B. P.	1 11	0 13 to 1 0 14 (Nom.)

The quantity of Export offerings in Sale no. 4 will be 18,800 chests.

There was a fair general demand in the Dust auction held on 29th June and 1st July, although some of the large buyers were virtually out of the market. The strongest features of the sale were black leafy exportable dusts. These were generally a full anna dearer. Bright liquoring Doors were in good demand and were half an anna dearer, but other Doors offerings were irregularly half an anna easier. The few Assams catalogued and commons were steady. Small powdery Darjeeling dusts with flavour were keenly competed for, but all other dusts from this district were virtually neglected.

Quotations	1953	1952
Medium Doors Dust	1 7 6	1 4 6
Medium Assam Grainy Dust	Not quotable	
Best Assam C.T.C. Dust	Not quotable	

The few Green teas offered internally met with no demand and all were withdrawn without bids.

FREIGHT MARKETS WEAK

TIME CHARTERING ACTIVE

THE freight markets continue weak and the immediate future prospects show no sign of improvement though with the United States Government having passed the Pakistan Grain Bill, Charterers are expected to be open shortly for tonnage to carry the 700,000 tons of wheat to be moved within the next six months. While the Calcutta coal section remained extremely quiet

with no fixture being reported, a fair demand for Indian ore continues though business has been slow to develop. A July loader was fixed at 68s for a cargo of ore from Calcutta to Trieste and ore from Vizagapatnam to U.S.N.H. was done at \$9. Sugar from Mauritius to Montreal paid 76s while in the North China section a cargo of rice in bags from Whampoa to Colombo was fixed at the lower level of 48s. 6d. There was little demand in the Australian section but a motor vessel was fixed at 110s for a cargo of maize and/or sorghum in bags from Queensland to U.K. while 113s. 6d. was paid for two vessels for sugar in bags to the same destination and a further cargo could be arranged for bulk wheat ex-silo from Australia to the Spanish Mediterranean.

Little change is reported in the American Markets where rates continue to weaken slightly but American coal exporters were encouraged when they learnt that several Japanese steel works were trying to cancel their orders for coal from Russia and Communist China due to poor quality. Several fixtures of coal from Hampton Roads to Continental ports were reported rates varying between 30s 6d and 29s for Rotterdam discharge and between 32s and 31s for one port discharge West Germany. A fixture was also reported for coal from Hampton Roads to Tandjong Priok/Semarang and Sourabaya at \$10.60 and \$8.60 was paid for a cargo to Japan. A brighter feature of the American market was the fixture of six vessels from Cuba with sugar in bags, four being done to U.K. at 65s while an earlier fixture was concluded at 67s and one fixture to Antwerp or Rotterdam discharge at 68s 6d. From South America 75s was paid for heavy grain from San Lorenzo completing Buenos Aires to U.K. and a handy sized motor vessel accepted 70s for Antwerp or Rotterdam discharge.

In the Time Charter section where conditions were more active, 14s 6d was paid for an oilburner delivery Gibraltar, redelivery U.K.-Continent three to five months trading and 16s was paid for a slightly smaller oilburner delivery Hamburg, redelivery Persian Gulf trip out. A handy sized motor ship accepted \$16,750 per month for two-four months trading delivery redelivery U.S.N.H.

LINSEED

The undertone of the market remained steady last week and the turnover was very limited. Because of restrictions on railway movements at the producing centres, arrivals were exceedingly scarce and ready stocks were practically unavailable locally. There was a fair demand from crushers but sellers were reserved and very little trading was reported. The oil section was very dull and very little trading was reported. Latest quotations were as follows: June Rs. 21-12 per maund, July/August Rs. 22-4 per maund.

HIDES AND SKINS

The market in skins ruled steady. Stocks were less than in the previous week.

Bazar Sales

(Between 23rd and 29th June, 1953)
Cowhides—Wet salted (Ord.) 36,900 pcs. on the basis of Rs. 9 to Rs. 10; Wet salted (Slaughtered) 13,400 pcs. on the basis of Rs. 13-8 to Rs. 25.

Bazar Stocks

(29th June, 1953)
Cowhides—Wet salted 33,500 pcs.
Goatskins—Wet salted (Daisco, Killed) 46,500 pcs.; Assam-Dinajpur-Murshidabad-Patna-Pakur-Purneah-Kissanganj 104,000 pcs.

SUGAR MARKET STEADY

During the week ended 30th June, the sugar market was steady and prices for ready ex-Kantapur delivery were as follows: Rs. 30 for ordinary grain, Rs. 32-12 for big grain; and Rs. 30 for coming ordinary grain. Ex-mill delivery rates ranged from Rs. 27-14 to Rs. 29 a maund. There was some uncertainty over imports as licences will be issued after 10th July. Stocks amounted to about 25,000 bags and arrivals were 7,000 bags a day. Sales averaged 3,000 bags locally and 2,000 bags for outstation markets.

SHELLAC MARKET FIRM

During the week ended 29th June, the market was firm. The volume of business was not great. The range of quotations was as follows:—

Standard Pure Buttonlac.	Rs. 105 to 107 buyers.
Pure Buttonlac	Rs. 100 to 102 buyers.
Lemon No. 1 Shellac	Rs. 103 to 108 done & buyers according to quality.
Lemon No. 2 Shellac	Rs. 98 to 102 do
F. D. Std. 1 Shellac	Rs. 93 to 98 do & buyers.
Pure TN Shellac	Rs. 90 to 94, basis done & buyers.
4% LT.N. Shellac	Rs. 80 to 82 done & buyers.
No. 1 Kusmi Seedlac 3%	Rs. 96 to do
No. 2 Kusmi Seedlac 3%	Rs. 86 do
Fine Bysaky Seedlac (Manbhum)	Rs. 84 to 85 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 77 to 78 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 72 to 73 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 68 to 70 buyers.
Kireelac	Rs. 32 buyers.

Shipments during June until the 26th were 25,604 packages.

Jute

PAKISTAN MAKING PROGRESS WITH JUTE MANUFACTURES

EXPANSION PLANS PUT BEFORE U.S. TEXTILE BAG MAKERS' MEETING

TWO items of news have appeared in the cables in the past week which are of significance to the Indian jute industry and to the Government of India though their significance may not have been appreciated. The first is that the new power production plant of the Adamjee mills in Narayanganj will shortly come into operation. The second is a report from the U.S.A. that burlap importers are of the opinion that Pakistani hessian is superior to that produced in India.

If has not been possible in Calcutta to find out exactly when the new power plant of the Adamjee mill will come into operation but it is stated that, as soon as that happens, the mills will be able to step up the number of looms in production to 1,500. It is also stated that these looms will work double shift which will make their capacity equal to more than 3,000 looms in India, for Indian mills do not have even one full shift—the working week being 42½ hours—while the modern machinery of the Pakistani mills is capable of greater output per hour. Other mills in Pakistan are in course of erection and though still a long way from completion, they are making steady progress in that direction.

The second item should not occasion any surprise because the Pakistani mills have an initial advantage in that they have at their command the finest qualities of jute. With that advantage coupled with their modern equipment, they should be able to turn out products superior to those which most Calcutta mills can make. In fact it is stated that the ordinary hessian produced by the Pakistani mills is equal to the "bright-weave" hessian of Calcutta mills, for which the latter quote premium prices. Another disturbing feature is that it is reported that, even though Indian mills' products have an exchange advantage over those of Pakistan, the Pakistani mills can underquote the Indian mills.

It will be seen, therefore, that Indian mills are at a disadvantage in regard to raw material, machinery and restriction on working hours. They are also burdened with double taxation of their products. They have to pay the Pakistani export duty on all the Pakistani jute they use, and that has the effect of forcing them to pay more for Indian jute. Their products then have to bear the Indian export duties on jute manufactures. The Pakistani import cannot be avoided until India becomes self-sufficient in jute production: the latter disadvantage it is entirely within the power of the Government of India to remove. The writing is on the wall. The longer the Government of India delays, the nearer and deadlier is the threat.

Pakistan's Production Goals

In this connection a report from The Hindu's correspondent in New York, dated 25th June, is of interest:

"The summer session of the American Textile Bag Manufacturers' Association, which has just concluded, heard a strong Pakistan delegation explain that country's plans for stepping up burlap production. The delegation included Mr. Ghulam Farooq, Chairman, Pakistan Industrial Development Corporation, and Mr. Adamjee, Chairman, Pakistan Jute Mills' Association.

"The Pakistanis told American consumers that they have 750 looms already in operation and that by the middle of next year they had planned to have 3,000 working with an annual productive capacity of 75,000 tons of burlap, all of which they proposed to sell in the U.S. market. Pakistan's ultimate production goal, it seems, is equal to the total American consumption. U.S. importers would have been more interested in knowing what price Pakistan would quote because they feel that unless the Pakistan Government subsidises exports this price may not be able to compete with Calcutta quotations. The Pakistan spokesmen, however, were discreetly silent on the price question."

THE JUTE MARKETS

Raw jute and manufactured jute goods have, on the whole, continued steady throughout the week. Under the influence of the Katni market there have been sharp intermediate fluctuations as raw jute and manufactures are very sensitive to the movements in that market. This is attributed to the nervousness of bull holders of jute and ed to the nervousness of hessian up to the end of 1953 statistical position of heavy goods position, though there are about the curtailment of output of heavy goods will in time have its effect. As regards raw jute, dealers' losses in the 1952-53 season were so heavy through holding stocks that they are afraid of holding now even though the statistical position justifies no bearish outlook. The result is that, on the least sign of a decline in mill buying, jute dealers rush to sell in the Katni market which, though not a real hedge, is the only protection

be placed. 40" 10 oz. hessian was at one time as high as Rs. 47-4 and B. Twills Rs. 103-8 for ready, but prices were slightly lower at the close. On Monday the market was easier. During the week there has been no great volume of business but covering against the Argentine order has been reported. There were also reports of small business in sacking for Indo-China and Indonesia. Mills have sold on each rise in the market.

On Wednesday morning the market opened quiet and quotations were as under:—

	Ready	July	Aug.-Sept.	Oct.-Dec.
40" 8 oz.	36-12	37-0	37-2	36-6
40" 10 oz.	46-12	46-14	47-0	46-0
B Twills	102-8	103-2	103-12	103-12
Heavy Cees (Plain)	102-12	103-0	103-12	103-12
Cornsacks	105-0	104-8	104-4	104-0

Raw Jute: There has not been any large business during the week but only day-to-day business on a small scale. Most of the business has been in New Crop and mills are inclined to neglect Old Crop. At the prices mills have been offering for New Crop sellers are not keen to sell any large quantity, so business has been restricted.

On Wednesday of last week business was done in New Crop at Rs. 32 basis Bots for Pakistani jute and at Rs. 29 and Rs. 23 basis Bots for Indian Northern and Assam respectively. Old Crop was done at Rs. 29 basis Bots for Northern. Business was reported on Thursday in Pakistani New Crop Tops and Middles at Rs. 38 and Rs. 35 respectively, while Pakistani New Crop jute was reported done on Friday at Rs. 36 basis Bots for Aug-Sept. shipment. On Saturday Pakistani district cuttings were sold to mills at Rs. 72 per bale for ready bills of lading and Northern New Crop was reported done at Rs. 28 and Rs. 28-3 basis Bots. On Monday, Pakistani New Crop jute was said to have been sold at Rs. 27-8 basis Bots. Old Crop was done on Wednesday at Rs. 25 basis Bots for Indian Northern, Rs. 24 for Assam Bots and Rs. 19 for Assam Cross

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Looms for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Bots and Rs. 24-8 for Murshidabad tossa Bots all local godown. Prices have been irregular and at times, when the gunny market has been quiet, buyers have been able to buy small quantities at below the general quotations.

On Wednesday morning the market opened quiet and quotations (in rupees per maund) were as under:

Pakistani Jute:	Landed at Mill	
	Old Crop Basis Bots. Shipment	New Crop Basis Bots. Shipment
Jat	27-8 July	31-0 Aug-Sept.
District	26-8 "	30-0 "
Northern	26-0 "	29-0 "
Cuttings Dist. N.C.	72-0 per bale	
Cuttings Jat N.C.	73-0 per bale	

(The difference in price between Middles and Bottoms in Pakistani Jute is Rs. 4 per maund.)

Indian Jute:	Landed at Mill	
	Old Crop Basis Bots. Shipment	New Crop Basis Bots. Shipment
Lower Assam	27-8 July	29-8 Aug-Sept.
Northern & Putna	27-8 "	29-3 "
Upper Assam	26-8 "	28-8 "
Murshidabad		
Tossa	25-8 "	
Bihar	22-8 "	
Daisee	27-8 "	
Mesta (Western)	21-8 "	
Bimili	22-8 F.A.Q.	
Mill Firsts	165-0 per bale	
Mill Lightnings	150-0 "	
Dundee Daisee S.G.	165-0 "	
Dundee Daisee L.G.	150-0 "	

(The difference in price between Middles and Bottoms in Indian jute is Rs. 3).

Mofussil: In Assam and Northern Bengal there is hardly any business passing over to lack of imports. In jungle districts and Murshidabad most of the imports are being despatched to Cossipur. Only low grades are available. Rain has been almost general but this is not unfavourable except in the daisee districts, where there has been rather too much and a spell of sunshine would be beneficial to recent sowings.

In Pakistan there is no business reported in the export market. Quotations are on the basis of Rs. (P) 113 for New Crop and Rs. (P) 113 for Old Crop Export Firsts. Not much business is reported in Kulcha bales but New Crop Jat was reported done at Rs. 21 basis Bots f.o.b. Narayanganj. Quotations are Rs. (P) 21 for New Crop Jat Bots and Rs. (P) 18 for Old Crop. Imports in Narayanganj are said to average 3,000 maunds a day for Old Crop and 2,000 mds. a day for New Crop. The weather has been favourable for the crop. Harvesting has slackened because the rivers have not risen as quickly as was expected.

ONE-QUARTER U.S. BURLAP IMPORTS FROM CONTINENT

A recent newsletter issued by jute interests in Boston, U.S.A., says that the higher Calcutta level of prices may well result in more Continental burlap being offered in that market. These goods have become an increasingly important factor, and the Bureau of Census (U.S. Department of Commerce) reports that Continental burlap imports for the first quarter of this year were about 30 percent of those from Calcutta.

PAKISTANI AND INDIAN JUTE PRODUCTION IN 1951-52

The Annual Jute Review for 1951-52, which has just been issued by the Department of Trade Promotion and Commercial Intelligence of the Pakistan Government, gives the following figures for the acreage and yield of jute in Pakistan and India.

Acreage and Yield of Jute in Pakistan		Estimated Total Yield	
District	Area in Acres	1950-51	1951-52
Tippera	125,230	164,602	465,415
Jessore	48,620	83,730	301,760
Bakerganj	26,025	43,020	98,250
Dacca	130,625	181,310	494,675
Kushtia	25,705	39,625	653,695
Mymensingh	307,235	431,715	82,255
Noakhali	20,045	35,455	1,154,070
Chittagong	105	225	60,515
Chittagong			390
Hill Tracts	2,500	2,670	8,625
Bogra	51,125	71,395	155,070
Rangpur	174,425	232,040	612,230
Rajshahi	62,000	105,805	199,895
Sylhet	25,335	37,455	93,740
Fariapur	113,815	145,375	438,180
Dinajpur	63,990	87,810	184,550
Khulna	15,975	27,920	42,250
Pabna	57,310	86,600	195,485
Total	1,250,065	1,778,770	4,452,455

Acreage and Yield of Jute in India.		Yield in Bales.	
States	Area in acres.	1950-51	1951-52

INDIAN CROP PROGRESSES

In their fifteenth crop report of the current season covering the week ended 27th June, Messrs Sinclair Murray & Co. Ltd., say that the weather in Assam has been favourable with good rainfall and sunshine. In West Bengal it has been wet and cloudy and although this has not been unfavourable in all districts, a spell of bright sunshine is urgently required to assist the growth of young plants. In Orissa the weather has been cloudy at Dampur but has been favourable at Jajpur Road. Harvesting is going on slowly in Assam because of lack of steeping water.

DANPUR: The weather has been cloudy and a spell of bright sunshine is urgently required. Owing to lack of sunshine, germination of recent sowings has been very poor and some fields have been reploughed for paddy cultivation. Sowings to date amount to -12/- compared to completed sowings on the corresponding date last year. The condition of earlier sowings is satisfactory and plants range in height up to 3. Drier weather is also required for the standing crop to allow weeding operations. The river has risen by about 4' but is still lower than last year at this time.

JAJPUR ROAD: The weather has been favourable with alternate rain and sunshine. A further spell of sunshine is very essential to allow cultivators to carry on with sowings and weeding operations. Sowings to date amount to -12/- as compared to completed sowings at this time last year. Seed germination is reported to be satisfactory so far. The condition of plants has improved to some extent but is still not satisfactory and they range in height from seedlings to about 1'.

RANAGHAT: The weather has been wet and a spell of bright sunshine is now urgently required to assist the growth of the standing crop. Sowings have been completed at -8/- as against completed sowings at this time last year. The condition of the young plants of earlier sowing is quite satisfactory but some of the fields which have been sown more recently are waterlogged and some damage is likely unless there is a spell of bright sunshine. The river level is slightly above normal.

COSSIMBAZAR: The weather has been wet and this has been unfavourable for young plants. A spell of bright and sunny weather is urgently required to assist the growth and to enable cultivators to carry on with weeding operations. Sowings have been completed at -10/- compared with -16/- at this time last year. The condition of earlier sown plants is not unsatisfactory but the condition of the plants of more recent sowing is not good and the fields are being waterlogged. Weeding operations have been suspended because of recent heavy rain.

NOWGONG: Sowings completed -11/6. The weather has been favourable with moderate rain. Further rainfall would be useful for filling tanks to provide steeping water. The condition of plants is satisfactory and they range in height from 2' 3" on the highlands to 5' on the lowlands. Harvesting is going on very slowly in some lowlands. The river has fallen during the week and is now below normal.

GAUHATI: Sowings completed -13/6. The weather during the first part of the week has been hot and dry but during the latter part good rainfall was experienced. Further rainfall will help fill ponds, tanks and low areas and thereby furnish steeping water. The condition of the standing crop is excellent and lowland plants are ready for cutting. Harvesting is going on on a very small scale, the hold up being due to lack of steeping water. The river fell during the beginning of the week but has since risen.

DIHUBRI: Sowings completed -12/-. The weather has been favourable with alternate rain and sunshine. The condition of the standing crop is satisfactory and plants range in height from 3' on the highlands to 6' 6" on the lowlands. Harvesting has commenced on lowlands and is going on slowly at the moment but is expected to be in full swing if the river continues to rise. The river has risen slowly during the week but is still 1' lower than last year at this time.

KHARUPETIA: Sowings completed -12/6. Weather has been hot and dry and this has been favourable to the standing crop. The condition of the standing crop is satisfactory and plants range in height up to 7'. Harvesting is going on slowly on lowland areas. The river is rising slowly and the level is normal.

DAISEE DISTRICTS: Sowings completed -10/-. The weather has been mainly wet and although this has not proved unfavourable a spell of sunshine is necessary to assist the growth of plants and to allow cultivators to complete weeding. The condition of young plants is satisfactory and they are making good progress. Plants range in height up to 4'. Weeding operations have been suspended owing to continuous rain.

PAKISTAN CROP NEEDS MORE SUN

In their seventeenth crop report of the current season covering the week ended 27th June, Messrs Sinclair Murray (Pakistan) Ltd., say that the weather has been generally favourable although some areas report excessive rainfall. Bright sunshine would now be beneficial and would promote the growth of the standing crop. Harvesting has been going on in some districts but is generally being delayed due to lower river levels. River levels on the western side, and higher on the eastern side. Small imports of weavings are arriving at baling centres but are reported to be of low quality.

NARAYANGANJ: Sowings completed -8/-. The weather has been slightly unfavourable due to too much rain. Bright sunshine is now required to promote the growth of the standing crop. Condition of about -1/- of the lowland crop has been very good, but the quality is reported to be poor. The river has been steady during the week and is the same level as the corresponding date last year.

DACCA: Sowings completed -8/-. The weather has been mainly wet with continuous rain. The condition of plants is healthy and they range in height up to 5' 6". The river has fallen during the week and it is reported that harvesting has been suspended temporarily. The river is now 5' lower than last year at this time.

CHANDPUR: Sowings completed -7/-. The weather has been favourable with alternate rain and sunshine and the crop has made satisfactory progress.

The condition of plants is good and they range in height up to 5'. Because of insufficient steeping water the harvesting on chur and lowlands has been suspended. The river level is about the same as the corresponding period last year.

HAIJIGANJ: Sowings completed -7/-. The weather has been favourable for harvesting and the growth of the standing crop. Further good sunshine would be beneficial. Harvesting is proceeding on lowland areas. The condition of the standing crop is healthy and plants are progressing satisfactorily. The river has fallen during the week and is now about 4' lower than the corresponding period last year.

AKHAURA: Sowings completed -8/-. The weather has been mainly wet. The condition of the crop in general is satisfactory and plants range in height up to 5' 8". Harvesting has commenced on a very small scale on the chur lands and extreme lowlands. The river has risen slightly and is now 3' 9" higher than last year at this time.

ASHUGANJ: Sowings completed -8/-. The weather has been cloudy and wet. The condition of the mid and highland crop is satisfactory but a spell of bright sunshine will assist the growth. Plants range in height up to 6' 6". Harvesting is going on in the lowlands and will commence on the midlands as soon as the river level is higher. The river has fallen during the week but is still 2' 9" higher than last year at this time.

NIKILDAMPARA: Sowings completed -16/3/-. The weather has been wet and cloudy. Alternate rain and sunshine would be beneficial. The condition of the standing crop is not altogether satisfactory and the growth is somewhat stunted. Plants range in height from 4' to 6'. It is estimated that about -11/1 of the crop has been cut but harvesting has been suspended because of a fall in the river and to allow the lowland crop to mature. The river has fallen during the week but is still 3' 2" higher than at this time last year.

SARISHABARI: Sowings completed -7/-. The weather has been very favourable. Plants are making good progress and weeding has been completed in all areas. The river has fallen slightly during the week but weekend reports are that the river is now rising. The river level is the same as last year at this time, which is slightly below normal.

SERAJGANJ: Sowings completed -7/-. The weather has been favourable with good rain and sunshine. The condition of the plants is healthy and they range in height from 2' on the highland to 7' on the lowland. The river has fallen during the week and is now 2' 5" lower than last year at this time. A rise in the river is now required otherwise the lowland crop will be overgrown.

NAKALIA: Sowings completed -8/-. The weather has been favourable with alternate rain and sunshine. The condition of the crop is satisfactory and plants range in height from 2' 6" to 5' 9". Harvesting is taking place on chur lands, but on lowlands has been suspended due to a fall in the river. It is reported from this district also that unless there is a rise in the river the crop may be allowed to over-mature. The river is now about 3' lower than last year at this time.

BIHANGORA: Sowings completed -8/-. The weather has been favourable. The condition of plants is satisfactory and range in height up to 6' 6". The river has fallen and is now about 2' 9" lower than the corresponding date last year.

THE FOREIGN JUTE MARKETS

DEMAND FOR CLOTH AND BAGS

(FROM OUR OWN CORRESPONDENT.)

Dundee, By Air Mail.

DEMAND for jute cloth and bags has shown a good improvement during the past month or two and most producing centres are fairly comfortably placed with orders. With Argentina again in the Calcutta market for considerable quantities, other consuming countries are definitely interested. There is an underlying fear that values may go up against buyers, and indeed, those quoted now for Calcutta hessians are at their highest point this year. The raw jute situation, showing prospects of a none too plentiful supply of material over the next 12 months, seems to indicate that prices will certainly not be much lower for some time, if they do weaken at all. Today's quotations for hessians are 84s. 3d. for 10 oz. 40 in. and 62s. 3d. for 7 1/2 oz. 17s. 0d. for shipment July/December, all f.o.b. Calcutta.

Some definite idea of the jute crop in Pakistan has now been gained from the statement of a responsible official of the Jute Board, who indicates four million bales, but he says the carry-over from this season is only about two million bales. If the consumption of raw jute goes on improving, as it is doing in Europe and in the U.K., the supply may be a problem before the end of another season. There is still keen competition for business in the export markets, Germany, Belgium and France all being particularly anxious to secure the U.S.A. custom. Prices, however, though perhaps slightly lower than Calcutta, appear to be economical. Dundee spinners and manufacturers are comfortably placed and it is not easy to purchase for reasonably early delivery in the case of cloth and bags, while it is practically impossible to secure orders for yarns to the end of this year. Prices are naturally very firm.

Imports of jute cloth into the U.K. are still increasing. For the first five months of this year, jute manufactures, piecegoods, were imported from India to the extent of 41,070,000 square yards (£1,525,438), compared with 72,007,000 square yards (£6,144,926) for the same period of last year. Imports from other countries were only 14,210,000 square yards (£46,329) this year and 18,977,000 square yards (£1,717,806) last year. Exports of these from U.K. were 9,804,000 square yards (£266,639) and 14,950,000 sq. yds. (£1,431,396) for the respective periods.

NEED OF TARIFF COMMISSION ENQUIRY INTO COFFEE PRODUCTION COSTS

COFFEE BOARD BLAMED FOR HIGH PRICES CAUSED BY EXCESSIVE EXPORTS

(By Valale I. Chacko)

THERE has been a notable change in the Government's coffee policy since the latter part of last year. Till then it was influenced by several factors, the most dominant being the Government's insistence on exports without full appreciation of the consequences this would have in the internal market. Protests were made: they came from a section of growers who realised the disturbing possibility that prices at home might rise too high. Although the Government insisted on increasing exports, it was not the target of countrywide criticism of rising prices, which inevitably followed. The public thought the Coffee Board was to blame for the excessive rise that took place between March and November 1952. It is difficult to judge the coffee situation without appreciating the background against which it developed and took its present form.

Coffee is a relatively minor crop in India. It is grown on about 225,000 acres of land which is mostly unsuitable for any other crop, and the annual production is about 21,000 tons. Certain varieties of Indian coffee are of excellent quality and were favoured in European markets when India could afford to export them. Since 1947, local consumption has been almost equal to production—about 18,000 tons in a normal year. So there have been acute shortages in subnormal years and excesses in bumper crop years. As long as there was statutory price control, margins at the distribution level were controlled and the distributors themselves were restricted in number. This gave the Board some control over the entire market which disappeared when the Government withdrew statutory price control in January 1943. Any further control the Board could exercise depended on the amount of coffee it released in the market. The quantity was limited when the crop was low. It was also limited when the Government ordered exports. If the supply was marginal any trader who was shrewd and purposeful enough could upset the Board's tenuous control over the market. Many such upsets have occurred during the last few years and they always resulted from the Government's decision to export coffee.

Reversal of Policy

The 1950-51 crop was 18,281 tons and the export of 1,200 tons left the country with about 17,000 tons, which is less than the minimum required for internal consumption. In 1951-52 the crop was about 21,000 tons out of which the Government wanted 3,000 tons to be exported. The Board protested, so the export allocation was eventually reduced to 2,200 tons. As is usual in such situations there were groups who tried to profit by the shortage and even helped create it by encouraging the Government to export more coffee. In 1952 the full effect of a wrong policy carried on unchecked for over four years became apparent.

The Government suddenly reversed its policy and the first indication that Delhi did not favour a high internal price came in November 1952. By a high internal pressure had spent itself and then the declining. This reversal of official prices were belated, was welcomed by the Board, but it happened to be only a tactical move that was part of a new legislative strategy. Not only coffee, but all the organised sector of the plantation industry fell victim in the move toward tighter administrative and political control. That, in real terms and in real intention, it is a personal control is an incidental factor.

The Coffee Board was specifically mentioned in a number of critical references in Parliament and outside by the Minister for Commerce and Industry. The charge was made that the Board was determined to exploit the consumer. The impression was deliberately sought to be created that the Coffee Act did not adequately enable the Government to check this tendency, so a new law was necessary. It is possible to trace the Government's recent coffee policy from the point of reversal regarding exports and a new concern for the Indian consumer. The Government's expression of concern last November together with its demand that the Board bring down prices came at the tail-end of the 1951-52 season, before the new crop was in the Board's hands—that is, it came when the Board could have done nothing about the market. It was not appreciated that prices could not be arrested by executive order. Nothing could be done until the Board possessed and could offer, enough stocks to force prices down. This it could do only in January but the Government intervened from the middle of December and control over the marketing of coffee was taken over completely from the Board. The latter thereafter became only an instrument to carry out Government orders.

Marketing by Allocation

Three administrative measures were taken by the Government to enforce its will. One was to suspend the release of coffee at the wholesale

auctions. The second was to increase retail sales at 15 centres instead of five. The third was to offer more coffee through coffee houses and co-operative stores. The Government was suspicious of auctions as a method of release, and favoured allocations to approved dealers and co-operatives. Marketing by allocation has certain theoretical merits and in fact was resorted to by the Board for some years till controls were removed, but there were also certain practical difficulties. It stratified the trade and introduced a rigidity which reduced efficiency in distribution. In a situation of scarcity it did not prevent profiteering by the trade. Even many co-operatives were not above this when the supply was inadequate. If adequate supplies were available and were released, the normal trade channels could effectively control the market. The Board clearly favoured auctions as a means of marketing coffee through normal channels. The Government discarded auctions and tried to channel supplies through co-operatives, coffee houses and local auctions to retailers. Co-operatives and coffee houses however could serve only a small area around each unit and in many cases retailers and grocers from nearby towns were buying from coffee houses and selling at a high profit to their customers. Consumers in the outlying areas continued to pay high prices.

In increasing the number of local auctions, small quantities had to be moved to distant points with the normal Board staff and under the normal procedures; the cost of doing so far exceeded anything wholesalers might have charged as a reasonable margin of profit. An indirect effect of the Government's method of marketing was that retailers who could not afford to buy anything more than their normal turnover were offered more than they could handle or pay for, while large dealers who had the means and the machinery to handle large stocks were denied supplies and threatened with stoppage of business. The result was that a large part of the coffee offered was not taken up; consumers were faced with the same shortages in the outlying districts and prices remained high. Much publicised criticisms of the Board only served to cause panic and uncertainty among dealers who feared a further drop in prices under Government pressure. The Board suggested that the Government should indicate the price at which it wanted coffee to be sold, and then leave the detailed marketing to the Board itself, but the suggestion was ignored.

Victimisation of Growers

In forcing prices down, the only party on whom an effective grip could be taken were the growers, whose entire crop was handed over to the Board. While there was no surety that consumers would benefit from reductions imposed on the grower, the Government insisted that release prices should be brought down by 61 percent. Producers opposed this on the ground that an arbitrary reduction of this nature was unjust and that the cost of production must be ascertained before prices were fixed. The arbitrary reduction of prices was opposed by the Board mainly on the ground that the cost of production had risen. Suspecting that the Government would force prices down even more to show its concern for consumers, the trade had to be cautious at the auctions. This accounts for the heavy withdrawals during the recent sales: nobody wants to be caught with a large stock of high-priced coffee if the market is going to be forced down by Government action.

An interesting development has taken place in regard to the basic question of how to fix prices. The Government has deputed a cost accountant to examine the cost of production so as to determine the Board's release price at the auction. Growers have justifiably objected to this procedure by pointing out that since the Government has taken a public stand on coffee prices the cost accountant's enquiry has been prejudiced. The attempt to fix the price of an industrial product by a departmental cost enquiry is open to several serious objections. That the industry happens to be Government-controlled makes the objections even stronger. A departmental cost enquiry is not comprehensive enough to justify a long-term fixation of prices. If it were, references to the Tariff Commission would become superfluous.

Prices and Production

Certain long-term objectives would be served by a fair price. Since 1944 there has been a steady increase in the acreage under coffee. The long depression of the 'thirties reduced the acreage to about 168,000 but the steady improvement in coffee prices and prospects later reversed the trend. The present acreage of 225,000 represents an increase in the proportion of high-yielding, disease-resisting varieties of plants. Given an attractive and steady price, extensive areas of hill land can be brought under better-yielding varieties of coffee and many growers would be induced to replace their over-aged and exhausted plants. Any production in

excess of home demand would meet a keen export market, where the price has been roughly 50 percent higher than the Indian price during the last four years. The larger the export the greater the reduction internal prices can stand, because a lower home price can be compensated by higher earnings from exports. Coffee is a first-class foreign exchange earner provided India produces enough to export. Apart from the country's need of foreign exchange, internal consumption can be rapidly expanded. To meet both these needs, production should be increased. These are national objectives which require a far broader outlook than can be expected in a hurried departmental cost examination. In fact, an unattractive price which causes a fall in production will affect the consumer as much as the producer. Coffee prices have to be determined on the basis of certain long-term considerations and any postponement of an enquiry by the Tariff Commission would unnecessarily delay coffee development plans without bringing any advantage either to the public or to producers.

BOARD'S RECOMMENDATIONS ON COFFEE MARKETING

MR. IVOR BULL RESIGNS

At a meeting in Bangalore on 26th June held under the chairmanship of Mr. Ivor Bull, the Indian Coffee Board and its committees took the following decisions:

The revised coffee crop estimate for 1952-53 season was placed at 12,300 tons Arabica and 10,400 tons Robusta, making a total of 22,700 tons. The pool had already received 22,478 tons up to 31st May, 1953. The estimate for 1953-54 was placed at 22,750 tons (consisting of 16,250 tons Arabica and 6,500 tons Robusta) as against the overall blossom estimate of 25,620 tons. The estimate was reduced because the coffee districts of Mysore, Coorg, Wynad and Shevaroy did not receive backing rains after the blossom showers.

As regards future marketing policy, the Board, felt that the 15,800 tons which would be available in the pool as on 1st July would be more than sufficient for internal consumption during the next six months, which it was estimated would be 12,300 tons, or an average of 2,050 tons per month.

It was decided to ask the Central Government to allow the export of 2,000 tons of Robusta after allowing for a carry-over of 1,500 tons to next year.

It was resolved to continue allotments to the Board's Propaganda Department and to co-operative societies at Rs.2-2 per point as desired by the Government. The monthly allotments to co-operative societies and the Propaganda Department would remain at 450 and 250 tons respectively.

It was resolved to reduce the price of coffee powder sold by coffee houses from Rs. 2-15 to Rs.2-13 per pound of Plantation powder, from Rs.2-11 to Rs.2-9 for Cherry powder and from Rs.2-6 to Rs.2-4 for Robusta powder.

Mr. Ivor Bull, Chairman, having resigned from the Board from 1st July, the Board elected the Hon'ble Minister Mr. H. Siddaveerappa as Chairman for the six months for which the Board's life has been extended by the Government. Mr. S. N. Ramanna was re-elected Vice-Chairman for the next six months. Members recorded their grateful appreciation of the services which Mr. Bull had rendered to the Board first as its architect and then as member and Chairman. Mr. Bull replied thanking members and the staff for the assistance they had given him throughout his tenure of office.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers' Association.

Closing prices on 19-6-53		Average prices for this period	
(Rupees per lb.)		(Rupees per lb.)	
Sheet:			
No. 1.	1.36		1.36
" 2.	1.33		1.33
" 3.	1.30		1.30
" 4.	1.16		1.16
" 5.	1.11		1.11
		Sheet Cuttings 1.	.85
		do. 2.	.80
Crape:			
R.M.A. 1X	1.05/08		1.06
R.M.A. 1	.98/1.02		.99
		Crape No. 2.	.94
		do. 3.	.89
Scrap Crape:

Flat Bark	" .62/64	"	.64
		Sc. Crape 3X	.66

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

LONDON TEA SALES

North Indian and other miscellaneous teas were offered for auction on 29th June met with quieter demand compared with the previous Wednesday. Prices moved irregularly throughout for all descriptions, especially light liquorings and slightly stalky Assam Broken Pekoes which showed an easier tendency. Clean Common Pekoes, free from

stalk, were quotably unchanged at Rs. 5½d. per lb. Better quality teas were about steady on balance. The quality generally showed falling off. 35,627 packages were offered.

At last week's London tea auctions the 70,187 packages on offer realised an average price of Rs. 8.44d. a pound, against Rs. 8.77d. last year and Rs. 8.59d. a year ago. Clean common broken pekoe is quoted at Rs. 5½d., against Rs. 5½d. at the previous sale. Results obtained by some of the companies are given below:—

	No. of packages	Av. per lb.
Amalgamated	1,001	3/7½
Assam Co.	2,223	3/8½
Assam Frontier	1,776	3/10½
Budla Beta	796	3/9
Buxa Doars	972	3/7½
Cons. Tea Lands	2,002	3/8
Darjeeling Co.	144	4/5½
Doors	1,221	3/6½
Doom Dooma	282	4/1
Jetinga	159	3/4½
Jhanzie	738	3/7½
Jokai	1,275	3/8½
Jorehat	767	3/8½
Majuli	808	3/7½
Malayalam	1,026	3/8½
Singlo	558	3/7½
Tingri	576	3/7½
Upper Assam	420	3/6½

ASIAN SCIENTISTS STUDY PLANT PROTECTION

Four Indian, three Pakistani, three Ceylonese and two Indonesian scientists have been studying modern methods of plant protection at Fernhurst Research Station in Surrey, England, for the last three months. Recently they gave a demonstration before many representatives of the British farming press and overseas journalists of mechanical methods of spraying against crop pests and diseases. The scientists concerned will remain at Fernhurst for six months. During their stay in Britain they will visit Messrs. Plant Protection Limited's factory, where chemical formulations are prepared for marketing, at Yalding in Kent. The students will also spend some time doing practical work on British farms.

The Indian students are Mr. P. L. Chaturvedi, Assistant Entomologist to the U.P. Government, Mr. A. Jivajee Hathi, Assistant Plant Protection Officer, Department of Agriculture, Kutch; Mr. G. C. Sen Gupta, Entomologist to the Government of Orissa, Cuttack; and Mr. C. J. Selvaraj, Entomologist, Department of Agriculture, Travancore-Cochin. They went to England under the Colombo Plan, and their training there has been undertaken in response to a request from the Commonwealth Relations Office of the U.K. Government, by Plant Protection Limited, and other firms, who offered to give practical instruction in modern crop protection methods.

During the time that the students have been at Fernhurst, the new Machinery Demonstration Centre has been built, equipped and opened. It is designed to provide added facilities for farmers, growers, spraying contractors, seed merchants and others who visit the Research Station to study chemical methods of plant protection.

COCHIN TEA SALES

At Sale No. 13 held on 23rd June, 1953, a little over 2 million pounds were offered for sale. Quality was a little worse than in the previous sale in that appearance of most teas was rough and stalky; liquors on the other hand remained reasonably bright. There were one or two invoices of high grown teas with nice quality included in the sale. Demand was general and for most teas there was keen competition. Common and low medium types sold at about last rates with occasional substantial advances recorded but the better mediums were in less demand and showed an irregular decline of 3 to 6 pence per lb. Where high grown teas showed improvement there was considerably more interest displayed and some attractive prices were paid for the best BOPs. Whole leaf grades were wanted and showed some increase, while Fannings were the strongest feature of the sale.

	Rs. as ps.	Rs. as ps.	Last Sale
Low Grown Travancore Bro. Or. Pekoe	1 10 0	1 9 6	
Medium " " " "	1 10 6	1 10 6	
Anamallai " " " "	1 12 6	1 13 0	
Best liquoring Nilgiri Bro. Or. Pekoe	2 5 0	2 2 6	
Black well made Or. Pekoe	2 1 0	2 1 0	

Business has been done in the Export Quota at 22 pence this week.

Export Sale No. 14 will be held on Tuesday, 7th July 1953.

AMBALAL (EXPORT) LTD.

In our issue of 25th June it was stated that G. Ambalal (Export) Ltd., whose annual review we quoted, were a firm of Calcutta tea brokers. In fact they are merchants and exporters of tea.

Turkey's grain production is estimated at 14 million tons for this year, according to recent surveys. The forecast shows an increase of 1.8 million tons above the record 1952 yield of 12.2 million tons. This year's gain is attributed to greater use of tractors, many of which were purchased with U.S. aid.

The Government of India has decided to license freely the import of raw cotton of staple length not less than 1 1/2" to introduce any quota system in respect of these imports. The Joint Chief Controller of Imports, Bombay, will put out a Public Notice in this regard very shortly.

COMPANY AND PUBLIC NOTICES

GOVERNMENT OF INDIA MINISTRY OF PRODUCTION. TENDER FOR HANDLING AND SHIPPING OF LOCO COAL AT COAL DOCKS.

1. SEALED TENDERS are invited in the prescribed tender form for the handling and shipping of Loco Coal at Coal Docks, Kidderpore, Calcutta, for a period of one year from 1-9-53 to 31-8-54. The offers should remain open for acceptance for a period of 2 months from the date on which the tenders are opened. The different State Railways have at present a coastal shipment programme for approximately 75,200 tons per month which is made up of shipments to:—

	(a) M. & S. M. Portion	(b) S. I. Portion
75,200 tons	37,600 tons	37,600 tons

2. Tenders should be submitted in the prescribed form, copies of which may be obtained from the office of the Chief Mining Engineer, Railway Board, 1, Council House Street, Calcutta, on payment of Rs. 5 per copy to the Cashier, Controller of Coal Accounts, Calcutta.

3. Tenders, in sealed covers addressed to the Chief Mining Engineer, Railway Board and superscribed "Tender for handling and shipping of Loco Coal at Coal Docks, Calcutta" should be deposited in the sealed Tender Box kept in the room of the Chief Mining Engineer at 1, Council House Street, Calcutta, from 10-30 a.m. to 12-30 p.m. on 22nd July, 1953.

4. Each tenderer is requested to deposit a sum of Rs. 10,000/- in cash with the Controller of Coal Accounts, Calcutta, as earnest money for the tender. The receipt for this deposit should be attached to the tender without which no tender will be considered. The tenderers shall also submit an Income Tax Clearance Certificate along with the tender.

5. The successful tenderer will, if so required by the Government, enter into formal agreement and deposit a sum of Rs. 50,000/- as security for the due and satisfactory performance of the contract. In the event of successful tenderer failing to perform the contract or on breach of observance of the terms and conditions of the contract by the successful tenderer the whole of the security deposit or such part of it as Government may decide, shall be forfeited to the Government, without prejudice to any other rights or action which the Government may have or can take. The earnest money of Rs. 10,000/- deposited by him may be set off against the security money and the balance of Rs. 40,000/- will have to be deposited by the successful tenderer in cash or G.P. Notes with the Controller of Coal Accounts within a week from the date of acceptance of the tender. If the security deposit is not deposited within the aforesaid period of one week the Government may, at its discretion, forfeit even the whole of the earnest money without prejudice to any other rights or action which the Government may or can take. The security deposit or so much thereof as has not been forfeited by the Government will be returned on due and satisfactory performance of the contract and within 6 months after termination thereof. No claim shall be made against Government in respect of interest on security deposit.

6. Tenders containing erasure and/or alterations will not be considered.

7. The undersigned reserves to himself the right to reject any or all of the tenders without assigning any reason and does not bind himself to accept the lowest or any tender.

8. Tenders received within the time specified will be opened at 2-30 p.m. on 22nd July, 1953 by the undersigned in the presence of the tenderers or their accredited representatives who may be present at the time of opening the tenders.

L. S. CORBETT,
Chief Mining Engineer, Railway Board.

LARSEN & TOUBRO LIMITED

NOTICE is hereby given that the Eighth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, J. K. Building, Douglass Road, Ballard Estate, Bombay, on Friday, the 17th July, 1953, at 5-00 p.m. to transact the following business:—

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. (For reference see notes below.) Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in 000's	Rate per cent.	Paid-up per Share	Market Quotations		Year of Issue	NAMES	Amount Issued in 000's	Rate per cent.	Paid-up per Share	Market Quotations

COAL COMPANIES

O Po, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE EFFECT OF MONETARY POLICY ON INDIAN BUSINESS ACTIVITY

"REFLATIONIST" CRITICISM OF THE RESERVE BANK

THE Reserve Bank's report on *The Trend and Progress of Banking in India in 1952*, which was published on Monday, might have been expected to make some contribution to the debate about whether excessive credit curbs have been responsible for the decline in business activity and confidence. It does not, though it provides statistical material for the disputants. Its silence on this point is connected with the only weakness of the report: the inadequate attempt to relate developments in the banking system to general movements in the economy, in which of course the banks occupy a central position. As a study of the progress of banking as an isolated industry, the report is excellent in almost every way. But banking is not just one industry among others. As the intermediary between debtors and ultimate creditors, and as a creator of credit, the banking system is the pivotal point of an economy that is based on fiduciary transactions; and any report on its progress should provide the opportunity for a survey of the whole pattern of commerce and industry. Such a survey would no doubt lead the Reserve Bank into controversial fields but there would be no harm in that; established institutions are not meant to remain aloof from controversy, but to contribute the most authoritative opinions to it.

At the present moment, on the one hand the Reserve Bank is being accused of working as a mere adjunct of the Treasury, implementing Government policies without exercising its considerable influence toward modifying them. At the same time and in other quarters, the Bank is being accused of "flouting" the Treasury, ruthlessly curbing credit and forcing deflation on the economy while the Government is endeavouring to promote a healthy degree of inflation. Advocates of the latter opinion have even urged the Government of India to "compel" the Reserve Bank to create more purchasing power and thus mend the stagnation that now affects wide sectors of Indian commerce. The Reserve Bank's report on the progress of banking during 1952 (the year in which the policies now in dispute were put into effect) makes no direct reference to this important difference of opinion, and we are left to assume that in so far as the Bank has any articulate opinions at all, they coincide with the Treasury's. But we expect the central banking institution to have independent views of its own about such matters as purchasing power, inflation and the adequacy of the credit supply. It is uniquely placed to form opinions on these questions and, having formed them, should not hesitate to express them. Two of the institutions on which the Reserve Bank is modelled, the American Federal Reserve and the Australian Commonwealth Bank, have in recent times succeeded in re-asserting their independence of political forces emanating from their respective Treasuries. We could contemplate the future of Indian banking with more confidence if their Indian counterpart quietly did the same. We might then hear less from the ardent inflationists who think that the Finance Ministry should compel the Reserve Bank to create purchasing power for political ends.

trial production or a persistent increase in unemployment. These two symptoms have affected the Indian economy in recent months, but the comparison with other countries which used similar monetary policies is *prima facie* evidence that dearer money was not to blame. The internal evidence is naturally much more important, and it points in the same direction: other factors than monetary policy, in particular government taxation, labour and commercial policies, were the cause of the deterioration in the Indian economic scene. To urge the central bank to compensate for defective government economic policy by pumping more credit into the economy is, in these circumstances, not a remedy but an invitation to disaster.

The new monetary policy was no doubt one of the causes of the lower volume of bank credit during 1952. The busy season of 1951-52 saw only a moderate expansion of bank credit of Rs. 99.96 crores, compared with an expansion of Rs. 180.29 crores in 1950-51. More interesting was the sharp reflux of funds at the end of the busy season: in the slack season of 1951 only half the new credit that had been created in the preceding busy season was cancelled, but in the slack season of 1952 more credit was cancelled than had been created in the preceding busy season. The total money supply declined by Rs. 92 crores during 1952, though the balance of payments deficit and the shift of deposits from demand to time account had a good deal to do with this contraction. Now it is the argument of the "reflationists" that this fall in bank credit and in the supply of money was (a) engineered principally by the Reserve Bank, and (b) a bad thing—or at least it became a bad thing by being carried too far. Neither of these assertions, it seems to us, can be proven.

The decline in prices that took place in 1952, especially in the spring, was a much more important cause of the decline in bank credit. The wholesale price index fell over the year from 432 to 374 (having fallen even lower during the year); this fall was a reaction from speculative over-trading and the result of improved supplies of many basic raw materials, not only in India but abroad. The Reserve Bank's report comments: "The lower volume of bank credit may be related to the fall in prices and the somewhat reduced level of foreign trade, though industrial production showed an increase." Industrial production has since—more than a year after the return to dearer money—ceased showing an increase, but since this has been caused by developments quite unrelated to a higher interest rate, there is no reason to suppose without further argument that more generous credit would boost industrial output and increase employment. It is just as likely that a relaxation of credit would cause further price rises, hoarding and more government overspending on the wrong things—all without any benefit to productive industry.

The successful working of the trade bill discount scheme shows that genuine commerce was not denied funds as a result of dearer money.

The large advances made to scheduled banks under this system last year (at below the prevailing bank rate) contrast with the limited advances taken against usance bills this year. The cost and terms of borrowing in this form remained the same, and if traders sought less in 1953 than in 1952, that must have been because business was suffering from a malaise that had less to do with the cost of credit than with other aspects of the general economic climate. We have already suggested that that malaise is caused by unsatisfactory government policies which the Reserve Bank cannot repair by tinkering with the rate of interest; of course international influences have made a significant contribution also.

Desiring to show that its credit policies have not been the cause of the setback in Indian industry, the Bank refers in its report to special finance schemes for cotton, tea and sugar. Unfortunately it volunteers no particulars. We believe that the Government guarantee of a small fraction of advances made to certain tea gardens in fact had very little effect; the Reserve Bank does not show how much money was advanced under this system but it was probably very little. We do not suggest that it should have been more—difficulties about credit were no more the fundamental cause of the tea industry's crisis last year than they are of other industries' uneasiness today. The Bank also intervened to reduce the margins for advances against stocks of sugar during the crushing season last year, and it assisted the financing of heavy purchases of Indian and imported cotton in Western India. No details are given in these connections, so we cannot judge how effective the central bank's action was in mitigating credit stringencies affecting particular industries. But this is enough to show that, once the Bank had raised the bank rate and revised its open market policy, its efforts were directed not toward a further tightening of credit, but to relaxing it as and when the need arose. This scarcely accords with the claim that industry has been forced to the verge of a slump by too rigorous curbs on credit.

The consequences of the new monetary policy for the banks themselves were, after the first upset, beneficial. (They were discussed on this page on 2nd April). The banks appear to have had a less strenuous and slightly less profitable year. Gross earnings of 18 of the larger scheduled banks were Rs. 2.1 crores higher at Rs. 28.3 crores, mainly because their income from discounts and interest was higher. Total expenses, however, increased by Rs. 2.4 crores—Rs. 1.3 crores because of the higher interest that had to be paid on deposits and Rs. 1.1 crores because of higher establishment and other charges. Altogether, therefore, net profits of these 18 leading banks in 1952 were Rs. 5.2 crores against Rs. 5.4 crores in 1951. The total paid-up capital and reserves of all Indian scheduled banks rose in 1952 by Rs. 1.8 crores, while the non-scheduled banks, although reduced in number, succeeded in increasing their capital and reserves by an even larger amount. This satisfactory progress continues the healthy trend of the last three years. The other changes in the banking structure during 1952 were known before this report was published: on the assets side, a reduction in advances and an increase in investments; and on the liabilities side, a large transfer of funds from demand to time deposits.

Though we began by saying that this annual report on Indian banking could give more information and guidance than it does—especially on the much disputed topic of the connection of monetary policy with national development—the present report at least furnishes evidence that suggests that the attempt to find the origin of Indian industry's current difficulties in credit policies is mistaken. The advocates of dearer money, in the inflationary years after the war, promised so much good from sounder credit control—and they have been largely vindicated since late 1951—that some people might begin to imagine that almost anything can be achieved by movements in the bank rate. Of course it cannot. Dearer money can prevent private (but not public) overspending and speculation, but easier money will not stimulate an economy that has been slowed down by crippling taxation and by the devotion of public moneys to over-ambitious development works which do not produce as much employment, goods, or purchasing power as could private enterprise.

NO "ODD-YEAR CRISIS" IN 1953

LESS FAVOURABLE PHASE AHEAD FOR BRITISH INDUSTRY

THE idea that Britain, and with her the sterling area, must suffer a financial crisis in the odd years of the calendar was never rational. It happened that there were crises in 1947, 1949, 1951; but they were separate crises, due to distinct causes; there was no pendulum swinging from crisis to recovery and back again. There was, however, something more than a psychological basis for the idea that another "odd-year crisis" might occur in 1953, for the fact that crises, whatever their causes, happened repeatedly showed that recovery had been precarious. If the recovery from the payments crisis of 1951 has not been solidly based, another crisis may result, in more difficult trading conditions, from more or less the same causes that produced the last one. As 1953 entered its second half, the economic fraternity in Britain surveyed the first half in retrospect and the second half in prospect and decided that there would be no crisis in 1953. But they were less confident about 1954.

At a glance, there is very little wrong with the country's present position. Industrial production has fully recovered from the recession and is at the highest level ever reached, and, as a corollary, unemployment is approximately at the lowest level ever reached. Including invisible earnings, there is probably still a credit balance on international payments. More careful inspection shows serious weaknesses. The trends are not all in the right direction, and the weaknesses, unless corrected, can cause another payments crisis next year. Already it is obvious that the overall payments surplus of £300-350 million, which the Government's experts calculated only a few months ago to be necessary to fulfil the nation's tasks without the risk of insolvency, cannot possibly be realised this year or in the foreseeable future.

The upward trend of production is evidently continuing, and it might be supposed that a country that had for years suffered from under-production could gradually strengthen itself by increasing production. But the increase is uneven—impressive in the steel industry, deficient in the coal industry—and the goods produced are not all flowing in the right directions. There is already talk of another serious fuel crisis next winter. A further increase in the output of fuel and power by the factories, in consequence of a further rise in their rate of production, would accelerate such a crisis. An increase in production means an increase in imports of materials, and thus an increase in the cost of imports, which is already the outstanding feature of the overseas trade returns. An increase in production could therefore aggravate problems, not solve them, unless the goods produced earn their due share of foreign currency. At present they are not doing so. Although the shortage of steel is at last overcome, exports of steel-based engineering goods, taken as a group, are not expanding but contracting; and this group is the mainstay of Britain's export business. The value of exports in general has shown no clear trend either upward or downward in recent months, whereas the trend of imports has been unmistakably upward. The divergence is the more remarkable as the average prices at which exports have been sold have been steady while the average prices at which imports have been bought have been considerably reduced.

The export markets outside the sterling area are becoming more difficult. That is one reason why the volume of exports is not increasing; and it is one reason why the value of exports must be expected to diminish, at least in non-sterling markets, because it will be necessary to lower prices. But there is another reason for the weakness of exports, and for the strength of imports. Home demand is active. The growth of production owes much to demand at home, little to demand overseas. Many industrialists speak apprehensively of increasing competition abroad; yet many firms are showing less exertion than is required of them in the export markets, because they can sell their goods quite easily at home.

Until just recently the Chancellor of the Exchequer and other high officials have intimated that the results intended when the monetary policy was being planned and carried out were materialising. A more cautious tone has lately been discernible in their utterances. The Treasury's Bulletin for Industry expresses the new feeling with the statements that more exports are needed and will be difficult to get and that, with the seasonal peak of commodity sales by the rest of the sterling area past and import relaxations beginning to take effect, "a less favourable phase may now be before us."

It is widely argued that policy, especially as exemplified in last April's budget, is no longer strict enough. Restrictions have been deliberately eased to allow industry to regain the former levels of production, although it was known that mon-

etary restrictions, as previously imposed, would cause a moderate recession of business as they eased the pressure of demands. Investment in new building and equipment—beneficial in the long run but inflationary in the short run—was encouraged by changes in taxation this year. Other tax concessions enabled the consumer to buy more freely. It seems that the Government has followed a deliberate policy to give the revival of business priority over further strengthening of the reserves. But that policy is becoming dangerous, and it may have to be reversed. The Government will evidently prefer to restrain home demands rather than reverse the policy (cautiously applied) of freeing imports.

CURRENT COIN

U.S. Business Holding the Heights.—In its monthly letter for July on government finance and economic conditions, the National City Bank of New York says that June was another period of good trade and industrial reports, with business in general holding the high plateau of the past six months or so. Despite widespread feeling that this record-breaking activity represents the top of a boom, and is borrowing something from the future, there are few signs that any great falling off is imminent. In July vacation shutdowns will reduce industrial operations and affect the indices. Apart from this temporary influence, curtailment in consumers' durable goods including automobiles is expected as time passes, and is already effective to a modest extent in a few lines. But order books in most industries are well filled. If new business is a little slower, the slackening seems neither substantial nor significant. In most merchandise markets supply and demand are well balanced. Buyers are not lengthening commitments or building up inventories alarmingly; on the contrary, their policies with respect to staple goods and materials are on the conservative side. Retail trade reports continue to be very good, as would be expected from the record-breaking employment and national income totals. In the headlines, international developments, pointing—if at times dubiously—toward a Korean truce and some easing of the tensions of the cold war, have had a prominent place; and they have tended to keep market sentiment uncertain and cautious, in the belief that government demand for goods and services may slacken. On the other hand, the best estimates of defence expenditures indicate that the effects of retrenchment cannot be pronounced for some time, and that defence requirements will hold near present levels for another nine to twelve months. Under the circumstances the question whether private demands will fill the gap when defence demands slacken still does not seem of major urgency, however important it may become in 1954. On the positive side, sentiment has been heartened by developments in the money markets. Federal Reserve purchases of government securities and reduction of member bank reserve requirements now indicate that the authorities never intended to push restrictive policy to the extremes then feared. A better understanding of credit policy, with correspondingly less apprehension of a squeeze on trade and production, is likely to prevail hereafter. However, sentiment should now swing so far as to assume that a tendency toward excessive credit expansion would not be met by appropriate restrictive measures.

Use of Insurance Funds.—The method of utilising the vast sums which make up the life funds, both ordinary and industrial, of the insurance companies is attracting an even wider interest than usual, for the new policy statement of the Labour party in Britain contained the proposal: "We shall give special consideration to the resources of insurance companies and the extent to which they serve the nation's economic objectives. They dispose of about £3,000 million and exert great influence on the distribution of investment." Anticipating this, the Life Offices' Association, the Industrial Life Offices, and the Associated Scottish Life Offices have been jointly responsible for the simultaneous publication of an interim report on the subject which will be closely studied as a timely warning against Government control of these funds. The report discloses that the total life funds of offices in Britain amount to over £3,000 million, representing savings by millions of policyholders, most of them people of modest means. These funds are steadily increasing at about £160 million a year. Of this income, ordinary assurance accounts for nearly £120 million and industrial assurance for £40 million. The investment of these vast sums is managed on competitive lines by over 80 separate institutions. Each board of directors applies its own judgment in the best interests of its policyholders so that there is no common policy of investment. Nor is any attempt made to seek control of industrial or commercial companies. "This is clear if for no other reason than that the offices have not the type of organisation to control Government control of such companies." What in the first place, one national investment board

would take the place of 80 odd existing competitors. Secondly, there would be a real danger that the life assurance funds would not be used in the best interests of policyholders, but in "uneconomic schemes sponsored for political reasons." Thirdly, bonuses for policyholders might be adversely affected. And fourthly, industrial companies wanting to borrow capital would have only one board to approach instead of over 80 and a refusal from the one board would be prohibitive. That industrial needs have not been ignored in the past is shown by the fact that over £360 million, which amounts to about 11 per cent of total assets, is invested in industrial ordinary shares, compared with about £50 million in the late 1920's. The insurance companies also have what is described as "an even larger aggregate holding of preference and loan capital in industry." Well over a third of their assets are invested in Government securities and over £200 million in house-purchase loans were outstanding at the end of last year. This position could, perhaps, be improved, but as the insurance companies point out, "the provision of risk capital for industry is not a practice which can be extended without limit." How far each office can go in this direction should be decided, not in some office in Whitehall, where uneconomic schemes might be sponsored for political reasons, but by each individual company in the interests of the thousands of small people who have taken out insurance policies. Precisely similar arguments would apply to any attempt in India by the government to gain—or rather increase—its control over these funds.

Less Oils and Fats.—Mr. J. C. A. Faure, chief buyer of oils and fats for Unilever, told the Congress of the International Association of Seed Crushers at Scheveningen, Holland, last week that world production of oils and fats this year would be about 23.6 million tons, or 890,000 tons less than last year. At this level, it would not be much, if at all, below consumption. However, there was no room for complacency in view of the increase in the world's population: "The present rate of world production will be quite inadequate to meet demand in two or three years' time.... There must be no slackening off in production for the world's future needs." Olive oil accounted for most of the decline in this year's production estimate; 867,000 tons less of it would be produced, but considering the carry-over stocks requirements during 1953 should be met. "Although the decline in olive oil production dominates the world picture, it does not mean that the output of all other crops will be maintained. I expect a smaller output of groundnuts, sunflower seed, copra, whole oil, sperm oil and lard. But this will be offset by increased production of palm oil, palm kernel oil, linseed oil, butter and one or two other items." Mr. Faure gave figures to show that 7,663,000 tons of edible oils would be produced this year as against 6,647,000 tons in 1952. Output of palm oils was estimated at 3,034,000 tons as against 3,037,000 tons; industrial type oils, such as linseed, tung, etc., at 3,186,000 tons (3,033,000 tons); animal fats including butter, lard and tallow at 9,000,000 tons (9,370,000 tons); and marine oils at 683,000 tons (739,000 tons). World exports of oils and fats this year were estimated at 5,210,000 tons, whereas import requirements were expected to amount to 5,020,000 tons, made up of 3,520,000 tons for Europe and 1.5 million tons for non-European countries. "If exports this year do in fact reach this figure of 5,210,000 tons, there should be more than enough oils and fats available in Europe to meet current needs for consumption," he declared. European domestic production of oils and fats was estimated at 2,875,000 tons, compared with 3,712,000 tons in 1952, the decline being due to the smaller olive oil crop. European consumption in 1953 is provisionally put at 6,350,000 tons and as stocks of oils and fats, quite apart from olive oil, are known to be large, it is clear that some liquidation will take place this year.

More Stock Exchanges.—Mr. Chunilal B. Mehta, president, said at the annual meeting of the Indian Stock Exchange in Bombay on Saturday that "the policy of unitary control has no bearing on the question of the soundness of an exchange. It was incorrect to argue that more stock exchanges in one area would lead to increased speculation. 'It makes no difference whatsoever whether one exchange functions or more' if trading by-laws remained the same; even if there were more exchanges, in dull times the volume of trading would decline as it had done now, said Mr. Mehta. The fact that all companies which had been given permission to raise new capital must give full publicity to each capital issue and also provide an opportunity to the common man to subscribe; this was specially necessary in view of the shift in wealth from the richer to the middle and poorer classes. In the last two years most of the capital had been obtained either by the capitalisation of reserves and the issue of bonus shares, or through the raising of capital by companies which do not generally invite subscriptions from the Indian

public. "If capital formation has to be increasingly shouldered by the common man, which will have to be the policy of the Government," the common man would have to take interest in the stock exchanges. This was possible only if their operation were made free and wide. Mr. Mehta suggested that all existing stock exchanges be recognised and trading regulated by uniform by-laws and statutes.

Pakistan and the Cotton Piecegoods Trade.—There can be little doubt that Pakistan's virtual withdrawal from her usual markets for textiles on account of balance of payments difficulties in the past twelve months or so has contributed to the recession which such producers as the United Kingdom, India and Japan have shown, for Pakistan is capable of absorbing large quantities both of yarn and cloth. Lancashire's anxiety is understandable, for in the five months ended May, her exports of cotton yarn to Pakistan were only 59,300 lbs., compared with 2,216,100 lbs. in the corresponding period of 1952, and with 2,359,000 lbs. in that of 1951, and those of cotton piecegoods were only 2,210,000 square yards, compared with 27,555,000 square yards and 24,650,000 square yards. The senior United Kingdom Trade Commissioner in Pakistan, Mr. F. B. Arnold, is now in Britain, and at the Manchester Chamber of Commerce a few days ago he discussed the position with merchants and others interested in the Pakistan market. The prospects for trade in textiles, he said, depended largely on the outcome of the food crisis. Since Pakistan is to obtain a large amount of cereals and other foodstuffs from the United States, the issue of import licences for textiles will presumably be resumed. Mr. Arnold suggested that licences might be issued for the second half of this year. At the moment, Mr. Arnold said, no licences were being issued except to Japan, which had agreed to take 650,000 bales of Pakistan raw cotton. In return for an undertaking by Japan to buy in the three months from April to June 150,000 bales out of the total, Pakistan had agreed to issue licences for cotton piecegoods from Japan to the value of £3,500,000 from July to September. This arrangement emphasises Mr. Arnold's warning that Lancashire's abisles to sell cotton and other goods to Pakistan depended to some extent on what could be bought from Pakistan.

Import Controls.—In his address from the chair at last week's annual general meeting of the Calcutta Import Trade Association, Mr. A. R. MacGillivray said that "the Import Advisory Council has steadily become more useful since it was inaugurated and is now of crucial importance in the determination of the broad lines of licensing policy." While in New Delhi for its last meeting he had made a number of suggestions to ease the difficulties of established importers. "I proposed the reintroduction of a more effective system of licensing to sole agents, which would enable established importers to expand their business and to take up new lines in the way that they would normally do in the absence of artificial restrictions of a system of control; I suggested that established importers should be given ad hoc licences, which would not count towards their quota entitlements, to enable them to import on behalf of actual users, and that the items which are licensable to actual users should be more carefully and appropriately selected, the quotas of established importers being increased in the case of those items which are not suitable for this type of licensing; and I pointed out that it was only fair that if importers met urgent Government orders from their stocks of goods which are in short supply and of which the import is restricted, they should be reimbursed by the issue of special licences to enable them to recoup their stocks." The Government, he declared, had now adopted "a much more realistic attitude" on the danger of allowing import control to become a form of protection to indigenous manufacturers. Mr. Krishnamachari had made it clear that the proper object of import licensing was the planned utilisation of limited amounts of foreign exchange; he would not use the control system to create an artificial scarcity so that inefficient local manufacturers could market their products easily. Mr. MacGillivray said that "we can expect a realistic and reasonable flow of imports or, in the worst circumstances, at least of token imports to provide the necessary element of competition which is often so sadly lacking." A petition which is often so sadly lacking, he said, was the good deal of alarm had been caused by the Government's decision that the head and branch offices of each individual company should have the same basic year for the establishment of their quota entitlements. The Government, Mr. MacGillivray said, seemed determined about this measure but might reconsider its application in cases of extreme hardship.

Broadcasting to Farmers.—"Is agriculture effectively served in the matter of radio information?" This question will be the main topic at a Farm Radio Conference for European countries, arranged by the Food and Agricultural Organisa-

tion and the British Broadcasting Corporation, to be held from 20th to 22nd July at Broadcasting House, London. It is hoped that the Conference, the first of its kind, will be an initial step towards a closer co-operation between the men in charge of farm radio services in Europe, and will give greater possibilities for a continuing exchange of ideas. F.A.O. will present a background paper, based on reports from the participating countries about their own farm radio services, from which it will be possible to make a survey showing the farm radio and farm television situation in various countries, the time allotted for radio information and radio teaching, comparing policies in programme planning, and showing what more can be done in public relations—especially in the way of informing townspeople about agricultural problems. Organisation and techniques used by farm radio services will be discussed, and one of the three days will be devoted to discussing the use and limitation of different information methods. Some interesting tours will be arranged by the B.B.C. Whilst the farm television service is developing well in the U.S.A., a few countries in Europe are in the first stage of discovering this new tool for agricultural information. It is expected that when this point is discussed at the Conference, new aspects for using the medium will be presented by a representative from the United States. The delegates, who will be official information officers, or those mainly responsible for farm radio activities, have been invited from all European member countries. It is to be hoped that A.I.R. will take a close interest in the proceedings and conclusions of this important meeting.

Estate Duty and Share Transfers.—In a note to the Government of India, the Stock Exchange, Bombay, suggests removal of clause 80(2) of the Estate Duty Bill under which companies must not register the transfer of any shares standing in the name of a deceased shareholder unless a certificate is produced from the Controller stating that the estate duty in respect of such shares has been or will be paid or that none is payable. The whole of clause 80 was added by the Select Committee of the Bill last March in the hope that it "will ensure speedy realisation of estate duty." The Stock Exchange believes that not only will it fail to do this, but sub-clause (2) "will destroy the free negotiability and marketability of a share and drive business on stock exchanges to a standstill." The effect will be that all purchasers will be required by companies either to establish that the transferor who is the registered holder of the shares is alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. In cases where the transferor dies before the share transfer is registered, the buyer has no means of ensuring that the shares are alive on the date the documents are presented to the company for transfer; or, should the transferor be dead, to produce the prescribed certificate from the Controller. GILT-EDGED RECOVER TO LEAD STOCK MARKET INDUSTRIALS RULE FIRM

London, 8th July.

WITH the counter attractions of sporting events out of the way, more interest was shown in the stock market last week and this led to steady improvements in values with firm conditions ruling at the end of the period. But the turnover, though better than for some time past, was still on the small side. Gilt-edged resumed their place as market leaders by gaining ground throughout the greater part of the period on buying by institutions. Funds turned very quiet during the later stages, however, and values tended to ease slightly. Good company news from many branches of industry, together with some brighter forecasts, brought investors into the industrial market where very firm conditions ruled latterly. Textiles were particularly buoyant, helped by the further relaxation in Australian import restrictions, while heavy engineering also gave a good performance. Oils turned firm following an announcement by some companies of increases in prices of petroleum products and though profit-taking subsequently nipped advances they showed signs of moving higher again. Shipping finished the week on a firm note after showing little change for the greater part of the period.

Among Far Eastern issues some quiet investment support was given to both Japanese and Chinese bonds. Rubbers were very quiet but tins lost ground with the decline in the metal price.

Tea shares encountered support, however, as investors took the view that the outlook for the industry was brighter. Gold shares ruled firm, for the greater part of the period though without any expansion in the volume of business. But latterly the market became rather uncertain and prices tended to ease. Diamonds turned weak following the news of a sharp decline in gem sales for the past quarter. Foreign bonds have generally been firm, though at one time German potash loans broke sharply because the debt settlement offer submitted to London trustees and paying agents by producers was considered inadequate. But subsequent cheap buying and short covering brought prices back to within two points of the opening levels. German Reich issues moved in sympathy but were aided on the recovery by the news that the Bundestag had accepted the debt agreement with France.

For most of the past week short loan conditions were very comfortable in the money market but near the end of the period supply of funds dried up and official assistance was requested. This was in direct contrast with the early part when money was so plentiful that official buyers mopped up surplus funds. During the week the turnover in Bills was on a large scale although it decreased towards the close. Applications for £250 million Treasury Bills totalled £334,115,000 of which the former amount was allotted at the average rate of 48s 8.48d percent, which is the lowest since May last year. This week £260 millions will be offered. The Bank of England Return showed the note circulation £5 million higher at £1,545 million while bankers deposits were £5 million higher at £282 million.

Canadian Development Company
The formation is announced of a new finance and development company in Toronto in which

60 percent of the capital is subscribed by London merchant and commercial banking houses, 20 percent by American investment banking firms and 20 percent by a prominent Canadian business man. The Company is to be known as Triarch Corporation Limited and will have an authorised capital of \$10,000,000. The chief purpose of the new Company will be to provide from British and other sources, finance as well as technical experience, for the development of natural resources and the expansion of industry and trade in Canada. The necessary Canadian dollars to permit participation by the London group have been made available by the United Kingdom Treasury—apparently continuing its policy of facilitating direct United Kingdom investment in Canadian productive enterprises which will benefit the British balance of payments.

U. K. Antimony Consumption

United Kingdom consumption of antimony metal rose in May to 379 tons from 326 in April, according to the British Bureau of non-ferrous metal statistics. Since the low December 1952 output at 202 tons, the trend has been steadily upward. The higher May consumption resulted from the increased use of antimony for oxides, especially white pigments. The reduction in price of antimony oxides over the past months is believed to have encouraged higher consumption and restrained the tendency to seek substitutes.

Heavy Chemical Deliveries

The call for contract deliveries of heavy chemicals in the past week has been on a fair scale despite some slackening in demand arising from holidays. Generally, there is now no shortage of materials needed by chemical manufacturers and production is sufficient to allow good deliveries of most products needed by both home and foreign customers. Competition is keen both among British manufacturers in the home market and between Britain and other countries, especially Germany. Other sections of the chemical industry report steady trade and activity. Dollar exports continue satisfactory but in other markets such as South America and India the lack of import permits, restrictions on foreign exchange and other barriers are seriously hampering British firms.

Russian Platinum Offer

Platinum is very firm at \$93 to \$95 with an increasing number of dealings being transacted at the higher level. Russia's offering of 3,000 ounces to Britain attracted interest but is not considered especially significant because the United States market enjoys free dealings and supplies are sufficient to meet consumer requirements. Bullion dealers believe that British interests may purchase the Russian offering and then resell to the United States Government for stockpiling; this type of deal would be embarrassing.

Bank of Indonesia

The Avasche Bank and the Indonesian Issue Bank, was renamed on 1st July Bank of Indonesia under legislation passed by the Indonesian Parliament. At the same time it became a State bank.

Tea Stocks

Tea stocks in London and provincial bonded warehouses on 26th June totalled 105,003,664 pounds compared with 107,220,240 a week earlier. Landings during the period totalled 6,799,572 pounds while deliveries totalled 9,015,948 pounds.

Cotton Futures Market

The high proportion of dollar imports involved has raised practical difficulties in the way of cotton futures market trading which other commodity markets have not had to face, according to the Liverpool Cotton Association in a memo to spinners. These other markets, however, have established a workable pattern of controlled trading designed to ensure that they are not used to evade the exchange control regulation. With the exception that this type of controls in trading will shortly be extended to grain markets with their larger dollar commitments, a definite prospect emerges that foreign exchange difficulties of a cotton futures market will no longer be found insuperable, the Association added.

Raw Cotton Arrivals

United Kingdom arrivals of raw cotton in the past week totalled 27,520 bales comprising 5,812 Sudan, 3,781 West African, 3,096 United States, 2,866 East African, 2,437 Pakistan, 2,273 Peruvian, 2,200 Argentine, 1,706 Egyptian, 997 Mexican, 400 Indian, and 1952 Syrian and other growths. The quantity at present afloat to the United Kingdom is 50,518 bales, principally Sudan, Pakistan, Peruvian, Brazilian, Argentine and West African.

Reduced Silver Exports

Business in exportable silver has been on a very reduced scale during the last quarter. The little room for Continental operators to work in the London market, according to the quarterly brokers. During April, the Japanese Government sold some 3,000,000 ounces of bar silver in the London market, the greater part of which was disposed of for essential industrial purposes through the usual channels.

Oilseed Prices

Against the background of Oilseed Crushers Congress at the Hague, the London produce market is still very quiet, and the only business at 60,000 and 60,500 French francs per ton, c.i.f. A tendency was noted occasionally in Indian African sunflowerseed at £43 against £42. Ethiopian rapeseed was, however, 10s lower at £51.

Finance in India & Abroad

FUNDS STILL FULLY USEABLE TRADE BILL REDISCOUNT FACILITIES EXTENDED

Wednesday, 8th July.

MONEY has been rather more plentiful in Calcutta this week but there is still keen demand for funds and it has not been possible to reduce rates in the interbank market below the level that has prevailed here for some time—21 percent for overnight money and 3 percent for call loans. This contrasts with the notably easier conditions in Bombay, where the call money rate is now down to about 21 percent, with lenders in excess of borrowers. The very large tender for treasury bills this week, resulting in a fall in the rate of acceptance, is a pointer to the onset of easier credit conditions. However, grain finance is considerable, sugar advances are being repaid only slowly, and the credit requirements of the jute mills are irregular, although on the whole well below last year's figure; more accommodation is usually required on account of cotton and cotton textiles during the monsoon. It is expected that some at least of the State Government loan flotations will have been made before our next issue, whereafter the supply of money should ease.

There have been very few export bills passing, and those were small. Remittance has been substantial. Sterling has been stronger against the dollar, with the result that the local rate has come down by a half to Rs. 47s-8. Rupee-sterling rates are unchanged.

The Reserve Bank of India has decided to extend the bill market scheme to scheduled banks having deposits (including deposits outside India) of Rs. 5 crores or more, provided they have a licence granted by the Reserve Bank in terms of section 22 of the Banking Companies Act, 1949. Hitherto only banks with total deposits of Rs. 10 crores and over could avail themselves of the rediscounting facilities offered on usance trade bills by the Reserve Bank. This broadening of the scheme will enable smaller banks, who have been urging since the inception of the scheme early last year that it was unduly restricted, to borrow more cheaply and conveniently. Just how much difference this will make to the central bank's advances against usance bills remains to be seen, but the step marks a further extension of a scheme that has worked very well over the past 18 months.

A sharp rise of Rs. 3.54 crores in notes in circulation to Rs. 1,141.64 crores was the main feature of the return of the Reserve Bank of India for the week ended 2nd July, 1953, while the total note issue fell by Rs. 13 lakhs to Rs. 1,174.43 crores. Notes held in the Banking Department consequently declined by Rs. 3.67 crores to Rs. 32.79 crores. An expansion of Rs. 10 crores in foreign securities to Rs. 603.15 crores has duly been adjusted by a reduction of rupee securities by the same amount to Rs. 439.86 crores. Deposits in the banking department show an all-round decline. Deposits of the Government of India and other Government accounts dropped by Rs. 14.28 crores and Rs. 62 lakhs to stand at Rs. 116.15 crores and Rs. 16.23 crores, respectively. Balances of commercial banks at Rs. 40.26 crores were about Rs. 2.76 crores less than in the previous week. The item of other loans and advances dropped from Rs. 22.28 crores to Rs. 14.29 crores, of which advances to scheduled banks against usance bills totalled Rs. 3.24 crores against Rs. 11.44 crores. Investments declined from Rs. 90.60 crores to Rs. 79.80 crores. Ways and means advances were shown at Rs. 3.45 crores (Rs. 3.43 crores).

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills amounted to Rs. 3,03,25,000 this week. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 8 percent, the average rate of acceptance declining to Rs. 2-6-2 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 3rd July, treasury bills for Rs. 6,30,75,000 were sold in favour of the Reserve Bank.

The bullion market ruled easier last week and prices further dropped on lack of support coupled with bear sales. Silver declined from the previous week's level of Rs. 154-4 to Rs. 152-2. The ready rate was quoted at a premium of 4 annas. Silver ruled quiet and rates remained unchanged at 74d. in London and at 851 cents in New York. Gold remained quiet in sympathy; the price fell from the level of Rs. 89-10 to Rs. 88-12. The sovereign at Rs. 58-8 registered a loss of 4 annas.

The return of Imperial Bank of India for the week ended 20th June, 1953, shows a rise of Rs. 1.49 crores in total deposits to Rs. 208.62 crores. Investments in Government Securities are up by Rs. 60 lakhs to Rs. 76.09 crores, while authorised investments remain unchanged at Rs. 10.70 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 5.28 crores and Rs. 75 lakhs to aggregate at Rs. 98.24 crores and Rs. 27.43 crores, respectively. Cash and balances are, in consequence, shown at Rs. 16.00 crores or Rs. 75 lakhs higher.

The statement of the position of Scheduled Banks for the week ended 26th June, 1953, discloses Demand and Time liabilities at Rs. 530.26 crores (Rs. 10.39 crores on account of borrowings from Banks) and Rs. 327.56 crores (Rs. 1.97 crores) compared with Rs. 529.91 crores (Rs. 10.87 crores) and Rs. 324.56 crores (Rs. 1.92 crores) respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 70 lakhs and Rs. 52 lakhs to aggregate Rs. 34.63 crores and Rs. 40.09 crores, respectively. There is a rise of Rs. 1.59 crores in investments to Rs. 314.03 crores. Advances and bills discounted at Rs. 509.82 crores reveal a fall of Rs. 11.44 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.7 percent and 59.4 percent against 8.6 percent and 61.2 percent.

THE HONGKONG AND SHANGHAI BANKING CORPORATION interim dividend will be £2 per share, free of Hongkong Corporation Profits Tax, payable on 10th August.

TREASURY BILL MATURITIES

Details of 3 months' Bills outstanding with the public on 10-7-53.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

CAPITAL

saying that when he urged the State Department to withdraw subversive literature from American Government libraries abroad, he did not intend that books by Whittaker Chambers and the like be burned. "That," said the Senator, "only makes us look silly." Precisely: Militant prudery always does end up looking silly. Once you entrust the censorship of our reading matter to policemen or civil servants, they immediately make asses of themselves by seizing good, bad and indifferent books. You cannot expect people unfamiliar with literature to carry out their work in a high-minded way—which is just why liberalism has always preferred that the State leave alone what it does not understand. The slight harm to our supposedly delicate moral sense that a few books might do is nothing alongside the damage done by sending policemen ransacking through our bookshells.

Dashiell Hammett, the thriller writer who created the Thin Man and the Maltese Falcon, was lately hauled up before McCarthy's committee and asked whether, if he were trying to fight Communism and Socialism, he would permit his books to be on the shelves of U.S. libraries. He gave what must be the classic reply to book-burners for all time to come: "If I were taking part in such a crusade," said Hammett, "I would permit neither libraries nor books." And that is the answer to the brave defenders of the public morals in Calcutta. If you want to stop people having unconventional thoughts about politics or morals it is not much use seizing *certain books*, for any selection you make is bound to be wrong. You have to seize the lot, and restrict the public of the city to a mental pabulum of one "liberal" newspaper per morning and one Government newsreel per evening. The Calcutta police, with the assistance of a newspaper that should know better, have made fools of themselves and the best thing they can do now is give back the books they have seized—presumably they have not burned Tarzan and the rest—and leave the care of our moral sensibilities to those who know best how to look after them—ourselves. The irony of this case is that there is in fact a traffic in really pornographic books and films going on all the time in Calcutta, but one has to pay more frequent visits to our lesser known bookshops before one discovers where that market is.

Meantime the police have been acquitting themselves with much greater credit in a much more difficult field—the defence of a public utility and the people who wish to use it from politically inspired hoodlums. Any motion of sympathy thro' some sections of the public might have felt for second-class tram passengers, who complained about a fare increase which came at an unfortunate time, has been quite extinguished by stupid and violent assaults on police, tramway employees and civilians. A photograph on the front page of *The Times* of India yesterday shows a mob stoning a tram and it is notable that, the majority of the assailants are small boys in rags who would understand nothing of what they are doing and care less for the inconvenience they are causing. A movement that will exploit these urchins is deplorable and the police deserve even more active co-operation than they have so far received from the public in putting a stop to an agitation that has gone too far. I understand that some of the responsible leaders of the resistance movement are prepared to admit in private that the Calcutta Tramways Company has served the city

well and cheaply, that its fares are still conspicuously moderate and that the eventual alternative to increasing its revenue might be to go without trams, as Madras already has to do. Their real objective is something quite different. It is to be hoped that Dr Roy's absence from the State will not hinder energetic efforts to meet this challenge.

“The starting of a new industry today”, said Mr. M. A. Sreenivasan at the meeting of the Kolar gold mining companies, “is an adventure calling for bravery bordering on heroism.” Among the obstacles that industrial heroism has to contend with, he mentioned high taxation, politically biased opinion about profits, uncertain export and import policies and the activities of ambitious politicians within labour unions. (We recently had an example of the latter in a well-known mining company and we are now having another in a steel mill.) Mr. Sreenivasan pointed to a new danger that industry might have to face from its dependence for power on hydro-electric works—exposure to “monsoonal vicissitudes”. Indian agriculture is already sufficiently subject to the vagaries of the weather, without industry being put in the same case. The cost of the recurring hazard of power cuts has been demonstrated in Bombay and Mysore, and yet some State Governments are preventing industries installing their own stand-by thermal power units. Mr. Sreenivasan spoke for the Indian mining industry in general when he said that “the structure of taxation of mining... has been out of line with what has, after careful thought, been devised by other countries of the world which have been more successful in developing their mineral wealth, and have thereby enriched themselves and their peoples”.

The fifth anniversary of the Damodar Valley Corporation passed last Friday without notice, though it would have provided a suitable occasion to review the very substantial progress that this organisation has so far made. Criticism has naturally not been wanting—which is quite proper in regard to an autonomous body that spends large sums of public money—but much of it has been wide of the mark and some seems to have been inspired by dislike of the idea of a non-departmental project making better progress than its less independent fellows. Of the many schemes the DVC has on its platter, the Tilaiya dam was completed at the end of the last monsoon, the Bokaro power station was opened at the beginning of this year, Konar is almost ready and will be complete by November, Maithon will be finished next year and Panchet two years later. The building of townships, roads and bridges, the reclamation of land, the extension of irrigation, and the progress of agricultural improvement and modern medicine have all been carried on in the areas that fall under the Corporation. This is a creditable record for the first five years. Of course it is always possible to argue that work could have been done more quickly and more cheaply, but the fact remains that the achievements of the DVC to date are among the most encouraging developments in postwar India.

600 prints the story of a wide boy selling "deaf aids, 6d each" from a barrow in Oxford Street. Wrapped in the brown paper parcel is simply a length of string with a knot at one end. On a customer remonstrating that this was no aid to hearing, the spy replied: "O' course it's a deaf aid, gunvor! You bungs the knot in yer ear'ole and sticks the uvver end of the string in yer waistcoat pocket. Then everyone says, 'Ullo! E's wearin' a deaf aid. Must be deaf!' So they shouts. And there's yer deaf aid!"

Company Meeting

THE KOLAR GOLD FIELD MINING COMPANIES

CHAIRMAN'S AND MANAGER'S REVIEWS: CLOSURE OF OOREGUM: BURDEN OF TAXATION

Mr. M. A. Sreenivasan, Chairman of the Mining Companies on the Kolar Gold Field, viz., The Mysore Gold Mining Company (KGF) Ltd., The Champion Reef Gold Mines of India (KGF) Ltd., The Ooregum Gold Mining Company (KGF) Ltd., and the Nundydroog Mines (KGF) Ltd., addressed the members at the Second Annual General Meetings held at Ooregum on 30th June at which the Directors' Reports and the Audited Accounts and Balance Sheets for the year ended 31st December, 1952 were submitted.

Mr. Sreenivasan opened his remarks by referring to the appointment to the Boards of the four Companies in September 1952, of Mr. R. J. Rego, Secretary Government, Development Department, following his nomination by the Mysore Government in succession to the late Mr. R. Ramakrishna, and in the case of Champion Reef to the appointment in June 1952 of Mr. R. E. Caselli to fill the vacancy caused by the retirement from the Board of Mr. B. W. Batchelor.

Proceeding Mr. Sreenivasan said:

"In my speech last year I referred to the steep fall in the price of gold which occurred in the early part of 1952. After a partial recovery to Rs. 240 per ounce there was a further decline to a minimum of about Rs. 210 per ounce in October and November 1952. The average price received for the Companies' production of gold during 1952 was approximately Rs. 237 per ounce which is about Rs. 57 per ounce lower than for the previous nine months—a drop of 19%. Since the end of 1952, the price has improved and steadied itself somewhat and has averaged approximately Rs. 233 per ounce to date. The present price is about Rs. 244 per ounce."

"Relations with labour continued to be cordial. In the course of recent negotiations with the Labour Associations, at which Mr. S. C. Joshi, Chief Labour Commissioner of India presided, it was agreed to pay a bonus to labour equivalent to 39 days' basic pay in respect of 1951. Other benefits given to labour in recent months have included issue of rations on credit and increase in the contribution to the provident fund by an amount equal to 61% on half of the dearness allowance. In addition, the Company has maintained welfare facilities for labour at a high standard."

"Operations at the Mines since the close of the year under review continued without serious interruption up to the end of May despite a threatened power shortage from January. From the 1st to the 22nd of June, however, the supply of power to the Mines was again cut owing to shortage of water in the Krishnarajasagara Reservoir. This cut was very severe and averaged at over two-thirds of the normal supply. Fortunately it was not of long duration."

"Indian agriculture has been known for ages as a gamble in monsoons. In recent years, a large part of Indian industry has also come to share the same fate. Power cuts have become a recurring hazard, resulting in loss of production, hardship to labour and a fall in earnings that has at times been calamitous."

"The position is particularly onerous in the case of certain industries, like gold mining in the KGF, which depend on nationalised source of power and are precluded from installing plants for generating their own power requirements."

"These paralysing power cuts have come at the same time as the nation's plans for increasing the generation of hydro-electric power, and serve to underline the wisdom and foresight of the planners in giving a high priority to these projects. While it is hoped that the completion of these installations will help to remedy this new and recurring nightmare, one expects too, that State Governments will take urgent steps to make industries dependent on them for their power supply less vulnerable to monsoonal vicissitudes by installing thermal stand-by plants of adequate size. It is gratifying to learn that the Government of Bombay and the Government of Madras have planned to install such thermal units. One confidently hopes that the Government of Mysore, which has taken the lead in hydro-electric development in India, will not lag behind installing similar plant, and thereby insuring industries in the State against recurring dislocation and loss."

"There have been, since we last met, two notable and welcome events to which I would like briefly to refer. India's First Five Year Plan has been published and has rightly been acclaimed as a realistic, if modest, programme which sets out to rehabilitate and raise our country's economy and the standard of living of our people. It is recognised as the forerunner of many more such plans which will, in time, help us win our age-long battle against poverty, and to secure for our people an economic status more consistent with our man-power and material resources. The plan recognises the role of private enterprise, and individual initiative; and to the extent that it does so it offers a challenge to enterprises such as ours, which I am confident will be loyally and enthusiastically met."

"The Plan depends, for its success, on increased capital formation and investment in productive enterprise. In this connection one cannot help sharing the general feeling that the economic climate in the country has, during the past few years, tended to become one that is not calculated to stimulate initiative or investment in industrial development. Apart from the high level of taxation which in the opinion of many responsible industrialists has run away from and far outstripped the pace of the country's earning power and economic progress, there are several other causes that have contributed to this unhealthy condition of affairs. With the activities of ambitious politicians and rival political groups who have succeeded in securing the

leadership of labour unions all over the country and the attitude that Governments have often adopted towards such activities with the many restrictions imposed and uncertainties caused by import and export control policies, and the trend of politically-biased opinion regarding the earning of profits, it would seem that the starting of a few industry today is an adventure calling for bravery bordering on heroism. Capital and enterprise that should be harnessed for industrial development has in consequence tended to get diverted to distribution and trade, if not speculation. If this view is correct it is obvious that means have to be found to remove some of the existing disincentives and handicaps and to provide some positive incentives that will encourage the investment of private capital in productive industrial enterprise."

Continuing Mr. Sreenivasan said:

"If I may be permitted to refer to one of the existing disincentives, it is the amount of official intervention that industry in the private sector has daily to cope with, from womb to tomb. Practically every industrial concern of any consequence today feels obliged not only to employ extra staff to cope with the growing volume of inquiries from and correspondence with Government offices and officials but has, in addition, either to maintain a residence in New Delhi or arrange pilgrimages to that costly capital, or both. This is not intended as a criticism of Government or its helpful competent and hard-worked officials. It is a fact in a planned economy. One hopes however that it may be found possible to remove or reduce a sizable proportion of it, and thus lighten the handicaps it imposes."

"The implementation of the First Five Year Plan and its successors will call for considerable amounts of foreign exchange. In my speech to you last year I tried to indicate the not insignificant contribution that a vigorous and expanding gold mining industry can make to the country's credit. I also pointed out how foreign exchange estimated at between 7 to 10 crores of rupees in value, is at present being found by devious means and employed in the business of smuggling gold into this country, and how increased gold production in India—for which there is scope—can assist in rescuing this foreign exchange for nation-building needs."

"The other event I wish to refer to is the appointment by the Government of India of the Taxation Enquiry Commission under the Chairmanship of the eminent economist and industrialist Dr. John Mathai who was formerly Finance Minister of India. The appointment did not come a day too soon. The structure of taxation of mining in general and of the gold mining industry in particular, has been out of line with what has, after careful thought, been devised by other countries of the world which have been more successful in developing their mining wealth, and have thereby enriched themselves and their peoples. As you know, your Directors have made a reasoned representation in this regard to the Government of India who are giving the case their sympathetic consideration. I trust it will not be very long before the industry gets some much-needed relief, and encouragement."

Dealing with the affairs of the Individual Companies, Mr. Sreenivasan said in reference to

THE MYSORE GOLD MINING COMPANY (KGF) LIMITED

"During the year, 206,172 tons of ore and 857 tons of mill-tail cleanings and mill excavations were treated with a recovery of 74,729 ounces of gold which gives a recovery of 7.22 dwts. per ton. Both the tonnage milled and the grade of the ore were higher than in the previous year, resulting in an increased gold return."

"The total proceeds of the sale of gold amount to Rs. 1,77,14,737 to which is added Rs. 19,702 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 8,83,222 and adding Rs. 42,140 for rents and bank interest, there is a net credit to the Revenue Account of Rs. 2,15,58,041. Deducting from this sum the total cost amounting to Rs. 1,44,37,589 there is a balance of Rs. 2,15,58,041 which is carried down to the Profit & Loss and Appropriation Account where there is added Rs. 8,567 in respect of deposit and loan interest, bringing the total credit to that account to Rs. 2,16,43,608. Against this there is charged Rs. 86,567 for staff provident fund, Rs. 12,00,176 representing 8.3% of costs for transfer to the Depreciation & Development Expenditure Reserve and Rs. 6,90,084 being the provision for income tax leaving Rs. 4,88,004 of which your Directors recommend should be utilised in paying a tax-free dividend of 6% for the year."

"Due to the higher tonnage treated there was a fall of nearly Rs. 2 to Rs. 64.8 in the cost per ton excluding development, compared with that of the previous period."

In the course of the speech of the Managers, John Taylor & Sons (India) Limited, in respect of the Mysore Company, Mr. J. K. Lindsay said:

"The total development done during the year was 8,895 feet; 6,424 feet was on reef, of which 1,132 feet or 18% was payable at an average value of 31.9 dwts. per ton over a width of 17 inches. Development was done on the upward extension of the 32nd level. Progress was made during the year with the scheme of access to Edgar's shaft pillar

from the footwall. In the bottom section of the mine, development was continued on the small oreshoots in the vicinity of North and South Auxiliary Vertical Shafts."

"The payable ore reserves were estimated to be 198,800 tons at 12.80 dwts. per ton at 31st December, 1952."

Referring to the results of

THE CHAMPION REEF GOLD MINES OF INDIA (KGF) LIMITED

Mr. Sreenivasan said:

"During the year, 148,890 tons of ore were milled with a recovery of 66,477 ounces of gold, which gives a recovery grade of 8.93 dwts. per ton. The output was seriously affected by rockbursts in Glens oreshoot and by a fire in the mine and was consequently at a considerably lower rate than for the previous period."

"The total proceeds of the sale of gold amount to Rs. 1,38,78,386 to which is added Rs. 19,443 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 7,92,310 and adding Rs. 40,148 for rents, bank interest and sundries, there is a net credit to the Revenue Account of Rs. 1,51,45,667. Deducting from this sum the total costs amounting to Rs. 1,21,28,615 and Rs. 1,106 in respect of an adjustment of Additional Royalty for the previous period there is a balance of Rs. 30,17,946 which is carried down to the Profit & Loss and Appropriation Account where there is added Rs. 5,457 the balance brought forward from 31st December, 1951 and Rs. 34,943 in respect of deposit and loan interest, bringing the total credit to that account to Rs. 30,58,346. Against this there is charged Rs. 73,161 for staff provident fund, Rs. 15,82,799 representing 13.0% of costs for transfer to the Depreciation & Development Expenditure Reserve and Rs. 11,38,924 being the provision for income tax leaving Rs. 2,65,462 out of which your Directors recommend the payment of a tax free dividend of 6% for the year which will absorb Rs. 2,60,004 to leave Rs. 5,458 to carry forward to the succeeding period. The considerably reduced profit compared with the previous period was due to the lower gold price together with the effect on production of the rockbursts and fire previously mentioned."

"The question of bonus to labour for the year 1952 was referred to an Industrial Tribunal which awarded four months' basic wages as bonus. In consequence of the lower rate of production and the cost of the bonus to labour for 1952 which was charged in the accounts for the year under review, the cost per ton of its 65.5 excluding development, showed an increase of nearly Rs. 10 compared with that of the previous period."

"As I said last year, the scheme of joint working with the Ooregum KGF Company was being reconsidered because of the difficulties being experienced by that Company. As a result of the lower price of gold last year and the reduction in output which, for technical reasons, cannot be avoided, the Directors of the Ooregum KGF Company reluctantly came to the conclusion that the Ooregum Mine must be closed. It has taken some time to give effect to this decision, but at present all the employees of that mine are under notice of termination of employment. The Mysore Government has recently given its consent to the transfer of the Ooregum leases to this Company, and the scheme for taking over the leases and the purchase of certain buildings, machinery and plant, will be placed before the shareholders in the near future."

In the course of the Managers' speech Mr. J. K. Lindsay said:

"The total development done during the year was 11,029 feet; 7,882 feet was on reef, of which 4,671 feet or 42% was payable at an average value of 23.8 dwts. per ton over a width of 35.5 inches. Development of Glens oreshoot and of the oreshoot south of Osborne's Shaft crosscut has continued. Development of the folds in the North section was continued down to 98th level. The main reef was developed on good values despite the presence of pegmatite which, however, did not appear to affect the values."

"The payable ore reserves at 31st December, 1952 were estimated to be 610,219 tons at 10.53 dwts. per ton."

Dealing with the affairs of

THE OOREGUM GOLD MINING COMPANY OF INDIA (KGF) LIMITED

Mr. Sreenivasan said:

"During the year, 118,386 tons of ore and 8,791 tons from various old dumps, which were excavated and found to contain gold, were milled, 34,000 ounces of gold were obtained which is equivalent to an overall recovery grade of 5.45 dwts. per ton. In addition, 27 tons of the Company's ore were treated by the Nundydroog Company with a recovery of 21 ounces of gold."

"The total proceeds of the sale of gold amount to Rs. 82,56,535 to which is added Rs. 13,571 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 4,11,477, and adding Rs. 50,309 for rents, bank interest and sundries, there is a net credit to the Revenue Account of Rs. 78,98,128. Deducting from this sum the total costs amounting to Rs. 75,27,700 there is a balance of Rs. 1,45,422 which is carried down to the Profit & Loss and Appropriation Account where there is added Rs. 63,447 the amount brought forward from 31st December, 1951 and Rs. 2,752 in respect of interest accrued on total credit to that account to Rs. 2,41,621. Against this there is charged Rs. 64,532 for staff provident fund, and Rs. 1,77,069 representing 2% of costs for transfer to the Depreciation & Development Expenditure Reserve. The actual capital expenditure for the year was Rs. 3,05,692. The Directors regret it is

not possible to recommend a dividend for the period under review."

"In consequence of the higher rate of tonnage treated the cost per ton of Rs. 49.6 excluding development, showed a decrease of Rs. 4.1 compared with that of the previous period."

"As was indicated to you last year, the position at the mine has become such that it is impossible for the Company to continue operating as a separate unit. For technical reasons, the output from the mine has had to be reduced and cannot possibly be increased. This, together with the lower price of gold, made it necessary to close the mine. Your Directors had decided to close the mine in March. On the advice of the Central and Mysore Governments, however, the Directors had to agree to postpone the closure to enable a Committee, which the Governments wished to set up to report on the position, as the closure of the mine involved about 3,500 men being thrown out of work. This Committee, on which the Company was represented by Mr. Sydney E. Taylor, Director, made its report during May and confirmed the necessity to close the mine. It also recommended acceptance by the Mysore Government of the proposal of the Directors that the Ooregum leases should be transferred to Champion Reef. The Government of India have accepted the Committee's report and, accordingly, one month's notice was given to the Directors on 9th and 10th June. The mine will be closed down on expiry of this notice but the cleaning up of the mill is expected to take several months."

"The said Committee also made detailed recommendations regarding the rehabilitation of and compensation to be paid to the Company's discharged employees. It is now an accepted principle that compensation should be paid to employees for loss of employment and the amount of compensation proposed by the Directors, viz., half a month's wages (including dearness allowance) for every completed year of service, was accepted by the Committee as reasonable. This will naturally be a heavy burden on the Company's resources but under the existing legislation is unavoidable. It is expected that it will be possible to offer continuing employment in other mines on the KGF to about 900 to 1,000 of the men who would otherwise be discharged."

"The Government of Mysore has recently given its consent to the transfer of the Company's leases to the Company's partner in the Joint Operation, the Champion Reef KGF Company. The scheme for the transfer of the leases and the sale of certain buildings, machinery and plant to the Champion Reef KGF Company will be placed before the shareholders in the near future."

The Managers' speech made by Mr. J. K. Lindsay contained the following remarks:

"The total development done during the year was 9,031 feet; 7,733 feet was on reef, of which 3,391 feet or 38% was payable at an average value of 28.4 dwts. per ton over a width of 27 inches. In Auxiliary section on the Main Reef, driving was continued at the 101st and 102nd levels and started at 103rd level. This lode is very erratic and irregular and patches of high values alternate with poor areas. However, the last 200 feet to the boundary has consistent quartz of good value as the main reef there forms one of the limbs of the folds which, therefore, are partly in the Ooregum and partly in Champion Reef property. The other limbs of the folds, which straddle the southern boundary, have also been developed."

"The payable ore reserves were estimated to be 253,390 tons at 8.48 dwts. per ton at 31st December. This is 57,083 tons more than at the end of the previous year and the grade is 0.11 dwts. per ton higher. In addition, the low grade ore reserves were estimated at 39,333 tons at 3.75 dwts. per ton. 90% of the ore reserves are now concentrated in a small area below the 94th level in the southern half of the mine. At these depths between 9,000 and 9,500 feet, the ground pressure and the danger of rockbursts make it necessary to adopt a single plan for the sequence of stoping which also has to include the ore over the boundary in the Champion Reef mine. This has made it impossible to maintain the output at an economic level. It was just possible to maintain a small working surplus up to August, 1952 by augmenting the output by treating certain old dumps on surface but these have been exhausted. Under present conditions, in order to cover costs and pay a 6% dividend, a monthly production of 3,200 ounces of gold would be required; but the maximum output which could be produced on average from the mine is only 2,300 ounces, declining to 1,900 ounces. Under these circumstances, there was no alternative to closing the mine."

Turning to the Report and Accounts of

NUNDYDROOG MINES (KGF) LIMITED

Mr. Sreenivasan said:

"During the year, 228,082 tons of the ore were milled with a recovery of 65,165 ounces of gold, equivalent to 5.71 dwts. per ton and 32,620 tons from old dumps were treated with a recovery of 2,577 ounces of gold, equivalent to 1.58 dwts. per ton. The total gold returned was thus 67,742 ounces. There were no serious interruptions to production during the year."

"The total proceeds of the sale of gold amount to Rs. 1,60,09,380 to which was added Rs. 24,885 in respect of sales of silver. After deducting royalty payable to the Mysore Government of Rs. 7,98,619 and adding Rs. 81,136 for rents, bank interest and sundries, there is a net credit to the Revenue Account of Rs. 1,53,16,782. Deducting from this sum the total costs amounting to Rs. 1,32,73,086 there is a balance of Rs. 20,43,696 which is carried down to the Profit & Loss and Appropriation Account. Against this there is charged Rs. 74,413 for staff provident fund, and Rs. 11,25,702 representing 8.5% of costs for transfer to the Depreciation & Development Expenditure Reserve and Rs. 5,60,376 being the provision for income tax, leaving Rs. 2,83,005 the whole of which your Directors recommend should be utilised in paying a tax-free dividend of 7% for the year."

"In consequence of the higher rate of production the cost per ton of Rs. 43.5, excluding development, showed a decrease of Rs. 3.2 compared with that of the previous period."

Mr. J. K. Lindsay in the course of his speech on behalf of the Managers said:

"The total development done during the year was 25,030 feet, most of which was on the West Reefs. The 62nd level N16 crosscut intersected the Oriental lode and 39 feet was driven which averaged 3.7 per ton over 71 inches. This is the deepest level at which the Oriental lode has been developed so far. On the 44th level, from N17 crosscut, 39 feet averaged 24 dwts. per ton over 62 inches and 1,418 feet on lode aggregated 4.2 dwts. per ton over 58 inches. The 3,800-foot level North from N21 crosscut was driven 1,053 feet. Of this, 173 feet averaged 11.3 dwts. per ton over 60 inches and 708 feet averaged 4.3 dwts. per ton over 64 inches. In the level south, of 489 feet driven 255 feet averaged 10.0 dwts. per ton over 61 inches."

"The payable ore reserves at 31st December, 1952, were estimated to be 538,397 tons at 8.90 dwts. per ton. This is 116,336 tons more than at the end of the previous year, but the grade is 0.37 dwts. per ton lower."

"The sudden fall in the price of gold in February, 1952, and the steps being taken to counteract its effects were described last year. The tonnage milled was increased by over 15% compared with the previous twelve months by working the mill to capacity throughout the year. To increase the mill capacity, two light stamp batteries in the old North mill were reconditioned and put into operation in December, thereby increasing the total number of heads available to 80. In addition, the grade was also increased, and the gold returns were 13,048 ounces, or nearly 24% higher than in the previous twelve months."

Mr. M. A. Sreenivasan on behalf of the Directors and Shareholders and Mr. J. K. Lindsay speaking for the Managers expressed appreciation and thanks to the Superintendent of the Mines and their Staffs for the efficient and energetic manner in which they had carried out their duties. Mr. Sreenivasan also expressed the Boards' appreciation of the work of the Managers, John Taylor & Sons (India) Limited.

The Report and Accounts of each of the four Companies were adopted and the following dividends were declared:

Mysore Company	...	6%
Champion Reef Company	...	6%
Nundydroog Company	...	7½%
Ooregum Company	...	Nil.

THE BURMAH OIL COMPANY LIMITED

SIR KENNETH HARPER'S REVIEW

The Fifty-first Annual General Meeting was held on Friday, 3rd July, in the Merchants' Hall, Glasgow, Sir Kenneth B. Harper presiding.

In moving the adoption of the Directors' Report and Accounts the Chairman referred to his Statement dealing with the group companies' activities during the past year. The substantial fall in the trading profits—from £7,500,000 in 1951 to £5,500,000 in 1952—did not signify any weakening of the fundamental strength of the Companies' trading position. On the contrary, the volume of the group's trade had increased by 25%, an increase sufficient to maintain their share of the market, though not enough to offset a narrowing of profit margins. He hesitated to forecast the future, so much depending on factors outside the group's control, but he said say that in the current year to date sales were showing a satisfactory increase over the same period last year.

Over past years about £10,000,000 had been spent in prospecting, with negligible results in terms of new oil fields, but there was now some ground for optimism in regard to at least two areas. Expert advisers were of the opinion that the gas field at Sui in Baluchistan promised more than enough gas to provide fuel for many years for all West Pakistan's industrial requirements, while the results just received of testing the lowest and possibly not the best of the four oil sands drilled through at Nahorkatiya in Assam suggested that the sand was capable of yielding moderate production. Evidence of industrial requirements, while the results just received of testing the lowest and possibly not the best of the four oil sands drilled through at Nahorkatiya in Assam suggested that the sand was capable of yielding moderate production. Evidence of industrial requirements, while the results just received of testing the lowest and possibly not the best of the four oil sands drilled through at Nahorkatiya in Assam suggested that the sand was capable of yielding moderate production.

Labour costs were 300/400% pre-war and for every £6 wages and allowances £1 was spent in housing, schools, hospitals and other forms of welfare. The group's success in improving the working conditions of their employees, but their efforts were in danger of being upset by the way the system of compulsory adjudication in industrial disputes was applied. However high the pay in relation to other comparable employment, arbitrary awards of two, three or four months wages were being made, thereby encouraging the Unions to make further demands and doing great damage to industrial relations.

Referring to the recent issue of Debenture Stock by the Anglo-Iranian Oil Co. Ltd., the Chairman recalled the historic relationship between the two companies. Burmah Oil Company money and enterprise had first proved the existence in Persia of oil in commercial quantities. When the Anglo-Persian Oil Co. was formed in 1909 the Burmah Oil Co. subscribed 95% of the Ordinary Capital and guaranteed the Preference stock. In 1914 the Ordinary capital was increased by £2,000,000 all of which was subscribed by His Majesty's Government. To day the Burmah Oil Company held about 26½% of the Ordinary stock. The Anglo-Iranian Oil Company's important share in the Iraq Petroleum Co. also derived from the Mr. W. K. Lindsay's interest in Iraq gas and the Burmah Oil Company along with his Persian concessions.

The Report and Accounts were unanimously adopted.

The Final dividend of 2/6d per £1 unit on the Ordinary stock, less Income Tax at 9/- in the £, recommended by the Directors, was approved and declared payable on 17th July, and the balance of £596,047 was carried forward.

Lord Bilsland and Sir William Fraser, the Directors retiring by rotation, were unanimously re-elected and the proceedings terminated with a vote of thanks to the Chairman.

ROHTAS INDUSTRIES LIMITED

(Managing Agents: SAHU JAIN LTD.)

MR. S. P. JAIN REPORTS "BETTER PERFORMANCE" BY MOST FACTORIES

Speech delivered by Shri Shanti Prasad Jain, Chairman, at the Twentieth Ordinary General Meeting of the Company at 3 p.m. on Tuesday, the 7th July, 1953, at Dalmianagar, Bihar.

Gentlemen,

I have pleasure in welcoming you to the twentieth Ordinary General Meeting. The Audited Accounts of your Company for the year ended 31st October, 1952, together with the Directors' Report are already in your hands. With your permission, I shall take them as read.

Improved Production

At the last meeting I gave a factory-wise review for your information and expressed confident hope as regards further improvement in the working results of the Company. I am glad to report that all-round vigilant efforts have borne fruit as will be evident from the details already in your hands. Barring the Vanaspali factory which, as apprehended, had to be closed down in June, 1952, the various other units have shown better performance.

Sugar

Your sugar factory registered 100% increase in production. Improved supply of cane to your factory will be ensured with the completion of the laying down of rails connecting Narsigani. To maintain and augment sugar production as a whole in the next season, steps have to be taken to divert all available cane to the industry. The position is that more than 35% of cane is being transported by rail and, if the railway freight is increased as is contemplated, I am afraid all the cane will not be available to the industry and production will be adversely affected.

Sugar is very much in the news now. There have been some fluctuations in the market and the price of sugar went up by 10-12% over the Government specified price, primarily due to increased consumption and the apprehension of lower production in the next season. The production of the current season is 13.1 lakh tons, while the normal consumption per year is 12 lakh tons. Consumption during the past 12 months has been of the order of 1.4 lakh tons per month and on this basis the total annual consumption will be 16 lakh tons. Though any increase in price by itself is regrettable, a rise of 10 to 12% is by no means of any significance and much more so when we compare the rise in the price of commodities like mustard oil, oil-seeds, gur, etc., to the extent of 40 to 80%. The Government of India have taken certain steps to keep the situation under check. It is, however, a matter for regret that after carrying on several years without imports there should be a move to resort to sugar imports now. It is relevant to note that the price of Formosa sugar went up by Re. 1/- to Rs. 1/8/- per maund merely on the reported move of the Government of India to import sugar. It is also worthy of note that against the import duty of Rs. 7/- per cwt. the internal imposts on sugar in the shape of excise duty, cane cess and co-operative commission work out to Rs. 8/4/- per cwt. This is a singular instance where taxes on an indigenous product are higher than import duty.

What is very clear in the context of events is that production of sugar within the country should be increased. It is very difficult to make any definite assessment of next year's production on account of the immature state of the cane crop. Assuming next year's consumption and production also at the same level as this year, it will be found that production will fall short of requirements by about 3 lakh tons. With the carry over of this year of about 1.5 lakh tons there will be real shortage unless effective steps are taken to increase production. This basic factor should not be overlooked.

Cement

The increase in the production of your cement factory is to the extent of 50%. The off-take from your factory continues to be satisfactory. The full

As the largest commercial bank in the South-West Pacific, the Bank of New South Wales invites businessmen to make use of the Bank's facilities in conducting their trade with that area.

At over 850 points in Australia, New Zealand, Fiji, Papua and New Guinea, the Bank of New South Wales has branches and agencies which keep in touch with local conditions, providing a full and overall picture of the local business and rural scene. Thus the Bank is well-equipped to assist enquirers from overseas.

Ask your bankers to consult and use —

pondency and to apply earnestly to the immediate task of industrial expansion which will not only provide increasing employment to millions in the country but will also create additional purchasing power and enable better standard of living.

We are to-day in a comparatively comfortable position. Three years of the five-year plan period are over and we have seen increase in industrial production and improvement in the food front. With the completion of the various river valley schemes which are well on their way, solution to the food problem is in sight. The problem of employment and higher standard of living which has to be tackled is serious but by no means incapable of solution with the country's man-power and material resources. On the solution of the problem depends the future of our country. Now is the time to plan and prepare for this. To reap the fruits during the bigger phase of development in the next five or seven years, beginnings have to be done now.

Transport

A problem that is assuming serious importance side by side with industrial development is that of transport. The availability of transport is steadily falling. The Railway Ministry in their attempt to cover short-falls emphasise the amount of movement in respect of a few commodities like coal, fertiliser, sugar, etc. These are not the only commodities for movement. The wheel of industry must be kept moving. Unfortunately, bottlenecks that did not exist before have been created. Traffic on the Eastern Railway, for instance, via Nani is only open for priority traffic up to a few classes and other priority items are not being moved at all. The sidings at Dalmianagar which along with the private sidings including Jamshedpur and Kulti handle large traffic have had to remain closed for all non-preferential traffic and preferential traffic beyond class VIII for 24 out of 30 days in June. This situation would not have been tolerated had the railways been worked by a private agency. The matter deserves government's prompt attention. The cost of transport is rising without adequate facilities being made available. The cost should have actually come down instead of steadily rising since there is increasing utilisation of the capacity. I do not wish to go into details here. It is necessary to remember that increasing industrial development and marketing requirements result in pressure on the railway transport and the railways have to be geared up to meet the growing demand efficiently and economically.

Labour Relations

Your Company is planning for extension of the labour colony with the co-operation of the Central and State Governments. During the next three-four years it is proposed to build up quarters and provide various amenities costing about 40 to 50 lakhs of rupees.

It is a matter for gratification that labour relations in Dalmianagar during the year have been more cordial. While the question of bonus for the year 1952-53 was pending before adjudication, the management and the recognised union of the Company entered into negotiations for settlement by mutual agreement in the spirit of the new approach initiated by our Central Labour Minister. The voluntary agreement thus entered into was examined by the Adjudicator on merits and considering it fair he gave an award on the basis of the agreement. But disturbing forces are still at work. A registered, but not recognised, union of the place is questioning the validity of the agreement as it was not a party either to the agreement or to the adjudication and has taken the matter to the Appellate Tribunal. This attitude is regrettable. It will vitiate the fundamental basis of collective bargaining and mutual agreement. The faith in the new approach will also be shattered as no management will be inclined to enter into such negotiations or agreement. As this method cannot successfully implement the desirable policy of joint approach on which industrial relations in the country are to be harmonised, the outlook of the trade unions has to be chastened up. The modified Labour Relations Bill is expected to embody the principle of collective bargaining and mutual agreement. It is hardly necessary to point out that the new legislation should contain adequate provisions to avoid developments that would cut at the root of the new approach. I would like to express the hope that in Dalmianagar mutual confidence between the management and labour will grow in the common good of the industrial undertakings concerned.

With these words, I thank you all. I am sure you will join with me in extending a hearty vote of thanks to the staff and labour who have combined to support the effort of the management to improve the working results of your Company.

AUSTRALIAN DIESELS FOR PAKISTAN

An interesting example of aid between Commonwealth countries is provided by the acceptance by the Government of Pakistan of an Australian offer to supply nine diesel-electric locomotives for the 5 ft. 6 in. gauge railways in Pakistan. Each locomotive is worth £A.100,000 and when the contract has been completed, Australian goods for Pakistan under the Colombo Plan will total £A.3,300,000 in value. They will assist in the rehabilitation of the Pakistan railway system and form an interesting example of Australia's growing industrial self-sufficiency and increased output.

The locomotives are to be built by the Clyde Engineering, Limited, Sydney, New South Wales, a company which has recently supplied 11 units to the Commonwealth Railways for service over the 1,100-mile journey from Port Pirie, South Australia, to Kalgoorlie, Western Australia. Recently an order for 26 locomotives has been in hand for the Victorian Railways and these diesel-electrics hauled public traffic on their delivery runs, despite having to change bogies at the border at Albury to transfer from 4 ft. 8 1/2 in. to 5 ft. 3 in. gauge. The locomotives for Pakistan are to be generally similar, but with modifications to suit local conditions. Construction is in association with the General Motors Corporation of the U.S.A., which has supplied the Clyde company with technical assistance and also provides the amount of Australian-made equipment employment is increasing.

Stocks and Shares

SHARE PRICES DECLINE IN DULL TRADING

Wednesday Evening. THE Calcutta share market has been even more subdued this past week and prices have tended to drift lower. A principal influence was the labour trouble at the Indian Iron and Steel Works; a statement by the management on the depressing history of this dispute is printed in full below.

The British India Corporation Ltd. has stated this week that there is no foundation whatsoever for the rumour that a change in the management of the Corporation is contemplated or that a large block of shares in the Corporation has recently changed hands. There is also no foundation for the rumour that the managing agencies held by its subsidiary, Beggs, Sutherland & Co. Ltd., have been transferred.

Messrs. Andrew Yule & Co. Ltd. have also denied rumours that a controlling interest in that firm will change hands.

With Indian Iron, the leading speculative counter, losing ground and jute shares meeting with selling pressure, despondency was the dominant note. In jute shares, brokers found selling orders difficult to carry out because the few buyers who were willing to do business insisted upon prices at which sales could not be affected.

The improvement in shellac prices was reflected in Angelo Brothers shares which rose from Rs. 18-2 to Rs. 19-2, but subsequently reacted to Rs. 18-14 in sympathy with the slight decline in the price of the commodity. Calcutta Trams do not appear to have been affected by the current disturbances regarding the increase in fares, and have hovered around Rs. 15. A representative of the company has stated that the daily loss as a result of the interruption of traffic amounts to Rs. 35,000 a day.

share prices receded in sympathy as will be seen from the following table:—

	Opening (7-7-53)	Closing (8-7-53)
Anglo-India	215	212
Champdany	158	152
Dalhousie	143	140
Howrah	24	23-13
Naihati	123	120
Union	176	164

Little business was completed in electric supply shares though there were more buyers than sellers. A small lot of Benares Electric changed hands at Rs. 18-14. Calcutta Electric were steady at Rs. 13-8 as were Jubbulpore at Rs. 14-4.

There were small buyers of selected sugar shares such as Belsund at Rs. 7-14, Cawnpore at Rs. 31-4 and Champaran at Rs. 22-12. There were sellers of Durbhanga at Rs. 10-10 and New Savan at Rs. 6-3. A solitary transaction was reported in Ramnugger Cane at Rs. 17-14.

For the reason given earlier, Indian Irons were neglected throughout the week and fluctuated narrowly around Rs. 24. The remaining shares in this section, however, with the exception of Marshalls and Indian Standard Wagon, were steady. There was a good enquiry for Braithwaite at Rs. 11-7 and Britannia Engineering were crossed at Rs. 20. Jessop & Co. at one time improved to Rs. 24-3, but subsequently, receded to Rs. 23-15 at which price buyers appeared. Kumardhubi Engineering improved by one anna to Rs. 7-13 and National Iron & Steel were steady at around Rs. 5. Indian Standard Wagon receded from Rs. 87 to Rs. 85.

In the miscellaneous section, paper shares ruled comparatively steady but little business was reported. Mysore Paper were better at Rs. 14 and there were buyers of Shree Gopal at Rs. 18-10, Star at Rs. 8-6 and Titagur at Rs. 35-6 respectively. A single transaction was reported in India Paper Pulp at Rs. 169. In cement, Sone Valley fluctuated narrowly around Rs. 7 whilst Dalmia Cement ordinary were done at Rs. 6-3 x.d. Assam Bengal had sellers at Rs. 2-15. Only one transaction was recorded in insurance shares, Hercules action was marked at Rs. 29. There was little activity in the shipping section and prices were more or less unchanged. Calcutta Landing were taken at Rs. 10-9, India General Navigation eased a point to Rs. 84 while there were buyers of India Steamship at around Rs. 6-8. Amongst other shares, Alkali & Chemical provided a bright spot improving from Rs. 13-8 to Rs. 14-12; the closing quotation, however, was slightly below the best. Angelo Brothers also met with spasmodic enquiry, improving at one time to Rs. 19-2 but were shaded at the close. Assam Saws and Bharat Airways had buyers at Rs. 6-7 and Rs. 1-14 respectively, while Britannia Biscuits met further selling pressure and eased to Rs. 11-4. British India Corporation steadied up to Rs. 8-5. There were buyers of Calcutta Trams at Rs. 15-1, Eastern Investments at Rs. 145 and Godfrey Phillips at Rs. 30-8. In contrast, Indian Cables were easier at Rs. 18-11, Jardine Henderson at Rs. 129, Indian National Airways ordinary at Rs. 3-7 and Metal Box at Rs. 18-6. There was a small enquiry for Martin Burne which were fully steady at Rs. 18-8. Midnapore Zemindary were quoted at Rs. 31 with more sellers than buyers, Shaw Wallace encountered

Provincial loans were neglected with 4 per cent Bombay and U.P. 1964 easing further to Rs. 100-5 and Rs. 100-4 respectively. It is now more or less certain that the new Provincial Loans will be launched on the market on the 15th of this month and it is understood that application lists will be available to the public on the 10th.

Good class preference shares continue to be enquired for, but in the absence of sellers, business completed was on a much reduced scale. In jute, Kinnisons were unchanged at Rs. 120 and Lothian were taken at Rs. 107. In the miscellaneous group, Dalmia Cement Fully-paid preference were crossed at Rs. 75, Indian Iron had buyers at Rs. 206-12, as did Indo-Burma Petroleum at about Rs. 90. Muir Mills were slightly better at Rs. 107 and Rohtas 'B' were freely offered at around Rs. 55 without attracting buyers.

In the banking section, Imperial Bank Fully-Paid and Contributory were quietly steady around Rs. 1,855 c.d. and Rs. 450 c.d. Business was reported in Punjab National Bank at Rs. 20 and United Bank of India (Rs. 10 paid-up) had buyers at Rs. 3-13.

Among railway shares, Baraset-Basirhat came to hand at Rs. 19 and Shahdara (Delhi) lost a point at Rs. 175.

There were strong buyers of Elgin mills and business was reported up to Rs. 17-1. Little interest was shown in the rest of the cotton section. Cawnpore Textiles and New Victoria were unchanged at Rs. 8-12 and Rs. 1-5 respectively. Muir Mills were marked at Rs. 215 and a small lot of Dunbar changed hands at Rs. 171.

Coal shares were neglected and business was on a restricted scale. Bengal declined steadily from Rs. 536 to Rs. 524 while Borrae were unchanged at Rs. 28-4. In an otherwise dull section, there were buyers of East Indian at Rs. 24-3 and Pench Valley at Rs. 20-12. Among the smaller priced shares, Bharat Collieries improved slightly to close at Rs. 5-14 while Bengal Bhatdee had buyers at Rs. 6-6. There was a small enquiry for Raneeunge at Rs. 8-8 but sellers were scarce. Talcher and Western Bengal were quoted at Rs. 2-15 and Rs. 4-15.

Following the break in the prices of finished goods during the earlier part of the week, jute

tered selling pressure and receded from Rs. 14-12 to Rs. 11-4.

In the mining section, Karanpura Development reacted from Rs. 14-11 to Rs. 14-4 while Indian Coppers were neglected at Rs. 2-13.

Once again a minimum of business was reported in the tea section with prices in some cases receding to lower levels. Dibrugarh changed hands at Rs. 8-6 and Dufflaghur at Rs. 37, while Naga Hills were marked down to Rs. 13. Banarhat were reported at Rs. 298 and New Dooars at Rs. 295. Loobah changed hands at Rs. 2-12 and Patrakola at Rs. 124, but at the close there were further sellers of the latter at one to two points lower. Basmatia were also on offer down to Rs. 26-12, Bishnauth at Rs. 28-12 and Hasimara at Rs. 28-4, but little interest was shown.

The working of LARSEN & TOUBRO LTD. for the year ended 31st March, 1953, has produced better results. The trading profit rose from Rs. 36.12 lakhs to Rs. 43.59 lakhs because of larger sales. Direct sales increased by Rs. 23 lakhs to Rs. 163 lakhs and indirect sales from Rs. 67 lakhs to Rs. 89 lakhs. The net profit totalled Rs. 11,49,951 (Rs. 10,89 lakhs) after the necessary adjustments, and of this taxation absorbed Rs. 5,45,000 (Rs. 5.25 lakhs), leaving Rs. 6,40,807 (including Rs. 35,856 brought in) for distribution. General Reserve absorbs Rs. 1 lakh. The ordinary dividend has been maintained at 10 percent, free of income-tax, leaving a carry-forward of Rs. 17,336. Discussing the outlook for 1953-54, the directors say that with an easier supply position, buyers are becoming more selective and competition is expected to become keener. Under such conditions, the sales opportunity depends on the solidity of the products and the service reputation. They are confident that the Company will play a major role in the execution of India's five year plan, development of agriculture, building of highways and village roads, producing more electric energy, and generally developing industry. Branch offices have consolidated the expansion mentioned in last year's report and have continued to show improvement. Important contracts have been secured by them. During the year, establishments at Jaipur and Hyderabad were opened with spare parts and service facilities. Managed companies have maintained their turn-over, the only exception being the India Crown Cork Company Ltd. which suffered a slight setback during the slump that hit the bottling industry in 1952. The Company's income from managed companies and associated companies was Rs. 4.12 lakhs.

Messrs Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the steel works at Jamshedpur during the month of June, 1953, was: pig iron 90,400 tons; steel ingots 82,600 tons; semis for sale 14,300 tons and finished 44,700 tons.

Messrs Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report the working of the company for the quarter ending 31st March 1953 as follows: pig iron production 290,400 tons; despatches 15,400 tons; steel ingots production 263,600 tons; semi-finished steel for sale production 49,900 tons; despatches 50,400 tons; finished steel production 147,200 tons; despatches 151,700 tons. The value of invoices of materials despatched during the quarter ending 31st March 1953, after deducting rebates payable to Government under Steel Control, was approximately Rs. 839.04 lakhs.

The TEESTA VALLEY TEA COMPANY made a gross profit of Rs. 1.05 lakhs for the year ended 31st December, 1952, against a gross profit of Rs. 51,724 in 1951. Providing Rs. 11,300 for taxation, Rs. 24,800 (Rs. 12,939) for depreciation, Rs. 20,000 (Rs. 6,030) for Renewals and Additions Reserve, bringing in Rs. 43,516 and making other adjustments, there is a distributable balance of Rs. 86,157. Staff Reserve absorbs Rs. 7,500. The dividend has been maintained at 10 percent, leaving a carry-forward of Rs. 46,657 (Rs. 43,516). The crop was 384,635 pounds (425,929 pounds) and the net average price annas 25.62 per lb. (annas 28.63). Estimates for 1953 have been made for a crop of 5,000 maunds to cost Rs. 6 lakhs.

Providing Rs. 4 lakhs (same) for depreciation and Rs. 6.90 lakhs (Rs. 9.80 lakhs) for taxation, the profit of the SONE VALLEY PORTLAND CEMENT COMPANY fell from Rs. 12.51 lakhs in 1951 to Rs. 10.57 lakhs for the year ended last December. The renovation reserve has been halved to Rs. 2 lakhs and the general reserve is lower by Rs. 50,000 at Rs. 11 lakhs, leaving a balance of Rs. 7,88,657 including Rs. 81,840 brought forward. The dividend has been raised by 2 percent to 10 percent, leaving Rs. 38,657 to be carried forward. The output was 2,32,640 tons (250,330 tons) and despatch 2,38,657 tons (245,082 tons). The company's collieries were making good progress. The limestone quarries were extended and were expected to meet the company's full requirements.

STEEL COMPANY'S STATEMENT ON BURNPUR LABOUR TROUBLE

The Indian Iron & Steel Co. Ltd. has issued the following statement on the labour trouble at Burnpur: "The present trouble started in the Hot Mills Section of the Sheet Mills of the Burnpur Works on 18th January, 1953, when some men staged a lighting strike without any previous notice or indication. These men formed a self-styled body and gave it the dramatic name of Action Committee. The Action Committee insisted that they must be recognised by the Company as a representative negotiating body. Only two kinds of workmen's representatives are considered bona fide at law viz. a trade union or a works committee. There being a registered and recognised trade union at Burnpur and the works committee being in a state of formation through Governmental agency as required by law, the Company found it impossible to meet this unusual and extralegal demand; the reason being that a modern industrial organisation which depends for its existence on constant negotiations with the Tariff Commission and Governmental bodies dealing with supplies and purchases of castings, rolled sections, fabrications etc. cannot deal with unauthorised bodies in regard to matters which may involve expenditure running into millions of rupees.

"On being denied this illegal and short-cut approach to power the Action Committee, which up to now led secretly by Leftist politicians, started a slow-down in the Hot Mills. The Labour Directorate, Government of West Bengal, the Minister of Labour, Controller, Government of West Bengal, the Iron and Steel Adviser, Ministry of Commerce and Industry, Government of India and the Chief Labour Commissioner, Government of India, have since attempted and failed to bring about a settlement. The workers have also had a variety of leadership during these months and one has seen the C.P.I., the P.B.I., the R.P.I., the Bengal Congress Committee, the Bihar Provincial N.T.U.C. and others vying for power and manoeuvring for position at Burnpur.

"As the Burnpur Works produce material of very great national importance the Company relied on the Government to help them solve this very complicated labour problem which had led to a faint colouring of a demand on the Company but was in fact a bitter partisan struggle among workers. It therefore unfortunately produced no light but only heat. Sir Biren Mookerjee, Managing Director of the Managing Agents of the Indian Iron & Steel Co. Ltd., saw the Chief Minister, West Bengal Government, regularly throughout this period, and kept him informed about developments. The Labour Minister, West Bengal Government, was also consulted at every step. During the second week of May 1953, Sir Biren Mookerjee went over to Delhi and stayed there almost all week, explaining the position in detail to the Minister of Labour, the Minister of Finance and the Minister of Commerce and Industry, Government of India, who thereafter got in touch with the Government of West Bengal and continued to take a keen and watchful interest in the matter.

"The following facts stand out as landmarks in the chronology of events relating to the troubles at Burnpur:

"1. The men staged a lightning strike in the Hot Mills and followed it up by a slow-down without stating any grievances for over two weeks. They refused to discuss anything through their recognised union.

"2. They stalled and side-stepped issues and avoided any settlement when the officers of the Government Directorate of Labour contacted them. The Labour Commissioner eventually gave up efforts at conciliation and recorded that the Company would be justified in taking disciplinary action. The Company gave charge sheets to 13 men and punished them by suspension and discharge. The men continued to slow down.

"3. The Labour Minister, Government of West Bengal, personally went over to Asansol, stayed there three or four days and met all persons involved in the dispute. He suggested a solution which they pretended to accept but in fact did not. He therefore said that the Company would be justified in discharging all workers of the Hot Mills who did not give a written undertaking not to slow down. He also suggested the procedure to be followed for the discharge of persons refusing to give any such undertaking. 322 men were finally discharged and the slow down was carried to the 18th Mill. The Government at this stage authorised the prosecution of the six men who have been leading the 'rebels'.

"4. The Action Committee carried on virulent propaganda against the Company, gained some followers and commenced a general slow down everywhere. The Iron and Steel Controller and other high officers of the Government of India attempted a settlement by personally visiting the 'rebel' leaders. They even went so far as to offer an unconditional reinstatement of the 322 and 13 men who had been discharged. This had the consent of the Company. It was however required that the workers' representation arranged through legally constituted channels or through the Labour Directorate pending formation of a lawfully elected works committee. The Action Committee refused this offer, threw overboard all responsible leadership and inspiration. The result was rampant hooliganism, rioting and assaults on those who refused to obey and dragged through the streets.

"5. The Government therefore had to proclaim Section 144 in the area but the rebels showed no respect for the law. They went on assaulting people and once attacked the police office to take possession of it by force. They were later gassed by the police and driven back. The Government now invoked the West Bengal Security Act and declared iron and steel an essential commodity within the meaning of the Act. On 5th July, 1953, many of the ringleaders were arrested by the police. The 'rebels' formed a procession and raided the S.D.O.'s bungalow some 21 miles from Burnpur. They demanded the release of all persons arrested and pelted the police and other officials with stones, injuring many. The police then dispersed them by firing in the air after lathi charges and tear gas had failed.

"It is clear from the lawless activities of these men that they want to win by using violence only following if they do not feel that they would have a large following if they chose constitutional methods. Had they really commanded a majority they would have acted within the law."

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate: Opening Quotation—Highest for the week—Lowest for the week—Closing Quotation—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

New Delhi

MR. IENGAR'S REPORT ON TEA PROPAGANDA CAMPAIGN

ADMINISTRATIVE ARRANGEMENTS FOR LEVY OF ESTATE DUTY (FROM OUR OWN CORRESPONDENT)

4th July.

THE Commerce Secretary, Mr. H. V. R. Iengar, returned here during the week from his tea mission and has made his report to the Government of India. As a result of his survey on the spot, the Government of India is not expected to spot the launch propaganda for India tea as such; the launch propaganda will be for tea. This will avoid any conflict with Ceylon and Indonesia. It may also bring other tea producing countries, particularly Ceylon, into the marketing organisation India plans to set up. It is equally certain that India will not fritter away her resources on a publicity organisation in every country but will concentrate on important countries such as the United Kingdom, Ireland, Germany, Holland, Denmark, Turkey and Egypt. The problem in Britain is not so much to push up tea sales or create the tea habit as to push up quality tea. Plans are being worked out to set up local organisations in these countries and negotiations are going on to bring in Ceylon and Indonesia into them. India will be represented at the U.S. Tea Convention meeting next fall.

Administration of Estate Duty

The Estate Duty Bill, as reported last week, will be given the highest priority during the monsoon session of Parliament. The Government has meantime created the necessary machinery to administer the law. Mr. Paareyall Uppal has been appointed member of the Central Board of Revenue in charge of Estate Duty. Mr. Ghose, a Revenue in England, who has had six years' experience in the British law by working in the British estate duty organisation, has been recruited to be the Indian Central Board of Revenue. Six employees of the Central Board of Revenue are being deputed, four to England and two to the United States, to be attached to the estate duty organisations in order to learn the working of the Act in those two countries.

Foreign Capital and the Steel Project

While in Europe, Mr. H. V. R. Iengar had discussions with industrialists, particularly British and German industrialists. According to his report, there is a distinct change in their attitude towards India. Having almost completed the rehabilitation of their own industries, they are eager to assist India in her industrialisation. In this connection, the Production Ministry is very hopeful about its steel project. The Production Secretary, Mr. A. K. Chanda, who is in Germany at present, is negotiating with three German firms, including Krupp, for their financial and technical participation in the project. Enquiries also show that the Government of India itself may have to find the money for the project if the financial participation of the German firms is not possible or their terms are unacceptable to India.

Steel Retention Prices and Textile Control

The Tariff Commission's report on steel retention prices and the Cotton Textile Committee's recommendations in regard to textile control have been received by the Government and are being considered. An early decision is expected.

Expansion Plans for Sindri

Mr. B. C. Mukharji's report on the expansion of Sindri Fertilizers and Chemicals, Limited, is under the active examination of the Government of India. An early decision is expected. Under a Technical Co-operation Agreement between India and the U.S.A., a technical mission under the leadership of the then Managing Director, Mr. B. C. Mukharji was sent to visit fertilizer plants throughout the world and to recommend the direction in which expansion of fertilizer production at Sindri should be undertaken. The mission is believed to have made two important recommendations. Firstly, it holds that in the interest of an important State enterprise the marketing of fertilizers should be done by the Company itself. The Central Food and Agriculture Ministry is at present responsible for the marketing of fertilizers, whether imported or produced at Sindri. The Ministry has a fertilizer pool through which prices are equalised. Throughout 1952 the cost of sulphate of ammonia imported by the Government of India varied between Rs. 370 and Rs. 400 per ton. It was sold at Rs. 350 per ton till 31st December, 1952, after which its sale price was reduced to Rs. 285 per ton, which is its sale price. The fertilizer Ministry sells sulphate of ammonia to various State Governments, which in turn sell it to cultivators. There are too many middlemen under the present scheme and the intention appears to be to eliminate as many of them as possible. The Directors of the Company in their last report indicated that the question of taking over the distribution from the Central Fertilizer Pool was at present under discussion. Enquiries show that the Company will shortly have a marketing organisation of its own and will undertake the distribution of its product early next year. As the expansion of Sindri, the Mission is believed to have recommended the setting up of a plant to manufacture urea and ammonium nitrate in order to provide a diversity and a balance in the availability of fertilizers from indigenous sources. However, it admits that because of rural ignorance the use of these types of fertilizers is still very limited. It therefore recommends a

drive to popularise them and would like the Government to import them to satisfy the existing and potential demand until internal production is able to meet it. The Mission believes that with a proper marketing organisation the manufacture of new types of fertilizers would be profitable.

Standing Labour Committee Meeting

A meeting of the Standing Labour Committee will be held here on 27th and 28th July. The Labour Minister, Mr. V. V. Giri, will preside. The five-point agenda includes a special review of the tripartite machinery, uniform standards for national and festival holidays in private industrial undertakings, productivity studies and programmes, payment of compensation for involuntary unemployment and Central legislation for shops and commercial establishments.

The tripartite machinery consisting of the Indian Labour Conference and its Standing Committee came into existence in August 1952. At its instance some industrial committees were also instituted. Since its inauguration 181 items have been discussed by the tripartite machinery, including all important legislative measures. In addition, its advice has been sought on matters that required the Government's attention. Nominally required the Government's attention for plantations, coal mining, cement, cotton textiles and tanneries, coal and leather, but it is the Plantation Labour Committee which has really been functioning. Since independence, the Labour Ministers' Conference, though not tripartite in character, has generally eclipsed the Indian Labour Conference and its auxiliaries.

That maximum productivity should be the target for every unit of production in any plan for better living is generally recognised. In consultation with the I.L.O., the Ministry of Labour has undertaken studies on systems of payment by results and productivity in the textile industry in Bombay State and in the engineering industry in the Calcutta region. Nine I.L.O. experts who came to India last winter have made their interim report. Higher productivity of individual workers and rationalisation and modernisation of equipment and plant might lead to some reduction in employment; however, the Government is opposed to retrenchment.

There is a marked variation in regard to paid holidays. In some cases no national and festival holidays are granted at all while in others they are adjusted against other holidays. The Standing Committee is being asked whether it is necessary or desirable to evolve uniform standards in respect of a number of national and festival paid holidays in commercial and industrial undertakings in India, and if so whether this should be done by

prescribing the number of days so allowed or by prescribing the maxima and minima of such holidays. Also whether there should be an all-India legislation for this purpose.

Earlier this month, the Central Labour Minister dealt at some length with the problem of involuntary unemployment arising from temporary stoppage or reduction of work because of shortage of coal, power, raw materials etc. or overproduction. He envisaged certain proposals and uniform procedure to deal with the problem. Reference, however, has been made to the railway wagon shortage, which often results in a shortage of coal or raw material. In Bombay, for example, priority given to the transport of fodder to Maharashtra has resulted in a cotton shortage in Ahmedabad. How far the employer is responsible for involuntary unemployment under such circumstances is a point which the Standing Committee will consider.

There are shops and establishment Acts in different States. It is often urged that in the interests of uniformity there should be an all-India Act.

Andhra and Tungabhadra

The Andhra State Bill has been returned by the Madras and Mysore Governments with their comments, it is learned here. The Madras legislature, meeting on 14th July, and the Mysore legislature, meeting on 13th July, are expected to adopt resolutions expressing their view in respect of the proposal to introduce the Bill in Parliament and with respect to the provisions of the Bill. The Constitution lays down that no bill for the purpose shall be introduced in either House of Parliament except on the recommendation of the President and unless, where the proposal contained in the bill affects the boundaries of any State or States, the views of the legislature of the State or, as the case may be, of each of the States has been obtained. It is to be noted that the President is not required to obtain the consent of the State legislature but has simply to ascertain its views, which may or may not be accepted by him. The views of the Madras and Mysore Governments will now be ratified by their respective legislatures—by Madras in respect of the opting of districts to form Andhra State and of Bellary district and by Mysore in respect of enlarging its size by the amalgamation of Bellary district.

Representatives of the Governments of Madras, Hyderabad and Mysore have been summoned for a conference on the Tungabhadra project to be held here on 9th July. At the Prime Minister's instance, its venue has been changed from Bangalore to New Delhi. The creation of Andhra State has made these discussions necessary. The Tungabhadra project is being implemented jointly

Private Reserve

always in perfect harmony

WITH YOUR MOOD OF THE MOMENT

Subject to local tax adjustments

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

by the Governments of Madras and Hyderabad. While Madras is financing it from its own resources, Hyderabad is using a loan from the Central Government. The project is located in Bellary district, so that after the creation of Andhra State and the merger of Bellary district with Mysore, it will fall within the latter's territorial jurisdiction. According to the plans under discussion, the Madras Government will include the cost of the project in the portion of debt to be allocated to Andhra State. Andhra State in turn will divide the cost with the Mysore Government on the basis of the canal water used by each of them. Although electric generators and lines have not yet been installed the other problem for the conference is the allocation of electric power to the participants in the projects.

According to the original plan, power from Tungabhadra was to be transmitted to Vijayawada and the east coast of India via Bellary, Anantapur, Cuddappah, Kurnool and Guntur. The transfer of Bellary district however has given Mysore the first claim to electrical energy. In the area adjacent to Bellary, Mysore has the highly industrialised towns of Harihar, Shimoga, Bhadravati and Chitaldrug, which will need an increasing amount of electricity. There are coffee estates in the locality also. Mysore's contention appears to be that it should be allowed to use all the electric power generated by the project. It is argued that enough electric power would be generated by the Krishna Punar project in due course which could be utilised by Andhra State. One snag however is that Mysore at present has no money to meet its apportioned liability and to put up the power generating plant. It is looking to the Centre for financial assistance, so the latter might be able to dictate terms.

States' Forest Policies

The Planning Commission has emphasised the need for soil conservation. Soil erosion follows deforestation. Tree Planting Week has now become an annual feature to prevent soil erosion and the spread of the desert. Side by side, unplanned deforestation is in progress. The budget provision for 1953-54 of the Forest Departments of various States, it is officially stated, shows that the largest revenue from forests is expected in Madhya Pradesh, Bombay and Uttar Pradesh. Here are the figures:

	Revenue	Expenditure
Madhya Pradesh	Rs. 321.61 lakhs	Rs. 65.03 lakhs
Bombay	Rs. 321.24 lakhs	Rs. 125.75 lakhs
Uttar Pradesh	Rs. 311.16 lakhs	Rs. 127.13 lakhs
Assam	Rs. 53.66 lakhs	Rs. 46.42 lakhs
Bihar	Rs. 70.86 lakhs	Rs. 56.50 lakhs

	Revenue	Expenditure
Madras	Rs. 165.61 lakhs	Rs. 84.03 lakhs
Orissa	Rs. 105.75 lakhs	Rs. 41.81 lakhs
Punjab	Rs. 56.23 lakhs	Rs. 46.29 lakhs
West Bengal	Rs. 53.62 lakhs	Rs. 68.28 lakhs
Hyderabad	Rs. 90.00 lakhs	Rs. 34.88 lakhs
Madhya Bharat	Rs. 75.00 lakhs	Rs. 28.99 lakhs
Mysore	Rs. 75.21 lakhs	Rs. 38.21 lakhs
Rajasthan	Rs. 39.61 lakhs	Rs. 27.80 lakhs
Travancore-Cochin	Rs. 165.00 lakhs	Rs. 75.10 lakhs

Some explanation is needed. The Forest Department in every State has a working plan to cut trees. During the last war, in order to meet military requirements, the felling of trees in advance was resorted to. Forests were partly rehabilitated when this was stopped for a few years after the war. In order to meet their revenue deficit some States, particularly Madhya Pradesh, have been felling trees on a wartime basis. In Madras, reserved forest areas were distributed to "political sufferers," who resorted to tree cutting indiscriminately. Forests are rehabilitated by natural regeneration, by the afforestation of blank spaces and by the reforestation of existing plantations when trees are cut down. Both afforestation and reforestation cost money and expenditure on the Forest Department is a yardstick to measure the effort a State makes on the rehabilitation of its forests. The figures quoted above should indicate that Assam, Bihar, Punjab, West Bengal, Rajasthan, the Andaman and Nicobar Islands, and even Travancore-Cochin are taking adequate steps to preserve their forests and thereby prevent soil erosion. It will be equally evident that some States are recklessly exploiting their forests to meet their revenue difficulties. According to the Planning Commission, the total acreage under forests in 1950 was 147 million, from which States were earning a revenue of Rs. 14.47 crores. This works out at less than Re. 1 per acre per annum in the whole of India. The Central Agriculture Ministry, instead of asking the offending States to stop their vandalism, regards this as too low a profit and has called upon States "to tackle this disheartening position effectively and improve upon it" by working through the Standing Committee of the Central Board of Forestry. Why the Government should waste the taxpayers' money on combating soil erosion is not disclosed.

Madras Wants Civil Servants Back
The Government of Madras has asked for the return of its civil servants now employed under the Government of India, it is learned. Its plan appears to be to call its officers back to Madras, have them apportioned between itself and Andhra

and return the surplus, if any, to the Government of India. Such a plan would disorganise work in the Government of India. The Government of India, however, has decided to enforce rigidly the tenure system and all its I.C.S. officers after serving for three or five years shall have to return to their State unless they are given an executive post as distinct from a post in the Secretariat. This decision does not apply to officers belonging to the Finance and Commerce Pool. In pursuance of this policy Mr. M. P. Pai has become Managing Director of Sindri Fertilizers and Chemicals Limited.

Indo-Egyptian Trade Agreement

The Indo-Egyptian Trade Agreement, initiated by the Commerce Secretary, Mr. H. V. R. Iengar, during his recent visit to Cairo should stimulate Indian exports not only to Egypt but to all Middle Eastern countries, it is emphasised here. The last régime in Egypt, it appears, ran through its entire sterling resources and it was left to the present régime to remedy the damage done to that country's financial stability and trade. A novel device has been adopted by the present régime under which 25 percent of the foreign exchange earnings of an individual are surrendered to the State in exchange for the local currency. An individual is entitled to sell the balance of his foreign exchange holdings to his best advantage in the market. In actual practice, he gets some premium on these sales. India has always had an adverse balance of trade with Egypt. Her principal import from Egypt has been long staple cotton, which averages Rs. 34 crores a year in value. India's exports average Rs. 5 crores a year, and the chief of these are jute and tea. Under the latest Agreement, 40 percent of Egypt's earnings in India will be paid in rupees and will be kept with an Egyptian bank in India to finance Egyptian imports from this country. The unspent portion of this fund will be remitted to Egypt at the end of one year, for which India will make sterling available to Egypt. If Egyptian imports are more than can be paid for by this fund, the Egyptian Government will provide an additional 10 percent of the total sterling earnings from India to meet the additional trade liability. This 10 percent sterling will be kept in a special India Account in Cairo. It is further learned that 25 percent of the 60 percent sterling earnings will have to be surrendered by Egyptian traders to their Government, the balance being available to them for financing their trade. It will be evident that as far as imports from India are concerned, an Egyptian trader would not have to pay any premium on his purchases of sterling. Unlike his other exchange transactions, he will get it at the official rate. On the average, exchange worth Rs. 17 crores a year will be available to finance imports from India.

There is general goodwill and friendliness for India in Egypt. In contrast to this, Anglo-Egyptian trade is practically at a standstill. Britain's purchases of Egyptian cotton have dwindled to almost nothing. This, in turn, has affected British exports to Egypt. India has an unexplored market for its manufactures in Egypt and the Middle East. One snag is that Indian goods are practically unknown in Egypt. It is for Indian manufacturers to organise showrooms and exhibitions in Egypt and thereby exploit the opportunity offered them by the Trade Agreement, it is emphasised here. They can succeed if they are honest and if their goods are of good quality and competitive in price.

Indo-Burmese Trade Talks

Letters were exchanged during the week by the delegates to the Indo-Burmese trade talks modifying the five-year Indo-Burmese Trade Agreement of 1951. They did not discuss the issue of Imperial Preferences, which are being abolished by Burma. The price factor being the main obstacle, the Agreement makes no fresh provision in regard to rice. As matters stand at present, India needs no Burmese rice in 1953. The rice requirements during 1954 by December this year and will negotiate the price of its rice requirements, which could be up to half a million tons from Burma. The scheduled of Indian exports contains 104 items including sewing machines, continental pipes, diesel engines, paints and varnishes, brass and aluminium sheets, machine tools, cements and steel products.

The existing trade agreement between India and Burma was signed in September 1951 after the visit of an Indian delegation to that country under the leadership of the then Food and Agriculture Minister, Mr. K. M. Munshi. It consists of three parts. Under the first part, which was valid from 1st May to 31st December, 1951, the Government of Burma agreed to supply 2.45 lakh tons of rice to India, and the Government of India in turn fixed certain quantities of gunny bags, groundnut oil, cotton yarn and galvanised iron sheets for export to Burma. Part two of the agreement, covering the period from 1st January, 1952, to 31st December, 1955, provided for an annual import from Burma of 350,000 tons of rice, 230,000 tons of it on a Government-to-Government basis. It also provided for the export to Burma of gunny bags, groundnut oil, cotton yarn and iron and steel products. Under part three, the two Governments agreed to hold periodical consultations in respect of any trade matter during the currency of the agreement. Under the schedule of the agreement Burma has undertaken to permit, during the five-year period, the export to India of gram and has similarly undertaken to permit the export to Burma of cotton piecegoods, hosiery, rayon piecegoods, manufactures of coir, leather and rubber, electrical goods, chemicals, coal and coke, paper and paper manufactures, tea, spices, soaps and toilet requisites, fish, fruit and vegetables, provisions and oilman's stores, tobacco and miscellaneous other items.

London

GOVERNMENT SPENDING REDUCED

JUNE GOLD AND DOLLAR SURPLUS (FROM OUR OWN CORRESPONDENT.)

WE have just completed the first quarter of the financial year, and although results at this stage can hardly be regarded as a good or reliable guide for those of the year as a whole, it is interesting to examine them from the point of view of the success or failure of the Government's economic policy. They disclose an excess of expenditure over revenue of £156 million—a more or less normal state of affairs, save that at the same time last year the deficit amounted to rather more than £200 million. The smaller deficit arises from the fact that Government expenditure is down by £87 million to £1,053 million, offset by a drop in revenue of just over £22 million to £897 million. The movements under the various revenue heads are illuminating. Income-tax receipts are over £21 million down at £238,886,000, and the fall in profits tax at £43,100,000 is almost as great. Surtax receipts, however, are steady at just over £21 million, while duties at £45,200,000 are over £6 million higher and the combined yield from Customs and Excise, £435,708,000, is almost £5 million up. Even more encouraging, perhaps, is the fact that the Treasury returns also show an improvement "below the line." By comparison with last year's deficit of nearly £154 million, this year's shortfall is just under £120 million, mainly as a result of reduced borrowings by local authorities, which are down by £18,650,000. The total deficit overall works out at £276 million, and a year ago it stood at £355 million.

A.E.I. Shares Cost \$22 million

The sterling area's gold and dollar surplus in June was \$46 million, against the May figure of \$48 million, to raise the total to \$2,367 million. On the face of it this appears rather disappointing, but closer examination reveals that it is indeed quite satisfactory. It is arrived at after taking account of \$28 million of American defence aid, against only \$13 million in May, but with only \$21 million from the E. P. U. against May's figure of \$21 million from that source. Seasonal factors are against the sterling area at present, but the surplus would have been much higher in June but for the payment in the second half of the month of some \$22 million for the repurchase of shares in Associated Electrical Industries from the American General Electric Company which has resulted in this important undertaking coming fully into British hands. But for this, the June surplus, excluding defence aid, would have been \$30 million instead of being only \$8 million, compared with the comparable figure of \$35 million in May. Dollar receipts from Coronation visitors are included in the June balance, which otherwise might well have been lower. Keeping that in mind, and the fact that the June surplus with the E. P. U. is down to £11 million, as a result of the half-yearly payment of \$9 million on the remaining British debt to the Union, of which we will receive some £800,000 in gold or dollars about the middle of this month, there may well be a levelling-off of the steady upward trend. The total reserves are now around the level at the end of 1951, but still a long way below the end-1950 figure and what might be regarded as adequate.

The retirement of Sir Edwin Plowden from the post of Chief Planning Officer to the Government and Chairman of the Economic Planning Board, which it is now announced will take place in October, is not after all to deprive the Government of his advice, for he will continue to be a member of the Board at the request of the Chancellor of the Exchequer. The move, however, marks several changes in the machinery of Government which will have the ultimate result of centralising economic policy in the Treasury, to which the Economic Section of the Cabinet Office, which has hitherto worked as a "common service" to the Government as a whole, is now to be transferred.

Commodity Price Reductions

The commodity markets have produced a few useful developments during the week. The fall in the price of aluminium, which last week was expected to be £6 per ton on the basis of the Government's agreement with Canadian producers, turns out in fact to be larger at £11 per ton. Sharp reductions have also been announced in the prices of rayon staple fibre, which is lengths of rayon used in the spinning industry in competition with cotton and other textile raw materials. Courtaulds are lowering the price of Fibro from 2s. 3d. a lb. to 2s. a lb., which more than offsets the 2d. increase which was made in February, 1952, and far from being a sign of trade falling off is apparently due to the fact that production is now at the near record level of about 200 million lbs. a year. British Celanese, makers of acetate rayon staple fibre called Celafibre, are maintaining its price at 3s. 6d. a lb. but are to introduce a cheaper variety at 2s. 9d. a lb. It is confidently expected what these price adjustments will help to sustain exports of both yarns and fabrics. From Holland, and the Seed Crushers Congress which is now meeting there, comes an estimate by Mr. J. C. Faure that the world shortage of oilseeds and edible fats is over and that current supplies are adequate to meet effective demand, though population increase will necessitate higher production in a few years' time. A move in the opposite direction is a Ministry of Supply Order which increased from last Wednesday the basis price for tinplate by 1s. 1d. per basis box and for tin coating extras by corresponding amounts.

This does not alter the maximum permitted selling prices for tinplate but aims at their temporary stabilisation pending a detailed examination of the price structure of the industry.

Sir Winston Churchill

The news that Sir Winston Churchill's medical advisers insisted on the Prime Minister taking complete rest for at least a month was unexpected—only the day before he had been answering questions in the Commons and the names of his advisers for the Bermuda talks had been announced—but occasioned little surprise, for the burden which Sir Winston has been carrying for some time has been extremely heavy. In addition to his own responsibilities he has been in charge of the Foreign Office during Mr. Eden's absence at what was a critical period in international affairs, was an active participant in the discussions between the Commonwealth Prime Ministers, and inevitably fulfilled a more than usually crowded social programme associated with the Coronation celebrations. The strain would have taxed the energies of a much younger man, and it is a high tribute to Sir Winston's sense of duty that it was not until he had discharged the majority of these duties that he finally agreed to accept the doctors' advice, though even then it was his intention to maintain control of the helm while resting at Chartwell. The anxiety occasioned by the news was completely genuine and there was considerable relief when Sir Winston, bowing to criticism from Mr. Attlee—occasioned, one feels, not solely by political motives—created a precedent by appointing Lord Salisbury "Acting Foreign Secretary" pending Mr. Eden's return to duty instead of adhering to his original plan of retaining control himself and sharing out the duties among a number of his other Ministers. Investing Lord Salisbury with this fuller authority is particularly welcomed in view of the meeting of Foreign Ministers which is now planned as a partial substitute or perhaps merely a curtain-raiser, to the Bermuda talks. Meantime Sir Winston appears to be responding well to his rest cure.

Parliamentary Business

In his absence, however, the Parliamentary scene has lost some of its colour though there has been much controversial material on its agenda, including several items on which Conservative back-

benchers are unable to see eye-to-eye with Government's policy. This was evident in respect to the proposal to merge the Ministry of Pensions with the Ministry of National Insurance, but it was carried by a Government majority of 14. It manifested itself again when the long-awaited statement on television policy was made to both Houses. This came as something of an anti-climax to the controversy which has raged in the press and on the platform, for it merely reiterated the earlier decision of the Government "to permit some element of competition" without making a final decision or any commitment as to the form it might take. "Might" not "shall," it will be noted. As to which it will be left over for decision until after the publication of a further White Paper on the subject in the autumn and further debate in the House of Commons, but meantime the B.B.C. gets the green light to go ahead with its expansion plans and on assurance that it will remain intact, while those interested in commercial—not sponsored—television are given five basic conditions which will control their operations, if and when they are permitted to operate.

For this partial retreat the Government has been compensated in other directions. The Opposition expected much from the debate on education in view of a very adverse select committee report. In the event, however, Miss Horsburgh, the Minister of Education, and Mr. Macmillan, the Minister of Housing, succeeded in rebutting the charges levelled against the Government's policy and even of making them rebound on the previous Government. The exchanges produced a Government majority of 33. The Government's retention of Abingdon—a marginal seat—with an increased majority coincided with this debate, and was followed by the announcement of further substantial progress in the May housing figures. Another by-election victory was reported at Edgbaston, and although the Conservative majority was down on the General Election figure, their candidate secured a larger proportion of the reduced poll. At the same time, the Government is steadily progressing with its plans. The 13th July has been announced as the "appointed day" under the Iron and Steel Act, 1953, when the Iron and Steel Corporation ceases to function and the Iron and Steel Board and the Iron and Steel Holding and Realisation Agency start on their duties.

Keeping 'tabs' on 12,05,000 daily journeys

Every day, Bombay's 260 trams and 350 buses carry an average of 12,05,000 passengers. Every day, Bombay's Electric Supply and Transport Undertaking receives—through its Hollerith installation—closely analysed returns of this vast traffic: a contribution of inestimable value to the economy of a great Corporation serving a great community. Throughout Asia, Hollerith installations in leading industrial and commercial undertakings are contributing similarly to the promotion of efficiency and reduction of costs. May we talk Hollerith with you?

Publications of greatest interest to key executives are *THE TABULATOR*, issued periodically, and *IN BUSINESS TOO*, describing Hollerith methods. Copies can be obtained by applying to any of the offices below—on your business note-heading, please.

U.S. WHEAT GIFT INJECTS NEW LIFE INTO ECONOMY

FOREIGN EXCHANGE AND IMPORT CONTROL

(FROM OUR OWN CORRESPONDENT)

Karachi, 3rd July, 1953.

PAKISTANIS in all walks of life must have heaved a sigh of relief when the news came that the American Congress had approved the free grant of one million tons of wheat. It was no doubt a foregone conclusion that the wheat would be forthcoming, but up till quite recently there was still a possibility that it would take the form of a loan instead of a free gift. If this had happened, Pakistan would no doubt have been tided over the immediate famine threat, but the fact remains that future development of the country would have been gravely retarded since the service of the loan in dollars would have absorbed Pakistan's dollar earnings for very many years to come. As it is, American generosity has injected a new life into the economy of the country. Not only will ample wheat now be available until the next harvest, taking into consideration also the quantities to be received from Canada and Australia, but it will be possible for the Government to keep prices of foodgrains down by selling the wheat at a concession rate if this is thought desirable. It will probably be necessary to do this in order to prevent the American condition that the wheat must be supplied free to persons who are unable to pay for it becoming too embarrassing.

Over and above this the sale proceeds of the wheat, which are to be placed in a special counterpart fund to be operated jointly by American and Pakistani officials, will produce ample funds for development. The Pakistan Government were already fairly well supplied with funds for internal expenditure on their development schemes by reason of the success of the recent government loans, which produced investment of new money amounting to Rs. 17 crores. The additional fund will be very substantial indeed, and it is understood that the prospect has enabled the Government to decide that all the approved development schemes can now be proceeded with. There was otherwise a great danger that some of the major ones would have to be shelved indefinitely. Incidentally, the fact that the special counterpart fund is to be jointly administered does not mean that America will get any preference in the placing of orders for equipment; it merely means that the schemes to be financed out of the fund must be jointly approved, and once that has been done the Pakistan authorities can place their orders on the most favourable source of supply.

Admittedly, foreign exchange resources will still be an important limiting factor, for they are helped by the American gift only to the extent that it lifts from Pakistan's shoulders the potential burden of payment for imports of wheat. Other forms of foreign aid are, however, many and various—the Technical Co-operation Administration of the United States is at present being particularly helpful—and the Government hopes that the slender resources gained from its export earnings will be greatly amplified thereby.

New Import Policy Soon

Foreign exchange remains, of course, the key factor in the formulation of Pakistan's import control policy. It is understood that the policy for the second half-year has, during the past week, been under the consideration of the authorities concerned and that an announcement is likely to be made shortly. It is generally recognised that although May and June figures of the balance of payments have been satisfactory (no details have yet been released) there will be little possibility of further import licences being issued as advance licences have already been issued for industrial requirements in the current half-year. The probability is that licences will be restricted to goods to be imported in pursuance of trade agreements, especially those with Japan and France, and certain classes of goods urgently required to relieve the most glaring shortages in the country.

National Development Plan

It appears to be certain that Mr. Zahid Hussain is to be Chairman of the new Planning Board, and that his place as Governor of the State Bank is to be filled by Mr. Abdul Qadir. Mr. Qadir, who is one of the two Secretaries of the Finance Ministry, has recently undergone an operation in America, but he has made a good recovery and is expected back in Karachi about the middle of this month. He has previously officiated as Governor of the State Bank and his appointment will be warmly welcomed.

No decision has yet been made about the remaining personnel of the Planning Board. The probability seems to be that there will be two whole-time members, in addition to the Chairman, and that the Board will be assisted as required from time to time by technical experts whose services will be supplied under the Colombo Plan and other foreign aid schemes. The main object of the Board will be to prepare an overall plan for the economic development of the country. It is recognised that despite the large variety of plans and programmes produced during the past five years, no such plan is in existence at present. The "Six-Year Development Programme", which was prepared as part of the Colombo Plan and was intended to cover the period July 1951 to June 1957, is hopelessly out of date; at best it was put together somewhat hurriedly and the figures of costs, if nothing else, would have to be largely revised. For the last two years, schemes, whether submitted by departments of the Central Government or by the provinces, have been examined and approved by the Planning Commission rather than on their individual merits than with reference to any integrated programme for the development of the country as a whole.

Dividend Remittance

A recent decision of the State Bank of Pakistan, on an application to remit dividends, in making their application of principle. In that no bank finance would be required in connection with the remittance beyond the amount already sanctioned by the Bank for credit facilities. The Bank turned down the application on the ground that it could not agree to the remittance being made out of the amount of overdraft sanctioned to the company. In response to this the company pointed out that the Bank had allowed the credit facilities to meet the heavy seasonal demands placed on them at certain periods of the year, and that the question of these facilities was a separate and distinct matter from the question of the profits earned by the shareholders of their capital. They urged that the shareholders were entitled to a reasonable return on their investment whatever might be the temporary situation of the company's banking account. The remittance was then allowed by the State Bank.

Bombay

NATIONALISATION AND INVESTMENT
TWO INDUSTRIALISTS' WARNINGS
TO ENTREPRENEURS

(FROM OUR OWN CORRESPONDENT)

5th July.

THE monsoon, which is the key season for all economic activities in the State, has begun well, holding out a promise of greater demand for goods and increased turnover for trade and industry. But business men are not cheered by these improved prospects. They are worried over fundamentals and long range policies, and the nationalisation of air transport this week has raised doubts among many of them. It was not so much the formal inauguration of the two nationalised air corporations that has made them uneasy. The issue so far as air transport is concerned had been settled months ago and the business community has reconciled itself to it. But, except for those directly interested and involved in this particular details regarding the grounds advanced for early nationalisation and the basis of compensation. It was Mr. J. R. D. Tata's speech to the shareholders at the final meeting of Air India International Ltd., which attracted attention to this aspect. The atmosphere at the deathbed of a youthful organisation was bound to be oppressive. For, unlike the internal passenger airlines this company was healthy and prosperous, and had shown remarkable expansion in its short life. Even with the greatest goodwill, Mr. Tata, who was mainly responsible for bringing the old company into being, could not but be expected in his funeral oration to be gloomy and dejected.

It must be said to Mr. Tata's credit that he was free from the slightest trace of bitterness and was careful not to say anything which might be discounted as rancour, even if he felt any towards those who were responsible for what appeared to many as a wanton act to satisfy an ideological urge. But it would have been too much to expect the progenitor of this concern not to criticise certain aspects of the Government's policy, apart from the general issue of nationalisation itself. He described to the meeting how, though the Government had been closely associated in the capital and management of the company since its inception, the authorities failed to take the Board into their confidence about the Secretariat's plans. At no time were the directors consulted, though it was a joint State and private enterprise business. Mr. Tata revealed that the Government was unwilling even to discuss alternative proposals which would have secured it full control over the Company's policies and operations, now provided by nationalisation, without a break in continuity and without giving a severe jolt to private enterprise, particularly at a time when confidence was required and not further estrangement between the two sectors. Mr. Tata was equally critical of the basis of valuation on which the assets of the concern were being taken over by the Government.

Nationalisation Fears

Air nationalisation has created doubts among industrialists about the future of the private sector. The fear is growing, in spite of formal assurances from various Ministers of the improbability of the Government taking over industries for a long time to come, that it might be their turn some day to be absorbed in the same way as Air India International. But they are disturbed more by the manner in which such absorption might be effected. From the example of this successfully run concern, they feel that whenever there is a political urge to widen the field of nationalisation, the nature of their management—however good or however much in conformity with the interests of the country as a whole—would fail to save them. They are certain that the process of nationalisation would involve as large an element of appropriation as of fair compensation, with the buyers dictating the terms of the transaction and the sellers having no say in the matter.

The industrial community here is therefore surprised at the official pressure being brought to bear on it from all sides to expand existing activities and to launch out into new fields. Not a week passes without a reference by some Minister to the disappointing behaviour of private enterprise in not increasing the volume of investment in industry. The Planning Commission is also believed to be disappointed by the inability of the private sector to provide more than Rs. 60 crores, which according to its estimate was the actual amount of new investment in industry during the first two years of the Plan, when the rate of investment envisaged in the plan was about Rs. 50 crores a year.

The Government takes care to see that as little as possible is left to the industry for reinvestment, and at the same time investors in private companies are discouraged by the Government's attitude, as instanced in the case of Air India International. Then there is the clear warning from important industrialists such as Mr. Tata and Mr. M. A. Sreenivasan of the Kolar Gold Mining Companies, against venturing into new enterprises. Mr. Tata made no bones about this and said that one of the lessons to be drawn from the Government's treatment of the air transport industry was that private enterprise should not in future rush into a new field without making sure

that the industry would be allowed to function with a reasonable measure of freedom. Even if an assurance of this kind is forthcoming, will it be worth anything in view of the presence of such legislation as the Industries Act?—ask industrialists. Mr. Sreenivasan went even further and said that starting a new industry today seemed to be an adventure calling for bravery bordering on heroism. It is for the Government and the Planning Commission to inform business men how they should approach the public for new share capital to expand existing industries or to start new ones, in view of the misgivings which they have themselves created in the mind of the investing public.

LONDON INSURANCE LETTER

NATIONAL INSURANCE SCHEMES

By Air Mail.

WHATEVER disagreements there may be concerning the working of national insurance schemes, it is agreed that provisions between one country and another should be as far as possible reciprocated. The agreement signed in June between the U.K. and Australia was accordingly welcomed here. Its essence is that people who change their place of residence from the one country to the other, either way, will receive approximately the same benefits as the general population of the country where they have newly arrived. This agreement should take effect early next year. Partial reciprocity had been in force previously between the U.K. and Australia and between the U.K. and New Zealand, and between Australia and New Zealand full reciprocity exists already.

U.K.'s own national insurance scheme is causing some anxiety to the actuarial profession and to far-thinking economists. The Government Actuary has prepared an interim report on the National Insurance Funds during 1951-52, and its publication is the occasion for reconsidering the trend. There is nothing disquieting in the immediate position. Compared with the preceding period, total income decreased by £13 million to £519 million and total expenditure increased by £30 million to £448 million; but there was, thus, still a net increase in the funds by just over £100 million, to £1,357 million. But the steady growth of benefits, as, particularly, the number of pensioners increases, will cause a large deficiency within the next generation.

The national insurance scheme works, of course, on quite other principles than those of ordinary life assurance. It does not relate contributions to claims, for instance; retirement pensions at the full rate are available to people who were near to the pensionable age when they began to contribute. And it does not accumulate actuarial reserves for pensions; so there is no such income to meet expenditure as would arise from funds equivalent to the capital liabilities, invested to earn interest.

Coronation Claims

Taken as a whole, underwriters' experience of Coronation insurance has not been unfavourable. The weather played curious tricks; for spectators and for many participants at fêtes it was wet and dismal, but for underwriters and for holders of insurance policies against rain the weather was on the borderline. The amount of rainfall at the crucial period was not, on average, much different from the amount—usually one-tenth of an inch over five or six hours—against which policyholders had insured. But in some areas it was more, in others less; and some policies did not cover quite the right hours of the day to substantiate their holders' claims.

The total of valid claims was not inconsiderable, but it was not excessive, in relation to premiums averaging about 10 percent. There was a considerable "spillover" of policies relating to fêtes and other events on other days in Coronation Week, and the weather was better on other days than on Coronation Day itself. Moreover, this type of insurance against wet weather received much useful publicity in connection with the Coronation. Underwriters report already a noticeable increase in interest among organisers of the smaller sporting events and of other functions.

Insuring Unseaworthy Vessels

No claims on the marine insurance market arise from the loss of the cross-Channel boat Princess Victoria in the gales early this year, as the vessel was owned and operated by the British Transport Commission, which generally bears the risks itself. But the findings of the tribunal which investigated the loss underlined an important principle. It was revealed that the master of the ship had reported "material defects", but that his reports had not been properly forwarded. The defects, therefore, were not remedied, and the owners were found "privity to the unseaworthiness" of the vessel. Such a finding would be reasonable cause for disputing claims. On the other hand, a court of inquiry has no judicial authority, and its findings might themselves be disputed.

REVOLUTION ON THE RAILS

Heavier trains and higher speeds characterize modern railroading. By introducing new ideas as they were developed—electric motor, internal combustion engine, the turbine—General Electric has shown continuous progress towards the ideal motive power in each successive locomotive type. Since 1895, when the first heavy-duty electric locomotive was built for the Baltimore and Ohio Railroad in U.S.A., General Electric's research and engineering skill have contributed to the development of locomotion by electricity, diesel-electric and gas, the latest contribution being the gas turbine electric locomotive. Inaugurated 75 years ago in U.S.A., when its parent company was first established, General Electric's unlimited resources, skill and research have been used and are available to India for the development of her industrial potential.

This is General Electric's 50th Anniversary of Service in India.

Plant condition is very satisfactory and they range in height up to 6' 6". Harvesting has been going on steadily on the lowlands and we estimate 2/6 has already been cut. The river has risen steadily during the week and is about the same level as at the corresponding date last year.

DHUBRI: Moderate rainfall has been experienced. Condition and growth of the standing crop is satisfactory but a few days of sunshine is required to promote the growth of the standing crop. The river is rising steadily and is higher than at the corresponding date last year.

KHARUPETIA: Alternate rain and sunshine has been experienced and this is favourable for the standing crop. Harvesting has been carried on in the lowlands on a small scale and we now estimate that 1/6 of the crop has been cut. Plant condition is satisfactory. The river is rising steadily and is now higher than normal.

DAISSEE DISTRICTS: The weather has been mainly cloudy but not much rain has been experienced. This has been favourable to some extent but a spell of good sunshine is now very necessary for the standing crop. Plant condition can still be considered satisfactory but in the case of later sowings the younger plants require further sunshine to promote their growth. Plants range in height up to 4' 6". First weeding operations have been completed in all areas and second weeding operations have commenced in some places.

Rainfall	For the Week	Total from 1-4 January	Over the week-end
Danpur	1.50"	10.19"	
Jaipur Road	3.07"	13.56"

Cosimbazar	2.04"	16.42"	
Nowgong	3.44"	30.48"	
Gauhati	1.12"	35.63"	
Dhubri	2.77"	37.91"	2.02"
Kharupetia	2.52"	36.52"	

N.B. As a basis of comparison last season's crop has been taken as 1/16/-.

PAKISTAN CROP PROGRESSES

In their eighteenth crop report of the current season, covering the week ended 4th July, Messrs. Sinclair Murray (Pakistan) Ltd., say that favourable

weather conditions have been experienced in most districts although further sunshine is required to promote the growth of later sowings. Rivers are rising and lowland harvesting is well in hand. Weekend reports say that excessive rainfall has been experienced in some areas.

NARAYANGANJ: The weather has been favourable with spells of alternate rain and sunshine which is beneficial to the standing crop. Harvesting of the lowland crop has been taken well in hand owing to a steady rise in the river level. Plants are reported to be healthy and range in height from 5' to 8'.

DACCA: The weather has been favourable with alternate rain and sunshine. The condition of plants is satisfactory and they range in height up to 8'. Because of a steady rise in river levels harvesting has been resumed on a moderate scale in the lowlands.

CHANDPUR: The weather has been favourable for the standing crop with spells of alternate rain and sunshine. Harvesting of the lowland crop has been curtailed to some extent because of insufficient steeping water but recent reports intimate that the river is once again rising and harvesting of the lowland crop is expected to be taken in hand during the coming week. The river level remained steady and at the same level as at the corresponding period last year.

HAIJIGANJ: Fairly heavy rainfall has been experienced but although this is not unfavourable for the standing crop a spell of dry weather and good sunshine is necessary to promote growth. Harvesting is progressing steadily in lowland areas. Plant condition is reported as satisfactory and they range in height up to 6'. The river level is 4' lower than on the corresponding date last year.

AKHAURA: The weather has been favourable with alternate rain and sunshine. Plant condition is reported to be satisfactory and they range in height from 5' to 6'. River levels during the past week have remained almost static but the level now stands at 2' 9" higher than at the corresponding date last year. For this reason cutting has been suspended meantime and will only be resumed on a further rise of river levels.

ASHUGANJ: The weather has been satisfactory with spells of alternate rain and sunshine although more sunshine is required to promote growth of the crop. Plant condition is satisfactory and they range in height up to 7'. Harvesting of the lowland crop is

nearing completion. The river has risen slowly during the past week and is now 2' 9" higher than last year at the corresponding date.

NIKILDAMPARA: The weather has been wet and cloudy with short spells of intermittent sunshine. Plant condition is reported to be unsatisfactory because of stunted growth of plants which range in height from 4' 6" to 6' 3". Harvesting has been progressing during the past week on a general scale and it is estimated that about 2/2 of the crop has been cut to date. New crop arrivals of Weedings are reported to be very disappointing. The river level has risen 1' 9" during the past week and is now 3' 5" higher than on the corresponding date last year.

SARISHABARI: The weather has been favourable for the standing crop. Plants range in height from 2' 6" in the highlands to approximately 7' in the lowlands. Cutting has commenced on a small scale on chur and lowlands; it is expected to continue next week on a larger scale owing to a steady rise in river levels. The river has risen 5' 3" during the week under review and is now approximately 2' higher than at the same time last year.

SERAJGANJ: The weather has been favourable with alternate rain and sunshine. Plant condition is generally satisfactory and they range in height from 2' 6" in the highlands to 7' in the lowlands. Harvesting has commenced and is continuing steadily. The river level has risen 3' 3" during the past week although the level is estimated to be still 1' lower than on the corresponding date last year.

NAKALIA: The weather has been favourable with alternate rain and sunshine but further favourable weather conditions are still required to promote growth. Harvesting was started on a small scale in the lowlands towards the end of the week because of a rise of 2' 3" in the river which now stands at 1' below last year's level on this date.

BHANGGOORA: The weather has been favourable. Plant condition is satisfactory although some slight insect damage has been reported in the Tussar crop. Plants range in height up to 7'. Harvesting has been started on the very lowlands on a small scale but there are reports of lack of steeping water. The river level has risen 1' during the past week and now stands at 2' 3" lower than on the corresponding date last year.

Rainfall	For the Week	Total from 1-4 January	Rainfall Over the Week-end
Narayanganj	0.56"	29.20"	34.90"
Dacca	5.25"	5.12"	43.13"
Chandpur	6.21"	8.56"	40.27"
Haijiganj	5.73"	7.50"	37.25"
Akhaura	2.97"	7.95"	37.19"

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Looms for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
LEDS, ENGLAND.

The J.3 Loom (3-leaf, 3-shuttle) weaves twill tubular cloth for socks.

Commodity Markets

COTTON TEXTILE TRENDS AFTER THE RECESSION

RECOVERY NOT UNIVERSAL

THE latest available figures relating to the world's cotton industry and trade do not, on the face of it, bear out the general impression of a steady recovery from last year's recession. Although information is incomplete, cotton yarn production in the main manufacturing and exporting countries in the first quarter of 1953, as recorded in the Quarterly Statistical Review of the Cotton Board, was almost certainly less than in the final quarter of 1952, and about 2 percent below the level of the first quarter of 1952. Only India was producing substantially more than a year previously. However, it is probably the case that this latest fall in output is the result, in part at least, of fortuitous and temporary factors, and does not indicate a reversal of the previous upward trend.

Of more significance is the fact that exports of cotton piece-goods from the main exporting countries in the first quarter of 1953 were roughly 5 percent below the previous quarter's total, and were down to the low level of the second and third quarters of 1952. Most of the exporting countries shared in this decline, only Japan being able to achieve a significant expansion in exports. Continuing import restrictions in various parts of the world are helping to keep world trade at a low level. Trade in rayon goods seems to be faring rather better. Exports of rayon piece-goods from the main exporting countries increased slightly in the first quarter of this year to something approaching the high 1951 level.

U. K. Recovery Slow

Activity in the British cotton industry has continued to improve steadily, though rather slowly, in the first few months of 1953. Total production during the first quarter of the year was, however, still below that of the corresponding period of 1952, before the full effects of the recession had made themselves felt. The latest figures show the total output of all kinds of yarn to be 15 percent below the post-war peak reached in November, 1951. The different products of the spinning section of the industry have fared very differently, however. Thus, whereas the output of cotton and cotton waste yarns has declined by 22 percent, that of spun rayon and mixture yarns has increased by over 50 percent. The latest figures for the weaving section tell a similar story; the rate of output in April (allowing for holidays) was approximately 19 percent below the November 1951 level, cotton cloth production having fallen by roughly 25 percent and rayon and mixture cloth production by about 5 percent. Products whose output is greater now than at the pre-recession peak include spun rayon fabrics, mixture fabrics of continuous filament and spun rayon, and cotton rayon mixture fabrics. This significant advance on the part of rayon at the expense of cotton, coming as it does after a period when the relative proportions of rayon and cotton in the total output of the industry had remained virtually constant, is the more noteworthy in that the relative price of the artificial as against the natural fibre is now much less favourable than formerly.

The latest figures of finishing activity reveal some interesting contrasts in the progress of the various sections. For example, in the first quarter of 1953 output in the piece dyeing section was 98 percent of the 1951 rate, and output in the finishing proper and raising sections was greater than the 1951 average; on the other hand machine printing output was only 79 percent of the 1951 average, and piece bleaching output only 82 percent. Particularly noteworthy is the expansion in the dyeing of rayon fabrics, especially spun rayons, as contrasted with the decline in the output of printed rayon fabrics.

The output of the cotton industry is still limited by the shortage of labour. Exports of cotton piece-goods from the U.K. in the first quarter of 1953 were rather less than in the final quarter of 1952; a slight improvement was recorded in April, however. Exports of rayon piece-goods were virtually the same as in the preceding quarter. It is interesting to note that spun rayon fabrics, which in 1950 and 1951 accounted for well under a half of total exports of rayon fabrics, now account for about two-thirds of the total. Imports of cotton piece-goods were rather greater in the first quarter of 1953 than in the previous quarter. The increase is wholly accounted for by imports of grey cloth from Japan for process and re-export. This trade is still being carried on under Colonial import licences, although no licences for it are being issued in Britain.

U.S. Consumption

The daily rate of cotton consumption in the United States was at a high level again in February and March, following the surprising decline in December and January. There was a slight fall in the rate in April, but this appears to be a seasonal effect. Cloth production figures for 1952, but these later than the fourth quarter of 1952, but these confirm the recovery from the recession. Cotton cloth output was then about 8 percent greater than in the corresponding period of 1951, and rayon

cloth output about 22 percent greater. During the first three months of this year mill stocks were further reduced, but little progress seems to have been made in lengthening order books, and mill margins, which increased every month between June, 1952, and January, 1953, fell slightly in February and again in March.

In the first two months of this year exports of cotton piece-goods averaged 53 million square yards per month, as compared with the relatively high average of 65 million square yards for the final quarter of 1952. Exports to Canada continued at a high level, accounting for 36 percent of the total. Exports to the Philippines were also at a high rate, this being the second largest market, but shipments to Indonesia were drastically reduced. The United States is the second most important exporter of rayon piece-goods in the world after Japan. In the first quarter of 1953 exports of rayon piece-goods were considerably greater than in the preceding quarter, this being largely accounted for by increased shipments to the Philippines, which is easily the largest market.

Japanese Exports Expand

Cotton and cotton waste yarn production in Japan amounted to 187 million lb. in the first quarter of 1953, as compared with 202 million lb. in the preceding quarter and 204 million lb. in the first quarter of 1952. This decline was due to the reduced ceiling fixed by the Ministry of International Trade and Industry, and also to a seasonal shortage of electric power. The ceiling was raised from 150,000 bales in January and February to 160,000 bales for the next three months. Thereafter production will be regulated by monthly allocations of raw cotton to the equivalent of 110,000 bales for domestic demand, the remainder being made up on a link system according to the quantities of yarn and piece-goods exported. There was no further significant

expansion in spindleage in the first three months of this year. Rather surprisingly, output of cotton cloth increased substantially from 550 million square yards in the final quarter of 1952 to 599 million square yards in the first quarter of this year. The whole of this expansion is accounted for by increased activity on the part of the independent weavers, who in the first quarter of the year were producing considerably more than a year previously, whereas the output of the vertical concerns, was appreciably less. Output of continuous filament rayon fabrics was also slightly greater in the first quarter, but output of spun rayon fabrics declined sharply.

Exports of Japanese cotton piece-goods increased sharply from 146 million square yards in the final quarter of 1952 to 137 million square yards in the first quarter of 1953. Japan thus regained her place as the world's largest exporter of cotton piece-goods. This achievement is the more noteworthy in that such normally important markets as Pakistan, Hong Kong, Aden and British East Africa were taking negligible quantities of Japanese cotton textiles in the first quarter. There were notable increases in shipments to Iran, the United Kingdom, Holland and the United States; exports to Indonesia fell sharply, this market taking second place to Siam.

Export orders for cotton piece-goods received during the first few months of the year remained at a fairly high level, amounting to 96 million yards in January, 79 million yards in February, 70 million yards in March and 65 million yards in April. Pakistan remained out of the market. The Japanese are hoping for much from the trade agreement with Pakistan signed in April, which provides for Japanese exports of cotton textiles to the value of £3½ millions, but it is understood that so far no import licences have been issued by Pakistan. A Cotton Goods Promotion Association has been set up by a number of member companies of the Japan Cotton Spinners' Association. The object is to stabilise prices by buying up cotton textiles for export when Japanese prices fall below world values. Exports of rayon piece-goods fell from 89 million square yards in the fourth quarter to 78 million in the first quarter. Shipments were reduced to most of the main markets with the exception of Indonesia, Singapore, Hong Kong and Germany.

Indian Production

Mill production of cotton yarn and cloth in India in December was the highest monthly total ever. The year's production was, however, not

FDS

quite as great as the record totals reached during the war. This high rate of activity has continued during 1953, although output in the first quarter was slightly below that of the previous two quarters. This considerable expansion of production, coupled with the drop in exports, has meant an appreciable increase in supplies to the home market.

The increase in exports of cotton piece-goods recorded during the third quarter of 1952 proved to be short-lived, for shipments in the fourth quarter totalled only 150 million yards. The biggest drop was in exports to Aden, which fell from 32 million yards to 9 million yards. Most of the other markets also took smaller quantities, in particular British East Africa, Pakistan, Singapore and Burma. The only market to take appreciably more was the Sudan, but since then the Sudanese Government has stopped further imports. In order to strengthen the competitive position of Indian cloth the export duty was reduced from 25 percent to 10 percent ad valorem at the beginning of January. This measure does not seem to have had any great immediate effect, as it is reported that exports totalled only 134 million yards in the first quarter of 1953, 116 million yards less than the target figure.

Western Europe

The recession hit the cotton industries of Western Europe at different times and with varying degrees of severity. Two, indeed, those of Spain and Portugal, appear to have escaped its effects and managed to increase their output considerably in 1952, the latter having a record year. Germany and Holland were able to maintain their output fairly well, thanks to increased exports, and at the turn of the year were producing about as much as or more than they were a year previously. In contrast the French and Italian cotton industries show no marked signs of recovery, the rate of output at the turn of the year being well under the level of a year previously. Italian rayon cloth production was particularly hard hit. The cotton industries of Austria and Belgium were the most severely affected by the recession during 1952; the latter appears to have recovered to a fair extent.

Exports of cotton piece-goods from the European countries also fared very differently. France was able to maintain her exports in 1952 at almost the 1951 level because of the relative non-vulnerability of her colonial markets. German and Dutch exports declined somewhat in the first months of 1953 from the high 1952 level, whilst exports from Belgium and Switzerland were tending to increase. Italian and Spanish exports continue to be at a very low level.

LIVERPOOL WOOL AUCTIONS

About 10,099 bales of Indian and Pakistani wool comprised the offering at the three-day sale, 9th to 11th June, in Liverpool. Of this total, 4,406 bales were sold—rather less than 44 percent. Most of the competition was provided by U.K. buyers, Continental representation being below average, and the U.S.A. showing minor interest. Business done on the first day was at prices rather lower than at the last (April) sales here, but the general tone improved before the end of the series. Superior Whites and good Yellows were the types in best demand. The next sale commences 21st July.

U.S. COTTON EXPORTS FALL 50 PERCENT

United States' exports of cotton for the marketing year ended 30th June were estimated to drop nearly 50 percent from a year ago, the U.S. Department of Agriculture reported. Exports for the marketing year ended 30th June, it said, were slightly over three million bales. It attributed the decline mainly to the availability of large quantities of cotton from other countries at lower prices. The biggest decreases in exports were to India, Japan, Belgium, Germany and the United Kingdom. In its outlook for the coming year, the department said cotton stocks are declining in the importing countries while exporting countries will have smaller supplies except in Egypt, Brazil and the United States. World production in the current crop year will be slightly less than last, the department said.

WHOLESALE PRICE INDEX FALLS

The official wholesale price index (with the year ended August '39 as 100) declined by 0.2 percent to 405.4 during the week ended 20th June, 1953. Compared to the corresponding weeks of last month and a year ago, the index was, however, higher by 1.6 and 7.4 percent respectively. This is the first occasion since the week ended 4th April 1953 that the index has declined. During the week under review Foodstuffs fell 0.4 percent to 390.4 owing to lower prices of gur and sugar (-0.5% each) and dal arhar (-2%), despite increases in rice and jowar (+1% each). Industrial Raw Materials fell by 0.6 percent to 479.7 as a result of decreases in the prices of jute (-5%), raw hides (-3%), linseed in Calcutta and wool (-2% each), gingelly seed, rape seed and cotton seed (-1% each), Karungani cotton at Tirpur (+6%), castorseed (+5%), lac (+4%), linseed in Bombay (+3%), groundnuts and manganese ore (+2% each), however, advanced during the week. The effect of higher prices of coconut cake and gingelly oil (+5% each), groundnut oil, sheep and goat skins (+2% each), linseed oil in Bombay and zinc (+1% each) was more than offset by decreases in mustard oil and copper (-3% each), castor oil and brass (-2% each). Linseed oil in Calcutta and coconut oil (-1% each) and, in consequence, the index for Semi-Manufactures stood

slightly lower at 362.9 as compared with 363.2 for the previous week. The Manufactures group index also declined by 0.4 percent to 369.1 on account of a fall of 7 percent in the prices of rayon and silk manufactures. Glass, however, rose by 1 percent. Higher prices of cummin (+17%), tobacco-leaf (+9%), turmeric (+5%), and betelnuts (+3%) at Bangalore, raised the Miscellaneous group by 4.7 percent to 690.4 although betelnuts in Calcutta, black pepper and cashewnuts declined by one percent each.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

AFRICAN COTTON CROPS

The report for the year ended 31st March, submitted at the annual meeting of the Empire Cotton Growing Corporation last week, calls attention to an important change in production in the Dominions, the Colonies, and the Anglo-Egyptian Sudan. The total crops in those territories in 1951-52 were some 975,000 bales. This was some 80,000 bales less than the record established in 1950-51, but it was still the second highest ever recorded. It was all the more remarkable because in 1951-52 an unfavourable season brought a reduction of over 200,000 bales in the Sudan crop. In previous years the Sudan and Uganda dominated production in the territories mentioned, accounting for an average of over 82 percent of the total for the ten seasons from 1941-42 to 1950-51. In 1951-52, however, the Sudan and Uganda together provided only 71 percent of the total, four other territories—Nigeria, Tanganyika, South Africa, and Southern Rhodesia—all having produced record crops. South African production in 1951-52, at 35,000 bales, compared with the previous record of 20,000 bales grown in 1925-26.

Calcutta Markets

FREIGHT MARKETS QUIET

TIME CHARTERING DULL

THE dull conditions in the freight markets continue and while tonnage remains in excess of demand these conditions are likely to prevail. An interesting fixture in the Eastern market has been that of a handy-sized July ship chartered at 42s 6d to carry a cargo of coal from Durban to Colombo which brings South African coal into direct competition with Indian coals in what has always been considered a natural Indian market. Indian exporters received a setback recently in their efforts to maintain their foreign markets when colliers had to wait for coal berths in Calcutta up to ten days or so which in many cases involved the exporters having to pay demurrage. These delays however have now been cleared and colliers may now expect to obtain reasonably prompt loading berths.

The Calcutta coal market remains extremely quiet due to the continued lack of orders for Indian coal, but fixtures for Indian ore continue. Manganese ore from Bombay to West Italy was done at 50s for an August loader and \$9 was paid for two July ships from Vizagapatam to Northern Range. Rates quoted in other Eastern markets have been largely nominal due to the lack of business concluded. From North China 77s 6d was paid for a cargo of mixed cereals to Antwerp and subsequently a motor vessel was reported fixed for the same business, but the rate paid has yet to be confirmed. Sugar from Mauritius to U.K. was done at 62s 6d for an August ship. Coal continues to be arranged from Hampton Roads to Japan, four fixtures being reported at rates varying between \$3.65 and \$3.25 and for a cargo to Buenos Aires \$5.75 was paid. There was more activity in grain from the Gulf and amongst the fixtures reported was 47s 6d paid for Antwerp discharge which showed a rate 6s 3d per ton lower than that recorded earlier and two ships were done at \$7.75 for Israel. Grain from the Gulf to Japan paid \$10.50 for one vessel and \$6.75 was

paid for discharge one port West Italy. The recent demand for sugar from Cuba fell away and only two part cargoes were fixed to U.K. at 65s and \$10 was paid for a full cargo to Dunkirk. In South America conditions were quiet, one ship being fixed to U.K. from San Lorenzo completing Buenos Aires with a cargo of light grain at 85s. In the Mediterranean a bright feature was the resurgence of chartering from Vassiliko Bay, four ships being fixed at 28s with a cargo of gypsum to Rotterdam while a further vessel was fixed to Rotterdam at 27s 6d with pyrites.

In the Time Charter section little business was reported. Representative of the fixtures were that of a motor vessel at 16s delivery London re-delivery U.K.-Continent, four to seven months trading and that of a similar vessel at 17s one East Coast India round voyage delivery Hull.

GOOD DEMAND IN TEA EXPORT AUCTION

LEAF GRADES FIRM

AT Sale No. 4, held on 6th July, 1953, offerings in the export auction consisted approximately of 18,000 packages of New Season's teas. There was a good general demand, best liquoring Assams being the strongest feature of the sale and often selling several annas above valuations. There was also a strong enquiry for the flavoury Darjeelings on offer and for these some very high prices were realised while the plainer liquoring Darjeelings were better supported than in the last few sales. Leaf grades and stylish BPs were in good demand and were fully firm and often dearer. There were several bright liquoring Doears on offer and these sold well but medium Doears, Common Broken and Fannings showed an easier tendency and are quoted 1/2 anna lower.

	1953	1952
Clean Black Pekoe	1-12-6	1-7-0 to 1-8-0
Clean Common B.P.	1-10-6	0-13-0 (Nom.)
Medium Assam B.P.	1-12-0 to 1-12-6	1-5-0
Good Assam B.P.	2-2-0 to 2-4-0	2-6-0 to 2-8-0

There was fair general demand but the Dust auction held on 7th July. Best liquoring C.T.C.s and cheaper Commons being the strongest features. The former sold several annas over valuations while the latter were dearer from 1/2 to 1 anna per lb. Exportable types were again popular and the Doears descriptions were about steady but medium Assams were somewhat irregular and a little easier.

	1953	1952
Medium Doears Dust	1-7-6	1-5-0
Medium Assam Grainy Dust	1-9-6 to 1-10-0	Not quotable
Best Assam C.T.C. Dust	2-4-0 to 2-6-0	Not quotable

The quantity of other grades on offer was 180 packages which met with fair demand.

SUGAR MARKET REVIEW

The Government announced this week that it would arrange sugar imports on its own and not allow any on private account. During the week ended 7th July, ex-mill delivery rates ranged from Rs. 27-14 to Rs. 29 a maund and the market was steady. Ready sugar ex-Kantapur delivery cost Rs. 30-2 a maund for ordinary grain and Rs. 33-12 a maund for big grain. Stocks amounted to 55,000 bags and arrivals were 8,000 bags a day. Sales averaged 2,500 bags a day for the local and suburban markets and 2,000 bags a day for elsewhere. Facilities for transport to Calcutta have been easier during the past fortnight and a quota of 1 lakh tons was released during the week. There are small enquiries from Madras though no business has yet been reported.

LINSEED

Generally firm conditions prevailed last week and prices showed little change, although trading was very limited. The almost total absence of supplies from upcountry owing to transport difficulties continued to be the chief feature and scarcely any ready goods were available locally. There was a small demand from millers who were not anxious to pay high prices owing to the poor offtake of oil; the weekly turnover was very small. Stagnant conditions prevailed in the oil market with a very poor local demand and continued absence of interest from overseas. Latest quotations were as follows: July Rs. 21-8 per maund; August, September Rs. 21-12 per maund.

SHELLAC MARKET DULL

During the week ended 8th July, the market ruled dull and inactive and a small volume of business passed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. (For reference, see notes below.) Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES.

O Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PADDY FIELD IN POWER POLITICS

RICE SHIPMENTS FALL: SIAM'S STRATEGIC ROLE

THE ease and speed with which Pakistan secured her wheat gift from the United States were not merely another example of American generosity; nor was India's failure to obtain cheaper rice from Burma the result of poor negotiating. They were manifestations of the existence of a world surplus of wheat and a world shortage of rice, which latter is the staple foodstuff of something like two-thirds of the human race. A number of inferences may be drawn from this disparity; perhaps the most obvious is that whereas the world's wheat supply comes principally from large-scale producers in well developed economies—the U.S.A., Canada and Australia being cases in point—rice is mainly a product of underdeveloped peasant economies, in which cultivation is done on small holdings and by methods which have changed very little throughout the centuries. Furthermore, the rice-bearing areas are almost all located in countries which are passing through the vast political and economic changes that followed the war and are still hammering out the pattern of a new social order. The result is a degree of instability in production which has been made the more pronounced by the transference of the entrepreneurial side of the trade from the former channels, which brought rice into the orbit of world produce markets, to government agencies by whom it is often used as an element in a barter agreement. In 1934 international shipments of rice were of the order of 9 million tons, by 1948 the figure had dropped to 3.3 million tons and last year (1952) they had returned to no more than 5 million tons. By and large international shipments are at present running at about 55 per cent. of pre-war.

Total exportable supplies of rice in 1953 in the world's surplus countries are estimated by the U.S. Agriculture Department as about four percent larger than in 1952. Export supplies from Burma, the department reported, are considerably larger than last year, and in Siam the carry-over stocks, plus the 1952-53 crop, will permit the exportation of a larger volume than last year. A feature of the 1952 world rice trade, the department said, was the increase in the number of countries coming into the market as exporters. This trend occurred in most areas of the world outside of Asia, and is expected to continue in 1953. Nevertheless, 68 percent of the world's exports were still from countries in Asia, and four-fifths of these, or nearly 60 percent of the world total, were from the "rice bowl"—Burma, Siam and the Indo-Chinese peninsula. These three areas exported a total of 6,570 million pounds of rice in 1952, compared with 6,950 million pounds in 1951.

*

Burma nationalised her rice trade in 1946, in which year her total crop was about half that of 1934; more significantly exports fell to a mere 500,000 tons in this first year of nationalisation, against 3.5 million tons in 1934. Not all of this decline is to be attributed to the fact of nationalisation, for 1946 was a year in which civil strife and commotion did much to weaken all departments of the Burmese economy. Burma, India, China and Siam are traditionally surplus producers of rice with India, Ceylon, China, Japan, the Philippines and Malaya as deficit countries. India's exports in 1940 totalled 1.5 million tons, but fell to the fractional figure of 9,000 tons in 1947; recovery is painfully slow, for 1951 exports had risen no higher than 301,000 tons. In the post-war period Siam alone has maintained rice production and exports at a steady figure. In 1951 she shipped abroad a little over 1.5 million tons and has ousted Burma from the latter's pre-war place as the world's largest exporter. Indo-China, formerly second, has fallen to fifth in the list and might go even lower if the recent insurgent advance into Laos should be renewed. By the same token a really purposeful thrust into Laos might bring Communist forces into close proximity to Siam, with highly inconvenient

consequences to the latter's rice exports to South and South-East Asia.

Ninety percent of the world's rice production and consumption is in Asia, and of the producing countries only three (those named above) have sizeable and regular surpluses. China claims to have achieved an exportable surplus, but the assertion will not bear close scrutiny, and has recently been exposed in some detail for what it is by Mr. John Kerry King in the American journal *Foreign Affairs*. It is certainly true that China has been shipping rice to other Asian countries. Last year she sent 250,000 tons to Ceylon and 50,000 tons to India. But, despite the People's Government's best endeavours to dress the transactions up as humanitarian gestures and evidence of prosperity inside New China, they were in fact hard bargains, shrewdly conceived to bring Peking some much needed strategic rubber and a propaganda dividend. Whilst Communist troops are doing their best to encircle the rice bowl of South-East Asia there is no harm in inducing the rest of the world to believe that China is self-sufficient in rice—which, if it were true, would be a remarkable reversal of a condition which has its roots in physical limitations rather than political or administrative systems. Beginning this year China has contracted to export 254,000 tons of rice to Ceylon annually for the next five years against 5,000 metric tons of rubber which China needs quite as much as Ceylon wants rice. If this five-year agreement is faithfully carried out, without delays or equivocation, it may then be possible to say that China's rice production has reached a point at which she possesses a real export surplus and not merely one which is exported from an underfed peasantry.

It used to be said that oil was the most valuable pawn in international politics; so far as Asia is concerned rice bids fair to become diplomacy's main bargaining counter. Short of a technological revolution in cultivation, there would seem to be little danger of overproduction of rice in the lifetime of the present or the next generation. Price support schemes for rice are unlikely to be necessary, for even if supply some day approaches demand, the steady increase in Asia's population would ensure that it will not overtake it—quite apart from the need for raising per capita consumption in the older population groups. For some of the new Asian states a real success in economic planning would be achieved if the scanty daily per capita ration of rice could be increased by a few ounces.

It is, indeed, a curious fact that until the stark tragedy of the Bengal famine of 1943 shook them out of their apathy, the Asian administrations of the nineteenth and twentieth centuries never seem to have contemplated the possibility of an absolute shortage of rice, though in India pride was justifiably high in irrigation projects designed to reduce dependence upon the undependable monsoon, and in famine relief machinery. In a recently published life of Sir Albert Howard

—one of the greatest agricultural scientists ever in the service of the former Government of India—there is hardly a mention of rice, except to note that great natural obstacles to its growth had been overcome by the peasant practically unaided. In his presidential address to the Indian Science Congress of 1926 the central assumption was that the rice cultivator had no need of scientific aids. Thus: "Examples of notable advances in agriculture which have taken place without the aid of science are to be found all over the world. In the Orient, perhaps the most remarkable is the cultivation of rice which has been developed by the people in the deltas of the great rivers to a high degree of perfection and carried up the slopes of valleys by means of a system of irrigated terraces. The rare and skill which have enabled the cultivator to grow a semi-aquatic crop like rice on the steep hillsides of India and Ceylon cannot fail to command our attention and respect. In this development science has played no part, and even now has not completed the preliminary analysis of the factors involved in the growth of the chief cereal of the Tropics. We can only guess at the sources of the nitrogen made use of by the rice plant."

One wonders what the state of knowledge is in this year of grace and whether the scientists and agronomists of today are better informed than their predecessors a quarter of a century ago. The Japanese are said to have evolved a new technique for improving the yield of the rice plant; if this is so, they have in their hands a powerful new weapon which might revolutionise the economy of Asia. And of all the Asian countries Japan is not the least affected by the present stringency in supplies. Prior to the war Japan, having the rice production of both Korea and Formosa to draw upon, was becoming independent of imports from non-Japanese territories. She is still growing little rice from these countries and cannot place long-term reliance upon either, and in any case, Korea's production has been dislocated by war. So Japan's dependence upon South-East Asian countries has grown at a time when their ability to meet her demand is less than it was.

For practically the whole of Asia rice is the staff of life, the basic human food, irreplaceable in the dietary of the industrial and agricultural worker alike. What bread is to the West, rice is to the East, only more so, because dietaries in the eastern hemisphere are less diversified and more conservative than in the West. Nowhere in Asia is the population stationary, and the rate of increase in some cases is three or four times greater than in the most fecund European countries. The old proverb that "with every mouth God sends a pair of hands" may once have provided a good working hypothesis, but experience has shown that, by themselves, human hands are not enough to ensure adequate food supplies in these difficult and disjointed times. In the present complex organisation of society the assumption that each new addition to the working population brings a corresponding increase in the available food supply simply does not work. Communism, pressure, military and otherwise, in the rice-growing territories of South-East Asia is not fortuitous. It is in accordance with well planned design. Rice may not be susceptible to the provisions of the Battle Act, but it is in a very real sense one of the chief ingredients of modern diplomacy. In the economics of the new Asia it enjoys a high strategic importance. The humble paddy field has become part of the power politics of our time. But by a strange irony, rice is among the very few commodities which neither of the great power blocs are in a position to barter in return for political favours, for on neither side of the iron curtain proper is it cultivated in quantities which leave a margin for export. If, as Mr. Rafti Ahmed Kidwai claims, India has attained self-sufficiency, she is fortunate, but she would nevertheless be unwise to spurn any offer of additional supplies if the price is suitable. The recent Indo-Burmese trade negotiations were significant for all the rice deficit countries of Asia, for their outcome may set the pattern for similar transactions between other Asian countries. India's stock position is undoubtedly better than it was a couple of years ago; but, in the light of all that has happened in the past, Mr. Kidwai would be unwise to be too confident.

JUTE TRADE NOT TO BE
DECONTROLLED YET
STOCK MARKETS IMPROVE

London, 15th July.
THERE is no prospect of jute being decontrolled in the immediate future though the question remains under consideration, it is learned from well-informed sources. Speculation regarding decontrol of jute was renewed last week when a Commons question on the subject was withdrawn without notice. But these quarters pointed out that this did not indicate that there might be an early Parliamentary statement. Early last week the *Financial Times* said in a report that there were renewed rumours that the U.K. jute trade might be decontrolled shortly. "Such rumours have often arisen before, but some well-informed traders now think a Parliamentary statement may be made soon. The Dundee Control buys raw jute—its buying this year has been extremely successful—and also is sole importer of Indian jute goods, that is, made-up goods and hessian cloth. Private buyers are, however, free to import jute yarn from countries other than India, subject to payment of duty. For some months, the report continues, the carpet trade has been importing jute yarn in order to cover its requirements. The world jute trade is at present quiet, with crop news from Pakistan a little better. Even with a 4 million bale Pakistan crop, however, world supplies are expected to be on the tight side next season, especially for good quality fibre."

Stock Market Report

Stock markets were in a more cheerful mood for the greater part of the week but towards the

end—which coincided with the end of the account—there was a tailing off of interest and prices tended to be at a standstill or slip back slightly. Restrictions in activity late in the week stemmed from the rising deficit in United Kingdom overseas trade, a warning from the ex-Chancellor regarding export markets and news that the Government had authorised Coal Boards to import European coal. The Board of Trade announced that the provisional total of United Kingdom exports in June was £204,000,000 compared with £211,700,000 in May and £214,800,000 in April, while imports amounted to £291,700,000 against £295,700,000 and £293,300,000 respectively. Re-exports in June were £8,000,000, while excess of imports (c.i.f.) over exports and re-exports (f.o.b.) totalled £79,800,000 compared with £76,800,000 in May and £69,500,000 in April.

Gilt-edged met renewed investment support following the news of the conversion offer to holders of 2½ percent National War Bonds 1952-54, but latterly the news of Treasury guarantees to three rows to the extent of £112 million halved the rise. The pattern of the movement in the industrial section was much the same as gilt-edged. First-class companies were in demand and prices rose steadily until late in the week when the rise halted because of the lack of follow-through support and end account profit-taking. Most activity was centred on motors, aircraft, textiles and collieries.

Oils were reasonably active and firm following the announcement of higher prices for the industry's products but Wall Street's easiness reflected in this section late in the week. Tin and plantation shares did not figure very prominently in the week's trading but prices were well maintained with dealers in tea shares watching the auctions very closely. The possibility of a general strike in Cal-

cutta attracted interest but there was no reaction. Foreign bonds have been extremely quiet and they finished slightly easier. Dealers in Japanese turned cautious when the latest Japanese trade and balance figures were known and marked down prices as a precautionary measure. Chinese moved higher at first but slipped back on the outbreak of renewed fighting in Korea. Gold shares also were extremely quiet and prices generally lower on the week. Diamonds were depressed by a sharp fall in the June quarters' gem sales but coppers were generally maintained.

The start of the week in London's money market was characterised by heavy calling in of funds by both clearing and other banks and Market Houses had to search for accommodation, with the result that official assistance was needed before books could be balanced. Mid-week saw slightly better conditions, with funds available to meet demand but the position latterly deteriorated and authorities once again were obliged to assist the market. The Bank of England Return disclosed that active note circulation increased by 11.6 million sterling to the new all time record of 1,556.5 millions reflecting seasonal demand for currency, while bankers' deposits rose by £15 million to 266.6 millions. Applications for £260 million of Treasury Bills totalled £353,440,000, of which the former amount was allotted at an average rate of 47s 3.47d percent. This week's offerings will be £250 million.

India and World Cotton Trade

Now that the Indian Government has removed all controls over prices and distribution of cloth and yarns it suggests that from now onwards much more will be heard of Indian participation in world cotton goods trade, writes the *Manchester Guardian* trade editor. It seems clear that the somewhat unexpected progress in production has made it difficult to justify the maintenance of most of the restrictions. The recent expansion of Indian cotton piece-goods exports must give all the more satisfaction in India because it was achieved in a world market where many competing countries have found it difficult even to maintain their previous volume of trade. It must be borne in mind, however, that Indian competition recently has begun to cause some discomfort to Canadian manufacturers and that Indian as well as Japanese competition has been blamed for the decrease of their own home market of which Australian mills are complaining. Complaints from these sources may foreshadow the erection of new obstacles to imports of Indian goods and the abandonment of the last measures of the former Imperial preference in Burma may be another factor in the situation.

Italian Hemp Crisis

The main cause of crisis in the Italian hemp industry is the monopoly policy of Consorzio Nazionale Canapa, according to a speaker at the Assembly of National Association of hemp traders. Delegates stressed the necessity of Government measures to improve business in hemp and avoid severe economic and social consequences which could come from the hemp industry crisis. The Assembly approved a motion suggesting the reorganisation of the Consorzio and its transformation into a body for controlling only stock-piling. It strongly urged the abolition of export monopoly by the Consorzio.

On the Rotterdam market business is reviving somewhat in Indian cotton and yarns and the market is steady. Although buyers are holding off Ceylon fibres also remain steady.

International Wheat Agreement

The U.S. Senate has ratified the International Wheat Agreement which extends for three years until 31st July, 1956, the agreement to control trade in wheat among the 45 producing and consuming nations. Of the 46 members of the four-year agreement that expires at the end of this month, only Great Britain, the largest importing nation, has refused to sign.

Sugar

The International sugar conference which opened in London on Monday, elected as its Chairman Sir Wilfred Eady, a member of the British delegation. Baron Kronacker of Belgium was elected Vice-Chairman. The British Minister of Food, welcoming the delegates, said that the International Sugar Agreement was satisfactory to producers and consumers alike and would be a real contribution to the economic stability and the well being of the world.

W. Germany—East Asia Shipping Line

The shipping line between West Germany and East Asia was resumed on 12th July after a 14-year interval, when the 17,000 tons freighter *Weserstein* left Bremen on her maiden trip. *Weserstein* will call at Colombo, Penang, Port Swettenham, Singapore, Hongkong, Manila, Kobe and Yokohama. The service is being operated jointly by the Nord Deutsche Lloyd Bremen and Japag Hamburg shipping companies.

New York Pepper Stocks

The New York produce exchange reports stocks of black pepper in licensed warehouses as on 30th June totalled 2,166 bags compared with 2,093 bags on 31st May. June receipts totalled 313 bags and withdrawals 140 bags.

Hong Kong Gold Prices

In a market lacking incentive, Hong Kong gold moved within a narrow range of \$270½ and \$273½ unoffical 13,540. Arrivals in Macao were 30,000 ounces. Unoffical exports are estimated at 9,500 aels. Forward contract totalled 7,500 ounces at \$39 85 cents, c.i.f. Macao.

Finance in India & Abroad

STATE LOAN PROSPECTS

WEST BENGAL ISSUE
OVERSUBSCRIBED

Wednesday, 15th July.

THE lists opened today for ten State Government loans, totalling Rs. 28 crores, all 4 percent, 1963, and all at a discount of eight annas except Bombay and West Bengal. Particulars will be found in an advertisement on the next page, while the Government of Uttar Pradesh advertises full details of its flotation on page 78. The West Bengal loan, it has been announced, was oversubscribed within a few hours. It is an open secret that certain of these issues were well and truly booked before the official announcement, while all of the borrowers will no doubt exert their influence in the commercial centres to solicit support; the present easiness of credit in Bombay suggests that there are fairly substantial sums of money awaiting investment there in the loans. But Rs. 28 crores is nevertheless a very considerable amount of cash to seek from the debilitated Indian capital market, and several of the States will not find it easy to reach their targets. Whatever the inconvenience, however, it is to be hoped that the ten borrowers will obtain the funds they seek for the States are already lagging in implementing their share of the five year plan, which is of course an important share. The terms they are offering are undoubtedly attractive, and the heightened marketability of State Government loans in the past year will assist their absorption.

Conditions are unchanged in the Calcutta money market, with funds still fully useable. Rates in the interbank market are 2½ percent for overnight loans and 3 percent for good money. Money is, by contrast, very easy in Bombay where the call rate has been down to 1½ percent, but the smaller tender for treasury bills this week shows that the plethora of funds in that centre was waiting for the State loans and was not available for lending outside the short-term market meantime. Thus, the credit position in the two cities will probably correspond better when the State loans are subscribed.

In the exchange department, there have been neither export bills nor remittance worth reporting this past few days. Exchange rates are steady, with the dollar at Rs. 475-8.

Silver was steady last week and the price rose from the previous week's level of Rs. 152-2 to Rs. 153-4. The ready rate was quoted at a premium of 3 annas. Bulls supported the market in face of limited arrivals. Silver continued unchanged at 74d. in London and at 85½ cents in New York.

Fluctuations in gold were narrow, and the price moved between Rs. 88-12 and Rs. 88-8. The sovereign also fluctuated between Rs. 58-11 and Rs. 58-9.

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills amounted to Rs. 2,81,25,000 this week. Tenders at Rs. 99-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 9 percent, the average rate of acceptance being Rs. 2-6-2 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 10th July, treasury bills for Rs. 1,06,25,000 were sold in favour of the Reserve Bank.

A fall of Rs. 5.30 crores in notes in circulation to Rs. 1,136.34 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 10th July, 1953. The total note issue also showed a fall of Rs. 56 lakhs to Rs. 1,173.87 crores. Notes held in the Banking Department consequently rose by Rs. 4.74 crores to total Rs. 37.53 crores. In the Banking Department deposits of the Government of India and other Government accounts fell by Rs. 3.25 crores and Rs. 3.23 crores to stand at Rs. 112.90 crores and Rs. 13 crores, respectively, while balances of commercial banks increased by Rs. 2.66 crores to Rs. 42.92 crores. Balances held abroad diminished by Rs. 2.10 crores to total Rs. 106.32 crores. Other loans and advances fell from Rs. 14.29 crores to Rs. 10.99 crores, of which advances to scheduled banks against usance bills totalled Rs. 1.49 crores (Rs. 3.34 crores). Investments were up by Rs. 87 lakhs to Rs. 80.67 crores. Ways and means advances were shown at Rs. 3.51 crores (Rs. 3.45 crores).

The statement of the position of Scheduled Banks for the week ended 3rd July, 1953, discloses Demand and Time liabilities at Rs. 531.35 crores (Rs. 11.90 crores on account of borrowings from Banks) and Rs. 327.62 crores (Rs. 1.90 crores) compared with Rs. 530.26 crores (Rs. 10.39 crores) and Rs. 327.56 crores (Rs. 1.97 crores), respectively in the previous week. Cash has declined by Rs. 1.7 crores to stand at Rs. 33.56 crores, while balances with the Reserve Bank have advanced by Rs. 2 lakhs to Rs. 40.11 crores. There is a drop of Rs. 62 lakhs in investments to Rs. 313.41 crores. Advances and bills discounted at Rs. 508.27 crores reveal a decline of Rs. 1.55 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.6 percent and 59.2 percent against 8.7 percent and 59.4 percent.

The return of the Imperial Bank of India for the week ended 3rd July, 1953, shows a fractional

drop of Rs. 87 lakhs in total deposits to Rs. 207.75 crores. Investments in Government Securities are down by Rs. 82 lakhs to Rs. 75.27 crores, while other authorised investments are up by Rs. 20 lakhs to Rs. 10.90 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 2.73 crores and Rs. 70 lakhs to aggregate Rs. 95.46 crores and Rs. 26.73 crores, respectively. Cash and balances are, in consequence, shown at Rs. 12.12 crores or Rs. 3.88 crores less.

The Directors of the IMPERIAL BANK OF INDIA at the meeting of the Central Board held at Bombay on Wednesday, the 15th instant, declared a dividend to shareholders for the half-year ended 30th June, 1953 at the rate of 16% per annum, payable on and after the 22nd July, 1953. The profits available, including Rs. 42,07,500 brought forward from the previous half-year, amounted approximately to Rs. 1,05,17,800 which sum was disposed of as follows:—

I. Payment of a Dividend of 16% per annum	Rs. 45,00,000.
II. Transfer to Pension Funds	Rs. 2,78,800.
III. Bonus to Staff	Rs. 20,00,000.
IV. Carried forward to next half-year	Rs. 37,39,000.
	Rs. 1,05,17,800.

TREASURY BILL MATURITIES

Details of 3 months' Bills outstanding with the public on 17-7-53.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
17-7-53	17-10-53	1,00.00	Rs. 2 6 2½

What is
Petrol?Where
does it
come from?

What happens
when you
combine
Iso-butane
and Butylene?

These are some of the many questions answered in a new series of four booklets which we have just produced (yes, we've been at it again!) called

THE PETROLEUM STORY

One of the booklets deals specifically with refineries, which is particularly appropriate just now when work is going ahead on the Burmah-Shell Refinery at Trombay. We talk about some of the things a refinery does, and this gives a close idea of the technical skill and planning behind the setting up of the largest undertaking of its kind in India. Two million tons of oil a year need an awful lot of refining!

But refining is only a part of the story. The other three books in our series deal with the history, production and transportation of petroleum products. We have not avoided technicalities—we have attempted to explain them in language which a layman can understand.

Schools, colleges—and everyone interested in oil—are invited to apply for these booklets at the nearest Burmah-Shell Office in Bombay, Calcutta, Delhi or Madras or to any one of our 21 Divisional Offices. When you write, please ask for the booklet by name—'History', 'Production', 'Refineries', and 'Transportation' in "THE PETROLEUM STORY" series.

BURMAH-SHELL... IN INDIA'S LIFE AND PART OF IT

India builds

The concrete cooling towers built for thermal electric power plants in various parts of India are yet another example of the part that A.C.C. cement is playing in the building of the new India.

THE CEMENT MARKETING COMPANY OF INDIA LTD.

ONCE again the forces of disruption have demonstrated that, though small, they can bring the commercial life of India's largest city to a standstill. They can even create the illusion of support by means of intimidation and by generating the apprehension of violence, which lead people who have no sympathy with their intentions to do what they want, stop work for the day. The hartal observed in Calcutta yesterday was declared in protest against almost every human ill except mortality itself; the list of grievances grew longer at each repetition. Though borrowing from trade unionism the name of "general strike", this sort of action has no relation with the comparatively respectable tactics of industrial labour for it is not designed to win concessions on specific issues. Indeed it would be within no one's power to grant redress of some of the grievances supposedly complained of yesterday. As for those where particular remedies could be applied—as over the rise in tram fares—one hopes they will not be, for firm decisions taken in full awareness of their implications should not be undone by a show of violence. The inclination to press by force for what cannot be won by persuasion has had enough encouragement lately to need no more. There are too many unsettled questions in India today—I need only mention linguistic States—to allow the belief to gain further currency that the governments of the country can be coerced as easily as the citizens of Calcutta. A stubborn stand now will save many other subjects for settlement by negotiation; capitulation might extend the area in which violence is the readiest political weapon.

From what we know of M. Beria's activities during his reign as chief terrorist, no one is likely to feel sorry for him in his eclipse. But one can hardly help feeling revulsion at the hysterical unanimity with which he is now denounced by people who know no more about him than they did last month, when they would have sworn that he was a patriotic gentleman. On the mere accusation of the party against whom he is alleged to have offended, the whole Communist Press and people rush in to expatiate on his delinquency—despite the facts that the mere charge is improbable on the face of it, and that there could not have been the least opportunity to collect, study and be convinced by the evidence against him. Of course this is not a new thing, and I shall perhaps be thought rather quaint for bothering to comment on it. But it is a demonstration of the abrogation of elementary decency that becomes no less disgusting by repetition. It is absurd that people who last month were maintaining that two years of examination by due process of law was not enough to prove that the Rosenbergs did what the U.S. Republic says they did, should now instantly assume that Beria is in fact guilty of the great crimes charged against him. The men and women of high principle and delicate conscience who protested against the execution of the Rosenbergs in countries like France and India were not by any means all Communists; they specifically protested in the names of justice and mercy. Will they demonstrate similarly when Beria is condemned, as he no doubt will be, on a vaguer and more ludicrous charge sheet? Of course not, and their failure to do so will prove that the "impartial" neutralists are just like the rest of us in that they apply two different standards to the Russians and the Americans: they expect the Russians to behave like free men and they expect the Russians to behave like fanatical barbarians.

There has been some damaging criticism recently, both in India and Britain, of the prices charged by manufacturers of drugs. This is a

A DITCHER'S DIARY

subject on which anger is easily aroused, for people naturally feel that it is more reprehensible to charge monopoly prices for useful medicines than for, say, vacuum cleaners, though I have never seen it proven that profiteering in the one is more common than in the other. The British Minister of Health, at all events, used strong language when he spoke of drug firms "battering on the health service," and equally vigorous expressions were used in this country before an enquiry was instituted. Profiteering by retailers, which we all know to exist, is of course indefensible, and if practised by importers or by the makers of old-established medicines would be no less so. But there is the danger of overlooking the fact that the manufacturer of a new drug must charge more than it costs actually to make and market it, for he has to bear the very considerable cost of the research that led to its discovery. Mr. H. C. H. Graves, chairman of Vitamins Ltd and an official of the Association of the British Pharmaceutical Industry, last week denied that drug manufacturers were making excessive profits and said that unless they were allowed an adequate return, research would be crippled; and in fact one famous British drug house has already announced its intention to reduce the scale of its research work. No one wants to see the pharmaceutical industry making more money than it should out of life-saving drugs, but most people would agree that the first need is for the fruitful process of research to be carried on. This point will be readily appreciated in Britain or America, but in India, where there is very little original research into modern medicines and few people have any idea of the immense cost of the business, it is a factor that might sometimes be forgotten.

I commend to the architects of the Indian welfare state; and for that matter to anyone interested in the relief of poverty, an excellent article on "The Rationale of the Social Services" by Mr. Walter Hagenbruch in the last issue of *Lloyds Bank Review*. Writing from Queens' College, Cambridge, Mr. Hagenbruch discusses the confusion about the ultimate aims of the welfare state that has overtaken reformers in Britain, in all parties. Poverty is so stark in India, so shocking, that the ends of social reform—though not necessarily the means—seem plain enough. But India is determined to telescope the industrial history of the West into a few decades, and so it is not altogether impossible that she might reach the stage of confusion Mr. Hagenbruch is talking about earlier than we expect. In a few words the case is this. When the ideal of the welfare state was first clearly defined in Britain in the last century, everyone thought they knew what they meant by social services: measures to see that nobody starved, that nobody was too poor to see a doctor, and that nobody lacked a rudimentary education. They also imagined that these measures would be self-liquidating, that is, that there was a fixed poverty line and once you got everybody above it a progressive economy would keep them there and there would be no more social services. Well, by the standards of 1950, says Mr. Hagenbruch, there is no poverty in Britain today—and yet the social services far from having liquidated themselves are now self-propagating, and people are beginning to ask, "What are the social services for, and where are we going with our programme of social security?" It is easy enough to reply that, with our more sensitive social consciences, our notions of poverty have now been up-graded, and so there are still some people below the poverty line. But is there any end to this process? What of the

evident danger that our poverty line might move upwards faster than our standard of living? Will a people that is increasingly dependent on the State ever accept a subsistence level defined in such a way that there is nobody below it? A small example illustrates the dangers. A P.E.P. survey showed in 1950 that English working people, when forced to cut their spending by unemployment, in many cases prefer to cut down on food and clothes first, while trying to keep up their outlay on children's pocket money, cigarettes, cinemas and football pools. No doubt such people would argue that the poverty line is not where you can just buy the bare necessities of life, but where you can still buy most of the things your friends buy too. In other words, social security has come to mean, not a régime in which a few unfortunate receive occasional help and temporary benefits to tide them over hard times, but a régime in which more and more of everybody's income is channelled through the State to promote the attainment of equality. "In that case", says Mr. Hagenbruch, "we should be honest and admit that we are not really aiming at relieving poverty but at removing inequality". There is a world of difference between the two—the most important being, I should say, that the first is possible and the second impossible. India has a long way to go before she will need to raise the poverty line, but meantime forward-looking social reformers might begin to ponder the problems Mr. Hagenbruch raises.

A new economic journal in a country that already pays more attention to the dismal science than to other humane studies might seem superfluous, but the *Indian Economic Journal*, of which the first number appears this month, will replace the old *Indian Journal of Economics* in an important field. Scientific discussion of the problems of theoretical and applied economics in India is a constant necessity, and the Indian Economic Association has done well to maintain a forum for it. Hitherto this has been done in co-operation with the University of Allahabad—it was while he was professor of economics at that university that Stanley Jevons started the old *Journal*—but henceforth the Association will manage the publication alone. Its editors will be Messrs C. N. Vakil, R. Balakrishna and B. V. Krishnamurti, and their first issue gives promise of a substantial and independent contribution to economic thought. I wish them particular success in their ambition to bring together academic workers with those actively engaged on the economic problems of Government and business. I suppose a financial journalist bears the same relation to an economist as a racing tipster does to a veterinary biologist, but a suggestion might not be unwelcome for all that: the relatively neglected field of Indian economic history contains as much rewarding material as theoretical economics, and more that will be of immediate interest to officials and business men.

Having heard that Vermeer of Delft painted only 37 pictures of which 102 are in the United States, I am half-inclined to lend some credence to the story of an American connoisseur who bought a Van Gogh at an auction in Paris for sundry thousands and, in order to get it home without paying the full Customs duty on masterpieces, got a young artist to do a pallet-knife still life over the top of it. After successfully negotiating the Customs in New York, he sent it to be cleaned up by a firm of painting restorers, who rang him a week later to say: "We've scraped off the fruit, and the fake Van Gogh too. Now what do we do with the Coronation of Queen Victoria?"

Company Meeting

THE CALCUTTA ELECTRIC SUPPLY CORPORATION
LIMITED

UPWARD TREND OF DEMAND FOR ELECTRICITY

SIR JAMES DONALD'S REVIEW

The Fifty-sixth Annual General Meeting of The Calcutta Electric Supply Corporation, Limited, was held on July 15 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C. Sir James Donald, C.S.I., C.I.E., chairman of the company, presiding.

The Secretary, Mr. A. R. Colley, A.C.A., read the notice convening the meeting and the report of the auditors.

The following is the Chairman's review which had been circulated with the report and accounts for the year ended December 31, 1952, and was taken as read:—

Following on the decision taken at the last annual general meeting, increasing the number of members of the board from five to seven, we appointed Mr. Godfrey Phillips, a member of our solicitors' firm—Messrs. Linklaters and Paines, and Mr. J. H. Waters, formerly our chief engineer in Calcutta, to be directors. Mr. Phillips subsequently, on retirement from Messrs. Linklaters and Paines, resigned his appointment as director and in his place we appointed Mr. Gauntlett—a member of Messrs. Linklaters and Paines. Both Mr. Gauntlett and Mr. Waters, with their experience in their respective spheres, should give the board valuable assistance in dealing with the many complex problems with which we are faced in dealing with this large and ever-growing undertaking.

The year 1952 was primarily one of consolidation and rehabilitation. In the previous year our energies were mainly centred on the construction of our additional generating plant, and as a result we acquired an accumulation of deferred works of repairs to buildings and maintenance of mains. With the completion of the large schemes at Cossipore and Mulapore we were able to give attention to these matters, and it was the work in connexion therewith and bringing everything up to date that constituted our main activities in 1952. Otherwise progress was on normal lines following the pattern of, and influenced by, the same factors which prevailed in the preceding years. Political troubles were mainly confined to questions of migration between West Bengal and East Pakistan—but communal tension was absent, and with higher living standards there was an increase in the demand for electricity for lights and fans and for electrical appliances—now to be obtained at prices falling well within the range of an ever-increasing public. Refrigeration and air-conditioning are also proving attractive.

Increase in Sales

In the result our sales on the domestic side, lights and fans, rose from 149,910,422 units to 158,924,961 units, an increase of 6.013 per cent. The rising appreciation of the benefits of electricity in the domestic sphere is reflected in the increased consumption of current for household apparatus—cookers, heaters, and refrigeration. Air-conditioning is also noticeably on the increase. It will be realized that this increasing load must impose an ever-increasing strain on our L.T. network. In order to relieve this we have encouraged large consumers to take advantage of the

special tariff applicable to large buildings, by which the owners can be given a supply of H.T. current (6,000 volts) available for conversion, by the owner, and use within the buildings at low tension, suitable for fans, lights, refrigeration, and air-conditioning. On the industrial or H.T. side there has again been a considerable increase in the number of units sold. Labour conditions were not unfavourable, communal tension on the wane, and fewer labour strikes.

The increase is shared by jute, cotton, and paper mills and engineering works. For a few months in the early part of the year the jute industry had increased its hours of working from 42½ hours to 48 hours per week, but reverted again at the end of May to the lower figure. The benefit we secured from the three months' extra working is represented by an increase of 24 million units in the consumption by jute mills. A number of new consumers was connected to our system during the year. In all on the H.T. industrial side we sold 610.68 million units compared with 556.78 million units in 1951.

The increase in our sales is reflected in our revenues. Our gross receipts rose from £4,350,517 in 1951 to £4,773,561 in 1952. Expenditure also went up from £2,990,838 to £3,539,645. With the greater output of our supply we consumed 40,000 tons more coal in our generating stations than in 1951, and this, together with an increase in railway freight charges, accounted for nearly £100,000 of the increase. The cost of repair and maintenance, to which I have already referred, was £141,000 more than in 1951. There is also an increase of £180,000 in depreciation. The cost of living continues to be a factor of some importance in wages we pay, and a steady continuing increase throughout the year in the cost-of-living index in the case of the middle classes of our employees resulted in a considerable increase in our wages bill. A claim was made by our employees for an extra month's bonus for the year 1950. This was referred to adjudication and has been decided in their favour.

Taxation Relief

We still continue to benefit through the operation of the initial allowances for depreciation for tax purposes, and are by this means relieved from any taxation liability. As in the past three years the Government of West Bengal have sanctioned a special appropriation which this year amounts to £198,540 to finance the expansion of the machinery of production, this being the amount required to equate the clear profits of the company with the reasonable return allowed us by the Electricity (Supply) Act. The circumstances under which these appropriations are made and the conditions attached to them were explained in my review last year and I need not recapitulate them. One change in the conditions has been made—the initial payment by which these appropriations will be brought back to be made available under such conditions as the Government of West Bengal may decide has been deferred from 1952 to 1953. No provision, therefore, has been made in the accounts for 1952. It has, however, been made clear

to us that the Government of West Bengal will not sanction any similar appropriation for future years. In all the circumstances the board have deemed it expedient to add to the net revenue special appropriation a sum of £240,000 for the purpose of the expansion of the machinery of production, and therefore not available either for distribution to shareholders or for the payment of additional benefits to employees. The only remark I need make in regard to the balance-sheet is that the increase in the net revenue of £538,762 to £1,832,654 is due to expenditure on necessary capital works. It will be noticed that the liability for goods supplied and expenses accrued has been reduced from £2,318,031 to £1,021,021—roughly the increase in the overdraft.

Allocation of Profits

We have allocated the usual amount, as required by the Electricity (Supply) Act, to the contingencies reserve and have made provision for the interest and sinking fund charges in connexion with the Debentures. The dividend on our Preference stock and an interim dividend on the Ordinary stock have been paid. We propose to make the normal contribution to the retiring gratuity fund and to pay a final dividend of 3 per cent. (free of tax) making 6 per cent. (free of tax) for the year. This leaves a carry forward of £161,233.

The demand for electricity does not stand still. It is ever on the upward trend and the question of future development and expansion is constantly in our minds. As I pointed out in the reviews of recent years, while there is at the moment sufficient generating capacity to meet present demands and for a few years to come, it will not suffice to meet the anticipated demand from 1956 onwards. This is a matter affecting not only ourselves, but also most electric supply companies. I referred last year to the necessity for immediate action to remedy the situation by an amendment of some of the provisions of the Electricity (Supply) Act of 1948. Action in this direction is, I understand, still under consideration, but a year has passed and as nothing has so far seen the light of day it is unlikely that any change in the law will be effected within another 12 months. Meanwhile many companies, particularly the small ones, will be hampered under the existing provisions in obtaining capital sufficient to procure new generating plant with the result that the areas which they serve are likely to suffer a shortage of supply for some years.

Agreement with Damodar Valley Corporation

As for ourselves, we are in a somewhat better position. While still awaiting an answer to our request for an import licence in respect of plant for our proposed new southern station, we were approached by the Damodar Valley Corporation with an offer to supply current from their generating station at Bokaro where they have a generating capacity surplus to their needs. The proposal had attractions since it could be determined that the transmission of current from Bokaro—225 miles from Calcutta—would be adequate and uninterrupted, and if the price at which the supply could be delivered within our area was comparable with the cost at which we could generate at our own stations, the construction of a new southern station could be deferred.

We therefore entered into negotiations with the authorities of the Damodar Valley Corporation and as a result we have entered into a provisional agreement with them for a supply over a period of years, commencing in 1956. The terms of this provisional agreement require the approval and sanction of higher authority. I will not at present comment further on the scheme except to give a warning that if there is delay in giving the necessary sanction there is grave danger that Calcutta may suffer a serious shortage of electricity, in 1956.

Visits to Calcutta

Sir Harry Burr and Sir William Lamond visited Calcutta during January and February of this year. They had interviews with the Chief Minister of the West Bengal Government and discussed with him current problems connected with development. The question of connecting our system to the Damodar Valley Corporation supply was also discussed and arrangements were made to enter into an agreement for this purpose. Mr. Hobson and Mr. Waters also visited Calcutta for the purpose of attending the discussions with the D.V.C. and the consideration of the technical problems involved. I have great pleasure in placing on record the appreciation of the board for the help accorded by the Chief Minister to our visiting directors.

The visiting directors also met the leaders of commerce and industry and had helpful talks with them on the various aspects of the corporation's operations. Our training scheme continues to show good results. Twelve men after training in this country and subsequently in India, now hold responsible positions in our generating stations, and at the present time there are three under training in this country. We are indebted to the British Electricity Authority and to the various companies in this country for the facilities they give us in this direction.

Thanks to Staff

Our thanks are due to the staff in Calcutta for another successful year's working. Their work throughout the year was characterized by its usual zeal and efficiency. To our regret Mr. Church, our agent in Calcutta, by his own wish and desire resigned as from the close of the year. He had rendered 26 years of outstanding and devoted service to the company. In his earlier years he had exhibited talents elevation to the post of agent, on the present time he was the due recognition of the ability and he had formerly held. As agent he had to deal with many complex problems and awkward situations and which he encountered. The company owe him a debt of gratitude for all the service he has rendered.

As successor to Mr. Church we appointed Mr. Macpherson, our secretary. Mr. Macpherson is a man of undoubted ability and we have every confidence that he will maintain the high standard and reputation of the corporation. He was in our commercial department for many years before he was appointed secretary. In his place we selected Mr. Colley, who was our commercial manager in Calcutta.

The report and accounts were unanimously adopted and the dividend was recommended was approved. The retiring directors, Sir James Donald, C.S.I., C.I.E., Mr. J. H. Waters, and Mr. J. W. Gauntlett, were re-elected; and the remuneration of the auditors, Messrs. J. Dix Lewis, Caesar, Duncan & Co., having been fixed, the proceedings terminated.

Stocks and Shares

SHARES DULL, PRICES DRIFT LOWER

Wednesday Evening.

THE share market remained dull and lifeless during the past week. All sections were depressed and the volume of business was extremely small. There were no sharp price movements and such changes as occurred were mostly downward. The whole market appears to be awaiting the outcome of the labour unrest at the works of its favourite speculative counter—Indian Iron. When figures for the production in June were published (see below) showing the serious consequences of the go-slow tactics adopted by labour, the price fell from Rs. 23-12 on Saturday to Rs. 23-4 on Sunday. Thereafter there was a recovery to Rs. 23-11-6. Factors responsible for this steadiness are the belief that a settlement of the dispute is impending as a result of Mr. Jai Prakash Narain's proposed visit to Burnpur, and the anticipation of an increase in the retention price of steel. The Tariff Commission have submitted their report to government and an announcement is expected very shortly.

The gilt-edged market was almost unaffected by the announcement of the new State Loans, as market guesses had anticipated the terms of the new issues quite accurately. News of the decontrol of cloth left cotton textile shares unchanged. Operators appeared to be unable to decide whether the removal of restrictions would increase opportunities of profit-making or whether, in view of the very high rate of current production which exceeds the target set by the Planning Commission, decontrol was not evidence of overproduction.

The jute section was inactive in sympathy with the low level of jute goods prices. It is known that the results of the working of a large group of mills during the half-year ended March 1953, which are to be published shortly, will reveal reduced profits and dividends. The fall in stocks of jute goods and substantial increase in shipments in June failed to impart strength to jute shares. The general trend of prices was to lower levels.

The gilt-edged market ruled dull throughout with little business passing. Except for inquiry in short-dated loans, most issues were neglected and the withdrawal of buyers may be attributed to the flotation of the new State Loans. 3% Conversion Loan 1986 fluctuated narrowly around Rs. 82-11, while 3% Non-terminable Paper was on offer at Rs. 82-9. In short-dated, 2½% 1954 was taken higher at Rs. 90-10 and 2½% 1955 had buyers at Rs. 98-6. 3% 1957 met with good inquiry at Rs. 98-4 and 3% 1958 was unchanged at Rs. 98-3. Sellers predominated in the medium-dated section though there were negligible price variations. 3% 1959-61 was dealt in at Rs. 96-4 and 3½% National Plan Bonds 1961 was quoted at Rs. 95-3. 3% 1963-65 was offered at Rs. 92-6 and 3% 1964 met with selling pressure to decline to Rs. 92-5. 4% 1960-70 eased to Rs. 102-3 and both 2½% 1961 and 2½% 1962 continued to be on offer at their previous prices. Long-dated loans were neglected though prices were unchanged.

Apart from a small inquiry for 3% provincial loans maturing in 1955 and the 4% West Bengal State loan 1964 which was steady at Rs. 100-7, all other provincials had more sellers than buyers. 4% Bombay 1964 receded further to Rs. 100-1 and 4% U.P. and Madras 1964 were quoted nominally at Rs. 100.

Among debentures, small lots of Calcutta Electric and Orient Paper were done at Rs. 101-8 and Rs. 91-8. Dunlop Rubber were on offer at Rs. 101-8 and dealings were reported in Bombay in the recent Standard Vacuum Oil issue at Rs. 101-8 (issue price Rs. 100).

Preference shares continued in demand but the absence of offerings, business was poor. Anglo-India and Bally were both done at Rs. 118 at which price there were further buyers. Birla came to hand at Rs. 103-8, Dalhousie at Rs. 117 and a small lot of Kankarrah at Rs. 105. Lawrence 2nd were unchanged at Rs. 95. There were buyers of Agarpara, Belvedere and Kelvin. Amongst miscellaneous issues, Bharat Collieries were taken at their previous quotation of Rs. 49-8 and British India Corporation were marked at Rs. 144 with further sellers at this price. Indian Iron & Steel fluctuated narrowly to close at Rs. 106-4. A small lot of Karanpura Collieries was placed at Rs. 85 while Kumar-dhobi Engineering lost ground to be quoted at Rs. 93. Martin Burn were steady at Rs. 103. A parcel of New India Sugar was placed at Rs. 61 and Rohtas Industries were freely offered at Rs. 54-3. Jensen & Nicholson (India) were scarce at Rs. 103-3. Shares on offer included Gladstone Lvall, Jardine Henderson, and Orient Paper 1st and 2nd. In contrast, there were buyers of Godfrey Phillips, Indo-Burma Petroleum and Ramnugger Cane.

In the banking section, Imperial Bank Full-Paid and Contributory were both better at Rs. 1,867-8 cd. and Rs. 450 cd. but in the absence of sellers, no business was recorded. United Commercial had buyers at Rs. 35-8 but here again sellers were scarce. A small lot of Hindustan Mercantile Bank was crossed at Rs. 11 while a parcel of United Bank of India 'D' shares changed hands at Rs. 3-13.

Although no transactions were reported in railway shares, with the exception of a few scrips like Arrah-Sasaram, Howrah-Sheekhala, Howrah-Amta and Shahdara (Delhi), there were sellers of

most issues including Bankura-Damodar, Katakhal-Lala-Bazar and Bukhtiarpur-Bihar.

Little interest was displayed in cotton shares with Bowreah and Dunbar at one time receding to Rs. 260 and Rs. 170; closing quotations, however, were a shade better at Rs. 265 and Rs. 173. Elgins dropped from Rs. 16-14 to Rs. 16-11. Kesoram were marked at Rs. 18-8 and New Victoria at Rs. 1-3.

Coal shares were no exception to the general trend and prices moved to lower levels. Amalgamated eased to Rs. 20-2 as did Bengal to Rs. 523. In contrast, there were buyers of Bharat Collieries at Rs. 5. Burrakur fluctuated narrowly around Rs. 10 while East Indian were steady following the recommendation of the directors to pay an interim dividend of 14 annas per share (same as last year). New Beerboom found few sellers at Rs. 190 and Pench Valley at Rs. 20-5. South Karanpura were weak at Rs. 11-14 while Standard were readily absorbed at Rs. 20-12. Talcher and Western Bengal were quoted at Rs. 2-15 and Rs. 4-13. There were keen sellers of Equitable at Rs. 40. Hurriladih at Rs. 16 and West Jamuria at Rs. 18.

There was a further reduction in the volume of business in the jute section and dealings were confined to small lots. Howrah fluctuated narrowly between Rs. 23-9 and Rs. 23-14 to close at Rs. 23-12. Birla were marked at Rs. 37-8 while small lots of Champanda changed hands between Rs. 150 and Rs. 153. Chitavalis were easier at Rs. 31 while Nellimarla were steady at Rs. 35. Kelvin and Empire had buyers at Rs. 235 and Rs. 20-12, but sellers were reserved. Fort Gloster could be placed at Rs. 342. Hooghly at Rs. 30-2 and National at Rs. 24-10. A solitary transaction was reported in Hukumchand at Rs. 40. Kamarhatti found limited support at the reduced price of Rs. 184. Khardah after being done at Rs. 175, turned sellers at Rs. 170. Waverley were marked at Rs. 5-10.

There was a larger turnover than hitherto in electric supply shares but prices in most cases were

YOUR OFFICE

You must be among the lucky exceptions if your office organisation provides all the service you require for the proper running of your affairs. Generally, far too many men are still employed in the soulless and unsatisfying work of transferring repeatedly bits of information from one sheet of paper to another, for someone else to work out, in time, information of little but historical value. Methods are deep in a series of long-established ruts, while up-to-date facts and figures, which the modern business man urgently and constantly requires for guidance on important decisions,

are virtually unobtainable. If you are not among the lucky exceptions, you must have wished many times to have your office procedure analysed, unnecessary effort eliminated, your real needs in the way of facts and figures set down, and then a scheme prepared and implemented to provide them quickly and accurately, with a minimum of effort and expense. Then only, you feel, you would be in full control of your business, and as an important by-product, your staff, employed on more interesting and responsible work, are likely to co-operate better than in the past.

'ENGLISH ELECTRIC'
hydro-electric plant

Harnessing the World's Water Power

The ENGLISH ELECTRIC Company has specialised in the development of water power projects for many years and has installed hydro-electric plant in countries throughout the world. In 1951 alone, over 350,000kW of 'ENGLISH ELECTRIC' plant has been commissioned, and work

is in hand for some of the largest hydro-electric installations in the world. The Company specialises in the production of complete turbine generator units, together with all the necessary transformers and switchgear for installations of any head and output.

works
wonders!

you have been WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

WHOLESALE PRICE INDEX FIRM

The official wholesale price index (with the year ended August 1939 as 100) remained unchanged at 405.4 during the week ended 27th June, 1953. Compared to the corresponding weeks of last month and a year ago, the index was higher by 0.6 and 6.5 percent respectively. The average for June 1953 stood at 405.4 as compared with 397.4 for the previous month and 374.8 for June, 1952. During the week under review, Foodstuffs declined by 0.1 percent to 399.0 on account of decreases in the price of sugar (-2%), salt (-5%) and bajra (-1%), despite advances in rice, wheat, jowar, dal arhar and coffee (+1% each). The index for Industrial Raw Materials moved down by 0.2 percent to 478.6 during the week. Items which recorded noticeable variations were: Rapeseed in Calcutta (-17%), cow hides at Kanpur (-7%), wool in Bombay (-3%), jute (-2%), cotton (-1%), lac (+9%), buffalo hides in Calcutta (+7%), wool at Kalimpong (+4%), silk, groundnuts and castor seed (+3% each), gingelly seed and cotton seed (+2% each). The Semi-Manufactures group, however, advanced by 0.2 percent to 363.5 owing to higher prices of groundnut oil (+4%), mustard oil at Kanpur and zinc (+3% each), copper (+2%), buffalo hides, sheep skins, castor oil and gingelly oil (+1% each). Mustard oil in Calcutta and brass (-3% each) and coconut oil (-2%) declined during the week. A rise of one percent in jute manufactures raised the Manufactures group index to 369.6 from 369.1, although glass and chemicals fell by 1 percent each. The Miscellaneous group also rose by 0.1 percent to 691.0 because of an increase of 5 percent in the prices of turmeric notwithstanding a fall of 3 percent in Black pepper.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100)

Groups and Sub-Groups	27-6-53	20-6-53	30-5-53	28-6-52

SUGAR PRODUCTION AND STOCKS

The opening stocks, production, despatches and closing stock of sugar in respect of Central Factories in India during the fortnight ended 15th June 1953, were 779,207, 1,535, 57,812 and 722,930 tons respectively, reports the Director of the Indian Institute of Sugar Technology, Kanpur, on the basis of returns received under the Sugar Production Rules, 1935. The figures for the corresponding fortnight of the previous season were 823,904, 17,846, 37,404 and 804,346 tons respectively. Figures for the current fortnight relate to 125 factories representing 90.94 percent of the total cane-crushing capacity, while the figures of the previous year relate to 124 factories representing 83.50 percent of the total cane-crushing capacity. The total figures for the production and despatches of sugar for the season 1952-53 are reported to be 1,315,731 and 983,132 tons respectively, as against the corresponding figures of 1,453,675 and 710,981 tons during the previous season.

CANE PRICES IN MAY

On the basis of returns received from the Central Sugar Factories, the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during the month of May, 1953, gives figures for—

(a) the total price of cane per maund (including co-operative societies' commission, transport charges, etc., but excluding cane cess) at the factory as follows:—

	Maximum Rs. a. p.	Minimum Rs. a. p.	Average Rs. a. p.
Uttar Pradesh	1 6 11	1 2 6	1 5 9
Bihar	1 9 0	1 5 5	1 6 6
Madras	1 5 0	1 5 0	1 5 0
Bombay			
Madhya Bharat			
All India	1 9 0	1 2 6	1 5 11

(b) the portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum Rs. a. p.	Minimum Rs. a. p.	Average Rs. a. p.
Uttar Pradesh	1 5 0	1 1 9	1 3 11
Bihar	1 4 4	1 3 4	1 3 9
Madras	1 5 0	1 5 0	1 5 0
Bombay			
Madhya Bharat			
All India	1 5 0	1 1 9	1 3 11

New Delhi

GOVERNMENT CONSIDERS PRICE RISE ONLY TEMPORARY

ANXIETY OVER INCREASE IN MIDDLE CLASS UNEMPLOYMENT

(FROM OUR OWN CORRESPONDENT)

THE Government of India, according to the Finance Minister, Mr. Chintaman Deshmukh, is not perturbed by the recent rise in prices, which is regarded as being of a temporary character. Food prices, it is confidently expected, will come down in the near future. The Government has already reduced the wheat price to Rs. 16-8 a maund. In view of the comfortable stocks position and encouraging production, rice prices should also decline. Sugar has been the only disturbing factor, but imports should bring down prices soon. Although the index number of wholesale prices for food articles has gone up by 25 points in the five months ended May, it is still 31 points lower than in May 1951. The following comparative figures of index numbers of wholesale prices are of some interest.

	Food articles.	General Index.
May 1951	412.9	456.8
May 1952	341.0	367.1
May 1953	382.0	397.4

The Prime Minister has shown considerable anxiety over the growth of unemployment. The Planning Commission, as already reported, will undertake sample surveys to ascertain the volume of unemployment and the categories of people that are most seriously affected. Meantime, the following is the official case. Unemployment in the countryside does not seem to be of unusual proportions. There may be seasonal unemployment or under-employment but recent claims that money is being accumulated in the countryside suggests that the cultivator, and even the landless labourer, are much better off today than they were ten years ago. The same is true of industrial labour: with the increase in production there can hardly be much unemployment. The progress of the five year plan is bound to add to employment opportunities. This may not however always happen immediately new industrial enterprises are established or existing ones modernised. Considering the capital invested, the volume of employment at Sindri, for instance, is not very large; this is inevitable if modern labour-saving devices are adopted.

As for white-collar workers there is no doubt that unemployment among the educated middle class has been increasing. Contributory factors are abolition of controls, reduction of purchasing power, return of a buyers' market, more women taking up careers and the present system of education. Although the middle classes have been amongst those clamouring for the abolition of controls, this has lost many of them their jobs. The lack of purchasing power accompanied by the transition to a buyers' market has led to retrenchment in commercial undertakings. Women have entered the professions and are competing with men, this accentuating unemployment. Lastly, there is the problem of overpopulation. The Government is already employing a large number of surplus men. It cannot increase employment appreciably. It can only help to restore at least partially, the purchasing power of the people. This it intends to do. Reform of the system of education is also overdue. The Government should shape its education policy so as to divert a majority of students to non-clerical jobs. It is a long-term plan, which should be begun soon.

Indo-Ceylonese Talks on Tobacco

A Ceylonese trade delegation led by Mr. S. Natesan, Minister for Posts and Information, is arriving here tomorrow to negotiate a reduction in the rate of import duty levied by India on Jaffna tobacco, which is produced in Ceylon, but mainly consumed in Travancore-Cochin. Mr. Kumaraswamy is the other member of the delegation. Jaffna tobacco is a special type of chewing leaf which the former Travancore Government was permitted to import from Ceylon subject to a maximum limit of 5,745 candelles of 600 lbs each in one Malayalam official year (August to July). This quantity was subject to an import duty of Rs. 135 per candel, any quantity in excess of this figure being liable to a duty of Rs. 900 per candel. At the time of the financial integration of Travancore-Cochin, it was agreed that duty at the old rate of eight annas per pound would continue on the restricted imports of Jaffna tobacco. During 1950-51, 1,800 candelles were allowed to be imported. These imports were to be progressively reduced by 10 percent every year till 1960-61, when imports were to be banned. The Indian rate of duty at present is Rs. 9-6 per pound, and is payable on any quantity imported above the quota fixed for Travancore-Cochin. Prewar imports averaged 1,508,104 lbs. a year. In the eleven months ended February, imports were 710,035 lbs in 1950-51, 1,056,848 lbs in 1951-52 and 783,282 lbs in 1952-53. The decline has caused considerable anxiety to Ceylon; she would like imports to continue on the old scale and a reduced duty of eight annas a pound to be levied. India, however, produces a similar variety of tobacco in Coimbatore which is rapidly replacing Jaffna tobacco. Apart from the loss of revenue, Ceylon's proposal would adversely affect growers of the former and it is not yet known what she has to offer in return.

Coach Factory Agreement Revised

The Government of India has revised its agreement with the Swiss firm of Schlieren regarding a factory for the manufacture of all-metal light-weight coaching stock. The revised agreement has been signed, and Mr. K. Sadagopan, who has been appointed officer in charge of the project, is leaving Delhi today to take up his new appointment. The revised agreement fixes the targets to be reached every year till the project is completed and links payments to the Swiss firm to the completion of each target. In other words, the Swiss firm has been made responsible for completing the project within a specified period. The agreement, it is further learned, provides for the engagement of a number of Swiss technical experts each of whom will have an Indian trainee working under him. The trainees will be replaced by other Indians as soon as they complete their training. This may provide a complement of fully trained Indian personnel for the project by the time it is completed. The revised agreement has removed almost all the defects pointed out by the Public Accounts Committee in the original agreement of May 1949.

Sugar Policy Reviewed

The Government's decision to import sugar on its own account was announced this week. The changes in sugar policy over the past year are interesting. On 25th September, 1952, the policy for 1952-53 was announced under which it was decided to export 200,000 tons of sugar, 50,000 tons of gur and 10,000 tons of khandasari.

On 11th October, 1952, it was announced that the excise duty of Rs. 3-12 per cwt would be refunded on all exports of sugar; in addition the cane cess of Rs. 2 per maund would be refunded on exports of U.P. sugar. On 26th January, 1953, the Government warned mills not to hold back released sugar. On 31st January, the ban on exports was reimposed. In May, the Government warned mills to reduce prices or "face the consequences". The Food Minister, Mr. Kidwai, also told Parliament that there were 300,000 tons more sugar in stock than were needed by the country. On 9th June, Mr. Kidwai in a statement from Naini Tal threatened to introduce a Bill to requisition sugar at fixed prices. However, his Ministry, in its legislative programme for the Parliamentary session, had no such bill. On 11th June, it was disclosed that the Punjab Government had been asked to investigate reports that large stocks of sugar had been smuggled into Pakistan, where it was selling at

Rs. 70 a maund. On 15th June, the Central Government announced its decision to flood important markets like Bombay, Calcutta, Kanpur and Delhi with sugar released from factories by arranging special trains for its movement. It also hinted that arrangements would be made to import sugar to defeat hoarding. On 22nd June, intending importers were invited to submit applications by 10th July for import licences for 6,000 tons of sugar. On 7th July, the Government announced its decision to import sugar on its own account and not through trade channels. On 10th July, an official Press Note disclosed that during the fortnight ended 15th June the opening stock with mills was 7,79,207 tons, despatches amounted to 67,012 tons and the closing stock stood at 7,22,930 tons.

This is the background to the sugar shortage. This year in May there was a surplus of 300,000 tons. In June, it was considered necessary to import sugar. On 22nd June, it was decided to import through trade channels. On 7th July this decision was reversed and the Government decided on State trading. What has been done about the threat to flood important centres with sugar is not disclosed. The precise quantity exported with the aid of the excise duty and cane cess refunds is not disclosed either. The report of Punjab's Chief Minister, Mr. Sachar, on smuggling to Pakistan remains a secret. Meanwhile, complaints of a wagon shortage from West Bengal and Bombay continue. The price of sugar was Rs. 6-7 per maund in September 1952. When it was decontrolled on 8th December, 1947, its price was raised from Rs. 20-14 to Rs. 35-7 per maund. In 1947-48 consumption was 9.20 lakh tons. The supply available for 1948-49 was 12.76 lakh tons, or 3.56 lakh tons in excess of the 1947-48 consumption. By the end of July 1948 the Government began to recognise the seriousness of the sugar situation. With the approach of Dussehra and Diwali in October and Muharram in the first week of December, black market prices soared. Some are wondering whether the 1948 sugar crisis will be repeated this year.

Technical Enquiry on Kosi Barrage

The Government is considering a proposal to associate a German expert with an Indian technical team to investigate the possibility of building a barrage across the Kosi river, it is learned. Investigations on this project have already cost approximately Rs. 11 crores. The first project report envisaged the building of a dam in the upper reaches of the river but the Advisory Committee which examined this report favoured a dam at reduced cost lower down. expert, Dr. Savage, examined the Advisory Committee's report and expressed the opinion that the dam would be silted up within 17 years. It has been suggested that a barrage should be built across the river for irrigation purposes. It is therefore felt that a small team should study the entire problem and that a German expert be associated with it. The Government will decide soon.

Indo-Pakistani Talks

Preparations are being made for the Indo-Pakistani negotiations which will commence at Karachi on 25th July when Mr. Nehru reaches there for a two-day conference with Mr. Mohammed Ali. The Indian section of the Steering Committee headed by the Commonwealth Secretary, Mr. B. F. H. B. Tyabji, will leave for Karachi on 13th July for a two-day meeting. India has already sent in a list of 40 items for discussion between the two Governments. These items have been graded into three categories. Category one includes items of a non-controversial character, which could be settled at the Secretariat level. Category two consists of technical items which need expert advice. Category three includes items relating to policy on which ministerial or governmental decisions are needed. The lists include every item under dispute, the principal topics being Kashmir, minorities, evacuee property, Pakistan's debt to India and the canal water dispute. According to plans, Indian Ministers will take up with their Pakistani counterparts the issues they are interested in, and will report to the Steering Committee any difficulties they might be faced with in resolving their differences. The Steering Committee will then meet to discuss ways and means of ending the deadlock. Enquiries show that the Indian Ministries of Education, Communications and Rehabilitation have already sent in their cases to their

opposite numbers in Pakistan. The others are expected to do so shortly.

Delhi's Accommodation Shortage

The Central Cabinet will shortly discuss office and residential accommodation for the Government and its employees, it is learned. According to recent calculations, the Government needs another 1,82,720 square feet of office accommodation and 31,969 units of residential accommodation. Because of current expansion this demand is increasing. The issue of dispersal of attached or unwanted offices has been pending for at least four years. Enquiries, however, show that no Ministry is prepared to part with any of its offices, however unnecessary for its day-to-day working they might be. Last year, it was decided to send to Simla a part of the Medical Directorate for which purpose accommodation was reconditioned at some expense to the tax-payer. At the last moment, on the personal intervention of the Health Minister, the offices were retained here. The same is true of the Western Command Headquarters, whose transfer to Simla has been under discussion for three years. As matters stand, a two-fold loss is inflicted on the tax-payer, one on the side of office and residential accommodation in the hills, particularly in Simla and in the former princely States, is suffering for want of maintenance. On the other, crores are being spent to build office and residential accommodation in already overcrowded New Delhi. Some feel that the problem of dispersal of offices from Delhi will remain unsolved unless the Prime Minister takes a firm stand with his colleagues. In any case a final decision is urgently necessary. The ugly hutchments built in wartime are too old and will collapse if they are not pulled down. The Cabinet, therefore, has to decide whether any of the subordinate and attached offices should be moved from Delhi; also what accommodation, office and

residential, will be needed here with or without the dispersal.

The Cabinet will discuss the need for a big building programme for Government offices. Some idea of this building programme can be obtained from the following demands. The Defence Ministry would like to have compact accommodation for its offices and the three Service organisations. At present, the Army and Naval Headquarters are located in the South Block of the Central Secretariat while the Air Force Headquarters is in hutchments. The External Affairs Ministry has been wanting additional accommodation, but with separate Secretariat buildings for the Defence Ministry it could have almost the whole of the South Block. The Ministry of Information and Broadcasting would like to have a five-storeyed building to accommodate the Bureau of Press Information, its advertisement consultant, and its Film and Publications Divisions. The building would have a library, a Press room and a conference hall. The Railway Board, the Central Board of Revenue, the Directorate of Posts and Telegraphs, the Auditor-General, the Planning Commission and the Central Public Works Department would like to have separate compact blocks of their own for their offices. The Central Board of Revenue with its Estate Duty Section has expanded considerably and needs more accommodation urgently. To meet the need for office accommodation "C" Block which was being used for residential purposes is being vacated and reconditioned to house offices.

Increase in Cereal Production

The fourth wheat estimate published this week shows an increase in India's wheat production by 6,88,000 tons in 1952-53 over last year's figure. Added to the increase in the production of kharif cereals and gram, the total increase in foodgrains production this year is about 5 million tons. The final estimates for wheat, barley and gram are still to be published. This year's rice crop has touched a new record of 23.4 million tons as against 20.7 million tons last year. The increase has been most marked in Bihar (8,71,000 tons), Orissa (9,83,000 tons), Uttar Pradesh (3,25,000 tons) and West Bengal (4,69,000 tons). Though almost all wheat-growing States have improved upon last year's production the largest increases have been in Uttar Pradesh (2,89,000 tons), Madhya Bharat (1,10,000 tons) and Rajasthan (1,41,000 tons). Optimism should however be tempered with the knowledge that in 1944-45 India produced 7.1 million tons of wheat, as against the fourth estimate of 6.38 million tons in 1952-53. This underlines the importance of favourable climatic conditions not only during sowing time but also throughout the period of growth.

Indo-British and Indo-U.S. Air Talks

The yearly review of the Indo-British air agreement was completed here this week. There will be no increase in the frequency of services as a result of this review. With effect from 1st October this year, B.O.A.C. will introduce tourist class services. This service will operate between London and East Pakistan only, but might be extended to the Far East from 1st April, 1954.

The Indo-U.S. air talks, scheduled to be resumed here on 15th July, have been postponed by at least a week.

Department of Kashmir Affairs

The Prime Minister has revived the Department of Kashmir Affairs and has appointed the Food Secretary, Mr. Vishnu Sahay, as its Secretary. In view of his coming talks with the Pakistani Prime Minister, Mr. Mohammed Ali, Mr. Nehru wishes a senior civil servant to devote his entire attention to the Kashmir problem. Mr. Vishnu Sahay was Secretary for Kashmir Affairs when that post was abolished two years ago.

Secretariat Changes

The Defence Secretary, Mr. H. M. Patel, is proceeding on ten weeks' leave on 20th July. The Joint Secretary, Mr. B. D. Ghose, will officiate for him. On his return from leave, Mr. Patel will become Secretary to the Food and Agriculture Ministry. Mr. S. Boothalingam is officiating as Secretary to the Ministry of Commerce and Industry in place of Mr. H. V. R. Iengar who has gone on leave.

Chairman of D.V.C.

The Chairman of the Damodar Valley Corporation, Mr. S. N. Mozumdar, has gone abroad on six months' leave. Mr. Phulan Bihari Varma, a member of the Corporation, is acting for him.

FOAM-RUBBER UNDERLAY FOR CARPETS

A new foam-rubber underlay which will give old carpets the soft, cushioned tread of the most expensive rugs has been invented by a British firm. Called Duralay, it consists of a sheet of rubber foam permanently bound to a sheet of hessian. It can be easily cut or shaped with a pair of shears or strong scissors. Laid rubber-side down under the carpet, it needs no sewing or nailing and will not creep, nor will the carpet placed on top of it. The manufacturers claim that it is proof against months and damp and, as it never loses its resilience, cushions and deadens all sound—an added asset for flat-dwellers. Chief advantages over felt are that Duralay does not become depressed with constant wear, is hygienic, and wears longer. There is already a considerable demand for it in the home market, and orders are coming in from overseas.

T.U.C.'S REPRIMAND TO LABOUR PARTY

(FROM OUR OWN CORRESPONDENT.)

11th July. DESPITE his many other preoccupations, Mr. Butler managed last week-end to utter a further warning with regard to the economic outlook. "Unless we keep our costs down we shall not hold our own," he said, "for we have big debts to pay off to the rest of the world and a heavy responsibility in assisting the development of the Commonwealth." He hoped no-one would be misled by the new hopeful feeling in the air into thinking all our economic difficulties had been overcome. That these facts are appreciated by the leading trade unionists has been further demonstrated this week. Sir William Lawther, the retiring President of the National Union of Mineworkers, bluntly warned the delegate conference that further improvement was to be won not by piling demand upon demand but by delivering the goods and the ultimately secured agreement to the dropping of a demand for a general wage increase in favour of one of a much more limited nature. The President of the National Union of Railwaymen issued a similar warning to that union's conference, but without the same success. It is not enough, however, that the leaders are showing a greater appreciation of the fact that a free-for-all wages scramble injures those who engage in it no less than the rest of the community. The rank and file, inspired largely by political motives, are less susceptible to reason, as is evident from the fact that demands are still going forward on behalf of millions of workers, and if these were conceded they would altogether add about £300 million a year to British industry's wage bill. In most cases the claims are based on the increased cost of living, but the retail price index has not risen as much this year as last. Nor have workers' fears of unemployment and redundancy, with their inevitable repercussions on wages, been realised. Indeed, the latest figures as at 15th June show that the number unemployed was in fact 42,500 lower than a month earlier and represented only 1.4 percent of the total number of employees.

Trade figures go to show that German and Japanese competition alone has not so far had too adverse an effect on British exports. The recent announcement of "a further instalment" in the progressive relaxation of the controls which Australia imposed on imports for balance of payments reasons—it is hoped they will be abolished completely in October—will go some way towards delaying the full impact of that competition in other markets. There can be little doubt, however, that any substantial increase in British export prices, which would be inevitable if wages costs should rise unduly, would be disastrous at this particular stage in the long struggle back from the dark days which marked the close of 1951.

Role of the T. U. C.

It is now clear for all to see that there is a conflict between the Labour Party and the T. U. C. The latter maintains that it has every right to complete independence in industrial action, irrespective of the political complexion of the Government in office. This was made evident in the General Council's support of certain of its members accepting posts on the new Iron and Steel Board, and was emphasised even more forcibly by Mr. Tom O'Brien's address to the miners' conference at Hastings a few days ago when he insisted that the T. U. C., of which he is Chairman, could not be regarded as "a sort of glorified industrial committee of the party," but that it had its own work to do whatever Government might be in power. "How can we put ourselves into cold storage merely because there is a Tory party in power? Have we to cease representing the day-to-day work of our people merely because there is a Government we don't like?" He went on to explain that trade unionists, who have their living to earn, cannot let the private industries in which they earn their "go to rack and ruin" while they wait for a Labour Government to get back.

Though not actually related, two other developments are not without a measure of interest. The first is the acceptance by Mr. Morrison of nomination for the post of Treasurer of the Labour Party by trade union interests. This may involve a fight with Mr. Arthur Greenwood, the present holder, which would be unfortunate, but would, if Mr. Morrison was successful, get him back his seat on the Party Executive which he lost last year in the constituencies' election at the Morecambe conference. The procedure for elections to the Parliamentary Committee—the Socialist shadow cabinet—which was altered last year to try and prevent the Bevanites securing too substantial representation, has again been altered to leave out the second ballot device, which turned out to be unnecessary last year, but the anti-"plumping" precaution of making each ballot paper carry votes for as many candidates as there are seats to be filled is retained.

Parliamentary Business

Although the senior Ministerial ranks are sadly depleted at the moment by illness and necessary absence abroad, the distribution of responsibilities and duties has so far worked satisfactorily enough to ensure the fairly smooth progress of the Government's programme. Mr. Butler, in the role of deputy for Sir Winston Churchill, appears to be enjoying himself vastly in the Commons, more especially at question time, but in addition has steered his Finance Bill through the Report stage with no more than one further minor concession

to the Opposition, and can look forward to the third reading next week with satisfaction. On the whole it has been a comparatively quiet week in Westminster with the emphasis on matters of more or less parochial interest. The future of sponsored television has continued to attract considerable attention. The Government policy to permit some form of competition with the B.B.C. has merely been postponed, not abandoned, and the appearance of the report of the Television Advisory Committee dealing with the question of what additional frequencies can be made available for television has furnished the radio industry with sufficient material to go ahead with plans to provide adaptors and equipment for stations. The battle between the Food Minister and the butchers regarding ewe mutton supplies in the ration has also attracted Parliamentary attention, but Mr. Lloyd George has effected a compromise settlement with the trade by an adjustment of prices for different qualities of meat and not, as the Opposition would have liked him to do, by cutting prices and increasing the subsidy. In view of the fact that he has also hinted at the return of freedom to the meat trade by 1954 and the end of Government bulk buying, this interim adjustment may not be without some value in the long run.

A similar device—rationing by price it is called by its opponents—has been adopted to try and meet the serious problem presented by the fall in coal stocks. Prices for best coal have been increased from 5s to 10s per ton to lessen demand and leave more for export. To offset this and encourage the use of the lower grades, the prices of the latter have been reduced. These temporary stratagems are not likely to solve the problem as a whole, however, and there was ample justification for Sir Hubert Houldsworth's plain speaking, as Chairman of the Coal Board, to the conference of the National Union of Mineworkers the other day when he appealed for greater efficiency and output both in the interests of the nation as well as of the workers themselves. Other Parliamentary developments of the week included announcements covering the composition of the committee which is to inquire into the conduct of London Transport, which is headed by Mr. S. P. Chambers of I.C.I. and former income tax adviser to the Government of India, and includes a fellow scribe, Mr. George Schwartz of *The Sunday Times*, the Chancellor of the Exchequer's agreement to allow an extra £1,000,000 from the Road Fund this year for road improvements; and agreement between all parties to the setting up of a select committee to inquire into the question of M. P.'s salaries and examine the relative position of members of other parliaments.

National Provincial Dividend

Once again the National Provincial Bank has surprised the City by being the only Bank of the

"Big Five" to depart from the almost traditional procedure of maintaining a fixed rate of dividend, by increasing its interim payment by 1 percent to 8½ percent. It will be remembered that in January the National Provincial brought last year's payment to 16 percent, and it was then assumed that the intention was to move from 15 percent to 16 percent. It would now appear that the intention was to move from 15 percent to 17 percent. The profits certainly justify the rise, but market hopes that others would follow suit have again been disappointed.

Burmah Oil Strike

Sir Kenneth Harper, Chairman of the Burmah Oil Company, made a cautious addendum to his published statement at the shareholders meeting in Glasgow this week. Oil has been struck in moderate quantities in the lowest and possibly not the best of the four oilfields at Nahrulkiya in Assam, and the result has been good enough to justify the group in applying the methods immediately to the search for further oil in the large area of the Assam valley over which the Assam Oil Company has the exclusive priority right to apply for concessions. At the same time, Sir Kenneth announced that the company's gas field at Sul, in Baluchistan, promised more than enough gas to provide for many years all of West Pakistan's fuel requirements.

National Health Figures

The National Health Service has just celebrated its fifth anniversary, and to mark the occasion the Ministry of Health has issued some quite startling figures with regard to its achievements, and there can be no doubt that Mr. Ian Macleod's message to the chairmen of the authorities connected with the service, namely, "that there can be no doubt that the service has already been of the greatest benefit to many millions of people," is no exaggeration. In the five years; chemists dispensed 1,062 million prescriptions; ambulances travelled about 420 million miles; 27 million pairs of spectacles were supplied; staffed hospital beds have increased by 35,000 to 470,000; nursing and midwifery staff have risen by 27,000 to 142,000; attendances in hospital out-patient departments have totalled 156 million and in casualty departments 50 million; about 42 million people are on doctors' lists; 305,000 patients have been supplied with hearing aids; and nearly 3,000,000 donations of blood have been given to the National Blood Transfusion Service.

Insurance Premium Record

British insurance companies collected a record £925,468,000 in premiums last year. This is nearly £68 million more than in 1951. Life funds of British companies are going up by £160 million a year.

Reliable Performance

Marion Power Shovels are known for reliable performance under all conditions. Their smooth, rapid operation results from extra power applied through the most modern and easy to operate of control systems.

MARION experience goes back to their first shovel in 1884. They built the first full circle swing, the first Railroad Ditcher, the first Stripping Shovel, and, more recently, the first 45 cubic yard shovel in service.

These, and many other pioneering developments form the tremendous body of experience behind every piece of MARION SHOVEL equipment.

The next time you need a power shovel, dragline, clamshell or crane, be sure you get a

BUSINESS REACTION TO
A.I.C.C. MEETINGNO RETRENCHMENT PLEA
BY I.N.T.U.C. LEADER

(FROM OUR OWN CORRESPONDENT)

12th July.

THE reaction of the business community in Western India to the discussion on economic affairs in the A.I.C.C., and to the innocuous and colourless resolution outlining the social and economic programme of the Party, is one of relief. It was known that many in the Congress Party who profess to understand economic affairs were seriously disturbed by the alarming increase in unemployment and the rise in the cost of living. Industrialists here were apprehensive that these people might try to foment radical measures on the Party, which might not do much to improve the situation but might hinder industry. The textile industry for instance was disturbed by wild talk of banning further efforts towards rationalisation and forbidding retrenchment.

Unemployment and Retrenchment

Beyond reiterating its faith in cottage and small scale industries and calling for a greater effort to mobilise small savings, the A.I.C.C. did not recommend any positive measures. But since the meeting, some leading Congressmen closely associated with the labour movement have made various suggestions to relieve unemployment which might affect industry both directly and indirectly. For instance, Mr. S. R. Vasawada, a prominent textile labour leader in Ahmedabad and Acting General Secretary of the I.N.T.U.C., while welcoming the A.I.C.C. resolution at Agra, regretted that the All India Congress Committee did not appear to have a clear plan for solving the problem of unemployment. He also said that the Planning Commission had placed greater emphasis on production than on employment. What he seemed to be hinting at was the same old plea, that there should be no retrenchment, even of superfluous workers, and that industry must carry the burden. Mr. Vasawada laid the blame for the Planning Commission's emphasis on production on its reliance on "Western economists" who considered wealth

and its production to be of greater importance than human happiness.

A Latter-day Luddite

But even more disturbing and fantastic was the suggestion made here last week by the Bombay Minister for Labour, Mr. Shantilal Shah—to reduce unemployment by prohibiting the import of labour-saving machinery. Mr. Shah spoke against the growing tendency toward mechanisation, and stated that if unemployment was to be halted, it would be necessary to place a limit on the import of machinery which displaced human labour, and to develop cottage industry on a mass scale. This amounts practically to throwing the whole of the five year plan overboard, because even the multipurpose river valley projects, apart from other large-scale industries in the public and private sectors, could not be implemented without the aid of machinery. Besides, if no machinery were to be imported, as advocated by this State Minister, there would be no point in completing these projects, or at least the power generating schemes since there would be no large-scale industries for the bulk purchase of power generated. Industrialists are naturally worried when Ministers openly advocate such reactionary policies. As it is, many of the industries in Western India are severely handicapped by lack of replacements for their plant. If imports of machinery are to be further reduced, they fear that production will not only be reduced but that the cost of production will increase, besides affecting adversely the volume of employment itself. Another possible result of such irresponsible suggestions which industry fears is that such statements might halt the small trickle of private investment in industrial equities. While all this is going on, the Central and the State Governments do not seem in the least inclined to invite industrialists to a frank discussion on ways of solving the problem of providing adequate employment.

A standard for titanium dioxide has been issued by the Indian Standards Institution. The standard lays down the requirements and methods of sampling and test for both the Analase and Rutile type of this material which is valued as a pigment in the paint industry besides being used in a number of other industries. For the purpose of determining the percentage of titanium dioxide in the pigment, the standard details both the volumetric and the gravimetric methods of estimation. The standard does not prescribe specific gravity as the basis of a quantitative assay of the two types of titanium dioxide but includes the method of determining specific gravity in an informative index. This standard has been prepared by ISI's Paints and Allied Products Sectional Committee.

The Government of India has decided to reduce, with effect from 28th June, 1953, the import duty on copra from 25 percent ad valorem (Standard) and 15 percent ad valorem (Preferential for British Colonial Produce) to 15 percent ad valorem and 5 percent ad valorem respectively.

Uttar Pradesh

LARGE GRAIN STOCKS AN
EMBARRASSMENTHIGH IRRIGATION RATES AND
BY-ELECTION DEFEATS

(FROM OUR OWN CORRESPONDENT)

Lucknow, 11th July.

THE State Government's foodgrains trade has placed it, temporarily at any rate, in a situation best described as *embarras de richesses*. It may be recalled that when, at the beginning of the current financial year, the Government terminated its policy of subsidised distribution of foodgrains it also hoped to "put an end to the enormous crippling losses it had been sustaining" in the effort. This hope has been partly realised, but now the Government is in possession of huge stocks which nobody wants at the present fixed price. There has been very poor offtake at the ration shops and it is not proposed to purchase any fresh supplies until the Government is able to get rid of the old stocks. A news-agency message this week referred to a transaction between the State and Central Governments under which the Centre took back 65,000 tons of wheat which the U.P. had taken from the State's quota of 300,000 tons for the current year. Though the State Government had bought it from the Centre at Rs. 18-8 per maund the Centre has now paid only Rs. 17-8 per maund. Besides, the State Government has to pay the incidental charges of Re. 1-4 per maund on these stocks.

Though this arrangement has, on the face of it, reduced the stocks with the U.P. Government, the wheat thus transferred to the Centre's books is to be sold to flour mills in U.P. at no loss to the Central exchequer. Flour mills in the State are prohibited from buying in the open market and they will thus be obliged to buy the dearer wheat from the Centre to keep going. While the Government of India's role as "honest broker" has come in for criticism, the State Government has to face the hostility of the ration shopkeepers who have with effect from this week, been allowed to sell rationed wheat without quantitative restriction to help them clear their stocks. But the concession is virtually no use to them because of poor offtake which has fallen to 5 percent of normal. They can dispose of their stocks only if they quote substantially lower rates than those prevailing in the open market and the Government has no objection if they thus voluntarily decide to court losses. The ration shopkeepers are naturally not happy over this "heads I win, tails you lose" attitude of the Government. When there is a price boom in the open market, the ration trade cannot participate. Government spokesmen, no doubt, are only too ready to sympathise with the plight of the traders, but they plead helplessness as the Government is committed to a "no loss, no profit" policy on foodgrain distribution.

Wheat Import Prices Cut

The Centre has announced a reduction in the price of imported wheat with effect from 1st July, but the effect of this reduction will not be felt in U.P. until the State Government is able to dispose of all stocks which were bought at the old price. It is clinging to these stocks in the hope that the present bearish trend is only a passing phase and that prices will be stabilised at a higher level once the rains are over. Some confirmation for this trend is available in the index of agricultural wholesale prices for May when the weighted general index (1948=100) rose by 5.7 percent to 93. All groups, namely cereals, pulses, oilseeds and fibres contributed to the rise. Cereals and pulses rose by 5.4 percent each to 97 and 116 respectively while oilseeds recorded a big rise of 18.6 percent to 115. Food crops rose by 4.3 percent to 97 and cash crops by 8.8 percent to 87. But it is not certain that this trend will be maintained.

Kharif sowings are well-advanced except in districts which have not yet had rain. In fact, the over-all situation is said to be so good that even the chronically scarce areas in the Eastern districts are not causing any anxiety to the Government, although Mr. Shibbanlal Saxena issued a statement early this month that the "spectre of famine" hangs over Gorakhpur. His main target however was not the present condition, but the Government's methods in recovering the "taccavi" loans.

Enhanced Irrigation Rates

Though bumper harvests may help to reduce foodgrains prices, the I.L.I. is expected to be checked somewhat by the Government's decision to enhance by 50 percent the irrigation rates with effect from the kharif season this year. The proposal for this increase had been approved as early as last year, but it was not enforced because of widespread opposition, even by the Congress Party. It may be recalled that this proposal was voted down by a majority of the Congress Legislature Party but that the Government got it passed in the House by using the party whip. The Government believes that irrigation rates should be linked with the prices of agricultural produce and that the rates now fixed are lower than one-tenth of the value of the produce. It has also represented the increase not as a tax, but "payment for services rendered." Nevertheless, it was good propaganda material for the Opposition and possibly played a not inconsiderable part in Congress defeats in the recent series of by-elections.

Ceylon

QUALITY OF EXPORTS CRITICISED

RUBBER PROSPECTS BLEAK

(FROM OUR OWN CORRESPONDENT)

Colombo, 30th June.

IN the past few weeks attention has been focussed on the quality of Ceylon's export goods. The Minister of Trade and Commerce and his advisers are trying to maintain the good name of Ceylon trade by taking drastic action against offending traders and by insisting on certain specified standards for the country's exports. The need for this action has been accentuated by the steadily mounting number of complaints in recent months against Ceylon exporters. Last year there were 114 complaints against firms and individuals for supplying unacceptable goods, and this year the complaints up to May alone already total 60. Investigation of some of these complaints has revealed that seriously adulterated goods were despatched from Ceylon, while in some cases contracts had not been honoured when prices had risen. These irregularities were not confined to small exporters only, some large firms being involved. The complaints were not confined to any one region either but came from various countries, particularly the Middle East, where a great deal of Ceylon tea goes, and from the United States and Europe.

One of the most outspoken complaints has come from Red China regarding the quality of rubber supplied by Ceylon under the long-term agreement between the two countries. China did not merely complain, but has protested strongly against the bad quality and shortage of weight in Ceylon rubber shipped under the contract. This, however, is a Government-to-Government affair and any shortcomings are not intentional, as far as the Ceylon Government is concerned, though the same cannot be said for those who supply the rubber to the State.

The cumulative effect of the complaints has been the consideration of sterner measures. Two special measures have been suggested. The establishment of that Standards Bureau similar to that in Australia and New Zealand, to fix quality standards for all exports, and thereafter to make its own administrative arrangements to ensure conformity with them. This Bureau, which will consist of both Government officials and trade representatives will in turn set up independent committees to apply voluntary standards to different exports. The second suggestion is to bring the entire export trade under licence, as in the case of tea, so that strict penalties can be imposed if there is a breach of the regulations. In this way it will be possible to deprive defaulting exporters of their licences, or suspend them. No final decision has been taken but some such action is generally approved in the export trade.

The Future of Rubber

Trade circles in Ceylon are apprehensive about the future of the rubber industry. The crepe rubber industry seems to be doomed because of the unfavourable prices realised; top grade crepe is now selling at between 90 and 95 cents. The use of synthetic rubber for the manufacture of products like gloves, surgical goods, and footwear, for which crepe was used previously, has affected the industry adversely. In Ceylon, in particular, the favourable prices realised by sheet rubber, consequent on the agreement with China, has resulted in the manufacture of crepe being discouraged in preference to sheet. At the same time, there is anxiety about sheet rubber. This results from the fact that more than half the amount of sheet that had to be supplied to China on contract has been shipped so that there will be an excess of sheet in the next few months. July to September are the best producing months, and with the possibility of the Chinese contract for the year being fulfilled before the end of 1953, there will be a surplus of sheet rubber with no market. It may not be easy to return to the world market as, apart from the decline in price, some of Ceylon's regular buyers have been buying from other sources since the contract with China began operating. In these circumstances, the outlook for Ceylon rubber is bleak. A Korean truce may add to the difficulties.

Ceylonisation of Export Trade

The first step in Government plans to ensure more effective Ceylonisation of trade is the building of a seven-storeyed building for the use of Ceylonese business men. The building, which will contain shops, offices and hotels, will be constructed in the heart of Colombo. This will become a new business area, in competition with the Pettah, the present popular business centre. Another recent Government decision stipulates that all new trade should be in the hands of Ceylonese only. This applies particularly to trade with Soviet Russia and the Iron Curtain countries of Eastern Europe, which Ceylon hopes to begin in earnest shortly. The Minister of Trade and Commerce has suggested that trade with Iron Curtain countries should be done through a central agency, controlled by the Government, as in the case of trade with China, where the Rubber Commissioner is the central authority through which Ceylon's trade with that country operates. Such control is intended to ensure that Ceylonese business men do not abuse trade licences issued to them by selling such licences to non-Ceylonese, or selling goods obtained through such permits.

It is also likely that Ceylon's rubber trade with China will finally be reserved for Ceylonese only.

This is indicated by the latest move to reduce the quota allowed to rubber shippers in connection with Ceylon's contract with Red China. From July, this quota has been reduced by 80 percent of that allowed at the beginning of the year.

Trade Prospects with Egypt

Ceylon is now negotiating a trade pact with Egypt. The recent conclusion of an Indo-Egyptian pact has forced Ceylon to accelerate her negotiations if she is not to be beaten in the Egyptian tea market by India. Ceylon's low grown teas have always found a ready market in the Middle East, particularly Egypt, but with the conclusion of Egypt's pact with India, this market is bound to be affected unless there is a definite agreement for the purchase of a specific quantity of Ceylon tea by Egypt. The possibility of a two-way pact is excluded as Egyptian exports such as cotton, cement, phosphates, hooves, and dried fruits will not find a market in Ceylon, while Egyptian rice, besides being too expensive, will not be available in sufficient quantities. Traders advocate that a triangular agreement between Ceylon, Egypt, and either Japan or an Eastern European country, for whose exports a market could be created in Ceylon, should be concluded.

Rice Subsidy

Ceylon's dwindling external assets are creating concern among the financial authorities. At the end of May, they dropped to Rs. 695 million, the lowest for the past ten years. In the first five months of this year, the country's external assets fell by Rs. 134 million. The situation has become more serious as at present the Government is still on the budget for 1953-54. In its search for finances to balance the budget, the Government is considering the feasibility of removing the subsidy on rice. This commodity, the staple diet of the people, is subsidised today at an annual cost of nearly Rs. 250 million, and it is only an income totalling that amount that will allow the Finance Minister to present a surplus budget at the end of July. The question now is whether this amount will be realised by removing the subsidy on rice, with all its complications, particularly at election time. The Ceylon Cabinet itself is sharply divided on this issue, and though a majority of Ministers are stated to be in favour of removing the subsidy, the minority can bring about a constitutional crisis if they decided to hand in their resignation on the issue.

Company Ordinance Amendments

To exercise a closer check on private and public companies, the Ceylon Government has decided to amend the Companies Ordinance. Under existing legislation, companies can be stated at will and unsuspecting subscribers and investors are exploited. The amendments are intended to block the loopholes in the existing law, and also to make it incumbent on companies to disclose their accounts regularly to all shareholders. Every company will also have to possess a stipulated number of directors. The amendments have become necessary as a result of recent investigations which revealed the existence of companies without offices or directors, and which swam up like mushrooms and disappeared with the same rapidity.

Madras

ADMINISTRATIVE INEFFICIENCY
IN MADRASLAGGARD LAND APPRAISALS AND
TAX COLLECTION

(FROM OUR OWN CORRESPONDENT)

13th July.

MR. Paul H. Appleby's Survey of Public Administration in India is a survey of conditions in each State, without referring to any State by name. Nevertheless, there are some unmistakable references to Madras in the report. Mr. Appleby draws attention at the outset to the factors making for unity and those making disunity, both in the Indian Constitution and in present Indian society. Among the factors making for unity, he says are: Central monopoly of income taxes, other than agricultural, and certain excise duties, as well as Customs; and the absence, except in the case of agriculture, of any very strong and divisive private interests potentially capable of becoming influentially hostile to governmental action. In the application of these two unifying factors to Madras, Mr. Appleby does not appear to be on sure ground, for there are in fact some "very strong and divisive private interests" with regional allegiances in the fields of commerce and industry. The incipient influence of these "divisive private interests" is noticeable particularly in the Tamil area of Madras State; they have also large feudal interests in agriculture.

The Central monopoly of income taxes, certain excise duties, and Customs, is true only in respect of collection, for already the States get specified shares from the divisible pool of income tax. Madras was primarily responsible for the creation of a divisible pool of certain excise duties, and Madras is again responsible for the demand for State shares in Customs duties. The influence in these regards of hostile industrial-cum-agricultural interests is, in effect, divisive because it weakens the Centre relative to the States. This is a logical sequence of the anxiety of these interests to avoid estate duty on agricultural property and a surcharge on larger landholdings or agricultural income tax. It is indeed an irony

that Tamil Nad, whose people go to other States and countries in such large numbers, should have shown no signs of realising that the "success of India as a nation is the pre-requisite to all other kinds of success—including particularly the success of the States."

Mr. Appleby is on stronger ground when he refers to land taxation. In one State, where the system found elsewhere in India calls for legally permissible re-appraisals of land values once every 30 years (too long a period in the modern world, and particularly when a period of inflation has been experienced), he says no reappraisal has been made for 45 years. In another State, where re-appraisal is supposed to be made in 30-year periods, but in a staggered schedule of about 1/30th a year, no district had been reappraised for eight years: this means that at least a fourth of that State is behind schedule. Neither of these States referred to is Madras, but Mr. Appleby could well have added that most of the districts in Madras have fallen behind the 30-year schedule by anything from 10 to 20 years. The static and unprogressive outlook of the Madras land revenue administration, which has an undeserved name for efficiency and competence, does not appear to have come to Mr. Appleby's knowledge.

What he says in respect of land taxation is fully applicable to this State. In the absence of agricultural income tax—which is effective in only three States—a source of revenue and an additional approach to the land tenure problem is being overlooked. In those areas where rents are unduly high it would appear, he continues, that some of the excess rent payments could be deflected back to the farmers and made in a smaller part available for land taxation. Land speculation, where large irrigation works are in progress, should be countered by a capital gains tax and other legislation to spread the benefits. None of these suggestions, which have in fact been advanced from time to time, could gain acceptance with an administration which has a pronounced bias in favour of landlords.

Commercial Tax Collection

Mr. Appleby's recommendation that revenue staff recruitment should be increased until tax collection is brought up to date and the gap between assessments and collections is nominal, could well be implemented in Madras State. It is well known that both sales tax and entertainments tax would yield considerably more than they are doing now if the machinery of commercial tax collection were improved. As Mr. Appleby says, if India is now getting about all the tax revenue it can hope to get, the outlook would be most distressing. That large unearned increments or windfalls which have accrued to landholders with large marketable surpluses of rice since decontrol last year should have been left untaxed, does not speak well for an administration which has had to deal with social tension caused by high prices of foodgrains even in "surplus" districts. Mr. Appleby has been rather restrained in his criticism of the fiscal policies of some States.

Red Tape Par Excellence

In another section of his Report, Mr. Appleby says that "time-consuming and delaying procedures over small expenditures may make concealed costs and involve costly delays in the pursuit of action objectives." At the same time he thinks that, as "all careful and responsible performers require red tape," governmental red tape is much more a good than an evil. A concrete instance which has just come to your correspondent's knowledge should throw some light not only on Mr. Appleby's views but on administrative "red tape" in this State. There is an irrigation tank in the taluk of District, storing enough water for the requirements of four surrounding villages. The ryots of one of these villages petitioned the Government in 1947 for the provision of a separate sluice in the tank and for the excavation of a channel to irrigate their 200 acres of land. They agreed to pay one-fourth of the cost of construction and excavation in 20 annual instalments. After two years the Collector's Office Head Clerk was pleased to state in a endorsement of 11th October, 1949: "The petitioners are informed that their request for excavation of a separate channel is under consideration of Government and the orders passed in the matter will be communicated to them in due course." The Superintending Engineer of—Circle confirmed in his letter of 21st March, 1950: "Proposals for providing a separate sluice and channel for the—lanas from—tank are already under examination." After one year more of "examination" the Superintending Engineer in a letter dated 2nd May, 1951, informed the waiting peasants: "Proposals for the construction of separate sluice and channel for the—lands have since been sent up to the Chief Engineer for Irrigation, Madras, for approval." Things appeared to be moving quickly when the Executive Engineer of—Division wrote on 14th September, 1951: "The matter is under consideration with the Collector of—District. Detailed estimates and plans have been prepared. Further action will be taken on receipt of the Collector's remarks on the proposal." Nothing was heard of the proposal till 26th February, 1953, when the Executive Engineer of—Division kindled fresh hope in rustic hearts: "The matter is under correspondence with the Superintending Engineer of—Circle and Chief Engineer of Irrigation, Madras, and final orders should be awaited." It is anybody's guess when the story will end. Meanwhile, the ryots of—village are waiting like Micawber, and perhaps as vainly.

Only a few molecules of oil
..but they keep the wheels turning!

In a properly lubricated gear system, the metal surfaces of the gear wheels are separated by a thin film of oil. Under heavy loads, the great pressure on the gear surfaces 'squeezes' the oil film to a few molecules in thickness.

Yet this minutely thin film of oil, transmitting the entire load from gear to gear, must never break. It must not rub off as the wheels go round, or fly off at high speeds. If metal-to-metal contact occurs between the gear surfaces, they may weld together and the machine will seize up.

Plain oil isn't enough!

To meet the exacting demands of modern machinery, it's little wonder that old-fashioned oils have been replaced by Gargyle Industrial Lubricants. These modern lubricants have tremendous affinity for metal. They cling fiercely to metal surfaces, forming a lubricating film that even extreme pressure cannot break.

Three main ingredients go into making these oils. The first: careful selection of crude oils with high natural affinity for metal. The second: scientific incorporation of additives which

increase this affinity, and give great 'anti-weld' properties. And the third ingredient? Every engineer knows the answer—experience. Eighty-seven years of experience go into every drop of oil we sell. Perhaps we can put this experience to work on your lubrication problems!

Whatever the load...
a LINE of oil has to take it!

At any moment while gears rotate, contact is limited to a microscopic line of oil. The pressure on the oil is enormous—but thanks to 87 years of lubrication experience, Gargyle Industrial Lubricants can take it.

For every industrial application, correct lubrication by Standard-Vacuum offers you vital benefits—

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

Calcutta Markets

DEMAND IN TEA EXPORT AUCTION FIRM GOOD INTERNAL SALE

At Sale No. 5, held on 13th July, 1953, offerings consisted of nearly 30,800 chests. Best liquoring C.T.C. types were the strongest feature of the sale and were up to 2 annas dearer while the whole leaf grades also improved in price, especially when they were clean and well made. Good liquoring BOP's with tip met with good support and Commons with clean appearance and sweet liquors sold readily. There was also a much improved demand for Darjeelings and when really flavoury, these realised very attractive prices but all the rest of the offerings met with less demand and were from 1 to 1 anna easier.

Quotations	1953	1952
Clean Black Pekoe	1-12-4 to 1-13-0	1-7-0 (Nom.)
Clean Common B.P.	1-10-6	0-13-0 to 0-14-0
Medium Assam B.P.	1-12-0	1-5-0 (Nom.)
Good Assam C.T.C. B.P.	2-6-0 to 2-8-0	2-7-0 to 2-8-0

At Sale No. 5, held on 14th July, 1953, offerings consisted of approximately 9,300 packages. Demand was good and general for most descriptions. Black leafy exportable dusts from all districts were the strongest feature of the sale and these often sold several annas above last rates. Good liquoring C.T.C. dusts were also in good demand and were fully firm to dealer. Bright liquoring Doonars and powdery common dusts were well supported and generally sold at up to one anna above last rates. Medium Assams were fully firm. There

was rather better though irregular demand for Darjeelings this week. The small flavoury types again being the most popular with buyers.

Quotations	1953	1952
Medium Doonars Dust	1-7-6 to 1-8-0	1-2-6
Medium Assam Grainy Dust	1-9-6 to 1-10-0	Not quotable
Best Assam C.T.C. Dust	2-6-0	

The quantity of other grades on offer was 270 packages and these sold at about last rates.

FREIGHT MARKET QUIET

THERE has been little change to record in the past week and such fixtures as have been made have shown a downward tendency. Owners are now willing to accept 47s. 6d. for Coals Calcutta-Hongkong, but no business has been done even at this reduced figure. Charterers are now holding for 37s. 6d. for Coal from Chinwangtao to Chittagong, but Owners are resisting 'this' although they would probably accept 40s.

A 7,000 tonner has been fixed for Iron Ore from Calcutta to Trieste at 65s. with Owners paying 4s. per ton to cover the cost of loading, trimming and Indian Income Tax. A 10,000 ton British oilburner has been fixed at 18s. per deadweight ton for one Kara Sea round voyage to India and re-delivery Continent and an 11,000 ton Greek oilburner has accepted 14s. for 5s. 7d. months trading with delivery Vizagapatnam second half August, while the Amersham Hill has been fixed at 12s. 6d. per deadweight ton delivery Antwerp-Hamburg at 13s. 6d., of Japan at 14s. 6d.

LINSEED

A slight advance was recorded and firm prices were maintained throughout last week. Following a temporary easement in transport restrictions from upcountry sellers, who had been very reserved during the early part of the week, latterly began to show a fairly keen interest for forward delivery; upcountry markets also reacted slightly. A fairly keen interest was shown by crushers; business was very limited at the start but later a fair turnover was reported at somewhat easier prices. The oil section was dull. Stocks were scarce and little interest was shown by buyers and sellers alike. The weekly turnover was small. Latest quotations were as follows: July-August Rs. 22-4 per maund.

HIDES AND SKINS

The market in skins ruled slightly easier. Stocks were higher than in the previous week.

Bazar Sales

(Between 7th and 13th July, 1953)
Cowhides—Wet salted (Ord.) 50,000 pcs. on the basis of Rs. 9 to Rs. 10; Wet salted (Slough-tered) 8,700 pcs. on the basis of Rs. 12-12 to Rs. 25-8.
Goatskins—Wet salted (Daisee, Killed) 42,280 pcs. on the basis of Rs. 285 to Rs. 400; Assam-Dinajpur-Murshidabad 22,100 pcs. on the basis of Rs. 285 to Rs. 325; Kissenang-Purneah 23,000 pcs. on the basis of Rs. 285 to Rs. 300; Patna 2,100 pcs. on the basis of Rs. 180 to Rs. 250; Pakur 3,720 pcs. on the basis of Rs. 250 to Rs. 265; Muzafferpore-Darbhanga-Samastipur 13,800 pcs. on the basis of Rs. 275 to Rs. 285.

Bazar Stocks

(13th July, 1953)
Cowhides—Wet salted 1,13,100 pcs.
Goatskins—Wet salted (Daisee, Killed) 1,02,500 pcs.; Assam-Dinajpur-Murshidabad 64,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenang 1,17,700 pcs.

SUGAR MARKET STEADY

Sugar prices ruled steady during the week ended 14th July. There was a good demand from Orissa and Assam and small enquiries came in from Cochin and Tuticorin. Ex-factory prices in Kanpur are steady and small mills' sales are easily taken up. Despatches from North-Eastern Railway stations are good, arrivals in Kantapur being 7,000 bags daily. Ex-godown Calcutta prices are big grain Rs. 32-12 per maund; medium grain Rs. 30-4 to Rs. 30-10; and small grain Rs. 30.

SHELLAC MARKET QUIET

During the week ended 11th July the market remained quiet and a small business passed. Quotations were as follows:

Standard Pure Buttonlac	Rs. 105 buyers
Pure Buttonlac	Rs. 96 to 100 value
Lemon No. 1 Shellac	Rs. 97 to 98 done & buyers
Lemon No. 2 Shellac	Rs. 83 to 99 value
F.O. Std. 1 Shellac	Rs. 83 to 98 done & buyers
Pure TN Shellac	Rs. 83 to 90 buyers
4% I.T.N. Shellac	Rs. 76 to 84 buyers
No. 1 Kusmi Seedlac 3% Rs.	90 to 94 value
No. 2 Kusmi Seedlac 3% Rs.	82 to 84 value
Fine Bysaky Seedlac (Manbhum)	3% Rs. 76 to 81 value
Fine Bysaky Seedlac (C.P.)	3% Rs. 68 to 74 done & buyers
Ordinary Seedlac (C.F.) under	5% Rs. 64 to 70 done & buyers
Ordinary Seedlac (C.P.)	5% Rs. 60 to 65 done & buyers
Kireelac Seedlac (C.P.)	5% Rs. 32 to 34 buyers

Shipments during July until the 11th were 6,453 packages.

Jute

GUESSING THE RAW JUTE CROP

SCEPTICISM ABOUT EAST BENGAL ESTIMATES: TRADE EXPECTS INDO-PAKISTANI TOTAL OF 65-75 LAKH BALES

THE preliminary forecast of the jute crop in East Pakistan which was issued last week gives the acreage as 788,695. This, it is stated, includes 30,390 acres on which jute has been grown without licences and which may, therefore, be destroyed. It is also stated that the crop on 29,930 acres which were not licensed for jute growing has already been destroyed. Licences were authorised for 998,430 acres but were taken up for only 811,385 acres. Even these licences were not fully utilised because of the low price of jute at sowing-time. The outturn of the crop is estimated at 28,39,302 bales which works out at 3.6 bales per acre.

Considerable scepticism has been expressed regarding these official figures and there is a general belief not only in Calcutta but also in East Pakistan that the forecast has been prepared for purposes of propaganda. Some trade reports in East Pakistan have put the expected outturn as low as 35 lakh bales but most estimates are higher. Estimates of outturn made now are, however, largely guess-work for the plants in the late districts are still a long way from maturity and there are areas where sowings were delayed by drought and have only recently been completed. In some areas the crop will not be fully grown until September.

The East Bengal Minister of Agriculture is reported to have said that the total outturn of the crop in Pakistan and India may not exceed 55 lakh bales and he put the carry-over in Pakistan at 20 lakh bales and in India as insignificant. Even allowing that the Minister may have better sources of information regarding the Pakistani crop than are available to us in India, it is doubtful whether anyone will accept his figure of 27 lakh bales for the Indian crop. Even more so than in Pakistan it is too early to estimate the outturn of the Indian crop owing to late sowings; and sowing is still in progress in some districts.

So far as carry-over is concerned, trade opinion in Pakistan seems to favour a figure nearer 25 lakh bales than 20. For the carry-over in India the figure which finds most general acceptance is 10 lakh bales and it is estimated that there are at least 3 lakh bales in merchants' godowns and in press-houses in Calcutta alone—not an insignificant quantity.

As has been said before, it is too early to make more than a rough estimate of what the outturn of the crop will be but general opinion seems to be that, granted favourable conditions until the crop is harvested, the outturn in Pakistan may be between 35 and 40 lakh bales and in India between 30 and 35 lakh bales. Allowing for carry-overs as above, that would give a total availability of between 100 and 110 lakh bales which would be sufficient for the world's requirements, but not excessive. So far as the official Pakistani estimates are concerned, it may be pointed out that officials connected with the administration of the Jute Regulation Act must have had a good idea nearly two months ago of how the sowings were progressing and it is pertinent to enquire why, if the sowings were showing signs of being as small as they are now estimated to be, the Pakistani Jute Board sold so much of its stock at such low prices at the end of May and early in June.

I. J. M. A. Production

In June the output of I.J.M.A. mills and mills reporting to the Association was 72,800 tons, just slightly higher than the output in May which was 72,500 tons. Of the June total 31,900 tons were hessian and 38,100 tons were sacking making 43.8 percent and 52.3 percent of the total respectively. These figures were practically the same as those for May. The total output for the jute year 1952-53 compared with that of 1951-52 is given in the table below—

Output of Mills Reporting to the I.J.M.A.

	Total	Hessian Sacking	Other kinds
July 1952-June 1953	861,500	347,700	510,400
	38.0%	57.3%	3.7%
July 1951-June 1952	945,200	306,400	607,000
	32.7%	64.2%	3.1%

It will be noted that, in the past 12 months, the outturn of hessian has increased by 6.3 percent compared with that of the preceding twelve months while that of sacking has decreased by 6.9 percent. The current output of hessian is, however, round 44 percent and that percentage may increase still further.

I. J. M. A. Consumption of Raw Jute

In June the consumption of jute by mills reporting to the I.J.M.A. was 4,34,000 bales making the total for the year July, 1952 to June, 1953, 63,17,000 bales. In May the consumption was 4,32,000 bales. The total consumption in 1951-52 was 55,37,000 bales. The reason for the higher consumption last year was, of course, that the

mills worked 48 hours per week from December, 1951, to March, 1952.

U.S. CONSUMPTION IN JUNE 58.5 MILLION YARDS

JUTE MARKETS GENERALLY DULL
All sections of the market have generally been dull and there have been no outstanding features of interest.

Manufactured Goods: After the jitters of the previous week the goods market has been calmer. Not much business has been transacted and there have been the usual fluctuations in the Katni market but no exceptional movements. Further business was reported with the Argentine in 9 oz. and 10 oz. hessian and in B Twill sacking cloth for October-December shipment but inquiries from other consuming countries have been small. Some business was reported in Liverpools and Heavy cees. The announcement of the sowings and expected outturn of the Pakistani crop had a bullish effect on the market. Mills have been reserved and there has been no selling pressure. On Tuesday afternoon the Katni wallahs depressed the market by spreading a rumour that the U.S. consumption figures for June were only 53 million yards but the market steadied later with the news that the correct figure was 58.5 million yards.

As against the figures of 58.5 million yards for June, 1953, U.S. consumption was 59 million yards in May, 1953 and 61 million yards in June, 1952. U.S. stocks at the end of June, 1953 amounted to 200 million yards as against 203 million yards at the end of May, 1953, and 193 million yards at the end of June, 1952.

Quotations on Wednesday morning were:	Ready	July	Aug-Sept.	Oct-Dec.
40" 8 oz.	Rs. 56-4	75-4	35-8	35-6
40" 10 oz.	Rs. 45-0	45-0	45-0	44-8
Heavy Cees (Plain)	Rs. 100-0	100-0	100-0	100-0
B Twills	Rs. 96-8	96-8	96-0	100-0
Corn sacks	Rs. 100-0	100-0	100-0	100-0

Raw Jute: There has been a general lack of interest and the only buying of importance took place on Saturday when one group is reported to have bought over 100,000 maunds. Another group had previously purchased nearly 50,000 maunds but had been unable to dispose of them. Sellers are keen to dispose of their holdings of Old Crop and are willing to discount prices in order to effect sales. There is more reserve in regard to New Crop because of the general belief that it will be small and late and that its prices are likely to be maintained. Business was reported as follows:

Old Crop:	Dhurbi & Northern Middles only Rs. 28-8 and Rs. 28
Assortment Rs. 27-8 to Rs. 26 basis Bottoms	
Upper Assam	Middles only Rs. 27-8 and Rs. 27
Assortment Jute Rs. 25 to Rs. 23-8 basis Bottoms	
Assortment Tossa Rs. 24-8 and Rs. 23-8	
Daisee (Sheoraphuli)	Rs. 26-8 basis Bottoms
Jungli Rs. 20 basis Bottoms	
Elmit	Rs. 20-12 F.A.Q.

Dundee Daisee Rs. 160 for Short Group and Rs. 145 for Long Group Pakistani Jat Rs. 25-8 to Rs. 24-12 basis Bottoms. Pakistani NC cuttings Rs. 68 to Rs. 65.

All the above are for shipment within one month.

New Crop: Dhurbi & Northern Rs. 27 to Rs. 26-8 basis Bottoms Upper Assam Rs. 26 to Rs. 27-8 basis Bottoms.

For supervised marks buyers paid 8 annas to Re. 1 more. Pakistani Jat Tops & Middles Rs. 36 and Rs. 33 Aug-Sept. Jat Assortment Rs. 29 basis Bots Aug-Sept.

All the above are for shipment in August-September.

Quotations are as under:

Pakistani Jute:	Landed at Mill	New Crop.
Old Crop	Rs. per md. Shipment	Rs. per md. Shipment

Imports into Cossipur have been rather less but not small for this time of the year. They consist mainly of Jungli jute and Murshidabad tossa. There were taken imports of New Crop from Northern Bengal for Saith day business. Prices have not changed much from those of last week.

Mofussil: In India conditions are unchanged but holders of stocks appear to be more anxious to dispose of them. Heavy and continuous rain during the past two weeks in the north-east have caused some fear of flooding when the excess water reaches the jute districts in Assam. In Lower Assam the weather has been favourable and harvesting is going on slowly. In North Bengal rainfall has been excessive. Flooding is reported from Bihar.

Markets in Pakistan have been dull and buyers have shown little interest. Imports of New Crop are increasing slowly but much of the present imports consists of short jute from the char lands which is not much better than X Bottoms. Heavy rain is reported from most districts and sunshine is much needed especially for the plants from the most recent sowings.

INDIAN CROP PROGRESSES

In their seventeenth crop report of the current season, covering the week ended 11th July, Messrs. Sinclair Murray & Co. Ltd. say that the weather has been favourable in Assam and harvesting is progressing slowly on lowlands. In West Bengal, some districts have had excessive rainfall which has held up weeding operations and a spell of dry sunny weather would be beneficial. Condition of early sown plants is satisfactory but later sown plants require strong sunshine to promote growth.

DANPUR: Sowings completed -12/-. The weather has been favourable with alternate rain and sunshine, and since the completion of sowings it has been about -3/- has been damaged through unfavourable weather conditions. Weeding operations are proceeding apace and the river level is about the same as it was at this date last year.

JAIPUR ROAD: Sowings completed -13/-. The weather has been favourable with alternate rain and sunshine. The condition of early sown plants is satisfactory and later sown plants are reported to be improving.

RANAGHAT: Sowings completed -18/-. The weather during the week has been mainly cloudy with scattered showers and a spell of dry sunny weather would now be beneficial. The general condition of early sown plants is satisfactory and later sown plants are improving.

COSSIMBAZAR: Sowings completed -10/6. Excessive rainfall was experienced during part of the week and it is estimated that about -1/6 has been damaged. Weeding operations are going on slowly. Condition of early sown plants is satisfactory but that of later sown plants is unsatisfactory. A spell of dry sunny weather is now necessary.

NOWGONG: Sowings completed -11/6. The weather has been favourable and the condition of the plants is satisfactory. Harvesting is proceeding slowly on the lowlands. The river level is about normal.

GAUHATI: Sowings completed -13/6. Alternate rain and sunshine has been experienced over the week which has been favourable for the crop. The condition of the plants is satisfactory and they range in height up to 7". Harvesting has been completed on the lowlands and is starting on a small scale on the midlands. The river has risen during the week and is about the same level as at this date last year.

DHUBRI: Sowings completed -12/-. Fairly heavy rainfall has been experienced during the week but the condition of the crop is satisfactory and plants range in height up to 8". The river is steady and is slightly above last year's level at this date.

DAISSEE DISTRICTS: Sowings completed -10/-. Favourable weather has been experienced during the week which has improved the condition of the plants which now range in height up to 5". Second weeding operations are now being taken in hand.

PAKISTANI CROP NEEDS SUN

In their nineteenth crop report of the current season, covering the week ended 11th July, Messrs. Sinclair Murray (Pakistan) Ltd. say that heavy rainfall has been experienced in almost all districts and a spell of dry sunny weather is now essential to promote growing. Rivers are rising and are about normal. Harvesting is proceeding steadily on lowlands. Small imports are reaching primary markets but the quality is poor.

NARAYANGANJ: Heavy rainfall has been experienced and the crop has made little or no progress. Strong sunshine is now essential to promote growth. Harvesting is in full progress on the lowlands. The river has risen steadily and is about 6" above last year's level at this date.

DACCA: Weather during the week has been mostly wet and a spell of dry and sunny weather is required to promote growth. Harvesting of the lowlands is now completed. Condition of the plants is for the most part satisfactory. The river is slightly higher than at this date last year.

CHANDPUR: Heavy rainfall has been experienced and a spell of dry weather is now necessary for the standing crop. Harvesting of the lowland crop has increased. The river has risen during the week and is at about the same level as at this time last year.

HAJIGANJ: Heavy rainfall has been experienced and a spell of sunshine and dry weather is now necessary to promote growth. Weeding operations have been completed and harvesting is in progress. The

river has risen and is about the same level as at this time last year.

AKHIAURA: The weather has been mainly wet although not unfavourable for the standing crop. Harvesting on the lowlands has started on a small scale. The river is rising slowly and is about 2' higher than at this date last year.

ASHUGANJ: Heavy rainfall was experienced early in the week and since then conditions have improved. Condition of the plants for the most part is satisfactory and they range in height up to 7". Harvesting is going on in the lowlands. The river has risen during the week and is 1½' higher than last year at this date.

NIKILIDAMPARA: The weather has been mainly favourable. Cutting of the lowland crop is proceeding slowly but the condition is reported to be unsatisfactory. The river has risen and is about the same level as at this time last year.

SARISHABARI: Weather during the week has been mainly wet and a spell of bright sunny weather would now be beneficial. The condition of plants is reported to be satisfactory except in the highlands due to early drought and late sowings. Harvesting is going on slowly on the lowlands. The river has risen and is about the same level as at this time last year.

SERAJGANJ: The weather has been wet and a spell of dry weather is now essential. The condition of the crop in general is satisfactory and cutting on the lowlands is going on slowly. The river has risen during the week and is now about 2' lower than at this date last year.

NAKALIA: Excessive rainfall has been experienced which has been unfavourable for the crop and a spell of dry sunny weather is now required. Harvesting on the lowlands is going on steadily. The condition of the crop is for the most part satisfactory. The river has risen during the week and is about 1' below last year's level at this date.

BHANGGOORA: The weather has been mainly wet and a spell of dry sunny weather would be beneficial. The condition of plants is reported as satisfactory. Harvesting is going on steadily on the lowlands. The river is rising slowly and is about 2½' lower than at this date last year.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Looms for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
LEEDS, ENGLAND.

The J.3 loom (3 leaf, 3-shuttle) weaves twill tubular cloth for sacks.

PAKISTANI JUTE GOODS IN THE U.S.A.

In its latest newsletter, a jute goods importing firm in Boston, U.S.A., says: "The widely known Adamjee Mills of Narayanganj are the first to make a commercial shipment of Pakistan burlap to this country. Bemis, America's largest burlap importer, has purchased the entire initial shipment which is due to arrive in New York and on the West Coast the middle of this month. Mr. A. W. Adamjee, Chairman of the Adamjee Jute Mills, and Mr. G. Faruque, Chairman, Pakistan Industrial Development Corporation, have been visiting the United States and Canada in the interests of Pakistan's new jute manufacturing industry, which by early 1956 is expected to be producing in the vicinity of 200 million yards of burlap per year, or roughly 20 percent of the Calcutta mills' current production."

Another firm of burlap importers adds: "Even though it may take a year or more, we like to think that each day brings us that much nearer to the time when Pakistan's looms will be producing in sufficient quantity to export sizable quantities to us."

PRODUCTION FIGURES

The Indian Jute Mills Association reports the total production of manufactured goods during June as follows: (A) Total reported production of manufactured goods exclusive of all Government orders:

Description	Quantity
1. Twist and Yarn	1,317 Tons
(a) For sale	
(b) All other including that used in sewing bags	729 "
2. Canvases	108 "
	2.5 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	936 Tons
	40.7 lakh yds.
	20.5 " Nos.
(b) Sacking	36,034 Tons
	863.5 lakh yds.
	351.9 " Nos.
4. Gunny Cloth	
(a) Hessian	28,726 Tons
	11,11.6 lakh yds.
(b) Sacking	1,797 Tons
	37.3 lakh yds.
5. Other manufactures (including ropes)	561 Tons
6. Total production (above figures combined)	
(a) All kinds	70,206 Tons

THE FOREIGN JUTE MARKETS

(FROM OUR OWN CORRESPONDENT.)

Dundee, By Air Mail. THERE seems to be a lack of stability in the jute industry at the moment, yet the position at all producing centres is quite favourable. Manufacturers are fairly comfortably situated with orders for jute cloth and bags for delivery over the next several months and there appears to be little chance of any material decline. The raw jute market in Pakistan is quiet and some shippers, who are not, by the way, in the top class, are showing a desire to secure orders. They are offering to sell Mill Firsts at £98 per ton and Mill Lightnings at £97, but there are still a number at £101 and £90 respectively, c. and f. U.K. Continental spinners and the Jute Controller in Dundee are out of the market meantime, having secured fair quantities during the past month or two. New crop reports are satisfactory, apart from the much smaller area cultivated the season, and it is hoped that there will be a sufficient supply of the raw material to satisfy all requirements.

THE NEW TEA ACT COERCION PREFERRED TO CO-OPERATION

By Valale I. Chacko

THE Tea Bill that was before Parliament in the last session was one of the most controversial of legislative proposals. The tea industry opposed it with almost absolute unanimity. Within the House support was practically all political. Yet it has been passed. The industry must now examine this Act and see how it affects its day-to-day working and long-term interests.

There is some confusion in the public mind about controls. There is a feeling that the industry stood for the status quo and that it was opposed to any form of Governmental scrutiny or control. The fundamental issue was whether the framework of control is such that a Board composed of the true representatives of the various interests could function with dignity and usefulness as a true partner with the Government in regulating the affairs of the industry in the best interests of the country. If these were the objectives of Government policy there can be little doubt that co-operation from the people who provide the leadership, initiative and professional knowledge is the most essential requirement. Co-operation cannot be obtained by dictation or coercion and when Ministerial pronouncements and Government policy alike were revealed to be suspicious of and hostile to management, it was a tactical error from the very beginning.

Arbitrary Official Control

To develop the industry, to give labour a square deal, to produce efficiently and to contribute to the nation's economic stability are objects with which no industry can quarrel. The outstanding feature of the Tea Bill was that it did not seek specifically to provide for any of the above objectives but merely to extend the area of arbitrary official control. In other words, it gave officials the right to take administrative and policy decisions about every aspect of the industry without the obligation to be answerable for the consequences. There is a world of difference between control of this nature and the regulatory control exercisable under carefully defined provisions.

Does the Tea Act define the powers carefully? Does it seek the co-operation of those most concerned with management of the industry? The best answer to these questions is in the specific provisions of the Act. Section 4 (2) provides the Government with the power to nominate members to the Board to represent the various interests. Does the Government know who the representatives of the various interests are better than those interests themselves? Since the Act provides unlimited powers of control and interference to the Board, the reservation of powers of nomination can be explained only by the supposition that it provides the Government a field for patronage.

Representation of Various Interests

This section does not mention what will be the proportion of membership allotted to the different interests. Except for the fact that this provides scope for revisions in the quota of each interest, what possible industrial regulation does it envisage? The Government, by taking the power of nomination, cancels the internal dynamism of the organisation, since new leadership within the organisation has no scope for expression.

Under Section 11 (1) the Government takes powers to dissolve the Board by the simple procedure of issuing a notification to that effect. The Government is not obliged to give any reason for doing so. A Board can be dismissed not only for contravening any of the provisions of the Act or doing something manifestly repugnant to the Act, but at the pleasure of the Government. Will such a Board, entirely nominated by the Government, whose membership is variable and liable to being dismissed for reasons it has no right to know, be capable of attracting the best men in the industry or of stimulating initiative or a robust independent attitude? Individually the members have no power over the Board administration and that is proper. But collectively the Board should have been master in its own house. Now, over a docile Board sits a Government-appointed chairman. Board officials are appointed not by the Board or with reference to it, but by the Government under Section 9 (1).

Section 31 (1) provides that all acts and proceedings of the Board shall be subject to the control of the Central Government which may cancel, suspend or modify as it thinks fit any action taken by the Board. Sub-section (2) provides that the Board shall carry out such directions as may be issued to it from time to time by the Central Government. These two clauses have a tremendous coverage but it would be difficult to quarrel with them. As far as I know, no section of the industry has objected to these provisions without which the Government would have no effective power. But if these provisions confer on the Government unlimited powers, is it necessary to take away the representative character of the Board and hold the threat of dismissal over its head?

There were objections to section 30 under which the Government can take powers to con-

trol the price and distribution of tea. The objection arose not merely because the Government sought control but because the particular types of control would not only act as a restraint of fair trade but would disrupt the trade if enforced. The Government modified this clause during discussion and it is an improvement over what it was originally but one particularly objectionable feature remains. It says that the Government may specify the maximum quantity which may be sold to any person. It confers the right of discrimination on the Government which has no machinery to make that discrimination equitable.

The cess on tea is a specific levy put on tea in particular to serve a special purpose. It is not a general levy for general revenue. Under sections 25, 26, and 27 of the Act the cess collected from tea will be credited to the Consolidated Fund or the general revenue account of the Government and such sums as the Government thinks fit will be paid into a tea fund from time to time. This involved procedure is supposed to meet a constitutional requirement, but it is part of that requirement to pay on an instalment system, at the discretion of the Government, the moneys required to meet the Board's expenses? The Board's accounts are subject to Government scrutiny and its budgets subject to Government approval—and yet it is only to receive payments from time to time as the Government think fit?

The debate in Parliament tended to give the impression to some people that the Bill was a legislative measure directed against foreign interests. In reality the enactment does not contain a single directive or provision to lend support to this view. Foreigners in the industry can play their vital part just as they have done before and they are subject to the same laws as are the Indians. It is difficult to convince the prejudiced and the doctrinaire whose support the bill had in ample measure, but it should not be difficult for any reasonable person to see that opposition to the Tea Bill was based on the principle that in a democratic society co-operation and not coercion is necessary to make any public measure successful. That co-operation has been put at a discount by the Tea Act.

CALCUTTA TEA SALES IN JUNE

GOOD GENERAL DEMAND

GOOD liquoring teas from all districts met with strong demand and there was a good demand for whole leaf grades throughout the month, say

UNITED BANK OF INDIA LIMITED

A PENSION FOR LIFE

Are you in non-pensionable service, trade or business? You too can have a pension for life with this easy "Help Yourself" investment Plan.

Start right now. Every month buy regularly for the next 12 years a Twelve-Year NATIONAL SAVINGS CERTIFICATE of say, Rs. 150. These certificates will mature, one every month, onwards from 1965. Cash a certificate each month thereafter; take the bonus of Rs. 75 as your pension and re-invest the principal, Rs. 150. Thus from 1965 onwards, you

will have a regular monthly income of Rs. 75 for yourself plus the accumulated principal of Rs. 21,600 for your dependants. Begin today and go on buying a Certificate every month for the next twelve years.

**NATIONAL
SAVINGS
CERTIFICATES**

**SECURITY FOR THOSE
WHO LOOK FAR AHEAD**

Issue of these certificates is subject to the National Savings Certificate Rules, 1944, as amended from time to time. For further information or details please apply to the National Savings Commissioner, Simla-3.

TA 3453

Carritt Moran & Co., in their monthly market review. Clean common and low medium teas advanced in price in Sale No. 2 but declined again by half an anna in the next sale. The plainer liquoring Darjeeling teas were often difficult to sell and withdrawals of this class of tea from Sale No. 2 were heavy.

There was an unusually large quantity of Darjeeling tea on offer. Leaf appearance was quite satisfactory, but cup quality with a few exceptions was disappointing and below average for early teas. A few flavoury invoices with stylish leaf appearance sold well. Offerings from Assam were limited and consisted of ordinary first flush teas. The quality of teas from the Dooars was above average and included a number of bright liquoring teas. Leaf appearance showed some improvement compared with last season and stalk and fibre were much less in evidence. With few exceptions, useful black teas with clean sweet liquors were on offer from Cachar.

	1953-54	1952-53
Clean Common BP.—	Rs. a. p.	Rs. a. p.
Sale No. 1	1 11 6	Not quotable
Sale No. 2	1 11 6	1 1 6
Sale No. 3	1 11 0	1 0 6

Internal

Leaf offerings continued to be very small and in the two sales held consisted of 1,369 packages of 1953-53 teas and 255 packages of 1953-54 teas. These met with fair demand and sold at slightly dearer rates in Sale No. 1, but there was an easier tendency in Sale No. 2.

Dust Sale No. 1, consisted of 33,836 packages of 1953-53 teas. Sale No. 2, included a further 13,402 packages of Old Season's tea and 14,464 packages of the New Season's crop. Black leafy exportable types were a strong feature but the Old Season's offerings were generally one to two annas dearer. New Season's Dooars and Commons met with fair enquiry, but little interest was shown in Darjeelings, except for the flavoury sorts, which sold well.

	1953-54	1952-53
Clean Common Dust—	Rs. a. p.	Rs. a. p.
Sale No. 1	1 6 6	Not quotable
Sale No. 2	1 6 0	1 5 0

Export sales up to and including Sales Nos. 1 and 2 totalled 48,439 chests at an average price of Rs. 1-13-10, compared with 36,097 chests at an average price of Rs. 1-7-10 a year ago. Internal sales at 545 chests of leaf and 12,003 chests dust (Rs. 1-12-5 and Rs. 1-7-7) go against 552 and 10,823 chests (Rs. 1-13-0 and Rs. 1-4-10) in the corresponding period last year.

As no extension was sanctioned to the validity of Special Licences beyond the end of May, there was an increased demand for 1953-54 Export Quota and the price rose to 24 pices per pound. At the end of the month the market was rather quiet with business passing at 22 pices.

Arrivals (in chests) in Calcutta warehouses during the period 24th May to 23rd June 1953, with the corresponding figures for last year in parentheses, were as follows: by rail 47,410 (63,266); by air 6,872 (10,314); by steamer 79,383 (158,084). Since the beginning of the season, 1st April, 1953, and up to 23rd June, 1953, arrivals have been 113,458 (97,953) by rail; 18,276 (22,180) by air; and 135,718 (214,813) by steamer; making a total of 267,452 (334,916) chests.

NORTH INDIAN TEA CROP REPORT

The following summary of crop and weather telegrams has been received for the month of June 1953.

Upper Assam.—Weather generally seasonable but abnormally hot in Panitola and rainfall above normal in Tingri and North Lakhimpur; outturn last month very poor to about normal; immediate prospects fair.

Central Assam.—Weather generally dry and rain wanted except abnormally wet in Moran; outturn last month poor to about normal; crop prospects generally fair.

Lower Assam.—Weather generally seasonable but hot in Borsola and rainfall deficient in Bishnauth; outturn last month poor to about normal; immediate prospects fair to good.

North Cachar.—Weather seasonable but abnormally hot in Happy Valley; rainfall generally is prevalent in some districts of Lakhimpur; red spider blight prevalent in Happy Valley and in some districts of North Cachar; outturn last month poor; immediate prospects fair.

South Cachar.—Rainfall is unusually heavy and is interfering with outturn; floods reported from parts of Longai; excessively hot weather is interfering with outturn in Chutla Dheel; in Hallakandi red spider blight lifting; black rot prevalent and helopellis prevalent in some districts; outturn last month poor to about normal; immediate prospects fair.

Eastern Dooars.—Rainfall for the month has been deficient but weather favourable generally; the outturn is considerably under last year; immediate prospects fair; blight is not so severe; black rot prevalent in some districts.

Western Dooars.—Outturn last month about normal; immediate prospects good; weather seasonable; good rain has fallen generally and prospects are now brighter; crop prospects generally are favourable; helopellis prevalent in some districts.

Darjeeling.—Outturn last month poor; immediate prospects fair; weather seasonable; helopellis prevalent; blister blight prevalent; thrips severe generally.

Teral.—Outturn about normal in absence of good rain; outlook fair; red spider in evidence in parts of South Teral.

LONDON TEA SALES

At last week's London tea sales the 52,677 packages on offer realised an average price of 3s 7.54d a pound, against 3s 8.20d last week and 2s 10.84d a year ago. Clean common or broken pekoe is quoted at 3s 4½d; last week 3s 5d to 3s 5½d. Results obtained by some of the companies are given below:—

	No. of packages	Av. per lb.
*Assam Dooars	723	3/83
Assam Fortier	1,206	3/9
Buxa Dooars	432	3/7
Cons. Tea Lands	258	3/64
*Darjeeling Co.	201	4/5
Dooars	921	3/53
Doom Dooma	513	3/84
Eastern Assam	327	3/81
Jhenzie	216	3/64
Jokai	1,740	3/71
Jorehaut	574	3/72

(*1953-54 season).

CHITTAGONG TEA SALES

At Sale No. 2 held in Chittagong on 8th July, 1953, leaf offerings consisted of 5,527 chests of which 108 chests were of 1952 manufacture. Dust offerings amounted to 1292 chests of which 52 chests were 1952 manufacture. There was a Supplement of 251 chests.

Leaf: There was a general levelling out of prices and poorest types were much in demand by bazar buyers, occasionally realising more than valuation, but from the start of the sale it was obvious that the high prices realised in Sale 1 for Clean Common teas were not going to be maintained in Sale 2. Whole leaf grades were three annas down with Fannings and Broken grades respectively five and six annas easier. The very B.O.P. sold at about Rs. 1-14 with really stylish Orange Fannings making Rs. 1-14-6. There were no withdrawals except for 246 chests of second-hand teas.

Dust: The pattern of the dust sale was similar to the leaf: a fair demand at four annas below last rates. 114 chests were withdrawn and of this figure 72 were on garden account. Clean Common Dust can be quoted at Rs. 1-6-0 with smaller types slightly better at Rs. 1-4-6.

	Quotations	
Sale 2—8th July, 1953		Sale 1—10th June, 1953
OP	Rs. 1 12 0	Rs. 1 15 0
FEK	Rs. 1 10 6	Rs. 1 13 0
BOP	Rs. 9 6 to 1 10 6	Rs. 2 0 0
BP	Rs. 1 9 6	Rs. 1 15 6
DPS	Rs. 1 9 6	Rs. 1 15 9
OF	Rs. 1 11 0	Rs. 1 15 9
FF	Rs. 1 10 0 to 1 10 6	Rs. 1 15 6

The next sale will be on 22nd July 1953 when 7,417 leaf, 1,652 dust and 172 chests Supplement will be offered.

COCHIN TEA SALES

At Sale No. 14 held on 7th July 1953, about 1,955,000 lbs. were offered. Although leaf appearance was generally inferior to the last sale and below average, liquors were brighter and above average for the time of the year. There was a good general demand and commons and low mediums showed advances of about 2 annas. Medium and good mediums were about steady while best liquoring descriptions inclined easier following quality. There was again a keen enquiry from Bombay buyers for whole leaf grades and these were a strong feature of the sale.

	Rs. As. Ps.	Last Sale
Low grown Travancore B. O. P.	1 10 0	1 10 0
Medium	B. O. P. 1 11 0 to 1 12 0	1 10 6
Anamallai	B. O. P. 1 12 0	1 12 6
Best liquoring Nilgiri	B. O. P. 2 3 0	2 5 0
Black well made	O. P. 2 2 0	2 1 0

The Export Quota market has remained steady this week at 21 pices buyers, business being done at this rate. Sellers are now quoting 22 pices with buyers scarce.

Export Sale No. 15 will be held on Tuesday 21st July, 1953.

TOBACCO ESTIMATE

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture the all-India final estimate of tobacco, 1952-53 puts the current year's area and production at 768,000 acres and 211,000 tons as against 659,000 acres and 192,000 tons respectively in the adjusted final estimate of last year. This shows an increase of 109,000 acres or 16.5 percent in area and 19,000 tons or 9.9 percent in production. The increase in both area and production has been shared mainly by Bombay, Hyderabad and Rajasthan and has been due to favourable weather conditions at the period of sowing and growing.

Information in respect of Bhopal has been included in this estimate for the first time. This estimate does not contain information in respect of late variety of the crop grown in U.P. and Delhi and the final position in Punjab and P.E.P. S.U. which will be reported at the time of all-India supplementary estimate. Past experience shows that the supplementary estimate figures are slightly higher than those of the final estimate.

THE CASHEW NUT INDUSTRY IN INDIA AN IMPORTANT DOLLAR-EARNER

THE supplement to the United Commercial Bank Review for May 1953 contains a survey of the cashewnut industry in India which says that owing to the paucity of statistical data it is not yet possible to make an exhaustive study of the industry. Those engaged in it have also ignored organisational propaganda on the part of the industry and the State also has been at best lukewarm in its attention to the industry. That is why the Economic and Statistical Section of the United Commercial Bank has tried to gather together all the available material so that it should serve at least as a starting point for later inquiries.

"The cashewnut industry is of comparatively recent growth. Lately the industry has earned annually 25 million dollars in foreign exchange and it has thus assumed an importance in the international sphere which is out of all proportion to its age. Next to jute and pepper, cashewnut now occupies a leading position as an earner of hard currency.

"India is not self-sufficient regarding her requirements of raw nuts. Nearly two-thirds of the total supply of raw nuts comes from Portuguese East Africa and British East Africa. In Tanganyika only, increasing realisation of the commercial importance of cashewnut has led to the production of cashewnuts has steadily increased to the stage of an exportable crop of 10,000 tons a year with an estimated value of £450,000. In Portuguese East Africa and British

East Africa, the nut grows mostly wild as in India. On the cashewnut market in Africa some four or five leading Bombay merchants have an important hold. The leading merchants have their agents in Africa who collect nuts in the African markets and despatch them to Bombay. The system of marketing is at present very primitive. These agents who have trade contracts with the cashewnut growers collect the nuts on a barter system. The leading brokers are however not primarily interested in cashew only; for them, the cashewnut business is of subsidiary importance. There have been occasions, when during dull situations in the market they have practically cut off all supplies of raw nuts. From this it is clear that they enjoy a monopoly position in the market, leaving little or no scope for any new enterprising business men to explore the nut market in Africa.

"The fluctuating nature of the price of raw nuts places the raw nut merchants in a very strong position. The price of raw nut varies in accordance with the variation in the price of cashew-kernels in overseas market. The cashew-kernel exporters place their demand for raw nuts after receiving the quotation from foreign importers. Actual transactions between the suppliers of raw nuts and producers of kernels take place when the producers find that the American quotation for kernels and the Bombay quotation for the nuts leave a reasonable margin of profit. In fact, a previous knowledge of the kernel market gives sufficient time to the cashewnut brokers to manoeuvre the prices. The methods of collecting and marketing of nuts in India are also as primitive as the general system of marketing agricultural commodities in India. The middlemen visit the small growers and collect the nuts and the marketable quantity is brought to the shandy and sold to the highest bidder. Even here the price of raw nuts is fluctuating, in accordance with the

demand for kernels ruling in the American market.

"No estimate whatsoever has been made regarding the cultivable land suitable for cashew nut. In fact in Travancore-Cochin State, plenty of uncultivated land remains unexploited. It is the responsibility of the State Government to make this suitable for the cultivation of cashew-nuts.

Export of Cashew-Kernel

"The cashew-kernel occupies an important place in the export industry. Exports are mainly through Cochin port all the year round, but arrangements for loading and unloading cargo exist at Quilon in the fair season where loading takes place during the period January to June. This is an industry having perhaps the quickest turnover. Due to the perishable nature of the article, the manufacturers are anxious to see that it reaches the consumers as early as possible. But international trade in cashew-kernels as such has developed only during the last two decades. Up to 1925 exports did not exceed 50 tons, but in 1952, nine months April to December, India exported 21,503 tons of kernels worth Rs. 103,905,079. The weight of the kernels sold abroad increased by exactly one-half. During the twelve months ended March, 1952, exports declined by 4,000 tons but were worth more than ever before in the last 25 years (Rs. 8.89 lakhs). Both in volume and value, exports have shown a considerable increase over the pre-war average of 13,000 tons worth Rs. 129 lakhs. The importance of the industry as a dollar earner is thus obvious. In 1950-51, exports to America alone brought \$15 million, or one and a half times the sum earned in the previous year. In 1952, for nine months April to December, the total earnings came to \$1,632,982. Despite a decline in the volume of exports \$14 million was obtained in the year ended March, 1952. In quantitative terms, India's exports to the United States rose from 15,000 tons in 1949-50 to 20,000 tons in 1950-51, but slumped to 14,000 tons in 1951-52. Except in 1951-52, the United

States has since the war been buying on an average 16,000 tons annually, or 80 percent of India's total export. Before the war, she bought 11,000 tons annually, or 85 percent of the total export. Britain is India's next best customer of processed cashews and her average offtake has been 3,000 tons or 14 percent of the total exports in recent years. Canada, Australia, New Zealand and several continental countries also import kernels in small quantities.

"If the cashewnut industry is to develop further in India certain steps are immediately called for. In the first place the South India Cashewnut Manufacturers' Association should take more active steps to guide and lead the industry at every stage. The Association should explore the possibility of making India self-sufficient in the matter of nuts. In some respects legislation will be necessary for proper mobilisation of raw nuts and their channelling into appropriate factories. At present grading on a quality basis is practically unknown and when in western countries perishable commodities like eggs can be controlled and numbered by government stamps, there is no reason why it should not be possible in the case of cashewnuts. Another direction in which productive efforts are required is in planting and tending the tree. Intensive internal cultivation can perhaps free us from the dependence on the foreign market. The Council of Agricultural Research can assist the industry more than it is doing at present by carrying on experiments on the actual spots and in the laboratory. In the factories, introduction of oil bath plants can yield the maximum cashew shell oil without spoiling the kernels. With the increasing demand for cashew shell oil, resulting from the discovery of new products, such as plastic, oil bath process can add to the commercial value of the oil. All the factories can install more oil bath plants to extract the maximum quantity of oil and export them to America. At present there is considerable wastage of oil in the process of extraction.

Cashew Shell Oil

"In the cashewnut industry next in importance

to the kernels is the oil derived from the nut. Indian exports of the oil in 1950 were estimated at about Rs. 60 lakhs. An authoritative estimate gives the proportion of oil as 18 lbs. of oil to 168 lbs. of nuts. This oil is filled in barrels each containing approximately 450 lbs. Till quite recently the export of oil was carried on more or less in a haphazard way. But with the introduction of the oil bath plant the extraction of oil has become comparatively easier. In spite of this however, up-to-date oil bath plant have not been introduced in this industry on any large scale; because in the first place, the cost of the plant is heavy and in the second place, as has already been mentioned above, those engaged in the industry are content with their present profit and are not inclined to launch programmes of propaganda or development. Moreover, owing to the very faulty and illiterate labour this costly plant can easily go out of order as some factories in Quilon have burnt their fingers badly in trying to work these machines with inefficient labour. There is no doubt whatever that if adequate long-term financing is attempted one of the first requisites will be to get better type of labour for this industry.

"Attention should also be drawn to the need of having proper and adequate statistics. It is deplorable that up-to-date statistics have not been maintained either by the industry or by the State regarding the cashewnut industry. No consolidated study whatever has been made about the industry so far. The industry's only organisation, viz., the South India Cashewnut Manufacturers' Association in Quilon, should cater to the need of organising and pooling the statistical data and keep the public informed about the development of the industry from time to time.

"Mention has already been made of the importance of the cashewnut industry as an earner of foreign exchange. The United States of America which took cashewnuts of the value of \$1,592,256 in the year 1939-40 from Cochin Port alone took nearly \$12,730,853 worth of cashewnuts in the year 1950-51 and still later figures will show that the exports are growing very rapidly. With the present unsettled condition in Africa and growing demand for shell oil this is the proper and opportune time when Indian industry can progress if it makes determined efforts to do so. Those engaged in the industry are at present content to rest on their oars since they have a field where competition is practically non-existent. The industry's association should therefore launch development propaganda, avoid waste at home, eliminate middlemen and duplication, ensure quality for the foreign consumer and arrange adequate transport. At present the industry cannot be developed between Bombay and Goa largely for want of transport. There would still be room for earning more foreign exchange if the cashew fruit can be used instead of being thrown away. Owing largely to the absence of a tanning and preserving industry in India, there are no facilities at present for this kind of work. The fruit therefore largely goes to waste. One way of utilising it would be to distil wine from it and export it abroad by way of an experiment. There are many directions in which the industry can be improved by those engaged in it."

Option of Redemption.

- (A) 2 months notice (iv) 1 month's notice (vi) Any int. day; (x) 5 months notice (y) 3 months' notice; (z) 12 months' notice
- (A) Redeemable at par between the years 1924 and 1940 in instalments of not less than Rs. 1,00,000 per annum or by tendering to be repaid in cash or by purchase at par before 31st December 1948. Also redeemable out of accumulated profits up to the extent of 10% per cent by purchase at any price less than par or by annual drawings at par.
- (B) Redeemable wholly in the event of the undertaking being purchased by the Corporation of Calcutta or Government of Bengal or wholly or partly by the Corporation of Calcutta or Government of Bengal with Imperial Bank of India as security against overdraft.
- (C) These Debentures shall have the right to convert them into shares of Rs. 10 each between 1st January 1950 and 31st December 1950 at the option of the holder one Bond being exchangeable for 50 Ordinary Shares.
- (XV) Redeemable (al) at 102 per cent on 1st October 1974 or in whole or by voluntary liquidation or the undertakings being purchased or in the event of the security being forfeited or transferable or otherwise (ii) at 102 per cent or by purchase at or under 102 per cent.
- (Z) The holder of each Debenture has the option to apply for conversion of his Share into 50 ordinary shares convertible in cash and this option expires at the end of 3 months from the date of notice of redemption by the Company.
- (xx) To be redeemed at a premium of 16 per cent RA. 10,000 to be "redeemed annually" on giving 3 months' notice with effect after term.

These Debentures are registered and are non-transferable by Francis Deed.

- (B) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of one share of Rs. 10 for every 10 such stock.
- (C) Ordinary shares thus converted will rank for dividend pari passu with other shares in respect of the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in accordance with the provisions of the Memorandum and Articles of Association.
- (D) Holders of the fully paid up convertible Debentures may at any time convert the same into fully paid up Ordinary Shares on 1st January 1944 convert into fully paid up Ordinary Shares each £50 debenture, into 50 shares of 1/- each.
- (E) If this option is not exercised before 30th September, 1944 the Company will not be entitled to exercise the option before 30th September 1946.
- (K) The holder of each drawing on 1st July, each year.
- (L) Option of repayment in part out of gross profits every year a maximum of Rs. 1,50,000. Notified to be redeemed at par on 1st November 1945.
- (M) Year by year drawings.
- (N) Option of "repayment on" months' notice after 31st July, 1935 at the rate of 102 p.c.
- (O) On 1st July or any of this Debenture on 31st December, 1950 or on any subsequent interest date.
- (P) The holder may be referred to or any subsequent half-yearly date for payment of interest up to 30th June, 1956, at a premium of 1% on giving 6 Calendar months' notice.
- (R) Option of repayment within 3 years from the date of issue on one month's notice.
- (S) The Company may the option to repay all or and at par by giving notice of 3 months expiring on any interest date after 30th September 1955. Any time on or after 1st October, 1955, the holder may elect to convert the Rs. 40 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such date.
- (T) May be redeemed at depreciation of Rs. 20 per Debenture redeemed earlier than 31st December 1955 at three months' notice.
- (U) May be redeemed on 30th June 1952 at 100 per cent Prem. From 30th June 1957 at premium of 1 per cent. From 30th June 1961 at 102 p.c. per cent.
- (V) Redeemable at 102 p.c. on 1st July 1954 with option to redeem on 3 months' notice on any interest date after 30-6-55 at same premium. These Debentures are convertible into shares of Rs. 10 each at the option of the holder on 1-1-60 and 31-12-60.
- (W) At 100 per cent premium between 1-1-60 and 31-12-60.
- (XX) At 100 p.c. on or after 1-1-59.
- (XZ) Redeemable at par no 31-12-54 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 10 p.c. per cent.
- (WZ) Redeemable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal.

COAL COMPANIES

O, Po, F and Dd. Indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve and other Funds	Acreage under Tea	Output and Average Price per lb realised for crop.				Estimate	NAMES	Accounts closed	Managing Agents	Net profits including Taxation	Dividends per cent.			Paid-up Share	Latest Market Quotations as available until.

JAPANESE COMPETITION IN ASIAN MARKETS

THE SEARCH FOR FOOD AND RAW MATERIALS: TRADE WITH CHINA

AMONG the many imponderables which hang over Asia not the least is the future trade policy of Japan. Prior to the war Japan's foreign trade was largely integrated with the Asian mainland; China, Manchuria and Korea were important sources of raw material as well as valuable export markets. The wartime "Co-Prosperity Sphere" was a short-lived vision of the hegemony which Tokyo would like to exercise in Asia. Trade, export or perish is much more than a propaganda slogan for Japan, which has to support 85 million people in four islands with an area only half as big again as the United Kingdom and in which less than a quarter of the land is arable. In addition to requiring 3.7 million tons of foodstuffs annually to feed her people at a level which is tolerable by Asian standards, Japan is deficient in many of the raw materials necessary for her basic industries. The war was the culminating, largest and least successful of a series of military ventures by which Japan sought to buttress and consolidate an economy in which the main asset is the discipline and industry of her people but is otherwise afflicted by grave shortages of raw materials.

An admirable picture of the recovery of Japan's war-shattered economy is given in a report recently published by the British Board of Trade and prepared by Mr. N. S. Roberts, Her Majesty's Minister (Commercial) at Tokyo. Whatever may be the faults of the Japanese in victory, says Mr. Roberts, there is no doubt of their qualities in defeat. "With the collapse of their armed resistance and the destruction of most of their industry, they set about the work of reconstruction with energy and with the minimum of political disturbance. The Occupation was responsible for many notable changes, among which were a reform in the system of land tenure by which 90 percent of the land is now owned by the peasant farmers themselves and, in labour legislation, the institution of a trade union system based on the American pattern. In the process of re-building Japan's industries and re-opening her overseas trade the United States has lent Japan about 1,800,000,000 dollars."

In addition there has been a steady flow of dollar expenditure and in 1951 the U.S.A. spent \$341 million on procurement for Korea, \$50 million on procurement for Occupation Forces, \$175 million on direct economic aid whilst \$168 million was spent by Occupation personnel. As Japan's visible dollar exports amounted to only \$302 million and her dollar expenditure, which includes imports of raw cotton and coal and other commodities for her industries, amounted to no less than \$880 million, the adventitious and miscellaneous receipts detailed above added a very useful \$734 million to her dollar account. An abrupt end to the Korean war and a political settlement in the Far East would almost certainly leave Japan with a dollar problem of the first magnitude. As a corollary it would also compel her to consider how much of the fabric of her pre-war trade with the Asian mainland could be restored.

Though greatly improved since 1946, Japan's economy is still essentially unstable and a rapidly growing population makes certain of her problems more urgent than might otherwise be the case. Last year's peace treaty ended six and a half years of Allied occupation of Japan, the treaty ensuring for each of the Allied Powers, their nationals, products and vessels most-favoured-nation treatment in matters relating to trade. The signatories to the treaty have three years at their disposal to enter into new arrangements with the Tokyo Government. The prospect therefore is that between now and 1956 we shall witness the negotiation of a number of new treaties of commerce and navigation with Japan. The 1952 peace treaty, as Mr. Roberts points out, solved many problems.

But it also created others. Japan lost her overseas possessions, and her merchant fleet is still only 37 percent of its pre-war tonnage. The restriction on trade with China is an aggravation of Japan's present economic difficulties and, if maintained, it is bound to increase Japanese export pressure in other fields. Mr. Roberts estimates that half of China's trade is now with Iron Curtain countries, so that it is not likely that the pre-war pattern of Sino-Japanese trade could be restored. Nonetheless the economies of the two countries remain to a great extent complementary. Before the war Japan imported large quantities of coal, iron ore, oilseeds and soya beans from northern China, whilst in 1933 China, Manchuria and the Kwangtung Territories took 43.3 percent of Japan's total exports—the principal items being cotton textiles, artificial silk, yarns, paper, iron and steel manufactures, machinery, marine products, woollens and bazaar sundries. Communist China would like to prove a much more exigent (to use Mr. Roberts' adjective) buyer and seller than she was in the past. Under the present authoritarian Government her overseas trade will be increasingly regimented and, in any case much of it has already been directed towards other Communist countries. Peking will reserve the best of China's raw materials for her own planned industrial development.

It is in the field of cotton textiles that India and Japan enter into real rivalry. Before the war Japan ordinarily had in operation about three-fourths of her 12 million spindles. So desperate was the Japanese wartime position that it was necessary to sacrifice most of the cotton spindles for scrap. But many have since been replaced, and today 7½ million spindles are operating—an increase of over 3 million during the past two and a half years—and a high proportion of mills are working two shifts of eight hours each. In 1951 exports of cotton textiles amounted to 1,094 million square yards which made Japan the world's leading exporter of cloth and piecegoods followed by the United Kingdom (865 million sq. yds.), the U.S.A. (807 million sq. yds.) and India (775 million sq. yds.). Japan, in fact, exported over 80 percent of her total output and until very recently the per capita home consumption of cotton cloth was only about 3 lbs per annum as against 7.15 lbs. before the war. Japanese exports of rayon have also been steadily expanding since the war despite tariff and quota restrictions in a number of countries, including India and Pakistan. Pre-war the biggest export markets were China and Manchuria, but the future of these markets must be regarded as doubtful. For the year 1951-52 Japan produced 138 million lbs of rayon filament yarn and 230 million lbs of staple fibre, the ratio of export to domestic use being 40:60 in filament yarn and 20:80 in staple fibre. Shortage of investment capital and power rationing make it probable that production will not exceed 400 million lbs in the immediate future.

though on a longer view the rayon industry would seem to have more assured prospects than cotton.

Steel is a good example of the heavy dependence of many sectors of Japanese industry on outside sources of raw material and the resulting handicaps to production. Peak wartime output of steel was 7.6 million tons; in 1951 output was 6.5 million tons, whilst Japanese prices are a good deal higher than either British or Indian, largely owing to high freight rates which have to be paid on imported raw materials. Before the war Japan obtained about 3.5 million tons of coking coal and 1 million tons of iron ore from North China and Manchuria, but this source of supply is no longer available. Whereas Japan paid only \$7 for freight on iron ore from China, she has to pay \$14.5 for ore from the U.S.A., \$14.7 from Goa and \$11.2 from Malaya. Mr. Roberts is of the opinion that unless Japan can find cheaper and closer sources of raw material her exports of steel plates, bars and semi-manufactures will seriously decline. As it is, under conditions of world rearmament, early delivery dates are her main selling point. Once this disappears the cost factor (particularly the cost of transporting raw materials) will price her out of some of the markets she now enjoys. However steel will remain the basis of some of her most important export industries and in these, says Mr. Roberts, "it is almost possible to demonstrate a simple theorem, namely, that Japanese competition in these industries increases in proportion to the distance, in terms of labour hours, of the finished product from the steel ingot."

Japan's small industries have always been held up as an example for the rest of Asia, and in India it has often been argued that they furnished a model worthy of emulation. It is indeed one of the distinctive marks of the Japanese economy that the small craftsman retains his importance in the scheme of things, notwithstanding the impact of big business (the pre-war Japanese trusts and business groups were amongst the biggest in the world) and the growth of large scale industry. But it is sometimes forgotten that Japan's contact with the West is of relatively recent origin, for the country was opened to foreigners less than one hundred years ago, i.e. in 1854. The Japanese small craftsman and journeyman worker has thus not suffered the long attrition which his counterpart in the West and some of the Asian countries has had to face. Mr. Roberts' report points out that in some of the more important Japanese industries small cottage factories predominate, resulting in enhanced competition and price cutting and the production of sub-standard qualities of goods. Those who think that the cottage industry represents an idyllic combination of the old and the new, of town and country, and the factory and the handicraftsman's bench, will be obliged to modify their picture, for it is to these cottage and other small manufacturing units that complaints from overseas markets of price cutting and inferior workmanship can ultimately be traced. Showing the small manufacturer in a more favourable light is the relationship with heavy industry to which many responsible small manufacturers are subcontractors for component parts.

For the time being at least (we may hope, for ever) the militarists' dream of a Japan industrially self-sufficient through its Asian colonies has been broken and, if the war did nothing else, it exposed the essential weaknesses of the Japanese economy proper. On the economic side the peace terms have been generous and realistic. How long America will be able to insist upon the less realistic post-Korean embargo on Japanese trade with China remains to be seen. Deprived of the whole or a substantial part of her former trade with China it seems certain that Japanese competition will erupt powerfully in other directions.

In due course both British and Indian manufacturers will probably encounter the full blast of a Japanese export drive, and, writing primarily for a British audience, Mr. Roberts emphasises that nothing is to be achieved by complaining of unfair Japanese competition because wages are lower in that country. Japan's scarcity economy has led to frugality in her people and skilful use of the cheapest materials. In this it may well be that there is a lesson for certain other countries which claim, as of right, standards of living somewhat in excess of their resources.

DISTRIBUTING WEALTH THAT DOES NOT EXIST

THE FAILURE OF LABOUR POLICY

THE labour policy pursued by the Government of India, most of the States and the various labour tribunals of the country in the past five years has failed. It has failed signally and dramatically, from whatever angle it is regarded: from the point of view of labour, the producer, the consumer or Government itself. The breakdown of policy on labour matters is of course part of the disappointingly limited success that has attended the Government's general economic policy. One could not fairly say that economic policy as a whole has failed, although the results that have been achieved have been far below what could have been attained by other methods. It is only with regard to labour that the failure has been total. The quietist school, who measure the success of labour policy in terms of industrial peace, will claim the opposite: amid the deterioration of economic conditions that has occurred in India in the last 18 months, the number of disputes between labour and management has decreased, and the past year in particular has been one of "good industrial relations." But this relative contentment among those actually and presently employed has been purchased at the following cost. Trade unionism has not advanced a step nearer the achievement of a sane and vigorous morality such as only can sustain a healthy labour movement; in fact petty jurisdictional and political disputes, not directly involving management, have done more damage to industry of late than differences between workers and their employers. Unemployment, which it is presumably one of the objects of labour policy to diminish, has grown to unprecedented proportions among the urban middle classes. Retrenchment has been heavy, especially from Government employ, and those retrenched have had nowhere to turn for new jobs. The first moves towards a welfare state have led, as was forecast by every observer who realised that India cannot yet afford a welfare state, to bureaucratic muddle. Rising labour costs have been a main factor in the slowing down of Indian industrial activity, the increase in prices and the cost of living, the decline of exports and the virtual absence of new industrial enterprise. Unrealistic tribunal awards have led straight to the closure of certain important concerns, one at least a public utility. In another case, a public utility in Calcutta, an award set off a chain reaction that led, through rioting and disorder, to a strike of the workers originally intended to be benefitted. In sum, labour policy has been one of the chief causes of the distress, unrest and discontent of large sections of the urban population, and of the discouraging progress of both private and public enterprise during the first few years of the national plan.

"It is only in an expanding economy," Mr. Mohanlal Shah told the All-India Organisation of Industrial Employers last Friday, "that the general and permanent interests of all sections of the community—workers, consumers and others—are safeguarded." Oversight of this simple truth has been the root cause of the failure of labour policy. The industrial doctrines applied in India in recent years have not been designed for an expanding economy. It has not been their object to promote the production of wealth, but to redistribute wealth that did not exist. This process has now been going on for several years, and no one except a small aristocracy of workers is any better off for it. There is a tendency to excuse the failure of labour policy, especially the growth of unemployment, by pointing to the increase in population, which is adding four or five million new would-be workers every year. But this is not a new development, and in a country in which there has been so much talk of planning for the future, one would presume that this elementary fact had been taken into the reckoning long since. In any event, the appearance of millions of new claimants every year is an excellent reason to give up the attempt to redistribute a totally inadequate fund of wealth by means of a labour policy which has been largely copied, it should be confessed, from the relatively stagnant populations of the West.

The whole subject of labour policy in India needs thinking out again, not just by the Central Minister concerned but by the industrial tribunals who have been dissipating with so lavish a hand the exiguous capital of industry. When Mr. Jagjivan Ram was mercifully transferred from the Labour Ministry, there was hope that new thinking would be done on the subject, and indeed his successor Mr. Giri has talked a good deal of sense during his incumbency. But he is now talking of introducing a Fair Wages Bill, with a "wage fixing board," under a neutral chairman and including workers and employers, who would determine what were "fair wages" in individual industries. This is not the policy for an expanding economy; it would take us right back to the middle ages, when scholastics discoursed learnedly on the "just price" of a quarter of turnips. The endeavour to fix a fair wage by reference to what an industry

"can afford to pay" (there seems to be no other standard) can only entail neglect of the needs of expansion and modernisation, because outsiders naturally consider only present demands on an establishment's resources and give no thought to future development on which nevertheless the progress of the economy depends. No one challenges the statement that India is a poor country—but the assertion that her workers cannot become affluent by grace of tribunals and labour laws is held to reveal callousness or indifference. In fact, this is only a particular statement of the general truth. If the further advance of Indian industry is to match the hopes of the planners, the policy of encouraging labour to expect more than the country can afford—a policy which has already failed—must be dropped.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a drop of 6.6 points between January and February, 1953. Contributing to the decline were decreases in the production of cotton, steel ingots, pig iron, cement, paper, coal and electricity, while an increase occurred in that of jute. Notes in circulation and cheque clearances also diminished.

Protection of Trade Marks.—The counterfeiting of trade marks and the sale of spurious goods in genuine or imitation containers has become especially widespread since the war because the shortage and dearth of consumer goods has made such practices very lucrative. It was stated in Parliament some months ago that about 10,000 offences were reported in 1950 alone; common experience and the difficulties of detection however suggest that the real number of offences is much greater. Mr. K. T. Chandy, chairman, told the first general meeting of the Trade Mark Owners Association of India in Bombay on Monday that "there is hardly any article of daily use which a consumer can buy without running the risk of being duped." A rapid survey made by the Associated Chambers of Commerce about two years ago showed that commercial piracy was most rampant in drugs, pharmaceuticals, tea, food preparations, soaps, cosmetics, toilet preparations, stationery, sewing machines, sewing threads, electrical goods, matches and tobacco. Not only does the business and reputation of genuine manufacturers suffer; they sometimes become liable to prosecution for the misdeeds of others. The problem has caused considerable concern to the Government, to commercial organisations and of course to trade mark owners; and it is on an official suggestion that the latter have formed an association to safeguard their interests. The registration and protection of trade marks in India is governed by the Trade Marks Act, 1940, which closely follows the U.K. Trade Marks Act, 1938, and was extended to Part B States in 1951. Some offences are punishable under the Indian Penal Code and owners of trade marks can also institute action in the civil courts. The chief problem however is to lay hands on the offenders—they are difficult to locate and often too numerous—and this apparently is entirely the responsibility of the trade mark owner. Mr. Chandy said that "this is as it should be in civil law but need not be so under criminal law." Despite the best efforts of owners, police assistance was sometimes necessary and should be made available "for timely intervention and seizure of incriminating evidence and materials." The Penal Code should be amended so that action can be taken against all abettors. Mr. Chandy suggested that summary trials be instituted, interim injunctions given more freely, punishment made deterrent, and its severity increased with each offence. Manufacturers of certain specified consumer articles should be legally obliged to disclose their correct name and address on the product, the container or the wrapper.

Under the present procedure, Mr. Chandy said, appeals against a decision of the Registrar of Trade Marks could be filed in a number of High Courts. The latter might interpret the law differently, in which case the expense of a further appeal to the Supreme Court would have to be incurred. To reduce the occasions for differences, the Registrar should as a matter of right be given an opportunity to appear in all trade mark cases before High Courts. It is interesting to note that Mr. Shavaksha, Registrar of Trade Marks, who also addressed the meeting supported this suggestion on the ground that it "would assure a high degree of uniformity of decisions;" he also agreed that the law should clarify in which High Courts appeals can be filed. Mr. Chandy said it would save applicants time and money if the Act allowed the Registrar to give preliminary advice as to whether a proposed trade mark was *prima facie* distinctive. He also thought that India should join the International Convention on industrial property. Some of its important benefits were that an applicant for the registration of a proposed trade mark in India would secure a period of six months time during which his mark would be protected in all the Convention countries

from rival applicants and he could use that time for submitting application in those countries, and applications made in one treaty country may also be considered as applications made in other treaty countries.

Cloth Exports Disappointing.—The cotton cloth market in Bombay reports a setback in domestic demand, and exports during the six months ended June—nearly 320 million yards—have not been encouraging either. Traders think that the chances of reaching the export target of 1,000 million yards for the year are remote, and the most they will sell in present conditions is about 700 million yards. So far, however, India's achievement seems to be nearer her ambitions than in the case of other participants in last September's international textile conference at Buxton. In the first four months of 1953, for instance, Lancashire shipped only 232.6 million yards as against a target of 450 million square yards. Japan shipped only 100 million yards as against a target of 350 million yards. India exported 208 million yards. Since Burma decided to ported 208 million yards from October, local exporters have been trying to find new markets and the Middle Eastern countries seem promising. Hongkong, Indonesia, Persian Gulf, Saudi Arabia and Burma have taken small lots of drills, prints and white mulls recently. Singapore has made only stray purchases but the Sudan is buying some Indian cloth, although the import of grey goods is still banned there. No business has been reported with Australia. Indian manufacturers are not inclined to reduce the prices of coarse and medium varieties; with the resumption of forward trading in cotton and considering other factors, a section of the cloth market feels that the rates for these varieties will not decline for some time at least. Yarn prices, however, have been rising and some interests are buying large quantities of cotton in order to be able to supply mills against their July-September allocations.

Pakistan's Search for Oil.—The acute shortage of coal, especially of good quality, has seriously hampered the development of transport and industry in Pakistan and is one of the major reasons why she is making vigorous efforts to find an alternative source of energy in oil. Thirty-four oil mining concessions have been granted since the Pakistan Petroleum (Production) Rules, 1949, came into force, ten of these to Pakistan Oilfields Ltd. and 22 to Pakistan Petroleum Ltd. (including ten in East Pakistan). Last year alone saw the spudding-in of eight test wells of which two, sponsored by Pakistan Petroleum Ltd. were successful. The company continues to show considerable enterprise and last Friday the Governor-General of Pakistan, Mr. Ghulam Mohammad, performed the formal spudding-in ceremony of its first test well in the Zin mountain of the Bugti tribal area, in Baluchistan. Prospecting is an expensive affair and its results are always uncertain; the company's failure at Lakhra in Sind and Patharia in East Pakistan, for instance, cost it Rs. 14 crores. Mr. Ghulam Mohammad's tribute "to the spirit of enterprise shown by oil companies without which some aspects of human progress would not be possible" was therefore appropriate to the occasion and he went on to hope that the success at Sui would offset the company's earlier prospecting failures. Of course, what has been found at Sui is not oil but a gas pool that is considered large enough to admit of commercial utilisation; Pakistan Petroleum Ltd. has already submitted a report to the Government on how this gas might be used. Although Pakistan is nowhere near achieving self-sufficiency in oil, the success and value of these efforts can be gauged from the fact that production since independence has increased more than four-fold—from 333,944 barrels in 1947 to 1,384,671 barrels in 1952. Mr. Ghulam Mohammad claimed that his "Government have not merely been watching the activities of the oil companies as interested spectators but have been rendering them such active help and assistance as they were called upon to render from time to time. As a step forward in this direction, they have recently decided to subscribe to the extent of 30 percent to the capital of Pakistan Oilfields Ltd. and Pakistan Petroleum Ltd." This proportion was originally set apart for subscription by Pakistani nationals in accordance with the Pakistan Petroleum (Production) Rules, 1949, but since the response from the public was poor "the Government felt called upon to fill the void."

Merchant Fleets.—The second-hand ship market is of importance to Eastern shipowners, for it offers them a means of securing tonnage quickly. For some time now the price trend has been in favour of the purchaser, and in the first half of this year, according to the valuable statistics published by *The Siren and Shipping*, India has taken advantage of the fact to add six vessels to her merchant fleet against only one vessel of 7,350 tons acquired by Pakistan. On a tonnage basis, however, India's acquisition is no more than a bare 6,000, for against the total tonnage of

28,863 of the six vessels purchased, at a total cost of approximately £11 million, three vessels with an aggregate tonnage of 22,852 were sold. Pakistan also sold one vessel for breaking up, and thereby reduced her total tonnage by 600 tons. As to market trends, the latest quarterly review issued by Harley, Mullion and Co., Limited, states that a notable feature has been the steady decline in shipping values generally, with particular emphasis on Liberty types. The British breaking-up market has also fallen sharply to about £6 per ton gross, with a very limited demand in evidence. In March the Liberty vessel Benarty was sold at £286,500. The *Tent*, a similar type, is now reported sold, in June, for about £237,500. This is a substantial fall in values, but even at the lower levels very few buyers are prepared to operate—the general view appears to be that recent purchasers of Liberty tonnage have been over-optimistic. The value of a Liberty ship just prior to the outbreak of hostilities in Korea (June, 1950) was about £105,000. Freight then were roughly at about the same level as today, but in the meantime operating and repair costs have increased and, moreover, the vessels are three years older. It is evident, therefore, that present prices are not justified by trading prospects alone and in the absence of any major international upset values may be expected to continue their drift downwards.

Export Credit.—According to British exporters of capital goods, one of the major difficulties which faces them in expanding their business is finding long-term credit facilities. To some extent a similar problem might well be facing exporters in this country, if not at once then in the not too distant future. The British Government has offered a measure of assistance by relaxing the former restrictions on the duration of such credits, but the provision of the money itself continues to be the function of the banks and other finance houses. How is the City reacting? The current issue of *The Banker* draws attention to some recent efforts to meet the need for medium-term export credits. Promissory notes for three or four years have been issued in London to finance capital goods exports on corresponding credit terms. These notes have been taken up by institutional investors, notably by insurance companies. The *Banker* points out that the question of attaching the guarantee of the Export Credit Guarantee Department to such borrowing may arise. Indeed, without some such backing the scope for placing notes of this kind will be limited. The notes are issued by the overseas importer and not by the British exporter. That is a good principle because it compels the capital market to examine the credit-worthiness of the overseas customer very closely—and London houses are expert in doing this. If the E.C.G.D. were to underwrite such notes the scrutiny would be even closer. After the bad experiences of both British and German exporters with extended credits in certain overseas markets it will be as well to make sure that credit terms are not extended to uncertain payers. These tests are evaded to some extent by another form of export finance to which *The Banker* draws attention. This is the issue of ninety-day bills which are automatically renewed as they mature because they are used to finance longer term transactions. The bills are held by the lending banks and are not discounted in the market. From the point of view of the credit mechanism this use of short-term credit for long-term finance is open to strong objections. The same is true of another form of "indirect export finance." Many exporting firms use their cash resources to back medium-term credit to overseas customers and then run large overdrafts to keep themselves in working capital. In these cases the banks are really financing the export credits by advances. It is hardly a proper use of this short-term type of loan. It is apparent, however, that quite a variety of choice is being offered to British exporters, and there is little evidence that loss of business from credit-worthy customers on this ground alone has occurred to any appreciable extent. There must be gaps, of course, and to fill these the City is seeking eagerly for ways and means.

Questionnaire on Taxation.—The Taxation Enquiry Commission's questionnaire which was issued last week is divided into six parts. Part I deals with the objectives of a sound tax policy; the relative place of direct and indirect taxes in the Indian tax system; the rôle of non-tax sources in public revenue; the burden of taxation on various classes of people; whether the tax is particularly heavy on any industry or occupation; taxation in relation to economic development; how to secure greater economic equality while maintaining the incentive for capital formation and higher production; terminal taxes on goods and passengers carried by rail, sea or air; taxes on railway fares and freights; taxes on the sale or purchase of newspapers and on advertisements; the scope for taxes on capital; reintroduction of salt duty; surcharges on land revenue; betterment levies; social security taxation, and modification of the prohibition policy.

Part II deals with income tax, special business taxes and estate duties. It covers the problems of depreciation and replacement costs, the feasibility of amalgamating income tax and supertax into a consolidated levy, the degree of progression in present rates, differential between distributed and undistributed profits, progression in the rates of corporation taxes, exempting intercorporate dividends from corporation tax, taxation of mutual insurance companies, taxation of dividends, and tax evasion and avoidance. Part III relates to commodity taxation including Customs, Central excises and sales tax: the classification of commodities in the Indian Customs Tariff, factors determining import duties, *ad valorem* and specific types of duty, fixation of tariff values and real value, detection of under-valuation, land customs valuation, exemptions, refunds, drawbacks and procedure for appeal; the circumstances under which export duties should be imposed, flexibility of rates and earmarking of proceeds of export duties for the long-range development of the export trade; Government participation in the import and export trade; selection of commodities for Central excise duty, rates of duty, tobacco and match excises, licensing, transport and warehousing of excisable commodities, earmarking of proceeds for development of taxed commodities, the effect of duties on the development of the taxed industries; the salt duty, altering import, export and excise duties by executive order, higher taxes on luxuries: taxes on services and on the sale of, or advertisements in, newspapers; multiple-point as against single-point sales tax, uniformity in the levy of sales tax, and taxes on sales outside the State or in inter-State commerce. Part IV relates to agricultural income tax, land revenue and irrigation rates. Part V deals with stamp duties, court fees, taxes on motor and other vehicles, entertainment tax, taxes on consumption or sale of electricity and betting taxes. Part VI is devoted to local taxation: the devolution of tax powers to local bodies by State Governments, and specific local taxes, such as property tax, service taxes, taxes on goods and passengers carried by road or inland waterways. Replies are sought by 21st September, 1953.

Reclamation in Cochin Port.—The Cochin port authorities have undertaken a project for the Indian Navy which is unique in the history of port engineering in India. About 120 acres of submerged land lying to the south of Willingdon and merged lands in the Cochin port area are being reclaimed. This is the first time that reclamation has been done in deep waters. According to Mr. M. S. Venkataraman, Port Administrator, it has never before been done at a depth of more than six or seven feet but the depth of more than 16 to 18 feet. The total quantity of in this case is 5,100,000 cubic yards and the dredging involved is intended to provide space for the naval base at Cochin. Four reclamation walls will be constructed and dredged material pumped into the enclosed portion. Reclamation walls on two sides have already been completed and stand four feet above the water level. Bunding for the third feet above the water level and a regular wall with rubble wall has been done and is now being built. This will be over 1,000 feet long and the fourth wall will be completed late in August and the fourth wall will be ready in about two months. Cochin port is a dredger, Lord Willingdon, which is capable of working with a mile-long pipeline, is being used for the operation. The cutter is lowered into the bed and turned, when it cuts the bed and keeps the material suspended in the water. The suction of the large centrifugal pump is located in the end of the large pipeline 39 inches in diameter. The pumping is done with the aid of a floating pipeline 39 inches in diameter.

Dollar Earning Prospects.—Foreign countries as a whole may add from \$2,000 million to \$2,500 million to their gold and dollar reserves in their transactions with the United States this year, about double the \$1,183 million they accumulated in 1952, estimates the National Foreign Trade Council. The Council has increased its previous estimate of 1953 total adjusted imports by \$1,000 million in view of the near record import movement in the first four months of this year, continued good prospects for imports and the expectation that offshore procurement expenditures under the Mutual Security Programme will approximate \$1,000 million this year. Its new estimate for 1953 total adjusted imports is \$12,300 million. This compares with \$11,503 million of adjusted merchandise imports in 1952. The estimate for 1953 total adjusted exports is identical with its estimate for total adjusted imports—\$12,300 million. It expected U.S. exports of services this year would approximate \$4,800 million, while U.S. imports of services would aggregate \$4,600 million. Thus the goods and services items combined would show a surplus for the United States of about \$200 million. Total unilateral transfers—which classification is largely comprised of government military and economic aid—plus the outflow of U.S. capital are estimated by the group as likely to net other countries \$3,000 million this year. Consequently, other countries as a group may have a residual surplus of \$2,800 million in their transactions with the United States this year.

GILT-EDGED RISE ON
INVESTMENT BUYING
INDUSTRIALS ALSO BETTER

London, 22nd July. In the face of some rather disheartening factors, the market generally made good progress in the past week. One source attributed this to the fact that speculative activity had given way to small but steady investment support. With the start of the new account, which coincided with the start of the week, the dreary and easier conditions of the preceding days disappeared as gilt-edged rose on investment buying to lead the market to generally higher levels. Although still small, turnover in funds increased with most of the demand centred on medium-dated stocks—and this despite the revenue deficit of the Treasury being announced the previous week. All groups of the industrial section moved higher with textiles again prominent, although some reaction from the best levels was noted on the last day, which was settlement day for the old account. The five percent increase in cotton spinners' wages in no way impaired sentiment, which was later bolstered by news of good dividends and higher output of cotton and rayon yarn. Also aiding sentiment in the industrial market generally were the early and successful closing of two new top-class issues (proving that there was still money about for something good) and the less enthusiastic attitude towards further nationalisation expressed in some trade union quarters.

The increase in Middle East crude oil prices gave a further fillip to oil shares and almost all leaders made useful gains. Some profit-taking occurred at times but the section closed firm. Foreign

bonds followed an irregular course. Greeks fell back and lost their earlier firmness. Germans were a good market on various items concerning debt ratification. Base metals were inclined to fall reflecting the lower prices of some commodities but losses were very small and coppers recovered to close firm. Diamonds rose sharply at one time on the report that the United States and the United Kingdom were stockpiling diamonds but they finished under the best on profit-taking. Gold shares remained very quiet ahead of the South African budget. Teas and rubber were very quiet and practically unchanged although the latter developed a firmer undertone on the news that the United States was to cut her synthetic output.

After a rather difficult start, short loan conditions improved considerably in the past week despite some adverse factors. Calls on the supply of funds included some £31 million for new stock exchange issues and tax payments, but banks proved good buyers of bills and ready lenders of money as outside money returned. In the early stages special buyers gave assistance, but by the end of the week some amounts were left unlet. Applications for £250 million of Treasury bills totalling £385,600,000, of which the former amount was allotted at an average rate of 47s 3/60d percent. This week £240 million will be offered. The Bank of England Return shows a rise in the active note circulation of over £10 million to a new high of £1,567 million, which is some £82 million above last year's level.

Shellac Prices Rise Sharply

Prices in the London shellac market advanced sharply on Monday in sympathy with higher advances from Calcutta. December delivery T. N. shellac was traded at 226 shillings per cwt but sellers later asked for 230 shillings against 227s 6d bid. Prices were at their highest since March last year. An order from the Argentine contributed to the firmer trend.

Arrive refreshed! Foam-soft berths are long, wide and luxurious on first-class Douglas Super-6 Clippers. They are available at a nominal extra charge.

"Super-6" Clippers to TOKYO

● Pan American has placed a whole new fleet of dependable and luxurious "Super-6" Clippers at your service! They're faster than ever, pressurized, air-conditioned and sound-proofed for your extra comfort. You fly smoothly high above the weather while you enjoy superb meals aloft by Maxim's of Paris.....complimentary drinks...courteous Clipper attendants.

"Super-6" Clippers of the "Asia Express" fly direct from New Delhi and Karachi to Beirut, Istanbul, Frankfurt and London ("Strato" Clipper connection to New York)—or Bangkok, Hongkong and Tokyo (connecting with "Strato" Clippers to San Francisco or Los Angeles). Other "Super-6" Clipper flights stop at Calcutta and offer service to Rangoon on eastbound flights and Basra, Duesseldorf and Brussels on westbound flights.

Increased demand for tea by West German buyers in the chief trading centres is foreseen by London tea traders as soon as the cut in the West German tax on tea, from 15 marks to 3 marks, becomes law. The trade here points out that though West German imports of tea from all sources rose from 3.7 million lbs. in 1950 to 6 million lbs in 1952, the heavy tax of 15 marks had a restraining influence on imports. Traders hope that that West German buyers will continue to cover a part of their requirements through the London auctions.

New York Prepares for Burlap Futures Trading

Members of the Commodity Exchange, incorporated in New York, on Friday approved the proposed futures contract for trading in burlap. The date of inauguration of trading will be announced shortly, Exchange officials said.

U. S. Bills to Suspend Metal Import Duties

Two Bills suspending the U.S. import duties on certain metals have been approved by the House of Representatives and sent to the Senate. One Bill would continue for one year, until the end of June 1954, the suspension of import duties on all types of metal scrap, except lead and zinc scrap. The other Bill would suspend for two years from the date of enactment the import duties on crude bauxite. An objection by the Texas Democrat representative blocked the passage of the third Bill which would have suspended for one year duties on imports of aluminium and aluminium alloys.

Metal Distribution Orders Revoked

The Ministry of Supply has revoked copper, lead and zinc distribution orders with effect from 5th August, so that when the London metal exchange resumes dealings in copper next month, licences will no longer be required for the purchase of any form of copper.

Starch and Glucose Control to End

The British Minister of Food has announced that Government control of starch, starch products and glucose will end on 27th September. From that date imports on private account will be permitted under arrangements to be announced by the Board of Trade later. Private imports from the sterling area, Western Europe and certain other countries (not including the dollar area or certain countries in Eastern Europe) of maize starch, potato starch (farnia) and dextrine at present made on the Ministry's account, and of all starch and starch preparations (including glucose) at present subject to global or specific individual licensing procedure, will be permitted on the Open General Licence. For imports from other countries, individual applications will be considered in the light of the situation at the time. These arrangements will not apply to sweetened custard, dessert powder or to sweetened corn flour.

Raw Cotton Arrivals in U.K.

Arrivals of raw cotton in U.K. ports this week totalled 18,403 bales, comprising Pakistan 6,308, East African 3,617, West African 3,537, Egyptian 1,385, Peruvian 1,277, United States 731, Indian 694, Sudan 140 and others 714. There was no advertised demand from contracting-out spinners but good interest was maintained in Argentine for August-September shipment. The quantity aloft to Britain totalled 45,756 bales, mainly West African, Sudan, Argentine, Peruvian, Pakistan and Brazilian.

Crisis in Italian Hemp Industry

Private estimates of the Italian hemp crop this year are 60,000 tons of dressed hemp. Last year's production totalled 71,000 tons of dressed and seed hemp. The Italian hemp industry is undergoing a severe crisis because of the loss of important foreign markets and the decline in German consumption. Hemp stockpiling and sales are now controlled by a Government agency. Producers complain that this agency is inefficient and cannot compete with foreign producers and private operators in the export market; they are asking for radical changes in its organisation and increased freedom of production, manufacture and sale at home and abroad.

Hongkong Gold Market

Hongkong gold again moved within a narrow range this week. Traders are marking time awaiting developments in Korea. The official offtake is estimated at 6,560 taels and unofficial at 12,970. Arrivals from Macao totalled 2,000 ounces. Unofficial exports are estimated at 8,500 taels. Forward contracts totalled 5,500 ounces at \$39.75, c.i.f. Macao.

Japanese Electrolytic Copper Price

The Nippon Mining Company, Japan's largest copper producer, has announced that the special price of electrolytic copper for production of copper goods for export will be 300,000 yen per metric ton instead of 260,000 yen. This compares with the new electrolytic general price of 320,000 yen per metric ton, to which level it was reduced from 340,000 yen on 18th July. A spokesman of the Company has said that since Japan is an importer of raw materials for copper production she gives priority to domestic copper consumption, except in special instances where she exports copper products under trade agreements. The Company will not cut the price of electrolytic copper for producers of copper for producers of copper goods for export below 300,000 yen before it is known how far domestic demand is likely to increase as a result of the recent reduction in the ex-refinery gener-

Finance in India & Abroad

GOOD RESPONSE TO
STATE LOANS

CREDIT STILL TIGHT IN CALCUTTA

Wednesday, 22nd July.

EASIER money conditions at the time of flotation of the ten State loans have assisted borrowing operations, and the loans have made better progress than was expected. At the time of writing it has been announced that five of the loans have been over-subscribed, and on those five issues alone Rs. 19 crores out of the total target of Rs. 23 crores has been obtained. Over-subscription of the West Bengal issue (Rs. 3 crores) we announced here last week. Since then the U.P. loan (Rs. 5 crores), Madras (Rs. 5 crores), Bombay (Rs. 5 crores) and Saurashtra (Rs. 1 crore) have been over-subscribed. Disposition of the excess sums subscribed has not been finally decided in all cases. West Bengal and Madras are reportedly retaining all the money subscribed. One or two of the remaining borrowers, Bihar, Madhya Bharat, Mysore, Travancore-Cochin and Madhya Pradesh, who are seeking a total of Rs. 9 crores, might have some difficulty in obtaining their full requirements by the closing day, which is tomorrow, Thursday. If by any mischance one or more of these borrowers should fail of their purpose, it will strengthen the case of those who have been arguing that the Centre should borrow on behalf of all the States. Since all State loans are morally guaranteed to an equal extent by the Union Government, there would be little sense in some States being able to obtain more capital than they require while others obtain less. Although this operation has been so successful, at least in the case of the big borrowers, the securities exchange is evidently nervous about the prospect of substantial offerings when these loans come on to the market. It may be some weeks before the loans find their way into the hands of genuine holders; in the meantime some are being held by people who subscribed for reasons other than a simple desire to invest in State securities. It is to be hoped that this process does nothing to reduce the eventual marketability of State loans, which has been increasing in recent months and which it should be the first aim of the States to maintain.

Though credit has been tending to become easier in general, as is shown by the fall in banks' advances, money has been fairly tight in the Calcutta interbank market, where today there are more borrowers than lenders. Rates are still 21 percent for overnight money and 3 percent for good money. Grains advances are substantial but jute finance is slack; outstandings on sugar account are coming down and it is notable that they are now lower than in the corresponding week of last year. This is the first time that this has been the case this season, and it suggests that talk of hoarding of sugar has been wide of the mark.

A fair number of tea bills have been reported, and also a few small gunny documents. Remittance has been normal. The principal exchange rates are unchanged; the U.S. dollar stands at Rs. 47s-8.

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills this week amounted to Rs. 2,79,50,000. Tenders at Rs. 99.66 percent were accepted in full and those at Rs. 99.65 percent allotted approximately 10 percent, the average rate of acceptance remaining unchanged at Rs. 2.62 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received up to 11 a.m. on Tuesday next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 17th July, treasury bills for Rs. 93,00,000 were sold in favour of the Reserve Bank.

Bullion ruled quiet last week and prices fell on lack of support. Silver declined from the previous week's level of Rs. 153-4 to Rs. 152-8 quoted today and the ready rate fetched a premium of 4 annas. The price was, however, unchanged at 74d. in London and at 83½ cents in New York.

Gold also eased to Rs. 87-10 from Rs. 88-12 in sympathy with silver. The sovereign at Rs. 58-8 disclosed a loss of 3 annas.

Sharp falls of Rs. 19.71 crores and Rs. 16.46 crores in the total note issue and notes in circulation to Rs. 1,154.16 crores and Rs. 1,119.88 crores, respectively, were the outstanding features of the return of the Reserve Bank of India for the week ended 17th July, 1953. Notes held in the Banking Department consequently diminished by Rs. 3.25 crores to total Rs. 34.28 crores. The currency contraction was duly adjusted by reducing foreign securities by Rs. 20 crores to Rs. 583.15 crores presumably through a transfer to the Banking Department. Balances held abroad consequently improved by Rs. 17.51 crores to Rs. 123.83 crores. In the Banking Department, deposits of the Government of India fell by Rs. 19.84 crores to Rs. 93.06 crores. While other Government accounts were about Rs. 16.45 crores up at Rs. 29.45 crores because of transfers of funds from the Central Government. Balances of commercial banks at Rs. 43.17 crores showed a rise of Rs. 25 lakhs. Other loans and advances declined from Rs. 10.99 crores to Rs. 10.44 crores, of which advances to scheduled banks against usance bills were Rs. 49.45 lakhs (Rs. 1.49

(crores). Investments dropped from Rs. 80.67 crores to Rs. 72.73 crores. Ways and means advances totalled Rs. 3.90 crores (Rs. 3.51 crores).

The statement of the position of Scheduled Banks for the week ended 10th July discloses Demand and Time liabilities at Rs. 529.02 crores (Rs. 12.33 crores on account of borrowings from Banks) and Rs. 328.34 crores (Rs. 1.90 crores) compared with Rs. 531.35 crores (Rs. 11.90 crores) and Rs. 327.62 crores (Rs. 1.90 crores) respectively in the previous week. Cash and balances with the Reserve Bank have diminished by Rs. 84 lakhs and Rs. 38 lakhs to aggregate Rs. 32.72 crores and Rs. 39.73 crores. There is a fall of Rs. 60 lakhs in investments to Rs. 312.81 crores. Advances and bills discounted at Rs. 500.21 crores show a drop of Rs. 8.06 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.3 percent and 57.1 percent against 8.6 percent and 59.2 percent.

The return of the Imperial Bank of India for the week ended 10th July shows a fall of Rs. 21 lakhs in total deposits to Rs. 207.54 crores. Investments in Government securities remain unchanged at Rs. 75.27 crores, while other authorised investments are down by Rs. 20 lakhs to Rs. 10.70 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 2 crores and Rs. 9 lakhs to aggregate Rs. 93.47 crores and Rs. 26.64 crores, respectively. Cash and balances are, in consequence, shown at Rs. 14.98 crores or Rs. 2.86 crores higher.

The profit of the INDIAN OVERSEAS BANK LTD. for the half-year ended 30th June, 1953, including the amount brought forward from last year's account, is Rs. 8,22,601-5-7.

According to the land customs trade returns received in the Department of Commercial Intelligence and Statistics the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of May, 1953, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	15	52
Western Pakistan	18	1
Other Countries	8	13
Total	41	66

Total trade amounted to Rs. 107 lakhs. Re-exports were nil and trade in treasure nil. There was an adverse balance of trade amounting to Rs. 25 lakhs.

A financial agreement relating to releases of sterling balances was signed in New Delhi on Monday between the Governments of India and the United Kingdom. The agreement will remain in force up to 30th June, 1957. The first Indo-U.K. financial agreement on this subject was signed on 14th August, 1947. Originally in force for the six months ended December 1947, this agreement was modified and extended from time to time by letters exchanged between the two Governments. It was eventually extended for a period of six years ending 30th June, 1957, by an exchange of letters on 8th February, 1952, between the Indian Finance Minister and the Chancellor of the Exchequer. The agreement concluded this week consolidates all the provisions of these exchanges of letters which are currently in force. There is no modification of the agreed arrangements for releases from the sterling balances.

LONDON FINANCIAL LETTER

BIGGER PAYMENTS SURPLUS
NECESSARY

By Air Mail.

STERLING has remained encouragingly—perhaps rather surprisingly—firm amidst talk of the possibility of a new payments crisis. No one, indeed, suggests that a crisis is imminent; and in the meantime the increase in the gold and dollar reserve every month this year (the increase of \$521 million to \$2,367 million in the half-year is considerable) and the achievement of new record sales to the North American market in April and then again in June (the June figure is at an annual rate of more than \$1,000 million) provide a very favourable background. There are two reasons for continuing anxiety. One is that while American aid is a rapidly diminishing quantity, the business prospect in America is viewed less confidently than of late; and as The Banker has reminded us this month, even a small decline in America's gross national product can have disastrous effects on imports from Britain and the rest of the sterling area. The other is that British exports to non-dollar areas are much less satisfactory than those to North America; with the result that the visible trade gap in June was the widest for 12 months. Comparing the first half of 1953 with the first half of 1952, imports have been reduced from £1,902 million to £1,694 million, but with exports reduced from £1,432 million to £1,310 million, the visible deficit has contracted only from £470 million to £384 million. Considering how bad the position was in the

A charter of confidence

An unwritten Charter of Confidence has been fashioned from the experience of generations of customers whom Lloyds Bank has faithfully served since it was first established nearly three hundred years ago.

The reliability of the services rendered by Lloyds Bank to its individual customers is a reflection of its sense of responsibility to the public and explains why the prestige of this great institution is always increasing and its business expanding.

Let LLOYDS BANK look after your interests

first half of 1952, this improvement is not enough. More serious is the evident fact that the gap is widening again.

No firm conclusion can be drawn from the "visible" figures alone, and unofficial estimates of "invisibles" (some people say official estimates as well) are only guesswork. Tourist expenditure (inward and outward) was practically in balance last year (whereas it has hitherto been considerably in deficit), and the Corporation probably brought it into credit in the first half of this year. The oil companies' earnings (a big "invisible" item) were probably increased; but shipping, at prevailing freight rates, must have earned considerably less than previously. The trend of financial services has evidently been favourable, though not sensationally so. According to the official estimates, there was an overall credit balance (excluding "aid") of more than £60 million even for the first half of 1952; so it can be confidently assumed that the total payments account it still comfortably in credit. But the current surplus cannot be anything like the annual rate of £200-350 million which the authorities have acknowledged as necessary.

Financing Commodities

Since the beginning of May it has been permissible for private traders to import wheat and other grains, but actual trading in grains on the London and Liverpool markets was not permitted until late June, and the trade could not function normally upon the U.K.'s participation in the International Wheat Agreement ceased at the end of July. From the first week of August dealing in copper is permitted on the London Metal Exchange, which thus regains its full pre-war function. Re-opening of the Liverpool cotton market is deferred for another year; but the last few months of 1953 will be a very important period in commodity trading, the grain trade's turnover being by far the largest of any commodity group in this country. The problem of financing private trade arose as

soon as the process of "freeing" the markets began soon after the war, but it must now be faced more earnestly. The main reason why the Liverpool cotton market remains closed is not the "dollar element" in cotton (which is much larger in wheat) but the inability, or unwillingness, of the cotton trade to arrange its own finance on a sufficient scale. It is much more costly at the present price of wheat to carry stocks which the millers would have regarded as sufficient in 1939, and cheap money is no longer available to help them. Since their income has been controlled in the meantime at approximately the pre-war level, they have been unable to build up financial reserves commensurate with the rise in prices. The shipping of wheat is normally financed by bills, and the discount market expects an increase in the turnover of bills on this account—counterbalanced eventually, perhaps, by

(Continued on page 128)

Saint Frères Circular Looms installed in Italy.

SAINT FRERES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Sacks made from Tubular Cloth are stronger

They cost less to make

FAIRBAIRN LAWSON COMBE BARBOUR LTD.
LEEDS, ENGLAND.

The J.3 loom (3-leaf, 3-shuttle) weaves twill tubular cloth for sacks.

IT is just six months since I mentioned here the proposed appointment of an enquiry team to look into the marketing of jute and jute goods, then foreshadowed by Mr. T. T. Krishnamachari in a speech in Hyderabad. I now learn from Delhi that the man for this formidable assignment has been located, in the person of Mr. P. Madhava Menon. Mr. Menon was till lately joint secretary to the Health Ministry and has just been enjoying some leave, so he is presumably in fine fettle to tackle the tallest order that has come the way of a Government official in a long time. He has been asked, I am informed, to study all commercial transactions "from the time jute fibre is extracted from the plant till it is loaded on the ship in the form of manufactures for export". His special interest in "speculation in jute goods futures" will take him to some odd corners of the country, not omitting I hope a certain hole in the wall in Canning Street where he will be able to learn the mysteries of *kutni*. He is to keep an eye out for malpractices and, it is said, name firms which have been indulging in them; at some stages of his enquiry perhaps he will feel that it would be easier to name firms that have not been indulging in them. But I wish him well in this investigation into the complex affairs of the largest industry in this part of the world, and everyone who has its interests at heart will hope that Mr. Menon will be able to suggest remedies for some of its several ills.

Comparisons of the weather from one year to another are notoriously fallible, but am I altogether wrong in thinking that Calcutta has been having snatches of unusually beautiful weather in the last few weeks? The thousands of office workers who have to walk home in the evening for want of a tram service are perhaps in no mood to appreciate it but the more fortunate who drive through the maidan in the late afternoon have often been able to enjoy a gentler prospect than our city usually affords. The mass of white cloud on the south-west horizon is a regular feature of a fine July evening in Bengal, and the bright brick-red of the Hooghly is no doubt a constant monsoon change, when the river is laden with the dust of the plains, but this year they have been combined with cooler airs from the south, bluer afternoon skies and the startling verdure of the maidan. Leaving the city later than I customarily do the other evening, a patch of vermilion cloud over the buildings in Dalhousie caught my eye, so I made for the Strand to have a better view of the west. When I got there I found that several thousand other people had had the same idea and there was a certain amount of jostling along our quite inadequate waterfront to have the best sight of the breeze that was blowing up the river. If you attempt the same expedition the day after you read this, it will probably rain little hounds as the Germans say, and you'll get no more than a wetting and a view of black storm clouds for your trouble, because the fine weather I refer to is admittedly a series of brief interludes in the monsoon rains. But even its vagaries are welcome, especially to those familiar with climates less predictable than the course of the seasons on the Indian plains.

"Friend and brother" is how the late G. K. Chesterton used to speak of Hilaire Belloc; Bernard Shaw called their odd and highly individualistic partnership "the Chesterbelloc". And now Belloc, a few days before his 83rd birthday, has joined the others in their literary Valhalla. Poet, orator, essayist, historian, crusader, novelist, traveller, reformer, journalist, military commentator and politician, Belloc was, until recent years, one of the most prolific writers of our time. How much of his tremendous output will survive remains to

A DITCHER'S DIARY

be seen. My own guess is that his verse will be read long after *The Servile State* and *Path to Rome* have passed into the limbo of forgotten things. For every (I almost wrote schoolboy, but remembered my friends in Bombay) adult addict knows those famous lines:

"And sacramental raise me the divine
Strong brother in God and last companion, wine"

At a dinner which was given to him on his sixtieth birthday Belloc, according to Chesterton's portrait of his friend, declared with sad good humour that, at that age, he did not greatly care whether his verse remained or not. "But, I am told," he added with reviving emphasis, "I am told that you begin to care again frightfully when you are seventy. In which case I hope I shall die at sixty-nine". The fact is, of course, that in the years between his sixty-ninth and eighty-second birthdays the causes in which Belloc broke so many lances ceased to be regarded as of real importance. Through two world wars England had been rendered safe for beer drinkers and violent talkers. Disappointing though it may have been, she remains reluctant to return to Roman Catholicism and sternly opposed to anti-Semitism; but Sussex is still there, with its thatched roofs, its songs and its heroic stories. These were the themes round which Hilaire Belloc wrote many of his most inspiring words. Appropriately *The Last Rally* appeared in 1940—the last of something like a hundred and fifty published works. Belloc was a writer who, so far as I know, neither broadcast nor appeared on television. He belonged essentially to an earlier age—there was a touch of the medieval in much of his thinking and writing.

An instructive example of the attitude of State Governments to rationalisation in industry was mentioned by Mr. Mohanlal Shah at the meeting of the Organisation of Industrial Employers last Friday. A leading manufacturing business in Bombay had made changes that rendered a number of workers surplus, but it delayed retrenchment as long as possible. Before any employees had actually been dismissed, the workers sought the intervention of the State Labour Minister who had the case referred to an industrial tribunal. This tribunal ruled that retrenchment would not be permissible, but a more thorough study of the situation by the appellate tribunal, to which the dispute was later taken, resulted in the ruling that the management would be acting in good faith and in the proper exercise of its responsibilities if it dispensed with a number of workers. There the matter should have rested, but at this point the State Government intervened, rejected the decision of the appellate tribunal and passed an order to the effect that retrenchment in this instance would not be "in the public interest". The reasons it furnished for this unusual action were curiously irrelevant: the workers who were to be sacked had been neither incompetent nor undisciplined, the company had been making profits, and retrenchment would create "alarm in the minds of workers everywhere in the State regarding their security of service". Apart from doubt about the desirability of the States upsetting decisions of the appellate tribunal, this intervention shows that the State Government concerned imagines that any business that makes profits thereby becomes a sort of charitable institution whose function it is to provide work for well behaved men, along with a guarantee of security of tenure. Workers, like directors and anybody else connected with business, are none the worse for a little salutary "alarm" regarding their security of service", for productive

endeavour cannot be managed on the same principles, as an old men's home.

The restoration of civic peace in Calcutta has been so welcome that one would appear ungrateful if one looked too closely at the methods by which it was achieved. But there is a disturbing feature of the negotiations that led to the decision to stay the increase in tram fares, and that is the part played by the Press Advisory Committee. The Press Note announcing reference of the tram fare rise to a tribunal was published after a meeting between this body and Ministers in the State Cabinet, and the Note made it clear that the Government was acting largely on the advice of the newspapermen, and partly at least in order to "obtain the co-operation of the Press". A Press Advisory Committee, one would have thought, is designed to advise on matters relating to the Press—for example, it would advise on what news should be published and what news withheld during communal rioting or war. But to allow a non-elected body of newspapermen to influence Government policy through privy conclave on matters connected with law and order or industrial costs seems to me thoroughly undemocratic. An advisory committee of barristers or accountants would have more right to express opinions on these questions. The Press Advisory Committee which played so dominant a rôle in last weekend's developments is a motley group whose names I cannot recall having seen published; they are nominated by the All-India Newspaper Editors' Conference, another non-elected body, and include genuine working editors, non-writing "editors" and news editors. They are drawn from a variety of dailies, news agencies, and even a monthly. It might seem strange for a journalist thus to warn against the presumption of the fourth estate to which he belongs, but my own anxiety is for the independence of the Press which can only be compromised by this dabbling in a field that does not directly concern it. The rôle of the Press is publicly to support or criticise authority according to its lights, not to play the part of adviser behind closed doors on every subject under the sun. While the editors have meantime been settling their own score with the reporters and photographers. The foolish violence on the maidan last evening, regrettable in every way, might at least remind the Press that maintaining order and reporting disorder are two separate functions, and it is better that they remain distinct.

Evidently I shall have to revise my opinion that politicians are a talkative lot. At least they breed them silent in Stirling. The Labour member for West Stirlingshire created something of a scandal last week by making his maiden speech in the House of Commons—for he was elected to that institution in 1945. Eight years' silence on the part of an elected person must be very nearly a record. And what years those eight were—the end of the war, the peace, the foundations of the welfare state, the break with Russia, independence for India and Pakistan, the cold war, Korea, a change of Government—did Stirling have nothing to say of all these matters? Was there nothing said of them in Strathblane or by Kelly Water that required to be said again in Westminster, no thought conceived in the shadow of Ben Lomond or on the bonnie banks of the Loch that the troubled world would have been the better for hearing through West Stirling's representative? If indeed there was not, if West Stirling gave them not a thought and cared not a fig for them, we must expose more of our politicians to its pacific influence, making a start perhaps by holding the Big Four conference in the Campsie Fells.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

ACTIVITY MAINTAINED: SIGNS OF GREATER CONFIDENCE

(FROM A SPECIAL CORRESPONDENT)

London, By Air Mail.

THE industrial and commercial scene in the United Kingdom presents considerable animation. Signs of increased activity, interspersed with occasional setbacks, which have been in evidence since the Budget have gathered in strength. Much of this represents definite expansion of industry or commerce; but there is also a good deal of energy displayed in such directions as the capitalisation of reserves or alterations of capital structure to meet the less inflationary conditions which have now supervened. Inevitably, the picture offers sharp contrasts in a number of directions, although, on the whole, the sense of relative stability is greater than at any time since the war. There are, for example, widespread demands for wage increases, in spite of the general easing of living conditions which has occurred. But, there is little disposition on the part of either the Government or employers to resist these claims outright—an attitude resulting from a growth of confidence in the immediate future of business. Thus, employers in the cotton spinning and weaving industry have agreed to a 5 percent increase in the wages of workers at a cost of over £4 million per annum—which is more than could be strictly justified on the basis of the cost-of-living index.

The adverse visible trade balance for several months past has been substantially higher than for the corresponding months of 1952, but against this has to be set the fact that the terms of trade are better. The lower costs of raw materials have not so far been reflected in higher exports, excepting to the United States and Canada, but it will be appreciated that it takes from six to nine months for raw materials to be made into finished products. Meanwhile, there is certainly a considerable rise in the volume of home retail trade. As was remarked in my last letter, special Coronation demands have played some part in this. Indeed the official figures now published show that the part has been larger than any one could have expected, especially in fancy goods, jewellery, cosmetics, wine, spirits and beer. But these are not to be regarded as the main avenues of trade. Indeed, it might be surmised that economies had to be effected in some directions in order to make these special purchases possible.

One interesting and permanent trade outcome of the Coronation has been the great impetus given to television. Sales of sets in May 1953 were 114,000 more than in April; the increase in May 1952 over April 1952 was only 31,000. The competition of television with the cinema becomes more evident now almost month by month. It may be noted that the Associated British Picture Corporation has announced that there were 10½ million less attendances at its group of cinemas in 1952 or a decline of nearly 5½ percent compared with those of the previous year. A considerable reduction of cinemas in the near future is forecast.

Criticism of Raw Cotton Commission

Not even those who dislike the Raw Cotton Commission are disposed to blame that body for having incurred a trading loss of £22 million during the 13 months to 31st August, 1952—the period of its latest report. It is conceded that the conditions then prevailing were exceptionally difficult and came into existence through no fault of the Commission. Only a minority of spinners exercised the right to make their cotton purchases independently of the Commission, the largest proportions being those using Sea Island or American varieties. Nearly all of the former was bought independently (but the quantity involved is not large) and 35 percent of the latter. It is significant, however, that the Commission in its report describes the activities of those who wish to bring it to an end as the most serious disadvantage under which it labours. Certainly, the critics represent some of the most powerful concerns in the cotton industry. Their disaffection is, however, a little curious in that, although it is pronounced, no specific sins of omission or commission are alleged. The reliance is, in fact, chiefly upon the argument that free trading must necessarily be better than State trading. Thus, the chairman of J. and P. Coats Ltd., referring to the Company's decision to stop buying from the Commission, observed that it is too early to make a comparison of how the Company has fared, "but undoubtedly it has enabled our buying operations to become more flexible, and this has proved of value under the difficult conditions ruling in Egypt and the Sudan." The chairman of Fine Spinners and Doublers Ltd., which has contracted out for three out of the four groups of cotton it uses, says that "the results of the year's operations have been carefully analysed, and so far as the prices paid were concerned, the net result shows that the differences in the methods of trading were marginal." This might imply that the financial gains through contracting out were not substantial, but as during the coming year this Company is buying 55 percent of its requirements of cotton through its own channels, there is evidently a determination to pursue the matter further.

Meanwhile, with just a little touch of asperity at these developments, the Commission has given a reminder that it can only be regarded as respon-

sible for contracts actually placed with it, and that it must not be expected to come to the help of spinners who contract out and find that things are not turning out as they hoped. It is an uneasy situation and further reactions are bound to occur. The latest news is that further firms have contracted out and that during the ensuing year the Commission will supply barely half of the spinners' total needs.

Outlook for Rayon and Wool

The textile industry more than holds its recovery, especially rayon and wool. A considerable stimulus has been given to the rayon industry by Courtauld's reducing the price of their viscose rayon staple from 27d to 24d per lb., which will lower the cost of production of blended fabrics. The Company has expressed itself hopefully upon the future demand for rayon staple in view of various new uses which are expected to have an effect upon consumption. As regards rayon yarn, it observes "we feel that the weight of yarn on order in our books possibly reflects over-buying, and that there may be some levelling off in this position before stability is reached." The fact that the Australian wool crop reached a record high level for the season ending 30th June should at least prevent any recurrence of soaring wool prices and has increased the confidence of woollen manufacturers.

No Abandonment of Synthetic Rubber

The sharp fall in the price of natural rubber encouraged some of the leading producers of this commodity to hope that this would mean a severe setback to producers of the synthetic varieties, especially as the U.S. synthetic industry goes back to private interests during the next twelve months and will have to continue without State aid of any kind. But these hopes have been dashed by the declaration of the Dunlop Rubber Company—the largest consumer of rubber in Britain—that the production of synthetic rubber must continue to expand. The Chairman of the Company has explained that its smaller expenditure on synthetic rubber development is not because of any slackening of interest, but that important new processes are being tested, and until the results of these are known, it is thought desirable not to add to financial commitments in the processes already employed.

City of London's Interests Broaden

The City of London continues to regain some of the connection with industry which it lost during the period of the war and also when the Labour Government was in power. There is, indeed, a slight recovery of the old universality of its operations, in addition to various issues and placings of shares by home companies. Among the examples of the former is the acquisition by an English subsidiary of a block of shares in the British subsidiary of an American-owned company. But the most important happening of this broader kind has been the coming together of a group of London and New York banking houses and a number of Canadian business men in the formation of Triarch Corporation Ltd., with an authorised capital of \$10 million. The combination, which is a powerful one from every point of view, is to develop the natural resources, industry and trade of Canada. It is emphasised that not only is financial aid to be given but technical also—presumably chiefly from the United States. That, in spite of heavy taxation, there is plenty of capital available in Britain is indicated by the heavy over-subscription of new issues of merit.

Export prospects are still discussed in a rather subdued manner in nearly every industry, undoubtedly not without reason. This leads thoughtful people to wonder if there may not be some setback awaiting the comparative optimism now prevailing. Meanwhile, there is, on the credit side, a lowering of tariffs by Australia. The question is whether Britain can increase her ability to compete in foreign markets. That industrial production as a whole is running at a markedly higher level than a year ago does make for lower costs. There is also the fact that the Government has made some reduction in State expenditure. This is modest so far, but that a beginning has been made shows that the problem of excessive State outlays is not an intractable one.

Chemists and Diet

A certain amount of disappointment, and indeed scepticism, has been expressed concerning the Society of Chemical Industry's symposium on "Food and the Future." It had been hoped that substantial contributions would have been made on the question of adding to the world's food supplies from sources hitherto unexploited. It is true that various novelties were suggested which invoked the aid of seaweed, algae grown in ditches and other expedients, but apart from their unattractiveness to the palate, they seemed very insubstantial things compared with the staple diets to which the more fortunate areas of the world have been accustomed hitherto. Perhaps the average man is not sufficiently open-minded on these matters, but undoubtedly an initial result of the symposium has been to slow down the rate of the chemist's progression as a decider of the dietetic intake of mankind.

Singapore stands first while Bombay and Hongkong tie for the second place amongst the most telephone-equipped cities of the mainland of Asia, according to Mr. Evelyn J. Bunbury, Chairman of the Oriental Telephone and Electric Company in a statement just issued to shareholders. Two percent of Singapore's population were telephone subscribers, while Bombay and Hongkong each returned 1.5 percent. Mr. Bunbury said that in the list are Calcutta with one percent and Karachi with 0.6 percent.

RATES DECLINE AT LONDON TEA SALES

There was generally a slow demand at lower prices for the 14,387 packages of North Indian, Pakistan and other miscellaneous teas offered at the London sales on Monday. A few of the old season's colour Assams sold at about steady rates but other descriptions declined by half-penny to 3d per pound. Sylhet teas, which constituted the bulk of the new season's offer, recorded the biggest declines. Clean Common Pekoe was indicated at around 32d a pound nominal against 40d previously.

At last week's sales the 43,948 packages on offer realised an average price of 3s. 6½d a pound, against 3s. 7½d at the previous sale and 2s. 8½d a year ago. Results of some of the companies are given below:

	No. of packages	Av. price per lb.
Assam Frontier*	60	3/61
Buxa Dooars	252	3/51
Central Province	774	3/7
Consd. Estates	780	3/71
Darjeeling Co.*	114	3/111
Darjeeling Consd.*	214	4/71
Dimbula Valley	144	3/71
Dooars	1,038	3/51
Eastern Produce	1,350	3/8
Hanipha	162	3/61
Jhanzie	672	3/61
Jokai	954	3/61
Jorehaut	850	3/71
Lunuvu	612	3/81
Ouvah	438	3/71
Standard	906	3/81
Tea Comn.	402	3/61
United Planters	540	3/71
Upper Assam	270	3/41

* 1953-54 season.

COCHIN TEA SALES

Offerings in Sale No. 14, which was held on 7th July, amounted to approximately 19,50,000 lbs. Although many low medium and medium teas were brighter in cup, the leaf appearance was generally poor and stalky. Some attractive high grown teas were on offer and a few invoices had a touch of flavour. From the outset there was a good general demand and prices for low medium to medium fannings and broken were often 2 annas dearer despite their poor leaf appearance. Commonest kinds were well supported at rates which were fully firm. Good medium types showed some decline in leaf appearance and were irregularly half to one anna easier. Best liquoring teas were about steady. The strongest feature of the sale were fannings of all descriptions. Whole leaf grades were fully firm and occasionally dearer. The demand weakened slightly towards the close.

Quotations

Low grown Travancore B.O.P.	Rs. 1-10-0
Medium Travancore B.O.P.	Rs. 1-11-0 to 1-12-0
Anamallais B.O.P.	Rs. 1-12-0
Best Liquoring Nilgiri B.O.P.	Rs. 2-3-6
Clean Black Leaf O.P.	Rs. 2-2-0

The Export Quota market has again shown an easier tendency and transactions have been done at 21 pias.

The total offerings in Dust Sale 'M' which was held on 30th June, amounted to approximately 2,20,000 lbs. There was a good general demand and prices for milled dusts were fully firm and occasionally slightly dearer. Better descriptions including high grown and Middle East types were slightly easier.

Approximately 3,67,753 lbs. were offered at Internal Sale 'N' held on 14th July. There was a good general demand although this weakened towards the close. Milled and Fine Dusts were occasionally dearer, but other descriptions met with a more restricted enquiry and were barely steady.

Large business was done for the Export Quota at 20 pias, but the market has now eased to 18 pias sellers, and business is being done at this rate.

COLOMBO RUBBER PRICES

The following figures were issued by the Indian Rubber Board from the weekly rubber market issued by the Colombo Brokers' Association:

	Closing prices on 3-7-53: (Rupees per lb.)	Average prices for the period: (Rupees per lb.)
Sheet:		
No. 1.	1.36	1.36
" 2.	1.33	1.33
" 3.	1.30	1.30
" 4.	1.16	1.16
" 5.	1.11	1.11
Sheet Cuttings	1.85	1.85
Crepe:		
R.M.A. 1X	1.08/12	1.071
R.M.A. 1	Cts. .95/100	Cts. .974
		Crepe 2. .92
		do. 3. .861
Scrap Crepe:		
Sc. Crepe 1.	Cts. .70 Nom.	Cts. .711
Sc. Crepe 2.	" .66.68	" .671
Flat Bark	" .62/64	" .634
	Sc. Crepe 3X	" .651

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

Stocks and Shares

IRONS IMPROVE IN IDLE TRADING

DISAPPOINTING JUTE COMPANY DIVIDENDS: GILT-EDGED DULL

Wednesday Evening.

DURING the greater part of the week the Calcutta share market was dull and inactive but a change occurred from Monday night when news was received of the increase in the retention price of steel produced by the Tata Iron & Steel Company. The effect has been to induce a degree of bullish activity in Indian Irons because of the hope that a similar announcement regarding steel produced by this Company will follow. Bulls were prominent in the market on Tuesday and under their influence the price improved to Rs. 24. On Wednesday, a further advance to Rs. 24-1-6 occurred, despite the still unsettled labour situation and the renewed possibility of an armistice in Korea.

Share prices in other sections have not moved up in sympathy with Indian Irons to any marked extent, but the almost complete absence of activity that prevailed since the disturbances in Calcutta began almost two weeks ago, has given place to a slightly larger volume of business.

The gilt-edged section was dull except for some enquiry for 3 percent 1957. Medium and long-dated loans were easier to buy than to sell. 34 percent National Plan Bonds 1961 were on offer at Rs. 98-4-9 (9 pias above issue price) particularly from Bombay.

In the jute section, the dividend recommendations of the Bird-Hellings group and of several other companies reflected the difficult conditions through which the jute industry was passing during the six months ended 31st March, 1953. Of the nine mills in the Bird group, dividends recommended were lower in the case of four (Auckland from Rs. 4 to Rs. 2, Kinnison from Rs. 7 to Rs. 4, Lansdowne from Rs. 3 to Rs. 2 and Lawrence from Rs. 4 to Rs. 2), three were maintained, (Dalhousie, Standard and Union all at Re. 1), one (Naihati) was passed for the second time and one (Northbrook) was increased from 4 as. to 6 as. In the case of Champdany, a cut from Rs. 8 to Rs. 3 is recommended. Hooghly's dividend has been reduced to Rs. 1-4. Caledonian has maintained the dividend at Rs. 6. The market received these recommendations with equanimity for they had already been discounted at the current level of prices.

One bright spot was the sugar section where a mild recovery in prices took place. Operators expect that reports of the current year's working will reveal better results than last year.

Coal shares remained neglected with very little business passing. The difficulty of finding overseas markets appears to dominate operators' assessment of prospects in this section. In tea sellers continued to predominate and closing prices, compared with a week ago, reveal small declines.

Details of the week's trading appear below.

Dullness was the keynote of trading in the gilt-edged section, and a nominal amount of business was put through. The 3 percent Conversion Loan 1966 turned easier at Rs. 92-9 while 3 percent Non-terminable Paper, needed to Rs. 92-5. In short-dateds, 3 percent 1957 met with sustained enquiry to improve to Rs. 98-7, but 3 percent 1958 eased to Rs. 98-2. Both 21 percent 1954 and 21 percent 1955 were on offer at their previous quotations of Rs. 98-10 and Rs. 98-6. Medium-dated issues showed little variation in prices, with 3 percent 1959-61 being quoted at Rs. 96-4. Both 3 percent 1963-65 and 1964 were on offer at Rs. 92-6 and Rs. 92-5 respectively, with few buyers. 4 percent 1960-70 met with mild support at Rs. 102-3. Long-dateds continued to be neglected with 3 percent 1966-68 easing by one anna to Rs. 90-2 with sellers over, and 3 percent 1970-75 was on offer at Rs. 86-6.

Trading in provincials continued to be under the influence of the new issues and there was a further marking down of prices of 4 percent 1964 Loans, though no business was actually reported. Except in the case of 4 percent West Bengal 1954 which met with some enquiry, the quotations of all the remaining 4 percent issues were purely nominal. The enquiry for 3 percent short-dated State loans, however, continued unabated, but there were no sellers.

Among debentures, Calcutta Electric and Dunlop Rubber were both in demand at Rs. 101-4. Business was transacted freely both here and in Bombay in the recent Standard Vacuum Oil debenture issue at around Rs. 101 with further buyers at this price.

Selected preference shares were again in good demand but sellers were reserved. There were buyers of Anglo-India at Rs. 118. Bally at the same rate and Dalhousie improved from Rs. 117 to Rs. 119. Fort Gloster 2nd was marked at Rs. 123. In the miscellaneous group, Bharat Collieries were unchanged at Rs. 49-8 and a small lot of Birds Investments was placed at Rs. 77. British India Corporation eased to Rs. 143 but Indian Iron & Steel were steady at Rs. 106-8. Indo-Burma Petroleum were taken at Rs. 91 and there were ready buyers of Martin Burn at Rs. 103

at which price several transactions were reported. Shares on offer included Shaw Wallace, Rohtas 'B', Rallis and Orient Paper 2nd. Shares in demand were Alkali & Chemical, Burrakur 1st, Burn 6 percent and 7 percent and Dunlop 2nd.

In the banking section, there were buyers of Imperial Bank Fully-Paid and Contributory at Rs. 181-7-8 x.d. and Rs. 445-4 x.d. but no business was reported. Punjab National Bank on enquiry from Delhi improved from Rs. 20 to Rs. 21-8. United Commercial were a shade better at Rs. 35-10 and United Bank of India 'D' Class shares were steady at Rs. 3-14.

Slightly more interest was shown in railway shares at around last quotations. Bankura-Damodar were crossed at Rs. 56-4 and Kalighat-Falta at Rs. 58. Howrah-Arma were taken higher at Rs. 71-8 with further buyers at this level. Other shares demanded for included Arrah-Sasaram, Shadara (Delhi) and Howrah-Sheakhala. In contrast, there were sellers of Bukhtiarpur-Bihar and Baraset-Basirhat.

Cotton shares were fairly steady although the turnover was restricted. Bowreah improved from Rs. 261 to Rs. 274 and Dunbar from Rs. 170 to Rs. 176. Cawnpore Textiles were quoted at Rs. 8-5 x.d. Elgins were marked at Rs. 16-13 and Kesoram were shaded at Rs. 18-6.

Extremely dull conditions prevailed in the coal section. Burrakurs changed hands on several occasions between Rs. 10 and Rs. 9-13. Small lots of Bengal were taken at around Rs. 526. There were few buyers of Bharat Collieries at Rs. 5-13 while Bhalgora and Central India eased to Rs. 4-3 and Rs. 4-8. East Indian were well maintained at Rs. 24-4 c.d. Panch Valley were wanted at Rs. 20-4 and Rewa came to hand at Rs. 20-11. South Karanpura were weak at Rs. 11-10 x.d. Talcher were unchanged at Rs. 2-15 and Western Bengal at Rs. 4-9 x.d.

Jute shares were dull and neglected. Agarpara were marked at Rs. 18-2 with further sellers at this price. There were small buyers of Birla at Rs. 37-8 but Champdany eased to Rs. 147. Fort Gloster were the exception, being steady at Rs. 355. Kamarhatti were done at Rs. 186 and Hooghly were readily absorbed at Rs. 30. Howrah were a narrow market around Rs. 23-10. Kelvin and Nellimala met with some enquiry at Rs. 235 and Rs. 35. Khardah eased to Rs. 170 at which price buyers appeared. Lansdowne were quoted at Rs. 130 and Nuddea were sold down to Rs. 42, but later recovered to Rs. 43.

In electrics, Calcutta changed hands freely at around Rs. 13-8 and there were buyers of Sijua Jheriah at Rs. 11-6 and Patna Old at Rs. 10-12. Shahjahanpur were on offer at Rs. 7.

Selected sugar shares met with good enquiry but in the absence of sellers, little business could be completed. Balrampur were lifted to Rs. 7-10 by buyers of Carew at Rs. 6-6. Cawnpore were ready buyers of Champaran at Rs. 23-12. Darbhanga improved to Rs. 11 while Belund were unchanged at Rs. 7-13. U.P. were crossed at Rs. 14-8.

Indian Irons fluctuated between Rs. 24-1-6 and Rs. 23-7 to close at Rs. 24-1-6. Indian Galvanizing New were done at Rs. 12-11 and the Old at Rs. 13. Indian Standard Wagon came in for some enquiry at around Rs. 84. Jessors were steady at Rs. 24 as were Kumardhubi Engineering at Rs. 7-8. There was a mild shift in National Iron & Steel with the price improving from Rs. 4-12 to Rs. 5-3. There were small buyers of Britannia Engineering, Hooghly Docking and Saran Engineering. Bharia Electric Steel and Arthur Butler were freely offered without attracting buyers.

In the miscellaneous section, Bengal Paper were weak with sellers at Rs. 43. India Paper Pulp were unchanged at Rs. 157 as were Orient at Rs. 31-10 and Shree Gopal at Rs. 18-7. Titagur Paper met with investment enquiry at Rs. 35-2 and there were ready buyers of Star at Rs. 8-6. Dalmia Cement ordinary, deferred and contributory fluctuated narrowly around Rs. 6-2, As. 11 and Rs. 1-5. Some Valley were unchanged at Rs. 7. Hercules Insurance met with some enquiry and were taken at Rs. 28-8 x.d. against the previous quotation of Rs. 29 c.d. (dividend Rs. 1-8 per share). Ruby General were marked at Rs. 6-3 and India General Navigation market at Rs. 84. Port Shipping came to changed hands at Rs. 84. Assam Saws were done at Rs. 6-8 hand at Rs. 12-8. Baratee Coke eased to Rs. 17-7. Bharat Airways were crossed at Rs. 2 at which price there were further buyers. British India Corporation fluctuated narrowly around Rs. 8-4 and there were a few buyers of British Ceylon Corporation up to Rs. 12 but sellers were reserved. Britannia Biscuits on the recommendation of a reduced dividend (5% against 7½%) receded to Rs. 10-8. Calcutta Land- ing had buyers at Rs. 10-10 and Dunlop Rubber at Rs. 27-12. Eastern Investments met with investment support at around Rs. 145. Ganges Rope improved from Rs. 195 to Rs. 200. Several deals were recorded in Gillanders Arbuthnot at Rs. 115 but later there were sellers at Rs. 113. Hoare

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land etc. for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railway experts. This will save you unnecessary delay and expenditure.

THE MEANING OF FREEDOM
LIBERTY AND POWER

Freedom: A New Analysis. By Maurice Cranston. Published by Longmans, Green and Co. Our copy from Orient Longmans, Calcutta. 177 pp, 12s. 6d.

Mr. Cranston, whose name will be familiar to listeners to the BBC and readers of the *New Statesman*, applies the Cambridge linguistic philosophy to the old problem of freedom. Briefly, this method consists of attending not to what men are arguing about but to what they are arguing with, i.e., words, and then—by clarifying the meaning of words, by reference to their usual usage—showing that very often men are not arguing about anything, but are simply using words differently. We have all made the discovery at various times that this or the other controversy conceals confusion about the meaning of the words the disputants are using, rather than any substantial or important difference as to matters of fact. So often in fact have we made that discovery that we may be surprised, like Mr. Jourdain, that so commonplace an experience can be the foundation of a philosophical system or method. The only justification for the noise that the "linguistic movement" has made in philosophical circles is that philosophers are particularly prone to confusion about the words they use. This accusation, that philosophers are careless with their words, will surprise those who recollect having been turned away from books of philosophy precisely by the apparently meticulous and sterile subtlety with which certain words are "defined" at the outset. But closer attention often shows that philosophers are offering "persuasive" definitions of the words they are going to use; that is to say, they are not really telling us what words mean, but what they would like us to understand as the "proper" meaning of those words. Thus, many amateurs must have had the experience of turning hopefully to a professional philosopher for enlightenment about something with which we are familiar in everyday life—say, religion or freedom—and being disappointed and bewildered to find that the philosopher "defines" religion or freedom in a way that removes it entirely from our own experience and renders anything the philosopher says about it thereafter useless or irrelevant. So it is in this sense that philosophy can justly be accused of having been careless, confusing or arbitrary about words; and it is in this sense and to this extent that the "linguistic movement" or the Cambridge philosophy can perform a useful function by clarifying philosophical and ordinary terms.

Perhaps no one word has been subject to so much of this form of ill usage as "freedom". This is because it is an expression that finds great currency in politics, as well as in philosophy, and it is exactly in politics that we often seek to get people to accept one thing by telling them that it is another. There is an extreme example ready to hand, and it is incidentally this example that gives Mr. Cranston's book its topicality and popular interest: the "freedom" offered by Communism. Over a large section of the earth today, millions of men and women are being given, or are being promised, a form of social organisation that is described as "freedom", but which does not in fact answer the description of freedom usually accepted. These millions are not just more stupid or less critical than the rest of us; there is something in the word "freedom" that facilitates the deception. And it is this, among other things, that Mr. Cranston sets out to examine.

Mr. Cranston starts from the obvious point (indeed, he never gets very far away from the obvious, which is just why he is a useful guide) that if we speak of being free we must mean free from something or someone. As long as we fail to state what we are, or want to be, free from, our statement is incomplete. There is little harm in this as long as these we are addressing understand the unspoken part of the statement; two convicts discussing freedom are not likely to misunderstand each other. But there can arise immense confusion if different people have different restraints in mind, from which they want to free themselves. To take a simple example with which Mr. Cranston does not deal at length: the once popular expression "free love" could mean a variety of very dissimilar things. It might mean freedom for lovers from certain conventions governing courtship and marriage; or it could mean freedom for one partner from moral obligations which are anything but mere conventions; or it could even mean the inescapable necessities of human nature, like loyalty and jealousy. Plainly, disconcerting consequences could flow from conflicting notions about the unstated part of the proposition in discussions of this sort of freedom.

Mr. Cranston applies this method of enquiry to most of the contexts in which the words "free", "freedom" and "liberty" are commonly used, with some interesting results. In politics he studies the various applications of the term "liberalism" in England, France, Germany and the United States. The last mentioned essay is especially worth study, for English-speakers who use the language in the English way are apt to assume that the Americans do too, while they will readily accept the fact that *liberté* and *Freiheit* mean something distinct from "freedom". In fact, the American notion of liberalism has been as different from the English as the French or German, and a reading of Mr. Cranston's chapter on American liberalism will make it easier to understand McCarthyism, and other critics of the "McLiberals".

The same linguistic analysis is applied to the ancient controversy about the freedom of the will, though in this section particularly Mr. Cranston goes beyond words to offer a contribution to the actual subject of the debate. With some hesitation and many qualifications he comes down on the side of the libertarian, against the pure determinist.

A major weakness of Mr. Cranston's analysis of freedom is his altogether inadequate treatment of the distinction between freedom and power. Naturally, he points out (pp 26-7) that many people confuse freedom with power, which is impermissible, or else they hold that freedom without power is "worthless," which may be true but is irrelevant logically. The hunger-marchers used to mock at their "freedom to dine at the Ritz" which was not worth much without the money to pay the bill, and Marx had a good deal to say about the emptiness, for the proletariat, of formal bourgeois freedoms in a democracy. Now it may be better to have the power actually to do certain things than merely to have the legal freedom to do them, but on no account can it be argued that the power is the freedom properly understood. This sort of argument is much more common than Mr. Cranston seems to think, and he quotes uncritically such expressions as "freedom from want" and "freedom from ignorance." These shibboleths of the welfare state are not freedoms at all; they refer to powers, which may or may not be realisable, and they are disguised as freedoms in order to borrow some of the emotional approval that surrounds libertarian notions in a democracy. Ignorance and want are not actual entities from which we can be freed, like foreign domination or the secret police. They are the absence of goods or knowledge, and one cannot logically ask to be freed from absence, freed from nothing. Of course if it be true that in our societies people are being kept in want and ignorance by external constraint, then there is some point in demanding that they be freed from those constraints. But in most democracies want and ignorance persist not because of constraints, but because resources have not been exploited, powers not realised.

We had a good example of the transference of the halo of freedom to a problem of power in India recently. Freedom from foreign domination was a meaningful demand and it attracted a great deal of enthusiasm, but when it was achieved it was found that independent India did not have enough to eat and so people began to talk about "economic freedom." The Government of India actually launched the slogan "Freedom from Foreign Bread." This demand sounded like the old political demand for political freedom, but of course it was quite different. Foreign bread is not a constraint like foreign political domination, and in asking to be rid of it while at the same time feeding the population of India, the were not asking for freedom but for power—the power to grow enough rice at home. The propriety of using libertarian notions to promote other ends is not in question here; the Government of India was no doubt well advised to utilise an old enthusiasm for a new purpose. But by confusing freedom with power, we run the risk of leaving free men under the misapprehension that they will not "really" be free until they are rich too, which is false. Worse than being false, this belief encourages men to rebel against imaginary constraints, when the only way to improve their situation is by their own efforts, by the development of their own powers.

ECONOMIC CO-OPERATION AND DEVELOPMENT

International Economic Co-operation (Sir William Meyer Lectures for 1949-50). By V. S. Krishna, Vice-Chancellor of Andhra University. Published by the University, Madras, 1952. Price Rs. 10.

A Sir William Meyer Lecturer has a difficult task to perform. Eminent Indian economists, including Sir Jehangir Cojaee (History of Indian Currency), have been invited in the past to deliver these lectures. In the case of Mr. Krishna, the task is perhaps made doubly difficult because of the choice of his subject. If the field had been narrowed down, either by being restricted to a specific historical period or by studying international economic co-operation between specific regions or political blocs, or with special reference to, e.g., the underdeveloped economies, maybe the result would have done more credit to the author's labours, and been more useful to students of economics. And speaking generally, this subject is difficult for one who has not had intimate contacts with the upper strata of government as well as business. Within these limitations, Mr. Krishna has produced a highly readable book. The lectures were delivered in January and February 1951, and presumably prepared in late 1950, though they have appeared in print after a lapse of almost two years. In this time some further developments have taken place, although the author can justly claim that the basic ideas and institutions of international economic co-operation had already taken shape by 1950.

The book consists of six chapters containing the six lectures. The first is historical, and is headed "The Nineteenth Century World Economic Order." One feels at times a certain confusion of ideas. Generalisations which aim at covering such a wide field almost invariably go off the mark, and it needs a very skilful handling of facts to support one's interpretations. And when the canvas is so wide, the delineation of cause and effect requires very great care. In the following lecture, "Disintegration and

Beginning of Mutual Aid," the story is brought down to the second world war. The Combined Raw Materials Board, of which the Allies can justly feel proud, and certain sections of which continue to render valuable service in the post-war years, has been disposed of in even less than one paragraph. Perhaps the author did not have adequate access to the documents concerning this organisation.

In the third lecture, "Extraordinary Aid" the work of UNRRA and other organisations is discussed. It is now known that even when the armies were on the field of battle, Churchill and Roosevelt had recognised that after the war won substantial American aid would be needed to help Britain reconstruct her war-torn economy. Many in Britain particularly, will not agree with the author's remark that the rate of interest on the American loan to Britain was a "moderate" rate. There was a strong sentiment in the U.K. shared by certain people, that the rate should have been lower, if the loan was not to be altogether interest-free. In his fourth lecture the author discusses how far American aid, through UNRRA and the ERP, has been successful in solving the balance of payments problems of Western Europe vis-à-vis the dollar area. Here he anticipates the substance of the more detailed findings of the Economic Commission for Europe embodied in its recent report, "Economic Survey of Europe since the War." American aid has not solved these problems. If during 1950 and 1951 Western Europe's dollar deficit was reduced, this was because of purely temporary factors. A short discussion of certain general issues connected with the dollar shortage is presented, summarising what others have said on this subject, including Professors Haberler and Samuelson.

The workings of some of the specialised agencies of the United Nations giving technical assistance to various countries, and of the International Bank, form the subject matter of the next chapter. The International Trade Organisation, General Agreement on Tariffs and Trade and the International Monetary Fund are the subject matter of the sixth and last lecture. A broadening of the outlook of the International Bank is recommended and for the development of underdeveloped countries the author does not favour private foreign capital. Discussions of the Trade Organisation and the Fund provide a useful and lucid summary and in this last lecture some general remarks are offered on what are termed "equitable exchange rates." In this connection, there is no mention of the devaluations of September 1949, why they were necessary, and how far they brought the world nearer to a more equitable structure of exchange rates. The value of the book would have been much enhanced if an index were supplied. When will our writers of English make it a point of using the present participle after "with a view to"?

SECURITIES AGAINST ADVANCES

Bankers' Securities Against Advances. By L. R. Suneja (Suneja Publishers, New Delhi, 325 pages, Rs. 12-8-0). Mr. Suneja is well known to students preparing for banking examinations, for whom he has written a number of books. In the present book he has dealt with the complex subject of bankers' advances. The introductory chapter contains certain statements which readers may question. For instance, on page 9, it is stated that Indian banks use 30 percent of their deposits in discounting inland bills. The ratio of inland bills discounted by banks in India to their total deposits is considerably lower, being hardly 10 percent. Again on page 13 it is stated that money at call and short notice represents money lent to bill brokers, stock brokers and others. The statement is not applicable to banks in India where the call money market is restricted almost entirely to dealings between banks. The remaining chapters deal with advances to different types of borrowers and against different types of securities. The legal and practical sides of the subject have been discussed in detail and the legal side is well supported by quotations of case law and the appropriate sections of various enactments. There appears to be one lapse. On page 155, section 277N(2) of the Indian Companies Act has been quoted in connection with restrictions on advances against shares of joint stock companies. It was section 277M(2) of the aforesaid enactment, however, that imposed restrictions on advances against shares, and this section has been replaced by section 19 (2) of the Banking Companies Act, 1949. Incidentally, it may be mentioned that there are a number of other misprints in the text.

The types of securities dealt with by the author cover a wide range and the practice and procedure in regard to advances thereagainst have been clearly set out. Readers in Calcutta may wonder why no mention has been made of jute delivery orders against which banks normally provide finance to the jute trade. The chapter on "Undesirable Securities" is opportune and deserves careful study. The book can be recommended to students and practical bankers as a useful work of reference on the subject.

New Delhi

INCREASING EFFICIENCY
IN INDIAN INDUSTRY
PROPOSAL FOR PRODUCTIVITY
CENTRE TO BE DISCUSSED

(FROM OUR OWN CORRESPONDENT)

18th July.

THE Standing Labour Committee, meeting here later this month, will discuss a proposal to establish a National Productivity Centre. The objects of the centre would be (a) to assist in implementing the proposals of the five year plan relating to productivity, and (b) to promote the use, particularly by the methods mentioned below, of modern techniques to raise productivity, especially those which require little or no new capital investment. The centre would continue the work begun by the I.L.O. Productivity Team and it is suggested that it should:

- conduct productivity studies in selected plants of the more important industries, particularly in those whose output is expected to expand substantially, in co-operation with the employers and workers concerned;
- organise practical training courses for Government, management and worker personnel from these and other plants in all phases of modern industrial engineering, management and other techniques which have proved to be effective in raising productivity;
- follow up the work of the trainees in their own plants; and
- assist in applying modern industrial engineering techniques in selected plants in order to raise productivity and workers' earnings and improve conditions of work, and to demonstrate to Governments, employers and workers the benefits resulting from the application of such techniques.

Considering the important effect of working conditions on productivity, the centre will in the course of this work be expected to study these conditions and suggest improvements. In order that it might be fully equipped to do this, its staff might include experts specially qualified to provide assistance in the fields of industrial health, safety and welfare. The centre might, in addition, organise courses in cost accounting and in the application in industry of statistical methods which have helped raise productivity; it might provide assistance in the application of these methods in particular plants. It might also give advice, on request, to the Government and to employers concerning the organisation, design and lay-out of new plants. The centre would, in its work, use visual aids, travelling exhibitions and other methods which have been found successful in creating and maintaining an interest in raising productivity. It should utilise and assist in developing present training facilities in universities, technical colleges and other institutions in industrial areas. It should also draw on the services and facilities which might be provided by the Asian Field Office of the I.L.O. In brief, the centre could spearhead the drive to increase productivity in Indian industry, and could co-ordinate the efforts of experts with the various techniques which have proved successful in other countries.

Estate Duty Law by September

The Andhra State Bill will be given first priority for disposal by Parliament during its forthcoming session. Second priority has been allotted to the Estate Duty Bill and to the auxiliary Bill which fixes the rates of estate duty. These measures are expected to become law by the end of September. Rules to be framed under the Estate Duty Bill are already being prepared. The annual revenue from estate duty is placed at Rs. 8 crores a year and will be distributed among the States. Seven State legislatures have already adopted resolutions authorising Parliament to levy estate duty on agricultural property and, except for West Bengal and Travancore-Cochin, all other States have agreed to get similar resolutions passed by their legislatures soon.

Bank Liquidation Procedure

The Ministry of Finance, it is learned, is trying to secure third priority for its Bill to amend the Banking Companies Act in order to implement the recommendations of the Banking Liquidation Enquiry Committee. The Committee recommended that section 43 of the Banking Companies Act should be amended so as to clarify the provision that depositors are not obliged to file formal claims in order to qualify for a dividend. It also suggested that sections 45A and 45B of the Act should be amended so as to make it clear that the jurisdiction of the winding-up court extends to all claims of a bank against its debtors whether arising before or after the winding-up order. Limitation should be imposed on the date of winding-up, or three years prior to it, should be liable to examination by the court, unless the court dispenses with such examination in the case of any of them. Section 235 of the Indian Companies Act should be amended so as to clarify the intention of the legislature beyond any doubt. In any case, the period of limitation proposed for a claim of the banking company against a director should be stated to be notwithstanding anything contained in Section 235 of the Indian Companies Act or any other law in force for

the time being. A court liquidator should be appointed in all States, wherever possible. A court sanctioning a scheme of arrangement under Section 153 of the Indian Companies Act in respect of a bank may, either at the time of sanction or at any subsequent time, make provision for enforcement and general supervision over the conduct of the scheme to ensure that the scheme is effectively carried out.

The function of the Reserve Bank in relation to schemes of arrangement should be extended. The certificate of the Reserve Bank under section 45 of the Banking Companies Act shall state that (a) the arrangement is not detrimental to the interests of the depositors, and (b) the arrangement is not impracticable. If the Reserve Bank gives the necessary certificate it shall submit a report to the court giving the result of its investigation into the conduct of the directors etc. The court is to exercise its discretion in sanctioning the scheme after considering the report of the Reserve Bank. Pending the decision of the Government on the recommendation of the Company Law Committee that there should be a Central authority to supervise winding-up proceedings, the Reserve Bank should be empowered, when directed to do so by the Government of India, to inspect any bank which is being liquidated by a private liquidator. If on inspection it is found that there has been a substantial irregularity or breach of duty in the liquidation proceedings, the Government of India may send a copy of the report to the liquidator for consideration by the court. The above powers of inspection should not apply to banks under the management of a court liquidator. The Banking Companies Act should be amended so as to exclude a banking company in liquidation from the application of the provisions of Part II of the Act. During the interval between suspension of payment and the appointment of a liquidator a special officer should be appointed to take charge of the books and assets of the bank and to exercise such powers as the court thinks fit.

Company Law (Amendment) Bill

The Bill to amend company law is being printed and will be ready for introduction during the August session of Parliament. It has 649 clauses.

The present Act contains long and detailed sections which have to be suitably amplified, hence the large number of clauses. The Officer on Special Duty in the company law branch of the Finance Ministry, Mr. D. L. Mazumdar, has returned from London and Geneva after studying at first hand the working of company law and stock exchange law abroad. The final draft of the Company Law (Amendment) Bill was discussed with British experts and some amendments were made. A Stock Exchange Bill is also being drafted and will soon be finalised.

Research on Unemployment

The Research Programme Committee recently constituted by the Planning Commission is being asked to undertake research on unemployment. Its first meeting is scheduled to take place early in September. The members of the Committee are Messrs D. R. Gadgil, D. P. Mukarji, Manilal Nanavati, C. N. Vakil, D. G. Karve, M. Venkatarangalya, P. C. Mahalanobis, P. S. Narayan Prasad, J. J. Anjaria, R. Balakrishna, V. K. R. V. Rao, Miss P. C. Dharma, S. R. Sen and B. Ramamurthi. Meanwhile a committee consisting of the Secretaries to the Cabinet and to the Ministries of Finance, Defence, Labour, Commerce and Industry, Rehabilitation and Education has been set up to discuss proposals to create or enlarge avenues of employment. It has held two meetings so far. The industrial schemes included in the five year plan will not provide very many employment opportunities, but will only fill to some extent the gaps in the industrial structure. The following estimates of employment in relation to capital investment is of interest:

	Capital Investment	Labour employed
Petroleum Refinery of Standard Vacuum Oil Co. Rs. 17.5 crores	500	
Expansion of Indian Iron and Steel Co. Rs. 31.7 crores	3,315	
Indian Aluminium Co. (establishment of smelter at Hirakud) Rs. 3.5 crores	665	
Expansion of Indian Cable Co. Rs. 2.8 crores	310	

There is a type for every purpose

Chloride and Exide BATTERIES

CHLORIDE & EXIDE BATTERIES (EASTERN) LTD.
BARLOW HOUSE, 59-C, CHOWRINGHEE ROAD, CALCUTTA-20.
BOMBAY—SAVOY CHAMBERS, WALLACE ST., FORT.
MADRAS—EXIDE HOUSE, 150B, MOUNT ROAD.

India is progressing rapidly towards self-sufficiency in the economic field—in industry, in commerce, in agriculture. OUTPUT, a quarterly magazine devoted to the survey of India's progress in these spheres of economic endeavour is informative and authoritative because experts in their several fields contribute to its contents. It is a survey that no industrialist, engineer, technician or student can afford to be without. It is the best magazine of its kind.

CONTENTS OF THIS ISSUE

Editorial Comments, Village Industries and Planned Economy, The Leather Industry, The Brush Industry, Coal and Coal Products, India's Cattle Wealth, Pharmaceuticals, The Woollen Industry, Labour Management Co-operation, Machinery Insurance, Building Materials.

COLOURED PICTURES

Cover: Still life of some cottage industry products. "Brush Industry"—Three stages of tooth-brush manufacture. "Pharmaceuticals"—Centre spread—How tablets and "Liver extracts" are made. Labour Management Co-operation—Chart showing the sphere and scope of industrial relations as they have developed in India.

A
Times of India
Publication

Available from all Agents of The ILLUSTRATED WEEKLY OF INDIA, leading newspapers and book-stalls or direct from THE TIMES OF INDIA, Post Office Box No. 213, Bombay; 10, Daryaganj, Delhi; 13/1 & 13/2, Govt. Place East, Calcutta, London Office: 4, Abchurch Lane, W. 1.

Expansion of fertiliser and chemical production	Capital investment	Labour employed
Sindri Fertiliser Factory Ltd.	Rs. 8.6 crores	49
Hindustan Machine Tools Ltd.	Rs. 24 crores	3,500
	Rs. 8.37 crores	3,000

It is estimated that the industrial projects outlined in the five year plan will increase employment by about 1,25,000. Following is an analysis of the schemes licensed by the Licensing Committee until its recent meeting:

Licences Issued	Capital investment	Labour employed
Producer Goods Industries	Rs. 62.5 crores	13,000
Consumer Goods Industries	Rs. 8.75 crores	12,000

It will, therefore, be seen that even if all the industrial schemes materialise they will not make a significant contribution to the problem of providing additional employment.

International Wheat Agreement Ratified

The Government of India ratified the International Wheat Agreement this week. Under the agreement, India will import one million tons of wheat every year for the next three years, instead of 1.5 million tons imported so far. The price ceiling has been fixed at \$2.05 per bushel and the floor at \$1.55 per bushel. The Agreement provides that the importing country shall have to buy the contracted quantity of wheat at the floor price even if the free market rate falls below it. Exporting countries will have to sell the agreed quantities at \$2.05 a bushel if world prices are higher.

Delhi Talks on Jute Mill Modernisation

Representatives of the jute industry visited New Delhi this week and met the Commerce Minister, Mr. T. T. Krishnamachari, and senior officials of his Ministry. The report of the I.J.M.A. delegation to Australia and New Zealand was amongst the subjects discussed. Another important subject was the rehabilitation and modernisation of plant and equipment in the jute industry. A number of units, it was pointed out, have already been modernised but further modernisation is required largely on the spinning side. Some felt that the circular loom was still in an experimental stage and it was doubtful whether, in view of its high cost, it would be suitable for the jute industry. The Government has, however, asked for the views of the industry on the problem of modernisation in general, and the financial requirements of any unit or units for that purpose. No strings will be attached if the Government decides to give such financial assistance to the industry. The Government is now waiting for the views of the industry.

Economic Adviser to Finance Ministry

Plans are being finalised to provide Mr. J. J. Anjaria, the new Economic Adviser to the Government of India in the Ministry of Finance, with an efficient organisation. The various economic and research sections working in the Ministry of Finance are being centralised under him. The Economic Adviser's organisation will have several sections, dealing with monetary policy, external finance, and domestic and international economic developments. Each section will be in the charge of an Assistant Economic Adviser and will have a number of research officers. Mr. Anjaria will continue to advise the Planning Commission. The economic section of the Cabinet Secretariat is being merged into the new Economic Adviser's organisation in the Ministry of Finance. The Government of India has separate economic advisers' organisations attached to the Ministries of Commerce and Industry, and of Food and Agriculture. It is yet too early to say whether these two

organisations will be amalgamated with Mr. Anjaria's. Presumably, however, there will be very close liaison between the three bodies.

Committee to Scrutinise Expenditure

The Finance Minister has set up a committee of Secretaries to approve new expenditure, it is learned. The Deputy Minister in the Finance Ministry is chairman of the committee, which will meet periodically to discuss all proposals for expenditure submitted by various Ministries. Till last year this scrutiny was done by the Standing Finance Committee of Parliament. With its abolition, each Ministry's proposals for new expenditure were examined by the Finance Ministry. There were delays if more than one Ministry was interested, but the new committee enables the Finance Ministry to ascertain the views of the Government as a whole before sanctioning a new proposal.

A.I.R. Screening Procedure Reformed

The Ministry of Information and Broadcasting has taken steps to rectify complaints against its system of screening music artistes, it is learned. The name "Jury" given to the screening committee has been altered to Audition Committee, and the power to grant exemption from screening to well known artistes has been vested in the Director-General of All India Radio. The Audition Committee will no longer be allowed to screen artistes by listening to their music directly. Each artiste will be allotted a roll number to cover his or her identity and the Audition Committee will hear the performance through a microphone. This, it is expected, will bring to an end the recent agitation in Bombay. Until now, Station Directors have enjoyed the power to select artistes within their area. They have largely relied on their staff for advice and selection, and there have often been complaints of favouritism. The B.B.C. and the Australian Broadcasting Commission have followed a different policy by screening artistes through committees. Such committees consisting of members of the Station staff have also existed in India but were ineffective. Unlike A.I.R., the B.B.C. has classified its services into Home, Light and the Third Programme, the last of these being for highbrows and select audiences. A.I.R. cater for select audiences, analogous to the Third Programme of the B.B.C. Side by side, a Central Programme Advisory Committee and a Central Advisory Board for Music were constituted.

To screen artistes a Central body under the Nawab of Rampur was set up. It had two wings: the North India wing with the Principal of the Morris College of Music, Mr. S. N. Ratanjankar, as vice-chairman; and the Karnatic wing with Mr. Justice T. L. Venkateraman Sastry as vice-chairman. Each vice-chairman was required to set up a panel or jury to screen artistes. This jury, with changing personnel, visited every station and classified artistes into "top" class, "A" class, "B-1" class, "B" class and "C" class. Trouble arose over the screening done by the North India committee. North India has its own peculiarities. For Bharkande and Vishnu Digambar, Patronage given by the Indian princes has created what are Allah Diya Khan and Abdul Karim. Each gharana has a style of its own which it is anxious to preserve. It was complained that in constituting the given neither to the Vishnu Digambar School nor to the various gharanas. There is some substance in the allegation that the wing was packed with representatives of the Bharkande School. To add Sumatimuthekar, was appointed Director of Music. In the initial stages, the jury called the artistes, listened to their music, examined them on the theory of music, but refused to grant exemption to some artistes of all-India fame such as Sideshwar Bai of Banaras, Ganga Bai and Mangagitation followed with the boycott and picketing of the jury. At the instance of Wilayat Hussain Khan of Bombay, the Bharati Sanget Kalakar was formed, which presented a nine-point memorandum to the Minister for Information and Broadcasting and sought permission for a deputation to wait on him. This the Minister refused. The Government, however, enquired into the allegations and decided on the changes reported above.

Indo-Ceylonese Tobacco Agreement

Discussions on Jaffna tobacco between the Ceylonese delegation led by Mr. S. Natesan, Minister for Posts and Information, Government of Ceylon, and the Indian delegation led by Mr. D. P. Karmarkar, Minister of Commerce, Government of India, concluded at New Delhi on Wednesday. An agreement has been reached which will be submitted to the two Governments for approval. The Indian delegation has agreed to facilitate the import of 2,500 candies of Jaffna tobacco a year for the next four years. At present, certain quantities are allowed to be imported at a concessional rate of duty of eight annas per lb. while the standard duty on the rest is over Rs. 9 per lb. Under the arrangement now agreed upon, additional quantities make up a total of 2,500 candies will be allowed to be imported at a concessional rate of 12 annas per lb. or Rs. 450 per candy. The Ceylonese delegation has agreed that during the same period the import of Jaffna tobacco into Ceylon will be allowed on Open General Licence and the effective rate of import duty will not be increased. It has also agreed to reduce the import duty on handloom towels and towelling to the lowest rates applicable for mill-made towels and towelling and to facilitate the increased import of Indian tobacco into Ceylon.

London

FINANCE BILL PASSED PRODUCTION RISING: ANXIETY OVER EXPORTS AND COAL OUTPUT

(FROM OUR OWN CORRESPONDENT)

18th July.

THE Finance Bill, which aroused a roar like that of the lion when it was introduced in the House of Commons exactly three months earlier, left it last Monday to no more than the bleating of a lamb with an unopposed third reading. Mr. Butler finished off the proceedings with the usual seriously hopeful summing-up which we have come to expect from the Chancellor of the Exchequer, whatever his political complexion, on the occasion. According to Mr. Butler it is now possible to take "a more cheering view of our economy," but he went on to warn his hearers that the need for more coal, more exports, and greater production remained the key factors to future progress. The Chancellor, dealt specifically with the third of these, and showed that production was expanding. In January and February it was about the same as 1951, in March and April it was about 2 percent higher than in the corresponding months of 1951, while the figure for May was 3 percent above that of May 1951. The figures certainly support his comment that we are making some progress. Unfortunately, the same cannot be said with regard to either coal or exports. The latest coal output figures continue to show a declining trend, and absenteeism, both voluntary and on account of illness among miners, is increasing. Stocks of large coal have dropped to an extent where, as a precaution against a winter famine, the Government has authorised the Coal Board to import supplies from Western Europe. As far as exports are concerned, the Board of Trade figures for June appeared simultaneously with the Chancellor's speech. He thought we were entitled to take satisfaction in the fact that our exports to North America rose to a new record level of £30.5 million, with those to Canada standing at £16.1 million. The comfort he derived from this fact, and from the additional fact that our imports were still at a reasonable level, was more than offset by the increasing anxiety in respect of exports.

The provisional trade figures for June, apart from the welcome successes in the dollar markets, show total exports at their lowest level since February and the trade gap wider than it has been for 12 months. Total exports at £204 million showed a fall of £11.7 million as compared with May. Re-exports showed a slight recovery to £8 million. Imports, on the other hand, fell by only £4 million to a total of £291.7 million, leaving the trade gap for June at £79.7 million as against £76.8 million in May. To some extent the June figures will have been affected by the Coronation, and in any event June is always a bad month for exports, so it is better to assess progress either by a comparison with the monthly average over each quarter—and on that basis British exporters would seem to be holding their own—or to study the half-year figures, which are as follows:—

	1952 1st Half	1952 2nd Half	1953 1st Half
Imports	1,902	1,580	1,694
Exports	1,347	1,233	1,256
Re-exports	85	41	54
"Gap"	470	306	384

It is not enough, however, merely to maintain exports. They must be expanded if we are to meet our commitments. Increasing production is also increasing our import bill. The movement of export figures from now on will have a special significance.

Progress in the Colonies

Both the Press and Visitors' galleries in the House of Commons were crowded on Thursday and the many representatives of the Commonwealth and Colonial territories among them were provided with ample evidence that the welfare of the under-developed areas and of the Colonial peoples was a matter of real concern to Parliament as a whole, even though there has been an unfortunate tendency of late to lend this subject a political complexion. The subject of the debate was the progress of the Colombo Plan and Colonial economic development. Since Mr. Griffiths was in Stockholm—where, incidentally, he was speaking to the Socialist International on the same subject—Mr. Shinwell opened for the Opposition. It is some years now since Mr. Shinwell was concerned with this particular field, with the result that he was obliged to temporise by asking for information rather than basing his remarks on actual facts and figures. Such criticisms as he had to offer furnished debating points rather than an indictment of Government policy, which was what they were intended to be. Mr. Oliver Lyttelton, the Colonial Secretary, followed with so many facts and figures regarding Colonial development over the past 20 years that even Mr. Shinwell must have been satisfied. And the figures were impressive. For instance, the crude oil produced in the Colonial Empire in 1932 amounted to 350,000 tons and refined oil to 770,000 tons; in 1952 the respective figures were 2,500,000 tons and 6,500,000 tons. Denying that the present Government was "soft-peddling" on Colonial development, Mr. Lyttelton pointed out that in 1948, when Labour was in power, capital formations for machinery, public works, plantations, etc., amounted to £180 million, but in 1952 the figure reached £400 million. He gave the figure fixed on for the ten-year development plan for the Colonial territories as £500 million.

Perhaps no one is clear as to the progress of the Colombo Plan, since to assess that is extremely complex. Mr. Shinwell seemed to be certain that the Government was not doing nearly enough, a general enough criticism which the Government itself would not doubt be glad to falsify if only it could find the means to do so. To meet Mr. Shinwell's requests for information on this aspect of the debate Mr. Nutting, the Under-Secretary for Foreign Affairs, was the Government spokesman. He was more sparing of figures, but was no less insistent that this country's record was something to be proud of, since we had been second only to the United States in helping United Nations agencies and the under-developed countries. It was with regret that he had to confess that our financial position did not permit us to carry our help any farther this year.

Labour Party's Quarrels

Far from being resolved, the alarms and excursions within the Labour Party appear to be on the increase. It is becoming more evident each day that the trade union section is determined to maintain a policy directed towards safeguarding the interests of its members, within the framework of the traditional Labour Party policy, rather than to accept without question the dictates of the purely political section, and especially of the Bevanites. This week Mr. Arthur Deakin, leader of the Transport and General Workers' Union, has indulged in some straight talking and not a little hard hitting at the union's annual conference at Southsea, and what is perhaps even more significant, he succeeded in carrying the large majority of the 800 delegates with him all the way. He has supported the trade unionists on the Iron and Steel Board and the acceptance of honours and titles, and suggested Mr. Treasurership, expressed reservations with regard to Challenge to Britain and particularly its further nationalisation proposals, and even went so far as to criticise Mr. Attlee's leadership in his handling of the Bevanites.

It is on the question of social ownership that there will be a clash, unless the moderates can bring about further compromise before September. In spite of instructions from the last annual Congress, the T.U.C. economic committee has sought to side-step the responsibility of preparing sweeping proposals for its extension to industries and services not already nationalised. It has this week approved an interim report, with special emphasis on the qualification, which includes a complete review of the economic situation as it sees it and the reviews a series of forms of public control with their particular applicability to different industries. Finally, it suggests an order of priority in which

certain industries may be brought under public control. The need for detailed study in each case is also mentioned, which at least implies that no actual programme for further nationalisation ought to be drawn up until after the return of a Labour Government.

Raw Cotton Purchase Programmes

Publication of figures showing how spinners and other users of raw cotton propose to buy their supplies in the 12 months beginning on 1st September shows that approximately 56 percent of American-type, Egyptian-type and West Indian Sea Island cotton imported in that year will be on private account, as against only 30 percent this year. It was expected that the proportion of contractors-out to contractors-in would show an increase, but the final figures in mills, as opposed to grades of cotton, is roughly that half will be buying privately while the Cotton Commission will be catering to the needs of the other half. It is anticipated that this division will permit both the Commission and private trade alike to provide good service for their respective sections of the industry. The Commission will still have to provide the bulk of the Egyptian-type cotton, which is clearly regarded as carrying the greater risk, and private merchants will be helped considerably by the big increase in the proportion of American-type cotton which they will be called upon to supply. As regards the procedure for private buying, there is one important change compared with a year ago. Entitlements are now required only for dollar cottons. The directions issued by the Ministry of Materials point out that a spinner who has contracted-out for only a part of his requirements will not be able to import privately non-dollar growths in a group for which he has contracted-in. Provision is made for the sale of unused cotton and for the re-export of unwanted cotton. The re-export of dollar cotton will not normally be permitted, but arrangements are made for dealing with dollar cotton bought on rejection terms in order to prevent the loss of the entitlement involved in a rejection. Imports of non-dollar cotton will be permitted without quantitative restriction against open individual licences, but for dollar cotton specific licences will be required, either against a valid entitlement or against the merchants' pool. No special procedure will be necessary to import non-dollar cotton on consignment—merchants will merely bring in the cotton on their open individual licences. For dollar cotton, however, only a bona fide merchant who is resident in the United Kingdom will be authorised to apply for an open individual licence to import those growths on consignment and this licence itself will carry no authority for the release of foreign currency.

DEVALUATION RUMOURS
BASELESSGOVERNMENT NOT PREPARED TO
RISK FURTHER INFLATION

(FROM OUR OWN CORRESPONDENT)

Karachi, 17th July.

ALTHOUGH there has hardly been a week-end since September 1949 when Karachi has not been afflicted with devaluation rumours, mostly emanating from Bombay, the war of nerves has recently reached such a pitch that even the most stalwart believers in "no change" have become shaken. The Government has not bothered to put out any official denials, largely because, ever since Sir Stafford Cripps' famous white lie on the subject, it fears that a denial would at once make the public jump to the wrong conclusion. It can, however, be confidently stated that it has no intention of devaluing the Pakistan rupee and is still firmly convinced, for reasons briefly outlined by Mr. Mohammed Ali, the Finance Minister, in his last budget speech, that devaluation would not be in the best interests of the country. It can also be stated categorically that it is quite untrue that Mr. Nehru informed the Prime Minister of Pakistan, either in London or later, that there could be no point in discussing the unsettled dispute between the two countries unless Pakistan agreed to bring her rupee down to the Indian level.

It is of course true that devaluation would promote trade with India, and the Government would probably accept this as an argument in favour. It would also remove a psychological barrier to investment from overseas. But the most important argument against it is that it would be highly inflationary, and Government economists feel that it is of prime importance that the rise in the cost of living (which itself tends to affect the cost of production) should be checked. In the past 12 months there has been a rise of about 12 points in the working class cost-of-living index, and this is a disturbing feature of the economic situation.

The cost of all imported goods, both producer goods and consumer goods, would shoot up with devaluation and it would serve as a check to industrial development, for new concerns, saddled with much higher capital costs, would not be able to compete with the concerns already in the field which had obtained their plant at a discount through the favourable exchange rate. The Government is not convinced by the argument that the "free market" rate of exchange between the two rupees proves that the Pakistan rupee is grossly overvalued, for it maintains that no real free market conditions exist as long as trade, travel and remittances between the two countries are hampered by such a multiplicity of controls and regulations.

Import Policy on the Anvil

The Commerce Ministry is now working out ceiling figures for further licensing of imports during the current half-year. It was allotted an overall figure for commercial imports by the Finance Ministry only about a week ago, and since then has been allocating this over the various heads. It is unlikely that further applications for licences will be invited; very few of the previous applications were satisfied in full and it would only waste the time both of importers and of the Chief Controller of Imports' office to admit a spate of fresh applications. In view of the fact that advance licences for imports of industrial requirements during the current half-year were already issued before the end of June, the additional ceiling figure is extremely limited. Consumer goods stand little chance of obtaining a share except where really essential goods are becoming unobtainable. In its effort to stimulate and encourage indigenous production, the Government is determined to licence all genuine industrial requirements, even though it means that the public must remain starved of consumer goods for some time to come.

The Government has under consideration the relative claims of Chittagong and Chalna ports for development expenditure, and a report on the subject, prepared by the Navigation Directorate of the Central Engineering Authority, is under consideration. Commercial interests concerned are also being consulted. It seems probable that there will be some slowing down of further development at Chittagong in order that the savings accruing therefrom may be devoted to Chalna. As regards Karachi port, the Communications Ministry is in full agreement with the Port Trust that the reconstruction of the East Wharf is absolutely essential, and the Finance Ministry will presumably have to agree. The estimate has been raised to Rs. 7.93 crores and it is understood that the old tenders will be cancelled and the work will be put out to tender afresh. As regards the proposed commercial dry dock, the Government is now considering whether this can be combined with the shipyard which is being established by the Pakistan Industrial Development Corporation. Preliminary work on this project has begun.

Taxing Managing Agency Commissions

Over a year ago I reported that the two-man committee had agreed on a formula regarding the taxation of managing agency commissions. Unfortunately, some hitch occurred in ratification and the agreement turned out to be inconclusive. The committee, which is supposed to meet at regular intervals to consider disputed points arising out of the double income tax avoidance agreement in force between India and Pakistan, has for various reasons been unable to meet for a long time, and this particular point has therefore been far too long on the agenda. The committee is, however, at last in session at Karachi and I am informed that the members have agreed that taxation of managing agency commission earned by managing agents in one country of companies in the other country shall be on a fifty-fifty basis and that this has already been ratified by the two governments. This is indeed satisfactory, for it was most unfair that this type of income should be subject to double taxation.

Tea Chest Manufacture in E. Bengal

The latest venture in the industrial field is one which will be of interest to the Pakistan tea industry. A Pakistani concern, it is learned, is going in for the manufacture of tea chests in East Bengal and is importing up-to-date equipment for the purpose. Experiences of tea chest manufacture in India have not been altogether happy and the Commerce Ministry has made it clear to the promoters that they cannot expect protection for an inferior type of article and must prove to the tea industry that they are able to supply good quality chests. They appear to be quite confident of doing so.

World Bank Mission Coming in August

A World Bank mission is due to arrive in Karachi towards the end of August, and the Government has several schemes to lay before it. It is confidently expected that further loans will be obtained for one or more of these schemes. One of them may be the utilisation of the natural gas recently discovered by Pakistan Petroleum Limited at Sui. Mr. C. Stribling Snodgrass, an American expert who has an international reputation in this line, has submitted his report on the subject and it is understood that he has expressed very confident opinions regarding the value of this discovery to the economy of West Pakistan.

Bombay

COTTON FORWARD TRADING
RESUMPTION WELCOMEDMR. NANDA HINTS AT PROPOSED
MOVES TO CHECK PRICE RISE

(FROM OUR OWN CORRESPONDENT)

19th July.

THE much-awaited and almost despaired-of permission to commence forward trading in the 1953-54 cotton crop was received just in time on the afternoon of Thursday, 17th July. The East India Cotton Association was keen, for astrological reasons, to inaugurate business at a very early hour on Friday morning. Preparations for the ceremonial opening of the new February 1954 contract had been made days in advance. But the Government of India took its own time to decide whether or not forward trading should be allowed at such an early stage when nothing was known about the size of the crop. The problem had meantime been further complicated by the decision to decontrol cloth. Cotton control, at least price control with floors and ceilings, appeared redundant when cloth made from this cotton was freed from price control. Even now the Government of India appears to be in two minds on this issue. It is because of this that it has allowed trading provisionally only in the February contract with the conditions regarding the floor and ceiling prices and for the basic staple of 25/32 with a tolerance of 1/32 remaining as at present. The market celebrated the event by lifting the rates of the current contract on the afternoon of last Thursday by as much as Rs. 8-8 per candy. The opening of the new contract will provide a loophole to those who are not in a position to honour their commitments, by transferring them to the February contract. Even so, there is a fair possibility that the bears will be roundly squeezed, considering the tight supply position and the

general expectation that the new crop will be delayed because the first rains came three or four weeks later than usual.

But while an important section of the business community in Western India has welcomed the removal of this difficulty in normal trading, there is widespread uneasiness both with regard to the economic situation in the country in general and over the future of forward trading in commodities. It is obvious that the Government of India and the Planning Commission are deeply worried that the rising cost of living and increasing unemployment in urban and rural areas might lead to widespread unrest. Various remedies, short-term and long-term, are being suggested to the authorities by political parties and institutions. Many of these are contradictory. But judging by what Mr. Gulzarilal Nanda, Minister for Planning and an important link between the Government and the Planning Commission, disclosed at Ahmedabad last week, the Government appears to have decided upon certain measures, at least with regard to the problem of high prices, which will closely affect the activity of the business community in the very near future. A joint deputation of the unions of shop assistants and bank workers which met Mr. Nanda at Ahmedabad complained about "the intolerable rise in the cost of living" and suggested that the Government take steps to bring it down to the prewar level. Mr. Nanda's reply was significant. He is reported to have agreed on the need to bring down the cost of living and added that the Government's policy "will certainly include restraint on speculative transactions, prevention of hoarding and readjustment of import and export policy." This is fairly indicative at least of the immediate line the Government is likely to take to check the price rise, apart from any steps the Finance Minister might propose in regard to currency and credit. Business men are naturally worried that the latter measures might bring about a slump as they did in March 1952.

Restrictions on Forward Trading

The business community here is now convinced that before long there will be some very stringent restrictions on forward trading in oil-seeds and oil, sugar, gur, spices and possibly base metals. It may be that in some cases, such as sugar, forward trading might be banned altogether. From the way a few markets have been behaving, some sections of the merchant community will not have much of a case for protest if these measures are put into effect. On the other hand, there are conflicting interests within the community itself in regard to the revision of import policy. It is generally believed here that whether or not the entire import policy is radically changed, a drastic revision of schedules is almost certain. Many of the items which are being manufactured within the country are likely to disappear from the list of free or liberal imports; quotas for some others might be cut down in order to compel people to use the products of cottage and small-scale industries. Some industrialists would naturally welcome such steps, but those engaged in the import trade, who are still rejoicing over the liberalised import policy for the current half-year, and many others in the distribution trade would regard them as a deprivation. They argue, with considerable justification, that to cut down imports in the present circumstances would only tend to raise the price of many consumer goods and would at the same time increase unemployment amongst the lower middle class, whose purchasing power has already been seriously reduced. With regard to Mr. Nanda's third antidote for the price rise—prevention of hoarding—the business community is not much impressed. The Minister is regarded as parroting a popular cry which has become irrelevant in present conditions and shown himself as being completely out of touch with the real state of the markets. The problem for business men today is not to hoard goods in anticipation of higher prices but to find buyers for their stocks, whether imported or produced in the country, at economic prices.

In the meantime, on the unemployment front, while the rains have brought some relief to agricultural labour, especially in the pockets affected by famine or scarcity during the last six months, this has benefited only those who were temporarily unemployed because of the severe drought. The monsoon, even a highly favourable one, is not likely, as was fondly hoped during last winter and spring, to affect the severity of the problem of unemployment, which owes its origin, at least on this side of the country, to the increase in population. In Western India there has been no reduction in the scope for either agricultural or industrial employment. If anything there has been considerable expansion during the last ten years. The trouble here is that jobs do not increase at the same rate as the number of people looking for them. The only remedy, it is felt, is a rapid expansion in the available field. But even if all the energy and the development of cottage and small-scale industries could not be very rapid. Yet the State Government is vainly searching for a solution of the unemployment problem in this direction, even now, without much effort on its part, give substantial impetus to industrial development. This would widen the scope for employment within a comparatively short period. But judging by the way it is trying to increase the supply of electric power it seems the Bombay Government would rather cut its nose to spite its face than allow the face to keep smiling.

Company Meetings

DALMIA CEMENT (BHARAT) LIMITED

MR. J. DALMIA'S PLEA FOR VARYING RETENTION
PRICES FOR CEMENT

Speech of the Chairman, Mr. J. DALMIA, delivered at the First Annual General Meeting of the Company, held on Monday, 20th July, 1953, at the registered office of the company at Dalmiapuram (Madras).

I welcome you all to the First Annual General Meeting of your new Company, which according to the scheme approved by you, has taken over the Indian assets of Messrs. Dalmia Cement Ltd. The latter has now become a subsidiary of this Company. The Balance Sheet and Profit & Loss Account with the Report of your Directors for the period ending 31st December, 1952, along with the accounts of various subsidiaries are in your hands.

Ever since the expansion of your cement factory at Dalmiapuram, there has been failure of rains, year after year, resulting in power cut. Each year we had hoped for better luck in the next, but the situation instead of improving kept on worsening. The production of the factory has suffered mainly because of this. The Company was, therefore, compelled to purchase and install diesel electric generating sets at heavy capital cost to supplement the available power supply. The cost of the installation of which has been completed only recently. We fervently hope that there may be ample rains in the future years.

The controlled selling price of cement has suffered a drastic cut since last December on account of availability of cheaper packing materials. It is rather regrettable that the increase in production costs resulting from the rise in labour costs, etc., has not been taken into consideration by those in authority while fixing the selling price.

It is unfortunate that the cement industry which occupies such an important place in the country's economy, although it is being controlled by a small number of persons, has not yet succeeded in having a combined organisation of its own to voice its common difficulties. However, on individual representations having been made by all, including the biggest combine of Messrs. A.C.C., the Government was pleased to refer the case of the cement industry to the Tariff Commission for investigation. The investigation is almost complete, and the report of the Commission is still awaited. In the case of the Steel industry, both the Tariff Commission and the Government have already conceded the principle of different retention prices for individual producers based on their respective production costs, although for consumers the sale price of steel is the same, irrespective of its producer. The differences in production problems and costs of different unit arising from their locations, are much more marked in the Cement industry. The location of most of the high cost factories was selected with the approval of the Planning and Development Department of the Government of India, having regard to availability of raw materials and distribution to consuming centres. Moreover, dispersal of this basic industry is in the interests of defence strategy. On the recommendations of the Tariff Commission will largely depend the fate of these factories and of the industry. Perhaps in the case of the cement industry the principle of different retention prices may not be conceded as the persons affected are not so influential and powerful as the larger Steel interests are. Even the Steel Re-Rolling industry, where the affected interests are not so influential and powerful, has suffered an invidious distinction in this regard.

It is regrettable that without trying to understand the basic realities of production costs, the high-cost units in case of the cement industry are charged with inefficiency even by those sitting high in authority. I shall welcome anyone to prove if such high cost of production is due to inefficiency.

On the other hand, if these high-cost locations are not wanted, let these units be stopped at least for a year as an experimental measure and let us see if the requirements of these areas can be fulfilled at reasonable prices by bringing cement from low production cost units which are situated at long distances. The cheap production cost locations are only the adjoining areas nearer to coal fields. Almost all known and workable deposits of raw materials for cement in those areas are already being exploited. But still all these areas are unable even to meet their own demand of cement. Then how can they feed Southern and Western India, where production costs are necessarily higher mainly due to their distance from coal fields or other factors beyond the control of the manufacturers.

The Cost of Coal

It is an acknowledged fact that coal is a very big item in the manufacturing cost of cement. Even with the most modern plant, the cost of production is about 25% to 30% in Cement burning alone depending on the quality of coal. The cost of coal varies between Rs. 20/- to Rs. 70/- per ton from factory to factory depending on the distance from coal fields and means of transport. The factories in South Madras and in Saurashtra have to meet their requirement of coal by getting a major portion by sea-route which raises the cost to about Rs. 70/- per ton of coal. This accounts for a difference of about Rs. 12-8-0 per ton of cement manufacturing cost of cement from factory to factory for the Cement burning process alone. Unless the Government is able to provide coal to all the Cement factories at a uniform price delivered at the factories, the fixation of a uniform controlled selling price for all manufacturers cannot be justified. On the other hand, cement from Southern and Western India meets the deficit of the low production cost areas to a great extent, even by incurring heavy transport charges which have ultimately to be borne by the consumers there. Under such circumstances, how far is it reasonable and justified to treat the high production cost factories on par with low production cost factories for the purpose of uniform sales realisation in a controlled economy. Concerns realisation only one plant and that too near coal areas have no worry, as they are not adversely affected by the fixing of a uniform sales realisation for all factories in India. But great are the hardships of those, who have factories only in high production cost locations which are none the less of great utility for the economy and development of the country.

and the great national projects. Their problems have not been considered with the sympathy they deserve. Such an unsympathetic attitude has discouraged and frightened many new-comers in whose favour licences were granted for establishing cement factories. So much so that even after getting capital subscribed, some had to liquidate their concerns and return the capital to the subscribers instead of venturing and hazarding the same to risk. The proposed Bagalkot cement factory, backed so much by the Government of Bombay, has not been able to see the light of the day so far.

We have apprised the Tariff Commission about the considerable wastage and loss which is being caused by unnecessary cross-movement of cement to long distances. The available rolling stock with the Railways is grossly inadequate and, therefore, the Railway Board has come out with a complicated "OWN YOUR WAGON" scheme. In this state of capacity is also extremely limited. In this state of capacity, the existence of unnecessary and avoidable cross movement of cement should not be tolerated. We are being compelled to despatch cement to distant stations which can be economically served from nearer factories. Similarly those factories are supplying cement in areas far away from their locations, but involving less transport from various stations which can be economically served from nearer factories. This is a result of unsatisfactory planning of the fixing of zones of distribution for the various factories on an equitable basis taking into consideration their locations and the need of the surrounding areas.

Important amendments have been made in the Industries (Development & Regulation) Act by which Government have taken extraordinary powers to control the prices and distribution of industrial products and to take over the management of an industrial undertaking without even giving it an opportunity to render an explanation. It is only to be hoped that these powers will be sparingly used in exceptional cases and not arbitrarily for serving exceptional cases. The Hon'ble Minister for Industry, after endorsing the amendments, stated in support of the amendments, stated in the Parliament that "IT MAY BE THAT THE GOVERNMENT WOULD HAVE ACTIVELY TO ENTER INTO THE FIELD OF EXPANDING INDUSTRY AND PROMOTING THE FLOATING OF NEW CONCERNS, IF IT DOES SO PURELY ON ITS OWN AS A NATIONALISED UNIT, EVEN THEN IT HAS TO MAKE IT A PROFITABLE ONE. OR AT ANY RATE, SEE THAT IT DOES NOT LOSE. OR THE PRICES HAVE TO BE CONTROLLED." It so happens that an industry must be profitable if it is to exist. The same consideration should be borne in mind while controlling the industries in the private sector. Any distinction will apparently be discriminatory.

Foreign Capital

Fears have been expressed about the invasion by Foreign capital into fields in which Indian Capital is operating. This is really no cause for alarm as operating. This does not allow them special provided Government does not allow them special facilities and exemptions from statutory requirements. Let all be treated alike and the best interests of the country be kept nearest to the heart. The Indian industrialists should also be helped and encouraged to improve the efficiency of their production by effecting improvements and mechanisation. Schemes of labour economy should

be appreciated and the impediments in the way of putting them through should be minimised. As it is, whenever any improvement is attempted, there is no co-operation from labour and no assistance from Government. On the other hand, demands are being received from labour that more workers should be employed for the same jobs which have been done in the past with fewer hands and can in fact be done with even lesser strength than at present employed. Labour seems to have no regard for the economy of the industry in which it is employed and no desire to put in their best efforts towards production. The right to strike is being often abused. It is necessary, in my view, in the present state of our country, to impose reasonable restrictions on strikes and also deterrent penalties for illegal or manifestly unjust strikes. Rigorous laws have been enacted to chastise managements if they do not conduct industries according to certain principles. The time has come when there should be laws enacted for correcting the growing indiscipline and go slow tactics of labour. If rationalisation of labour on economic grounds is continued to be objected to, the time may not be very far, when many concerns may have to close down as the Madras Tramways had to do.

If maintaining and feeding extra labour without work in accordance with the demand of labour itself according to the Hon'ble Shri Mahavir Tyagi, Minister for Defence Organisation, it does so in the case of private employment as well. It is the duty of the State to provide opportunities of employment for all. Forcing the maintenance of idle labour by private industries is only another indirect form of tax on industry, which is entirely unjustified, and imposes an undue burden on the industry.

I am glad that our Government has decided to make intensive effort to promote exports of Indian manufactures. The policy of the Government should be to encourage and actively help exports. For successful utilisation of exports opportunities, quick decisions are required of Government, not only on questions of licensing policy but also for extending special facilities to enable the exports to materialise. The delays in inter-departmental references should be reduced to the minimum.

Cement manufactured in India is of high quality and up to usual standard specifications. Indian Cement has been received with satisfaction wherever it is exported. It is no doubt true that at present Cement is a much needed commodity in India, but exports are possible from South India, which is a surplus area. It is hoped that Government would be liberal in allowing export of Cement within limits from the Southern areas.

Some of the Shareholders have been making requests to the Board of Directors to form a scheme to convert the partly paid shares of your Company into fully paid ones and thus wipe off the liability of uncalled capital and also to convert Deferred shares into Dividend paying ones. This is under active consideration of your Directors. Shareholders are requested to send their concrete suggestions. After considering all suggestions, a suitable scheme will be placed before you for approval in due course.

The difficulties of getting remittance from Pakistan have seriously affected the finances of your Company in India. Your Directors could not see their way to increase the dividend quantum to keep level with other Cement Companies, who have either no stake and difficulties involved in Pakistan or have a very small percentage of capital investment there, in relation to their total investment.

Before closing, I would like to express the Company's appreciation of the services rendered by the officers, the staff and workers of the factory and offices during the period under review.

With your permission I now move that the Audited Accounts for the year 1952 and the Directors' Report thereon be taken as read and be adopted.

MR. HOLCK-LARSEN REPORTS
ANOTHER RECORD YEAR

Speech of the Chairman, Mr. H. Holck-Larsen, at the Eighth Ordinary General Meeting of the Company held on the 17th of July, 1953.

Gentlemen,

It gives me great pleasure to welcome you to this, the Eighth Ordinary General Meeting of our Company.

Copies of the Balance Sheet and the Directors' Report for the year ended 31st March, 1953, have already been circulated to you and, with your permission, I will take them as read.

The year has been another record year for our Company, both in respect of sales and profit. Direct sales show an increase of 16 per cent. to Rupees 162 lakhs, to which must be added indirect sales totalling Rupees 89 lakhs, against Rupees 67 lakhs during the previous year. Our total annual turnover thus exceeds 2½ crores of Rupees. The corresponding net profit enables us to maintain a dividend of 10 per cent free of income-tax on the ordinary shares, after having allowed Rupees 5.45 lakhs for taxation and Rupees 2.72 lakhs for depreciation.

You will have noticed with satisfaction that the item of "Goodwill", which stood in our books at a cost of Rupees 7,29,556, has now been completely written off. The same applies to Commissions and Brokerage on our last issue of shares. In addition, it has been possible to transfer Rupees one lakh to a General Reserve fund.

We are pleased with these results, more so because the year must be described as one of a weakening market, with a noticeable recession in several of the fields in which we do business. Machines and parts became freely available and the competition became stronger; it can reasonably be said that the "Sellers' Market" has now come to an end.

To meet these conditions, we relied with confidence on the superior quality of the products which we handle, on our considerable stock of spare parts, and on the fine service reputation which we have built up. To this we added an intensification of our sales efforts: We expanded and developed our sales and "after sales service" organisation; we intensified our propaganda, and arranged for the employment of our salesmen and engineers to call on clients and to prospective customers. We also strengthened our organisation for arranging demonstrations in the field of the machinery we handle, and we further developed the training schools which we maintain for the personnel of our customers.

Those of you who heard Mr. Toubro's speech last year will recall that he prepared us for stronger competition, and, in consequence, an increase in expense to meet those conditions. The decision to meet the challenge of the market by a determined and expanded sales and service effort, has been a good one. It has paid us a good return by firmly consolidating our position in the market. We can justifiably claim that we are, today, extremely well established—and I venture to say that we will be able to cater for an even larger business, without any material additions to our present establishment.

While we are firmly convinced that we are right in having expanded and consolidated our position in this manner, I need hardly tell you that a constant watch is being kept on the economy of our Company, and care is being taken that no expenses are incurred which are not, in the opinion of your Directors or the Managing Agents, essential to the furthering of this aim.

In spite of the expansion of our sales, and a considerable expansion of our service facilities throughout the country, it has been possible to carry on the business without employing additional personnel from overseas. The Company's policy of Indianisation is progressing, and I am glad to say that those members of our Indian staff whom we sent abroad for specialised training and who have now returned to the Company, are doing well. We are still sending personnel abroad for training, and we receive encouraging reports on their progress. In addition to this, our Company's local Trainee Scheme (we have today 75 trainees) has proved a great success, and it may well be expected that some of the boys whom we see today at Powal, at Madras, or in the field, will be the future executives of our Company.

We view this development with satisfaction, and I wish to say here, that it is our Company's policy to bring more and more of our talented Indians to the top. This is being done by careful training. In our workshops and offices, by specialised training abroad, and by taking advantage of the many visits of experts from our overseas Principals. While this is our policy, I want at the same time to warn against undue haste or over-zealousness. A certain flexibility is necessary. One must bear in mind that a rapid progress is taking place in the Western world, not only in technical matters, but also in respect of methods of administration, inventory control, etc. To meet competition successfully, and to enable us at all times to give the best service to our customers, it is our duty to keep abreast of such developments, and, where necessary, rely on imported talent and specialised knowledge.

The Greater Bombay Municipal Corporation has now decided to repair and widen the two-mile stretch of road from Saki Naka to Powal, and this should effectively assist us in reducing our conveyance expense. To get this scheme expedited, and to show our civic sense, our Company has agreed to contribute Rupees 48,000 towards the cost of the road-building, which is estimated at roughly Rupees 1,70,000. Our wish now is that regular public transport should be introduced to serve this increasingly important area.

We review the past year, which I will term a year of development and consolidation, with satisfaction, and our Company has good reason to be optimistic about the current year, and the future. You will have seen from the report that we consider ourselves well equipped to play a major role in the execution of India's Five-Year Plan, in the development of agriculture, building of highways and village roads, construction of dams and tanks, clearing of virgin land, bunding and ditching, producing electric energy, and generally assisting in raising the standard of living of the people.

We have the tools, and there are many and encouraging signs that we will be given ample opportunities of using them. It is our desire to serve, because we realise that only by serving the public well, can business created by private enterprise survive.

We realise that to be a responsible business enterprise, it is not sufficient just to produce, sell or service good machinery. The welfare of all those who are affected by our Company's operations—customers, distributors, stockists, associates, shareholders and employees—must be an important factor in the Company's business decisions.

In this connection, I wish to express, on behalf of the Company, our sincere appreciation to all those L. & T. employees who during the past year have given of their best. Many of them have worked under difficult conditions, in remote places and in unexplored markets. It is to a great extent due to their efforts that the year has been one of added strength to our Company, enabling us to meet the future with fortitude and confidence.

In conclusion, I wish also to express my gratitude for the valuable co-operation and assistance extended to me by my colleagues on the Board.

I now beg to move that the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1953, be approved and adopted.

Make this important decision—to put some savings apart before you begin spending away your income. Let your savings work for you and the nation's good. Raise your standard of security with this guaranteed investment plan.

TWELVE-YEAR NATIONAL SAVINGS CERTIFICATES yield at maturity 50 per cent. more for your money, and this 50 per cent. additional benefit is tax-free and will not be taken into account in fixing the rate of income tax on total income.

TEN-YEAR TREASURY SAVINGS DEPOSITS offer excellent investment for those who wish to draw a current income. Interest at 3½ per annum, which is tax-free and which will also not be taken into account in determin-

ing the rate of income tax on total income, is paid to the depositor or remitted to his address annually.

POST OFFICE SAVINGS BANK DEPOSITS are the easiest means of securing your small savings. Interest is added at 2½ per annum, tax-free, on balances up to Rupees 10,000 and at 1½ per annum on balances between Rs. 10,000 and Rs. 15,000. And you can draw on your deposits to meet special calls.

INVESTMENTS THAT NEVER DEPRECIATE

For further information and/or rules governing these Investments, please apply to the NATIONAL SAVINGS COMMISSIONER, GORTON CASTLE, SIMLA-3, or the REGIONAL NATIONAL SAVINGS OFFICER of your State.

ABOLITION OF SPECIALITIES EXPORT DUTY A WELCOME MOVE

THE announcement last week that the export duties on jute specialities were to be abolished with effect from 16th July was a matter of some significance, though the bulk of the trade remains unaffected. It is also welcome because it is an indication that the Government is taking, though somewhat belatedly, a more realistic attitude towards the taxation of jute products. Those sections of the industry which are engaged in the production of carpet yarns and felting have been agitating strongly for reduction or abolition of the duties. The former had a strong case because the duty was increased last year by administrative action in classifying carpet yarns as "hessian" whereas they had formerly been classified as "sacking" for the purposes of the assessment of duties. At present there is a great scarcity of carpet yarns in the U. K. and even with supplies imported from Continental jute manufacturers, U. K. carpet manufacturers have not been able to secure their full requirements. It is hoped that Indian mills will now be able to obtain a share of this trade.

In the case of felting it is believed that there are potential outlets in the motor car and house furnishing industries. One need only look round one's own house or to examine one's car to get an idea of the extensive uses to which felting is put. At present Indian jute felt is too expensive to be competitive but the abolition of the duty will remove that handicap partially if not entirely. An important consideration in regard to this item is that large quantities of jute waste can be utilised in its manufacture and the greater utilisation of waste the more economical becomes the manufacture of other products.

Another speciality which will benefit from the abolition of the duty is the paper-lined hessian bag and, presumably, that applies also to the hessian bag lined with synthetic materials. Lined bags can be used for commodities which would otherwise seep through the interstices of a plain cloth bag. Bags lined with synthetic materials can be used also as containers for chemicals which would attack the unprotected jute fabric. Large quantities of these bags are manufactured abroad but if the abolition of the duties enables the industry to be developed here so much the better.

Other items which will benefit from the abolition of the duty are serim, carpets, canvas, tarpaulin, matting and ropes. None of these is in itself at present important nor is the present total production of all the items affected of much importance. They are all, however, capable of development and, at a time when the standard production of packaging materials are meeting with competition which threatens permanent contraction of demand, it is only prudent to encourage the development of other uses for jute and to discover new outlets.

As the Government has been looking into the effects of the duties on these specialities, it might consider also the handicap placed on Indian mills and the advantage conferred on foreign competitors by the incidence of the export duties on standard jute goods. Sooner or later, for the survival of the industry, these duties will have to be abolished, and the sooner the better.

THE JUTE MARKETS

There has not been much activity in any section of the market but the undertone has remained steady and the tendency has been towards firmness.

Manufactured Goods: Overseas buyers have not shown any large interest but business has been done in hessian with the U.K. and the U.S.A. and in heavy sacking with the U.K. and the Far East. Business with the latter has not been large but in some quarters it is thought that it is indicative of more to come. Mills have been reserved, and there has been no selling pressure. At one time B Twills were as high as Rs. 100-6 for July shipment but that price was not maintained. The abolition of the export duties on specialities did not have any effect on the market as the volume of goods involved is not large and standard manufactures are not affected. At the time of writing the tendency is firmer and prices are again higher.

The market opened firm on Wednesday morning and quotations were as under:

	Ready	July	Aug.	Sept.	Oct.	Dec.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	36-4	36-4	36-4	36-2		
40" 10 oz.	45-13	45-14	45-6			
B Twills	100-10	101-8	102-8			
Heavy Cees (Plain)	102-0	102-4	102-8			
Corn sacks	102-0	102-4	102-8			

Raw Jute: Mills have displayed little activity during the past week and jute prices have moved in sympathy with those of gunnies. On Friday and Saturday a moderate amount of business was done in New Crop at Rs. 22-8 basis Bottoms for Dhubri and Northern Bengal and at Rs. 27-8 basis Bottoms for Assam for August-September shipment. Covering business was also reported at eight annas above these rates. One group of mills was offering prices for Old Crop below the general level of quotations and small business resulted at Rs. 22-8 to Rs. 23 basis Bottoms ex-local godown for Assam jute and at Rs. 24 basis Bottoms for Northern. Local packing free from Jungli was also done at Rs. 22-8 basis Bottoms and odd lots of bimil and mesta were also reported done. On Tuesday some business was reported in Northern Middle Jute free from samia at Rs. 32, in Tossa Middle Jute free from samia at Rs. 31-8 to Rs. 32-8 and all daissee middles at Rs. 32. European standard New Crop Northern was reported done at Rs. 35 for Dots, Rs. 32 for B Dots and

Rs. 29 for X Bottoms. The undertone of the market has been steady. Sellers are reserved regarding New Crop and there is a feeling among them that as imports at present are small and not increasing and the crop is at least a month late, enough has been sold for early shipment. Most of them are holding stocks of Old Crop and would be glad to dispose of these but are not inclined to discount prices in order to effect sales. Quotations on Wednesday morning were as under:

Jute	Landed at Mill	
	Old Crop	New Crop
	Rs. per md. Shipment Basis Bots.	Rs. per md. Shipment Basis Bots.
Jat	26 July-Aug.	29-8 Aug.-Sept.
District	25 Do.	29 Do.
Northern	25 Do.	29 Do.
Cuttings Jat N.C.	70 per bale	
District N.C.	68 per bale	

(In Pakistani jute there is a difference of Rs. 4 per md. between Middle and Bottoms).

Indian Jute	Landed at Mill	
	Old Crop	New Crop
	Rs. per md. Shipment Basis Bots.	Rs. per md. Shipment Basis Bots.
Lower Assam	26 July-Aug.	29-8 Aug.-Sept.
Northern	26 "	29-8 "
Upper Assam	25 "	28-8 "
Murshidabad Tossa	23 "	
Bihar	22 "	
Daissee	28 "	
(Sheoraphuli)	21 "	
Mesta (Western)	22 "	
Bimil F.A.Q.	per bale	
Mill Firsts	165 One month	
Mill Lightnings	150 "	
Dundee Daissee	165 "	
S.G.	165 "	
Dundee Daissee	150 "	
L.G.	150 "	

In Cossipur imports from Murshidabad and Jungi districts continue in fair quantity and there are moderate imports from Northern Bengal and Assam. Good quality Northern jute is being bought at premium prices.

Mofussil: In North Bengal and Assam markets business is negligible because of the lack of imports. There are small imports of New Crop but they are mostly very wet. Rivers are rising and are 1½ to 2 feet higher than at the same time last year and this may speed up harvesting. The standing crop is doing well and it is expected that the yield will be heavier than last year's. Sowings are continuing in some districts. In Western districts fair imports are still coming in and most of these are despatched to Cossipur.

In Pakistan imports of New Crop are small and increasing only slowly. During the week there was an improvement in demand for New Crop and, with some competition in Narayanganj for the small immediate requirements, prices rose about Rs. 2 per md. Some business ports, prices rose about Rs. 2 per md. Some business was reported with the Continent but sellers were difficult to find at the prices being offered. Old Crop has been neglected except for Cuttings for which there has been fair demand and prices have risen by Rs. 2 to Rs. 3 per bale. The crop is reported to be doing well in all districts.

Arrivals of Raw Jute

Arrivals of jute in Calcutta and at mill stations in the Calcutta area in June amounted to 4,31,000 bales, making the total for the season, July 1952 to June 1953, 54,68,000 bales. Of these 41,45,000 bales were of Indian origin and included mesta and bimil, while

13,23,000 bales came from Pakistan. The arrivals in June were 37,600 bales more than in May last and 2,32,704 bales more than in June 1952. This year mills have continued buying to keep their stocks up as a precaution against higher prices because of smaller crops while last year they were restricting purchases because prices were already falling and the certainty of large crops gave them a sense of security.

In the season 1951-52 total imports by rail, steamer and boat were 50,42,400 bales, of which 32,12,500 bales were of Indian origin and 18,29,900 bales were imported from Pakistan. Besides these, mills were estimated to have received 8,02,300 bales from "other sources," mainly jute and mill-gate purchases, making the total arrivals 58,45,000 bales. The figure of 54,68,000 bales for 1952-53 includes 7,77,800 bales of Indian jute and 29,000 bales of Pakistani jute from "other sources."

It will probably cause some surprise that the total arrivals in 1952-53 are less than those in 1951-52 in spite of the large size of the 1952 crop. It may be noted, however, that imports from Pakistan were lower by 31 lakh bales which accounts for most of the reduction and is indicative of the progress India has made towards self-sufficiency in jute.

PROGRESS OF INDIAN CROP

In their eighteenth crop report for the current season covering the week ended 18th July, Messrs. Sinclair Murray & Co., Ltd., say that weather conditions have been variable but in general have been satisfactory for the crop. More sunshine is required in certain areas to prevent the growth of later sowings while in certain districts in Assam more rainfall is necessary to provide steeping water.

DANPUR: Alternate rain and sunshine has been experienced which has been beneficial for the standing crop. Weeding operations are progressing in all areas. Plant condition is improving and they range in height from 9" to 5". The river rose considerably, almost to flood level, but later reports mention that the level is now falling slowly. It is, however, higher than at this time last year.

JAIPUR ROAD: The weather has been mainly cloudy and sunshine is required to assist the growth of plants. Weeding operations are being carried out extensively. Plant condition is improving both in the earlier sown districts and later sown districts. Plants range in height up to 3'.

RANAGHAT: Favourable weather was experienced although it was mainly cloudy. A spell of sunshine is required to promote growth of plants, the condition of which is now satisfactory in the earlier sown fields. Later sowings are improving but are still far from satisfactory.

COSSIMBAZAR: The weather has been mainly cloudy with fairly heavy rainfall. This has not been favourable for the later sown plants; strong sunshine is urgently required to promote growth and also to enable cultivators to carry on with weeding operations which have been curtailed during the past week. Plant condition is improving both in the earlier sown districts and later sown districts. Plants range in height up to 7'6".

NOWGONG: Alternate rain and sunshine has been experienced which is beneficial to the standing crop. Harvesting however, has been delayed in the lowlands because of a lack of steeping water and further rainfall is required. Plant condition is healthy and satisfactory. Plants range in height up to 7'6".

GAUHATI: Rather heavy rainfall has been experienced with very little sunshine but this has not been unsatisfactory. Plant condition is reported to be good and they range in height up to 7'6". Harvesting has been completed in the lowlands and is going on steadily in the midlands. Although the river fell earlier in the week it is again steadily rising and is at the same level as at this time last year.

DIHUBRI: Very heavy rainfall was experienced but towards the latter part conditions improved with moderate sunshine. However, this has not proved unfavourable for the crop. Condition of plants is satisfactory and they are reported to be healthy and growing well; plants range in height from 4' to 8' 6". Harvesting is being carried out freely because of the recent rise in the river which now stands at about 2' higher than at this date last year.

DAISSEE DISTRICTS: Plentiful rainfall was experienced which has not been unfavourable but a spell

of sunshine would be beneficial to promote growth. Second weeding operations are almost completed. Condition of the plants is reported to be improving and they now range in height up to 5' 6".

PAKISTANI CROPS' PROGRESS

In their twentieth crop report for the current season covering the week ended 18th July, Messrs. Sinclair Murray (Pakistan) Ltd. say that weather conditions have been favourable and the midland and highland crops continue to make satisfactory progress. Present imports of lowland crop indicate that it has not been well grown, the quality seen up to date being mainly short and immature. In most areas the lowland crop has already been harvested. Rivers are lower than last year at this time but are still rising.

NARAYANGANJ: Weather conditions have been favourable for the standing crop. A spell of strong sunshine is necessary to enable cultivators to dry their harvested jute. The condition of the mid and highland crop is satisfactory and plants range in height up to 8". The river has risen about 6" but is still 2" lower than last year at this time.

DACC: Alternate rain and sunshine has been experienced which has been favourable for the standing crop. Harvesting of the midland crop is going on slowly. The river has risen but is still about 1' 6" lower than at this time last year.

CHANDPUR: The weather has been wet and a spell of strong sunshine is necessary to promote further growth, although the condition of the standing crop is satisfactory. The river has risen but is still about 1' 6" lower than last year at this time.

HAJIGANJ: Favourable weather has been experienced and the standing crop continues to make satisfactory progress. The river is about the same level as last year at this time.

AKHAI: Favourable weather conditions have been experienced and the standing crop continues to make satisfactory progress. The river is rising slowly but is still about 1' 6" lower than last year at this time.

ASHUGANJ: Favourable weather conditions have been experienced and the standing crop continues to make satisfactory progress. It is reported that harvesting of the midland crop has been suspended in this area because of a shortage of sleeping water. The river has risen but is still about 1' 3" lower than at this time last year.

NIKILDAMPARA: Weather conditions have been satisfactory but reports from this area indicate that the condition of the standing crop is not satisfactory and there is a very little chance now of an improvement. The river is about 6" lower than at this time last year.

SARISHABARI: Favourable weather conditions have been experienced and the condition of the crop is about 2" lower than at this time last year.

SERAJGANJ: Weather conditions have been favourable and the condition of the standing crop is reported as satisfactory. The river is still about 4" lower than last year at this time.

NAKALIA: Weather conditions have been favourable and the condition of the standing crop is reported as satisfactory. Harvesting of the lowland crop has been completed. The river has risen but is still 1' 4" lower than last year at this time.

BHANGORA: Favourable weather conditions have been experienced and the crop continues to make satisfactory progress. A lack of sleeping water is reported so harvesting is more or less suspended. The river is still about 4" lower than last year at this time although it has risen.

GREATER ATTENTION TO BUYERS' NEEDS URGED

MR. R. S. KANORIA'S ADDRESS TO GUNNY TRADES ASSOCIATION

IN his presidential address at the annual general meeting of the Gunny Trades Association on 21st July, Mr. Ramsunder Kanoria said: "The first half of 1952 was most thickly crowded with gunny disputes. Perhaps in the entire history of the gunny trade and industry such a vast number of disputes never arose. Nearly a thousand or more disputes were referred to the Bengal Chamber of Commerce and Industry. Nearly 400 disputes were referred to this Association, and several hundred disputes were referred to the High Court. There were three main causes for them. The first and the most potent was severe recession in prices, the second was a faulty legislation in jute goods, and the third was a decline in commercial morality. The last factor is in reality a consequence of severe losses in slump, and allurements of escape under legal shelter. It is not at all pleasant to recollect the bitter experience of these dark days, but now the clouds have been taken away. The transitional period is always pregnant with disruptive as well as constructive forces, and it is not surprising that the commercial morality underwent a deterioration, but the wonder is that the market has withstood it, and is now fairly rehabilitated in normal behavior. There are practically no disputes from July 1952 onward, although some of the older disputes are still dragging on. Several influences have imperceptibly worked to restore confidence in the market, namely the endeavours of the Disputes Settlement Committee, appointed by this Association for dissolving disputes, disciplinary action taken by this Association against certain parties, cooperation of the Jute Mills Association and Calcutta Jute Factories Shippers Association, and the amendment of the West Bengal Jute Goods Act V of 1950, and above all, the innate quality of the gunny merchants. I am

rather proud that a situation that appeared so desperate and devastating should have been stabilised so quickly. I still consider the gunny market as holding a high standard of morality as compared to other markets. A market of a lower calibre would have shattered to pieces under the thundering assaults of slump involving staggering losses.

Export Trade

"The mainstay of the Indian jute industry is exports. Its exports are falling and the tendency is towards fall. Let us not bemoan the past follies or the opportunities missed, nor scramble to allot the blame for the fall to the Government or mills or shippers or to our neighbours. Let us accept the fact that exports are falling, and strive to revise them. Every constituent of the gunny trade from jute mills to shippers must play his part. I have a few suggestions to make.

"The Indian jute mills robbed the Dundee jute industry of its business in standard jute goods, and the fact was accomplished in the early years of the 20th century. Dundee after clamouring for some time accepted the fact as it was and turned to the production of fine and quality jute goods and carved out a place for itself. But Indian jute mills have been producing the same stereotyped standard goods giving little heed to the change in the tastes of the consumers. Customers often complain that the jute mills pay scanty attention to specialties and odd-sized goods. Some of the Indian jute mills can profitably try this line. The production in this shall be small, but the margin of profit shall be large. In the absence of a response from the industry here, the Continental jute mills are having brisk business.

"Since the advent of the buyers' market, the buyers are supersensitive as to the quality and finish of the contracted jute goods. The mills shall be doing great service to the industry and the trade by being assiduously careful in the manufacture of the goods. This will earn reputation for them and pave the way for repeat business. Certain mills have earned limited reputation due to the supply of inferior goods to foreign buyers. This shall not be tolerated in view of keen competition from other sources. If mills deliver appropriate goods, business relationship with them would be highly valued, and they would be able to capture business more frequently than others.

Cheapness of Jute

"The factor of cheapness has enabled jute goods to establish their supremacy in the world markets over other packing and wrapping materials, and it is on this factor that the leadership of jute fabrics is likely to be lost. There is no dearth otherwise of competitors and substitutes. The export duty on jute goods has become lucrative source of revenues to the Central Government but it is a dangerous source of income, and cannot and should not be considered a permanent and independent source, as exports are much affected by national policies adopted by foreign lands, tactics adopted by substitutes and competitors. But the Government are very tardy in adjusting to the fast moving circumstances. In 1946 export duty on hessian was Rs. 80 and on sacking Rs. 50 per ton. That was raised to abnormal heights during the control period. In 1950 on hessian it was Rs. 350 on sacking. The intention of enhancing the export duty then was to enable the Government to share in the difference of price between the control price, and the price that ruled in foreign countries. These circumstances disappeared with the withdrawal of controls in March 1951, but the export duty, although reduced considerably since then, does not fall in line with the present market conditions, namely the advent of buyers' market. At present the export duty on hessian stands at Rs. 275 per ton and on sacking at Rs. 80 per ton. The burden of export duty on hessian is very killing. The continental jute mills are free from such encumbrances and their manufactures enjoy an advantage in prices. The competitive strength of the Indian jute product has been weakened and they are being priced out from the markets. It shall not be a creditable commentary on the statesmanship of the Indian Government that the jute goods should go down in competition due to the deadweight of export duty. If the export duty is reduced to a nominal value, the Government and the country would be amply reaping in increased production and increased exports.

"If the question of export duty is once solved, the question then shall remain how to make a further cut in the cost of production. India has ceased to be cheap. Even then its efficiency has not improved to the extent its has become costly. This involves modernisation of the Indian jute mills. The jute mills are fully conscious of this, but the problem of finance is still a major obstacle. Surely an industry that gives employment to three lakh people directly provides showering bounties in innumerable ways on other branches of industry indirectly cannot be allowed to go down for want of funds. Either the Government of India should provide subsidies to jute mills who require it for modernisation fully or partly and/or further assist it in securing aid from the World Bank. The factor of cheapness is the life breath of jute goods industry.

The Future of the Jute Industry

"Life seems to ooze out drop by drop from the Indian jute goods industry. There was a time when jute mills worked 54 hours a week, and the goods were consumed, then the time came when the jute mills worked for 48 hours and the production was consumed, then again came the time when 12 percent looms of the total were sealed and the weekly working hours were reduced from 48 to 42. Now the position is growing still worse. The production of jute mills is gradually decreasing. Little success

ing, but the stocks are mounting. The Continental jute mills have expanded their production. Pakistan is developing its own industry, jute mills are being set up in many other parts of the world. Paper bags have almost captured the demands for bagging for smaller fills. The Indian jute industry is dying inch by inch. In the misfortune of the Indian jute industry lies the opportunity for other competitors to blossom. The efforts of the jute goodwill missions may delay the shadow of doom, but the die has been cast. In spite of my pessimism, which I wish should prove false, I still hold that the industry has no immediate danger. It has vitality enough to struggle long before extinction—extinction in the sense of diminishing world wide connections and relegation to an insular position."

U.S. CONSUMPTION AND STOCKS

U.S. consumption for June in round figures was the same as for May. The total estimated consumption for the first six months of this year was 386 million yards compared with 343 million yards for the same period last year. U.S. stocks at the end of June, estimated at 201 million yards, were 2 million yards less than at the end of May. These consisted of 152 million yards spots and 49 million yards alofts. Appearing below are two tables which include the June figures—(1) based on member reports to the Textile Bag Manufacturers Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

(FROM OUR OWN CORRESPONDENT)

Dundee, By Air Mail.
LITTLE change has been noticeable in the price levels of most commodities in the jute trade lately. In spite of the alarmingly low figures of the acreage under cultivation in Pakistan, which no one can believe are anywhere near correct, values of the fibre have remained about the same. The Pakistan authorities continue to mention that this season's crop has been curtailed to about 4,200,000 bales, yet they say that the acreage is only 789,965 acres. This area compares with last season's 1,908,815 acres, which were estimated to yield 6,823,000 bales, calculated at 3.58 bales per acre. To obtain more than four million bales from the smaller acreage this year, the yield would require to be over five bales per acre. The general opinion of the trade is that this is not possible and less credence than ever is being given to the propaganda efforts of Pakistan to keep prices for raw jute at a high level.

The abolition of the export tax on certain jute goods and yarns from India, just announced, should have no effect on the position in the United Kingdom, at least not so long as the Jute Control continues in office, as prices of all jute materials, whether produced in the U.K. or imported, are at a fixed level. Rumours are still strong regarding an early closing down of the Control, but there is nothing official yet. Business is still proceeding normally and consumers of jute goods are securing their requirements as so well sold in the majority of widths and weights of hessians that it is now almost as difficult to purchase cloth as it is yarns. Continental spinners have further reduced their terms for hessian yarns in the hope of attracting business from U.K. carpet manufacturers and local weavers, but as common 8 lb. cops and 8 lb. spools are still at least 1d per lb. higher than the net rates for local spins, they are meeting with very

Calcutta Markets

FAIR DEMAND AT TEA EXPORT AUCTION

C.T.C. DUSTS IMPROVE IN INTERNAL SALE

AT Sale No. 6, held on 20th July, offerings consisted of 23,300 chests in the Export auction. Demand was general and quite strong. Once again the best liquoring C.T.C. Assams were keenly sought after and generally sold at dearer rates. Medium Assams with improving liquors were also in good demand. There was keen competition for the flavoured Darjeelings offered and some high prices were realised. Leaf grades and clean commons remained steady, but Doors Broken Orange Pekotes and low medium broken and fannings were in less demand and were 1 to 1 anna easier.

Quotations			1952		
Clean Black Pekoe	1-12-6 to 1-13-0		1-13-0	1-13-0	1-13-0
Clean Common B.P.	1-10-8		1-10-8	(Nom.)	
Medium Assam B.P.	1-13-0 to 1-13-0		1-13-0	1-13-0	1-13-0
Good Assam B.P.	2-8-0 to 2-10-0		2-8-0 to 2-10-0	2-8-0 to 2-10-0	2-8-0 to 2-10-0

Internal Sale

At the Internal Sale, the Dust offerings consisted of approximately 7,139 packages. There was a strong general demand, C.T.C. types again being the strongest feature, and selling about 2 to 3 annas above the last rates. Black leafy exportable types were also dearer by about one anna. Medium Assams and Commons were in good enquiry and sold from 1 to 1 anna above valuations. Limited interest was again shown by buyers for Darjeelings though satisfactory prices were paid whenever flavour was available. There was a fair demand for the 324 packages of other grades on offer.

Quotations			1952		
Medium Donors Dust	1-8-6		1-8-6	1-8-6	1-8-6
Medium Assam Grains Dust	1-10-0 to 1-10-0		1-10-0 to 1-10-0	1-10-0 to 1-10-0	1-10-0 to 1-10-0
Best Assam CTC Dust	2-7-0 to 2-8-0		2-7-0 to 2-8-0	2-7-0 to 2-8-0	2-7-0 to 2-8-0

FREIGHT MARKET DEPRESSED BY TONNAGE SURPLUS

BUSINESS concluded last week was slight and at reduced rates in most cases. Coals from Calcutta to Japan have been reported fixed at 50 shillings and Ore Mormugao-Batavia at 50 shillings. One from Vizagapatam to U.S.N.H. has been arranged at \$3.30 for August loading. A number of fixtures were made for coals from Hampton Roads amongst which were five ships to Japan at rates ranging from \$8.25 to \$8.60, the latter rate being for December shipment. A vessel was fixed for Antwerp discharge at 29 shillings.

Further tonnage was booked for grain Pacific India at 70 shillings for September loading and a cargo of phosphate in bulk was fixed from Makata to Madras and Calcutta at 72s.6d. for August loading.

In the time charter section, a spot Greek Liberty accepted 12s. 6d. for a trip across delivery Vizagapatam redelivery U.S.N.H. s.s. Claire T. 8327 tons deadweight, was chartered by local owners at 14 shillings for 2-3 months' coastal trading with delivery Calcutta in July.

The future holds out little prospect of improvement, and with an anticipated surplus of tonnage in this area over the next few months rates are likely to remain at low levels.

SUGAR MARKETS STRONGER

During the week ended 21st July, sugar markets were stronger because demand was good while despatches were poor. Prices in Calcutta rose following restrictions on the cooking of consignments via Mokameh from the North Eastern Railway. Rates also increased in Kanpur. There was a steady demand from South India, particularly Tuticorin and Cochin; one ship sailed with 10,000 bags on 16th July and another with 12,000 bags on 20th July. The Government has invited tenders for the import of 30,000 tons of sugar and this should have a bearish effect. In Calcutta, stocks amounted to 40,000 bags and arrivals were 4,000 bags a day. Sales averaged 7,000 bags a day to local and outside markets. Rates for ready sugar ex-Kantapur delivery were Rs. 30-12 a maund for ordinary grain and Rs. 33-8 for big grain.

LINSEED

Generally firm conditions prevailed last week and price levels were maintained. Trading was, however, on a slightly reduced scale. Upcountry markets were reported to be firm and the movement of supplies was still on a very small scale. Sellers were rather reserved, and although there were fairly keen enquiries from crushers the volume of trading during the week was fair following some enquiries from local buyers. There was, however, no possibility of export business at these levels. Latest quotations were as follows: July-August Rs. 22-8 per maund.

HIDES AND SKINS

The market continued easier and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 14th July and 20th July, 1953)
Cowhides: Wet salted (Ord.) 45,000 pcs. on the basis of Rs. 9-8 to Rs. 10; Wet salted (Ord.) on

the basis of annas 8-6 to annas 10; Wet salted (Slaughtered) 8,700 pcs. on the basis of Rs. 12-8 to Rs. 25-8.
Goatskins: Wet salted (Daisee, Killed) 113,380 pcs. on the basis of Rs. 225 to Rs. 345; Assam-Dinajpur-Murshidabad 15,800 pcs. on the basis of Rs. 260 to Rs. 300; Pakur 3,250 pcs. on the basis of Rs. 260 to Rs. 260; Muzaffarpore-Darbhanga-Samastipur 9,500 pcs. on the basis of Rs. 262-8 to Rs. 280.

Bazar Stocks

(20th July, 1953)

Cowhides: Wet salted 88,700 pcs.
Goatskins: Wet salted (Daisee, Killed) 135,000 pcs.; Assam-Dinajpur 16,000 pcs.; Muzaffarpore-Pakur-Patna-Purneah-Kissanganj 1,51,000 pcs.

Commodity Markets

WORLD SUGAR EXPORTS HIGHER IN 1952

TALKS ON NEW AGREEMENT IN LONDON

WORLD exports of centrifugal sugar reached 12.6 million short tons, raw value, in 1952, compared with 12.4 million tons in 1951, the U.S. Department of Agriculture reported recently. Exports averaged 9.4 million tons a year in 1935-39. Asia's exports increased from 1 million tons in 1951 to 1.4 million tons in 1952, largely as a result of increased exports from the Philippines and Formosa. Philippine exports rose from 679,289 tons in 1951 to 856,338 tons in 1952, while Formosa exports rose from 326,068 tons in 1951 to 318,494 tons in 1952. Other significant increases were registered in India (1,376 tons to 12,524 tons) and the Indo-China area (3,020 tons to 5,469 tons). Asian imports increased from 1.5 million tons in 1951 to 2 million tons in 1952. Japan's imports rose by about 600,000 tons, from 559,123 tons to 1,154,638 tons. Other significant import increases were registered by Thailand (6,000 tons in 1951 to 29,000 tons in 1952) and the Republic of Korea (4,956 tons in 1951 to 8,806 tons in 1952).

New Sugar Agreement

India is among the 48 countries represented at an inter-governmental sugar conference which opened in London on 13th July. The object of the talks is to try and work out a new international commodity agreement on sugar-aimed primarily at stabilising prices in the international market in beet sugar, cane sugar and molasses. Russia, Czechoslovakia and Poland are among the countries which have sent delegates. Though the conference has been called by the U.N. Secretary-General and organised under U.N. auspices, the groundwork for it has been done by the International Sugar Council in London, set up in 1937 to administer the sugar agreement of that year and still operating, largely as an international meeting-ground for discussions on sugar, since the 1937 agreement did not survive the war. The International Co-ordinating Committee for International Commodity Arrangements set up by the United Nations in its review of international commodity problems last April pointed out a situation of some concern in the world sugar market. World sugar production in 1952 was at the record level of 35,000,000 metric tons. At the same time world consumption was over 2,000,000 tons below the production figure.

Even before the price and demand question became prominent the International Sugar Council had been planning for an international agreement. The final version of a draft agreement, dated 10th June, 1953, has been issued as an Economic and Social Council document and is before the conference as a basic working paper. The draft takes essentially the pre-war line by allocating a basic quota to each exporter and obligating importing countries to reserve a specific part of their needs to exporting countries taking part in the agreement. According to the draft, importers will agree to limit their sugar production

and marketing to the amount produced in a base year (to be determined), plus an agreed percentage of the estimated increase in sugar use above the amount used in the base year. The rest of this increase is reserved for exporters who can sell sugar on the free market. On their part the exporting countries will agree, as far as is practicable, to limit sugar exports to their basic export quotas and to adjust their production so that it will not total more than that needed for their own use, plus permitted exports and maximum stocks, as indicated by the agreement.

WHOLESALE PRICE INDEX RISES

The official wholesale price index (base: year ended August 1939=100) rose by 0.3 percent to 406.8 during the week ended 4th July. Compared to the corresponding weeks of the previous month and a year ago, it was higher by 0.4 and 5.8 percent respectively. Foodstuffs rose by 1.9 percent to 406.6 because of the reappearance of price quotations for tea for internal consumption at a higher level, together with increases in the prices of wheat at Jabalpur (+6%), jowar and sugar (+3% each), bajra (+2%) and gram (+1%). Prices of wheat at Amritsar, and of rice, dal, arhar, and coffee declined by 2 percent each. The index for Industrial Raw Materials remained almost unchanged at 478.7, variations being recorded in the prices of rape seed (+9%), gingelly seed (+5%), linseed in Calcutta and lac (+2% each), jarilla, Pun, Amr, and Bengal Fine Cotton in Bombay and Silk (+1% each), linseed in Bombay and manganese ore (-6% each), copra (-3%), raw hides and castor seed (-2% each), Karungani cotton at Tirpur, jute and groundnuts (-1% each). The Semi-Manufactures group rose by 0.1 percent to 364.0 because of higher prices of groundnut cake and mustard oil (+3% each), castor oil (+2%), groundnut and linseed oils in Calcutta and goat skins (+5% each), despite decreases in linseed oil in Bombay and copper (-4% each), coconut oil (-3%), groundnut oil in Madras, brass and buffalo hides (-1% each). Lower prices of rayon and silk manufactures (-9%), jute manufactures (-2%) and cigarettes (-5%) brought down the Manufactures group index by 0.9 percent to 366.4. The effect of higher prices of chillies (+4%), and turmeric (+2%), was almost counterbalanced by declines in black pepper and cashewnuts (-2% each) and betelnuts (-1%). In consequence, the index for the Miscellaneous group stood at 691.1 as compared with 691.0 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

Engineering and Transport

RECENT POWER SUPPLY DEVELOPMENTS

COMMONWEALTH CONFERENCE ON STANDARDS FOR CABLES

A CONFERENCE was held at the British Standards Institution in London recently, attended by delegates from Australia, New Zealand, Canada, India, Ceylon, Southern Rhodesia, South Africa and Pakistan, from which it is hoped there will evolve an agreement on basic standards for electric cables. For many years before the war cables made to British standards were fully accepted throughout the Commonwealth countries, except Canada (which was excluded because of the different voltages employed). Since the war, the tendency has grown for individual countries to publish standards differing, if only in detail, from those established elsewhere in the Commonwealth. The objective of the conference was not to urge reversions to British standards, but to establish standards avoiding the multiplication of types for the same purpose. For instance, the thickness of insulation on rubber cables in Britain remained practically unchanged for some 50 years, but with improved techniques of rubber manufacture it became possible to reduce the thickness without reducing the safety. Some Commonwealth countries which had previously followed British practices,

however, have not yet altered their standards to match this progress. The Australian manufacturers attending made it clear that they were not empowered to become parties to an agreement at this stage, because there are certain statutory requirements to be complied with, but it is hoped that an understanding may be reached which will lead to an agreement later. One of the aims of the British industry in this connection is to effect economies in the use of rubber and lead.

British cable exports to Commonwealth countries are now worth about £16,000,000 a year, and this figure is expected to increase with industrial and social development overseas in the coming years. But it was stressed at the conference that while Britain was at present the biggest producer, other countries will be faced with similar problems when their production is so developed that it exceeds domestic demands. Arrangements already exist for an interchange of service specifications between various Commonwealth countries with a view to adopting common standards, and the value of uniformity in that connection was emphasised at the conference.

Long-Distance Electricity Supply

The bulk of Britain's electricity supplies are drawn from the national grid, which was conceived in 1926 when the demand was about 11 percent of what it is today. It says much for the planning of that project that it has permitted the enormous increase of consumption, which is at present in the region of 51,000 million units a year. Within the next 20 years, however, it is anticipated that this consumption figure will be doubled, and as the present system could not meet that load a new "super-grid" network was devised in 1950 for completion over a period of ten years, and the first section was officially opened recently. When completed, the new power network—which is to be superimposed upon the old, calls for an increase in the present line construction by 1,200 miles and is to double the voltage at which the power is carried—will form the most closely integrated system in the world. The original cost of the scheme was estimated at £52 million. The new voltage will be 275,000v., as opposed to 132,000v. on the old grid. A higher voltage is used when the source of the power is a long distance away from the point at which the electricity is required because it is more economical to do so. Australia, Canada, Germany, and Spain, for instance, all

have power lines at voltages over 200,000v., and Sweden has been operating at 380,000v. But the distances in Britain are not, relatively speaking, very large and the 1926 grid was never intended, except for maintenance and emergencies, to carry current over even between adjacent areas. Nevertheless, because of the unbalanced distribution of electricity which developed and the varying needs that arose during the war and afterwards, the old grid was made to function as a central distribution pool and to carry the power for long distances, still using the voltage of 132,000 originally conceived for the network. With the new grid, long-distance inter-connection is being specifically catered for and, coupled with the larger quantities of electricity to be supplied, it has been calculated that transmission at 275,000v. will be more economical. The decision to use a higher voltage introduced many problems for the technician, however. These were principally associated with the transformers and with the circuit-breakers in the switching stations.

Some transformers being built for the "super-grid" by Metropolitan-Vickers at Trafford Park, Manchester, will have a case and windings weighing over 100 tons, and, when complete with their tanks and oil-cooling systems, will weigh about 275 tons and be about 25 feet high. The business of transporting and installing such transformers becomes a problem of its own. When the "super-grid" is completed it will consist of a central ring through Lancashire, the West Riding, and the Midlands. From it two lines will run to London, where they will join a semi-circular ring round the city which will go from Tibury on the north bank of the Thames round Littlebrook on the south. There will also be a line to London through the Severn Valley from the Midlands. The central ring will be connected to Scotland via Carlisle and the north-east coast.

Cross-Channel Cable Tests

Pending realisation of these long-term plans, ways and means of increasing available resources to cover the rising demand are being examined. The British Electricity Authority has just announced that underwater cable-laying trials will be carried out this summer near Dover, in connection with the proposed cross-Channel exchange of electricity. Both the British and the French will take part in the trials, which are expected to be completed early next year. The Post Office cable-laying ship *Alert* will lay two half-mile lengths of cable of British manufacture, and these will be joined at sea to a 300-yard length of cable provided by the French. After electrical tests the cables, joints, etc., will be recovered and returned to works for tests to find whether and to what extent damage has occurred during laying. In France, a programme is being developed for a sea trial of sections of gas compression cable. This will test the location of faults, the maintenance of gas pressure, and the penetration of sea water under fault conditions. The practicability of connecting the electricity systems of Britain and France has been investigated since 1949 by a joint committee of the British Electricity Authority and Electricite de France. A 132,000-volt cable circuit, laid approximately between Dover and Calais, where the shortest route is about 26 miles, is suggested. The results of the cable-laying tests and of other investigations will prepare the way for a report. The British Government has already approved the Electricity Authority's decision to carry out the development programme. Costs are being shared equally by the British and French authorities.

Power from Windmills

The search for power continues in other spheres as well. This was apparent from an invitation from Enfield Cables Ltd. to a Wind-Power Exhibition at St. Albans. The main feature was to have been the demonstration of a new type of windmill for generating electric power in areas remote from grid supplies. The windmill design is revolutionary in that the propellers are hollow. As they revolve centrifugal force sucks air in through the hub and throws it out through the tips. The suction is used to drive a generator turbine. Such generators are of no use unless the wind force is at least 30 m.p.h. Electricity or wind power must therefore be stored, so that power generated on windy days may be used in calm weather. One method of achieving this is to use the current to decompose water into hydrogen and oxygen, which can be used at any time to drive a gas engine. Another relies on storing steam. Unfortunately, because of the non-delivery of one of the 80-foot propeller blades the 100-foot windmill was not seen completed, but other exhibits tracing the use of wind-power through the ages right up to this latest development, the Enfield 400 kilowatt wind-driven electric generator, made under contract for the British Electricity Authority and with the co-operation of the Electrical Research Association, suggest that considerable progress is being made which, once fully tested and found adequate, might well go a long way to aiding the development of countries such as India and Pakistan.

The Government of India has invited tenders for the import of 30,000 tons of sugar for shipment before the end of September 1953. Import will be allowed from both sterling and dollar areas. Necessary import licences will be issued to the successful tenderers. The last date for submitting tenders is 4th August. Details of tenders have been circulated to Sugar Merchants' Associations, Chambers of Commerce at important ports, and also the Sugar Mills Association.

COMPANY AND PUBLIC NOTICES

THE KINNISON JUTE MILLS CO., LIMITED.

NOTICE is hereby given that the Ninety-fourth Ordinary General Meeting of THE KINNISON JUTE MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-30 A.M. on Friday, the 14th day of August, 1953, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 31st March, 1953, declaring the Dividends recommended by the Directors, electing a Director and Auditors and for transacting any other ordinary business of the Company.

in Circulation disclosed drops of 5.8 points and 0.3 points, respectively. Correlating all the factors the Capital Index of Indian Industrial Activity declined by 6.6 points during February, 1953.

The graph shows the monthly index over time. The Y-axis is labeled from 70 to 140 in increments of 10. The X-axis is labeled with biennial periods from 1937-38 to 1952-53. The index starts around 110 in 1937-38, rises to a peak of about 135 in 1945-46, drops sharply to around 100 in 1947-48, and then fluctuates between 110 and 130 until 1952-53.

COAL COMPANIES

O, P, F and Dd indicate Ordinary, Preferred, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY MISCELLANEOUS COMPANIES

O, P, F, D, G and R indicate Ordinary, Preferred Ordinary, Founders' Deferred, Guarantee and Rebate Shares, respectively. P next to the names of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PERSONALITIES AND POLITICS IN INDIAN LABOUR UNIONS

THE DISPUTE AT BURNPUR AND ITS COST TO THE NATION

THE month that is just drawing to a close will be remembered in West Bengal for the most discouraging display of dissension, violence and indecision since the truncated State began its career five years ago. A number of parties have at various times in the past four weeks behaved with discredit to themselves—the Ministry, the police, the Congress, the Left-wing political groups and of course the goondas. But at least the goondas behaved like larrikins, the politicians behaved like opportunists, the police behaved like strong but not always discriminating enforcers of the law. To that extent, they all acted in character, even when they made mistakes or went too far. But the Government of the State alone defected from its true character, in that it failed at times to act like a Government. Of all the criticism that can fairly be levelled at the various participants in this unhappy episode, that is the most important. The disadvantages of weakness, vacillation and indecision in a Government were demonstrated only too clearly by the Calcutta Ministry during the absence abroad of Dr. B. C. Roy. The Chief Minister will return in a day or two to find that the estimation in which his Government is held has fallen lower than his party can afford to allow. This defeat was not sustained in the street battles with rioters, nor even in the encounter with the Press on the maidan; it was suffered in the judgment of ordinary men and women who expect that a Government should know its business at least as well as they know theirs. This explains why dissatisfaction and division have spread so quickly to the Congress Party, which represents the majority of the electorate, and from there to the Ministry itself. We are not of that fashionable party which now argues that the Ministry was in the wrong from the start and that all the blame for the month's disturbances rests with the State Government. That accusation is merely political and is just one of the several attempts that are being made to exploit the situation for party advantage. The decisions taken (where decisions had been taken and not simply deferred) by the Congress Government of the State last month, before Dr. Roy left for Europe, were correct and liable to criticism only as regards matters of detail. It was by its failure to make a stand where firmness was necessary, its fumbling from concession to concession, that the Ministry alienated not only sympathy but respect among the peaceable middle class.

We are not thinking only, or even mainly, of the tram fare fiasco in Calcutta. We would prefer to leave that issue to one side, for it has been discussed threadbare by the daily Press. Besides, it is complicated by various factors: it involved a British company, it was related to the rise in the cost of living, and it ended up in an unfortunate dispute between the authorities and the Press. We would prefer to take the case of the Indian Iron and Steel Company whose production has been crippled by a labour dispute which will have much more serious consequences for the Indian economy than a one-pence increase in Calcutta tram fares. This instance of governmental indecision involves a leading Indian company, one of the greatest industrial concerns in the country, whose expansion plans symbolise many of the national aspirations that attach to the five year plan. It produces materials basic to the further growth of the economy; it produces them more cheaply and efficiently than most countries with which India is so often unfavourably compared; it enjoys the complete confidence not only of its workers, investors and the Indian Governments, but also of the World Bank. The loan of over \$30 million that was secured by this company from the World Bank some months ago, was not simply a means to making its plant one of the largest in the world; it was a sign of the world's confidence in India's

industrial future. If there is an enterprise in India that a national Government could have supported with a whole heart and no misgivings about backing sectional interests, it is the Indian Iron and Steel Company. This is all the more true because the trouble at Burnpur did not originate in any act or omission by the management, on whom the workers have pressed none of the claims usually associated with an industrial dispute. Support of the company would have entailed no denial of the workers' rights to favourable treatment from their employers, but only the assertion of the right of a great enterprise to carry on work of the first national importance without becoming involved in personal, political and provincial rivalries of the meanest order. In fact, the working of the Burnpur section of the company has been disrupted for over six months by a partisan feud that has cost the nation dearly in money, materials and repute. When it is all over—and there is no sign of that yet—the workers will not be one anna better off than they were before it began. Indeed, looking at the matter solely from the point of view of labour, they will be worse off because their bargaining strength vis-à-vis the management will have been sapped by internal dissension. There is a class of trade unionists who sincerely but mistakenly believe that the advancement of industrial enterprise in India is none of their worry, and who set more store by the promotion of vigorous labour organisations. Though narrow and short-sighted, this is an honest conviction and one sees many signs of it, for example, within the British Labour Party. But the most devoted trade unionist could feel nothing but distaste for the petty, bitter wrangling that has set one group of workers against another in Burnpur for most of this year. The full story of this domination of unionism by provincial jealousy, personal animosity and political demagoguery is too long and too complex to rehearse here. But it is a matter of vital concern to the Indian labour movement, for it points to dangers that could frustrate the endeavours of working class leaders to ensure that the industrialisation of the country is not achieved at the expense of their own people. Forces inimical to labour unionism as much as to the national interest have shown their power in earlier industrial disputes; the long strike at the Indian Copper Corporation is an example. Burnpur is situated in the heart of the industrial area and attempts are already being made to infect other industries with the same virus that has paralysed work in part of the Indian Iron and Steel plant. The duties of union leadership and the responsibilities of Government are plain.

A sound trade union has been operating at Burnpur since 1946 when it was organised by the late Professor Abdul Bari and since when it has been led by his closest disciple. This union has enabled the workers to achieve considerable progress and their earnings are now seven or eight

hundred percent higher than in 1939; even allowing for the increase in Indian prices, this means that their real wages have been at least doubled. Yet a group of individuals whose connection with the working class is most tenuous, and whose professional interests range from stock-broking and hotel-keeping to party politics, has succeeded—not by means of popular support but by means of the energy familiar in disruptive minorities—in virtually bringing to a standstill work in a vital section of the plant.

The losses that have been sustained in this dispute have been guessed at on various occasions, but we might attempt here as accurate a reckoning as is possible. First, the nation has so far lost at least 100,000 tons of iron and steel—a lakh of tons of a commodity that is so valuable that the Government of India has, in order to increase its output, borrowed and lent crores of rupees and scoured the world for funds and technical assistance. Further, corresponding quantities of coke oven by-products have been lost. Three or four hundred urgently required railway wagons and their components have not been produced when the transport system is falling further and further behind the needs of industry. Factories that rely on supplies of steel sections and sheets from Burnpur are throttled back to a fraction of their capacity and their workers unemployed. The black market in steel sheets and sections is enjoying a new lease of life and the rates at which these commodities are being dealt in are now hundreds of rupees above the controlled prices. The company itself has lost many lakhs of rupees; not only is its normal functioning thrown out of joint, but work on its construction programme, for which it has borrowed money and employed technicians, has been seriously set back. The workers themselves have sacrificed about Rs. 25 lakhs in production bonuses and wages. Orders for construction work and most other forms of business in Burnpur and the surrounding industrial region have fallen away. India's credit as a borrower of international funds has been gravely impaired and confidence in the power of elected State Governments to maintain order weakened.

The State Government has of course not been inactive during this time, but its efforts to repair the situation have been singularly fruitless. We have no wish to be unfair and will readily admit that at a time when firm action was most urgently needed in Burnpur, the Ministry was deprived of its usual vigorous leadership by the absence of Dr. Roy and it was engaged in maintaining order in Calcutta. But it cannot escape notice that the established union whose

serve their own interests could then be thrown aside, their value as instruments of Communism exhausted. This has happened elsewhere before, and it must be one of the first tasks of the West Bengal Ministry, under the restored captaincy of Dr. B. C. Roy and with the active assistance of the Centre, to see that there is no further risk of it happening here.

AGRICULTURE AND WORLD TRADE

BRITISH agriculture—including horticulture in that broad term—has lately become again a controversial subject. Hundreds of tons of Dutch tomatoes, already consigned, found themselves suddenly debarred from entering Britain, and caused a minor crisis in external trading relations. Imported Australian ewe mutton caused a minor political crisis at home, because the butchers could not sell it on the ration at the fixed price; it was taken off the ration—and some butchers, defiantly, distributed it gratis for feeding domestic pets. These and similar troubles result from the British Government's protective policy for agriculture. There is a protective tariff—at times an outright embargo—on imports of various fruits and vegetables; and the remuneration of farmers for producing basic agricultural products is assured by an annual price schedule. It is axiomatic that the cost of agricultural products is artificially high, as a result of tariffs, subsidies, and "managed" wholesale and retail prices. The recent surplus of meat, particularly mutton and pork, is due not to a genuine surplus but to the Government's insistence on prices which are higher than the consumer is able and willing to pay.

Britain's farm-price policy is tending to develop on a small scale the same problems as America's farm-support policy has developed on a huge scale: the problem of food which there is the economic incentive to produce, but not enough economic incentive to consume. Even with imports severely restricted or excluded, there are surpluses of fresh food, vegetables, fish and meat, at prevailing prices; the surplus of pigmeat may be substantial next year, although imports are still much less than before the war. Four broad categories of people are affected by the policy of assisting domestic agriculture: the home producers, who benefit; the home consumers, who pay; the overseas suppliers, whose market is restricted; and the British exporters, whose goods are not bought with the sterling earnings of overseas suppliers as freely as they would be if imports into Britain were larger. When British exporters complain of the import restrictions imposed abroad they should remember that their own Government is not entirely innocent.

However, such recriminations are of doubtful value. Protection of agriculture in industrial countries and of industry in agricultural countries has so profoundly changed the composition of world trade since the prewar era that the implications of the change, whether approved or regretted, must be accepted. The policy works both ways, and it is tending to restrict the volume of trade by diminishing the international exchange of manufactures for food. Advocates of protection for agriculture in a food-importing country such as Britain have a valid case: that the food-exporting countries are purposefully developing their industry, taking resources from agriculture and consuming more of their food at home; that precautions against scarcity and high prices are needed, even though for the present supplies are becoming more plentiful and prices are tending to decline. It is unlikely that, protected or not, British agriculture would sink back into its prewar depression, because plentiful supplies at low prices are no longer available elsewhere.

The changes in international trade which these developments imply have not yet worked themselves out. It is about a hundred years since British agriculture began its major decline and British industry began its major expansion—when foods and materials became plentifully and cheaply available from the "new" countries. In exchange for these primary products, British exports, largely of consumer goods, grew rapidly. As the "new" countries developed their industry the relative (and in some cases, such as cotton textiles, the absolute) demand for British consumer goods abroad diminished, while the demand for capital goods increased. There is still a great need for capital goods; but there are many more countries producing them. However liberal economists may protest, the process of industrialising the primary producing countries will continue, and they will export a smaller proportion of their primary products and import a smaller proportion of their manufactures. The process would doubtless be impeded, but it would not be halted, by a general recession of trade.

Yet the big manufacturing countries (including the USA and the USSR, which are big primary producers and manufacturers at the same time) will still be able to export capital equipment on a large scale if the necessary credits can be

arranged. And there will probably be more assistance from abroad in establishing varied industries in the developing countries. This point is not always duly appreciated in assessments of the trend of international payments. Even in Britain, American companies are extensively interested in the oil, chemical, electrical, building, food and other industries (and also in retail trade). American, British and other industrial companies are increasingly exporting their organisation and technique to the developing countries which are no longer willing to buy their goods as direct imports. These "foreign" subsidiaries and associates are not always welcome, but they are needed. The remittance of capital, and later of profits, is becoming again an important element in international payments, even though visible international trade, as a proportion of total trade, is tending to diminish.

AN AGEING POPULATION

MOST nations have been obsessed since the war with the problems of the next few months. Britain has her share of them, but she has also been troubled recently with the problems of the next generation. An interim report of the Government Actuary and the annual report of the Ministry of National Insurance have drawn attention to the great and growing burden of dependent people. This is a question on which there has been a good deal of alarmist prophecy, much of it exaggerated. Other "old" countries have to face this problem, that the proportion of non-producers to producers is increasing. It is a healthy trend when the increase in non-producers is due to a high birth rate, for the young people will be productive later. But when it is the proportion of old people that is increasing the problem cannot thus solve itself, and some action is needed if living standards are to be maintained. In countries such as India, where the average life is short, lengthening life by combating disease means lengthening productive life: a man should be capable of working at 40 or 50 if he lives so long. On this account alone production in India is capable of vast expansion as medical knowledge increases and is more widely practised. But progress in the Western countries means that people cease work earlier, even though they live longer.

The lowering of the pensionable age in Britain is one cause of the problem which is now occupying economists. Already, out of a population of some 50 million, the number of people of pensionable age is about 6½ million; it is estimated to increase to 9½ million 25 years hence. During that time, according to the estimates, there will be no significant change in the number of people working. The basic problem is not, of course, financial, but it takes a financial form. Britain enjoys a national insurance scheme which, though it is by no means the most advanced in the world, is much more paternal than the country attempted before the war. The national insurance fund does not operate on normal principles, accumulating premiums to earn revenue for future liabilities: it uses its current revenues to meet current liabilities. In the financial year 1951-52 the fund showed a surplus of income over expenditure of nearly £100 million; in the current financial year the surplus is estimated at a little more than £20 million; in 1953-54 there is a prospective deficit of a little less than £20 million; and by 1977-78 the prospective deficit is well over £400 million. Most of the change is attributable to the increasing cost of retirement pensions.

This position is serious enough on its own account. It raises doubts whether it will ever be possible substantially to reduce British taxation from its present high level. Taxation is not, of course, the only problem. Even if there were no national insurance scheme, the ageing population would still have to be fed and clothed and housed and otherwise cared for, out of current resources. But it is generally agreed that the high rate of taxation is one of the worst impediments to the increase in production which could make the burden bearable. At present the country is doing nothing to provide for this difficult future. What is obviously needed is a big increase in productivity, so that output per worker will increase at least enough to provide for more dependents. But the large-scale re-equipment of industry that is needed for that purpose is not being undertaken. In the last budget an effort was made to promote saving and investment, by reducing taxation of individuals and of companies; but there is no scope to continue this policy while governmental expenditure is increasing.

The statisticians estimate that Britain's real national income, which has been increasing at an annual rate of about 11 percent, will have to increase at quite twice that rate if the Government's foreseeable obligations are to be met without a further rise in taxation. They argue, therefore, that it is much better to be bold—to plan for a further big increase in production—than to look cautiously at the markets which would have to receive increased output in competitive trading, thus waiting for a crisis that can be clearly fore-

seen. However, that answer begs many questions. In a free economy industrial enterprises can be guided and encouraged by governmental policies, but they cannot be coerced. Even if the Government boldly reduced taxation (risking, perhaps, an inflationary deficit which would introduce new problems), there would be no assurance that saving and investment in the private sector of the economy would increase to the extent needed. Other changes will have to be made, unless the standard of living is to drift helplessly lower.

Various possibilities are being suggested by politicians, actuaries, economists, and other academic thinkers. Specially discussed has been the suggestion of Mr. Walter Hagenbuch, of Queen's College, Cambridge, in July's *Lloyd's Bank Review*, that national insurance should be more discriminating as to need and more genuinely insurance: that it should more positively transfer benefits from the fortunate to the unfortunate and should positively promote true saving for old age, so bearing less heavily on general taxation. The financing problem would certainly be thereby eased. Others have argued that, regressive as the idea may seem in principle, the tendency to cease work earlier and enjoy "maturity" at leisure must be reversed: that the State's pension policy must be less generous. For these ageing European communities there will be various compromises. But unless the cold war can be ended they can only retard, not prevent, a decline in living standards.

CURRENT COIN

Cement Cost-Price Structure.—The cement industry has made excellent progress in recent years and produced an estimated 36 lakh tons in 1952-53 as against only 16.2 lakh tons in 1948-49. Projects within and without the five year plan offer promise of expanding demand and the Planning Commission hopes output will reach 50 lakh tons by 1955-56. This usually encourages the industry's spokesmen to speak with optimism on its prospects, but in his address from the chair at last week's annual general meeting of Dalmia Cement (Bharat) Ltd in Dalmiapuram, Madras, Mr. J. Dalmia turned the spotlight on a problem—the relation between costs and selling prices—that is crucial to the industry's future expansion. The Tariff Commission has been enquiring into it recently and its report is awaited. Mr. Dalmia meanwhile took the opportunity to defend high-cost producers against charges of inefficiency and returned to his old plea that a system of varying retention prices for factories should be introduced as in the case of the steel industry. He based his case on the fact that production costs vary because of differences in the location, size and equipment of factories, in techniques of manufacture and in working conditions. In order to save on transport, producers have usually established units near deposits of limestone, the chief raw material, and near consuming markets. According to Mr. Dalmia, the siting of most high-cost factories was decided with the approval of the Government, whose cement policy in general has had three main aims—to expand the industry, to disperse it and to prevent the growth of monopoly. It is the second of these aims that has largely led to variations in the production costs of different factories; Mr. Dalmia claimed, for instance, that costs even in the modern and well equipped factories, which had been set up with a large capital investment, were higher than in the older units or groups of units. Low-cost cement-producing areas were only those which lay near the coalfields and almost all workable deposits there were being fully exploited. Coal is indeed the crux of the problem of rising costs in the cement industry. A large number of factories are situated at great distances from the coalfields and have to pay heavily for supplies because railway freight charges are so high. Although inferior grades can be used for power production, in the kilns only high-grade coals with a very low ash content can be used, and these come only from Bihar and West Bengal. Mr. Dalmia estimated that the cost of coal to factories varies from Rs. 20 to Rs. 70 a ton, depending on their distance from the coalfields and the means of transportation. Factories in southern Madras and Saurashtra pay the latter price because railway transport facilities are inadequate and they have to get their coal by sea. He declared that "unless the Government is able to provide coal to delivered at the factories, the fixation of a uniform controlled selling price for all manufacturers cannot be justified."

Yarn for Handlooms.—The removal of controls over the distribution and prices of yarn and cloth supplies of both are likely to remain easy and cheap. The textile industry produced a record 1,450 million lbs of yarn and 4,600 million yards of cloth in 1952, and production of the former rose as against 336 million lbs in the first quarter of this year period of last year. However, Mr. H. K. Jajharia, president, told the Calcutta Yarn Merchants Asso-

ciation on Saturday that "the rise in yarn output has not been followed by a corresponding increase in offtake; in fact, the offtake of yarn by handlooms is reported to have been poor due to poor demand for handloom cloth vis-à-vis mill cloth." This was responsible for the Government's decision to decontrol yarn, a decision which was "long overdue." Mr. Jajharia said that the needs of handloom weavers had always dominated the official yarn control and export policy. He was sorry for their plight but "the salvation of the weavers does not actually lie in the supply of yarn, which is now abundant, but in various other factors such as marketing and financing facilities and the availability of yarn at cheap prices." Measures such as the special excise duty on cloth and restrictions on the output of dhosis and sarrees would not bring "any permanent relief to weavers." The Government had shown "great caution" in its yarn export policy; by linking exports to internal sales it sought to ensure a steady flow of yarn for handlooms "but export quotas for yarn only to mills has caused great disappointment among other exporters." Mr. Jajharia thought the best method would have been to fix "an overall export target of 25,000 bales—a quantity almost equal to the one now envisaged—and allot quotas on a first come, first served basis," subject if necessary to the stipulation that shipment must be made within a specified period.

Conditions for Convertibility.—The gradual move towards currency convertibility is the theme of the fourth annual report on exchange restrictions just issued by the International Monetary Fund. Admittedly the report indicates unequivocally that there are not likely to be any big changes in international trade and payments arrangements during the current year. But any member country that still retains exchange restrictions must now consult with the Fund every year, and in a chapter discussing the programme of consultations for 1953, the report says that "many countries wish to make more rapid and more specific progress than in the past in relaxing restrictions and moving towards convertibility." For instance, much of the discussion of these problems "seems to have been more practical and pointed than in the past." Member countries are more concerned now with the "how" and "when" of convertibility than with deciding "whether" there should be convertibility. But the Fund "feels that it must continue to emphasise the need for fundamental corrective measures." Eliminating restrictions is easier when certain key obstacles can be overcome, such as the pressure of inflation, the overvaluing of certain currencies, and import restrictions by countries which have a favourable balance of trade. The Fund also feels that "those countries which have a favourable balance of trade should do more towards adjusting tariffs, simplifying Customs procedures," and the like. The Fund will also wish to discuss with certain countries the use of "retention quotas" and other "disorderly" currency practices, such as multiple exchange rates. These retention quotas have been adopted by many European countries recently, as a way of encouraging dollar exports. But the Fund intends to discuss with each country that has adopted any of these devices a programme for abolishing them as soon as possible. The report also includes a survey of the exchange controls and trade restrictions in most of the countries which belong to the Fund and some which do not. For this alone the document is of considerable value.

Anglo-Pakistani Trade.—Overall figures for trade between Pakistan and Britain show that during the first four months of this year Britain took £12,237,000 worth of Pakistani goods, and exported to Pakistan commodities to the value of £10,030,000. Jute and cotton were Pakistan's chief exports and in May this year their combined value came to £2,361,000. Pakistan sent Britain 103,758 tons of raw jute in the first five months of this year which were valued at £1,448,000. She was Britain's second largest supplier of raw cotton and cotton waste and sent £3,855,000 worth. In raw cotton under 1½-inch and over 7/8-inch staple she was also the second largest supplier, sending Britain 22,267,000 lbs worth £2,530,000. During the five months, Pakistan sent Britain 12,289,000 lbs of raw cotton of 7/8-inch staple and under, valued at £1,322,000. Britain also got 4,298,000 lbs of sheep's and lamb's wool for which she paid £884,000. Pakistan's exports of tea to Britain in May totalled 866,000 lbs, bringing the total for the five months to 6,117,000 lbs costing £690,000. During the first five months of this year Britain imported tea to the value of £29,847,000; of this quantity only £1,083,000 worth came from non-Commonwealth countries. Hides and skins sent by Pakistan in the first five months of this year amounted to 953 tons—over twice the corresponding figure for last year—valued at £436,000. Her exports of animal feeding stuffs to Britain weighed 10,927 tons and were worth £331,000.

Almost half of the 7,863 tons of machinery, valued at £2,893,000, that Britain sent to Pakistan in the five months was textile machinery. Second only to India as Britain's best customer for this type of plant, Pakistan took 405 tons in May, bringing her total imports of British textile

machinery for the five months to 3,782 tons, worth £1,298,000. Other British machinery imported by Pakistan during the five months to the end of May included 43 tons of generating sets and generators to the value of £20,000; 198 tons of electrical machinery of other descriptions worth £23,000; 266 tons of mechanical handling equipment costing £105,000; 217 tons of metal-working machine tools to the value of £86,000; internal combustion engines aggregating 3,113 BHP and valued at £50,000; 33 tons of printing and bookbinding machinery worth £33,000; and 180 tons of pumps to the value of £78,000. Over one-fifth of the iron and steel and their manufactures that Britain exported to Pakistan in the first five months of this year—15,972 tons valued at £1,171,000—was accounted for by wrought tubes, pipes and fittings. Pakistan imported £1,986,000 worth of British-made vehicles in the five months to the end of May including 368 cars valued at £152,000; 75 commercial vehicles (£79,000); 259 chassis for vehicles other than cars (£222,000); and 99 tons of cycle parts and accessories (£40,000). Miscellaneous manufactured articles made up a substantial item—worth £1,807,000—in Pakistani imports from Britain during the first five months of this year. In the same period Britain sent Pakistan electrical goods and apparatus costing £602,000; cotton yarns and manufactures (of which piecegoods accounted for the major part) valued at £485,000; oils, fats and resins worth £437,000; chemicals, drugs, dyes and colours to the value of £316,000; non-ferrous metals and their manufactures costing £255,000; and woolen and worsted yarns and manufactures worth £183,000.

Business in the Antipodes.—In its monthly summary of Australian conditions, the National Bank of Australasia says that the past financial year has been a period in which Australia's money balances have been built up and her trade stocks have been run down. For the present, however, most supplies are adequate and the hope that they will remain so is enhanced by an increasing contribution from local manufacture. During 1952-53 the full capacity of Australian industry was not called upon although gaps made by import restrictions had to be filled. Even today, though activity and employment in secondary industry is increasing, the acceleration is not rapid. Business in manufacturing is competitive and some factories would welcome more work. Many Australian manufacturers will probably enjoy more continuous activity in 1953-54.—However, there is little indication yet that the capacity of industry will become overstrained in meeting the requirements of the next twelve months unless a pronounced increase occurs in the demand for its products. One of the reasons why present buying is kept within bounds is that the approach of consumers has changed. The eagerness to buy is not what it was. The possibility of further price rises which characterised the last boom is no longer so evident as to accelerate spending. Even more important as a curb to the consumer, and also to the investor, is the present level of costs and prices. Internal conditions would almost certainly respond again in the forthcoming year to another marked rise in export income or to a renewed flow of funds from abroad seeking investment in this country. But at present there is no reason to expect either development. Although in the northern and western parts of Australia the outlook for primary production is favourable, rains are late in a major portion of Victoria, South Australia and southern New South Wales. Without another large lift in export income the main sources of new money are likely to be limited. A trade balance, if rendered favourable by continued import restrictions, could add to reserves and new Central Bank credit could increase the money volume. These additions may continue to uphold a cost-price structure which for a section of local industry is out of line with world conditions and they may withhold the compulsion towards greater efficiency which comes from adversity.

The latest quarterly survey of the Australia and New Zealand Bank says that business activity has continued at a high level in New Zealand during the first half of 1953. Readjustment, required after the rush of imports in the early part of 1952, has been assisted by good seasonal conditions and satisfactory export markets. Butter fat supplied to dairy factories during 1952-53 is estimated to be some 5 percent higher than in the preceding season, and butter exports have been at a very high level, assuming record proportions. Grain yields during the past season have been satisfactory, and sheep numbers are high. End of season wool sales in May saw prices above those for the previous season. These satisfactory results in the main export industries have been reflected in buoyant overseas trading conditions which, accompanied by a high level of development works activity, have continued to exert a degree of inflationary pressure in the New Zealand economy. There is evidence of a continuing high level of activity, but it also points to the vulnerability of the New Zealand economy under existing conditions. Export income is high, but imports are restricted. There can be no lasting satisfaction with New Zealand's progress while import controls remain in force.

you have been WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

KOREAN TRUCE HAS LITTLE EFFECT ON STOCK MARKET CHINESE BONDS RISE: COPPERS DOWN: GILT-EDGED IN DEMAND

London, 29th July.

THE armistice in Korea had very little effect on the London stock exchange this week, the news having already largely exerted its influence. The immediate beneficiaries were Chinese bonds, which were marked up by 1 to 1½ points though they later reacted under profit-taking; Hongkong and Shanghai Bank also were strong on hopes of increased trade with China. Coppers eased on further consideration of the implications of an armistice. Otherwise the markets were mainly firm over the greater part of the week in very quiet conditions, though latterly they took on a somewhat narrowly irregular appearance. Gilt-edged made progress on good demand which could not always be met. Buying came principally from the institutions and was centred on medium-dated stocks. Industrials also made quite a good showing on the week but profit-taking later reduced gains. A feature was the overwhelming demand for the new English Electric debentures which opened at a premium of about 2½ points. But General Electric fell sharply on the release of figures showing a fall in profits. Textiles were a good market during the earlier stages but the latest wage claim checked a rise in engineering issues. Commodity shares were largely neglected though rubbers developed a better tone on the news that the United States was to cut her synthetic production and on reports that U.S. consumption of the commodity had increased. This however was uncertain on the present trend of tin prices. Tea shares were quiet throughout the period and were inclined to be irregular. Gold shares were very quiet ahead of the South African Budget; when the proposals were known prices tended to harden but subsequently slipped back. Fairly widespread buying occurred in the later stages and the section took on quite a firm appearance. Small investment support was noted for Japanese bonds during the period and Germans were inclined to harden in sympathy although potash issues finished on a rather weak note. The oil market was generally firm until the final stages when a fair amount of activity left it somewhat irregular.

Only during a short period immediately after mid-week was credit just about adequate for all needs; otherwise it has been very tight in the money market during the past week. From the outset there was keen demand and heavy outside calling and at times money tended to drift away from the market to aggravate shortages. Bill buying by banks was below normal and with clearers calling in money special buyers had to ease the position on most days. Applications for £240 million of Treasury bills amounted to £275,500,000, of which the former amount was allotted at an average rate of 46s 11.89d percent. This week £250 million will be offered.

The Bank of England Return showed a further rise in note circulation of nearly £20 million to around £1,587 million, which was a new peak and nearly £84 million above the level of the corresponding period last year. Bank deposits fell by £6 million to £273 million.

Stock Exchange Prospects

The Investor's Chronicle market newsletter says: The Stock Exchange should remain good but with little business. The tendency is to prefer safety. Rubber shares should benefit from the cut in U.S. synthetic production. After the holidays, both Japanese and German bonds might improve if Japan can restrict excessive imports and if Dr. Adenauer is re-elected.

Bombay Oil Pipeline Contract

The Meritt, Chapman and Scott Corporation announces that the Bombay Port Trust has awarded it a contract to build a pipeline system connecting the two oil refineries now under construction on the outskirts of Bombay with an offshore market terminal. The \$4 million project will be undertaken by the firm's Indian subsidiary in association with the Hindustan Construction Company Limited of Bombay.

Tea Stocks Decline

Tea stocks in London and provincial bonded warehouses on 17th July totalled 94,522,932 lbs. compared with 98,784,144 lbs a week before. Landings during the period amounted to 4,638,292 lbs. and deliveries were 9,100,404 lbs.

U.S. Price for Local Mica

Since 15th March, 1952, the U.S. General Services Administration has bought less than 6 percent of the contemplated purchase of 25,000 tons of U.S. produced mica. This has been revealed by the Administration as it announced the U.S. Government's programme for the purchase of domestic acceptable quality. The price it will pay for domestic non-ruby mica, the Administration says, will range from \$56 per lb. for number three and larger, full-trimmed, good-stained, and better, down to 160 cents per lb. for number 5-1/2 and 6, half-trimmed, heavy-stained. The price range for domestic ruby mica is from \$70 down to 200 cents per lb.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

CREDIT EASIER, TREASURY BILL OFFER INCREASED

Wednesday, 29th July.

MONEY is definitely easier, although the demand for the relatively small amount of funds available for lending in the Calcutta interbank market is still keen. Conditions in that market were much less stringent yesterday, but again today there are more borrowers. Call money generally is now quoted at a uniform 2½ percent, and the trend of rates will shortly be downward. Sugar advances are falling satisfactorily, following an improvement in the rail movement of stocks; jute finance is at a lower level.

There has been moderate bill business this week, after a busy session last week; mostly tea and gunny bills have been reported. Remittance has been normal. The principal exchange rates are unchanged.

Tenders for this week's offer of Rs. 1 crore of three-month Government of India treasury bills reached their highest so far—Rs. 3,70,25,000. Tenders at Rs. 99.6 percent and above were accepted in full and those at Rs. 99.6-3 percent allotted approximately 30 percent, the average rate of acceptance remaining unchanged at Rs. 2.6-2 percent per annum. Now that subscription lists to all State loans have been closed and the supply of money is easier in a slack season market, the new treasury bill offer has, as expected, been raised, but only to Rs. 1,50,00,000. Tenders for this amount will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 24th July treasury bills for Rs. 74,72,500 were sold in favour of the Reserve Bank.

Silver fluctuated narrowly early in the week chiefly due to varying budia charges. Sentiment deteriorated at the close because of the Korean truce and the price fell from the previous week's level of Rs. 152.8 to Rs. 149.10, quoted today. The ready rate was a rupee higher at Rs. 150.10. Although the London market was quiet, the price was unchanged at 74d. The New York price was unaltered at 85½ cents.

Gold also moved lower in sympathy with the white metal, and the price declined from Rs. 87.10 to Rs. 87. The sovereign was down from Rs. 58.8 to Rs. 57.10.

Further sharp falls of Rs. 14.19 crores and Rs. 16.71 crores in the total note issue and notes in circulation to Rs. 1,13,97 crores and Rs. 1,103.17 crores featured in the return of the Reserve Bank of India for the week ended 24th July, 1953. Notes held in the Banking Department consequently rose by Rs. 2.62 crores to total Rs. 36.80 crores. The currency contraction was duly adjusted by reducing Rupee Securities by Rs. 15 crores to Rs. 424.86 crores. In the Banking Department, deposits of the Government of India were down by Rs. 39 lakhs to Rs. 92.67 crores, while other Government accounts were higher by Rs. 2.36 crores to Rs. 38.81 crores, presumably due to the subscriptions to the new State Loans. Balances of commercial banks at Rs. 53.13 crores showed a rise of Rs. 9.96 crores because of the repayment of the 1953-55 Loan and easier money conditions. Balances held abroad fell by Rs. 1.31 crores to Rs. 122.52 crores. Other loans and advances improved from Rs. 10.44 crores to Rs. 11.28 crores, of which advances to scheduled banks against usance bills continued unchanged at Rs. 49.45 lakhs. Investments rose sharply by Rs. 14.99 crores to Rs. 87.72 crores. Ways and means advances were shown at Rs. 3.30 crores (Rs. 3.90 crores).

The statement of the position of Scheduled Banks for the week ended 17th July, 1953, discloses Demand and Time liabilities at Rs. 535.63 crores (Rs. 14.31 crores on account of borrowings from Banks) and Rs. 328.52 crores (Rs. 2.09 crores), compared with Rs. 529.02 crores (Rs. 12.33 crores) and Rs. 328.34 crores (Rs. 1.90 crores) respectively in the previous week. Cash has diminished by Rs. 1.33 crores to aggregate Rs. 31.39 crores, while balances with the Reserve Bank have increased by Rs. 7 lakhs to stand at Rs. 39.80 crores. There is a rise of Rs. 89 lakhs in investments to Rs. 313.70 crores. Advances and bills discounted at Rs. 494.64 crores show a drop of Rs. 5.57 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.2 percent and 57.2 percent against 8.3 percent and 57.1 percent.

The return of the Imperial Bank of India for the week ended 17th July, 1953, shows a rise of Rs. 3.88 crores in total deposit to Rs. 211.42 crores. Investments in Government Securities are up by Rs. 10 lakhs to Rs. 75.37 crores, while other authorised investments remain unchanged at Rs. 10.70 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 1.32 crores and Rs. 65 lakhs to aggregate Rs. 92.15 crores and Rs. 25.09 crores, respectively. Cash and balances are, in consequence, shown at Rs. 17.46 crores or Rs. 2.49 crores higher.

THE CENTRAL BANK OF INDIA made a profit of Rs. 60,54,807, including Rs. 17,23,014 brought in, for the half-year ended last June. The direc-

tors have resolved to pay an interim dividend of 8 percent (Re. 1-8 per share) which will absorb Rs. 18,87,255, leaving Rs. 41,67,552 to be carried forward.

The following is a statement of the cash balances of the Central Government on the last day of April, 1953:—

	Rs.
(1) At the Reserve Bank of India in India	99,76,14,000
(2) At treasuries in India	1,92,67,000
(3) In England (Sterling converted at 18d. the Rupee).	3,36,80,000
Total	1,05,05,61,000

ALL STATE LOANS NOW SUBSCRIBED

Subscription lists for all the remaining State loans—Bihar, Travancore-Cochin, Madhya Pradesh, Madhya Bharat and Mysore—were closed in the past week. The Rs. 1-crore Bihar loan (issue price Rs. 99.8) and the Rs. 3-crore Travancore-Cochin loan (issue price Rs. 99.8) were oversubscribed by the closing date, 23rd July. The closing date for the other three loans was extended to 28th July, on which date the Reserve Bank announced that they too had been fully subscribed. The Madhya Pradesh and Madhya Bharat loans were of Rs. 1 crore each and their issue price was Rs. 99.8; the Mysore loan amounted to Rs. 3 crores (issue price Rs. 99.8). The Madhya Pradesh issue was oversubscribed by Rs. 25,84,000; 10 percent of the excess is to be retained by the borrower.

PAKISTAN GOVERNMENT TO ISSUE TREASURY BILLS

The Government of Pakistan has decided to issue treasury bills of three months' duration. Tenders for the first offer of Rs. 1 crore of treasury bills were invited up to Tuesday of this week at Karachi and up to Monday at Dacca, Lahore and Chittagong. Successful tenderers are due to make payment next Friday, and other conditions are ascertainable from the offices of the State Bank of Pakistan.

TREASURY BILL MATURITIES

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
21-7-53	31-10-53	1,00,00	Rs. 2 6 2½

22-5-53	15-8-53	1,00,00	Rs. 2 6 2½
15-5-53	8-8-53	1,00,00	Rs. 2 6 2½
8-5-53	1-8-53	1,00,00	Rs. 2 6 2½
1-5-53			
Monthly Maturities (000's omitted)			
August, 1953		5,00,00	
September, 1953		5,00,00	
October, 1953		5,00,00	
Total		14,00,00	

THE CALCUTTA TRAMWAYS COMPANY LIMITED.

PRELIMINARY ANNOUNCEMENT

The Directors of the Calcutta Tramways Co. Ltd., issue the following preliminary announcement of the results for the year ended the 31st December, 1952 based on draft Accounts, which are subject to final certification by the Auditors and to approval by the Board, with a comparison of the figures for the preceding year.

	1952	1951
The Profit for the year after transferring £80,000 to Renewals and Replacement Account and providing £82,643 for Additional Bonus for 1950 and arrears of Dearness Allowance under the Tribunal award amounted to	184,101	(325,856)
Against this total has been debited:—		
Provision for Income Tax	95,000	(150,000)
Debt Stock Interest	25,461	(25,939)
	63,640	(149,917)
and there has been credited:		
Income Tax deducted from Debt Stock Interest	11,934	(11,894)
Provision for Taxation in previous years no longer required	23,857	nil
Resulting in a balance for the year of	99,431	(161,811)
to be applied as follows in accordance with the Agreement dated 30th August, 1951, between the Governor of the State of West Bengal and the Company:—To Shareholders' Account	87,457	(87,457)
Balance to Special Reserve Account	11,974	(74,354)
The amount applicable to Shareholders' Account, as above, is out of which is payable the contribution to Second Debenture Redemption Account	4,047	(4,700)
The Dividend on Preference Shares, less Income Tax, absorb	6,562	(6,563)
There was paid on 15-5-53 an Interim Dividend on the Ordinary Shares of 2½ per cent f.o.t. (net)	17,500	(17,500)
	29,099	(28,763)
It is envisaged that a final Dividend of 3¼ per cent f.o.t. will be paid, but the final consideration of this must be held over until after the Chairman's visit to Calcutta in August, 1953	24,500	(24,500)
Thus leaving to be added to the amount carried forward on Shareholders' Account the balance of—	£33,948	(£34,194)

A. Smith,
Actg. Agent.

HOW little the terms of an agreement between nations matter, compared with the spirit of conciliation. The simultaneous news of the conclusion of a truce in Korea and the end of the Karachi talks between India and Pakistan provides an instructive contrast. On the face of it, much has been accomplished at Panmunjon, and little in Karachi. But only the recklessly optimistic assume that a genuine settlement in the peninsula is near at hand, while only the most cynical could refuse to recognise the great improvement that has occurred in the subcontinent. The truce ends three years of devastating war that has laid waste a whole country, strained the resources of several others and disturbed the economies of the whole world. It has been accepted with gratitude everywhere, and no doubt with joy in thousands of families, but with precious little hope that it will lead to further détente in the Far East. It is said that wars solve no problems; some wars certainly don't, and the Korean war is an example of a war that has multiplied conflict and disagreement a hundredfold, even among those who were supposedly allies. The political conference which is now to follow within 90 days can scarcely attain what must be its prime object, the peaceful unification of Korea, because each major partner seems determined that the concessions likely to be asked for by the other will be impossible. The outcome of the discussions between Mr. Nehru and Mr. Mohammad Ali, on the other hand, is relatively slight and the principal issues have been left over, but the atmosphere of cordiality and of a genuine willingness to negotiate puts a quite different light on them. The stakes in the global power struggle are of course much greater than in the local friction between the two nations of this subcontinent, but that is all the more reason to introduce into the former the conciliatory spirit that Mr. Nehru has so often tried to promote. The day Mr. Dulles drives through the streets of Moscow to the Kremlin to the cheers of Russian crowds, as Mr. Nehru drove through Karachi a few days ago, we shall entertain more solid hopes for international peace.

Collections of speeches, and least of all political campaign speeches, are not my favourite form of reading, an aversion which I think fairly general and probably a hang-over from dull afternoons in school with Cicero and Condorcet. But a few hours with Adlai Stevenson's *Speeches*, in the American edition, have revived my respect for printed oratory, at least of the Stevensonian kind. The collection has been published again this week in Britain, so it will now be available to wider liberal audiences. It is the purple patches in a speech that weather worst, though they might be the best to listen to, but Mr. Stevenson rarely got very purple, so there is less flustian, less dross in his book. He is consistently elegant and his rare sense of humour is seldom still for long. Much of it takes the form of "wisecracks", which I believe are more typically American; some of them would make useful fillers in the *Readers' Digest*. For instance he defines a politician as "a man who approaches every question with an open mouth". And he tells an audience, "The last time I was in this room was with Colonel Frank Knox. He made a much better speech to you than I will today. I know because I wrote them both". The Republicans said he was being too funny about serious matters, but some of his own supporters said he was being too intellectual for most voters. He answered both criticisms adequately; the first, by telling the Republicans to worry more about "their backbone than my funnybone", the second, by saying that "it is better to talk over people's heads than behind their backs". He was proven

A DITCHER'S DIARY

right in the latter opinion, for some variety of pollster has reported that the Governor's speeches were taken by most people as more "readable and human" than the General's, and the printed collection has been in the best-selling bracket. His puns are fairish: "Harvard humanises the scientists and simonises the humanists"; but his epigrams less distinguished: "Not failure but low aim is crime". Often he strikes a richer vein of genuine humour, as after the election when someone asked him how it felt to be defeated in so great a contest. He said he "felt like a little boy who had stubbed his toe in the dark. He was too old to cry but it hurt too much to laugh".

I detect the makings of a lively controversy in the memorandum submitted by the All-India Manufacturers Organisation to the Government of India recommending the introduction of commercial broadcasting. The Ministries concerned, Broadcasting and Commerce, will almost certainly be inclined to sit on the idea, but the A.I.M.O. will probably not let the matter rest there, for it has taken the trouble to draw up a case, and it is not a bad one. It is a question of some public interest and a full discussion of it would be useful, since there is a great deal to be said on both sides. The dislike of advertising which characterises the educated and the snobbish both here and abroad, the perfectly natural jealousy of the official monopoly, and sheer conservatism are the three things that will weigh most heavily against a proposal which, if judged solely on its merits, could not be dismissed lightly. If by any chance the suggestion awakens as much interest as the debate over sponsored radio and television has in the United Kingdom, I hope that not too much stress will be laid on the reasons that have been adduced against it in Britain. For the problems of communication and advertising are totally different in the two countries. There are relatively few places in the British Isles that cannot be reached by the energetic salesman (relatively few markets anyhow) while most of India is inaccessible at one season or another to the most resourceful purveyor of goods, news, instruction or entertainment. Commercial radio stations might fill as useful a rôle here as in the United States or Australia, and counsel should be sought from those countries which have had long, and evidently quite satisfactory, experience of private enterprise in broadcasting. At this point no doubt someone will bring up the question of "bad taste" (i.e. other people's tastes) in sponsored radio, of which the American stations are held to be conspicuously guilty. But the A.I.M.O. has suggested that a controlling authority be established by the Centre, with a "code" for broadcasters to observe, and if these safeguards are instituted the rest need not concern those who do not have to listen. On the whole, I think this is the most sensible proposal to emerge from the "Buy Swadeshi" movement in some time.

Another front on which it is a pleasure to record the rise of more progressive ideas on Swadeshi is plywood manufacture. This young branch of Indian enterprise, behind a protective barrier of import duties and quotas, supplies most (and just now, all) of the chests used by the tea industry. Representatives of the latter have understandably had hard things to say when they found they were being forced to accept grossly inferior and expensive containers for a product that has to be sold largely in discriminating Western markets. But after the stupendous, and quite unnecessary, ex-

pansion of capacity after the war, the plywood manufacturers turned their attention to quality and efficiency, and the progress they have made is already substantial. Mr. N. N. Bose, who is chairman of the Plywood Manufacturers Association of India and one of the most energetic and conscientious of men, would be the first to admit that there is a long way to go yet, but under his leadership the better section of the industry, which is represented in his Association, is concerned to see that the distance is covered in the shortest time. As he says in his speech at the last annual meeting, which is published elsewhere in *Capital*, he is shortly leaving for Europe to examine for himself the condition in which Indian tea chests arrive overseas. He refers also to the valuable work being done by the Association's laboratory and test house; to the tour of Dr. Otto Kramer, a plywood expert sent to India by the United Nations; and to the need to control the quite fantastic over-production of plywood in India. He advises his industry to diversify the types of veneers it makes—for furniture, to take an instance—rather than putting all its eggs in one basket by relying solely on the much put-upon tea industry. These are welcome signs of a healthier outlook in an industry which at one time appeared to be battenning on, rather than serving, the producers of tea. The Association has just begun to publish an official journal, *Plywood*, and I see that in its first number it carries an article by Mr. J. L. Llewellyn of the Indian Tea Association which gives an extremely frank, but I should think quite fair, statement of the tea industry's attitude to its junior partner.

Most business men would take it for granted that direct taxes raise prices, though most of the economic textbooks say just the opposite. The questionnaire issued by the Taxation Enquiry Commission nowhere puts the question directly, so far as I have noticed, though it is implied in the section on "Inflationary and Deflationary Situations". But the Commission will no doubt be consulting the report of the Colwyn Committee on National Debt and Taxation which was published in Britain in 1927, and there they will find the head-on collision that took place between tax experts and business men on this issue. Business witnesses firmly maintained that higher income taxes led to higher prices because companies needed to prevent their actual cash return from falling. But the Commission held to the academic opinion that since income tax "is assessed on the profits... and if, as may be presumed, people are already charging the prices that yield them the best profit, the removal by the State of a portion of the profit will not tempt them to fix prices differently". Since then, opinion—even expert opinion—has come round much nearer the business man's point of view. Just how far, can be judged from an interesting article by Sir Henry Clay, formerly Economic Adviser to the Bank of England, in the last issue of *Progress*, the Unilever house magazine. Sir Henry argues that the business men are right because when they plan ahead, they plan for bigger profits if they know that much of what they earn will be taken by the State. His article will be of interest to accountants and prospective witnesses before the Taxation Enquiry Commission; it may also be of some use to politicians who are wondering why prices should be rising in India while taxation is high and purchasing power low.

"Indian Navy Ships at Rome", says the heading on a Press Information Bureau hand-out this week. Possibly on the way to joint manoeuvres with the Swiss Fleet.

Company Meeting

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY LIMITED

SIR PURSHOTAMDAS THAKURDAS DEPLORES MALPRACTICES AND RECOMMENDS NEW CODE OF CONDUCT

Presiding over the Seventy-eighth Ordinary General Meeting of the Oriental Government Security Life Insurance Company, Ltd., held at 4 p.m. on Wednesday the 29th July, 1953, at the Head Office of the Company at Oriental Buildings, Bombay, Sir Purshotamdadas Thakurdas, K.B.E., C.I.E., J.P., Chairman, said:

"The new business completed last year amounted to 71,359 policies assuring slightly less than Rs. 211 crores which shows a decrease of 2,100 policies assuring slightly less than a crore as compared with the new business of the preceding year. Our total Premium income last year was slightly less than Rs. 977 lakhs, showing an increase of Rs. 24 lakhs. Claims by Death amounted to slightly over Rs. 109 lakhs and claims by Maturity Rs. 262 lakhs. The ratio of Actual to Expected Deaths during the year was 42.9% as against 46.6% in 1951. The expenses of Management last year amounted to 23.22% of the Premium Income. The Funds of the Company increased to over 674 crores at the end of the year. The demand for Policy loans continued with increasing keenness during the year, the total amount of Policy loans at the end of the year being Rs. 462 lakhs.

The net rate of interest after deduction of Income-tax at the source earned during 1952 was 4.05% compared with 2.94% in the preceding year. The difference is mainly accounted for by the fact that while in 1951 the Company did not receive any refund of Income-tax, in 1952 we received refund of tax for two years. Had one year's refund been received in 1951 and one year's in 1952, the net rates of interest for these years would have been 3.43 and 3.58% respectively.

Malpractices

It is surprising that when certain abuses are rampant in a type of business activity and suitable laws are passed by the legislature of the country to remove them, these very abuses reappear in a more intensified form even after the law is passed. This is precisely what has happened in the business of Insurance and particularly Life Insurance. The Insurance Act 1938 concerned itself amongst other things with the removal of two sinister malpractices, viz., rebating and excessive payment of commission which, despite the stringent provisions in the Act, to remove them, persist in a more intensified form. In several cases, the malpractices used to take the shape of the creation of more than one intermediary between the Branch Manager and the Agent merely to indulge in payment of high commission and rebating with the salary of the intermediary. In such cases, no service whatsoever rendered to the institution. The Insurance Act made rebating an offence both for the one that offers and the one that takes and also imposed maximum limits of commission payable on the first year's and the renewal premiums. From their very nature, it will be extremely difficult to prove the commission of these two evils of rebating and excessive payment of commission in such a manner as to convince a Court of Law. When these evils are present, canvassing in a sphere divorced from the normal ethical standards of canvassing, viz., advocating the merits of the Company and recommending the best type of policy suited to the needs of the prospect for an agent who gives the highest rebate secures a large volume of business in spite of the soundness of his institution and recommends a type of policy that gives him the largest commission regardless of the suitability of the policy to the insured.

Some foreign companies used to give this rebating a superficially innocent cloak by quoting a lower rate of premium to persons of high financial status, who, they argued, would be subject to lower mortality. Such a practice goes counter to the very basis and structure of Life Insurance, viz., co-operation of the highest order. If the population is to be dissected into sections on the basis of economic status, why not dissect them on the basis of climate and similar factors affecting longevity? In other words, why should not the country be cut up into sections on the pattern of a chess-board based upon climate, health and so many other factors that influence mortality and companies quote differential rates of premium corresponding to the mortality risk? Such a course would be repugnant to the very idea of insurance. Persons of lower economic status should have to pay higher premiums than those of higher economic status and the payment of the same rate of premium by the rich and the poor varying only with age and the state of health as revealed by medical examination when effecting insurance is the very foundation of the co-operative spirit underlying the structure of life insurance. It is some consolation that the Executive Committee of the Life Insurance Council has issued a directive that the practice of quoting differential rates should be discontinued and it is to be hoped that Companies will appreciate the good that the business will derive from observing this directive.

Code of Conduct

The Committee has also issued a Code of Conduct, which, it observed, will go a long way towards eradicating other evils which unfortunately permeate the business of life insurance. The Code of Conduct has been drawn up so as to give greater latitude to younger and smaller companies as against their big brethren. For instance, while the former are allowed to pay the maximum rate of commission in all cases, the bigger companies are enjoined on to reach the maximum by a sliding scale based upon the volume of business introduced by the Agent. Again, the bigger companies are required to have only one intermediary between the Branch Official and the Agent whereas the smaller companies are allowed two intermediaries for a certain period.

While on this subject, may I not give a piece of advice to foreign Insurance Companies which transact business in this country and ask them to realize that those days when they used to conduct their business operations in this country under the protection of one or other of the Sections of the Govern-

ment of India Act which prevailed prior to the securing of Independence by this Country no longer exist? The national feeling in this Country has now been aroused and while foreign business houses will be tolerated to a certain extent so long as they act in such a way as to set a good example to indigenous institutions, they should not try to indulge with anything like impunity in methods calculated to hamper the growth of national institutions by dumping through rate-cutting concession and would act as a force indigenous Companies to resort to this measure.

Estate Duty Bill

Confining myself to those provisions of the Estate Duty Bill which affect the business of Life Insurance, I would point out that the Bill as originally introduced in Parliament did not contain any specific exemption from Estate Duty in respect of Life Insurance policy moneys. This lacuna was remedied however to a certain extent by the Select Committee to which the Bill was referred. According to Clause 32(1) of the Bill, moneys payable under any policy of insurance effected by a deceased on his life for the purpose of paying Estate Duty or assigned to Government for the said purpose will be exempt from Estate Duty to the extent of the amount of duty payable. This is a most welcome concession and a fair and equitable object of Life Insurance in such cases is to prevent the land or house property or business having to be sold, mortgaged, etc., merely for the purpose of paying Estate Duty. The Bill, in my opinion, will be a boon to the Country's economy that business of estates which may have been built up as a result of patient and painstaking endeavours over a long period should not have to be wound up or broken up merely as a result of having to pay Estate Duty.

Then there is Clause 32(1) (g) in terms of which exemption from Estate Duty will extend to moneys payable under one or more policies of insurance effected by the deceased on his life to the extent of Rs. 5,000/- There is yet another Clause, viz., Clause 32(1) (j), according to which, inter alia, moneys earmarked by a deceased parent or natural guardian, in consideration of the marriage of any of his female relatives dependent upon him for the necessities of life, under policies of insurance will be exempt to the extent of Rs. 5,000/- in respect of the marriage of each of such relatives. The latter two provisions propose to give such relief as that, in my opinion, it is hardly worth the name. It is well known that this Country has a very low per capita income as compared to other countries. The need for intensifying insurance consciousness and aiding the development of Life Insurance business in this country, all the greater in this Country because social security in the form of provision for one's old age and for the family in the event of his premature death has in India as contrasted with other advanced Countries mainly to be provided for and arranged by the individual himself. It is, therefore, in my view imperative that where the Policy moneys are payable to named beneficiaries, i.e., where the policies are effected under the Married Women's Property Act or where the policyholder has executed a nomination or assignment, either absolute or conditional, the limit of exemption should be fixed at a figure not less than Rs. 1 Lakh.

Apart from the specific exemptions mentioned above, there are Clauses 9 and 10 of the Bill dealing with gifts which provide that Estate Duty will not be payable on gifts of property made not less than two years before the death of the deceased, provided bona fide possession and enjoyment of the property gifted away was immediately assumed by the donee and thenceforward retained to the entire exclusion of the donor. Doubts have been raised in certain quarters whether the above provision as to gifts of property applies to gifts of moneys payable under Life Insurance Policies and these doubts will have to be removed. Quite apart from this, the conditions laid down in these Clauses which would qualify a gift for exemption from Estate Duty are such as to whittle down considerably the value of this exemption so far as Life Insurance Policies are concerned. It was to meet the need of expeditiously settling claims under Life Insurance Policies that the Insurance Act, 1938, provided by Statute an easy and convenient mechanism for transfer of Life Insurance Policies in the shape of nominations as well as conditional assignments which obviated the need for taking out evidence of title in the event of the prior death of the nominee or the assignee as the case may be. If the gift of the policy in favour of the nominee or assignee were to operate as an absolute gift so that the donor retains no further interest in the policy, extreme hardship due to the necessity to obtain evidence of title will result as used to be the case prior to 1938 in the settlement of claims. It would, therefore, be doing disservice to policyholders and claimants to force the former to effect assignments so that the donee assumes possession and enjoyment of the property to the entire exclusion of the donor as a condition precedent to exempting the policies from the scope of Estate Duty.

The condition that the gift should have been made at least two years before the death of the donor should not apply to Life Insurance policies since it may happen that in some cases the policyholder may die before the expiry of the minimum period after effecting a second or subsequent nomination or assignment due to the death of the first nominee or assignee. The first nomination or assignment had established his bona fide and clearly indicated his intention to divest himself of the interest in the policy from the date of its execution.

I must finally mention Clause 14 which would work a real hardship in respect of Life Insurance Policies. That Clause lays down that money received under a policy of insurance effected by any person on his life, where the policy is wholly kept up by him for the benefit of a donee, whether nominee or assignee, or a part of such money in proportion to the premiums paid by him, where the Policy is partially kept up by him for such benefit, shall be deemed to pass on the death of the assured. This Clause has been almost bodily lifted from the corresponding English Act and to the utter disregard of the vast difference between the conditions obtaining in the two countries. While in the United Kingdom it is fairly common for the wife to have a separate income wherewith she would be in a position to pay the premiums on a policy gifted to her by her husband, in India it would be only a microscopic minority of the policyholders whose wives will have a separate income of their own and thus be in a position to pay out of their own income the premiums on policies which their husbands might have transferred to them by way of gift. In the overwhelming majority of cases, therefore, the premiums falling due subsequent to the date of gift, will also be paid actually by the policyholder himself with the result that the benefit of Clause 9, viz., exemption from Estate Duty, will not be available in actual practice. On the other hand, the premiums subsequent to the date of gift were to be paid by the donee, the policyholder will not be able to get the rebate on insurance premium allowed under the Income-tax Act and thus what the claimant stands to gain on the one hand the policyholder will stand to lose on the other. Considering, therefore, the provisions of Clauses 9, 10 and 14 taken together, I feel that the benefit in respect of gift of Life Insurance Policies envisaged in the above Clauses will prove illusory in actual practice. Clause 14 requires therefore to be entirely deleted, and Clauses 9 and 10 should be amended as suggested above.

Oriental Fire & General

Despite the adverse factors affecting development of General Insurance business, our Subsidiary, the 'Oriental Fire & General' continued to make steady progress, and an increase in gross direct premium income was recorded in each Department. Incurred Loss Ratios of 34.98% in the Fire Department, 32.96% in the Accident Department and 68.01% in the Marine Department can be looked upon as satisfactory and our expenses of management and commission costs well within the limit imposed by legislation. The financing of increased reserves necessitated by a rising premium income was responsible for our having to show a loss in the Accident & Marine Revenue Accounts but, thanks largely to a satisfactory profit of Rs. 7,78,68/- in the Fire Department, we were able to wipe off the deficit in the Profit & Loss Account brought forward from the previous year.

This deficit, as you are aware, was almost entirely due to the writing down of our investment in Government Securities which had depreciated owing to the increase in the Bank Rate in November 1951. It will be noted that some adjustment has been made in the 'Oriental Fire' investment portfolio to achieve a wider spread and better balance without any sacrifice in the way of security. Your Directors feel that this redistribution of investment will make it unlikely that we should be faced with a similar situation in future.

In the general field also, I regret to have to record that market conditions still leave much to be desired, and little attempt was made to the date of despatch of the amended Act—in fact certain companies appeared to pay more attention to finding ways of circumventing the Act than to making a sincere attempt to comply with it. Competition was unfortunately aggravated by a further reduction in the volume of Fire business available in India mainly due to the general trade recession and a fall in insured values during the year. However, I understand that at last a more determined effort to improve business is to be made by enforcement of the 'Code of Conduct' which should result in a much higher degree of compliance with the Act. Although certain aspects of this Code may be open to criticism, we can only re-affirm our unqualified support to any such measures which are likely to result in reducing malpractices and improving market conditions.

Before concluding, I should like to convey our appreciation of the co-operation given by our Active Agents which has enabled the Company to complete New Business of nearly Rs. 21 crores during which might be considered a difficult year.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Without Prejudice

WHEN LEGAL COSTS ARE NOT PURELY BUSINESS EXPENSE

SUPREME COURT'S RULING IN INCOME TAX CASE

(FROM OUR LEGAL CORRESPONDENT)

PERSONALLY we found the ultimate result of this income tax case a little startling, though the professional expert may take it in his stride. Incidentally, the case threw doubt on the correctness of the well known Bombay decision *J. B. Advani v. C.I.T., A.I.R. 1950 Bom. 297*, though that decision was not actually overruled. It concerns the vexed question of legal expenses incurred by an assessee in his character as a trader in defending himself against a criminal prosecution and the point was whether such costs were allowable as a business expense.

The facts were that the respondent assessee carried on business as the selling agent of Bengal Potteries Ltd. and he was prosecuted under Section 13, Hoarding and Profiteering Ordinance, 1943, on a charge of selling goods at prices higher than were reasonable, in contravention of the terms of the Ordinance. Before the prosecution was launched the respondent's business premises were searched and a part of his stock was seized and taken away. He defended the case, spending a sum of Rs. 10,835, and the prosecution ended in his acquittal. In his assessment to income tax the respondent claimed the deduction of this sum of Rs. 10,835 from the profits of his business under Section 10(2) (KV) of the Act, as an expenditure laid out "wholly and exclusively for the purpose" of his business. The Income Tax Officer disallowed the claim but the Appellate Assistant Commissioner allowed it and so did the Appellate Tribunal and the Calcutta High Court. The Income Tax Commissioner thereupon appealed to the Supreme Court, whose decision has just been reported.

Now, will the reader consider the phrase "wholly and exclusively," the meaning and interpretation thereof? It means, we take it, in this connection that to qualify under the sub-section the respondent must have defended the proceedings, without admixture of motives, for the purpose of upholding the reputation of his business and to save his confiscated stock. But, sticklers as we are for the strict dictionary application to the written word, we have to apply our common sense, and there can be hardly any human action in which, although there is one sole impelling motive which and which alone really impels the doer of it to perform the act, there are not one or more other circumstances, however trifling, which reinforce his decision, though they count as nothing in bringing that decision about.

That, if we have interpreted it correctly, seems to have been the reasoning of the Calcutta High Court. The contention of the income tax authorities was that there was another strong and compelling motive actuating the assessee in defending the proceedings other than "the purposes of the business," in that he wished not only to protect the good name of his business but himself from imprisonment or fine or both, and that where there existed such a double object the expenditure could not be said to be "laid out wholly or exclusively for the purposes of the business." Their lordships of the Calcutta High Court had negatived this argument in agreement with the Appellate Tribunal and in disagreement with the Income Tax Officer.

The Tribunal had observed: "It may be stated straight off that it has not been established by any material that the conviction in cases like this may end in imprisonment. The question that personal liberty was likely to be jeopardised therefore will not be considered by us. . . . In any case, in the absence of any material in this particular case that personal liberty was likely to be jeopardised all that we can say is that there was a chance of conviction in which the respondent might have been fined. No doubt, the element of saving himself from the fine, if any, might be there, but it is so inextricably mixed up with the main purpose for the defence that we are prepared to ignore that little element. In our opinion, the defence was solely for the purpose of maintaining his name as a good business man and also to save his stock from being undersold, if the Court held that the prices charged by the respondent were unreasonable."

The High Court upheld this view. Said Harries C. J. (Banerjee J. concurring): "In every criminal prosecution where the matter is defended to protect the good name of a business or a professional man, the fear of possible fine or imprisonment must always be there. But the Tribunal has pointed out that this was so inextricably mixed up with the protection of the good name of the business that it can well be found that the money spent in defence in the criminal prosecution was spent solely and exclusively for the purpose of the business. The finding is a finding of fact and is binding upon us."

Thus the Appellate Assistant Commissioner, thus the Appellate Tribunal and thus the High

Court. But thus not that lesser luminary, the Income Tax Officer, who, in the end, turned out to be right after all.

The Supreme Court restored his decision. Said the Chief Justice of India (his lordships three colleagues concurring): "The learned Judges proceeded to refer to a ruling of the Bombay High Court—*J. B. Advani v. C.I.T.*, and *E. P. Tax*—and held that the respondent satisfied both the tests laid down there as applicable in such cases: he was charged with regard to a transaction which took place in the ordinary course of business and he was charged in his capacity as a trader. If these two tests were satisfied and the Court came to the conclusion that the primary object of incurring the expenditure was to protect the good name of the business, then it could be said that the expenditure was wholly and exclusively for the purposes of the business. . . . We are unable to agree that the finding of the Tribunal to which reference has been made is binding on the Court as a finding of fact and is decisive of the reference. The finding of the Tribunal is vitiated by its refusal to consider the possibility of the criminal proceedings terminating in the conviction and imprisonment of the respondent. . . . The respondent was prosecuted under Section 13 which provides: 'Whoever contravenes the provisions of this Ordinance shall be punishable with imprisonment for a term which may extend to five years or with fine or with both. . . . The framers of the Ordinance thus appear to have regarded as binding on the Court for a deterrent punishment in view of its social character and it is idle to suggest that it is for the income tax authorities to prove in such cases that the conviction might result in a sentence of imprisonment and that, in the absence of such proof, there was at the most only a chance of conviction and fine. We cannot appreciate the remark that 'even this chance of conviction and fine is so inextricably mixed up with the main purpose of the defence that it could be ignored.' A finding arrived at on this line of reasoning is obviously vitiated by a serious misapprehension regarding the risk involved in a prosecution under the Ordinance and it cannot be regarded as binding on the Court in dealing with the reference. If, as the High Court realised, in every criminal prosecution where the matter is defended to protect the good name of a business or professional man, the fear of possible fine or imprisonment must always be there, it must ordinarily be difficult for any Court to say that the expenses incurred for the defence, even if they are not to be regarded as the 'personal expenses' of the person accused, constituted 'expenditure laid out wholly and exclusively for the purposes of the business.'"

Reference was made in the course of the argument to numerous cases where legal expenses incurred in civil litigation, arising out of matters incidental to the carrying on of a business, were allowed as a deduction in the computation of its profits; as was inevitable, the well known case *C.I.T. v. Maharaja of Darbhanga* was cited, where the Privy Council held that litigation expenses incurred by a money-lender in connection with a loan advanced, or capital invested even including law charges in defending a suit for damages, for conspiracy and misrepresentation, are deductible as being for a business purpose. The general test in regard to expenses of civil litigation is whether the expenses were incurred by the assessee in his character as a trader and the liability fell on him as a trader, in other words whether the transaction arose out of, and was incidental to, the assessee's business or profession. But in purely civil litigation "no question could arise as to the primary or secondary purpose for which the legal expenses could be said to have been incurred as in the case of a criminal prosecution where the defence cannot easily be dissociated from a possible conviction and imposition of the prescribed penalty." (Per Patanjali Sastri, C.J.).

Nor were their lordships satisfied, "as at present advised," that a distinction drawn in the Bombay case between the legal expenses of a successful and unsuccessful defence is sound. "The deductibility of such expenses under Section 10(2) (KV) must depend on the nature and purpose of the legal proceeding in relation to the business whose profits are under computation and cannot be affected by the final outcome of that proceeding."

The appeal was allowed. (I.T. Commissioner v. H. Hirjee. A.I.R. 1953. Supreme Court 324).

WORLD'S FIRST TWIN-ENGINE AIRLINE HELICOPTERS

Two British firms have been given U.K. Ministry of Supply contracts to build prototype twin-engine helicopters suitable for commercial airline service. They will be the first airline helicopters in the world with twin-engined reliability which experts believe is essential for flight over built-up areas. Considerable development work still lies ahead, and it is likely to be 1957, at least, before services start on a regular basis. Both types have some kind of fixed wing on the fuselage as well as rotating blades above. One, the Fairey Rotodyne, is powered by two turbine engines. The other, the Mark 3 version of the Bristol 173, has nearly reached the stage where orders for quantity production can be placed: three prototypes have already been ordered.

Engineering and Transport

SHIPBUILDING ACTIVITY STILL AT HIGH LEVEL

BIGGER VESSELS BEING BUILT: MORE TANKER TONNAGE

ACTIVITY in the shipyards of the world continues at a high level despite worldwide complaints of a steel shortage, according to the latest shipbuilding returns of Lloyd's Register for the quarter ended 30th June, 1953, just issued. However, shipbuilders do not feel very optimistic about the future because of the rising costs of construction. As on 30th June, the world's yards were building 1,152 vessels (of 100 tons and over) totalling 6,037,432 gross registered tons—which is a rise of 32,675 g.r.t. compared with the figure at the end of the previous quarter, and of 423,249 g.r.t. compared with the position a year ago. More than half of the tonnage was accounted for by tankers. Thus there were under construction 306 tankers of 3,420,232 tons, a rise of 152,973 tons over the figure for March last. The percentage of oil tanker tonnage to total tonnage increased from 54.4 to 56.7 percent. The number of vessels under construction, however, decreased from 1,190 ships on 30th June, 1952, and 1,202 ships on 31st March, 1953, to 1,152 ships on 30th June, 1953; this indicates the growing tendency on the part of owners to build ships of larger size than before. The tonnage of ships commenced, launched and completed were higher. During the quarter under review 274 vessels of 1,356,993 g.r.t. were commenced, 301 vessels of 1,304,939 g.r.t. were launched and 311 vessels of 1,315,330 g.r.t. were completed. These figures compare with 278 vessels of 1,125,517 g.r.t. commenced, 250 vessels of 1,063,404 g.r.t. launched and 260 vessels of 1,220,558 g.r.t. completed in the previous quarter.

Ships for Foreign Buyers

A notable feature of the new buildings is that nearly a third (1,957,881 g.r.t.) of the total tonnage under construction is meant for export. Countries "importing" the largest amounts of new tonnage are Norway (478,355 tons), Panama (466,015 tons), Liberia (243,053 tons) and the United States (122,845 tons). Norway is also keeping the Empire tonnage being built in her own yards (173,401 tons) and ranks second among the countries to make the largest additions to their fleets. The first is, of course, Great Britain, with an addition of 1,554,403 tons, all from her own yards. The United States is third with 629,881 g.r.t. Great Britain continued to be the biggest builder with 317 ships of 2,123,565 g.r.t. on hand, accounting for over 35 percent of the world tonnage under construction. Next in the list was the United States with 658,086 tons, followed by Germany with 545,329 tons, the Netherlands with 450,683 tons, Italy with 384,958 tons, Sweden with 374,832 tons, France with 369,123 tons and Japan with 335,487 tons. In India, according to the Lloyd's Register returns, there were five ships totalling 11,092 tons under construction. As there were two ships of 5,100 g.r.t. each under construction in the Visakhapatnam Yard on 30th June, the other three vessels are evidently very small. No ships were being built in foreign yards for registration in India.

American Orders Largely for Tankers

American capital is still the major source of orders for new ship construction being placed at leading yards in Europe and Asia, according to the *New York Journal of Commerce*. During the 12-month period ended 31st March, 1953, U.S. and affiliated interests ordered 40 vessels, aggregating 1,038,686 gross registered tons from builders in other countries. Since 1948, American-controlled investments have ordered 239 new vessels in other countries, aggregating 4,881,630 deadweight tons, valued at \$378 million. One factor behind this development, the *Journal* said, has been the large-scale expansion in the operations of American companies in Europe and the Far East, particularly in building new oil refineries and marketing organisations. Significantly, oil tankers account for 82 percent of the total American orders in foreign shipyards.

BRITISH AUTOMOBILE PRODUCTION AND EXPORTS

British car manufacturers in June kept up the "car every 15 seconds" output rate of the previous month. The speed at which assembly lines were moving gave a weekly output of 11,500 units, nearly 1,000 a week more than the previous average for the year. Altogether, the June car production figures (a five-week accounting period) provided 57,535 models for British motorists and overseas markets. Truck and bus output amounted to nearly 22,000 brought the grand total for car and commercial vehicle production in June to more than 79,000 despite the Coronation holiday. Car shipments in June rose to 30,077, a consistent figure which exceeded the monthly average till then by over 5,000. The number of commercial vehicles sent overseas was 8,576, a little less than the rate of export in earlier months (8,725). Details of the first months' export dealings by markets reveal that the United States and Canada were the top car buyers, taking between them 33,374 British models. This trade alone earned \$44 million for Great Britain, nearly twice the dollar receipts for her car exports to North America in the first half of last year.

Books and Publications

INDIAN BANKING STATISTICS
FOR 1952

Statistical Tables Relating to Banks in India, 1952. (Published by the Reserve Bank of India, Price Rs. 6).

This publication is based mainly on the balance sheets of banks, and contains a wealth of data relating to individual banks and the banking system as a whole. It is understood that beginning with this issue, an attempt has been made to coordinate the banking statistics published in the Statistical Tables and the Annual Report on the Trend and Progress of Banking in India (the latest issue of which relating to 1952 was published recently); the scope of the former will be restricted to audited balance sheets of banks and that of the latter to statistics submitted under the provisions of the Banking Companies Act. The opportunity has been used to prune the historical series where they had become unwieldy or their repetition from year to year was not considered necessary. The two publications together will thus present complete banking statistics.

The Statistical Tables relating to 1952 contains comprehensive data on the working of Indian and foreign banks; detailed breakdown of data in respect of important balance sheet items is also given. It is noticed that the recent down-trend in the number of joint stock banking offices in the Indian Union continued in 1952 also, the fall during the year being 148. This was entirely accounted for by non-scheduled banks, particularly the smaller ones, largely because of the closure of banks or conversion of banking into non-banking companies where it was found difficult to comply with the provisions of the Banking Companies Act. There was one banking office for every 10,425 of the population served by banks, and on an average one banking office for every 74,656 of the population. About 53 percent of the offices of scheduled banks were concentrated in the larger towns having a population of 50,000 and above. The number of offices of co-operative banks increased by 53 to 672 in 1952.

During the year under review, as a result of the closure of offices in Pakistan, the offices of Indian joint stock banks outside the Indian Union declined by 20, the number of remaining offices being 106. Consequently, their business in foreign countries also showed a considerable decline; their deposits, loans and discounts and cash balances fell by Rs. 17.6 crores, Rs. 4.3 crores and Rs. 10.1 crores, respectively. A significant point brought out by the statistics relating to co-operative banks is their growing importance as compared to non-scheduled banks in regard to the magnitude of banking business. At the end of 1952 the deposits of co-operative banks at Rs. 105.7 crores were a little over one and half times those of non-scheduled banks and the credit extended by them at Rs. 82.9 crores was nearly double.

The current earnings and expenses of Indian scheduled banks showed a further rise of Rs. 2.1 crores and Rs. 2.4 crores to Rs. 34.3 crores and Rs. 26.3 crores, respectively, the former reflecting a larger volume of business and higher loan rates and the latter increased interest payments and establishment expenses. Net profit registered a small decline of Rs. 7 lakhs at Rs. 7.4 crores. The current earnings of exchange banks rose by Rs. 28 lakhs to Rs. 13.3 crores. But this was more than offset by an increase of Rs. 2 crores in the expenses mostly on interest payments on deposits and other accounts at Rs. 9.2 crores. Consequently, the net profit of exchange banks also declined by Rs. 1.6 crores to Rs. 4 crores. The ratio of current operating expenses to current earnings worked out at 76.8 percent for Indian scheduled banks and 69.4 percent for exchange banks as compared to 74.1 percent and 55.4 percent, respectively, in 1951. The corresponding ratio of non-scheduled banks, however, declined from 83 percent to 80 percent. The publication can be obtained from the Accountant, Department of Research and Statistics, Reserve Bank of India, Post Box No. 1036, Bombay 1.

INDIA BELTING & COTTON MILLS LTD.

Bombay Cotton Annual, 1951-52. (Published by the East Indian Cotton Association Ltd., Bombay, 264 pages. Price Rs. 4). The latest issue of the excellent annual maintains the high standards set by its predecessors. It contains a wealth of information on various branches of the cotton trade including statistical tables of crops, exports, imports, prices, stocks and consumption. There is also a section on Government notifications; the Annual is "designed to meet the requirements of all who are interested in the production, distribution and consumption of Indian and foreign cottons, yarn and cloth."

Major Industries of India Annual 1952-53. Edited by M. P. Gandhi. (Published by M. P. Gandhi & Co. Price Rs. 10, or de-luxe edition on art paper Rs. 15, 324 pages). The emphasis in this, the second, issue is on the significance of the various projects planned for India's economic development and the concrete tasks before each industry, both in the private and public sectors. For the planners speaks the Prime Minister, Mr. Nehru, extracts being given of his speech last December when he presented the five year plan and the final report of the Planning Commission to the two Houses of Parliament. Mr. E. P. Moon, adviser to the Planning Commission, writing on basic industries under the five year plan refers to the role of private enterprise in the development of consumer goods industries and of important capital goods industries, and of the Government in developing basic capital and producer goods industries. Succeeding articles cover Indo-American trade relations, by India's Ambassador to the U.S.A., and, as the title suggests, most of India's primary industries. All articles are written authoritatively and the book, expensively produced, is amply illustrated and contains many useful tables.

The second annual number of the Indian Journal of Power and River Valley Development contains a variety of excellent articles written by engineers in India and abroad. Lord Citrine, Chairman of the British Electricity Authority, discusses Britain's electricity supply under public ownership. Mr. S. C. Mazumdar, Consulting Engineer to the Government of West Bengal, argues the case for the Ganga Barrage. Prof. Koichi Aki, Vice-President of the Resources Council of Japan, discusses the problem of hydro-electric development in his country. Mr. Kunwar Sain, Chief Engineer, Hirakud Project, and Member, (Designs) of the Central Water and Power Commission, describes the main features of the Hirakud project. Mr. Norris Dodd, Director-General of the F.A.O., urges conservation of land and water resources by scientific agricultural practices. Mr. N. D. Gulhati, Secretary-General of the International Commission on Irrigation and Drainage, outlines the programme of activities of the international organisation. Dr. Sudhir Sen, Secretary of the Damodar Valley Corporation, pleads for more river valley authorities in India on the lines of the TVA. Mr. Neil Bass of the World Bank describes the functioning of the Bank and its role in the development of backward areas. Mr. Norman Marr, Director, Engineering and Water Resources Department of Canada, reviews the rapid development of water-power in his country. Mr. L. F. Harza, a leading consulting engineer, explains the role of international co-operation in the development of natural resources. Mr. W. E. Blomgren, Assistant Chief Engineer, and Mr. J. G. Milliken, General Engineer, Bureau of Reclamation, U.S.A., describe one of America's great engineering achievements—the Colorado-Big Thompson Project. Mr. V. R. Raghavan, of the Central Water and Power Commission, surveys the post-war development of power in India. Prof. H. O. Walch, UNESCO Professor at the Indian Institute of Technology, describes the development of construction of large dams from the technical angle. Dr. W. Weissel, General Manager, Gruner Brothers, Consulting Engineers of Switzerland, surveys underground power stations. Dr. Jagdish Lal, of the Indian Institute of Technology, reviews the development of water power machines. Priced at Rs. 5, this 148-page magazine is published from 6, Waterloo Street, Calcutta.

BOOKS RECEIVED

Soviet Labour. (Published by the Employers' Association, Calcutta. Price As. 12, 54 pages).

Annual Market Review 1952. (Published by Premchand & Sons, Limited, Bombay. 77 pages).

Hydro-Electric Potential in Europe and Its Geographical, Technical and Economic Limits. (Published by the United Nations. Price \$1.00, 98 pages+7 annexes, bibliography, and 2 maps).

Direction of International Trade, Vol. III, No. 12. (Published jointly by the United Nations, International Monetary Fund, and International Bank for Reconstruction and Development. Price \$0.50, 169 pages).

The 34th Lausanne National Fair will be open from 12th to 27th September, 1953. The fair has 16 halls, is divided into 20 groups and displays the products of 2,250 exhibitors from all the Swiss cantons.

Commodity Markets

WHOLESALE PRICE INDEX
FALLS SLIGHTLY

THE official wholesale price index (base: year ended August 1939=100) fell to 406.4 during the week ended 11th July from 406.7 (revised) in the corresponding week of the previous month, and a year ago, it was 0.1 and 6.0 percent higher respectively. Foodstuffs declined by 0.1 percent to 406.0 because of lower prices of gram at Patna (-3%), rice, coffee and sugar (-1% each), despite increases in tea (+3%), gur (+2%), gram at Hapur and wheat (+1% each). Industrial Raw Materials fell by 0.3 percent to 477.2 on account of declines in the prices of jute and manganese ore (-3% each), rapeseed at Kanpur (-4%), silk, wool and lac (-2% each), cotton, castorseed, gingellyseed and cottonseed (-1% each). Prices of groundnuts (+7%), rapeseed in Bombay (+3%), linseed and copra (+2% each), however, rose. In Semi-Manufactures, items which recorded noticeable variations were gingelly oil (+8%), groundnut oil (+4%), linseed oil (+2% each) and mustard oil (-2%). The group index increased by 0.2 percent to 364.3 from 363.7 (revised) for the previous week. The Manufactures group index remained almost unchanged at 366.3, because a rise of 2 percent in the prices of chemicals was offset by a slight fall in jute manufactures. The index for the Miscellaneous group declined by 0.3 percent to 669.0 because of decreases in the prices of tobacco leaf and cashewnuts (-2% each) and betelnuts (-1%), despite increases in chillies (+14%) and turmeric (+1%).

(Base: Year ended August 1939=100)

SUGAR PRODUCTION AND STOCKS

Opening stocks, production, despatches and closing stocks of sugar in Central sugar factories in India during the fortnight ended 30th June, 1953 were 7,38,251, nil, 84,889 and 6,53,362 tons respectively, reports the Director of the Indian Institute of Sugar Technology, Kanpur, on the basis of returns received under the Sugar Production Rules, 1935. Figures for the corresponding fortnight of the previous season were 8,34,139, 6,472, 34,270 and 8,06,341 tons. Figures for the current fortnight relate to 126 factories representing 92.05 percent of the total cane-crushing capacity, while those for last year relate to 128 factories representing 92.77 percent of the total cane-crushing capacity. Total figures for production and despatches of sugar during the 1952-53 season are reported to be 13,17,659 and 10,82,601 tons respectively, as against the corresponding figures of 14,62,524 and 7,48,690 tons for the previous season.

NEWLY REGISTERED COMPANIES

Gopiram Ltd.—Director, Mr. R. K. Agarwal, 7, Wellesley Place. Moneylenders and investors. Capital Rs. 5 lakhs.

Electrical Manufacturing Co. Ltd.—Director, Mr. Om Khosla, P-33, Ganesh Chandra Avenue. Capital Rs. 25 lakhs.

Black & Co. Ltd.—Director, Mr. H. E. F. Taylor, 18, Strand Road. Freight brokers. Capital Rs. 5 lakhs.

Kanoli Tea Ltd.—Director, Mr. L. C. Kanoli, 138, Canning Street. Importers and exporters. Capital Rs. 10 lakhs.

Pasari Brothers Ltd.—Director, Mr. B. L. Pasari, 158, Cross Street. Producers, agents and brokers. Capital Rs. 5 lakhs.

Stocks and Shares

SHARES QUIET AND DULL

COAL SHARES WEAKER: IRONS UNCERTAIN

Wednesday Evening.

SHARE business has remained dull and quiet this past week. Selected jute shares have been better in sympathy with the finished goods market, but the rest of this section is dull. Coal shares are notably quiet, but have eased again since because of continuing anxiety about the labour situation at Bumpur.

Some Government securities have been a shade steadier, but most loans are dull and easier. The Calcutta Port Trust loan, Rs. 1 crore, 4 percent, has been absorbed easily, the list being closed the same day. Half of this amount was sold at Rs. 99.4 with a life of 10 years, and the other half disposed of privately.

Details of the week's trading follow. There has been little of note in the week's trading in Government securities and the market continued dull with little business passing. Apart from an enquiry for 3 percent 1970-75 which improved by one anna to Rs. 86.7, there were more sellers than buyers of other loans and prices were inclined to sag. Three percent Conversion Loan 1980 met with selling pressure and was hammered down from Rs. 82.8 to Rs. 81.15. In short-dateds, the enquiry for 3 percent 1957, reported last week, appears to have been satisfied and in consequence the quotation has eased to Rs. 98.6. The 21 percent 1954 and 21 percent 1955 loans were unchanged at their previous levels of Rs. 99.8 and Rs. 98.6. In contrast, there was mild enquiry for 3 percent 1958 at Rs. 92.2. Medium-dated loans were neglected and both 3 percent 1963-65 and 4 percent 1960-70 shed one anna to close at Rs. 92.5 and

KETTLEWELL BULLEN SOLD
Negotiations for the sale of the old-established Calcutta agency house, Kettlewell Bullen and Company, Limited, of which there have been rumours for some time, have now been successfully concluded. An offer has been made by well-known Indian interests, and has been accepted. The terms have not yet been finally settled and the transfer of ownership is now subject to the consent of the Government of India. An injunction restraining the transfer of the managing agency of the Fort Gloster Jute Manufacturing Co., one of the firms managed by Kettlewell Bullen, was dissolved yesterday afternoon. Kettlewell Bullen and Co. are, among other things, managing agents of the Fort Gloster Jute Manufacturing Company Ltd., Bowraha Cotton Mills Co., Dunbar Mills Ltd. (cotton), and the Mothola Co. (tea).

Rs. 102.2 with further sellers at these levels. The 1 percent 1959-61 loan and 34 percent National Plan Bonds 1951 were on offer at Rs. 99.3 and Rs. 98.5 with business passing at these prices. In long-dateds, 3 percent 1968-69 was a weak feature at Rs. 90.1 but as mentioned earlier 3 percent 1970-75 met with support and improved to Rs. 86.7.

Among provincials, there were no sellers of the 4 percent 1964 issues with the exception of the Bombay loan which was on offer at Rs. 100. The 4 percent West Bengal issue 1964 continued to meet with enquiry at Rs. 100.6 and in some cases buyers were even prepared to bid one anna higher. The recently floated 4 percent U.P. 1963 loan changed hands at around Rs. 99.5 against the issue price of Rs. 99.8. No business appears to have been reported, up to the time of going to press, in any of the other new State loans.

There was good demand for first-class debentures such as Calcutta Electric, Dunlop Rubber and Standard Vacuum Refining at Rs. 101.4, Rs. 101.4 and Rs. 101 respectively. Similarly, Orient Paper debentures were wanted at Rs. 92.10. Deals were also reported in Rohtas Industries at Rs. 84 and Soorah Jute at Rs. 92. There were small sellers of Fort Gloster and Naitahi Jute Debentures.

The enquiry for first-class preference shares was well maintained and in most cases sellers were difficult to find; any shares coming on offer were readily absorbed. Anglo-India were marked at Rs. 118.8 at which price there were further buyers. Belvedere were crossed at Rs. 125 and a small lot of Waverley was done at Rs. 43.8. There was an unsatisfied demand for Agartara, Chitavalah, Kamarhaty, Lohian and Nellimaria jute shares. Fort Gloster 7 percent, which have voting rights, were enquired for up to Rs. 131 with sellers reserved. Among miscellaneous shares, Allahabad Bank were placed at the slightly higher rate of Rs. 132.9 and a small lot of British India Corporation was sold at Rs. 144.8. Burn 7 percent were crossed at Rs. 136.8 against a previous quotation of Rs. 129. Calcutta Electric were marked between Rs. 124 and Rs. 12.6. Chrestien Mica Industries, in the absence of support, were sold at Rs. 53 against a previous quotation of Rs. 60. Dalmia Cement fully-paid and contributory were done up to Rs. 73 and Rs. 23.12. Indian Iron were fully steady at Rs. 106.8 and Indo Burma Petroleum improved from Rs. 91.8 to Rs. 92.8 with buyers over. A parcel of New Churulia Coal was placed at Rs. 3-2, Purtabpore came to hand at Rs. 15 and

Shaw Wallace eased to Rs. 18. A few transactions were recorded in tea shares which included Moheema at Rs. 3-8, Pusimbing at Rs. 93 and Singtom at Rs. 4-15.

In banks, there were buyers of Imperial fully-paid at Rs. 1,825 but the contributories were offered at Rs. 441. A small lot of Hindustan Commercial fetched no more than Rs. 84. United Bank of India D Class shares were unchanged at Rs. 3-13. United Commercial Bank had buyers at Rs. 35-10 but there were no sellers below Rs. 36.

Among railways, a lot of Bukhtiarpur Bihar was sold at the previous quotation of Rs. 24 and Baraset Basirhat were in demand at Rs. 19 compared to last week's price of Rs. 17. Shares on offer were Burdwan Cutwa and Futwah-Islampur. There were buyers of Arrah Sasaram, Howrah, Amta, Howrah Sheakhala, Katakhal Lalbazar and Shahdara (Delhi) Saharanpur but no sellers.

With the exception of Bowraha and Dunbar Cotton which met with interested buying, there were no marked changes in prices of other shares in this section. There were ready buyers of Bowraha at Rs. 274 while Dunbar at one time improved to Rs. 185 but closed a shade lower. Several deals were reported in Cawnpore Textiles between Rs. 8-2 and Rs. 8-4 and Kesoram were quoted at Rs. 18-8.

Very quiet conditions were experienced in the coal section and with the exception of a few shares prices moved to lower levels. Amalgamated eased to Rs. 19-10, Borra to Rs. 25-14, Butrakur to Rs. 9-10, Ghusick to Rs. 15-7 and South Karanpura to Rs. 11-10. Equitable dropped today from Rs. 37-8 to Rs. 35-8. Steady features included East Indian at Rs. 23-6 ex-dividend, Pench Valley at Rs. 20-4 and Standard at Rs. 20-14. Among the lower priced shares, Central India were marked at Rs. 4-10 and Western Bengal at Rs. 4-9. Oriental Coal provided a feature and improved from Rs. 10-12 to Rs. 12-8 on buying by interested parties.

There was a mild recovery in jute shares following the improvement in the gunny market. Howrah rose from Rs. 23-12 to Rs. 24-2 but closed slightly easier at Rs. 24. Shares which were supported included Dirla at Rs. 38, Delta at Rs. 232, Empire at Rs. 20-12, Kamarhaty at Rs. 189 and Reliance at Rs. 15-13. Gouperore were marked up 15 points from Rs. 265 to Rs. 280 and Nuddea improved from Rs. 44 to Rs. 45. Fort Gloster on interested buying were lifted to Rs. 376 although the closing price was slightly easier. In contrast, Agartara eased to Rs. 17-10 and Lawrence to Rs. 159.

Calcutta Electric fluctuated narrowly around Rs. 13-9 at which price there was a fair turnover. Benares were marked at Rs. 18-2, Jubbulpore at Rs. 14-3 and Muttra at Rs. 9-2. A small lot of U.P. was done at Rs. 170.

Sugar share prices were well maintained. Carew came to hand at Rs. 6-6, Champaran at Rs. 23-12, Darbhanga at Rs. 11-5 and Ramnagar at Rs. 17-10. Solitary transactions were reported in Deoria at Rs. 10-4 and Shree Sitaram at Rs. 13. New Saven were unchanged at Rs. 6-2.

Fluctuations in Indian Iron & Steel were influenced by the day-to-day news regarding the labour situation at Bumpur. The shares moved between Rs. 23-8 and Rs. 24-0-6 to close at Rs. 23-14. Bhartia Steel were shaded at Rs. 10-12 and Braithwaite eased from Rs. 11-6 to Rs. 11-1. Britannia Engineering could be placed without difficulty at Rs. 20 while a small lot of Indian Malleable Castings ordinary was done at Rs. 5. Indian Standard Wagon after being quoted at Rs. 85 improved to Rs. 89. Jessops were unchanged at Rs. 23-14. Business was reported in National Iron between Rs. 5 and Rs. 5-4.

In the miscellaneous section, Titagur Paper improved from Rs. 35-4 to Rs. 35-12 owing to lack of scrip. Shree Gopal were marked at Rs. 18-7 while Bengal and Orient were weak at Rs. 43 and Rs. 31-11. Some Valley Cement fluctuated narrowly round Rs. 7 as did Dalmia Cement at Rs. 6-2. New Asiatic were in demand at Rs. 4-5 as the market welcomed the decision of the Directors to recommend a higher dividend payment. Hercules Insurance had small buyers at Rs. 29 ex-dividend. India General Navigation and India Steamship were quoted at Rs. 85 and Rs. 6-10. Airways India were lower at Rs. 10-4 as were Aluminium Corporation at Rs. 3-13. Angelo Brothers and Assam Saws were unchanged at Rs. 18-8 and Rs. 6-8. There was a flutter in Bharat Airways which improved from Rs. 2 to Rs. 2-10. British Ceylon Corporation were marked at Rs. 12-8 with further buyers at this price. British India Corporation were unchanged at Rs. 8-3. F. & C. Osler on interested buying rose from Rs. 5-2 to Rs. 6-4. Ganges Rope, Indian Cables, Jardine Henderson and Martin Burn met with investment inquiry at Rs. 200, Rs. 18-11, Rs. 130 and Rs. 18-5. Weak features included Indian Wood Products at Rs. 32-8 and Shaw Wallace at Rs. 11-2. Calcutta Trams were marked down today from Rs. 14-12 to Rs. 14-4.

In the mining section Metal Corporation were quoted at Rs. 4-10 and Indian Copper Corporation showed no change at Rs. 2-13. Chrestien Mica In-

dustries Ordinary were marked at Rs. 10.4 and the Deferreds at Rs. 7.

Business in tea shares continued to be on an extremely restricted scale and with sellers predominating prices in some cases were marked down to lower levels. Killcott were at one time taken up to Rs. 12 but at the close reacted to Rs. 11.4. Hasimara were easier at Rs. 26.12 and Naga Hills at Rs. 10.8. Chamong were reported at Rs. 8 and Patrakola at Rs. 110. Chandypore came to hand at Rs. 62.8.

We have received the reports of the AUCKLAND, LANSOWNE, UNION, KINNISON, STANDARD and NATH JUTE MILLS in the Bird-Heilgers group for the half-year ended 31st March, 1953. Profits are lower all round because of the general difficulties of the industry.

The Auckland Jute Mills made a profit of Rs. 62,245 as against Rs. 2,82 lakhs in the previous half-year. The ordinary dividend has been lowered from Rs. 4 to Rs. 2 per share, after transferring Rs. 50,000 from stock reserve. Taxation absorbed Rs. 25,429 (Rs. 3.10 lakhs).

The profit of Lansdowne dropped from Rs. 1.13 lakhs to Rs. 47,868. Taxation was at Rs. 28,975 (Rs. 85.335). The ordinary dividend has been reduced from Rs. 3 to Rs. 2 per share after transferring Rs. 35,117 from stock reserve.

Although the loss of Union was up from Rs. 1.36 lakhs to Rs. 2.12 lakhs, the ordinary dividend has been maintained at Re. 1 per share after transferring Rs. 2.75 lakhs from reserves. Depreciation absorbed Rs. 57,774 (Rs. 54.641).

There is a sharp fall in the profit of Kinnison from Rs. 4.50 lakhs to Rs. 56,880. Tax contingencies absorb Rs. 84,000 (Rs. 75,000). Transferring Rs. 44,081 from stock reserve, the ordinary dividend has been reduced by Rs. 3 to Rs. 4 per share.

The loss of Standard has been reduced from Rs. 1.79 lakhs to Rs. 82,536, but the directors have been able to maintain the ordinary dividend at Re. 1 per share after transferring Rs. 1.80 lakhs from reserves. Depreciation absorbs Rs. 21,721 (Rs. 20,915). The company has decided to modernise the hessian looms at a cost of Rs. 27 lakhs and electrify the mill at a cost of Rs. 9½ lakhs. The finance will be met partly from the recent issue of a debenture loan of Rs. 25 lakhs and partly from the surplus working capital.

Naihati's loss was up from Rs. 3.41 lakhs to Rs. 5,07 lakhs. Dividends have consequently been passed again. Allowing Rs. 1,45,480 for depreciation, a loss of Rs. 7,86,971 including a debit balance of Rs. 2,30,351 brought in has been carried forward. The poor results were chiefly due to the very high percentage of sacking looms and the fact that it was not possible to keep the looms fully employed owing to lack of orders for this particular fabric. The mill's on-costs were also very high due to debenture interest without the compensatory savings anticipated from the capital expenditure programme, an uneconomic power plant and heavy repairs to machinery and the mill roof. These are, however, temporary factors and on completion of the electrification and modernisation scheme the mill should become a fully efficient unit in the opinion of the directors. Both these projects are expected to be implemented by late 1954.

Details of the above accounts, and of other mills in the same group, will be published in the form of a table in the next issue of Capital.

The ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO., LTD. has maintained the usual progress for the year ended last December; 71,359 policies assuring Rs. 21,22,44,577 were issued as compared with 73,459 policies assuring Rs. 22,22,25,811 during the previous year. The income for the year amounted to Rs. 11,32,30,442.10.2 of which Rs. 9,17,79,468.8 was derived from premiums, the increase over last year's premium income being Rs. 24,27,689.10. The outgo amounted to Rs. 6,61,19,966.15.8 leaving a balance of income over outgo of Rs. 4,71,10,475.10.6. The ratio of expenses, including commission, to premium income during the year of account is 23.2 percent, as compared with 21.91 percent in 1951. At the close of the year the funds amounted to Rs. 67,69,74,430.2.8. The excess of the aggregate market values over the aggregate book values of the company's investments in stocks and shares amounted as on 31st December, 1952 to more than Rs. 55 lakhs, the corresponding figures for 31st December, 1951 being nil. The value of these investments stands in the books, as on 31st December, 1952, at or below market value. The directors have recommended a dividend to shareholders of Rs. 175 per share and this is Rs. 50 higher than in the previous year.

The report of the second year's working of the ORIENTAL FIRE & GENERAL INSURANCE CO. shows satisfactory results. The profit is shown at Rs. 3,12,639 for the year ended 31st December, 1952, and after bringing in a debit balance of Rs. 2,88,635, there is a balance of Rs. 24,003, which is carried forward. The Fire Department earned

a profit of Rs. 2,37,786 after setting aside as reserve 50 percent of the premium income. The Accident and Miscellaneous Department showed a loss of Rs. 19,020 after raising the reserve for unexpired liability to 50 percent of the premium income. There is a loss of Rs. 34,745 in the Marine Department after increasing the reserve for unexpired liability to 100 percent of the premium income.

The working of the UNITED INDIA LIFE ASSURANCE Co. for the year ended last December shows satisfactory results. The dividend has been raised by Rs. 20 to Rs. 50 per share and this works out to 50 percent on the paid-up capital. During the year 17,380 (15,359) proposals were received for assurance amounting to Rs. 4.63 crores (Rs. 4.25 crores). The policyholders' Trust Fund was Rs. 7,40,81,533 as against Rs. 6,86,04,416 at the beginning of the year. The total revenue from premiums was Rs. 1.37 crores (Rs. 1.29 crores).

VALIDITY OF SUPERTAX CERTIFICATES FOR NON-RESIDENT SHAREHOLDERS

In order to remove difficulties experienced by non-residents in obtaining every year certificates authorising deductions of super-tax at nil rate or at a rate lower than the standard one, the Government of India has decided that in the case of non-residents whose income does not fluctuate widely from year to year the Income-Tax Officer concerned will issue such certificates valid for three years instead of one year. As it is not practicable for an Income-Tax Officer to issue more than one certificate in favour of a non-resident shareholder who holds shares in more than one company, it has also been decided that a company may accept, in place of the original certificate issued by an Income-Tax Officer, a photostatic or a certified copy of it when produced by a non-resident shareholder or his authorised representative or bankers.

THE WEEK'S TRANSACTIONS

to lay before him.' It would be contrary to this principle, and to the clearly expressed intention of Parliament in the governing legislation, if ministers were to give, in replies in Parliament or in letters, information about day-to-day matters. Undue intervention by the minister would tend to impair the board's commercial freedom of action."

The Rau Committee says: "We are in complete agreement with these views which merely postulate in different language the accepted parliamentary convention that 'accountability is commensurate with responsibility' and that Ministers can only be questioned where responsibility is accepted." It adds: "If Parliament creates a statutory authority, entrusts to it certain duties and responsibilities and make it free to take its own decisions, the Government, which is not responsible for these decisions, cannot be held accountable for them. Further, if it is held that questions can be freely asked about the working of a Corporation, there will be a tendency on the part of the Corporation to avoid responsibility, and to seek the direction and advice of the Minister or the department concerned in every matter, thus defeating the object with which the Corporation has been established. The lack of initiative, and absence of quick decisions, for which Government departments are blamed, would creep into the working of the Corporation. Ministerial interference will tend to grow. The limitation of the Government's authority and accountability to Parliament in respect of matters transferred finally to the Corporation is thus inherent in the adoption of the Corporation method."

"It is necessary to lay down clearly the duties and powers of a Corporation for the future."

"1. A Corporation should be created only when a project has been investigated in sufficient detail, and a fairly firm estimate has been sanctioned by the Government."

"2. Within the sanctioned project estimate, the Corporation should have full power to execute the project without any outside interference. The Corporation should not have any power to modify the scope of the project. That power should vest only in the Government."

"3. If the project estimate is likely to be substantially exceeded, the Corporation must come up to the Government for a revised sanction."

"4. After completion of the project, the Corporation should have full powers to run its commercial or quasi-commercial activities, irrigation, navigation, power and flood control."

"5. In regard to non-commercial activities like soil conservation, afforestation, etc., schemes should be submitted by the Corporation to the Government for approval before they are taken up. Such schemes should be implemented only to the extent approved by the Government."

"6. The budget estimates of the Corporation should be subject to the approval of the Government."

"7. Power should be taken by the Government to give directions 'as to the exercise and performance by the Corporation of its functions' somewhat on the lines of the Air Corporations Act, 1933."

"8. The powers reserved for the Government under these proposals should vest in the Central Government, as it would obviously be impossible for a Corporation to consult different Governments which might give different decisions."

"In other respects the scheme of the D.V.C. Act may be followed."

"The Estimates Committee has recommended that full Parliamentary control over the various river valley schemes should be ensured; that all plans relating to a scheme should be laid before Parliament as soon as the scheme is sanctioned, together with an explanatory memorandum; and that changes in plans or estimates should be

approved by Parliament after they are first examined by the Estimates Committee. We are unable to agree with these suggestions in so far as statutory Corporations are concerned, as they would have the effect of placing them in a position worse than that of Government Departments."

Referring to the D.V.C. Act, the Committee does not agree with its provision that the members of the Corporation shall be appointed after consultation with the State Governments. "We do not consider it a sound principle to provide for regional representatives on Corporations of this nature." The Committee is opposed to the inclusion of part-time members because they make it difficult to hold frequent meetings. The Committee, furthermore, would reduce the strength of the Corporation to a Chairman and two members. Although it would not prescribe the qualifications of members by statute, it felt that in the selection of personnel the functional element should be given more attention."

As for the controversy over the policy-making and functional types of Corporation, the Committee considers the former better in every way. Here it differs radically with the Estimates Committee. It also differs with the Estimates Committee in saying that the functions of initiating and making plans for a project should vest in the Central Water and Power Commission. The Planning Commission would entrust these functions to State Governments, which may take such assistance as may be required from the Central Water and Power Commission. The Rau Committee holds that the Estimates Committee's proposal would make the Central Water and Power Commission very unwieldy and it was doubtful whether the expected economies in planning and designing would be realised in actual practice. "We suggest that the freedom of the Corporations to choose their own consultants should remain unhampered."

London

EXPORTS AND THE TERMS OF TRADE

NEXT COMMONWEALTH FINANCE CONFERENCE

(FROM OUR OWN CORRESPONDENT)

25th July.

THE need for higher productivity and more exports has grown into what might almost be regarded as the theme song of British Chancellors of the Exchequer. Unfortunately its constant reiteration does not appear to have much impact on the rank and file of the trade unions, which renders its acceptance by the Labour party and the T.U.C., as evidenced in the former's programme and the latter's report, somewhat idle. Nevertheless Mr. Butler made yet another statement of his case to the National Joint Advisory Council last Wednesday. Seeing that it comprises representatives of the T.U.C. and the British Employers' Federation, the Chancellor was in fact appealing to the converted, so we may take it that in reducing his thesis to five plain reasons why the present level of exports is not good enough he was hoping to reach a much wider audience. One cannot be too sanguine that this hope will be realised, but the reasons are worth mentioning just the same. They were:

1. It was common prudence to assume that the favourable trends during last year and the first five months of this year of the terms of trade would not always persist.

2. Last year's trade balance involved a low level of imports and at the present level of exports our ability to pay even for necessary imports would be increasingly in doubt.

3. We had large debts to repay to the United States, Canada, and to Europe through the European Payments Union.

4. The ability to trade on equal terms with North America—the ability of the pound to look the dollar in the face—depended upon the development of the productive strength and efficiency of the sterling area, and that in its turn depended upon the United Kingdom's making available investment funds for the rest of the sterling area and through its exports supplying those countries with the equipment and materials they need for development.

5. The present level of gold and dollar reserves, though higher than a year ago, was still insufficient as a margin of protection against the fluctuations in earnings and expenditure to which our great volume of trade was subject.

U. K. Export Prices

Mr. Butler emphasised his case with some illuminating facts and figures. To meet the five points he estimated we should need an annual surplus of from £300 million to £350 million—a considerable task seeing that there has been a big rise in imports whereas the volume of exports is about the same as it was in the fourth quarter of last year. Foreign competition has increased and disinflationary policies abroad have made importers more price-conscious. That our prices are still proving competitive is due not to reduced costs of production but because of the steady fall in the prices of imported raw materials. Mr. Butler did not call specifically for dividend restraint or a wage freeze, but he mentioned that between 1947 and 1952 gross trading profits increased by 35 percent and wages and salaries by 50 percent, and went on to explain that the main purpose of profits should be to have adequate sums to plough back into industry and it would impair the nation's strength if such resources were applied for the benefit of current consumption—to personal incomes, whether of shareholders or wage-earners. Labour costs, the largest element in production costs, rose by £550 million in 1952, although production was lower than year than in 1951. A 10 percent rise in wages and salaries throughout manufacturing industry, he estimated, would cause a rise in export prices of 4½ percent, and the effect of such an increase "would be to cause a serious fall in the volume of our exports. It would end our hopes of building up an adequate export surplus. It might plunge us back into deficit." Also, it would lead to unemployment at home and a rise in the cost of living.

Mr. Butler's warning regarding the terms of trade is borne out by the latest Board of Trade statistics in this connection. In June the prices Britain paid for imports fell one point, from 88 to 87. On the other hand the prices we received for our exports also dropped to the same extent, leaving the ratio between the two unchanged. This is not the first time there has been a pause in the generally favourable trend, but it is significant in view of the tendency for imports to increase in volume with increased production unless exports can also be increased. If one also considers, along with the above trends, the latest survey of wholesale prices, some encouragement is to be derived from the fact that at long last there would appear to be a slowing down of the steady rise in the prices for food, which over a long period has tended to offset the steady drop in the prices of basic materials. In the past two months, i.e., May and June, both these indices have moved in the same direction, downwards. Ultimately, it is to be hoped that retail prices will move the same way, and perhaps help to support a much wider stand against the dangers involved in the refusal on the part of both employers and workers to relate earnings to productivity and output.

In the latter context last Monday's debate in the Commons on scientific research in industry and

productivity certainly had its uses, for it was productive of much commonsense and even some practical suggestions from the Labour benches. Mr. Richard Stokes, who opened the debate with "An ounce of practice is worth a ton of theory," went on to quote from his own long experience of how to increase productivity in the engineering industry. He did not think much of the contribution science could make, but had proved in his own works that an effective system of joint consultation together with tax-free bonuses related to output and payable to all employees from the lowest to the highest produced results. It had in fact led to an increase of earnings of all employees of from 50 percent to 99 percent, tax-free, besides reducing voluntary absenteeism and time-wasting. Mr. F. Lee, who wound up for the Opposition, also made an admirable speech which concluded with a pledge that the trade unions would be as much behind this Government as a Labour Government in trying to surmount the country's economic difficulties. Sir Walter Monckton reinforced the respect he has won as Minister of Labour with a speech emphasising the need for real joint consultation and mutual confidence between management and workers.

Convertibility Discussions

In this matter of economic survival, however, Britain does not stand alone even though it may play a leading rôle. The Treasury has just confirmed that discussions are proceeding between the Commonwealth Governments in connection with the possibility of holding another economic conference, possibly towards the end of this year and perhaps in Canberra rather than in London. It should be explained that everything is still very tentative, but there is general appreciation of the fact that the series of conferences which have been held in the last few years have been productive of much good. For instance, most of the leaks in the central reserves of gold and dollars have been plugged; with the possible exception of Pakistan and Ceylon, the other sterling area countries have returned to the position of living within their means, even increasing their international reserves. Even the two exceptions are following policies which promise to restore their positions in spite of the difficulties with which they have been or are now faced. The emphasis appears to be on the advantages of providing regular opportunities for the exchange of views rather than on any new developments having arisen which actually calls for them, though the latter possibility cannot be ignored, in view of Mr. Lester Pearson's recent speech in Ottawa in which he referred to the work which has been going on for some months on convertibility plans, and that was now "on the way to completion."

If this pointer given by the Canadian Minister of External Affairs is followed it is possible that if and when the Commonwealth Finance Ministers meet again they may take up once again the "Commonwealth Plan" which they devised at their last meeting but which had to be shelved when Mr. Butler and Mr. Eden were unable to secure the support of the then new American administration. There has been open policy, and even to participate in the work to which Mr. Lester Pearson referred. At the same time there have been many other calls for their attention, and it cannot be overlooked that import restriction has played a large part in the sterling area's recovery to date and that whether it has or has not advanced towards a position when convertibility can be regarded as a real possibility will depend very largely as to whether the progress already made can be maintained during the second half of this year.

Calcutta Tramways' Revenues

The unfortunate repercussions in Calcutta over the Tramway Company's decision to make a small increase in second-class fares has had the effect of making the Chairman, Mr. D. E. Webb, decide to visit Calcutta himself (he leaves next week and will be in the city by the time this despatch is published) and to discuss the whole question with the West Bengal Government. Not unnaturally, shareholders here have been worried by these developments, and the board of directors have done well in publishing preliminary figures with regard to the 1952 accounts, though it is pointed out that final consideration of these must await the chairman's return. The net revenue, after tax, was £32,510, against £32,757 in 1951. Tax absorbed £95,000 against £150,000. The proposed final dividend is 3½ percent, tax free, making 6 percent, tax free, as before.

Sterling Investment Abroad

The Manchester Guardian takes advantage of the announcement of the signing of the new financial agreement between the United Kingdom and India, to invite attention to a fact which is all too often overlooked, particularly by those who clamour that Britain should provide more finance for overseas countries, namely, that during the past few difficult years we have already been investing abroad on an heroic scale. Though the agreement merely confirms existing arrangements for the releases of sterling balances, the paper points out that it is a reminder of the prodigious burden which Britain imposed on itself to meet "what were, at best, controversial obligations." In 1948 India still had £760 million in blocked sterling balances. The first agreement allowed for the release of £80 million up to the middle of 1950. In fact, this calculation was soon upset by inflation in India, and to plug the gap in India's balance of payments, an extra £150 million had to be released in this period. "This was one of the reasons why Britain's overseas position was so precarious, for some of this money was, of course, used to pay for dollar imports." In December, 1950, releases of sterling to

India were incorporated into the Colombo Plan so that she could call upon £35 million each year for six years. At present £140 million remains to be released under this arrangement in the next four years. The balance of the original £750 million, amounting to £310 million, was transferred to the Reserve Bank of India in February, 1952, to be used as a currency reserve.

Bombay

CENTRE MOVES TO CLARIFY SALES TAX LAWS

BOMBAY CONSIDERING TWO-POINT LEVY

(FROM OUR OWN CORRESPONDENT)

26th July.

IT is not often that the Government of India is so impressed by representations from the business community on a particular subject that it takes them up for urgent consideration. Contrary to the tradition of putting most of the suggestions it receives into cold storage, the Central Ministry of Finance appears to be genuinely concerned about the effect of the Supreme Court's judgments on the rights of a State Government to levy sales tax when commercial or industrial units situated in other States supply goods to distributors for sale within its territory, on the general run of inter-State business. The gravity with which the situation created by the rulings of the Supreme Court is viewed by this Ministry can be gauged from the fact that, if necessary, the Centre is prepared even to amend Article 286 of the Constitution to set matters right. This was disclosed by no less an authority than Mr. M. C. Shah, Deputy Finance Minister in the Central Government, who was on a visit to Saurashtra and Gujarat last week. Addressing a gathering of business men at Rajkot on 21st July, Mr. Shah admitted that inter-State trade had been dealt a severe blow by the judgments of the Supreme Court and there was a countrywide demand for relief. The Central Government was holding discussions with State Governments and examining the need to amend the relevant Article of the Constitution to help inter-State trade out of its present difficulties.

On the issue of sales tax and the need for a uniform basis for levying it over the country as a whole, the attitude of the Central Government has been reasonable and even sympathetic from the outset. But after the defeat it sustained during the last Finance Ministers' conference at the hands of State Governments led by Mr. C. Rajagopalachari, the Chief Minister of Madras, it was but natural that it should go warily about this business. Most State Governments are beset with increasing financial difficulties and have come to resent interference by the Centre with regard to so elastic a source of revenue, on which they depend so heavily to extricate themselves from their self-created difficulties. Even though the present examination is limited to a very narrow issue regarding the administrative difficulties and anomalies which have been created by the Supreme Court's interpretation of the section in the Constitution dealing with restrictions on the levy of sales tax on the sale or purchase of goods in inter-State trade, the business community here is anxious about the outcome of this examination, for it is being conducted in consultation with the State Governments. It is equally apprehensive about the delay which is likely to occur if it is ultimately decided that the remedy for the present anomalous position is to amend the Constitution. For the redress of their wider grievances regarding this oppressive tax in the State of Bombay they are looking to the Taxation Enquiry Commission.

Bombay to Amend Act

Meanwhile, the Bombay Government appears to have been convinced of the justice of many of the complaints voiced at the time the law was imposed and is seriously thinking of amending its Sales Tax Act. It still refuses even to consider reversion to the original single-point tax, collected at the time of the last sale to the consumer or to the unregistered small retailer; the Government is believed to be engaged in examining a two-point tax, collected first at the source and then at the time of the final sale. It is also prepared to consult Congress Party leaders and representatives of various trades before making revisions, and if possible might amend the Act during the next session of the Assembly at Poona rather than wait till the next budget. Returns showing the revenue realised from the sales tax have provided more eloquent testimony than all the representations made by commercial organisations, and the Government is afraid that, apart from losing revenue, the volume of trade in the State has been adversely affected by the change-over from the single-point to the multi-point tax.

Some other remarks of the Union Deputy Finance Minister during his visit to Western India also deserve mention. Urged to ban forward trading in edible oils and oilseeds in the interest of consumers, he said that the Forward Markets Commission, which was to be appointed soon, would enquire into the question of speculative trading in all commodities. Earlier, at Rajkot, he categorically denounced forward business in bullion; of course he expressed this opinion purely in his personal capacity. Finally the Deputy Finance Minister gave an assurance that he would do his best to minimise administrative difficulties relating to income tax, but offered no hope of an alteration in the law itself or in any of its substantive provisions.

Now you can plan to travel **TOURIST** by **B.O.A.C.** at GREATLY reduced fares Save approximately Rs. 1,538

CALCUTTA TO **ROME • GENEVA • ZURICH**
PARIS • LONDON • AMSTERDAM
BRUSSELS • FRANKFURT • MADRID
and many other destinations

Rs. 1,560 Single
Rs. 2,808 Return

You can, also fly,
one way 'Standard' Class,
one way 'Tourist' Class,
and save upto Rs. 769.

B.O.A.C. Tourist Services will commence on 1st October, 1953

HERE ARE SOME OF THE MAIN FEATURES:—

- ★ Pressurized, air-conditioned Argonauts, equipped with 4 Rolls-Royce engines with specially developed system reducing noise and vibration to a minimum.
- ★ Free meals on board; full bar service.
- ★ Free baggage allowance of 44 lbs.
- ★ Stop-over wherever you like at no extra fare.
- ★ Half fares for children under 12 years.
- ★ 34 YEARS FLYING EXPERIENCE.

FLY BY B.O.A.C.

Uttar Pradesh

SUCCESS OF VOLUNTARY LABOUR DRIVE DOUBTED TALENT MISAPPLIED: CONFLICTING OFFICIAL CLAIMS

(FROM OUR OWN CORRESPONDENT).

Lucknow, 25th July.

AMONG the popular side-shows organised in connection with the A.I.C.C. session at Agra recently was a State Development Exhibition which is officially stated to have been visited by 200,000 people before it closed on 15th July. Twenty-one departments of the State Government participated and several walked off with prizes distributed by the Union Railway Minister, Mr. Lal Bahadur Shastri. The departmental stalls were intended to give the people an idea of the major constructive activities in Uttar Pradesh under the State's Rs. 121 crore five year plan. The presentation of targets and achievements was said to be effective, but some inconvenient questions have been asked as to how far the entries on the credit side correspond to actual facts, particularly in relation to self-help on which great store has been laid by planning officials in the State. On the last Republic Day, the State Government launched its first "Shramdan" (voluntary labour) week and in May last another "Shramdan" fortnight was organised. Millions of people are officially stated to have participated in these activities over an area covering lakhs of acres. The Deputy Minister for Planning, Mr. Phool Singh, has also announced that the Government proposes to make such "Shramdan" drives an annual feature.

However, many observers have started wondering whether, in actual practice, this "Shramdan" drive has not miscarried, even if it is not misconceived. Its idea is, firstly, to revolutionise social thinking regarding the place of manual labour and, secondly, to mobilise the great potential of manpower for social and economic development. It is even claimed by some exponents of the movement that if the entire adult population in the country could donate one hour's free labour each day for one year it would be equal in move value to the annual budgets of the Central and State Governments put together. This may or may not be true in theory, but when put into practice even on a limited scale, as in Uttar Pradesh, the scheme betrays several weaknesses.

"Shramdan" and Unemployment

Quite apart from the objection that "Shramdan" is unnecessary when there is so much unemployment in the country, doubts have been expressed on whether it is sound economy to draft highly paid Government servants for manual labour, the return for which in terms of money is ridiculously low. It would not have mattered so much if the work put in by the officials had really been honorary, completely outside their office hours and done without detracting in any way from the work for which they were being paid. But this is not the case and the voluntary service is done usually by taking time off from the office. Claims regarding the amount of work done and money saved are also sometimes inflated as the following example shows. In a district in Lucknow division during the last "Shramdan" fortnight, officials undertook to clear a six-mile stretch of a canal distributary. The work consisted of digging, de-silting and dressing. The estimated cost of the undertaking was placed at Rs.60,000. Two hundred and fifty Government servants worked on it for 14 days, giving two hours of free labour, and at the end of the fortnight actually cleared about one mile of the canal instead of the projected six. The Irrigation Department, which was the beneficiary of this donation of labour, has however come to the conclusion that the total cost of clearing the entire six-mile length of the canal distributary should not exceed Rs. 3,500 and that since the officials have cleared only one mile the money equivalent of their labour should be less than Rs. 600. The Irrigation Department has gone further and deducted Rs. 100 towards the cost of "redressing" the handiwork of the officials, even on the one-mile stretch, because their labour was unskilled and amateurish.

The discrepancy between the Irrigation Department's version and that of the officials who donated the labour was so great that the Government is said to have referred the matter back to the Irrigation Department to make sure that it had not, by chance, dropped two zeros from its calculations! This incident is taken to be more or less typical of most official assessments of the "Shramdan" drive, and has naturally not been very flattering to officialdom. Yet, another serious discrepancy has been noticed between the claims of the Deputy Minister for Planning and the official statistical analysis. The Deputy Minister claimed here that "roughly one lakh acres of land" will be irrigated as a result of the second "Shramdan" drive but the Departmental note has claimed a figure of 1,50,000 acres. According to the Minister, the work done during this second drive was worth over Rs. 21 lakhs against an actual expenditure of a little over Rs. 25,000, but the former figure has to be accepted with reserve until it is re-checked by established methods of work measurement. Some element of error or exaggeration is perhaps unavoidable in such matters, but the Government must show a little more wool to justify the great cry.

Jute

THE KOREAN ARMISTICE AND THE JUTE MARKETS

NEED TO INCREASE EXPORTS BUT RESTRAIN PRICES

WHEN the war in Korea began jute and jute goods, along with most other commodities, experienced a boom because consumers everywhere started stockpiling lest the war should spread and supply routes be disrupted. No doubt there was also the thought that good profits would be reaped, as undoubtedly they were. In time, stockpiling reached saturation point. Then came the proposals for a truce and exchange of prisoners. That immediately gave Calcutta a fit of the jitters. It was argued, not without reason, that there would be no more stockpiling and that, probably, there would be a suspension of buying until the quantum of stocks was reduced. It was also feared that reduction in the output of goods in the U.S.A. for war purposes might start a slump there similar to that of the 'thirties, which would ultimately cause a worldwide trade depression.

The proposed armistice did not, however, materialise as quickly as had been expected. In fact, the repeated delays and postponements created doubt whether the Communists were really, in earnest, and before long the prospects of the conclusion of an armistice had ceased to be an influence in the jute markets. Rearmament in America and Europe was the order of the day and it was announced from Washington that, even if there were a truce in Korea, rearmament would go on. That was heartening to the bulls but there were still uneasy moments when the U.S.A. threatened to reduce its rearmament schedule and cut down its foreign aid policy.

At the time of the English Revolution of 1688 the French Ambassador in London reported to his Government that the English king had been driven out but not even a dog had barked. Now the Korean armistice has come and not a jackal in the by-lanes of Burra Bazar has uttered a single howl. Ideas about the effects of an armistice on commerce seem to have undergone a radical change. Now the talk is that the money which will have to be poured into Korea for its rehabilitation will act as a primer to the pump. The conclusion of peace in Korea is to be followed by the admission of China to the United Nations and by the removal of restrictions on trade with China. Better relations with China will be followed by a settlement of the war in Indo-China and by the restoration of peaceful conditions in all the countries of the Far East. All these countries will want B Twills and heavy Cees and so on, and everything in the garden will be lovely for the jute industry. Well, the truce in Korea is a step in the right direction but it will be a long and weary struggle until the rest is achieved. Meantime our "intelligent anticipators," as they were once called, will no doubt find many reasons for putting the markets up or down as they think desirable.

The markets are firm and tending higher but higher prices are not wanted. What is needed is a greater volume of trade and it would be a pity if higher prices again put the brake on the consumption of jute manufactures. It is said that the basic reason for the rising prices of manufactured goods is the possibility of a scarcity of raw jute. If that is so, steps should be taken to dispel such notions for there is scarcely any doubt, though harvesting is still in its early stages, that there will be ample jute for the mills' needs at the present rate of working, though not any excess.

NEW MAN BEING SELECTED FOR JUTE MARKETING ENQUIRY

Our New Delhi correspondent reports: Within 24 hours of his appointment to enquire into the working of the jute trade, Mr. P. Madhava Menon wrote to the Government of India to say that because of the illness of his wife he would not be able to take up his new assignment before November next. As the Government wishes to expedite the enquiry, another person is being selected and an announcement is expected very soon.

THE JUTE MARKETS

Apart from minor fluctuations, the firmness noted last week has continued in all sections of the market, the general tendency being towards higher prices.

Manufactured Goods: Reports of further buying by, or on account of, the Argentine together with enquiries from the U.K. and the U.S.A. have combined to maintain the upward trend of the market. Covering business has also been reported in packing. Mills are reported to have sold fair quantities and in some cases it is stated would entertain offers for hessian only on condition that the buyers took also a quantity of sacking. On Thursday mills were offering rather more than the market could absorb and that, combined with reports that the shipping instructions received this month for heavy goods were poor, caused a temporary drop in prices. Shipping instructions for hessian on the other hand were reported to be very good and that had a steadying effect. There have also been good enquiries for specialities, especially twine. Shippers have shown some interest in Cubans for October-

December, but their enquiries have met with considerable reserve on the part of mills. The signing of the Korean armistice did not have the bearish effect that was at one time expected. Bazar sentiment has also been influenced by the strength of the raw jute market.

On Wednesday morning quotations were as under:

	Ready.	Aug.	Sept.	Oct./Dec.
	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	36 12	36 14	36 14	37 0
40" 10 oz.	45 12	47 0	47 0	46 10
B Twills	103 2	104 4	104 4	105 0
Heavy Cees (Plain)	104 8	105 0	105 0	105 8
Cornsacks	103 8	104 4	104 4	105 8

Raw Jute: The market has continued steady throughout the week, even at times when there was an easing in the prices of manufactured goods. The strength of the raw jute market appears to come from the fact that there is very little Indian jute of good quality left. Offers of Assam and Northern jute from upcountry are scarce. Imports to the local bazars are almost entirely of the jungli type and good daissee jute is difficult to obtain. The business done in the past two or three weeks has enabled stockholders to make substantial reductions in their holdings and they are not so keen to sell now. Their ideas have also been

influenced by the lateness of the New Crop, and this has caused less of it to be offered. There are, of course, large quantities of Pakistani Old Crop available but buyers are reluctant to pay the premiums asked and much of the Pakistani jute arriving is of poor quality.

During the week business was done in Northern jute ex local godown at Rs. 26 basis Bottoms for an assortment of 20/80 M/B. Further business was done on Thursday at Rs. 26 to Rs. 25-8 for Northern and at Rs. 24-8 to Rs. 24 for Assam all ex local godown. Pakistani pseudo-jat was done at Rs. 25-12. On Friday Cut Mesta Bottoms were done at Rs. 26. Karimpore Tossa Middles free from samla at Rs. 31-8. Northern Middles at Rs. 29-4 and Assam Tossa Bottoms at Rs. 26-8. A fair quantity of Northern ex local godown was done at Rs. 26 basis Bots. Sellers raised their quotations on Saturday to Rs. 27 basis Bots for Northern and Rs. 26 basis Bottoms for Assam but the increase in prices checked business. Some business was, however, reported in European packing at Rs. 32 for Bots, Rs. 29 for B Bots and Rs. 26 for X Bots. On Monday Pakistani N.C.'s were sold at Rs. 72 and habi-jebi at Rs. 90. Ready bills of lading for Pakistani district jute were done at Rs. 29-8 for Middles and Rs. 26-8 for Bottoms. Indian Northern Middles were done at Rs. 31 for White Jute and Rs. 32 for Tossa. Mesta was done at Rs. 23 basis Bots.

On Wednesday morning the market opened firm and quotations were as under:

Pakistani Jute:	Old Crop	Landed at Mill
	Rs. per md.	Rs. per md.
Basis Bots. Shipment	Aug.	31-8
Jat	28-8	30-8
District	27-8	30-8
Northern	27-8	30-8
Cuttings Jat		
N.C.	72-0 per bale	
Cuttings District N.C.	70-0	

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Looms for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Imports into Cossipur and other local markets have increased but are mainly jute and tossa and Murshidabad tossa. Good demand has reduced stocks and prices are higher.

Motussil: The position in Indian markets is unchanged. There are small imports of New Crop in Assam but not yet enough to be of any importance and they are mostly very wet.

In Pakistan the markets are firmer in sympathy with Calcutta. There has been much interest shown by overseas buyers but the prices they have offered this week, though still below the parity of local prices, are higher than they were last week. All imports of New Crop are finding a ready market and the quality is improving. Imports are expected to increase substantially next month. Harvesting is going on and most of the lowland crop is reported to have been harvested while cutting of the midland crop has commenced. Interior markets are reported to be firm and, though there is not a great demand, sellers are reserved and asking for higher prices because of Government propaganda regarding the size of the crop.

SATISFACTORY WEATHER IN MOST INDIAN JUTE DISTRICTS

In their nineteenth crop report for the current season covering the week ended 25th July, Messrs Sinclair Murray & Co. Ltd., say that weather conditions have been satisfactory in the majority of districts but in general further sunshine is required to promote the growth of later sown plants. River levels in Assam have remained fairly steady throughout the week but are still slightly above normal.

DANPUR: Favourable weather conditions have been experienced with alternate rain and sunshine; lowland weeding operations have been completed and are continuing in the mid and highlands. Plant condition has improved and they now range in height from 1' 6" to 5'. The river has fallen and is now below last year's level at this time.

JAIPUR ROAD: The weather has been fairly satisfactory with alternate rain and sunshine. Weeding operations are continuing and the condition of earlier sown plants can be considered satisfactory. Later sowings are improving but more sunshine is still required to promote growth. Plants range in height between 3' and 5'.

RANAGHAT: Fairly heavy rainfall was experienced towards the latter end of the week and has not proved favourable for the later sown plants. Fields are reported to be waterlogged but this should not affect early sown plants, the growth of which is now satisfactory. Plants range in height up to 7'. However, a spell of extreme sunshine is urgently necessary to promote the growth of later sowings.

COSSIMBAZAR: Unfavourable weather has been experienced; it has been cloudy with intermittent showers and thunderstorms. The condition of early plants in the midlands can be considered as satisfactory and they range in height up to 5'. Later sowings on the highlands however urgently require more sunshine to promote growth and to allow cultivators to carry out weeding operations. The condition of highland plants is not satisfactory; they are stunted in growth, and only range as yet up to 1' 6" in height.

NOWGONG: Favourable weather was experienced with light rainfall but more rain is still required to enable cultivators to proceed with harvesting as sleeping water is still insufficient. Plant condition is healthy and they range in height up to 7'. Harvesting is proceeding slowly and cannot be carried on regularly until sleeping water is available.

GAUHATI: The weather has been favourable with moderate rainfall. Further rainfall is still required to provide sleeping water in this area. Condition of plants in general is satisfactory and weeding operations are being carried out where required. Plants range in height from 3' 6" to 7' 9". The river level is steady and is the same as at this time last year.

DIUBRI: The weather has been favourable with moderate rainfall. Harvesting in the lowlands has been completed and in the midlands has been started. Plant condition is reported to be satisfactory and they range

in height from 4' 6" to 7' in the high and midlands. The river has risen and stands 1' 9" higher than at the same date last year.

DAISSEE DISTRICTS: Very favourable weather has been experienced. It has been mainly hot and dry and beneficial for the growth of plants. Crop condition is reported to be improving slowly and plant condition can be considered satisfactory, ranging in height up to 6'. Weeding operations have been completed.

WEATHER CONDITIONS FAVOURABLE FOR PAKISTAN CROP

In their twenty-first crop report for the current season, covering the week ended 25th July, Messrs Sinclair Murray (Pakistan) Ltd., say that weather conditions have been favourable and the standing crop continues to make satisfactory progress. Some areas report that steeping water is still insufficient. River levels are lower than last year at this time.

NARAYANGANJ: Wet weather has been experienced and although this has not been unfavourable a spell of dry and sunny weather would be beneficial. The condition of the standing crop is satisfactory but steeping water is still insufficient. The river has risen about 1' but is still 2' 6" lower than last year at this time.

DACCA: Favourable weather conditions have been experienced and the condition of the standing crop is satisfactory. Harvesting in the lowland area is completed and is being taken in hand in the midlands. The river has risen but is still about 3' lower than last year at this time.

CHANDPUR: Favourable weather conditions have been experienced. The standing crop continues to make satisfactory progress but there is still not sufficient steeping water. The river has risen about 1' but is still 1' 6" lower than last year at this time.

HAJIGANJ: Favourable weather conditions have been reported from this area. The standing crop continues to make satisfactory progress. The river is about 6' lower than at this time last year.

AKHRAUR: Weather conditions have proved favourable and the standing crop continues to make satisfactory progress. The river is about 2' lower than at this date last year.

ASHUGANJ: Weather conditions have proved favourable with alternate rain and sunshine. The condition of the standing crop is satisfactory. The river has risen but is still 2' lower than last year at this time.

NIKLIAMFARA: Weather conditions have not been favourable and a spell of strong sunny weather would prove beneficial to the plants. The condition of standing crop is not satisfactory as plants are reported to be stunted in growth. The river is about 3' lower than last year at this time.

SARISHABARI: Weather conditions have been rather wet and although this has not been unfavourable a spell of sunny weather would prove beneficial.

SERAJGANJ: Weather conditions have proved favourable and the standing crop continues to make satisfactory progress. Harvesting operations have been taken in hand fairly freely. The river has risen and is now about 9' lower than last year at this time.

NAKALIA: Favourable weather conditions have been experienced and the standing crop continues to make satisfactory progress. The river has risen steadily and is now about the same level as last year at this time.

BHANGOORA: Alternate rain and sunshine has been experienced and this has proved favourable. The standing crop continues to make satisfactory progress. The river has risen but is still about 3' lower than at the corresponding date last year.

THE FOREIGN JUTE MARKETS

(FROM OUR OWN CORRESPONDENTS)

Dundee, By Air Mail.

GENERALLY speaking, the jute industry is in a fairly healthy condition at the moment, and the volume of business in all commodities is sufficient to maintain a satisfactory level of prices. The raw material has been dearer lately, but only slightly, and there are hopes that there will be a sufficient supply of the fibre to meet all requirements over the next 12 months. The published figures of the area cultivated in Pakistan would be alarming if they were taken seriously, but they are so ridiculously low that they cannot possibly be anywhere near correct. At 788,965 acres, compared with 1,906,815 acres last year, the crop would be only about 3,000,000 bales. Continental manufacturers are moderately busy, but it is apparent that spinners are producing more than sufficient to meet the consumption. They are offering to sell more freely to the U.K. and have reduced their terms for ordinary hessian yarns further, with little success. Common 8 lb. cops and 8 lb. spools could be bought landed in U.K. at just over 16d. per lb., duty paid, which is about a penny per lb. dearer than the net rate of 15.12d for local spins.

Importation of jute cloth and bags into the U.K. from Calcutta continues to increase, that for June being 16,734,000 square yards of cloth, costing £593,562, against 7,643,000 square yards (£273,854) last year, making the total for the first six months 57,804,000 square yards (£2,119,000) and 79,636,000 square yards (£2,719,227) respectively. There were no imports of cloth from the Continent last month, while the bulk of the jute sacks and bags, amounting to 50,627 cwt. (£287,433) came from India, against 23,868 cwt. (£199,861) in June last year. Total imports of these for the six months were 238,590 cwt. (£1,386,655) this year, compared with 345,305 cwt. (£5,105,721) last year. The U.K. imported 619,215 bales of raw jute to 30th June this year (£2,864,488), against 372,970 bales (£10,776,470) during the same period last year.

All mills and factories in Dundee and district were closed on 25th July for two weeks.

Plantation Topics

U. K. TEA DRINKING HABITS SURVEYED

THE Tea Bureau has just produced its third consumer survey, which was made just six months after the derationing of tea in the United Kingdom. In view of the uncertainty disclosed in earlier estimates as to the effect this development would have on consumption, it is of interest to learn that "broadly speaking, the picture shows a small but distinct advance in tea consumption" since then. "The housewife has taken advantage of freedom to give herself and her family a stronger and more frequent cup of tea," and this may well reflect "the very marked increase in satisfaction with the quality of tea available." The housewife and her tea-cup have a section to themselves from which it is learned that consumption by "all tea-drinking housewives" has increased slightly from an average of 6.7 to 6.8 cups a day, but that the average number drunk by upper-class housewives has increased significantly (from 5.7 to 6.4), bringing this class of housewife almost into line with the average. The quantity of tea used in making tea was the subject of detailed investigations. It appears we have still far to go before the well-tried formula of "One for each person and one for the pot" becomes universal or even usual. "The proportion of those observing it, when making tea for four, had more than doubled since 1951," says the report, "but it is only 11 percent." No fewer than 53 percent are still using three teaspoonsful or under when making tea for four, and among these is listed a parsimonious three percent who use one-and-a-half teaspoonsful or less.

It seems that even children under five are tea addicts. The survey says that, along with almost all the adults in the country, more than nine-tenths of the children drink tea, and that in working-class and "very poor" homes four out of five infants are tea drinkers. Since infancy is defined as from birth to four, it is at least surmisable that the youngest of them, unable to handle the cup that cheers, are sucking contentedly from the bottle. The statistics on the subject differentiate between "working" and "middle" and "upper" class homes. The upper-class infants present a class "too small for analysis," and of the middle-class infants tea-bibbing under five years of age is confined to 65 percent, or three out of five. The age group five to fifteen shows 93 percent of children (all social classes averaged) taking tea, but of their elders the whole gamut of female adults (100 percent) and 99 percent of their men folk conform to the tea habit.

The report contains such curious information as that tea caddies are used rather more in Scotland and the North of England, and particularly in the North-East of England, than in the Midlands and the South. There has been a slight increase in the use of tea caddies, "doubtless partly attributable to housewives' buying or being given a coronation tea caddy." The present position is that 71 percent of housewives use a caddy, 22 percent a tin, and believe it or not—four percent actually keep their tea in its original package. The survey is priced at 6d.

DEMAND GENERALLY RESTRICTED AT LONDON TEA SALES

Demand was generally restricted for the limited quantity (only 11,070 packages) of North Indian and other teas finally catalogued for auction in London last Monday. They consisted mostly of new season's Dooars descriptions. The few good liquoring kinds sold at near brokers' valuations but most plainers sorts were withdrawn against bids of 2d. to 3d. per lb. below valuation. Clean Common Broken Pekoe was indicated at 36d. nominal per lb., as against 38d. nominal last week.

At last week's sales the 35,475 packages on offer realised an average price of 5s. 54d. per lb. against 3s. 65d. in the previous week and 2s. 817d. a year ago. Results of some of the companies are given below:

	No. of packages	Aver. per lb.
Amalgamated	504	3/4
Cent. Province	846	3/6
Cons. Estates	546	3/6
Demodera	252	3/6
Dumbula Valley	174	3/7
Dooars	739	3/4
Eastern Produce	1,421	3/8
Hanipha	204	3/7
New Dumbula	396	3/8
Pundaloya	204	3/8
Southern India	492	3/4
Spring Valley	156	3/6
Stagbrook	180	3/3
Standard	654	3/8
Tea Corporation	468	3/6
United Planters	762	3/7

COCHIN TEA SALES

Offerings at Sale No. 15, held on 21st July, amounted to approximately 16,49,600 lbs. Leaf appearance continued to be rather disappointing, but liquors generally were brighter in cup and there were a few attractive Nilgiri invoices on offer. There was a good general demand. Commonest kinds were fully firm to dearer, while low medium and medium descriptions were well supported at rates which were an irregular one anna easier. Best liquoring sorts were about steady but dearer where improved quality was evident. Whole leaf grades, which

were one to two annas dearer, and fannings were a strong feature. Middle East types in particular being keenly sought after.

	Quotations		Last Sale	
	Rs. As. Ps.		Rs. As. Ps.	
Low Grown				
Travancore	B. O. P. 1 9 6		1 10 0	
Medium	B. O. P. 1 10 0 to 1 11 0		1 11 0 to 1 12 0	
Anamallai	B. O. P. 1 11 0 to 1 12 0		1 12 0	
Best liquoring	B. O. P. 2 3 9		2 3 6	
Nilgiri	B. O. P. 2 2 0 to 2 3 0		2 2 0	
Clean Black	O. P. 2 2 0 to 2 3 0		2 2 0	

The market for the Export Quota eased to 171 pies at which price limited transactions took place. Export Sale No. 16 will be held on 4th August.

CHITTAGONG TEA SALES

At Sale No. 3, held 22nd July, leaf offerings consisted of 7,417 chests. Dust offerings amounted to 1,652 chests of which 60 chests were of 1952 manufacture. There was a supplement of 171 chests.

Leaf: A slightly improved selection met with a weak market. Prices eased progressively as the catalogue was sold and competition was only seen at the lowest levels. By the end of the sale B.P. and B.P.S. were over four annas easier and B.O.P. and P. Fgs. shared in the general decline; 312 chests were withdrawn.

Dust: There was a steady demand at slightly lower rates and every package sold readily. Clean Common Dust can be quoted at Re. 1-4-6 with Churamoni types a little easier at Re. 1-4. Best liquoring types were in keen demand by Karachi buyers and one parcel realised Re. 1-12-3.

Sale 2—8th July		Sale 3—22nd July	
O.P.	Rs. 1 8 6	Rs. 1 12 0	
PKK	Rs. 1 7 6	Rs. 1 10 6	
B.O.P.	Rs. 1 6 6 to 1 7 0	Rs. 1 9 6 to 1 10 6	
B.P.	Rs. 1 5 0 to 1 5 6	Rs. 1 9 6	
B.P.S.	Rs. 1 5 0	Rs. 1 9 6	
O.F.	Rs. 1 7 0 to 1 7 6	Rs. 1 11 0	
P.F.	Rs. 1 6 0	Rs. 1 10 0 to 1 10 6	

The next sale will be held on 5th August when 6,485 leaf, 2,306 dust and 238 supplement chests will be offered.

COLOMBO RUBBER PRICES

The following figures are issued by the Indian Rubber Board from the weekly rubber market report issued by the Colombo Brokers' Association:

Closing prices on 17-7-1953		Average for week	
(Rs. per lb.)		(Rs. per lb.)	
Sheet:			
No. 1.	1.36		1.36
No. 2.	1.33		1.33
No. 3.	1.30		1.30
No. 4.	1.16		1.16
No. 5.	1.11		1.11

Cream:			
R.M.A. 1X	1.05/08		1.051
R.M.A. 1	.95/100		.973
		Cream 2.	.924
			.881

Scrap Crepe:			
No. 1.	Cts. .70		Cts. .70
No. 2.	" .66/69		" .661
Flat Bark	" .60/63		" .611
		Sc. Crepe 3X	.64

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

Calcutta Markets

DEMAND IMPROVES IN TEA EXPORT SALE

IRREGULAR ENQUIRY IN DUST AUCTION

At Sale No. 7, held on 27th July, offerings in the Export auction consisted of approximately 22,000 packages. There was a good general demand, which was better than in the previous Sale. Medium and low medium were well supported and these types were a half-anna dearer. Medium Assams sold at about the last rates but those with brighter liquors were fully firm and often dearer. This was also the case with the better liquoring Assams, where buyers followed quality teas. Leaf grades were again in good demand and were generally a little dearer, while stylish Broken Pekoes Souching sold well.

Quotations		1953		1952	
		1 13 0		1 6 0	
Clean Black Pekoe					
Clean Common Broken		1 11 0		0 13 0 to 0 14 0	
Pekoe					
Medium Assam Broken		1 13 0		1 4 6	
Good Assam Broken		2 10 0 to 2 12 0		2 8 0 to 2 10 0	
Pekoe					

Internal Sale

At the Internal Sale, held on 28th July, the Dust offerings consisted of approximately 10,000 packages. There was a good and general, though rather irregular, demand. There was once again very good enquiry for black leafy exportable dusts; these and clean black dusts were the strongest feature of the sale and were often selling up to 2 annas per lb. above the last rates. Commonest dusts were dearer by one anna, while Medium

Assams were fully firm. Dooars with bright liquors were selling at one to two annas above the last rates. C.T.C. Assams showed a decline in quality and as a consequence met with less demand and were about one to two annas easier. There were comparatively few Darjeelings on offer but they sold quite well, especially when they had flavour. Only a few Internal leaf teas were offered and these sold at the last rates.

Quotations		1953		1952	
		1 10 6		1 3 6	
Medium Dooars Dust		1 9 0 to 1 9 6		1 3 6	
Medium Assam Grains					
Dust					
Best Assam CTC Dust		2 5 0 to 2 7 0		2 0 0	

SHIPS CHARTERED TO CARRY U.S. GRAIN TO KARACHI

EASTERN FREIGHT MARKETS REMAIN DULL

THE anticipated chartering of foreign tonnage for the carriage of grain from America to Karachi commenced last week and four vessels were fixed from U.S. Gulf Ports at 72 shillings and seven from U.S.N.H. at 68 shillings. All for August loading. In addition four American flag vessels were chartered for July and August at \$20.45 from U.S. Gulf Ports for the same business. Charterers have now withdrawn temporarily from the market. The National Coal Board in London has announced the purchase of 200,000 tons of coal from Belgium and 300,000 tons from France for shipment within the next few months. This is likely to give a fillip to coastal shipping in the U.K. and possibly to Mediterranean traders but is unlikely to affect deep-sea vessels to any extent. A report from Hongkong emphasises the inability of British-run tonnage to compete with Japanese. According to this report, no fewer than 19 British ships are lying idle in Hongkong and a further 19 have been laid up preparatory to scrapping.

Markets in the East remain dull and a British diesel is reported to have accepted 57s. 6d. for coals Calcutta-Japan with 131 percent commission. A large motorship has been fixed from Vera Cruz to Bombay and Madras with sugar at 88s. 9d. Bombay discharge and 92s. 6d. Madras. Two vessels were arranged for the carriage of flour from Australia to Ceylon on the basis of 65 shillings West Australia loading, 75 shillings South Australia-Victoria-NSW. Another coal cargo was arranged from Durban to Karachi at 40 shillings.

The time charter market showed some signs of stiffening and a 10,750-ton oil-burner obtained 15s. 6d. for 5-7 months' trading delivery U.S. Gulf redelivery U.S.N.H. or Gulf.

SUGAR MARKET STEADY

During the week ended 28th July, the sugar market was steady although only small business passed. Railway bookings to Calcutta via Mokameh Chat were opened on 22nd July but despatches were moderate and ready prices as a result were maintained. There were small enquiries from South India. Bookings over the Assam Rail Link were opened so that State's requirements were being met directly. In Calcutta, stocks amounted to 30,000 bags and arrivals were 2,500 bags a day. Sales averaged 3,000 bags a day in the local markets and 2,000 bags outside. Prices of ready sugar ex-Kantapur delivery were Rs. 30-14 a maund for ordinary grain and Rs. 33 for big grain.

LINSEED MARKET FIRM

The market remained very firm throughout the week with a notable advance in prices. With steady conditions prevailing upcountry and a continued scarcity of despatches, to this centre, sellers showed very little interest. A small volume of trading was reported at increased prices. There was a fairly keen demand from crushers on the whole. The oil market remained steady and prices were showing an upward trend. Although the possibility of export business receded further, the much improved local demand helped maintain support. Latest quotations were as follows: July-August Rs. 23-8 per maund.

HIDES AND SKINS

The market in hides was weaker, while that of skins was steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 21st July and 27th July, 1953)

Goatskins:—Wet salted (Ord) 6,000 pcs. on the basis of Annas 9-6 to Annas 11-3; Wet salted (Ord) 42,000 pcs. on the basis of Rs. 8 to Rs. 10-8; Wet salted (Slaughtered) 11,500 pcs. on the basis of Rs. 12-8 to Rs. 24.

Goatskins:—Wet salted 57,180 pcs. on the basis of Rs. 185 to Rs. 375; Assam-Malda-Dinajpur 20,100 pcs. on the basis of Rs. 285 to Rs. 340; Purneah-Kissenganj 4,620 pcs. on the basis of Rs. 275 to Rs. 290; Patna (Ord) 4,800 pcs. on the basis of Rs. 150 to Rs. 210; Pakur 3,590 pcs. on the basis of Rs. 250 to Rs. 260.

Bazar Stocks

(27th July, 1953)

Cowhides:—Wet salted 1,03,500 pcs.

FIVE-YEAR NATIONAL SAVINGS CERTIFICATES CAN NOW BE HELD FOR SEVEN MORE YEARS AFTER MATURITY

Although further issue of 5-Year National Savings Certificates has now been discontinued, present holders of these certificates may, at their option, continue to hold them after maturity for a further period upto seven years.

RS. 150 FOR RS. 100

For example, if your investment in these Certificates amounts to Rs. 100/-, the encashment value, seven years after maturity, will be Rs. 150/-.

CASH VALUES

You also have the option of cashing your Certificates any time after maturity and the amount payable will be

Rs. 120/- after first year,	Rs. 135/- after fourth year,
Rs. 125/- after second year,	Rs. 140/- after fifth year,
Rs. 130/- after third year,	Rs. 145/- after sixth year,

IT PAYS YOU TO HOLD YOUR MATURING FIVE-YEAR CERTIFICATES FOR SEVEN MORE YEARS.

Issued by The National Savings Commissioner, Government of India, Gorton Castle, Simla-3.

FUNDAMENTAL RESEARCH

A firm basis of research is essential to sound technical progress

in any field. The Aero Engine Research Laboratory at

Thornton-le-Moors, Cheshire, England, plays an

important part in Shell's contribution to all branches of

aviation. Here engineers, chemists and metallurgists

study the vital factors of fuel and lubricating oil

performance in relation to engine and

airframe development. Application of

the knowledge gained at Thornton

and other research centres enables

us to meet, and anticipate, the

progressive requirements of

the Indian aircraft industry.

BURMAH-SHELL...

IN INDIA'S LIFE AND PART OF IT

Chairman's Speech

THE PLYWOOD MANUFACTURERS ASSOCIATION OF INDIA

MR. N. N. BOSE ON ALTERNATIVE USES OF PLYWOOD

Summary of the speech of Sri N. N. Bose, President of the Association on the occasion of the Third Annual Meeting of the Association held at the premises of the Association, P-11, Mission Row Extension, Calcutta, on the 14th July, 1953.

The year 1952 has been a dark one for the Tea Industry. Tea prices, which began to fall since the autumn of 1951, went on falling till towards the end of 1952, the market was at its lowest for over a decade and Tea estates were suffering huge losses. It is not my intention on this occasion to review the reasons for such a sad turn in the prosperous tea industry of the Tea Industry on various occasions. Neither do I want to participate in the controversy as to the part played by the Government in not helping the Tea Industry in one of its worst crisis. I would, however, like you to take one lesson to heart from this bad situation and that is best illustrated by the saying "It is not safe to put all your eggs in one basket."

I have told you on previous occasions that there is ample scope for use of plywood in other spheres. In a country like India, Plywood Industry can brighten the houses of many middleclass and poor people by supplying cheap, light and durable items of furniture. It has got vast potentialities in neighbouring countries both in the Middle East and in the Far East, if not, in Europe itself. While making this statement I am fully conscious of the fact that most of our plants are small and meant for tea chests only but I think even with these small plants with but a few additions in machinery, it is possible to produce a certain percentage of plywood for other use and not to depend on the tea industry hundred per

cent. "As you know I am going abroad on your behalf in about a week's time. One of my aims will be to see how it is possible for plants like ours to manufacture plywood for household purposes."

The second lesson that we should take from the crisis which faced the great Tea Industry in 1952 is that there is no room for complacency even in a highly organised and prosperous industry like the Tea Industry not to speak of an industry like ours. It is now well known and well accepted that one of the main reasons for the crisis in the Tea Industry was over-production and the situation showed improvement as soon as it decided on curtailment of production. If an industry like the Tea Industry could not avert a crisis by only 10% over-production, it is no wonder that the Plywood Industry is also passing through a crisis firstly on account of fall in demand from the Tea Industry for reasons stated above and secondly because the capacity of the tea chest industry, according to official estimate, now stands at over 9 million tea chests when the internal consumption can at best be about 5 million. The need for control is therefore evident. The other alternative is chaos.

In my speech on both the occasions of the last two Annual General Meeting of the Association, I appealed to you for co-operation, goodwill and sacrifice. The time has come when this has to be put in practice for the common good—for the common safety. I am accordingly thankful to Dr. Nagaraja Rao, the Industrial Adviser, for arranging a meeting of the Indian Plywood manufacturers in Calcutta and this is going to be held day after tomorrow. We shall no doubt take this occasion of discussing various problems confronting the industry and if we succeed in devising some means whereby the Plywood Industry can be put on a sound basis—even if it means some sacrifice from some or all of us—we shall have taken a step which we shall never regret and for which we shall feel happy in years to come.

I have dwelt at some length on the above subjects as these have been haunting me for some time past. I consider them as most important for stabilising the industry and most essential for freeing it from periodic ups and downs which have been a sad feature of this industry since the war ended. I shall now pass over the other subjects hurriedly.

Protection for Plywood

The most important event of the year has, as has been pointed out in the report, been the enquiry for continuance of protection by the Tariff Commission under the Chairmanship of Dr. B. V. Narayanaswamy Naidu. Although the report is not out, I have every confidence that protection will be continued for another term. I would, however, urge on you, with all take this opportunity as the last one in putting the industry on a sound footing so that further protection becomes unnecessary. As a matter of fact, from the way the industry is expanding, I should think that we should be able to export a good quantity of plywood in course of another 2/3 years and the necessity for imports of foreign plywood will not arise in future.

I take this occasion of referring to the visit of Dr. Otto Kraemer, U.N.O. expert on Plywood and expressing my sincere appreciation of the good work done by him in visiting plywood factories throughout India and offering us valuable advice. We are thankful to the Government particularly to Sri M. D. Chaturvedi, Inspector General of Forests, for the initiative taken by him in the matter and we offer our heartfelt thanks both to our Government and to the U.N.O. for arranging such a visit which has been most helpful to the industry.

The import policy in 1952 was not, in the particular situation confronting the Tea Industry, helpful to the Plywood Industry. The special licence granted by the buyers of the Assam Saw Mills & Timber Co. Ltd. was uncalled for and harmful to the cause of the indigenous industry. The Government has, however, made good to a great extent the harm done to the industry by not allowing any import of tea chests in the first half of 1953. For this the Government deserves the best thanks of the industry.

The Government has, however, allowed 5% imports in the second half of this year. Although this is a small quantity and may be taken as a token import to which no objection should ordinarily be taken, it may be pointed out that the condition in the Plywood Industry is very serious and any imports could somewhat. In view of the fact that there is no demand for tea chests, either indigenous or imported, it is to be hoped that the Government will see that licences are issued only after orders begin to be placed with the indigenous industry.

I am very pleased to say that our Laboratory and Test House has been doing useful work. Not only the products of our members are being tested there but it is helping the J.F.O.s by testing samples sent by them to the Association Laboratory. This shows the important part that is being played by the Laboratory and the esteem in which it is held.

I have now pleasure in referring to another important achievement of the Committee. The first issue of the Journal "Plywood" is just out and the Committee can take pleasure in accomplishing a work about which it had been talking for a long time.

I am, however, sorry to say that due to the very bad time through which our industry has been passing for nearly a year, it has not been possible to collect funds to make much progress with the other venture consider this as a most promising enterprise and most vital for Calcutta members in particular. I hope that with better prospects ahead, this too will take shape and start functioning in a short time to come.

Before I conclude, I must thank you for the confidence you have placed in me by entrusting me to the task of representing the industry in the U.K. and the Continent and in those countries. This is a task of great magnitude and I do not know how far I shall succeed in my mission but I can assure you that I shall leave no stone unturned to make it a success.

It is also my fervent hope that by the time I return, the situation in the Plywood Industry will have taken a turn for the better and the clouds that pervade the autumnal atmosphere will have passed giving place to autumnal sunshine and happiness.

COAL COMPANIES

O Po, F and Dd. indicate Ordinary, Preferred, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES.

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

STRAINS IN THE ANTI-COMMUNIST ALLIANCE

U.S. IMPATIENCE WITH EUROPE: THE END OF DOLLAR AID

THE bonds that unite the anti-Communist alliance of powers have visibly grown looser in recent months. An American way of putting this would be to say that "the cohesion of the free world has diminished", but that carries the implication that these developments are to be deplored, which might not by any means be the case provided that the common determination to resist Russian imperialism has not weakened. By saying that the loosening of the alliance has been going on "in recent months" we avoid dating it from any particular event; to take the election of the Republicans, the death of Stalin, the rise of McCarthy or the actions of President Rhee as the starting point for the change, would perhaps seem to hint that this or the other event was peculiarly the cause. But the one thing certain is that the change in attitudes within the anti-Communist alliance this year has been complex and not the outcome of the actions of any one man, one party or even one country. The conviction in the United States that foreign aid must now be brought to a speedy end is neither a simple cause nor effect of the new spirit, but it is connected with it in ways that repay closer attention.

It has been known since the Republicans went to Washington that foreign aid would taper off, but it had not been expected that this would be done so quickly nor that it would be the occasion for the polite expression of so much disappointment and disgust by the American people. Discussing the time-table for the end of foreign aid programmes, the foreign editor of the *Neue Zürcher Zeitung* says this week: "Whatever the final decision, it is certain that the Americans are disappointed with the conduct of most of the nations which in the course of the past six years have received billions of dollars from them." This disappointment sometimes takes the form of the belief that America's allies, who have received unprecedented financial assistance, have broken faith, and therefore the closure of aid programmes is not just a desirable economic reform but the prelude to tougher diplomatic tactics. Thus, *Newsweek*, an influential New York weekly, said lately: "The two-power domination of the world by the U.S. and Russia is weakening—ultimately will end. This means deep, historic change. For one thing, the era of multi-billion dollar aid is ending. In the future you can expect Congress to appropriate money only for those global projects which will concretely benefit the U.S., and the money will be strictly conditioned on these benefits. You can expect a more realistic working relationship with our allies. Illustration: the U.S. from now on will be more reluctant to give British policy carte blanche support all over the world. As for France, you can expect a tougher U.S. attitude. The President as a last resort is prepared to move firmly to limit France's power in forming Western policy." This coupling of the end of foreign aid with tougher policies towards Western allies is typical of much American feeling. The earlier and well accepted proposition that dollar aid would have to end some time has now become the assertion that it should end as soon as possible because the recipients have not played the game. An American newspaper says: "The Senate's determination to end the foreign aid programme next year reflects the growing exasperation of Congress with America's allies."

There are, beyond doubt, grounds for this exasperation. But before we list them, we should emphasise that current American pessimism about the "failure" of foreign aid is overdue and quite under-estimates the success of the foreign policies the State Department has pursued since 1947 and the esteem in which the American people are held in the West. The gloom and irritation illustrated in the quotations above from the U.S. press will probably pass—without the need to "get tough" or

"go anything alone"—and when they are past, it will be seen that foreign aid was not in fact a big mistake and nor was the United States betrayed by her allies. It will also be seen that a multi-billion dollar exercise stretching over six years and touching every part of the democratic world was bound to become confused as to its aims and to become the vehicle for a number of illusions about the conduct of foreign policy. Meantime however, the American people can point to certain developments in allied countries which suggest clearly that dollar assistance did not always have the results awaited and hoped for.

French politics have played a major part in this process of disillusionment. Not just the instability of cabinets in Paris, nor the repeated loans from the Bank of France, nor the uncontrolled inflation, which all persisted despite years of lavish American assistance. There was also the conscious attempt of the Pinay Government—probably the best France has had since the war—to have French industry subsidised by off-shore purchases against dollars and at the same time to obtain more military aid. This attempt to use dollar aid as an excuse for doing nothing about the inadequacies of the domestic economy seems to have shaken American opinion more than was realised in France at the time. When it was followed after a few months by the vitriolic anti-Americanism of the Rosenberg campaign (which became much more hysterical in France than in Britain or India, and which was backed in that country by responsible sections of opinion and by the Catholics) some shortening of American patience is not difficult to understand. Against the disapproval in France it would be fair to set the appointment in France of the Marshall aid case of the United Kingdom, where Marshall aid was relinquished at the beginning of 1951; Britain was the largest beneficiary of dollar assistance and it could not be said that it did not make good use of at least most of the help it received, though no doubt achievements were well below expectations.

But the French have disappointed American hopes in another sphere where there is no countervailing British response; far from it. The turn of French opinion against the European Defence Community is seen from the other side of the Atlantic as a simple breach of contract, especially since the scheme was proposed by the French in the first place. This is part of the failure of the Europeans to do the one thing the Americans wanted them to do most: to unite. The ultimate objective of the Marshall Plan was the creation of a vast economic unity in Europe, without frontiers or barriers, and eventually with a single army. Nothing of the sort has happened, or even begun to happen. Perhaps it never could; perhaps the Europeans do not really want it; and perhaps it would be a thoroughly bad thing. But the fact remains that that was what the Americans thought was going to happen, and they presumably formed this hope with some encouragement from European statesmen.

While the European nations have come no closer together, their "colonial" affairs—a subject on which the American conscience was always uneasy—have become more complicated. Since U.S. aid began to flow, Britain has extricated herself from Palestine but she has suffered heavy economic loss in Persia and sometimes seems as far as ever from agreement in Egypt. The situation in Malaya has improved, but the position in Kenya is beginning to appear as troublesome as a new Malaya, even if the causes are quite dissimilar. The French foothold in Viet Nam has grown no more secure, while the supposedly satisfactory arrangements in the other Indo-Chinese States have crumbled with discouraging speed.

Another reason for American pessimism about foreign aid is the result of the recent Italian elections. Millions and millions of dollars have been poured into Italy for the restoration of industry and transport and the improvement of agriculture—and yet this year 35 percent of the electorate voted for Communists or left-wing Socialists. It is not surprising that many people are reconsidering the proposition that the best way to fight Communism is with economic aid. As a matter of fact, that theory has always been extremely dubious except in the obvious sense that a healthy economy is better able to withstand the political, moral and sometimes military challenge from Marxism. This is a subject of great interest in Asia, where we too often hear the quite unfounded statement that the better fed and better educated people become, the less likely they are to turn Communist. One could with almost as much justification argue the other way, when one considers the poorest and most backward regions of this continent. It is interesting to note that Ruth Fischer, the sister of Gerhart Eisler and a former member of the Comintern whose views on Communism are said to carry some weight with the State Department, has just put forward similar views with India in mind. "Writing on 'The Indian Communist Party' in the *Far Eastern Survey*, she analyses the results of the Indian elections and points to the gains made by the Communists in South India: 'The relatively large Communist vote in these States does not support the facile thesis that poverty breeds Communism. Indian villagers, to be sure, exist at a level which, by Western standards, represents permanent poverty, and Madras was at the time facing near-famine. On the other hand, the populations of these States are among the most politically literate and best educated in India. Travancore-Cochin, for instance, has the highest literacy rate of any Indian State.'

These are a few of the grievances the United States has against the countries she has assisted so generously since the war, and a few of the reasons why she should now be anxious to end dollar aid. Of course, other democracies have their reasons for feeling disappointed with the United States and their own grounds for loosening the bonds that have held the anti-Communist alliance together. Trade barriers and unsatisfactory creditor policy on the part of the USA are standing reproaches. The McCarran law, which is of little importance to India, has alienated many people in Europe and elsewhere by its inhuman control over immigration and travel to the States. Senator McCarthy is so distasteful an individual and in truth so unrepresentative of American feeling that one hesitates

UNEMPLOYMENT AND PLANNING

THE CHOICE BETWEEN JOBS AND "WELFARE"

THE growth of unemployment in recent months may have resulted from an absolute decline in the number of jobs available or from a sudden large influx of applicants into the labour market. Considering the lack of statistics and other precise information, caution is justified. The Planning Commission in a recent communication to State Governments points out that "on account of the inadequacy of available data it is difficult to say whether there has been any absolute decline in the total volume of urban employment. But it appears that the growth of fresh employment opportunities, especially in the private sector, has not kept pace with the numbers seeking work." The latest statistics of the working of employment exchanges show that the number of registered unemployed increased by more than 7,000 during June; there was a sharp decline in vacancies notified and a smaller one in the number of placements. Central and State Government establishments are among the chief users of the employment exchanges, and were responsible for approximately two-thirds of the vacancies notified and placements made during June. The exchanges cover only a very small sector of the labour market and the trends indicated by their working are not necessarily true of the economy as a whole.

Unemployment, by causing hardship, frustration and discontent, embitters political life and undermines security; but whatever its political repercussions, it is a problem which can be solved only by economic means. If the number of jobs is not increasing as fast as the number of job-hunters, the only solution is to close the disparity by increasing the former. The primary aim therefore is to increase employment opportunities by economic expansion, by setting up new industries, stimulating agricultural production, undertaking hydro-electric and other projects. All of these things are being done under the five-year plan, but evidently not quickly enough. The plan, rightly, has only limited application in the private sector, where it suggests targets without seriously examining how they will be achieved or how the goods produced will be sold. With the help of official statistics and particular examples such as the cotton textile, paper and cement industries the Government has persuaded itself that this sector is progressing well enough. What it recognises insufficiently is the fact that private enterprise cannot expand adequately unless capital investment is forthcoming. The argument that what private enterprise loses through taxation, public enterprise gains as investment—thus maintaining the expansion of the economy as a whole—misses the point that various types of investment differ as to the quantum of employment they provide. The State Governments' eagerness to appropriate resources without regard to the needs of other sectors of the economy was demonstrated last month by the manner in which some State loans were raised; this drew sharp criticism in South India especially.

Another feature of official thinking on unemployment is the search for interim, almost makeshift, remedies which are neither adequate in the short run nor justifiable in the long run. This search seems to have been intensified since Mr Nehru, the Prime Minister, declared earlier this year that employment rather than production was the better measure of economic progress. The Planning Commission has recently reminded State Governments that the plan recommends "the fullest use of the available manpower resources by operating labour-intensive methods, maximum utilisation of the unemployed manpower in the implementation of development projects, minimum expansion of money incomes, speeding up of capital formation, safeguards against excessive unemployment arising out of technological change, and proper distribution of capital in new investments with a view to keeping employment opportunities to the maximum." It has gone on to outline an 11-point programme to reduce urban unemployment, particularly among the educated; the suggestions are of uneven merit but one especially—to encourage schemes for power development sponsored by private capital—deserves to be pressed more vigorously. Industries, in South India especially, have had the unfortunate experience of restricting production and laying off workers because of electric power shortages, but State Governments continue positively to hamper private efforts to expand supplies. The Central Government's lethargy in amending the Electricity Supply Act, 1948, which would increase returns and thereby encourage these efforts, is also inconsistent with this aim. Power supply, however, is only one, relatively minor, factor in the unemployment situation; much more important and dangerous in the long run is doctrinaire attachment to the welfare state. Nobody denies that attempts to improve the condition of workers are laudable; but wages have to bear some relation to productivity

and to the profitability of enterprise. In the period of war and postwar shortages, welfare burdens could be, and to some extent were, transferred to the consumer, but with the return of more competitive conditions, economic survival, of industries as of nations, depends on the ability to produce goods more cheaply. This calls for more efficient production—for the modernisation and rehabilitation of equipment, and for the achievement of a new optimum balance between the various factors of production. The Government's dilemma is that it wants more workers to be employed at higher wages that are completely out of line with the present stage of economic development; at the same time it wants industry to produce goods more cheaply without diminishing the relative or absolute importance of a major item in their cost of production.

CURRENT COIN

Rail Transport Gap.—The working of the railways has greatly improved since partition but remains a source of constant worry to trade and industry. Efforts have been made in recent years to impress upon the authorities the need to improve facilities further. A year ago bottlenecks in the movement of coal caused stocks in many factories to fall so low that they were threatened with closure. The Railway Ministry at the time said it did not have enough wagons and begged to be excused for its inability to do anything. Meantime, however, measures were taken to increase the supply and rationalise the movement of coal wagons; and four months later, in November, a member of the Railway Board based his defence of the much-criticised regrouping scheme on the claim that coal transport had improved. That claim was no doubt justified, although not many considered it to be a result of regrouping, and the improvement in supply of wagons to coalfields has since been maintained. Difficulties however continue and coal is only one—although perhaps the most important—of a wide variety of commodities affected. In his presidential address at the first quarterly general meeting of the Indian Chamber of Commerce in Calcutta last Friday, Lala Karam Chand Thapar warned that the deficiencies of the railways might affect the success of the five year plan; the point is examined in some detail by our New Delhi correspondent on page 185 today. Transport shortages, according to Mr. Thapar, mean that factories have to carry larger stocks of fuel, stores and raw materials while finished goods accumulate; this immobilises capital and raises insurance and interest charges. The export trade has also suffered and Mr. Thapar urged that the allocation of Rs. 400 crores for the railways under the five year plan be raised. He also suggested that a high-powered committee be appointed to enquire into the results of the railway regrouping scheme. There will be widespread agreement with his view that State Governments' road transport policies are badly in need of overhaul. It is reported that an official of the Railway Board admitted at a conference with business interests in Calcutta a few days ago that the rail transport situation has deteriorated considerably since May. The "Own Your Railway Wagon" scheme conceived by the Board during that month was in itself implicit admission of this fact. Under this scheme it is trying to find out whether business interests will buy themselves wagons, which it is properly the function of the railways to provide. However, as our New Delhi correspondent points out today, the shortage does not cover wagons alone but extends to locomotives also, and in many areas doubling of track and better transshipment facilities are necessary. There is no evidence yet of a serious effort on the part of the Government or the Planning Commission to tackle these difficulties.

Insurance and Estate Duty.—High priority has been accorded to the Estate Duty Bill and it is expected to become law by the end of next month. Death duties have been under discussion for nearly three decades and the present Bill has been examined in some detail by two select committees, the second of which reported last March, but public discussion has made clear that it is not yet in proper shape. Among the most important sectors of the economy it affects is insurance, and strong protests have been heard in recent months that the exemption limit of Rs. 5,000 granted in the case of life policies is too low. Sir Purshotamdas Thakurdas, chairman, last week told shareholders of the Oriental Government Security Life Assurance Company in Bombay that the exemption gave "such meagre relief that, in my opinion, it is hardly worth the name." He thought that where policy moneys were payable to named beneficiaries, i.e., where policies were effected under the Married Women's Property Act or where the policyholder had executed a nomination or assignment, either absolute or conditional, the exemption limit should be fixed at Rs. 1 lakh. Life offices play a particularly important rôle in mobilising the community's savings and it is essential that their efforts to expand business should not be impeded by such measures. The select committee has more reason-

ably proposed that moneys payable under insurance policies effected by a deceased on his life for the purpose of paying estate duty or assigned to the Government for this purpose will be exempt from estate duty to the extent of the duty payable. Some clarification is needed as to whether gifts of moneys payable under life policies are included in the gifts of property which are exempt from duty under clauses 9 and 10 provided bona fide possession and enjoyment of these gifts is immediately assumed by the donee and retained to the entire exclusion of the donor. Sir Purshotamdas criticised the condition that gifts should be made at least two years before the death of the donor. In some cases the policyholder might die less than two years after making his second or subsequent assignment or nomination because the first assignee or nominee had died; but it was clear from his first assignment or nomination that he intended to divest himself of interest in the policy from the date of its execution. In another section of his address, Sir Purshotamdas' criticism of malpractices in insurance were especially sharp; they do not apply to life offices alone. Since the Insurance Act, 1938, was passed, efforts have been made to prevent rebating and the excessive payment of commissions, but he said that "despite the stringent provisions in the Act to remove them they persist in a more intensified form." He is confident, however, that the new Code of Conduct will help eliminate evils in insurance business.

Mineral Policy.—The first meeting of the Mineral Advisory Board set up by the Government of India will be held in New Delhi tomorrow. Among the matters to be considered by the Board will be ways of increasing production of metallic copper, lead and aluminium; measures to discourage the export of raw materials; and ways to encourage the export of finished or semi-finished products. The Board will consider the action necessary to bring into production the Khetri and Alwar copper mines and to step up the development of lead deposits in Zawar and the production of the existing aluminium plants in Bihar and Travancore. It will also consider what help should be offered to industry to start the manufacture, on modern lines, of refractory goods, ceramics, glass, by-products of coal distillation, asbestos goods etc. A review will be made of the working of the Government's mineral policy. The Mineral Policy Conference of January, 1947, emphasised the need for Central co-ordination of mineral development and the need to ensure maximum production, conservation and utilisation. As a result of this conference, the Indian Bureau of Mines was set up, the Geological Survey of India expanded and the Indian School of Mines reorganised. The research programme of the Bureau of Mines and Geological Survey of India will be considered at tomorrow's meeting. The Board will review the working of the export policy, the main factors governing which have been conservation of assets, maintenance of quotas for export to check "abnormal drain", earning of foreign exchange, obtaining compensatory supplies of foreign minerals and maximum utilisation of domestic raw materials for internal manufacture. The Mineral Advisory Board was set up by the Government in January, 1953 and consists of representatives of the Central Ministries concerned and mining interests, with provision for representation of State Governments and certain other industries when problems affecting their interests are to be discussed.

Workers' Living Costs.—Statistics issued by the Government of India's Labour Bureau show that, apart from a fall of two points in Cuttack and one in Ludhiana, working class cost-of-living indices rose during May in all the centres covered—Monghyr, Jabalpur, Akola, Khargpur, Mercara Jamshedpur, Jharia, Dehri-on-Sone and the Madras Plantation Centres. Without exception, general indices moved in the same direction as those for food, reflecting the predominance of this item in working-class budgets. Higher costs of fuel and lighting also contributed to a large rise of 11 points in Monghyr. There was an increase of nine points in Jabalpur and four in Akola. Dearer food caused a rise of seven points in Khargpur, although fuel and lighting and commodities in the miscellaneous group were cheaper. The largest rise was in Jharia, the index advancing by 13 points to 169. The food group rose by 16 points while in Dehri-on-Sone food prices appreciated 12 points. In Cuttack the price of food and clothing declined but fuel and lighting cost more. General indices (base year 1944 equals 100) ranged between 142 in Khargpur and 175 in Dehri-on-Sone. The index for Mercara (based on July-December 1948 equals 100) showed a one-point rise to 116; so also did the one for the Madras Plantation Centres (based on January-June 1949 equals 100), to 121. The Kanpur index (base, year ended August 1939 equals 100) increased by 12 points to 453 during June; all groups, apart from house rent, rose. What the Labour Bureau is pleased to call the all-India working class cost-of-living index is said to have

remained unchanged during April at 142 (base year 1944 equals 100).

Prospects for U.N. Technical Assistance.—Presenting the Technical Assistance Board's fifth report to the Technical Assistance Committee of the Economic and Social Council at its first meeting at Geneva the other day its Chairman, Mr. David Owen, warned that the expanded programme had arrived at a "critical period." While it had been able to achieve great success, it was confronted by great dangers. The future outlook was rendered uncertain by the problem of financial support and any substantial reductions in the financial contributions would have "catastrophic" effects in 1954. In the past the main cause for anxiety has been the slow tempo of the application of funds. Today the anxiety is lest the accelerated tempo of the programme exceed the financial resources. The main problem, of course, is the fact that the expanded programme is essentially a long-term operation, for it is a question in most cases of training specialists in the recipient countries or of undertaking wide campaigns extending over several years, whereas the contributing countries are at present engaged to participate in the programme for only a single financial year. It is to be hoped that discussions now proceeding at many points will result in an agreement for long-term financial support. To aid this development, and presumably to meet some of the objections to it, Mr. Owen announced an improvement had been made with regard to the recruitment of experts by the appointment of a special officer in Europe and by the response of governments in setting up appropriate recruiting machinery, which ought to improve the quality of the people being used and to ensure that the young men and women to whom scholarships or fellowships are awarded are of the type who could truly take advantage of the training given and put their experience to good use on returning to their own countries. Another innovation is a Technical Assistance Board which will serve as a co-ordinating organ and make the necessary contacts with specialised agencies and governments. It will help carry out the programmes with the maximum economy and nominate technical assistance residents in the recipient countries, maintaining an overall view of the situation of those countries. Mr. Owen, for instance, emphasised the fact that for the development of these programmes it was indispensable to obtain the co-operation of the countries themselves, without which all efforts would be vain. The main problem, however, is still finance. If in 1954 it is not possible to find larger resources than in 1953 it will be necessary to reduce programmes by 20 percent. At the same time it must be extremely difficult to lay down a plan of work without knowing what resources would be available and also on account of the intermediary period between the promise of contributions and their actual payment. In this connection, Mr. Owen urged that payments be freed from convertibility problems and from the restrictive measures which burdened certain services accorded by governments, in order to ensure flexibility. Finally, he pointed out that the administration of the programme had to discuss its 1954 campaign with the recipient and contributing governments without any information as to what financial means would be at its disposal. He appealed to governments to increase their contributions within the limits of the amounts which might be fixed by the Council. This contribution ought to allow of the execution of programmes extending over several years.

Voluntary Returns on Business Losses.—In a Press Note the Government of India announces that the Income Tax (Amendment) Act, 1953, includes a new sub-section (2A) to section 22, which enables persons who have sustained losses under the head "Business, profession or vocation" which they wish to carry forward to the succeeding year or years in part or wholly, to submit returns, on the usual form, declaring such losses. On receipt of the returns the income tax officer will take the usual steps to make an assessment and determine the loss to be carried forward. The filing of voluntary returns showing losses had not hitherto been provided for in the Income Tax Act; this has been remedied in the new sub-section. The returns showing the loss, the Note says, should be filed within the usual period allowed for the filing of voluntary returns by those who have taxable income. This period may in suitable cases be extended by the income tax officer. The Note continues: "As the time for the filing of voluntary returns for 1953-54 and earlier years had already passed when the Income Tax (Amendment) Act, 1953, was enacted and very little time was left after the enactment for the filing of voluntary returns for 1953-54 also, it has been decided as a matter of concession to receive voluntary returns showing losses for 1953-54 and earlier assessment years, till 31st December, 1953. Persons who wish to submit such returns are, therefore, advised to file them before the income tax officer concerned as early as possible and in any case before 31st December, 1953. Such returns submitted after this date will not be accepted."

CORRESPONDENCE

ISSUE OF RIGHTS SHARES

TO THE EDITOR OF "CAPITAL."

Sir,

Three well known companies in Bombay have widely advertised for the issue of new shares. These new shares are offered only to the existing Ordinary shareholders and not to the holders of Preference shares. Section 105-C of the Companies (Amendment) Act, 1938, stipulates that when the directors increase the capital by the issue of further shares, they should be offered to the members in proportion to the holdings of "each member irrespective of class." Many companies follow this section to the letter.

The very words "Rights Shares" seem to imply that every member is entitled to exercise his rights irrespective of what class of shares he holds. The management holds that the issues are not being made by the directors but by the companies in general meetings and by means of special resolutions subject to three-fourths of majority of both the Ordinary and Preference shareholders, and consequently Section 105-C does not apply. It is not understood how the Ordinary shareholders alone have been preferred for the allotment of new shares or by whom the resolution was initiated—by the Ordinary or the Preference shareholders. It seems rather strange that the Preference shareholders have been invited to vote for these shares, although they are not allowed to apply for the new shares, to which they might otherwise be entitled.

Will any person or authority interested in and conversant with the Companies Act, particularly the Controller of Capital Issues, enlighten me on this point? Since the issue involved is fundamental and has far-reaching consequences, in case this Section 105-C is found loosely worded, will the authorities concerned safeguard the interests of the Preference shareholders at large and protect their rights to acquire their share of fresh capital issued by companies by resolutions in general meetings?

Yours Faithfully,
H. J. VEJANA

Calcutta, 28th July.

SCRAP EXPORT POLICY

TO THE EDITOR OF "CAPITAL."

Sir,

Your attention is drawn to the new licensing policy issued by the Iron and Steel Controller, Calcutta, with regard to the export of ferrous scrap. There was a time when Japan and other countries were looking to India for scrap supplies. Now the Korean war has ended and the market is switching over from sellers to buyers. Abundant supplies of scrap are available, according to reliable sources, from the U.S.A., Canada, Guam Islands, Australia, Korea, etc. It is not possible to sell scrap at the prices it was fetching during January to March 1953. Due to the adoption of a new restricted export policy for scrap, shippers could not sell the material in advance in sufficient quantities to meet demand; therefore buyers turned to sources other than India. Prices of scrap are going down drastically. During January-February 1953, prices were £23 5s per ton, c. and f., approximately, whereas today's price is about £19 10s per ton for heavy M.S. scrap piece of about 4mm thickness. There is a further chance of prices going down. It will be very difficult for shippers to bring goods to the port from the interior of India if prices fall further.

In view of the above, reconsideration of the export policy is essential in the interest of the trader and the country. A free export policy for scrap, as it was during 1952 and early 1953, should be adopted. Furthermore, I have to state that conditions under the new licences are very rigid, impracticable and have never been imposed by any State before. Absurd conditions have been imposed, e.g., in the event of exporting rusty black sheet cutting, 25 percent of the material mechanically pressed and baled and fresh sheet cutting is to be delivered to the nominee of the Iron and Steel Controller. On investigation it has been found that there is no public arrangement whereby the exporters may get the facility of having their material mechanically pressed and baled. Such being the situation there should not be any rigid condition while granting licences. Moreover, while the purchase price of exportable scrap ruling in the market is about Rs. 150 to Rs. 160 per ton, exporters are forced to deliver 25 percent of the exportable quantity at Rs. 60 per ton, which is quite unreasonable; even the material is purchased from Government sources such as railways, disposals etc. at about Rs. 180 per ton. Under these circumstances, the free export policy of 1952 and early 1953 should be adopted for the benefit of the trade and the country and to earn foreign exchange.

Yours Faithfully,
B. PARSRAMKA

THE CALCUTTA MONEY MARKET

RATES TENDING EASIER

Wednesday, 5th August.
CREDIT is somewhat easier in the Calcutta interbank market and the rate for overnight loans is now established at 2½ percent, with call money at 2½ percent. Some money was lent on Tuesday at 2½ percent.
The bill market was very active at the end of last week, mainly on account of tea bills, but in the past three days the exchange department has been quiet again. Very few export documents have been reported and remittance is only moderate. The principal exchange rates are unchanged.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills declined to Rs. 2,60,50,000 this week. Tenders at Rs. 99-6-8 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 40 percent, the average rate of acceptance being a pic higher at Rs. 2-6-3 percent per annum. Tenders for another Rs. 1½ crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 31st July, treasury bills for Rs. 10,62,00,000 were sold in favour of the Reserve Bank.

Bullion ruled steady last week and prices improved all round. The shortage in the supply of ready stocks helped to brighten sentiment. Bulls also supported the market, and there was reported to be a bear squeeze in Bombay. Silver closed higher at Rs. 150-10 as against Rs. 149-10 in the previous week, while the ready rate was at a premium of about 14 annas. The price was, however, unchanged at 85½ cents in New York and at 74d. in London.

Gold also moved higher to Rs. 87-4 from Rs. 87 and the sovereign was quoted at Rs. 57-12 (Rs. 57-10).

The statement of the position of Scheduled Banks for the week ended 24th July, 1953, discloses Demand and Time liabilities at Rs. 535.82 crores (Rs. 13.66 crores on account of borrowings from Banks) and Rs. 328.31 crores (Rs. 2.08 crores) compared with Rs. 535.68 crores (Rs. 14.31 crores) and Rs. 328.52 crores (Rs. 2.09 crores), respectively in the previous week. Cash has diminished by Rs. 47 lakhs to aggregate Rs. 30.92 crores, while balances with the Reserve Bank have risen by Rs. 10.73 crores to stand at Rs. 50.53 crores. There is a rise of Rs. 1.91 crores in investments to Rs. 315.61 crores. Advances and bills discounted at Rs. 489.99 crores reveal a drop of Rs. 4.65 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.4 percent and 50.7 percent against 8.2 percent and 57.2 percent.

The return of the Imperial Bank of India for the week ended 24th July, 1953, shows a fractional drop of Rs. 11 lakhs in total deposits to Rs. 211.31 crores. Investments in Government Securities are up by Rs. 54 lakhs to Rs. 75.91 crores, while other authorised investments remain unchanged at Rs. 10.70 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 2.58 crores and Rs. 41 lakhs to aggregate Rs. 69.57 crores and Rs. 25.58 crores, respectively. Cash and balances are, in consequence, shown at Rs. 25.33 crores or Rs. 7.92 crores higher.

The profit of the BANK OF BARODA for the half-year ended 30th June, 1953, amounted to Rs. 12,61,614-10, including Rs. 2,38,382 brought in; the directors have resolved to declare an ad-interim dividend at the rate of 5 percent to absorb Rs. 5,00,000, leaving a carry-forward of Rs. 7,61,614-10-0.

The net profit of the PUNJAB NATIONAL BANK totalled Rs. 24.97 lakhs for the half-year ended last June and this is about Rs. 6 lakhs higher than in the corresponding period of the previous year. Bringing in the last balance, there is a distributable balance of Rs. 26.6 lakhs, of which bonus to staff absorbs Rs. 2.87 lakhs and charity Rs. 26,000. An ad-interim dividend at 4 percent has been recommended, as compared with 6 percent in the previous year, to absorb Rs. 3.5 lakhs, leaving a carry-forward of Rs. 19.97 lakhs.

Provisional figures for the foreign sea and airborne trade of India on private and Government accounts during June 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 29,28 lakhs, re-exports Rs. 38 lakhs (transit trade Rs. 1 lakh); Imports Rs. 52,00 lakhs (transit trade Rs. 1 lakh); Total Trade Rs. 90.66 lakhs. Treasure: Exports (including re-exports) of currency notes Rs. 3 lakhs, others nil; Imports of currency notes Rs. 73 lakhs, others nil or negligible. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 13.34 lakhs.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue

collected in India during the month of February, 1953, amounted to Rs. 1,295 lakhs as compared with Rs. 2,065 lakhs in the corresponding month of the previous year. The subsequent comparison should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 953 lakhs as against Rs. 1,249 lakhs, export duties for Rs. 319 lakhs as against Rs. 781 lakhs and land customs and miscellaneous for Rs. 23 lakhs as against Rs. 35 lakhs. The total gross collection of Union Excise duties amounted to Rs. 770 lakhs as compared with Rs. 686 lakhs. During the 11 months, April 1952 to February 1953, the grand total of gross Customs and Union Excise Revenue realised was Rs. 23,934 lakhs as compared with Rs. 23,815 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 10,903 lakhs as against Rs. 12,975 lakhs, export duties for Rs. 5,042 lakhs as against Rs. 8,325 lakhs, land customs and miscellaneous for Rs. 354 lakhs as against Rs. 404 lakhs and Union Excise duties for Rs. 7,635 lakhs as against Rs. 8,111 lakhs.

THE distribution of free food in West Berlin has already led to trouble and if continued will no doubt lead to more. It is difficult to see what good will be achieved by this sort of provocation and pin-pricking. Certainly it will prove nothing about the scarcity or abundance of food in East Germany; if the Russians were kind enough to begin offering free caviare in the next street, many of us would consider going to collect some, even if we could afford to buy our own. There may indeed be genuine want in East Germany, but the humanitarian satisfaction of filling a few stomachs is nothing alongside the friction generated between two Governments which, it is hoped, will eventually have to negotiate the re-unification of Germany. Anyhow, humanitarianism is a notion we introduce into diplomacy when it suits us, and leave out when it does not—as when we ban the export of penicillin to a Communist country. I think the Americans have been misled by their own extraordinary generosity into an action which will not help their cause one bit. Governments resent other nations making direct approaches to their populations; the Indian Government not so long ago properly took steps to control the distribution of parcels from Russia, and the U.S. Government would no doubt have had something to say if during prohibition the Canadians had opened free grog shops along the 49th parallel for their "oppressed neighbours". The cases are quite dissimilar, I admit, but the effects on international relations cannot be very different.

A report published yesterday that the touring Australian cricket team is silently "simmering" with anger about partisan sports writers, biased spectators and poor umpiring set me thinking about the supposed benefits for international relations that derive from amateur sport. I seem to recall whispers of exactly similar complaints from MCC teams touring the Dominion—without going back to the days when Australia (it was said, I do not know how seriously) was threatening to leave the Commonwealth unless the British Cabinet did something to stop Harold Larwood bowling body-line, or whatever it was Jardine said he was bowling. Cricket actually is fairly free of these irritations but such rare deteriorations in Anglo-Australian relations as occur, occur in the summer. The unhappy display of national rivalries at the last Olympic Games, especially the incidents involving the Chileans, Argentinians, Americans and Russians, were no great advertisement for the pacifying effects of sport, while most people will remember the near-international incident that took place when the Dynamo football team played in England at the end of the war. George Orwell once suggested that a certain way to bring nearer the third world war would be to arrange a series of nice, friendly and strictly amateur football matches in which the Russians played the Americans, the Italians the Yugoslavs (in Trieste, preferably), the Greeks the Albanians, the Arabs the Jews, Ulster versus Eire, Kuomintang versus Peking and the Czechs against the Germans. (This is my own list actually, but you can add your favourite engagements easily enough.) The exhibitions of fervent nationalism associated with games are no criticism of games themselves, of course, but it is better to be clear on the point that we are playing cricket, or whatever sport it may be, for the sake of the thing and not to cement international relations, which in fact are just as likely to come unstuck in the process.

In the sphere of American politics, the late Senator Robert Taft was the inheritor of many desirable qualities. He had brains, courage, political breeding and a high place in the Republican Party councils. But he had little of that indefinable

A DITCHER'S DIARY

yet indispensable thing we call luck. For the last twenty of the sixty-three years of his life his party was out of office, and there was less of that kind of bi-partisanship in Taft which, for example, made it possible for Mr. Dulles to function as a sort of fifth wheel of the State Department coach during the closing months of the Truman régime. Three times he failed to secure the Republican Party nomination for the Presidential election, though it has to be said that, even if he had been successful against either Wendell Wilkie or Mr. Dewey, it is unlikely (so strongly was the anti-Republican tide then running) that he would have reached the White House. When at last his chance came, he was pitted against General Eisenhower, an opponent who might be lacking in some of the higher political techniques but who brought to the contest a prestige which no servant of the Party, however devoted, could hope to offset. The General was a national figure in just the way the Senator was not and the Republicans, determined to find their way out of the wilderness in which they had been lost for too long, adopted Eisenhower as their candidate and rejected Taft, with the result we all know. Under the new administration Taft became the leader of the Senate, in which post, except for a brief brush over the appointment of the Secretary for Labour, he gave the President a pretty full measure of co-operation. Senator Taft was commonly regarded as an "isolationist." Perhaps he was, but many Americans think as he thought, and it would be a mistake to regard his views as unrepresentative. Indeed, he voiced the convictions of a powerful section of opinion in his own country. He was cynical and suspicious of most of America's allies in Europe and, with a somewhat qualified exception in favour of Britain, roundly defied them to none of them would fight, if and when it came to the push. In this and many other matters he was blunt and outspoken, but in remembrance he seemed to mellow and to have come round to a less rigid conception of American policy. If, during his lifetime, he never quite pulled off the big prize he had set his heart upon, by one of those strange twists of fate his death has underlined his political significance. As long as he lived it was a guarantee that the leadership of the Senate, which is a post of considerable power and influence, would not pass into undesirable hands. Now it is not so certain that Senator McCarthy from Wisconsin will not one day assume the mantle which Taft inherited.

A law suit settled in London this week may contain an interesting moral for foreign business men in India. An unsuccessful action brought by the Government of India in the Chancery Division against the Delhi Electric Supply and Traction Co., Ltd. (in liquidation) led to the conclusion that the liquidator was fully within his rights in rejecting a claim for Indian income tax and business profits. The ground was that the demand was unenforceable against the company's assets, all of which had been repatriated to the U.K., and that payment of revenue claims of a foreign government would be a breach of a liquidator's duties under would be a breach of the U.K. Companies Act, 1948. But, whilst the liquidator's action has been thus upheld in the courts, it is not an unreasonable assumption that the Government of India will now begin to consider afresh how best it can protect itself against such losses of revenue. The Indian tax authorities had a claim for Rs. 16.21 lakhs against the Delhi Electric Supply & Traction Co., Ltd., which was purchased from the U.K. shareholders

by the Government of India for a sum of approximately Rs. 82 lakhs in 1947. By a special resolution the company went into liquidation in 1949. Giving judgment, Mr. Justice Vaisey remarked upon the hardship that was present in the case, adding "it might have been open to the Indian Government to retain part of the purchase money to meet its tax demands" and, though the company had its registered office in London, "it was hard because the company was built up in India and it was regrettable that English law compelled the liquidator to disregard the local tax claims." Nonetheless the law on the point was clear, and he could not accede to the Government of India's application, a decision which his lordship appeared to reach with some regret. It is not for a layman to say whether any further steps to obtain relief are open to the Government of India, but it is clear, even to the lay mind, that though few similar cases are likely to arise in the future, as a result of this judgment the Indian authorities are likely to be specially vigilant to see that all tax claims are settled before granting permission to companies to remit the full proceeds of the sale of their assets after disposing of their business in India.

The Government of India yesterday put out a study of the cost of living up to May in several Indian cities, relying on the State Labour Departments' indices for the working class and on the indices prepared by the West Bengal Government and by this newspaper for the middle class. The object of the Government's study was to show that it was not true that living costs rose in India while they fell abroad, and that it was incorrect to say that such rises as occurred in India were due to higher foodgrain prices after decontrol. As far as it goes, the case is a fair one. Living costs in many Indian centres had not risen alarmingly in the first four months of this year—though they have risen since, especially in West Bengal. Foodstuffs other than cereals have played a major rôle, so the cost of living cannot be used as a stick to beat Mr. Kidwai for decontrolling grain. The comparisons with other countries, the United Kingdom and the U.S.A., are of very doubtful value; it would be a brave statistician who would draw any conclusion whatsoever from the fact that the official index in Britain has gone up sharply this year while the so-called "all-India cost of living index" has not. An index is meant to be compared only with itself from month to month; it is hazardous to compare it with another index. Of more interest to business men than these lucubrations would be an enquiry into the effects of dearness allowances on the cost of living. One would expect the cost of living in a city where large numbers of workers are paid d.a. according to movements in the index to be much more unstable than elsewhere. If when prices rise, employees are given more wages, this should make prices rise even further; and if when they fall, wages are cut, this should make them fall more than they would otherwise have done. Thus, living costs would be subject to more violent fluctuations in places where there were "escalator clauses" in wage agreements, as in Calcutta. This is the theory of it at all events, and it would be useful to know if it works out that way in India.

In his diary published under the title *The Best of Both Worlds*, Tom Driberg M.P. tells of a writer who wished to quote the French proverb "Pour connaître l'amour il faut sortir de soi" (to know love, one must go out of oneself) and was astonished to see it actually printed as "Pour connaître l'amour, il faut sortir le soir".

THE LONDON METAL EXCHANGE

RESTORATION TO PRE-WAR STATUS

THE resumption of dealing in copper on the London Metal Exchange yesterday marked the restoration of this famous institution to its full pre-war status. Before the Government took control of all metals on the outbreak of war the Metal Exchange dealt in copper, zinc, lead, and tin. In the more distant past it used to deal also in silver, but dealing in the main non-ferrous metals is the Exchange's proper function.

The process of reopening since the war has been gradual. It began with tin in November 1949; because tin is the only predominantly sterling commodity among those four metals. Zinc followed soon after, in January 1953. Both those metals had become relatively abundant. But the problem of copper seemed less easy to solve. It is much the dearest of the three base metals; it used to account for the largest turnover on the London Exchange (the figures for 1938 were 475,000 tons of copper, 387,000 tons of lead, 296,000 tons of zinc, 91,000 tons of tin); and in copper the "dollar element" is particularly large. However, the authorities are satisfied that the risk of losing some dollars is well worth taking, in return for the apparent certainty that the London market will regain its leading position in the world's trade in metals.

In the long years when the Exchange was closed its predominance was viewed even by stalwart members as an historical fact, no longer as a normal condition temporarily interrupted. It was not merely that the whole principle of the free markets had been called in question. The doubt also arose whether the London market could ever regain its importance after the conditions which established it had disappeared.

For more than a hundred years London had been the centre of the world's metalliferous mining; for London provided the equipment, the technicians, the finance. But competing interests, particularly North American, developed to such effect that in the uneasy period between the end of the last war and the reopening of the London Metal Exchange such an authority as Mr. Chester Beatty could say, "When I started in mining London was the mining centre of the world, and I regret to say that it no longer holds that position," and Mr. Robert Annan: "The commanding position which London has held for more than a century as the centre of mining finance is being threatened."

Such nostalgic comments are still valid. Yet no other market has arisen, not even in New York, to take over all the functions of the London Metal Exchange. No undisputed standard of value—a single free world price—has been established for the leading metals without the unrestricted interplay of supply and demand on London's international market.

The origins of the Exchange, as of all such institutions, are vague and informal. It is not known precisely when the merchants and other interested persons began their regular meetings in the Royal Exchange for the purpose of buying and selling metals. But it is known that from these activities the London Metal Exchange Company, Ltd., blossomed forth in Lombard Court in 1877, and that the famous terminal market in the London Metal Exchange building in Whittington Avenue, London E.C. 3—in the heart of the ancient trading community—began to operate in 1882.

Market Procedure

It is a dignified room, where dealings take place. In its centre is the "Ring," comprised of

four curved benches surrounding a black band in the rubber flooring. The "Ring members" are those entitled to sit; behind them, standing, are the non-dealing members and the clerks of dealing members. (All transactions done by the authorised clerks have the same validity as those done by their principals.)

The procedure is strictly ordered. At precisely the appointed time a bell is rung, and business begins to the call: "Lead, gentlemen, lead"—or whatever may be the subject; and at the end of the allotted time the bell is rung again and business ceases abruptly. It is the price deemed by a price-fixing committee to be ruling when the bell closes the session that is telephoned or cabled to any part of the world, to become, for most practical purposes, the current world price of the metal, the basis for contracts in many countries involving ores, concentrates, and other forms.

For so important a function, and for deals which may individually involve many thousands of pounds, the method of making contracts while the session lasts may seem curiously casual. The standard contract itself is formal enough. But it is based on scribbled notes which are the outcome of sometimes confused calls; for when several bids or offers are being pressed at the same point at the same time not even the most experienced operator can always infallibly follow transactions which to the uninitiated (if he were admitted to the scene) would be quite meaningless. Yet misunderstandings are rare, and there is the soundest basis for all deals—good faith.

The terms of dealing are not the same for all the four metals. Zinc and lead, which are treated very similarly, are dealt in for settlement in the current month or in any of the three months following, for delivery within specified periods expressed in terms of market days of the settlement months. Copper and tin, on the other hand, are dealt in for delivery not in any settlement month but on any specified day up to three months forward. The difference necessarily affects the method of quoting: there are monthly "settlement prices" for zinc and lead, but copper and tin are quoted for "cash" and "three months," with intermediate prices for intermediate dates.

For each of the four metals a standard contract has been evolved. The form is "standard" in the sense that all dealings are based on these contracts, but the form itself is changed as conditions require. (The copper contract lately put into force is an entirely remodelled form of the pre-war contract.) The contracts specify quantity, quality, brand, and delivery—a tonnage of metal of a minimum purity of a brand approved by the Committee of the London Metal Exchange (which means of approved analysis and repute), to be delivered at a stated time and place (or places).

Forward Functions and Prices

The market's "forward" function is to enable a producer to sell metal at a known price while it is still in the ground, a smelter to hedge against an intake of ore, a merchant to hedge a transaction in scrap, a manufacturer to match known requirements of metal for a sale of products in the future without taking delivery until he needs it. The market provides means of borrowing or lending metal for agreed periods.

The insurance against fluctuation benefits all concerned with the metal trade, and, in some cases, the relief from financing supplies which are not immediately required effects considerable financial economies. It is, however, well understood in London that the reopening of the Exchange

has not been an unmixed blessing for producers. Bulk-buying on long-term contract by governmental agencies provided much surer stability than the market's facilities can offer; because it is not the function of a terminal market to fix prices. Only to smooth the fluctuations—and fluctuations may still be wide when consumers' policies change from stockbuilding to destocking or vice versa, especially when the market is rather thin, as recently.

It is a fact that heavy falls have occurred in the London prices of metals as these metals have reverted from governmental to commercial dealing. It can be argued that there was no real significance in the falls, because the official fixed prices were too high for a period when supplies had become plentiful, and because disposal of the Government's big stocks temporarily depressed values. But this is not a localised problem, for the weakening of free prices elsewhere. Mr. J. R. Govett, chairman of Consolidated Zinc Corporation, Ltd., referring in his report on 1952 to the fall in the U.K. price of lead from £131 on 30th September, 1952 to £73.5s. on 23rd April, 1953 and in that of zinc from £110 on 31st December, 1952 to £63.15s. on 23rd April, 1953 (falls which have involved losses of millions of pounds to producers as a whole), remarked that measures to solve the problem of the Government's stock disposal "were not as well contrived as they might have been."

Criticisms of the Exchange

Mr. H.E. Jackson, president of the British Non-Ferrous Metals Federation, has felt it necessary to defend the London Metal Exchange against the criticisms of producers. "Give the Exchange a chance" he said in July. "Don't condemn it until it has had a reasonable period to get under way." Producers, he argued, had for long had the best of all possible worlds, and they should not complain if prices fell temporarily below the level at which they might be expected to settle—that was only a minor compensation to users for a long period of artificially high prices, and, anyway, encouragement of demand was badly needed.

Another criticism, that London exerts too much influence on world metal prices, in relation to the tonnage which it handles, is perhaps more difficult to answer. The Americans particularly have protested that Britain does not consume enough metal, nor the London Metal Exchange deal in enough metal, to make London prices truly representative, and they have argued from that premise that London prices should not be accepted as world prices. Mr. Jackson has dealt with this objection, too. While remarking that the tonnage handled by the Exchange is in fact considerable, even by American standards, he has pointed out that the tonnage passing through the Exchange is not the significant factor. "What matters is that the prices set by the Exchange for marginal dealings provide the standard on which very much larger tonnages pass between buyer and seller outside the Exchange."

This argument may be inclined to run in a circle, but it clarifies, not obscures, the fact that London prices are, in the main, the accepted standard. They are, after all, beyond question, free prices; and it is difficult to find representative free prices elsewhere.

It is too early to say that the London Metal Exchange has fully regained its pre-war status—not all foreign governments are yet able to allow their nationals to use its facilities. But that it has already reassessed its influence so effectively is proof enough that it is a thing apart from London's last dominance of world mining. The Exchange belongs to another, even older, tradition; that which evolved the intricate, highly skilled, professionally trustworthy, infinitely adaptable, markets of free international commerce. Only if the major producers, supported by their governments, decide that free commerce cannot provide reasonable stability, and so adequate incentive to promote long-term capital plans, will the London Metal Exchange begin to wither.

New Delhi

SHORTAGE OF RAILWAY FACILITIES THREATENS PROGRESS OF FIVE YEAR PLAN

WORKING OF PRIVATE INDUSTRIES AFFECTED: BLEAK PROSPECTS FOR CHEAPER TRANSPORT

(FROM OUR OWN CORRESPONDENT)

1st August.

THE railways appear to be the limiting factor in progress with the five year plan. The authorities have admitted that carrying capacity at the end of the plan period will approximately equal requirements at the beginning of the plan. The railways at present have 211,000 wagons but it is estimated that another 20,000 are required to meet the existing demand. It is expected that by April next year 19,266 wagons will have been received, against which 8,500 will have been condemned as over-aged and unserviceable. For the three years ending March 1954, orders for 32,293 wagons have been placed and orders for 31,000 more are expected to be given during the remaining two years of the plan, thus making a total of 63,000 wagons. The number of wagons expected to arrive by 1st April, 1956, is 54,266. The comparative position, therefore, is envisaged as follows:

	As on 1st April, 1951	As on 1st April, 1956
Wagons on the line	199,094	229,433
Wagons condemned as over-aged and unserviceable	47,256	49,404

The scarcity of wagons will continue even after the completion of the plan, but no estimates of requirements after 1955-56 have yet been made.

Similar is the case with locomotives. The Railways' requirements at the end of the plan are placed at about 8,800 locomotives. On 1st April, 1951, 8,209 locomotives were on the line. During the planning period, orders for 1,453 locomotives are expected to be placed but an almost equal number will have been condemned as over-aged and unserviceable. There will thus be no appreciable increase in the number of locomotives at the end of the plan period. All the available capacity for the manufacture of wagons and locomotives in this country has already been taken up by the Government. Production could not be stepped up even if the installed capacity was greater because of the shortage of steel. It is doubted whether additional supplies could be obtained from abroad, even if the railways had more money to spare. Further, assuming that the locomotives and wagons were available there would still remain the track bottlenecks between North and South India via Waltair, Bezwa and Raichur; and between the coal areas and Calcutta on the one hand and industrial areas on the other, particular points being Ajni, Banaras Cantonment, Mokameh, Moghulsarai, Chukli and Sakri-ghali-Maniharihat. The problem can be solved by doubling the railway track at some points but this will cost Rs. 80 crores in South India alone, and will necessitate the slowing down of transport for the period of the doubling construction.

In the last analysis, finance is the limiting factor. The Planning Commission in its Draft Plan made an allotment of Rs. 350 crores for the railways (as against the latter's demand for Rs. 400 crores) but in the final plan raised it to Rs. 400 crores. The total demand made so far by the railways has thus been met. The point therefore is whether the inadequacies of the railway projects were brought to the notice of the Government in the formative stages of the general plan. Clearly, the railways had no plan to cope with the increased production envisaged in the Five Year Plan, otherwise they would have been in a position to indicate how many extra wagons were needed. If it had planned in terms not of rehabilitation but of increased carrying capacity, they would have demanded a larger allotment of funds.

More Money for the Railways

The Planning Commission, it is learnt, is expected to increase the allotment for the railways by Rs. 10 crores. But will this sum meet their requirements or ensure full and proper utilisation, having regard to the limited supply of railway material? The over-aged and unserviceable wagons and locomotives could possibly be used for some time even after they are condemned. The more important problem is to remove track bottlenecks. According to official estimates, the doubling of the Bezwa-Madras line alone will cost Rs. 30 crores. The railways thus do not seem to be serious about providing adequate facilities for the increased production under the five year plan. The success of the plan is being seriously jeopardised by their shortcomings.

There has recently been a great deal of criticism because of the transport bottlenecks in the regions of Calcutta and Bombay and on the South India route. The railways however claim a much improved performance in the current year. In regard to coal, for instance, they claim that the average of daily loadings for the six months ended June, 1953 was 3,079 wagons as against 3,038 in 1952, 2,851 in 1951 and 2,690 in 1950. It is pointed out that coal stocks, in terms of the number of days' consumption, with five industries or under-

takings were by no means low, as will be evident from the following figures:

Iron and Steel	20.6 days
Electricity	37.6 days
Cotton	24.4 days
Paper	13.9 days
Ordnance Factories	49.8 days

Then again stocks at pitheads declined from 3,386,214 tons on 31st May, 1952, to 3,316,593 tons on 31st May, 1953. The average of wagons loaded daily in the Bengal and Bihar coalfields was 3,500 wagons.

Following are the comparative figures of wagons supplied to carry some of the major commodities for the period 1st April to 20th June, 1953:

Commodity	1952	1953
Metallic Ores	55,527	60,865
Iron and Steel	29,121	26,413
Cotton	16,111	15,267
Textiles	7,780	9,137
Raw Jute	25,935	18,582
Jute Manufactures	3,154	2,106
Cement	40,116	39,203
Gypsum	63,784	129,655
Fertilisers	1,235	4,715
Foodgrains	150,519	152,071
Sugar	24,544	32,059

Under the instructions of the Bombay Government top priority was accorded to the transport of hay to famine areas in the State, and for this purpose 2,600 wagons were employed in the month ended 18th June, 1953. The transport of imported cotton from Bombay to Ahmedabad, textiles from Ahmedabad, salt from Bombay, mangoes from Dulsar and "smalls" from Bombay had to be stopped during this period.

Complaint from Industries

The analysis appears impressive, but does not wholly meet the criticisms. In regard to coal, it is alleged that the improvement in the supply of wagons has largely benefited Government projects and not the general consumers of coal. During May and June, for example, the wagon supply to down-country destinations was very unsatisfactory and industries in the Calcutta area received smaller supplies. It is further alleged that the railways have been giving preference to non-revenue paying traffic, particularly to the Government's own undertaking such as the Sindri fertilizer factory. Consumer goods industries have been neglected, especially those manufacturing drugs, medicines, chemicals, toiletries, glass, porcelain, cycles, electric lamps, fans, hurricane lamps, sewing machines, hosiery goods, paints, batteries, vanaspathi, vegetable oils, biscuits, matches, steel furniture etc. Commercial firms interested in the internal movement of stone chips and gravel, industrial raw materials, machine and machine parts and various consumer goods have also spoken of inadequate transport facilities. Complaints have also been received from firms engaged in the export trade about their inability to move goods from upcountry to port towns. These complaints have been carefully examined here and orders have now been issued that high priority goods will be moved on certain days of the week leaving the other days for the booking of low priority goods. It has been decided to allocate a certain number of wagons for non-essential traffic. With these steps, it is hoped, shortages will shortly ease; this should be welcomed provided there is no substantial shortfall in high priority traffic. The system now introduced, however, prevailed under the priority controls during the war and in the immediate postwar period. It is worth enquiring why it was changed and bottlenecks created.

Reference has also been made to the Government's accepted policy of providing cheap and efficient transport. Air transport, as far as carrying goods is concerned, is still in its infancy and in any case cannot meet the needs of the country. Thanks to the Central Government's policy of protecting the automobile industry, State Governments' taxation measures and threats of nationalisation, road transport is becoming increasingly expensive. Inland water transport is still undeveloped and in any case could only supplement rail-road transport on certain routes. Coastal shipping is inadequate and very expensive as compared to the railways. Meanwhile, because of the fall in passenger traffic, the latter are thinking of increasing freight rates to balance their budget. The prospects for cheap transport seem bleak.

Coal Exports Slump

Exports of coal have rapidly declined during the last six months and are less than 50 percent of the corresponding 1952 figure, it is learned. The follow-

ing are comparative export figures for the first three months of 1952 and 1953.

	1952	1953
January	218,178	110,767
February	303,514	182,344
March	238,966	63,340
	760,658	361,451

Taking the financial year, exports of coal reached a record figure of 2,393,628 tons in the 12 months ended March 1952, but fell to 2,100,546 tons in the corresponding period of 1952-53, thus showing a drop of over 233,000 tons. Several reasons have been given for this decline. Firstly, because of the Indo-Pakistani trade deadlock exports to Pakistan during the first three months of 1953 were very small. This trade has probably revived in the following months. Secondly, in contrast with last year exports to Britain, Egypt, Aden, Hongkong and Australia have been nil. The pattern of the coal trade has changed because of the loss of these markets. Trade circles criticise the Government's policy of restricting exports of metallurgical coal. In 1951, the Coal Commissioner imposed grade-wise restrictions on the composition of export cargoes, insisting on the inclusion of unsuitable inferior coals. This was done at a time when one million tons of suitable export coal was lying in stocks at pitheads because of the lack of orders. One result has been that in the first six months of 1952 no less than ten cargoes of Indian coal caught fire on the high seas and at least two of the vessels became a total loss.

The Government's policy, it is claimed, is based on discrimination. It is the large, so-called British-owned collieries which produce metallurgical coal, whose conservation is considered essential. But these collieries, without exception, are owned by rupee companies, whose shares are quoted on Indian stock exchanges. An analysis of the holding of shares will show that these companies are British only in name and the majority of their shares are held by middle-class Indians. There are holding Indian members in their managing agencies as well. The profits of these companies are largely retained in this country and are often ploughed back into the industry after they have been shared by a large number of Indians. Congestion in Calcutta port and the wagon shortage are other difficulties of the coal export trade. The expense of running a general cargo ship is placed at £425 per day, approximately. It is alleged that in August last year coal ship owners lost £231,700 in idle time. With the return of more competitive conditions, the buyer is now in a position to select the kind of coal he requires from the cheapest market. How far the decline in coal exports is affecting employment is not yet known. But the Government will have to revise its coal conservation policy and improve transport facilities if it does not wish to lose the export market altogether.

Ore Export Licensing Changes

As a first step towards revising the system of export licensing for iron ore and manganese ore in order to ease their transport position, the Government of India has asked shippers of these ores to furnish the Central export trade authorities at the ports with full particulars of all shipments made by them from January 1950 to 30th June, 1953. The shippers have also been asked to declare their outstanding commitments and to complete exports against commitments which are up to the middle of October 1953, when the revised procedure for the export of these ores is likely to be introduced. Intending exporters have been warned not to enter for the present into fresh commitments which cannot be completed before 15th October, 1953. As reported last week, the Government has decided to de-link the allotment of railway wagons from godown space held by persons or firms in Calcutta port. Wagon allotments under the revised system of export licensing will only be made to persons or firms holding export licences. The public notice issued now is intended to ascertain who the genuine exporters are, and to eliminate the bogus ones.

Demands of Mining Labour

The demands of mining labour are proposed to be examined by an arbitration tribunal soon. These demands include higher wages, increased dearness allowance, supply of uniforms, paid holidays for festivals, railway fares or other charges for workers going on leave, and provision against involuntary unemployment. Employers have pointed out that while production of coal has reached a high level, output per man has declined. The miners' case was examined by a Conciliation Board in 1947, but they have demanded a revision of the award it gave. It is not yet known whether the dispute will be referred to one of the existing tribunals or to a new tribunal specially constituted for the purpose. The Government's conciliation machinery in the coal industry is being overhauled. This will raise the administrative expenses of conciliation, which may increase coal prices by Rs. 1 a ton. The question of reducing coal freights by Rs. 1 a ton in order to retain the present level of coal prices is being examined here. The Railway Board is opposed to the proposal. An early decision is expected.

Standing Labour Committee Meets

The two-day session of the Standing Labour Committee, which met here this week, reached an agreement according to which compensation to the extent of 50 percent of the basic wage and dearness allowance would be payable to workers during the period of involuntary unemployment, the duration of such benefit being restricted to 45 days in a year. This benefit would be payable to permanent workers who had completed one year's continuous service and to whom alternative employment was not provided by the employers. Workers would be

U.K. LOAN FOR CAPITAL GOODS PURCHASES

FUTURE OF COTTON EXPORTS

(FROM OUR OWN CORRESPONDENT)

Karachi, 31st July

FROM every point of view it is excellent news that Her Majesty's Government has granted Pakistan a credit of £10 million to help tide the country over the present emergency. Not only should this gesture have a good political effect, but it will give British manufacturers a better chance of doing business with Pakistan in competition with the Japanese. The money is to be used for purchase in the United Kingdom of capital goods for food production projects including essential ancillaries such as communications, irrigation and power. The loan will be repayable over ten years and will bear interest at the rate of four percent. The arrangement will be that the Export Credits Guarantee Department will meet payments to manufacturers as and when they fall due under the approved contracts, and the Pakistan Government will present to the Department promissory or Treasury bills sufficient to cover such payments. At the same time they will present for the E.C.G.D.'s counter-signature instructions to the London bank to make payments from the special account to the manufacturer of the goods in question.

Rising Cotton Spindage

It is interesting to learn that the Pakistan Tea Board has decided to set up a Committee to consider measures for the stepping-up of production of tea in Pakistan to 80,000,000 lbs. This has been necessitated by the marked increase in the internal consumption of tea, a process which the Board evidently expects to continue. The Pakistan Government is rightly anxious to meet this demand in full and at the same time have a sufficient surplus for export. To some observers in Karachi it has occurred that, looking ahead, the Pakistan Government would be well advised to consider the future of the cotton export trade from the same aspect. After jute, cotton is the main source of foreign exchange earnings, but at the present rate of expansion the indigenous textile industry will very soon absorb the bulk of the crop. By the end of 1954 the spindage in operation is expected to be well over a million and, with double shift working, production of cloth will be about 846,000,000 yards annually. This will use about 750,000 bales of cotton, i.e. half the total crop. Later on it is intended to expand the industry to two million spindles, which means that about 1,200,000 bales will have to be earmarked for local consumption. If therefore the Pakistan Government does not wish to deprive itself of this important source of foreign exchange it would be necessary to increase the output of cotton, simultaneously with the output of foodgrains. In the early stages there may be some competition between the two and the Government may be in a dilemma. In course of time however the problem should resolve itself without difficulty, when vast new areas are brought under irrigation by the Lower Sind Barrage (which is expected to be opened in May 1954), the Thal Development project and the Taunsa scheme. The Sind Government is also just beginning work on the Upper Sind Barrage at Guddu but it will be many years before this will bear results.

Sind Industrial Trading Estate

The Central Government has been talking of taking over the Sind Industrial Trading Estate for the last three or four years, and it is understood that at last the negotiations are nearing completion. It is high time that this was done and that

more attention was paid to the development of Estate services. As it is, factory development, which has gone ahead fast in recent years, has outstripped estate development, and the roads in particular are in a shocking state. They provide the worst possible advertisement for the Trading Estate, and it is hoped that the Central Government will appreciate the necessity of putting first things first and providing this elementary amenity for industrial tenants.

The latest venture on the Trading Estate is the establishment there of the first of the three Polytechnics recommended by the Council of Technical Education for Pakistan. About 127 acres have been acquired from the Estate and buildings are under construction at an estimated cost of Rs. 18 lakhs. The external expenditure on this scheme is being met by the Ford Foundation of America and equipment worth Rs. 21 lakhs has already been purchased in the U.S.A. and is now in process of arriving. Three experts are also expected to arrive very shortly in Karachi to assist in the installation of the equipment. The Polytechnic will conduct two-year diploma courses in mechanical, electrical, power and automobile engineering, in building construction and in electronics.

The United Kingdom Government is also assisting in furthering technical education in Pakistan by supplying the full equipment required for eight Technical High Schools in the different provinces, in addition to equipment for the Technical High School which is already functioning in Karachi. H.M.G. are also arranging for the training of 40 teachers over a period of four years.

Industrial Import Licences

The policy adopted during the present crisis of granting import licences for industrial requirements direct to the industrial consumers, instead of to import houses, has caused some anxiety in business circles. Several firms which had incorporated themselves in Pakistan feel that they are being deprived of business to such an extent that it may pay them to close down and simply act as indent agents for their U.K. principals, thus reducing their local overheads to a negligible figure. It would be a great pity if this were allowed to happen, for many small manufacturers prefer to buy from stock rather than to import on their own account and the local companies, besides maintaining stocks for emergency requirements, frequently also supply technical advice and service. From the Pakistan Government point of view, too, closure of local companies would mean a loss of income tax and an undesirable growth of unemployment. The Commerce Ministry have let it be known that they fully appreciate these points and are reconsidering their policy in this matter. It is not known whether they will be able to do so before the announcement of the new commercial policy which the Prime Minister has promised in about a fortnight's time, but in any case there should be plenty of time for consideration before next half year's licensing begins.

Arrangements for the import of capital goods on extended credit terms, under the Japanese Trade Agreement or private agreements with foreign manufacturers in other countries, have temporarily broken down because of uncertainties about the exchange cover. It was the practice of the State Bank to allow exchange for capital goods to be covered for one year ahead, but this was by no means sufficient to satisfy the banks who naturally could not themselves agree to stand the further risk. Long discussions have been going on with the State Bank and it is understood that the Finance Ministry is considering the advisability of instructing the latter to give the exchange cover for the full five years. It is believed that an announcement on the subject will shortly be made.

Bombay

THE "GIRI APPROACH" SHELVED

INSURANCE AND ESTATE DUTY BILL

(FROM OUR OWN CORRESPONDENT)

2nd August.

IT has been a week of almost incessant rain in Bombay and already we have had more than our full share for the whole year. Outside the State capital, where it really matters, rainfall has been more moderate but satisfactory and bumper crops are expected from almost all the districts in the north and south. This has created a feeling of optimism in business circles, which is reflected in markets. But apart from the weather, there is enough to depress even the most hardy business man. The week began with reports of the meeting of the Standing Labour Committee in New Delhi and the somersault of Mr. V. V. Giri on his earlier policy for a fresh approach to labour-management relations. He had been against compulsory adjudication, and had promised a Bill to change the whole basis of the present legislation, both of the Centre and the States. He has found in the increase in unemployment an excuse to abandon the principal plank in his much advertised new policy and to yield to the pressure of politically minded labour leaders. He is now to follow a more cautious and conservative policy and the hopes of industrialists in Western India for a new policy on the settlement of trade disputes and the vagaries of industrial tribunals have been disappointed.

Mr. Giri was even able to persuade the representatives of industry attending the Committee to agree to paying compensation to workers for involuntary unemployment. This is regarded here as the thin end of the wedge to put an end to all efforts to rationalise industry and to achieve more economical management in the near future. This new concession by employers will soon be embodied in legislation. It is doubted by shrewd industrialists whether, as Mr. Giri hoped, it will reduce the volume of industrial litigation; it may merely provide a fresh excuse for more references to industrial tribunals. So long as his Ministry is being reluctantly driven against its convictions, in certain respects, by the I.N.T.U.C. leaders, business men can find little consolation from his wise words of advice to workers at the end of his address to this meeting.

Insurance Malpractices Criticised

Another depressing factor has been the reminder that the dreaded Estate Duty Bill is to come before Parliament soon and is likely to be on the Statute book in a matter of two months or so. Business men have realised the futility of attacking the principle underlying this new expropriatory measure and are now concentrating on getting certain provisions in the Bill affecting their own businesses reconsidered and amended before it is passed by the House and the Council. This was the line taken by Sir Purshotamdas Thakurdas in his presidential address to the shareholders of the Oriental Government Security Life Assurance Co. Ltd., at its annual general meeting last Wednesday. He confined his criticism to those provisions of the Bill which affect life assurance, conceding that while the Bill originally introduced did not contain any specific exemption from estate duty in respect of life insurance policy money, the Select Committee had been wise enough partially to remedy this defect. He welcomed the clause exempting from estate duty moneys payable under policies taken out specifically for paying estate duty or assigned to the Government for this purpose, but criticised as very low the exemption limit of Rs. 5,000 on money payable under insurance policies for other purposes, and suggested that where policy moneys were payable to named beneficiaries, the limit of exemption should be fixed at a figure not less than Rs. 1 lakh. Similarly, he asked that certain clauses relating to gifts be examined afresh, doubting whether the limits placed on gifts of property would also govern gifts of money payable under life insurance policies and suggesting that this uncertainty should be removed before the Bill was enacted.

He also suggested that the condition that gifts should have been made at least two years before the death of the owner should not apply to life insurance policies, since it may happen that in a number of cases, the policyholder may die before the expiry of the minimum period, after affecting a second or subsequent nomination or assignment as a result of the death of the first nominee or assignee. In effect, he asked for the deletion of clause 14 and suitable amendment of clauses 9 and 10.

Sir Purshotamdas dealt also with other topics affecting insurance business. He criticised the two sinister malpractices in particular: excessive payment of commission, and rebating which flourish in an intensive form despite the stringent provisions introduced in the Insurance Act, 1938. He showed how these provisions were being evaded by the creation of more than one intermediary between the branch manager and the agent, merely for the sake of paying a higher commission. He detailed rates of premiums for persons of high financial status on the ground that they would be subjected to lower mortality and recommended that all companies should follow the Code of Conduct issued by the Executive Committee of the Life Insurance Council. Similarly he issued a warning to foreign insurance companies regarding methods "calculated to hamper the growth of national institutions."

LONDON INSURANCE LETTER
PENSIONS AND EMPLOYMENT

By Air Mail.

DISCUSSION of the problems raised by the prospective increase in the proportion of dependents to producers has been elevated to the highest plane. The Government is formulating a policy which, it hopes, will induce people to remain at work longer. But the problem for many over 40's is not how long to stay in work but how to find work to stay in. The Life Offices' Association has felt it necessary to answer the criticism that group pension schemes are aggravating this difficulty. The Association has stated that it is quite incorrect to suggest that insurance companies are refusing to insure over-40 age-groups; that, on the contrary, they study the individual requirements of employers and provide pension schemes, which are "made to measure." If there are any special conditions, such as maximum entry age, they are mainly to protect the employer, not the insurance company.

It is admitted that some employers will not engage older workers, because the annual cost of their pensions would be disproportionately high—or if the cost were restricted the pension would be or if the cost were restricted the pension would be a too small. But 100 percent membership of a scheme, the Association has pointed out, means only 100 percent of those eligible; an employer can still engage workers on a non-pension basis. Independent critics are not yet convinced. Employers like their arrangements to be clear-cut. There are many cases of discrimination against older people who seek employment with a firm which operates a contributory pension scheme.

Premiums and Their Composition

The Chartered Insurance Institute held its annual dinner at the Guildhall in the latter part of July, and the Duke of Edinburgh proposed its toast. The new president, Mr. C. F. Trustam, said in reply, that security was the armour of the courageous, not the refuge of the weak. "The ever-growing hazards of this dangerous age can be freely accepted if the protection of insurance is available." Mr. Trustam pointed out that more than £500 million came to the U.K. each year in the form of insurance premiums from overseas, and none of that money came under compulsion; it was a tribute to the stability and integrity of British insurers.

In his annual address to the British Insurance Association in the same month, the retiring chairman, Sir Edward Ferguson, remarked that the increment to life funds by about £160 million a year constituted "the largest single source of personal voluntary savings." He gave other interesting figures. The total membership of the Association, from the largest to the smallest companies, amounts to 210. Their aggregate premium income, from home and abroad, amounted to £925 million in 1952, compared with £859 million in 1951. Last year's total was made up thus—in order of size: accident £267 million, ordinary life £261 million, fire £208 million, industrial life £122 million, marine £67 million. Sir Edward took up the cudgels on behalf of private enterprise and against governmental direction. He said that the insurance companies had an incontestable record of sound finance, of skilled economic planning, and of service to the individual, to industry, and to the nation.

Controlling Fire

In the first half of this year there were signs that the fire hazard in this country was coming under control, but the position is still serious. According to the estimates of *The Times* (based on the known cost of large fires and a proportional allowance for the more numerous smaller ones), the half-year's losses totalled £11,963,000, compared with £12,757,000 in the first half of last year and with £11,473,000 in the second half. But an improvement in the first quarter was not maintained in the second quarter. In any case, an annual rate of about £24 million for 1952 and 1953 is still very high (an O.E.E.C. report relating to 1950 estimated that the cost of fires in the U.K. was as large as the aggregate cost in Italy, Denmark, Norway, Switzerland, Holland, Austria, and Eire); and if indirect losses are not much less than direct losses the total cost in this country must be approaching £1 million a week.

The insurance companies apply, of course, differential rates of premium according to the estimated hazard, and by this practice they offer a direct incentive to protection against fire. The fire brigades, costing in this country about £15 million a year, are the most essential insurance against the spread of fire once it has broken out; but there is still not enough being done to prevent outbreaks and to confine them before the fire services take charge.

Open grates are a frequent cause of small fires in homes, but industrial and commercial establishments are still the main culprits. They account for more than half of the number of outbreaks and for a much larger proportion of the total damage. Indeed, a fractional percentage of very large fires accounts for about half the cost of all fires. So those concerned to diminish the problem are working on the principle that all fires begin as small fires and must be prevented—by layout, choice of materials, etc., as well as by fire-fighting appliances—from growing into big fires.

Lloyds Expansion

Lloyd's underwriters' accounts can never be precisely interpreted, because they are made up in three-year periods; single-year figures are shown but are only partial. Yet trends can be observed from "new business"—that is, first-year premiums, without regard to further premiums receivable on the same policies during the second and third years. Lloyd's covers almost every conceivable risk, but

marine business predominates, and life business is very small. First-year premium income in marine insurance increased from £53 million in 1950 to £60 million in 1951 and to £68 million in 1952. Corresponding figures for motor vehicle insurance are £4.6 million, £5.1 million, £5.9 million; for aviation insurance £4.1 million, £3.8 million, £4.2 million. In "all other" insurance the figures are about as large as in the marine accounts—£57 million, £59 million, £69 million. But claims in this miscellaneous section have risen much more than marine insurance settlements—by £19 million to £86 million in the former and by £4 million to £64 million in the latter, over the three-year period.

Calcutta Markets

GOOD DEMAND MAINTAINED
IN TEA EXPORT SALE

IMPROVED ENQUIRY IN DUST AUCTION

AT Sale No. 8 held on 3rd August, offerings in the Export auction consisted of approximately 25,000 packages. There was again a good general demand. There were a considerable number of Darjeelings in this sale and these included a number of fine teas which realised very high prices. The more ordinary sorts from this district also sold well. Good CTC Assams and tippy BOP's with useful liquors were in good demand and these sorts were fully firm and often dearer. Medium Assam BOP's and OFGs, especially with bright liquors sold well and were often dearer, but Medium Assam Broken Pekoes were a little easier. There was this week rather less demand for Fannings and these also were a little easier. There was a strong demand for all leaf grades, especially for stylish OP's and these were up to 2 annas dearer. Clean Common teas were well supported and were fully firm to dearer. There is now very little tea available for Export below Rs. 1-11-0 per lb.

Quotations.	1953	1952
Clean Black Pekoe	1-13-6	1-6-0
Clean Common E.P.	1-11-3	0-13-0 to 0-14-0
Medium Assam B.P.	1-12-6 to 1-13-0	1-3-0
Good Assam B.P.	2-10-0 to 2-12-0	2-9-0 to 2-10-0

At the Internal sale, held on 4th August, the Dust offerings consisted of approximately 11,527 packages. There was good general demand. The bright liquoring Doors were the strongest feature of the sale and sold fully one anna above last rates. There was also a continued enquiry for black, leafy exportable types which were fully firm. Medium Assams were however irregular and a little easier, while CTC's met with less demand than during recent weeks and dropped in price from one to two annas per lb. especially where quality was on the decline.

Quotations.	1953	1952
Medium Doors Dust	1-9-6	1-6-0
Medium Assam Grassy Dust	1-10-6	—
Best Assam C.T.C. Dust	2-4-0 to 2-5-0	2-8-0 to 2-9-0

U.S. GULF-KARACHI GRAIN
FREIGHT RATE FALLS

TIME CHARTERING BRIGHTER

FURTHER fixtures were recorded for grain from U.S. Gulf to Karachi at the reduced rate of 70s for August loading. Three vessels were also taken for India from the Pacific Coast at 70s. A number of fixtures have been made recently for Ore from Calcutta to Continental Ports on the basis of 60s f.i.o. and in view of the known unreliability of wagon arrivals from the mines it appears likely that some congestion for vessels loading ore will occur.

The Time Charter market showed a little firmness and some interesting Charters were arranged. A British diesel 8,980 d.w. secured 15s 9d for 10-12 months trading and the m.s. *Dundalk Bay*, 7,390 d.w. was taken for 9-12 months trading at 22s with delivery U.S. Gulf. The m.s. *Christie Salen*, 9,050 d.w. was fixed at 21s for a round trip to India delivery Sweden, redelivery U.K.-Continental whilst the m.s. *Trevelyan*, 10,187 d.w. accepted 16s for a Persian Gulf round voyage delivery U.K. redelivery U.K.-Continental.

Recent bunching of food grain ships has caused a certain amount of congestion in sheds and coupled with inclement weather has slowed down the normally rapid despatch given these carriers.

SUGAR MARKET QUIET AND STEADY

During the week ended 5th August, the sugar market was quiet and ready prices were unchanged, ex-Kantapur delivery rates being Rs. 30-14 a maund for ordinary grain and Rs. 33 for big grain. Arrivals were 3,500 bags daily and are likely to increase so prices should decline, though transport from North Eastern Railway stations is still not as good as it should be. Sales averaged 2,500 bags daily for the local markets and 1,000 bags a day outside. Demand from South India has not improved. Stocks amounted to 25,000 bags. A quota of 100,000 tons has been released, and ex-mill delivery rates are Rs. 28-10 to Rs. 30-8 a maund. Preliminary reports on the western U.P. cane crop are good.

LINSÉED

In sympathy with the general decline in oils and oilseeds, prices in the local linseed market showed an easier tendency last week and values lost about Re. 1 per maund. Upcountry markets did

not follow this reaction chiefly owing to the heavy rains and floods at the centres, which caused some restrictions in the movement of supplies. Business was reported locally on a small scale and buyers and sellers alike showed only moderate interest. The oil section was dull. The absence of enquiries had its effects on prices and trading was very scarce. Latest quotations were as follows: Ready Rs. 22-8 per maund; August-September Rs. 22-4 per maund.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

Bazar Sales

(Between 28th July and 3rd August, 1953.)
Cowhides:—Wet salted (Ord) 2,000 pcs. on the basis of Rs. 9-4 to Rs. 10; Wet salted (Slaughtered) 9,800 pcs. on the basis of Rs. 12-8 to Rs. 24-2.
Goatskins:—Wet salted (Daisee, Killed) 44,700 pcs. on the basis of Rs. 265 to Rs. 375; Assam-Dinajpur-Murshidabad-Jalpaiguri 34,100 pcs. on the basis of Rs. 280 to Rs. 335; Purneah-Kissengani 22,250 pcs. on the basis of Rs. 280 to Rs. 320; Patna 7,250 pcs. on the basis of Rs. 105 to Rs. 185; Pakur 4,570 pcs. on the basis of Rs. 250 to Rs. 265; Muzafferpore-Samastipur 17,500 pcs. on the basis of Rs. 240 to Rs. 275.

SHELLAC MARKET STEADY

During the week ended 4th August, the market remained steady and a moderate business passed. Quotations were as follows:—

Standard Pure Buttonlac	Rs. 110 value.
Pure Buttonlac	Rs. 103 to Rs. 104 done & buyers.
Lemon No. 1 Shellac	Rs. 102 to Rs. 103 done & buyers.
Lemon No. 2 Shellac	Rs. 100 to Rs. 101 done & buyers.
F. O. Std. 1 Shellac	Rs. 98 to Rs. 99 done & buyers.
Pure TN Shellac	Rs. 95 to Rs. 97 basis done & buyers.
4% I. T. N. Shellac	Rs. 88 to Rs. 90 done & buyers.
No. 1 Kusmi Seedlac 3%	Rs. 100 buyers.
No. 2 Kusmi Seedlac 3%	Rs. 90 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 85 value.
Fine Bysaky Seedlac (C.P.)	Rs. 76 to Rs. 78 done & buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 74 to Rs. 76 done & buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 69 to Rs. 70 buyers, according to quality.
Kireelac	Rs. 35 to Rs. 36 buyers.

Shipments during July were 24,568 packages.

ADVANCE TOWARDS AGREED STANDARDS AND PROCEDURES

In the economic field the Assembly was chiefly concerned with the international operating rights of airlines and other operators of air transport services. Since the declaration states that each must retain sovereignty over its own airspace, and cannot permit nationals of other countries to operate air services into its territory without permission, repeated attempts have been made to devise some general form of permission to be agreed upon by all nations, so that operators of international services could arrange them to the best possible advantage without the necessity for constant reference to governments for permits and licences. It has proved impossible, however, to evolve a formula acceptable to all states, and the network of international air services now covering the world is the result of some 300 special agreements between various pairs of governments. These agreements have tended to sectionalise the world and to make air transportation increasingly expensive and less convenient than it should be. This matter of operating rights was thoroughly studied and discussed at Brighton. The conclusion reached was that the time was not yet ripe to attempt world-wide agreement concerning the exten-

While modifications have to be made from time to time to meet new developments and techniques, the basic annexes of I.C.A.O. which contain the various international standards, practices and procedures to be implemented all over the world, are now approaching a degree of stability in which the number of future amendments necessary will decrease progressively. Similarly, the regional plans in the eight I.C.A.O. navigation regions are becoming stabilised. The Assembly, therefore, de-

The aircraft-manufacturing countries of the world see it in their national regulations that any such aircraft, and other aircraft produced by them, are fully airworthy. Nevertheless, it would be desirable for international airworthiness standards to exist to which all aircraft would have to conform. Such standards would naturally have to be limited to broad principles of safety and airworthiness, for otherwise initiative in the design and performance of aircraft, on which progress depends, would be stifled. The advent of the jet age has emphasised the desirability of some action being taken by I.C.A.O. to develop international airworthiness requirements to which all aircraft-producing states would have to conform. The I.C.A.O. Assembly in Brighton was of the opinion that it is highly probable to arrive at a solution of this problem as early as 1960 and it adopted a resolution which will strengthen the hand of the Council in the work it has already undertaken on this question.

Apart from the U.K., says the bulletin, Commonwealth producers of steel, in order of importance, are Canada, Australia, India, South Africa and Southern Rhodesia. Comparative figures for crude steel production in these countries for 1938 and 1952 respectively were (figures in thousand tons): U.K., 10,398 and 16,418; Canada, 1,155 and 1,370; Australia, 1,182 and 1,610; India, 937 and 1,530; South Africa, 341 and 1,180; Southern Rhodesia, nil and 30. The main increases in Commonwealth steel production, according to the bulletin are likely to occur in Canada, which may be producing 4,400,000 tons in five years' time; in Australia where production is expected to rise to 2,500,000 tons; and in India which may be producing over 2,250,000 tons. South Africa is also planning further expansion. The bulletin also gives a survey of the Commonwealth resources of iron ore, coal and manganese ore. The Commonwealth was estimated to have something like one-third of the world's "probable reserves" (this term includes proved reserves) of iron ore, with India heading the list; possessed extensive coal resources equivalent perhaps to one-twelfth of the world's "probable reserves"; and accounted for almost two-fifths of the world production of manganese ore. Of the world production of 7,500,000 tons of manganese ore in 1951, 2,354,000 tons came from Commonwealth countries, India leading with 1,284,000 tons.

FABRIC SHIPPERS URGE ABOLITION OF EXPORT DUTIES

Year	Total Production,	Hessian,	Sacking,	
July-June, 1950-51	857.9	229.7	490.0	Thousands of Tons
		38.5	57.2	Percentage
1951-52	945.0	309.4	606.7	Thousands of Tons
		32.8	64.2	Percentage

		39.1	57.3	Percentage.

Turning to the consumption of raw jute, we find that in 1950-51 the quantity was 52,200 bales, in 1951-52 56,360,000 bales and in 1952-53 59,500 bales. The reason for the higher consumption in 1951-52 is obvious from what has been said above. It is interesting, however, to note that the consumption of raw jute per ton of goods produced was 6.12 bales in 1950-51, 5.98 bales in 1951-52 and 5.83 in 1952-53. The probable explanation for this is that mills are now getting supplies of better jute. In 1950-51 mills were forced to use large quantities of birmah jute also, on which the wastage is very heavy. In 1951-52 the quantity of these fibres used was less, but mills were using out more heavy sacking for the production of which they were able to use low qualities of jute which again give a high wastage figure. If the

Raw Jute: There has not been much business in the past week. Early in the week sellers were reserved and inclined to hold for higher prices but with little encouragement from the market for manufactures mills have not taken much active interest. Assam Bottoms, which are the barometer of the market, were quoted at Rs 27 at the time

In Pakistan imports of New Crop are increasing but pucca balers are inclined to hold off as there is no parity between local prices and those obtainable abroad. In the early part of the week and review prices in Narayanganj rose to (P)Rs 23 bales. Bottoms for kutchra but have since eased on reports of quieter markets in Calcutta.

Your money goes farther when you buy Firestone Tyres—you get the world-famous extra safety and extra service of Firestone—without extra cost. Therefore, you save money when you buy Firestone.

LONGER WEAR

New, exclusive tread compounds to resist abrasion, continuous running strips on the Saffi-Grip tread, and the cooler running construction provided by Firestone Gum-Dipping combine to give you longer service.

GREATER SAFETY

The Gum-Dipped cord body is stronger and safer to resist injuries and blowouts. The Saffi-Sured construction welds tread and cord body into an inseparable unit for still more safety. And over 3,000 sharp-edged angles give you greater skid protection.

With Firestone, you have the safest, longest-wearing tyre that money can buy—and . . .

TEA COMPANIES.

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BUSINESS DOWNTURN EXPECTED IN THE UNITED STATES

EFFECT ON STERLING AREA TRADE: INDIA'S EXPORT DUTIES

FEW occupations are more hazardous for economists' reputations than short-range forecasting. Most of the specific and verifiable prophecies made by economists since the end of the war have been wrong. This is not as much a reflection on the profession as it may appear, for the very fact of a solemn prophecy being made can contribute to its being falsified. Thus, the warning of the economists last year that at the end of 1952 Britain would find herself in the midst of a first-class crisis may possibly have had something to do with the measures that were then taken to ensure that the crisis was averted. But most economic forecasts, if they issue from a reliable source, set forces going that help prove them right. If Mr. Deshmukh were to tell Parliament tomorrow that he felt sure that India was in for a period of sharply reduced profits, further unemployment and lower sales, within a few months the economy might show just those features, as a result of a collapse of confidence. Similarly with the long spate of optimistic forecasts about the future of business activity in the United States. The consistently bullish crystal-gazing of professional economists, officials and business leaders since 1949 must have been a useful stimulant to the expansion of output that has gone there. Economic forecasting is of course a highly developed business in the United States and never a week passes without one or two glances into the future being vouchsafed by academic, private or government experts. In the last few years almost all of these prognostications have promised steadily expanding activity until some date or other, after which there would be the danger of a downturn. It is the rider that has so far always proven wrong. The downturn has not occurred, the economy has continued to grow and confidence has not faltered. But the next set of prophecies still carry the rider, with the date for the possible downturn advanced to the slightly more distant future. Currently the danger date is being set at some time about mid-1954.

This is an interesting commentary on the organisation of free societies in the twentieth century. The richest and most resourceful of them, on whose vigour depends the welfare of a dozen others, cannot promise to maintain present levels of economic activity beyond a few months. If the danger after that period were simply that expansion would slacken or even cease, this would not be a matter for concern. But everyone knows, though they usually avoid saying it, that the danger is much greater than that; it is that a recession would gather momentum all too quickly and that what economists call the "multiplier" would soon become the "divisor", leading to sharp falls in employment and consumption. Admittedly, that danger is not as great in the United States today as it was in the 'twenties; the belief that still seems to be cherished in the Kremlin, that capitalist America is walking on a tightrope and will at any moment plunge into a slump, is a woeful exaggeration. But the point for America's trading partners, and especially the members of the sterling area, is that a comparatively mild downturn of business activity in the United States, involving only a small increase in domestic unemployment, could be quite enough to have disastrous consequences abroad. Hence the keen interest that we in the sterling area take in the succession of business prophecies from New York, Washington and Chicago.

To say that the democracies are living on their nerves, waiting for the United States to slump, would be putting the matter much too strongly. But the possibility of a recession in the most powerful economy in the world is borne constantly and vividly in mind by every country with whom she trades. To our knowledge it is only in India that a Cabinet Minister has been heard to say recently

that slumps just do not happen any more, because "we have learned to remedy that". Even in the United States, where there are probably more influential Keynesians than in Britain and where the administration has had some experience of applying contra-cyclical doctrines

CONVERTIBILITY SCHEME STALEMATED

U.K. INITIATIVE ENCOUNTERS CONTINENTAL CAUTION

LONDON had some hope that the meetings of the International Monetary Fund and of the International Bank in September would be the occasion for a further advance towards convertibility of currencies, but that hope was dissipated when the Chancellor of the Exchequer made it known last week that he would not attend the meetings. International monetary policy is now more than usually confused. As recently as July the Canadian Minister for External Affairs referred to the work on plans for convertibility as being "on the way to completion." There have been some signs of activity for this purpose around the British Treasury. A few months after the meetings of the Fund and Bank, the economic experts of the British Commonwealth will meet to review progress and to plan the next phase of policy. But it is impossible to judge whether these developments will bring quick results, any more than their predecessors.

It was in December last year that the initiative in the movement towards convertible currencies seemed to pass from the United States to the sterling area—not specifically to the United Kingdom, for some other sterling countries were at least as much interested. What was actually discussed then at the Commonwealth economic conference is a closely kept secret, but it is known that whatever plan was agreed was presented in the following March to the Americans during the visit of the British Foreign Secretary and Chancellor of the Exchequer to Washington, and that in the subsequent months the Continental countries of the Organisation for European Economic Co-operation and of the European Payments Union were consulted on the plan individually. During these discussions with the European countries it became clear that formulation of American economic policy was not proceeding very rapidly. The initiative seemed at that time to have passed definitely to Britain, but Britain was clearly sharing it not only with the other sterling countries but also with the other leading countries of Europe.

The position seems to be at present that not only America but the European countries also are cautious in their attitude towards the British plan. No European Government, it seems, has committed itself to approval of the plan. It is therefore assumed that a major difficulty has still to be overcome. That difficulty, presumably, is to combine the British plan with the continued existence of the European Payments Union, or to provide a satisfactory alternative to EPU for those countries which still need its services. It is, moreover, axiomatic that whatever plan the British and European countries might agree among themselves would depend on a liberal economic policy on the part of America. There is still no clear sign that such a policy is emerging, or, indeed, that the American Administration is yet ready to formulate a long-term international economic policy of any kind.

It is not surprising in these circumstances that progress towards convertibility seems slow, after the promising activities from late-1952 to mid-1953. What is distressing is that no one seems to know who will make the next move, or who holds the initiative. Another year may elapse before Washington is ready to act on its own account. So the responsibility seems still to rest with Britain. Mr. Butler's attitude towards the Fund and Bank meetings does not suggest that he takes that responsibility very seriously at present; or it suggests that he has been discouraged by the indifference of America and Europe to British efforts to promote convertibility. The British plan has certainly fallen behind its programme, which envisaged a broad agreement with America this year. It will consequently be difficult, though not impossible, to proceed further when the Commonwealth's economic experts meet again some months hence. It is not very profitable to speculate what line of policy they may follow without knowing what last December's plan proposed in detail. It can, at least, be said that if the general, though unequal, recovery of the sterling countries' external finances is consolidated in this second half-year, and if, in particular, the gradual rebuilding of the gold and dollar reserve continues, the basis for a new advance will have been laid.

The steady increase in the gold and dollar reserve this year has exceeded all expectations; and the medium-term outlook is not unfavourable, even though the allocation of American economic aid for 1953-54 is much smaller than last year's. There is about \$200 million carried forward from past allocations, and if that sum is added to the current period's allocation of about \$150 million the total received in the year to June next should be only about \$50 million less than the \$400 million received in the past period. However, the figure of \$2,456 million which the gold and dollar reserve reached at the end of July is

still much too small to serve as a basis for convertible sterling, and even if the increase could be maintained at the rate of the past year—a very optimistic assumption—it would be years before the reserve would be adequate. Hence the importance which the sterling countries attach to revaluation of gold. In his reply to the budget debate in the South African House of Assembly this month the Finance Minister revealed that the questions of the gold price and convertibility had been linked in the negotiations between the sterling countries and America. The implication seems to be that an increase in the world price of gold, which the Americans have hitherto strongly resisted, is one of the fundamentals of the British plan.

CURRENT COIN

Trade with Moscow.—A favourite theme of Communists in this country is that economic—especially food—shortages would ease if only the Indian Government would stimulate Indo-Russian trade, but Moscow's dilatoriness in replying to the Indian proposal for a three-year barter deal suggests that exhortations should be directed elsewhere. The proposal was made in March but Russia's acceptance was received only last Thursday—shortly after it was officially remarked that she had not even bothered to reply. India has suggested a three-year deal under which Russia would supply wheat (quantity not specified) in exchange for commodities to be decided after discussion between the two Governments. Trade between the two countries has never amounted to much, and the last of a number of barter deals, which was concluded in June 1951, provided for the exchange of 100,000 tons of Russian wheat for 5,000 tons of raw jute, 1,850 tons of tea, 5,500 tons of tobacco and 2,500 tons of shellac from India. That may or may not be the pattern for the new agreement, but points to bear in mind are, firstly, Mr. Kidwai's conviction that India no longer needs wheat urgently (rice is the real need), and secondly, that it would be unwise to export raw jute, at least during the current season when even total supplies are likely to approximate closely to mills' requirements. Russia has in recent months made notable efforts to expand and diversify her trade with Western nations and an unusual feature of her agreements with countries like Denmark, Holland, France and Argentina is the substantial amount of consumer goods she has agreed to take. Her eagerness to trade with the West springs no doubt from considerations of political expediency and is a logical corollary to the wider diplomatic moves made in recent months to ease tension between the two power blocs. She has probably taken into account the fact that if she increases her trade with Western European countries she can further complicate their relations with the United States (where opinion against trading with Communist countries is strong) and perhaps thus weaken the Western defensive alliance. She is, for instance, to purchase several French cargo ships; Britain has been asked for some more, but the U.K. Board of Trade is considering whether these can be sold in view of the U.S. Battle Act, which lays down no definite embargo except on tankers. Russia has offered strategic materials such as chrome and manganese but her price for these is higher than in world markets. The Russians seem to be particularly seeking favour with France and have given her a very good bargain because she is one of the Big Three; many of the commodities they are to get from her under the latest agreement could have been supplied by Italy, who has deliberately been ignored despite the fact that she is far more eager to trade with Russia. There is no doubt that as export markets shrink and become more competitive business men in the free world will become increasingly eager for trade with the Communist countries. But, as the Economist pointed out recently, the fact is that fundamentally Russia is not a reliable market for Western consumer goods nor a cornucopia of food and raw materials. Nor, we think, is she ever likely to become a cheap and steady supplier of the capital goods that are currently India's chief need.

KESA's Expansion.—The latest annual report of the nationalised Kanpur Electricity Supply Administration for the year ended 31st March, 1953, records some encouraging increases over the previous year—from 191 million units to 202 million units in production, from 24,400 to 27,200 in the number of consumers, and from 93,850 kilowatts to 99,400 kilowatts in the connected load. Unfortunately the cost of electricity to consumers also increased from .793 annas per unit to .805 annas, after having shown a steady annual decline from the 1948-49 level of .817 annas. The Administration, however, ascribes this to factors outside its control: Rs. 3.66 lakhs were paid as increased coal freights and Rs. 26,000 was added as additional cost of the contribution to the Employees' State Insurance Corporation. But for these increases, the price per unit would have been lower at .770 annas per unit (which compares with .706 annas when KESA was privately managed). The demand for electricity is growing, so expansion continues. Work on the Rs. 234-lakh extension project is being "pressed

forward with all possible speed" and the 15,000-kilowatt generating plant is hoped to be installed during the current financial year. The steam boiler and associated equipment have been functioning since January and have enabled the older boilers to be thoroughly serviced. The progress of the distribution section of the project, which was sanctioned at an estimated cost of Rs. 119.2 lakhs, is stated to have "kept pace at every stage with the additional electricity made available from time to time." Revenue from the sale of energy, rental of meters, etc., totalled Rs. 144.08 lakhs as against Rs. 130.36 lakhs in the previous year. Expenditure was Rs. 89.84 lakhs (as against Rs. 82.76 lakhs). Rs. 20.31 lakhs (Rs. 21.59 lakhs) were set aside for depreciation, Rs. 1.89 lakhs (Rs. 1.79 lakhs) for contingency reserve and Rs. 9.49 lakhs (Rs. 5.74 lakhs) for arrears of depreciation. A sum of Rs. 22.55 lakhs (Rs. 18.55 lakhs) came under the heading "reasonable return on capital base in terms of the Electricity (Supply) Act, 1948." The Government has sanctioned a further project estimated to cost Rs. 128.33 lakhs for the replacement of worn-out plant. This project comprises the provision of one 15,000-kilowatt electricity generating plant and two 150,000 lbs. per hour boilers with the necessary associated equipment and civil works. The cost of the project will be met from the depreciation fund.

A Policy for Minerals.—The Government of India's policy on the development of mineral resources has never been very precise; nor—as the example of the leading mining industry, coal, shows—always beyond criticism. The mineral policy conference held in January 1947 recognised in a general way the importance of minerals to the country's economy and felt that if their exploitation was to be rational and judicious it should be centrally co-ordinated. The first step in this direction was the Mines and Minerals (Regulation and Development) Act of 1948, which gave the Central Government powers for the regulation and development of mines and oilfields. The Indian Bureau of Mines was set up during that year and the Geological Survey of India reorganised and expanded. But, as Maulana Azad, Central Minister for Natural Resources and Scientific Research, said in an address read the inaugural meeting of the Mineral Advisory Board last Friday, "It is somewhat surprising that till now we did not have an advisory board in this field." He declared that no national mineral policy could be framed without a complete and accurate geological map and the pooling of scientific knowledge. The former, however, is likely to remain little more than an ambition for a long time to come, although the Geological Survey has been doing excellent work in this field. (Between 1948 and 1952, it mapped over 40,000 square miles and carried out systematic investigations into deposits of magnesite, gypsum, manganese, bauxite, chromite, iron ore, ilmenite, fireclay, lignite, coal, oil, pyrite and copper). Scientific research is proceeding simultaneously, two important centres mentioned by the Minister being the National Metallurgical Laboratory at Jamshedpur and the Fuel Research Institute at Dhanbad. Maulana Azad was sanguine enough to assert that India's "supplies of iron and coal are almost inexhaustible while recent explorations have held out a promise of vast reserves of petrol." But in pointing to India's importance as a mineral producer, he did well also to lay stress on the deficiencies—sulphur, silver, zinc, lead, tin, nickel, mercury, platinum and petroleum—and to hope that future surveys would help overcome at least some of them. The emphasis on the need to process minerals within the country as far as possible before exporting them is understandable and is in line with the ambitions of many other raw material producing countries. But some sectors of the mineral export trade are likely to become highly competitive, in which case these ambitions will have to be reconciled with the need to pay greater attention to the precise nature of buyers' requirements.

India's Trade Deficit with U.K.—The latest statistics in the U.K. Trade and Navigation Accounts show that in the first half of the current year India incurred a deficit of £4,014 million in her trade with Britain, as against a surplus of £4.2 million in the corresponding period of last year and a surplus of £2.4 million in the whole of 1952. Both exports and imports declined, the former from £63.34 million in the first half of 1952 to £51.07 million this year and the latter from £59.1 million to £55.09 million. Chiefly contributing to the fall in exports were jute manufactures (from £11.07 million to £3.25 million) and tea (from £23.98 million to £18.77 million); but exports of both have recently shown an encouraging recovery and were higher last June than in June 1952. Comparing the half-years, the most outstanding export increases were in raw cotton and cotton waste (from £646,000 to £1,765,000) and leather and manufactures (from £3.8 million to £7.24 million). Rises also occurred in non-ferrous ores and scrap (mainly manganese ore), raw

and waste wool and woollen rags, woollen and worsted yarns and manufactures (mainly carpets, floor rugs, etc.), coir mats and matting, and undressed hides and skins. Declines were shown by tobacco, non-metallic mineral mining and quarry products other than coal, seeds and nuts for oils as well as oils, fats, resins and gums. Compared to the first half of 1952, India this year imported more electrical goods and apparatus, woollen and worsted yarns and manufactures, and non-ferrous metals and manufactures, but less of almost all the other major groups of items. Despite declines, machinery and vehicles (including ships and locomotives) were most prominent in terms of value; electrical goods and apparatus displaced chemicals, drugs, dyes and colours from third position. Electrical machinery jumped to first place among machinery imports, displacing textile machinery where despite a fall India is Britain's largest customer. Other features were a substantial increase in machine tools and a very sharp decline in internal combustion engines.

I.L.O. Aid to Productivity.—More than 55 percent of the technical assistance programme of the International Labour Organisation will be concerned with vocational training and training within industry in underdeveloped countries, says its seventh annual report. Another 10 percent of the programme, in the related field of manpower and improved industrial methods, brings to some 65 percent the amount of the ILO's programme devoted to increasing productivity. This has been a major emphasis for the agency in recent years. The figures are based on the "expert-months" for which ILO will incur financial obligations in 1953 under the expanded programme of technical assistance of the United Nations and the specialised agencies. The total of "expert-months" is estimated at 3,610. (One expert on the job for one month equals one expert-month.) Other fields of activity in technical assistance—many of which have a more or less direct relationship to productivity—include co-operatives, handicrafts and cottage industries; social security; labour inspection and occupational safety and health; labour statistics; and miscellaneous. The main purpose of international economic and social policy in general is to raise standards of living throughout the world, and particularly in underdeveloped areas, the report points out. "High productivity in the long run makes rising standards of living possible. An equitable distribution of the fruits of higher productivity is, however, the only means of insuring that higher productivity does in fact make for rising standards of living." Among the factors that produce higher productivity, the social and human factors are of the first importance. The ILO is primarily concerned with these factors, and its work includes training to improve the workers' skills, more efficient organisation of the employment market, and health and welfare measures to maintain the workers' productive capacity. Among the projects undertaken by the ILO in 1953 to achieve those objectives, and which are of interest to our readers, may be mentioned the fact that an ILO productivity mission has helped reduce by 50 percent the number of looms in Indian spinning mills. Closely related to low labour productivity as a bar to the attainment of high living standards is underemployment, in which the skills that workers already have are insufficiently utilised in a nation's economy. The report outlines the policies recommended for combating underemployment, including land reform, in which the ILO and the Food and Agriculture Organisation are collaborating for a solution. ILO handicrafts experts are associated with a number of the demonstration projects established under the technical assistance programme, while a co-operative field mission has been established in Lahore to assist Asian governments and to serve a regional co-operative centre. The emphasis is shifting increasingly towards aid to governments in implementing their own programmes administratively. The 1953 programme allows for 35 experts and 37 fellowships in social security.

U.S. Foreign Investment.—Unbalance in the world's economy, economic nationalism and general social and political insecurity are among the factors limiting American private investments in other countries, according to a recent report of the U.S. Department of Commerce. The report, first of a three-part study to analyse obstacles to American investments, observes that "many countries are keenly aware of the advantages they can obtain by the entry of American capital, particularly when it is accompanied by American know-how." Some countries, the study notes, have already taken steps to improve the investment climate. The report finds, however, that the prospects for greatly increased investments over the next few years are not bright. It notes that "positive and effective steps" by the United States and other governments for the removal of investment obstacles will require time and patience, but that "practical understanding and mutually satisfactory adjustments can be built".

Factors in the Far East and Near East tending to discourage foreign investors, the report continues, are policies and practices of many governments, the uncertain situation, and lack of adequate facilities and resources such as transport, power and skilled labour. In its analysis of the Near East and Africa, the report said investment in the postwar period "has spurred spectacularly". The Commerce Department places the total amount of U.S. private direct investment in the area at the end of 1950 at approximately \$1,078 million. Roughly 80 percent is concentrated in petroleum activities. The report estimates the value of long-term American investments in Western Europe at the end of 1951 at about \$3,500 million. Almost half was invested in the United Kingdom, and most of the remainder in France, Germany, the Netherlands, Belgium and Italy.

Servicing Earth-Moving Equipment.—Of interest to engineers and those concerned with earth-moving equipment will be the Euclid service training and maintenance schools which have been introduced in India to coincide with the monsoon, a period during which the large projects overhaul their equipment. The schools are of one week's duration and cover all aspects of service and daily maintenance. Three engineers have come from the Euclid factory in America to conduct a course of lectures and practical demonstrations. Courses were held at Hiraakud from 6th to 11th July, at D.V.C. from 15th to 22nd July, and at Bhakra from 29th July to 12th August. First each component is discussed in the classroom and maximum use of visual aids is made; all the lectures are fully illustrated; 16 m.m. films, film strips and VU-Graph projection of seven-inch transparent slides brought from America are used. The classes were attended by selected workshop personnel, mechanics and field officers, many of whom impressed the experts with their technical and mechanical knowledge of equipment, and of operational and maintenance requirements. At the end of each course an oral examination was held with satisfactory results, and each attending engineer was given a maintenance manual. The problems encountered in the maintenance of construction equipment are similar all over the world. Training of a continuous, progressive nature designed particularly to reach those who are actually performing the maintenance is necessary. With the development of modern giant earth-movers, there is an increasing need for the practical application of improved techniques in servicing equipment. Although Blackwood Hodge (India) Ltd., Euclid's distributors in India, wished to invite engineers from all the large projects in the country to attend these service schools, they have had to restrict attendance at classes to approximately 15 persons in order to ensure individual attention and instruction. However, it has been decided that the company's engineers will continue the work that has been started by conducting further lectures and demonstrations.

Industrial Disputes in May.—Provisional statistics of industrial disputes for May 1953 show an increase in the number of work-stoppages and a slightly higher time-loss as compared with the previous month. The number of workers involved was less. There were 81 disputes involving 34,350 workers and accounting for a time-loss of 217,526 man-days. The average duration of disputes increased from 4.4 days in April to 6.3 days in May. Seven of the disputes resulted in lock-outs, affecting 2,657 workers and accounting for a time-loss of 17,309 man-days. Apart from strikes and lock-outs resulting from industrial disputes, there were six work-stoppages not connected with industrial disputes. These involved 8,971 workers and resulted in a time-loss of 32,411 man-days. Three of these were in Bombay and the remainder in Madras, U.P. and West Bengal. Fifty-eight disputes ended during the month, out of which 39 lasted for not more than five days each. Wages, allowances and bonus were the main points of dispute in 29 cases while grievances relating to personnel accounted for 26 disputes. Thirteen disputes ended in complete or partial success for the workers, but in 25 disputes they were unsuccessful. The results of the remaining disputes were either indefinite or not known. Among States, West Bengal accounted for the largest number of disputes, workers involved and man-days lost during May. Bombay recorded a larger number of disputes but a smaller time-loss as compared with April. Considerable improvement was noticed in Punjab and U.P. Among industries, the largest time-loss was recorded in cotton textiles—85,489 man-days were lost as against 20,173 in April. The time-loss suffered by the engineering industry, which was the highest in April, declined appreciably in May. The time-loss decreased in jute and "other textiles", iron and steel and miscellaneous industries but increased in the "food, drink and tobacco", "wood, stone and glass" and "skins and hides" groups of industries. Mines and plantations, which recorded no time-loss in April, accounted for 2,821 and 721 man-days respectively during May.

DOMESTIC ISSUES BRIGHT
RUBBERS AND TEAS FIRMER

London, 12th August.

THE post-holiday week provided a good deal of varied interest in the stock markets. But the final survey revealed that domestic issues were on top all the time. The gilt-edged section gave a very good account of itself despite the fact that it had to contend with the fresh government borrowing of £80,000,000 for the Gas Council. First grade industrial equities again proved themselves serious contenders in the big money field. Institutions again appeared as eager buyers of any lines that came on offer. But, as this was seldom, there was a tendency to seek fresh fields in the shape of good secondary stocks and the old established shipping lines. Interest in foreign issues was largely centred on Japanese stocks which registered some useful gains. Chinese loans however eased through lack of interest and the tiredness of holders.

Rubbers and teas, though largely idle, were generally inclined to be firmer. For most of the week this was accounted for, to some extent, by the uptrend of Wall Street. Singlo declined 15d to 15s while Jokai registered a fractional gain on the week to 27s 3d. Mining shares generally gave an indifferent display. Gold mining shares moved very narrowly, the London market showing little interest in view of the fact that neither the Cape nor Paris appeared willing to operate very extensively. Coppers reacted downwards with the lower price of the metal at the reopening of dealings in the London Metal Exchange, although some

of the losses were later wiped out. This was despite the prospects of a strike in the copper belt.

Because of the Bank holiday, discount houses had a large volume of new bills to pay for and the start of the week in the money market found credit in keen demand. But a change for the better soon took place and mid-week saw credits just about adequate for demand. Latterly, however, calling in of funds by outside banks together with the calling for payment of loans by one or two of the main clearing banks created a shortage of money and the authorities had to help the market before books could be balanced. The Bank of England Return disclosed that active note circulation declined by £4 million to £1,598.4 million while bankers' deposits fell by £12.6 million to £262.1 million. Applications for £260 million of Treasury Bills amounted to £369,645,000 of which the former amount was allotted at an average rate of 47s 350d. percent. This week £270 million will be offered.

Rice Trading

In view of the changed pattern in international rice trade, market circles believe it may take at least a year for business to resume pre-war proportions. The Government has returned rice trading to private hands officially from 1st August but 4th August was the first market day. Burma which is one of the main exporting countries had adopted a principle of calling for tenders. This eliminates the normal trading procedure. The United Kingdom Ministry of Food meanwhile is offering its remaining stocks at undisclosed prices although they are believed to be around the previous controlled prices. These stocks are expected to last about two months at the present level of offtake. Miscellaneous business, however, is being done in small parcels from Europe. Uruguayan rice was recently available here around 105s. percent, landed duty paid, but no first hand offers were received as licences, it is understood, are no longer available from the origin.

Rotterdam Grain Futures

Trading in grain futures on the Rotterdam grain market is expected to be resumed shortly, it was learned. It is believed that for the time being only barley and maize futures will be quoted. The Rotterdam futures market was of considerable importance before the war. The resumption is made possible by the recent withdrawal of the restriction measures introduced by the Dutch Government following Holland's liberation in 1945.

Seeds and Oil Dull

With interest in both seeds and oils absent, business was at a standstill. Coconut oil was £1 lower at £112 c.i.f. for Ceylon oil but this market remained largely nominal. Uruguayan linseed oil also eased slightly to £82½ c.i.f. from £83-7/8 and American crude soyabean oil to \$251 f.o.b. Seeds were irregular with declines in Indian 3% kardi-seed at £50 and Canadian linseed at £48½, while British East African castorseed rose slightly to £61½—all c.i.f. per ton.

Quiet conditions prevailed on the London oil-seeds market with business slow. Large sales are reported of Dutch produced coconut oil to North European buyers from £103 to £104 per ton, c.i.f. resulting in lack of interest in Ceylon and Straits oil. Linseeds: lower offers of Indian 3% kardi-seed at £49 c.i.f. failed to draw buyers, while Canadian linseed firmed to £49½ c.i.f. on good domestic demand.

Hong Kong Gold Prices

Hong Kong gold again eased in the past week owing to lack of buying incentives. After touching \$263 the price drifted to \$263½. The bearishness was attributed to the Korean truce, lower international prices and the possibility of sterling convertibility. It is reported that the Macao gold import licence fee was cut by 70 U.S. cents per ounce which also adversely affected the market. Official offtake totalled 9,100 taels and unofficial 11,000 taels. Arrivals in Macao were 7,500 ounces and unofficial exports estimated at 5,500 taels. Future contracts of 8,500 ounces have been fixed at \$39½ per ounce, c.i.f. Macao.

Rubber Market

Values on the London rubber market were lifted fractionally above last week's lows in a quiet but moderate turnover. Sellers were reluctant to operate, while American buying orders appeared intermittently in addition to some outside interest for near deliveries. United Kingdom and this is also affecting the sole crepe market. Available supplies of thicker crepes improved and tend to weigh on the market.

Raw Cotton Arrivals

United Kingdom arrivals of raw cotton in the past week totalled 29,272 bales comprising 8,355 United States, 4,926 Peruvian, 3,218 Sudan, 2,673 Argentine, 2,542 Brazilian, 1,752 East African, 1,554 Mexican, 1,072 Pakistan, 689 West African, 200 Indian and 2,297 Syrian and others. Quantity currently afloat to the United Kingdom totalled 36,252 bales, mainly Sudan, Egyptian, East and West African, Pakistan and Mexican.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET
GOOD DEMAND FOR INTERBANK FUNDS

Wednesday, 12th August.

MONEY is generally easier and there is little fresh demand for accommodation from trade and industry. Sugar advances are falling steadily with occasional fluctuations due to the irregular supply of wagons. The interbank market has been rather more active in the last few days and there are borrowers over at the rates of 2½ percent for overnight funds and 2½ percent for good money. The bill of exchange section has been quite dull, with only small tea and a few moderate gunny bills reported. Remittance has been fair. Exchange rates are steady.

Tenders for the offer of Rs. 1½ crores of three-month Government of India treasury bills fell to Rs. 2,01,75,000 this week but the average rate of acceptance was unchanged at Rs. 2-6-3 percent per annum. Tenders at Rs. 99-6-6 percent were accepted in full and those at Rs. 99-6-3 percent allotted approximately 43 percent. Tenders for another Rs. 1½ crores of treasury bills will be received up to 11 a.m. on Tuesday of next week at Bombay and up to Monday at Calcutta, Madras, Kanpur and Delhi. During the week ended 7th August, treasury bills for Rs. 7,83,50,000 were sold in favour of the Reserve Bank.

Bullion was steady last week and sentiment improved chiefly due to good offtake in ready stocks. Speculators also supported the market. Silver rose from the previous week's level of Rs. 151-4 to Rs. 152-8 quoted today, while the ready rate was done at a premium of 4 annas. Although the spot rate was unchanged at 74 d. in London, the forward price rose from 73½ d. to 74 d. The price continued unaltered at 85½ cents in New York.

Gold also improved in sympathy with silver and there was good upcountry demand. The price was higher at Rs. 88-6 against Rs. 87-12. The sovereign at Rs. 57-12 showed a gain of 4 annas.

A rise of Rs. 12.92 crores in notes in circulation to Rs. 11,07.06 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 7th August, 1953, while the total note issue was fractionally lower by Rs. 52 lakhs to Rs. 11,39.92 crores. Notes held in the Banking Department consequently fell by Rs. 13.45 crores to Rs. 22.95 crores. In the Banking Department deposits showed an all-round fall. Deposits of the Government of India and other Government accounts declined by Rs. 4.47 crores and Rs. 8.91 crores to stand at Rs. 103.82 crores and Rs. 27.09 crores, respectively. Balances of commercial banks at Rs. 46.65 crores disclosed a drop of Rs. 36 lakhs. Balances held abroad were down by Rs. 1.64 crores to Rs. 119.15 crores, while investments improved by Rs. 1.22 crores to total Rs. 90.19 crores. Other loans and advances rose from Rs. 11.82 crores to Rs. 13.08 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 49.44 lakhs. Ways and means advances were shown at Rs. 3.30 crores (Rs. 2.50 crores).

The statement of the position of Scheduled Banks for the week ended 31st July, 1953, discloses Demand and Time liabilities at Rs. 530.25 crores (Rs. 14.38 crores on account of borrowings from Banks) and Rs. 328.27 crores (Rs. 2.29 crores) compared with Rs. 535.82 crores (Rs. 13.66 crores) and Rs. 328.31 crores (Rs. 2.08 crores), respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 23 lakhs and Rs. 5.75 crores to aggregate Rs. 30.69 crores and Rs. 44.78 crores, respectively. There is a rise of Rs. 80 lakhs in investments to Rs. 316.41 crores. Advances and bills discounted at Rs. 489.51 crores reveal a drop of Rs. 48 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 57.0 percent against 9.4 percent and 56.7 percent.

The return of Imperial Bank of India for the week ended 31st July, 1953, shows a fall of Rs. 3.12 crores in total deposits to Rs. 208.19 crores. Investments in Government Securities remain unchanged at Rs. 75.91 crores, while other authorised investments are up by Rs. 10 lakhs to Rs. 10.80 crores. Loans, cash credits and overdrafts have decreased by Rs. 44 lakhs to aggregate Rs. 89.13 crores, while bills discounted and purchased have increased by Rs. 13 lakhs to stand at Rs. 25.71 crores. Cash and balances are, in consequence, shown at Rs. 20.93 crores or Rs. 4.45 crores less.

According to the land customs trade returns received in the Department of Commercial Intelligence and Statistics the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of June, 1953, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	17	148
Western Pakistan	17	6
Other Countries	4	16
Total	38	170

Total trade amounted to Rs. 208 lakhs. Re-exports were nil and trade in treasure nil. There was an adverse balance of trade amounting to Rs. 132 lakhs.

In a Press Note, the Reserve Bank says that Government Promissory Notes of the following loans, interest on which falls due for payment during September 1953, will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta, for payment of interest from 16th August, 1953.

Whatever poets may say, it's gears that make the world go round—gears so small that they would fit into a cigarette packet—gears so big that they dwarf a house—gears of every size and cut—spur, bevel, helical, worm, hypoid. Indian industry cannot function without gears, and gears cannot function without the right kind of lubricant. Our research people are constantly experimenting to find ever better lubricants for use in gears.

IT'S GEARS THAT MAKE THE WORLD GO ROUND

What happens to oils in high-speed gears? That many-sided problem is just one which our people study. They study them in gear rigs which turn up to 15,000 r.p.m. These and other studies go on all the time. The lubricants which Burmah-Shell supply for your gears are the result of this kind of research.

BURMAH-SHELL IN INDIA'S LIFE AND PART OF IT

SAVING TAX RUPEES SERVING TAXPAYERS

WITH

NO. 12 (100 H.P.) NO. 112 (75 H.P.) NO. 212 (50 H.P.)

Saving tax rupees is important to every official in a state, city, town or village. He has to in order to do his job well. But as important as saving the tax rupee is the job of making it

serve the taxpayer. Service to the taxpayer means useful work and that is the speciality of "CATERPILLAR" Diesel Motor Graders. They do high-quality work at low cost. "CATERPILLAR" Diesel Motor Graders build roads and streets, widen and maintain existing roads. You will be serving your community and getting the maximum out of every tax rupee invested.

MR. Krishnamachari's statement in the House of the People on Tuesday about Indianisation came at an opportune moment, for the recent debate in Parliament on the Collection of Statistics Bill revealed that some people had already forgotten the satisfactory results of the last Indianisation "census" at the close of 1952. The new information presented by the Minister on Tuesday should still controversy for a time, since he was able to say that the latest figures "show a definite indication of more Indians being employed in the superior cadres and less and less Europeans being employed". He added: "I find that the trend of employment of Indians in these firms is definitely encouraging". This is welcome news at a time when employment opportunities have been contracting in most other sections of business and when trade has been slack, as during the past six months. For most people, I should think, the important thing is that the absolute number of well-paid jobs open to talented Indians should increase, and this appears to be the case. Mr. Krishnamachari again disclaimed any intention of dealing with individual firms in this connection, and since his policy of seeking general understanding with chambers of commerce is achieving the required effects it might be better to remove the Indianisation question from the realm of public controversy. It has been there now for just about a year, and to the best of my perception the weight of moderate Indian opinion during that time has inclined to the view that once the Minister is satisfied that foreign firms accept his policy in general, they should be left to implement it within the limitations of business efficiency. Incidentally, Mr. Krishnamachari gave the impression on Tuesday that he was speaking from figures sent to him unsolicited by the major business organisation involved; this should dispose of the belief aired during discussion of the Statistics Bill that it was a legal instrument required to extract information about Indianisation from unwilling foreign firms.

It would be a great pity if the recent improvement in relations between India and Pakistan were to be quite dissipated by the unseating of Sheikh Abdullah. One feels inclined to agree both with Mr. Nehru when he says that this is an internal affair that need not affect negotiations between the two nations, and with Mr. Mohammad Ali when he says that there is something here for the Prime Ministers to discuss. The only people one cannot agree with are those who think that this is a suitable occasion to undo whatever good has been done in the last few months, and to publish the wildest accusations against their neighbours. The problem of Kashmir, and the undertakings India and Pakistan have given to the people of the State, remain the same whoever rules in Srinagar or in so-called Azad Kashmir. If the Sheikh has proven unreliable and ungrateful, as well as an over-zealous doctrinaire in his domestic policy, it is better he has been dismissed because the Kashmir issue can be solved only by open agreement, not by chicanery. As for the supposed machinations of foreign powers, we must await further evidence; stories of sinister foreigners paying street urchins one anna a time to throw pebbles at Srinagar shop windows are too slender a basis for concluding that Kashmir has become a pawn in an international conspiracy.

Dr. Roy, says one of the daily papers, has returned from Delhi "with a bagful of benefits". And indeed he has, if the list of concessions he is reported to have secured in the capital is confirmed. It is obvious that the Chief Minister pressed

A DITCHER'S DIARY

the argument that the recent disturbances in Calcutta were largely the expression of economic distress, and that he needed the assistance of the Government of India in bringing down the cost of living from its present excessive height. The decisions to relax restrictions on cotton mills' output of dhooties, to increase supplies of sugar, to reduce the selling prices of wheat and rice and to obtain cheaper mustard oil from Uttar Pradesh should have the effect of making living costs much cheaper, for these are the things that have become more expensive in the last few months. How these discriminating concessions will be viewed from other States of the Union remains to be seen. When it was suspected some months ago that the Bengal cotton mills were not cutting back their production of dhooties as much as the other States, there was much loud complaint from Bombay; while the advocates of restored food subsidies will now probably want to know why grain should be subsidised only in this State. West Bengal can reply that her circumstances are special; unemployment and distress have been more marked here than elsewhere, and the Congress Party has lost more ground in Calcutta than it can afford. It would go against the spirit of the union if one State were to be coddled at the expense of others, but since (for instance) the restriction on mills' production of cloth was introduced at the suggestion of one South Indian State, there is no harm in relaxing it in another State that has been most unfairly affected by it. West Bengal is in every way a peculiar case, both in her importance and in her disadvantages, and it is the simplest political wisdom to lend her Chief Minister assistance in mitigating distress in a State that came recently so near breaking point.

The mining of sillimanite is a new industry in India and I must confess I had never heard of the substance before last year. The report (published on another page of this issue of Capital) of the chairman of the company which is pioneering its exploitation, Assam Sillimanite, is only the second, so it is not surprising that it deals with the growing pains of an infant enterprise. Baldly, the position seems to be that there are a number of people in India who are like me in having only the vaguest idea of what sillimanite is but who are unlike me in having factories where it could be put to some good use. Until the value of this refractory is better known in its own country, it is clear that the producers have to find a market for it somewhere; otherwise they cannot take production to the level of 5,000 tons a year which is estimated as the necessary minimum for development work and further exploration. But the ukase that Indian minerals should not be exported without being partly or wholly processed by domestic labour is standing in the way of the grant of export licences to the required extent. This looks like another case of "conservation" being taken to mean, being left to go to waste in the ground. The proposition that you have to encourage people to take the stuff out of the ground, if necessary by letting them export it for a few years, before uses will be found for it at home seems simple enough to me, but someone in Delhi boggles at it. Incidentally, sillimanite is quarried under most difficult conditions, for it is found in a part of Assam that has twelve feet of rain a year and no roads for five months, in spite of which the company provides the best of working conditions for its employees, who with a single exception are Indian nationals. Further employment is provided in Calcutta, where the blocks are sawn. If a less scholastic interpretation of the mineral policy

rules is all that is needed to guarantee the progress of this nascent industry, the administration ought to be able to furnish it.

Conducting a Government is strenuous work no doubt, but conducting an election campaign is even more so. For this reason alone the Conservative Party, which has just begun to regain the strength it lost when Sir Winston Churchill and several of his lieutenants fell ill, can scarcely be contemplating going to the country in the near future. Though Sir Winston said some months ago that Britain needed a period free of elections, he must now have realised that his party would stand to make very considerable gains if an election were held this autumn. Politically, everything is in favour of it—the success of Mr. Butler's budget, the improvement in the economic situation testified by the rising reserves, the progress of the house-building programme, the Premier's initiative in international affairs and the worsening strains inside the Labour Party. But it was only this week that Sir Winston returned to the saddle after his six-week rest, and even now he is directing affairs from the country; Mr. Eden is convalescing on the Continent and Mr. Macmillan will not be fit for work before October. To send a party with this ailing leadership to the country, before they have had the opportunity to demonstrate from their offices and on the floor of the Commons that they are restored to health, might be asking too much of voters; and to send the leaders themselves, especially the ageing Premier, on a gruelling election campaign might be asking too much of their health. So an early dissolution is not to be expected despite the anxiety there must be in the Conservative Party to exploit the substantial advantage it now enjoys over its divided opponent. Meantime Sir Winston's return to more active interest in the direction of foreign policy will be warmly welcomed by all who wish to see how far he can regain and extend the initiative in the current sparring for the beginnings of an international settlement.

The spectacle of practised and polished writers accidentally saying just the opposite of what they mean to say carries a lesson for all of us lesser scribblers. There is a classic example in a book by Harold Laski, but I saw an equally glaring instance in a letter written by Miss Rebecca West to the *New Statesman* and *Nation* last week. To quote Laski's howler first, he once wrote the sentence: "I am not, indeed, sure whether it is not true to say that the Milton who once seemed not unlike a 17th century Shelley had not become, out of an experience ever more bitter in each year, more akin to the founder of that Jesuit sect which nothing could induce him to tolerate". There are four "not's" in that sentence, which is precisely one too many with the result that Laski is saying the contrary of what he intends to say. Miss Rebecca West's letter of last week repeated a passage from an article she wrote on the Rosenbergs, and then went on: "I cannot feel that any reader of normal intelligence could read those words and not fail to gather that I thought the Rosenbergs should not be executed and should be reprieved". The surplus "not" in this piece of nonsense is particularly damaging for Miss West, for she is defending herself in a newspaper controversy from the charge of having said exactly what she does say now by inadvertence. The sight of well known authors coming such fearful croppers should steel us all in the resolve never to attempt a sentence containing more than one "not".

Company Meetings

BRITISH INDIA GENERAL INSURANCE CO., LTD.

MR. FRAMROZE H. MEHTA'S REVIEW

At the 33rd annual general meeting of the British India General Insurance Company, Limited held in Bombay on July 23, the chairman, Mr. Framroze H. Mehta, J.P., said:

Gentlemen: I have great pleasure in welcoming you once again to this thirty-third annual general meeting, and submitting the directors' report, audited accounts and balance-sheet for the year ended Dec. 31, 1952. The report and statement of account have been in your hands for some time and, with your permission, I take them as read.

Last year I referred to the Insurance Amendment Act and since then, much useful work has been done by the Government Insurance department executive committee and tariff committee to improve insurance conditions both in the life and general departments. For the first time, an invitation was extended by the executive committee to meet the delegation of the advisory board of directors, to consider ways of improving the trade and putting the same on healthier lines. The delegates of the advisory board of directors met several times and discussed problems pertaining to general insurance from various angles; useful suggestions were put forward, and from the trend of the discussions which ensued, it seems that the directors have realized the situation facing them. More such meetings between the delegates of the advisory board of directors and the executive committee will be held in the near future for frank and open discussions with a view to evolve schemes and formulae to create a healthy growth in the insurance market. Under the Act, greater responsibilities are thrown on the directors to ensure that the affairs of the company are being run on sound lines. While the directors are ultimately responsible for successfully running the company, the main functions of the board of directors are to look after the interests of the shareholders by whom they were elected, to control and invest the funds of the company, appoint suitable persons to manage the affairs of the company and to have an overall supervision.

Insurance underwriting is of an intricate nature and has such a wide scope that it can only be managed by those who have long experience of underwriting and who can devote their whole time to the various problems created from time to time. It is not advisable to make directors responsible to look into the day-to-day affairs of well-managed and smooth-running organizations.

Working Difficulties

While overall control from the authorities is necessary for improving the trade, which is of a national character, to put same on a healthy and sound footing, it is essential that freedom be allowed to the insurers to evolve their own methods suitable to them. The working difficulties can only be judged by those experienced in the insurance field, and each insurer has his own set problem to face to develop the business suitable to him which cannot be worked out on a set pattern. From what was said by the chairman and directors of companies at the various meetings of the advisory board of directors, there appears to be a great divergence of opinion on the subject. It is but natural that with such differences it is difficult to produce a suitable working scheme acceptable to all. If, however, insurers extend to each other their active co-operation in trying to understand the difficulties facing others, and adopt a policy of 'live and let live', I am sure a common understanding can be reached by evolving a scheme which may be acceptable to all and which would ensure a healthier trend in insurance.

It is an accepted fact that insurers lean to a very great extent on the interest earning capacity of their funds. Insurance companies being credit institutions, like banking institutions, render financial assistance to industry, thus contributing to a great extent to the national building programme. It is, therefore, desirable that a certain amount of freedom be given to the insurers in their investment policy.

The biggest problem facing the Indian insurer today is expenses. With the steady increase in prices, the standard of living rising and the demands from the staff unions for higher salaries, bonuses and gratuities, coupled with the fall in direct premium income, the insurers find it increasingly difficult to

keep within the required quantum of expense. The scramble for direct business in India is, therefore, due to the anxiety of the insurers to fall within the required quantum.

The year 1952 saw a considerable drop in gross direct Indian premium, especially in the fire department. The drop is mainly due to the country's economic condition, import restrictions and revision in rates in certain sections of the tariff.

Fire Claims Rise

The fire section is the mainstay of the general department as shown by the accounts of various companies. This department had yielded a reasonable percentage of profit in the past on account of the claims ratio being within limit. However, the trend in 1952 and in the first half of 1953 is towards an increase in the claims ratio, particularly in the first half of 1953 which is considered abnormal, and with the increasing claims ratio, the profit-earning of this department will be affected; hence the situation calls for the very careful consideration of the underwriters. The majority of claims in this department of insurance are due to lack of reasonable care by the insured, especially industrial concerns. A fire loss can be considered as a national waste, and while the insurance companies pay for the loss to restore the property, they can never restore the loss sustained by the nation.

With rapid industrial developments in India and congestion in big cities, increasing fire claims are evident, and it is therefore desirable that the Government Insurance department, in conjunction with the insurance associations, should take a lead in educating the people in fire prevention and consequent waste.

Marine Results

Marine insurance results since the last year have been good. However, the position is deteriorating rapidly, mainly due to the fact that the claims ratio in recent years the tendency has been towards cutting rates without considering the subsequent consequences, so much so that we are now reaching an uneconomical level and, if no immediate improvement is made towards stabilizing the same, it may lead towards a disaster. Todate results of the marine accounts clearly endorse the views expressed by me last year. It is time that the tariff committee gave their serious consideration to this problem, taking into account the nature of the world market of the trade, and tried to remedy the present chaos created by uneconomical rate war.

For the first time, Indian shipping companies have placed their hull insurance business direct with Indian companies. It is, indeed, a very great gesture, indicating their confidence in the stability of the Indian insurers and their ability to conduct this class of business. Our thanks are due to them for their confidence in us and we assure them that their interests will be well looked after with efficient service.

The miscellaneous section continued to be unsatisfactory, mainly due to heavy material losses in the private and commercial vehicle section. Private motor car rates are increased from the beginning of 1953, but it is doubtful whether the increase is sufficient to keep pace with the increasing claims costs. From the trend of claims received in 1953, it is evident that before long a further revision will be necessary, not only for private cars but for the whole motor section.

Personal accident and aviation business throughout the world is unprofitable. This is mainly due to the ridiculously low rate prevailing in the market and unless a revision in rates is forthcoming, this class will continue to show a loss.

The economic conditions of the country have remained unsettled, and there has been a consistent drop in the investment market. In 1948 the book value of our investments was below the market value to the tune of Rs. 14,26,000, representing a gain of 16.50 on our investments then. Since then this gain on our investments was wiped off and instead our investments show a depreciation amounting to roughly Rs. 10,37,000, for which adequate reserve has been provided, by creating a further reserve of Rs. 3,39,995 in the current year.

General Department

The accounts produced show a decrease in premium income. The total gross premium income was Rs. 1,03,66,721 as against Rs. 1,09,68,000 last year. The net premium income for the year 1952 was Rs. 57,74,464 compared with Rs. 64,80,558 for the previous year—i.e., a drop of Rs. 7,06,094. The paid and outstanding losses give us a ratio of 40.14% as against 34.61% in the previous year.

Although our claims' experience in all three departments is within limit, considering the trend for increased claims and to meet with any abnormal losses, your directors considered it advisable to build up a strong reserve position and, accordingly, the percentage of reserve in all three departments has now been increased.

The reserve for unexpired risks together with the additional reserve created amounts to Rs. 33,67,609, i.e., 58.32% against 54.65% last year—a strain of 3.67%.

The gross profit as shown in the profit and loss account was Rs. 8,10,974, which works out at 14.04% of the net premium income, compared with 11.36% last year. The total fund now stands at Rs. 66,43,700.

Fire Department

The gross premium income was Rs. 64,05,798 as compared with Rs. 67,04,000. The net premium income amounted to Rs. 34,29,550, and showed a drop of Rs. 5,04,049. Claims paid and outstanding cost us 32.13% compared with 26.94% last year. The ratio of commission and expenses and taxes was 55.07% as against 51.47% in 1951.

The profit transferred to the profit and loss account was Rs. 6,54,223 (19.07% of the net premium income as against 14.09% for the preceding year. The reserve now stands at 52.40% as compared with 50% last year.

Marine Department

The gross premium income was Rs. 15,33,730 against Rs. 15,91,000 in 1951, but the net premium income was increased by Rs. 61,093 and now stands at Rs. 5,62,172.

Due to continuous pruning of this account and without indulging in any uneconomical rate cutting, it was possible to bring down the loss ratio, from 62.58% last year to 58.99% in the current year.

After providing a reserve at 105% against 100% to the previous year, which, together with the increase in net premium income, absorbs an additional amount of Rs. 89,202. Rs. 3,057 was transferred to the profit and loss account.

Accident Department

The working of the miscellaneous insurance department shows a decrease in the premium income mainly due to the drop in premium income which now stands at 49.62% compared with 42.66% previously.

Your directors have once again considered it advisable to strengthen the reserve position in this department, and accordingly increased the reserve to 55% as compared with 52.5% last year.

The profit transferred to the profit and loss account, after providing the above reserve, was Rs. 56,221.

Life Department

The interest yields in these departments were slightly higher than last year, and rose from 3.84% to 3.84% in the closed account, and from 2.43% to 2.96% in the current account.

Closed Account: This being a running off account, no comment is necessary.

Current Account: The completed new business for the period under review was Rs. 67,96,000 as compared with Rs. 57,78,000, i.e., an increase of Rs. 10,18,000. Efforts are being continued to bring down the expense with the same now stands at 43.57% as compared with 44.98%. The death claims amount was lower than last year, the figures being Rs. 46,015 in 1952 against Rs. 54,010 in 1951, and fell well within expected claims. There was a great improvement in the lapse ratio which now stands at 19.37% compared with 33.68% last year. Further efforts are being continued to bring down the lapse ratio within a reasonable figure. After transferring Rs. 15,000 from the pure of loss account, the life funds show, at a figure of Rs. 12,08,512, an increase of Rs. 4,51,114 over the previous year.

Profit and Loss Account

After crediting Rs. 1,73,255 as interest, and transferring the profits from the fire, marine and accident to Rs. 8,87,883. Rs. 6,774 and Rs. 15,000 were transferred to the life closed account and life current account respectively. Rs. 58,008, Rs. 6,230 and Rs. 3,370 were debited as expenses not charged to other accounts. The amount transferred to the profit and loss appropriation account was Rs. 7,95,974 as compared with Rs. 7,36,366 in the previous year.

Appropriation Account

Rs. 2,10,000 and Rs. 2,14,000 for provision for taxation and reserve for depreciation in securities were debited to this account. After transferring Rs. 50,000 to general reserve, Rs. 25,000 to reserve for equalization of dividend, Rs. 65,000 to reserve for reserve of Rs. 15,000, the balance of the profit and loss appropriation account was Rs. 2,98,894, out of free of income tax, absorbing Rs. 2,00,000.

Continued efforts are being made to develop the business at home and abroad, and the list of opened new branches and agencies will observe the list of field. It will take some time before the effect and the progress of these branches will be felt by us.

The board has granted a bonus at the rate of 11 office and at branches.

The present healthy position of the company is staffed at all branches and head office, and their loyalty to the "British India." My board and I are glad and thankful for placing on record our appreciation, without whose co-operation it would have been difficult to produce the good results achieved.

I now move that the directors' report, audited revenue accounts and balance sheet be received, adopted and entered in the minutes.

ASSAM SILLIMANITE LIMITED

MR. U. B. H. DUNBAR REVIEWS SECOND YEAR'S WORKING

The following statement has been issued to the shareholders at the Second Ordinary General Meeting of the Assam Sillimanite Ltd., by Mr. U. B. H. Dunbar, the Chairman—

The year at present under review is the second year of the Company's working.

The State of Assam experienced an exceptionally heavy monsoon which started early and finished late. Transport was interrupted early in May and could not be resumed before the middle of November leaving only 51 months during which the Company's vehicles could ply. Rainfall recorded at Sonapahar was 141.96" against 135.48" in 1951 and at Hahim at the foot of the hills 126.02" was measured against 103.65" in 1951. Heavy landslides were experienced in the Bospini section of the 22 miles of hill road built by the Company and maintained by them but these were cleared within a few days. A small stream burst its banks and inundated about 150 yards of the local Board Road between Hahim at the foot of the hills and the Assam Main Trunk Road at Boka. This was also repaired by the Company's Road Maintenance Gangs.

The Company now employs 262 persons, all but one being nationals of India which is a substantial contribution to the economy of the state of Assam. Health at the Quarry has been generally good and the Hospital and Medical Services provided by the Company are much appreciated. All staff are suitably housed. Water supply, electric lighting, and facilities for gardening, recreation, shopping and cheap food-grains have continued to be maintained by the Company.

The scale of production and despatch from the Quarry was largely determined by the Export and Sales positions. Sufficient stocks are now in Calcutta to meet all expected demands without an inordinate increase of storage charges. The Board is of opinion that future production and despatch can be maintained at a level of 5,000 tons which is our minimum requirement for the target of economic working.

The installation of precision saws at Paharpur, Calcutta, was completed during the year. The first saw was put into operation in September, 1952 and a technician was sent out from St. Helens, Lancashire, by Messrs. Pilkington Brothers, Limited, the world-renowned British Glass Manufacturers who are the founders and principal shareholders of the Company. This expert was with us three months to train locally recruited staff, all of whom have been quick to pick up the details of this new mechanical process. A second saw was put into operation in February, 1953.

A complete set of approximately 750 blocks has been supplied to the New Hindustan Pilkington Sheet Glass Factory now being erected at Asansol which is expected to come into production before the end of 1953. This Fourcault Tank will be the first in the world fitted with Solid Sawn Sillimanite Blocks throughout at glass level. A large scale trial of approximately 50 blocks is also being undertaken by an Indian owned Sheet Glass Factory in the U.P.

During the year Messrs. Pilkington Brothers, Limited, published the results of large scale trials of Khasi Solid Sawn Sillimanite Blocks in a paper read by Mr. C. F. Griffith, B.Sc., A.R.I.C., of their Research Department, to the Society of Glass Technology of Great Britain. Khasi Solid Sawn Sillimanite Blocks were found to be still in need for further service after a production life of 820 days (117 weeks).

While Solid Sawn Sillimanite Blocks represent the Company's supreme quality and highest priced product, Sillimanite Crushings are produced in the course of mining solid Sillimanite large enough for sawn blocks in the ratio of 20 to 1, and these crushings have been sold mainly to Continental Refractories Manufacturers for grinding into blocks under the latest processes. It is hoped that performance results will become available within the next few months for publicity purposes. It is noteworthy, however, that there has been a fall in the market price of competitive refractory products in most world markets and an adverse effect on sales of Natural Sillimanite Crushings may be expected until the advantages of the Natural Sillimanite become more widely known. In this respect a most valuable paper written by Messrs. U. B. Singh and N. L. Misra of the Banaras Hindu University, was published in the April 1953 number of the British Refractories Journal.

Marketing in India

Great efforts have been made to stimulate sales in India. An exhibit was made at the Exhibition held in connection with the Annual General Meeting of the Indian Ceramic Society at Hyderabad in December and attracted great interest. A similar exhibit will be made at the Indian Ceramic Society's Jubilee Meeting at Banaras next November. As a result of this exhibit and of the publication of the Pilkington large scale tests of Solid Sawn Sillimanite blocks, sales of these blocks have already been made as stated below. Several other users in India have taken blocks for trial. Refractories manufacturers in India have also taken quantities of Natural Sillimanite Crushings for trials and tests but as all refractory tests are lengthy, results are only to be looked for towards the end of the year by which time it is hoped that performance reports from foreign users will also be available.

The Directors are aware that many users in India have insufficient experience of the highest grade refractories. It is obvious that a refractory, even if double the cost, will be cheaper if its useful life is three times as long as the longer life and it is the object of the Company to collect the data in support of this fact for publishing in the Indian Market.

Until the Indian Market requirements of Natural Sillimanite expand very considerably beyond the present purely experimental stage, the Company's existence depends upon sales for Export. Unfortunately these sales have again been restricted in the Central Government have only granted export licences for a quantity of 1,750 tons for the current calendar year to date. We have since, however, the assurance of an increased quota which we think will be at least 1,100 tons. Even this quantity is inadequate for the Company's continued operations. I estimate that 5,000 tons per annum is the minimum sales target needed to pay for the cost of operations and the necessary development work which has to be undertaken each year to explore for and open up fresh deposits.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such site. Each case will be examined by the Railway experts. This will save you unnecessary delay and expenditure.

METHODS OF WORKING OF THE WORLD BANK SOURCES OF FUNDS: CONDITIONS FOR LENDING

THE need to finance development plans in countries without sufficient resources of their own is widely appreciated, but the chief difficulties are to find adequate funds and technical knowledge and to make them available to the countries concerned on a basis which smacks neither of charity nor of self-interest. The most useful international effort towards meeting these problems is the International Bank for Reconstruction and Development. It is not yet the final answer, but it might well be if its activities and limitations were generally appreciated and its assistance invoked only against that knowledge. In this respect Mr. Walter Hill, the Bank's special representative in Europe, recently gave a useful account of its activities to a meeting of British business men in the offices of the Federation of British Industries.

The Bank was founded in 1944 and its shares are held by 54 governments. There are four sources of funds for lending. First, there is the capital subscribed by the member governments, 20 percent of which is paid up, the remainder serving as a guarantee fund. Each government has subscribed two percent in gold or dollars and 18 percent in its national currency; the latter may not be lent by the Bank without the member's consent. Up to the end of last year the total capital made available for lending was \$846 million, the major part of which represented a release by the United States of the whole of its paid-up subscription. Secondly, the Bank issues its own bonds at rates fractionally above those of comparable government securities. By this means a further \$567.5 million has been raised in the capital markets of Canada, Switzerland, the United Kingdom and the United States. Thirdly, some \$66.4 million was available at the end of 1952 from funds derived from the Bank's own operations. Finally, the funds available for lending are replenished by the Bank's practice of selling loans from its portfolio to private investors and by repayments from borrowers. The total available from these four sources at the end of last year was \$1,556.4 million.

Types of Loan

The Bank is authorised to make loans and guarantees up to the total of its unimpaired subscribed capital, reserves and surplus. Up to the end of March of this year, the net total of loans outstanding was \$1,557 million, of which roughly two-thirds had been actually paid. Mr. Hill explained that loans could be made either to a government or to a private enterprise, but that in the latter case the loan must be guaranteed by the government concerned. The Bank has to satisfy itself that the borrowing country can afford to assume the additional foreign debt represented by the loan. It is only allowed to lend a country its own currency in exceptional circumstances, and in fact has never done so. The project for which the loan is required must be economically meritorious and the service of it will be made easier if it is calculated to assist a country's balance of payments. The project itself must, of course, be financially and technically sound and the Bank maintains a small engineering staff to ensure this. The Bank never finances the whole cost of a project, preferring that local investors should provide a substantial part, so that there will be local interest in the sound management of the scheme. There are various types of loan, of which by far the most common is to finance a single well-defined scheme, such as the building of a dam, the irrigation of an agricultural area, the modernisation of a port, or the expansion of a steel mill. In addition, the Bank occasionally makes loans to finance an overall programme of economic development, such as the ten-year plans for Southern Italy and the Belgian Congo. Occasionally, too, the Bank makes a loan to an intermediary financial institution which in turn lends to smaller enterprises in the borrowing country, an example being the loan to the Industrial Development Bank of Turkey.

An "Ideal" Project

Mr. Hill went on to give a case history of what he called an "ideal" project financed by the International Bank.

"Before the decision to proceed with a major construction job can be taken, a certain amount of preliminary engineering work must be carried out, in order to know if the 'bright idea' is in fact feasible. In our 'ideal' case, this work will be performed by engineers or engineering firms specially employed for the purpose by the prospective borrower. If the borrower asks the Bank to recommend engineering firms to help do this work, the Bank presents a list of qualified firms, drawn up on an international basis. The borrower is free to select a name on the list, or to go outside the list if he wishes. Preliminary engineering studies of this kind determine the feasibility of the project, estimate construction costs and, usually, draw up the principal specifications. The conclusions regarding feasibility and cost will enter into the International Bank's judgment about whether the project merits a loan. In forming this judgment, the Bank will naturally wish to be assured that the preliminary engineering work was of high quality. The Bank is not concerned whether the specifications are drawn up to European or American standards, but only that they are technically sound and do not involve unnecessarily high costs.

"It is, of course, inevitable that some of the projects proposed to the Bank do not reflect a high quality of engineering. For instance, we found one hydro-electric dam in an advanced stage of construction before the borrower had determined whether he had a sufficient flow of water to turn his turbines; and subsequent studies, suggested by the Bank, showed that the flow was in fact inadequate. In another case, we found a railway proposing to add substantial amounts of new and heavier equipment to its rolling stock without any provision for the necessary strengthening of the bridges over which it would travel. In both cases, these ultimately became feasible projects, but only after the intervention of the Bank.

Borrowers Encouraged to Open Tenders

"Once the preliminary engineering work is completed, and the Bank has decided to help finance the project, the Bank agrees with the borrower on a list of the goods and services necessary to the project. It is against this list that the Bank makes disbursements. The borrower must then find contractors and suppliers to carry out construction and provide equipment. The Bank encourages the borrower to place contracts for all equipment, materials and services to be used on the project on the basis of international competitive bidding. To the borrower, it is of obvious interest that the cost of a project should be kept at the lowest possible figure, having regard to all the circumstances. The lower the construction costs, the lower will be the financial charges and, in consequence, the more economical will be the costs of operations. To the Bank, the principle is also of obvious concern; the more economically the Bank's funds are utilised, the greater will be their impact in terms of physical projects actually completed. Moreover, as an international co-operative institution, the Bank regards it as appropriate that all member countries who are in a position to supply the goods or services which the Bank is financing should be given an opportunity to do so in a field of fair competition. It is stipulated in the Bank's Articles of Agreement that 'the Bank shall impose no conditions that the proceeds of a loan shall be spent in the territories of any particular member or members.'"

In order that all parties should get the maximum benefit from competitive bidding, Mr. Hill went on, the Bank advised potential borrowers to retain the services of a qualified consultant to act for them in determining the qualification of bidders, preparing specifications and analysing bids. The Bank never proposes that a particular contract should be placed by the borrower with a particular firm. Nor does the Bank ever suggest that competition should be restricted to any group of firms. The selection of the list of bidders from whom tenders are invited is the responsibility of the borrower, and so is the selection of the individual firm to which the contract is ultimately awarded. However, the Bank, on request, is prepared to supply its borrowers with a list—compiled on an international basis—of firms which the Bank considers to be qualified to undertake the work which the specific contract requires.

This list is, however, supplied on the understanding that it is not exhaustive, and that it should be supplemented by the borrower so far as it may be possible to do so.

The Bank's Requirements

"The Bank's interest is to be assured that the successful contractor or supplier is reliable and competent, and that the price is reasonable. The Bank reserves the right, under its loan regulations, to withhold disbursements when it sees evidence of unreasonable terms, and it takes any steps necessary to acquaint itself with the relevant facts. As an additional safeguard, the Bank believes that the successful supplier or contractor should not have provided the engineering services for the preliminary designing of the project; the two functions should be kept separate. On the other hand, the engineers who have performed the preliminary work are frequently retained to supervise the construction.

"The question of what currency the Bank will furnish to the borrower arises only when the borrower has selected his contractors and his suppliers. The Bank's loan regulations require the borrower to 'use reasonable efforts to purchase goods with the currencies of the countries from which such goods are acquired'. If a borrower who has decided to buy his goods in, for example, the United Kingdom is successful in arranging that they be paid for in sterling, the Bank makes an effort to provide this sterling out of the United Kingdom's capital subscription to the Bank, or out of the probable proceeds of a sterling bond issue. Should the Bank be unable to acquire sterling, or whatever other currency may be required, from one of these sources, it may be willing to purchase sterling with dollars from the Bank of England. In the latter case, the borrower will be indebted to the International Bank in dollars instead of in sterling. Whether or not, in fact, the Bank will purchase sterling with dollars depends upon whether or not the borrower is willing and able to assume the additional dollar indebtedness. In the absence of convertibility, many countries find it more difficult to assume an additional dollar obligation than to assume one in sterling, or some other inconvertible currency.

"Once a construction of the project is under way, the Bank desires to be kept informed of its progress. To this end, the borrower submits periodic statements to the Bank describing physical progress, the state of the project's finances, and any difficulties encountered. These statements are no more than a prudent management of a project will themselves require, to keep informed of the progress of construction and of financing. The Bank's aim in requesting progress reports is to be aware of any obstacles which may arise that would impede or delay the project's completion. If a difficulty should occur in, for example, the supply of local currency needed to carry the work forward, the Bank may be able to consult with the borrower and perhaps suggest methods of raising the needed funds. An interesting example of this occurred in El Salvador. A power authority to which the Bank had made a loan was short of local currency, so the Bank sent its Director of Marketing to El Salvador to help float a local bond issue, the first in the country's history. Again, if deliveries of equipment are delayed, the Bank may be able, at the borrower's request, to intervene to speed up these deliveries. In the period following the Korean crisis, delivery difficulties became so acute that the Bank was obliged to retain staff members with the particular job of aiding borrowers in this way."

Mr. Hill referred to the common belief that the high proportion of American equipment used in projects financed by the International Bank was the result of the Bank's own technical staff being mostly American and familiar with American equipment. This, he said, was a misunderstanding; in the first place it was the borrower and not the Bank who chose the equipment, and in the second place less than half the Bank's technical staff were American. Of the total of 35, two were from Canada, one from Latin America, five from Central Europe. The Bank also employed such assignments since the beginning of 1951, five in the Netherlands and the remainder in eight other countries. In certain cases international bidding might not be feasible, for example if some of the equipment for a project had already been ordered before the loan was made. In such cases the contract prices were reasonable. The Bank also recognised that it may sometimes be desirable for equipment to be standardised in order to provide for easy interchange of units and stocking of spare parts. Again, it did not follow that when there were competitive bids the lowest would always be accepted, since other factors, notably time of delivery, were sometimes more important than price.

The National Safety Council of the United States has presented the "Award of Merit" to the Firestone Tyre & Rubber Co. of India, Ltd., Bombay in recognition of their operating 1,000,000 man-hours without a lost time accident through the period July-November, 1952. As this is the first such Award to be given to an industrial undertaking in India, Mr. N. G. Kewaramani, the Chief Inspector of Factories, presented it to the Safety First Committee of the Firestone Tyre & Rubber Co. of India, Ltd. In presenting this Award, Mr. Kewaramani stated that he had closely observed the Safety First Programme of the Firestone Factory with a great deal of interest and appreciation. Accepting the Award on behalf of Firestone, Dr. S. V. Bhattacharya, Chairman of the Firestone Safety First Committee, said that this recognition was keenly appreciated and would be an incentive to improve the safety record still more.

Stocks and Shares

IDLE MARKET AWAITS NEWS OF INDIAN IRON DISPUTE

BETTER FEELING IN GILT-EDGED: JUTE SHARES NEGLECTED: SLIGHT RECOVERY IN COALS

Wednesday Evening.

THE Calcutta share market has been listless this past week and attention is concentrated on developments in the Burnpur labour dispute. It is known that the Government of India is now taking a lively interest in this damaging, eight-month-old slow down, but the attitude of the minority "action committee" is still inflexible. Indian Irons broke through the Rs. 23 mark when the very disappointing production figures for July (published below) were released but improved later on bullish rumours of an imminent settlement to Rs. 23-6. They closed this evening at Rs. 23-5 with very little business being done and sentiment rather uncertain.

Jute shares have been very dull, but coals have been slightly better after the sustained selling pressure of last week. Government loans are mostly unchanged but slightly steadier, with the State issues, both 1963 and 1964, hard to buy. Details of the week's trading follow.

There was a slightly better feeling in the gilt-edged section but business continued on a restricted scale because of a scarcity of sellers to meet the market. Three percent Conversion Loan 1966 improved further to Rs. 82-6, but encountered a certain amount of selling at this price to react at the close to Rs. 82-3. In short-dated issues, there was a good enquiry, for 3% 1957 at Rs. 98-6 and 3% 1958 at Rs. 98-3. In the medium-dated group, 3% 1959-61 was better at Rs. 96-4, because of the approach of the interest date (15th August), but 3% National Plan Bonds continued to be on offer at Rs. 98-5. Both 3% 1963 and 1964 were taken higher at Rs. 92-6, with few declared sellers. Four percent 1960-70 met with small enquiry at around Rs. 102-2, and there were buyers of 2% 1961 at Rs. 90-7. In the long-dated section, 3% 1970-75 continued to be in demand at Rs. 86-7, and although there was no change in the price of 3% 1966-68, there were more buyers than sellers at Rs. 90-1.

The recent improvement in 4% State loans reported last week was well maintained and prices in most cases were marked up. Both West Bengal and Bombay 4% 1963 had buyers up to Rs. 100-4. Four percent U.P. 1963 was also a shade better at Rs. 99-7. There was an enquiry for 4% West Bengal 1964, at Rs. 100-4, and 4% U.P. 1964 at Rs. 99-6.

Good business was completed in debentures at improved prices. Bengal Nagpur Cotton were taken at Rs. 98-4, as were Soorah Jute at Rs. 96-12 and Union Jute at Rs. 97. Calcutta Electric Supply were wanted at Rs. 101-8, and there was an enquiry for Standard Vacuum at Rs. 101-8. Kumardhubi Engineering were crossed at Rs. 83, against a previous quotation of Rs. 83.

The demand for preference shares reported last week has continued and in some cases buyers were prepared to pay higher prices to obtain their requirements. Among Jutes, Bolly were taken at Rs. 119-8, Dalhousie were marked at Rs. 117. Coimbatore were done at Rs. 105-8, and Howrah 'A' had buyers at Rs. 118. A parcel of Fort Gloster was taken at Rs. 116. There were buyers of Auckland 2nd at Rs. 74, Alexandra at Rs. 104-8, Kelvin at Rs. 122 and Lothian at Rs. 109, but in the absence of sellers no business was recorded. Among miscellaneous issues, Bharat Collieries were readily absorbed at Rs. 49-8 and Burn 6 and 7 percent were marked at their previous quotations of Rs. 118 and Rs. 133. Burrakur 1st were crossed at the higher rate of Rs. 123-4. Godfrey Phillips came to hand at Rs. 82 and Jessops at Rs. 106. Calcutta Electric and Jardine Henderson met with pressure, and eased to Rs. 12-1 and Rs. 32. Kumardhubi Fireclay 7% were done at Rs. 115 ex-dividend, against a previous quotation of Rs. 110 cum-dividend. Indian Iron & Steel fluctuated narrowly around Rs. 107, and there was a limited enquiry for British India Corporation at Rs. 144-8. National Tobacco 1st changed hands at Rs. 83-8 cum-dividend and a small lot of Rohtas 'B' came to business at Rs. 54. Alkali & Chemical were scarce at Rs. 107-8, as were Indo-Burma Petroleum at Rs. 93-8.

In the Banking section, Imperial Fully-Paid and Contributory, after being a nominal market at Rs. 1,810 and Rs. 436 found buyers towards the close at these prices. Punjab National Bank were marked several times at around Rs. 21-12. There were buyers of United Commercial at Rs. 35-10, but no sellers below Rs. 36.

Enquiry for railway shares was selective, being confined to Arrah-Sasaram at Rs. 77. Howrah-Amra at Rs. 73, and Katakhal-Lalabazar at Rs. 61. Business was reported in Bankura-Damoodar at Rs. 53 and Burdwan-Cuttack at Rs. 59-8. Ahmadpur-Katwa and Futwah-Islampur were on offer but no buyers were forthcoming.

Bowreah and Dunbar Cotton receded at one time to Rs. 272 and Rs. 177, but recovered today to Rs. 285 and Rs. 180, though not much business was completed. Other shares coming in for business included Benares at Rs. 2-8, Mahaluxmi at Re. 1, and New Victoria at Re. 1-4. Elgins and Cawnpore Textiles closed a few annas lower at Rs. 10-12 and Rs. 18-1.

Coal shares continued to meet with selling pressure until the end of last week, but on Monday small buyers appeared and prices recovered slightly. Bengal, after being sold down to Rs. 500, came back to Rs. 516. Similarly, Burrakur went up from Rs. 8-14 to Rs. 9-2 but again reacted to Rs. 8-15. Katras Jheriah were weak at Rs. 39-12, against a previous quotation of Rs. 42, as were East Indian at Rs. 22-14, against a previous quotation of Rs. 23-6. Pench Valley were amongst the few shares which offered resistance and found buyers at Rs. 20-8. Ranegunge met with enquiry at the lower level of Rs. 8-1, and improved at the close to Rs. 8-6. Further deals were recorded in Samla at Rs. 7-8, Talcher at Rs. 2-9, and Union at Rs. 23-2. Amalgamated, Borra and Dhemo Main were freshly offered without attracting buyers.

In an otherwise dull section, Hooghly Jute were prominent, improving from Rs. 29 ex-dividend to Rs. 32-4 ex-dividend. Other steady features included Empire at Rs. 20-12, Fort William at Rs. 295, Kelvin at Rs. 232, and Nellimarla at Rs. 35. Howrah fluctuated narrowly between Rs. 23-8 and Rs. 23-12 and the turnover in this once popular speculative counter was considerably reduced. Investment enquiry was noticeable for Kamarhatti, National and Reliance. Fort Gloster fluctuated between Rs. 415 and Rs. 428, to close at the latter rate.

In electrics, Calcutta changed hands on several occasions at around Rs. 13-9, while Benares were marked once at Rs. 17-14 and Jubbulpore at Rs. 14. Dishargarh Power and Patna changed hands at Rs. 98 cum-dividend and Rs. 11. Shares on offer included Agra at Rs. 165 and U.P. at Rs. 168.

Although prices were steady, the volume of business in sugar shares was restricted. Bharat came to hand at Rs. 16-15, and Carew, after improving to Rs. 7-2, closed a shade lower at Rs. 7. There were buyers of Champaran and Cawnpore at Rs. 24-7 and Rs. 34-8. Darbhanga were fully steady at Rs. 11-2, while Ramnugger were a shade lower at Rs. 17-8.

Indian Iron & Steel shares fluctuated in sympathy with the news from Burnpur. At one time the shares were marked down to Rs. 22-15, but subsequently recovered on bear covering to Rs. 23-6. To-night's closing quotation is Rs. 23-5. Bhartiya Steel were marked at Rs. 10-8. Burn & Company were lower at Rs. 282, as were Indian Galvanizing at Rs. 12 ex-dividend. A parcel of Indian Standard Wagon was placed at Rs. 90. Jessops were crossed at Rs. 23-6, and Textile Machinery met with good enquiry, improving to Rs. 6-3. In the miscellaneous section, Titagur Paper were subject to profit-taking and the price receded to Rs. 35-7. In contrast, there were small buyers of Orient Paper at the depressed level of Rs. 31-4. India Paper Fuli were marked at Rs. 160 ex-dividend. Assam Bengal Cement changed hands at Rs. 6-10. India General Navigation improved from Rs. 85 to Rs. 88 following the recommendation of the Board of Directors to pay an ordinary dividend at the rate of 5 percent per annum. India Steamship were unchanged at Rs. 6-12, while there were small buyers of Calcutta Landing & Shipping at Rs. 10-10. Alkali & Chemical, British Ceylon Corporation, British India Corporation and Indian National Airways were some of the shares which were enquired for at around their previous quotations. Pararee Coke improved to Rs. 17-8, and F. & C. Osler, after receding to Rs. 6-1, recovered to Rs. 6-6. Indian Cables met with some selling to Rs. 6-6, and reacted to Rs. 18-1, as did Indian Wood Products to Rs. 31-8. Jardine Henderson and Martin Burn continued to find support at Rs. 129 cum-dividend and Rs. 18-2. Metal Box were unchanged at Rs. 18, and National Tobacco, after dropping to Rs. 8-6, recovered to Rs. 8-14. Rallis were freely offered at Rs. 66, as were Rohtas Industries at Rs. 8-2.

In the mining section, Orissa Minerals provided the only feature following the recommendation of the Directors to increase the half-yearly dividend from Re. 1-8 to Re. 2 per share. At the close there were buyers of the shares at Rs. 35-8, but few declared sellers. Burma Mines were easier at 14 annas as were Non-Ferrous Metals at 8 annas. Consolidated Tin and Indian Copper were unchanged at Re. 1-1 and Rs. 2-13.

Although there continues to be a good general demand at the tea auctions and the prices which are being realised compare most favourably with last year's, the Tea share market continued to be neglected. Sellers predominated, and with little interest being displayed, prices drifted to lower levels. Bishnauth changed hands at Rs. 26, Brooke Bond at Rs. 11, and Dhelakhat at Rs. 10-2. Banachar were taken at Rs. 289, and Hudibari at Rs. 18. Hattikihira had sellers down to Rs. 9, at which price business was reported. Arcuttipore were taken up to Rs. 3-12, and Chamong to Rs. 7.

The discussion on the Collection of Statistics Bill revealed the demand for Indianisation of the personnel of non-Indian undertakings. The Minister of Commerce, Mr. D. P. Karmarkar, explained that collection of information from foreign firms was only one object of the Bill, which covered the whole field of commerce and industry. As for the participation of foreign capital in Indian enterprise, he referred to the Prime Minister's policy statement and said: "Whenever foreign participation in Indian industries is helpful, we will have it. The major point is that we should have our say in the matter. Whenever foreign firms come to India, we will be for them to employ as large a number of Indians as is possible for them, unless it becomes unavoidable for technical reasons."

London

STERLING AREA GOLD AND DOLLAR RESERVES UP

FIRST STEP TOWARDS STEEL DENATIONALISATION

(FROM OUR OWN CORRESPONDENT)

8th August.

CONTRARY to expectations, for the seasonal influences are against it, the gold and dollar reserves of the sterling area continued their upward trend last month. The July surplus announced by the Treasury was almost double that of June and amounted to \$89 million. This included American defence aid to the extent of \$36 million, against \$28 million in June, and the receipt of \$2 million, against \$10 million, from the European Payments Union surplus settled in gold. Eliminating these two factors to arrive at the true trading surplus, the July figure was a surplus of \$51 million, against only \$7 million in June. Even allowing for the fact that the June figure was adversely affected to the extent of some \$22 million by the large transfer involved in the repatriation of the American holding in Associated Electrical Industries' Ordinary capital, much encouragement is to be derived from the July showing. The gold and dollar reserves have now increased by almost \$800 million since the low point was reached in April, 1952, and they are now back where they were in December, 1951. Even at the present figure of \$2,456 million, however, they are still a long way short of the peak of \$3,867 million reached in June, 1951, or what might be regarded as an adequate level. The upward movement is also slow, while the steady decline in the E.P.U. surplus over the past few months is a reminder that the easing of import restrictions might soon upset the balance. In July, for instance, after only a partial relaxation of restrictions, we moved into a deficit with E.P.U. of £4,000,000—the first since August of last year—of which half will have to be settled in gold this month.

A new trade analysis by the Board of Trade suggests that a large part of this country's success in weathering the storm has resulted from the "direction" of trade, or in other words by canalising exports to dollar markets and drawing imports from the sterling area. In terms of the volume of trade, the price changes having been ironed out, it is found that the rate of British imports from the world as a whole rose 19.1

percent between 1947 and the first quarter of this year. That total, however, contains a 64.2 percent increase in imports from the sterling area and a 44.3 percent decrease from the dollar area. On the same basis, the rate of British exports to the whole world went up 51.5 percent over the same period. Within that increase was a rise of 53.2 percent in British exports to the sterling area and of no less than 112.5 percent in those to the dollar area. So far as prices are concerned, the terms of trade over the same period have also been split up. Between 1947 and 1952 it is shown that there was a deterioration with the whole world of 14.1 percent, including a deterioration with the sterling area of 23.3 percent and with the dollar area of 15.5 percent. These new indices, which are published in the Board of Trade Journal, are of considerable interest. The export figures are as follows:

British Exports by Volume 1950 Equals 100.				
Period	World.	Sterling Area.	Dollar Area.	
1947	62	62	46	
1948	79	79	69	
1949	87	93	64	
1951	101	109	96	
1952	95	98	96	
1952, first quarter	106	121	85	
" second quarter	92	92	95	
" third quarter	86	83	95	
" fourth quarter	95	94	110	
1953, first quarter	94	95	102	

Templeborough Rolling Mills

The first practical step towards denationalisation of the steel industry was taken this week by the Iron and Steel Realisation Agency in the form of a "private deal" covering two-thirds of the share capital of the Templeborough Rolling Mills to the former owners, British Ropes Ltd., and William Cooke and Co., Ltd., at a cash price of £7.5s. per share against the take-over price of £7 per share. The balance of the shares is held by United Steel Companies, so the pre-nationalisation situation, when each of these companies held one-third of the capital of the rolling mills, has been restored. This initial operation has been anxiously awaited as a possible guide to the market for future, and of course much larger, operations, but it is questionable whether it will offer any guidance at all, for as Sir John Morrison, Chairman of the Agency, pointed out, in this case no change had been made in the company's capital structure and that would not necessarily apply to all companies, while the closeness of the resale

price to the take-over price was "the result of hard bargaining" and shares would only be sold at a fair price so that no-one should expect to get his shares back at one pound just because he received one pound for them in compensation.

What we do know now, however, are the Agency's plans for the sale of the larger steel companies—there are seven of them, and they represent the bulk of the transaction, and in view of the large sums involved the whole operation will obviously take a long time. The first big public offer is to be made in the early autumn and it will concern all the Ordinary shares of one of the "big seven"—Colvilles, Dorman Long, Lancashire Steel, Stewarts and Lloyds, United Steel, Whitehead, Steel and John Summers—though which one is not yet certain. Assisting this operation, and those which follow, will be a consortium of eight leading private banks who have in the past raised capital for iron and steel companies, including Barings, Bensons, Hambros, Helbert Wagg, Lazards, Morgan Grenfell, Rothschilds, and Schroeders. In addition, investors will be allowed to tender a "wide list" of Government stocks in payment, and the price at which they will be accepted for each steel issue will be announced each time by the Bank of England. Finally, former shareholders will be assured of preferential treatments if applications for any share exceed the amount of the issue. These arrangements should at least ensure that the operation goes more smoothly than was originally anticipated.

Government's Record

Although the present Government's departures from the policies pursued by its predecessor continue to attract considerable adverse criticism in interested quarters, there are increasing indications that in many respects they are meeting with a remarkable measure of success. In the first six months of this year, for instance, 145,304 permanent houses were built in Britain, and if completions in the second half follow the same trend as shown in 1952 and 1951, the target of 300,000 houses in the year is likely to be reached. Houses built for sale, at 11,974 more in the six months, period in 1952, but Socialist fears that the building of houses to let would suffer have not been justified, since 22,366 more houses in this category were also built to show an increase of 23 percent. The figures for Scotland set up new records for monthly, half-yearly, and average yearly completions. The contention that a Conservative Government and unemployment were synonymous has also been disproved. At mid-July unemployment represented no more than 1.5 percent of all employees. At 272,700 the figure was the lowest since October, 1951, when the total stood at 263,700. A year ago, however, the total was 393,500 and in the previous month was 25,100 higher. Though the immediate rise in employment is mainly seasonal, in such basic industries as agriculture and fishing and in the food, drink and tobacco group, the threat of unemployment is no longer really valid. What is still all to the Government, is the fact that there is an increasing trend for labour to move away from the heavy export industries to move away from sugar goods industries. In July, for instance, engineering, metal goods and precision instruments lost 8,000 employees. It may be that Mr. Butler will find himself obliged to restrict his "incentives" policy if this state of affairs continues.

Less success might have been expected from the new civil aviation policy introduced last July, which, it was then contended, would endanger the existence of the State corporations by laying them open to too much competition by expanding the scope offered to independent air transport companies. The latest annual report of the Air Transport Advisory Council—covering the fifteen months to 31st March, 1953—though it emphasises the fact that it is too early to assess the results of the new policy or the success of the air services that have been approved since its introduction, arrives at the tentative conclusion that the latter should prove of benefit to the public without having a detrimental effect on the existing services of B.O.A.C. or B.E.A. The number of applications to start services, covering new routes and shown a considerable increase, as have the numbers recommended for approval by the Minister of Transport and those he had endorsed. It is significant that the State corporations themselves were responsible for some of the applications, about 10 percent, for the introduction of appropriate additions and variations to their services.

Airline Economics

An appropriate footnote to this report is furnished by a note by Mr. Peter Masefield, Chief Executive, in the latest issue of the B.E.A. Magazine, which not only provides an interesting commentary on the economics of airlines operation but also suggests that there are distinct advantages in maintaining the competitive spirit "toes" and always seeking new techniques which economies. Mr. Masefield presents the figures of its fleet of turbo-prop Viscount air liners after their first 2,000 hours of scheduled commercial service. These show that they earned a total revenue of £480,000 with a clear profit of nearly £70,000. He explains that this profit of nearly £70,000 has been made over B.E.A.'s most lucrative longer routes during the summer peak traffic and results from a 73 percent load factor.

Bombay

"UNEMPLOYMENT" STRIKE FAILS

FIRM ACTION DEFEATS COMMUNISTS

(FROM OUR OWN CORRESPONDENT)

9th August.

IT was a good thing that attention was focussed on the issue of rationalisation in the textile industry and the introduction of the four-loom system in some of the Bombay mills by a one-day strike of all textile workers in the city on Friday last, instigated by the Communist Mill Mazdoor Sangh. The trouble with this industry in Bombay is that there are three competing unions clamouring for, and claiming, the allegiance of the workers. Each is more interested in the exciting game of politics than in making any real effort to build up a sound and lasting trade union structure or to further the welfare of workers. Regarding textile labour as mere pawns in their attempt to capture political power, each union is perpetually at war with the other two; as a result the industry is never at peace for any appreciable length of time.

A singular feature of this unceasing internecine warfare is that though the ultimate target is either the Government or a rival union, the immediate attack is always directed against mill managements. The difficulty of the millowners in settling any points at dispute by negotiation can, therefore, be easily imagined. If they come to terms about any dispute with one union, the others, even though agreeing with the outcome, are bound to take up the cudgels merely to ruin the rising prestige or influence of the union negotiating the settlement. There are times when, if a union finds its influence waning, it raises an imaginary issue and stages a fight to regain its hold over workers. Even though, in some cases such as power rationing or staggering of holidays, the grievance is exclusively against the Government, the strike weapon, which hurts only the industry, is used by one or other of the leftist unions. It may be recalled that something of this nature occurred a few years ago, when the Socialists led a disastrous strike lasting for over two months over a bonus award by an industrial tribunal. Something similar has happened in the present struggle over rationalisation.

Arbitration Board

The four-loom system was introduced in the Khatau Mills after notice of the impending change had been given. In protest against this, a one-day strike was called by the Communist Mill Mazdoor Union. As a result of negotiations, the representative union of workers, the Congress-controlled Rashtriya Mill Mazdoor Sangh, expressed its willingness to abide by the decision of two persons, one nominated by the union and the other by the employers. This two-man arbitration board held that the conditions in the mills were satisfactory and that the four-loom system might be allowed. The union agreed to the introduction of the new system on condition that none of the two-loom weavers were discharged and that only those who were willing to work on four-looms should be asked to do so. As the system provided increased wages to workers, more workers than were required to work the four-loom system volunteered to work on this basis. The mill started an additional shift which not only gave employment to all those who were displaced by the introduction of this system but actually increased employment. All this was made clear to the textile workers by the officials of the representative unions, which advised the workers against participating in the strike called by the Red Flag Union. The Mill Mazdoor Sabha, the Socialist Union, also advised textile workers affiliated to it against joining in a futile demonstration started by the Communist Union to re-establish its hold over textile labour.

On this occasion, the State Government immediately took a definite stand against the Red Flag Union's effort to create trouble in the city's most important industry. Mr. Shantilal Shah, the State Labour Minister, called a Press conference last Wednesday and explained the whole position, exposing the bogey of unemployment which had been raised by the Communists. He said that the call for a one-day general strike in the textile mills in Greater Bombay would be an illegal stoppage, and those participating in it would lose their right to holidays with full wages, besides having to face

other consequences. He also unequivocally condemned those behind the strike for trying to disrupt production of cloth in order to regain their hold on the workers.

Employment Statistics

Mr. Shah emphasised that the introduction of rationalisation in some mills had not increased unemployment. The Minister asserted that employment in the industry, in the city of Bombay, had improved even though two units had been put out of commission by fire in 1952. He disclosed that the number of workers employed in the textile mills in Greater Bombay in May, 1953, was 230,568 as compared to 217,420 in May, 1952, and 223,426 in May, 1951. The number of workers employed in the industry fell to 212,780 in July, 1952, because of the dislocation caused by the shortage of power last year. Mr. Shah disclosed that the Communist leader, Mr. S. A. Dange, had stated in 1938 that he was not opposed to rationalisation as such, and under certain conditions was prepared to support it, if he was convinced that the scheme would benefit the workers by way of increased wages. In 1936, Mr. Dange, who had now taken the lead in opposing rationalisation, had indirectly been a party to the introduction of a six-loom system in the Sassoon Group of mills in Bombay.

The authorities on this occasion were not content merely to put the case in a clear perspective before the Press and the public, but issued a police ban on meetings and processions for a period of 24 hours from midnight on Thursday last to halt the activities of those preparing the strike. Armed police were posted at all strategic points to prevent hooliganism or molestation of workers who offered to work. The police also took the precaution of arresting the principal sponsors of the strike during the early hours of Friday. As a result of these measures and because of the open stand taken by the rival unions in advising their followers not to take part in the strike, the response to the Communists' call was very poor. Only about 10 percent of the workers stayed away from the mills and only one mill was obliged to stop work during the first shift. Even the leaders of the Red Flag Union had to admit on Friday evening that the strike had failed. The real advantage of forcing this issue was to have the whole question of rationalisation in the textile industry and the introduction of the four-loom system cleared once for all, with the lead taken by the Government and the workers' own organisation, instead of mill managements being left to fight the issue single-handed or to be victimised by certain unruly elements in the industry, as on some previous occasions.

Uttar Pradesh

THE U.P. SUGAR INDUSTRY
HIGHER CANE CESS
PROPOSED

(FROM OUR OWN CORRESPONDENT).

Lucknow, 8th August.

THE sugar industry in Uttar Pradesh is far from happy under two masters—the Centre and the State Government. In fact, even the State Government is not satisfied with Central jurisdiction over many aspects of the industry, leaving the State Government with only the duty, and the responsibility of regulating the supply of cane to the factories. Cane supplies to the manufacturers have become a serious problem because of large outstanding arrears owing to the growers by the State Government. These amount to Rs. 148 crores while the cane cess arrears due to the Government are slightly higher—Rs. 1.54 crores. The State Government has asked the Centre to devise machinery to expedite payment of the cane arrears; but it to expedite cane price arrears itself. A provision in the U.P. Sugarcane (Regulation of Supply and Purchase) Bill lays down that factories will have to pay interest at the rate of 7½ percent on all arrears outstanding at the end of 15 days after the delivery of cane. The Government's view is that this rate is not unduly high and that the fact that this rate is not unduly high and that the factories could get accommodation from the banks at lower rates. Punitive action such as imprisonment for persistent defaulters has been considered.

Growers are not satisfied even with such stringent provisions, but would like more summary procedures such as auctioning the stocks of defaulting factories; this the Government cannot always legally do since the banks have a prior claim on the stocks. The industry is naturally perturbed at the prospect of the Bill being placed on the statute book and the Government is blamed for taking the line of least resistance inasmuch as it is politically inexpedient to displease the growers. A semi-political consideration, which was reinforced by the turn of the "one pice war" against the Calcutta Tramways, was also evident when the Chief Minister, Pandit Govind Ballabh Pant, made a surprise announcement dropping the proposal to levy a tax of one anna per maund on the sale of cane. He said that the Government had had no intention of enforcing this tax for some time, even if it had been approved by the legislature, but the public will be pleased that it has been dropped, for when the irrigation rates were enhanced the Government had said that it was not their intention to enforce higher rates in the near future, although in fact they were enforced the following season.

Higher Cane Cess Proposed

Though the sales tax on cane has been dropped, the Government is retaining the proposal to enhance the cane cess from As. 3 to As. 4. The sugar industry in U.P. knew that this was coming when in May last the Government of Bihar increased the cess in that State from As. 3 to As. 3-3. This progressive increase in cess by the major sugar producing States contrasts strangely with the recommendation of the Tariff Board (1950) that the cess on sugar cane should be reduced from As. 3 to As. 1-6 per maund. The Tariff Board had remarked that the levy of any tax on raw materials was wrong in principle and much more so when it was imposed on the raw material of a protected industry. But these arguments cut little ice with the State Government because of revenue considerations. If the proposal is put through it is bound to add to the cost of sugar considerably. The Bihar increase of 3 pies in the rate of cess, it was calculated, would raise the cost of manufactured sugar by As. 2-6 per maund, and if this is so, a one anna increase should raise the cost of production by as much as As. 10 per maund.

Declining Cultivation: Poor Yield

Already, in April last, the U.P. Government had increased the sales tax on sugar from two pies to six pies in the rupee, as a result of which the price of sugar was raised by As. 9 per maund. The case against increasing the cess is further strengthened by the admitted failure of the Government to devote the major part of the cess to the purpose for which it has been levied all these years. Sugarcane cultivation in the State has been steadily declining. Out of the total cropped area of 47.5 million acres in U.P. in 1951-52 about three million acres were under sugarcane cultivation. But it is carried on in small plots scattered all over the State though it is thought that the official move for consolidation of agricultural holdings will have a salutary effect on sugarcane cultivation. For the time being, however, the fact remains that both the yield of cane per acre and the recovery percentage in Uttar Pradesh are very much lower than, for instance, in some of the southern States.

The yield of cane per acre in the U.P. is 320 maunds, which compares with 790 maunds in Bombay, 740 maunds in Madras and 490 maunds in Hyderabad. The recovery percentage for the U.P. is 9.57 as against 12 in the Deccan. The revealing figures which were quoted by the members of the Opposition in the Assembly were not challenged by the Government which took refuge in the excuse of the dual control exercised over the sugar industry. But there is a growing feeling in other States that inefficient cultivation in U.P. is responsible for the nation-wide high cost of sugar production. It is time that the State Government took measures, in its own interest, to see that the State's share in the aggregate cane area in the country as a whole does not fall lower than it has already done.

The Japan International Trade Fair Commission is sponsoring the Japan International Trade Fair from 10th April to 25th April, 1954 at Osaka. Manufacturers and business men from all over the world are being invited to participate. The Fair is the first of its kind to be held in Japan since the war.

DUNLOP
transmission belting
[Square Edge]

Specially constructed from hard type closely woven fabric (silver duck) and sklm-coated between plies. This construction ensures that Dunlop Belting is—
★ practically immune from edge wear ★ ideal both for high-speed drives subject to severe flexing and heavy drives necessitating shock load resistance. ★ extremely economical and suitable for almost all industrial and agricultural applications.

AN UNPOPULAR BUDGET

HIGHER IMPORT TARIFFS, RICE SUBSIDY ABOLISHED

(FROM OUR OWN CORRESPONDENT)

Colombo, (By Air Mail)

THE budget recently presented by the Finance Minister, Mr. J. R. Jayawardene, has been described as the most unpopular budget placed before Parliament since Independence. The fact is that with falling prices of tea, rubber and coconuts (the three chief plantation industries in the country's agricultural export economy) there was no alternative left to the Finance Minister. It is true that the budget will hit the poor rather hard. Chief among the new levies are higher taxes on the large income groups, and higher import duties on a number of goods including luxuries and semi-luxuries. Several goods of Indian origin will be affected by the new levies, and in this group fall perfumery, textiles and eggs.

The new import duties affect motor cars and spare parts, cement, steel, asbestos, iron, timber, textiles, piecegoods, boots, shoes, jewellery, perfumery, spirits, paper, cutlery, tinned foods, coffee, confectionery, eggs and jaggery. However, none of these increases caused the uproar—that ultimately ended in open violence—that the Finance Minister's announcement about the removal of the rice subsidy evoked. The reactions to this announcement are still being felt. How much this decision affects the man in the street can be gauged from the fact that the removal of the subsidy means that rice, the staple diet of the people, is now being sold at three times the price it was before the removal of the subsidy.

Indo-Ceylonese Trade

The trade agreement recently concluded, with particular reference to tobacco, between India and Ceylon, in New Delhi, has been generally welcomed in this country, and has, in the words of the leader of the Ceylon delegation, saved the tobacco industry of north Ceylon from complete collapse. The general view of trade circles in Ceylon is that India's gesture to increase the quota of imports of Jaffna (Ceylon) tobacco was "generous", and was certain to reassure the industry. In view of the fillip given to the local industry as a result of the Indian concession, trade representatives here are now advocating the cultivation of cigarette tobacco in Ceylon, primarily to make the country self-sufficient, but also for export if there is an excess. It is stated that the cultivation of 12,000 acres of cigarette tobacco would meet all domestic needs. There is some doubt as to the wisdom of allowing the import into Ceylon of Indian beedies on open general licence, but it is accepted as inevitable as Ceylon had to make some concession in view of India's favourable attitude.

Trade circles in Ceylon are at present optimistic about the possibilities of an expansion of Indo-Ceylon trade in coconut, oil and copra. This optimism has been occasioned by a recent order of the Indian Government urging manufacturers of toilet and perfumery articles to use coconut oil in place of groundnut oil, which is being extensively used at present, and which is needed as food. The desire to supply India with more coconut oil and copra is not a result of any lack of markets for the Ceylon produce, but more in the hope that if there is a strong Indian demand, the prices of these commodities in the world market might show an upward trend. For many years Ceylon copra and oil have been at a premium in the world markets and still better prices would be expected if the demand increased.

Tea Exports and Quality

The latest tea statistics for Ceylon, published this week by the Tea Controller, show that internal consumption dropped to 14 million pounds last year from 14,765,000 pounds in 1951. However, Ceylon exported eight million more pounds of tea last year than in the previous year. The United Kingdom was, as usual, the biggest buyer taking 118,242,983 pounds, a little over one-third of the total exports for 1952. Australia came second with 41,473,884 pounds, and the United States third with 33,310,451 pounds.

The Tea Controller mentions in his survey for 1952 that although prices, particularly for low-grown teas, at the Colombo auctions slumped occasionally during the year, Ceylon teas generally fared much better than Indian teas. The reason for the sharp decline in Indian tea prices, the Controller adds, had been the very low quality of a large part of the tea produced in India. "Thanks to the ceaseless efforts of Ceylon's tea planters, we have succeeded in maintaining the premium quality of Ceylon's tea, and at the same time succeeded in producing record crops in recent years," declares the Controller. Referring to blight, the Tea Controller states that after successful experiments the disease has been brought under effective control in Ceylon. Although the disease had not been completely eliminated, most estates which were formerly badly affected by the blight had made spectacular recovery, and it could be safely said that on the whole the island's tea gardens were now in better shape than since before the war.

Fibre Committee's Recommendations

A Special Committee appointed by the Ceylon Trade and Commerce Minister to report on the fibre industry has recommended the abolition of the system of guaranteed floor prices. The Com-

mittee considers that it is only in a free market that an efficient producer will get a reasonable margin of profit. The main recommendations of the Special Committee are:—the possibility of forming a Marketing Board, or a similar organisation, should be investigated by the Government; a cess for propaganda and research should be levied on all fibre exports; research should be carried out with a view to improving methods of production and manufacture, and to find further uses for fibre both locally and abroad; possibilities of processing fibre further before export should be explored; minimum standards of quality should be laid down for fibre exports; attempts should be made by the Government to explore new markets, and the expansion of existing markets.

Scrap Iron Demand

A sudden demand of Ceylon's scrap iron has arisen since budget day when the Finance Minister announced that the Government had decided to sell scrap, thereby reversing its earlier decisions to ban the export of scrap iron. The chief contenders for Ceylon's scrap at the present time are Indian and Japanese business interests, with some interest also displayed by a Pakistan firm. The Japanese bidder is Mr. M. Matsuoaka, a representative of Messrs. Marubeni Co. Ltd., one of the largest steel corporations in Japan. Most of the Indian bidders are local business men acting on behalf of large industrial undertakings in India. It is worth recalling that about three months ago, when the ban on the export of scrap was operative, the British Iron and Steel Corporation offered to buy the entire tonnage of all available scrap iron in Ceylon at £22 per ton c.i.f. At the present time it is unlikely that Ceylon could get £22 as the price in Singapore recently dropped to £16 per ton.

Rubber Replanting

Ceylon's rubber rehabilitation scheme, which aimed at replanting with high yielding varieties a maximum of 13,000 acres annually for a period of five years, till the goal of 65,000 acres was reached, has fallen short of the schedule for this year because of the lack of suitable planting material. Applications for replanting, however, have not been wanting and there have in all been requests to replant 30,000 acres this year. Actually replanting has been restricted to about 5,000 or 6,000 acres. The Government is providing replanting subsidies. To overcome the shortage next year, the Government has begun nurseries to grow good planting material to be supplied to rubber planters when the next group of applications for replanting is considered in 1954. For the present only those who could furnish proof that they are in possession of the required planting material will be given the subsidy to replant.

Madras

POLITICAL UNREST IN MADRAS

RAJAJI'S LEADERSHIP OF CONGRESS CHALLENGED

10th August.

MADRAS State has just weathered a storm of acute political unrest. Agitation both inside and outside the Legislature was centred on the modified scheme of elementary education which the Government brought into force in June. Inadequate publicity of the details of the new scheme was partly responsible for the widespread opposition it engendered and papers placed on the table of the House last month were an afterthought which failed to convince the majority of members of the desirability of the change. After an acrimonious debate the Assembly passed, in spite of the Government's opposition, a resolution recommending that the scheme be stayed and an expert committee of officials and non-officials be appointed to investigate. The Opposition demanded the resignation of the Cabinet. Rajaji, however, explained that neither the Opposition nor the Government had expressly stated that the resolution was intended to have the effect of a motion of no-confidence. The Chief Minister continued that there was no Act of the Legislature prescribing courses or hours of study in elementary schools. On this subject, therefore, the Government was free to make such regulations from time to time as they considered best suited to serve the true ends of education. In his view, the resolution passed by the Assembly was only an expression of opinion and did not have the force of law. Constitutional conventions did not, therefore, require that the Government should either accept the resolution, or resign, or advise dissolution of the Assembly.

Even in Congress circles there is a feeling that the Government suffered a moral defeat although, constitutionally speaking, it has every right to continue in power. C. R.'s explanation that the executive authority had the right to reduce the hours of school-teaching and to prescribe out-of-school training in village crafts failed to convince since the new scheme represented a radical departure from the old methods—it was so radical that it involved questions of major policy.

The adverse vote in the Assembly reflected economic problems during the last two months, and the disintegrating effects of the impending partition are already clearly in evidence. Ever since Prime Minister Nehru announced the Union Government's decision to form an Andhra State,

some powerful Tamil Nad elements in the Legislature Congress Party, who had never reconciled themselves to the return of Rajaji, have seriously considered the possibility of a full-fledged Congress Government in the residuary State without the leadership of C. R. Rajaji. In their opinion, had served his purpose; his abilities as a brilliant parliamentarian and political tactician were indispensable to run a minority government, with majority support somehow wangled in the Assembly. They calculated that the party position in the residuary state assembly would be more favourable to Congress, commanding, as it would, a little more than 50 percent of the seats. But these elements were in unseemly haste when they seized upon the modified scheme of elementary education to try and remove Rajaji from leadership.

In their hurry they forgot that he had still some part to play in the interests of the residuary state before assets and liabilities were actually divided and the Tamil claims to some border areas were satisfied. They even forgot the decisive rôle he played in getting Madras City excluded from the scope of Mr. Justice Wanchoo's enquiry and in not allowing the Andhras to have even their temporary capital in the city. They were angry because Rajaji stopped the further assignment of free land to political sufferers and made it impossible for the legislature to use the administrative machinery for self-aggrandisement. The Andhras, for their part, did not forget the "wrong" done to them, and the Andhra members of the Legislature Congress Party began to think in terms of non-co-operation with his leadership. Party discipline slackened and a number of Andhra Congress legislators deliberately absented themselves from the Assembly on several occasions when divisions were expected. The adjournment motion on police firing in two places might well have led to the defeat of the Government; the Opposition amendment to the Government motion on elementary education was passed when about 25 Andhra members and 4 Tamil Nad members of the Congress Party deliberately stayed away from the Assembly. Even the last-minute effort of Mr. Kamaraj, President of the Tamil Nad Congress Committee, who brought round a number of recalcitrant M. L. A.'s, was of no avail.

Andhra State Bill

The Assembly session which was convened to discuss the Andhra State Bill was a disappointment to C. R.'s Government in respect of a number of crucial decisions. The Assembly, for example, passed, in spite of the Government's opposition, a recommendation that steps be taken for final settlement of the boundaries of Madras, Andhra, Mysore, Orissa, Hyderabad and Madhya Pradesh States by a boundary commission. In spite, again, of C. R.'s vigorous opposition, the Assembly adopted an amendment recommending deletion of Clause 46 of the Andhra State Bill and its Seventh Schedule which related to the division of assets and liabilities of the present Madras State as between the two new States; and the insertion of a new clause providing for the apportionment of these by an order of the President on the recommendation of a neutral commission of experts presided over by a Judge of the Supreme Court. Another vital amendment moved by the Opposition and passed by the Assembly recommended that all assets and liabilities should be apportioned among the States of Madras, Andhra and Mysore on the basis of the population of the Madras and Andhra States and the territory transferred to Mysore State. Although these decisions of the Assembly are not binding on the Union Parliament or the Union Government, they will have to be given consideration. For the first time since the present Government came to power, Communist adroitness in exploiting both the confused party situation inside the Assembly and the acute political unrest outside for their party ends brought them rich dividends, although the exit of C. R. was not one of them. The Assembly session left behind the impression that the political crisis which threatened the stability of C. R.'s Government had only been postponed to a later day.

That day—1st October—is drawing near. The possibilities are that (1) C. R. will relinquish office of his own accord; (2) that the residuary state's Congress Legislature Party will elect a new leader unanimously; (3) that C. R. will contest the leadership, in which case the Congress Party will probably be split in two. The first prospect would come as a great relief to a good number of Congress M. L. A.'s: the second possibility would depend on the willingness of Mr. Kamaraj to take up the reins of leadership himself in order to put an end to the unfortunate controversy over Brahmin leadership in an area where the anti-Brahmin movement led by a political body known as the among Congressmen. The third possibility might lead to the dissolution of the Assembly, President's rule and fresh elections. There is, of course, a fourth possibility, that is, of C. R. continuing in power in the residuary state. But this, in turn, is related to the political wisdom of Mr. Kamaraj, who is understood to hold the view that the continuance of Rajaji in power till the next General Elections would be in the best interests of the Congress Party. There is no doubt that Mr. Kamaraj up his mind, but he probably has not yet made whether C. R. remains or goes, the residuary unrest in for a period of increasing political problems which caused a Congress landslide at the nearer solution than they were on the eve of the last General Elections.

Jute

THE SCOPE OF THE JUTE MARKETING ENQUIRY

INVESTIGATION INTO SPECULATIVE ACTIVITIES: NO MENTION OF EXPORT DUTY BURDENS

SOME months ago it was announced that the Government of India intended to appoint a Commission to enquire into the jute trade and industry. The terms of reference have now been made public. When the Government's intention to hold an enquiry was first published, it was pointed out in these columns that there had already been several enquiries and that the ground referred to in the first brief intimation had already been covered by the two Bengal Government Jute Enquiry Committees and the Marketing Enquiry of the Indian Central Jute Committee. The full terms of reference are now known and are published below; it will be seen that all the subjects in the first two paragraphs have already been enquired into. It is true that these reports are some years old, but conditions have changed very little. There was a good deal of disruption and disorganisation during the war and until controls were relaxed afterwards. There was further disorganisation after the partition of Bengal and again after the devaluation of the Pakistani currency. When controls were in operation, trade in both raw and manufactured jute was diverted from normal channels and much injury was done by excessive export duties, discriminatory quotas and licensing systems. Most of these things have gone now and the industry and trade appear to be settling down to more normal conditions.

The third paragraph refers chiefly to speculative operations but it also directs enquiry into the extent to which market prices are affected by operations of mill-owners and jute dealers. The Commission is also to enquire into the circumstances which rendered necessary the closing of the "fatka" market in December 1952 and the malpractices that resulted in undue depression of prices of raw jute and jute goods. It is a pity that there is no directive to enquire why the "fatka" market is allowed to carry on under a different name. The question of speculation brings in a large and very controversial subject. It has already been covered by the Todd Report, which was comprehensive and constructive. Many people are of the opinion that speculation in jute and jute manufactures should be rigorously suppressed but it appears to be certain that the authorities do not have the force or organisation to repress it even if they had the will. Hence the "katni" market. Others believe that hedging markets are an essential safeguard for traders, but then the question arises of how to prevent them from becoming mere vehicles for gamblers who have no stake in the trade or industry and who accentuate and exaggerate every trade movement.

The Commission is asked to recommend measures to secure fair prices for the grower and for the industry and to ensure that the export trade is not affected by frequent manipulations of the market by interested parties. A strange omission is that there is no reference to the export duties on manufactures. This seems to indicate a lack of appreciation of the fact that jute is no longer a near-monopoly of India. The price which the manufacturer can get for his goods and the price which the jute grower can get for his raw jute are in the long run determined by world conditions and not by internal conditions or local manipulations. The export duties constitute, therefore, one of the most important links in the whole chain from the grower to the ultimate consumer and it is useless to make recommendations of measures to secure for the grower as well as for the industry a fair price for raw jute and jute goods unless the export duties are included in the terms of reference.

Text of Notification

Following is the text of the notification issued from New Delhi on Saturday on the appointment of a Commission to undertake a comprehensive investigation into marketing practices in the raw jute and jute goods trade:

"Whereas the prices of raw jute and jute goods have been subject to frequent and wide fluctuations from time to time resulting in hardship to the grower of jute and difficulties to the jute industry;

And whereas it has been represented to the Government that these fluctuations are frequently aggravated by various factors, such as the difficulties which the grower has to face in the marketing of raw jute, the practices prevalent in the jute goods trade, speculation in raw jute and jute goods and similar other factors;

And whereas the Central Government is of the opinion that having regard to the importance of the jute industry in the national economy of the country a comprehensive enquiry should be made into all the relevant factors that affect prices of raw jute and jute goods;

Now, therefore, in exercise of the powers conferred by section 3 of the Commissions of Enquiry Act, 1952, the Central Government hereby appoints a Commission of Enquiry consisting of the following members, namely: Mr. K. R. P. Aiyangar, Joint Secretary to the Government of India, Ministry of Finance, New Delhi who is hereby appointed

Chairman of the Commission; Mr. P. S. Gupta, Deputy Director-General of Supplies and Disposals, New Delhi; and Mr. D. Sandilya, Joint Director of Finance, Railway Board, New Delhi; for the purpose of making a thorough enquiry into the various factors that affect the prices of raw jute and jute goods.

The Commission shall perform the following functions, namely:

(a) to examine and enquire into the operations of the tiers in the jute industry and trade from the grower of raw jute to the seller of jute goods;

(b) to examine and enquire into the factors which determine the return to the grower of raw jute for his product and the part played in it by the cost and the adequacy or otherwise of transport, the lack of contact between the grower of raw jute and its consumer, the absence of market information to the growers of raw jute and all matters relating thereto;

(c) to examine and enquire into the nature and content of speculations in both the raw jute trade and the jute goods trade, the extent to which market prices are affected by the operation of mill owners, jute dealers and the speculative operators in the market and to consider, in relation to the circumstances which rendered the

closing of the "fatka" market in Calcutta in December 1952, the malpractices indulged in by the various units that operated in the "fatka" market resulting in undue depression of prices of raw jute as well as jute goods;

(d) and after such examination, enquiry and consideration to make recommendations to the Central Government on the measures necessary:

(i) to secure for the grower as well as the industry a fair price for raw jute and jute goods;

(ii) to put down the malpractices engaged in by certain sectors of the jute industry in order to rig up or depress prices for their own ends; and

(iii) to ensure that the jute export trade is not affected by frequent manipulation of the market by interested persons.

The Commission shall submit its report to the Central Government within four months from the date of the publication of this notification in the Official Gazette."

THE JUTE MARKETS

FAIR BUSINESS WITH WEST AFRICA

All sections of the market, though easy early in the week, steadied later and have continued so throughout the rest of the week with a mild tendency towards higher prices. Except for a fair amount of covering business in B.T. wills for early shipment there does not appear to be any particular reason for this firmness. There have been bear factors, such as the increase in the mills stocks of heavy sacking at the end of July and the heavier imports of Old Crop into Cossipur, which normally would have led one to expect an

Saint Frères Circular Looms installed in India.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Looms for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Sacks made from Tubular Cloth are stronger

They cost less to make

The J.S. loom (3-leaf, 3-shuttle) weaves twill tubular cloth for sacks.

TEA

**the
NATIONAL
DRINK**

Each day more and more people are turning to tea because this delicious drink quenches thirst and builds up stamina. Tea is, besides, one of our major industries and, as these facts will show, plays an important part in our national economy.

India produced 621,466,627 lbs. of Tea and exported 427,565,465 lbs. in 1952. Exports represent 68.7 per cent of the total crop.

A revenue of Rs. 145,715,000 is derived by the Union Government from Customs and Excise duty on Tea.

India earns an equivalent of Rs. 930,000,000 in foreign currency from her Tea exports.

India contributes over 50 per cent of the total world consumption of 1,175,000,000 lbs. of Tea.

About 170,000,000 lbs. of Tea are consumed in India.

Over Rs. 730,000,000 have been invested in India's Tea Industry, In India there are 6,240 Tea gardens covering 785,584 acres.

ing tests, and to what extent physical performance is controlled by tests on the more fundamental properties.

The draft takes essentially the prewar line by allocating a basic quota to each exporter and placing an obligation on importing countries to reserve a specific part of their needs for exporting countries taking part in the agreement. According to the draft, importers will agree to limit their sugar production and marketing to the amount produced in a base year (to be determined), plus an agreed percentage of the estimated increase in sugar use above the amount used in the base year. The rest of this increase is reserved for the exporters, who can sell their surplus on the free market. (Special considerations are attached for the two largest importers, the United States—whose imports are limited by domestic laws—and the United Kingdom—which is under the Commonwealth Sugar Agreement). On their part, the exporting countries will agree, insofar as practicable, to limit sugar exports to their basic export quota.

Calcutta Markets

GOOD GENERAL DEMAND IN
TEA EXPORT AUCTION

ENQUIRY SLACKENS IN DUST SALE

AT Sale No. 9 held on 10th August, offerings in the Export auction consisted of 49,500 chests. There was once again a good general demand for all sorts, with the exception of thin and plain liquoring teas from Assam and the Doors which were generally easier. Leaf grades were well supported; stylish Orange Pekoes were one anna and sometimes more dearer, while Pekoes were about half an anna dearer. The quality of the best liquoring Assams catalogued showed a decline, but even so these met with a good demand and were generally fully firm. Good Medium Assam BOP's were once again keenly competed for often at dearer rates. Flavoury Darjeelings met with a good demand, while the more ordinary sorts were very strongly competed for and often showed substantial gains, particularly the leaf grades. Generally quality from all districts is showing a decline and many of the invoices seen, particularly from the Doors and Cachar, are of ordinary "Rains" quality.

	1953	1952
Clean Black Pekoe	Rs. 1-14-0	1-7-0 to 1-8-0
Clean Common Broken Pekoe	1-11-3	0-14-0 to 0-14-5
Medium Assam Broken Pekoe	1-12-6	1-3-0
Good Assam Broken Pekoe	Rs. 2-8-0 to Rs. 2-10-0	Rs. 2-9-0 to 2-10-0

At the Internal sale held on 11th and 12th August, the Dust offerings consisted of 19,965 packages. There was less general demand than during last week and though bright liquoring Doors, Clean Commons and Exportable types were in good enquiry, Mediums especially where quality showed a decline and Good Assam CTC's received less support and were from 1 to 1 anna easier. Darjeelings also met with less competition except in case of powdery types with flavour. Bright liquoring Doors and Commons sold 1 to 1 anna above valuations.

	1953	1952
Medium Doors Dust	Rs. 1-9-6 to Rs. 1-10-0	Not
Medium Assam Grainy Dust	Rs. 1-10-6	Quotable
Best Assam CTC Dust	Rs. 2-3-0 to Rs. 2-5-0	

FREIGHT MARKETS QUIET

COAL CHARTERING DEPRESSED

QUIET conditions prevailed in all markets last week and there was little change in rates although charterers succeeded in reducing the rate on sugar from Queensland-U.K. by 3s. 6d. per ton with the fixtures of two ships at 110s for October loading. Chinwangtao Coal Charterers also depressed the market by 2s. 6d. arranging two vessels at the very low rate of 37s 6d. Durban-Karachi was done at 40s for late August loading. A September vessel was fixed for coal from Calcutta to Japan at 50s. and a first-half October ship accepted the same rate.

A Greek Liberty has been chartered at 14s 6d. per d.w. ton, delivery Calcutta August, redelivery Japan. A vessel has been fixed for sorghum in bags from Queensland to India at 3s for August loading. An interesting fixture is that of a 9,000 d.w. cargo guaranteed, creosoted sleepers from Vancouver to Chittagong at £35,000 lumpsum f.i.o.

A number of carriers were taken for coal from Hampton Roads to Japan at rates ranging from \$8.40 to \$8.60 for August to December shipment.

SUGAR MARKET STEADY BUT
UNDERTONE WEAKER

During the week ended 11th August, the sugar market was fairly steady though the undertone was weaker because of the Government's plans to reduce prices. Foreign sugar is expected to arrive in Bombay and Madras by the end of this month and preference in distribution arrangements will be given to State Governments or their approved agencies. Prices ranged from Rs. 31 to Rs. 31-8 a maund for ordinary grain and Rs. 32 to Rs. 33 a maund for big grain. Ex-mill delivery rates were from Rs. 28-12 to Rs. 30-8 a maund. Stocks amounted to 35,000 bags and arrivals were 5,500 bags a day. Sales averaged 3,000 bags a day for the local markets and 500 bags a day outside. Enquiries came in from the Calicut and Cochin areas and business amounting to about 5,000 bags was done, but there was no demand from Assam.

LINSEED

Stagnant conditions prevailed last week and although prices showed little change the general tendency appeared to be somewhat easier. A severe shortage of supplies still continued owing to restrictions on railway bookings from the producing centres. Whilst sellers, therefore, appeared rather hesitant, buyers too showed little interest, and a very limited turnover was reported. There was little activity in the oil section and although prices reacted slightly buyers remained more or less out of the market. Latest quotations were as follows: Ready Rs. 22-4-0 net maund; August-September Rs. 22 per maund.

HIDES AND SKINS

The market remained almost unchanged. Stocks were higher than in the previous week.

Bazar Sales

(Between 4th and 10th August, 1953).

Cowhides:—Wet salted (Ord.) 15,000 pcs. on the basis of Rs. 9-4 to Rs. 10; Wet salted (Slaughtered) 9,000 pcs. on the basis of Rs. 12-8 to Rs. 22-8; Wet salted Buffaloes (Ord.) on the basis of Annas 7-6.

Goatskins:—Wet salted (Daisee, Killed) 79,700 pcs. on the basis of Rs. 220 to Rs. 375; Assam-Dinajpur-Murshidabad 7,600 pcs; Purneah-Kissenganj 4,600 pcs. on the basis of Rs. 280 to Rs. 307-8; Patna (Ord.) 1,100 pcs. on the basis of Rs. 145 to Rs. 245; Pakur 3,000 pcs. on the basis of Rs. 255 to Rs. 265; Muzafferpore-Darbhanga-Samastipur 6,200 pcs. on the basis of Rs. 260 to Rs. 270.

Bazar Stocks

(10th August, 1953).

Cowhides:—Wet salted 1,03,100 pcs.
Goatskins:—Wet salted 51,000 pcs; Assam-Dinajpur 76,000 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,98,000 pcs.

The Tennessee Valley Authority of the United States has made special arrangements with the Indian Journal of Power Library Unit at the latter's office in Calcutta for use by projectors. The first consignment of books has already arrived and is now available for use. Those interested may contact the Library, c/o The Indian Journal of Power and River Valley Development, 4, Waterloo Street, Calcutta-1.

KAMLA TOWER * KANPUR

Only a few molecules of oil
..but they keep the wheels turning!

In a properly lubricated gear system, the metal surfaces of the gear wheels are separated by a thin film of oil. Under heavy loads, the great pressure on the gear surfaces 'squeezes' the oil film to a few molecules in thickness.

Yet this minutely thin film of oil, transmitting the entire load from gear to gear, must never break. It must not rub off as the wheels go round, or fly off at high speeds. If metal-to-metal contact occurs between the gear surfaces, they may weld together and the machine will seize up.

Plain oil isn't enough!

To meet the exacting demands of modern machinery, it's little wonder that old-fashioned oils have been replaced by Gargyle Industrial Lubricants. These modern lubricants have tremendous affinity for metal. They cling fiercely to metal surfaces, forming a lubricating film that even extreme pressure cannot break.

Three main ingredients go into making these oils. The first: careful selection of crude oils with high natural affinity for metal. The second: scientific incorporation of additives which

increase this affinity, and give great 'anti-weld' properties.

And the third ingredient? Every engineer knows the answer—experience. Eighty-seven years of experience go into every drop of oil we sell. Perhaps we can put this experience to work on your lubrication problems!

Whatever the load...
a LINE of oil has to take it!

At any moment while gears rotate, contact is limited to a microscopically narrow line of oil. The pressure on the oil is enormous—but thanks to 87 years of lubrication experience, Gargyle Industrial Lubricants can take it.

For every industrial application, correct lubrication by Standard-Vacuum offers four vital benefits:—

- Reduced power consumption;
- More continuous production;
- Decreased maintenance;
- Lower lubrication costs.

STANDARD-VACUUM OIL COMPANY

Shareholders are requested to intimate change of address, if any.

U.K. TRACTORS FOR U.S.A.

Orders to the retail value of \$20 million for British-built Fordson diesel tractors will follow the recent visit to America of Sir Patrick Hennessy, managing director of Ford, of Dagenham says a report in the Financial Times. Initial shipments are already on their way. During the last four months of this year, diesel tractors in the value of \$3 million will leave Dagenham for work on U.S. farms, and preliminary estimates for 1954 put this new diesel tractor's dollar earning capacity at about six times that figure for next year.

The tapping of this big new market is the result of negotiations by Sir Patrick and his tractor team from Dagenham; the British product will now compete directly with American machines. The first shipment will be used for instructional purposes and to familiarise distributors and the 2700 product. Technicians from Dagenham will leave for America on 1st August to advise on technical problems, sales and distribution matters. Quantity supplies are scheduled to begin in September.

Production at Dagenham has attained new records with vehicles of all kinds coming off the highest in the company's history. This will be stepped up to meet the demands of American farmers and those in other promising new territories.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to June, 1953. Compared with May, the June Index for Government Securities discloses a drop of 0.3 points, while that of Preference Shares reveals a rise of 0.4 points.

There were decreases in Bank (3.2 points), Cotton (9.5 points), Coal (4.0 points), Jute (3.6 points), Mining and Oil (2.5 points), Cement (1.1 points), Engineering (7.4 points), Paper (8.6 points), Sugar (3.0 points) and Miscellaneous (9.3 points),

while Tea increased by 24.6 points. Correlating all the factors the Capital variable yield securities index shows that the Index (or stock prices in the above classes of shares declined by 4.4 points during June, 1953.

Ship via London

The PORT of LONDON AUTHORITY

A Self-governing Public Trust for Public Service

London—Britain's Premier Port—
 equipped for all types of ships
 and cargoes.

For full particulars apply:
 GENERAL MANAGER, PORT OF LONDON AUTHORITY, LONDON, E.C.2

put 'Paludrine' on your payroll

Absenteeism is today a serious problem, which employers of labour everywhere are forced to face. In India Malaria as the greatest single cause of illness has a direct effect on the absentee rate.

'Paludrine' prevents Malaria

Put it to work today in your factory and establishment. Let regular 'Paludrine' dosage raise the level of health among your employees, and so cut down that rising curve of lowered efficiency and lowered production, which always accompanies absenteeism.

All over the world today 'Paludrine' is doing just this job in many establishments and organisations, where its continued use bears silent but irrefutable testimony to its efficacy and power.

Yes—put 'Paludrine' on your payroll and fight one of the most serious causes of absenteeism in India

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CONSUMERS' VIEW OF COAL MARKETS AND DISTRIBUTION CONTROLS

an honorarium for mere attendance at the place of work. An annual bonus linked with actual productive output would be welcome, but the present quarterly bonus linked only to attendance does nothing to encourage efficiency in the country's basic industry. The welfare schemes introduced in the coalfields have not secured any improvement in output per worker; if raisings have been increasing in recent years, that has been because costs have risen so that collieries have to increase their output to maintain some proportion with their overheads. That process can continue only for so long,—and then the industry has to turn to ways of reducing its absolute costs. It has been said that the industry has already increased its production to the point of overproduction, and it has then been argued, (quite illogically, if the reason for greater output was higher overheads) that the best thing to do now is to impose a cut on total raisings of all grades of coal. The overproduction argument deserves to be examined more closely.

There was no mention of overproduction during 1952, so it must apply to the first half of this year. But in the first five months of 1953, production of coal was actually 206,932 tons below the same period of last year. It is true that production of the lower grades of coal was higher by about 45,000 tons this year, so the producers of these grades might be having trouble in disposing of their output. But that would be no reason for reducing the production of all grades of coal. Production of the higher grades (Selected A and B, and Grade I) has fallen by about a quarter of a million tons this year. Unfortunately, exports have also declined heavily this year to date, and there is little prospect of them picking up between now and December. Thus, we have probably reached the position where the production of coal is just about balancing demand, with a definite surplus of lower grades and the possibility of increasing stocks of all grades if total offtake does not improve or if raisings are further increased. To put this in the form of the argument: "Coal is being produced in excess of requirements. Therefore restrict production" would be quite fallacious and would serve only the interests of the lower grade collieries. On the contrary, we should urge that even if it were shown that the coal industry as a whole were overproducing—higher grades as well as lower—every effort should be made to increase exports and internal offtake. To cut back the production of coal at this stage would be an admission that the five year plan to increase Indian industrial production was a failure and was being abandoned.

There is in fact an immense amount of waste in the Indian coal trade today. It is not the waste of producing too much coal as such, but the waste of raising and carting about the country

coal that nobody would buy if their choice were free. The great improvement in coal transport this year—on which the railways are to be congratulated—has unfortunately been mostly to the benefit of this inferior fuel. Despatches of higher grade coal in the first five months of this year, as compared with the same period of 1952, were slightly—56,000 tons—better, but despatches of lower grade coal were considerably—259,000 tons—better. The increase in despatches of higher grade coal is 0.65 percent but the increase in despatches of lower grade coal is 21.1 percent. In other words, the commendable effort of the railways to strain every resource to improve coal transport is having the effect of moving more ash which consumers do not want to buy, if they can get something better. This fact is worth careful note, because the only case we have seen made out for the retention of irksome distribution controls is that the rail transport system is inadequate. Small wonder it is inadequate if so much of it is used to convey waste matter that will not burn and only damages industrial plant. The abolition of distribution controls, which we have been recommending ever since the domestic shortage of coal was eased, and a priority system to safeguard the requirements of essential users, would not only be welcomed by industry throughout India, but would remove some of the strain from the overburdened railway network.

Some surprise was expressed last week in Parliament at the rapid deterioration of the coal export trade. To some extent, this loss was inevitable because several of the markets India was serving a few years ago were not "natural" markets and could not possibly be held once America, Australia and South Africa were back in the export business around the Indian Ocean. But India does have a "natural" market for her coal, in which she need not have lost ground, as she appears to have done if only temporarily. This extends roughly from Aden in the West to Singapore in the East, and includes Ceylon and Pakistan. By sending out bad coal with good, in ships that caught fire, and by levying what were euphemistically called "commercial charges" that were regarded overseas as discriminatory profiteering, the Government of India gravely prejudiced Indian coal within its own "natural" markets. These two causes for complaint have now been removed, but the former position will not be regained unless something positive is done to promote coal exports. A plan that has been discussed in the Press includes a railway freight rebate and a reduction of Calcutta port dues on coal destined for export abroad. A similar scheme was in operation for many years right up to the outbreak of the last war, and there is every justification for reviving it now.

Various sectors of the coal industry are of course differently situated and we cannot pretend that the picture we have sketched of its present position will be regarded as accurate by all of them. Even the groups roughly described as higher and lower grade producers do not hold monolithic opinions about the affairs of the industry nor agree on what should be done. Furthermore, the coal industry is and has been for many years riddled with politics and there are very few propositions one could put forward about its condition that would not be approved by one faction and denounced by another. That is why we choose to approach the present problems of the coal industry not from the point of view of the producers but from that of the consumers, who are in fact the bulk of Indian industry. The Government should do the same. It might be impossible to please everybody in the coal industry, but it should not be hard to satisfy the consumers who know well enough what they want: to buy the grade of coal they need at a fair price, when and from whom they wish. If it be suspected that there lies behind this the desire to help a certain section of producers, on the grounds that they are best equipped to meet the requirements of Indian industry, then we can only answer that that is just the sort of "discrimination" the Government of India should practise. There has been too much discrimination aimed at protecting the interests of the inefficient, the poorly advantaged and the simply dishonest. It is not before time that we let a freer market "discriminate" in favour of workers who will give, of their best and of collieries that will supply consumers at home and abroad with the sort of fuel they want.

There is another old anomaly that the Tribunal might attend to when it considers the new demands of labour: the perversion of the bonus scheme. Far from being a payment for work done, the coal mines bonus has degenerated into

INTERNATIONAL TRADE IN ENGINEERING GOODS

BRITISH, U.S. AND GERMAN COMPETITION

BY coincidence, the British Treasury (in its monthly Bulletin for Industry) and the British Engineers' Association (in a circular to its members) have both this month published detailed studies of international trade in engineering goods. They do not cover quite the same ground, and they do not, even together, cover all the ground, but the information which they provide reveals some interesting trends and confirms more precisely trends which were vaguely known. The Treasury's study is concerned with Britain's export of engineering goods by comparison with that of her main rivals, America and Germany. Converting to an annual basis the figures for most of the first half of 1953, it compares the three countries' achievements in 1951-53. All three are exporting more engineering goods this year than in 1951, but Britain is exporting less than in 1952. Germany is exporting at the same rate this year as in 1952, while the increase in American engineering exports has continued this year. However, Germany's increase of 38 percent last year (compared with 8 percent for Britain and with 2 percent for America) was so large that that country has achieved the biggest total gain since 1951. The figures for 1951 and 1953 are £491 million and £673 million for Germany, £969 million and £1,017 million for Britain, £1,351 million and £1,424 million for America.

In absolute terms, America is the leading exporter of engineering goods, and Germany is still well behind Britain. The "threat" of German competition is no longer developing very rapidly, partly because Germany's general export surplus is having inflationary effects and monetary policy is therefore directed to modify it. But it is well understood in Britain that German competition will eventually gain strength, and that American export of engineering goods will continue to be stimulated by export of American capital. A decline of 3 percent in British engineering exports this year, compared with America's increase of 3 percent, has ominous implications, especially as Britain's engineering industries are heavily dependent on overseas markets and as Britain herself is heavily dependent on engineering exports as a means of paying for her imports.

The study by the British Engineers' Association relates to world trade in capital goods in 1952. That was the year when German engineering exports achieved their big increase, and it is with German competition that the study is primarily concerned. With vehicles excluded there is less disparity between British and German figures; Britain's exports of capital goods totalled £531 million last year, Germany's £393 million. And Germany's exports of machinery were expanding last year in almost all markets: parts of West and East Africa were the only exceptions. However, the expansion was most pronounced in Europe and in South America, two of Germany's main traditional markets; whereas Britain maintained her strong position as an exporter of machinery to Australia, India, and South Africa, three of her main traditional markets.

World trade in engineering goods is tending to fall back into its pre-war pattern; and many people in the British industries believe, and hope, that it will conform more or less with that pattern for some years. Then Britain's major markets will be the Commonwealth countries; Germany will be predominant in Europe; and America will share Canada with Britain, and South America with Germany; while the three big exporters compete in the Middle East. This is a very approximate pattern, and only approximately pre-war; for instance, Britain used to export engineering goods in quantity and variety to South America. But it is a recognisable pattern, to which many British firms would be willing to adhere if they could thereby stabilise their sales. However, there is still something lacking: the big eastward trade. Largely German, it has been disrupted by the military war and by the ensuing political war. Germany cannot rely indefinitely on the West and North European markets. Her combined exports of capital goods to the Netherlands, Italy, France, Sweden, and also Brazil, were approximately equal last year to Britain's combined exports of capital goods to Australia, India and South Africa. To every country of Continental Europe, except Portugal and Poland, Germany exported more machinery than Britain last year. The western half of Europe is not an under-developed area, in the accepted sense; its capacity to absorb capital goods is not unlimited. Any long-term plan for German engineering exports must envisage substantial trade with the eastern regions of the land-mass, including China.

These regions are of crucial importance, because without them there will evidently not be enough markets for all the capital goods and other engineering products of America, Britain, Ger-

many, and the lesser exporters. However, on the somewhat premature assumption that these markets will be opened up, it is not yet clear how the trade will be distributed. It will not automatically go to Germany. Britain may find the encroachment of American goods in the Commonwealth markets so serious that she has strong inducement to make trade agreements with the East European countries and China. Russia has been in the market recently for such consumer goods as textiles and butter. If Malenkov is serious in his promise of better living standards for the Soviet people, promises which are echoed in other countries of the Russian sphere of influence, there may be big new markets for consumer products of the West's engineering industries, provided that suitable products are available in exchange.

CURRENT COIN

U.K. Trade with Pakistan & Ceylon.—In contrast to India, both Pakistan and Ceylon achieved a favourable balance in their trade with Britain during the first five months of this year. The latest figures contained in the U.K. Trade and Navigation Accounts show that Pakistan's surplus was £3.9 million (exports £15.23 million, imports £11.35 million) and Ceylon's £2.5 million (exports £12.74 million, imports £10.23 million). India's deficit over the same period was £2.97 million, and has increased substantially since; but these trading results are a reflection of the severity of imports cuts rather than of general economic health. All three countries have experienced stiffer competition in export markets and the two surpluses are not surprising in view of the fact that import restrictions have been far more drastic in Pakistan and Ceylon; the economies of both these primary producing countries lean heavily on the export of a very few commodities and have been trying to recover from the effects of the slump in commodity markets all over the world last year. Pakistan's main exports to Britain are the raw fibres jute, cotton and wool. During the first half of this year, she was almost the only supplier of the first and the second largest supplier of the second, her other notable exports being tea, hides and skins, and animal feeding stuffs. She bought more textile machinery from Britain than any other country except India, a reflection of her strenuous efforts to build a sizeable textile industry. Machinery as a group constituted her biggest import from Britain, followed by miscellaneous manufactured articles, vehicles (which includes anything from automobiles to cycle parts), and iron and steel and their manufactures. Ceylon's chief exports to Britain are tea and rubber; during the first six months of this year she was the second largest supplier of the first, after India, and the second largest supplier of the second, after Malaya. Other leading exports were foods (mainly coconut products); textile materials other than silk, wool or cotton; and miscellaneous raw materials. Vehicles headed the list of Ceylon's imports from Britain, followed by machinery and then by chemicals, drugs, dyes and colours (over half of which, in terms of value, consisted of ammonium sulphate). Substantial amounts of electrical goods and apparatus and miscellaneous articles such as perfumery and toilet preparations were imported.

Lancashire's Trade with East Africa.—After spending three weeks in the four East African territories of Uganda, Tanganyika, Kenya and Zanzibar, a British cotton export team has recently returned to Manchester. The team set out to examine every possible way in which the Lancashire cotton industry could increase its exports to these markets. During its stay it has gathered a great deal of first-hand information about the types and qualities of cotton goods that are needed now or are likely to be needed in the future. The team also set out to examine the true nature of any difficulties which might lie in Lancashire as well as in the markets themselves and extend its position in these markets. One of these difficulties, namely, the heavy backlog in shipping goods to the market owing to lack of port facilities at Mombasa, has been satisfactorily settled. Both the Kenya and Uganda Governments have granted extra facilities to clear the 1,850 tons now registered for calling forward at Liverpool. This means to say that this quantity is likely to be shipped before the end of the year, whereas up till the end of July the average rate of shipments from Liverpool to the market was only 44 tons a month. The team has also concerned itself in talks with the Governments about the instability of the market arising from uncertainty about future import licensing policy of the East African territories. While any long-term settlement of this problem largely rests with the U.K. Government, the four Governments in East Africa listened sympathetically to the points expressed by the team and are now considering what, if anything, they themselves can do in the short term. The Governments were fully alive to the danger of dislocation which might arise

from any extension of trade with Iron Curtain countries and this is also a matter they have under review. In the markets generally the team found abundant goodwill for British goods and particularly in parts of Uganda and Tanganyika there was clearly discernible an increasing discrimination on the part of the African buyer for better quality goods. From Governments, from traders and from consumers alike the team met with a high degree of goodwill and well expressed preference for British goods in a stable market, and a clear indication that in such circumstances trade could be considerably stepped up providing service continued the improvement it had shown in recent years and prices met the particular conditions of the markets.

U.S. Gold Stocks Back to 1947 Level.—U.S. Government gold stocks at the end of July dropped to \$22,267,000,000, their lowest post-war level. (There was a further fall to \$22,227,000,000 during the week ended 5th August). The decline, technically an indication of sounder currency conditions abroad, is also a sign of deteriorating currency conditions in the United States. The August issue of Pick's World Currency Report gives the following figures, in millions of U.S. dollars:

	(End Of)		July
	1947	1949	1953
Total bank deposits	153,288	164,467	171,000
Currency in circulation	28,224	27,600	30,030
Total	181,512	192,067	201,030
U.S. gold stock	22,868	24,563	22,267

Ratio of gold to currency and deposits 12.6% 12.8% 11.1%

The reduction of this gold cover is relatively important, as increases of currency liabilities have reached record proportions of constant inflation. At the same time, it has to be stressed that about \$3 to \$5 billion of the official gold stock of the U.S. is at present "callable" by foreign governments, whose American assets in currency or government bonds are legally and at any time convertible into gold at \$35 per ounce. In view of such facts, says Pick's Report, any prospect of a return to a gold coin standard in the U.S. will have to be discarded for the present and probably also for the near future.

World Bank's Balance Sheet.—The International Bank for Reconstruction and Development last week reported a net income of \$18,485,411 for the fiscal year ended 30th June, 1953 compared with \$15,872,883 for the preceding fiscal year. This income was placed in the Supplemental Reserve against losses on loans and guarantees and raised the Reserve to \$76,513,511. Loan commissions amounted to \$9,551,822 and were credited to the Bank's Special Reserve, increasing that Reserve to \$37,236,477. Total reserves at the end of the fiscal year were \$113,749,988. Gross income, exclusive of loan commissions, was \$42,839,207, compared with \$35,188,744 in the preceding fiscal year. Expenses totalled \$24,353,796, including \$724,270 of administrative expenses and \$18,629,526 of bond interest and other financial expenses. The Bank made 10 loans totalling the equivalent of \$178,633,464 during the year, bringing total loan commitments at 30th June to \$1,590,766,464. Disbursements during the year were \$226,756,982, compared with \$184,777,004 during the preceding year. Cumulative disbursements to 30th June amounted to \$1,103,261,115. All repayments of principal due during the year were received, and some borrowers made payments in advance. Of the total of \$2,328,028 received, \$245,000 was prepaid by the Banco Nacional de Nicaragua and \$302,000 by Denmark. Borrowers also repaid \$17,837,948 on loans sold by the Bank to investors. This sum included \$6,000,000 of prepayments by shipping companies in the Netherlands and \$500,000 by Belgium. Bonds of the Bank sold to investors during the year amounted to \$71,600,000. An issue of \$60,000,000 was sold in the United States, and an issue amounting to 50,000,000 Swiss francs (approximately \$11.6 million) was sold in Switzerland. The Bank also arranged in June another issue of Sw. fr. 50,000,000 to be dated 1st July, 1953. Total issues of the Bank outstanding on 30th June amounted to \$556,374,002. During the year, the Bank sold \$13,637,966 of securities from its loan portfolio, including \$5,333,821 without the Bank's guarantee. The cumulative total of portfolio sales at 30th June was \$70,014,654, of which \$20,211,508 had been sold without guarantee. Germany, Japan and Jordan became members of the Bank during the year. On 30th June, 54 countries were members of the Bank, and the total of subscribed capital was \$9,036,500,000.

Study of National Budgets.—The Economic Commission for Europe has made a study (Economic Bulletin for Europe, Vol. 5, No. 2; available in English and French editions from Sales Agents for United Nations publications; price 3s. 9d.) of the "national budgets"—in the United Kingdom the "Economic Surveys"—which, since 1947-48,

have been prepared in the United Kingdom, the Netherlands, Sweden, Norway, and Denmark. The essence of these budgets was the annual preparation of forecasts of production, foreign trade, investments, etc., which served as a background for the formulation of economic policy. Mainly originating from war-time planning, this procedure represents a new development in the technique of designing economic policy for primarily private enterprise economies in peace-time. Experiences from experiments in this field over five years are now available, permitting an appreciation of results and future possibilities. The study shows the part played by the national budgets in the preparation of import plans, building programmes, tax policy, etc., and indicates their importance as a tool for the achievement of a co-ordinated economic policy. It is strongly emphasised how the budgets were closely related to the policies actually followed by these countries—that is, policies aiming at a stable expansion of production and employment. The study therefore concludes that, with the changes in economic policy in recent years, the decline in the importance of the national budgets is hardly surprising and that their future use, except as a modest aid for business forecasting, is heavily dependent on whether the present trend continues or there is a return to more expansionist policies. These findings are supported by an analysis of how the quantitative forecasts of production, trade and investment in the national budgets compare with actual developments. Even though no close correspondence could be expected in a period of such rapid changes it appears that in the period until 1951 the national budgets generally provided good indications of future developments. It is noted, however, that there was a tendency to take a cautious view of the possibilities of expanding production and trade, and it is emphasised that in future use of the budgets a more balanced approach is desirable. It is also concluded that substantial improvements in statistical material and technique are called for. There are good prospects that such progress may actually be made and in that case the budgets will provide a helpful and indeed necessary tool for governments embarking on a policy of economic expansion.

Malaya's Foreign Trade in 1953.—The continued decline in the price of rubber, and to a lesser extent tin, were again evident in Malaya's foreign trade in merchandise during the first half of 1953, which showed an adverse balance of \$41,706,297. For the first six months of this year total foreign trade amounted to \$3,173,105,932, compared with \$4,038,632,559 for the first six months of last year. Imports were valued at \$1,628,718 and exports at \$1,544,887,214, compared with \$2,049,169,428 and \$1,998,463,131, respectively, during the same period last year. The average price of rubber over the six months was 1s. 9d., compared with 2s. 8d. per lb for the same period last year. Total exports amounted to 408,634 tons, valued at \$656,406,428, of which 110,493 tons valued at \$175,666,449 were exported to the United Kingdom. Exports to the USA amounted to 97,745 tons valued at \$152,132,763 and to "American Account Countries" they were valued at \$9,904,838. This volume of exports was the lowest shipment figure for the first half of any year since 1946. The decrease in the total value exported compared with the first half of last year was \$443,237,589. Shipments to the USA and "American Account Countries" decreased \$182,203,254 in value. The average price of tin was £843 compared with £970 per ton for the first half of 1952. Total exports amounted to 31,353 tons valued at \$232,226,210 compared with 30,568 tons valued at \$244,624,872 last year. Exports to the USA at 13,425 tons valued at \$999,924,696 compared favourably against the 7,400 tons valued at \$59,479,568 shipped during the same period last year, when purchases in the USA were restricted to Government transactions only. Exports to the United Kingdom amounted to 4,689 tons valued at \$73,315,474 last year. Exports to "Other Countries"—chiefly the Continent of Europe—were on a similar level to last year and amounted to 13,179 tons against 13,956 tons, but decreased in value by \$18,182,295. The United Kingdom continued to be Malaya's best customer on a reciprocal basis. Total trade amounted to \$641,954,275. Imports were valued at \$359,291,374 and exports at \$282,662,901, compared with \$457,928,186, and \$433,223,644 last year. Despite the lower prices and decreased exports of rubber, Malaya again made a valuable contribution to the gold and the dollar earnings of the sterling area, as the favourable trade balance with the U.S.A. was \$192,657,109—chiefly due to the increased shipments of tin. During the same period last year Malaya had a favourable trade balance of \$265,360,454. Total exports to the U.S.A. amounted to \$263,544,652 against \$70,887,483 imported from that source. With the Republic of Indonesia total trade, chiefly through the entrepôt of Singapore, amounted to \$512,527,725, a decrease of \$143 million from the corresponding half yearly figure. Imports were valued at \$371,971,255 and exports at \$140,556,470. Malaya's production of rubber was 274,677 tons, of which 163,197 tons came from

large estates and 111,480 tons from small holdings. Compared with last year's figures, the effect of the lower prices was shown in the production from small holdings, which dropped 10,341 tons. There was an increase of 5,993 tons in the production from large estates. The production of tin—ore was fully maintained and amounted to 27,532 tons, a decrease of only 663 tons from last year's figure.

CORRESPONDENCE

ISSUE OF RIGHTS SHARES TO THE EDITOR OF "CAPITAL"

Sir,

There is nothing to prevent the Directors of a Company from issuing new shares without regard to the provisions of Section 105C of the Indian Companies Act so long as previous approval to such issue and the terms thereof has been obtained by the Company in General Meeting. Where such approval is not obtained, the Directors would, of course, be bound, under the provisions of the above Section, to offer the new shares to all existing shareholders, irrespective of class, pro rata to their existing holdings.

The offer of new shares to the existing Ordinary shareholders of the three Companies of Bombay, mentioned by your correspondent, Mr. H. J. Vevaina, in his letter published in *Capital* of 6th August, 1953, appears to be quite in order, since the new issues are being made pursuant to special resolutions passed by the Companies in General Meeting. That being so, the management has rightly pointed out that the provisions of Section 105C do not apply. Why the Ordinary shareholders alone have been preferred for the allotment of the new shares, or by whom the resolution was initiated is beside the point, so long as the General Meeting was validly convened, held, and the relevant special resolutions thereat were passed by the requisite majority. Preference shareholders of a Company, as a rule, are entitled to be present at any General Meeting, but usually cannot participate in its proceedings, nor are they entitled to any voting rights. Presumably, the Preference shareholders of the Companies referred to by your correspondent are entitled to voting rights under the Articles of Association of the respective Companies, otherwise it is not understood how they could have been "invited" to vote for the issues.

The Company Law Committee, in their report to the Central Government, have remarked that Section 105C "has been a prolific source of trouble since its insertion by the Indian Companies (Amendment) Act, 1936". In their recommendations to the Government for amending this Section, they have attempted to resolve conflicting judicial decisions and to clarify the intentions of the legislature as understood by them, and it is interesting to note that, in their view, it is unfair that holders of Preference shares should automatically obtain privileges where further capital is to be issued. They have accordingly recommended that the right of taking up further shares be restricted to the holders of the equity capital in the Company unless the Company in General Meeting sanctioning the issue decides to the contrary.

Yours faithfully,
D. M. COELHO.

Calcutta, 18th August.

THE END OF DOLLAR AID

TO THE EDITOR OF "CAPITAL"

Sir,

I have read, with particular interest, the leading article in your issue of 6th August wherein you have made a very fine assessment of the causes behind the American Government's policy of curtailment of foreign dollar aid. While reading the article I found myself waiting throughout for some reference to the circumstances which first occasioned the generous aid granted by the U.S.A. by loan or gift; but the American attitude, I think quite accurately depicted in the article, appears to be concentrated on the failure to obtain the benefits expected to accrue to the U.S.A. as the result of dollar aid. It would be ungrateful not to recognise and acknowledge the substantial assistance which dollar aid has given to the war-torn democracies. But in the assessment of results little account seems to have been taken of the cause which prompted the aid. One might pose two very vital questions: Was the dollar aid policy designed purely to bring short term benefits to America? Was the dollar aid wholly and absolutely voluntary? On the first score surely it is universally accepted that America's own internal economy demanded that dollars had to be placed in the coffers of her overseas buyers to enable them to purchase American goods. One might go still further and ask whether America

Calcutta, 17th August.

The kip market in the past week was slightly more active than might have been expected in this holiday period. Prices were steady and the few cheap offers available previously have mostly disappeared. So long as prices continue at the present level, there is every chance of business being done on a reasonable scale, though if prices rose a few percent, slackening off in buying would be very considerable.

A GUIDE TO KEYNES'S GENERAL THEORY

A Guide to Keynes. By Alvin H. Hansen. (McGraw-Hill Book Company Ltd. \$3.75.) A distinguished American Keynesian has contributed to the "Economics Handbooks Series" a manual for advanced students wrestling with Keynes's *General Theory of Employment, Interest and Money*. It is neither of two things that Professor Hansen could have made it: neither an exegesis of Keynesian doctrine, nor a critical examination or defence of the "new economics." It is, rather, a high-class "crib." The other two approaches to Keynes's work have been attempted elsewhere, for example by Seymour Harris and Pigou, and the student making his first examination of Keynesian theory will have to refer to those books and sundry others. But he should also, of course, see what Keynes himself did actually say. When he sets out to do that, however, he finds that the *General Theory* is a very difficult work, at least in parts, and being thus discouraged he is likely to leave the master's *chef d'oeuvre* unread and content himself with a study of the exegete. It would be a pity if, because of this, Keynes's *General Theory* were to join the list of famous unread books, which includes More's *Utopia* and Marx's *Capital*; because first-hand acquaintance with the *General Theory* will convince the student that, just as Marx once told his son-in-law "I am not a Marxist," Lord Keynes's shade would be entitled to say sometimes "I am not a Keynesian."

So this is the task Professor Hansen has set himself; to write a book which neither defends Keynesian theories nor sets out all their implications, but which simply provides a chapter-by-chapter guide to the most important work in economic analysis written in this century. He pays

most attention therefore to the more difficult rather than the more interesting sections of the *General Theory*. The last section of the *General Theory*, "Short Notes Suggested by the General Theory," is in some ways the most interesting, but the reader who has mastered the earlier chapters will have no difficulty with it, so Professor Hansen devotes only two of his chapters to it. But the earlier parts of Keynes's work are knottier, and here Professor Hansen often devotes one of his chapters to each of Keynes's. The result is a book which is rather more than half as long as the *General Theory* and of which this reviewer has no hesitation in saying that the student who has read and understood it will have no trouble in reading the original.

One wonders whether books of this sort really do succeed in sending students to the original. The appearance of cribs and students' manuals might only serve to heighten the impression that the original is quite unapproachable and thus ensure that no brave student stumbled through it by accident as it were. As long as there is no "guide-book" to hand, the student is apt to blame his difficulties on his own slowness, rather than the inherent intricacy of the work. But when reputable Harvard professors write cribs, the student is quick to see that his teachers are confessing that the work is obscure and, therefore, beyond the powers of a mere student. The reviewer recalls having had this experience with Kant; the numerous analyses of the *Critique of Pure Reason* served to convince him that Kant was quite impossible, so he became a Kantian for a term after reading only the cribs. This should be less likely to happen with Keynes because (as Professor Hansen might have stressed more vigorously) the *General Theory* is not all that difficult, and once the detour of Book II is got past the advanced student should have no more trouble than he has with Marshall or Pigou. Indeed there would have been some advantage in Professor Hansen directing attention to the vital chapters and recom-

mending that they be read first, rather than accepting Keynes's own order of subjects. Keynes was a brilliant and (usually) lucid writer but the construction of his books is anything but systematic, partly because he was breaking so much new ground and partly because, as Professor E. A. G. Robinson has remarked, he wrote in too much of a hurry and had no time to go back and rearrange his ideas when he had seen where they led.

One minor criticism of Professor Hansen's guide is his algebra. There is no hint in his book of Keynes's own attitude to mathematical "demonstrations" of economic truths. In the *General Theory* he always introduces symbolic language with apologies, keeps it to a minimum, relegates it to footnotes and in at least one place advises the reader "who rightly dislikes algebra" to skip it. Indeed one of his repeated criticisms of Pigou is that he sometimes "puts one over" in mathematical argument. But Professor Hansen introduces much more algebra and many more graphs into his simplification than there are in the original (which contains, if memory serves, only one graph). Not only that, but Professor Hansen uses different symbols to Keynes's, which seems unnecessary in a guide book. But this is a small point, for if the student finds mathematical statement of a relation easier to grasp, Professor Hansen will indeed have simplified; we only mention it for the benefit of students who dislike algebra as much as Keynes himself did.

The page references are to the American edition, but students in India will have no bother in correlating them with the English edition for the argument is grouped in short numbered sections. Altogether, Professor Hansen's guide can be warmly recommended to teachers looking about for the best way of introducing students, not to that vague body of dogma that now goes by the name of Keynesianism, but to the actual masterpiece of the greatest economist of modern times. The importance of their doing so is best emphasised by the famous last section of the *General Theory of Employment, Interest and Money*: "... the ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices from the air, are distilling their frenzy from some academic scribbler of a few years back... Soon or late, it is ideas, not vest-interests, which are dangerous for good or evil." Keynes was no academic scribbler, but his ideas are so powerful, for good or evil, that his student of economics can afford not to study them at first hand.

Multiple Exchange Rates and Economic Development. By Eugene Richard Schlesinger. (Published by the Princeton University Press, U.S.A., for the International Finance Section of the Department of Economics and Social Institutions in Princeton University, 1952. Price \$1.76 pence. Agents in India: Oxford University Press, Mercantile Buildings, Lal Bazar, Calcutta.)

Exchange restrictions assume diverse forms and a multiple exchange rate system is a form of exchange control under which the exchange rate for the purchase or sale of a foreign currency is not fixed but varies, depending upon the purpose for which the foreign currency is required to be bought or sold. Such a system represents a form of selective interference with the price mechanism mainly with the object of influencing the level and composition of imports and exports. The popularity of multiple exchange rate systems appears to have increased in recent years, particularly among the Latin American Republics and some of the other economically less developed areas of the world.

In the present monograph Dr Schlesinger, who is now an economist with the Federal Reserve Bank of New York, has examined multiple exchange rates with particular reference to their relationship to the problems of underdeveloped economies. The author first discusses the impact of multiple rates on the level and composition of imports and then investigates the influence of multiple rates on the domestic price systems, government revenues, capital formation and the structure of production; these are compared to the impact of various other commercial, fiscal and monetary policies. He then analyses the effects of different multiple rate systems on exports and foreign investment and discusses their impact on the geographical trade pattern. In the concluding part of the work the author briefly formulates his distrust of multiple exchange rate systems may have to be modified somewhat considering the economic structure which is characteristic of most of the underdeveloped nations and the alternative policies which are open to the governments of these countries. He sums up his study by stating that on balance there seems to be a definite but limited rationale for the inclusion of multiple exchange rates in the economic programmes of underdeveloped countries. There is very little literature on the present work probably represents the first systematic analysis of the applicability of multiple exchange rates to conditions in underdeveloped countries. Dr Schlesinger's excellent study is therefore recommended to all students of international finance.

Saint Frères Circular Looms installed in Italy.

SAINT FRÈRES CIRCULAR LOOMS

Hundreds of Saint Frères Circular Looms are in use—in new factories and old, sometimes working alongside flat looms—in the Belgian Congo, in South Africa, Sweden, Norway, Italy, Great Britain, Germany, Belgium and France.

These looms were originally designed for making tubular cloth from jute. Deliveries of a Saint Frères Circular Loom for hard fibres are now available. Saint Frères Circular Looms are manufactured by Urquhart Lindsay & Robertson Orchar Ltd., Dundee, Scotland.

Sacks made from Tubular Cloth are stronger

They cost less to make

The J.3 Loom (3-leaf, 3-shuttle) weaves twill tubular cloth for sacks.

A DITCHER'S DIARY

He tried this first with Britain and the United States, but happily he failed after some initial success. Then he tried it with Russia and the West. His genius for misjudgment was so uncanny that we may take this as an augury that a settlement between the democracies and Russia might be attained after all.

A correspondent tells me that at the recent opening of the new London office of the United Commercial Bank Mr. B. T. Thakur brought together for cocktails a gathering that was fully representative of the City of London, eastern exchange banking and financial journalism. The United Commercial Bank's fine new premises at 15 Throgmorton Avenue must be counted something of a find in these days when office accommodation of quality is still in very short supply within the City's historic square mile. Apart from Indian visitors and leading members of the resident Indian community in London, there was a large gathering of business folk of other nationalities to wish the Bank good fortune in its new venture. Cocktail parties are neither so numerous nor intense in London as they are in Calcutta and they really do serve, in a rather special way, to bring old friends together. Inevitably the affair took on a predominantly banking aura, with a certain amount of wistful reminiscing about the good old days in Windypore where there was no question of sprinting to catch the last train home. The important point, however, is that Indian banking is spreading its wings westward. The United Commercial is not, of course, the first to break new ground in the City of London. The Bank of India has been established in Moor-gate for quite a time and the Reserve Bank and the Imperial Bank of India (which are in rather a different category to the rest) are old inhabitants. The Central Bank of India opened its London office a few days ago under the general direction of Sir Cecil Trevor, a former Deputy-Governor of the Reserve Bank of India, and Mr. H. C. Captain, the Central's managing director, was on the spot to give the affair the appropriate cachet. My correspondent says he seems to remember that the Central made an earlier venture into London—about 20 years ago—but after a short experimental period decided the time was not ripe to establish themselves there on a permanent basis. The progressive relaxation of monetary controls and greater freedom within the sterling area, and a little outside it too, have enabled the bill on London to recapture some of its former attractions. That leading Indian joint stock banks should be taking steps to secure a footing in the London arbitrage market is a sign of their own enterprise, but also of the recovery of sterling and of the continuing importance of London as a financial centre, which some people mistakenly thought had come to an end.

The impending closure of Whiteaway Laid-law's department store in Bombay will mark not only a further stage in the disappearance of this type of retail business from India, but also the severance of the firm's oldest connection. For it was in India—in Calcutta in fact—in the year 1882 that this famous house of "drapers, outfitters, general dealers, colonial merchants and agents" established its first store. Since then it has spread to other parts of the sub-continent, to Ceylon, Kenya, Malaya, Singapore, Shanghai, Hong Kong, Argentina and, through a subsidiary, to Indonesia. It is curious that this city, which provided the first foothold for so large an enterprise,

When you dislike a public figure over a number of years, and when he never disappoints your expectation that he will do the wrong thing, I suppose you come to have a sort of attachment to him. The astonishment with which you follow his progress from one absurdity to another breeds a species of wrong-headed affection, and you await his next mistake with the same kind of fond expectation as you watch a favourite child's examination successes. I was coming to feel that way about Dr. Mossadik. The pertinacity with which that irascible and tearful politician quarrelled with everyone that could do his country any good, the persistence with which he evaded the personal consequences of his own policies, the single-minded vigour with which he led Persia from bankruptcy to anarchy all showed an unusual determination that would have been wholly admirable, if only it were devoted to some useful end. Probably no politician since the collapse of the Axis has been so resourceful in finding new ways to fail, so astute in contriving new humiliations for his country. After all, it must require exceptional gifts to be wrong all the time. Most politicians do not get the chance to show their talents in this line, for after their first few catastrophes they are relieved of office. Dr. Mossadik thought he had solved that problem—first by suffocating nascent democratic trends, then by breaking the power of Islamic conservatism, and finally by engineering the collapse of the court. He did what the politicians always say they will do: leave no stone unturned and no avenue unexplored. Every stone he turned revealed a new scorpion to chastise Persia, every avenue he explored led to a new bonfire. In a way, Dr. Mossadik's foreign policy was in the Persian tradition, that of playing off one great power against another.

should be the first to withdraw support from the "emporia". The Army and Navy Stores closed down here not long after the war, Whiteaway's went in 1951 and Hall and Anderson's seems smaller every time I go along Park Street. Evidently, the difficulties of department stores are not peculiar to India, for the chairman of Whiteaway's, Sir Harold Gillett, said at the company's meeting recently that turnover had been reduced in many of the countries listed above. Drastic import controls in primary, producing countries after the slump naturally, struck at just the goods department stores usually stock, while politics in Shanghai and inflation in the Argentine have made matters worse. But Whiteaway's are still hopeful of further expansion; Sir Harold hinted at "several propositions" under consideration by the Board, to broaden the company's operations.

Why should a rural community in West Bengal have as many drummers as it has schoolteachers, or about twice as many drummers as it has physicians? There is probably some simple explanation, but no one has been able to give it to me yet. The question arises after study of a report on a community development project in Jhargram, Midnapore district, which has been published by the State Government. It gives a break-down of the occupations and pursuits of the 40,000 inhabitants of this area; naturally, all but 2,000 of them are wholly concerned with agriculture but it is the division of that 2,000 among the various crafts and professions that is interesting. The largest proportion, very nearly half in fact, are engaged in cottage industries, and the next biggest group, of 333, are hut builders. Then come 134 teachers. So far, so good. But the next major pursuit, it appears, is percussion, for there are 133 drummers. Doctors, masons, barbers, dhobis, drivers and lawyers follow, all a long way behind the drummers. The authors of the "agro-economic survey" take the trouble to explain the existence of 42 lawyers and 10 deed-writers—there are civil and criminal courts in Jhargram—and they confess themselves puzzled by the presence of 73 physicians because Jhargram "has a reputation of being a very healthy place". But concerning the drummers, and no doubt unlike the drummers, they are silent. If this implies that Jhargram is typical, India must have one and one-third million drummers, which would make tympany a grossly over-stuffed profession. More seriously, this small fact should remind us how little we know about "employment" and "unemployment" in this vast agricultural economy.

The history of the stock exchange contains some curious examples of shareholders' patience, but few more striking than was instanced in a company report that appeared in the English financial papers last week. It concerned the 72nd annual general meeting of the Channel Tunnel Company, Limited. Out of 530 stockholders in this old-established firm, five turned up and found themselves facing three out of four directors. I wonder if they expected to hear heartening news about the scheme to build a tunnel from England to France, some word that this long-talked-of proposal was at last to be implemented. In any event, they did hear what many shareholders in other companies do not have the pleasure of hearing from their directors: they had made a profit on 1952's working. It appears that the company's only lively fixed asset is a plot of land in France which brings in rent; it is from beneath this plot, I presume, that it is hoped that one day the triumphant diggers of the Channel Tunnel Company will emerge from under the English Channel.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 30th June 1932 and the Profit and Loss Accounts for the half-year and the year ended 30th June, 1932:

(i) That we have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-laws of the Bank) and the Profit and Loss Account, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and (ii) that we have obtained all the information and explanation we have required and that they have been found to be satisfactory; (iii) that the transactions of the Bank which we are so enabled to submit a true and correct view of the position of the Bank; (iv) that the Returns furnished by the Branch Agents have been found adequate for the purposes of our audit; (v) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (vi) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the position of the Bank's affairs according to the best of our information and knowledge derived from the examination of the books and documents connected with the accounts; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria & J. Devia respectively.

A. K. JOSCELYNE,
B. S. BILLIMORIA,

Without Prejudice

CONTEMPT CASE FOLLOWS
COMPANY MEETINGTHE USES OF "ALLEGED"
(FROM OUR LEGAL CORRESPONDENT)

THIS case concerns the law of contempt of court; and will repay study by those who in these days of industrial unrest and violence have charge of undertakings, in the course of the management of which they have to make public or semi-public reports, written or verbal, to the shareholders of the concern, or to others, to whom they owe a duty to report. It is proposed to make here some preliminary observations on the particular category of contempt into which this case was said to fall. But they may be all summed up in one very blessed word—the simple past participle "alleged". If in any comment on any pending litigation, especially criminal litigation, the cautionary "alleged" is scattered *ad nauseam* throughout the speech or document it will pay ample dividends in any subsequent trouble of the kind with which we shall presently deal.

The class of contempt is a publication or comment which causes or may reasonably cause prejudice against parties concerned in a pending case before their case is heard. (Newspapers are usually the alleged offenders in this category but they stand in no more privileged position in this respect than anyone else. They merely supply the bulk of the law reports and judicial decisions.) Such comments are undoubtedly contempt of court. Nor is it necessary that a comment on a pending case must actually prejudice the judge or jury before it can be said to amount to contempt; it is enough if it is calculated to create prejudice against the applicant.

"If anyone discusses in a paper the rights of a case or the evidence to be given before the case comes on, that... would be a very serious attempt to interfere with the proper administration of justice. It is not necessary that the court should come to the conclusion that a judge or jury will be prejudiced, but if it is calculated to prejudice the proper trial of a case, that is a contempt and would be met with the necessary punishment in order to restrain such conduct". Or, to quote that very learned and even more outspoken Ameri-

can judge, Frankfurter J., the Lord Darling of the U.S. Supreme Court. Bench: "If men, including judges and journalists were angels there would be no problems of Contempt of Court. Angelic judges would be undisturbed by extraneous influences and angelic journalists would not seek to influence them..... (But) it is the focussed attempt to influence a particular decision that may have a corroding effect on the process of justice and it is such comment that justifies the corrective process..... It is a condition of that function (the function of judges) indispensable for a free society that in a particular controversy pending before a Court and awaiting judgement, human beings, however strong, should not be torn from their moorings by the undertow of extraneous influence".

And again as an equally world known authority, Oliver Wendell Holmes, J., put it: "When a case is finished, Courts are subject to the (same) criticism as other people but the propriety and necessity of preventing interference with the course of justice by premature statement, argument or intimidation hardly can be denied".

There is, of course, a substantial reason for this apparent restriction on the right of freedom of speech and expression specifically guaranteed to all citizens by Article 19 of the Indian Constitution. Administration of justice by an impartial judiciary is the whole basis of the Indian system of jurisprudence and indeed of that of every democratic State. "It is the concern not merely of immediate litigants. Its assurance is everyone's concern. The method of administering justice prevalent in our Courts is that a conclusion to be reached in a case will be induced only by evidence and argument in open Court and not by outside influence whether of private talk or public print".

In short, comment and criticism, however fearless and outspoken, is allowed. But "comment, however forthright, is one thing. Identification with respect to specific matters still in judicial suspense is quite another". Comment on a concrete case must not be such as to constitute an attempt, conscious or unconscious, intentional or unintentional, to influence the judge or jury before they have made up their minds on the pending controversy.

So much for the law. Now for the facts in the latest Indian case on the subject.

There had been trouble in the Nunddydroog Mines, Mysore, and a criminal case was pending against certain persons accused for having—so it was alleged—conspired together to cause mischief by fire in the mines, and for causing such mischief by fire resulting in damage to a mine and loss to the management to the value of about Rs. 20,000. While the matter was thus sub judice, Mr. Arthur H.E. Taylor, the Managing Director of Messrs John Taylor & Sons Ltd., presiding over an annual general meeting of the Mining Companies held on 27th and 28th December, 1951, was said to have stated as follows: "The regrettable outbreaks of fire which have occurred in the Mine since the close of the period under review have cast a shadow over this year's working. These outbreaks were undoubtedly due to sabotage and have resulted in loss to the company, labour and Government, and, though loss of life did not take place, this might well have been the case. The police have instituted criminal proceedings against certain persons accused of being connected with these acts of sabotage."

Now, in the light of subsequent reflection Mr Taylor no doubt would have concluded that this part of his address might have been more carefully worded with advantage. In two places it certainly assumes and publicly canvasses as true the first and vital issue which was sub judice and which the prosecution had to prove, namely, that the fires were due to sabotage and not to any other cause, also the reference to potential loss of life may be read, though doubtless not so intended, as a hint that exemplary punishment was called for. But Mr Taylor is not, presumably, a lawyer, and reading the whole passage one thinks that it is such as any business man might have written as a straightforward honest explanation to the company's shareholders of the difficulties under which the company was labouring.

The speech was published in the Deccan Herald and the Hindu. Did it constitute contempt of court? Was it an attempt to secure that the trying court should "be torn from its moorings of impartiality by the undertow of extraneous influence?"

In less grandiose language than that of the great American jurist, counsel for the accused petitioner urged that it was. "The effect of such a statement and its publication in the Press amount to interference with the course of justice as the respondent has arrogated to himself the role of an investigator and usurped to himself the function of the Court of law by expressing an opinion on a matter which was sub judice. It was also an attempt to influence the public, and the shareholders of the Mining Company to be prejudiced against the accused in the criminal proceedings and would tend to prevent the Court from adjudicating and doing justice in the case on the facts before it."

But even assuming, as the High Court did, that the statement and its publication were reprehensible, the court has a discretion as to whether or not to exercise the salutary powers vested in it. Some 22 years ago 14 gentlemen belonging to the Congress were accused of various offences and were being tried at Chittagong by a Special Tribunal. Sir (then Mr) Alfred Watson was the then editor of The Statesman, Calcutta; and in the course of an editorial Sir Alfred dealt with a controversy raised by another newspaper regarding the acts of violence alleged to have been committed by the Congress Party at Chittagong and referred to the accused persons as "Chittagong raiders." He had omitted the saving prefix "alleged" while referring to persons against whom the trial was pending, though he made the correction later. Rankin C. J., held that though there was a contempt of court committed by the paper, it did not call for serious interference at his hands. Mr. Taylor was in a stronger position than the editor of a newspaper would have been in the publication of the statement he made. For in the words of Medapa C. J., (Vasudevamurthy J. concurring), it was "not merely proper to the Managing Director of the Mining Companies but even his duty to report to the shareholders at a General Body meeting what in the view of the management was the cause for those incidents."

While their lordships held that "there is no doubt room for complaining that the respondent has by saying that the incidents which are alleged to have taken place were undoubtedly due to sabotage given expression to an opinion on a matter which is sub judice and this might well have been avoided" nevertheless they found that in the circumstances the statement did not prejudice the fair and impartial trial of the case and therefore did not amount to contempt of court. But the court emphasised that this was not a case which was to be heard by a jury. If it had been, the complaint that the speech might prejudice the public against the accused might have had more force. (K. S. Vasani v. A. H. E. Taylor. A.I.R. 1953. Mysore. 103).

Stocks and Shares

EASIER TENDENCY IN SYMPATHY WITH
INDIAN IRONSENGINEERING AND JUTE SHARES DEPRESSED: ALL
FIXED-INTEREST STOCK STEADY

Wednesday Evening.

THE share market has been dull and quiet with attention centred on the labour situation in the Indian Iron and Steel works. The possibility of a closure is now being taken seriously and this, together with the strike notice put out by the Action Committee, caused the price of Irons to fall from last week's Rs 23-5 to Rs 22-14 at the close this evening; further falls took place after hours. The market is now also taking into account the effect of the loss of steel production on the engineering industries generally, and the whole section has been easier.

Most other sections have been dull with some losses. Jutes have receded and coal shares have been neglected. F. & C. Osler have made a smart recovery from Rs 6-4 to Rs 7-6. The demand for debentures and preference shares continues to be good.

Securities have been steadier but not much business has been put through. Apart from Paper, most loans have been supported but prices are mostly unchanged. The Bombay Municipality has successfully floated its loan for Rs 14 crores, of which Rs. 75 lakhs was offered to investors on the same terms as the recent Port Trust flotation.

Details of the week's trading follow.

The gilt-edged market ruled quietly steady and there were buyers of most issues. Three percent 1986 continued to meet with selling pressure and declined to Rs. 82, at which rate there were small buyers at the close. In short-dated loans, there was a good enquiry for 3% 1957 which improved to Rs. 98-7. There were buyers of 2½% 1954 at Rs. 98-8, while 3% 1958 was marked at Rs. 98-3 cum-voucher, and later at Rs. 98-1 ex-voucher. Medium-dated loans met with investment enquiry but owing to shortage of scrip, very little business could be completed. Three-and-a-half percent National Plan Bonds were the exception with sellers at Rs. 99-5. Three percent 1959-61 was dealt in at Rs. 96-1 ex-voucher. There was a good enquiry for 3½% 1963-65 and 1964 at Rs. 92-6 in each case, but sellers were not forthcoming. Two-and-a-half percent 1961 was better at Rs. 90-8, and there was some demand for 2½% 1962 at Rs. 91-8. Among long-dated loans, 3% 1966-68 was easier with sellers at Rs. 90-1, but there were buyers of 3% 1970-75 at Rs. 86-7.

Little or no business was completed in provincial loans. There were buyers of 4½% U.P. 1963 and 1964 at Rs. 99-8 and Rs. 99-7, and there was a small enquiry for 4½% West Bengal 1963 at Rs. 100-4.

Debentures of joint stock companies came in for more business with enquiry confined to selected issues. Calcutta Electric and Dunlop Rubber had buyers at Rs. 101-8, in each case. Orient Paper were steady at Rs. 93, and Standard Vacuum recorded deals at the improved rate of Rs. 102. Mangalore Electric, Sijua Jheriah Electric, and Soorah Jute were all done at Rs. 96.

Once again the turnover in the preference section was satisfactory, there being an unsatisfied demand for a number of issues in the miscellaneous section. As for Jutes, although there were sellers of certain scrip, very little business could be completed as would-be buyers were not prepared to pay higher prices. Budge Budge were marked at Rs. 120, and Fort Gloster 7½ continued to be absorbed at the high price of Rs. 136. Howrah 'A' were done at Rs. 417, and later found buyers at Rs. 118. Lothian were marked at Rs. 110, and a small lot of New Central changed ownership at Rs. 108. Other enquiries included Belvedere, Kelvin and Khaddah. In the miscellaneous group, Alkali & Chemical were crossed at Rs. 111, against a previous quotation of Rs. 108. Birds Investments were Re. 1 lower at Rs. 76, and Burn 6½ were placed at Rs. 120. Burn 7½ were scarce at Rs. 121. Dalmia Cement Fully-Paid were wanted at Rs. 73. Equitable changed hands at Rs. 118, and Dishergarh Power 5½ were reported at Rs. 105 cum-dividend. Indian Irons were steady at Rs. 107, and parcels of Indo-Burma Petroleum changed hands at Rs. 83-8. Jensen & Nicholson were better at Rs. 107, and there were buyers of Kettlewell Bullen 2nd at Rs. 65-8. Railis were unchanged at Rs. 78. Rohas 'A' had buyers at Rs. 100, while there were sellers of the 'B' Preference at Rs. 53-12.

In the banking section, there were buyers of Imperial Fully-Paid and Contributory at Rs. 1,821 and Rs. 435 but few declared sellers. Punjab National Bank were offered at Rs. 21-12, while United Bank of India 'D' shares recovered to Rs. 3-13. United Commercial were a shade lower at Rs. 35-8.

In the cotton section, both Bowreah and Dunbar were a shade better at Rs. 282 and Rs. 180. Other shares in this section showed no material

change. Cawnpore Textiles were marked at Rs. 8, Elgins at Rs. 17 and Muir at Rs. 209. Swadeshi Ordinary and Preferred Ordinary found buyers at Rs. 9-5. New Victoria were unchanged at Re. 1-4.

Less interest was shown in coal shares, and business was confined to selected scrip. Bengal, after recovering to Rs. 514, receded at the close to Rs. 507. Burrakur fluctuated narrowly around Rs. 8-15. East Indian were marked at Rs. 22-14, and New Beerboom after being sold down to Rs. 17-11, recovered to Rs. 18-4. Pench Valley and Standard could be placed without difficulty at Rs. 26-6 and Rs. 20-12. Among the smaller fry, Central India, Talcher, and Western Bengal were all easier at Rs. 4-6 Rs. 2-7, and Rs. 4-1.

In an otherwise dull jute section, Fort Gloster and Hooghly were at one time prominent at Rs. 432 and Rs. 33. Later the former receded to Rs. 408, with further sellers at this price. Howrah were quiet at around Rs. 22-7. Other transactions included Barnagore at Rs. 150-8, Budge Budge at Rs. 154, Ganges at Rs. 68, India at Rs. 125, and Khaddah at Rs. 145. National were steady at Rs. 24, and business was reported in Presidency at Rs. 4-14. Reliance were subjected to profit-taking, with the price receding to Rs. 15-3.

On the completion of recent selling orders on London account, Calcutta Electric recovered from Rs. 13-8 to Rs. 13-13. Mirzapur were crossed at Rs. 8, showing an improvement of Re. 1 over the previous quotation. There were buyers of Muttra at Rs. 9-1, and Patna at Rs. 11.

Like the other sections, shares ruled dull, though prices on the whole were unchanged. Carew came to hand at Rs. 6-14. Darbhanga were quoted at Rs. 11, and Ramnugger at Rs. 17-10. There was some enquiry today for Cawnpore at Rs. 34-14 and Champaran at Rs. 24-4. A solitary transaction was reported in Dyer Meakin Breweries at Rs. 5-12.

With no improvement in the labour situation, Indian Iron & Steel shares were subdued throughout the week, with the price receding to Rs. 22-14 which is tonight's closing quotation. Fears of a general steel shortage as a consequence of the strike, had a depressing effect on other shares in this section. Bhartia Steel were easier at Rs. 10-9, Burn were offered at Rs. 283, and there were sellers of Jessop at Rs. 22-14. There were small buyers of Indian Galvanizing New at Rs. 12 ex-dividend, and Kumardubi Engineering met with mild support, to close a few annas better at Rs. 7.

In the miscellaneous section, India Paper Pulp were wanted at Rs. 160 ex-dividend, and Orient Paper at Rs. 31-4. Business was reported in Shree Gopal at Rs. 18-2, and Star Paper at Rs. 18-5. Titagur Paper, which hitherto have kept fairly steady, met with some selling pressure with the price receding from Rs. 35-12 to Rs. 34-14. With the exception of Dalmia Cement which had buyers at Rs. 6-9 other shares in the Cement section were inclined to be easier. For example, Assam Bengal were sold down to Rs. 3-8 and Sone Valley to Rs. 10. Hercules Insurance were taken at Rs. 29, while New Asiatic on selling pressure receded from Rs. 4-1 to Rs. 3-14 ex-dividend. India Steamship fluctuated narrowly around Rs. 6-12, while India General Navigation, after improving to Rs. 88, found sellers at the close at Rs. 85. Anglo Brothers were steady at Rs. 18. British India Corporation at Rs. 8-5, and Assam Saws at Rs. 6-9. British Ceylon Corporation, on the announcement of a fresh issue of capital on favourable terms, found buyers at Rs. 13-8, without attracting sellers. Cherra Chhatrak Ropeway were crossed at Rs. 8-2, while Dunlop Rubber were unchanged at Rs. 27-12. F. & C. Osler met with renewed support and recovered from Rs. 6-4 to Rs. 7-4. Ganges Rope weakened to Rs. 176, and to Rs. 7-4. Ganges Rope weakened to Rs. 176, and to Rs. 7-4. Miller to Rs. 10-6. Indian Cables were fully steady at Rs. 18-2, and Indo-Burma Petroleum came in for strong investment enquiry, improving from Rs. 53-8 to Rs. 55-8. There were ready buyers of Jardine Henderson at Rs. 129 cum-dividend. Martin Burn and Shaw Wallace met with investment support at Rs. 18 and Rs. 10-5. A large parcel of Rohas Industries was placed at Rs. 8 and Textile Machinery were steady at Rs. 6-1.

In the mining section, Orissa Minerals were steady at Rs. 36 cum-dividend, while Indian Copper were shaded at Rs. 12-12.

Once again tea shares were neglected, and only a few transactions were recorded in the past week. Some of the more popular counters were freely offered, but in the absence of any enquiry prices were marked down. Bishnauth were quoted at Rs. 25-8, Dufflaghur at Rs. 32-12 ex-dividend, at Rs. 25-8, Dufflaghur at Rs. 32-12 ex-dividend, East India at Rs. 16-4, Hasimara at Rs. 24-12, and Huldibari at Rs. 17. Delakhat changed hands at Rs. 10-3, Grob 'B' at Rs. 8-3, and Maud at Rs. 15-4. Tezpor dropped to Rs. 15-2, with further sellers at this price, while New Chumta were taken at

the opening of their

LONDON BRANCH

On
14th August, 1953.

At
159, Fenchurch Street, London, E.C.3

With
Sir Cecil R. Trevor, C.I.E. as London Adviser.

H. C. Captain,
Managing Director.

THE EASTERN BANK, Ltd.

INCORPORATED IN ENGLAND.
(Liability of Shareholders is Limited.)

HEAD OFFICE:
2 & 3, Crosby Square, London, E.C.3.
SUBSCRIBED CAPITAL " £2,000,000
PAID-UP CAPITAL " £1,000,000
RESERVE FUND " £1,250,000
RESERVE LIABILITY OF SHAREHOLDERS " £1,000,000
BRANCHES: Calcutta, Bombay, Madras, Cochin, Karachi, Chittagong, Colombo, Bagdad, Basrah, Mosul, Kirkuk, Amara, Bahrain, Doha, Aden, Singapore, Penang, Kuala Lumpur, Butterworth.

General Banking and exchange business transacted with all parts of the world.

The Bank undertakes Trustee and Executorship business through its affiliated Company, The Eastern Bank Trustee and Executor Co. (India) Ltd.

CALCUTTA BRANCH:
14, Netaji Subhas Road,
Phone: Bank 5571/2. W. A. H. RUSHTON, Manager.

APV
Dairy Engineers

APV ENGINEERING CO., LTD.
41A, Chowringhee Road, Calcutta,
Branch Offices Bombay and Delhi.

THE INSIDE STORY OF DUNLOP
INDUSTRIAL V-BELTING

THE TOPPING RUBBER seals and protects the jacket overlap.
THE JACKET, of strong woven fabric impregnated with rubber, armours the belt against surface wear.
THE FILLER RUBBER ensures that the cords are placed at the correct level to prevent distortion or undue stress of cords when flexing round the pulleys.
THE CUSHION RUBBER ensures maximum cord adhesion and long life.
THE CORDS are specially designed to provide adequate strength and resistance to stretch and fatigue.
THE BASE RUBBER, specially compounded to resist frictional heat, provides a suitable foundation for the cords, and gives a sufficiently large gripping surface on the sides.

Dunlop Industrial V-Belts are the product of advanced technical experience and methods of manufacture. They are made in the standard range of sections—M, A, B, C, D, and E—and are suitable for the efficient transmission of power in multiple belt drives.

THE DUNLOP RUBBER
CO (INDIA) LTD

DRAKY

Range of Horse Power Capacities for Multiple Belt Drives			
BELT SECTION	H.P. RANGE	BELT TOP WIDTH	BELT THICKNESS

E	OVER 100	1 3/4"	29/32"

Rs. 17.8. Choonabhatti were a shade better at Rs. 220, but Engo were easier at Rs. 170.

The profit of JARDINE HENDERSON LTD., fell from Rs. 60.23 lakhs to Rs. 29.81 lakhs for the year ended 31st March, 1953 as compared with the previous year, owing to the fact that tea and tea companies under its managing agency could not do well during the period under review. Bringing in Rs. 5,86,448 there remains a balance of Rs. 35,66,976, of which taxation absorbs Rs. 12 lakhs (Rs. 24.45 lakhs) and general reserve Rs. 2 lakhs (Rs. 7.50 lakhs). The usual preference dividends have been paid, but the ordinary dividend has been lowered from 10 percent to 7½, leaving a carry-forward of Rs. 4,64,163. The company bought the entire share capital of McLeod, Russell & Co., Ltd., London, who are the managing agents of some tea companies in India.

The HERCULES INSURANCE COMPANY earned a net profit of Rs. 6,90,571 for the year ended 31st December, 1952, which is an increase of Rs. 1,18,121 over the previous year. Bringing in Rs. 1,27,798, there is an available balance of Rs. 8,18,369. General reserve is allocated Rs. 4 lakhs (Rs. 3½ lakhs). The dividend has been maintained at Rs. 1.8 per share, to leave a carry-forward of Rs. 2,38,369. Taxation absorbs Rs. 4 lakhs (same). The Fire, Accident and Marine departments earned surpluses of Rs. 7.26 lakhs, Rs. 1.85 lakhs and Rs. 1.83 lakhs, respectively. The total net premium income rose from Rs. 42,42 lakhs to Rs. 47.17 lakhs. The percentage of net commissions and expenses to net premium income was 28.85 (25.34). Total funds were shown at Rs. 72.61 lakhs (Rs. 65.61 lakhs).

After providing Rs. 34,976 (Rs. 31,971) for depreciation, there is a profit of Rs. 39,738 of the ANANDA (ASSAM) TEA COMPANY for the year ended 31st December, 1952, and this compares favourably with the previous year's loss of Rs. 24,776. Bringing in Rs. 4,458 and making other adjustments, there is Rs. 40,222. The dividend has been maintained at annas 12 per share, leaving Rs. 19,484 to be carried forward. The crop was 4,971 maunds (5,272 maunds) and the average selling price Rs. 1.10-10 (Rs. 1-11.5) per lb. Estimates for the current year have been made for a crop of 4,600 maunds at a cost of Rs. 4,68,997.

The profit of the LOTHIAN JUTE MILLS COMPANY fell from Rs. 9.75 lakhs to Rs. 4.56 lakhs for the half-year ended 31st May, 1953, as compared with the previous half-year due to a decline in rent from the Albion Jute Mills Company from Rs. 10 lakhs to Rs. 5 lakhs. Allowing Rs. 1.92 lakhs (Rs. 4.15 lakhs) for taxation, transferring Rs. 1 lakh (Rs. 3 lakhs) to general reserve and bringing forward Rs. 64,166 there is a balance of Rs. 2,49,044. The ordinary dividend has been maintained at Rs. 15 per share, leaving a carry-forward of Rs. 64,044.

After allowing Rs. 1.29 lakhs (Rs. 1.82 lakhs) for depreciation and Rs. 1.62 lakhs (Rs. 2.07 lakhs) for taxation, the profit of INDIAN GALVANISING CO. (1926) LTD. fell from Rs. 2.92 lakhs to Rs. 2.48,730 for the year ended last December, as compared with the previous year. Meeting all charges and bringing in Rs. 67,371, there remains Rs. 1,92,949. The dividend has been reduced from 12½ percent to 6 percent, although the ordinary capital has been meanwhile raised from Rs. 12.32 lakhs to Rs. 36.95 lakhs. The carry-forward is at Rs. 3,587. The Drum Plant in Bombay was brought into commission during June, 1953, and was running satisfactorily.

The working of TATA IRON AND STEEL COMPANY for the year ended 31st March, 1953, discloses the usual satisfactory results. Profits total Rs. 3.09 crores as against the previous year's Rs. 3.60 crores. This reduction results mainly from lower production and despatches of pig iron and steel and from the curtailment of operations at the Agricola plant because of the lack of orders. Furthermore, the previous year's profits included a non-recurring item representing retrospective increases in retention prices in respect of previous years which was only partly made up in the present year by the accretion of the postwar refund of excess profits tax and by a profit on the sale of skull scrap, leaving a difference of about Rs. 20 lakhs between the two years. Profit-sharing bonus absorbs Rs. 98.57 lakhs (Rs. 1.06 crores). Adding Rs. 7,46,217 brought in and other miscellaneous receipts there remains a balance of Rs. 2,32,85,204. General reserve is allocated Rs. 46,80 lakhs (Rs. 74.98 lakhs) and dividend reserve Rs. 1.84 crores (Rs. 1.87 crores) leaving a carry-forward of Rs. 2,05,446. The ordinary dividend has been maintained at Rs. 21 per share as also the dividend on the deferred share at Rs. 115.3 per share.

Revenues also include a sum of Rs. 177 lakhs representing for the period of 12 months ending 31st March, 1953 the increase in the retention price granted by government on the recommendation of the Tariff Commission specifically for the purpose of financing the cost of replacements and renewals at the present high price of plant and machinery. In accordance with the conditions imposed by the Government, this additional amount has not been taken into account for pur-

poses of managing agents' commission, profit-sharing bonus and distribution of dividends and has been allocated as follows:—Rs. 100 lakhs for additional provision for depreciation (plant rehabilitation reserve) and Rs. 77 lakhs for provision for taxation.

The negotiations with the Government for a Rs. 10-crore loan for the expansion and modernisation of the company's plant have been virtually completed and it is expected that the company will be in a position to commence drawing on the loan shortly.

The scheme for the conversion of deferred shares into ordinary shares made substantial progress during the year under review. The mediator recommended a conversion ratio of six ordinary shares for one deferred share. The directors of the company have accepted the ratio recommended by the mediator and directed that such ratio be incorporated in a scheme to be submitted to the holders of ordinary and deferred shares in accordance with the procedure prescribed in section 153 of the Indian Companies Act. The directors hope that the conversion of the deferred shares into ordinary shares under the above scheme will be completed in the course of the current financial year.

With a view to improving the capital structure of the company which today suffers both from lack of balance between the equity and preference capital and from an excessive disparity between the value of the gross block and the total capital issue, the directors have decided that, along with the conversion of the deferred shares into ordinary shares in the ratio fixed by the mediator, a part of the general reserve should be capitalised and issued as bonus share to the holders of ordinary shares after conversion at the rate of one new ordinary share for every ordinary share held. This proposal will be included in the conversion scheme to be submitted to the High Court and to the shareholders.

Substantial progress has been made on the various projects relating to the modernisation and replacement of plant.

The working of the ATTOCK OIL COMPANY for the year ended 31st December, 1952, has produced excellent results. Trading profit is higher at £1,297,655 from £661,537 in 1951. The Pakistan Oilfields Ltd., a subsidiary company, however, showed a loss of £23,277. Allowing £214,983 (£162,751) for depreciation and £683,019 (£244,952) for taxation there remains £361,443. General reserve is allocated £160,000. The dividend has been raised from 12¼ percent to 20 percent including an interim of 5 percent. Adding sums brought in from the previous year, there remains £232,993, (£229,545) which has been carried forward.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the week, the figures indicate Opening Quotations—Highest for the week—Lowest for the week—Closing Quotation—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

New Delhi

LIKELY SCOPE OF COAL LABOUR DISPUTE ENQUIRY

NEED TO INCREASE PRODUCTIVITY: IMPACT OF FUEL COSTS ON INDUSTRY (FROM OUR OWN CORRESPONDENT)

15th August.

THE Government of India has decided to refer a number of industrial disputes in the coal fields to an industrial tribunal for adjudication, it is announced here. The tribunal will be set up as soon as arrangements are complete. The terms of reference are expected to include the general question of wages and the continuation of the present foodgrain concessions, as also the effect of such concessions on the industrial economy of the country. Other issues for adjudication may be the following:

1. Holidays with pay.
2. Equal pay for men and women.
3. Standardisation.
4. Payment for load or load grading.
5. Railway return fares.
6. Concessional supply of footwear and uniforms.
7. Compensation for involuntary unemployment.
8. House rent.
9. Wages of (a) time rated trammers; (b) miners other than gallery-face pick miners; (c) workers engaged in stone cutting; and (d) other unskilled workers.

A serving or retired high court judge is expected to constitute the one-man tribunal. An official announcement is expected shortly.

Nobody will disagree with the opinion of the Indian Coalfields' Committee of 1946 that the coal industry needs a settled and contented mining labour force. The problem, however, is how labour can be settled in mining operations and what will make it contented. Regarding its migratory nature the Committee regarded "migratory as an incorrect word to use, for the labourer does not so much change his abode permanently as return to the land for short periods during the year. It has been estimated that 30 to 40 percent of the workers so return in June-July, and 20 to 30 percent in October-December. According to a recent survey, a miner is absent for about 57 days in the year on these visits. In addition, while resident in the coalfields he works, on the average, for only 4½ days in the week, so that his working days in the year are about 190 days only. This considerable absenteeism is one of the principal causes of the low average annual output of Indian mining labour; others are the miner's failure to work the full shift, his lack of suitable training and the comparatively primitive way in which the coal is cut and raised in India in many small mines."

More Workers, Lower Earnings

The General Report for 1949 of the International Labour Organisation's Coal Mines Committee contains the following observations made by the Government of India. "As a result of improvements made in the general working conditions of the miners, and particularly because of the free and concessional supply of rice and foodgrains, there has been a considerable influx of labour into mines from the neighbouring regions. In mines where the gang system of working is in force, it is found that ten to 12 workmen go down into the pits where previously a gang consisted of six or eight men; the result is that total earnings are divided among a larger number of workers and each individual worker's pay is lower." It may be added that the Government's estimate of working days in a year, as disclosed in the International Labour Organisation reports, was 140 and not 190 as estimated by the Coalfields Committee. The Government also admitted in these reports that standardisation of employment was necessary to ensure the success of such measures as provident fund, bonus, and miners' welfare fund.

The latest review was made by the Working Party for the Coal Industry, which reported in 1951. It said: "We have very reluctantly to record that the productivity of an Indian miner has not shown any improvement though ample arrangements have been made to safeguard his interests by fixing the basic wage, reasonable dearness allowance, bonus, free rice, cash concession, provident fund, leave and other concessions. The Coal Board Award has no doubt brought stability in the industry but it has not brought in an increased O.M.S. (output per man-shift), the result being that the cost of production of coal, instead of showing a tendency to go down, is rather on the upward trend and this is mainly due to the low productivity of mining labour."

Contradictions in Aims

Thus the cost of coal is high because of the low productivity of labour. Labour, say experts, is inefficient because of large-scale absenteeism. Holidays with pay (already 15 numbers) and the migratory character of labour are largely responsible for absenteeism. Labour leaders wish not only to retain the existing causes of absenteeism but to accentuate them by introducing more holidays with pay and railway return fares. Labour is discontented because it thinks wages are low. Individual cash earnings are low because there is

surplus labour in the coalfields. Free rice, food-grain concessions and attendance bonus are responsible for this large influx of labour. Labour leaders want not only to retain the existing concessions, but to extend them to uniforms and footwear. These contradictions are explained by the fact that coal labour has become a pawn in the game of party politics. Political parties know that if coal miners come under their control, they have a powerful weapon with which to paralyse the life of the country. Their record does not indicate any desire either to stabilise the labour force or to make miners contented, much less to raise their standard of living.

In contrast to this policy are the views expressed at the thirty-third session of the International Labour Organisation by an American workers' delegate, Mr. Delancy. He said: "It is no secret that American labour's principal aim throughout the years has been to secure higher wages. This has accomplished two things: (1) It has helped to make sure that the benefits of mass production are used to raise living standards by increasing purchasing power and reducing prices. (2) Our unions have both forced and helped along the drive for higher production. They helped it because they saw the increased output was a way in which to get still higher pay, shorter hours of work and improved living conditions."

Linking Wages to Output

One way to secure the twin objects of stabilising the labour force and thereby raising its productivity is to link wages with output. To this end, nations should be linked to units of work. The Working Party on the Coal Industry says: "We have discussed this matter with union officials as well as with the Mining Association. We are of the opinion that it is desirable to fix a unit of production so that the minimum wage may carry with it the onus on the part of the worker to do a fair day's job for wages received. This is the primary and essential factor to reduce the cost of production."

Before the war, the price of coal was regulated by the wage structure; approximately 65 percent of the cost of production consists of wages. During the war, demand for coal increased, the cost of living rose and other avenues of employment were open to coal miners, so various concessions and bonuses were introduced. The situation has totally changed now. Foreign demand for coal has fallen and because of the wagon shortage stocks have accumulated at pitsheads: as a result, there is unemployment. It is evident that costs, and therefore wages, should be reduced. Coal is an important element in the cost of production of almost all industrial goods so that any increase in its price affects industrial costs generally. The Finance Minister gave the following figures of annual collections to Parliament this week:

Coal Mines Labour Welfare Cess Rs. 74,00,000
Stowing Excise Duty on Coal Rs. 95,00,000

Total Rs. 1,69,00,000

Obviously, these collections raise the cost of production; yet they are only two of the many impositions on the industry. It is, therefore, proper that the tribunal is also to enquire into the effect of various concessions on the industrial economy as a whole.

Agreement with Germans on Steel Plant

Information has been received from Western Germany that an agreement was signed last Saturday between India and a German combine of two firms, Krupp and Demag, under which the latter will participate with finance and technical aid in the project to set up a third integrated steel plant in India. The estimated capital cost of the project is \$150 million. The German contribution might be up to \$20 million. The Government of India is expected to provide about \$80 million, and the private limited liability company which is to be incorporated, first to implement the project and then to manage it, is expected to ask the World Bank for a loan of \$50 million. The plant is expected to go into production in four years' time. Representatives of the German combine are expected to visit this country next month to discuss with Indian experts where the plant should be situated. Originally two alternative sites, one at Hirakud in Orissa and the other in Madhya Pradesh, were recommended. It is likely that the final choice will be in favour of Orissa. This will be the first State project in which a foreign combine will participate

MARKETS DISTURBED BY
KASHMIR CRISISSTATE TO DROP MULTI-POINT
SALES TAX

(FROM OUR OWN CORRESPONDENT)

16th August.

BOMBAY markets this last week have blown both hot and cold. There was a good deal of early enthusiasm and the outlook was fairly hopeful. Cotton, the barometer of general sentiment here, had got over the initial fear of unduly large deliveries in the August contract and was forging ahead steadily. Dalal Street was riding on a wave of optimism and there were signs that Tata Deferreds would rise beyond Rs. 2,000, a fitting prelude to their ultimate extinction in two or three months' time. Oilseeds and oils had successfully weathered the sharp impact of the Government policies designed to bring down the price level. The stage was, in fact, set for a week of uninterrupted bullish activities.

News of political developments in Kashmir upset these calculations. The first reaction was not unduly adverse; in fact, there was a tendency to welcome the news. Even the business community, which had not shown any active interest in the changing political relations between the Union of India and Sheikh Abdullah's Government, had become a little exasperated at the antics of the Kashmir Premier. It was the news of the reaction in Karachi to the charges reported in Srinagar that eventually depressed markets. Early enthusiasm in the Stock Exchange gave way to caution, even though it did not lead to actual depression as some of the more gloomy elements in business circles expected. Later, the forward cotton market also lost

its buoyancy following a fresh lot of tenders last Friday, dragging down both the August and the February contracts. This spread to the other speculative markets on the eve of Independence Day and a week which was expected to be buoyant ended on a note of uncertainty and anxiety.

Perhaps the effect of the changed atmosphere in Karachi and its implications for the economy of this country would not have been so pronounced had it not been for the revival of fears regarding the burden which might be added by the Estate Duty Bill. The Finance Minister's speech in Parliament brought no consolation, and the feeling of uncertainty to which it gave birth will not be removed till the promised Bill specifying the rates is introduced in Parliament. Market feeling was such that even the bullion market, which was expected to secure a good rise in prices, both because of the uneasy feeling over future relations with Pakistan and the inevitable search for escape routes from the Estate Duty levy leading to a greater demand for gold, did not advance. Not even the partial victory which business men scored over the State Government on multi-point sales tax, when it was learnt about the middle of last week that the Government had finally decided to abandon the multi-point levy and to replace it by a two-point tax, afforded much relief.

State-Business Relations

But this last development has had a good effect on the relations between the business community and the Government of Bombay. Relations have been severely strained during the last few months, as a result of the business community's un concealed hostility towards the multi-point sales tax and the demand from so influential an organisation as the Indian Merchants' Chamber for a revision of the Government's prohibition policy. It had been known for some time that the Government looked with disfavour on this latter body. Apart from ignoring social functions sponsored by the Chamber and one or two other important trade organisations in the State, the head of the Government is believed to have gone to the length of suggesting to the Central Ministers that they too should take similar action. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, is also believed to have been disconcerted by the frank criticism of some of his speeches by leaders of commerce and industry in Bombay. In spite of this, the Government of India endeavoured to maintain good relations with the business community in Western India, in contrast to the openly hostile attitude which the State Government took no pains to hide. Some of the difficulties experienced by the Bombay Government in getting its recent loan fully subscribed seem to have been contrived to convey to the State authorities both the strength of feeling among business men about the sales tax controversy, and to stress the importance of this community to the Government. The decision to drop the multi-point tax has been utilised by some of the elders in the business world to bring about a rapprochement between the authorities and the representative business organisations in Western India. It is said that the new atmosphere of cordiality will be in evidence at an improvised function which will be attended by a number of Ministers.

New Labour Legislation

If the reopening of Parliament in New Delhi has brought fresh worries to the business community in Western India, the session of the State legislature which will commence next week is likely to bring its own share of complications. Both the Payment of Wages Act and the Bombay Industrial Relations Act are to be tightened up and additional categories of workers are to be brought within their purview. Even persons engaged in a managerial, administrative, or technical capacity, drawing a salary up to Rs. 350, will now be brought under the provisions of the B.I.R. Act, 1946. One of the important provisions, designed to help mobilise small private savings in excess of basic wages for two months shall be paid into the provident fund account of the employee, if he is a subscriber, or otherwise invested in such manner as may be prescribed by the Government.

Independence Day celebrations lacked the enthusiasm of previous years. Even the official and civic functions were fewer, while private rejoicings, illuminations and late night revelries were on a much smaller scale than usual. One of the factors responsible was the weather which had been so erratic and undependable recently that people hesitated to arrange elaborate programmes which might be marred at the last moment by a heavy down-pour.

PROTECTION OF DRY BATTERY INDUSTRY

The Government of India's resolution on the Tariff Commission's report on the continuance of protection to the Dry Battery Industry was published in the Gazette of India dated 15th August, 1953.

The Government has accepted the Commission's main recommendation that the measure of protection needed by the industry is less than that afforded by the normal revenue duty and since the domestic industry is not exposed to any threat of foreign competition under the present import policy, the protection granted to it need not be continued beyond 31st December, 1953. The Government has also accepted the other ancillary recommendations of the Commission.

West Pakistan

HALF-YEAR TRADE BALANCE
DISAPPOINTINGDEVALUATION RISKS IN DEFERRED
PAYMENTS

(FROM OUR OWN CORRESPONDENT).

Karachi, 13th August.

THE Prime Minister's statement, made during the course of his East Bengal tour, that the new commercial policy of the Pakistan Government would shortly be announced naturally gave rise to some speculation. I understand however that what Mr. Mohammad Ali actually had in mind was merely the issue of a new Import Control Schedule, which would include some items for licensing which were previously "not invited." As a matter of fact there is no scope for any drastic change in the existing import policy, and the fresh licences which are to be issued during this half year will be for very small amounts: the situation still dominated by the limitations of foreign exchange and there has been little improvement in the gold and sterling reserves. Hopes that the second quarter of the calendar year would show a more substantial balance of payments in Pakistan's favour have been sadly disappointed. The figures are not yet out but it is understood that the favourable balance is only between Rs. 1 and 2 crores, which is even less than in the first quarter of the year. Considering that imports were cut to the bone, this must be regarded as most disappointing; nevertheless, officials are reasonably optimistic, mainly because during the current half year there will be no outgoings on account of wheat purchases.

Deferred Payment Scheme

An announcement is shortly likely to be made about the question of exchange cover for imports of capital goods under the Deferred Payment Scheme. The special arrangements entered into with Japan and with certain British firms which were prepared to offer comparable terms have not yet taken effect, because it has not been settled who should stand the risk of devaluation during the period of five years. Payments are expressed in sterling, and obviously if and when the Pakistan rupee is devalued—not that there is any likelihood of this at present—somebody stands to lose, and neither the Exchange banks nor the importers could face such a risk. It is believed that the Government have now decided that if the importer deposits the full value of the order in rupees in the non-resident account opened in Pakistan by the seller, the State Bank shall grant exchange cover for the full period of five years during which the piecemeal remittances will be made. If the importer can afford only to deposit part of the value of the order he will be allowed exchange cover to that extent and his further deposits from time to time during the five-year period will entitle him to similar cover. Once this is cleared up a large volume of orders should be placed both with Japan and the United Kingdom especially for cotton textile machinery.

Iron Ore Exploitation

Some time ago I mentioned the interest being shown by the Pakistan Industrial Development Corporation in the iron ore deposits discovered at Drosh in the Chitral State. These were being examined by German experts, and it is learned that they have established that the deposits are of excellent quality and comprise about eight million tons of ore. Unfortunately the inaccessibility of the area militates against their exploitation, and the P.I.D.C. have decided to concentrate first on the exploitation of the even more recently discovered deposits in the Salt range. These are of much poorer quality—about 42 to 44 percent ore—but are in great abundance. Although no announcement has yet been made on the subject it is understood that the Corporation have entered into a long-term contract with Krupp's, who will both provide technical advice and set up a pilot plant for smelting the ore. This is likely to be situated somewhere on the banks of the river Indus in the Attock or Mianwali district of the Punjab.

Karachi Shipyard Development

A German concern is also taking a large part in the furtherance of the Karachi shipyard scheme, with which the P.I.D.C. are determined to proceed. German consulting engineers have prepared a blueprint of the layout, and their technicians are now working at the site. This is in the West Wharf area of Karachi. The scheme comprises a commercial dry dock, three ship building berths, and a slipway for launches and other similar vessels, as well as the usual accompaniment of workshops. The fact that the shipyard is next door to the premises of the Pakistan Oxygen and Acetylene Company will be very convenient, as it will make substantial use of the products of the latter. The site is not quite large enough for requirements, and the intention is that about 400 yards of foreshore should be reclaimed, and the channel beyond should then be dredged to the required depth for launching ships.

Jute Goods Exports

It is not surprising that the recent visits of Messrs. Ghulam Faruque and Adamjee to the U.S.A. and Canada, where they contacted the main burlap interests, should be causing some

you have been

WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives and inflammable articles as personal luggage but it is against your own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

1950	28.9	32.5	21.8	22.4
1951	26.8	28.2	23.0	22.3

The lower running costs of non-Indian offices cannot be entirely attributed to better working methods. Initial expenses incurred in placing new business on the books are many times the subsequent expenses so the expense ratio is influenced by the volume of new business written in the year. As non-Indian offices each year write a smaller volume of business in proportion to the business in force than Indian companies their expense ratios are naturally lower. Also, their average sum assured per policy is much larger in the case of both new business and business in force. That is, the volume of business remaining the same, they have to handle a smaller number of cases. Since to a considerable extent expenses of management depend directly upon the number of cases, irrespective of their size, this saves for non-Indian offices a good proportion of administrative costs and thus helps lower their expense ratio. Of course, to write policies which assure large sums is not a matter of choice; it depends on the sections of the community from which the clientele of an office is drawn and perhaps to some extent on the organisation of the field force. Non-Indian offices generally restrict themselves to cities and large towns where the business potential is most concentrated. They are not, unexpectedly, patronised by foreigners; some highly placed Indians are probably also inclined to insure with them because they are believed to offer better services. Further, the high rates of bonus they declare on "with profit" policies attract some discriminating individuals. These are some of the merits which enable non-Indian offices to draw their customers from comparatively few and to do sections of the insuring public, and which result in a fairly large sum being assured per policy.

The statistics given above show that the expense ratios of Indian offices have steadily declined, although more slowly than the fall in new business. On the other hand, non-Indian offices indicate the opposite trend but this may be attributable to their increase in new business. In fact, if one company which has increased its new business rapidly is excluded the expenses ratio has been more or less constant. The fall in the expenses of Indian offices may be traced to the provisions of the 1950 Amendment Act. It has partially resulted from the efforts of some companies to economise in order to comply with the limitation on expenses. A significant part of the fall may also be attributed to the lower ceiling fixed for first year commissions on new business, which became effective for the first time in 1951. A higher scale of renewal commissions, in the second and third years of the business written in 1951 or later, has also been allowed so that in 1952 expenses on commission may be proportionately higher than in the previous year and still higher this year. In 1953, however, new forces have come into play which aim at reducing expenses. The Executive Committee of the Life Insurance Council has framed a Code of Conduct to be observed by all insurers. New commissions to agents have been graded according to the volume of business procured by them, and the number of intermediaries between the branch manager and the shareholders have been restricted. These provisions should enable life offices to lower expense ratios and possibly make other reductions.

One of the greatest evils in Indian insurance, which has a definite bearing on the operating costs of offices, is rebating. Although prohibited by the Insurance Act, it is believed to be widely prevalent. The Act says that nobody should be induced to insure by offering a concession on the premium payable and it has also been made illegal for the insured to accept such gratification. As offering and accepting rebates is entirely a private transaction between the agent and the insured, it is almost impossible to bring illegalities to light and statutes, however rigorous, are bound to be futile. Not infrequently, success in procuring business insured solely on the amount of rebate the agent can squeeze from the agent. Other factors such as the merits of individual offices or the art of canvassing recede into the background. If the ability of the agent to secure business depends on his capacity to offer a rebate, that in turn depends on how he is remunerated by his office. The Act restricts the maximum amount of commission that can be paid to an agent but the provision is evaded by bringing into existence other intermediaries between the agent and the office. Thus, it may reasonably be expected that if the total remuneration paid to the agent and the intermediaries is cut down, rebating will decrease. Though the Code of Conduct imposes limitations on the number of intermediaries employed, their practical effect on the working costs of offices is somewhat doubtful. Some of the latter will probably try to recast their field organisations in order to conform to the Code of Conduct, but in such a way that the price paid for procuring new business remains more or less the same.

The eagerness of offices for new business and the high-pressure selling methods by which a portion of the business is obtained produce unhealthy results. Many policies lapse too early and, because of the heavy initial expense, cause losses and lead to higher expense ratios. Energy and money are wasted in trying for such spurious business. The leading insurance executives denounced by many have been vehemently trying to improve it. No Indian offices put up this much better performance in this respect and to keep expenses low.

The statistics in the Insurance Year Book do not show the total of policy lapses each year but they do give percentages of lapses to new businesses in individual companies. We may take as examples the three largest Indian life offices, which between them accounted for a little less than half of the new business done by all Indian offices during 1951 and had in force a similar proportion of business at the end of that year. Of the three companies one-third, and in the remaining two companies a little over two-fifths, lapsed by the end of 1951. Of the new business written in 1950 no less than one-fifth to one-third lapsed by the end of 1951. It is evident that the picture is far from encouraging. During the same period, non-Indian offices fared better. In some of the important ones, the proportion of lapses occurring by the end of 1951 out of the new business written in 1948 onwards was a little over one-fifth, and in a few cases was only one-tenth. The measures prescribed by the Indian Insurance Act against unhealthy practices are mainly remedial. In some sectors, especially agents' commissions, but in the present circumstances stronger action seems necessary if positive results are to be achieved soon.

It is reported that phatka trading in loose raw jute has been reopened by the Calcutta Jute Exchange. Evidently the prohibition on raw jute futures has been found not to apply to loose jute as opposed to jute baled in a hydraulic press. It is unfortunate also that such a step should be permitted before the newly set up Commission has had time to examine the matter and submit its report. Paragraph "C" of the terms of reference expressly instructs the Commission to consider the malpractices indulged in by the various units that operated the phatka market resulting in undue depression of prices of raw jute as well as jute goods. The phatka market referred to was, of course, the phatka market in manufactured goods but the study of its operations may lead to recommendations which would be equally applicable to raw jute.

would be equally applicable to the cotton market. There are strong arguments in favour of real futures markets but Calcutta has never had one. As a result of the Todd Report an attempt was made to set up a properly organised futures market but it was not a success. There have been phatka markets in raw jute and in jute manufactures but none of them has functioned satisfactorily. All these markets were dominated by gamblers who had no stake in the industry. Those engaged in the legitimate trade were afraid to make use of them because their movements were unpredictable. It was argued, of course, that, if the mills and the merchants had made full use of the phatka markets, the gamblers would not have been able to exert such a powerful influence, but that is conjecture. The failure of the futures market set up after the Todd Report was also attributable to the fact that the mills made no use of it. The bidders traded in it to a considerable extent but at that time there was a large export business whereas there is now no export business and only a small quantity of jute is packed in pucca bales for internal use.

So far as the mills are concerned there appears to be little need for a futures market. If they make sales of manufactures there is almost always plenty of raw jute for them to buy and at most times, they can immediately cover their sales without having to pay higher prices. There have been occasions when that has not been so and mills, having sold manufactured goods, have found that the prices of raw jute have risen before they could buy jute against their sales. These occasions have, however, been few, and normally they have adequate protection in buying actual jute. It is not, however, so with merchants. They may get the offer from mill buyers of what appears to be attractive business but, if they accept it without having the jute actually in hand, they run a risk for, unlike a manufacturer who can buy large quantities at a time, merchants can buy upcountry in only comparatively small lots and may lose money before they have covered their sales. In such circumstances a properly organised and dependable futures market would be an advantage to merchants. Conversely, also, a futures market would afford protection to merchants who have purchased jute upcountry in expectation of being able to sell it to mills and then find that they cannot do so because mills are probably for want of buyers for manufactures are refraining from buying jute. With a true futures market in being merchants could "hedge" their stocks by selling futures and protect themselves against loss on their stocks in a falling market.

There is perhaps some over-simplification about this but such operations are the only real justification for foreign markets. In Calcutta it has never been possible to prevent large operations by persons outside the trade who merely want a quick profit and are not too scrupulous about how they make it. Propagation of false rumours is one of their chief methods of influencing the market in their own interests and there was a glaring example this week when some of the *katni* wallahs circulated a rumour that the Pakistani Prime Minister had resigned, hoping, no doubt, that this idea of an impending crisis would cause a fall in the market. Apart from the influence of outsiders, difficulties are also created by people in the trade who operate far beyond their need for hedging. There have also been cases in the past when attention to hedging has been made by people actually in the trade, especially towards the end of a season when particular qualities may be scarce.

The main problem, then, in setting up a proper futures market is to discover ways of preventing the market from being dominated by persons outside the industry and of restricting the operation of those in the industry to their actual need of hedge. If this problem can be solved the setting up of a futures market would be an advantage but it is a problem of great intricacy.

I.J.M.A. Production and Consumption
In July the output of mills reporting to the I.J.M.A. was 78,400 tons compared with 72,800 tons

In June, in July 1952, the output was 63,800 tons. There has been a further increase in the proportion of hessian produced, the percentage in July being 45.3 compared with 43.8 in June. In July 1952, hessian was only 31.4 percent of the total output. In July 1952, the mills turned out 54,400 tons of sacking, while last month they produced only 40,500 tons. These figures are significant and, in time, must influence the sacking market. On a basic basis, the total production of manufactures from the mills consumed 4,57,000 bales of jute, compared with 4,34,000 bales in June. In July 1952, the consumption was 5,00,000 bales

There has been a definite change in the tone of the market during the week just closing. At the beginning of the period all sections were steady, but since then markets have been dull and the tone easier. The reason is said to be lack of demand in the market for manufactures, which has kept the mills out of the raw lint market.

Manufactured Goods: In contrast to the previous week, the mills were able to effect sales of good quantities of both hessian and sackings there has been a lack of business in the past week. Buyers appear to have satisfied their requirements for the time being and bazar dealers are taking time to digest what they have bought recently. Mills also appear to be under serious selling pressure. In the market and, though prices are a little lower all round, even the reported reduction in U.S. hessian consumption in July to 56 million yards did not bring about any serious fall. Some enquiry was reported for specialities and it is said that business is being held back because of unusual demand for these goods will actually be to the benefit of the reduction in duties. There has been some bare selling, especially in sackings, but no serious pressure.
