THE U.S. DOLLAR AND THE WORLD ECONOMY

RECESSION FEARS FOR 1954: REFLATION AND THE PRICE OF GOLD

THE first week of the New Year finds Commonwealth Finance Ministers deliberating in Australia, and Congress reassembling in Washington. In both places the economic outlook for 1954 figures prominently on the agenda. At the moment of writing neither the results of the Sydney Conference nor the text of Mr. Eisenhower's State of the Union pronouncement are available to us. But it needs no great prescience to forecast that neither will stray very far from that middle of the road position which enables leaders of public opinion to be hopeful without undue optimism and cautionary without spreading alarm. As a curtain-raiser to the Presidential messages to Congress, 300 economists—one-third of whom are in government employ—met in Washington to consider the economic prospects for the new year. The verdict of this formidable gathering is that an "orthodox recession" is now to be expected and that the U.S. gross national product in 1954 will decline by about 5 percent by comparison with the year just closed. Only a tiny minority of these practitioners of the dismal science believed that there might be a change for the better in the last days of 1954. This brings the story to the opening days of 1955, which is about as far ahead as any reasonable person will wish to look in these difficult days. Americans are not, as a rule, "depression minded," but they do expect their conferences to register firm conclusions. For what it is worth we record the formal verdict of this mammoth assemblage. President Eisenhower has been warned; the "overtime economy," as it was described by one speaker, is due to get back to more normal working conditions.

These reflections relate primarily to the short-term outlook, but after a decade of precarious dollar earnings and generous aid the rest of the world has come to realise that the ups and downs of American economic activity merely serve to relieve or to worsen, but never to solve, what has come to be amongst the most intractable problems of our time. The dollar gap may widen in 1954, and it may well close a little in succeeding years; but he would be a bold man who would dare to say that it will not still be with us ten or fifteen years hence. Indeed, it is perhaps to be accounted a gain that the more educated sections of world opinion have at last come to recognise the element of permanency inherent in the dollar problem, though some hard thinking still requires to be done (and not least in Washington) before there is general recognition that dollar shortage is a twentieth century economic disease and not a symptom. An important contribution to a better understanding of this highly complex matter has recently been made by Mr. Roy Harrod, the Oxford economist, in the 1953 Sir George Watson Lectures dedicated in alternate years to some subject connected with American history, literature or institutions. No more apposite topic than the dollar could have been chosen and, as Mr. Harrod's four lectures have now been printed in book form, it is to be hoped that they will reach a wide public. For all of us are more involved in the dollar problem than we realise, or would care to admit.

*

Except in so far as it throws some light on contemporary behaviour, the remoter history of the dollar is hardly germane to the present discussion. "One may think", says Mr. Harrod, "of the dollar that we know as having been created by the United States; but one may also think of the matter the other way round, and argue that it was the dollar problem that created the United States," an allusion to the relationship between currency and constitution. But, as Mr. Harrod emphasises, the more recent history of the dollar is an integral part of world history. It could not be otherwise in the light of the relative importance of American trade and the influence of American demand upon the world price structure. By the same token, for those who are not afraid to disinter the dead bones of the past Mr. Harrod (unwittingly perhaps) draws a sombre picture of the prelude to the 1929 slump—a picture which bears a macabre resemblance to the events of yesteryear. Thus: "from early in 1927 there had been a downward trend in the world level of general prices, but it must be added that this was a gentle trend and may well be judged not to have exceeded the rate justified by normal technical progress. Stocks of certain commodities, notably wheat, were increasing but this trend was not universal or such as to occasion much alarm." Whether this flashback has any relevance to 1954 must be left to individual judgment, though not everybody will observe the author's caveat that we must not be too dogmatic as to the origin of slumps or the area of their chain reaction. After examination, Mr. Harrod comes to the conclusion that the 1929 world slump emanated in the United States where it had its origin in "the stagnation hypothesis," a somewhat complicated economic concept of which, be it said, there is today no sign whatsoever.

*

But the more absorbing part of Mr. Harrod's thesis relates to the dollar gap—the problem which in 1945 we were content to classify as belonging to the post-war transition period. Now we are not so sure. The diagnosis which is given of the dollar gap as it existed in the years 1946 to 1948 was that it was a symptom of overspending on capital account which in 1947 appeared likely to generate an acute insolvency crisis throughout Europe, a crisis that was, in fact, only averted by Marshall Aid. It will be recalled that the case for such overspending did not lack influential support, and there were those who argued that on the long view it was so important to have extensive capital reconstruction that it justified the risk of short-term bankruptcy. It is true that as long as the countries of Europe indulged in inflationary overspending they could not establish surpluses on external account, which was the first condition for achieving any kind of dollar balance. But Mr. Harrod's diagnosis overlooks the fact that Europe ended the war completely denuded of dollars and that if some part of the U.S. loan to Britain was spent unwisely some other part was dissipated in the futile and premature attempt to restore sterling convertibility in the autumn of 1947, reluctantly undertaken under American pressure. However the inflationary spiral was reduced and with it the dollar gap was narrowed. Subject to certain exceptions, Mr. Harrod puts 1951 as the end of the immediate post-war inflationary period. In 1947 the dollar deficit of the world with the U.S. on current account was approximately $11 billion; in the three-year period 1950-52 it was running at approximately $2 billion per annum. How much of the improvement may be attributed to the removal of inflationary influences is open to debate. Mr. Harrod agrees that but for discriminatory restrictions against dollar iimports the gap might have been much wider in the last three years than it was.

The sterling devaluation of 1949 comes in for stringent criticism, partly because Mr. Harrod considers that the rashness of that decision has destroyed any prospect of experimenting carefully with devalution "as a possible remedy for what remains of the dollar gap." The events of the fateful week-end of 18th September, 1949, are described as one of the greatest follies in the whole course of monetary history. These are strong words, but Mr. Harrod bases his criticism on three main arguments. In the first place devaluation occurred at a time when inflation was still proceeding in most of the countries concerned, whereas the correct policy would have been to eliminate the inflation and then see what kind of external deficit remained. (It is claimed that the heavy speculation against sterling in the summer of 1949 could, and should, have been stopped by restricting drawings upon non-resident sterling balances which would have been well within the terms of the 1945 Loan Agreement). Secondly, the whole curative effect, if any, of the devaluation rested upon the elasticity of demand for exports. Imports into Britain and many other sterling countries were rigidly controlled in 1949. Thirdly, Mr. Harrod considers the devaluation was much too large, though it had the merit of scotching the bear speculation. The need for such drastic devaluation is attributed entirely to the ineptness of the International Monetary Fund which possesses none of the testing-out mechanisms of the old Exchange Equalisation Fund. The result was to undervalue sterling and, says Mr. Harrod, "it seems probable that sterling is still somewhat undervalued (1953)."

*

All this is back history, though the decision of 1949 is in Mr. Harrod's opinion one of the main reasons why dollar imbalance remains. Ever since the 1870's the U.S.A. has enjoyed a large surplus on foreign trade account which, since the big gold-mining developments in South Africa, has been partly used to purchase a share of newly mined gold. Debtors to the United States have also had to settle their accounts in gold. But the dollar price of gold has remained fixed while the dollar price level of goods and commodities in general has more than doubled in recent years. Mr. Harrod, as so many others, sees in this one of the most serious causes of the world's continuing dollar imbalance. He asks: "Is the future of the dollar to be that of the leading currency interchangeable with gold, as sterling was before 1914, or is the rôle of gold now to be played down?" And he protests that gold can hardly resume its traditional rôle as the main medium of reserve and settlement if the value of annual accessions continues to be so small by comparison with the growth in world trade. Not only the gold-producing countries but all trading nations which have to settle international accounts have a grievance against U.S. gold policy, for the commodity value of gold depends entirely on what happens in America and the rest of us have to acquiesce.

Mr. Harrod advances a number of reasons why the Americans might be prepared to consider raising the price of gold to a level more in line with that which obtains for commodities. Though the U.S. may well continue for a long time to have a surplus on capital and current account, he considers that at $22 billion the U.S. external reserve must be regarded as "miserably inadequate" to the other great defence preparations the Administration has under way. Indeed, in wartime such a reserve would fall far short of America's needs, for she would be unable to maintain a peace-time level of exports and her import requirements would be considerable. The case against an upward valuation in the price of gold is that it would cause inflation in the U.S.A itself, though if we assume that the Federal Reserve System is up to its job this should not be so. The strategic argument is strong in the long-term. In the shorter run if a recession were to occur this year might there not be a case for a little reflation? And, if so, why not reflate by a measure that would benefit America's friends and allies and oil the wheels of international trade?

DOLLAR OIL, ROUBLE OIL AND STERLING OIL

KEENER COMPETITION IN PETROLEUM

AN agreement between the Government of India and the Standard-Vacuum Oil Company on the joint search for petroleum and the production of petroleum if it is discovered in commercial quantities in West Bengal, was signed in New Delhi on Christmas Eve. The agreement is the result of negotiations between Government and Standard-Vacuum which have been in progress for the last 18 months. The Government will provide one quarter of the expenditure required and Standard-Vacuum will contribute the balance. The total contribution of the Government will not, however, exceed Rs. 2½ crores unless the Government wishes to provide further contributions towards the continued expenditure for the project. Standard-Vacuum has given an assurance that if commercial production of oil in sufficient quantities is established, it will consider the erection and operation of a refinery of a minimum capacity of at least 10,000 barrels per day.

It is not merely by coincidence that news about oil has appeared in extraordinary profusion recently. This is one of the most dynamic commodities in the world's economy. The production, refining, marketing, and use of oil develop at an accelerating pace. There is, however, some doubt whether consumption can keep pace with output. A new phase is beginning; and it seems that one of its characteristics will be vigorous competition between dollar oil and sterling oil, unless agreements and interlocking interests effectively regulate the market. The Petroleum Information Bureau in London has estimated world production of oil (including natural gasoline) at 675 million metric tons in 1953, compared with 640 million metric tons in 1952. In this total the British Commonwealth is very inconspicuous. While the estimate for the United States, of the order of 340 million metric tons, accounts for more than half of the total, and the Middle East, estimated to yield 112 million metric tons this year, shows the biggest expansion, the much-publicised Canadian fields have produced only about 11 million metric tons this year. (Canada is the main Commonwealth producer for which figures are available.)

Canada's potential output of oil is known to be immense; but Canadian oil is dollar oil in two senses. Canada is in the dollar area; and it is mainly with American dollars that her oil resources are being developed. Because Canada's oil wealth is taken for granted attention has turned recently to the wonderful promise of large-scale oil production in Australia. The oil struck late in 1953 in the north-west of that continent is at present flowing at a rate which is insignificant in relation to world totals, but responsible authorities have estimated that Australia may be able to satisfy all her requirements of oil within a few years. But there is a fly in this ointment too. Australia is not only in the Commonwealth but also in the sterling area; but the American Caltex organisation owns 80 percent of the capital of West Australian Petroleum, which struck oil in the Exmouth Gulf, and Caltex, which largely financed the exploration, will presumably be the principal financial element in this new Australian oilfield. The implications of this development—in terms of international politics and payments, of Australia as a major industrial power, of the struggle to participate in the development of underdeveloped countries—are a subject on their own. We are merely concerned with the fact that where British capital and exploration failed (not for want of trying in Australia) their American competitors have apparently succeeded.

* * * *

Attention turns now to Persia. Sterling oil interests, represented by Anglo-Iranian Oil Company, were dominant there until Dr Mossadiq nationalised the oil industry in 1951, thereby rupturing diplomatic as well as economic relations between the two countries. Now diplomatic relations have been restored, preliminary discussions on the marketing of Persian oil have been concluded, and the way is nearly clear for the oil to begin flowing again to the international market. Circumstances have changed, however, since 1951. Even Anglo-Iranian Oil, whose title is now a misnomer, is no longer vitally concerned with Persian crude oil or with the great Abadan refineries. It has redoubled its efforts and interests in other countries, including new activity in Australia. The other Middle East producers have made good the loss of Persia's production of crude oil, and new refinery capacity in Europe and elsewhere has counterbalanced the loss of Abadan. There are two salient facts about Persian oil. The one is that it is no longer needed, but is, on the contrary, an embarrassment to the oil business. The other is that it makes the balance between dollar oil and sterling oil.

In the Middle East at present the balance is approximately 60:40 in favour of American interests. In Britain there is a feeling that, however American intervention in this area may be appreciated in the contest with Communism, a predominant interest in the marketing of Persian oil should be reserved for British interests, even though the Persian oil industry itself remains nationalised and the marketing is internationalised, with American and European interests also participating. (The American interests, it may be remarked, were particularly prominent in the preliminary discussions). It is the pride of the British oil-refining industry that it has been able alone to approach, though not quite to reach, the annual capacity of Abadan, and that it has been able in 1953 to exceed in the export value of its products the total earnings of the British coal industry, traditionally one of Britain's major exporters. Abadan will to some extent compete with this new and valuable export. Even more, it will compete with the refinery capacity of the United States, which, against growing sales resistance, has had to curtail its operations.

Rouble oil has appeared on the world's oil market and is already competing with sterling oil in Iceland and Finland. Both these countries are short of sterling and Finland has a large rouble surplus to make the attraction all the greater. It is believed Russia has taken some trouble to capture these markets giving prompt delivery and possibly cut prices. Oil from Baku must have a long haul overland and this already decreases the margin Russia obtains when selling at world prices. Some rouble oil has already been shipped to Sweden though Western companies still hold the market, and agreements for shipments to France and the Argentine exist. The difficulty experienced here is the lack of tanker capacity. It is one which will have to be solved if Russia is to increase her share of the world's oil export trade, unless she reserves herself to business only with those who are prepared to carry their own purchases. Present tanker capacity of both Russia and Poland is already fully occupied in serving satellite customers in the Far East. Russia's proportion of the world oil trade is still less than two percent of the whole but her present exports amount to only two million tons compared with a total production of about 65 million tons. An increase in exports would be possible if such a course was considered necessary to the Russian economy. It is believed the Rumanian field which has languished since the war is now reviving and there is the potential output of the new Ural-Volga field, which according to Russian boasts will prove a second Baku, to be considered.

The truth is that, all over the world, stocks of oil and of oil products are tending to accumulate. The mild winter, so far, has caused a considerable reduction of demand for heating oils, in the United States particularly. In Britain, the big expansion of capacity for premier-grade petrol, which the petroleum companies have promoted actively to justify their large expenditure on catalytic-cracking plants, has caused an unexpected surplus of second grades. There is another major element in the position: the heavy demand for middle distillates which is resulting from the development of relatively low-cost diesel engines and gas turbines. The developing buyers' market is not uniform: it does not relate to all grades equally—it may soon be focussed particularly on the premier grades of petrol. But it does indicate a new competitive phase where dollar and sterling interests, already in competition, may be in open conflict.

CURRENT COIN

Asian-European Trade.—In a study of trade between Asia and Europe published this week by the United Nations, it is shown that trade relations between the continents are in a stage of transition. The historic pattern (Asian raw materials and foodstuffs being exchanged for European manufactured goods) has probably disappeared for good, without a clearly discernible new pattern having evolved as yet. Meanwhile, in the immediate post-war period, Asian trade has failed to keep up with the expansion in world trade, with the result that Asian exports by 1952 had dropped to 10.3 percent of world exports as against about 15 percent in the years 1928 and 1938, while Asian imports just maintained their share (12 percent as against 13.7 percent in 1928 and 12.2 percent in 1938). About one-third of Asian exports and about one-third of Asian imports have been traded with Europe. On the other hand, in Europe's international trade, the Asian element has been relatively small, varying between 6 and 8 percent. The study points out that Eastern European countries, including the USSR, have played an insignificant part in the trade between Asian countries (with the exception of mainland China) and Europe. Moreover, imports from Eastern Europe were conducted mainly through the trading centres in Western Europe. The outstanding development in the post-war period has been the shift in mainland China's trade towards Eastern European countries and the USSR since 1949. China's imports from Eastern Europe are said to have increased from 21 percent in 1950 to 70 percent in the first nine months of 1951, while exports have increased from 30 to 77 percent. After stressing that both the volume and the composition of trade between the two regions depend on the levels and structure of world demand and external finance available, as well as on the size and economies of production, the study urges the need for a readjustment of world trade and payments. It offers three types of "desirable" adjustments: (1) increased exports from Asia and the Far East to the United States combined with a smaller increase in imports from this source. "The resulting dollar surplus could then, in turn, be used for larger Asian purchases in Europe, thus contributing to Europe's dollar problem," the extent of the dollar earnings spent in Europe depending "on the ability of European countries to supply the Asian import needs at competitive prices." (2) An increase in Europe's own dollar earnings in the United States and the rest of the dollar area with a simultaneous shift in European imports of raw materials from dollar sources to Asia and the Far East. Generally speaking, "the longer-term prospects of such shifts to Asian sources of supply appear to be fairly good if increased production and reduced costs are achieved under conditions of reasonable stability in demand and prices." (3) Substantially greater capital movements to supplement merchandise balances. "From the point of view of trade expansion, national policies in Asian countries for the encouragement of investment into new or widening avenues rather than simple substitution for existing foreign investment would appear to be more constructive." The study suggests practical steps which the Asian and European countries themselves might take to facilitate trade between them. These measures include: increased efforts to expand sales, for example by sending governmental or private trade missions to countries in Asia and the Far East, studies of their specific import needs and technical and economic means of meeting them, the development of joint enterprises and direct investments by European firms, increased diversification of export commodities as well as greater standardisation and control of quality and packaging of Asian export products, and simplified customs procedures and trade regulations and administration. The study draws attention to the vulnerability of Asian exports and the need for greater price and market stability as well as a diversification of Asian export trade. It points out that few countries in the world are so dependent on export trade as some Asian countries. This becomes particularly evident when export figures are related to national income. Ceylon, Burma, Thailand, and Indonesia, for instance, register export ratios as high as those of any country in the world. A few agricultural and industrial materials and food products dominate Asian exports. Rice accounts for about 30 percent of the value of exports from Burma; 90 percent of exports from Pakistan have been made up of jute, cotton, tea, wool, hides and skins. About 80 percent of Malayan exports consist of rubber, tin, oil seeds and oil; and 75 percent of Indonesian exports have been petroleum, rubber and tin. Over 80 percent of Philippine exports are covered by sugar, copra, vegetable oils, and abaca. Tea, rubber, copra, and oil form more than 90 percent of the entire exports of Ceylon, while Thailand's rice, rubber, and tin exports account for 80 percent of the country's total exports. The principal commodities for export in order of importance are rubber, jute and jute products, fats and oils, tea, rice, cotton and cotton products, tin metal, petroleum, tobacco, and pepper. While Asian countries are highly dependent on exports for the purchase of essential goods abroad, it is a measure of their poverty and low level of economic development that their share in world trade is unduly small: the region which is the home of about half of the world's population accounts for only 10 to 12 percent of world trade. These figures are extremely low even if allowance is made for the fact that China and India are exceptionally large national units.

* * * *

Taxation and Economic Development.—The present revenue structure of some countries of Asia and the Far East and its bearing on problems of financing increased investment for economic development are reviewed in the latest issue of ECAFE's Quarterly Economic Bulletin. After examining sources of savings, the all too familiar conclusion is reached that savings are inadequate and have to be increased considerably if investment is to proceed at a rate sufficient to employ a growing population and to secure a modest rise in income per head without resort to inflation. Private and public domestic savings in Asian countries can and should be increased, but there appears to be little promise of securing a larger flow of foreign public and private capital. To make an increasing amount of domestic resources available for capital development, higher taxation is required as the only effective financial instrument for reducing private consumption, the review says. The revenue systems of underdeveloped Asian countries are characterised by the comparatively small proportion of national income which they collect, and by the low savings which result in the government sector, whatever proportion of national income is taken as revenue. Generally there is a heavy dependence on indirect taxes, in contrast with most advanced countries, where taxes on income and wealth form a large part of revenues; this is not only inevitable but, we should argue, proper. The most important of the indirect taxes have been customs duties, the yield of which has been rather steady. Recently export duties have been prominent, but this is a temporary phenomenon, depending on high demand for exports. The yield of customs duties depends on fluctuations in the demand for the region's exports and on its trade. Apart from customs duties levied in traditional ways, the profits of government import and export monopolies have been substantial in some countries, as has foreign exchange taxation in others. Sales taxes have recently been introduced in a number of countries, levied at various different stages according to administrative considerations. Among direct taxes those on personal income are the most important, but, apart from Japan, direct taxes are generally less important than indirect taxes. Nevertheless, income taxes do bear heavily on that minority of the population that pays them and since that minority is also the class that must provide economic leadership the consequences are sometimes serious. Land taxes have some significance, but taxes based on property or on capital values play a very small part, on the whole, in revenue systems. The revenue structure, if it is to be geared to economic development, must provide incentives towards increasing the productive efficiency of the community and it must provide for a fair and equitable distribution of burdens. Inflation is a serious problem in many of these countries and the review argues that fiscal policy alone is insufficient to counter it and must be reinforced by direct controls.

* * * *

Facts on Textiles.—Soon after the publication of its excellent and profusely illustrated booklet, *Clothing India's Millions*, which explained the processes employed in the manufacture and marketing of cloth, the Bombay Millowners' Association has brought out this month a monograph entitled *Facts about the Cotton Mill Industry of India*. This publication is likely to prove of greater interest to the student of economics and politics, as it provides reliable statistical data on the production of cloth and yarn, the quantity and cost of cotton used, manufacturing costs including wages, fuel, stores and overheads and the burden of taxes and other local, State and Central levies. After dealing with each of these factors in turn, the booklet concludes that, out of every rupee in the income of a cotton textile mill, raw cotton purchase absorbs a little over eight annas, while wages and salaries absorb four annas. Manufacturing expenses, including stores, power, fuel and establishment charges, leave a balance of an anna and a quarter out of which the producer has to make provision for depreciation, taxes, reserves and dividends. The object of this analysis is to point out that factors beyond the control of the industry are responsible for the increase in the cost of cloth and not the managing agents' commission, which forms only 0.92 percent., or the dividends to shareholders, which account for only 2.19 percent of the value of cloth and yarn sold. An estimate of the revenue derived by the Central and State Governments and local authorities from levies on production and consumption places it at a little over Rs. 40 crores. Among the other important aspects of the industry dealt with in this publication are rehabilitation of plant, rationalisation of technique, exports of cloth and the place of handlooms in the industry. The industry could effect an appreciable reduction in its production costs by modernising its equipment, much of which badly needs replacement. While some units have already undertaken this, it still presents a serious problem. On a conservative estimate, textile mills in Bombay City alone would require over Rs. 100 crores to complete their rehabilitation programme. But the funds at their disposal for this purpose are insufficient and, as was admitted by the Working Party for the cotton textile industry, it is not possible at this stage to attract new capital for rehabilitation. Another obstacle is the Government's machinery import policy, which aims at protecting the indigenous machinery manufacturers. This makes it difficult for any unit to obtain the latest and most efficient machinery, even where funds are available. With regard to rationalisation, while the industry concedes that in a country where there is abundant man-power it should be undertaken in stages to avoid an aggravation of the already acute problem of unemployment, it deplores the short-sighted opposition to the very principle of rationalisation. After all, the future of both labour and industry is bound up with attempts to increase productivity, leading to a lowering of prices. In fact, there will be increased scope for employment in the industry when there is an increase in the per capita offtake of cloth. Without rationalisation on the other hand, there is bound to be a fall in production and a corresponding decrease in employment. Indian mills, where a worker handles on an average not more than two ordinary looms, cannot hope, in spite of certain favourable conditions, to compete against countries like the U.K., where one operative minds four to six ordinary looms, or the U.S.A., where he operates 32 to 78 automatic looms and Japan where the minimum workload of a worker is 48 automatic looms; there is a similar discrepancy in the case of ring frame spindles also. Boosting wages and amenities without a proportionate increase in productivity can only lead to less employment. The case for encouraging exports and for the creation of conditions which would enable both the handloom sector and the mechanised textile industry to exist together without injuring each other, has been set out in this publication with a moderation which does credit to the Association. Summing up it asks for a more realistic appreciation of its problems in view of the pre-eminent position the industry holds both in the private sector and in the national economy. This is a modest plea and if it is accepted, there is no doubt that the textile industry can play its rôle even more effectively than it does today in promoting the country's prosperity.

* * * *

An Institute of General Managers.—Latest professional body to be formed in London is an Institute of General Managers, which is intended to cater for the needs of the chief executives of trade and industry and to assist the drive for greater productivity and effective management. Over a hundred attended the recent inaugural dinner, when the principal guests included Sir Rupert de la Bere and Sir Patrick Hannon. The Institute, with its offices at 86 Eccleston Square, London, S.W.1, is deliberately an exclusive body. In addition to the requirements of managerial experience and training, no candidate for membership can be accepted who does not hold a bona fide general management appointment at the time of his application. One of its basic concerns is stated to be the education and training of the younger men, the potential general managers, who are making their way in industry and commerce and who are the future leaders of the nation's enterprise. The Institute, however, recognises that no amount of training and examination success by itself can make a competent general manager: he must possess, amongst other qualities, the attributes of personality and leadership. Its articles define a general manager or chief executive as being responsible for the overall leadership, planning, coordination and control of all the managerial functions in an enterprise, ensuring that the various functional divisions work together as an efficient unit in accordance with the policy decided by the board of directors or proprietors. A provisional council has been appointed pending the election of a council of 36 or more members, including leading chief executives of all types of enterprise. Branches are being established in various centres throughout the British Commonwealth, and it has been announced that all chief executives who were admitted to membership before 31st December will be foundation members.

* * * *

The Cascade Generator.—On New Year's Day when the Prime Minister laid the foundation stone of the Institute of Fundamental Research and the Atomic Energy Commission guests were enabled to see the million-volt cascade generator which was recently installed in a temporary building on the site of the Institute and which has now reached full operation. (The work on this installation was started last May.) The cascade generator forms an important link in the plans of the Commission for developing atomic energy in India. It will be used to obtain data necessary for the design of an atomic reactor and for fundamental research into the structure of the nucleus by study of the fission caused in heavy elements by high energy gamma rays, nuclear energy levels and so on. For this purpose high efficiency detectors, developed in the Institute, are to be employed. The purpose of a cascade generator is to produce high energy atomic particles which are used to study the structure of the atomic nucleus. The original high tension generator, which produced the first artificial disintegration of the atomic nucleus, was constructed at the Cavendish Laboratory at Cambridge, under the supervision of Lord Rutherford, by Messrs. Cockcroft & Walton. The one now in operation at the Tata Institute of Fundamental Research was developed later by Messrs. Philips Electric Co. at their establishment in Holland and embodies a number of improvements which have been brought about since then. It produces a high tension of one million volts with a combination of condensors and rectifiers, by multiplying by 12 times the voltage from a 100,000 volt transformer to give a nominal voltage of 1.2 million volts. Charged particles are produced at the top of an accelerating column, which is an insulated tube across which is supplied the high tension of one million volts. These charged particles travel down the accelerating column, which is kept under a high vacuum, and bombard a target which is at ground potential. The main advantage of this type of unit is its ability to give a high flux of charged particles: thus deuterons of about 300 microampere beam current bombarding a target produce about two thousand million high energy neutrons per second. This result is approximately equivalent to the radiation from a 200 gram radium-beryllium source. Very interesting nuclear reactions take place when these particles bombard targets of light elements like deuterium, tritium, lithium, beryllium, boron and carbon. For example, one-million-volt protons bombarding lithium give high energy gamma rays whilst fast deuterons hitting a tritium target produce a high flux of very fast beutrons.

UNUSUAL ACTIVITY IN STOCK MARKETS

GOLD AND URANIUM SHARES RISE STEADILY

London, 6th January.

THE London stock markets have been noteworthy for the absence of the usual year-end lassitude. In fact, around the year's end some sections had their busiest time for the whole quarter. The outstanding example was the Kaffir market where gold and uranium shares climbed steadily higher in the face of what was at times very heavy profit-taking. After the turn of the year, however, much of the animation went out of the section and prices eased off slightly. Although Kaffirs were the most publicised for their semi-boom conditions, at times the turnover in other groups was not as small as it might have seemed. In foreign bonds growing confidence in West Germany's trade and financial position resulted in the Reich loans forging steadily ahead, in some cases at the expence of Japanese. This was a reversal of the procedure a few months ago when the Far Eastern issues were favoured. Oils were prominent on the improved relations with Persia and on expectations of an increased dividend from the Shell Company. Although the latter hopes met with disappointment when the interim dividend was changed, the market was not greatly unsettled. Industrials have gone steadily ahead showing quite remarkable resistance to lower levels despite the uncertainties of the general wages question and a suggestion of a possible recession in American business activity. During the week *The Financial Times* industrial ordinary index reached its highest level since November, 1951. Probably the quietest group has been gilt-edged, where movements are largely dictated by the operations of banking, insurance and similar institutions. These showed the usual reluctance to enter into new commitments at the year's end and this was reflected in the turnover.

The money market ruled featureless and there was hardly any change in the general pattern as compared to the previous week. Despite some occasional patchy conditions, the market reflected more-than-adequate credit conditions. Early patchiness could be attributed to one or two houses suffering from late calling of funds. In fact, Lombard Street became quite comfortable towards the close, with ample credit available to meet market requirements. In the last session of the year, as usual, there was a big turnover of credit. There was the usual heavy calling of funds. This was mostly done by non-clearing lenders and the possession of maturing treasury bills gave the necessary benefit to the market. In the early part of the week most of the big banks were either buying March bills or lending money. Towards the close, it was noticed that clearing banks were not big buyers of bills, and that their purchases mainly covered February maturities and selected dates in March.

Liverpool Cotton Futures Market

The Liverpool Cotton Association announces that, subject to the Cotton Bill now before Parliament becoming law, it will be possible to open the futures market on 18th May, 1954. Before the date of opening, however, a large amount of work remains to be done in finalising details and making statutory changes in the Association's articles and rules, as well as in connection with a new clearing association.

U.S. Kenaf Sale

The U.S. Agriculture Department says that it will put up for sale 2,713 bales of kenaf fibre on 12th January. This will probably be the Department's final action under an experimental kenaf fibre programme begun two years ago. The fibre was produced in 1952. In 1951, the Government set out to determine whether kenaf fibre—a substitute for jute—could be grown in the Western Hemisphere if an emergency cut off the United States' normal jute supply from India and Pakistan. Since then the Department has bought about 3,800 bales of the fibre from farmers in Florida, Colombia, Cuba, Haiti, Guatemala and Mexico.

French Jute Production

French jute spinners produced 8,291 tons of yarns in November, including 7,364 tons for weavers and the remainder for rope makers. This compares with the October output of 9,202 tons, of which 8,310 tons were for weavers. Production of jute fabrics totalled 6,038 tons in November compared with 6,927 tons in October.

British Silver Imports

British imports of silver bullion totalled 901,770 ounces valued at £277,991, against nil in November 1952. Total imports of silver bullion for the first eleven months of last year were 26,706,119 ounces valued at £8,175,741, against nil for the corresponding periods in 1951 and 1952.

Rubber for China

Applications by rubber companies for export licences covering the proposed shipments of rubber to China have been rejected by the Indonesian Government. This was reported on 21st December by the Indonesian Information Office, New York. The Office said that the rubber companies made the applications immediately after the news was received in Djakarta of the preliminary agreement on a trade treaty with China. The applications were turned down, it was stated, pending further discussions on the details of the basic agreement. An Indonesian Foreign Ministry statement received by the Information Office, New York, emphasised that the Sino-Indonesian trade agreement is subject to further study by both parties. It cannot go into operation until specific ratification by the Indonesian Government. No date for the probable ratification was given and an Information Office spokesman said that there was no likelihood at this time of any immediate export of either rubber or tin to China.

Arrivals of Russian Gold

A further shipment of Russian gold, reported to total seven tons and be worth over £2 million, arrived in London on 29th December in a Russian ship *Beloostrov*. This consignment, like the two tons which arrived by air on 28th December, is believed to be consigned directly by the Moscow Narodny Bank to the Bank of England. It is thought in London that further shipments are likely in view of the probability that Russia is short of sterling following a sharp decline in her exports of grain and timber to sterling countries.

Hollandsche Bank Unie, a leading Dutch banking concern, in its year-end review refers to the recent Russian gold sales, which it considers "remarkable" in a period when prices on free gold markets have been anything but favourable. "Only exceptional circumstances can have compelled the Soviet Government to accept such loss of foreign exchange and to carry through these gold sales at this — for her—unfavourable time," it says. The review recalls that Russian gold bars have also been processed in the Netherlands. It considers it unlikely that the free gold price will drop further but does not think that advocates of a higher official gold price will get their way because of the action of free market prices.

Russian Silver Sales

As a result of Russian silver sales in London, the British Government has been able to cover a substantial part of its war-time lease-lend silver obligations to the United States without resuming demonetisation, according to Messrs. Mocatta and Goldsmids, the leading London firm of bullion brokers. Russia sold 14,500 ounces in London in August, the biggest transactions since the Indian Government retired from the market. There were more substantial Russian sales, though not so large, in December. There was also a special sale of three million ounces by Japan in the summer, in addition to usual supplies from Australia and sterling area producers. Mexican support is responsible for the steadiness of the New York silver rate despite the falling off in industrial demand in the United States, Messrs. Mocatta and Goldsmids say. If industrial demand does not improve in 1954, support may be withdrawn and prices may weaken. However, new coinage orders from Saudi Arabia have been going to Mexico direct and this may be a good reason why the Mexican authorities should continue to support the market. The Far East's gold demand has been unusually quiet this year although 20,000 to 40,000 ounces a month have been going to Bangkok. Hongkong now allows the import of gold in transit and it is understood that a cargo of gold is flown weekly from there to Macao.

THE CALCUTTA MONEY MARKET

FUNDS FULLY USEABLE

Wednesday, 6th January.

THERE was a squeeze for funds at the close of the year, for banks' window-dressing purposes, and although that source of demand has since eased, money remains moderately tight. Advances against sugar, grains and seeds are going out seasonally, and in general funds are fully employable. In the interbank market the call rate, which was 2½ percent on Monday is now quoted at 2½ percent though there were lenders over yesterday at that rate.

The bill of exchange market has not yet got into its stride and reports only small tea and gunny bills, mostly the former. Remittance was good at the end of the year, as is usual, but has failed off since. Sterling rates are unchanged, but the U.S. dollar quotes Rs. 476-8.

* * * *

Tenders for the offer of Rs. 1 crore of three months' Government of India Treasury Bills amounted to Rs. 1,32,50 000. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 70 percent. The average rate of acceptance was Rs. 2-7-9 percent per annum, which is by far the highest rate the market has yet obtained. Tenders for Rs. 1 crore of three months' Government of India Treasury Bills will be received up to 11 a.m. on 12th January at Bombay and up to 11th January at Calcutta, Madras, Kanpur, Delhi and Bangalore. During the week ended 1st January, Government of India Treasury Bills for Rs. 3.58 25.000 were sold in favour of the Reserve Bank of India.

During the week ended 25th December 1953 Government of India Treasury Bills for Rs. 4.75,75.000 were sold in favour of the Reserve Bank of India.

* * * *

Silver ruled very firm and the price rose from the previous week's level of Rs. 151-2 to Rs. 154-12 quoted today on nervous bear covering, followed by renewed buying enquiry, especially from up-country centres. The price was, however, unchanged at 73 15/16d. in London and at 85¼ cents in New York.

Gold was quietly steady with supply and demand almost in balance. The price rose by 3 annas to Rs. 83-5, while the sovereign at Rs. 56-12 showed little change.

* * * *

Rises of Rs. 10.08 crores and Rs. 6.63 crores in the total note issue and notes in circulation to Rs. 1,145.97 crores and Rs. 1,132.15 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 1st January, 1954. The expansion in currency was duly adjusted by raising foreign securities by Rs. 10 crores to Rs. 528.15 crores and this was partly done by reducing balances held abroad by Rs. 5.14 crores to Rs. 139.32 crores. Deposits in the Banking Department disclosed an all-round increase. Deposits of the Government of India and other Government accounts improved by Rs. 3.19 crores and Rs. 69 lakhs to aggregate Rs. 113 43 crores and Rs. 19.48 crores, respectively. Balances of commercial banks at Rs. 46.70 crores showed an increase of Rs. 71 lakhs. Other loans and advances rose from Rs. 11.83 crores to Rs. 16.05 crores, of which advances to scheduled banks against usance bills were the same at Rs. 49.45 lakhs. Investments were up by Rs. 1.53 crores to stand at Rs. 76 25 crores. Ways and means advances were shown at Rs. 1.15 crores (Rs. 1.84 crores).

* * * *

The return of the Imperial Bank of India for the week ended 25th December, 1953, shows a drop of Rs. 7 lakhs in total deposits to Rs. 207.06 crores. Investments in Government securities are down by Rs. 1.18 crores to Rs. 86.94 crores. Loans, cash credits and overdrafts have risen by Rs. 2.20 crores to Rs. 91.66 crores and bills discounted and purchased by Rs. 3.72 crores to Rs. 12.38 crores. Cash and balances are, in consequence, shown at Rs. 20.67 crores or about Rs. 82 lakhs less than in the previous week.

* * * *

The statement of the position of Scheduled Banks for the week ended 25th December, 1953, discloses Demand and Time liabilities at Rs. 516.31 crores (Rs. 8.21 crores on account of borrowings from Banks) and Rs. 331.85 crores (Rs 1.83 crores) compared with Rs. 519.35 crores (Rs. 9.61 crores) and Rs. 331.43 crores (Rs. 2 01 crores) respectively in the previous week. Cash has increased by Rs. 70 lakhs to aggregate Rs. 32 08 crores, while balances with the Reserve Bank have decreased by Rs. 2.57 crores to Rs. 44 58 crores. There is a fall of Rs. 1 26 crores in investments to Rs 336 04 crores. Advances including bills discounted at Rs. 461 09 crores reveal a rise of Rs. 2.74 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are shown at 11.1 percent and 54.4 percent against 10.8 percent and 53.9 percent.

* * * *

In order to afford adequate credit facilities to the cotton textile mills to purchase Indian cotton, and with a view to minimising the difficulties which were being experienced by them in financing imports of American and East African cotton at that time, the Government of India in their resolution of 31st March, 1952, guaranteed to purchase from scheduled banks, at prices mentioned in the resolution, cotton of 1951-52 crop subject to certain conditions. The Government of India have now reviewed the position and have decided that the guarantee be withdrawn with immediate effect as the purpose for which the guarantee was given has been adequately served.

THE release of Khan Abdul Ghaffar Khan from the gaol where he has been languishing—often in very poor health—for most of six years will be welcomed as belated justice to a man who has never been shown to have done his people any harm, and perhaps also as a sign that the Muslim League now feels more confident that it can tolerate in liberty men whose ideas do not match its own. (It is an index of the perils of the Gandhian faith that its original professor should have been murdered by Hindus, while its greatest Muslim exponent should have been incarcerated for six years in an Islamic state.) The Khan practised this faith in what is surely one of the least promising parts of the world for the preaching of *ahimsa*, the stormy Frontier Province, and while he was not able to influence their choice in the plebiscite of 1947, he did command great respect among his fellow Pathans. I doubt personally whether he was ever involved in subversive activities—certainly the Government has never attempted to show that he was—though I suppose he was an awkward figure to have around when the Pakistan army was supporting the tribal incursion into Kashmir. He is too old now, and from all accounts too sick, to think of assuming the leadership of a constructive opposition party, while his brother, who was always more active the narrower political sense, does not intend to take advantage of the greater freedom now allowed him to enter the electoral arena. So the immediate consequences of this liberal gesture will not be great, but it might allay some Indian suspiciousness about the purposes for which Pakistan has been willing to accept American military assistance.

* * * *

In a broadcast over All India Radio last night on the future of education in India, the Information Minister, Dr. B. V. Keskar, expressed himself on the subject of the English language in much stronger terms than are customary—indeed, in terms that were stronger than the case he was arguing warranted. He declared that a student who took the higher education in this country today emerged as "a kind of Anglo-Indian" whose knowledge of his own country "is distant and woefully inadequate". He had wasted much of his time at college learning things that would not be of much use to him in India, mainly because, the medium of instruction being English, he had had to learn "how English people live, dine, dress or carry on their social activities". Dr. Keskar's argument seemed to be that you cannot learn the English language properly without studying English literature, and that means that you must also acquire a lot of useless knowledge about English customs, and by the time you have learned all that, you have lost much of your own nationality and have become a cultural half-caste. "This cultural subservience to a foreign country is most damaging to the growth of our own personality and the development of our thoughts". The Minister went even further, and I think too far, by claiming that the advocacy of English by eminent Indians today was just "another proof of the cultural enslavement that has taken place". This is a bit hard on almost the whole of the educated classes of modern India and especially on the Government to which Dr. Keskar belongs, which on his own view must be a very incompetent lot. I think it only muddles discussion of cultural matters to import tendentious political terms like "domination" and "subservience". If the latter expression is meant to denote the condition of Russia in relation to France and Germany throughout most of the last century, or the condition of the United States in relation to Britain and Germany until the Civil War, or even the condition of Canada and Australia today, then it does not appear to have such terrible consequences. The main weakness of Dr. Keskar's spirited excursus showed up when he said that India would not reach her full stature until English was replaced by "our own medium whatever that might be". Exactly; what is it to be, when it comes to the higher learning? Any substitute now adopted would, for several generations at least, be open to much more serious objections than English, though perhaps on different grounds. These questions have a way of solving themselves as cultural advance progresses, and the main thing is to ensure that it does progress, by holding fast to whatever is the best present instrument for learning. As for learning "useless" things about other countries, what is useless today might not be some years hence. In fact, I understand it to be the wish of most progressive Indians that quite a number of aspects of Western life that are not relevant to India now will become so within the not too distant future.

* * * *

The irruption of commercials into the American television coverage of the coronation (for instance, the Queen stepping from the State coach suddenly being transformed into Miss Texas stepping from a new model Pontiac) caused so much discussion last year that there is some interest in the following report from a Birmingham newspaper in the year 1897: "As showing the progress in science during the sixty years of the Queen's reign, nothing could be more remarkable than the exhibition of animated photographs of a portion of Tuesday's Royal Procession in London, which was given in our city the same evening, under the joint management of the proprietors of *Nestlés milk* and *'Sunlight' soap*". Evidently the association of advertising with royal pomp caused no trouble in the nineties. I find this scrap of information in an excellent article on The Evolution of Shopkeeping by Mr. Basil Yamey, the London economist, in the latest issue of *Lloyds Bank Review*. Mr. Yamey introduces it to illustrate the process of standardising and branding goods which revolutionised shopkeeping in Britain from the turn of the century onwards. The change seems to have been begun by the tea trade which, when the system of tea licensing was abolished in 1869, put on the market branded packet teas which of course required no skill in blending and no expert advice from behind the counter. The result was that publicans and drapers could sell tea as well as grocers—and the first *obstacle to large-scale organisation* of the retailing trade was removed. The shopkeepers loudly lamented the decline of their "craftmanship" that this entailed, and warned that at this rate shopkeeping would become "fatally facile". "Any untrained adventurer or group of tinkers think they can master its mysteries in a week". And indeed that is more or less what has happened, with great benifit to the housewife and consumer generally. Mr. Yamey says that the transformation of shopkeeping was promoted by "the revolt of the consumers" which revealed "a widespread and critical suspicion of the prices charged and the methods followed by the retail trade". I think there is a similar suspicion in India today but as long as so much shopping is done by servants, the revolt will be slow in coming. When it does come, it will do a lot to change the appearance of Indian cities for nothing has done as much to give the cities of Europe their individual characters as the evolution of shopkeeping. The organisation of retailing in Britain and the legal restrictions on big stores in France no doubt account for the differences between Regent Street and the Rue St. Honoré; I wonder what College Street will look like when Indian consumers revolt against the present wasteful system of retailing in this country.

* * * *

In an address before a gathering of chartered accountants in London recently Mr. Oliver Lyttelton made "a remark which may strike you as a bit of paradox: that on the whole it will be found that there is only one way of lending money, and that is upon the expectation or calculation that you will get it back. Finance corporations, which are sometimes asked to lend money upon other considerations, especially to small traders, have indeed a difficult task . . ." The Secretary of State for Colonies might almost have made this remark after reading the report of the Enquiry Committee into the affairs of the Indian Industrial Finance Corporation, which was presented to Parliament at the close of last year. There can be no doubt that the critics of the Corporation, whose charges have so largely been repudiated by the Enquiry Commission, are people who imagine that money can be lent *without* the expectation of getting it back. It is true that a banker has been defined as a "man who will lend you money only if you can prove beyond doubt that you don't need it", but the alternative is that he—or the institution that serves his function in a larger sphere—should dissipate loans to "deserving parties" who will be in no position to repay them. Enqtiry has shown that the allegations against the Industrial Finance Corporation—that it was guilty of favouritism and nepotism, that it assisted only large industries and not small ones, that it has lent money only to firms that make good profits, etc.—all come down to the familiar complaint made against bankers ever since credit was discovered: that it wanted to get its money back some day. Since neither the Enquiry Committee nor the Government could conceive of any other way of running this kind of business, the Corporation has been vindicated and is now free to continue its useful work without constant criticism—at least until the next "deserving party" who has a friend in Parliament is refused a loan. This verdict comes at a convenient time, when the States are proceeding to set up Finance Corporations of their own, for the report and the Government's observations on it will be a valuable guide to them. The way should also be clear now for the receipt of the World Bank loan to the Corporation, a quantum of urgently needed capital funds that has been kept on ice for over a year because of allegations that have now been proven baseless.

* * * *

Miss Christina Foyle, whose connection with the publishing world I need hardly explain, has given some inside information on successful bookselling that should be carefully noted by such of my readers as propose to write their memoirs when they retire. There is, she claims, "a strong feeling in the trade that certain subjects, such as dogs, doctors and Abraham Lincoln, are lucky, and that book titles including the word 'valley' are always popular". I conclude from this that a work entitled something like *How Green Was the Valley of Abraham Lincoln's Doctor's Dog* would be the best seller of our age though I am quite ready to admit that there would be some difficulty about finding suitable material to include in a tome with such a curious title. That would scarcely deter some of our contemporary authors who seem to have no trouble in assembling all sorts of rubbish between the covers of one volume.

* * * *

A certain Lancashire newspaper is, I know, held in the highest esteem in exalted quarters and its readers affect a degree of superiority over subscribers to lesser journals in the rest of the country. So I am not surprised to learn that the congregation of a Lancastrian church saw nothing amiss in their minister introducing, during a prayer, a reference to current evils with the words: "O Lord, as Thou wilt have read in yesterday morning's *Manchester Guardian*...."

BRITISH COMPANIES FOR SALE

Britisher wishing to retire has for sale in Bombay three highly successful old established manufacturing private limited companies, together with very valuable Sole Agencies. All of the Companies are entirely separate, although complementary, to each other and have very high import quota certificates and assured imports of Raw Materials for essential manufactured products. Sole Manufacturer of Certain articles in great demand.

(1) **A MANUFACTURING CONCERN** for which no raw materials of its own are required. It processes the materials of others. It is the largest factory of its kind in India.

Turnover (manufacturing charges only) in 1951 ... ... Rs. 90,000
in 1952 ... ... Rs. 64,000

Replaceable value of machines today Rs. 2,00,000. These machines are only three years old and are of the best foreign manufacture. Price wanted, including goodwill, tenancy rights, electric power, etc., Rs. 3,00,000.

(2) **A MANUFACTURING CONCERN,** the only one of its kind in India, making a product with assured sales and with the import of raw materials guaranteed as finished product absolutely essential to the five year plan. This Company has new and modern factory buildings with its own siding. It also has large godowns. Duplicate machines have just been imported and are still in their packing cases sufficient to double present production.

Turnover in 1951 (Buyers of finished article supplied the raw materials) ... ... Rs. 8,50,000
1952 ... ... Rs. 34,00,000
Original value of machines, one only three years old and the other still unpacked, together with new buildings ... ... Rs. 5,00,000

Price wanted, including goodwill, tenancy rights, factory buildings, electric power, godown, etc., Rs. 9,00,000 plus stock at present day valuation Rs. 2,00,000 approximately.

(3) **A MANUFACTURING CONCERN** with the largest output in India of its particular product. A New machine has just been erected to double this production. Several different articles manufactured all with universal demand by Civilian markets and Government. Has also extremely valuable Sole Agencies for well known foreign manufacturers of high class article in permanent large demand in India and for which very large licences always granted. High import quota certificate and very high import figures where quota figures so far not called for.

Turnover in 1951 ... ... Rs. 50,00,000
1952 ... ... Rs. 1,25,00,000
Value of Machines ... ... Rs. 2,50,000

Price wanted, including goodwill, tenancy rights, electric power, Sole Agencies, Trade Mark, etc., Rs. 20,00,000 plus stock at present day valuation approximately Rs. 3,00,000.

All these Companies enjoy a reputation for the very best products. They are all under the expert supervision of British Engineers and the machines are as new. The present highly trained staff can remain and the Advertiser is prepared to stay on for another four months in an advisory capacity. This is an unusual opportunity, and one not likely to recur, for an Indian National to purchase well run Companies with excellent reputations and well known for their various products. Balance sheets, profit and loss accounts and income tax verification certificates are open for inspection to genuine prospective PRINCIPALS only who are able to furnish satisfactory bank references in the first instance.

Stocks and Shares

NEW YEAR IN SHARE MARKET OPENS ON DULL NOTE

HEAVY OFFERINGS OF JUTE SHARES: SELECTIVE SUPPORT FOR TEAS

Wednesday Evening.

THE New Year in the stock market has opened on a disappointing note, with weakness in speculative shares, heavy selling of jute shares, and prices barely steady in most other sections. The volume of business put through since our last report has been very small. References to the possible implications of U.S. military assistance for Pakistan, especially from the Prime Minister, have kept operators cautious. On the other hand, the opinion of London observers (not shared in Washington) that a small recession is imminent in the United States has not had any effect in Calcutta, though it has contributed to the caution in the more wary Bombay share market.

The selling of jute shares has affected a number of issues, and a table published below shows the decline in prices that has taken place in this section. Tea shares, on the contrary, have been steady here as in London. Buyers are selective, favouring Assam gardens and not Darjeeling, but also showing some interest in cheap Cachar issues. The turnover in this section has not been large but there are more buyers than sellers.

Orient Paper have improved today on the publication of an excellent report which is referred to below. Titaghur Paper has buyers despite the strike at the plant. The rest of the market was dull.

Details of recent trading follow.

* * * *

Extremely dull conditions prevailed in the gilt-edged section since these notes were last written and there was an almost complete absence of buyers. Three percent Conversion Loan 1986 was marked one anna lower at Rs. 82-6. Three percent Non-terminable Paper was quoted at Rs. 82-10 cum-voucher, and later at Rs. 82-8 ex-voucher, with little or no business passing. In short-dated issues, there was unsatisfied demand for 2¼ percent 1954 at Rs. 98-15, but there were sellers of 2½ percent 1955 at around Rs. 98-6. Three percent 1957 was taken lower to Rs. 98-4-6, but the Reserve Bank soon appeared as a buyer and the quotation was marked up to Rs. 98-5-6. Three percent 1958 receded to Rs. 98. Among medium-dated loans, 3 percent 1959-61 was taken lower at Rs. 96-1, but subsequently recovered at the close to Rs. 96-2 as did 3 percent 1963-65 from Rs. 92-7 to Rs. 92-8; 3½ percent National Plan Bonds at one time dropped to Rs. 98-14, but at the close there were small buyers at this price. Four percent 1960-70 continued to be on offer at Rs. 101-12. Long-dated loans, in contrast, maintained a steady front, with 3 percent 1966-68 being quoted at Rs. 90-4, and there were buyers of 3 percent 1970-75 at Rs. 86-8. Provincial loans were a very dull market with practically no business being reported. Prices in all cases remained unchanged, with sellers rather than buyers.

The only business reported in debentures during the period under review, namely from 28th December, 1953 to date was in Carew & Company (1st Mortgage) at Rs. 99-12. There was, however, a sustained demand for Calcutta Electric, Orient Paper and Dunlop Rubber at around previous quotations, but in the absence of sellers no business was completed.

Once again selected jute and miscellaneous preference shares met with good support and in some cases prices improved by one to two rupees. In jute, Empire were taken at Rs. 115, Ganges were marked at Rs. 125, Howrah 7 percent at Rs. 125, and the 'A' Preference at Rs. 118. Waverley changed hands at Rs. 46. Among miscellaneous scrip, Associated Hotels were taken at Rs. 63-4, Bharat Collieries at Rs. 49-12 and British India Corporation at Rs. 148. Business was reported in Burrakur 1st at Rs. 119, and 2nd at Rs. 8-6. Other transactions included Dunlop Rubber 1st at Rs. 129, Indian Iron at Rs. 107, Jardine Henderson at Rs. 79 and New Victoria Cotton at Rs. 3-6. Rallis were quoted at Rs. 73-12, Rohtas 'B' at Rs. 57-4 and Titaghur Paper 1st were crossed at Rs. 158.

In the banking section, Imperial Bank Fully-Paid and Contributory were fairly steady around Rs. 1830 and Rs. 440 cum-dividend. Hindustan Commercial Bank were transacted at Rs. 8-12 and United Commercial Bank, after being enquired for up to Rs. 46, turned sellers at the close at Rs. 44-8. United Bank of India 'D' Class shares were steady at Rs. 3-15.

* * * *

Cotton shares were dull, and a limited amount of business was put through. Cawnpore Textiles changed hands at Rs. 8-2. Dunbar at Rs. 180-8. Elgins at Rs. 17-9, Kesoram at Rs. 20, and New Victoria at Re. 1-2.

Coal shares continued to be in the doldrums, and business completed was of a retail nature. Burrakur eased to Rs. 8-6, Bengal were marked at Rs. 502 and Equitable at Rs. 30-12. Central India were done at Rs. 5-8, Hurriladih at Rs. 15-12 and New Beerbhoom at Rs. 18-6. Raneegunge were marked at Rs. 11 and Western Bengal at Rs. 13. In an otherwise dull section there was a strong enquiry for Katras Jherriah at Rs. 39-8, but in the absence of sellers no business could be executed.

Jute shares lagged behind the rest of the market and it was almost impossible to execute selling orders at anywhere near quotation rates. The following table illustrates the trend of prices in this section:—

	Opening 28-12-53.	Closing 6-1-54.
Agarpara	16-14	15-12
Bally	160	153
Fort Gloster	370	358
Howrah	24-4	23-14
Kamarhatty	185	180
Nuddea	47	44-8
Orient	175	172

A large parcel of Calcutta Electric Supply shares was reported to have changed hands at Rs. 13-4. Patna were done at Rs. 11.

A nominal amount of business was completed in sugar shares. Carew were done at Rs. 7-8 and Ramnugger Cane at Rs. 18-10. The solitary feature was provided by Cawnpore Sugar which met with good enquiry at the higher rate of Rs. 36, but there were no sellers to meet the market.

In the engineering section, Indian Iron & Steel from an opening price of Rs. 25-6 receded at one time to Rs. 25-1, and closed at Rs. 25-3. Braithwaite were marked at Rs. 13-8, Kumardhubi Engineering at Rs. 8-4 and National Iron & Steel at Rs. 5-4. Demand continued for all three classes of Indian Steel & Wire Products shares, with buyers of the Fully-Paid Ordinary at Rs. 65-12, the Contributory at Rs. 19-8 and the Deferred at Rs. 43-4.

* * * *

Featuring the miscellaneous section was Orient Paper which improved from Rs. 40 to Rs. 43-10, with few shares offering. Bengal Paper was steady at Rs. 53-8 as were Shree Gopal at Rs. 20. Titaghur, after receding to Rs. 35, improved at the close to Rs. 35-6. Sone Valley were slightly easier at Rs. 6-14, while Calcutta Landing & Shipping were steady at Rs. 18. Ruby General Insurance were done at Rs. 5-9 and India Steamship were turned over freely around Rs. 7-1. Angelo Brothers were marked at Rs. 19-5, Assam Saws at Rs. 7-4, Calcutta Trams at Rs. 13-5 and Dunlop at Rs. 30-8. Britannia Biscuits receded from Rs. 12 to Rs. 11-10 as did British India Corporation from Rs. 9-5 to Rs. 9-2. There was good investment support for Indian Cables at the higher rate of Rs. 20-5. F. & C. Osler were marked at Rs. 7 and there was a strong enquiry for Indo-Burma Petroleum at Rs. 72-8. Jardine Henderson changed hands at Rs. 115, Metal Box at Rs. 17-6 and Midnapore Zemindary at Rs. 36. Martin Burn were quoted at Rs. 19-9 and Shaw Wallace at Rs. 11-8. National Tobacco were weak at Rs. 10 and Rallis at Rs. 59-8. Rohtas Industries were steady at Rs. 11-3 as were Textile Machinery at Rs. 9-3.

In the mining section, Chrestien Mica Industries were enquired for at Rs. 10-6. Burma Mines, Non-Ferrous Metals and Indian Copper were all easier at Re. 1-5, As. 11, and Rs. 2-11 respectively.

In an otherwise dull market, tea shares have remained remarkably steady although the volume of business has been small. Basmatia were better at Rs. 33-4 as were Bishnauth at Rs. 34-8. Grob 'A' and 'B' were the feature in this section and on rumours of a bonus issue were taken up to Rs. 31 and Rs. 16-12 respectively. Dhelakhat were unchanged at Rs. 13-4 as were Dufflaghur at Rs. 40. Among Dooars scrips, Hasimara remained steady at Rs. 31-6, Jaybirpara were better at Rs. 30 and Rajabhat had buyers at Rs. 18-8. New Dooars changed hands at Rs. 387. Chamong were marked higher at Rs. 12-8, Pashok were better at Rs. 9, and Tukvar were unchanged at Rs. 7-14. Central Cachar had sellers at Rs. 65, and a small lot changed hands at Rs. 64-4, while Lackatoorah were quoted at Rs. 9-5. Atal were unchanged at Rs. 3, as were New Terai which had buyers at Rs. 13.

* * * *

The working of the ORIENT PAPER MILLS for the half-year ended 31st March, 1953, has again produced excellent results. Sales are up from Rs. 1.54 crores to Rs. 1.78 crores. Allowing Rs. 5 lakhs (same) for depreciation and Rs. 31 lakhs (Rs. 10 lakhs) for taxation, the profit is Rs. 26.32 lakhs, as against Rs. 26.19 lakhs in the previous half-year. Transferring Rs. 20 lakhs to dividend equalisation account, bringing in Rs. 1,91,320 and meeting other charges, there remains an available balance of Rs. 8,22,941, of which the ordinary dividend has been maintained at 10 percent to leave a carry-forward of Rs. 2,26,754.

* * * *

The profit of Rs. 58,355 of the BENGAL NAGPUR COTTON MILLS for the half-year ended 30th June, 1953, compares favourably with the previous half-year's loss of Rs. 4.24 lakhs. Adding Rs. 23,808 brought forward and other miscellaneous receipts, there is Rs. 97,993, of which the ordinary dividend has been maintained at 2½ percent to leave a carry-forward of Rs. 19,993. Depreciation absorbs Rs. 2.75 lakhs (Rs. 2.40 lakhs).

Despite an improvement in the working of the MACNEILL & BARRY group of coal companies for the half-year ended 30th June, 1953, as compared with the preceding half-year, results continue to be adversely affected by difficulties of transport and dwindling export enquiry. Equitable has reduced the ordinary dividend by 5 percent to 10 percent, and the company was reported to have bought the entire share capital of Apcar Collieries Ltd., a valuable addition to the Company's working properties in its Poniati group of collieries. The development of the Taltore Seam at West Jamuria Colliery was proceeding rapidly and prospects of the company are regarded by directors as brighter than they have been for some time. The process of stabilisation of the underground workings at the Dhemo Main Colliery continued but conditions were reported to be extremely difficult. The details of accounts are published below:

Half-year ended	Raisings Tons	Despatches Tons	Coal Sales Rs.	Net Profit after Taxation Rs.	Provision for Taxes & Cesses Rs.	Dividend percent	Carried forward Rs.

Col. C. F. Birney told shareholders of the ASSAM RAILWAYS AND TRADING CO. LTD. in London recently that demand for the company's coal was satisfactory as far as quantity was concerned. "But as regards price, we are still required to sell at the price fixed by Government five years ago, in spite of the increases in cost since that date. This is now under fresh consideration; but I am afraid it is not fully appreciated in Government circles that no enterprise such as mining can be expected to flourish unless it is permitted to earn the market rate for risk capital." On the timber side, where the sale of tea chests has been the main source of revenue, competition is growing. The Government of India, spurred by the need for assisting indigenous industries, have practically stopped the importation of tea chests or panels. The tea industry's demand for tea chests is of the order of 5 million per annum, "and it is said that India's plywood industry can produce much more than this." Referring to the crisis in the tea industry, Col. Birney stated: "One result of this, so far as your company is concerned, was that individual tea companies began to curtail their orders for tea chests and to live on their stocks or from hand-to-mouth. While this, of course, could not be expected to be more than a very temporary palliative from their point of view, it did constitute an unwelcome setback in our sales of chests at the end of 1952-53, and our stocks increased. In 1953-54 our veneer mill has had perforce to work a certain amount of short time. The picture, however, would not be complete if I omitted to point out that our production and sales of chests, since we installed more machinery, are about twice as high as they were six or seven years ago; and in spite of the increasing competition to which I have referred, I am glad to say that our chests continue to enjoy a high reputation on the tea gardens in India and in the tea markets throughout the world."

* * * *

Although production and sales of the ASSOCIATED CEMENT COMPANIES for the year ended 31st July, 1953, are higher than in the preceding year, the profit is down from Rs. 1.96 crores to Rs. 1.81 crores because of rises in costs. Bringing in Rs. 7,08,841, there remains a balance of Rs. 1,88,31,599. Plant reserve absorbs Rs. 45 lakhs (Rs. 50 lakhs), gratuities Rs. 5 lakhs (Rs. 10 lakhs) and bonus to employees Rs. 34.25 lakhs (Rs. 31 lakhs). The dividend has been maintained at Rs. 9-8 per share, leaving a carry-forward of Rs. 3,69,730. Depreciation absorbs Rs. 73.84 lakhs (Rs. 66.69 lakhs) and taxation Rs. 1,20 crores (Rs. 1.17 crores). The construction of the new cement works at Sindri has been started and is making good progress. It has further been decided to construct a modern firebricks factory at Katni which is scheduled for completion by the middle of 1955. In addition to undertaking the above projects, the company has embarked upon a large-scale rehabilitation and modernisation programme at several of its factories. Furthermore, flotation plants are being installed at the Khalari and Sevalia factories for enriching the raw materials. The company's Workshops for the manufacture of machinery are also being strengthened in order to cope with the increased volume of such manufacture. The negotiations with the Pakistan Industrial Development Corporation, referred to in last year's report, for the formation of a new company in Pakistan to take over the undertakings of this company in that country, have not as yet been finalised. The matter is being actively pursued by both the parties, and a final decision is expected to be taken in the near future.

* * * *

Addressing the annual general meeting of CONSOLIDATED TIN MINES OF BURMA, LTD. in London on 18th December, Mr. W. J. C. Richards, Chairman, said that "the deplorable conditions which have prevailed in that part of Lower Burma in which our mines are situated and which I have described to you at the last two meetings have persisted. We remain virtually dispossessed of our mining properties, and our general manager and other British employees have not been permitted to visit the mines since January, 1950. Illicit mining continues unabated, and as it is unskilled it is detrimental to future ordered exploitation if conditions ever improve to justify it. Such steps as the Burma Government have taken to restore law and order in the district have not been effective. As a consequence the company's operations have again been restricted to the business of ore buying and the separation of mixed concentrates." The company made a group profit of £30,812 for the year ended 31st March, 1953, as against the previous year's £13,181 in spite of conditions of lawlessness and armed insurrection around the mines. Taxation absorbs £15,175 (£1,377). Bringing in £21,967 and making other adjustments, there is £39,440. The dividend has been raised by 2½ percent to 7½ percent to absorb £13,121, leaving a carry-forward of £26,289. The Government of Burma was reported to have initiated discussions with in mine owners in Lower Burma with a view to the mines being operated jointly with the Government. The discussions were merely of a preliminary nature.

INDIAN INSURANCE IN 1953

LIFE BUSINESS MAINTAINED: BIGGER COMPANIES CONTINUE TO GAIN GROUND

INSURANCE business in India in 1953 began to feel the impact of the forces that caused a trade recession in the last few years. No dout the country recovered partially from the sharp fall of commodity prices at the beginning of 1952, but even now the effects of the recession are being felt. Life insurance business has been able to maintain its figures for the last few years despite the recession. But this is because companies have been exploring new avenues of business in rural areas and among sectors of the population that previously did not go in for life insurance. In 1953 the same tendencies were noticeable and life assurance business appeared to be more or less on the same level as in previous years. There was, however, a distinct setback in October, November and December. October, which usually marks the beginning of the busy spell in life insurance, was particularly depressing. Nevertheless, life insurance companies, with their usual buoyant optimism and remarkable powers of resilience, will be able to maintain their figures in 1953 also though an increase in business is unlikely.

Though the total business was maintained, the trends noticed in past years became even more pronounced in 1952 and 1953. There was a tendency for business to move into the hands of bigger companies at the cost of medium-sized and smaller companies. It was complained that the bigger companies were not playing the game as they increased their business by taking away the business of younger companies rather than by exploring new avenues.

"Another feature that has been noticed in recent years is the increase in business of foreign companies in India. During 1953," the Crown Life Insurance Co. Ltd., of Canada, which has been transacting business in India for many years, withdrew its business from several parts of the country. Still, the sum total of the business of foreign companies, now mostly British, continues to increase. As the figures (Chart I) given below show, though the total new life business transacted in India in 1951 was slightly higher than in 1950 the share of Indian companies went down and that of non-Indian companies went up. The same tendencies will, no doubt, appear to be more pronounced when the figures for 1952 and 1953 are available. Chart III gives the new business figures of a few leading foreign companies (mainly British) for the years 1948 to 1952; from these it will be apparent that since independence the share of business done by British companies has been steadily increasing. The main reason for the increase of business of British companies is that in recent years they have intensified their organisation and have been able to offer more attractive terms to the public, either in the shape of higher bonuses or reduced premiums. This has been made possible by the raising of the Bank rate in Britain to 4 percent and the resultant increase in the interest earned by the companies. Though very recently the Bank rate in Britain has been reduced to 3½ percent it is not regarded as a general return to cheap money conditions.

Similarly, from Chart II it will be seen that the new business figures of the big Indian companies are steadily increasing despite a decline in the total business of Indian companies in the last few years.

Because the figures for a number of companies are not included in the Insurance Year-Book the totals given do not represent a correct picture of the whole position. For instance, in the Year-Book for 1952 (giving the figures of 1951) the returns of no less than 63 companies are not incorporated because they were submitted late or for other reasons. Under the circumstances, the actual figures of business would no doubt be higher. Though most of the companies whose returns are not incorporated are small ones whose figures may be insignificant, there are some big companies also whose returns would affect the total to some extent. The Controller of Insurance should devise some means by which this irregularity is eliminated.

General Business

Writing a year ago, I stated that the sharp trade recession in the early months of 1952 would have a depressing effect on general insurance business. The figures for 1952 show that there has been a fall in the premium income of most companies, except New India. (The figures of the five leading companies are given in Chart V.) This was inevitable in view of the slump in the prices of a number of commodities which are important in India's foreign trade—raw cotton, jute, tea and oilseeds. Unfortunately the decline in wholesale commodity prices was not accompanied by a corresponding fall in retail prices and in the cost-of-living index; this further aggravated the crisis. Naturally these factors had an adverse effect on fire, marine and miscellaneous business, and not only was premium income at a much lower level but it brought in its train the other inevitable results—heavier claims experience and higher management costs. However, insurance companies have successfully withstood the difficulties and it is a matter of much relief that in 1953 the outlook is distinctly better with the improvement in commodity prices. General insurance business is likely to show further progress during the past year. The increase in the business figures of New India resulted from a very intensive exploitation of home and foreign markets, wide expansion of its organisation, and commencement of new avenues of business such as hull, machinery and cattle insurance.

Below are given the figures of general insurance business done by companies operating in India for the years 1943, 1945, 1947 to 1951 as shown in the Government Year-Book (Chart IV), as well as the working results of five of the biggest general insurance companies in India (Chart V).

Marine Insurance

Marine insurance business, particularly Indian coastal cargo business, in 1952 and 1953 was on the whole satisfactory. But marine business in India, young as it is, suffers from a number of disadvantages. Ever since the abolition of the combined marine surcharges on marine cargo risks in 1947, competition has forced down the basic rates of premium all over the world to a level that does not appear to be economic and the present tendency is to use the war risk rate to subsidise the inadequate marine rates. This has hit marine insurance business in India rather badly. The position has been further aggravated by the fact that in many cases the insurance covers risks which are not strictly marine insurance at all. For instance, in 1952 Indian companies suffered heavily by covering "country damage"—that is, damage incidental to weather and handling in the country of origin—in respect of the claims arising from cotton imported from the U.S.A. The loss was caused by unusual rainfall and inadequate storage facilities in the cotton-growing districts of California. The claims have been fully met by the Indian market but the question of recovering these losses from the shippers and shipowners is being discussed.

The commencement of hull insurance is no doubt a landmark in the development of general insurance business. India has a vast coastline and her shipping is developing fast with the support of the Government under the Five Year Plan. It is therefore time that Indian companies commenced to underwrite this very important line of marine insurance (hull insurance). The initiative shown by the New India Assurance Co. Ltd. in covering risks of the premier Indian shipping company, (the Scindia Steam Navigation Company) is commendable.

Miscellaneous Insurance

In an article a year ago, I referred to the heavy claims in motor insurance business and the inadequacy of premiums in covering the risk. This has necessitated a revision of the premium rates and since the end of 1952 new premium rates have been brought into force. It is now hoped that in view of the revised rates the losses of the motor departments will be eliminated.

Non-Tariff Companies

The problem of non-tariff companies remains as unsatisfactory as ever. Revision of rates, etc. has often become ineffectual because such companies have quoted premiums at lower rates than tariff companies. Tariffs have always formed an integral feature of general insurance business and since the Insurance Amendment Act, 1950, a statutory Tariff Committee has been formed for their regulation and enforcement. But curiously enough tariff is not applicable to all companies and those applying to the Central Government for exemption from the operation of tariff are granted that exemption freely. Thus we have the "strange spectacle of two sets of companies carrying on the same class of business and working side by side—one under compulsion to observe and be governed by tariffs and another left free to arrange their premium rates according to their own ideas." It is hoped that the Government will enquire into the matter and see that these anomalies do not continue.

Machinery insurance, covering breakdown and providing for the maintenance of machinery, has also commenced in India and in this matter the Indian organization has obtained the advice and technical help of a leading German insurance group.

The need for *cattle insurance* in a vast agricultural country like India cannot be overestimated but until recently no important insurance company was doing this sort of business on a big scale. The pioneer work undertaken in this direction by the New India Assurance Co. Ltd., and other companies is a matter of much satisfaction.

Aviation insurance has also been developing rapidly and some companies, notably the Ruby General Insurance Co. Ltd., have been doing such business on a large scale. Aviation insurance covers not only passengers for personal accidents but also hull insurance of aeroplanes and it is expected that with the recent nationalisation of airlines Indian companies will receive the support of the Government.

Lacunae in the Insurance Act

The Insurance Amendment Act, 1950, with its elaborate provisions for the regulation and control of insurance companies, has now been in operation for over three years and a number of anomalies and lacunæ are being observed which are affecting certain groups of insurance companies adversely. In particular, the rule which provides for the limitation of expenses bases the quantum of management expenses on the gross direct premium in India. This has been responsible for the severe and unhealthy scramble for direct business because every insurance company has to try its utmost to obtain the quantum of business that is necessary to keep its expenses within limits. A fall in direct business in a particular year would involve a curtailment of permissible expense, even though the establishment expenses which are of a semi-permanent nature will remain the same. Another defect is that the rule does not take into account foreign or reinsurance business. To carry on overseas and reinsurance business the head offices of companies have to devote attention and incur expenses and it is but fair that a reasonable provision should be made for expenses incurred on these accounts. These points have been clearly brought out in a number of chairmen's speeches made at the time of the annual general meetings of companies. The Government is no doubt aware of the problems and it is hoped that some other formula on which to base the quantum of expenses will be evolved.

Overseas Business

The overseas business of Indian companies continues to progress steadily, particularly in the general insurance line. The following figures indicate the progress of life and general business of Indian insurers abroad for the five years between 1947 and 1951:

Chart VI: Overseas Business of Indian Insurers

Life:

Year	New Business	Business in force
	(In crores of rupees)	
1951	7.08	49.94
1950	7.53	56.65
1949	7.95	61.54
1948	7.04	45.30
1947	5.51	25.35

Other than Life:

	Net Premium Income (In crores of rupees)
1951	6.32
1950	4.84
1949	3.94
1948	2.94
1947	2.11

It will be noticed that life business has been declining for the last two years but the expansion of general business has been marked. The almost complete stoppage of life assurance business in Pakistan by Indian companies and the reduction of business in Malaya, Ceylon and East Africa for political reasons are possibly the causes of the decline in life business. Malaya, Ceylon and East Africa are the chief places where Indian life assurance companies have been doing business.

On the other hand, general insurance business in the foreign market has been steadily increasing. The New India Assurance Co. Ltd., for instance, is now represented in 36 different countries either through branches or through agencies and nearly 40 percent of its direct business in 1952 was secured from its operations abroad. The foreign business of Ruby General is also substantial.

Investment Conditions

Investment conditions continue to be more or less the same and the tendencies of 1952 are still noticeable. There has been further depreciation in value of assets of a number of companies which in some cases have been provided for in the Investment Reserve Account, while in other cases book values have been written down to the extent of the depreciation. Simultaneously interest yield continues to increase which, no doubt, is a matter of considerable relief to insurance companies. The following chart shows the rate of interest earned on the mean life funds of insurance companies for the five years between 1947 and 1951 which, it will be noticed, shows a steady increase since 1949.

Chart VII

Year	Rate of Interest.
1947	3.03
1948	3.02
1949	3.05
1950	3.16
1951	3.30

In 1952, these tendencies continued. Though the Government Year-Book figure is still not available, the interest yield of the first ten leading companies will show that the interest rate has generally continued to increase, though the rate of increase is very slight.

Chart VIII

Bombay Life	3.3	3.5
Bombay Mutual	3.8	3.5
Bharat	3.3	3.3
United India	3.3	3.3
Lakshmi	3.1	3.5

The recent reduction of the Bank Rate in Britain from 4 percent to 3½ percent caused some apprehension in insurance circles as to whether a reversion to cheap money conditions could be expected but these apprehensions have now been set at rest.

Consequent on the rise of interest earnings of insurance companies and also as a result of reduction in expense ratios in many companies since the expense limitation provisions were imposed by the Insurance Amendment Act, 1950, life assurance companies have been able to declare higher bonuses in valuations effected in 1951 and 1952 and the tendency has been generally to assume a slightly higher rate of interest in the valuations. The following figures (Chart IX) give the valuation results of some of the companies in 1951 and 1952 and a comparison with the results of the previous valuation.

Estate Duty Act

One new legislative measure which will affect life insurance is the Estate Duty Act. The Bill, when it was first placed before Parliament a few years ago, raised a lot of controversy but the Government was determined to pass it as they needed the revenue urgently to finance the Five Year Plan. The business community have therefore accepted the inevitable and are trying to adjust themselves to the requirements of the law. Life insurance policies in other countries have played a very important part in protecting properties and business interests from being liquidated for the purpose of paying estate duty and in India it is hoped that life insurance will play the same dominant rôle. Unfortunately, however, the exemptions that have been allowed to life insurance policies under the Act are very meagre and though several representations were made by the insurance industry for raising the limits of the exemptions, Parliament did not accede to the request. Under Section 32 of the Estate Duty Act the exemptions from Estate Duty are allowed to life insurance policies up to the following limits:

(1) Moneys payable under one or more policies of insurance effected by the deceased on his life for the purpose of paying Estate Duty or assigned to the Government for the said purpose, to the extent of the amount of duty payable but not exceeding Rs. 50,000.

(2) Moneys payable under one or more policies of insurance effected by the deceased on his life, to the extent of Rs. 5,000.

(3) Moneys earmarked under policies of insurance or declaration of trusts or settlements effected or made by a deceased parent or natural guardian for the marriage of any of his female relatives dependent upon him for necessaries of life to the extent of Rs. 5,000 in respect of the marriage of each such relative.

Apart from these concessions, it is possible to have insurance policies to cover gifts as allowed under the general exemptions up to Rs. 2,500 for charitable purposes and Rs. 1,500 for any other kind of gift. Though the concessions are meagre, the act opens out a new line of business for life insurance companies, and it is hoped that companies will take advantage of it and educate the public to make use of the concessions. Already some companies have extended the age limit for taking up life policies where they are obtained specifically to cover estate duty.

(FROM OUR NEW DELHI CORRESPONDENT.)

2nd January.

A SCHEME for unemployment insurance is being worked out by the Planning Commission, it is learned. Sponsors of the scheme have two claims for it, namely that it can be self-supporting and should stimulate employment. There is a growing volume of opinion that the present labour policy has had the effect of restricting employment. In actual practice, industrial and commercial undertakings prefer to pay overtime rather than employ fresh hands because law prevents them from adjusting the labour force to their needs. Unemployment insurance will provide the necessary funds to a worker to sustain himself during the period of unemployment. It will help an employer to adjust his labour force to his fluctuating needs. In other words, the fear of maintaining a surplus labour force having been eliminated, he will be encouraged to employ additional labour in times of trade boom or industrial activity. Unemployment insurance, it is thus claimed, will assist in solving the problem of unemployment.

Indo-U.S. Air Agreement

The Government of India has decided to give 12 months' notice to the U.S. Government to terminate the Indo-U.S. Air Agreement, it is learned here. Notwithstanding this drastic action, hope is expressed that the American airlines will reconsider their attitude and their Government will revise the agreement on the model of the Indo-British or Indo-Netherlands Air Agreements. The question of revision of the Indo-U.S. Agreement was initiated by the Government of India over 18 months ago, soon after the air agreements with the United Kingdom and the Netherlands had been revised. Under these two agreements, India inter-alia secured for itself the sole right of determining the frequency of air services by means of annual reviews. Furthermore, on the existing basis, India complained that the two American airlines violated the principle of the Fifth Freedom. The U.S. Government did not accept either of these contentions. Its main claim was that in actual practice the two American airlines did not operate their services to the detriment of Indian interests. India, it would be thus seen, was placed on the horns of a dilemma. It was anxious to meet the American representations to the maximum extent. Side by side, it could not adopt a line of action which would be regarded as discriminatory by the British and Netherlands Governments. In fact the non-revision of the Indo-American Agreement has been regarded as discrimination by the Dutch, who lodged a protest against the continuation of the Indo-U.S. Agreement in its present form. It is evident that either India would have to scrap the revised air agreements with Britain and the Netherlands and revert to their old agreements or terminate the Indo-U.S. Agreement in the hope that better counsels would prevail at Washington and the U.S. Government would agree to revise its agreement on the model of Indo-British and Indo-Netherlands Agreements. It has selected the second course. An official announcement is expected shortly.

Petroleum Exploration

An agreement between the Government of India and the Standard-Vacuum Oil Company for the joint exploration for petroleum, and production of petroleum if it is discovered in commercial quantities, in West Bengal was signed in New Delhi. The Government and Standard-Vacuum have agreed to contribute jointly the funds required for the operations. The Government will provide one quarter of the expenditure and Standard-Vacuum will contribute the balance. The aggregate contribution of the Government will not, however, exceed Rs. 2½ crores unless the Government wishes to provide further contributions towards continued expenditure for the, project. Standard-Vacuum has given the assurance that if commercial production of oil in sufficient quantities is established, it will consider the erection and operation of a refinery of a minimum capacity of at least 10,000 barrels per day. Standard-Vacuum will manage the joint operations. The Government and Standard-Vacuum will each nominate a person who will discuss from time to time the programme of the joint operation.

New Import Policy

The January-June import policy, announced last week, largely maintains the status quo on the assumption that the balance of payments position during the next half-year will remain unchanged. For the next year, the Government has assumed exports to be of the order of Rs. 255 crores which, if added to the withdrawals from the sterling balances and invisible exports, would provide the amount to be available for imports. The scheme of token imports, evolved mainly to set up standards for indigenous production, has been continued. Import quotas of 22 items have been enhanced, including those for safety razor blades, flashlight cases, essential oils, moulding powers and unset pearls. Import quotas of 34 items which can be produced in larger quantity in the country have been stepped down; these include table fans, card cans, jams, jellies, lead pencils, hand knitting wools, cod liver oil, duplicators, a large variety of engineering stores such as iron and steel screws, brass, copper wire, electric motor starters, certain varieties of drugs and chemicals and certain types of surveying and mathematical instruments. Newcomers will be now permitted to participate in imports of machine cloth, palm oil, coconut oil, cigars, domestic refrigerators, watches, water and oil colours, and musical instruments. For these, quotas have been provided. The Idle Capacity Committee, appointed last autumn by the Government, in an interim report has disclosed idle capacity in the engineering industry to the tune of 50 percent. The Committee has suggested various methods by which this idle capacity could be worked. One of its recommendations related to import policy, which has been implemented under the January-June import policy.

Wagons and Engines from America

The Governments of the United States and India signed the first operational agreement under the Technical Co-operation Programme, providing $20 million for the rehabilitation of the Indian railways. It enables India to purchase 100 broad-gauge steam locomotives, 2,500 metre-gauge and 2,500 broad-gauge wagons from global sources. This allocation is a part of the total authorisation of $77.1 million, as assistance to India by the U.S. Government in the current year, of which $66.5 million are earmarked for economic aid and the balance for technical aid. India's counterpart expenditure, amounting to $6,720,000, can be spent on the cost of transport, assembly, handling of locomotives and wagons within this country.

Sugar Imports

In order to bring down the price of sugar to a reasonable level and to maintain continuity of supplies the Government decided to import sugar. At first it was proposed to import one lakh tons of sugar up to the end of December 1953 and to consider the question of importing any further quantity in March-April 1954 when it would be possible to have a reasonably correct idea of production during the next season. During the last session of the Parliament a supplementary grant of Rs. 7.25 crores was obtained to cover expenditure on the import of one lakh tons of sugar. The decision was subsequently reviewed and it was decided to import another quantity of one lakh tons also. On a subsequent review again, in the light of the anticipated production during 1954 and consumption requirements, a further quantity of 45,000 tons of sugar to meet immediate requirements has been decided to be imported. The total expenditure involved in the import of the entire quantity is estimated at Rs. 17.17 crores of which the supplementary grants taken during the last session accounted for Rs. 7.25 crores. The present demand of Rs. 9.92 crores is intended to cover the balance. The imported sugar is being sold to State Governments to the extent required by them for distribution through ration or fair price shops. The next preference is being given to co-operative societies and the balance is sold to merchants. The total sale proceeds of the imported sugar during the current year on the basis of the sale prices will work out to Rs. 20.64 crores as against the import price of Rs. 17.17 crores. Enquiries show that the sugarcane crop has been generally damaged in areas other than western Uttar Pardesh and sugar production during next year may be below expectations.

Increasing Cotton Cultivation

The Government has sanctioned a grant of Rs. 32 lakhs for the Governments of Bombay and Saurashtra under the scheme for increasing cotton growing in the country. In accordance with the scheme, it had been announced that the land revenue of all additional area brought under cotton cultivation during 1950-51 would be remitted and that the loss of revenue incurred by the State Governments as a result thereof would be made good by the Central Government. Out of Rs. 32 lakhs now provided, Rs. 25 lakhs will be paid to the Government of Bombay and Rs. 7 lakhs to the Government of Saurashtra.

The Khadi Board

The Bombay meeting of the All-India Khadi and Village Industries Board was not able to resolve the deadlock that had existed between it and the Government, the deadlock mainly being over the constitution and functions of the Board. As reported earlier, the Government would like the Board to be a statutory board to be elected constitutionally every year. The members of the Board, having accepted the principle, would like the statutory board to include three members to be elected by themselves and to become the Working Committee of the existing Board. In the nature of things, such a plan could not provide much scope for the democratic constitution and functioning of the Board. The Board had set up a Production Committee, which covered a wide range of subjects unconnected with khadi or village industries. It had, for instance, suggested the reservation of some oil-seeds for village ghanis, which were to be subsidised by the levy of a cess on the product of oil mills. Similar subsidy was proposed for matches manufactured by village industries. This plan was equally unacceptable to the Government. To subsidise khadi and handloom products the Government has levied a cess on millmade cloth. The yield from this cess is placed at Rs. 6 crores a year, Rs. 4 crores of which has been earmarked for the handloom industry and Rs. 2 crores for khadi. As against this, the Board's 1954-55 budget is placed at Rs. 12 crores. The Board, it will thus be seen, would like to become an independent sovereign body, which would place limitless demands on the Government, without any control over its activities. In the nature of things, such a plan could not find favour with the Government.

Trade with Pakistan

The Government of India, through an Open General Licence, has considerably curtailed the commodities which could enter the free trade between India and Pakistan. The Open General Licence issued in September 1952 included a large number of commodities outside the Indo-Pakistan Trade Agreement, such as fruits and vegetables, pepper, chillies, ginger, lime and firewood. Experience of actual trade has, however, shown that the desire for free trade was not reciprocated by Pakistan, which did not allow any goods on Open General Licence basis. Imports of Indian fresh fruits and vegetables into Pakistan is not permitted even under licence. The Indo-Pakistan Border Trade Conference, which met at Calcutta in the first week of October, ended in smoke. Events have shown that Pakistan is not interested in opening trade negotiations with India. Under the circumstances, another shorter Open General Licence was issued, restricting the scope of the original Open General Licence.

Imperial Bank Offices

A new District Office of the Imperial Bank was opened here on 2nd January with Mr. J. L. Bagga as the District Manager. The office has 30 branch offices in the Punjab, PEPSU, Kashmir, Aligarh, Bulandshar, Hatras, Meerut, Saharanpur, Roorkee Dehra Dun, Mussoorie. It is housed in the newly-built storey in the New Delhi office of the Imperial Bank. The Imperial Bank had three District Offices at Lahore, Kanpur and Calcutta in the Bengal Circle of the Imperial Bank. The Lahore Office was merged with the Kanpur District Office after partition. The Lahore District Office has now been revived and located at New Delhi.

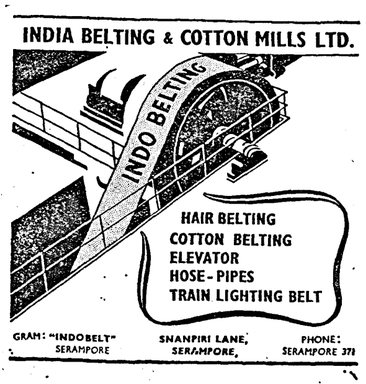
Sholapur Mills

The Government of India in the Ministry of Commerce is examining a proposal to institute a tribunal by an Ordinance to determine the quantum of compensation in the case of Sholapur Mills, it is learned. The Supreme Court, it will be recalled, declared the Sholapur Mills Act *ultra vires* because it had vested its management in perpetuity in the Government. The Supreme Court held that in such a case compensation, as provided by the Constitution, should have been paid. Here a distinction could be made between taking over the management for a limited period of five years, as is provided under the Industries Regulation Act, and permanent vesting of management in the Government, as is provided in the Sholapur Mills Act. One legal view is that the Supreme Court has not invalidated the Industries Regulation Act, which *inter alia* provides for investigation into the affairs of an industrial undertaking and issue of a directive in case the investigation discolsed gross mismanagement. It was non-observance of the directive which would render the management to be taken over by the Government for a limited period of five years. The Government would amend the Industries Regulation Act also if the interpretation placed on the Supreme Court judgement was found untenable. It will in that case provide for compensation if an undertaking were taken over by it even for a limited period of five years. Institution of a tribunal in the case of Sholapur Mills should be welcomed, because fixing of the compensation would be left to a judicial or semi-judicial body independent of the Government.

Aid for Minor Irrigation Works

The Government of India has approved the Bombay Government's scheme costing Rs. 30 lakhs for minor irrigation works in the non-scarcity areas of the State during 1953-54 and agreed to finance them on a loan basis. On completion of all the works, the area likely to be irrigated will be about 54,100 acres and the additional yield of food crops 12,000 tons. The Indian Government has sanctioned a grant of Rs. 3,79,950 to the Kutch Government for 1953-54 in connection with the construction of sluices, sluice tunnels, based weirs, and earth works on five dams at Guniasar, Kapdiar, Kotae, Bhuvad and Janan.

The Commerce Minister, Mr. T. T. Krishnamachari, will look after the Finance portfolio during the absence from India of Mr. Chintaman Deshmukh who is due to leave for Sydney on 3rd January. On his return the Finance Minister is expected to visit Ceylon and Madras.



London

PROSPECTS FOR 1954

UNCERTAINTIES OF RECESSION IN U.S.A. AND LABOUR AT HOME

(FROM OUR LONDON CORRESPONDENT)

THE Christmas and New year festivities are over, and we enter 1954 heartened by the knowledge that on the whole 1953 was a pretty good year taking everything into consideration. The available statistics, though still few in number, confirm that view. The outlook for the current year, however, seems less promising, and especially in the economic sphere, where the normal uncertainty has been considerably heightened by the adverse criticism in a recent O.E.E.C. survey of Britain's ability to increase her industrial productivity and exports, speculation with regard to the possibility of a recession in the United States in the near, future, and the serious threat to the economic stability of the country which wage demands and possible deterioration in industrial relations represent. One's reactions to these "pointers" are conditioned, of course, by one's approach to them. The optimists can, and indeed do, find flaws in the arguments employed in the O.E.E.C., report, just as the jeremiahs accept them as marking the knell of doom. In the case of an American recession, also, there are two schools of thought, not only here but in America as well, and the majority opinion appears to favour the conclusion that any recession will be slight and certainly easily manageable. The wage claims problem is less easily dismissed, for its outcome seems to depend very largely on what happens in the case of the disputes in the engineering and shipbuilding industries. The unions are firm in their decision to ban overtime and piecework after 18th January unless their demand is met, though not necessarily in full, while the employers are no less adamant that the claim is unjustified and that they are not prepared to make any concessions whatever. Sir Walter Monckton, Minister of Labour, has failed to bring about a compromise, and has fallen back on the only alternative, the appointment of a Court of Inquiry to consider the situation in the two industries concerned. It is possible that the operation of the ban may be delayed until the court's findings are made public, but as they are not binding on either side the danger of chaos in the industries concerned will continue for the time being—and already the mere possibility has had an adverse effect on export orders.

Background to the Sydney Conference

This background is hardly propitious for the Commonwealth Finance Ministers' Conference in Sydney, to attend which the Chancellor of the Exchequer, Mr. Butler, and the main body of the British delegation left London last week. It needs to be emphasised, however, that although the British delegation is appreciative of the danger spots, it does not accept the views of the pessimists. It will, therefore, press for the continuation of the policy worked out at previous conferences, which has already shown such excellent results, but perhaps with an even greater urgency in promoting Commonwealth self-help. This, it is felt, can be done by two means. Firstly, the adoption of a firm policy at home to prevent inflation and to encourage more exports, and secondly, the more rapid development of the productive resources in the Commonwealth, for which it is believed British resources will be less restricted than they have been in the recent past. Nothing spectacular is expected to come out of the conference—the economic situation of the sterling area, though it has improved, is not yet advanced to a stage when convertibility of sterling or the complete removal of restrictions on its use can be envisaged—but at least it will provide for a useful exchange of views as to how the policy has worked out so far in respect of each individual unit, the extent to which it might be modified to meet particular needs, and, perhaps most important of all, what steps will have to be taken to meet any new economic trouble as and when it arises.

It is with some satisfaction that the individual here learns that the Government has prepared plans to meet any adverse economic development in the international sphere, even though for the moment these plans are unknown to us. Unfortunately, internal developments are such that our hopes are revived one day and dashed the next. It is good to learn, for instance, that the expansion in industrial production which started in September continues at a satisfactory rate. The Central Statistical Office, on the basis of incomplete information about output in November, has estimated that the index of production should be 130-131, against 128 in October and 125 in September. This is a sharp increase, representing for the first eleven months of 1953 a rise in production of 5 percent over the same period of 1952 and of 2 percent compared with 1951. Some of the credit for this must go to Mr. Butler's "incentive" budget, to the stimulus of which industry has undoubtedly responded. Encouraging also is a consideration of the details with regard to the November trade figures (the overall figures were discussed in the last despatch), which disclose that the increase in exports was shared by nearly all groups of commodities including engineering, chemicals, textiles, aircraft and even metals. Nevertheless, for the first eleven months of the year exports are 1 percent lower in value than in the same period of 1952, but, as import prices have fallen slightly, their volume was 2 percent greater. As a result, the increase in industrial production is being dissipated to some extent in this way, and undoubtedly by the home market taking up most of it. These tendencies are likely to be aggravated by widespread wage claims, whereas the country's interests demand that they ought to be held in check. The danger was emphasised in a statement to workers in the shipbuilding industry and to firms supplying it by Mr. J. W. Elliott, President of the Shipbuilding Conference, which stated that new orders for merchant vessels placed in British shipyards in 1953 totalled only half a million gross tons, which was one-third of the tonnage ordered in 1952, and one-eighth of that ordered in 1951.

Budget Prospects

All these factors are likely to influence Mr. Butler when he comes to prepare his next Budget, and unless the outlook changes quite considerably within the last quarter of the financial year, he may find himself obliged, reluctantly no doubt, to revise his ideas and present a "hard" one. Treasury returns for the first nine months of the year have just been issued, showing a deficit on ordinary revenue at that stage of £546 million, against £525 million in the same period of 1952. Revenue usually exceeds expenditure during the last quarter—it did so by £613 million in the last financial year—and to meet the estimates for the current financial year it must do so by £504 million, but a lot depends, of course, on the size of the supplementary estimates. The Chancellor has done better "below the line," where expenditure is mainly of a capital nature, chiefly because of smaller loans to local authorities. The deficit here is only £283 million, against £424 million in the previous year, so that the overall deficits for the respective periods were £829 million this year as against £950 million last year. That ordinary revenue has fallen by £69 million, and in some cases the Chancellor's anticipated decreases have been greatly exceeded already, suggests that his estimated surplus on ordinary revenue over the whole year of £109 million may not be achieved. In addition, he must face the fact that the tax reliefs granted in the last Budget will cost about £170 million this year, and about £260 million in 1954-55. The prospects of any further tax reliefs seem rather remote, and it will be surprising if the Chancellor is not in fact forced into adopting less agreeable methods than the granting of "incentives" to maintain the country's solvency.

Trade with Russia

A special panel of the Federation of British Industries has just issued a report urging industrialists in this country to make vigorous attempts to increase trade in nonstrategic goods with the Soviet Bloc and Communist China. It has appeared simultaneously with the arrival here of several cargoes of bar gold from Moscow. Early in December Samuel Montagu & Co. received a shipment worth about £6 million, and last week there were two more consignments, estimated to be worth between £20 and £25 million, from the Moscow Narodni Bank to the Bank of England, the first direct deal between these two central banks since 1936. The movement confirms that the Russians are short of sterling, and also that they are serious in their efforts to increase purchases in this country. There have also been sales of silver recently, and quite large shipments of manganese from Soviet Russia have recently arrived. The gold will have come in handy towards partially off-setting the year-end debt repayments to the United States and Canada. It was also hoped that Japan might repay the recent sterling credits in dollars, but instead she repaid sterling borrowings from the International Monetary Fund in dollars and then made a further purchase of sterling. Janan's shortage of sterling is also acute, and although the Anglo-Japanese payments agreement of 1951 has been renewed for another year, talks are still going on here about ways of expanding trade.

Liverpool Futures Market to Reopen in May

After a gap of over 14 years, it is hoped to open the Liverpool futures market on Tuesday, 18th May, subject to the Cotton Bill now before Parliament becoming law. In making this announcement the Liverpool Cotton Association points out that a large amount of work has still to be completed, both in finalising the details and making the statutory changes in the Association's articles and rules. There is much to be done also in connection with the new Clearing Association. The date is obviously a compromise. If it was any later there would hardly be time for the market to get into its stride before the next crops began to move and before the withdrawal of the Raw Cotton Commission's cover scheme. Any earlier would make it very difficult to complete all the necessary preliminary preparations. Conditions having changed materially since pre-war days all procedures and documents, etc. will have to be devised afresh.

Tea Prices Raised

The retail prices of most of the well-known brands of tea are to be increased by amounts ranging from twopence to fourpence a pound with effect from next week. This decision by the suppliers comes as no surprise, though it will hardly be welcomed by the housewife, who has long ceased to worry about quality after years of bulk buying and subsidised and rationed supplies, for it means that tea (even though all grades are now better than they were, say, a year ago) has risen in price by 1s per pound since May 1951. The trade, however, has a good case. In the auction sales in 1952 the price of all grades averaged 3s 0½d per pound. In 1953, the average was 3s 7½d. At the last sale before Christmas it touched the highest point reached so far with an average of 3s 11½d. Poor crops in producing areas is one explanation, crop restriction to improve quality is another, with the revival of the re-export trade from this country and the increase in consumer demand with the derationing of sugar as further contributory factors.

Brevities

Four British Post Office engineers are on their way to Calcutta to help convert the city's telephones from manual to automatic operation.

Mr. T. T. McCreath has retired from the Managing Directorship of Steel Brothers and Company, but remains a Director.

New capital issues in 1953, according to the Midland Bank compilation, reached a total of £396,031,000, an increase of £25½ million over 1952 and the highest total for any year since 1919, when these figures were first available. Issues by public boards accounted for over one-half the total.

British European Airways carried 1,638,000 passengers in 1953—more than ever before—while British Overseas Airways, according to provisional figures, carried 287,100, an increase of just over 5 percent compared with 1952.

Uttar Pradesh

GOVERNMENT SCHEMES TO FIGHT UNEMPLOYMENT

RENEWED EMPHASIS ON COTTAGE AND SMALL INDUSTRIES

(FROM OUR LUCKNOW CORRESPONDENT).

THE rise in unemployment in Uttar Pradesh had been somewhat masked by the predominantly agricultural character of the economy of the State, but the seriousness of the problem has now been admitted by the State Planning Board. The recent disturbances which were widespread and resulted in considerable damage to public property were, according to the Police Minister, Communist-inspired but abetted directly by unemployment and rising prices. On Chief Minister Pant's own admission, any spectacular schemes for the relief of unemployment were beyond the resources of the State which has already had to revise its expenditure on planning upwards from Rs. 90 crores to Rs. 130 crores. The solution, according to him, therefore lies in expanding cottage industries, and as an answer to critics who say that cottage industries do not make for an adequate standard of living for the worker he cites the instance of the Ferozabad bangle industry where a worker earns Rs. 5 per day, which is higher than in any other industry.

But even the glass industry, which is a solitary bright patch in an otherwise depressing picture, is handicapped by its weak capital structure and the uncertainty of transport facilities. In a recent statement to the Press, Mr. L. M. Bhatia, Director of Cottage Industries, declared that the glass industry had to restrict its activities on account of shortage of coal. Mr. Bhatia has charged the railway administration with failure to meet the industrial requirements of the State. "The railways do not," he says, "attach any importance whatever to the movement of 'smalls' which frequently leaves small industries in the lurch." The State Government, however, has been encouraged by the prospect of financial assistance from the Centre as a result of the survey recently conducted in the State by Mrs. Kamaladevi Chattopadhyaya, Chairman of the All-India Handicrafts Board. Besides the handlooms, the industries expected to benefit directly are brassware, silk, pottery, chikan embroidery and cutlery.

Handloom Industry's Difficulties

As regards the handloom industry, which employs more people than all the textile mills in the State put together, a solution is not easy because demand for handloom products is depressed by high prices and indifferent quality. The State's scheme for the development of the handloom industry envisages the production of 9,50,000 yards of cloth valued at Rs. 10 lakhs by the end of 1956. The expansion of textile mills in the State, however, does not hold forth any prospects and there is some disappointment about it in official circles although there is none among the industrialists, as most of the spindleage allotted by the Centre is meant for providing yarn to the hand looms. It may be recalled that the Government of India has allotted 323,576 spindles for new mills in Bombay, Madras and other States, and another 4,12,014 spindles for the expansion of existing undertakings. U.P.'s share under both these heads is only 15,000 spindles. As matters stand, weavers in this State will have to depend largely on distant mills for the supply of their raw material.

As for heavy industry the Mirzapur cement factory, which is the biggest industrial undertaking in the State, is expected to go into production within six months. It would produce about 20,000 maunds of cement daily. Though predominantly an agricultural State, some idea of the place occupied by it in several important industries has been conveyed by the "Bharat Mein Uttar Pradesh" exhibition which was closed last week after remaining open for about 2½ months. Power alcohol heads the list, U.P.'s output in relation to the total national production being 81.1 percent. Commercial spirit comes next with 62.10 percent. The output of leather, vegetable tanned, is 60 percent and that of chrome tanned 30 percent. The percentages of the State's output of some other important industries are: vegetable ghee 10.5 percent, sugar 53.16 percent, oils (mustard) 45.45 percent, glass sheets 22.2 percent, woollen 16 percent, matches 14.8 percent, paper 11 percent, jute 2.3 percent and textile yarn 8.5 percent and cloth 7.48 percent. Recently the Central Government granted permission to a concern in Aligarh to manufacture gilded glass beads and pearls and to another concern in Meerut to manufacture tennis balls. Three 20-ton capacity solvent extraction plants have also been allotted to U.P. According to Pandit Pant, if all the schemes in hand could be implemented according to schedule it should provide employment to about three lakhs of people.

Improving the Quality of U. P. Jute

While the development schemes in U.P. have on the whole progressed, more or less, according to expectations, the jute expansion scheme has received a setback as a result of the Jute Inquiry Committee's recommendations. The State Government has lost no time in acting upon these recommendations and directing future efforts to improving the quality of fibre instead of indiscriminate expansion of jute cultivation. Under the revised plan, the State Jute Experimental and Demonstration Farm at Ghoghraghat in the district of Bahraich will be used mainly for producing larger initial stocks of improve jute seeds. The Farm had hitherto been used for conducting experiments and trials like varietal, manurial and cultural practices etc. and multiplication of improved strains. It is estimated that in 1954-55 about 1,000 maunds of improved jute seeds will be available as a result of the multiplication work at the Farm. At present about 560 maunds of jute seeds are available for producing better quality jute in certain selected areas. This will also serve as a nucleus stock for multiplication of pure pedigree seeds. About 320 new tanks are to be constructed during the next two years for retting jute, and the cost of these tanks is to be borne on a 50-50 basis between the Centre and the State. A proposal is also under consideration to supply improved jute seeds to jute growers in exchange for the local seeds produced by them. The Government of India, it may be recalled, had called upon the State Government to undertake a detailed soil survey with the object of determining areas suitable for jute cultivation. A committee of experts is, therefore, proposed to be set up shortly to implement this recommendation. The Government of India committee had also suggested that to fight pests and diseases, the scope of the activities of the jute development staff should be extended to include plant protection and that more equipment and insecticides should be provided. More spraying and dusting equipment is accordingly being provided.

Madras

BUDGET ADJUSTMENTS IN MADRAS AND ANDHRA

FOOD POLICIES IN THE NEW STATE

(FROM OUR MADRAS CORRESPONDENT).

THE Budget proposals of March 1953 for the composite Madras State, it may be recalled, covered the financial transactions for the whole year 1953-54. But, in view of the then expected formation of Andhra State on 1st October, 1953, only a vote on account was taken to meet the budgeted expenditure for the first six months April-September. The Andhra State Act had since regularised the expenditure of the composite State for the first six months and had also provided for the authorisation of the expenditure by the Governor for the first four months of the second half-year. That Act, however, stipulated that the expenditure for the second half-year should be voted by the Legislatures of the respective States even though a good portion of it had already been incurred before the Legislatures could meet. In pursuance of this stipulation, the respective Governments of Madras and Andhra have just presented their Budget proposals for the second half of 1953-54.

The Madras Budget for this half-year estimates revenue at Rs. 23.71 crores and expenditure on revenue account at Rs. 23.48 crores, leaving a small surplus of Rs. 23 lakhs. It may be recalled in this connection that the Budget proposals of March last gave a detailed breakdown of revenue and expenditure for the Andhra districts and the rest of Madras State. According to this breakdown, the Andhra area was expected to have a deficit of about Rs. 2 crores and the residuary area a surplus of an equal amount. On the basis of these estimates one should have expected for the second half-year a surplus of at least Rs. 1 crore in the Madras Budget and a deficit of at least Rs. 1 crore in the Andhra Budget which has budgeted for a deficit of Rs. 51 lakhs only.

The Madras Budget has taken credit for the receipt of Rs. 2.81 crores under taxes on income and Rs. 0.91 crore under Union excise duties from the Central Divisible Pool. As it might take some time before the Estate Duty Act produces revenue, no credit has been taken under this head. Land revenue might bring in Rs. 3.75 crores in view of the improved seasonal conditions. Under Stamps, the original estimates of March last took credit for some additional revenue from a revision of the Court Fees Act. As the necessary legislation has not yet been introduced, this credit has been omitted in the Budget. This is perhaps one of the reasons for the smaller budgeted surplus. The receipts from sales tax have been estimated at Rs. 4.9 crores on the basis of actual collections in the first half-year. The partition of the State and the operation of Article 286 of the Constitution have currently introduced an element of uncertainty in the yield from this tax. However, the present favourable season is expected to result in some improvement in the purchasing power of the peasants, and so the Finance Minister hopes that there might be no further fall in this revenue. The receipts from the new State tax on tobacco might be not less than Rs. 25 lakhs in the second half-year.

Debit Charges

Regarding expenditure on Revenue Account, the Madras Finance Minister has pointed out that the debt charges are fast growing and that, although the borrowings have all been invested on useful irrigation and electricity works, the benefits derived by agriculturists from these investments are not passed on to the Government in full measure. Better justice to the general taxpayer would, therefore, be achieved by the levy of a reasonable betterment fee from the persons, spread over, if necessary, in easy instalments. It may be recalled that the Opposition forced the Government to abandon their proposal for a betterment levy in 1952. Under new items of expenditure, the National Extension Service is just under way with a provision of Rs. 18 lakhs. Expenditure on famine relief will practically cease as a result of renewed agricultural operations in all drought-affected districts.

The five year plan outlay for the composite State has been broken up as between the Madras, Mysore and Andhra States; the schemes benefiting the residuary State add up to Rs. 79 crores or 56 percent of the total which is short of the population ratio by 6 percent. This is so because greater emphasis is given to irrigation and electricity projects in the Andhra area. The needs of Madras have been appreciated by the Planning Commission and the Government of India who have since agreed to include two irrigation projects—one on the Vaigai in Madurai District and the other on the Amaravathi in Coimbatore District. The Central Government has undertaken to finance these schemes with earmarked Central loans, as also the balance of work on the Mettur Canals Scheme. The Budget takes credit for Rs. 1.57 crores by way of irrigation projects loan from the Centre. Capital expenditure accounts in all for Rs. 6.86 crores in the second half-year exclusive of Rs. 50 lakhs for State trading schemes, Rs. 35 lakhs by way of loans to local bodies and Rs. 29 lakhs by way of deposit transactions; this capital expenditure is to be met from the loan proceeds of Rs. 6.17 crores and the Centre's loan of Rs. 2 crores less repayments, leaving a closing balance of Rs. 45 lakhs. To deal, in some measure, with the problem of unemployment, a number of small irrigation projects (which alone are possible in the residuary State) are indicated for the next year.

Andhra Budget

The Andhra Budget for the second half-year estimates revenue at Rs. 11.83 crores and expenditure on revenue account at Rs. 12.34 crores, leaving a deficit of Rs. 51 lakhs. Outside the revenue account, receipts consist of Rs. 2.45 crores from the open market loan and Rs. 3.93 crores by way of loans from the Government of India; disbursements consist of Rs. 5.35 crores by way of capital expenditure and Rs. 60 lakhs (net) as loans to local bodies. Improvement in seasonal conditions accounts, in large part, for the smaller budgeted deficit.

Partition has changed the pattern of revenue in Andhra State. In the composite State, land revenue formed 14 percent of the total revenue; it remains at the same percentage in the residuary State while it constitutes 28 percent in Andhra. Commercial taxes, which constituted 25.3 percent in the composite State, remain nearly the same in the residuary State while they form only 16.4 percent of the total revenue in Andhra. These comparative figures show that Andhra State, being predominantly agricultural and less industrially and commercially developed than Madras, has to depend on agriculture for a considerable part of its revenue. One of the stated justifications for a multi-purpose general sales tax is that it makes good the loss of excise revenue. As sales tax constitutes just one-sixth of the total revenue in Andhra, the question arises if prohibition could well be scrapped or drastically modified for financial reasons. According to the Finance Minister, the Andhra Government has decided to appoint a committee to go into the question of prohibition and report in time for implementing the recommendations in the Budget for 1954-55.

As regards expenditure on revenue account, education in Andhra accounts for 17.8 percent, the same as in the residuary State; general administration 11.6 percent; irrigation, including interest on capital outlay, 10.7 percent; and buildings and roads 8.9 percent of the total expenditure. As social services are starved of finances, the Finance Minister has prepared the ground for new taxation proposals in the next year by a well-reasoned appeal for new sources of revenue.

It is indicated in the Budget speech that steps will be taken soon to see how much of cultivable waste land shown in the accounts is easily available for men of ordinary means to bring under the plough. The Andhra Government is also examining measures to relieve the land hunger of peasants. The food policy of the Government, which is already in force, is to have no restrictions on the movement and price of paddy and rice within the State. However, farmers could also sell their stocks to Government procuring agents at stipulated rates for export to other States. The Government propose to export one lakh tons of rice each to Travancore-Cochin and Madras on a Government-to-Government basis and another one lakh tons to the open market in Madras State through private dealers who will be appointed by tender.

Bombay

MR. NEHRU'S VISIT TO BOMBAY

ADDRESS TO I.N.T.U.C. AT JALGAON

(FROM OUR BOMBAY CORRESPONDENT).

3rd January.

MR Nehru's visit last Friday was mainly in connection with the establishment of a large township to provide accommodation for 35,000 people, sponsored by the Bombay Housing Board at the suburb of Chembur, and the laying of the foundation stone of the building to house the Institute of Fundamental Research and the Atomic Energy Commission at Colaba. The State Housing Board was not very active during the early years of its formation but it has in recent years been trying to make up for its previous lethargy. Apart from providing several colonies for a large number of displaced persons, by converting temporary military hutments erected during the war into habitable tenements and putting up several new constructions, it has at present under construction 6,429 tenements for industrial workers and about 8,000 more for displaced persons in another suburb of the city. The new colony at Chembur, the foundation stone of which was laid by the Prime Minister on the 1st of this month, has been well planned. It is to consist of 2,637 tenements, of which 2,169 are for industrial workers under the Subsidised Industrial Housing Scheme of the Union Government and the remaining 468 are meant for the employees of the Burmah-Shell refinery. There is provision in the scheme for 4,455 more tenements on which also work is expected to be started soon. The colony, when completed, will house about 35,000 people and will be self-sufficient in as much as provision has been made for schools, parks, public gardens, libraries, markets, banks, playgrounds, dispensaries and a hospital.

Before he reached Bombay, the Prime Minister was in Jalgaon in this State on 31st December to inaugurate the sixth annual session of the Indian National Trade Union Congress. While quite a considerable portion of his speech on this occasion was devoted to the proposed U.S. military aid to Pakistan, he dealt with some economic questions, as he was bound to do. Considering his audience and the occasion, his address sounded lukewarm, hesitating and halting. It was expected that in the changed circumstances arising from a greater need for unity and absence of strife in the economic sphere, the Prime Minister would be as forthright in his advice to workers, especially those who are organised in the INTUC, which is a Congress-sponsored body, as he is wont to be with employers. Though he did remind workers that they had to conduct their movement and run their organisations in the context of the changed national and international situation, he said that the workers had to decide whether they should change India's present economic structure or not, as if the making of this decision rested entirely with only one class and other interests in the country had no say in it. There was hardly anything in his address reminding workers of their obligation to work hard and produce more, and when he talked about difficulties in the way of nationalising industries he did it in a manner which conveyed the impression that the private sector had only to be tolerated because of these difficulties. He, however, did tell workers that it was not right for a section of the community to look to its own problems or to press for its own demands.

Mr. Michael John, the President of the INTUC, being ill could not attend the session and his speech was read by Mr. S. R. Vasavade, the Vice-President. Stressing the need for correlating the income and consumption of the various sections of our society with the wealth produced in the country and claiming that the single factor which was primarily responsible for disturbances in the country's economic life was the existing disproportionate distribution of the national output, Mr. John asserted in his speech that labour and not capital should be given priority in any plan of economic development. While industries are groaning under the huge volume of labour legislation passed during the last few years, Mr. John regretted that no new labour legislation had been passed during 1953, except that with regard to compulsory relief to laid-off and retrenched workers. Though workers' organisations never missed a single opportunity of trying to get awards of industrial tribunals revised in their favour by going in appeal, Mr. John criticised the Government for not abolishing the Labour Appellate Tribunal. He naively complained against the delay on the part of the Government in implementing even unanimous decisions of trade union representatives, taking it for granted that all such decisions must be accepted by the Government and forgetting that many of the unanimous requests of the private sector went by the board and were never paid any attention. At the same time it must be said, to do full justice to Mr. Michael John, that he gave expression to some very healthy and wholesome sentiments with regard to the lines along which trade unionism should develop in the country. He emphasised that though the INTUC and the Congress shared the same ideal of achieving general welfare through democratic and peaceful means, it did not mean that the INTUC was prepared to liquidate its own separate identity or that it would not resist any effort on the part of Congressmen to utilise the working class in their political game, in the same way as it had resisted such efforts of Communists and Socialists, as at Burnpur. He also emphasised the urgency for trade union unity and felt that, at the present stage, if the trade union movement was to grow it must be kept aloof from party politics.

Last Tuesday, when Mr. C. D. Deshmukh, the Central Finance Minister, was expressing at his Press conference his satisfaction about the price levels during 1953 and said that during the remaining period of the five year plan they were likely to remain so, the Bombay State Finance Minister, Dr. Jivraj Mehta, was bewailing in a broadcast from the Bombay Station of All India Radio that though the financial targets laid down in the Plan would be substantially fulfilled, it was unlikely that all the material objectives envisaged in it could be achieved. He said that this had become inevitable because of the continuous rise in the cost-of-living index and price levels generally, which had raised the actual cost of schemes above their corresponding target estimates. Dr. Mehta also complained that while the State was expected to spend as much as Rs. 146 crores on the plan, financial assistance from the Centre amounted to only Rs. 16 crores. While he stated that his Government confidently expected to fulfil the financial targets laid down for it in the plan, he hedged in this undertaking by several big "ifs." He made this promise on the assumption that "the Central assistance in the remaining period of the plan will be fulfilled according to the target promised, that famine conditions do not overwhelm the State, that the revenue from sales tax does not go below Rs. 15 crores and that no critical trade depression or any such untoward crisis overwhelms the State." Though he admitted that it was rash for anybody to make a dogmatic prophecy about Government finance in these days, when conditions changed substantially at short intervals, he felt comforted by the thought that in spite of adverse circumstances beyond the control of his Government, Bombay was likely to be foremost amongst Governments—Central and State—in fulfilling or very nearly fulfilling the financial obligations laid down in the first five year plan.

Egyptian Economic Mission

The Egyptian Economic Mission led by Mr. Hussein Fahmy, which was here for a week, left for Karachi last Wednesday. The timing of the Mission's visit to this city was rather unfortunate, because it does not appear as if it was able to establish as many contacts as it desired because of the intervening holidays and the general slackness in economic activity even during the days which were not listed as public holidays. The All-India Manufacturers' Organisation held a reception in honour of the mission, when Mr. Fahmy stated that both India and Egypt should work in collaboration for the welfare and prosperity of both the countries and indicated that India could develop exports to Egypt, for a number of manufactured goods, provided shippers paid more attention to the quality of the goods they sent there. At a Press conference, Mr. Fahmy referred to the bright prospects for a joint Indo-Egyptian shipping enterprise to carry the import and export trade between the two countries as the volume of this trade was bound to increase as a result of the Indo-Egyptian payments agreement, although the progress made so far in this direction was not significant. The leader of the Egyptian Economic Mission should have several times during its stay in the city emphasised his suggestion that India should help Egypt with finance and technical know-how in this direction, especially mentioning exploitation of Egypt's voluminous iron ore deposits, besides helping Egypt in establishing factories for the manufacture of electrical appliances and superfine cloth. It was obvious that Mr. Fahmy felt a little embarrassed at the complaint from the Indian textile industry regarding prohibitive prices of Egyptian cotton because all that he could say in defence was that Egyptian cotton was much in demand and that other countries were eager to buy his country's cotton at the current level of prices. It may be noted that imports of Egyptian cotton in India had fallen considerably during the 1952-53 cotton year and even during the current season the quantity imported was comparatively smaller.

Import Policy

The import programme for the first half of 1954 has been well received here by the business community. Mr. Shantilal M. Shah, President of the All-India Importers' Association, in a statement to the Press observed that the trade welcomed the Government's pronouncement in this regard as only a few changes had been made in the existing liberal policy. What led him to voice this satisfaction was that it secured stability on a wider range, gave larger scope for newcomers and extended the scope for grouping of various items, thus providing greater flexibility in imports. In Mr. Shah's estimate, the policy decision on this important subject pointed to a fair attempt on the part of the Government to adjudicate successfully between the conflicting claims of industry, trade and consumers, pointing out the liberalisation of imports of certain commodities such as betelnuts, sheet and plate glass, pearls, essential oils as providing a welcome relief to consumers. Business circles have also favoured the inclusion of additional items for newcomers and actual users. There is some surprise felt at the further restrictions on the imports of as many as 34 items including woollen piecegoods and yarn, umbrella ribs etc., in view of the Commerce Minister's statement at the Import Advisory Council that the policy for the previous half-year had not unduly hurt any industry. The import trade is also a little disappointed over the fact that the Government has not accepted its unanimous demand to include 1952-53 as a basic year. The industrial circles on the other hand are gratified that the Government has allowed larger imports of industrial raw materials and capital equipment. The immediate effect on the markets of the Government's announcement of its policy for the next six months was a rise in the prices of dyes, art silk yarn and umbrella ribs, while there has been a corresponding decline in the imported variety of betelnuts and safety razor blades. In spite of the salutary effect of this announcement, the last day of the year 1953 proved somewhat disastrous for the more speculative markets in Bombay, because of the anxiety emanating from signs of economic recession in the U.S.A., headlined in the morning papers. Cotton, which had been fluctuating wildly during the week, witnessed heavy liquidation by bull operators and lost about Rs. 17 per candy in addition to the loss of an equal amount on the preceding day. Oilseeds were also marked down substantially, while there was nervousness also in the bullion market and the kerb market in equities.

Shipping Company Meetings

The last fortnight has witnessed the annual general meetings of several shipping companies in Western India, such as the Great Eastern Shipping Co. Ltd., the Malabar Steam Ship Co. Ltd., and the New Dhollera Steamship Co. Ltd. While the anxiety about the need for securing a share in the transport of oil along the coast from the new refinery to be established for Indian shipping companies and the need for building up a suitable tanker tonnage with the assistance of the Government, is shared in common by all the companies, some of these meetings have disclosed a rift amongst them about certain other aspects of the trade. This was discernible in the speech to the shareholders of Mr. A. H. Bhiwandiwalla, Chairman of the Great Eastern Shipping Co. Ltd., at its annual general meeting on 24th December. Mr. Bhiwandiwalla criticised the step taken by the Scindia Steam Navigation Co. of resigning from the Indian Coastal Conference as a protest against malpractices resorted to by some steamship companies and observed that it was not by going out of the Conference but by making it more effective that such malpractices could be checked. He said that unhealthy competition amongst Indian companies in the export trade was not widespread so far and was restricted to a few erring members of the Conference which could be eliminated by suitable means. He hoped that a solution of this problem would emerge as a result of discussions amongst the members of the Conference and he appealed to the Scindia Co. not to press its resignation. What was of greater significance in Mr. Bhiwandiwalla's speech was that, without naming any company but obviously hinting at the Scindia group, he initiated discussion along another line which was sure to divide the Indian companies. He said that with the increase in its tonnage and the contemplated expansion by purchase of more ships, this company had a right to expect an increase in share in the carriage of coastal trade, which he suggested could be secured by lines with bigger fleets and greater experience branching out into overseas trade and giving more scope on the coast to new entrants like the Great Eastern Shipping Co. Ltd. Mr. Bhiwandiwalla stated that coastal trading was a nursery in which the new and smaller companies could develop before extending their activities to the more competitive overseas trade and added significantly that those with better experience should take their vessels out of the coast to enable newcomers to develop and stand on their feet. He hoped that both the Government and the lines concerned would view this suggestion in its proper perspective and act upon it.

East India Cotton Association

The East India Cotton Association also held its 32nd annual general meeting on 22nd December. Sir Purshotamdas Thakurdas, President of the E.I.C.A., suggested at this meeting the removal of price control on cotton. He said that there was no justification for any control on the price of this commodity as cloth prices had been decontrolled. It was only as a corollary to the wider need for controlling the prices of cloth that the maximum and minimum rates in cotton were initiated. Sir Purshotamdas said that the cotton grower in the country had been denied the price for his produce based on world parity for the last five years in the interests of the cloth consumer and also for promoting exports of cloth. He asked that he should now be allowed to receive a fair return for cotton, as prices of cloth were no longer controlled. He also criticised the Madhya Pradesh Government for its proposal to levy a heavy sales tax on cotton, which had ultimately to be postponed till the end of June this year, in order to avoid a crisis which had arisen in that area in the marketing of cotton. He considered that the postponement of this levy till June was no solution and appealed to the Central Government to impress upon the Madhya Pradesh Government to abandon this effort of levying a sales tax which amounted to Rs. 25 per candy. Referring to the forward section of the market, Sir Purshotamdas said that forward trading in cotton was not free from all defects, but that the Association was earnest during the last few years to remove these defects. He assured full co-operation to the Chairman of the Forward Market Commission in his efforts to study the working of forward trading in cotton and hoped that Dr. Naidu would pursue the policy of mending matters by removing abuses rather than that of ending established institutions or systems. The ordinary general meeting was followed by an extraordinary meeting when a resolution was passed making Sir Purshotamdas an honorary member, after paying tributes to the services rendered by him to the cotton trade in general and the Association in particular.

IMPORT POLICY FOR JANUARY TO JUNE, 1954

EXPLANATORY NOTE OUTLINES MAIN CHANGES

IT has been decided to apply the import policy for July-December 1953 to the licensing period January-June 1954, subject only to the changes announced in public notice dated 30th December 1953, according to an explanatory note on the new import policy. The import requirements of the country have been reviewed in detail and only such adjustments have been made as have been shown by experience to be necessary for sustaining the tempo of economic development. The import of goods the like of which are produced in the country in sufficient quantity and of reasonable quality has been restricted. In particular, the policy for the imports of engineering stores has been reviewed in order to ensure that foreign exchange is not spent on the import of goods for the production of which idle capacity exists in the country. The restrictions imposed on the import of engineering stores have been separately listed.

Reductions in imports have been effected in a number of ways. In all, import quotas of 34 items have been stepped down: these include such diverse items as table fans and card cans, jams and jellies, lead pencils and hand-knitting wool and also engineering stores, such as brass, lead and copper wrought. There are a number of items which have only been recently taken up for production: for these, as for example electric motor starters, certain varieties of drugs and chemicals and certain types of surveying and mathematical instruments, separate quotas are required to be established. Some minor adjustments have been made in a few other items. List R-III contains a statement of the items in respect of which it has been prescribed that only a small percentage of the licence will be available for the import of goods the like of which are being produced in the country. In the case of five other items, it has been decided that import of goods valued at less than the prescribed figure will not be permitted. Provision has been made for stepping up imports of a few items of consumer interest like betelnuts and safety razor blades. Mainly, however, imports have been liberalised of goods which are required for stepping up industrial production and agricultural development. Import quotas of 22 items have been liberalised. These include plastic moulding powders, essential oils, resinoids, certain types of drugs and flashlight cases. For the rest, the objective of increased imports is sought to be achieved by other means. For a number of items, as for example machinery, electric control gear parts, active finishing agents, scientific and optical instruments, it is proposed to issue additional licences to established importers.

Advantage has also been taken of this opportunity to extend the field of choice available to importers for effecting imports against their licences. The scope of the grouping procedure adopted for the first time during the last half-year has been further extended. The number of groups has been expanded and the statement showing new groups and allied items will be found in List-III. Licences for writing and printing paper are interchangeable; so also the licences for most kinds of fabrics and moulding powders. The restrictions imposed on the use of licences for certain items have been reviewed and wherever necessary these have been more closely defined, or the percentage has been increased or imports from even the dollar area allowed.

The list of items licensable to newcomers and actual users has been amplified. As many as 17 items have been added to the newcomer list. These include palm oil, coconut oil, tobacco, cigars, bath tubs, domestic refrigerators, and watches, etc. Only eight items have been added to the actual user list. The changes in import policy have been categorised in 11 statements. The restricted items have been split up into five categories and the liberalised items into six categories. Different devices have been adopted to seek the desired reduction or increase in imports. A separate category has been given for each device and where more than one device has been applied to a particular item, it has necessarily found place in more than one list. The major changes are contained in Lists L-I and R-I. Import quotas have been stepped up only in the case of 22 items and stepped down in the case of 34 items. For the rest, changes are of a minor nature, small adjustments being made here and there to secure a reduction or increase in imports in respect of specified kinds of goods.

A good book and . . .

a good cup of **TEA** *are ideal companions*

AND A GOOD CUP OF TEA IS MADE THIS WAY

• Boil fresh water • Rinse out teapot with boiled water • Put in one teaspoonful of tea for every person and one extra teaspoonful for the pot • Stand tea for four to six minutes before serving • Add milk and sugar after tea has been poured into cup

* *1,250,000 workers are employed in the Indian tea industry.*

ISSUED BY CENTRAL TEA BOARD CTB·G·54

LONDON INSURANCE LETTER

ENCOURAGING GROWTH OF NEW BUSINESS WRITTEN ABROAD

By Air Mail.

IT can be assumed that the total of new life assurance business emerging this month or next in respect of 1953 will show a further increase, but the rate of expansion is inclined to diminish as the postwar inflation ends and the community settles to steadier monetary conditions. Detailed statistical information is still coming forward in respect of 1952, and it shows a slower rate of advance compared with 1951. The Life Offices' Association and the Associated Scottish Life Offices have lately published the combined figures of their members for the former year. Excluding group business, they show total sums assured, and bonuses, amounting to £4,800 million; comparing with £4,500 million at end-1951 and with £4,120 million at end-1950. For new ordinary life assurances the total was £160 million—an increase of £17 million, against an increase of £75 million during 1951. In group life and group endowment business the rate of increase diminished less, the £159 million newly assured being £30 million more than in 1951, against an increase of £75 million in that year compared with 1950.

An encouraging feature of the returns is the continuing growth of new business written abroad. Again excluding group business, the total of sums assured abroad was £600 million at end-1952—an increase of £76 million on 1951, following an increase of £66 million in that year on 1950. The increase in the rate of expansion abroad is the more notable for being against the trend of the offices' business as a whole.

Group Pensions

An increasing proportion of life assurance is transacted in the form of group pensions, operated by employers. New policies covering deferred pension and life assurance benefits bought under existing and new schemes in this country amounted in 1952 to £48 million (against £40 million) for pensions, to £233 million (against £200 million) for life assurance; and future pension rights of the employees involved exceeded £200 million a year. Total premiums attributable to staff pension and life assurance schemes at home and abroad amounted to £86 million last year, against £72½ million in 1951.

It was not until the 1930s that pensions for employees became a major factor in employment in this country, and their evolution as an important branch of life assurance is still more recent. The respective merits of private pension funds and of those operated by a life office are still debated, but the tendency is in favour of the life offices' skilled service, which is adaptable to the individual case and requires no specially employed personnel to operate it. Particular attention has to be devoted now to older people recently engaged for employment, but the facilities are provided by the life offices for the employer who is willing to use them. This type of insurance service will certainly continue to grow as the wage-earning population becomes more security-conscious. The stage has already been reached where few sizeable firms can afford not to adopt some group pension scheme—the right kind of labour will not be available otherwise. But participants in schemes with pension benefits still numbered only about 1½ million at the end of 1952, whereas the nationally-insured working population numbers well over 20 million. Even allowing that for very small firms such schemes are hardly practicable, there is plenty of scope for further growth.

Speculation in Property

The Bank of England evoked varying reactions with its request to insurance companies not to provide the finance for speculative deals in property. The procedure has been to purchase the freeholds of stores or offices and to lease them back to their former owners. Big financiers who put through such deals have no need to call on insurance companies for funds, but some financiers with smaller resources have occasionally been assisted by, mostly, the smaller insurance companies, in search of lucrative investments. This method of writing up assets is, of course, in the strict sense, uncreative, and most people in the City feel that insurance funds should not be involved in it; apart from the possibility that high rentals will attract high local rates and that the investments, as such, will be unsound. It is also argued, however, that such transactions are sometimes intended to changes the use of properties, with more profit and, therefore, more economic advantage to the community; and that this is an entirely respectable activity for insurance funds.

The British Insurance Association replied, indirectly, to the Bank of England, but in terms so vague as to be almost evasive. "If there were a feeling that any take-over bid would be detrimental to the nation, the insurance companies would be the first to be careful not to facilitate it by financial co-operation." The public could surmise that the Association saw nothing wrong in such deals and would not dissuade its members from participating in them. If so, it could surely have been more forthright in their defence. The tendency—which these property deals often reflect—to segregate ownership from occupation of premises involves changes in the insurance of "property risks." When the owner and the occupier are the same there can be no disputing the liability for accidents, but when a business is carried on by one party in premises owned by another party it is important to distinguish causes—whether due to working or to structural defects.

Jute

IMPROVED OUTLOOK FOR 1954

PROGRESS TOWARDS RAW JUTE SELF-SUFFICIENCY: NEED FOR MODERNISATION OF MILLS

WHILE it is not possible to get an accurate picture of the jute industry in 1953 as compared with 1952 until the complete statistics for the year are available, there will be general agreement that the position in 1953 has shown an improvement and that the position at the end of the year was healthier than it was at the beginning. Raw jute prices have recovered from uneconomically low levels which discouraged the growing of jute to levels which, it is believed, will favour an expansion of the crop in 1954 to, at least, the volume reached in 1952. Possibly, with the impetus given by the Government's scheme for the expansion of the area, the production of higher yields and the development of better qualities, further progress towards self-sufficiency may be achieved.

On the manufacturing side much has been done to adjust output to demand. Mills have increased their output of hessian and are now turning out a bigger percentage of hessian than ever before. There is all the more satisfaction, therefore, in the fact that markets have been found for all the additional output of hessian and that mills' stocks of hessian manufactures have declined during 1953. That is, in a large measure, because of the reduction in the export duties which made Indian hessian once more competitive in the main markets. Markets which had been partially lost are now being recovered and the process is still continuing. There is, however, evidence that those competitors to whom markets were ceded by the Government's taxation policy are not to be pushed out without a struggle. Measures are being taken by them to lower their costs and it is probable that the Government of India may be forced to make a further reduction in the export duty on hessian if they cannot be persuaded to abolish it altogether. Fears are also being expressed that the demand from the U.S.A. may be less in the coming year because of a general reduction in industrial activity. The general production index in the past few months has shown signs of a recession. India must, therefore, make every effort to regain a greater share in America's burlap trade and the Burlap Council has undertaken this task.

On the sacking side, mills have reduced their production to an extent which, it is believed, approximates to the amount of trade lost in the Far East markets, which have almost ceased to buy heavy sacking, not because they do not want it, but because political and economic conditions render it impossible for them to do so. It is generally believed that Australia will later this year decontrol the import trade in jute manufactures and leave it to private enterprise. Information from Australia indicates, moreover, that stocks of cornsacks and woolpacks in that country are not large. Whether or not decontrol takes place in the near future, it appears, therefore, to be probable that Australia will be returning to the market from which she has been virtually an absentee for more than a year. Mills' stocks of sacking have been declining for the past few months and, though it is too early to draw firm conclusions, it looks as if the world will absorb all the sacking that India is at present producing. The price is, of course, still a problem and mills are still in the position of having to sell sacking at a loss but, if it is correct that the mills are no longer producing more sacking than the world requires, the time must come when the mills will be able to demand, and get, a price which will at least cover the cost of production.

On the subject of competition there is no room for complacency. Though the reduction of the export duties has made Indian goods once more competitive they will not remain so unless Indian mills go ahead with modernisation so that their production costs are progressively reduced. Not only must machinery be modernised but the efficiency and output of the workers must be improved. There will be much opposition to both, but both must be done if foreign competition is to be met successfully. In other countries old mills are being modernised and extended and new ones are being built. Pakistan is not yet a competitor because she cannot yet meet her own internal demand. That will, of course, come in time and Pakistan will be exporting to foreign countries. In spite, however, of her modern machinery and cheap jute on the doorsteps of the mills, as it were, Pakistan will be handicapped by an artificially high rate of exchange. That is India's safeguard at present but it may not last indefinitely. Indian mills must, therefore, be prepared to face Pakistan's competition when it comes.

Taking all these factors into consideration it may be said that the industry is justified in entering 1954 with some degree of confidence—certainly more so than at the beginning of 1953. 1954 will, of course, bring its problems, as every year does, but there is at present a sense of satisfaction that some recovery was achieved in 1953 and hope that more progress towards restoring the industry to prosperity will be made in 1954.

Jute Futures Trading

The Government of India has decided to associate the Chairman of the Forward Markets Commission with the Jute Enquiry Commission, and has accordingly appointed Mr. B. V. Narayanaswamy Naidu, Chairman, Forward Markets Commission, as an additional member of the Jute Enquiry Commission. This suggests that the latter body will now pay more serious attention to the problem of futures markets in jute goods and raw jute; it is hoped that a preliminary report might be issued on this subject, even before the Jute Enquiry Commission makes its full report.

Pakistan Raw Jute Sales

It was reported from London that Russia was in the market for 100,000 bales of Pakistani raw jute and Poland for 25,000 bales. Pakistan lately sold fairly substantial quantities of raw jute to Spain, it is understood, against rice.

THE JUTE MARKETS

DURING the two weeks since our last report, considerable business has been done in raw jute though there have been days when mills were showing no interest and prices were quoted lower. With overseas markets closed part of the time for Christmas and the New Year holidays there has not been much enquiry for manufactures though, before the Christmas closing, there was moderate buying of hessian by the U.S.A. and the U.K. Locally there was some buying of heavy goods in expectation of orders from Australia. There have also been the usual fluctuations in the speculative markets with profit-taking and bear-selling at each rise and bear-covering when prices dropped. Mr. Nehru's speeches on the matter of U.S. military aid to Pakistan also caused some nervousness among speculators who look upon the matter as a bear factor. The undertone has, however, been steady throughout the period and it may be said that the general sentiment continues mildly bullish.

Manufactured Goods: Early in the period under review the sacking market was firm on reports of business in cornsacks for Australia and mills were able to sell at prices of up to Rs. 110. B Twills also came in for attention and business was done at Rs. 108 for April-June just before the Christmas closing. After the holiday the market was easier and prices were quoted lower mainly on account of profit-taking by speculators. During the week-end after Christmas prices dropped on account of selling pressure in the fatka market because of the approach of due date but recovered later. There was again a decline during the New Year holidays, which was attributed by some to nervousness as a result of the speeches of the Indian and Pakistani Prime Ministers on the subject of the negotiations between Pakistan and the U.S.A. for military aid to Pakistan. B Twills in the fatka market were at one time as low as Rs. 105. The market opened steadier after the holidays and business was reported in heavy goods, mainly cornsacks. Local buying carried the price of B Twills up to Rs. 108-4 on Monday but the market was again easier on Tuesday because of reports that mills' stocks at the end of December would show an increase.

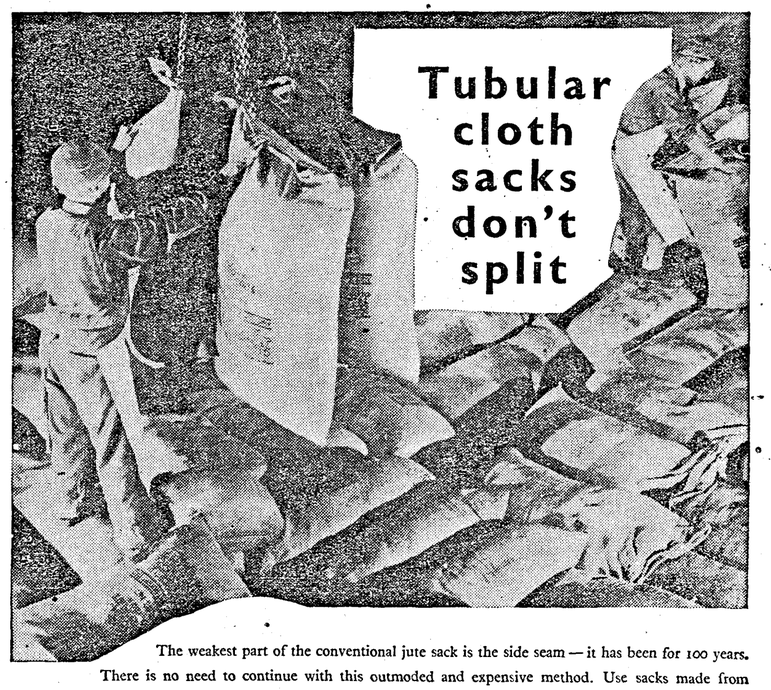
On Wednesday morning quotations are as under. The market is easier because of lack of demand from abroad and nervousness of speculators because of Mr. Nehru's speech.

	Ready.	Jan.-Feb.-Mar.	April-June
40" 8 oz.	38-4	38-0	37-4	36-4
40" 10 oz.	45-14	46-0	45-12	45-2
B Twills	106-6	107-0	107-8	107-8
Heavy Cees	103-8	105-0	106-4	106-8
Cornsacks	108-8	109-0	109-4	109-0

Raw Jute: Before the Christmas holidays considerable business was done with mills in a wide range of qualities and grades at firm rates but there were sellers over at the close. After the holiday the market was easier with sellers pressing for business and quotations were lowered. During the New Year holidays conditions were easy and no business was reported but, when the market reopened, good business was done with mills at slightly higher prices. The following transactions have been reported since our last issue.

Indian Jute:

Dhubri Middles alone Rs. 32-8 to Rs. 33.
Assortment Rs. 28-8 to Rs. 29-8 basis Bottoms.



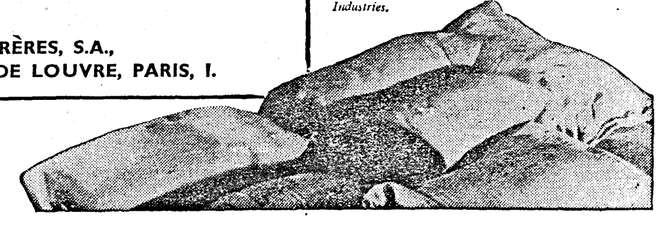
The weakest part of the conventional jute sack is the side seam — it has been for 100 years.

There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

. . . Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

The illustrations show sacks holding 2 cwt. of sodium sulphate being stacked at a factory of Imperial Chemical Industries.

SAINT FRÈRES, S.A.,
34 RUE DE LOUVRE, PARIS, I.



CP 236/42

Northern Middles alone Rs. 32-8 to Rs. 33.
Assortment Rs. 29 to Rs. 29-8 basis Bottoms ex-Agency.
Rs. 27-8 to Rs. 28-8 basis Bottoms ex Calcutta.
Assam Assortment Rs. 28 to Rs. 28-8 basis Bottoms ex Agency.
Rs. 27-8 basis Bottoms ex Calcutta.
Assam Tossa Rs. 30 to Rs. 30-8 basis Bottoms ex Agency.
Murshidabad Tossa Rs. 29 basis Bottoms ex Agency.
Daissee Rs. 31 for Bottoms only.
Daissee Mesta Middles Rs. 31 to Rs 32-8.
Daissee Mesta Assortment Rs. 27-8 basis Bottoms.
Bimli F.A.Q. Rs. 25-8.
Ropes (untwisted) Rs. 22-8.
Dundee Daissee 2/3 S.G. Rs. 180.
Dundee Daissee 2/3 L.G. Rs. 165.

Pakistani Jute :

Northern NC Cuttings	Rs. 69 per bale ex Calcutta.
Jat NC Cuttings	Rs. 75 per bale ex Calcutta.
Habi-jabi	Rs 105 to Rs. 110 per bale.
	Rs. 24 per md. ex Calcutta.
Jat Middles	Rs 34 ex. Calcutta.
Assortment	Rs. 31 basis Bottoms.

At the time of writing mills have withdrawn from the market. Sellers are still keen for business.

On Wednesday morning quotations are as under:

	Landed at Mills. Rs. per maund. Basis Bottoms.	Shipment
Indian Jute :		
Lower Assam	29	Jan.-Feb.
Upper Assam	28	Do.
Northern	28-8	Do.
Purnea	28	Do.
Murshidabad Tossa	29-8	Do.
Daissee Sheoraphuli	31	Do.
Daissee ex Calcutta	30-8	Do.
Daissee Mesta ex Calcutta	27-8	Do.
Bihar Mesta	25	Do.
Bihar jute	26	Do.
Bimli F.A.Q	25-8	Do.
Local packing Northern	28	One month
Local packing free from Jungli	26	Do.
Local packing Jungli	24-8	Do

Tossa prices are Re. 1 to Rs 2 above the prices for white jute: middles are Rs. 3 above the price of Bottoms but sellers are getting a premium for middles alone.

Pucca Bales.	Rs. per bale.
Mill Firsts	180
Mill Lightnings	165
Dundee Daissee 2/3 S.G	180
Dundee Daissee 2/3 L.G.	165
Pakistani Jute ex Pakistan :	**Rs.(I) per maund basis Bottoms**
Jat	31
District	30
Northern	29

The difference between Tops and Middles in the case of Pakistani jute is Rs. (I) 3 and between Middles and Bottoms Rs. (I) 3-8 to Rs. (I) 4.

Mofussil : In Indian markets upcountry imports continue small and all that come in find ready buyers. The general feeling in the districts is bullish and it is reported that everyone in the trade is holding stocks in expectation of higher prices later in the season In most places the quality is low and kutcha balers are finding difficulty in securing the quantity of middles they require. Prices have fluctuated in sympathy with the Calcutta market and are still above Calcutta parity. Imports into Cossipur are averaging about 50 wagons daily and despatches to mills are said to be about the same. Stocks are, however, fairly large.

Before the Christmas holiday Pakistan reported good business done overseas, a feature of which was the buying of grades such as Hearts, Rejections, Habi-jabi and Cuttings in which overseas buyers are not usually much interested. This business firmed up the Pakistani markets and prices were quoted higher, but after the Christmas holiday demand fell off and prices eased. Imports into the main centres are small but not abnormally so for this time of the year. In Narayanganj they amount to 10,000 to 12,000 maunds daily, of which, however, nearly half is taken by the local mills. Mahajans, beparis, aratdars and balers are all said to be holding stocks in the expectation of higher prices. Growers are also holding stocks of both old and new crop and there are reported to be still considerable quantities of old crop which were resold by the Jute Board awaiting disposal. In fact some stockists are still holding jute of the 1952 crop. Quotations are as under:

Jat Rs.(P) 24-8 basis Bottoms.
District Rs.(P) 23-8 basis Bottoms.
Northern Rs.(P) 21 basis Bottoms.
Tossa is quoted at Rs.(P) 4 higher than white jute.

Mill Firsts	Rs.(P) 146
Export Firsts	127
Export Lightnings	114
Export Hearts	86
Dacca Tossa 4's	176
Dacca Tossa 5's	156
Outport Tossa 2/3	125
Outport Tossa 4's	100

FINAL ESTIMATE OF INDIAN JUTE CROP

According to the Directorate of Economics and Statistics, the all-India final estimate of jute for 1953-54 puts the area and production at 1,196,000 acres and 3,128,000 bales (of 400 lbs. each) respectively, as against the partially revised estimate for last year of 1,817,000 acres and 4,605,000 bales—a decrease of 621,000 acres or 34.2 percent. in area and 1,477,000 bales or 32.1 percent in production. The decline in acreage and production of jute has been reported by all the jute-growing States; it is, however, more marked in West Bengal and Bihar and is due mainly to unfavourable weather conditions and low prices of jute at the time of sowing. In parts of West Bengal and U.P., the crop also suffered to some extent from floods and attack of Semilooper pest.

THE FOREIGN JUTE MARKETS

NEW YEAR OPENS WITH ORDER BOOKS FULL

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE jute trade generally closed the year under quite satisfactory circumstances. So far as Dundee spinners and manufacturers are concerned, seldom have they gone forward to another year with their order books so well filled up for delivery over three to four months ahead. Business has been quieter last week on account of the seasonal holidays, but there is evidence that there are still many wants to fulfil.

The British Jute Trade Federal Council have issued a statement saying that the consumption of jute goods in the U.K. in 1953 has been greater than for any year since the war. A record post-war production has also been achieved by spinners and manufacturers. A campaign amongst the large users of jute goods to get them to return to these in preference to the substitutes which they had been forced to use in 1949 and 1950 has been successful. In these years there was a great scarcity of jute goods. Since the war, adds the statement, raw jute consumption in Dundee and district has been almost doubled. Heavy demands for jute yarns by the carpet industry have been made, and an improvement in the linoleum industry resulted in large orders being placed. The industry's post-war modernisation programme has been maintained, and up to the present over £5,000,000 has been spent on new plant and machinery in Dundee alone. Considerable progress has been made with the automatising of weaving looms. There has been the introduction of new automatic looms and the attachment of simple mechanism to existing flat looms that allows the weft threads to be replenished without the looms having to be stopped by the weaver. Further progress has been made in the installation of schemes under the new wages structure. This is based on job evaluation, and, being the first attempt by an entire industry to apply base rate analysis or merit ratings to all the jobs in the trade, the development is creating widespread interest in industrial circles.

Mr. Louis M. Hill, director of Low & Bonar, Ltd., chairman of the British Jute Trade Federal Council, said at the recent annual meeting that the trade in Dundee had solid reasons for looking to the future with confidence so long as no fundamental changes took place. The worst feature of the industry was the inability of producers to secure more labour. Mr. Hill stated that Pakistan was now emerging as an exporter of jute goods and this is a phase which must give particular concern to the Indian mills in particular.

At the annual meeting of the Jute Importers' Association, Mr. R. S. Walker, Director of Jute Industries, disclosed that 806,000 bales of raw jute were imported last season to 30th June, a post-war record. This compared with only 550,000 bales in the previous season. Mr. Walker drew attention to the exceptionally high standard of quality of the jute shipped to Dundee by Pakistan and only 34,699 bales were arbitrated upon last season, compared with 34,918 bales in the previous period.

Prices for raw jute have remained firm and unchanged and Calcutta goods have fluctuated only slightly: 10/40" hessians 75s 6d and 7½ oz. 57s 6d, January, 74s 9d and 56s 6d February-March and 73s 6d and 55s 6d April-June. "B" twills are offered at 172s 6d to the Jute Control for January shipment, all f.o.b. Calcutta.

Commodity Markets

TEXTILE TRADE TRENDS

COTTON BOARD'S LATEST REVIEW

MANY changes in the general trends of world trade in cotton and rayon piecegoods are recorded in the Cotton Board's latest quarterly statistical review. For instance, cotton yarn production in the main cotton textile manufacturing and exporting countries of the non-Communist world in the third quarter of last year appears to have been about 2 percent less than in the second quarter, according to the incomplete information so far available. This cannot be taken as evidence of a declining trend, as holidays reduce the figures for many countries. Because of this, output in the United Kingdom and Western Europe was little different from the previous quarter's total, despite the general upward tendency in activity. As regards the other major producing countries, further substantial increases in output in Japan and India were insufficient to counterbalance a more than seasonal decline in the United States. Compared with the third quarter of 1952, when activity was still severely curtailed by the recession, total yarn output shows an increase of about 8½ percent. Most of the main manufacturing countries were producing at an appreciably greater rate than a year before, the principal exceptions being the United States, Canada and Italy.

Total world trade in cotton piecegoods in the third quarter was only slightly greater than in the preceding quarter, the increase being of the order of 1 percent. The level of cotton textile exports were still below even the low 1952 average rate, and a substantial increase would have to be achieved in the final quarter of the year if the 1953 total were to be even as great as the 1952 total. Once again Japan provided the outstanding performance with a further substantial increase in exports, whilst the United Kingdom, Italy and India achieved more modest increases. On the other side of the balance, exports from both the United States and France appear to have suffered severe reductions. In point of volume Japan is now well ahead of her rivals in the export field. India and the United Kingdom shipped roughly equal quantities in the third quarter, whilst the United States is now a long way behind in fourth place.

World trade in rayon piecegoods remained at the high level reached in the previous quarter. A further substantial expansion in exports from Germany was recorded, and this, together with a smaller increase in shipments from the United Kingdom, was sufficient to balance a sharp decline in the trade of the United States. Exports from Japan were virtually unchanged from the previous quarter; in volume they are at least twice as great as exports of rayon piecegoods from any other country.

The decline in the weekly output of the United Kingdom cotton industry in the third quarter of the year was entirely due to the incidence of holidays. Compared with the corresponding period of 1952 yarn output showed an increase of 38 percent and cloth output one of 31 percent. The latest figures show yarn output to be running at about 9 percent below the pre-recession peak, cotton yarn output having declined by 16 percent and spun rayon and mixture yarn output having increased by 57 percent. It would seem, however, that staple fibre has reached the limits of its advance in Lancashire, at least for the time being; output of spun rayon yarns has been stable for some weeks, whereas cotton yarn output has been increasing steadily. Cloth output in October was also about 9 percent below the postwar peak level, cotton cloth output having declined by about 13 percent and rayon and mixture cloth output having increased by about 2 percent. Here, also, the increase in the output of cotton cloth since the beginning of the year has been much more pronounced than the increase in rayon cloth.

Exports of cotton piecegoods from the United Kingdom increased from 169 million square yards in the second quarter to 182 million in the third quarter. It should be noted, however, that the high figure of 67 million square yards achieved in July was not repeated in any of the three subsequent months. The main reason for the increase was clearly the relaxation of the restrictions on imports into Australia, trade with this market increasing from 20 million square yards in the second quarter to 34 million square yards in the third quarter. Changes in the other markets were relatively minor—a slight increase to British West Africa and a slight decrease to the Union of South Africa. Trade with New Zealand and British East Africa has been expanding steadily for some time, but exports to Malaya and Singapore have been declining. Exports of rayon piecegoods registered a further increase in the third quarter of the year, though the volume of trade is still below the 1950-1951 level. As in the case of cotton piecegoods increased trade with Australia and New Zealand accounts for much of the expansion, but it is noteworthy that Southern Rhodesia and British East Africa have now become important markets for British rayon piecegoods.

Less U. S. Activity

Cotton consumption in the United States suffered a sharp decline in the third quarter of the year which does not appear to have been entirely seasonal in nature. Indeed the rate of consumption in each of the three months of August, September and October was below that of the corresponding month of 1952. Moreover, order books have been contracting, although mill stocks of cloth remain low and mill margins steady. Possible contributory factors to this downward tendency, in addition to the general slight falling off in business activity, are reduced military expenditure on textiles and the decline in cotton piecegoods exports. Cloth output figures for the second quarter of the year, the latest so far available, reflect the higher level of activity prevailing then. Compared with the corresponding quarter of 1952 cotton cloth output showed an increase of about 14 percent and rayon cloth one of about 22 percent. It is reported, however, that in certain apparel uses cotton has been regaining ground previously lost to rayon and other synthetic fibres.

Exports of cotton piecegoods from the United States declined from a monthly average of 59 million square yards in the second quarter of the year to an average of about 46 million square yards in July and August. Exports to Canada were severely reduced, and this market, which had been the United States' most important export outlet for so long, took second place to Indonesia in these two months, with the Philippines third in importance. There were also sharp reductions in shipments to the Philippines, Cuba and Venezuela, whilst Indonesia was one of the few important markets to take more American cloth. Exports of rayon piecegoods also suffered a severe setback in July and August, the main factor being a steep drop in shipments to the Philippines, which thus lost its place as the most important market for American rayon cloth to Canada.

Japan Returns to Pre-War Level

Output of both cotton yarn and spun rayon yarn in Japan again increased markedly in the third quarter of 1953. So did that of spun rayon fabrics, but cotton cloth and continuous filament rayon cloth production was slightly below the previous quarter's level. This decline seems to have been due to holidays in August and output is reported to have been at record post-war levels again in September. It is noteworthy that production is now not far short of the 1939 rate.

Exports of cotton piecegoods from Japan increased from 206 million square yards in the second quarter to 242 million square yards in the third quarter, a remarkable recovery from the low point of 143 million square yards reached in the third quarter of 1952. The October figure is reported to show yet a further increase to 85 million square yards. Once again the main feature of the quarter's trade was the increased shipments to Indonesia, which reached the extremely high level of 98 million square yards. Exports to Hong Kong were also much higher at 24 million square yards, this being Japan's second largest market. Exports to a large number of other destinations were also greater, including Singapore, Australia, Holland, Burma and the Philippines, whilst the United Kingdom and Iran were almost alone among Japan's principal markets in taking appreciably less than in the previous quarter. The reasons for Japan's good export performance include, besides the effect of last year's trade agreement with Indonesia, the linking of currency allocations for raw cotton with export performance, the easing of import restrictions in certain Sterling Area countries, and the conclusion of barter deals with some Middle Eastern countries. Exports of rayon piecegoods in the third quarter were steady at the high level reached in the second quarter. There was little change in the amount going to the different markets, the most important of which are Indonesia, the Union of South Africa, Iraq and Hong Kong.

Indian Production Rising

Mill production of cotton yarn and cloth in India increased yet again in the third quarter of 1953, although the August and September figures were somewhat less than the all-time records reached in July. How much farther this expansion in output, which has gone entirely to the home market, will go is uncertain as there have been reports of increasing stocks of cloth and growing sales resistance, particularly in the case of fine and superfine qualities.

Indian exports of cotton piecegoods were appreciably greater in the second and third quarters of 1953 than during the previous six months. The increase in shipments to Burma has been outstanding, and this is now India's largest overseas market. Australia, Indonesia, and British East Africa have also been taking increased quantities of Indian cloth, but trade with Singapore has been dwindling steadily over the last twelve months. In an effort to stimulate the export trade the government abolished the export duty on medium cloth and agreed to refund the import duty on foreign cotton which is manufactured into cloth for export.

Production of cotton yarn and cloth in the Western European countries considered as a whole was much the same in the third quarter of 1953 as in the preceding quarter, despite output losses due to holidays, and about 16 percent greater than in the third quarter of 1952. Conditions vary in different countries: the German and Dutch industries seem currently to be faring better than most, whereas the Italian industry is still in a very depressed state, particularly the spinning section.

Exports of cotton piecegoods from the Western European countries in the third quarter were at a somewhat lower rate than in the second quarter, as French exports, after being well maintained for so long, were apparently much reduced. Exports from Italy recovered from the very low levels to which they had fallen in the previous six months; a revival of trade with Turkey and increased exports to Iraq are the main reasons for this increase. Dutch exports have also been rising, thanks to increased trade with Indonesia, and smaller German exports to Scandinavia and Holland were more than made up for by increased shipments to Turkey, Syria, Egypt, Morocco and the United Kingdom. Exports of cotton piecegoods from Spain also revived in the first half of the year, Iran, Turkey and Canada becoming important markets.

In the rayon piecegoods trade exports from Germany continued their impressive advance, and are now running at almost three times the 1951 rate. The United Kingdom, the Union of South Africa, Sweden and Denmark all took appreciably greater quantities in the third quarter. The partial recovery in demand for Italian rayon goods was maintained in the third quarter when exports to British West Africa and Hungary were at a substantially higher rate than in the preceding quarter.

CANE PRICES IN NOVEMBER

On the basis of returns received from Central sugar factories, the Director of the Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during November, 1953 reports as follows: (a) the total price of cane for maund (including co-operative society's commission, transport charges etc., but excluding cane cess), at the factory as follows:

	Maximum Rs.As.P.	Minimum Rs.As.P.	Average Rs.As.P.
Uttar Pradesh	1 9 11	1 7 8	1 8 3
Bihar	1 7 6	1 7 6	1 7 6
Madras	— — —	— — —	— — —
Andhra	— — —	— — —	— — —
Bombay	1 13 0	1 4 7	1 9 0
All India	1 13 0	1 4 7	1 8 2

(b) The portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum Rs.As.P.	Minimum Rs.As.P.	Average Rs.As.P.
Uttar Pradesh	1 7 0	1 5 7	1 6 5
Bihar	1 6 0	1 6 0	1 6 0
Madras	— — —	— — —	— — —
Andhra	— — —	— — —	— — —
Bombay	1 9 11	1 9 11	1 9 11
All India	1 9 11	1 5 7	1 6 7

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939 as 100), advanced by 0.9 percent to 390.3 during the week ended 19th December, 1953, as compared with 387.0 (revised) for the previous week. The index was, however, lower by 0.3 percent relative to the corresponding week of the previous month but was 4.7 percent higher than that of a year ago. During the week under review, Foodstuffs showed a rise of 1.2 percent to 367.6 owing to higher prices of gur (+6%), bajra (+5%), dal arhar (+4%), wheat and tea (+3% each) and gram at Hapur (+2%). Industrial Raw Materials advanced further by 2.9 percent to 465.2 as a result of increases in the prices of raw wool (+12%), export prices of manganese ore (+7%), linseed and rapeseed (+6% each), raw cotton and gingellyseed (+5% each), raw silk, groundnuts, cottonseed and lac (+3% each). The index for Semi-Manufactures stood at 355.7 as compared with 356.0 (revised) for the previous week, as the effect of lower prices of groundnut

cake (−10%), tanned sheep skins (−2%), coconut oil at Cochin, cotton yarn and copper (−1% each), was almost offset by advances in linseed oil (+7%), mustard oil (+4%), coconut oil in Calcutta, groundnut oil and gingelly oil (+3% each), tanned goat skins, castor oil and brass (+1% each). A fall of 2 percent in the prices of rayon and silk manufactures brought down the Manufactures group index from 363.8 to 363.5 during the week. The Miscellaneous group index rose by 0.3 percent to 712.4 on account of higher prices of cashewnuts (+4%) and black pepper (3+3%), chillies, however, moved down by 1 percent.

INDEX NUMBERS BY GROUP AND SUB-GROUPS

(Base: Year ended August 1939 = 100)

Groups and Sub-Groups	Week Ended 19-12-53	12-12-53	21-11-53	20-12-52

SUGAR PRODUCTION AND STOCKS

Opening stocks of sugar with factories in India on 1st November, 1953, were 1.96 lakh tons as against 4.96 lakh tons on the corresponding date of the previous season, but arrivals of foreign sugar in November totalled 36,000 tons and 1.56 lakh tons are expected to arrive in December 1953 and January 1954. Of the stocks with mills, 45,000 tons of sugar were despatched during the fortnight ended 15th November, as against 39,000 tons in the corresponding period of last year. Closing stocks on 15th November were 1.54 lakh tons as against 4.64 lakh tons on the same date last year. The total production of sugar during the first fortnight on November was 3,000 tons as against 7,000 tons during the corresponding fortnight of the previous season.

COAL BOARD ASSISTANCE TO MINES STOWING FOR CONSERVATION

The Coal Board some time ago suggested that, pending the publication of the Rules under the Coal Mines (Conservation and Safety) Act, the Government should sanction assistance to coal mines in cases of stowing for conservation of coal, as they have been doing in case of stowing as a safety measure. The Government has accepted this proposal and has authorised the Board to afford assistance, as an interim measure, to collieries for stowing operations for *conservation* on the same terms and conditions on which aid is at present sanctioned by them for stowing under the Coal Mines Safety (Stowing) Rules, 1939. The assistance will, however, be subject to the condition that the amount and the rate of assistance for stowing for conservation shall not exceed the amount and rate allowed for stowing for safety in coal mines and the amount of assistance will be limited to Rs. 1 lakh in each case.

Calcutta Markets

STRONG GENERAL DEMAND IN DUST AUCTION

RATES SIX PIES TO ONE ANNA HIGHER

AT Sale No. 28, held on 5th January, offerings in the Dust auction consisted of approximately 22,000 cases. There was again a very strong and active general demand for all descriptions, commonest sorts being the strongest feature of the sale. The sale, which opened fully firm to ½ anna dearer, strengthened as it progressed and at the close prices were 6 pies to 1 anna above last rates.

Offerings of other grades consisted of approximately 3,500 cases and these met with a very strong general demand at dearer rates. Prices generally advanced by 1 to 2 annas per lb. Because of the Christmas Holidays there were no sales after 22nd December. The next Export sale will be held on 11th January.

LITTLE BUSINESS IN FREIGHT MARKETS

QUEENSLAND REPORT OF U.S. COAL ORDER

NOT a great deal of business has been concluded in the past fortnight, chiefly because of holiday influences; and, with the exception of the Eastern market, rates have shown little change.

A number of ore fixtures have been arranged from Mormugao at varying rates. Japan has paid $7.60 and 58s 6d whilst business has been done to the Continent at 56s 6d February-March shipment and 59s 3d January-February. A cargo was also arranged from Madras to Rotterdam at 55s. In the coal trade there is an unconfirmed report of the fixture of a 6,000-ton vessel at over 60s for Japan but other charterers still indicate only 55s. Local shippers are endeavouring to obtain a cover for 200,000 tons coal to Korea for shipment in the second half of this year and in this connection a recent report from Australia is of interest. This report states that a Japanese vessel sailed on 22nd December from Bowen, Queensland, with nearly 8,000 tons of high-grade Collinsville coal for the U.S. forces in Korea. The shipment is the first of an order for 100,000 tons. The Queensland Government is hoping that the shipment will convince the U.S. authorities that the coal is one of the world's best for coking and steaming purposes and that additional orders will follow. Queensland is at present in the process of developing rich coal deposits that exist in several parts of the State, and is looking to Japan and Korea as an important export market for this coal.

There was a fair movement of wheat from British Colombia to Japan at rates ranging from $6.60 to $6.70 for January shipment. Further cargoes of grain were arranged from Black Sea to South America at 45s and there was a moderate demand in the River Plate market for cargoes to U.K.-Continent. The time charter market was rather quieter than of late.

you have been

WARNED!

Violating Railway Rules and ignoring safety measures, passengers often carry explosives and inflammable articles as personal luggage. Such practice is known to have started fires in compartments, causing loss of life.

It is not only strictly against the Railway Act to carry explosives sonal luggage but it is against and inflammable articles as peryour own safety.

Explosives and Inflammable Articles cannot be carried as Luggage in Compartments or Brake Vans under any circumstances.

EASTERN RAILWAY

LINSEED

Although there was a general reaction in the market during the past week and the price level was lower, an underlying firmness prevailed because of a shortage of supplies. The demand from local mills eased slightly, and although arrivals were poor buyers were not inclined to make purchases at higher prices. The actual turnover was small. Prices in the oil section also showed a decline following diminished enquiries. Latest quotations were based on: Ready Rs. 21-12 per maund.

HIDES AND SKINS

The market in hides and skins was firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 22nd December, 1953, and 4th January, 1954)

Cowhides: Wet salted (Ord) 11,500 pcs. on the basis of Annas 8-6 to Annas 9-9; Wet salted (Ord) 10,000 pcs. on the basis of Rs. 8 to Rs. 9; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 10-8 to Rs. 22-12.

Goatskins: Wet salted (Daissee, Killed) 83,290 pcs. on the basis of Rs. 280 to Rs. 440; Assam-Dinajpur-Murshidabad 58,400 pcs. on the basis of Rs. 315 to Rs. 350; Purneah-Kissenganj 19,450 pcs. on the basis of Rs. 290 to Rs. 325; Patna (Ord) 27,820 pcs. on the basis of Rs. 210 to Rs. 240; Muzafferpore-Darbhanga-Pakur-Patna 1,11,900 pcs. on the basis of Rs. 265 to Rs. 280.

Bazar Stocks

(4th January, 1954)

Cowhides: Wet salted 1,03,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 53,000 pcs; Assam-Dinajpur 38,500 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,91,000 pcs.

SUGAR MARKET REVIEW

During the fortnight ended 5th January, sugar consumption was normal, stocks amounted to about 10,000 bags and arrivals were 15,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 30-8 a maund for ordinary grain and Rs. 32 for big grain. There was a good demand for mill delivery sugar from Bihar and Assam. Because of booking restrictions via Katihar, prices rose in Assam. In Calcutta the ready market was dull. A steamer arrived with about 54,000 bags of British refined sugar. More steamers are expected to arrive in January.

SHELLAC MARKET REPORT

The market, at the beginning of the fortnight to 5th January, was steady. It became dull during the middle and small business passed. A firmer tone prevailed in the market towards the end and moderate business passed. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 130 buyers, 130 value
Pure Buttonlac	Rs. 122 buyers, 122 value
Lemon No. 1 Shellac	Rs. 125 buyers, 128 done & buyers
Lemon No. 2 Shellac	Rs. 120 buyers, 121 done & buyers
F. O. Std. I Shellac	Rs. 114 to 117 done & buyers
Pure TN	Rs. 112 basis done & buyers
4% I.T.N.	Rs. 105 to 104 buyers
No. 1 Kusmi Seedlac 3%	Rs. 126 buyers, 125 value
No 2 Kusmi Seedlac 3%	Rs. 117 buyers, 117 done & buyers
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 112 to 110 value, 110 buyers
Fine Bysaky Seedlac (C.P.) 3%	Rs. 105 value, 102 to 103 done & buyers
Ordinary Bysaky Seedlac Under 5%	Rs. 100 value, 96 to 98 done & buyers
Ordinary Bysaky Seedlac 5%	Rs. 95 value, 93 to 94 buyers
Kireelac	Rs. 56 buyers

Shipments during December were 27,160 packages.

Engineering and Transport

ROAD VEHICLE COSTING

CONTROL BY COMPARISON WITH ESTIMATES

RESULTS of research carried out by a joint committee of the Institute of Municipal Treasurers and Accountants and the Institute of Cost and Works Accountants into the methods of controlling the costs of road goods vehicles in the service of local and public authorities have just been published in a booklet *Transport Costing**. While the research was specifically conducted in relation to the type of undertaking referred to, the procedures suggested could easily be applied to other classes of goods or passenger transport, especially those over short distances.

The authors enter a plea for less rather than more costing; much costing information at present prepared by many authorities appears to serve no useful immediate purpose. It is often prepared because it is thought that it might be useful some day—perhaps to help in settling policy, perhaps to show the extent of changes in costs or in price-levels. Sometimes these requirements fully warrant the effort involved; sometimes they do not. But although information serving no present purpose may be useful later on, nothing can be said for it if its mass becomes so enormous that no one ever has the time to extract from it precisely the data required. Two aspects of cost accountancy—first the need for a good standard of comparison, and second the need for costing data to have a clear purpose—are fundamental, yet are too often ignored.

Fixed and Variable Costs

About two-thirds of the total cost of motor haulage represents the wages of drivers, licences, insurance, depreciation (or capital charges), and garaging. About one-sixth covers repairs to the vehicle and renewals of parts, and the other sixth comprises fuel. These proportions are only approximate but they are important because they indicate where economies will most probably be obtained. It will be seen that the greater part of the expenditure incurred in operating a motor vehicle arises merely from having it available for running; the amount of effective work done influences this particular part of the total expenditure relatively little.

The first step in order to operate a fleet of vehicles economically is to have systematic and exact information about the type and amount of transport required from that fleet. It is desirable, therefore, that instructions to drivers should be based on requisitions from those who require transport. Having received the requisitions the superintendent (or other employee, however designated) has the opportunity at this stage to allocate the vehicles available to the jobs for which they are most suitable and to assess the time they will be occupied on these jobs.

Tests of Utilisation

Log sheets should be certified by the superintendent, who should bear in mind his responsibility regarding idle time and wasteful running. Generally speaking, ton-miles do not form a satisfactory unit for satistical purposes, where materials of varying bulk and types are carried; where a uniform commodity is carried, ton-miles may be adequate. The total tonnage carried by each vehicle, however, may be some indication to the superintendent of those vehicles whose log sheets deserve a closer examination. He may find useful the calculation of miles per hour each day (or simply the daily miles run), as an indication of vehicles which have moved little during the day, and he will investigate those cases where the vehicle has not been occupied all day.

One form of information which is essential, both to assist the superintendent and also to indicate how efficiently his department is operating, is a statement of total utilisation for a period (see table). This entails the preparation of estimates of utilisation for each class of vehicle. The period to which the estimates relate may be quarterly or longer, although comparisons of actual with estimate should be reasonably frequent.

Costing Repairs

Among the various ways of costing repairs two principal methods can be discerned. The first depends upon comparisons between costs of similar vehicles, the second upon comparisons of costs with estimates. To compare repair costs of similar vehicles it is necessary to determine the cost of each individual vehicle, although it may be satisfactory to group costs of similar vehicles. If groups are used a simple average cost per vehicle can be obtained, say each year, so that the yearly cost of each vehicle can be compared with earlier years, with other vehicles in the same year, and possibly with the costs of other authorities.

These tabulations will disclose where expenditure appears abnormal, and, if they are used with a narrative record of repairs, may identify costs which seem unreasonably high. This method of comparing costs between vehicles is bound to be complicated and lengthy, and the possible explanations of differences will be so numerous that it may never be entirely satisfactory. It generally results only in enquiries being made about the few matters which seem to defy explanation, but such enquiries may have some value in keeping up the standard of efficiency in the repair shop.

Much more effective control is obtained by comparing costs with estimates, provided that the estimates are based upon a reasonable standard of efficiency in carrying out repairs. One method in use is to allow a standard cost per mile varying with the type of vehicle. This cost per mile is applied to the periodical mileage of each group of similar vehicles, and actual repairs costs for the group are compared with the result of that calculation. Another method is based upon an estimate of the cost of repairs to each vehicle in the ensuing period. This estimate is made after an examination of each vehicle and the actual cost is regularly compared with it. A third method involves the preparation of an estimate for every repair job of any size. In so far as the jobs are repeated, one estimate for each kind will do. Decarbonising is an example; when the estimate is established as satisfactory standard, the periodical total expenditure on decarbonising can be compared with the standard multiplied by the number of jobs done.

Even where individual estimates are necessary the accumulation of experience facilitates the preparation of further estimates and the position may be reached where it becomes unnecessary to determine the actual cost of every job for comparison with the estimate. Comparisons may then be made on the basis of the total expenditure on each class of work. while few authorities have so far attained this level of skill in estimating, it may well be that this method of controlling repair shop efficiency will be used more widely.

Repair Classification Method

The most common method used in allocating the cost of vehicle is to charge for the use of vehicles at a rate per hour, although a rate per mile is sometimes suitable (e.g., for cars), and there are examples when an hourly rate is used for that part of the expenditure which is roughly proportionate to time, and a mileage rate for such items as repairs and fuel which are chiefly influenced by mileage. In a few instances, when vehicles are entirely used on one service which requires no further allocation, the total cost of the vehicles is charged to that service.

Vehicle rates are generally estimated at the beginning of a period and used for charging until circumstances change to such an extent that the estimate needs to be varied. In practice it will be found better if vehicles of similar type bear the same rate; a separate rate for each vehicle appears to be straining after an unobtainable accuracy. Several items of vehicle costs (e.g., depreciation) cannot be determined accurately for each job on which a vehicle works, and this limitation on the precision of allocating haulage costs should be recognised. It is necessary to be on guard against methods which, at high cost, appear to achieve accuracy, but in fact do not

Finding Rate per Hour

The following method for an hourly rate seems reasonable:

(*a*) Vehicles should be divided into groups of similar types in order to estimate one rate for each group.

(*b*) The average running hours per vehicle in each group are estimated for the ensuing year.

(*c*) An hourly rate is calculated for wages of drivers, allowing for wages, overheads (such as insurance, holidays, supervision, etc.) and idle time. It may be desirable to have alternative rates to be used if a second man is carried or if overtime pay is earned.

(*d*) An hourly rate is calculated for relatively fixed items such as licences, insurances, depreciation, and garaging.

(*e*) An hourly rate is calculated for repairs and renewals. The actual cost of repairs to each group may not be available as a guide to the estimated cost for the ensuing period, but some information should be available, either to find the approximate cost in the past, or to estimate the cost of work likely to be needed. The cost of tyres will be estimated with the aid of tyre mileage figures and the average miles per hour experienced in the past.

(*f*) An hourly rate for fuel and lubricating oil (allowing for handling expenses) can be similarly obtained from the statistics of miles per gallon and miles per hour.

The total rate per hour is applied to the times shown on the vehicle log sheets, and this rate need be changed only when there is a significant variation in its basis. There are a number of well-known procedures for dealing with the under- or over-recovery of expenditure, of which the simplest is to carry forward to the next period and adjust rates if necessary. Construction of a mileage rate is by a similar set of calculations.

Company Meetings

THE ASSAM RAILWAYS AND TRADING COMPANY LIMITED

PROBLEM OF RISING COSTS

The seventy-third ordinary general meeting of The Assam Railways and Trading Company, Ltd., was held on 17th December, 1953 at Winchester House, Old Broad Street, London, E.C., Col. C. F. Birney, D.S.O. (the chairman), presiding.

The Chairman said:

The revenue account shows a trading balance of £207,529, some £76,000 less than last year. The decrease occurs in both the collieries and the timber mills. Generally speaking, expenditure has increased in every department owing to increase in wages and salaries; we are also having to pay increased royalties on coal and timber to the Assam Government.

The income from subsidiary companies and trade investments, amounting to £27,095 gross, was much the same as last year—a satisfactory figure.

On the left hand side of the account you will notice a substantially lower figure for taxation. This is mainly due to decreased profits. It will also be seen that the unilateral relief allowed in the U.K. was equal to 100 per cent. of the Indian taxation. Excess Profits Levy was payable for a full year instead of for three months only. The net result is a figure for taxation of £109,723, against £156,049 last year.

Below the line, the final results are improved because our auditors consider that an amount of £20,000, over-provided in former years for taxation, is no longer required. So that, adding this to the net profit for the year and the carry-over from the previous year, there is a sum of £105,038 to be dealt with, compared with £131,856 last year.

Your directors think it wise to continue the policy of building up reserves and £20,000 is added to the reserve for development (£30,000 last year) and £25,000 to general reserve, which figures will then stand at £200,000 and £225,000 respectively. Your directors recommend the payment of a dividend of 10 per cent. on the "B" stock (a dividend of 8 per cent. having already been paid on the "A" stock) leaving a carry-forward of £29,993.

Balance-sheet Features

There are one or two items on the balance-sheet which call for comment.

Last year I referred to the large figure in the balance-sheet for stocks, stores, sundry debtors, etc. The sum locked up in stocks and stores tends to grow, requiring additional working capital. Your directors have given special attention to this matter, and although a general increase in the volume of business in recent years, particularly in the output and sale of tea chests and fitments, must involve some increase in the stocks, every effort is being made to keep the figure as low as possible, consistent with the need for maintaining regular production.

On the left-hand side of the balance-sheet shareholders will have noticed that the amount outstanding for taxation at March 31, 1953, was the lowest for several years, being only £61,384 compared with £214,000 three years ago. It is satisfactory to note that these arrears of tax have been reduced, showing a much cleaner balance-sheet.

My remarks so far have referred to the year ended March 31 last. Since then, though the monthly accounts so far received indicate results somewhat less favourable than a year ago, I am hopeful that the final results for the year may not be substantially lower.

Coal

I would like to leave you with a general picture of your business in Assam today. As regards coal, our new colliery at Tipongpani, which is still being developed, is expected to come into full production during the course of the next few years. Like our older mines, this is worked "to the rise," and therefore there is no substantial difficulty as regards water. But being in the hills, surface transport to railhead adds considerably to the cost per ton.

There are large reserves of coal at lower levels, where mining "to the dip" will have to be carried out, with all its additional problems of pumping out the water. Our Namdang mine, which is now being developed some 800 feet below the main entrance, is of this kind.

The demand for our coal is satisfactory so far as quantity is concerned. But as regards price, we are still required to sell at the price fixed by Government five years ago, in spite of the increases in cost since that date. This is now under fresh consideration; but I am afraid it is not fully appreciated in Government circles that no enterprise such as mining can be expected to flourish unless it is permitted to earn the market rate for risk capital. I say "not fully appreciated" advisedly, because while there appears to be some divergence of opinion in official circles in India as to what is a fair return for risk capital, there has been evidence recently that a more realistic view may be gaining ground than has hitherto been the case. I refer, of course, to the Tariff Commission's recommendation following the application by the Tata Iron and Steel Company for an increased return on their capital, mentioned by the chairman of that company in his speech to shareholders on September 3, 1953. It is to be hoped that the Government of India will find it possible to reconsider the position they have taken up, and to agree that the full amount of capital at charge—as distinct from the nominal capital—should be permitted to earn an adequate return, having regard to the risks involved.

Timber

On the timber side, where the sale of tea chests has been your main source of revenue, competition is growing. The Government of India, spurred by the need for assisting indigenous industries, have practically stopped the importation of tea chests or panels. The tea industry's demand for tea chests is of the order of 5m per annum, and it is said that India's plywood industry can produce much more than this.

Shareholders will no doubt be aware of the short-lived but severe crisis in the tea producing industry in India towards the end of 1952, owing to uneconomic prices for common teas at that time. Final figures are not yet available, but the impression so

(Continued from foot of next column)

THE CONSOLIDATED TIN MINES OF BURMA, LTD.

IMPROVED RESULTS

MR. W. J. C. RICHARDS' SPEECH

The twenty-third annual general meeting of Consolidated Tin Mines of Burma, Ltd., was held on 18th December, 1953 at Alderman's House, Bishopsgate, London, E.C.

Mr. W. J. C. Richards, chairman of the company, presided.

The Chairman said: The deplorable conditions which have prevailed in that part of Lower Burma in which our mines are situated and which I have described to you at the last two meetings have persisted. We remain virtually dispossessed of our mining properties, and our general manager and other British employees have not been permitted to visit the mines since January, 1950.

Illicit mining continues unabated, and as it is unskilled it is detrimental to future ordered exploitation if conditions ever improve to justify it. Such steps as the Burma Government have taken to restore law and order in the district have not been effective. As a consequence the company's operations have again been restricted to the business of ore buying and the separation of mixed concentrates.

Capital Reserve Increased

The report and accounts for the year ended 31st March, 1953, which are presented for adoption today, do not, I think, require explanation. There are, however, a few items which call for comment. There has been a welcome increase in the capital reserve which is due to certain capital receipts during the year, the chief item being the recovery of £33,946 in respect of the company's claim for concentrates extracted by the Japanese and recovered on the reoccupation of Lower Burma. There has also been a small and final ex gratia payment of £530 from H.M. Government for capital rehabilitation. These payments being of a capital nature are not being distributed and the cash position of the company is thereby improved. Excess of current assets over current liabilities on the date of the balance-sheet was in the region of £200,000 which is equivalent to approximately two-thirds of the company's issued capital.

Stocks of concentrates at 31st March last were considerably higher than in the previous year but I am pleased to be able to tell you that these stocks have since been realised profitably in spite of the heavy fall in the market price of both tin and wolfram.

The group profit for the year of £30,812 compares with £13,181 for the previous year. This is a creditable achievement as the price of tin and wolfram followed a downward course throughout the year and we were unable to make forward sales as experience has shown that we cannot be sure we shall be able to ship our stocks even if they reach the port of shipment, nor can we estimate the quantity of ore we shall be able to buy.

The improved results enable the Board to recommend for your approval a dividend on the issued share capital of 7½ per cent., less tax at 9s in the £.

Government's Suggestion

Shareholders will have seen from the directors' report that the Government of the Union of Burma has suggested that the tin mining companies operating in Lower Burma should combine and enter into a joint venture with Government. The discussions so far have been no more than exploratory and your directors have intimated that they are willing to consider Government's proposals. The terms must of course be equitable and acceptable to mine-owners and there is no reason to suppose they will not be.

There is also a strategic aspect. We feel that as we are a British company we must endeavour to arrange that our production of wolfram will at all times be available to H.M. Government. The preliminary step of amalgamating the mining companies is likely to be the most difficult and until it has been achieved the joint venture with the Government must be regarded as remote.

I must again warn shareholders against undue optimism regarding profitable mining in the future. Co-operation with Government in a joint venture will not of itself afford protection and the restoration of security should precede the partnership which is now suggested.

Mineral Products Ltd.

Our subsidiary—Mineral Products, Ltd.—has again had a profitable year's trading and, although a reduced dividend was paid, the undistributed profits were increased by £1,300.

I express the Board's thanks to Mr. P. R. Maddox, the acting general manager, and his small European and Asiatic staff in Burma who have given unremitting and efficient service during another hazardous year. More particularly, we acknowledge the services of our colleague, Mr. P. E. Day, who has had executive charge of all our transactions.

The report and accounts were adopted.

(Continued from previous column)

far is that in 1952 there was more loss than profit in the Indian tea producing industry as a whole. One result of this, so far as your company is concerned, was that individual tea companies began to curtail their orders for tea chests and to live on their stocks or from hand to mouth. While this, of course, could not be expected to be more than a very temporary palliative from their point of view, it did constitute an unwelcome setback in our sales of chests at the end of 1952-53, and our stocks increased. In 1953-54 our veneer mill has had perforce to work a certain amount of short time. The picture, however, would not be complete if I omitted to point out that our production and sales of chests, since we installed more machinery, are about twice as high as they were six or seven years ago and in spite of the increasing competition to which I have referred, I am glad to say that our chests continue to enjoy a high reputation on the tea gardens in India and in the tea markets throughout the world.

The report and accounts were adopted and the dividend, as recommended, was approved.

Option of Repayment.
(t) 1 months notice (v) 1 month's notice (w) Any int day. (x) 3 months notice (y) 3 months notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1945 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year.

(B) But before 21st December 1968 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at pay in the event of the undertaking being purchased by the Corporation of Calcutta or Howrah on 1st January 1945. or every seventh year thereafter.

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft.

(E) The holders of these Debentures have the right to convert their into shares of Rs 10 each between 1st January, 1933 and 31st December 1949 on giving 6 months' notice one Bond being exchangeable for 50 Ordinary shares.

(F) Redeemable (a) at 102 per cent on 1st October, 1974 or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent. The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 for every £1½ of the stock. All Ordinary Shares thus converted will rank for dividend pari passu in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised.

(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 10 Ordinary Shares of Rs 10 each on 1 month's notice.

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946.

(K) Repayable at par by 1986 by annual drawings on 1st July each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M) At par by 12 annual drawings

(N) Option of repayment on 6 months' notice after 31st July, 1955 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 2 years from the date of issue on one month's notice

(S) The Company has the option to repay all or and at par by giving notice for 6 months' expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs. 300 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days' notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months notice

(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 1 per cent.

(V) Redeemable at a premium of 3 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-59 at same premium These Debentures are registered and are transferable by Transfer Deeds.

(W) At par per cent premium between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of ½ per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal.

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice. Option not exercised repayment to be made after full term.

(y) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

AMERICAN ARMS AND INDIA'S QUARREL WITH PAKISTAN

MR. MOHAMMED ALI ON THE USES OF U.S. MILITARY AID

THE prospect of Pakistan lining up with American-led alliance of anti-Communist powers has now been before India for a year. It appeared first in reports that Pakistan would be the easternmost member of a Middle East Defence Organisation and then some months later, when that project had run aground, in reports that the United States would supply unknown quantities of arms and other warlike material to India's neighbour. None of these latter reports has been very precise; at first it seemed that this was because the parties to the negotiations were moving secretly, but it has since become obvious that it was rather because neither of them know clearly what form the assistance should take and that in fact everything was still at the talking stage. It is a small point but one worth noticing in passing that New Delhi's sources of information have been, although inaccurate in some particulars, adequate to prevent the consummation of a *fait accompli* that would have changed the whole climate of international relations in Asia. The Olympian and excessively moralistic airs that Delhi sometimes affects in dealing with international affairs have not weakened its grasp of diplomatic realities which it sometimes implies do not exist. Whether Mr. Nehru is right or wrong, this vigilance is something that the country will note with reassurance.

And enough has now leaked out to suggest that Mr. Nehru is right, though probably for the wrong reasons. At least the reasons he has made public are wrong, though there are others he has not candidly set forth and which most of his countrymen understand without the need for full discussion. We would argue that Mr. Nehru is wrong when he says that this subcontinent does not require military protection from the hostility of the totalitarian *bloc;* he is wrong when he says that the cold war has not yet reached India's borders but that American aid for Pakistan would bring it there; and he is wrong when he says that the acceptance of arms means the forfeiture of sovereignty and the return of colonialism in Asia. The plan that has been devised by America's military leaders in the Pentagon is wise and far-sighted in all these respects for it is based on recognition of a fact that we would call undeniable were it not that India's Prime Minister does deny it—that the preservation of national independence in this part of the world depends on the military strength of the American-led alliance. But if he is wrong on these points, Mr. Nehru is beyond doubt right on another: that as long as India and Pakistan are carrying on a cold war of their own, a war in which there has been a prolonged but uneasy truce since 1949, then any military assistance to Pakistan by a third power is an act of simple hostility to India.

*

If India's position is now being misunderstood, she is partly herself to blame. The preaching of neutrality that has made up so much of her foreign policy in the last few years has only clouded the issues, especially because it has often been implied, and on occasion actually stated, that India's foreign policies were decided after a weighing up of moral values to which the wicked West was insensitive. India favours neutrality today not because she moves on another, and superior, moral plane to the antagonistic *blocs* in the world struggle for power, but because she has made a reasonable calculation of the chances of war and of her own situation in the present cold war. This calculation is no doubt open to question and others may see the facts differently, but as an estimate of the contingencies it is entitled to respect and is in any event India's own business. Where moral pretensions come into the case we do not see; it is no more proper for Indians to claim that they are setting a saintly example to the warmongerers of East and West than it is for Americans to claim that their armies are the hosts of light marshalled before the ranks of Russian satanism. The current controversy about aid to Pakistan might provide a convenient occasion to drop a pretence that has only given offence, as resembling sanctimoniousness in a sinner. If it were dropped, India's interest in Pakistan not receiving wholesale military assistance would be more clearly seen abroad.

Coming down to the level of plain fact, we see that India today is spending half her budget of over Rs. 400 crores on defence, and has been doing so for several years past. Pakistan, who can afford it no more, has been laying out a similar proportion of her resources on defence. The armed forces that these funds are sustaining are not intended to safeguard the lines of communication in the Indian Ocean, nor to defend the eastern entrance to the Suez Canal, nor even simply to provide guards of honour for distinguished guests. They are tokens of the fact that the bloody work of partition that was begun in this subcontinent in August, 1947 is not yet complete; the frightful operation of dismemberment that began six years ago has still a stage to go. Pakistani troops are today installed on territory that India claims—with all the support of legal agreements in her favour—is Indian territory, at least until the inhabitants have had a free opportunity to decide otherwise. In addition there are several other flaps of flesh in this operation that are yet to be tidied up, and although armed force has not yet been invoked to deal with these issues they are all matters into which communalist passions could erupt in either country if relations were to deteriorate. The scores which India has to settle with Pakistan may well be less important for humanity at large than the weightier subjects of contention that now divide the whole world, but how important they are to India is for Indians to judge.

*

In these circumstances, it is the merest blindness for outsiders to insist that Pakistan can be strengthened as an anti-Communist power without affecting India's interests. The world has already had several examples (and it has several more apprehensions) of what use can be made of military assistance given to an anti-Communist stalwart. It has seen Formosan arms used in Burma and heard South Korean arms rattled to intimidate non-Communist countries; and the French have their own opinions about what use Germany might make of weapons placed in its hands to defend the eastern approaches to Europe. If there were any doubt about what virtue Mr. Mohammed Ali saw in American arms, it should have been dispelled by his interview with an American news magazine, published this week. A military agreement with the United States might strain Indo-Pakistani relations at first, said the Prime Minister of Pakistan, "but I am convinced that our relations would improve as the military strength of the two countries became more equal". He said that a settlement of the dispute with India over Kashmir would be more difficult to reach at first but he was sure that ultimately a military aid agreement with the United States would bring about an earlier settlement. He added: "At present we cannot get a settlement mainly because India has greater military strength and Nehru is not much interested in a fair settlement. When there is more equal military strength then I am sure that there would be a greater chance of a settlement". In other words, American arms would be used by Pakistan (while she was holding them ready for possible use against aggressors from the north) to intimidate India into a "fairer" settlement of the Kashmir dispute. No further evidence is needed to back Mr. Nehru's repeated statement that military aid to Pakistan would be an act of undisguised hostility to this country and to what this country construes to be its interests in Kashmir.

Mr. Mohammed Ali went on to use some astute arguments to ensure that Washington did not retreat before the barrage of criticism that has emanated from India. "If aid to Pakistan falls through", he said, "the United States will certainly lose prestige in the eyes of small countries. It would be a triumph for the Communist bloc—and India". This is perhaps true, though matters do not seem to have gone so far yet that to defer them until India and Pakistan had reached agreement in Kashmir would be interpreted as a retreat from Mr. Nehru's anger. The alternative is that a much worse interpretation might be placed by "the small nations" on American actions—that U.S. military leaders can intervene in unsettled quarrels around the world in the name of global strategy, and that all any country has to do to get the better of its neighbour is to proclaim that it is a doughty enemy of Communism.

*

Appeals to the United States "not to surrender India's *friendship*" by giving arms to Pakistan must sound rather false in American ears. Americans may feel entitled to ask what *Indian friendship is worth to them now*, for it is not only gentlemen like Senator Knowland who take friendship for the USA to mean membership of an active military alliance. If, as India so often asserts, she is absolutely neutral in the struggle between Communism and democracy, and if she sees American vigilance in defence of freedom as the symptom of a lower morality, then of course Washington is under no obligation to reckon with her opinions. But, fortunately or unfortunately, the course of international events (and hence of the world struggle for power between Russia and the Western alliance) is not determined by emotional friendships and moral judgements. It is determined by such realities as the fact that Indian strength, whatever it might be morally or militarily, is not available to the West in bargaining with the Russians but it would almost certainly be available for use against a patent aggressor, especially if that aggressor's force were directed towards this subcontinent or the Middle East. It is also affected by such realities as the weakening of southern Asia by the continuance of Indo-Pakistani differences which would only be exacerbated if Pakistan were to use American arms in the way hinted at by Mr. Mohammed Ali.

American military leaders are no doubt correct in thinking that the countries bordering on the southern limits of Russia's land empire need strengthening, but this is not to be achieved by pretending that the Kashmir dispute does not exist or that one of the parties to it can be armed without disadvantage to the other. If Washington had evidence to suggest that Russian aggression in the Middle East were imminent, there might be some case for thus disregarding the present disposition of forces within the region itself, but if (as is much more likely) the latest proposals are part of a long-range policy of containment, then they should wait upon the resolution of India's differences with her neighbour. Indian opinions about the issues involved in the cold war with Communism are often unrealistic, but they are much less likely to be mistaken about the state of Indo-Pakistani relations. Military aid to Pakistan at this stage would do precious little to curb the expansive force of Communism, but

it would do a great deal toward damaging the interests of a country that the United States in other spheres thinks fit to receive generous economic assistance.

ENGLISH IN INDIA

A FOREIGN LANGUAGE AND A NATIONAL CULTURE

IT is, let us face it, more than somewhat humiliating for an Indian when he begins to speak in Sanskrit, changes to Hindi after a few uncomfortable minutes, and finally has to resort to English, in which language alone he can correctly and effectively say what he has to say. This is what happened at Hyderabad on Sunday to Mr. K. M. Munshi who, besides being the Governor of Uttar Pradesh, is a popular writer in Gujerati, which is perhaps why the incident has been reported at length in the *Times of India*. Unreported, something similar must be happening everywhere in India and Pakistan (Mr. Mohammed Ali recently inserted in a Bengali speech an English paragraph on foreign affairs in spite of protests from his Dacca audience) every day to hundreds of thousands of educated men and women seeking precise expression for their more or less precise ideas on various cultural and political problems.

Questions of prestige and the odium of alien association apart, both of which are capable of dangerous exaggeration, this dependence on English obviously constitutes a difficult problem of self-expression in the creative sphere and of self-assertion in the political. The difficulties inherent in bilingualism are many, not the least among which is that when the majority of the electorate are ignorant of the language in which alone the majority of the elected are at home, there is an inevitable dichotomy between the ruler and the ruled, leading to conditions that are certainly not conducive to democracy. Another possible consequence, and just as undesirable, is a divorce between education and politics and, in extremer cases, between thought and action. Again, for many the problem is more multilingual than bilingual, for Hindi is spoken by fewer people than its seemingly militant advocates claim and the need for English will probably be exhausted later than its opponents are at present prepared to concede. If, in these bewildering circumstances, India is groping for a solution which will at once satisfy the demands of nationalism and meet the requirements of civilised and progressive life, there is need for sympathy on all sides.

There is an even greater need for hastening slowly, and that is what was admirably demonstrated by the framers of the Indian Constitution which, in giving English a reprieve for 15 years, realistically recognised that what has been done, for better or for worse (and not many Indians have described Macaulay's work as an unmixed curse), over a period of two hundred years cannot be undone in two without violent repercussions on the nation's life. Many thoughtful Indians, not in South India alone and not all of them de-Indianised, realised that hasty abolition of English from the schools and universities might create a dangerous vacuum in India's intellectual life. In recent years, therefore, there has continued in this country a very lively debate on the subject to which politicians, teachers, students, writers and journalists have all contributed their respective points of view. The argument was not always free from acrimony, nor was its result a unanimous decision ("..... there is time for decisions and revisions which a minute will reverse."), but there was some progress towards clarification of the multitude of issues involved.

* * * *

The Bombay Government has suddenly decided of force the pace. The "clarification" vouchsafed to newspapermen on 6th January by its Education Minister, Mr. Dinkarrao Desai, of the order banning the admission of Indian students in primary and secondary schools with English as the medium of instruction does indeed clarify how dangerous the logical consequences of the decision may be. His description of "the craze for continuance of English" as a manifestation of "slavish mentality" does not merit serious consideration; patriotism is not a monopoly of the Bombay Government. Nor is it necessary to attach much significance to his prophecy that other States will soon follow Bombay; that is a politician usurping the functions of the wayside astrologer. But it is a matter of some little importance when a State Minister thinks nothing of stating in public that students of a particular State need not "bother" about the Central services if the latter proved difficult of entry as a result of the abandonment of English. That is the way, not only to cultural isolation, but also to political disintegration.

It is not surprising, therefore, that the President of the Bombay Congress, Mr. S. K. Patil (no "sort of Anglo-Indian" he), has described the order as "unwise, imprudent, and suicidal," that Dr. Paranjpey has called it "a retrograde step," and Sir Mirza Ismail as "retreat from civilisation." The order is all those things. Additionally, it is a triumph of illiberalism. It is not as though a particular language is being encouraged; another is being suppressed. As less rash Indians than Mr. Dinkarrao Desai have themselves pointed out, (in English of which not many English writers would be ashamed), much more than a language is at stake for, at higher levels, every language stands for a way of life.

And yet, and here we revert to a point suggested earlier, it must be galling for an Indian to think that his way of life is very largely shaped by a language not his own. Is his life then, he may well wonder, insufficiently Indian? Is the Indian intellectual, he must often ask himself, an exile in his own country with no line of communication between himself and the vast majority of his own people? These are not questions that comfort, and yet they must be pressing themselves on many minds. English can scarcely be the answer, nor can Hindi or any of the regional languages with their acknowledged inadequacies. Important as it is to be able to speak to one's own people, it is as important to be able to hear what others abroad may be saying. To think with an ill-developed language is to risk stultification of thinking itself. Out of all these complexities, there is obviously no easy way. The mistake is to think that there is, as Mr. Dinkarrao Desai appears to have done, and inability to offer a readily acceptable alternative to his policy need not prevent one from condemning it.

The common cold is not the only human ailment to refuse to respond to quick treatment. Most cultural questions sort themselves out if left well alone. Such may yet be the course India's language problem will take. Irish is not heard very often in the streets of Dublin, despite strenuous efforts by Irish Desais. For centuries the Russian intelligentsia thought and spoke and wrote in French or German and then, when the time came, proceeded to create one of the richest literatures in their own language, Russian. Both examples are relevant. When an Indian language, or more than one perhaps, is able to replace English by virtue of its adequacy as an instrument of self-expression, that language may well be found to have been created by the English-educated of today. That will not come about unless the Indian languages are taught, learned, and spoken and written in well and widely; nor will it come about if English is thrown away in thoughtless haste.

As an afterthought, perhaps we would hear less against English if the language were taught and learned as it once used to be. There is no worse enemy of English than bad English, and the various State Governments in India could do worse than directing part of their linguistic zeal to this aspect of the question.

SOURCES OF STRENGTH IN THE U.S. ECONOMY

YEAR OF ADJUSTMENT AHEAD

THERE is even more interest than usual at the beginning of 1954 in the National City Bank's Monthly Letter, for it deals in the January issue with recent prognostications of a recession in the United States. Reviewing first of all the economic record for 1953, it says: "The year just closed has been the most prosperous in the nation's history, judged by the number of people gainfully employed, incomes received, and total output of goods and services. Most prices, except those of farm products, have been extraordinarily stable. Higher output at stable prices signifies a rise in living standards, and although a sizable share of the national product has necessarily been for defence, the volume of goods and services available for everyday living and for additions to the country's wealth has been the greatest on record. The immense and growing productive power of the country again has been impressively demonstrated.

"Despite this enviable record in 1953, the year ends on a note of uncertainty with respect to business conditions. In the past few months there has been a moderate slackening in activity which is reflected statistically in the decline in manufacturers' new and unfilled orders, in less favourable retail sales figures, in the small rise in unemployment in November, and in the slow easing of industrial production. When even a moderate decline appears there is always some apprehension as to how far it may go and how long it may last. Offsetting these statistical soft spots, on the other hand, are numerous factors of strength: the favourable showing in construction contract awards, the substantial plans for new plant and equipment installations, some adjustment of inventory positions, the stable nature of Government demands, the large liquid asset holdings of individuals, the availability of credit, and well-sustained personal incomes. A reasonable expectation is that industrial production will hold well in the early months of 1954 as automobile output picks up and the construction and capital goods industries fill what is still a good-sized demand for their products. Construction contract awards have been running ahead of a year ago during the autumn and in November showed a 12 percent increase. Housing contracts were down slightly but other construction awards, particularly commercial building, showed large increases. Outlays for new plant and equipment in the first quarter of 1954 are expected to be larger than in the first quarter of last year, according to the Securities and Exchange Commission. Although these outlays may later fall somewhat behind the record expenditures of 1953, they still are expected to be large compared to any other year.

* * * *

"Construction and investment in capital goods provide formidable support for the economy, and it is seldom that total business activity has dropped off sharply when these two important segments have remained steady. Adding the demands of federal, state and local governments, which in the aggregate will probably show only minor change from 1953 levels, a good foundation for another busy year seems to exist. Business sentiment recognises these supporting elements. It does not expect, however, that they can fully sustain activity, and is not certain that present indications with respect to construction and capital goods programmes will be fully realised. The fear is that these programmes may be undermined by a drop in the flow of orders, resulting from cutbacks in inventory or from declines in consumer demand, all leading to reduced operations, lower profit expectations, and less willingness to make new investments. Retail trade, although at a very high level, has been slowing down. During the first eight months of 1953, retail sales were 6 percent higher than in the same period of 1952. In more recent months they have dropped, on a seasonally adjusted basis, somewhat below the earlier months, and have averaged only about 2 percent higher than in 1952. What happened is that personal income ceased to increase as it had done in the earlier part of the year, and new consumer borrowing also slackened. The result was a slower rise in sales. This slowing down carried into the Christmas season, when retail sales appear to have held abreast of last year but were unable to show gains.

"The inventory rise also has plainly flattened out, at least to the extent that it represented voluntary accumulation. The inducement to add to inventories or to place commitments for materials or goods far ahead has weakened as the year advanced and the immense output of goods brought back quick deliveries and buyers' markets. Retail sluggishness and the flattening of the inventory rise have had repercussions upon manufacturers. New orders have slackened. Shipments are exceeding new orders, a situation which obviously cannot last indefinitely. However, the fall in orders and backlogs is partly due to curtailment in military buying."

LINES OF DEVELOPMENT FOR THE COMMONWEALTH

WHILE the Commonwealth Finance Ministers have been discussing the affairs of the sterling area in Sydney, a particular aspect of Commonwealth finance has been engaging attention in London. In the sterling area's economic capital there has been some dissatisfaction with the progress of planning and development. The total of loans negotiated through the London capital market or related bodies on behalf of Commonwealth sterling countries in 1953 is approximately £100 million. (A corresponding figure of some £30 million for Canada is of considerable importance but not directly relevant to the sterling area.) The total is small in relation to the vast possibilities for development, but it is reasonably satisfactory for one year, with various dominions and colonies—notably Pakistan, Ceylon, Malaya, Kenya—showing increasing interest recently.

The British Government's objective for the balance of payments (an objective that was certainly not reached in 1953) is a current annual surplus of £300-350 million, partly to strengthen the gold and dollar reserve but largely also to provide capital for export. However, at the rate at which development schemes have progressed, since the Commonwealth conference in London late in 1952 elevated the subject to a high place, no such large sums will be required. It is true that Britain is not yet in a position to provide capital on the scale really needed, but it is also true that the sterling countries where development should be proceeding as rapidly as available capital permits, are not at present using all the capital available. At the time of the London conference the British Government arranged that £60 million of the sterling resources of the International Bank should be made available for development projects. Soon afterwards a group of British firms engaged in banking, insurance, trade, and industry, formed the Commonwealth Development Finance Company, with potentially large resources. But 1953 has passed without a call on the £60 million and with the CDFC only tentatively beginning operations. If plans are to be well laid they cannot be made in a hurry. But there is not much news of projects, even under preliminary consideration, which would qualify for the facilities which British capital can now make available.

There is plenty of news of American and German capital projects in the sterling area and a source of strength for the pound will be the four loans which the World Bank now has under consideration for certain countries within the area. These are India, Ceylon and British Central Africa, where the loans are for power development, and there is a further instalment of $50 million credit to Australia.

* * * *

Communiqués of Commonwealth conference make planning seem easy. But it is one thing to lay down the general lines of development, another to follow them with specific practical projects. Governments all over the world (the United States is no exception) have in the past few decades taken an increasing interest in development projects, but they are still in the main the task of private enterprise. The activities of private enterprise can be guided and facilitated, but not directed. Mr. L. S. Clare Grondona, as an Australian, has a suitable background for his many years of study of Commonwealth development and related subjects. His *Commonwealth Stocktaking*, lately published in London, provides valuable factual information on which Commonwealth development plans could be appropriately based. It cannot, however, allow for all the national aspirations of the Commonwealth countries; which may be a big factor in industrial plans. Mr. Grondona says: "Insofar as industrialisation in the Commonwealth may have drawn labour and capital from primary production, its wisdom is certainly open to question." That is a sound economic statement, but not necessarily relevant politically. In the economic sense, of course, the sterling area should produce those goods which the world needs and which it can produce relatively cheaply. British policy is not always in harmony with other sterling countries' policies in this respect—hence the tariff barriers against British as well as foreign goods in sterling markets.

Statistics of relative costs, for a particular product in various countries and for various products in a particular country, are as relevant as the statistics of production and trade that Mr. Grondona has provided so plentifully. But the facts have not previously been well consolidated, and they make a very useful guide. We can see that the sterling Commonwealth has a considerable export surplus of some industrial materials (wool, jute, sisal, rubber, tin, bauxite, manganese, chrome) and of some foodstuffs (cocoa, coffee, tea); approximately satisfies its own needs in respect of some minerals petroleum, copper, lead) and of some foodstuffs (sugar, mutton and lamb); but is considerably deficient in some industrial materials (iron ore, sulphur, timber, aluminium) and in some agricultural products (wheat, maize, rice, beef, cotton, tobacco.) There is no natural virtue in self-sufficiency, but there is a natural inclination to stimulate production of those goods which cost the sterling area large quantities of foreign exchange. Excepting, perhaps, cotton, and, more probably, softwood, the deficient commodities could probably be produced in quantities sufficient to satisfy needs. But it can equally well be argued that if the world needs more of the commodities that the sterling area produces already in excess of its needs they should take priority in development plans. Whatever the policy, the resources are there waiting. It will be unfortunate if plans to develop them are not readily forthcoming.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a fall of 1.0 point during June and July, 1953. Contributing mainly to the decline were decreases in the production of jute, steel ingots, pig iron and coal, while rises occurred in cotton consumption, cement, paper and electricity. Notes in circulation also declined.

* * * *

Optimism In Iron and Steel.—The world's iron and steel industries are going ahead optimistically with their expansion schemes and plans for increased output, despite the fact that last year brought the end of the post-war (and cold-war) boom in the demand for their product. In the face of declining demand and the shrinking order books which are all that the present holds, it is an encouraging sign for the future that such huge, heavy capital-using industries, should have decided to put so much faith in continued expansion and progress. These facts are brought out in an article appearing in the Special Review of the Iron and Steel Trade published annually by William Jacks and Co. Ltd, which optimistically describes the present trends as indicating slight recession, but not slump. Only the United Kingdom among the large Western producers was able to record continued advances in production during the second half of the last year. The United States reports that taken over the year, the performance during the record year, 1951 will be exceeded by a wide margin, but current trends are downwards, and the outlook for the New Year is uncertain. In Western Europe the High Authority established under the Schuman Plan is to go ahead with its large programme of investment and expansion. It has no doubt been encouraged in this by the obvious success of the post-war development plan which has given the British iron and steel industry an increase of 50 percent over its pre-war output, and has reduced the selling price level of its products well below that of the rest of the world. The success of the industry in the United Kingdom is all the more remarkable in view of the political vicissitudes through which it has passed. In fact none of its ups and downs seems to have upset the determination of management and labour to maintain by far the most outstanding record of progress among the heavy industries in the post-war economy. Ambitious plans are afoot for the expansion of output from the present record of approximately 17½ million tons, to an optimum of 20 million tons in four or five years' time. This will involve the further investment of some £300 millions on top of the £263 millions which have already been spent since the war. It requires a good deal of optimism to think in such terms when most of the money cannot be found out of current earnings, or accumulated reserves, thanks to present taxation policy, but will have to be borrowed on the open market at a rate of interest which is bound to reflect the political uncertainties about the industry's future, the prevailing trends in world demand, and the prospects of increased competition from the United States industry and from the integrated industries of Western Europe. At present the British industry is in the hands of private owners once again. But its freedom is not absolute, and nobody entertains the belief that it ever will be again. The Ministry of Supply retains the all-important power to fix selling prices which it has exercised, usually with discretion, during the last 20 years. The industry has worked well under this restraint, and would be well advised to go on making the best of it. While some measure of control, in the supposed interests of the community, continues to exist and be used, the impulse to complete nationalisation is proportionately weakened. A system of dual pricing is at present in force which in practice works similarly to that used in the coal industry. In brief, the home producer is subsidised at the expense of the foreigner. Although there are constant complaints against this system from abroad it has worked well for the home user who has been able to buy his steel well below the price levels operating on the world's markets. There seems no reason why the system will not continue until world prices are forced down, and those of the British supplier will have to follow suit.

* * * *

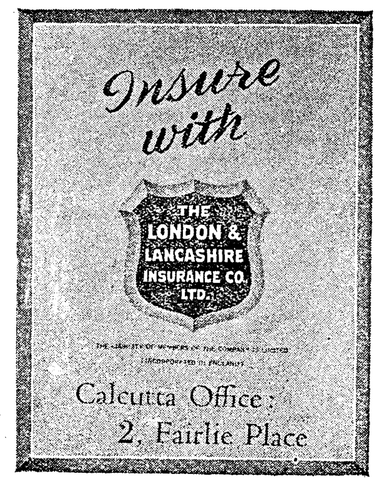
New Trend in Cloth Exports.—There was a time, especially during the latter half of 1953, when it was feared that the volume of cloth exports for the year would show a progressive decline, as it had done during the previous two years. But realising this danger in time, the Government introduced certain measures to encourage exports. The joint efforts of the industry, the trade and the authorities now seem to be reversing the trend. December 1953 has proved an important month in this respect, with a record of 77.6 million yards exported, the best achievement during the last year and a half. This effort during the last 3 months of the year has raised the total to 701.3 million yards, which is more than 100 million yards higher than in 1952, when the figure was 593.8 million yards. In 1951 textile exports were 780 million yards, while in 1950, the peak year, 1,133 million yards of cloth were exported, giving India first place among the world's exporters of cotton cloth. It may be recalled that the target accepted by India at the Buxton International Textile Conference in 1952 for the year which has just ended was 1,000 million yards. The actual achievement falls 300 million yards short of this figure. Now that this trend has been reversed, there is every hope of achieving the target in 1954, if production continues at the present rate. A feature of the trade during 1953 was that nearly a quarter of the year's export of medium cloth was passed for shipment during its last two months. This was the result of the Government of India's timely step to abolish the export duty on this variety of cloth during the last week of October, 1953. Exports, last year made up of 260.7 million yards of coarse, 273.9 of medium, 152.5 of fine and 41.2 million yards of superfine cloth. How the whole pattern of textile exports has changed can be seen by comparing the breakdown of these figures for 1952, when coarse cloth licensed for shipment totalled 163.1, medium 138.7, fine 260.4 and superfine 22.6 million yards. The shipper is further heartened by the fact that when the Cloth Export Promotion Council, for which the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, has worked so hard, is inaugurated in Bombay this week, the volume of export is likely to increase appreciably. The latest news from export circles is also encouraging. There is a moderate demand from the U.K. for medium greys, while the demand from West Africa for this cloth is also continuing unabated, either by direct imports or through the United Kingdom. Pakistan has also entered the market and is believed to have booked between 2,500 and 3,000 bales of assorted varieties of cloth from the mills in the north and the west of the country. More orders from this source are expected because difficulties are being experienced regarding deliveries from Japan, which constitutes its main source of supply. It is also interesting to note that mill production during 1953 is expected to reach an all-time record of about 5,000 million yards. This would be about 300 million yards more than the target for 1955-56, set under the five year plan.

* * * *

Guidance for Taxpayers.—In order to assist the public in the matter of income tax assessments and refunds, and to encourage "good relations" and direct contacts between assessees and the Income Tax Department, a Public Relations Office attached to the Income Tax Department in Calcutta was created some time ago. For about a year no whole-time Public Relations Officer was functioning, but one has now been appointed and his office is located in Room No. 57 on the first floor of the main Income Tax Building at 3, Government Place West. He will explain to taxpayers their rights and obligations under the Income Tax Act and will assist and guide them in matters of assessments and refunds. He will try, in consultation with the Commissioner of Income Tax, to redress complaints and to resolve difficulties which are brought to his notice. His assistance may be sought by assessees in filling up income tax return forms and preparing other statements required by income tax officers in connection with their assessments. The Public Relations Officer will be in charge of the Enquiry Section and all enquiries regarding the procedural aspects of income tax work should be addressed to him. He will also advise assessees about the concessions and exemptions provided for in the Income Tax Act and will explain, if required, the principles on which recognition is granted to provident funds for income tax purposes. Any grievances that assessees might have relating to the amenities provided for them in the income tax buildings may be brought to his notice. The Officer will also establish contact with the various chambers of commerce and other trade, industrial and public organisations for the purpose of ascertaining their viewpoints and redressing their grievances. The Department hopes that taxpayers will take full advantage of the organisation and that the functioning of a full-time Public Relations Officer will help establish goodwill and helpful co-operation between assessees and the Department.

* * * *

Radio Advertising in France.—Before the war, advertising was allowed on two transmission posts in France, Radio Normandie and Poste Parisien, which belonged to the newspaper *Le Petit Parisien*. Ever since Liberation the authorities have been firm on "no advertising". However, some critics see the beginning of a slackening in this attitude, and point to "special announcements" as coming very close to advertising. Television development has brought the question once more to the fore. One of the arguments for allowing advertising on French radio and television is that foreign transmitting stations just across the frontier will in the near future be flooding France with television advertising, as they do now with radio advertising, for those who care to tune in. The recent decision in the British parliament is also pointed to as an argument in favour of advertising, or at least some proportion of advertising on the French radio and television. Furthermore, the Minister of Information has recently admitted that without the aid that advertising would provide, the financing of television in France comparable with television in other neighbouring countries will be very difficult.



Our City Cable

TEA SHARES RISE ON AUCTION RESULTS

LARGE TURNOVER ON STOCK MARKETS

London, 13th January.

ALTHOUGH on the surface the stock markets have not been impressive during the past week, the turnover was the largest for some considerable time, with markings in excess of 53,000. While it is true what there was a great deal of variation in prices, it can be said that much of this large buying movement was for genuine investment purposes, based on announcements from the Commonwealth Conference that the Finance Ministers were fully alive to the possible effects of an American recession on the sterling area. At the same time it must be added that Wall Street's recent action and the economic news from America led to a certain amount of switching from secondary domestic industrials to medium-dated gilt-edged. The only section that remained consistently firm during the week was that of tea shares. Helped by record auction values and retail prices being raised, values appreciated on further investment buying, and fears that higher retail prices might mean switching over to other beverages have been allayed by the recent high prices realised for cocoa and coffee, which will eventually be reflected at the retail stage. Elsewhere in overseas issues sharp upward movements were recorded in foreign bonds, led by Germans. Consequently there has been a brighter outlook in the international field, and in the case of Germans there was the additional factor of the German economic position, which has encouraged expectation of an early pay-out under the debt settlement. Japanese issues were reasonably firm but most of the money in that section was channelled into issues nearer home such as the German and Greek bonds which were quiet till recently. Consequently the counterparts of the latter in New York registered a rise. South African gold shares were less active, but still a fair amount of business was done, with dealers commenting favourably on the fact that the public was displaying more confidence in this class of shares.

The London money market ran into more difficult credit conditions during the past week after having surmounted the year-end more comfortably than usual. Heavy outside calling caused stringency at times and heavy payments to the Exchequer made credit so short on Monday that despite considerable official assistance, both direct and indirect, one or two houses were forced to seek a trifling amount at penal rates from the Central institution. This was the first time the market had been forced to this move in nearly four months. Conditions improved later in the week, however, with the authorities engaging in some mopping up of surpluses, while the finish was patchy, although supplies finally proved about adequate. The Bank of England Return showed a reflux of £28.1 million, making a total of £48.5 million since Christmas. The fiduciary issue was reduced by £50 million but the reserve in the Banking Department was still over £33¼ million. Applications for £250 million of treasury bills totalled £319,349,000, of which the former amount was allotted at an average rate of 42s. 7.90d. This week, £220 million will be offered. Rates of fine trade bills remained unchanged.

Hongkong Gold Prices

Hongkong gold fluctuated in the past week with trading quiet because of the absence of incentives. The market closed heavy with bullion dealers unable to see the prospect of any appreciable rally in the near future unless some stimulant appears. Official offtake was 2,590 taels and unofficial 13,350 taels. Arrivals in Macao were nil. Forward contracts totalled 5,600 taels at $3.35.

Japanese Textiles for Pakistan

A spokesman of the Japanese Cotton Spinners' Association said on Monday that the President of the Gosho Trading Company would leave Tokyo shortly for Karachi to negotiate the export of an estimated 30 million square yards of Japanese cotton piecegoods to Pakistan. Negotiations for these exports have been in progress between the Japanese cotton spinners and Pakistan since November when Pakistan announced her decision to import cotton piecegoods through a Government purchasing agency. The spokesman said that the price offered by Pakistan for imports of Japanese piecegoods could not be accepted unless Pakistan agreed to cut the price of her own raw cotton exports to Japan. The acceptance of low price bids by Pakistan without a cut in raw cotton prices, he added, would immediately cause other importing nations to ask for reductions.

Russian Pig Iron for U.K.

The British Iron and Steel Corporation has concluded a deal with the Soviet Union for the purchase of pig iron. It is understood that the quantity exceeds 100,000 tons of basic steel-making iron, low in phosphorus content. Although no actual details of the price were disclosed, it is understood that they compare favourably with U.K. domestic prices. These, according to destination, range from £16 12s. to £17 19s. 6d. per ton, delivered. This is believed to be the first postwar deal in pig iron between the two countries. Official quarters say that the purchase is on a purely commercial basis.

Uganda Mining Venture

An important new mining venture from which columbite and fertiliser bases, perhaps also uranium, will be derived is likely to be developed in Uganda. The Tororo Exploration Company announces that a detailed drilling campaign on the Bukulu deposits at Tororo has just been completed and it indicates the existence of over 200 million tons of soil containing workable amounts of apatite and pyrochlore. The Company is now examining the economics of erecting a treatment plant to produce apatite concentrates for the manufacture of general chemicals and fertilisers and of pyrochlore concentrates for the production of niobium. The statement said, it would appear that 100,000 tons of apatite and about a million lbs of nibium pentoxide could be recovered annually.

Marine Diesel Fuel Prices

Shell Petroleum announces that spot bunker prices for marine diesel fuel and light marine diesel fuel have been reduced by 2s. and 2s. 6d. per ton, respectively, throughout the whole of the sterling price range of ports. Further reductions have also been made in marine fuel oil and marine diesel fuel prices at certain ports in India, Africa and Australia. The price changes are effective since 1st January this year. There are no noteworthy changes in the dollar price range of ports.

THE CALCUTTA MONEY MARKET

BUSY SEASON FULLY ESTABLISHED

Wednesday, 13th January.

THE busy season is now fully established and there is sustained demand for money. The banks, which had been accumulating idle funds for the last few months, are now advancing against cotton, sugar and foodgrains on a fairly substantial scale. This accommodation is naturally being sought upcountry, and in Calcutta itself conditions are quieter because jute advances are largely unchanged and the repayment of loans by the tea gardens continues. Consequently in the Calcutta interbank market the call rate still stands at 2½ percent. Which is only one pie percent above the rate at which the Government is borrowing this week against treasury bills.

The bill of exchange market has been quiet, but after the good tea auction this week a fair show of bills is expected in the next day or so. Remittance has been moderate. The principal exchange rates are unchanged.

* * * *

Tenders for Rs. 1 crore of three month Government of India treasury bills amounted to Rs. 1,21,50,000 this week. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 82 percent, the average rate of acceptance being Rs. 2-7-11 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received at Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to Monday of next week. During the week ended 8th January, treasury bills for Rs. 15,25,000 were sold in favour of the Reserve Bank.

* * * *

Silver ruled firm last week and the price was almost unchanged around Rs. 154-12 quoted today due to nervous bear-covering combined with strong support. The ready rate was about 2 annas lower. Silver was quiet in London and the price declined from 73 15/16d. to 73⅜d., but it was again unchanged at 85¼ cents in New York.

Gold was quiet in the absence of demand and fell from the previous week's level of Rs. 83-5 to Rs. 82-15. The sovereign at Rs. 56-8 showed a loss of 4 annas.

* * * *

Further sharp rises of Rs. 18.43 crores and Rs. 22.61 crores in the total note issue and notes in circulation to Rs. 1,164.40 crores and Rs. 1,154.76 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 8th January, 1954. The expansion in currency was duly covered by raising foreign securities by Rs. 20 crores to Rs. 608.15 crores and this was partly done by reducing foreign balances in the Banking Department by Rs. 17.07 crores to Rs. 122.25 crores. Notes held in the Banking Department, consequently, fell by Rs. 4.17 crores to total Rs. 9.65 crores. Deposits disclosed an all round decline. Deposits of the Government of India and other Government accounts diminished by Rs. 6.42 crores and Rs. 4.43 crores to Rs. 107.01 crores and Rs. 15.05 crores. Balances of commercial banks at Rs. 40.05 crores showed a decline of Rs. 6.65 crores due to good monetary demands. Other loans and advances rose from Rs. 16.05 crores to Rs. 19.02 crores, of which advances to scheduled banks against usance bills improved from Rs. 49.45 lakhs to Rs. 79.45 lakhs. Investments dropped by Rs. 96 lakhs to stand at Rs. 75.29 crores. Ways and means advances were shown at Rs. 1.95 crores (Rs. 1.15 crores).

* * * *

The statement of the position of Scheduled Banks for the week ended 1st January, 1954, discloses Demand and Time liabilities at Rs. 517.78 crores (Rs. 6.54 crores on account of borrowings from Banks) and Rs. 331.15 crores (Rs. 1.51 crores) compared with Rs. 516.31 crores (Rs. 8.21 crores) and Rs. 331.85 crores (Rs. 1.83 crores) respectively in the previous week. Cash has increased by Rs. 4.39 crores to aggregate Rs. 36.47 crores as also balances with Reserve Bank by Rs. 1.09 crores to Rs. 45.67 crores. There is a fall of Rs. 7.39 crores in investments to Rs. 328.65 crores. Advances including bills discounted at Rs. 461.09 crores reveal a rise of Rs. 4.85 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, consequently, shown at 10.3 percent and 54.9 percent against 11.1 percent and 54.4 percent.

* * * *

The return of the Imperial Bank of India for the week ended 1st January, 1954, shows a drop of Rs. 46 lakhs in total deposits to Rs. 206.62 crores. Investments in Government securities are down by Rs. 3.61 crores to Rs. 83.33 crores. Loans, cash credits and overdrafts have risen by Rs. 1.12 crores to Rs. 90.58 crores and bills discounted and purchased by Rs. 1.89 crores to Rs. 14.27 crores. Cash and balances are, in consequence, shown at Rs. 18.23 crores or about Rs. 2.44 crores less than in the previous week.

* * * *

The directors of the IMPERIAL BANK OF INDIA declared a dividend to shareholders for the half-year ended 31st December, 1953 at the rate of 6 percent per annum, payable on and after the 18th January, 1954. The profit, including Rs. 37,39,000 brought forward from the previous half-year, amounted approximately to Rs. 1,01,10,900 which sum was disposed of as follows: payment of a dividend of 16% per annum Rs. 45,00,000, transfer to pension funds Rs. 2,85,900, bonus to staff Rs. 20,00,000 and carried forward to next half-year Rs. 33,25,000.

* * * *

The profit of the BANK OF INDIA LIMITED amounts to Rs. 82,39,778-2-6 including the sum of Rs. 6,36,553-4-6 brought forward for the year ended 31st December, 1953. Allocations include income tax and super tax Rs. 29,00,000 and interim dividend at the rate of 6% free of income tax for the half-year ended 30th June, 1953 Rs. 15,00,000, leaving an available balance of Rs. 38,39,778-2-6. The directors propose to pay a final dividend at the rate of 8% free of income tax making 14% for the year to absorb Rs. 20,00,000 to leave a carry-forward subject to the payment of a bonus to the staff of Rs. 18,39,778-2-6.

* * * *

It has been reported that subject to audit the HONGKONG AND SHANGHAI BANKING CORPORATION'S final dividend for the year will be £3 per share free of Hongkong Corporation Profits tax, written off bank premises H. K. $4,000,000 and carried forward approximately H. K. $9,875,000.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in India during the month of July, 1953, amounted to Rs. 1290 lakhs compared with Rs. 1579 lakhs in the corresponding month of the previous year. The comparison in the following statements should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 975 lakhs as against Rs. 1046 lakhs, export duties for Rs. 292 lakhs as against Rs. 503 lakhs and land customs and miscellanous for Rs. 23 lakhs as against Rs. 30 lakhs. The total gross collection of Union Excise duties amounted to Rs. 817 lakhs as compared with Rs 810 lakhs. During the four months, April to July 1953, the grand total of gross Customs and Union Excise Revenue realised was Rs 8358 lakhs as compared with Rs. 9220 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 3830 lakhs as against Rs 4205 lakhs export duties for Rs. 1247 lakhs as against Rs 1970 lakhs, land customs and miscellaneous for Rs. 74 lakhs as against Rs. 121 lakhs, and Union Excise duties for Rs. 3207 lakhs as against Rs. 2924 lakhs.

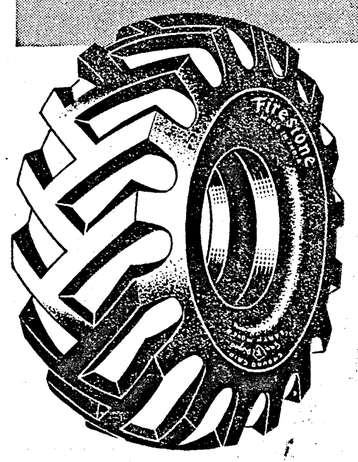
Firestone

Proudly Presents

THE FIRST

'earthmover'

MADE IN INDIA



India has now entered a phase of development and construction of huge dams, irrigation projects and hydro-electric generation which is an integral part of its Five-Year Plan to raise the living standards of the people within the shortest possible time. To accomplish this, large quantities of earth-moving equipment are required and, to match this equipment, a correspondingly large number of special tyres are needed. Firestone immediately responded to this demand and now present with pride the *first* earthmover Tyre to be built in India.

ANOTHER Firestone FIRST !

TO SPEED THE PROGRESS OF THE FIVE-YEAR PLAN

THE extension of Sir Benegal Rama Rau's term as Governor of the Reserve Bank by one year sets at rest, for some months at least, agitated speculation about his successor. The guessing was the more intense because it was held that the new Governor of the Bank would leave some other important post vacant which would then have to be filled, and so on until almost all the country's leading figures (and some not in the country just now) were tipped for transfer. This upset has now been deferred for a year, and may not even then take place. This is welcome, for it is now generally agreed that the present disposition of the country's political talent among the various ministries, embassies and the like is as good a deal as one could expect from a short pack of cards. It means that some of the men at the top are heavily overworked, and none more than Mr. Nehru, but it is probably better that there should be no reshuffling before some of the younger men in the second rank have discovered the marshal's baton in their knapsacks.

* * * *

The very large audience at the symphony concert on Sunday night did not hear the orchestra at anything like its best, though they did enjoy a quite professional performance of Haydn's Clock Symphony. They also heard well deserved praise from the new president of the orchestra, Mr. Ben Watt, for his predecessor, Mr. J. Forbes Ormiston, who left Calcutta on Monday after almost 30 years here in the service of the North British and Mercantile Insurance Company. Forbes Ormiston joined that firm in his native Edinburgh in 1915 and hopes now to return to the same office, 39 years later, after his trip around the world. He came out to India after sevice with the Scottish Rifles and in his long stay here he played an active part in the country's political and cultural life. He was nominated to the Central Legislative Assembly by the Bengal Chamber to look after insurance interests in 1940 and again in 1946-47, and he was a member of the select committee that examined the Insurance Amendment Bill of 1946 under which this industry is now conducted. He was a member of the Government of India's Insurance Advisory Committee for all the ten years of its life, between 1940 and 1950, and he gave the benefit of his experience also to the old Calcutta Insurance Association, the new Insurance Association of India, the Overseas General Insurers Association and the Association of Life Assurance Offices, having played a leading rôle in the direction of all these bodies at a time when insurance in India was undergoing far-reaching changes. He was also closely associated with the work of Toc H in this country and was at one time chairman of its central committee. But Forbes was best known to us here in Calcutta for his enthusiastic support of the Calcutta School of Music and the Calcutta Symphony Orchestra and it was under his presidency that these ornaments of our civic life recovered from the disruption of the war and postwar years to reach their present high standard. Mr. Watt recalled the other evening that it was during his predecessor's time that Senor Casanovas had been appointed Conductor, and that the change had been made from the uncomfortable hall where the concerts used to be held to the New Empire, and he said that during those years the president had not missed one rehearsal of the orchestra. Calcutta music-lovers have much cause to be grateful to Forbes Ormiston, and to be thankful that this aspect of his work in India has now been left in no less enthusiastic hands.

* * * *

Mr. A. D. Shroff, in addition to his multifarious other responsibilities, has now succeeded Mr. P. G. Rose of Burmah-Shell to the presidency of the Indian Society of Advertisers, and I take this as an indication that the Society is determined to maintain its stature as the representative of the 38 national advertisers who now foot so large a share of the advertising bill in India. In his address to the meeting of the Society yesterday in the Taj Mahal Hotel, Bombay, Mr. Shroff referred to two questions that have lately been much under discussion (for example before the Press Commission)—newspaper supplements and circulations. Mr. Shroff said that he was "rather perturbed by the misuse of so-called supplements which are published by a number of newspapers on the slightest pretext and which often force the advertiser into buying space which he does not want and which is uneconomical for him, however much it may fill the coffers of the newspaper concerned". Everyone has noticed that there has been a rash of supplements issued by the dailies in the last few years, some of them on curious pretexts and many of them not very valuable documents for readers and therefore not for advertisers either. But the part of Mr. Shroff's criticism that puzzles me is his reference to advertisers being *forced* to buy space in them. I would have thought that if the members of the ISA did not like daily newspaper supplements they could stop them soon enough by declining to support them; if they do advertise in them, it must surely be because they see some virtue in them. Where the force could come from I do not know, but I am sure the Press Commission would like to hear about it. Mr. Shroff calculated that if 15 percent of India's population is literate, there is a potential newspaper readership of 50 million—but in fact the total circulation of English and Indian language newspapers combined is 3½ million, or only 4 percent of the literate. I understand that it is one of the Press Commission's discoveries that instead of the 7,000 odd newspapers and periodicals that were believed to exist in India, there are only about 4,000. On both these grounds it would appear that there is room for plenty of expansion in the Indian Press, but since it was demonstrated here in Calcutta last year that a city with a population of several millions (with a higher proportion of literacy than 15 percent) cannot support more than three dailies with a total circulation of well under two lakhs, we cannot assume that new ground will be won easily.

* * * *

The Labour Party's revised version of *Challenge to Britain*, which was published last Friday, suggests that the next Chancellor the Party sends to the Exchequer is going to have his work cut out redeeming a list of generous promises. He will have to implement equal pay for women at once, restore the National Insurance benefits to their original value "in purchasing power", increase pensions, restore food subsidies, secure better prices for farmers, spend more on the health services and abolish the charges, and increase the outlay on education. Having accomplished all these things, he will then be required to achieve the miracle of a budget surplus and sponsor a vast new programme of investment in backward areas of the Commonwealth, "even at the cost of sacrificing something of our own standard of living". The greatly increased taxation that would be needed to make even a part of this programme possible is to be combined in some mysterious fashion with an effort to "create an optimistic outlook in industry". Obviously heavier income taxation would not bring in enough extra revenue, for it has been calculated that if taxes were so fixed as to put a ceiling on incomes of £2,000 a year the Government would get only £68 million additional revenue. So there would have to be confiscation of capital over and above a certain level—a process that is to be simultaneous with an expansion of industrial capacity and output, and the encouragement of risk-taking investment. Altogether this basketful of promises is so absurd that it is impossible to take it seriously as a forecast of Labour policy, and one suspects that the Party is so much at sea that it is willing to promise anything to anybody until such time as it has worked out a genuine programme. That the socialists are hard up for arguments to put forward in the face of the obvious improvement in Britain's fortunes since they left office was confirmed by an extraordinary article by Thomas Balogh, the Labour economist at Balliol, in the *New Statesman* last month. With every appearance of seriousness he claimed that the liberalisation of the economy that the Conservatives have introduced is a deep and dirty plot to ensure that once Labour returns to power a first-class crisis can be engineered in the City such as will discredit the Left once and for all in our generation. Even if the City were as forward-looking as all this, I would have thought there were other explanations for Mr. Butler's policies than the existence of such a sinister conspiracy.

* * * *

Chester Wilmot's death in the *Comet* disaster off Elba deprives us of one the most brilliant journalists and radio commentators to emerge from the last war. His coverage first of the Middle East and Pacific wars for the A.B.C. and later of the European war for the B.B.C. not only made him famous throughout the English-speaking world, but gave him a passionate interest in the science of strategy far surpassing that required by a mere journalist, and in the last few years he had been developing into a war historian second in breadth of vision only to Churchill himself, whom he so greatly admired. The Americans have invented for their leading radio commentators the term "contemporary historian" and, while I admit it is a pretentious name to give to reporters, it does describe the gift Wilmot had of presenting events as they occurred as part of the fabric of history. Those who heard his broadcasts of the British Army's advance from the D-day landing in Normandy to the surrender at Luneburg, and then later his reporting of the Nuremburg trials, will have foreseen in him the talents that he brought to the writing of *The Struggle for Europe*, quite the best book on the war written by an observer. He was returning from Japan this week, where he had been writing a penetrating series of despatches on the recovery of that country which were being published by newspapers in three continents, when the tragedy at Elba cut short a career that was still far short of fulfilment. The *Comet* crash will awaken painful memories in Eastern India for it is only nine months since many lives were lost near Calcutta in a disaster that was at first attributed to our May weather, but which it now seems might have had other causes. The grounding of BOAC's fleet of these planes will be a costly piece of caution, especially for the manufacturers' efforts to secure their acceptance in the United States, but if, as is possible, there are hazards in commercial jetliner operation of which the full measure has not yet been taken, there is no other course.

ESTATE DUTY AND LIFE INSURANCE POLICIES

ENGLISH PRECEDENTS ON EXEMPTIONS

By N. T. Raju

THE Estate Duty Bill after a chequered career, of nearly seven years, during which it has undergone many radical changes, was at last placed on the Statute Book on 6th October 1953. The provisions came into force from 15th October. The duty extends to all forms of property, whether real or personal, with the exception of agricultural land in some of the States, and to all persons dying in India, excluding Jammu and Kashmir. Some of the most important exemptions and concessions pertain to policies of life insurance and as these are usually owned by persons of the upper middle classes and the richer sections of the community and are for substantial amounts, a discussion of the Estate Duty Act, as it affects them, should be of wide interest.

Prior to this Act there was no similar law prevailing in the country, and the only death duties were in the shape of court fees paid for obtaining probate, letters of administration or a succession certificate. In the notes on clauses of the Estate Duty Bill it is stated that "in drafting the Bill, including the definitions and interpretation clauses, the United Kingdom Acts on the subject have been followed as closely as possible so that the assistance of the U.K. decisions may be available". White C.J said in another connection that when sections of an Indian Act are professedly based on an English enactment, and reproduce it almost word for word, and when they relate to a branch of law which is entirely English Law, the Indian Courts will be bound in practice, if not in theory, by the decisions of the English Court of Appeal. The English decisions do not govern us, nevertheless they are powerful persuasive precedents. Therefore the sections of the Indian Estate Duty Act which concern themselves with life policies have been explained or amplified in the light of the English Case Law and it is hoped that it will enable a sufficiently clear interpretation of the Act to be given.

Estate Passing at Death

The Act imposes Estate Duty on the principal value of the property passing, or deemed to pass, on the death of the deceased at the rates laid down, and it is provided that property which the deceased was competent to dispose of at the time of his death, is deemed to pass on his death. Gifts made during one's lifetime are not treated as part of the Estate passing on death, provided they are made at least six months before death for public charitable purposes, and at least two years before death for any other purpose. To restrict, if not entirely eliminate, avoidance of tax, and at the same time to recognise genuine intentions and actions, it is enacted that to be exempt from duty, *bona fide* possession and enjoyment of the gifts should be assumed to the entire exclusion of the donor, at least six months or two years before the death of the donor as the case may be. It is common practice to make gifts of life policies to dependents in consideration of natural love and affection by way of assignments. The assignee retains full control of the policy, and is entitled to the benefits under the policy to the entire exclusion of the assured, though the latter maintains the policy by paying premiums. These have been dealt with in Sec. 14 of the Estate Duty Act, and following the English Law it has been provided that "moneys received under a policy of life insurance effected by any person on his life, where the policy is wholly kept up by him for the benefit of a donee whether nominee or assignee", shall be deemed to pass on his death thus bringing them within the scope of estate duty. It was decided by the House of Lords in *Barclay's Bank* v. *A. G.* that to "keep up" a policy was to pay the premiums as they fall due, and the person who paid them was the person who kept up the policy. If however a policy is effected and kept up by the assured for his own benefit but is subsequently assigned to a donee, it cannot be said to have been kept up for the benefit of the donee prior to the assignment. If he continued to pay the premiums on the policy after the assignment, the position would be different. In *Lord Advocate* v. *Fleming*, the deceased assigned to his daughter a policy on which he paid premiums for many years, but after the assignment the premiums were paid by his daughter out of her own income, and it was held that no duty was chargeable. It would therefore appear that if a policy assigned to a beneficiary is to be free from estate duty, the assignment should be absolute and premiums thereafter should not be paid by the assured directly or indirectly. If the assured pays some of the premiums, only a corresponding proportion of the policy moneys are chargeable to duty on his death.

Insurance Against Payment

The next important provision affecting insurance is Sec.33(i) (f) which exempts from estate duty "moneys payable under one or more policies of insurance effected by the deceased on his life for the purpose of paying estate duty or assigned to the Government for the said purpose, to the extent of the amount of duty payable but not exceeding Rs. 50,000". It is evident that new policies taken out for the purpose of paying duty come under this section. It is doubted by some whether existing policies assigned to the Government for paying duty will be eligible for the benefit. But from the wording of the section there does not appear to be much room for such doubts. The manner in which the policies should be worded for this purpose is not laid down in the Act, nor is any guidance available in the Draft Estate Duty Rules published. A representation has recently been made to the Central Board of Revenue by the Indian Life Assurance Offices' Association seeking clarification in the matter. It would appear that if a policy is absolutely assigned by the assured to the Government and made payable to the official responsible for collecting estate duty on the estate of the assured on his death, it should be sufficient for the policy to rank for exemption.

Section 33 also exempts from duty moneys under policies effected by the deceased on his life to the extent of Rs. 5000 and also "Moneys earmarked under policies of insurance or declarations of trust or settlements effected or made by a deceased parent or natural guardian for the marriage of any of his female relatives dependent upon him for necessaries of life, to the extent of Rs. 5000 in respect of the marriage of each of such relatives". It is not clear whether for the latter purpose the policies should be assigned in favour of the female relatives, or whether there will be no exemption if by the time of death of the parent or natural guardian, the assignee is already married, though at the time of effecting the policy, trust or settlement she was unmarried.

Moneys exempted as above under Sec. 33 will be included in the principal value of the estate passing on the death of the deceased and relief will be afforded by way of a proportionate rebate. The benefit of exemption from duty, therefore, is very much whittled down and ceases to be sufficiently attractive in the case of all medium sized estates.

Life Policy Concessions

The most important and the most valuable concession affecting life policies is that contained in Sec. 34 of the Act. Here again the English Law is closely followed, and any property passing on the death of the deceased in which "he never had an interest is not aggregated with any other property but is treated as an estate by itself and estate duty is leviable at the rate or rates applicable in respect of the principal value thereof". Therefore policies falling under this section attract no estate duty whatever on the first Rs. 50,000 in case of persons to whom the Mitakshara or similar law is applicable, and on the first Rs. 1 lakh in case of other persons. On subsequent slabs the duty is at a low rate. The word *interest* means an interest which would be protected in a court of law or equity and the word *never* is strictly construed.

Gifts of policies by assignment, even if the assignment be absolute and irrevocable, do not enjoy this concession, as the assured has an interest in the policy until he assigns it as an *A. G.* v. *Pearson*. When the policy is issued under the Married Women's Property Act, it creates a trust immediately on its being effected, and the assured will never have an interest in it if it is expressed to be for the absolute benefit of a named beneficiary.

Conditional benefits making the wife's or other beneficiary's interest contingent on the latter surviving the assured have been held, by the decision in *Re: Fleetwood's Policy*, not to have prevented them from being benefits under the Married Women's Property Act. But not where policy moneys are payable to the "assured or his wife if the assured predeceses her". Though conditional benefits suitably drafted come under the Married Women's Property Act, they may not be entitled to non-aggregation with other property on the death of the assured as he has a contingent interest in the policy, though the contingency may not have materialised.

Persons other than the wife or children do not come under the Married Women's Property Act and if a person wants to provide for any such person he may, as David Houseman suggests, achieve the same result from the point of view of non-aggregation for estate duty, by first executing a deed covenanting with the trustees to use his best endeavours to effect the policy and declaring trusts, and subsequently arranging for its issue in the name of the trustees.

Position of Foreigners

Finally, it may be of some interest to refer to the position of foreigners under the Act. Property passing on the death of a foreigner dying in India, excluding Jammu and Kashmir, will be liable to duty. Immoveable property, passing on the death, situated outside the territories to which the Act extends, will however be excluded. Moveable property situated abroad will also be excluded unless at the time of death the foreigner is domiciled in the said territories, or in case of settled property, of which the deceased was a life tenant, the settler was so domiciled when the settlement took effect.

It is prescribed in the Draft Rules that moneys payable under life policies shall be deemed to be situated at the place where the policy provided that the moneys should be payable, or, in the absence of any such provision, at the head office of the company. Therefore, if an Englishman temporarily resident but not domiciled in India dies, proceeds under sterling policies on his life payable in England will be outside the scope of the Act. If he is domiciled in India, his sterling policies will be liable to estate duty. Such policies come within the scope of estate duty in England as well though a grant of representation in the United Kingdom is not necessary to recover the policy monies. If the deceased has no other assets in U.K., no U.K. grant is required for any purpose and consequently there will be no opportunity to collect estate duty in the United Kingdom.

Books and Publications

KNOWLEDGE AT 6 ANNAS A TIME

"FREEDOM and not Servitude is the cure for anarchy." This quotation from Edmund Burke is the avowed text point for a series of 6-anna booklets issued by Casement Publications Ltd., Bombay. After reading several of the series (No. 5: *Follow My Leader, A Study of Communism and the Government Machine*, by Raymond Postgate; No. 8: *Farmers into Factory Hands?* by Sir Percival Griffiths and No. 19: *Denial of Faith*, by Francis Watson, among them) it is patently obvious that even though the publishers opine that their authoritative contributors "are known for their independence of opinion" and that at the time of commission the only proviso stipulated was that "they should undertake to approach their subjects from a strictly international standpoint," their selection has been such that the series as a whole becomes a skilful indictment of the Communist approach to all of the current problems dealt with. True, there is a considerable amount of retrospective damning of Fascism and Nazism, but there is little doubt of the publishers' objective.

It is satisfying that all the authors are well seasoned writers as well as experts in their particular lines—No: 18: *Social Welfare*, by Margaret Cole; No. 11: *Trade Unions*, by Professor G. D. H. Cole, in which he dismisses the Soviet Union and satellite countries' set-up of trade unions as part of the State machine and as being too confusing to relate to the Western approach; No. 13; *The Party System*, by Sir Ernest Barker—are among the first 20 titles received.

The approach being "international" there are many references to India. No. 9: *Growing More Food*, by Sir John Russell, in which but one paragraph refers to Russia (only faintly damning, suggesting that "both Russia and China could help greatly in solving problems of food supply and one can only wish that they would do so") makes many references to the efforts (past and particularly present) made by India to solve her food problem. In No. 10: *People's Justice*, by T. Chapman-Mortimer, the writer points a moral in the differences between the British and totalitarian approaches to justice. He makes several references to Gandhi's deliberate brushes with the law, quoting the Mahatma: "I certainly consider it as light (a sentence) as any judge would inflict on me, and . . . I must say I would not have expected greater courtesy." And the judge: "I have to deal with you in one character only . . . as a man subject to the law who by his own admission has broken the law." The author concludes: "The question the judge had to decide was, 'Was the accused guilty of the crime charged?—not as in totalitarian States, 'Was he socially dangerous?' or, 'Was he a danger to the Government?'"

That is typical of the general attitude of these admirable short essays (approximately 5,000 words) to the differences between comparative freedom and established tyranny. As they stand, each should prove an excellent aid to the "after-dinner speaker"; but more seriously, they will also stimulate the appetite for further reading.

BURMA'S MONEY

Burma's Currency and credit. By Dr. U. Tun Wai, (Published by Orient Longmans Ltd., Calcutta. Price Rs. 10. 213 Pages).

The book is, as claimed by its publishers, the first of its kind in so far as it relates to Burma. It has been hailed as something of an event because it is the first systematic work on the subject written by a Burmese. The author was formerly a lecturer in Economics in the University of Rangoon and is now working with the United Nations Economic Commission for Asia and the Far East as Economic Affairs Officer in the Research and Statistics Division. The book consists of 14 chapters. The history of Burma's currency and credit from the time of the early British connection in the middle of the 19th century till the Japanese occupation in 1942 has been traced in the first 11 chapters. As Burma was a part of British India till 1937, students of Indian economics may not be unfamiliar with the subjects discussed in these chapters, particularly the history of the rupee, the development of commercial banks, the co-operative movement and the establishment of the Reserve Bank of India. In these chapters, however, certain economic features peculiar to Burma such as moneylending by the chettiars of Madras, the almost complete absence of joint stock banks of Burmese origin and the lack of the savings habit have also been discussed. The currency and credit system of Burma from 1945 to 1950 has been surveyed in Chapter 12. As the author has pointed out, after the reoccupation, Burma had to start from scratch and Japanese currency worth Rs. 300 crores had to be demonetised. The re-introduction of the rupee by the British Military Administration, subsequent establishment of the Currency Board for the issue and management of currency, and the reopening of branches of foreign commercial banks in Rangoon, have been covered in this chapter. Of special importance is the establishment of the Union Bank of Burma, as the central bank for the country in 1947. The author has devoted a considerable portion of this section and the appendix to the constitution, powers and functions of the Union Bank under the Union Bank of Burma Acts of 1947 and 1952 which, it is interesting to observe, are modelled on the Reserve Bank of India Act and the Indian Banking Companies Act. The concluding chapters of the book contain observations and suggestions of the author. Of particular interest are his comments on the "plural economy" of Burma. Dr. Wai has taken great pains in collecting materials for his book.

Stocks and Shares

SMALL LOSSES IN DULL TRADING

FURTHER SUPPORT FOR TEA SHARES: JUTE SECTION UNIMPRESSED BY BIRD GROUP DIVIDENDS

Wednesday Evening.

THE share market has been dull this past week, with prices barely steady, except in the tea section where a selective revival of interest was seen after the excellent tea auctions in Calcutta and London. The volume of business has been small but there have been some substantial selling orders reported of both ordinary and preference shares, particularly in the jute section. The market presented a better appearance today, perhaps because Mr. Mohammed Ali's news conference in Calcutta yesterday seemed to be more conciliatory; there was for example some enquiry for jute shares today.

Though caution has dominated share dealings since the New Year, prices have not been eroded on any wide scale and there is still confidence that given encouragement the recovery of last year can be resumed. Titaghur Paper shares, although both mills are still on strike and there is no sign of a settlement, are quoted at Rs. 35-8. The only features worth noticing were an advance to Rs. 5-9 by Hindusthan Motors, and a sharp improvement in the ordinary and preference shares of Bathgates on the news of the transfer of ownership to new hands.

The Reserve Bank has ceased selling Government loans and gilt-edged are now steadier; although money is reported to be very tight in Bombay there is no stringency here in Calcutta.

Details of the week's trading follow.

* * * *

Government securities ruled quiet throughout the week and the volume of business was small. Three percent Conversion Loan 1986 was marked down further to Rs. 82-2 though there were buyers at this price at the close. Three percent 1896 eased in sympathy to Rs. 82-6. In short-dated issues, there was a very good enquiry for 2½ percent 1954 and the price firmed up to Rs. 99 with buyers over, while 2½ percent 1955 was unchanged at Rs. 98-6 with business passing around this level. Three percent 1957 was dealt in at Rs. 98-5-6 and 3 percent 1958 was quoted at around Rs. 98-1. In the medium-dated group 3 percent 1959-61 was unchanged at Rs. 96-2, while 3½ percent National Plan Bonds continued on offer at Rs. 98-14. Three percent 1963-65 was steady at Rs. 92-8 and 3 percent '964 had sellers at around Rs. 92-7. Four percent 1960-70 was supported at Rs. 101-12. Among long-dated loans, 3 percent 1966-68 was quiet at Rs. 90-4, but 3 percent 1970-75 had buyers at around Rs. 86-8. Provincial loans were dull with 4 percent's Madras 1963 and 1964 being marked down to Rs. 99-14. In contrast, 4 percent West Bengal and U.P. 1963 had small buyers due, perhaps, to the approach of the interest date (15th January) though prices were unchanged.

Enquiry persists for selected miscellaneous preference shares but there were sellers of jute preference shares with few declared buyers. Among jutes, Anglo-India were offered at Rs. 115, Fort Gloster were done at Rs. 124, Howrah 'A' were crossed at Rs. 117 and Hukumchand were reported at Rs. 110. In the miscellaneous group, Associated Hotels were done at Rs. 63-4, Bharat Collieries at Rs. 49-12, Burrakur 2nd at Rs. 8-3 and Burn 6 percent at Rs. 131. Birds Investments were crossed at Rs. 79 and Dunlop Rubber 1st were taken Rs. 2 higher at Rs. 131, and at this price there were further buyers. Equitable Coal were crossed at Rs. 117, Indian Iron recorded deals at around Rs. 107, McLeod 2nd were taken at Rs. 77 x.d. and a small lot of Martin Burn changed hands at Rs. 103. New Victoria Cotton were quoted at Rs. 3-6. Bathgate improved today from Rs. 21-4 to Rs. 24.

In the banking section Imperial Bank Fully-Paid were quoted at Rs. 1820 c.d. and the Partly-Paid were steady at Rs. 437 c.d. Hindustan Commercial Bank were done at Rs. 8-13 and United Bank of India 'D' Class shares at Rs. 3-15. There was some investment enquiry for Punjab National Bank at Rs. 21, but United Commercial eased further to Rs. 41.

* * * *

The only transaction reported in railway shares was in Dehri-Rohtas at Rs. 6-12.

Cotton shares were dull. Bowreah were lower at Rs. 260 and Dunbar at Rs. 163. Elgins were easier at Rs. 17-4 c.d., Kesoram were done at Rs. 20-4 and New Victoria at Rs. 1-2.

Coal shares were quiet and a nominal amount of business was completed. Burrakur fluctuated narrowly to close at Rs. 8-5. Bengal were done at Rs. 505 and Borrea were marked at Rs. 28 c.d. Business was reported in Central India at Rs. 5-3 and New Beerbhoom at Rs. 18. East Indian after being taken at Rs. 26-2 turned sellers at Rs. 25-8. Contrary to the general trend, Equitable were steady at Rs. 31-12. Raneegunge were quoted at Rs. 10-14, South Karanpura at Rs. 9-12 and Western Bengal at Rs. 4-14.

The dividend recommendations of the Bird/Heilgers group of jute mills announced last Saturday, though on the whole fairly satisfactory, failed to cause more than a ripple of interest in the section. The following statement shows the latest dividends recommended and those paid for the previous half-year.

	30-9-53.	31-3-53
Auckland	Rs. 2	Rs. 2
Dalhousie	3	1
Kinnison	5	4
Lansdowne	5	2
Lawrence	3	2
Naihati	Nil	Nil
Northbrook	8	6
Standard	1	1
Union	4	1

Buyers of the remaining shares in this section were conspicuous by their absence. Howrah fluctuated narrowly around Rs. 23-12 c.d., to close at Rs. 23-6 x.d. Agarpara were lower at Rs. 15-4, Alliance were quoted at Rs. 165, Anglo-India at Rs. 197, Bally at Rs. 156, Barnagore at Rs. 144 and Birla at Rs. 13-4 x.r. A few deals were recorded in Budge-Budge at Rs. 148, Chamdany at Rs. 141 and Chitavalsah at Rs. 10-12. India were offered at Rs. 121, Kinnison changed hands at Rs. 202 and Lawrence were crossed at Rs. 153. Nuddea were lower at Rs. 43-8. Small lots of Orient Jute came to hand at Rs. 175, Presidency were reported at Rs. 5-2, and Standard at Rs. 126.

* * * *

With the exception of Calcutta Electric which changed hands freely at around Rs. 13-6, little interest was shown in Electric Supply shares. Bareilly were quoted at Rs. 14-4, Jubbulpore at Rs. 13-12 and Upper Ganges at Rs. 14-14. A small lot of U.P. was taken at Rs. 153-8.

There was mild enquiry for selected sugar shares during the week, the special feature being Cawnpore which on buying support improved from Rs. 36 to Rs. 37-4 c.d. Belsund were marked at Rs. 8-11, Champarun were steady at Rs. 23-12, Durbhanga at Rs. 13 and U.P. at Rs. 13-14. Ramnugger Cane were crossed at Rs. 18-12.

There was a sharp reduction in turnover in the market's favourite counter, Indian Irons, with the price fluctuating narrowly around Rs. 25-6. Bhartia Steel were quoted at Rs. 10-12, Braithwaite were steady at Rs. 13-8 and Britannia Building were done at Rs. 5-10. Jessops were marked around Rs. 25, Kumardhubi Engineering around Rs. 8-2, and Marshalls at Rs. 6. Indian Galvanizing provided a feature improving from Rs. 15 to Rs. 15-12.

Business in miscellaneous shares was on a much reduced scale. Orient Paper were active at Rs. 44-8, while India Paper Pulp were slightly easier at Rs. 178. Shree Gopal were steady at Rs. 20 and Titaghur at Rs. 35-8. Sone Valley fluctuated narrowly around Rs. 6-14, New Asiatic Insurance were transacted at Rs. 4-8 and Ruby General at Rs. 5-9. Bengal Assam Steamship were offered at Rs. 165 while Calcutta Landing & Shipping were inquired for around Rs. 17-12. India Steamship were well maintained at around Rs. 7-1, Among others, Alkali & Chemical were lower at Rs. 14-12, and Angelo Brothers were marked at Rs. 19-2. Assam Saws changed hands at Rs. 7-2 and Britannia Biscuits at Rs. 11-12 x.d. British India Corporation were turned over freely at Rs. 9-1, and Dunlop Rubber were offered at Rs. 30. Godfrey Phillips were crossed at Rs. 30 and Indian Cables receded from Rs. 20 to Rs. 19-9. Indo-Burma Petroleum were steady at Rs. 72-8, Jardine Henderson were quoted at Rs. 115 and Metal Box at Rs. 16-14 x.d. Hindusthan Motors were active at Rs. 5-9. National Tobacco were easier at Rs. 9-12 while Rallis recovered to Rs. 60-8. Rohtas Industries were shaded at Rs. 11-4 as were Shaw Wallace at Rs. 11-7, and Textile Machinery at Rs. 9-1. Tide Water Oil were marked at Rs. 12-14. There was a mild flutter today in Bathgate ordinary Shares with the price improving from As. 15 to Rs. 1-8.

The feature in the mining section was Orissa Minerals which were scarce at the higher rate of Rs. 30. There was some enquiry for Burma Mines which were steady at Re. 1-5 and Non Ferrous Metals at 13 annas. Indian Copper were subdued at Rs. 2-11.

* * * *

For the first few days of the period under review the tea section remained idle with no price fluctuations. Following the improvement in the auctions on the 11th, however, the market became active once again and the volume of business expanded at rising prices. Among Assam scrip, Ananda Assam were a point better at Rs. 20. Baghmari had buyers up to Rs. 14-6, Basmatia and Bishnauth at Rs. 33-4 and Rs. 34-8, and Dhelakhat had strong buyers up to Rs. 13-14. Brooke Bond were unchanged at Rs. 12-4 as were Dufflaghur at Rs. 40 and Gohpur at Rs. 35-10. Others to show a rise included East India at Rs. 20, Grob 'A' at Rs. 31, Seajuli at Rs. 24-10, Teen Ali at Rs. 26-2 and Tengpani at Rs. 10-8. Tezpore were unchanged at Rs. 21.

In the Dooars section, Banarhat recovered to Rs. 390, Bhatkawa had buyers at Rs. 29-4 as did Birpara at Rs. 96 and Choonabhutti at Rs. 279. Hantapara were marked at Rs. 179 while Hasimara were better at Rs. 31-14 as were Jaybirpara at Rs. 30. Rajabhat had strong buyers at Rs. 20-8.

Business in Darjeeling scrip was restricted, Chamong being done at Rs. 12-8, Pashok at Rs. 9 and Poobong and Tukvar at Rs. 9-7 and Rs. 7-14,

respectively. From other areas Lackatoorah were marked at Rs. 9-6, Loobah at Rs. 3-2 and Kornafuli at Rs. 7-13. Hansqua were better at Rs. 16-10 and New Terai were marked up to Rs. 13-4.

* * * *

There is a fall in the profit of the RELIANCE JUTE MILLS COMPANY from Rs. 7.56 lakhs to Rs. 4.18 lakhs for the half-year ended 30th September, 1953. as compared with the previous half-year. Adding Rs. 48,080 brought in there remains Rs. 4,65,721. Contingencies absorb Rs. 1 lakh and depreciation Rs. 1 lakh (Rs. 1½ lakhs). The ordinary dividend has been maintained at 4 annas per share to leave a carry-forward of Rs. 71,971.

* * * *

Allowing Rs. 5,007 (Rs. 50,000) for taxation, Rs. 16,200 (Rs 10,500) for tax contingency reserve, Rs. 31,444 (Rs. 26,323) for depreciation and meeting other charges the profit of the SOUTH KARANPURA COAL COMPANY is shaded from Rs. 32,621 to Rs. 24,009 for the half-year ended 31st August. 1953. This is due to lower sales at Rs. 15.08 lakhs against the previous half-year's Rs. 15.98 lakhs. The dividend has been. however. maintained at 1½ percent to leave a carry-forward of Rs. 28,788 (Rs. 26,614). Raisings totalled 1,95,393 tons (1,06,006 tons) and despatches 1,00,523 tons (1.06,258 tons). The transport difficulty continues to affect the working of the company adversely.

* * * *

The profit of the ELGIN MILLS COMPANY at Rs. 17.39 lakhs for the year ended 30th September, 1953, compares unfavourably with the previous year's profit of Rs. 26.05 lakhs. Depreciation absorbs Rs. 7½ lakhs (Rs. 5½ lakhs) and rehabilitation reserve Rs. 3 lakhs (Rs. 10 lakhs). With a carry-forward of Rs. 1.23.353 from the previous year there is a balance of Rs. 8.12,424 of which the ordinary dividend has been cut by 8 annas to Re. 1 per share leaving a carry-forward of Rs. 73,424.

* * * *

The profit of the HOWRAH MILLS COMPANY has fallen by Rs. 4.21 lakhs to Rs. 10.59 lakhs for the half-year ended 30th September, 1953. Bringing in Rs. 1,55,026 there is a balance of Rs. 14 16,469 of which taxation absorbs Rs. 5 lakhs (Rs. 7.26 lakhs), depreciation Rs. 2 lakhs (same) and renewal reserve Rs. 1 lakh (Rs. 2 lakhs). The ordinary dividend has been reduced by 4 annas to 10 annas per share to leave a carry-forward of Rs. 1,14,437. The rehabilitation of mills with modern machinery is likely to be undertaken shortly.

* * * *

The scheme for the conversion of the deferred shares of the TATA IRON AND STEEL COMPANY into ordinary shares in the ratio of one deferred share for six ordinary shares as passed by the majority of shareholders of both classes has been sanctioned by the Bombay High Court and the company is expected to implement it in practice at an early date. It may be recalled that the move towards such conversion was initiated as far back as 1941. It is also proposed to capitalise a part of the general reserve for the purpose of issuing bonus shares to ordinary shareholders after conversion at the rate of one new ordinary share for every ordinary share held. The present capital is Rs. 10.47.24,135 divided into 50,000 preference shares of Rs. 150 each, 6.93,819 second preference shares of Rs. 100 each. 3.50.000 ordinary shares of Rs. 75 each and 48,750 deferred shares of Rs. 30 each.

* * * *

Messrs. TATA INDUSTRIES LIMITED, managing agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of December, 1953 was : pig iron 101.400 tons, steel ingots 95.100 tons, semis for sale 18,300 tons and finished steel for sale 53,400 tons.

New Delhi

PLANS TO REDEEM I.M.F. DOLLAR LOAN

SIR SHRI RAM RESIGNS FROM I.F.C.

(FROM OUR NEW DELHI CORRESPONDENT.)

A DECISION regarding the buying back of rupees from the International Monetary Fund is expected to be taken by the Finance Ministry in the near future. It will be recalled that this country drew upon the resources of the Fund in the middle of 1948 to meet a serious shortage of dollars needed to finance its imports of food and anti-inflationary supplies of consumer goods. Interest charges on this transaction are mounting up. A round sum of $100 million was purchased in that period for Indian rupees. As a result, the Fund's holdings of our currency, including the rupee part of the Indian subscription to its capital, rose to 118 percent of our membership quota of $400 million. Under the rules governing the charges on the use of the Fund's resources, interest has to be paid on the Fund's holdings of a member's currency in excess of the quota. The rate of interest is graduated according to the size of the excess and the period for which it has been outstanding. For a balance of less than 25 percent in excess of the quota, as in this country's case, the interest rate rises from nothing for the first three months to five percent at the end of the tenth year. The rate currently applicable to this country's outstandings is 2.5 percent. In about six months' time this will rise to three percent. In addition to the interest, a service charge of three quarters of one percent is also levied by the Fund.

The reason why recourse was had to the Fund's resources was that Britain's own acute dollar difficulties at the time were pleaded in defence of that country's inability to provide convertible sterling for our needs. The reason why the repurchase of the rupees from the Fund has been delayed so far is the continuing dollar shortage of the sterling area which has only recently been eased by a gradual and still limited recovery of the central hard currency reserves. Opinion in the Central Finance Ministry, however, has lately reached the point where it is considered that the reserves have improved sufficiently to permit dollar drawings by this country to relieve the progressively increasing burden of interest charges payable to the Fund.

In the budget for the current financial year, service charges on the Fund dollars account for a budget provision of Rs. 89.73 lakhs; in the previous year the figure was Rs. 73 lakhs in 1951-52 Rs. 55 lakhs and in 1950-51 Rs. 33 lakhs. As involving a special use of the sterling area's central reserves, the Indian intention to repurchase rupees from the Fund with dollars may possibly come up for mention at the current Commonwealth talks at Sydney. But it is not even remotely likely, according to informed circles, that objections will be raised in any quarter.

Choosing a new Chairman

Sir Shri Ram has resigned the Chairmanship of the Industrial Finance Corporation. This follows the recommendation of the Industrial Finance Corporation Enquiry Committee, which has been accepted by the Government. The Committee, it will be recalled, suggested that the Corporation should have a whole-time paid Chairman to be appointed by the Government. The Committee proposed that such a Chairman be responsible both to the Government and the Board. He should be assisted by a General Manager and a Secretary in the matter of the day to day working of the Corporation, while the overall policy and the general superintendence of the Corporation would be the responsibility of himself and the Board of Directors. The position of the Chairman would be analogous with that of the Governor of the Reserve Bank. He should not necessarily be an active industrialist, but should have mature experience in the field of production, management and finance. It was not considered enough to have an eminent banker as the Chairman as it was not wished to see the Corporation governed solely by a banker's outlook. The selection of a proper person for this responsible position would be a matter of great importance and nothing would be gained by replacing the whole-time Managing Director by a whole-time Chairman unless a man with appropriate status, experience, and outlook were found.

The Government is now engaged in selecting a person, envisaged by the Committee, for appointment as the Chairman of the Corporation. A meeting of the Board of Directors is being convened shortly to submit a panel of names from which the Government will make its selection.

Loan from International Bank

The Government of India has accepted the British offer of £5 million recently released from Britain's contribution of £60 million to the International Bank. The amount will be treated as a loan from the International Bank but will enable India to save dollar expenditure, in its repayment as also on its interest charges. £4½ million will be earmarked for financing the new steel project and the remaining £500,000 will be available for other projects.

The Progress of Productivity

The International Labour Organisation experts on productivity, and systems of payment by results, arrived in India in the first week of December 1952 for a period of six months in the first instance. The experts have conducted pilot productivity studies in selected units in the engineering industry in the Calcutta area, and the textile industry in Bombay and Ahmedabad, with the object of demonstrating how productivity and earnings of workers can be improved through the application of modern techniques of plant organisation and work study. The increase in productivity arising as a direct result of the teams' work has been assessed at between 6.5 percent and 36 percent in the units in the textile industry and between 12.5 percent and 116.0 percent in those in the engineering industry. The team has also taken care to ensure that its work is confined to increasing productivity by such means as do not involve addition of expensive equipment, and do not result in retrenchment. The experts working in the engineering industry have since left India, while the terms of those working in the textile industry have been extended to the first week of May 1954. The latter are at present engaged in conducting productivity studies in the Bombay Telephone Workshops. They have recommended an experiment in the application of work study techniques, and systems of payment by results in a complete mill or a single department. The attitude of some of the workers' associations to such a comprehensive investigation has not been very encouraging so the project in the textile industry is at present at a standstill.

The expert team has also recommended the establishment of a National Productivity Centre to be staffed, to begin with, by International Labour Organisation experts. The proposal has the blessings of the Planning Commission. The matter was discussed at the last meeting of the Standing Labour Committee held on 28th July, 1953. The employers welcomed the idea and expressed their willingness to share the cost. The workers, while welcoming the proposal, stressed that the experts should confine their activities to investigations and recommendations and that the workers' representatives would not agree to any change-over from piece-rates to time-rates. It will thus be seen that the system of payment by results is the cornerstone of the Productivity Scheme. The workers would not agree to the change-over, although it would raise their own standard of living.

The Mysore Session of the Indian Labour Conference, meeting next week, will discuss the proposal for setting up a National Productivity Centre. The Centre would continue the work which has been commenced by the International Labour Organisation Productivity Team and to this end should, it is suggested : (a) conduct productivity studies in selected plants in the most important Indian industries, and more particularly in those whose output is expected to expand substantially, in co-operation with the employers and workers concerned; (b) organise practical training courses for Government and for management and workers personnel from these and other plants in all phases of modern industrial engineering, management and other techniques which have proved to be effective in raising productivity; (c) follow up the work of the trainees in their own plants; and (d) assist in applying modern industrial engineering techniques in selected plants with a view to raising productivity and workers' earnings and improving conditions of work in these plants, and to demonstrating to Governments, employers and workers the benefits which follow from the application of such techniques. The Centre might, in addition, organise courses in cost accounting and in the application in industry of statistical methods which have proved helpful in raising productivity.

It is proposed that, subject to the availability of funds, the cost of staffing the Centre (with the exception of the salaries of Indian staff) be financed by the International Labour Organisation out of technical assistance funds, for the first two years of its operation. The Government of India would, of course, be required to assume the obligations provided in the basic agreement between the Government and the International Labour Organisation concerning the provision of technical assistance. The Government might however wish to consider seeking financial assistance from employers' and workers' organisations or from individual firms or institutions to cover such expenses as the salaries of any Indian staff engaged during the first two years, who could not ordinarily be paid out of technical assistance funds, the daily subsistence allowances of International Labour Organisation experts, at present paid by the Government and the cost of transportation, office space and clerical staff. The issue is whether, in view of the attitude of labour the Centre should be started. One view here is that there should be a clear and unequivocal assurance from the labour that it would welcome the scheme of payment by results before starting the Centre.

Amending the Constitution

The question of amending the Constitution in order to remove the lacuna, on account of which the Sholapur Mills Act was invalidated by the Supreme Court, is engaging the serious attention of the Government of India, and an amending Bill may be brought up before Parliament during its forthcoming Budget Session. The Supreme Court's judgment has created a two-fold problem, an immediate, and a long-term problem. By invalidating the Sholapur Mills Act it has made the existing management unauthorised. This has created several problems. Firstly, the Government of India has loaned Rs. 1¾ crores of the taxpayer's money to a body of men who are no longer authorised to remain as Directors of the Board of Management. Secondly, all their dealings, although performed in good faith, are liable to be challenged in courts of law. The Government is therefore compelled to take such action as would make the management and its dealings legal. This it proposes to do by means of an Ordinance, which apart from clothing the management with legality would set up an independent tribunal to determine compensation. The Supreme Court, it will be recalled, invalidated the Sholapur Mills Act on the ground that, contrary to Constitution, it did not provide for compensation in respect of an undertaking which had been taken over by the Government on a permanent basis. The Ordinance will not stand in the way of handing over the undertaking to its original management if it were so decided at a later stage. There have been some negotiations between the Government of Bombay and the original management in order to decide whether defects in the act could be remedied by the former outside the Ordinance. Such an agreement would however be dependent on a majority of shareholders ratifying the actions of the existing management, and accepting the responsibility for repaying the loan advanced by the Government. Whether an Ordinance, if issued, could not be challenged again in courts of law on the ground of discrimination is another matter for decision. This, however, does not solve the long-term problem. For, in invalidating the Sholapur Mills Act, the Supreme Court's judgment has indirectly created serious difficulties in the implementation of the Industries Regulation Act. In the absence of a clear ruling, it is a matter for speculation whether the Supreme Court's judgment sought to provide for compensation in respect of industrial undertakings taken over by the Government on permanent or quasi-permanent basis, or for a limited period, as provided in the Industries Regulation Act. To remove all doubts, it is proposed to amend the Constitution itself. A Bill to amend the Constitution during the Budget Session of Parliament might therefore be introduced.

An Industrial Development Corporation

The Government has accepted in principle the proposal to set up an Industrial Development Corporation. The Ministry of Commerce and Industry, which sponsored the scheme, is at present engaged in working out its details. As already reported, the Corporation is intended to supplement and not supplant private enterprise. With this end in view the Corporation would take such industries which had remained undeveloped for lack of finance or other similar reasons. Availability of transport facilities would be a major consideration for the Corporation. It is not expected to launch schemes for which transport facilities were not adequate.

Automobile Industry Development

The Development Committee on the Automobile Industry will meet here on 23rd January. Apart from reviewing the progress so far made in implementing the manufacturing programme, the Committee will discuss various proposals for the manufacture of heavy and medium trucks. The negotiations for a tie up of Asoka Motors, Ltd. with the Rootes group for the manufacture of motor cars are definitely off, it is learned. Asoka Motors however are still in the field with their scheme to manufacture trucks in association with Leylands. Tatas have a scheme to manufacture trucks in association with a German firm, Mercedes Benz. These two applications will be considered by the Committee.

The Government, it will be recalled, has already accorded its sanction to approved units for the manufacture of baby cars.

Disagreement on Taxation Policy

Opinions still remain sharply divided on the issue of purchase tax to replace the single point sales tax. The question was examined by an official committee last November, which was equally divided on the proposal. Enquiries show that while the Bombay and West Bengal Governments have strongly favoured the scheme, the Madras and Travancore-Cochin Governments have equally strongly opposed it. Another attempt to reach an agreement through a Finance Ministers' Conference may be made. The ultimate remedy however, will have to be in the amendment of the Constitution.

India's River Projects

The Government of India has provided Rs. 15 crores in the 1954-55 budget to finance four major river developments, namely Koyna and Ukai projects in Bombay State, Krishna Project in Andhra State and Kosi Project in Bihar State, Krishna and Kosi Projects are still in investigation stage while detailed estimates are completed in respect of the two projects in the Bombay State. The Koyna hydro-electric-cum-irrigation project will be the largest of its kind in the Bombay State, consisting essentially of a dam across the Koyna Valley near Helwak in the Satara North District to store water, a power station in Konkon about 1,600 feet below the level of the lake to generate electricity, and a system of lift irrigation schemes on the Krishna River in the Satara South, Belgaum and Bijapur Districts.

Rice Barter with Ceylon

The Ceylon Government has agreed to a barter arrangement under which India will exchange thirty thousand tons of Burmese boiled rice with the equal quantity of Indian raw rice. India needs boiled rice for Travancore where it is preferred to Indian rice. The first two initial shipments are expected to reach Travancore shortly. India has agreed to complete the exchange within three months.

London

YEAR-END GOLD AND DOLLAR RESERVES ENCOURAGING

SECOND OFFER OF NATIONALISED STEEL SHARES

(FROM OUR LONDON CORRESPONDENT)

THE sterling area, so far as its gold and dollar reserves stocking was concerned, was certainly not overlooked in Father Christmas's seasonal share-out. December turned out to be the best month in the year and produced no less a surplus on current earnings than $114 million. To that most encouraging development was added a further $20 million on account of receipts of American defence aid, plus another $4 million as the gold payment quota relating to the November surplus with the European Payments Union. But for the annual debt repayments to the United States and Canada, which fell due on the last day of the year, the gold reserves would have risen in December by $128 million. These repayments, however, required $181 million, so in point of fact the reserves actually declined by $43 million—the first drop since December, 1952—to stand at the end of the year at $2,518 million. The year as a whole has been one of steady, if unspectacular, progress, and although provisional figures for the British balance with E.P.U. during December show a deficit of £3.1 million—almost wholly due to an interest payment on the credit received from that source in the past—of which half will have to be met in gold in January, other indications suggest that the gradual replenishment of the reserves may be expected to be resumed this month. A substantial contribution to the December figures was made by the arrivals of Soviet gold—the City's guess, in the absence of official figures, is around $60 million, which would still leave the December figures better than the $32 million surplus in November—but as these were apparently in settlement of a trade deficit, which might well persist, they are not regarded as a financial windfall.

The maintenance of this progress, however, is dependent upon so many varying factors that it is only right to mention that although industrial activity is at a very high level in this country at the moment there is an underlying uneasiness which it is difficult to disperse. This fact is only too apparent in a private report to clients recently issued by an enterprising firm of London stockbrokers who have recently conducted an inquiry into present business conditions in 16 industrial centres in this country. From this it would appear that almost all industries are busy, and having met severe competition from abroad over the past twelve months by accepting lower profit margins, there is rather less pessimism about exports as a whole than there was a short time back. The view that the buoyancy of home trade, resulting from Mr. Butler's "soft" budget of last April, might prevent the expansion of export trade is not as generally accepted as it was; which might perhaps be some explanation of the Chancellor's New Year gift in the form of a reduction of purchase tax on several categories of goods (which will cost the Exchequer about £2,000,000 in a full year) to meet the argument that sales are unduly depressed in the early months of each year in the anticipation of purchase tax changes in the budget. Nor have industrialists found any difficulties about raising additional capital. Order books are thinner, of course, but export orders are generally good for all but the lighter products. Curiously enough, every centre reports that labour relations are good, but labour, just the same, is the principal cause of the uneasiness, for it is generally agreed that industry's ability to meet competition could be seriously hampered if the current wage claims were as successful as that of the railwaymen has been.

Effects of Award to Railwaymen

The immediate effect of the award to the railwaymen of a four shillings a week increase in salaries and wages, coming on top of "still further rises in costs during 1953" and increased provisions for depreciation, interest, maintenance and pensions, is that the British Transport Commission has applied to the Minister of Transport for authority to raise from 1st February its railway freight, dock, and canal charges by 10 percent, subject to a limit of 10s a ton in the case of merchandise by freight train and perishable traffic by passenger train—estimated to yield altogether about £26 million in a full year. It is hoped that this will cover that current budget "gap" of British Railways, but the Commission emphasises the uncertainty of the future outlook and at least covers the possibility of a further application to increase passenger fares by remarking that action "must depend on a number of factors, and particularly upon the outcome of negotiations still in progress." The application has been referred to the permanent members of the Transport Tribunal. If it is granted, according to the National Union of Manufacturers, "it could not but be reflected in increased costs on all goods and services, and to that extent would undermine the real value of wages:..... It seems a serious blow to the gallant efforts of Mr. Butler in curbing inflation."

By themselves, the freight increases would not necessarily be quite so serious a blow, for they would of course be widely dispersed. The real trouble is that the railwaymen were only one of the labour groups who are in the long, and ever lengthening, queue demanding wage increases. The National Coal Board and the National Union of Mineworkers have apparently reached an amicable settlement in connection with the miners' demand for a rise for 400,000 lower-paid workers which is likely to be made public when, as seems probable, it is confirmed later this month. It may well lead to a further rise in the price of coal, even though the industry has done unexpectedly well in 1953 and Sir Hubert Houldsworth, Chairman of the N.C.B., thinks it reasonable to expect an upward output trend during 1954. In spite of an extra week's holiday and the Coronation holiday, total output for the year 1953 was only about one million tons lower than for 1952, and we start this year with stocks about two million tons higher than a year ago although an extra one and a half million tons went for export. The outlook in the shipbuilding and engineering and the electrical contracting industries, on the other hand, it a lot less encouraging. Both employers and labour are at present jockeying for position, seeming to give way at one moment and then getting "tough" the next—with the Minister of Labour occupying the unenviable position of referee without the authority which any normal referee would possess. Were it not for the seriousness of the disputes to the country's economic well-being this posturing and manœuvring would be almost farcical. As it is, there should be an end to it, and that soon, for tempers are being unnecessarily frayed in the process.

Losses in State Trading

The case against State trading or bulk buying, and justification for the present Government's policy to eliminate it as soon as possible and return all trading in commodities to private hands, is provided in the volume of trading accounts and balance sheets of Government Departments for 1952-53. This shows that the Ministry of Materials showed a net loss on trading in raw materials and metals of more than £45 million. Substantial losses are again expected this year, and as the surplus which was built up over the "seller's market" years since the war have now been reduced to an almost negligible figure, these will have to be borne by the revenue. In 1952-53 the largest losses, which aggregated £53.2 million, partially offset by profits totalling £7.9 million, were incurred on jute (£14 million), timber (£10.5 million), zinc (£18.5 million), lead (£7.2 million) and tungsten (£2 million). The losses on zinc and lead arose in part from the sale at current market prices of metal bought under forward purchase contracts made in a period of scarcity in 1951 to safeguard future supplies. Although trading has now been restored to private hands, deliveries to the Ministry under these contracts still continue. The loss on jute was caused mainly by the sale of stocks of high-priced jute goods at falling prices, which was accentuated by substantial reductions in Indian export duties. The Labour press has headlined the Ministry of Material's trading losses, as compared with the profits of earlier years, as being the Conservative party's "gift" to private enterprise, but there can be little doubt that had State trading been retained until stocks were exhausted British industry would not have been able to compete on foreign markets in the face of falling world prices, while if it had been continued to average-out prices the process would have had to continue for so long a time that all private enterprise would have been effectively killed.

Lancashire Steel Shares

The second offer to the public of nationalised steel shares, £9 million worth, in the Lancashire Steel Corporation, has just been announced. The full prospectus is not yet available, but there are slight variations in procedure compared with the earlier offer of United Steel shares—only the former Steel stock will be accepted instead of cash, and the lists are, of course, being closed earlier—but the success of the operation is again being secured by ensuring that the full amount of both Preference and Ordinary shares, which make up the total in equal quantities, will if necessary be subscribed by insurance companies, investment trusts and other City institutions on underwriting terms. In these circumstances, the doubts expressed in some circles at the timing of the new offer, with United Steel standing at 1s discount, may not be particularly important, and least of all to former stockholders, who are given preferential consideration in allotment.

L.S.E. Raises Membership Fee

Members of the London Stock Exchange are to pay higher subscriptions for the year beginning 25th March, according to a circular just issued by Sir John Braithwaite, Chairman of the Council. The higher charges have become necessary because there has been a substantial fall in membership over recent years, and the trend is expected to continue. At the same time additional expenditure has been incurred. For those members paying 30, 40, 50 or 75 guineas the increase will be 10 guineas. Those now paying 100 guineas will pay five more. Subscriptions have not been raised since 1920, when the amount payable by members joining on nomination was 100 guineas a year, so the rise is not very considerable or surprising. Members elected without nomination hitherto have paid 50 guineas, this privilege being confined to clerks placed on a waiting list after four years' service in the Exchange. Those admitted on this basis after 24th April will have to pay the same subscription as those admitted on nomination, namely, 105 guineas. The rates under 50 guineas apply to members admitted on nomination before 1920.

TIMES HAVE CHANGED . . .

KEYSTOR

AUTOMATIC PUNCH

Root of the matter in punched card methods is . . . punching the cards. Hand-feed punching—swift and simple though it be—must still seem an anachronism in days of total mechanisation. The Keystor Punch reduces hand work to the irreducible minimum. Time spent in inserting and removing cards is saved . . . the effort of direct punching is saved. The operator does no more than feather touch the keys. Data so recorded is stored in the brain of the machine and only when the punch bar is tapped does punching commence. There is a lot to learn about Keystor. To keep abreast of the times, you should know it.

RELEASE OF SMUGGLED GOLD

MINISTER'S HINT DISTURBS BULLION MARKETS

(FROM OUR BOMBAY CORRESPONDENT).

11th January.

IT is not often that a Minister drops a brick in the more or less placid waters of the forward markets. However, Mr. A. C. Guha, Union Deputy Minister for Finance, who was in Bombay last week on a short visit, dropped quite a heavy one last Thursday afternoon. He stated at a Press conference that the question of disposing of the stocks accumulated by the Union Government of smuggled gold, which were lying with the Mint in Bombay, was being seriously considered by his Ministry. These stocks are valued at about Rs. 2 crores and should, therefore, amount to about 2,50,000 tolas. Though he did not indicate how, when and in what instalments this large quantity of gold would be thrown on the market, the news caused quite a flutter in the bullion market even though operations had closed for the day. In kerb trading, which has now become a regular feature of practically all forward markets in the city, there were wide fluctuations in the price of the metal. There were repercussions on the price of silver also. From Rs. 82-14, which was the price at which gold was officially quoted at the end of business on that day, it dropped to Rs. 81-10. Later, it recovered to Rs. 82 in the evening and has since made up practically the whole of this loss.

It may be recalled that a few months ago a rumour to the effect that the Reserve Bank would offer large quantities of gold belonging to the Government of India for sale caused an upheaval in the market. Although it was contradicted, it now appears that the rumour was not altogether without foundation.

In indicating this possibility, Mr. Guha also said that the Government was trying to tighten up avenues of illicit entry of gold into the country. He feared that a certain amount of smuggling was bound to persist over the land frontiers. The Deputy Minister for Finance also announced that the Government would shortly introduce a Bill in Parliament amending the Indian Sea Customs Act, to remove certain difficulties of the Customs authorities in dealing effectively with smugglers not only of gold and silver but of other manufactured articles also. The Government was aware that many such articles, the import of which was banned, were to be found in Indian markets. The onus of proving that goods had been smuggled, under the Act as at present, lay with the Government. This hindered the authorities in dealing with those openly selling such articles. It was proposed to remove this disability by amending some of the provisions of the Act in such a manner as to require the dealers of such goods to prove that they had not been smuggled into the country.

Reddy on New Projects

Mr. K. C. Reddy, Union Minister for Production, was on a visit to this city last week. Speaking at a reception held in his honour at Congress House, he gave some interesting news about several Government-sponsored industries. He stated that very soon India would see a sudden spurt of activity with regard to the production of important commodities such as penicillin, cables, DDT, machine tools, etc. His Ministry was concentrating on the growth of these industries and results would soon begin to show. In addition, Mr. Reddy recalled that the Government had planned large electrical equipment production in India in conjunction with certain combines. Plans had been asked for and the Minister hoped that within a month or two they would be available; he expected that within a couple of years production would be in full swing. Mr. Reddy also took the opportunity to defend the agreements entered into with the Krupps-Demag combine for the steel plant and observed that the Government had managed to obtain the best terms possible under present circumstances.

The most optimistic part of his address at this gathering, however, was with regard to the possibility of obtaining petroleum in the Bengal basin. Mr. Reddy said that this area was being explored for the extraction of crude oil so that India could do without the imports of petrol. Agreement for exploration had been reached between the Government and Stanvac; the latter had carried out an aerial survey, and a geological survey would soon begin. After this, if found suitable, another agreement for the actual extraction would be signed. Mr. Reddy added amidst cheers that he was very hopeful about the result of this exploration. During his stay the Minister visited the Standard Vacuum and Burmah Shell refineries now under construction. He said that the projects were making satisfactory progress and would start production according to schedule. As the major portion of the Stanvac refinery has been completed, it is expected to start working in July this year, while that of Burmah Shell will be completed early next year. Amongst the other industrial units inspected by the Production Minister were a cycle factory and chemicals factory. He also held discussions with the Salt Merchants' Association.

Industrial Progress

Some important aspects of the Government's economic policy came in for criticism at the hands of Sir M. Visvesvaraya, when he addressed the third quarterly meeting of the Central Committee of the All-India Manufacturers Organisation at the Taj Mahal Hotel. After expressing his general dissatisfaction with the slow progress of technical education and industry, he proceeded to discuss three of his main interests—the steel, automobile and aircraft industries. Referring to the new agreement with the Krupps-Demag combine on the establishment of a steel plant, he said that the work could well have been entrusted to an Indian firm, which would have not only given the country the additional steel production which is required, but would have at the same time given opportunities to Indians to develop into experts or technologists of distinction in this industry. With regard to the aircraft industry, Sir M. Visvesvaraya's complaint was that while the Government should have concentrated its resources on the actual manufacture of planes, facilities for which existed here, it had ignored this and nationalised air transport in the teeth of opposition from private investors who had originally provided the capital for it.

The Committee of the Organisation had a good deal to say about providing incentives to private enterprise. Its resolution on this subject asked for a programme of positive action by the Government for strengthening the base of the national economy and raising the standard of living of the people. It urged the Government to stimulate productive investment by public and private companies through tax concessions enabling them to retain more profits to plough back into industries. This alone could enable them to undertake renewal and modernisation of plants and enlarge their productive capacity. One suggestion was the early setting up of an Industrial Development Corporation for nursing and developing new industries of an essential nature. Another subject which exercised the mind of the Organisation was the decline in the export trade during the last two years to regenerate which it asked for the abolition of all existing export duties, as these had become anomalous in a buyers' market. It also urged measures to prevent a further rise in the cost of production which did not directly bring about either increased efficiency or greater productivity of labour.

Foodgrains Trade

The foodgrains trade in Bombay, which has been practically at a standstill for the last ten years, is preparing feverishly for its return to activity from 21st January. This has been rendered possible by the decision of the Central Government to remove all controls on the movement of coarse foodgrains and the implementation of this decision in the 11 rationed cities in the State. The import and sale of foodgrains will still be under licence. Applications for such licences are pouring in rapidly. In Bombay city alone these are expected to number more than 5,000. Instructions to small railway stations in the areas from which such foodgrains are likely to be despatched to Bombay State do not seem to have been issued and there are some apprehensions here that the merchants may not be able to put commodities like bajra, jowar and maize on the market on the date announced for the freeing of this trade in adequate quantities. At the same time, there is some dissatisfaction among applicants for licences at the imposing of a licence fee and a deposit for the due observance of the terms of licence, as also for some of the information which is being asked from the prospective traders in foodgrains. The general criticism amongst business circles with regard to this is that even though the Government has decided to remove controls, bureaucracy is reluctant to divest itself of the powers it has exercised over private trade and is trying to reimpose some of the restrictions by way of introducing certain conditions in the licences. One of the effects of this announcement, and of allowing private trade in imported wheat simultaneously, has been a fall in the price of pulses as well as coarser foodgrains.

Western India Commerce Chamber Meets

The Western India Chamber of Commerce held its annual general meeting here last week. Mr. G. D. Somani, M.P., who was elected President for 1954 in place of Mr. Begraj Gupta, said that the greatest task before the country and the Government today was encouraging capital formation. He emphasised that it was through industrialisation that the country could achieve its objective of a welfare state and, looking to the conditions in the country, such a development could only come properly from the private sector. The State's share in this process should be that of evolving a suitable system of incentives, to induce increased investment and to create conditions which would lead to a smooth flow of funds. He regretted that while undue attention was being paid to improvements in agriculture, industrialisation was not receiving the attention it deserved, and pointed out that conditions in the rural areas would improve only when pressure on the land had been reduced by absorption of the surplus agricultural population in industries. Even from the point of view of unemployment, speedy relief would come, according to Mr. Somani, from intensifying efforts to develop industries which alone would create fresh avenues of employment by diversifying, stabilising and enriching the economy.

Economic Recovery in Japan

Mr. P. B. Advani, one-time Director of Industries of this State, gave an account of recent industrial developments in Japan at the Rotary Club here last week and spoke on Indo-Japanese cooperation in trade and industry. Mr. Advani said that industrialists in Japan were not only prepared to help this country with technical knowledge but were also ready to participate in the efforts being made at present for industrial expansion by investing capital as well. Giving an instance of the rehabilitation of Japanese industries, Mr. Advani said that in the matter of generation of electric energy, Japan produced 52 billion units in 1952, which was an increase of 130 percent on the pre-war level. It was, however, in the field of steel production that the result was most impressive. Japan's present production capacity is 7 million tons a year, compared to a little more than a million tons produced by India and the 2.1 million tons which were expected to be produced here by 1956-57—a figure which would still fall short of local demand by 2.8 million tons a year.

Diesel Engine Manufacture

Mr. G. R. Damodaran, M.P. who is the Chairman of the Development Council on Internal Combustion Engines and Pumps, indicated at Poona that the ban on the import of diesel engines of up to 25 H.P. might become a permanent feature of the import policy. He admitted that this industry was equipped to meet all important demands but some of its manufacturing capacity had remained idle during the last two or three years, and he assured the Indian Diesel Engine Manufacturers' Association that his council would do everything possible to promote the indigenous industry. In return Mr. S. L. Kirloskar, Chairman of the Association, gave an assurance that factories were in a position to ensure quality production at reasonable cost to meet the entire demand for engines and pumps. The estimated total capacity of the industry, a major part of which was located in Bombay State, according to Mr. Kirloskar exceeded 20,000 horizontal and vertical engines per year and the range of production of these factories was from 4 H. P. to 250 H. P. The industry aimed at increasing this range as well as the types of engines and was fully capable of fulfilling the target assigned it under the five year plan. With the help of the Internal Combustion Department of the Indian Institute of Science, it also hoped to improve the quality of its products still further.

An Industrial Parade

Industrial undertakings in Bombay are organising, in co-operation with the Bombay Suburban People's Central Association, a grand industrial parade on 26th January. This parade is intended to raise funds for the Association to enable it to give relief to the poor. The factories taking part in the parade will make a suitable donation to the fund and will be represented by decorated vehicles advertising their products.

CHANGING PATTERN OF COTTON AND TEXTILES TRADE

LANCASHIRE'S EFFORTS TO REGAIN THE KARACHI MARKET

(FROM OUR KARACHI CORRESPONDENT).

AT a time when trade and industry itself is all too often prone to request Governments to provide it with swaddling clothes, thus inviting added restrictions to the free movement of international commerce, it is refreshing to find an instance of private enterprise making a determined bid to set its house in order by its own efforts. For some time past it has been apparent that the natural two-way traffic between Lancashire and Pakistan of raw cotton and textiles was being diverted, through pressure of circumstances, to other highways. Lancashire was brought to its feet by the Japanese trade agreement and there are signs that the policy of *laisser-faire* is at an end. In the last week of the old year the Lancashire-Pakistan Cotton Committee, the formation of which had been advocated for some time, held its inaugural meeting in Manchester under the chairmanship of Sir E. Raymond Streat, who is also Chairman of the Cotton Board. The prime reason for the creation of the Lancashire-Pakistan Cotton Committee was that the Board had felt that for a variety of reasons the trade relationships between the two countries had deteriorated in recent years and that the best had not been experienced on either side. This is only too true.

Post-Partition Trade

It has been widely held in Pakistan that since partition the U.K. had treated the Karachi cotton market with indifference, if not with neglect. The figures for the year ending June 1953 tell their own tale, for during that year the U.K. lifted a mere Rs. 4.96 crores' worth of raw cotton while Japan alone took Rs. 25.65 crores. As price was not a factor it would appear that conservative Lancashire, with its traditional caution, had been nervous of the outcome of the unsettled conditions following partition prevailing in Sind and the Punjab arising from the inter-migration of population. Perhaps also it was feared that new cultivators might mix varieties hitherto not produced in these districts, and there was considerable diffidence in dealing with the large number of new sellers about whom little was known. In the event, these apprehensions were not shared by other countries, and new customers were found by Pakistan in Russia, Japan and later on in China. The reluctance of Lancashire to deal, at a time when a new country in the Commonwealth urgently needed a helping hand in establishing its economy, was particularly felt last year when, had it not been for substantial off-take by Japan, there would have been something of a crisis in the Karachi market.

However, that is now past history and a positive step has been taken by Lancashire to turn the flow of trade back into channels mutually beneficial, from a long-term aspect, to both the U.K. and Pakistan. At the Manchester meeting it was decided to despatch a cordial and pressing invitation in the name of the newly-formed committee to all the proper authorities and organisations in Pakistan to send a delegation to Lancashire at the earliest possible date in the New Year to discuss with the committee the lines of immediate action to be taken to the mutual advantage of both countries. Almost simultaneously, in anticipation of this move by the Lancashire-Pakistan Committee, an informal meeting was convened in Karachi for exploratory discussions under the auspices of the Ministry of Commerce which was attended by, in addition to officials, about thirty members of the Karachi Cotton Association and the Pakistan Cotton Association. A free and frank exchange of views took place and it seems reasonable to assume that there will be a ready response from Karachi to the gesture by Lancashire.

The Long-Term Prospects

It is recognised here that the recent pattern of trade in raw cotton and textiles which has evolved during the past two or three years cannot be reckoned as permanent, and that new factors may appear which could easily result in Pakistan's new customers looking elsewhere; two of the most important of these factors are the possibility of the convertibility of sterling, through which Pakistan cotton would lose its present advantage, and the comparatively early attainment by Pakistan of self-sufficiency in the production of the cheaper varieties of cotton textiles. In the U.K. Pakistan can probably find in the long run a more stable market, less sensitive to extraneous influences.

With the passing away of the Raw Cotton Commission, at whose demise few will shed a tear, Liverpool Cotton Exchange will once more become a free market. This event will have an appreciable effect on Pakistan cotton and the developments will require careful study. In all probability dealings in futures will commence in May for delivery in October. A shrewd local commentator has drawn attention to the fact that the basis of the Liverpool contract will be American cotton only, as many of the other growths are subject to official controls and other "wayward" influences. Owing to the exigent control of foreign exchange by Pakistan local exporters will labour under a severe handicap as, under present regulations, they will not have available sterling to cover their operations in the Liverpool market, the rules of which call for daily clearings and payment of margins. The State Bank is well aware of the problem and a close watch will be kept on the impact next season on the Karachi market of what really amounts to a move towards the convertibility of commodities.

REASSURING DECLINE IN HESSIAN AND SACKING STOCKS IN 1953

AT the end of December stocks of manufactured goods held by mills reporting to the I.J.M.A. were 98,900 tons, an increase of 600 tons over the revised figure for November. Hessian stocks amounted to 24,300 tons, or 24.57 percent of the total and were 200 tons lower than at the end of November. Sacking stocks showed an increase of 1,500 tons as compared with those at the end of November and were 73,000 tons or 73.81 percent of the total. Miscellaneous manufactures were down by 700 tons. At 31st December, 1952, the total stocks were 115,000 tons—16,100 tons more than at the end of last month. Hessian stocks were 34,200 tons or 29.74 percent of the total. The figures at the close of 1953 must, therefore, be looked on with satisfaction for, in spite of the large increase in the output of hessian during 1953, the stocks of hessian held by mills have decreased, showing that Indian mills have been able to find markets for all and more than their increased production. The stocks of sacking at the end of December, 1952, were 78,200 tons—5,200 tons more than at the end of 1953. The output of sacking has, of course, been drastically reduced during 1953 but the fact that stocks are now lower than they were a year ago is an indication that the adjustment of output to demand may have been fully achieved.

JUTE MARKETS SHOW EASIER TENDENCY

The easier tendency which was apparent on the morning of Wednesday of last week developed further during the week under review. Speculative selling of B Twills in the fatka markets was said to be mainly responsible and it is reported that potential foreign buyers of manufactures have been deterred from entering into business because of the possibility of prices falling further after they have bought. A slight rise in mills' stocks of sacking also had a weakening effect. In spite of the downward tendency in the market for manufacturers and easiness among jute sellers there has been considerable business in raw jute though it was mostly confined to one group of mills. At the time of writing the speculative markets are steadier and prices have recovered a little.

Manufactured Goods: Profit-taking by bull speculators started a decline in the fatka markets which, with short reactions, continued until Tuesday afternoon when there was a recovery. Small business in hessian was done on account of the U.K. and U.S.A. on Wednesday and Saturday. Small business was also reported in sacking but not in sufficient quantity to have any influence on the market. At the time of writing some enquiry is reported for sacking and it is believed that business for Australia is on the tapis. At the beginning of the week B Twills were quoted at Rs. 106-6 and the lowest touched was Rs. 102-14. On Tuesday evening they had recovered to Rs. 105-8 on covering in the speculative market. 40" 10 oz hessian last Wednesday morning were standing at Rs. 45-14 and, with intermediate fluctuations, dropped to Rs. 44-4 but recovered later Rs. 44-14. On the whole, however, it has been a discouraging week in the goods market.

Quotations on Wednesday morning are as under, the market being firmer on bear covering.

	Jan.	Jan.-Mar.	April-June
40" 8 oz.	37- 4	36-12	36
40" 10 oz.	45- 6	45- 2	44-10
B Twills	105-14	106- 8	106-12
Heavy Cees	104-12	106- 4	106-12
Cornacks	108-12	109	109- 4

Raw Jute: This section of the market has been easier in sympathy with the market for manufactures. Most mills have kept out of the market except for small purchases but one group has been in the market almost daily and has bought a substantial quantity at declining prices. Most of this business was for delivery ex local bazars at rates considerably below the cost of landing jute in Calcutta from the districts contracted for. All sellers are, of course, holding stocks and it is possible that, because of the weakness in the manufactured goods market, they were willing to discount cost prices in the hope of covering later at a profit. Most of the business done has been in Northern qualities at Rs. 28 to Rs. 27 basis Bottoms ex Calcutta. A fair quantity of Bimli has also been done at Rs. 25-8 to Rs 24 for F.A.Q. Other business reported was as under:

Dhubri Rs. 28 to Rs. 7-12 basis Bots for ready bales lading.
Assam Rs. 27-8 basis Bots for ready bales of loding.
Assam Rs. 28 basis Bots Jan.-Feb.
Murshidabad Rs. 26-8 basis Bots Jan.-Feb.
Murshidabad Tossa Rs. 29 basis Bots Jan.-Feb.
Daissee Rs. 31 to Rs. 29-8 basis Bots Jan.-Feb.
Daissee Mesta Rs. 28 to Rs. 26-8 basis Bots Jan.-Feb.
Mill Reds Rs. 200 to Rs. 195 per bale Jan.-Feb.
Mill Firsts Rs. 190 per bale Jan.-Feb.
Dundee Daissee 2/3 LG Rs. 165 to Rs. 160 Jan.-Feb.
Dundee Daissee 2/3 SG Rs. 180 Jan.-Feb.
Pakistani NC's (Jat) ex Calcutta Rs. 75.

Sellers in Calcutta are somewhat nervous because of the weakness in the market for manufactures and because they are all holding stocks. On the other hand stockholders in the districts are reserved and are unwilling to reduce prices.

On Wednesday morning quotations are as under and the market is steadier with more interest shown by mills late on Tuesday night.

	Landed at Mills Rs. per md. Basis Bottoms.
Indian Jute:	
Lower Assam	28-8
Upper Assam	28
Northern	28-8
Purnea	28
Murshidabad Tossa	29-8
Daissee Sheoraphuli	30-8
Daissee ex Calcutta	29-8
Daissee Mesta ex Calcutta	27
Bihar Mesta	24
Bihar Jute	25
Bimli F.A.Q.	25
Local packing: Northern	28
Local packing: free from Jungli	25
Local packing Jungli	24

Tossa prices are Rs. 2 above the prices for white jute: Middles are Rs. 3 above the price of Bottoms but sellers are getting a premium for middles alone.

Pucca Bales	Rs. per bale
Mill Firsts	180
Mill Lightnings	165
Dundee Daissee 2/3 SG	180
Dundee Daissee 2/3 LG	165

Pakistani Jute ex Pakistan:	Rs. (I) per maund Basis Bottoms
Jat	30-8
District	29-8
Northern	28-8

The difference between Tops and Middles in the case of Pakistani jute is Rs. (I)3 and between Middles and Bottoms Rs. (I)4.

Mofussil: Conditions in upcountry markets are much the same. Stocks are firmly held and, though the tone is easier in sympathy with the fall in Calcutta, prices are scarcely any lower and are more out of line with those in Calcutta than they were before. Arrivals in Cossipur average about 8,000 maunds daily and the recent sales to mills are expected to bring about some reduction in stocks. Prices have fallen a little but are expected to steady again when dealers begin covering against last week's business. Imports of daissee are very small but fair stocks are still held by dealers though the bulk of what is held in Calcutta bazars is district tossa.

Markets in Pakistan have been quiet in the absence of any overseas inquiry and in sympathy with easier conditions in Calcutta. Some further business with Russia was reported but has not been confirmed. Imports into the main centres are unchanged. In Narayanganj about half the imports are taken up by the local mills direct from the beparis' boats.

Quotations are as under:
Jat Rs. (P) 29-8 for Bots Rs. (P) 29-8 for B. Bots and Rs. (P) 12-8 for X Bots.
District Re. (P) 1 less than jat.
Northern Rs. (P) 2 less than district.
Tossa is Rs. (P) 4 higher than white jute.
Cuttings NC Rs. (P) 39.
Dacca Tossa 4's Rs. (P) 173 5's Rs (P) 153.
Dundee Tossa 4's Rs. (P) 133 Outport Tossa 4's Rs. (P) 98.
Mill Firsts Rs. (P) 143.
Export Firsts Rs. (P) 123.
Export Lightnings Rs. (P) 110.

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports total stocks of jute goods at the end of December, 1953, as follows:—

Total reported stocks of manufactured goods exclusive of Government orders.

Description.	30th November 1953 (Lakh Yds.)	(Tons)	31st December 1953 (Lakh Yds).	(Tons)
Hessian Cloth and Bags	9.17	24,138	8.91	23,790
Standard Hessian (included in above)	6.01	16,115	6.20	16,455
Sacking Cloth and Bags	17.09	70,793	17.18	72,395
Standard Sacking (included in above)	14.57	58,988	15.32	63,489
Rove, Rope, Twine, etc		2,290		1,632

Total reported stocks of manufactured goods held on Government account.

Sandbags	1	27	1	27
Scrim Cloth	7	198	4	99
Hessian Bags and Cloth and Canvas	7	187	13	316
Sacking Cloth and Bags	19	719	17	619
Rove, Rope, Twine, etc		14		4

Summary

I. J. M. A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports production figures for December 1953 as follows:—

(A) Total reported production of manufactured goods exclusive of all Govt. Orders.

Description	Quantity	
1. Twist and Yarn		
(a) For Sale	1,544	tons
(b) All other including that used in sewing bags	786	tons
	128	tons
2. Canvas	2.9	lakh yds.
3. Gunny Bags (Tonnage excludes sewing twist)		
(a) Hessian	1,577	tons
	72.1	lakh yds.
	41.3	lakh Nos.
(b) Sacking	35,478	tons
	825.8	lakh yds.
	335.3	lakh Nos.
4. Gunny Cloth		
(a) Hessian	35,104	tons
	1314.7	lakh yds.
(b) Sacking	2,330	tons
	52.2	lakh yds.
5. Other manufactures (including ropes)	400	tons
6. Total production (above figures combined)		
(a) All kinds	77,347	tons
(b) Hessian (both bags and cloth)	13,86.8	lakh yds.
(c) Sacking -do.-	8,88.0	lakh yds.
(d) Canvas -do.-	2.9	lakh yds.

(B) Total reported production of goods manufactured on Government account.

Description	Quantity

* Based on production figures from July 1948 to April 1949 (full working months excepting March) with full complement working 48 hours a week.

N.B.—The above figures include return of Gagalbhai Jute Mills and of all members of the Association with the exception of three mills whose production figures for December have been estimated.

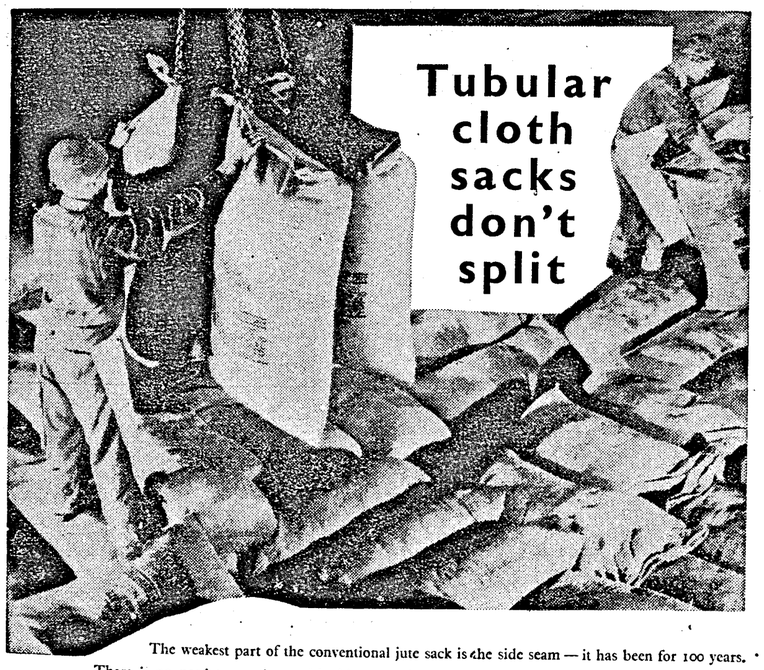
THE FOREIGN JUTE MARKETS

JUTE CONTROL'S ACCOUNTS SHOW A BIG TRADING LOSS

(FROM OUR DUNDEE CORRESPONDENT).

CONTINENTAL spinners generally are not doing much, because of the paucity of orders for jute yarns and cloth. Manufacturers in most countries are still demanding about 82s for 10 oz. 40 in., f.o.b., against Calcutta's 73s 6d for February-March shipment, f.o.b. Other quotations are 74s for January, and 73s for April-June, with "B" twills at 176s January, 177s February-March and 177s 6d April-June, f.o.b. Calcutta. Raw jute values have dropped £2 per ton this week to £108 for Mill Firsts and £97 for Mill Lightnings, £102 for good Daisee-2/3 and £92 for grade, £110 for grade Tossa-2/3 reported at £122, all c. and f. U.K.

The sensation of the week in Dundee is the statement just issued that the Jute Control has lost £14,184,861, according to the trading accounts and balance sheet for 1952-53. A preface to the accounts states that the high loss arose mainly as the result of sales from stocks of high priced jute goods at falling prices. This fall was accentuated by substantial reductions in the Indian export duties. (The price dropped by about £50 per ton during the year under review). The accounts show that the Control had stocks to the value of £30,704,084 when the year opened. Purchases, including freight, insurance, etc. amounted to over £16,000,000 and it finished the year with stocks valued at over £12,000,000. Sales brought in £20,500,000. Administration and general expenses came to £58,349 and interest on capital employed to £885,437. In the previous year (1951-52) the loss was £1,165,065. Of course, it is not surprising that a heavy loss was made, but the Control has made substantial profits on a rising market, in the past, and there are expectations that this will be so in the current year.



The weakest part of the conventional jute sack is the side seam — it has been for 100 years.

There is no need to continue with this outmoded and expensive method. Use sacks made from tubular cloth. They have no side seams; they are stronger; they last longer; they are more economical.

... Write to us for full details of tubular cloth sacks. A wide range is available. We will gladly send you a sample sack for testing.

SAINT FRÈRES, S.A.,
34 RUE DE LOUVRE, PARIS.

The illustrations show sacks holding 2 cwt. of sodium sulphate being stacked at a factory of Imperial Chemical Industries.

Calcutta Markets

VERY STRONG DEMAND IN EXPORT AUCTION

RATES ALSO HIGHER IN INTERNAL SALE

AT Sale No. 29, held on 11th and 12th January, offerings in the Export auction consisted of 56,000 cases. There was an exceptionally strong and active demand for all sorts and prices advanced by several annas. The market, which opened fully four annas dearer, strengthened as the sale progressed and closed six annas dearer for Commons and Leaf grades, while Medium Brokens and Fannings were up to seven annas dearer. BOPs suitable for Ireland were very strongly competed for and were from eight to ten annas dearer. Best liquoring sorts were also several annas dearer, but offerings of this type of tea were scarce. There was again increased demand for tippy teas and these sold very well and some realised high prices.

Quotations

	1954	1953
	Rs.	Rs.
Clean Black Pekoe	2-10-0 to 2-11-0	1-6-0
Clean Common B.P.	2- 7-0	0-14-6 to 0-15-0
Medium Assam B.P.	2- 3-0 to 2- 9-0	0-15-5
Best Assam CTC B.P.	2- 9-0 (Nominal).	

Internal Market

In the Internal sale, offerings of dusts consisted of approximately 21,200 packages. There was a very strong and active market; prices of all descriptions opened 3 annas above last rates and later improved up to 5 annas. At the end of the sale a slightly easier tendency was, however, noticeable and prices were generally 3 to 4 annas dearer. Black leafy exportable types and the better liquoring C.T.C.'s were the strongest features of the sale.

Quotations

	1954	1953
	Rs.	Rs.
Medium Dooars Dust	2-1-6	1-6-0 to 1- 6-6
Medium Assam Grainy Dust	2-2-0	1- 9-6
Best Assam C.T.C. Dust	2-5-0	1-14-0

Offerings of other grades totalled nearly 3,200 packages. The market followed the same trend as in the Export sale and there was keen competition with prices improving by 4 to 5 annas per pound.

FREIGHT MARKET BRIGHTENS

NORTH AMERICAN SECTION QUIET

CHARTERING got off to a slow start after the holidays but within the past few days business done has been on a more satisfactory scale.

There has been a welcome activity in the Calcutta coal trade where fluctuations in rates are discernible and the report of the fixture mentioned last week has now been confirmed. A spot vessel obtained 57 shillings for coals to Japan and this was repeated for an end January loader, while another January vessel was fixed at 55 shillings. For a February loader 57 shillings was also paid and it is believed that another vessel is treating at the same rate. A January vessel accepted 45 shillings for coals to Singapore and 60 shillings was paid for a February vessel for ore from Calcutta to Japan. Ore continues to move from Mormugao, three fixtures being reported for Japan at 58 and $8.15 for January loaders, and at 59 shillings for a February ship, while 58/6d was paid for Antwerp or Rotterdam discharge, and 62/6d for iron ore to U.K. Elsewhere in the Eastern section, coal was reported fixed at 32/6d for a Japanese vessel from Chinwangtao to Chittagong and 40 shillings was paid for a February ship for coal from Durban to Aden. The Australian section was quietly steady, sugar in bags being fixed at 102/6d from Queensland to Canada and a cargo of flour in bags to Ceylon was arranged at 66/3d. Coal was fixed from Newcastle N.S.W. to Korea at $8.25 and there is an enquiry for a further cargo from Victoria at 72/6d.

The North American section did not show any sign of great activity and of the few fixtures reported for coal from Hampton Roads 28 shillings

(Continued on page 60)

Commodity Markets

WORLD COMMODITY TRADE SCHEME

STABILISING THE EARNINGS OF PRIMARY PRODUCERS

A FIVE-MEMBER committee of experts, in a report prepared for the United Nations, recommends measures to overcome instability in the prices of primary commodities. Violent changes in such prices have had serious economic consequences for exporters and even for importers of raw materials, with consequent dislocation of international trade and hindrance to economic development. Among the recommendations of the experts who met at UN headquarters from 15th September to 9th November, 1953, and whose report* was issued on 30th December, 1953, is the setting up of an inter-governmental trade stabilization commission to discuss and propose action on stability in primary commodity markets. The experts also favour use of buffer stocks, by which price stability would be maintained by buying and withdrawing supplies from the market when prices are weak, and selling stocks when supplies fall short of demand; as well as systems of compensatory payments to ensure international flow of money in the event of sharp fluctuations in primary commodity markets. This report of the Committee of Experts on international price relations is the outcome of a decision of the U.N. General Assembly in 1952. The Assembly then recommended to governments that whenever they adopted measures affecting prices of primary commodities for international trade, they should consider the effect of such measures on the terms of trade of countries in the process of development so that primary commodity prices would be kept in equitable relation to prices of capital goods and other manufactured articles. Governments were also recommended to give serious consideration to all other aspects of the problem of undue fluctuations in the terms of trade. At the same time as it approved these recommendations, the Assembly also asked that a report be prepared on practical measures which it might be available to adopt in carrying them out. Five experts were selected by the Secretary General to prepare the report.

Serious Consequences of Fluctuation

The sponsors of the 1952 resolution of the General Assembly were prompted by several facts analyzed in a United Nations study entitled *Instability in Export Markets of Under-Developed Countries* published last year. The prices of many primary commodities entering into international trade have been for many years, and continue to be, subject to violent short-term changes. For example, the year-to-year variations of prices paid by the United States for primary products during the period 1922-1949 show that out of 218 averages only 18 were below 10 percent; 143 were in the range 10-19.9 percent; 50 in the range 20-29.9 percent; and seven were 30 percent and upwards. For a selection of 11 commodities, the variation between the high and low points of market prices within the same year averaged 27 percent over the half century from 1901 to 1950. In the case of rubber, the price in the London market quadrupled during 1950. In the case of wool, prices were multiplied by three and then fell back to their original level within a period of eighteen months. What makes price variations so serious for primary producing countries is the fact that some of them are highly specialized in their exports, which are limited to one or a few products, and that some have a very high ratio of foreign trade to national production. Furthermore, capital development in under-developed countries depends heavily on current export proceeds for its finance. Since much of those proceeds is required to pay for imports of essential consumer goods, the variations of trade have a violent effect on the margin available to finance capital goods imports.

As the report points out, all countries produce both primary and manufactured goods; many have significant exports of both, and many have significant imports of both. The balances of national advantage cannot therefore be explained by a simple division between advanced manufacturing countries and under-developed primary producers. The United States, for instance, is a major exporter of cereals, tobacco and cotton, and at times of coal and petroleum. Primary products account for about 25 percent of its export trade. Even the United Kingdom, though its export trade is now largely concentrated in manufactures, has an import trade which is by no means specialized on primary products. It is also very interested in the earnings of the whole sterling area which is a major exporter of primary commodities. Both the United States and the United Kingdom, as well as the other industrial countries, have an interest in high and stable incomes in countries which form a major market for their exports. On the other hand, the primary producing countries have a great stake in the prosperity and high economic activity of the industrially advanced countries which are the main outlets for their raw commodities.

The Recommendations Reviewed

Before submitting recommendations for establishment of an inter-governmental trade stabilization commission, the report reviews and comments on past proposals with the purpose of setting the new recommendations in the right perspective. The experts consider that single-commodity agreements can prevent excessive short-term fluctuations in the price of the commodity. If, however, by design and accident, they are used to hold in check the long-run movement of prices, they will either break down, or be maintainable only by restriction. This would be wrong except on certain rare occasions. The experts also think that buffer stocks for individual commodities, or for a group of them, are preferable to multilateral contracts, provided the problem of finance can be solved. But the nature and long-term movement of particular commodity markets may render them unsuitable for buffer stock schemes, while multilateral contracts may promise a measure of stability. The experts, at present, see no grounds for confidence that agreements for single commodities will be concluded in sufficient number to meet the more general demands of under-developed countries for stability of earnings. In particular, multi-commodity buffer stocks would require an ample and assured source of finance, and the management of their price policy would be by no means easy. They consider that there is a useful place for general stabilizing measures, such as contracyclical lending which would enable industrial countries to maintain the disbursement of their currencies to the outside world at a time when they are afflicted by a business recession. They would also favour compensatory schemes under which, and in circumstances to be defined, countries that gain from a shift in the terms of trade, would be called upon to make compensatory payments to countries which have suffered income losses from that shift.

What Nations Themselves Can Do

On the national level, the experts indicate various ways in which nations can, by measures within their domestic jurisdiction, help towards greater stability. These include the establishment of buffer funds and a smoothing of the flow of contracts for heavy engineering goods. There are also various ways in which nations can avoid causing violent disturbance to the economies of other countries, as for instance in the accumulation or liquidation of stockpiles. The experts hold, moreover, that if governments wish to have an assurance of as much stability of price relations as is consistent with economic change and progress, then they must look beyond schemes relating to particular commodities and review the general structure of the world's monetary systems. The experts examined one such possibility for

You think it can't? Planned lighting was installed by Philips in one factory which thereafter booked a production increase of 25%. Why? Because good lighting on the job obviously results in greater precision of work, fewer rejects, minimum wastage. But at the cost of high overheads? No, very much the contrary. Philips "T L" Fluorescent Lamps give three times more light than the ordinary bulb for the same current consumption. And ... have long and efficient life.

Why don't you consult Philips Lighting Service Bureau for free specialized advice. Address— "Philips House", Calcutta 20.

monetary reform, namely, the commodity reserve currency scheme, which would authorize commodity units to qualify as monetary reserves. The experts note that there is at present no effective international procedure for discussing and proposing action on the broad aspects of stabilization. They therefore recommend establishment of an inter-governmental trade stabilization commission. The commission would be advisory and not executive, and its main tasks would be (i) to consider and make recommendations to the Economic and Social Council on general proposals for stabilization, whether they are referred to it by the Council as meriting examination, or originate in the commission; (ii) to report from time to time on its activities to the Council, and when stability of the world's markets appears threatened, to make prompt recommendations to the Council for appropriate inter-governmental action. These recommendations would be sent at once to all governments.

In order to provide permanent representation for the most important trading countries and an adequate rotation of representation for the others, the experts believe it would probably be necessary to have eight or nine member governments on the commission. They also think it would be necessary to have meetings for a number of weeks several times a year.

INTERNATIONAL COTTON CONGRESS

Under the theme "The Cotton Industry—Today and Tomorrow", the International Federation of Master Cotton Spinners' and Manufacturers' Associations will hold its Jubilee International Cotton Congress from 14th to 20th May, 1954, on the occasion of its Fiftieth Anniversary. The Congress will be held at Buxton, England at the invitation of the Federation of Master Cotton Spinners' Associations and the Cotton Spinners' and Manufacturers' Association. Experts from member countries will present papers covering various aspects of the industry, from raw cotton growing to finished fabrics. The Congress will provide a forum for a discussion of problems of the cotton and allied textile industries.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August 1939 as 100), advanced further by 0.6 per cent to 392.6 during the week ended 26th December, 1953, as compared with 390.2 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 1.0 and 4.8 per cent respectively. The average for December 1953 stood at 389.4 as compared with 390.6 for the previous month and 372.7 for December, 1952. The annual average for the year 1953 worked out to 393.9 as compared with 386.9 for the year 1952. "Foodstuffs" rose by 0.3 per cent to 368.8 as a result of higher prices of Dal Arhar (+5%), Gur (+3%), Salt in Calcutta and Coffee (+2% each), Wheat at Hapur and Sugar (+1% each), notwithstanding declines in Jowar (—3%) and Tea for internal consumption (—1%). Industrial Raw Materials advanced by 2.1 per cent to 474.5 from 464.9 (revised) for the previous week, on account of increases in the prices of Rapeseed in Bombay (+15%), Cotton seed (+7%), raw Jute (+6%), Groundnuts (+4%), Linseed and Gingelly-seed (+3% each), Jarilla and Bengal raw Cotton in Bombay and Copra (+1% each). The export prices of Manganese ore (—17%), Rapeseed in Calcutta (—3%), raw Wool (—2%) and raw Silk (—1%), however, moved down. The Semi-Manufactures group rose by 0.5 percent to 357.5 owing to advances in the prices of Groundnut Cake (+8%), Mustard oil in Calcutta (+5%), Groundnut oil (+3%), Linseed oil (+2%), Mustard oil at Kanpur, Brass in Bombay, Coconut oil, Coir yarn, Zinc and Copper (+1% each) although Brass in Calcutta (—4%) and Mustard oil at Patna (—3%) registered decreases. Increases in the prices of Rayon and Silk manufactures (+2%) and Glass (+1%), raised the index for Manufactures by 0.2 percent to 364.1 notwithstanding a fall of 1 percent in Paints.

The Miscellaneous group index remained almost unchanged at 712.5 although variations were recorded in the prices of Turmeric and Betelnuts (+1% each) and Black Pepper (—1%).

The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

LOCATION OF THE NEW STEEL PLANT

THE CHOICE BETWEEN DURGAPUR AND ROURKELA

REPRESENTATIVES of the Krupps-Demag combine which, jointly with the Government of India, is to establish a steel plant in this country, are expected to arrive in New Delhi on 16th January with their recommendations on the location of the plant. A final decision is expected to be taken shortly afterwards. Meanwhile the Governments of West Bengal and Orissa have been vigorously canvassing for the site in their own particular States—the former for Durgapur, and the latter for Rourkela. Both agree that the location of the plant must be decided on purely economic consideration but their analysis lead to contrary conclusions.

Broadly, the West Bengal Government says that the most economic location of the steel plant depends on the following basic factors: 1. Sources of the principal iron-making raw materials such as iron ore, coking coal and limestone, of the requisite grades and quantities. 2. The cost of assembly of the principal raw materials at any given site. 3. Supply of iron and steel scrap. 4. Supply of fuel, power, water and other essential service facilities. 5. Transportation facilities for the movement of raw materials. 6. Markets for the finished products and their cost of distribution. 7. Labour supply. 8. Relations with other industries. 9. Supply of refractory bricks, linings, etc. 10. Supply of stores, replacements and renewal parts, etc. 11. Cost of construction. 12. Total outlay, including cost of a separate industrial town. 13. Construction period.

If the plant is built in Durgapur, the West Bengal authorities state, the cost of assembling the principal raw materials for pig iron making should not be higher than that of Jamshedpur which has the lowest assembly cost. The assembly cost of raw materials could be further lowered by using "purchased scrap" of which Calcutta has a plentiful supply. There will soon be an abundant supply of electrical energy and perennial water; no capital investment will be needed to provide these services. The heated circulating water will be discharged directly into the pool above the Durgapur barrage; no extra expenditure will have to be incurred on cooling tanks. The plant site is next to the Eastern Railway, it can also be easily reached from the Bengal Nagpur Railway System. The Grand Trunk Road, the main highway west of Calcutta, will ensure first-class road communications. The investment on rail and road facilities will be practically nil. There is ample space available close to the proposed plant site for the development of a township with residential buildings for housing the personnel. The stownship can be provided with modern amenities like power and water supply at a low cost. Transport of coal to Durgapur will involve minimum haulage and cost; undue strain on the railway system will be avoided; the need for additional wagons will be kept down to the minimum. The coal seams and the ore mines are already in commercial operation. The extra capital cost which will be needed for opening up virgin coal and ore deposits if the plant were located at some of the other sites will be avoided. The navigation canal to the Hooghly will provide cheap water transport to the markets for finished steel independently of the railways. Finished iron and steel can be distributed cheaply to the fabricating and engineering industries, also to the Ganges Valley, Assam and Pakistan, and to all ports of the East and West coasts of India. Plant and equipment, including structural steel, could be delivered and erected much more quickly at Durgapur than elsewhere owing to its proximity to Calcutta port and the geographical concentration of the fabricating and engineering industries in this area. The time lag between the investment of capital and the realisation of the benefit will be the minimum—the plant will begin to produce steel and earn revenue from a relatively early date, and this will help counteract the fast developing steel famine in the country.

Power Supply

The steel plant will require a steady, all-season power supply of 25,000—30,000 k.w., which will be considerably higher when the capacity is increased to one million tons a year, according to the West Bengal Government. As for water supply, the plant will require a minimum flow of 200 cusecs, or a large reservoir of at least 200,000 acre ft. capacity from which make-up water can be drawn and again put back into the reservoir. The plant is estimated to cost Rs. 70 crores and about 55 percent of the capital outlay will be on the heavy plant, machinery and essential stores which will have to be imported from abroad through the Calcutta port. The total weight is expected to be about 200,000 tons. The indigenous stores and materials will have to be drawn from Calcutta or the Damodar Valley. There must be adequate shop facilities for the repair and maintenance of plant, machinery and equipment. Such facilities need not be as comprehensive and elaborate in a more developed tract such as Durgapur as at a place like Rourkela. The liberal supply of oxygen has become indispensable for such operations as scarfing, cutting, welding, furnace tapping, etc. The consumption of oxygen runs as high as 80 cu. ft. per ton of ingot in the U.S.A. and Europe. A plant to generate the requisite amount of oxygen is estimated to cost about Rs. 30 lakhs. For the construction of the permanent steel town, there is needed an abundant supply of building materials —bricks, sand, lime, shingles, tiles, cement, steel, timber, etc. Their assembly requires easy facilities for transportation. An abundant supply of skilled and unskilled labour and provision for their accommodation are also very important. Finally, says the West Bengal Government, on account of the possible economies in capital costs, there may be a total saving of Rs. 8 to Rs. 10 crores if the plant is located at Durgapur rather than at Rourkela. Savings in capital cost coupled with the shorter construction schedule and other economic advantages will result in an appreciably lower operating cost as well as lower cost of production per ton of steel at Durgapur. The total savings per annum in operating costs will be of the order of Rs. 11,100,000, it concludes.

The Orissa Government's Case

In a memorandum addressed to the Central Government, the Orissa Government states the case for Rourkela. It says that all raw materials such as iron ore, limestone, dolomite, manganese, refractories and steam coal, except coking coal, are available in plenty in close proximity to Rourkela plant site. Not only are the raw materials available in abundance, but their quality as well as suitability for use in a steel plant has been well established by their long use for over a period of years in the existing steel plants. The cost of producing and delivering steel to the consumer would be lowest if the plant were in Rourkela. The minimum flow of water in the Brahmani River during the driest season at the Rourkela site would be more than ten times the maximum requirement of the proposed steel plant. The requirement of a steel plant is about 24 million gallons a day whereas at Rourkela on the driest day, 25th May, it was found that 130 million gallons daily was available. Steam coal and gas coal are available from the Himgiri-Rampur coal mines near Rourkela and plenty of hydro-electric power can be had from the Hirakud Dam project to meet the entire needs of even a million-ton steel plant. As the transmission lines from Hirakud are passing directly through the Rourkela plant site, no extra expenditure would be required on this account. According to one of the steel consultants, it is estimated that the cost of thermal power station required for the plant would be Rs. 7 crores. So there would be a definite saving in case of the Rourkela site. In addition to saving each year about 400,000 tons of coal, the unnecessary waste of transport for carrying the coal would be prevented and investment on provision of additional transport facilities would be saved. Rourkela, the memorandum says, is situated directly on the Calcutta-Bombay main line and no additional construction of railways is necessary. Quoting the Planning Commission, it says that the additional transport facilities required for the expansion of the existing iron and steel plants in the Damodar Valley region would involve an outlay of Rs. 10 crores to Rs. 12 crores. Both in assembly and distribution costs, it is asserted, Rourkela will be the cheapest site. The cost of steel at the other competing sites under consideration would be as much as Rs. 20 to Rs. 30 higher than at Rourkela.

NEW FIRESTONE "EARTHMOVER" TYRES

The Firestone Earthmover tyre, whose "unveiling" ceremony took place this week, is designed and built for service in dam building and flood control work; hydro-electric and irrigation projects; airport construction; excavating; road cutting and filling; highway construction and maintenance; removing overburden; coal and ore strip mining; bund construction; river and harbour work; grading; bridge and viaduct construction; railway construction and maintenance; logging; quarrying; and other construction work. Each of these tyres contains more than 100 pounds of rayon cord with a total length of over 64 miles. The weight of rubber is approximately 400 pounds (compared to 11 pounds in an ordinary passenger

tyre) and each tyre contains more than 200 pounds of chemicals. The 21.00-24 contains more than a mile and a quarter of beadwire weighing 24 pounds (compared to half a pound in an ordinary passenger tyre). Its load capacity is 15,490 lbs. at 26 m.p.h. and 17,350 lbs. at 10 m.p.h. The prescribed rim is 15" and the maximum section width is 23". The height of the tyre is 69".

SELF-SERVICING MINER'S ELECTRIC CAP-LAMPS

MESSRS. Oldham and Son Ltd. have established a factory in Madras to manufacture self-servicing miner's electric cap-lamps under Government licence, and the first large installation will be made at the Singareni Collieries Co. Ltd. in Hyderabad early next month. Oldhams claim to be the pioneers in the development of the cap-lamp and obtained official approval for the first of these lamps in England in 1920. In 1935 they developed the Oldham Wheat Cap-Lamp, which introduced revolutionary conceptions into mine lighting and lamp room control, and was the first of its kind to be known as the self service cap-lamp. It is approved for use in gaseous mines, and its light to weight ratio is described as very favourable. The lamp is of one-piece construction, consisting of a toughened bakelite head-piece and a 4-volt unspillable accumulator. The battery is carried around the man's waist and the head-piece is conveniently attached to the miner's helmet. A sweat-resisting short lay cable connects the accumulator to the head-piece. The lamp itself is little more than two and a half inches in diameter; the body, made of toughened bakelite, is fitted internally with an aluminium parabolic reflector, and a non-corroding special alloy lens ring, which carries the ¼" armoured glass and the rubber channel washer, the latter preventing the entry of water. The shape of the reflector has received special attention and is finished in different states of polish. The matt gives a diffused light over a solid angle of 130° without glare and its centre beam has ten times the average light over the whole angle. A rotary switch is situated on the right side of the beam piece which allows the wearer to switch the lamp on and off. Beneath the metal clip is located a key switch which allows the contacts to be made live when the lamp is placed on the frame for charging.

The Oldham Wheat Accumulator is claimed to be far in advance of anything yet attempted—it is completely unspillable and yet gives the same characteristics as a wet battery. The secret of acid retention has in the use of the Sponac Separators which are made of a special material which absorbs up to 15 times its own weight in liquid. In actual use almost all the electrolyte for the working of the cell is contained within its separators. Simplicity of operation and maintenance is a notable feature of the lamp. The novel method used is known as the Oldham self-service system. For the first time the miner automatically undertakes many of the routine duties which were formerly carried out by the lamp man e.g. when he goes on shift he takes his own lamp off charge, and when he returns by placing his lamp on the storage frame he automatically places his lamp on charge. The Oldham engineers have thus made the charging almost foolproof, induced a high safety factor, eliminated moving parts, and provided for conditions where accumulators may be in varying stages of discharge. A further point on maintenance is that there is no necessity to renew the electrolyte in the battery. The colliery is not called upon to provide acid, as only distilled water is used for topping-up. This is of course necessary to replace the evaporation of water due to electro-chemical action.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

FIGHTING INFLATION AT HOME AND COMPETITION ABROAD

TWO years have passed since the Government declared its intention of administering a check to the hire purchase movement, as being one of the causes of inflation. It is the case, however, that hire purchase in Britain today is far more extensive than it was two years ago and, indeed, is at the highest point reached so far. Official views upon this subject have been reticent of late: it would be surprising if they were not, seeing that the National Boards concerned with electricity and gas supply urge their customers to avail themselves of hire purchase facilities for various appliances. Moreover, some four-fifths of the national output of furniture are now sold by this method. No Government would wish to incur the wrath of newly married couples by putting difficulties in the way of their setting-up house, even though the financial method of doing so involves a mortgaging of the future. And what are building societies but hire purchase institutions? Undoubtedly, rather heavy risks are being taken in some directions, and serious consequences would result if full employment were not maintained. But as this eventuality has not occurred, and there is general confidence that it will not, hire purchase is now regarded in official quarters more as a useful aid to the ensuring of consumption of goods, than as an inflationary menace.

As with hire purchase, so with rising wages. Whilst much is said by industrialists of the necessity of wages not advancing further if Britain's competitive power is to be equal to the task of more exacting overseas markets, the political view, even in conservative circles, is not really definite. On the contrary, there is a tendency to believe that larger wage packets may do good by increasing the purchasing power of the country as a whole, thus helping to sustain the Home market for goods. So it is that a fairly complacent view has been taken of the railwaymen's latest demand for wage increases, although the existing average rate is £8-10-0 a week, and has been made possible by successive rises in fares and freight rates, and a yearly deficit on the working of British Railways. It is already accepted that further increases in wages are certain, and that these also will be met by still higher charges to the public. Admittedly, there is to be an inquiry (in which workers will join) into means for making the railways more efficient. But, as it is a condition of the inquiry that no recommendations shall be made which would bring about a reduction in the number of workers employed, there are clearly limits set to what can be accomplished.

Textile Industries' Campaign

It may be noted, related to some of the foregoing remarks, that leaders of various industries are placing emphasis upon being able to exploit the Home market to the utmost—although they are not beneficiaries from hire purchase and perhaps would not take an easy-going view of wage rates. Prominent among these are those in the textile industry, which has now made a fresh departure in its intensive campaign against purchase tax. It has done so by the holding of an exhibition of fabrics, at which the incidence of the tax upon each was made unmistakeable and an idea was given to the probable effect if the tax were removed. Eighteen textile associations, and one trade union have combined for this purpose, the whole being led by the Cotton Board. Government officials have received special invitations to the exhibition and are said to have been much impressed by the "visual" propaganda. The contention is that by rendering the Home demand for textiles more effective, thus providing a larger guaranteed absorption of output, it will be possible to reduce prices of goods made for the export markets. Few would disagree that to have a maximum flow of orders from the Home Market is sound policy and that its existence does have a bearing upon successful trading in export markets. It should be also evident, however, that this factor ought not to be separated from the equally important ones of reducing production costs by the increased efficiency of workers and machinery and a standing firm on the principle that increased wages should be closely related to increased output per worker. It is thought by some students of the textile situation (and of the industrial situation in general) that these considerations are tending to be obscured if not deliberately ignored. Exports of cotton piecegoods have improved of late. This has been largely attributable to the modifying of Australia's restrictions upon imports and to gains in the East African market. Far Eastern and Near Eastern trade continues to decline, synchronizing with marked expansion of Japanese trade to those areas. The growing vigour of Japanese trading policy has been much commented upon, as has also the fact that it is being favoured by special circumstances, such as the trading agreement with Indonesia entered into last year and now finding full expression. It has been noted that India's textile exports to Singapore have also suffered as the result of increasing Japanese competition.

U. S.-Japanese Competition

Yugoslavia's award to a Japanese concern of a substantial contract for the supply of rayon machinery has caused a good deal of heart searching. Yugoslavia has been much cultivated during the past few year as a market for British machinery and it was looked upon as safe. It is recognized that the success of the Japanese tender is probably largely due to the fact that the Japanese company is closely associated with one of the largest American concerns interested in the development of synthetic fibres, from which concern it receives whatever technical assistance it requires. The existence of this state of affairs has led to the further reflection that United States companies are known to be taking a considerable interest, both technical and financial, in various other Japanese concerns and that the resulting combination of technical proficiency, adequate capital resources and lower labour costs can but mean that competition in the international markets will be very keen in other directions as well.

Germany has also secured substantial contracts, mostly of an engineering kind, against British tenders, and has done so not only on lower prices but on ability to promise quick delivery. As an outcome of this, British engineering companies are now seeking to reduce profit margins. But the crux of the problem, namely high wage rates, is untouched and at present untouchable. The directors are, in fact, powerless in this matter, as the engineering trade union is among the most powerful in Britain.

Plantation Topics

THE RECOVERY IN TEA

PRICES LIKELY TO BE MAINTAINED

THERE could hardly be a more complete transformation in the price and the statistical position of a commodity than that which has occurred during the past 12 months with tea, says the *Financial Times* in a recent editorial. In the autumn of 1952, Indian common teas had fallen to around 1s. 6d. a lb, and were, at one time, selling below the cost of production. But by the end of last January, the price had recovered to around 2s. 6d. a lb. and the rise has continued steadily throughout the past 12 months. Last week the price of common tea reached the record figure of 4s. a lb. The basic reason for this recovery is that Indian production by the end of 1953 was some 23 million lbs. smaller than in the previous year. The crop restriction scheme was less important than the weather in reducing the crop.

But, as the *Financial Times* points out, there is no doubt that the changed statistical position would not of its own have caused the present rise in tea prices. A remarkable increase in tea consumption has been taking place, not only in the traditional tea-drinking countries but also in the United States, where it appears that imports of tea rose by about 10 percent in 1953—largely because of the prohibitively inflated cost of coffee. In Britain also it appears likely that an increase of something like this order has taken place.

If, when production in India begins in April, there are indications of a substantially higher Indian output, this could, of course, exert a psychological influence on the market. But not until the autumn will there be any substantial weight of tea available for export to the U.K. In the meantime it would seem likely that the present values will at least be maintained. One of the features of the present situation is that the difference between the price of common and better quality teas has narrowed considerably. For the present, stocks in U.K. are low and there are no signs that the recent average increase of 4d. a lb. passed on to some consumers will have an adverse effect on consumption. Whether it will be necessary to pass on further increases to consumers cannot be known, but, although the sharp rise in values has presented a problem to blenders, it would seem unlikely that any further retail increases will take place in the next few months. For the present, tea still remains a comparatively cheap drink and there is no reason to suppose that rising consumption both in the U.K. and in other countries is likely to receive any setback, especially while coffee remains so expensive.

Tea stocks in London and provincial warehouses on 1st January were 103,398,336 lbs compared with 101,540,196 lbs a week earlier. Landings during the period were 10,905,948 lbs and deliveries 9,047,808 lbs. The International Tea Committee reports that U.K. imports of tea in November, 1953 totalled 47,270,000 lbs. of which India sent 35,377,000 lbs, Pakistan 1,536,000 lbs. Ceylon 8,556,000 lbs, Indonesia 350,000 lbs, Kenya, Uganda and Tanganyika 315,000 lbs, Nyasaland 507,000 lbs. and other countries 629,000 lbs. Re-exports totalled 3,200,000 lbs, leaving net imports at 44,070,000 lbs. Consumption in September, 1953 was 40,768,000 lbs against 43,008,000 lbs in September, 1952.

London Tea Sales

Last week's record prices for common teas at the London auctions were broken again on Monday of this week under exceptionally strong and sustained demand. At the outset, all descriptions shared in the rise of 2d per lb. and as the sale progressed gains of 4d were general. Towards the close common broken pekoe was selling in the region of 52d per lb against 48d last Wednesday. Export demand was restricted by the animated bidding of domestic buyers. Offerings totalled 25,778 packages of North Indian and other miscellaneous teas.

At last week's London tea sales the 66,761 packages on offer realised an average price of 4s 1.04d a lb, against 3s 11.93d a lb. in the previous week and 3s 0.34d a year ago. Clean plain broken pekoe was quoted at 4s, against 3s 9¼d previously.

The uptrend continued when 11,152 packages of Ceylon tea were auctioned in London on Tuesday of last week. The strongest demand was for tea of up to 54d per lb. and prices for these qualities generally recorded gains of 1d to 1½d per lb. Fannings grades were also eagerly sought. Other descriptions were sold readily at fully steady prices. Good export demand was in evidence, reported to be mainly on United States and Canadian account. Clean common broken pekoe was quoted at 47½d to 48d per lb, compared with 46d nominal previously, while low broken orange pekoe was indicated at around 48d to 50d. The 7,958 packages of Southern India growths also offered met with a strong demand and prices generally advanced by 1d to 1½d per lb.

Results obtained by some of the companies are given below :—

	No. of packages	Average per lb

CALCUTTA TEA AUCTIONS IN DECEMBER

Demand was very strong and general in the first two sales of the month and although export buyers were not operating to quite the same extent in the last two sales, the strength of the market was maintained by local buyers who were bidding freely for all types, say Carritt Moran and Co Ltd. in their review of the December tea auctions. Whole leaf grades were an outstandingly strong feature and showed an advance of six annas per lb. throughout the month. The limited number of tippy teas were keenly competed for and sold at several annas above valuations. Clean common teas were four annas dearer and commonest kinds even more. An unsatisfactory feature of the market is that medium and better liquoring kinds did not appreciate to the same extent and were only about two to three annas dearer. Darjeelings shared in the general rise. It is anticipated that the last Export Sale of any appreciable size of the 1953-54 crop will be completed by the end of February.

Leaf appearance of Darjeeling teas was very satisfactory for the time of the year, but cup quality for the most part was of an ordinary plain rains description, although a few invoices with fair autumnal flavour were available. A few brighter liquoring invoices from Assam with cold weather character were catalogued, but cup quality of the bulk of the offering showed a decline and was generally rather plain. The offering from the Dooars were very much above the average for the time of the year both as regards leaf and liquor, and a number of bright liquoring teas with autumnal flavour were available. Leaf appearance of the teas offered from Cachar district was particularly good for the time of the year and the catalogues contained a number of bright liquoring teas.

Internal Market

Because of the high price of the Export Quota, leaf offerings showed a slight increase but consisted mostly of stalky residue grades. As for Dusts, the leaf appearance of most of the Dooars offerings showed a marked decline, being very brown and fibrous, but cup quality was generally bright in character. Quality from Assam and Cachar was above average for the time of the year. Offerings from all districts met with keen competition. Best C.T.C. Dusts advanced by about two annas per lb and all other kinds were three annas dearer.

	Rs As. P.	Rs As. P.

Sale No. 25 „ „ Dust	1 11 0	1 1 0
Sale No. 26 „ „ Dust	1 12 6	1 2 0
Sale No. 27 „ „ Dust	1 13 3	1 2 6

Export sales up to and including Sale No. 27 totalled 1,269,293 chests at an average price of Rs. 1-14-6, compared with 1,015,783 chests at an average price of Rs. 1-6 a year ago. Internal sales at 19,457 chests of leaf and 398,749 chests of dust (Rs. 1-10-7 and Rs. 1-11) go against 14,042 and 351,495 chests (Rs. 0-15-3 and Rs. 1-4) in the corresponding period of last year.

Export Quota

During the first nine days of December, the price of the Export Quota remained steady at 30 pies per lb. During the next nine days the price rose to 40 pies, but following the announcement made on 18th December regarding the release of an additional 3.5 percent, representing about 12 million lbs, the price declined to 36-37 pies and finally closed at 38 pies.

The estimated North India crop to the end of November 1953 was 475,767,706 lbs, as compared with 498,658,634 lbs to the same date last year. The average figure at this date for the three years 1950-52 was 495,328,400 lbs.

Arrivals (in chests) in Calcutta warehouses during the period 24th November to 23rd December, 1953, with the corresponding figures of the previous year in parentheses, were as follows: by rail 125,427 (134,654); by air 7,594 (10,594); by steamer 510,770 (423,209), making a total of 643,791 (568,457) chests. Since the beginning of the season, 1st April, 1953, and up to 23rd December, 1953, arrivals have been 829,042 (745,512) by rail; 76,612 (106,346) by air; and 2,902,610 (2,336,898) by steamer, making a total of 3,808,264 (3,188,756) chests.

COCHIN TEA SALES

At Sale No. 1, held on 5th January, offerings amounted to approximately 13,20,000 lbs. The auction was characterised throughout by a very strong and general demand at enhanced prices. Common and Medium descriptions were from 1½ to 2½ annas dearer. Nilgiris, although keenly competed for, came to an irregular market and were 2 to 3 annas dearer, except for the finest which were up to 1 anna dearer. Whole leaf grades were the strongest features of the sale, and prices showed advances of about 3 annas.

	Quotations 1954 Rs.as.ps.	1953 Rs.as.ps.

The market for the Export Quota has shown a slightly easier trend, and sellers are now quoting 36½ pies.

Sale No. 2 will be held on 19th January and Internal Sale B on 25th January.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN NOVEMBER

Indian rubber output in November 1953 was 2,514 tons, according to the Indian Rubber Board. Exports in November amounted to 1 ton 490 lbs of sole crepe. No rubber was imported during the month. Consumption by manufacturers was 1,888 tons, of which 4 tons were imported. Stocks with estates and dealers on the last day of November totalled 5,828 tons, including 1,224 tons in transit. Stocks with manufacturers at the end of the month were 3,020 tons, of which 2 tons were imported. Manufacturers also used 180 tons of reclaimed rubber, the month-end stock being 317 tons, and consumed 1 ton 118 lbs of synthetic rubber, of which manufacturers held a total stock of 14 tons 1,645 lbs.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly rubber market report published by the Colombo Brokers Association:—

Sheet:	Closing prices on 30-12-53. per lb.	Average prices for the period. per lb.
No. 1	Rs 1.10½	Rs 1.10½
No 2	Rs 1.07½	Rs 1.07½
No 3	Rs. 1.04½	Rs. 1.04½
No 4	Rs. .80½	Rs. .80½
No 5	Rs. .75½	Rs. .75½
Sht Cutts. 1		.40
Sht. Cutts. 2		.38
Crepe:

Sc Crepe No. 1	Cts 52 Nom.	Cts. 52
Sc. Crepe No. 2	Cts. 44/48	Cts. 46
Flat Bark	Cts. 40/43	Cts. 41½
Scrap Crepe 3X		43½

To arrive at the f.o.b. Colombo prices add 24 cents per lb. in respect of rubber other than scrap crepe and 26 cents in respect of scrap crepe to the above market prices.

NORTHERN INDIAN TEA CROP REPORT

The following summary of crop and weather reports was received from different tea districts for the month of December.

Upper Assam :—Weather generally seasonable but abnormally dry in Panitola and North Lakhimpur. The season has closed. Outturn last month was poor to about normal. The outturn to date is considerably under last year in Panitola.

Central Assam :—The cold weather has set in and the season is closed. Weather abnormally dry in Nazira.

Lower Assam :—The cold weather has set in and the season is closed. Weather dry in Bishnauth and Mangaldai. The outturn to date is generally under last year.

North Cachar :—Weather seasonable. The season has closed. Outturn last month about normal to good. The outturn to date is considerably under last year in North Cachar. Despatch delayed in Lakhipur and Happy Valley due to rivers drying up.

South Cachar :—Weather seasonable. The season is closed. Outturn last month about normal. Both black rot and helopeltis prevalent in Hailakandi.

Eastern Dooars :—The season has closed. Weather dry. Rain badly wanted. Blight is not so severe.

Western Dooars :—Outturn last month about normal. Dry weather is interfering with outturn. The outturn to date is about level with last year. Immediate prospects bad. The cold weather has set in. Rainfall is much below normal for the season to date. Blight is not so severe.

Darjeeling :—Weather seasonable.

Terai :—The season has closed. Weather seasonable. Rainfall is much below normal for the season to date. Helopeltis prevalent. Blister blight prevalent.

The article entitled "Indian Insurance in 1953" which appeared in the issue of *Capital* dated 7th January, 1954, should have borne the name of P. R. Gupta, M.A., F.C.I.I. (London). This was omitted in error.

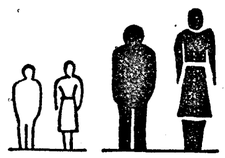
AGE AND EMPLOYMENT IN BRITAIN TODAY

FINDING JOBS FOR AN OLDER POPULATION

(FROM OUR LONDON CORRESPONDENT)

ONE of the major problems affecting Britain today is the ever-increasing number of older persons in her population. In the bad old days old people were dependent on their families, save for the few, comparatively speaking, who found their way into almshouses or other similar organisations maintained very largely by charitable bequests from the gentry or from civic funds. In the circumstances, it was not surprising, perhaps, that they were ill-equipped to survive the rigours of life for long and consequently made up an almost negligible proportion of the total population. It was an age, moreover, when "family" life meant a lot more than it does in these days of varied and widespread interests, so that the replacement factor was a lot higher.

The intervening years between those times and the present day have witnessed two world wars which proved a serious drain on the youth of the country. At the same time, medical science has advanced to such an extent that expectancy of life is now much more favourable, and the Biblical span of three score years and ten is probably the lower rather than the upper limit. In addition, we have the Welfare State assuring all men over 65 and women over 60 of a weekly pension, to say nothing of all the other benefits which they enjoy with the rest of the population. It is hardly surprising to find, therefore, that in Britain to-day the proportion of people past minimum pensionable ages is greater than ever before,



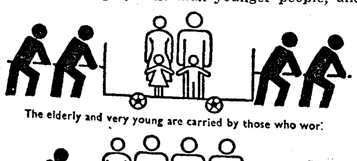
Expectation of life at birth shown in years —as it was and as it to-day

and that their numbers will continue to grow, for much the same tendency is to be witnessed in the age group just below (the 50 to 60). Unfortunately, the number of younger people shows an opposite trend and is going down. These population changes are taking place because, generally speaking, we are living longer and have smaller families than our grandparents. Rising standards of living, better working conditions, improved health services and increased medical knowledge are lengthening our lifespan.

In 1911 there were 2¾ million men of 65 and over and women of 60 and over. This figure represented one in 15 of the population. In 1951 there were 6¼ million, or two in 15. In 1977 the number is expected to be 9¾ million or three in 15. Between 1952 and 1962 the number of people aged 50 to 60 will grow by about one-sixth. Over the same decade, however, there will be about 300,000 fewer men and about 450,000 fewer women between the ages of 18 and 40. The effect on the country's economy is not difficult to envisage, for as the "pensionable" population increases the others must work harder to support it, and with longer holidays and shorter working hours—conditions which are generally accepted—the time is fast approaching when either more older people must remain in employment, or our standard of living must either remain where it is or again decline.

Unemployment at 50

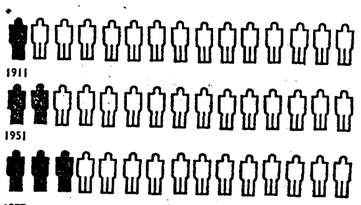
Since the war it has been the aim of successive British Governments to maintain a high and stable level of employment for all who are fit and willing to work—without age limits. It has been demonstrated, however, that older people often have great difficulty in finding work once they become unemployed. Those over 50 have higher rates of unemployment than younger people, and generally they remain out of employment for much longer periods. When unemployment threatens, it is often thought that those past minimum pensionable age should be the first to go, no matter how efficient they are. It is obvious that the smaller number of younger people cannot be distributed evenly over all types of employment. Because some jobs must be filled by young men and women, others must in the future be done to a greater extent by older people.



Having accepted that fact, in March, 1952, the Minister of Labour and National Service set up an expert committee (the National Advisory Committee on the Employment of Older Men and Women) whose first report,* issued about eighteen months later, aims at creating a better understanding of the issues involved, for "we are convinced that the principal barrier to the extended employment of older persons lies in traditional attitudes of mind and only a better understanding of the issues is likely to change them." The need for encouraging their employment is a present as well as a long-term need, and the policy is not fundamentally challenged by fluctuations in employment or the trend toward more leisure for the worker.

The increase in the average expectation of life coupled with improved working and living conditions suggests, in general, a capacity for a longer working life, but there is a need for more information. Evidence available suggests that the majority of men and women who are capable of giving efficient services at 60 could continue to do so up to 70. There are wide variations, however, and some people may be unfit for employment well below 70 whilst others can give good service well beyond that age. There is no evidence for assuming that the minimum pensionable ages under the National Insurance Scheme and many employers' pension schemes are the ages at which most people cease to be able to give effective service; and, there is support for the view that the emotional content of work may hold at bay the effect of ageing, and that a sudden severance, not compensated by some other absorbing occupation or interest, may quicken it. In later middle age people tend to move away from occupations which make severe demands for speed, agility or sustained heavy muscular effort. Contrary to common belief, demands for speed appear to be a more frequent and stringent limitation than demands for muscular effort.

The older person is at a positive advantage on jobs which require accuracy and attention to detail. He compares favourably in regularity of timekeeping, in conscientious application and in other directions and has a rare value as a teacher of his craft to the young. Older people are probably more adaptable and trainable than is commonly thought. They may learn in a different way, and the technique of training and adaptation must sometimes be different, but many have shown a capacity for absorbing new skills and techniques. Research on this subject is being undertaken by



universities and other bodies. What evidence there is about comparative liability to industrial accidents is favourable to the older worker, but there is need for further research under conditions of the same exposure to risk. Information collected by the Factory Inspectorate indicates that older people are more liable to injury from falls or falling bodies—accidents which can be prevented by general safety measures. The Report states that there is still much to be learned about the process of ageing. It is a continuous process from early life, but the decline in ability in one direction is often compensated in others. Development in the technique of assessing individual capabilities, and the skills demanded by particular occupations, should enable capabilities to be better used at all stages of working life.

Retirement Policy

Perhaps the most important section of the Report is that dealing with engagement and retirement policy and practices. This points out that the most convincing proof that older persons are able to work and that employers find it satisfactory to employ them is to be found in the numbers who are, in fact, doing so. It discusses the wide variations in the proportions of older persons employed by comparable industries or establishments and concludes that factors other than the suitability of the work strongly influence engagement and retirement practices. The high rate of unemployment among older workers indicates their difficulty in finding new work. Of the 30,000 persons who were continually unemployed throughout 1952, 60 percent were over 50. The difficulties are greatest for professional people, higher executives, management, clerical and unskilled manual workers.

Reasons for the difficulties include; Traditional attitudes towards older workers—remnants of the old feeling expressed in the familiar words, "Too old at 40"; Pension Schemes to which the older worker can be admitted only at extra cost to the employer; and recruiting exclusively from schools or college leavers.

Women share in the general problems, but they also have some problems of their own. More women want to return to work after bringing up their families and there is a need to provide greater opportunities of employment suitable to their abilities. Reasons sometimes given for not employing older women in important spheres of women's work, such as retail distribution, clerical employment and the manufacturing industries, are questioned, and it is considered they should be reviewed. They include:—(a) the effect on superannuation schemes with a low fixed retiring age, e.g., 55; (b) wage scales which automatically associate a higher age with a higher wage, irrespective of length of service; (c) fear that older women will be unable to undertake long standing in shops; and (d) the belief that shoppers prefer young women to serve them.

The Committee is convinced that many of the age barriers limiting the older person's opportunities for employment are unjustifiable, and recommends as the general policy in engaging workers that: Employing authorities of all kinds in industry, commerce, the professions and elsewhere should, review any practices or agreements, any provisions attached to pension schemes, or other special arrangements which place an age barrier in the way of older people seeking employment. The test for engagement should be capacity, not age.

There are substantial variations in retirement practices but, in general, compulsory retirement at a fixed age is more common in clerical and administrative employment, where it is associated with pension schemes, than in manual occupations where the great majority of workers are not at present affected by such rules. There is, however, some predisposition in all fields of employment towards retirement at the minimum pensionable age of the National Insurance Scheme. Yet there is no medical support for retirement at a fixed or customary age and it is strongly recommended that every effort should be made to remove from the minds of both employers and employees the idea that any particular age of retirement should be either compulsory or expected.

It is recognised that special circumstances may cause difficulties and exceptions may occasionally be necessary. Advice on some of these is given, for example:

Redundancy.—Where there is redundancy older workers should not invariably be discharged first. All the circumstances should be taken into account and particularly the prospects of alternative employment for younger or older workers.

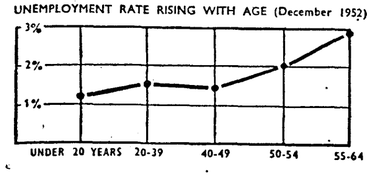
Unbalanced Age Structures.—Compulsory retirement to allow for recruitment of young workers to adjust the age balance of an organisation should be only an exceptional and temporary necessity.

The utmost importance is attached to the efforts to promote the continuance of older persons who are still fit and able to work in their existing employment. It is this which can have much the greatest effect in extending the employment of older people and it is in this direction also that the best response is likely.

The Committee, therefore, put forward this specific recommendation on retirement policy: All men and women employed in industry, commerce, the professions or elsewhere, who can give effective service, either in their normal work or in alternative work which their employers can make available, should be given the opportunity, without regard to age, to continue at work if they so wish.

A special section of the Report is devetod to the problems of professional, managerial and executive employment In this field, work is generally stable, but unemployment statistics show that those who become unemployed usually find it particularly difficult to get other suitable work. The full extent of the resulting waste of ability is probably not known, for it may be hidden by premature retirement or acceptance of unsuitable work. The Committee consider that the general principles of their recommendations on engagement and retirement policy should apply to all forms of employment—in the professional, managerial and executive classes no less than in other occupations

Some of the difficulties which arise in applying these principles in practice, however, take a more acute form in these occupations.



Engagement.—(1) The admittance of older entrants ought not to delay the promotion of younger staff to an extent that would impair the efficiency of the organisation; (2) Difficulties are greatest for those who seek a new occupation as well as a new job. Many who have to start afresh in middle life, such as the married women or Regular Officer, find careers closed to them by restrictions on age of entry or training requirements. But in certain occupations including the Civil Service, age restrictions for entry have recently been relaxed, and it is suggested that other occupations might do the same. The admission of older entrants can also meet the difficulties of professions competing to attract the smaller number of young persons available; (3) Employers may find the wider experience of the older entrant well worth his salary. But those without suitable previous experience are usually willing to accept a lower start at the appropriate wage for the job.

Retirement.—(1) The decision whether a person holding a senior administrative, professional or managerial post can continue to render effective service must be made on the qualities of the individual in relation to the service expected; (2) In a longer working life promotion will often come later. This may be unsatisfactory for some individuals and some managements, and there is need for thought, and experiment on ways of overcoming the difficulties. Keeping on the older person, but in a lower position, may avoid promotion problems.

Pensions.—Pensions schemes have a greater influence on employment opportunities among the professional and executive classes than elsewhere.

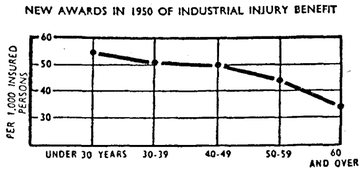
The numbers affected in these occupations are not great, but individual hardship and waste of ability and of expensive training are considerable. It is recommended that all those concerned should be asked to consider how existing practices may be modified to admit the occasional late entrant and prevent the too early discharge of the efficient older worker.

Pension Schemes

The effect of pension schemes on engagement and retirement is dealt with in a separate section. Since the war there has been a marked increase in the financial provision for old age through both national and private pension schemes, and the Committee emphasise the importance of both types of schemes taking into account social and economic trends and avoiding provisions which impede the employment of older persons. The National Insurance Scheme covers some 20,000,000 employed persons for retirement pensions. Only tentative estimates can be given for employers' schemes. It is thought that they cover between 5,000,000 and 7,000,000 workers, about half of whom are manual workers. The number may have been rising recently by as many as 500,000 a year, and probably more than twice as many people employed in industry and commerce are now covered by superannuation schemes as in 1936. These schemes vary considerably in terms and conditions, rates of contribution and benefits.

National Insurance pensions do not affect engagement policy because they are of universal application. In private schemes, however, the higher cost of bringing in an older entrant may prejudice his chances of employment. In suggesting the direction in which solutions should be sought, the Committee state that "contracting out" of the pension scheme is not always the answer. As a general solution it is unlikely to appeal either to workers or employers. It may also present special difficulties when pensions are paid through a group scheme operated by an Insurance Company, but Insurance Companies will, if approached, try to help their clients to work out suitable adjustments to their schemes. The Committee consider that once the principle is accepted that an employee entering a new pensionable job after a certain age, is not entitled to more than the superannuation benefits related to the actuarial value of the contributions paid by him and on his behalf for the period of his service with the firm, it should be possible for employers and workers in an undertaking to arrive at an acceptable solution.

The provisions of the National Insurance Scheme and those most common in private schemes have been examined by the standard of the Committee's recommendation that the age of retirement should be flexible and related to individual capacity. All pension schemes have a minimum pension age. In the National Insurance scheme this is 65 for men and 60 for women, but with inducements to postpone claiming. In private schemes the age varies. It is considered these ages need not affect continued employment so long as they are accepted as the "minimum pensionable age" and not the "retirement age". The Committee recommend that the procedure for administering pension schemes should draw the least possible attention to the attainment of the minimum pensionable age Positive inducements in the form of higher ultimate pensions are thought to be most



likely to encourage postponed retirement and these arrangements need not, as is sometimes thought, normally affect the eligibility of pension costs for taxation relief. To be effective as inducements, the basis on which increments are assessed and the general principle behind the arrangements for earning higher pensions must be made clear to the future pensioners. This applies to both private and national schemes.

The problem of the lack of facilities for the transfer of pension rights, which may limit the movement of older workers to more suitable employment, is to be considered in a later report.

Research Projects

A short account is given of what has already been done and something is said of the Committee's plans for the future. In the search for more information certain research projects are being carried out and some special enquiries have been started, the most important being the Ministry of Pensions and National Insurance inquiry into the causes of retirement. Efforts have already been made to arouse public interest in the problems. In industry, commerce and the professions there is no evidence yet that there are widespread changes in favour of the older worker in those employments whose engagement and retirement practices are governed by specific rules or strong customs. But there are examples of deliberate recruitment of older people for specific work, modifications of fixed retirement ages and other adjustments which, though isolated, are significant. There are also increased opportunities for older persons in Government Service—both national and local.

Looking to the future, the Committee's next task is to take stock of current research and to determine what further research is desirable. More information is wanted about such things as fitness and capacity for work at later ages, about productivity of older workers in comparison with that of younger workers on various types of work, about absenteeism and time-keeping and about accident rates.

Calcutta Markets

(Continued from page 52)

was paid for Rotterdam discharge and $4.60 for a cargo to West Italy, while three part cargoes of sulphur from Port Sulphur to U.K. were arranged at 42/6d. Dull conditions reigned in the North Pacific section, wheat being fixed to Japan at $6.60 and a cargo of lumber and general cargo to U.K. paid 72/6d f.i.o. Two-cargoes of wheat from British Columbia to U.K. were done at 61 shillings.

In the time charter section a number of fixtures were done, among them being an oilburner delivery Vizagapatam re-delivery Northern Range at 14 shillings and a motor vessel timechartered for a round voyage Persian Gulf/India/Pakistan or Colombo delivery Gothenburg at 17/9d.

THE SUGAR MARKET

During the week ended 12th January, sugar sales were normal in the Calcutta market, arrivals were 5,000 bags and stocks amounted to 10,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 30-12 to Rs. 31 a maund for ordinary grain and Rs. 31-12 for big grain. Ex-mill delivery prices for Bihar factories ranged between Rs. 29-10 and Rs. 30 a maund for D28 sugar. It is rumoured that the cane price might be increased by one anna per maund soon. The Government has lifted the ban on futures trading in gur, so its price has increased to Rs. 16 per maund at Muzaffarnagar

LINSEED

Conditions were more or less unchanged last week and whilst prices showed no material change the general tone remained quietly steady. Arrivals to this centre were very limited owing to transport restrictions, and buyers and sellers alike were rather cautious. Trading was on a small scale chiefly for ready goods. The oil section was exhibiting a quieter undertone and although there were keener offerings from sellers at lower prices buyers appeared to be reserved and the turnover was very small. Latest quotations were as follows: Ready Rs. 21/12/- per maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 5th and 11th January, 1954)

Cowhides :—Wet salted (Ord) 7,000 pcs. on the basis of Annas 8-6 to Annas 9-9: Wet salted (Ord) 30,000 pcs. on the basis of Rs. 8-8 to Rs. 9-4; Wet salted (Slaughtered) 8,500 pcs. on the basis of Rs. 11-8 to Rs. 23.

SHELLAC MARKET REPORT

During the week-ended on 12th January, the market was dull and inactive at the beginning but became steadier at the end, and a small business passed. The range of quotations was as follows:

Standard Pure Buttonlac	Rs 130 to Rs 128 value.
Pure Buttonlac	Rs. 122 to Rs 118 value.
Lemon No. 1 Shellac	Rs. 128 to Rs 123 value.
Lemon No. 2 Shellac	Rs. 121 value, Rs 118 buyers.
F.O. Std. I. Shellac	Rs. 115 to Rs. 110 buyers.
Pure TN Shellac	Rs. 110 to Rs 104 basis done & buyers.
4% I.T.N. Shellac	Rs. 104 to Rs. 100 value.
No. 1 Kusmi Seedlac 3%	Rs. 123 to Rs. 118 value.
No. 2 Kusmi Seedlac 3%	Rs. 116 to Rs. 110 value.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 110 to Rs. 105 value.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 103 to Rs. 96 value —Rs. 98 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 98 to Rs. 92 buyers.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 94 value—Rs. 85/86 done & buyers.
Kireelac	Rs. 56 to Rs. 54 buyers.

Shipments during January until the 9th were 7,592 packages.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The *Capital* Index of Indian Industrial Activity (Base: 1935) has now been brought up to July, 1953. Compared with the preceding month there were increases in Cotton Consumption (1.9 points), Cement (12.8 points), Paper (17.2 points), Wagons Loaded (4.0 points) and Electricity (7.6 points), while decreases occurred in Jute Manufactures (0.4 points), Steel Ingots (26.5 points), Pig Iron (20.4 points) and Coal (1.8 points).

Index for Cheque Clearances revealed a rise of 2.1 points, while that of Notes in Circulation disclosed a drop of 3.6 points.

Correlating all the factors the *Capital* Index of Indian Industrial Activity declined by 1.0 point during July, 1953.

(C) Redeemable at pay in the event of the undertaking being purchased by the Corporation of Calcutta or Howra, or 1st January 1945 or every seventh year thereafter

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 193 and 31st December 1949 on giving 3 months' notice one Bond being exchangeable for 50 Ordinary shares

(F) Redeemable (a) at 102 per cent on 1st October 1976, or in the event of voluntary liquidation or the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent.

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and the option expires at the end of 3 months from the date of notice of repayment by the Company.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of Share of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend part passu in all respects from the financial year following that in which the option is exercised and the holder will, receive interest on the stock converted in respect of the financial year in which the option is exercised

Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture, for 40 Ordinary Shares of Rs 10 each on 1 month's notice

(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946

(K) Repayable at par by 1986 by annual drawings on 1st June each year

(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.

(M At par by 12 annual drawings

(N) Option of repayment on 6 months notice after 31st July, 1953 at Rs 2-8 per cent Prem

(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(P) May be redeemed on 30th June 1966 or any subsequent half-yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th September 1952 Any time on or after 1st October 1947 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st Octobe in each year on giving 15 days' notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December. 1955 on three months' notice

(U) May be redeemed on 30th June 1952 at 2 per cent Prem on 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at premium of 1 per cent.

(V) Redeemable at a premium of 5 per cent on 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-56 at same premium These Debentures are registered and are transferable by Transfer Deeds

(W) At par per 12 annual drawings between 1-1-60 and 31-12-64.

(X) Any time on six months notice.

(XX) At par on or after 1-12-59.

(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after from date of issue on 6 months' notice Option not exercised repayment to be made after full term.

(y) These Debentures are registered and are transferable by Transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

CONFLICTING APPRAISALS OF INDIA'S ECONOMIC POSITION

OFFICIAL OPTIMISM AND THE DOUBTS OF PRIVATE ENTERPRISE

A REVIEW of the progress of the five year plan issued this week by the Planning Commission, just in good time for the Congress session at Kalyani, says that "the immediate aims of the five year plan have been largely achieved." Quibblers will want to hedge this about with numerous qualifications, but they will not be able to extenuate the chief fact of the case: that there has been, in the first three years of the plan, a remarkable improvement in India's economic situation. Whether it has been due to any great extent to the activities of the planners, or even whether the improvement noticed has been the improvement that was planned, is another matter and one also that probably could not be easily decided. Certainly it must be noted that India's economic position has improved along with that of other countries with which she is closely associated, including countries that do not attempt overall national planning. This detracts nothing from India's credit but it might serve as a reminder that the continued stability of the economy depends at least in large measure on the persistence of favourable conditions abroad. In any event the fact remains that under Congress administrations and during the course of the plan India has bettered her economic status and seems set for a period of further advance in the next few years. Things might of course have improved even further in this time, and at Kalyani there will be members of the governing party concerned to temper complacency with reminders of tasks undone and opportunities missed. But, not having belonged to the class of extravagant optimists when the plan was launched, we see no reason now to join the class of extravagant pessimists just because miracles have not been achieved.

If the progress of the last three or four years has not yet produced spectacular results, that is because it has consisted largely of the negative work of removing disabilities to economic expansion: controlling inflation, correcting instability, insulating the agricultural sector from the effects of bad monsoons, and the like. Establishing perennial irrigation in an area that is usually well served by the rains does not necessarily lead to an increase of this year's crops over last year's, if last year's was a reasonably good harvest. But it does mean that when a bad monsoon comes, it does not bring famine. This sort of strengthening of weak points in the line is not the same thing as advance, but it is a necessary prerequisite. When the more obvious gaps have been plugged, further effort beyond that point begins to produce visible results.

*

Another way of putting this is to say that in the course of a backward nation's development there is something like a sound barrier in aviation. At or below the sound barrier the smallest accretion to the national income has to be won by the most painful effort, but once that barrier is pierced every outlay of effort has a cumulative effect. It is as though a deposit had been converted from simple to compound interest; the "investment multiplier" has risen in value. We do not pretend that India has reached that stage yet, or even claim that it is imminent. The transition, the passage through the barrier, can perhaps only be detected *after* it has been made, so policy can never be based on the expectation that it is coming this year or next. But it can readily be understood that while an economy is in the region of the sound barrier, there is justification for the most contradictory appraisals of the prospects. Some look to the present difficulty of winning the smallest move forward, and are discouraged; others underestimate the effort needed to break through the nearest obstacles and think only of the efflorescence thereafter possible, and take heart. This appears to be the present condition of economic opinion in India.

As an example of this contradiction we may take the sanguine review issued on Monday by the Planning Commission, on the one hand, and the plaints now being submitted to the Shroff Committee, on the other. The Shroff Committee is enquiring into sources of finance for the private sector, a comparatively narrow question when taxation is excluded, but the organisations that have forwarded lengthy documents for its consideration have all very properly prefaced their reflections on credit mechanisms with reviews of the general economic situation. It is the majority opinion that fiddling with the credit structure alone will be of very little use unless improvement is sought in the overall "climate of investment"—a phrase that occurs in almost all these documents. This is undoubtedly true, and was pointed out by some observers as soon as the announcement of the Committee's appointment was made. But the fact we are drawing attention to here is that all these reviews of the economic climate offered by industrial and commercial bodies are discouraging, while the Planning Commission feels a much more optimistic outlook justified. This contradiction requires some explanation.

*

There are one or two obvious explanations, on each side. The administration is committed to a sanguine approach for political reasons; business men are freer than politicians to dwell on the less creditable part of recent performance. Again, in as much as the Government is itself directly responsible for some of the chief grievances of industrialists—as on labour policy—we would not expect to see these charges admitted in an official report. But on the other side, there is the fact that business men are usually tempted to overstate the difficulties of obtaining equity capital from the market when there is the possibility of obtaining it in the form of loans from Governments or other institutions. An industrialist naturally (though shortsightedly) prefers getting a known and certain sum of money for a fixed period and at a fixed rate of interest, to going into the free capital market and attracting shareholders who thereby buy a perpetual and direct interest in his business. Once the Government had mentioned the possibility of dispensing long-term loans to industry, some exaggeration of the difficulty of raising investment capital by other methods was inevitable.

More fundamental is the Government's reluctance to see that the methods it has successfully used in the last three years were adequate for the limited task of restoring stability, but they are quite inadequate for the task of carrying the economy further into a period of vigorous expansion. We have argued that the Congress administrations have no reason to be ashamed of the achievements of the first part of the five year plan, but that those achievements were mostly the removal of negative disabilities, such as inflation and periodic famine. The tasks that now lie ahead of the "public sector" are indeed more positive—the completion of major hydro-electric projects and the improvement of transport for example—but they are still largely concerned with the mere skeleton of the economy, with the creation of the material conditions for progress. The actual work of producing the goods and services that will bring about a noticeable rise in living standards and that will give the mass of the people evidence of improving conditions, this work still has to be done by private industry. And private industry will not be able to do that work unless the economic climate is transformed from mere stability to actual and dynamic expansion. It is in this sense that the conflicting views of Government and industry are consistent: the economy has been strengthened to the point where more rapid progress is possible, and the heavy investment now going forward in the public sector will facilitate progress, but at the same time private industry is not able to make the best of this improvement because it is starved of capital, because it is apprehensive of labour policy and because risk-taking and venturesomeness have been actively discouraged.

*

We would not deny that one of the points where the line had to be strengthened before advance was undertaken was the assurance of reasonable working conditions and living standards for industrial labour. One does not have to be a doctrinaire socialist to sympathise with the anxiety of the Government to ensure that industrialisation was not carried through at the expense of a depressed class, drawn from the land to be brutalised by bad pay and insecurity in new factories. But a good deal has by now been done toward that end in the labour legislation and tribunal case law of the last five years. Naturally, what has been done has not been enough to make the Indian worker the equal of industrial labour in other countries, but that is because labour legislation by itself can never permanently raise living standards without a parallel increase in the production of goods and services. It would be hypocritical to pretend that the material and moral condition of many Indian workers today is anything but unpleasant, but that is not because society does not protect them from exploitation but because the society in which they live is a very poor one. Further protective legislation will not make it richer but will in fact make it poorer still, and thus postpone the amelioration of working class conditions.

In labour legislation too the time has come to recognise that the negative work of Government has done as much as it can, and that henceforth progress lies with the expansion of private industry's ability to turn out goods. We have seen it suggested by politicians that this would amount to saying to labour: "Right, you've had your innings; now it's the boss's turn to make his penny at your expense, or at least without advantage to you." In fact it amounts to saying no such thing. Rather it means explaining that the worker has hitherto received the benefits of India's improved economic position in the form of protective legislation, and that henceforth he will be able to receive those benefits in the form of more and cheaper goods and a wider choice of employment for himself and his sons.

Just as it needs explaining to labour that the expansion of private industry need not involve any surrender of the protection won since 1948, so it might also need explaining to a class of business men that a more favourable climate for investment in industry will not, and must not, involve the sacrifice of the stability and soundness brought about by Government policy in the last few years. Inflation has barely been controlled and the credit system fortified, but some business men are already implying (particularly in petitions to the Shroff Committee) that these notable achievements must be thrown away so that private industry can obtain the funds it needs for new investment. Some of the proposals now being placed before the Committee would have little other effect than to land the Reserve Bank with a lot of worthless paper and to endanger confidence in the banking system. Progress will not be made by demolishing the props that now support the economy, but by superimposing on the satisfactory but limited attainments of the last few years a more vigorous and expansive programme of private investment and re-investment.

COMMODITIES FIRM DESPITE RECESSION FEARS

UPWARD TREND WHILE U.S. PRODUCTION FALLS

AT the Commonwealth economic conference that has just ended circumstances were less favourable to discussion of schemes for regulating commodities than at the preceding conference of December 1952. Whereas then the post-Korean slump was a vivid memory, now commodity prices in general have evidently established themselves on an upward trend. How long the trend can be sustained is a matter for conjecture, and there is no suggestion that such basic sterling commodities as rubber and tin can regain the inflated values of the early period of the Korean war. But the immediate incentive to plan supplies, purchases, and prices, is not so strong as it was. Plans for three major commodities—wheat, sugar and tin—were worked out in 1953, but none of them has been accepted without qualification by consumers. Britain, the principal importer of wheat, refused to adhere to the International Wheat Agreement. The United States, the principal importer of tin, shows no enthusiasm for the scheme worked out at the International Tin Conference. Ratification of the International Sugar Agreement is significantly slow and will evidently never be complete; and sugar, incidentally, is a conspicuous exception to the general recent upward trend of prices.

For the upward trend itself it would be difficult to find a parallel in comparable circumstances. In a period (since the summer) when American industrial and mining production has declined by approximately 5 percent (according to the index of the Federal Reserve Board) commodity prices have risen by rather more than that percentage (according to the indices of the United States and of other countries). Though American prices sagged for a time, and so allowed a more normal relationship to be established between dollar and sterling prices, even dollar prices have joined in the advance, notably wheat and coffee. That basic prices in general can advance while American business is receding reflects a remarkably change in the balance of international economic forces. Non-American countries, Europe in particular, have continued to expand their production and trade while America's production and trade have contracted. These countries have not been intimidated by America's economic recession—not yet, on its hitherto moderate scale. Their consumption of commodities is now so large that they can dominate the trend of commodities temporarily at least, unless American buying is more severely reduced. This new assertion of the non-American world can even benefit America in this phase, for an upturn of commodity prices can encourage Americans to buy, and so curtail the recession.

Meantime, of course, the scope for a rise in commodities is limited by the possibility that America's recession will gather speed. The unusual stability of the European metal markets, for instance, represents a balance between this possibility and the opposite possibility, that American business will soon turn upward again and so raise all prices sharply.

* * * *

A comparatively new element in the situation is the Soviet Union and associated countries. Besides long-standing exports such as grains, timber, coal, they have entered the market as sellers of pig iron, rarer metals, oil products, and other commodities, on an appreciable scale. But interest is focussed at present on their emergence as buyers, not only of rubber and wool and other industrial commodities but also of farm produce, tea, sugar, and other commodities for the consumer. It does not appear that such trade can be rapidly expanded unless the Soviet Union continues to draw on its gold stock, but the development could be a sustaining influence on commodities in general as it has been in the past year on wool, whose prices have been inclined downward recently.

The commodity markets, in brief, are in a period of readjustment. The main adjustment to the post-war expansion of supplies has been completed, unless one regards the regulation schemes of 1953 as the beginning of a new adaptation to plenty. Statistically the markets are generally in a sound condition, because consumers of commodities have not fully restored stocks which they allowed to run down after the Korean boom; hence the premiums which persist in the London metal market, for instance, on supplies for immediate delivery, and the sensitive response of prices to labour troubles or other developments that may impede supplies. This period of transition is not appropriate to international planning of commodities according to a set idea of "normal" price relations. That a United Nations committee of experts should add its authority to the idea of establishing stabilising pools of commodities at this time has caused some surprise. It is both the strength and the weakness of such "buffer stocks" that they are intended to work against the trend of the market. The boom that followed the outbreak of the Korean war and the slump that followed the boom must have disillusioned anyone who believed that the market always acted rationally. Consumers are excessively eager to accumulate supplies when prices are rising and excessively reluctant to accumulate supplies when prices are falling. An agency that automatically bought up "surpluses" when prices were falling and released stocks to meet "deficiencies" when prices were rising could perform a sensible and useful service. But it would tend to stabilise prices within a range arbitrarily agreed. There is a continuing debate between those who believe that free pricing in a free market is too erratic, and therefore damaging, and those who believe that underlying changes must show themselves in price relations, and that any scheme that controls prices restricts progress. Even if the principle of regulation is accepted, a period of transition is not the time to apply it.

WHAT BRITAIN DRINKS

LOYALTY TO TEA AT 5s. A POUND

THE considerate London store manager who provided free cups of coffee for women waiting hours for January's cut-price sales to begin, and who found little interest in his offer because the women wanted tea, must have reflected on the British people's devotion to that beverage. This month the retail price of most brands of tea is increased by 4d. to an average of 5s. a pound, but the trade is confident that consumption will be almost unaffected; although the subsidised price, in mid-1952, was only 3s. 8d. During the war, while most of Europe was drinking the strangest coffee-substitutes, coffee—real coffee—was never rationed in Britain. But tea was rationed at considerably less than prewar levels of consumption, and consumption of coffee therefore rose (briefly, however) to a peak three times as high as the prewar average. Advocates for coffee still believe that the British people's addiction to tea could have been permanently weakened if the price of coffee (which was particularly favourable in Britain, because the Ministry of Food bought from East Africa much below world prices) had remained low. But the fact that soluble coffee-extracts, which are relatively expensive, enjoy large sales shows that ease of preparation, which is also an advantage of tea, is quite as important as price. Britain's consumption of tea per head, a little less than 10 pounds per year, is still about 1 pound less than before the war. Consumption of coffee, about 1½ pounds per head per year, is still rather more than before the war. So the prewar relationship has not been quite restored, although tea has gained and coffee has lost since tea was derationed in October 1952, and although the price of Brazilian coffee is as much as 15 times the prewar price, whereas the price of Indian tea has increased over the same period only about 3½ times.

Britain is by far the largest importer of tea, but both America and Russia have shown increasing interest in the commodity, which, with Indonesia exporting much less than before the war, is a potentially increasing earner of foreign exchange for the sterling area. Supplies of both coffee and cocoa have been restricted by "natural" factors—the weather and disease—but demand has not been sensitive to prices, and these commodities have therefore been able to rise far above the average of commodity prices. There has been, by contrast, a slump in wine prices in Europe, a slow but persistent decline in consumption of beer in both Britain and the United States. Sociologists may interpret these trends as a transfer of demand from alcoholic to non-alcoholic drinks. Wine crops have been heavy, but the fact remains that demand has not fully responded to lower prices. Into this conflict, in Britain, an important new element has entered. The soft drinks industry, restricted until recently by an allocation of sugar based on prewar consumption, is now free, like other consumers, to buy all the sugar that it can use; and in anticipation of this freedom the American soft drinks interests, particularly those making cola drinks, have entrenched themselves strongly in the British market. It has yet to be proved that the British public will adopt the cola-drink habit as a general mode of drinking, extensive enough to affect appreciably the consumption of coffee and tea. But it is significant that companies concerned primarily with the brewing and selling of beer have taken responsibility for these and other soft drinks in Britain and have invested large sums in processing and bottling equipment for them.

* * * *

The English "public house" may have its counterpart in a Continental beer-house, but it is (for better or for worse) as distinctive a characteristic of England as the cafe is of France and of other Continental countries. Gradually, the "pub" is changing character. More beer and other alcoholic drinks are being drunk in the home, less in licensed premises. The "pubs," therefore, are trying to attract a different kind of custom: not only the men's but the whole family's. Some of them have added a special unlicensed room, where only soft drinks are served, mainly for the children. Others are combating the counter-attraction of television (which is largely responsible for the transfer of drinking to the home) by installing television sets for the entertainment of their customers. They do not yet (not in the towns, at least) serve tea or coffee, but they have to offer more soft drinks to meet the competition of unlicensed bars, some of which are catering establishments of considerable size. Beer has another serious competitor, light wine. Heavy wines are handicapped by a heavy excise duty, and consumption of port (more than of sherry) has been much reduced since prewar times. But Chancellors of the Exchequer (especially Sir Stafford Cripps, who drank no alcohol) have treated light wines more kindly since the war, and the more recent decline in the prices of wine, ex duty, enables the public to buy retail a bottle of table-wine (somewhat less than a litre), of satisfactory quality, for 6s. or less. The last-published statistics, covering the third quarter of 1953, show a decline of £5 million to £158 million, in expenditure on beer, compared with the same period of 1952, and a rise of £5 million to £68 million, in expenditure on wines and spirits, on the same comparison. Wine-drinking is largely responsible for the changeover, and if wine became (as it could become on the present scale of incomes) a working-class as well as a middle-class drink it could extensively replace not only beer but tea; helping thereby, if liberal trade were allowed, to solve the economic difficulties of France. Yet none of the present trends, which have social as well as economic significance, suggests that the ordinary British family will abandon its loyalty to tea.

CURRENT COIN

The Fifty-Ninth Session.—*An Indian Correspondent writes from Kalyani:* The 59th Congress session, the first to be held in Bengal for 25 years, promises to be both important and impressive. The party is not at its strongest in this State where there is a widespread feeling, possibly exaggerated, that its problems do not always receive the sympathetic consideration they deserve. The presence at Kalyani of so many national leaders, who are also at the helm of the administration, may help allay that suspicion of indifference, although it seems unlikely that problems of specific States will be allowed to dominate discussion. It will be a mistake, however, for the Congress to be content with pleasant generalities on international affairs in preference to less pleasant realities at home; the view (re-stated recently by Michael Oakshott to the displeasure of many idealists) which regards politics as primarily municipal, rather than ideological, may seem narrow, but overmuch preoccupation with the latter aspect of politics is capable of defeating the ideal itself. Nor should it be forgotten that the pursuit of worthy political objectives, national as well as international, is not helped by basic weaknesses in the domestic economy. On this latter, Dr. Roy almost spoke his mind when opening the exhibition on Saturday. In commending the industrial section of the exhibition, the first to be organised by the party, he very nearly brushed aside khadi with all that it stands for, although just before him Mr. Mehta, General Secretary of the Congress, had sung the usual praise of that fetish. This is not an unrepresentative indication of a very real conflict within the party. One section of its followers wants to face tomorrow boldly, another has its face turned nostalgically to a vanished yesterday. It seems possible that the 59th session will leave the Congress still facing both ways. Finally, the Congress would have done well to make its respect for the forms and conventions of democracy more obvious by openly observing one of the most fundamental: that of keeping the party and the Government distinctly apart. The magnificent, and not unpublicised, effort made by the West Bengal administration, the nationalised railways and air services and the Central posts and telegraphs to make the Kalyani session a success has tended to blur the dividing line between those two entities.

* * * *

Caution in Sydney.—The meeting of the Commonwealth Finance Ministers in Sydney has closed on a pleasantly optimistic note. Whatever the difficulties of the coming year, the conference rightly decided that they should not be increased by the spread of doubt and pessimism from such a high official source. This was wise in a year when the level of confidence could well decide between continued progress and stability, or depression and stagnation. The communiqué published after the conference placed the emphasis on consolidation, and cautious progress along present lines, instead of possible new experiments in convertibility. This undoubtedly reflects the world's uncertainty about the development of the United States economy. A further step towards convertibility might have been expected in view of the recent international, and especially European, feeling on the subject, and the latest move of the International Monetary Fund in relaxing its credit policy. But, as it was, the conference limited itself to measures for the physical encouragement of increased trade.

The gold and dollar reserves have improved greatly, thanks to the progressive policies of 1953. But the trend has not been maintained, and even with the assistance offered by the I.M.F., the reserves are in no position to withstand a long drain. The memory of 1949, when several years' constant drain on the reserves culminated in a speculative flight from the pound and made devaluation inevitable, is much too strong. But if convertibility is impracticable, there is an excellent chance of maintaining a high level of trade with Europe, as current achievements have shown; and if there is little prospect of improved trade with the dollar area in this year of uncertainty, at least efforts are to be made to encourage the relaxation of the restrictions against U.K. and Commonwealth imports, imposed by some countries in the Sterling Area.

The importance of the capital flow from the U.K. to other members of the Commonwealth was recognised as being of great importance both for the countries receiving the investment, and as a prop to a hardening British export market. New channels for this flow were opened during 1953, and Commonwealth countries now have access to the London Money Market for approved development finance. But progress in this field will depend on the resources which the U.K. has available for export when all conflicting calls have been met, and these in turn will depend on internal political developments. Assurances have been given on this matter, but they are always easier to give than to keep. The increase of inflationary conditions in the U.K. have already given rise to well based rumours that overseas investment will be halved in 1954. In the move towards freer trade and currencies the importance of the forthcoming review of the General Agreement on Tariffs and Trade (G.A.T.T.) was mentioned. This could mean that the Finance Ministers are preparing for the necessity of keeping Commonwealth trade at a high level whatever the fluctuations in international trade generally though efforts in that direction might be difficult to square with the affirmed principles of freer and expanding trade. Developments in this field should be worth noting, though India has little to gain from any fresh extension of the principles of Imperial Preference.

* * * *

Indo-U.S. Air Pact.—The Government of India last Thursday gave the U.S. Government a year's notice terminating the Indo-U.S. Air Transport Agreement, and at the same time expressed the hope that a new agreement would be concluded "which would enable the airlines of the United States to operate in India in a manner so as not to conflict with the economic operation and development of Indian Airlines operating abroad in their legitimate areas of activity." The present agreement was signed in November 1946; it contained general provisions regarding the capacity and frequency of air services between India and the United States (third and fourth freedom traffic) and other traffic destined for or coming from third countries (fifth freedom traffic). At the time, India's airlines had not organised long-distance international air services, so foreign airlines were not made to comply with specific provisions to regulate their capacity, frequency, carriage of fifth freedom traffic, etc. But after Air India International started its long-distance services in June 1948, it was found that a considerable amount of fifth freedom traffic that should have legitimately belonged to it was being carried by foreign airlines. Therefore, in agreements signed after 1948, provisions were incorporated to regulate capacity and the carriage of fifth freedom traffic, including regional traffic. Such agreements were signed with Australia and the Philippines in 1949 and with Britain in 1951; the 1946 agreement with the Netherlands was also amended to meet these requirements. The agreement with the United States, however, remained unchanged but in the meantime it was found that the capacity provided and utilised by these airlines on their services to India had been far in excess of the requirements of traffic between India and the United States and that the bulk of traffic carried on these services to and from India was fifth freedom traffic, including, in the case of Pan American Airways, a large proportion of such essentially local or regional traffic as that between India and Pakistan. The Indian Government therefore approached the U.S. Government with a view to revising the Indo-U.S. Air Agreement and bringing it into line with India's agreements with other countries (some of whom are reported to have protested against the former not having been amended). No satisfactory decision could be reached at the subsequent series of talks, so India has given notice to terminate the agreement.

* * * *

Coal Output in 1954.—The Government of India has decided, under the Coal Mines (Conservation and Safety) Act, that the production of selected A and B grades of coking coal in 1954 should be limited to 7.4 million tons, and the production of coking coals of Grade I and Grade II should be limited to the level of production in 1952. The Government has also decided that the targets of production of various grades of coking coal for individual collieries in 1954 should be fixed by the Coal Board after taking into consideration the actual production in 1953 and a number of other factors. Among the factors listed are, firstly, that there should be no excessive retrenchment of labour. Secondly, the limit fixed should not render the working of the colliery uneconomic. Thirdly, pegging should be regulated by the supply of wagons and each colliery given a wagon despatch target for the year, which may include stocks left over from the raisings of 1953 and determined as on 31st December, 1953; once that target has been completed, no further wagons will be supplied to the colliery during the year. Fourthly, for the purpose of this scheme, all the collieries under one ownership or managing agency will be treated as one group and the production quota for each grade may, with the approval of the Board, be transferred from one colliery to another within the group provided the total output of each grade of coal of the group does not exceed the limit fixed by the Board and the closure of any colliery is not involved. Fifthly, all collieries (including Government collieries) will be subject to the scheme. Attempts by individual collieries to downgrade the coals with a view to defeating the purpose of pegging will be deprecated. The Board has decided that the target of production in 1954 for individual collieries should be fixed, subject to the considerations mentioned above, at the level of the anticipated production in 1953 or the production target for 1953, whichever is less. The production targets have been fixed and are being intimated to collieries. As pegging of output will be regulated by the supply of wagons, each colliery will be given a despatch target in terms of wagon-loads. The despatch targets will be determined on the basis of the output targets plus stocks of coal and coke as on 31st December, 1953, less the quantity of coal required for consumption at the colliery. The figures of stock as on 31st December, 1953, and estimated colliery consumption for 1954 (based on the figures of actual consumption in 1953) will be collected from the Chief Inspector of Mines' office and the despatch targets, as determined, will be intimated in due course. In the meantime, the production targets now fixed may also be taken as the despatch targets for 1954. In case any collieries wish to appeal for an increase in the production targets, such appeals should be submitted on or before 10th February, 1954, together with detailed information as shown in the form circulated to the collieries.

CORRESPONDENCE

COMPULSORY AIR TRAVEL INSURANCE

To The Editor of "Capital"

Sir,

I read a news item about the plan for compulsory insurance of every passenger of the Indian Airlines Corporation. It is mentioned in the report that an "important step that the Corporation has to take, before it can go ahead with the scheme, is to secure authorisation for getting an agency of some insurance firm of international repute and for this purpose the Corporation had moved the Insurance Commissioner (perhaps the Controller of Insurance!) of the Government of India."

When the various air services in India were being managed by private enterprise, a number of companies had their booths in the various airports and were issuing cover, thereby fulfilling a useful service. The fact that the Indian Airlines Corporation has under its consideration a proposal to take an agency of a single firm is very disconcerting in the sense that the business is likely to be monopolised by a single institution. If the proposal of the Corporation is to pass on the business to the Indian Insurance Companies Association Pool that will be the best way of tackling the problem. All the companies that share in the business of the Pool will be benefited instead of one company alone taking away the business of the whole Corporation. If, however, there is any difficulty about the Indian Insurance Companies Association Pool taking up the business, the alternative for the Corporation will be to arrange for the sharing of the business among the various companies that are now transacting this business. The fact that the air services are now under State monopoly should not by itself lead to a monopoly of the business by a single insurance company. As there is going to be a compulsory levy for insurance of all passengers it is but fit and proper that the business should be shared among all the insurance companies transacting this business in India.

Yours Faithfully,

S. Rangarajan.

NEW ACCOUNT BRINGS GOOD MARKETS

TEA SHARES RECORD SUBSTANTIAL GAINS

London, 19th January.

THE start of the new account on the London Stock Exchange during the past week brought exceptionally good markets. Most sections joined in the advance and activity showed some expansion, with the number of deals marked yesterday the highest figure since May 1951. Industrial equities were buoyant with shoes, radios, buildings, textile stores and many miscellaneous issues recording gains ranging up to several shillings. The strength of foreign bonds has been mainly in Germans, but Japanese also improved and Greeks were quietly supported. Tea shares enjoyed their best market for several years with substantial gains recorded, and the kaffir market, under the stimulus of good quarterly development, reports encouraging uranium profits. Rubber shares and oils however had a quiet week with little in the way of stimulus appearing during the week. Today however markets had a rather mutilated day. A certain amount of dullness overhung most sections, due to the settlement which was in progress and which retarded new business. But observers felt there was nothing significant in the dullness. The underlying reason for the strength of markets in recent weeks still holds good. The large funds for investment which exist at present, and the fact that deflation of raw material prices has left industry with ample capital means that the attractions of new issues is decreasing. Another factor is that, according to market circles, the floating supply of shares is growing smaller as any reasonable sized line of good shares finds its way off the market and into investment portfolios.

The week in the London money market was made up of alternate bouts of patchiness and difficulty. On almost every day the authorities gave some kind of assistance, while at one time near mid-week four or five market houses resorted to the Bank of England to borrow small amounts at the penal 3½ percent rate. However, conditions eased towards the close but full privilege money was taken up in a number of cases in order to balance the books. Applications for £220 million of Treasury Bills amounted to £335,490,000. £210 million were allotted at an average rate of 42s 7.72 percent. This week £210 million are offered. The Bank of England Return showed a drop of £19 million in active note circulation to £1,563 million while bankers' deposits fell by £16 million to £272 million. The fiduciary issue was lowered by £25 million to £1,600 million.

Mazawattee Shares

Ordinary shares of the Mazawattee Company on the London stock exchange were marked up from 4s 6d to 6s on Thursday, their highest level since 1949. This followed a statement by the directors that "negotiations have reached an advanced stage for an offer to be made to ordinary stockholders at par." The Company has paid no dividend for two years. Before that, shareholders received five percent per annum.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 13th January shows gold stocks up by $1,000,000. Foreign deposits rose by $60,000,000 while foreign investments fell by $29,000,000. FED resold the remaining $66,000,000 of securities that it held under repurchase agreements. Member banks' borrowings fell $14,000,000 to $156,000,000, while their excess reserves rose by $189,000,000 to $963,000,000. The reserve ratio rose 0.2 percent to 0.45 percent.

Hides and Skins

The market for East Indian hides and skins continued to display a firm undertone. East Indian tanned goatskins were offered, superior quality at 160 cents per pound and prime quality at 140 cents, cost and freight New York, for 11/12 pounds average. Dried salted skins were sold at 950 cents per dozen, cost and freight, over the week. Traders reported improved demand for East Indian goatskins but buyers resisted the prevailing price levels.

Tea Stocks

Tea stocks in London and provincial warehouses on 8th January amounted to 108,895,428 pounds, compared with 103,393,336 a week earlier. Landings during the period were 15,360,948 and deliveries 9,883,856.

Amsterdam Tea Auctions

Following the recent rise on the London tea market, some prices jumped about 40 cents per half kilo at the Amsterdam tea auctions. Ordinary and Medium grades especially were firm, while better grades improved only moderately. Offerings totalled 3,075 chests of Java and 1,080 chests of Sumatra teas, the bulk of which were bought for home consumption. At the next auction, scheduled for 4th February, some 4,000 chests will be offered.

Germans Return to Market

The New York bond market was high-lighted by two important developments. One was the successful marketing of $100 million of the 15 year 3½ percent World Bank bonds which immediately went on a fractional premium above the offering price of 100 plus accrued. Some of the older issues were also in demand selling at the best 1953-54 levels. The other development was resumption of trading on the New York exchange in some German bonds after 12 years absence. These also attracted strong investment demand, and prices were bid up anywhere from 4 to 8 points from Tuesday's opening levels, with the original Dawes sevens of 1949 and threes of 1972 showing the widest going. Dealings were exceptionally heavy. Elsewhere, in foreigns, Greek and Serbs extended their recent gains early in fairly good turnover but eventually sagged under profit-taking. Italians eased initially but later recovered in limited dealings. Denmarks and Norwegians were little changed either way on small sales. Various Australians were in demand at 1953-54 peak levels, while Japanese were most fractionally mixed. In South Americans, some Brazilians declined under very small offerings. Investment Quality Corporates also pushed ahead in enlarged turnover. Industrial and utility convertibles as well as speculative rails also advanced.

Hongkong Gold Falls

Hongkong gold touched the low of 246 5/8 during the week. The market attempted a rally but was checked at 248⅛ and closed at 248 showing a loss of 1⅞ on balances. The weakness was attributed mainly to the slump of American dollars in Hongkong. Bullion dealers forecast that there is no considerable rallying power under the prevailing conditions especially in view of the approaching lunar year when tightness of money is beginning to be felt. Offtake, official, was 8,370 and unofficial 19,090 taels. Arrivals in Macao nil.

Madras Kips

During the past week some reasonable quantity of business passed in Madras kips on the London market. There is, however, a feeling amongst dressers that prices will decline slightly. Sale of fourths was rather difficult.

Finance in India & Abroad

GOOD DEMAND FOR CREDIT

SUBSTANTIAL SURPLUS ON SEA-BORNE TRADE

Wednesday, 20th January.

WE are now in the midst of the busy season. Money is tight in most centres, advances are going out against sugar and foodgrains, and the banks have been borrowers from the Imperial. In Calcutta conditions have not changed ; funds are easily lendable at the prevailing interbank call rate of 2½ percent but the total of outstandings on jute and tea accounts is not large.

The bill of exchange market is exceedingly dull and brokers are complaining of a very thin time. There have been almost no gunny bills seen this past week, and only a few tea bills have been reported since the good showing of bills after last week's big tea export auction. Remittance has been modest. The principal exchange rates are unchanged.

* * * *

The provisional figures of foreign Sea and Airborne trade of India on private and Government accounts during December 1953, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows :—

Merchandise : excluding transit trade of Pakistan but including that of other land frontier countries : Exports—Rs. 4934 lakhs, re-exports—Rs. 29 lakhs (transit trade—nil), Imports—Rs. 3756 lakhs (transit trade—Rs. 1 lakh). Total trade—Rs. 8719 lakhs.

Treasure : Exports (including re-exports) of Currency Notes ; Rs. 6 lakhs ; others, nil. Imports of currency notes Rs. 256 lakhs ; others negligible. Balance of trade : The merchandise import figures are exclusive of the value of certain consignments of Government Stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded that of imports by Rs. 1208 lakhs. This figure represents a substantial improvement on those for October and November 1953, which were Rs. 238 lakhs and Rs. 985 lakhs respectively.

* * * *

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills amounted to Rs. 1,01,00,000 this week. Tenders at Rs. 99-6-0 percent were accepted, the average rate of acceptance being Rs. 2-8-0 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received at Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to 11 a.m. on Wednesday, 27th January. During the week ended 15th January, treasury bills for Rs. 5,90,00,000 were sold in favour of the Reserve Bank.

* * * *

The Reserve Bank of India bought sterling worth £11,745,000 in November, 1953 at an average rate of 1s. 6d. as compared with £7,425,000 in November, 1952, and sold £235,000 (£5,695,000) at an average rate of 1s. 5 63/64d. Net purchases for the eleven-month period ended November, 1953, were £730,55,000.

* * * *

Bullion ruled firm last week and prices rose sharply. There was a good deal of short-covering and bulls continued to support the market strongly. Silver improved from the previous week's level of Rs. 154-10 to Rs. 157-14 quoted today, while the ready rate fetched a premium of 4 annas. Silver was, however, unchanged at 73¾d. in London and at 85½ cents in New York.

Gold also rose from Rs. 82-15 to Rs. 84-1 and suggestions that the confiscated smuggled gold would be sold to the Reserve Bank helped sentiment. The sovereign at Rs. 56-14 also showed a gain of 6 annas.

* * * *

There were again rises of Rs. 9.50 crores and Rs. 3.68 crores in the total note issue and notes in circulation to Rs. 1,173.90 crores and Rs. 1,158.44 crores, respectively, according to the statement of the Reserve Bank of India for the week ended 15th January, 1954. This currency expansion was duly covered by raising foreign securities by Rs. 10 crores to Rs. 618.15 crores and this was partly done by reducing foreign balances in the Banking Department by Rs. 8.06 crores to Rs. 114.19 crores. Notes held in the Banking Department consequently rose by Rs. 5.80 crores to total Rs. 15.46 crores. Deposits of the Government of India were down by Rs. 8.82 crores to Rs. 98.19 crores, while other Government accounts increased by Rs. 6.42 crores to stand at Rs. 21.47 crores presumably due to a transfer of funds from the Centre. Balances of commercial banks at Rs. 42.53 crores disclosed a rise of Rs. 2.48 crores. Other loans and advances rose from Rs. 19.02 crores to Rs 20.11 crores, of which advances to scheduled banks improved further from Rs. 79.45 lakhs to Rs. 1.19 crores. Ways and means advances were shown at Rs. 1.26 crores (Rs. 1.95 crores).

* * * *

The statement of the position of Scheduled Banks for the week ended 8th January, 1954, discloses Demand and Time liabilities at Rs. 513.64 crores (Rs. 8.02 crores on account of borrowings from banks) and Rs. 329.04 crores (Rs. 1.43 crores) compared with Rs. 517.78 crores (Rs. 6.54 crores) and Rs. 331.15 crores (Rs. 1.51 crores) respectively in the previous week. Cash has fallen by Rs. 4.37 crores to aggregate Rs. 32.10 crores as also balances with Reserve Bank by Rs. 5.95 crores to Rs. 39.72 crores. There is a rise of Rs. 37 lakhs in investments to Rs. 329.02 crores. Advances including bills discounted at Rs. 482.49 crores reveal a rise of Rs. 16.55 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, consequently, shown at 11.7 percent and 57.3 percent against 10.3 percent and 54.9 percent.

* * * *

The return of the Imperial Bank of India for the week ended 8th January, 1954, shows a rise of Rs. 23 lakhs in total deposits to Rs. 206.85 crores. Investments in Government securities are up by Rs. 70 lakhs to Rs. 84.03 crores. Loans, cash credits and overdrafts have risen by Rs. 4.65 crores to Rs. 95.23 crores and bills discounted and purchased by Rs. 2.47 crores to Rs. 16.74 crores. Cash and balances are, in consequence, shown at Rs. 14.18 crores or about Rs. 4.05 crores less than in the previous week.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of October 1953 :—

	Rs.
(1) At the Reserve Bank of India in India	.. 111,28,93,000
(2) At treasuries in India	.. 2,60,80,000
(3) In England (Sterling converted at 18d. the Rupee)	.. 2,44,85,000
Total	.. 116,34,58,000

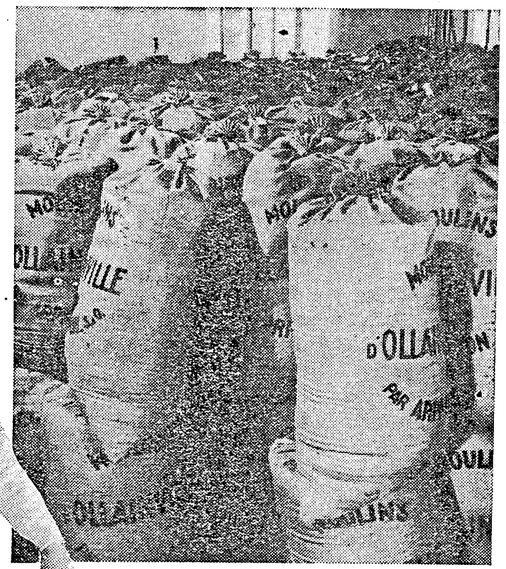
Tubular cloth sacks don't split



The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

SAINT FRÈRES S.A., 34 RUE DU LOUVRE, PARIS

Ⓢ 236-43

value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of November 1953 are as follows: Merchandise Exports to Eastern Pakistan Rs 35 lakhs; to Western Pakistan Rs. 27 lakhs; to other countries Rs. 12 lakhs. Total exports Rs. 74 lakhs. Merchandise Imports from Eastern Pakistan Rs. 1,17 lakhs; from Western Pakistan Rs. 2 lakhs; from other countries Rs. 53 lakhs. Total imports Rs. 1,72 lakhs. Total trade Rs. 2,46 lakhs. Re-exports negligible and Trade in Treasure negligible. Balance of Trade—The total value of exports fell short of the total value of imports by Rs. 98 lakhs.

MR. DHARAMSEY KHATAU and Mr. A. D. Gorwala have both in the past week referred to the unpopularity of business men as a class, the former in his speech before the meeting of the Associated Cement Companies and the latter, from a rather different angle, in an article in *The Statesman*. The one point they agreed upon was the extent of that unpopularity; Mr. Khatau said the industrialist "is painted as an anti-social evil thriving as a parasite on the exploitation of others' efforts"; as a person to be tolerated only for as long as is necessary to bring about his replacement". I think the case can be overstated, and business men need not adopt the "nobody-loves-us" stance just because a few politicians who have never done a real day's work in their life choose to exploit ancient prejudices against money-making. In any case some of the greatest of industrialists in other countries have had to endure worse unpopularity, often undeserved. It is not so many years since Henry Ford hired America's leading publicist to run a campaign costing many thousands of dollars designed to change the popular estimate of that multi-millionaire, to convert him from a "crocodile" to an affluent Santa Claus." (The attempt succeeded.) In so far as the unpopularity of Indian business men is part of the current ignorance and suspicion of the whole system of free enterprise, a change will have to wait upon a turn of political opinion, a turn that will be the quicker in coming if private industry delivers the goods. But to the extent that it is founded on specific allegations of dishonesty, it must be repaired by patient efforts to win back lost confidence by fair dealing. My suggestion is that those industrialists who lie under suspicion should make a start with their own shareholders, rather than bothering about amorphous "public opinion". I often get letters from shareholders asking me to "expose" some supposed skulduggery in company affairs; my usual reply is that the shareholders have the power to do so themselves in the much more effective forum of the company meeting. But some have lately written back to say that they went along to the annual meeting with their grievances and got short shrift from the directors. In these cases the particular complaint was that the directors were giving more money away to charities than to the shareholders, and they have sent in balance sheets that support this allegation. One sugar company had given Rs. 3,18,778 to unnamed "charities and donations" and Rs. 2,00,000 to its ordinary shareholders; another in the same group had given Rs. 2,31,488 to charities and Rs. 1,97,275 to the owners of the common stock. This is not a common occurrence I know, and even in these cases it probably has some perfectly honourable explanation; but if it is an instance of industrialists trying to buy popularity with good works financed by disgruntled shareholders I think it is tackling the problem from the wrong end.

* * * *

Though Dr. Lillian Gilbreth bears no resemblance to Miss Myrna Loy, it was through Miss Loy's acting (with the help of Clifton Webb) that she became world-famous. Most people will know of the two books she has written about herself and her family, and the films made from them—*Cheaper by the Dozen* and *Bells on their Toes*. This distinguished, grey-haired mother of twelve has been visiting India, and last Thursday gave a talk to the Indian Chamber of Commerce in Calcutta. The talk was on the "Functions of Management Associations or Institutes", rather a startling subject to be tackled by a woman most widely known for her family life. But Dr. Gilbreth has achieved fame in a field of activity which is a long way from the hearth and home: she is one of the world's leading authorities on the science of industrial management. Trained as an engineer, she married a man who pioneered the field of time and motion study, and helped to establish industrial management as a progressive science in the United States. When he died his wife, who had already helped him consistently in his studies and teaching, took over his lecturing responsibilities and helped to develop the work he had started. The technique of scientific management—though long familiar in certain Indian industries—is still in its infancy in this country; it is one to which industrialists will have to pay increasing attention as the industrial sector of the economy expands. Dr. Gilbreth drew a picture of how the movement had evolved in the United States and Europe. A professional organisation had made itself responsible for each particular section of industrial management activity, setting standards for its members, and co-ordinating and spreading technical knowledge among them. The activities of these individual associations had been co-ordinated under a single Institute of Industrial Management which had become responsible for the development of the science in step with the changing techniques of industry. Enthusiasts have formulated a similar objective for India and they will no doubt have derived encouragement from the visit of this pioneer.

* * * *

The controversy about the use of the English language in education, which began in Bombay, has by now spread all round the country, though fortunately no other Government shows any desire to follow Bombay's headstrong lead. Some of the more general arguments on this subject were examined in an editorial in *Capital* last week but I might here touch on a small but still important aspect of the case that has been drawn to my attention several times lately. It concerns the position of a class of men whose numbers are not large but whose rôle in India's destiny is very large—the Central Government's civil servants, members of the armed forces and the senior Indian personnel of banks, business houses and the like. Their work takes them to all parts of the country—they might be in Madras for a few years, then in the Punjab then back to Bengal; during that time they have to maintain a home as best they can and educate their children. Those of them who are well off can afford to keep two establishments going, leaving their children to be educated in their home State while they are posted about the country. Those who are not so well off—and that means all of them until they are pretty senior—have to transplant their children from one school to another, and I understand that hitherto they have managed to preserve some continuity of educational progress by patronising the Anglo-Indian schools, since there are not Hindi schools of equivalent standard scattered so widely about the country. The alternative is that their children have to acquire a string of regional languages, in addition to their mother tongue, that are mostly of little use to them. For these people the exclusion of their children from English-language schools is a genuine hardship, and in fact it would probably make recruitment to the all-India services increasingly unattractive. This would not worry Bombay, whose Education Minister has said that the Centre can look out for itself and he does not care if Bombay men do not join the national services, but it should worry Indians of less strongly provincialist convictions. Far from being suspected of any disinterest in the national culture, I should think that the members of the all-India services were the real Indians—in that they are not simply Biharis or Madrassis or what have you—and anything that makes their careers less supportable is a blow against Indian unity. It would be a great pity if every talented young man who chose to serve his country, rather than just his own State, had thereby to choose a divided home and ill-educated children.

A DITCHER'S DIARY

* * * *

The Labour Party's pledge to institute equal pay for women has moved Harold Wincott to write a new version of a famous passage of the Bible, of which I have space here to quote a few verses:

1. ¶And Adam and Eve went forth from the garden to till the ground whence Adam was taken: and in the sweat of their faces did they eat bread.

2. And Eve was discontented and complained. So the serpent, which was more subtil than any beast of the field, came unto Eve and said, Why art thou discontented *and* why complainest thou?

3. And Eve replied, Lo, I labour all the hours that the Lord God sendeth me. Verily, to the bone do I work my fingers. Truly did the prophet say, Woman's work is never done. Six days doth Adam labour but there is no rest for me on the Sabbath:

4. Rather do I then work twice as hard as on the other days of the week that Adam may rest at ease, the slothful *so-and-so*. But when the day of reckoning cometh, Adam doth pay me *but* fifteen pence, keeping twenty-five for himself.

5. Now the serpent was glad when he heard this, and to the woman he said, Truly this is unjust. Hearken ye to *my* counsel and ye shall obtain equality of payment with Adam for thy labours....

9. Now the serpent knew that in a little while the people would be called together to *elect* new rulers, whether of the sons of Church-ill or of the sons of Att-lee. And the serpent was one of the sons of Att-lee.

10. And the serpent knew that in the *electing* of rulers heads were counted but that the contents of the heads mattered not at all. For this was a democracy which Adam, being a progressive man, had created.

11. Therefore said he unto the woman, if I give thee equality of payment with Adam wilt thou then vote for the sons of Att-lee when the people are next called together to *elect* their rulers?

12. And Eve, expecting a heavier price, said, Verily, gladly will I promise so to do:

13. But having *elected* the sons of Att-lee, how shall they give me equality of payment with Adam? Shall I then receive twenty pence *each* day of reckoning, and Adam twenty?

14. And the serpent replied, Nay, not so. For then would Adam vote for the sons of Church-ill to prevent *this* thing of which thou speakest from coming about. Rather shall we pay thee twenty-five pence and Adam twenty-five pence also....

33. Lo, if the sons of Att-lee are *elected* to rule the land, their wise men, Be-van and Ba-logh, shall see to it that only the rich shall be sent *empty* away; and the pensioners and all those whose incomes are fixed. And their heads are few. And the hairs on their heads are few and they shall soon be gathered unto their fathers

34. Thus did the serpent beguile Eve a second time, and she did promise to vote for the sons of Att-lee.

35. And the serpent spoke unto himself thus, Verily, this is a good day's work that thou hast done. Unless, perchance, some *Tory* snake-in-the-grass doth promise to make Eve *more* equal.

Company Meeting

THE ASSOCIATED CEMENT COMPANIES LIMITED

MR. DHARAMSEY KHATAU REVIEWS PROGRESS OF REHABILITATION AND EXPANSION PROGRAMME

The Seventeenth Annual General Meeting of The Associated Cement Cos. Ltd., was held in Bombay on Friday, 15th January, 1954. The Chairman, Shri Dharamsey M. Khatau, referring to the concepts of a Welfare State and a Mixed Economy, said :—

"A Welfare State must rely for its fulfilment on the efforts of its people. It is, therefore, vital at this stage of the nation's development that stress be laid on the responsibility for hard work and all out effort, which both industrialists and workers must face up to in order to achieve the national goal."

"So far as 'Mixed Economy' is concerned," the Chairman continued, "it is important that both the public and private sectors understand clearly the principles on which its operation is based. As I see it, these principles envisage the development of two distinct and clearly defined spheres of industrial activity, each complementary to the other, each fortifying the other, and both knowing that they can count upon operating within the security of a nationally accepted, long term plan of economic development."

Speaking of the attitude of Government and the public towards private enterprise, the Chairman observed: "Today, the morale of the industrialist is at a low ebb. He constitutes a ready target, and is often the subject of abuse in public speeches. He is painted as an anti-social evil thriving as a parasite on the exploitation of other's efforts; as a person to be tolerated only for as long as is necessary to bring about his replacement. If private enterprise is to achieve that which the nation expects of it, then this attitude should change. We do not expect either molly-coddling or fulsome praise, but it is too much to hope that when we have been able to contribute very substantially to the advancement of national interest, at least some gesture of appreciation, or some word of encouragement should be forthcoming from the responsible leaders of our country? Whatever social and political form Indian economy might eventually take, it is clear that during the foreseeable future at any rate, private enterprise is not only necessary but is essential. No one can doubt that the industrialist will be encouraged to undertake his task with infinitely greater resolution when he knows that his initiative and endeavours are appreciated and accepted as an honourable contribution towards the betterment of the nation. We make no plea for the condoning of malpractices in the field of industry. Whenever these occur, either in the public or private sectors, they must be rooted out and given no quarter. What we do ask is that Government and the enlightened public learn to differentiate between the good and the bad, that all are not painted with the same brush, and that the good element is given the support and encouragement which it deserves and is entitled to."

Unemployment

The Chairman then referred to the crucial problem of unemployment in the country, the major cause of which was the terrifying rate at which the population was increasing, and hoped that the work being done to rationalize population would be further intensified, so that the rate of increase might be brought within manageable bounds in a reasonable period of time.

Referring to the rôle of industry in solving this problem, the Chairman continued: "I would like to take this opportunity of sounding a note of warning to those who advocate that one solution of the unemployment problem lies in industry being compelled to employ a larger number of workers than is necessary for the manufacture of its products. Such action would not only fail to ease the situation, but would inevitably further provoke it. This problem cannot be tackled by frustrating efforts at increasing the efficiency and output of labour. The best contribution which industry can make towards the provision of better jobs for more people is by the creation of greater wealth through higher efficiency, and the utilization of this wealth to develop more industries. Thus alone will it be capable of providing expanding opportunities for employment."

Production and Sales

Reviewing the progress of the Company during the year, the Chairman said: "We have produced and sold a substantially larger quantity of cement than was the case last year. When it is remembered that the production and sales for the year 1951-52 were also considerably higher than the previous year, shareholders will appreciate the very strenuous and sustained efforts which the Company has made to increase production. Unfortunately, even though production and despatches have been very much higher this year than they were during the year 1950-51, the profits of the Company are less now than they were then. This unhappy position is due to an increase in production costs beyond our control, which has not been compensated for in the selling price allowed by Government."

Tariff Commission

Referring to the Tariff Commission enquiry, the Chairman stressed that the Company had pointed out the necessity of its being enabled to earn enough to provide for the modernization and rehabilitation of its older plants, as well as to allow for the expansion programme laid down in the Five Year Plan. Continuing he said: "It is understood that arising out of this enquiry the Tariff Commission had recommended to Government that the profits of the Company should be limited to a 10% return on the gross block and a 4½% return on the working capital employed. Out of this profit element the Company is expected to meet not only taxation and dividends, but also bonus to employees and Managing Agents' commission. The latter two items have not been accepted as items of cost. When it is so transparently clear that management is an integral part of the Company's organization, and indeed is responsible for providing its very direction, and that bonus to labour results from adjudications ordered by Government itself, then it is difficult to understand the reasoning which excludes expenditure under these heads as being part and parcel of the cost structure. The result is that after paying agency commission, taxation and bonus to employees, the return of 10% on gross block is reduced to about 4%. I submit that in any country, much more so in an under-developed one like ours, where the immediate need is for the production of greater wealth through rapid and efficient industrialization, such a poor return is grossly inadequate to provide the incentive for people to save, and to risk their savings in the promotion of industrial expansion."

The Chairman went on to say that though he had hoped that the Government would take a more realistic view of the profits which the Company should be permitted to earn, the present indications were to the contrary, and that even the meagre increase in selling price recommended by the Tariff Commission was not likely to be sanctioned.

He then added: "The Cement Industry as a whole, and the A. C. C. in particular, can show a record of achievement which I submit will bear favourable comparison with other industries in the country. Your Company has always adopted a policy of producing and marketing the maximum quantity of cement at the lowest price possible, consistent with the aims of maintaining its plants efficiently; providing a reasonable return to its shareholders; anticipating and providing for the growing needs of the nation; and ensuring the well-being and welfare of its work people. Further it has consistently followed the practice of ploughing back every surplus rupee into the strengthening of the business, so as to create greater national wealth and increasing employment. In fact I believe that the A. C. C. can with every justification claim to have achieved all that is best in robust private enterprise. It has justified the confidence reposed in it not only by its workers and shareholders, but also by its consumers, namely, the public and Government. In view of this record, it is my earnest hope that Government will allow this Company a fair selling price in the secure knowledge that the incentive so provided will be utilized to the fullest effect in furthering the interests of the industry and those of the country."

Plant Rehabilitation and Expansion

The Chairman next reviewed the progress maintained by the Company under its Plant Rehabilitation and Expansion programme and stated that since the Company embarked upon its post-war expansion programme, it had already increased its annual capacity by 11 lakhs of tons. Plans had been translated to continue this expansion further, and to carry out a systematic programme for the modernization and rehabilitation of several of the older factories. Under these schemes, it was intended to modernize the factories at Shahabad, Kymore, Dwarka, Kistna and Patiala.

Referring to the Sindri factory now under construction, the Chairman observed that the first unit of this plant with an annual capacity of 100,000 tons of cement would come into production in the latter half of 1955, and that a second unit with a similar capacity would begin operation a few months later. These expansion and rehabilitation projects had been designed and were being carried out entirely by A. C. C. engineers and technicians and a great majority of the machinery for these projects were manufactured in the Company's Workshops.

The Chairman continued: "As and when this programme is completed, your Company will have added a further annual capacity of 1,000,000 tons of cement over and above the 1,100,000 tons which I have already reported. The ability of the Company to achieve this programme must of course depend on its earning capacity and this in its turn must necessarily be regulated by the selling price permitted to us by Government."

Pakistan

Referring to the Company's factories in Pakistan, the Chairman remarked that negotiations were still going on with the Pakistan Industrial Corporation for the formation of a new Company in that country, and when negotiations were concluded, the matter would be placed before the shareholders for their consideration.

Labour-Management Relations

Turning to labour relations, the Chairman observed: "It is with some sorrow that I must again report to you this year that even though there has been an appreciable increase in the wage bill resulting from voluntary increments given by the Company, adjudication awards, labour legislation, etc., this has not been reciprocated by a corresponding increase in production effort on the part of labour.

"So far as the management of your Company is concerned, we believe that in the human will to work lies the greatest single source of productivity. We accept also that it is an inescapable function of management to ensure that our work people are given such material benefits as lie within the earning capacity of the Company. Further that they are provided with security and the opportunity to advance; and are treated as useful and essential members of society, whose day to day work is conducted in an atmosphere of personal dignity. It is to the attainment of these ends that we have dedicated our labour policies. And it is towards their achievement that we shall continue to strive.

"The attitude, however, of labour leadership, as I see it, is still most discouraging. It continues to emphasize increasingly the privileges which are due to labour, and to make on its behalf exorbitant and impossible demands. Little effort is made to enunciate the responsibilities that are labour's in the promotion of industrial progress, which alone can create the wealth required to provide a betterment in the standard of living. Government policy also takes the form of producing a bewildering succession of labour legislation without proper consideration of the impact which this must have on the industrial structure. The attitude is still abroad in Government that they must protect labour against the wiles of unscrupulous employers. These approaches to this essentially human problem on the part of Government and Trades Union leadership frustrate all attempts at increasing efficiency and the *per-capita* output. Ultimately this will retard economic progress, and imperil the competitive position of Indian products in world markets.

"The crying need of the hour is for an immediate cessation of the studiously fostered propaganda by labour leadership that Indian capital is based on the exploitation of its work people. This attitude should be substituted by an approach which advocates joint endeavour by honourable men, imbued with a determination to make the country industrially prosperous, and in doing so to provide material well-being and social welfare."

Bonus Shares

The Chairman then announced that sanction of the Central Government to the issue of fully-paid bonus shares in the ratio of one such share for every five shares held had now been obtained, and steps were being taken to call an Extraordinary General Meeting of the Shareholders for this purpose.

Bonus to Staff

The Chairman then stated that the Board had recommended this year the payment of a bonus equivalent to three months' basic earnings to the employees at the Head Office, the Works, and other places, and concluded by referring to the Company's appreciation of the loyalty and efficiency of the staff and operatives.

The report and the audited statement of accounts for the year ended 31st July, 1953, were then adopted.

BETTER FEELING IN SHARES BUT BUSINESS STILL RESTRICTED

Wednesday Evening.

THERE has been distinctly better feeling in the share market this week but business is still on a limited scale. A feature has been support for shares in the Birla group: Central India Coal have improved to Rs. 6-9, Orient Paper to Rs. 46-8 and Texmaco to Rs. 9-10. Two oil shares, Indo-Burma Petroleum and British Burma Petroleum, have also been in demand, the former moving up from Rs. 72-8 to Rs. 76 and the latter from Rs. 2-7 to Rs. 2-11. Titaghur Paper have been better at Rs 35-14, despite the continuance of the strike. Indian Irons have been very steady, and are quoted this evening at Rs. 25-13.

These features apart, the market is mostly dull. Jute shares are neglected and tea shares have been steady at last prices.

Government securities have been quiet but rates have hardly changed. The Reserve Bank is selling long-dated loans and buying short.

Details of the week's trading follow.

Trading in gilt-edged was rather dull during the week, though towards the close there was a slightly better feeling. There was mild enquiry for medium and long-dated loans but the overall volume of business was restricted because of tight conditions in the money market. Three percent Conversion Loan 1966 opened at Rs. 82-3 but buyers appeared at the close and the price improved to Rs. 82-6. In short-dated loans 2½% 1954 was marked up to Rs. 99-1 while 2½% 1955 was steady at Rs. 98-6. Three percent 1957 was traded at Rs. 98-6 and 3% 1958 was taken one anna higher to Rs. 92. Among medium-dated loans, 3% 1959-61 was unchanged at Rs. 96-2 but 3½% National Plan Bonds 1961 encountered some selling pressure and declined to Rs. 98-13. Three percent 1963-65 was marked at Rs. 92-8 and 3% 1964 improved to Rs. 92-8. After payment of the half-yearly interest 2½% 1960 was quoted at Rs. 93-5 but later improved to close at Rs. 93-9. Four percent 1960-70 was supported up to Rs. 101-13. In the long-dated group, both 3% 1966-68 and 1970-75 had buyers at their previous quotations of Rs. 90-4 and Rs. 86-8. Provincial loans continued dull, though there was a small enquiry for 4% State issues 1964 due to the approach of the interest date (1st February). All 4% State loans maturing in 1963 were marked down by 2 annas following payment of the half-yearly interest on 15th January.

Miscellaneous preference shares were once again in good demand but there were inclined to be rather more sellers than buyers of jute preference shares. In jute, Anglo-India were crossed at Rs. 115 while Fort Gloster 1st and 2nd were both lower at Rs. 122 and Rs. 81. Hooghly were offered at Rs. 14-5. Hukumchand were done at Rs. 109-8 and a small lot of Kinnison at Rs. 117-8. Among miscellaneous issues, Alkali & Chemical were taken at Rs. 109, Birds Investments at Rs. 76-8 x.d., British India Corporation at Rs. 149 and F. & C. Osler at Rs. 50. Bathgate improved from Rs. 21-4 to Rs. 37-8 following the change in the management, but sellers appeared subsequently and the price reacted at the close to Rs. 34. Godfrey Phillips were quoted at Rs. 76, Indian Iron at Rs. 107, Rallis at Rs. 74 and Titaghur 1st were crossed at Rs. 158-12.

In the banking section Imperial Bank Fully-Paid and Contributory were marked at Rs. 1,790 x.d. and Rs. 425 x.d. Hindustan Commercial were taken at Rs. 8-12, Punjab National Bank improved from Rs. 21 to Rs. 21-8 and United Commercial were subdued at Rs. 41-4. United Bank of India 'D' Class shares were unchanged at Rs. 3-15.

A solitary transaction was reported in Howrah-Amta Railway shares which were crossed at Rs. 75-8.

* * * *

Cotton shares were dull with the exception of Dunbar and Bowreah which improved sharply from Rs. 170 to Rs. 181 and Rs. 270 to Rs. 280 respectively. Cawnpore Textiles were quoted at Rs. 8-4, Elgins at Rs. 15-14 and New Victoria at Re. 1-9.

Except for a small enquiry for a handful of selected coal shares, the majority of shares in this section ruled quiet. Special features were Katras Jherriah, Borrea, Rewa, East Indian and Central India. Burrakur fluctuated narrowly to close at Rs. 8-8. Bengal were done at Rs. 505, Amalgamated were quoted at Rs. 19-8 and New Beerbhoom at Rs. 18-2. Borrea were steady at Rs. 28-2 as were East Indian at Rs. 25-6. Raneegunge were unchanged at Rs. 10-14. Rewa were crossed at Rs. 24-6, South Karanpura were marked at Rs. 10-2, Talcher were steady at Rs. 3 and business was reported in Western Bengal at Rs. 5-3. In the past 48 hours Central India collieries have spurted from Rs. 5-14 to Rs. 6-9.

Prices of jute shares showed little variation and business completed was on a limited scale. Howrah fluctuated between Rs. 23-4 and Rs. 23-9 to close at the latter rate. Agarpara were marked at Rs. 15-8, Anglo-India at Rs. 199, Bally at Rs. 157 and Birla at Rs. 13-12. Champdany changed hands at Rs. 142, India at Rs. 121, National at Rs. 23-12, Nellimarla at Rs. 10-12, Orient at Rs. 172 and Reliance at Rs. 14-4 x.d. Fort Gloster provided a feature improving from Rs. 358 to Rs. 391.

Although business in electric supply shares was on a limited scale, prices were fairly steady. Agra were crossed at Rs. 150, Calcutta Electric were done at Rs. 13-4, Jubbulpore were wanted at Rs. 14-1, Patna at Rs. 11-4 and Upper Ganges Valley at Rs. 14-12.

A special feature in the sugar section was Cawnpore which improved further to Rs. 38-12 with few shares offering. Balrampur were marked at Rs. 7-7 and Dyer Meakin Breweries at Rs. 5-10. There was some enquiry for Ramnugger Cane & Sugar at Rs. 18-14. Carew improved today from Rs. 6-15 to Rs. 7-6.

Turnover in Indian Iron & Steel shares was on a much reduced scale though today there appeared to be more activity in this scrip with the price improving from an overnight quotation of Rs. 25-7 to Rs. 25-13 which is tonight's closing quotation. Braithwaite were steady at Rs. 13-12 as were Indian Galvanizing at Rs. 15-14 and Jessop at Rs. 25-5. Burn & Company were easier at Rs. 327-8. Kumardhubi Engineering were marked at Rs. 2-3 and Marshalls at Rs. 6-2. Saran Engineering were crossed at Rs. 10-4.

* * * *

Orient Paper shares moved from strength to strength with buyers at the close at Rs. 46-8. Bengal Paper changed hands at Rs. 53, India Paper Pulp at Rs. 176 and Shree Gopal were recorded at the higher level of Rs. 20-2. Titaghur Paper were slightly better at Rs. 35-14. Sone Valley were dealt in at Rs. 6-14, Ruby General were marked at Rs. 5-13, Alkali & Chemical at Rs. 15 and Angelo Brothers at Rs. 18-14. India Steamship improved from Rs. 6-15 to Rs. 7-4 and Balmer Lawrie were scarce at Rs. 182. British India Corporation eased to Rs. 8-15 on rumours of a lower dividend, but Dalmia Cement improved to Rs. 8 as did Hindustan Motors at Rs. 6-2. Bathgate after being done at Rs. 2-2 turned sellers at the close at Rs. 1-10.

A product of
The Imperial Tobacco Company of India Ltd.

Eastern Investments were steady at Rs. 137, Indian Aluminium were done at Rs. 108-8 and Indian Cables rose from Rs. 19-9 to Rs. 19-15. Indian National Airways were steady at Rs. 4-9, Indian Wood Products at Rs. 34-2 and Indo-Burma Petroleum on strong buying support improved from Rs. 72-8 to Rs. 76. Martin Burn were dealt in at around Rs. 19-10, Metal Box were crossed at Rs. 17-6, National Tobacco changed hands at Rs. 10 and Rallis at around Rs. 60. Rohtas Industries were steady at Rs. 11-8 as were Textile Machinery at Rs. 9-10. British Burma Petroleum improved today from Rs. 2-7 to Rs. 2-12.

In the mining section, Burma Mines were dealt in around Re. 1-6 and Non-Ferrous Metals at 13 annas. Indian Copper were quietly steady at Rs. 2-12, as were Tavoy Tin at 9 annas.

Once again the volume of business in tea shares has been restricted and price fluctuations small. Among Assam scrip a large parcel of Ananda Assam changed hands at Rs. 20-4. Bateli had buyers at Rs. 15-4 as did Sapoi at Rs. 12-12. Betjan, however, were lower at Rs. 27-14 while Bishnauth and Dejoo Valley were unchanged at Rs. 34-8 and Rs. 12-4, respectively. In the Dooars area Choonabhutti were the feature and on sustained buying improved ten points to be quoted at Rs. 292. Banarhat were steady at Rs. 392 and Hantapara were taken up to Rs. 188. Killcott had buyers at Rs. 16-8 and Rajabhat were unchanged at Rs. 20-6. Among other scrip Gielle were quoted at Rs. 10-6. Central Cachar had buyers up to Rs. 66 and Roopacherra were marked at Rs. 8-14. New Terai were steady at Rs. 14.

* * * *

The working of the CAWNPORE SUGAR WORKS for the year ended 31st October, 1953 has produced excellent results. There is a rise of about Rs. 10.45 lakhs in the profit to Rs. 22.32 lakhs owing to a large crush of about 59.24 lakh mounds. Allowing Rs. 10½ lakhs (Rs. 3½ lakhs) for taxation, Rs. 2.75 lakhs (Rs. 3 lakhs) for depreciation, transferring Rs. 5.66 lakhs to rehabilitation reserve, Rs. 2 lakhs to quarters reserve and bringing forward Rs. 31,891 there is Rs. 4,33,636 of which the ordinary dividend is the same at Rs. 2 per share. The carry-forward is shown at Rs. 53,636. The company proposes to issue bonus shares to ordinary shareholders in the ratio of one to one by capitalising reserves subject to the sanction of the Government. The directors have also approved of an extensive capital replacement programme.

* * * *

The profit of the UPPER GANGES SUGAR MILLS at Rs. 2.64 lakhs for the year ended 30th June, 1953, compares unfavourably with the previous year's Rs. 3.24 lakhs, taxation having absorbed Rs. 4 lakhs (Rs. 2.75 lakhs) and depreciation Rs. 10 lakhs (Rs. 8½ lakhs). Adding Rs. 57,216 there is Rs. 3,21,668. The ordinary dividend has been raised by 8 annas to Rs. 2-8 per share to leave a carry-forward of Rs. 6,355.

* * * *

After allowing Rs. 4.40 lakhs (Rs. 2.68 lakhs) for taxation and Rs. 60,000 (same) for depreciation the profit of the BHARAT SUGAR MILLS totals Rs. 2.11 lakhs for the year ended 30th June, 1953, as against Rs. 3.66 lakhs in the previous year. Transferring Rs. 1½ lakhs to renewals account and bringing forward Rs. 43,742 there remains a balance of Rs. 2,52,118. The ordinary dividend has been the same at Rs. 1-8 per share to leave a carry-forward of Rs. 8,681.

* * * *

The NEW INDIA SUGAR MILLS made a profit of Rs. 4.63 lakhs for the year ended 30th June, 1953, and this compares unfavourably with Rs. 9.15 lakhs in the previous year. Providing Rs. 1.40 lakhs (Rs. 1.20 lakhs) for depreciation Rs. 5.10 lakhs (Rs. 6.40 lakhs) for taxation, bringing forward Rs. 1,15,051 and transferring Rs. 2 lakhs (Rs. 7½ lakhs) to general reserve there is a balance of Rs. 3,78,102. The ordinary dividend is the same at Rs. 2-8 per share to leave a carry-forward of Rs. 1,35,890.

* * * *

There is a profit of Rs. 1.21 lakhs of the CENTRAL KURKEND COAL COMPANY for the half-year ended 31st December, 1952 as against Rs. 24,000 in the previous half-year. Adding Rs. 2,272 brought in there remains Rs. 1,23,476 of which taxation absorbs Rs 36,957 and depreciation Rs. 29,951 (Rs. 28,400). There is again no distribution and the carry-forward is Rs. 56,568. Raisings totalled 68,070 tons (77,097 tons) and despatches 82,013 tons (54,297 tons).

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

New Delhi

TALKS ON IMPLEMENTING PLANTATIONS LABOUR ACT

CEMENT PRICES NOT TO BE CHANGED

(FROM OUR NEW DELHI CORRESPONDENT.)

IMPLEMENTATION of the Plantations Labour Act is one of the chief items on the agenda which the fifth session of the Industrial Committee on Plantations is to consider when it meets in Calcutta at the end of this month. The Plantations Labour Act, 1951 received the President's assent on 2nd November, 1951, but has not yet been brought into force. The more important of its provisions can be implemented only after appropriate rules have been framed. Though the power to frame rules is vested in State Governments, an assurance was given in Parliament that the Central Government would frame model rules which could serve as a guide to State Governments. Consequently, soon after the passing of the Act, the Central Government framed draft model rules in regard to most of the subjects and circulated them among the State Governments concerned and the employers' and workers' organisations. In the light of the comments received, some of the draft rules were revised. Meanwhile in 1952 the tea industry was overtaken by a crisis owing to a sharp fall in the level of prices of tea, with the result that no progress could be made with the question of implementation of the Act. The official team of enquiry appointed by the Ministry of Commerce and Industry recommended *inter alia* that the implementation of the Act should be postponed for a period of two years so far as the tea industry was concerned and that "as soon as prices revive, the improvements envisaged in the Act should be gradually introduced, priorities being fixed by mutual agreements between labour, industry and Government". This recommendation as well as others contained in the report of the official team was considered by the Industrial Committee on Plantations at its meeting held at Calcutta in December 1952, but the Committee was unable to come to any definite conclusions as the report did not contain adequate data for the purpose.

Some Provisions Already Established

There has since been an appreciable improvement in the prices of tea which has been sustained over a period of several months, and most of the tea gardens in North-East India, which had closed down, have re-opened. With this improvement in the fortunes of tea, the Government thinks that it has become necessary to consider the question of the implementation of the Plantations Labour Act without any further delay. The provisions of the Act in regard to the following matters impose financial obligations on employers:—1. Certification by certifying surgeons and issue of tokens. 2. Provision of drinking water. 3. Conservancy. 4. Medical facilities. 5. Provision of canteens. 6. Provision of crèches. 7. Recreational facilities. 8. Educational facilities. 9. Housing facilities. 10. Facilities for protection against weather, etc. 11. Appointment of welfare officers. 12. Leave with wages. 13. Payment of maternity benefit and sickness allowance.

Although the Act has not yet been brought into force, progressive employers are already providing, on a voluntary basis, housing and medical facilities for plantation workers according to a phased programme. In addition, there are State laws to regulate the grant of maternity benefit to such workers in Assam, West Bengal and Travancore-Cochin. Maternity benefit is being paid in other States also in accordance with tripartite agreements. Certain employers are also paying sickness benefit to workers in accordance with similar agreements. In regard to the welfare measures which have been undertaken by some employers on a voluntary basis, the effect of the implementation of the Act would be to level up the obligations of employers in general. No doubt full implementation of the Act will involve provision of certain new measures of welfare by most employers.

State Governments Must Frame Rules

An estimate of the cost of implementation of the Act in a tea estate of 300 acres in Southern India was prepared by the United Planters' Association of Southern India some time ago for submission to the official team. On the assumption that an estate of 300 acres would employ 340 workers for 200 days in a year, the Association has estimated the recurring expenditure per worker per working day at Rs. 1-4-2 and the capital expenditure at Rs. 4-2-11. The estimate indicates the level of expenditure if all the welfare items contained in the Act are implemented immediately and fully. These estimates have not been checked by the Government. The scheme of the Act is such that practically none of the welfare measures can be implemented unless rules on the subject are framed by the State Government concerned. The only provisions which would involve financial commitments on the bringing into force of the Act (without the framing of rules) seem to be the following: Section 8. Drinking water. Sections 20 and 27. Tokens and fitness certificates. Section 30. Annual leave with wages. As the expenditure on these items will not be excessive, the Committee may consider whether there is any objection to the bringing into force of the Act without further delay. Of the other welfare measures which can be enforced only by the framing of rules, it might be possible to implement some without much delay or expense while, in the case of some, implementation will have to be planned on a long-term basis. The Committee might consider the possibility of a phased programme of implementation of all such measures.

The Committee is invited to consider the following points:—a. Whether the Act may be brought into force immediately and if so, on what date. b. Whether all the welfare provisions of the Plantations Labour Act, 1951 should be implemented immediately, or whether any priorities should be laid down and a phased programme drawn up in the matter of implementation, and c. If the latter, what arrangement should be made for the preparation and implementation of the phased programme.

No Change in Cement Prices

The Associated Cement Companies have accepted the Government's scheme for joint control of the rehabilitation fund, to which A.C.C. will contribute at a rate of Rs. 2 a ton of their production. Cement prices will remain unchanged at Rs. 71 a ton as against Rs. 72 recommended by the Tariff Commission.

A Study Group for Road Transport

The question of ensuring adequate transport capacity for the implementation of the five year plan, and for meeting the future demands arising from the accelerated economic development of the country, has been receiving the active attention of the Government of India. The Planning Commission, which went into this question and has collected data from the States regarding current and anticipated future demands for transport planning, has recommended the setting up of a study group to go into these questions in detail and to make suitable recommendations. The steps to be taken for the formation of the proposed study group were discussed at an inter-departmental meeting convened by the Ministry of Transport on the 13th October, 1953 when it was decided to form it. This has now been done.

The terms of reference of the study group are as follows:—i. Study the data regarding targets of additional production and demand on a regional basis and work out the additional transport capacity required to be created for facilitating the movement of traffic arising therefrom. ii. Examine more thoroughly the suggestion to demarcate 50-mile zones in the congested areas round Calcutta, Madras, Bombay, Ahmedabad, Kanpur, for road traffic (it being understood that the Railways would not accept transport of certain categories of goods within the zones) with special reference to (a) the economics of the proposal; (b) relief to railway traffic (wagon capacity to be released); (c) problems, if any, arising out of increase in road traffic, like capacity of roads and their conditions, suitability of bridges for coping with additional traffic; (d) additional employment likely to be created and other related aspects. iii. Go into all aspects of the problem of rail-road transport coordination and make recommendations to the Government. iv. Study the problems of light railways like the Martin Burn Railways, which it is understood, are finding it difficult to face the competition of road traffic.

Economic Comparisons of Road and Rail

The study group will also examine whether any relief is needed for the railways in any area. It will examine the question of co-ordinating coastal transport with the railways in general and of utilising river transport in the Eastern zone in particular. Nationalisation of road transport has been mainly of passenger traffic. Enquiries, however, show that the bulk of the goods traffic is already moving by road transport. Here occur the problems of the economics of road transport, which is under a serious handicap. A railway wagon generally costs Rs. 12,000. It has a carrying capacity of twenty tons. Its life is placed at 30-40 years. Compared with it a motor truck, on the average, costs Rs. 20,000. Its carrying capacity does not exceed three tons and its life is under 10 years. It is the low freight rate and handling convenience which attract traffic to road transport.

Ministries have now nominated their representatives, and the constitution of the study group is as follows:—1. Secretary, Ministry of Transport or his nominee—Chairman, 2. The Consulting Engineer (Road Development) and Joint Secretary, Ministry of Transport, 3. Deputy Secretary (Transport), Ministry of Transport, 4. Representatives—a. The Planning Commission, b. The Ministry of Railways (Railway Board), c. The Ministry of Commerce and Industry, d. The Ministry of Food and Agriculture, e. The Ministry of Production, f. The Ministry of Labour, and g. The Ministry of Irrigation and Power, 5. Officer on Special Duty (Econ. and Stat.) Ministry of Transport—Member-Secretary.

The study group may co-opt such other representatives from the various Ministries as it may consider expedient. The study group will take opinions of, or invite assistance from, such experts from the States as they may consider desirable, particularly when they visit the States concerned. The study group may also have to go into the working of other systems of transport, mainly inland waterways, at a later stage, but they will begin with road and rail transport in the first instance.

Expanding Railway Facilities

The Ministry of Railways has decided to increase the transit capacity of Moghalsarai to 2000 wagons a day. Moghalsarai has been a bottleneck, with a transit capacity of 1300 wagons a day in 1951. This was raised to 1500 wagons a day in 1953 and plans were afoot to expand it further to 1800 wagons a day by 1955-56. The latest business trends have indicated increased demand for the carrying capacity of the railways, hence the decision.

Side by side, the transit capacity of Waltair is being increased from 220 wagons to 340 wagons a day and that of Nagpur, from 280 to 350 wagons a day. It is, however, interesting to note that even the existing transit capacity of these two junctions was not fully taken up during November and December 1953.

As for the second five year plan, a section has been set up in the Railway Board to work out the details. One thing appears to be certain, namely, that the rehabilitation of the Railways would have been completed by the end of the existing plan period. The second five year plan would largely relate to new lines and the doubling of the existing congested lines. The procedure for the formulation of the plan has been altered. Under the new procedure, each district has been directed to formulate its requirements and submit them to the regional authorities, which in their turn would submit them to the Railway Board.

Helping Indian Shipbuilding

The Government of India has advanced loans to three shipping companies to purchase ten ships, six of which will be from abroad and four from the Vizagapatam Ship Yard. The India Steamship Company has placed orders for two seven-knot ships to be delivered by December 1954. This Company is placing orders for two more ships with the Vizagapatam Shipping Yard. Loans are being similarly advanced to the Great Eastern Shipping Corporation to finance the purchase of three ships, one of which will be from the Vizagapatam Yard. Malabar Steam Ship Company has been assisted with loans to purchase two ships for coastal traffic, one of which will be from the "Yard". All are cargo ships. Government's loan will cover 80 percent of the cost of additional tonnage.

The Government, it will be seen, has framed the plan for assisting the shipping companies, to keep the "Yard" busy and keep up its production and employment. The Transport Secretary, Mr. N. M. Ayyar, is going down to Bombay on Saturday to have discussions with the Bharat Lines, Limited, and the Scindia Steam Navigation Company. It is learned that Bharat Lines is likely to purchase four ships while Scindia's requirements, though still indefinite, are placed at six ships.

Codification of the shipping laws is another direction in which the shipping industry is being assisted. The Government has appointed the Deputy Director-General of Shipping, Mr. P. R. Subrahmaniam, on special duty to examine all the laws governing Indian shipping and to prepare a draft bill for introduction in Parliament. A bill to regulate country craft is also under preparation.

Low Cost Housing

An international exhibition of low cost houses was opened here on 20th January. The objectives of the exhibition are commendable enough and cannot be disputed. The question is, is it practicable? There are three principal building materials for houses, namely, bricks, cement and steel. The prices of all three are regulated by the price of coal. In regard to bricks, transport is an additional factor to be taken into account. As has been already reported, due to transport bottlenecks, there has been a scarcity of coal for bricks. In the case of coal, iron and steel and cement, labour costs govern their prices. It is common knowledge that the price of steel has been steadily going up in recent years. In addition both labour leaders and Railways have been making demands, which would have the effect of raising the price of coal. Against this background, there is hardly any use holding an international exhibition and discussing the value of low cost houses.

Government Loans to Industry

The Industrial Development Corporation is to be registered as a private limited liability company at an early date. Although the details are still being worked out, enquiries show that it will be a state undertaking, which will not enter into competition with the Industrial Finance Corporation, so far as the assistance of industrial enterprise in the private sector is concerned. It will however loan out, or sell on hire-purchase, industrial equipment.

The Government is also examining proposals for an industrial development bank to finance private enterprise. The bank, if floated, will however be a private concern. The Government will also make direct loans to well-managed industries, as it has lately done with the iron and steel and shipping companies.

With the former Defence Minister, Sardar Baldev Singh, as its Chairman, the Government of India has set up a Committee to make a survey of India's Ordnance factories and make recommendations to stimulate their production.

Uttar Pradesh

TAX ON KUMBH MELA PILGRIMS CRITICISED

EXPECTED RELIEF TO INDUSTRIAL USERS OF ELECTRICITY

(FROM OUR LUCKNOW CORRESPONDENT).

THE economics of the Kumbh Mela now in progress in Allahabad has been the subject of considerable controversy in the State; it has been alleged that the salient principle governing the division of spoils between the powers temporal and those spiritual has been vitiated by the levy of a pilgrim tax. The State Government has, of course, been able to divert some of the wrath of the Opposition to the Centre, as the tax was imposed by a Presidential ordinance. By virtue of this ordinance, the Railways will collect the tax from the pilgrims and hand it over to the U.P. Government as part compensation for about Rs. 50 lakhs which is estimated to be the expenditure incurred by them in connection with the mela. The rate of the tax has been fixed at Rs. 1-8, Re. 1, 8 As., and 6 As. per passenger depending on whether he travels I, II, Inter or III. The incidence of the tax is no doubt small and, as the Government has argued, well within the ability of the pilgrims to pay. But it is the principle of it which has been assailed even by the Congress party which feels that it is bound to make the Government still more unpopular in the countryside. Why the State Government failed to make provision for this expenditure of nearly half a crore in the budget is a question to which no answer has been forthcoming. New taxes are not popular, and it is surmised that both the State Government and the Centre have shut out discussion of the merits or ethics of the tax by the issue of a Presidential ordinance immediately after the adjournment of Parliament. The tax is to be levied on all travelling to Allahabad, irrespective of whether they are Hindus or not and whether they are pilgrims or not. There is, however, a precedent in that at the last Kumbh Mela at Hardwar a pilgrim tax was levied. Not a few local boards levy a toll tax on people coming from outside and in the case of almost all pilgrim centres, as also hill stations, the toll is the main source of municipal income. The difference in the present case is that instead of the municipal board collecting the tax, the Railways will collect it and make it over to the State Government. Incidentally, while this arrangement has the merit of convenience it will not enhance the popularity of the railway administration which in the past has been criticised for functioning as a revenue collector for the Finance Minister.

Dislocation of Goods Traffic

While the mela spirit dominates Uttar Pradesh generally, the business community is not altogether happy at the tremendous dislocation caused to goods traffic. Thirteen hundred coaches and 300 locomotives have been earmarked for the mela, and all the zones of the Indian Railways have contributed to the pool, the largest contributor being the Northern Railway. Three-fourths of the pilgrims coming by rail are expected to reach Allahabad by the Northern Railway and the remainder by the North-Eastern and Central Railways. By maximising the line and yard capacities, the Railway authorities have planned for 133 trains to enter and leave the stations serving the mela area during the peak period—a train coming in or going out every five minutes. The public and the business community have been notified that it will not be possible to move any goods traffic on the adjoining sections for considerable periods of the mela. Whether the Railway expectations of passenger traffic will materialise it is too early to say, but it may be recalled that during the 1932 mela, which was attended by 32 lakh pilgrims, only eight lakhs travelled by rail, this against expectations of 18 lakhs.

Electricity Duty to be Reduced

With not much more than a month to go for the presentation of the budget for the next financial year, the agitation against the electricity duty, imposed last year, has been stepped up. The duty, which is fixed at 25 percent on the bill, brings in a revenue of Rs. 80 lakhs a year to the Government, but in view of the heavy burden it places on industrial undertakings consuming power the Chief Minister is reported to have called a meeting of representatives of industry to discuss the position. The Government is also collecting data on the subject on their own. In the Government's estimate the electricity bill in industries amounts to 3 to 4 percent. The incidence of the duty, it is therefore, argued amounts to about 1 percent and the Government seems to be convinced that this increase is not wholly unreasonable, having regard to the increase on other items of expenditure in industries. It is hoped that, even if the duty is not withdrawn, some relief is bound to be provided in the rate. A tax on the consumption of electricity was levied for the first time in India by Bombay in 1932, and was followed by Bengal and Madras. In all these cases the basis of the tax was energy consumed for light and fans. No such limits have been set by the U.P. Government which, when it imposed for the first time as high a duty as 25 percent, gave no exemption to electricity used as power by industrial undertakings.

Zemindari Abolition and After

A public debt office of the Reserve Bank of India, it is understood, will shortly be opened in Lucknow to issue negotiable bonds worth about Rs. 70 crores to intermediaries who have been affected by the abolition of zemindari. The public debt office, which is expected to be functioning here by April next, will issue about 20 lakhs negotiable bonds ranging in value from Rs. 50 to Rs. 10,000. Arrangements for issuing these bonds are being speeded up because the Government will have to pay another instalment of cash interim compensation to the tune of Rs. 2½ crores if the negotiable bonds are not issued by that time. The last instalment paid in November amounted to Rs. 27,000,000. Meanwhile the Revenue Ministry has made a number of important amendments to the rules under the Abolition Act as it has been found that the "gaon samajs" in whom the public land was vested after the abolition have not been acting in a manner conducive to public welfare. One of the important amendments to the rules now provides that payment on the negotiable bonds will be made in yearly instalments and every six months. As regards educational and charitable institutions which have been affected by zamindari abolition, it has now been decided that payment of the annuities due to them will be made half-yearly and not annually.

Government's Wheat Stocks

The visit to Lucknow last week of the Union Food Minister, Mr. Kidwai, was availed of by the State Government to finalise arrangements for the disposal of a part of their wheat stocks. The Centre has now offered to take 26,000 tons of the 56,000 tons of imported wheat. As regards the remaining 30,000 tons, the millers are the only prospective buyers and in order to induce them to lift the stocks Mr. Kidwai has proposed to them that the Government would give the mills full liberty to extract fines provided they pay Rs. 18-8 per maund. In case the whole quantity is lifted, the Centre would supply the millers another quantity at Rs 15-8 per maund for producing 'ata'. The U.P. Roller Flour Millers Association, putting its own construction on the matter, thinks that the idea of the Government in disposing of their stocks by April is to open the market for mills also. The millers are willing to accept the offer on two conditions. In the first instance they want to be sure that if the Centre reduces the price of wheat the concession will be extended to the stocked wheat which they are now offering to the industry. Secondly, the Government should protect the industry from losses in case the mills are allowed to buy from the open market or there is inter-state movement of fines. The mills have been consuming about 4,500 tons a month out of the Government's wheat stocks and if they do not increase their offtake there is every possibility that the grain would further deteriorate and might eventually have to be condemned as unfit for human consumption.

The Kanpur working class cost-of-living index number (Base August 1939=100) for December 1953 fell by 15 points to 438. It was 9 points lower than in the corresponding month of the previous year. The Food index fell by 26 points to 465 on account of a fall in the prices of wheat Birra, gram, rice, dal arhar, mutton and potatoes. The price of mustard oil, however, rose. A fall in the price of firewood was responsible for a decline of 5 points to 423 in the Fuel and Light index. Because of a rise in the price of dhoties and saris the Clothing index rose by 23 points to 495. The Miscellaneous index went down by 16 points to 452 because of a fall in the price of soap, supari and bidis. The index for house rent remained stationary.

FREEDOM OF ENTERPRISE

SIR H. MODY CONVENES MEETING OF INDUSTRIALISTS

(FROM OUR BOMBAY CORRESPONDENT).

A MEETING of eminent industrialists was convened by Sir Homi P. Modi early last week to organise a united front of industry, to prepare an effective case for the private sector and to undertake a sustained and vigorous presentation of it to the people of the country and the Governments. When Sir Homi spoke with unusual seriousness and severity about the effect of Government policies on the morale of industry with a pointed reference to what the Prime Minister said in his address to the Associated Chambers of Commerce at Calcutta, when he (Sir Homi) presided over the annual meeting of the Employers Federation of India last month, nobody believed that he was so much in earnest as to follow up his statements by calling a meeting of representative business men from every important industry to formulate steps to enlighten public opinion about the handicaps and difficulties under which private enterprise was being made to function and the important rôle it could play if allowed greater scope and freedom in the economic development of the country and the attainment of the same social objectives which the Government wanted to achieve and which the business community accepted without demur in common with the other sections of the community. Apart from the labour policy of the Government and the general trend of the awards resulting from compulsory arbitration by industrial courts and tribunals, three important aspects came in for severe criticism from those present at this meeting. These were: (i) the various legislative and administrative acts of the Central and State Governments; (ii) the burdens continuously piled from various directions on industry; and (iii) the constant interference in important and petty matters to which operations of industrial undertakings were subjected by the authorities. All were agreed that the time had come when the private sector must make it clear that it could function effectively, in the context of the policy of a mixed economy pursued by the Government, only if the spheres of activity of the two sectors were clearly defined and both were allowed to co-exist as equal and autonomous forces, one supplementing and fortifying the other. While there was no authoritative statement on the decisions taken at this important meeting, it is understood that Sir Homi has been authorised to set up a small committee with the necessary powers to carry out the proposed scheme of effective representation. To understand the true significance and the inherent strength of this move to make a united stand against undue encroachments and the piling up of disabilities on the private sector, it is necessary to mention the names of some of those who participated actively in the deliberations. They were Sir Purshotamdas Thakurdas, Sir Sri Ram, Sir Cowasji Jehangir, Sir Allan Eliott Lockhart, Sir Chunilal V. Mehta, Mr. Tulsidas Kilachand, Mr. M. A. Sreenivasan, Mr. Pranlal Devkaran Nanjee, Mr. Kasturbhai Lalbhai, Mr. Ambalal Sarabhai, Mr. R. G. Saraiva, Mr. A. D. Shroff, Mr. D. M. Khatau, Mr. N. H. Tata, Mr. K. M. D. Thackersey, Mr. T. V. Baddelev, Mr. Neville N. Wadia, Mr. J. R. D. Tata, Mr. E. L. C. Gwilt and Mr. N. Barlow.

Shikarpur Shroffs' Association

The indigenous institute of shroffs (bankers) has been attracting greater attention of late and claiming a legitimate place in the banking system of India. Even the Reserve Bank has taken notice of this section of the business community and is trying to fit it in properly in the country's banking system. In Bombay, this form of business of discounting of *hundis* is more or less monopolised by those popularly known as Multani Shroffs who really come from Shikarpur in Sind, which at one time formed a part of Bombay province. These shroffs or bankers have formed themselves into an influential organisation called the Shikarpur Shroffs' Association. At a function last Friday evening at the Taj Mahal Hotel, when this Association presented an address to Mr. B. T. Thakur, General Manager of the United Commercial Bank Ltd., Calcutta, who belongs to this community and came originally from Shikarpur, Mr. Purshotamsingh Lunidasingh Bajaj, the President of this Association, gave an interesting account of the history and the methods of working of Shikarpur shroffs, about whom Mr. Burton, whose fame as an able administrator in the early days of the British raj was excelled only by his translation of the *Arabian Nights*, once said that the *hundis* of a Shikarpur bania served as cash from Astrakhan in Russia to Calcutta. Mr. Thakur, though a discreet banking man, in his reply was severely critical of some of the economic and labour policies of the Government. He said that though all-round economic betterment and national prosperity should be the first objectives of political freedom, the authorities had been laying greater emphasis on other issues and ignoring the imperative need for expanding the economy. There was no difference of opinion about the need for social welfare and social betterment between the politicians and the industrialists. But the latter insisted that we should first have resources to fulfil such purposes, while the former in their eagerness and impatience had taken measures which harmed the economy without increasing welfare. Mr Thakur counselled that in our haste to improve we should not destroy the existing means of production and pointed out that the strangling effect of hasty, immature and unrealistic labour policies was increasingly visible in the arrest of expansion and absence of more employment. He warned that unless we reversed our thinking and views in this respect our efforts would end in national disaster.

Stanvac Office Opened

Mr. Morarji Desai, the State Chief Minister, declared the new Rs. 35-lakh office building for the Standard Vacuum Oil Co. open by unveiling a plaque bearing a flying horse, which is the Stanvac insignia. After performing this ceremony, Mr. Desai said that the new building was the first of its kind in the city and held many comforts for those who would be working in it. He was glad that the Stanvac Company had set an example to other business concerns in the city and in the country in the matter of consideration for their staff. Pointing to the huge pile in the background, Mr Desai said about it that "here is no attempt at creating beauty, but only an attempt to utilise it for basic uses. This building will have served its purpose if it is copied not only here but elsewhere." Referring to the agreement reached by his Company with the Government of India to continue exploration work for oil in the Bengal basin, Mr. R. T. Burton, General Manager of the company, said that it was evidence of his organisation's active interest in the development of the country. His company was proud to be associated with the Government of India in the effort to determine whether the country possessed undiscovered oil deposits which could be produced commercially for the benefit of its people. About the company's new home in Bombay, Mr. Burton said that in constructing it the maximum effort was made to utilise local material, besides employing a Bombay firm of architects for general designing and Bombay contractors in all phases of its construction. Concluding his speech, Mr. Burton referred to the 60 years' hospitality his company had enjoyed in India and said that, "as in the past, it shall always be the endeavour of the Standard Vacuum organisation to serve the best interests of India, which we firmly believe will coincide with the best interests of the company, for only thus can we ensure for ourselves a happy life amidst a very hospitable and gracious people."

Advertisers' Society Meets

Mr. A. D. Shroff, who has been elected Chairman of the Indian Society of Advertisers for this year, gave a new interpretation of the rôle of advertising in the complicated pattern of economy today. While addressing a gathering at the Taj Mahal Hotel last Wednesday which included the members of the Society, leading business men in the city and newspaper editors who had been invited to celebrate the first anniversary of the birth of this organisation, Mr. Shroff said that a good deal of misunderstanding and misconception existed even in the highest quarters with regard to the rôle of advertising in the economic cycle of production, selling and consumption. According to him, far from increasing the price of any product, advertising helped in reducing it by helping towards mass production as a result of the wider and vast distribution of goods which resulted from it. In the course of his address, Mr. Shroff also spoke about the need for rationalising the cost of advertising as well as the elimination of unethical advertising and revealed that the Society was considering the adoption of a code of ethics for advertising. Mr. P. G. Rose, the retiring Chairman, showed how the Society had built up a firm and respected position in the newspaper world and among advertising agencies and deplored the effects of taxes on the newspaper industry. Mr. Rose said that if advertisers were forced to reduce their advertising space to meet the enhanced cost resulting from tax on advertisements, it would affect the distribution of their products, which in turn would react adversely on production and employment.

Raisman on Population Problem

A prominent economist, with an intimate past association with India, has warned the country about the need for paying immediate attention to the population problem. Sir Jeremy Raisman, as a former Finance Member of the Government of India, can claim to speak with some authority and experience on this subject and in an interview soon after his arrival here on a visit to this country, he said that in the future as in the past India's effort to create more wealth might result not in raising the standard of living, but in multiplying the number of people living on the margin of subsistence unless this problem was tackled effectively at the same time. His favourable reference to India's Five Year Plan naturally led to a discussion on the advisability of this country embarking once again on deficit spending and the consequential inflation of currency in circulation. While Sir Jeremy was naturally reluctant to pronounce an opinion on this aspect of the economy, he gave a balanced account of the conditions which might justify credit expansion. He however showed an obvious leaning towards the more orthodox method of raising finance by taxation and floating of public loans, instead of creating additional purchasing power. Elaborating the subject he said that the effect of deficit financing varied according to the financial climate prevailing at any given time. Under conditions of economic recession, deficit financing by the Central Government might have a very healthy effect on the economy: on the other hand, any indication of boom conditions would aggravate inflation if the Government at the same time relied on deficit budgets. All that Sir Jeremy would commit himself to in this discussion was that the monetary policy should be carefully adapted to the varying conditions prevailing from time to time. With regard to the broader questions of world trade, Sir Jeremy reiterated the British stand that without slackening the effort to make the most of the Commonwealth's resources we must all aim at expanding world trade and avoiding a split-up of the world into separate currency blocs. This, he said, was not only an economic necessity but had a profound political significance as well.

Chairman of Millowners' Association

The ballot held on Friday, 15th January, for the election of the Chairman of the Millowners' Association, Bombay, for 1954 resulted in the election of Sir Vithal N. Chandavarkar, Managing Director of Messrs. N. Sirur and Co. Ltd., who are managing agents of the Mysore Spinning and Manufacturing Co. Ltd., the Minerva Mills Ltd. and the Modern Mills Ltd. It was in 1933 that Sir Vithal joined the Committee of the Association and he was elected its Deputy Chairman in 1935 and again in 1942, 1951, 1952 and 1953. He has held the office of Chairman also nine times in the past. Sir Vithal was Mayor of Bombay in 1932-33 and became a member of the Bombay Legislative Council in 1933. He represented the millowners of Bombay in the old Central Legislature from 1941 to 1945. He became President of the Employers' Federation of India, following the appointment of Sir Homi Mody as Governor of Uttar Pradesh. Sir Vithal has also been in the forefront of Bombay's academic affairs and he was selected as the Chancellor of Bombay University for three successive terms from 1933 to 1939.

COMMONWEALTH ECONOMIC PROPOSALS

LABOUR TROUBLES AND EXPORT PROSPECTS

(FROM OUR LONDON CORRESPONDENT)

So far as one is able to judge from the comparatively meagre details which have hitherto been released with regard to the discussions in Australia of the Commonwealth Finance Ministers, they have not produced anything revolutionary in the way of new policies for tackling the economic problems of the sterling area countries. Summarised, the main lines of agreement appear to be:

(1) That sterling area countries should give more trade to each other.

(2) That the sterling area's gold and dollar reserves must be built up further, but not to the exclusion of earning other currencies.

(3) The Commonwealth should continue its collective approach to the United States for support in the attempt to achieve partial convertibility between the sterling and dollar currencies.

(4) Commonwealth countries should avail themselves of the London loan market to help to finance development programmes following an easing of British Treasury restrictions.

(5) The Finance Ministers should communicate with each other more often without waiting for conferences.

(6) A large rice-production scheme in Ceylon would be examined and might be assisted with external finance.

A larger volume of inter-Commonwealth trade would be very welcome to British industrialists, for undoubtedly the most serious falling off in recent months has been in this sector, but it is hardly surprising to find that some doubts have been created by the possibility of a shortage of capital at home if special measures are to be adopted to canalise the available finance into Commonwealth development programmes. Well informed circles, however, do not believe that this is what Mr. Butler has in mind. It is much more likely that no more will be done than to make the available resources—upon which only too few calls have been made so far—more widely known and more easily accessible.

Growing Labour Troubles

British manufacturers are certainly in need of some sort of encouragement, from whatever quarter it may come, since their relations with the labour force show unfortunate signs of deteriorating still further, and even with things as they are, instances are being reported of business which would normally be placed in this country being diverted to the Continent on the sole ground that circumstances might arise which would delay completion of the orders. Guerilla strikes by electricians engaged by contracting firms have been the feature of the past week, starting with no more than a handful of men on the first day, until by the end of the week some 2,000 men were out. In themselves these stoppages may not have done much harm to production, but they have worsened relations between employers and labour, and it is against that background that the claims of the engineers and shipbuilders are now being investigated, that the miners' claim is being considered by the National Coal Board, and that fresh claims are being lodged almost each day. The grant of a wages increase to the railwaymen has set off what threatens to become a free-for-all scramble unless saner counsels prevail in the near future.

Using Pakistan Cotton

The position of Lancashire spinners using Pakistan cotton, has come under the consideration of the Raw Cotton Commission in connection with its wider study of measures which may be necessary to cover the transition to private buying this year. As a result, such spinners have now been advised by the Commission not to delay beyond the end of January the making of plans for securing supplies from Pakistan during the summer. The warning has been necessitated by the fact that spinners have been reluctant to contract for delivery beyond March at the higher replacement prices in the hope, probably, that prices would decline. The Commission points out that new crop prices at Karachi have not fallen as they were expected to do. On the contrary, prices have hardened materially with the continued good offtake in that market for both domestic and export business. Since last Friday the Commission has not quoted an index price for Pakistan cotton for the July call period. The statement of the Commission goes on to say that because of the special difficulties arising from the transition to private buying, it wishes that users of Pakistan cotton should be fully posted about the supply position. This, briefly, is that demand from the Continent and the Far East is a very uncertain factor; the crop is smaller than was expected; and it is believed that a high proportion of the export business so far placed is for higher grades. There is a moderate quantity of Pakistan cotton afloat and abroad which is expected to arrive here in January, February and March, which is for sale at negotiated differentials on the Pakistan price indices. A list is given of the prices per pound now acceptable for delivery after arrival, and the approximate replacement prices are also shown. The latter show premiums ranging from 40 to 145 points over the indicated selling prices. The margins are sufficiently large to justify the warning, as well as a measure of anxiety.

Agreement for Burma's Oil

There will be widespread satisfaction at the outcome of the long-drawn negotiations over the past two years in connection with the resumption and further development of the Burmese oil industry. As a result, the three companies concerned, Burmah Oil, Indo-Burma Petroleum and British Burmah Petroleum, acquire a two-thirds interest in a new undertaking Burmah Oil Co. (1954) Ltd., with a capital rated at the sterling equivalent of £15 million, while the remaining one-third goes to the Burmese Government. The immediate aim is to make Burma self-sufficient in petroleum products by refining 4,500 barrels a day, and to meet the modest capital expenditure necessary for that the three companies are to make a cash gift of £750,000. It is apparently ultimately hoped to raise production to 10,000 barrels daily so as to permit Burma to revive her export trade in petroleum products, but for that obviously additional capital would be necessary. This may come from the Burma Government—which retains the right to increase its stake in the larger development programme to "any limit as and when it desires"—or be provided by both parties on a *pro rata* basis, or by the companies alone, subject to general agreement. In any event, the accelerated assumption of control over the industry by Burmese is allowed for, and for this purpose the company will implement training programmes both in Burma and abroad, on the whole the compromise offers a workable solution of what might have been a very vexed problem. The Burma Government is promised a valuable asset if and when it exercises the option to finance the industry fully and to operate it; meantime the companies who have sunk so much in the development of these resources can at least hope to see some return for their enterprise and some recompense for the losses they sustained during the war. Much credit for the final outcome goes to U. Nu, the Burmese Prime Minister, who has set a precedent which might well mark the first step towards an even wider solution of many of Burma's economic difficulties.

Commonwealth European Trade

In view of developments during the Commonwealth Finance Ministers' Conference in Australia, and especially the reported decision that a stage has now been reached when overall trade, as opposed merely to trade with the dollar areas, is capable of further expansion, there will be more than usual interest in the congress to be held in London at the end of this month under the sponsorship of the Economic and Social Committee of the European Movement. It is, of course, a non-official gathering, but in view of the fact that for three or four days from 29th January some two hundred delegates from twenty countries, including many leading politicians and economists of Britain, the Commonwealth and Europe, are to seek ways and means of promoting closer trade ties between Europe and the Commonwealth, its decisions may well prove to be of more than academic interest. Describing the purpose of the Second Westminister Conference, as the meeting is called, Mr. Edward Beddington-Behrens, who is to be Deputy Chairman, with Herr Herman J. Abs, the former leader of German debts settlement talks as Chairman, said that the aim was to consider practical ways of increasing production in industry, agriculture, and the output of raw materials so that the whole of the Commonwealth and Western Europe could pull together. "We cannot any longer lean on the American taxpayer," he added. "We must shoulder the responsibility ourselves and establish a balanced and healthy economy within the Europe-Commonwealth block. The final aim, of course, must be currency convertability and a free world market."

Cheap Sterling Deals

The British Treasury has taken steps to tighten exchange control to put an end to a variant of "cheap sterling" deals in Middle East trade. The traffic is believed to be on a scale which has cost this country the equivalent of several million pounds a year, mainly in such commodities as sugar and textiles, which have been declared to the authorities as shipments within the sterling area but have subsequently been re-routed to Lebanon. From 1st February, therefore, goods consigned through the Lebanon area to sterling destinations will be required to lodge at the ports an extra copy of the shipping bill or specification. Further evidence may be required that the declared destination holds good, or it may be required to pre-enter goods with the Customs in advance of shipment. No action is being taken against bona-fide traffic. Indeed, the importance of Middle East trade is fully appreciated by the authorities, who are anxious to expand it in every possible way.

The Gap Widens

Meantime, the provisional trade figures for December record a sharp drop in exports to £231.6 million from the £248.9 million in November, while imports rose to £281.5 million against £272.4 million, so that the trade gap for the month increased to £50 million against the November total of only £23.5 million. Holidays affected the December figures, of course, so a better appreciation of the situation is available from a consideration of the aggregates for the year. The most encouraging feature of these is a substantial improvement in the visible trade deficit. Exports totalled the same as for 1952 at £2,582 million, with re-exports reduced by £39 million to £105 million. Imports at £3,347 million were reduced by £132 million. The net result is that the trade gap for the year was reduced by over £90 million to £660 million. Although shipments to North America fell in the closing months, it is also encouraging to find that 1953 was a good year for dollar exports, which at £315.6 million were 14 percent higher than in 1952. Canada provided the greatest expansion, with a 21 percent rise in offtake to £156.8 million, while the United States took 9 percent more at £158.3 million. In assessing these figures two factors must be kept in mind. The first is that British export prices were lowered during the year, so that in point of fact we had to export a larger volume of goods to earn the same value as we did in 1952. Secondly, the price of our imports fell, so the real saving on this account may or may not be as large as is shown, depending on the extent to which stocks have been increased. These factors make it difficult even to make a guess at the true payments position. The first half of 1953, with its higher deficit on visible trade, brought an overall payments surplus of £26 million. In the second half of the year other credits may not have made quite so good a showing. Nevertheless, the year as a whole should show a good credit, though it is likely to be well below the official estimates of what is required.

THE POLITICAL SITUATION IN SOUTH INDIA

PROSPECTS FOR COMING ELECTIONS IN TRAVANCORE-COCHIN

(FROM OUR MADRAS CORRESPONDENT).

With the approach of another general election, within two years of the 1951-52 election, in Travancore-Cochin, Communists have again sprung into activity after a period of suspended animation since Rajaji took over power in April 1952. They chose, not without significance, a city near Travancore-Cochin for their recent all-India, Party Congress which was highlighted by a mass parade attended by 200,000 people. This Congress, held at Madurai (the second most populous city in Madras State), has issued a call to party members to intensify their efforts in the direction of "united front" movements and organisations. The "united front" line, which has been in operation since 1950-51, has helped the Communists garner a rich harvest although some of their political allies have left the "united front" and some others have begun to distrust their tactics. This political line, however, has just been confirmed by the various regional Communist conferences and by the all-India Congress. The Communists appear to believe that their setback in States like Travancore-Cochin and Madras, where they were within an ace of forming "united front" governments in 1952, is only a passing phase in their constitutional strategy. They believe they can stage a come-back with greater force; a Congress defeat in next month's Travancore-Cochin election would add to their strength in the entire South Indian region.

All eyes are, therefore, turned to Travancore-Cochin where a bitter contest between the Congress Party on the one hand, and a united front of leftists including Communists, Praja-Socialists, Revolutionary Socialists, Kerala Socialists and some Independents on the other, in foreseen. The nine-member Travancore Tamil Nad Congress group in the legislative which precipitated the political crisis by voting against the Congress Government on a crucial motion of confidence, is now ploughing a lonely furrow in the Tamil area of the State. In most of the State there will be no three-cornered or four-cornered contests as in the last election but only straight two-man contests between the Congress and U.F.L. This factor, together with the Praja-Socialists' electoral arrangement with the Reds, the acute agrarian distress reflected in the preponderence of landless agriculturists, the unsolved problem of unemployment in the coir and other cottage industries, and the Communists' own streamlined trade union and party organisation, should discourage any hasty forecast of a possible Congress victory.

Mr. Rajagopalachari has already inaugurated the Congress campaign in the State with brilliant propaganda salvoes against the Communists. C.R.'s own continuance in power in Madras State improves the prospects of the Congress Party in Travancore-Cochin as he has established his reputatoin as a master anti-Communist strategist who forced the Communist tide to recede within a few months of his coming to power in April 1952. Prime Minister Nehru has yet to enter the field; it remains to be seen whether his intervention will have any better effect than it had in the closing months of 1951. In the opinion of some top Congress circles here, it would be a near-victory for the Congress if at least the former party position could be reproduced in the new Assembly.

Agrarian Reform

Rajaji went to Travancore-Cochin immediately after putting through the Madras Assembly some significant reform legislation amending the Malabar Tenancy Act and stopping tenant eviction in South Kanara. Incidentally, it is the reform measures introduced by C.R. that form the main element in his anti-Communist strategy—a strategy which made the Communists resign themselves to a slow slogging match in the parliamentary field since July 1952, when their attempt to vote the Madras Government out of power failed. As this strategy has had a measure of success in terms of breathing-time gained, C.R. has claimed that he had "imprisoned" the Communists in the Legislature. He, of course, did not add that it well suited their purpose to be so "imprisoned" for that had been their party line since 1950-51. Their greatest hope had been (and still is) to build themselves up into a strong parliamentary party. The last general election justified that hope and gave them an insight into the potentialities of guaranteed constitutional rights and effective political freedoms and of adult franchise against a background of poverty and land hunger. It has been their parliamentary strategy to demand things which the Government could concede only in part, to harp on the insufficiency of what is conceded and, the same time, to take the credit for what is "wrung" out of "unwilling hands."

There is no alternative to a liberal-conservative strategy in the conditions of South India, whose disquieting population trends were covered in this column some time back. Necessary reforms, boldly carried out, in the current structure of property relations, to the extent of correcting unbalance and of reasonably conserving the established order for as long a time as possible, constitute C.R.'s strategy. A degree of social and economic stability is its objective and is intended to pay political dividends for the Congress in the near future. There is enough drive and determination on the part of Rajaji to

carry out boldly a reform programme with its main emphasis on the rehabilitation of agriculture and amelioration of the lot of actual cultivators.

C.R.'s agrarian policy and the Communists' agrarian line constitute the crux of the political situation in Madras. As any agrarian reform programme the intricate and complex conditions of rural adras might cause as much discontent as it seeks allay, its successful implementation presents ficulties which no one but C.R. could overcome th ease. As something done here and now would ve a tremendous psychological effect on the der-privileged agricultural classes, not only on count of the benefit it immediately confers on em, but on account of its appearing as a promise something better to come, it is likely that R.C. ill implement before 1955 or 1956 a land reform ogramme covering the entire State instead of the ecemeal legislation he has been putting through nce 1952. C.R.'s personal popularity would be as ecessary for implementing the programme as it ould be for enabling the Congress Party to capilise, in terms of political power, what has been one. If, for any reason, C.R. does not continue at ie helm beyond 1954 or 1955, it is anybody's guess hether the Congress would be able to sweep the olls without the twin assets of C.R.'s record in fice and C.R.'s personal popularity. It would so be rash to forecast if, after C.R., any her leader could execute his strategy as deftly id as subtly as he has been doing.

Organising the Peasants

While C.R. has to do so much and so quickly, me is on the side of the Communists for they can fford to wait. In the hope (which might yet be elied) that even a liberal-conservative programme ould never be put through in a short period of ime, they have formulated a kind of agrarian olicy which, according to their calculations, could ttract large sections of the peasantry to their anks. Incidentally, their current agrarian line evolved at their recent Party Congress) which, y and large, confirms their pre-election policy declarations, is a logical continuation of their electoral strategy which brought them some notable ictories in a number of rural constituencies. It is heoretically possible for them to effect a broad-based mobilisation of the peasant classes on their side for the simple reason that neither the Congress nor the Praja-Socialists have made much headway in the direction of their organisation. Only the Dravidian Federations in Tamil Nad have made a little progress in the direction of peasant organisation. As parties other than the Communist are not likely to register appreciable progress in the sphere of peasant organisation in the next few years, the only alternative is to launch a series of reforms which might wean away considerable sections of the peasantry from the influence of the Communists.

There is, of course, the risk that the sections benefited by reforms might decide on continued association with the Communists in the hope of further dividends. But it is here that a leader of C.R.'s eminence and popularity could convince them that, even in the absence of Communist pressure, they would have got what they actually did because they deserved, in any case, to get relief. Only transparent sincerity of purpose could convince the peasant folk (harijans in particular) that there is the fullest appreciation, on the part of Congress and its Government, of their vital basic needs and aspirations. Once they are convinced, they might dissociate themselves from the Communists for they are by and large peace-loving, and may be credited with enough intelligence to evaluate the violent potentialities of continued association with them. In other words, it would be as difficult for the Communists to lead the peasant masses, by stages, in a violent agrarian civil war as it would be for the Congress and its Government to isolate the Reds by vague promises of land reform, by violent verbal attacks on the trouble-makers, by repressive measures and the like. Congress performance alone holds the key, whatever the Communists might demand in their policy declarations. But what they demand is not entirely without significance in the context of the agrarian situation in Madras and the neighbouring States. The sands of time are fast running out, and 1956 is drawing near. The Madras and Andhra Governments are faced with the gigantic problem of executing sweeping land reforms which might still save South India from Communism, whatever be the result of the impending election in Travancore-Cochin.

LONDON TEA SALES

A GOOD general demand was evident on Monday at the London tea auctions, although the market was rather quieter than of late. Prices generally were half-penny to three farthings per lb. lower, especially for thin liquoring types, while undesirable stalky kinds showed greater declines. All good liquoring descriptions sold well. A fair export demand was recorded. Common Broken Pekoe was quoted at 51d. per lb. against 51½d. on Wednesday of last week. Offerings totalled 31,773 packages of North Indian and other miscellaneous teas. At last week's London tea sales the 67,972 packages on offer were sold at an average price of 4s. 4.92d a lb., against 4s. 1.04d. in the previous week and 3s. 2.84d. a year ago. The exceptional strength of the sale of Indian teas on Monday set the pace when 11,969 packages of Ceylon teas were auctioned on the following day. Low-grown varieties jumped by as much as 4d. per lb., while other descriptions recorded gains of up to 3d. All teas were keenly competed for, chiefly on domestic account. Clean Common Broken Pekoe was indicated at 51d. per lb. against 47½d. to 48d. previously. A rapid clearance was effected of the 7,031 packages of South Indian growths at advances of 4d. to 5½d. per lb. A feature of the sale was the closing of the gap between the prices of quality and common teas. This is shown in the table below which gives the averages secured by some of the companies:

	No. of packages	Average per lb.

CHITTAGONG TEA SALES

At sale No. 14 of 1953-54, held in Chittagong on Wednesday, 13th January, 1954, leaf offerings consisted of 16,287 chests and dust offerings amounted to 4,977 chests. There was a Supplement of 150 chests.

Leaf: The market opened on a strong note and very soon the highest level yet seen in Chittagong was reached when practically all tea was sold at four to five annas above brokers' valuations. It is worthy of record that a tippy O. Fngs. found a buyer at Rs. 2-10 and a tippy F.O.P. and B.O.P., went for Rs. 2-8-6 and Rs. 2-8. Karachi buyers, in particular the big blenders, operated strongly.

Dust: Dust met a very strong market and clean common may be quoted around Rs. 2 to Rs. 2-1, an advance of a full three annas on previous rates. Best liquoring kinds realised up to Rs. 2-8-6.

Quotations

	Sale 13—22nd December, 1953.	Sale 14—13th January 1954.
OP	Rs. 1-15-6	Rs. 2-3-0 to 2-4-0
Pek	Rs. 1-14-3	Rs. 2-2-6 to 2-3-0
BOP	Rs. 1-14-0 to 1-14-6	Rs. 2-3-6 to 2-4-0
BP	Rs. 1-13-6	Rs. 2-3-0 to 2-3-6
BPS	Rs. 1-13-9	Rs. 2-3-0 to 2-3-6
OF	Rs. 1-14-0	Rs. 2-2-0
PF	Rs. 1-12-0	Rs. 2-0-0

Sale 15 will be held on Wednesday, 27th January 1954 and the catalogues contain 8,522 chests of leaf, 2,311 chests of dust and 105 chests in supplement.

Jute

INDIAN MILLS' PRODUCTION IN 1953

IN December the total output of jute manufactures by mills reporting to the I.J.M.A. was 77,800 tons against 69,000 tons in November. This is the highest production of any month since July and the second highest of the calendar year. There is all the more satisfaction, therefore, in the fact that roughly an equivalent quantity of goods was dispatched from the mills and that there was virtually no increase in mills' stocks at the end of December. Of the output last month 37,100 tons or 47.69 percent were hessian and 38,000 tons or 48.84 percent were sacking, the remainder being miscellaneous goods. These percentages show that there has again been a small increase in the proportion of hessian.

Taking the calendar year 1953 and comparing it with the calendar year 1952 it will be found that the total output of the mills decreased by 83,200 tons or 9.58 percent. This was partly because, in the early months of 1952, the mills were working 48 hours per week. Partly it was due to the switchover from sacking to hessian in the latter half of 1953 which meant a reduction in tonnage output. During 1953 mills produced 77,600 tons of hessian more than in 1952, an increase of 25.57 percent, but the output of sacking was down by 157,300 tons or 25.89 percent. In the latter months of 1953 the change from sacking to hessian was still in progress, as may be seen from the December figures when the proportions were nearly equal.

Though it is gratifying that the industry has been able to adjust itself to changing demand, the fact that there has been a loss of nearly one-tenth of its turnover cannot be viewed with complacency and while this is in large measure the result of circumstances beyond the control of the industry no opportunity should be missed to develop new markets to replace those lost.

In the statement below the figures are set out in tabular form for easy comparison:

	Total		Increase or decrease	
1953	1952		Tons	Percent
868,800	952,000		— 83,200	— 9.58
		Hessian		
388,900	311,300		+ 77,600	+ 25.57
		Sacking		
450,200	607,500		— 157,300	— 25.89
	Total	Hessian		Sacking
1953	868,800	388,900 tons		450,200 tons
		44.28%		51.81%
1952	952,000	311,300 tons		607,500 tons
		32.70%		63.81%

I.J.M.A. Stocks of Manufactures

	Total (Tons)	Decrease.
31-12-52	115,000	
31-12-53	98,900	16,100
	Hessian	
31-12-52	34,200	
31-12-53	24,300	9,900
	Sacking	
31-12-52	78,200	
31-12-53	73,000	5,200
	Other kinds	
31-12-52	2,600	
31-12-53	1,600	1,000

I.J.M.A. Consumption

In December the consumption of mills reporting to the I.J.M.A. was 4,53,600 bales compared with 4,02,000 bales in November making the total consumption for the six months July-December 25,25,600 bales. In December 1952 the consumption was 4,70,000 bales and the total for July-December 1952 was 27,20,000 bales.

Arrivals of Raw Jute

Arrivals in Calcutta and at mills' stations during December were 6,06,700 bales compared with 5,06,300 bales in November. Of the December arrivals 4,79,100 bales were Indian jute and 1,27,500 bales were imported from Pakistan. The total arrivals during the six months July-December were 29,07,600 bales of which 20,42,000 were of Indian origin and 8,65,600 bales were imported from Pakistan. In July-December, 1952, the total arrivals were 29,27,000 of which 20,97,000 were Indian jute and 8,30,000 were Pakistani jute. It is interesting to note that not only are the total arrivals nearly the same in these two half-years but also the proportions of Indian and Pakistani jute are roughly the same.

THE JUTE MARKETS

THERE has been no outstanding feature in any section of the market in the week just closing and prices have not shown much change. At the time of writing last week some slight steadiness was noted after a dull week. That steadiness turned out to be very temporary and the easier trend was soon resumed. Raw jute has been dull and not much interest has been taken by mills but prices have shown little change.

Manufactured Goods: After steadiness at the beginning of the week some nervousness developed with the approach of settlement day in the speculative market as there was an idea that the bulls might not be able to take up their commitments. The settlement passed off, however, without a hitch and the market recovered from the mild decline which had taken place. Business in hessian with the U.K. and the U.S.A. has been reported almost daily and mills have sold both for early shipments and for January-June. Not much interest has been taken in sacking but mills appear to be disinclined to sell sacking at current quotations. On Tuesday afternoon the market was easier and quotations were dropped.

On Wednesday morning opening quotations were as under:

	January	Jan/Mar	April/June
40" 8 oz	37- 8	36-12	36
40" 10 oz	45-10	45- 4	44-12
B Twills	104- 4	104-12	105- 4
Heavy Cees	104	105	105- 4
Cornsacks	107-12	108	108

Soon after the opening the market eased on bear selling and B Twills dropped to Rs. 103-6 and 40" 8 oz to Rs. 45-6.

Raw Jute: There has not been much business in the raw material during the past week. Small business was reported in supervised marks of northern qualities at Rs. 28-8 basis Bottoms for delivery exagency and at eight annas less for delivery ex Calcutta. There is a steady demand for superior jute for special hessian but only small quantities are available. Pakistani special NC's and HJ are also in demand but there are few really special NC's available. Pucca bale daissee was reported done at Rs. 165 and Rs. 160 for Dundee Long Group 2/3. Sellers are looking for business at current rates but are not at present willing to discount in order to attract buyers.

Quotations on Wednesday morning are as under:

Indian Jute:	**Landed at Mills Rs. per md. basis Bots.**	**Shipment.**
Lower Assam	28-8	Jan-Feb
Upper Assam	28	,,
Northern	28-8	,,
Purnea	28	,,
Murshidabad Tossa	29	,,
Daissee ex agencies	31	,,
Daissee ex Calcutta	29-8	,,
Daissee Mesta ex Calcutta	26	,,
Bihar Mesta	24-8	,,
Bihar Jute	25-8	,,
Local Packing Northern	28	,,
Local packing free from jungli	25-8	,,
Local packing jungli	24	,,
Bimli	25 F.A.Q.	,,

Tossa prices are Rs. 2 above the prices for white jute. Middles alone are being bought at a premium of 8 annas to Re. 1.

Pucca Bales	**Rs. per bale**	
Mill Firsts	175	Jan-Feb
Mill Lightnings	160	,,
Dundee Daissee 2/3 SG	175	,,
Dundee Daissee 2/3 LG	160	,,
Pakistani Jute ex Pakistan:	**Rs. (f) per md. basis Bots.**	
Jat	30-8	Jan/Feb/Mar
District	29-8	,,
Northern	28-8	,,

In the case of Pakistani jute there is a difference of Rs. 3 between Tops and Middles and Rs. 4 between Middles and Bottoms.

Mofussil: There is no change in conditions in markets in India. The available supplies appear to be firmly held and the markets are being fed slowly and sparingly. Imports of loose jute are small and in the big centres business is confined mainly to trading in kutcha bales. The daissee markets show little change. In the bazars most of the imports are district and jungli tossa but mills buying direct report some increase in imports. Arrivals in Cossipur are much the same as those of last week but some indications of a falling off are reported.

In Pakistan imports into the main centres have increased but the quality is lower.

Overseas enquiry has been poor and, in consequence, pucca bales have not been showing much interest. In these conditions the market is largely influenced by the B Twill quotations from Calcutta.

Quotations are as under:

Jat Rs. (P) 24 basis Bottoms.
District Rs. (P) 23 basis Bottoms.
Northern Rs. (P) 20 basis Bottoms.
Tossa is Rs. (P) 4-8 above the price of white jute.

Mill Firsts	Rs. (P)	146	per bale

JUTE LOOM CENSUS, 1953

THE Indian Jute Mills Association's booklet on loom statistics, showing the distribution of hessian, sacking and other looms in jute mills in India and Nepal, brings the data up to 30th June, 1953. It gives separately for each individual mill a recording of the reed space of hessian, sacking and other looms. As before, the Association's ruling on loom classification has been followed and according to that, all looms of 40" reed space and over (unless they are "other looms") have been classified as hessian looms. This does not mean, however, that mills do not use any looms above 40" reed space for sacking production.

A comparison of the figures published in the previous booklet reveals that during the period 1951 to 1953 the hessian and sacking loomage of mills within the Association increased from 65,720 to 65,749, a rise of 29 looms. This is owing to Shree Ganesh Jute Mill increasing their loomage by 29. The total recorded hessian and sacking looms of mills outside the Association has remained stationary at 3,225, there having been a transfer of 35 looms from hessian to sacking. On an all-India basis, the number of looms increased from 68,945 to 68,974.

The total loomage of the mills within the Association has during the same period increased from 68,844 to 68,974. The increase on the hessian and sacking side has already been explained; further increase of 102 looms other than hessian and sacking on Hukumchand's account should also be noted The corresponding figure of mills outside the Association has remained stationary at 3,728. The net result has been that all Indian looms, from 72,572 in 1951, have risen in number to 72,702 in 1953, an increase of 0.2%.

In West Bengal, whilst the total hessian and sacking loomage of the Association mills has increased from 63,939 to 63,968, that of the mills outside the Association has remained stationary at 1,602. The total hessian and sacking loomage of mills outside West Bengal has remained stationary at 3,404.

The total recorded loomage outside the Association in 1937 was 2,941 which grew to 3,290 in 1940. In 1944 the total loomage stood at 3,600, of which 3,156 were hessian and sacking and 444 were other looms. In 1947 the total number of looms declined to 3,393 of which 2,915 were hessian and sacking and 478 other looms. In 1949 the total looms further declined to 3,355 of which 2,852 were hessian and sacking and 503 were other looms. In 1951 the total loomage increased to 3,728 of which 3,225 were hessian and sacking and 503 were other looms. In 1953 there has been no change from that position.

It was stated in the last two reports that the period 1947 to 1951 witnessed a change-over from steam to electrically driven looms. A further change in the same direction took place during the period 1951 to 1953. Thus the number of steam driven looms among the Association mills declined from 24,688 to 19,997, a fall of 4,691 looms all of which (as also 29 additional looms of Shree Ganesh) were converted to electrically driven looms. The number of electrically driven looms within the Association rose from 41,032 to 45,752. The position outside the Association is that the number of steam driven and electrically driven looms remained the same as before.

GROWING BETTER JUTE PLANTS

THE EFFECT OF CLIMATE AND MINERAL NUTRIENTS

THE Indian Central Jute Committee has just published two pamphlets showing the results of investigations carried out by Dr. J. C. Sen Gupta. The first deals with the effect of the time of sowing and the second with mineral nutrition. Dr. Sen Gupta has found that the most favourable time for sowing Corchorus Capsularis or white jute is between the end of March and the end of April while the most favourable time for Corchorus Olitorius is between mid-April and mid-May. Seeds sown at these periods was found to produce the biggest plants and the plants themselves developed more quickly. Plants exposed to high temperatures for a couple of months and long hours of bright sunshine were found to have the greatest growth during the monsoon. These experiments were carried out in 1945, 1946 and 1947 and the pamphlet gives elaborate details of the results obtained. As far as can be seen from cursory examination the experiments confirm what has been known to the growers for many years as the result of their own practical experience. The best time for sowing must, of course, vary from year to year and cannot be accurately forecast even by meteorologists for no two years have identical weather conditions. Moreover the latitude in which the plants are grown must have an influence and there is a considerable difference between the furthest north and the furthest south jute-growing areas. The fact that plants from late sowings do better than those from early sowings is also well known to the growers and there has been a saying in the trade for about half a century "late-sown, well-grown." One may, however, be tempted to ask why, if the growers know this, many of them sow early. The answer is that they want to get an early crop in the belief that they will get premium prices by marketing new crop, before heavy supplies come on the market and depress the price.

The experiments carried out to discover the jute plant's mineral requirements showed that potassium and calcium nitrates produced the best growth. This result was obtained by growing plants in sand impregnated with chemical solutions instead of growing them in soil. Presumably as a result of these experiments it will be possible to determine which are the most suitable artificial manures to be used. This is, however, complicated by the fact that the soil in which jute grows varies from district to district and there may be soil deficiencies in some districts which will necessitate the use of different fertilisers. The experiments appear to have taken into consideration only the growth of the plants. An important matter is to discover the effect of different chemical fertilisers on the fibre. It has, for instance, been known for a long time that iron salts in the soil affect the colour of the fibre and that one of the reasons why the so-called "district" jute deteriorates rapidly in colour when stored is that it is grown in soil and retted in water which contain iron salts.

THE FOREIGN JUTE MARKETS

BUSINESS CONTINUES MODERATE IN CONTINENTAL MARKETS

(FROM OUR DUNDEE CORRESPONDENT).

MOST Continental countries are still reporting small or moderate business taking place in jute goods. Manufacturers are finding it difficult to compete in the export markets, as, with raw

Without Prejudice

STRIKE DURING PENDENCY OF LABOUR DISPUTE

UNION LEADERS' APPEAL AGAINST CONVICTION

(FROM OUR LEGAL CORRESPONDENT)

THIS case concerns principally the meaning of one word. The word is appeal and upon its interpretation depended the question whether certain sharp sentences of imprisonment imposed upon various union officials for alleged illegal instigation of thousands of textile workers to strike should be upheld or set aside by the Supreme Court. The appellants were the President and the Secretaries of the Mill Mazdoor Sabha, a union of textile workers in Bombay, registered under the Indian Trade Unions Act. These gentlemen had been convicted by a Bombay Presidency Magistrate under Section 27 of the Industrial Disputes (Appellate Tribunal) Act 1950. This is the appropriate part of the Section: "Any person who instigates or incites others to take part in, or otherwise acts in furtherance of a strike or lock-out, which is illegal under this Act, shall be punishable with imprisonment for a term which may extend to six months or with fine which may extend to one thousand rupees, or with both."

The magistrate had sentenced the accused to six months' rigorous imprisonment and to a fine of Rs. 1,000 each, the maximum sentence. On appeal to the Bombay High Court the convictions were upheld but the sentences reduced to three months' simple imprisonment and the fines were cancelled. The accused appealed again, this time to the Supreme Court.

Now there are, it seems, some 210,000 textile operatives working in Bombay and about 35 percent of them belonged to three different labour unions. The first is "Rashtriya Mill Mazdoor Sangh" which was recognised as a "Representative Union" under the Bombay Industrial Relations Act 1946 on the ground that it represents not less than 15 percent of these textile workers. The second is "The Mill Mazdoor Sabha" of which the appellants were the office-bearers but which represented less than 15 percent; and the third "Girni Kamgar Union" representing the least percentage of workers. A large number of workers, comprising about 65 percent, were not organised at all and belonged to no union.

On 9th December, 1949, the Representative Union gave a notice of change under Section 42 of the Bombay Industrial Relations Act, 1946, to the Mill Owners Association in Bombay claiming bonus for that year. On 23rd Decemer the dispute was referred by the Bombay Government to the Industrial Court under that Act; and while this dispute was pending the Industrial Disputes (Appellate Tribunal) Act of 1950 came into force.

On 7th July the Industrial Court made its award; and dissatisfied with it, the Mill Owners Association on 9th August filed an appeal before the Appellate Tribunal and an *ad interim* order was passed on 10th August directing how the bonus should be paid. The appellants made speeches on 14th, 15th and 16th August exhorting the workers to go on strike; and these exhortations formed the gravamen of the complaints promptly thereafter filed by the Labour Commissioner before the Presidency Magistrate charging the appellants with an offence under Section 27 of the Appellate Tribunal Act, above-quoted, and resulting, as already stated, in sentences of three months' simple imprisonment.

At the appeal before the Supreme Court two main contentions were raised on behalf of the appellants. We will not concern ourselves with the second ground which was of little general or commercial interest save to say that it was not sustained. The first and principal ground was this: that the conviction under Section 27 was void because there was no *competent* and *valid* (italics ours) appeal against the award before the Appellate Tribunal. Both the contentions were repelled by Bardekar and Dixit JJ in the Bombay High Court and they were reiterated before the learned Chief Justice of India and four other of the Supreme Court judges whose unanimous decision has just been reported.

In order to deal with the first contention it is necessary to refer to certain provisions of the Appellate Tribunal Act. Section 7 of the Act provides an appeal to the Appellate Tribunal from any award or decision of an Industrial Tribunal: (a) if the appeal involves any substantial question of law; or (b) if the award or decision is in respect of any of the following matters, namely, (1) wages, (2) bonus or travelling allowance. Section 24 (b) prohibits a workman from going on strike during the pendency of an appeal, and Section 25 renders a strike and a lock-out illegal if declared, begun or continued in contravention of Section 24. Then follows the penalty clause, Section 27, quoted above, imposing fine or imprisonment.

The question was whether the appellants rendered themselves liable to prosecution and conviction under Section 27 because they instigated the strike while the appeal was pending before the Appellate Tribunal, and that question involved consideration of the meaning and interpretation of the word "appeal."

* * * *

The meaning and interpretation adopted by the appellants and argued by their counsel with great pertinacity in three Courts, before a magistrate, two High Court judges, and five judges of the Supreme Court, were, if one may respectfully say so, of extreme ingenuity and illustrate how easily and plausibly a phrase, perfectly plain as to its grammatical meaning, can be interpreted in two different ways. What the appellants urged in effect was this. "True it is that Section 24(b) prohibits a strike during the pendency of an appeal. But it must be a genuine appeal, a valid and competent one; not a frivolous and vexatious one, not an abuse of the process of the Court, without any merit or real grounds, designed only to obstruct and delay the workmen's right to strike. In this case and in this sense of the meaning of the word 'appeal', no valid or competent appeal was pending and therefore we have committed no offence under Section 24(b)."

The answer of the prosecution to this was that "Section 24 on a plain and natural construction requires for its application no more than that an appeal should be pending and there is nothing in its language to justify the introduction of the qualification that it should be valid or competent."

Their lordships of the Supreme Court adopted the latter interpretation, affirmed the convictions and sentences, and dismissed the appeals.

Said Ghulam Hasan J: "Whether the appeal is valid or competent is a question entirely for the Appellate Court, before whom the appeal is filed, to determine, and this determination is possible only after the appeal is heard, but there is nothing to prevent a party from filing an appeal which may ultimately be found to be incompetent..... We consider that the word 'appeal' must be construed in its plain and natural sense without the insertion of any qualifying words such as are intended to be introduced by the contention raised before us. There is yet another reason for not construing the word 'appeal' in the manner suggested by the appellants and that is that the legislature in introducing this provision contemplated that industrial peace should not be disturbed so long as the matter was pending in the court of appeal irrespective of the fact whether such an appeal was competent in law. If this were not the case the parties could easily defeat the object of the legislature by arrogating to themselves the right to decide about the competency of the appeal without reference to the court, commit a breach of the peace and escape the penalty imposed by Section 27. There was no justification for the appellants to instigate the workers in the so-called 'bona fide' belief that Section 27 did not apply to an appeal which they thought was incompetent." *A.I.R. (Supreme Court), January 1954. 73.*

FOR BETTER SOCIAL SERVICES AND SOCIAL AMENITIES

Every little is needed to add to the nation's pool of investment — to finance the great development schemes to help build the Welfare State of tomorrow.

THE SMALL SAVINGS SCHEME grows and flourishes, under a guarantee of absolute security.

WHY HAS IT GROWN because it fulfils an obvious and urgent need—it puts your money to work for your and the nation's good.

Invest in

NATIONAL SAVINGS CERTIFICATES	Rs. 150 for Rs. 100 in 12 years.
TEN-YEAR TREASURY SAVINGS DEPOSITS	3½% Interest paid annually and capital secured for 10 years.
POST OFFICE SAVINGS BANK DEPOSITS	2% interest added on deposits upto Rs. 10,000/- (on deposits up to Rs. 20,000/- in the case of joint accounts).

Interest earned is free of Indian Income-tax

PROTECTION FROM CORROSION

A NEWLY developed process for Londing vinyl plastic protective coatings to sheet metal is said both to protect the metal from corrosion and to give the surface an attractive coloured finish. The coating is applied by first adding a special adhesive to the metal sheets and then heating them and rolling the plastic coating on to them under a low pressure while they are hot. The protective films, which can be as thin as 1-500th inch or as thick as 1-50th inch, are said to be so firmly bonded to the metal that it can be deep-bent or drawn without the films being harmed. The coated metal can also be drilled, and cut without causing flaking, crinkling, or the formation of unsecured flaps. Designs can be punched or impressed on to the coating after its application to the metal, and it can be used for bonding to aluminium as well as to steels and other ferrous sheetings. The processed sheeting is said to cost about one-third the price of stainless steel of similar quality.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August 1939 as 100), rose 0.6 percent to 394.8 during the week ended 2nd January 1954. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 1.9 and 5.4 percent respectively. During the week under review, "Foodstuffs" advanced further by 2.3 percent to 377.2 owing to a sharp rise in the prices of jowar (+21%) supported by higher prices of gur at Muzaffarnagar (+9%), gram at Hapur (+4%), wheat, bajra and sugar (+1% each). Prices of gram at Patna (−7%), dal arhar (−5%) and rice at Patna (−3%), however, showed decreases. The index for Industrial Raw Materials declined by 0.7 percent to 471.4. Items which recorded noticeable variations during the week were: raw wool (−7%), rapeseed (−6%), export prices of manganese ore (−5%), jarilla cotton in Bombay and linseed (−4% each), groundnuts in Bombay (−3%), Bengal cotton in Bombay and lac (−2% each), gingellyseed at Jhansi (+14%), karungani cotton at Tripur and raw hides (+5% each), raw silk (+4%), groundnuts at Cuddalore (+3%) and cottonseed (+2%). The Semi-Manufactures group index remained almost unchanged at 357.6, as the effect of increases in the prices of groundnut oil in Madras (+6%), gingelly oil (+5%), castor oil (+2%), coconut oil and copper (+1% each) was neutralised by declines in groundnut oil in Bombay (−7%), linseed oil in Calcutta and mustard oil (−1% each). The index for Manufactures remained almost stationary at 364.0 as compared with 364.1 for the previous week. A fall of 1 percent in the prices of black pepper brought down the "Miscellaneous" group index from 712.5 to 712.2, notwithstanding a rise of 1 percent in cashewnuts.

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS AND SUB-GROUPS

(Base: Year ended August 1939=100)

Group and Sub-group	Week Ended 2-1-54	26-12-53	5-12-53	3-1-53

COAL STATISTICS FOR NOVEMBER 1953

DURING the month of November last year, 839 collieries and 8 Coke Plants were working, according to the Chief Inspector of Mines in India. On an average 317,380 persons were employed daily and 7,380,686 man-shifts were worked. The overall percentage of absenteeism was 14.51. The output per man-shift for Miners and Loaders was 1.09 tons, for all persons employed in underground and open workings 0.56 tons and for all persons employed 0.35 tons. Total production for the month was 2,676,502 tons of coal, 118,921 tons of soft coke, 189,954 tons of hard coke and 16,078 tons of other kinds of coke. During the month 2,554,988 tons of coal, 121,089 tons of soft coke, 42,125 tons of hard coke and 4,761 tons of other kinds of coke were despatched. The coal stocks at the collieries on the last day of the month were reported to be 3,193,653 tons.

The Annual General Meeting of members of The Bengal Chamber of Commerce and Industry will be held at the Royal Exchange, Calcutta at 3 P.M. on 26th February, 1954.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to December, 1953. As compared with November, the December Index for Food shows a drop of 7 points, while that of Clothing reveals an increase of 1 point. Indices for Fuel and Lighting and Miscellaneous remain unchanged at 239 and 266, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 4 points during December, 1953.

Compiled and constructed by the Statistical Department of "Capital".

ALWAYS IN THE LEAD . . .

It was the powerful acceleration of Hindusthan 14 that brought it victory at a recent motor sports event in Calcutta. This proves once again that Hindusthan 14, with its special features and outstanding qualities, tops every car in its range. The graceful modern lines of the mono-construction body ensure added speed and reduced petrol consumption by eliminating idle weight and wind resistance. The roomy interior seats six persons comfortably on latex-foam cushioning, cradled between the wheels, that have double shock absorbers for smoother ride. Topping everything is the price, as low as that of a smaller car.

Calcutta Markets

STRONG DEMAND AT LOW RATES IN TEA EXPORT AUCTION

GOOD GENERAL DEMAND IN INTERNAL SALE

AT Sale No. 30 held on 18th January offerings in the Export auction consisted of 61,900 packages. There was a strong but less general demand at lower rates, and prices tended to recede as the sale progressed. Medium BOP's were the weakest features of the sale with out-market bidding for these types being limited, and were sometimes easier up to 2¼ annas per lb. Medium Fannings and other broken grades were an anna lower while Clean Commons sold about ½ anna under last rates. Commonest sorts remained fully firm. Best liquoring C.T.C.'s although showing improved cup quality were marked down by about an anna. Whole Leaf grades opened firm to dearer but closed easier.

Quotations

	1954 Rs.as.ps.	1953 Rs.as.ps.
Clean Black Pekoe	2 9 6	1 6 6 to 1 7 0
Clean Common B.P.	2 5 6	0 15 6
Medium Assam B.P.	2 6 6 to 2 7 0	1 0 0 to 1 1 0
Best Assam CTC B.P.	2 8 0 (Nom.)	

Internal Market

The offerings in the Dust sale on 19th January consisted of approximately 20,500 cases. There was a good general demand for all descriptions but prices were generally ½ to 1 anna below last rates. Commons and Commonest sorts however, were the strongest feature of the sale and these were generally firm to occasionally easier. Darjeeling Dusts sold well, while the best liquoring C.T.C. sorts realised satisfactory prices.

Quotations

	1954 Rs.as.ps.	1953 Rs.as.ps.
Medium Dooars Dust	2 1 0	1 7 6
Medium Assam Grainy Dust	2 1 6	1 9 6 to 1 10 0
Best Assam C.T.C. Dust	2 4 6	1 14 6

The Internal Leaf sale consisted of approximately 8,000 cases which was the largest Internal sale printed so far this season. There was only fair demand however and prices were lower by 1 to 2 annas and followed the Export market in this respect. The small quantity of Green Tea offered sold well.

RATES GENERALLY MAINTAINED IN FREIGHT MARKET

ENCOURAGING ACTIVITY IN U.S. GRAIN TRADES

THE main feature of the market last week was the activity in the grain trades from both North and South America and a number of fixtures have been recorded. Rates have been generally maintained but hardened slightly for River Plate grain as vessels were in short supply. The Calcutta coal market was dull after the fixtures reported last week but ore continues to be fixed from Calcutta to various destinations. For a February loader to Japan 60 shillings was again paid and another vessel was fixed at $8. A prompt vessel accepted 55 shillings for Calcutta, completing at Vizagapatam at 15 shillings less, to Rotterdam or Emden while a March loader from Calcutta to the same discharge option was fixed at 57/6d. Ore from Calcutta to Gdansk or Gdynia was done at 73/6d. for motorship expected ready to load early February. Rates continued steady for ore from Mormugao to Japan, with three ships being fixed at $7.98, $8 and 57 shillings, all February loaders, and scrap was fixed from Colombo to Japan at 60 shillings.

In the Far Eastern section two further fixtures of coal from Chinwangtao to Chittagong are reported, the business being done at 32/6d. and 30/- both for Japanese vessels, while in the Australian section flour in bags to Ceylon was arranged at 66/3d. Barley in bulk to Antwerp/Hamburg range from South Australia was fixed at 97/6d. and the same rate was paid for a part cargo to U.K.

The activity in the American grain trades was an encouraging feature and from the Northern Range fixtures were made to Japan and Continental ports while from British Columbia fixtures were recorded to Japan and U.K. Representative fixtures were Northern Range to Antwerp-Hamburg 40 shillings and to Japan $11.40 and from British Columbia to U.K. 61 shillings and to Japan $6.50. Activity also reigned in the South American market and at least eight fixtures were recorded for U.K. or Continent discharge and among these were a Greek vessel fixed at 66 shillings for Antwerp/Rotterdam discharge (one port) or 69 shillings for two ports discharge and a motor vessel was paid 74 shillings for Dunkirk discharge. A fixture was concluded at $11.75 for grain from the Plate to Japan and 70/9d. was paid to a vessel for U.K. discharge.

There was no great activity in the Time Charter section, 13 shillings being paid for an oilburner delivery London for one West Indies round voyage and 13/6d. for a vessel delivery Calcutta re-delivery U.K./Havre-Hamburg range.

THE SUGAR MARKET

During the week ended 18th January, sugar sales were poor in the Calcutta market. Arrivals were very poor, about 1,000 bags daily, and stocks amounted to 30,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31 to Rs. 31-4 a maund for ordinary grain, and Rs. 32-14 for big grain. Ex-mill delivery prices ranged between Rs. 30 and Rs. 30-8 a maund for D28 grain.

HIDES AND SKINS

The market in skins was firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Sales

((Between 12th and 18th January, 1954)

Cowhides :—Wet salted (Ord) 7,000 pcs. on the basis of Annas 8-6 to Annas 9-3; Wet salted (Ord) 20,000 pcs. on the basis of Rs. 7-12 to Rs. 9; Wet salted (Slaughtered) 12,000 pcs. on the basis of Rs. 12-8 to Rs. 22-8.

(Continued from page 89)

jute maintaining its level of price, they cannot afford to come down to the rates quoted for Calcutta goods. Spinners are showing anxiety to dispose of their surplus production of yarns, but they could transact a good deal more business with the U.K. if they would shade their terms further. Dundee manufacturers cannot afford to pay from ⅛d to 1d more for their weaving yarns than the rates ruling for local spins, as their prices for jute cloth and bags are fixed at a maximum. The carpet trade, however, is still interested in imported yarns, but they are now confining their purchases mainly to those offered from Calcutta, which are said to be of good quality. Continental spins are also favourably commented on. It is still as difficult to place orders for yarns of most descriptions with Dundee spinners, and any business that is being done is for delivery as far forward as May/June. Common 8 lb. cops and 6 lb. spools are very firmly held at 16.17d per lb., and twists, which are a bottleneck in the trade, are at 17.71d per lb. for 3 ply 8 lb. The majority of spinners are far behind with deliveries. A good number of spinner-manufacturers are out of the market as sellers of weaving yarns and, indeed, some are buying outside yarns, even those who sold largely in the open market. The consumption of yarns is steadily increasing in the U.K., but the position should be much easier by the end of the year when a number of spinners will have additional machinery in operation.

Raw jute values have been steady to firm and the Jute Controller has bought fair quantities during the week, Mill Firsts at £108 and Mill Lightnings at £97, crack Daisee-2/3 at £102 and grade at £92, grade Tossa-2/3 at £110 and fours at £100, c. and f. U.K.

Calcutta goods have fluctuated slightly, closing at 73s 6d for 10 oz. 40 in. and 56s 6d for 7½ oz., January/March, and 73s 0d and 56s 0d February/March, while "B" twills are at 174s 0d and 175s 0d for the respective positions of shipment.

Dundee goods continue in good demand on the basis of 13.60d per yard for 10 oz. 40 in. and 11.11d for 8 oz.

U.S. BURLAP CONSUMPTION

Boston, By Air Mail.

EARLY last year optimistic forecasts were made in Boston and in Calcutta that U.S. burlap consumption for 1953 might be expected to reach one billion yards, say Bemis-Boston in their Burlap Letter. The estimated total U.S. consumption, however, declined 2 million yards from 1952; but eliminating deliveries to the armed forces, 1953 was a better burlap year than 1952, with an estimated 809 million yards reportedly "consumed" for civilian uses in 1953 compared with 752 million yards for such purposes in 1952.

U.S. consumption for December declined 3 million yds. from November. Although the decline was not too great, it was disappointing as it was hoped that last month's consumption might follow the pattern of a year ago, when it increased. U.S. stocks at the end of December were 3 million yds. more than at the end of November. These were estimated to have been made up of 114 million yds. spots and 76 million yds. afloats. Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry :

B—Held by the Commissioners.
÷New Howrah Bridge Loans.
D—This is a Domestic Loan not subscribed for by the Public
B.—A Sinking Fund has been established for the liquidation of this loan in May, 1953.

A—Held by Govt of India.
E—Held by Govt of Madras.
R—Interest reduced from 6% to 3% from 1-6-44.
Y—Interest reduced from 6½% to 4% from 1-4-35.
Z—Interest reduced from 4¼% to 3% with effect from 1-7-38.

N—Nominal.
**Loans held by Govt are not shown here.
*Free of Income Tax
†Loans held by Govt are not shown here.
‡Free of Cochin Govt Income tax.
§Free of Travancore State Tax.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

THE RANDALL COMMISSION ON U.S. ECONOMIC POLICY

TEXT OF RECOMMENDATIONS: CONVERTIBILITY AND DOMESTIC INFLATION

THE twenty-two recommendations of the Randall Commission, submitted to President Eisenhower this week, are cautious and sensible—roughly the sort of programme one would have expected from a Commission dominated by well-meaning Republicans. There is very little in them to warrant joyous acclamation from the sterling area. The first news-agency summaries naturally singled out the more acceptable and plain-spoken passages of the report for circulation abroad, with the result that the earliest reported reactions of Mr Menzies in Melbourne and Mr Butler in Calcutta were rather more laudatory than will be the case when the full document is studied. Mr Deshmukh, speaking a little later from Madras, was much more dubious, and his doubts will be reinforced by a reading of the following resumé of the proposals.

In the order in which they were presented, the recommendations of the Commission are:

Economic aid on a grant basis should be terminated as soon as possible, and no further aid is justified unless it contributes to the security of the United States. The offshore procurement programme should be governed by factors of cost and availability, as it is in the United States, or on "broad strategic judgements." This programme should not be used as a form of general economic aid. Where friendly nations require support to maintain their military forces—"connected with U.S. security"—grants should be made, not loans. In other cases where substantial economic aid is necessary "in the interest of the United States", but cannot be obtained from private sources, loans should be made, not grants. The Technical Co-operation programme should be pressed forward vigorously. It should not become a "big money" programme and should not involve capital investments. The U.S. should continue to support the United Nations expanded Technical Assistance Programme and the programme of the Organisation of American States, but no country should contribute as much as 60 percent of the financing of the world-wide co-operative effort.

The U.S Government should do all it can to create "a climate" that would encourage private investments abroad, because private capital, in the main, must "undertake the job of assisting in economic development abroad." U.S. corporate tax on income from U.S. investments abroad should be reduced by "at least 14 percent," and private individuals should be able to offset in full against their domestic tax, the appropriate foreign tax. The existing programme of guarantees against expropriation or inconvertibility of exchange—being administered by the Foreign Operations Administration (FOA)—should be given a further period of trial. The Export-Import Bank should continue to make loans 'which are in the special interests of the United States," and which are based on sound credit policies.

*

The International Wheat Agreement of 1953 should be used to the full in resolving pressing wheat problems while it is in operation, and "its termination in 1956 be given consideration." The U.S. should move "as rapidly as feasible" towards elimination of inflexible price-support programmes in agriculture "which result in fixed prices, open or concealed export subsidies, import quotas at home and abroad, and excessive use of tariffs." Fluctuating prices of raw materials cannot be stabilised by commodity agreements. Greater stability of world prices should be sought, rather, through relaxation of trade impediments, diversification of economies of the countries "now excessively dependent on a small number of products" and through continued consultation and co-operation with other nations to improve knowledge of world supply and demand and to explore possible means of easening instability.

The "Buy American" Act should be amended so that the President might exempt from its provisions bidders from other nations "that treat our bidders on an equal basis with their own nationals." Meanwhile, the President should direct procurement agencies to consider foreign bids which satisfy all other considerations on "substantially the same price basis as domestic bids." Congress should direct the President to have the Tariff Commission undertake a study of the tariff schedules immediately with a view to greater simplicity of the tariff "definitions" and also possible changes in rates. The President's power to negotiate trade agreements under the Trade Agreements Act and to place them in force should be extended for not less than three years, "with appropriate safeguards." It should include the authority to reduce any existing tariff rate five percent in each of the three years. The issuance of passports and visas to tourists should be made less difficult, and duty-free allowance for tourists should be increased from $500 to $1,000.

The present ban on exports by the United States to Communist China and North Korea, and U.S. efforts to secure similar action by other free nations must continue until the present threat to free world security has been removed. U.S. efforts to prevent exports to the European-Soviet bloc that might contribute to its military strength must continue until genuine peace is assured. So far as it can be done without jeopardising military security, and subject to the embargo on Communist China and North Korea, the United States should acquiesce in more trade in peaceful goods between Western Europe and the Soviet bloc.

Gradual but positive progress towards currency convertibility is urged, but responsibility for introducing currency convertibility should rest on the countries concerned. Convertible currencies are "indispensible" for the attainment of world-wide multilateral trade and the maintenance of balanced trade in a relatively free market. The $3,300 million in the gold and convertible currencies holdings of the International Monetary Fund—a United Nations institution—should be used more actively to effect "a gradual and controlled" approach to eventual full convertibility.

*

It will be seen that the chief features of the report are less emphasis on "give-away" programmes, continued caution in the matter of tariffs, advocacy of private rather than public investment abroad (a point on which some of the potential recipients of this capital do not agree), approval of non-strategic trade between the Communist countries and West Europe, a reminder to Britain that convertibility is primarily her own task, and finally the suggestion that the I.M.F.'s present funds (to which it is not urged that the U.S.A. should add new money) be used to assist the move to convertibility as and when Britain decides to make it. This, we repeat, is a sensible, though cautious, series of proposals and will give disappointment only to the more impatient advocates of convertibility or to those who imagine that it is entirely the United States' responsibility to restore international economic health, without the sterling area doing anything to put its house in order.

It is as important to notice the things the Randall Commission has not recommended. It has not urged that the U.S.A. demolish its tariff barriers or even lower them sharply; it has not urged that the Buy American Act be scrapped; it has not, in short, proposed that the American market be thrown open to foreign imports to a degree that would permanently solve the dollar problem for all soft currency countries. It has not recommended international commodity agreements designed to support the prices of goods now bought by the U.S.A. from the sterling area, tin and rubber for example, and it has even suggested the termination of one such agreement to which the United States is now a party. It will be recalled that Mr Lewis Douglas, in his report to the President on U.S. economic policy last year, favoured international commodity pacts, but most economists will recognise that the Randall Commission's doubts about the efficacy of such agreements are justified. The Commission has not suggested any change in the price of gold. Finally it has not proposed that Congress approve the allocation of large sums of dollars to back an early British dash to convertibility.

*

This last omission is one on which some disappointment may reasonably be felt, not because U.S. support is the one thing required for the restoration of convertibility but because, granted that Britain and the rest of the sterling area do adjust their internal economies to the point where convertibility could be envisaged, then the assurance of U.S. support to safeguard the reserves against any early stresses would be a necessary guarantee. Lord Balfour of Burleigh (who cannot be suspected of any illusions about the need for Britain to master her own "creeping inflation" before attempting convertibility) says in his address to the forthcoming meeting of Lloyds Bank: "The great impediment to convertibility ... is the dangerously low level of our reserves. Experience over the past year has confirmed, what was already apparent, that we cannot hope out of current trading surpluses alone to raise these to a level that would justify the plunge into full convertibility. The only alternative would be some special measure designed to strengthen the liquidity of the sterling area, which implies the co-operation of the dollar countries and above all of the United States. Last year I expressed the hope that this problem would receive the priority it deserved in the programme of the newly elected President. It is the great disappointment of 1953 that those hopes have not been realised". The Randall Commission does not entirely repeat this disappointment, because it does suggest that the $3,300 million in gold and convertible currencies now held by the I.M.F. should be used to assist the move to convertibility, but this is no substitute for the full support that Mr Butler and Mr Eden asked for on their visit to Washington.

But the question of U.S. support of sterling reserves will not even arise until Britain and her partners have done their own part of the job; the control of domestic inflation and the encouragement of greater efficiency and competitiveness in domestic industry. Until those things have been achieved, the largest U.S fund in support of convertible sterling would simply be wasted; if it were larger it would last longer, but it would eventually be exhausted. The Randall Commission has not offered to solve our problems for us but it has made recommendations that will be useful to some extent (if Congress accepts them). In the meantime there remains what Lord Balfour calls a "hard fact" and which he describes in words roughly similar to those used by the Chancellor of the Exchequer in Calcutta on Monday: "that no one in the world owes us a living and that, utterly dependent as we are on the sale of exports in a buyers' market, nothing will get us through but tremendous efficiency and the fullest competitive power".

CONGRESS AT KALYANI

THE PARTY'S ADVICE TO THE GOVERNMENT

(BY A CORRESPONDENT AT KALYANI)

A WEEK before the Congress party met for its 59th plenary session at Kalyani, two bombs, believed to have been left behind by the American troops stationed there during World War II, went off with no harm done to anyone. That was the last time anything resembling an explosion was heard in that sleepy satellite town where Congressmen later proceeded to pass nine official resolutions. Absence of noise can scarcely be a serious criticism of the deliberations of an old and mature political party, which is also in power, but the suspicion seemed to press itself upon many observers that the lack of open controversy proceeded less from conscious unanimity on all points than from the restraint imposed from above—"Congressman doesn't eat Congressman." Beneath that placid surface, things were less quiet. The dispute between West Bengal, Bihar and Orissa over redistribution of border areas must have reached serious proportions, for it was the immediate cause of an emergency session of the Working Committee on Saturday. It is not improbable that there were other similar issues exercising the minds of Congressmen, although not necessarily that of the leader.

Mr. Nehru, President for the sixth time, seemed more concerned with international affairs, as becomes a statesman of his stature. It must still have seemed curious to many that, apart from the usual condolences and greetings, the first four important resolutions related to foreign affairs. Indicative as it is of the extent to which Mr. Nehru now decides what is good for Congressmen to discuss, it is also open to the criticism that the delegates are being sent back to their constituencies with somewhat insubstantial wares to sell. Moving the resolution on Korea Dr. Anup Singh recalled a conversation with his housemaid in Seoul. To a lengthy statement on the prospects before Korea her only reaction was, "Can you tell me, Dr. Singh, if the price of rice will go up or come down if the Communists come?" Similar questions may confront Congressmen when, in accordance with their President's directive, they go forth to the villages for "mass contact"; the annual session concluded on Monday cannot be said to have equipped them with the necessary answers. Instead, they were treated to a spate of familiar oratory on a series of remote problems like the difficulties of the Neutral Nations Repatriation Commission in Korea and the prospects of the Foreign Ministers' conference in Berlin. Not that these are in any way unimportant questions, but surely there is something wanting in a list of priorities in which "the economic betterment of our people" is described as "our first duty and concern" and yet the subject does not receive a mention in the Presidential address until the middle of the fourth page. The relevant resolution was eighth, last but one, on the official list.

In the result, an air of unreality pervaded the proceedings. On foreign affairs, which took up so much time, nothing very definite emerged. That there are three negatives in the announcement "we...adhere to a non-violent approach, and our basic policy of non-alignment and non-partisanship" is probably the hang-over of a lifetime of non-cooperation, but that they do not add up to a foreign *policy* does not seem to have occurred to anyone. This is not necessarily a defect, for there is much to be said for that empirical approach to foreign affairs which eschews abstractions and is content to look for practical solutions of concrete problems, and perhaps this is what India means when she iterates her (unquestioned) right to consider every problem "on its merits." Introduction of largely irrelevant ethical issues confuses oftener than it clarifies. Mr. Nehru was very clear when he opposed U.S. military aid to Pakistan on the ground that the aid "might possibly be utilised against India," and Congressmen recorded their approval with loud cheers.

* * * *

Mr. Morarji Desai had said earlier at a meeting of the Subjects Committee that it was a satyagrahi's *dharma* always to see the good points of others. This was not always apparent in the other resolutions on foreign affairs. The Congress is entirely right in describing foreign possessions in India as "a constant irritant," but other portions of the resolution summarily titled "Colonial Domination and Racial Discrimination" contain harsh and hasty judgments based, apparently, on fragmentary data and not a few ancient prejudices. Nor is it wholly fair to condemn incidents in, say, East Africa without a reference to the outrages committed by the terrorists, for they have not always been strictly non-violent. And again, the error is repeated here that a string of judgments is the same thing as a policy although there is not the slightest indication anywhere of a suggested course of action. This is even more apparent in the resolution on Planning and Development, perhaps because here was a subject on which something more definite was at once possible and urgently needed. Nobody would grudge the Congress the "satisfaction" with which it noted the achievement of many of the targets of the five year plan, notably in regard to the production of foodgrains, cotton, jute, sugarcane, cloth, cement, fertilisers, etc.; the satisfaction is, in fact, widely shared, although it is in some minds accompanied by certain reservations. But a party's work is not done just by congratulating its administrative wing; a more important aspect of its duties is to use its relative freedom in pointing out to the Government its deficiencies and its deviations, if any, from the theoretical basis governing the party's policies. It is this function which is not discharged when the offices of party president and head of the government reside in one person. There may be very good organisational reasons why Mr. Nehru has taken it upon himself to hold both offices, and the merging may have many advantages, but one of its inevitable consequences is that, in the absence of the corrective influence expected of the party, resolutions passed by the latter hardly ever rise above the level of repetitiveness (with which Mr. Nehru in his address charged his critics). Here again in the economic resolution there is the same emphasis on greater production unrelated to the question of demand and consumption; again there is talk of doing something (just what, is not clear) "with a view to providing employment," as though building a pyramid would be justified if it provided a few jobs.

The two points on which the Congress came near to recommending something definite to the Government are procedures of governmental business and recruitment, and demarcation, "wherever possible," of spheres of production as between large and small industries. Both suggestions are beset with ugly possibilities. A little more expedition could, with profit, be introduced in almost every department of almost every government in the world, but there are very good reasons why the various checks and counter-checks on the functioning of a bureaucracy should not be done away with before very careful consideration, why in short a government should not become a commercial enterprise in all respects; the two work on vastly different planes and principles. Whilst each can learn something from the other, a business house behaving like a bureaucracy will soon have to shut up shop; as assuredly, a government trying to function like a shop will not be in business very long. In the matter of recruitment of personnel, the Government will no doubt be guided by its own experience with the emergency recruitment of the I.A.S., rather than by the imprecise recommendations of the party. The best of policies will come to nothing if the executive to implement them is chosen on dubious or ill-defined bases. The demand for demarcation of spheres of production between large and cottage industries, which is only another name for protection of the latter at the expense of the former, is not new, but its revival now suffers from the disadvantage that its sponsors will not find it easy to explain away the unhappy experience of the Centre which, under pressure from Madras, was forced into a step that did immense harm to the cotton textile industry and not nearly enough good to the handloom industry of South India. This pathetic faith in cottage industries as a solver of the unemployment problem (which is at its acutest in the urban areas and *not* in the villages) persists, and it does not seem to matter to Congressmen how often it is pointed out that not only is it useless as a provider of employment but that it is also contrary to the economic experience of all industrially powerful nations, among whom, very rightly, India wishes to count herself in a not distant future.

It cannot be said in truth that the Congress party's Call to the Nation, which is the name of the ninth resolution, was such as to give every Congressman, let alone every Indian, a decisive and clear-cut lead. It was all the same an exhilarating experience for West Bengal to have the Congress in session at Kalyani. It can have done this State nothing but good to have here, however briefly, so many influential fellow-Indians from the rest of the country. Those visitors too must have profited from a closer acquaintance with this State's people and problems, about both of which the Congress will yet be called upon to do a great deal. Having once been more than a party, the Congress today is less than a party, and the great organisation is undoubtedly showing signs of age at 69. But it did one's heart good to see that its President, at 64, is still astonishingly youthful with many years of service ahead of him. The country will need it too.

CURRENT COIN

Tea in the Dooars.—Addressing the annual general meeting of the Dooars Branch of the Indian Tea Association at Binnaguri on 21st January, Mr. S. H. Davies, Chairman of the Indian Tea Association, said that the two main causes of the recent crisis in the tea industry were the production of more tea than was required by world consumers, and the existence of far too much of the poorer quality teas. He explained the need for the crop regulation scheme and urged planters in the Dooars to lay great emphasis on quality. Discussing prospects for the future, Mr. Davies thought that "we have some justification for looking forward to a period of fair—but only fair—prosperity, provided that both Government and labour base their expectations on an average of 1952 and 1953, and not only on 1953's results." However, it was wrong to assume that "everything in the gardens is lovely", for more time was needed to recover from the effects of the depression. Financially, company overdrafts had to be repaid and reserves would then have to be replenished. Factories had to be improved and machinery modernised if the standard of manufacture was to be raised, and this would cost large sums of money. "Then, turning to the field, we have to face up to the fact that a very large acreage of tea was planted at or before the turn of the century, and that in these plantings the bushes are now over 50 years old. To maintain our gardens, therefore, we must now intensify our replanting programmes and while we shall incur considerable expenditure on uprooting, replanting and the care and maintenance of the young tea, we shall also suffer loss while the replanted areas are out of bearing. We can achieve all this, however, provided we are not pressed too hard by Government and labour to grant costly amenities to labour, and provided labour leaders show responsibility and try and work with us as a team." Speaking earlier, the Chairman of the Dooars Branch, Mr. G. Carlton, stated that "1953 sales will not see us out of the wood by a very long way and no dividends means a loss of confidence.....The Dooars must produce tea at an equal or lower cost than our competitors and here I refer to our competitors outside India, producers of common teas." Mr. Carlton implied that relations with labour had not been satisfactory, but "almost all cases of disturbances were caused by labour agitators and not by the labour themselves." Difficulties in the administration of Central Excise still remained and there was an urgent need to clear invoices in advance of despatch. Some arrangement of "duty paid godowns" was necessary as no officer could possibly attend to three or four gardens and leave time to transport the invoice and load it within the six hours allotted. Mr. Carlton went on to speak of poor communications but added: "The Assam Link has done us well in both directions and at one time despatches of tea were well ahead of last year's and the Dooars crop is ahead of last year. Due to congestion at the Tea Warehouses, Calcutta, there was a hold-up in November and we still do not get all the wagons we need and as we need them. Nevertheless the number this year to the end of November was the highest yet, 8,823 wagons. It is also impossible to obtain booking for smalls, such as a piece of machinery being sent for repair."

* * * *

Speculation in Bullion.—The report of the Bombay Bullion Association, under whose auspices the forward market in gold and silver is run, though based on the Vikram Samvat calendar, brings out some very interesting features of this trade last year. The most important is the extremely small volume of actual deliveries of silver and gold bars which take place despite the huge daily turnover in speculative business. The total number of silver bars tendered through the clearing house during the Samvat year 2009, which ended on 6th November 1953, amounted to 7,740, and the quantity of gold so tendered came to only 11,000 tolas. Quite possibly a large part of even this volume of deliveries was the same small quantity of metal, changing hands several times. This is not surprising in view of the fact that (except to a very small extent in the case of gold) neither of these metals is produced in the country or allowed to be imported from abroad—not legally at any rate. The frenzied activity which goes on from day to day is the more remarkable because hedging operations either form no part of it or at the most amount to only a token quantity since there is little new production and few imports. This fact discounts a good deal from the value of forward trading in bullion. But for forward trading and the artificially high price of gold and silver in India in relation to world prices, smuggling of gold would not occur. One reason why the State Government, which exercised control over this market till lately when the Forward Markets Commission under the Union Government was brought into being, did not look askance at this highly speculative business—despite recurrent crises and consequent litigation—was the sizeable income it derived from the stamp duty on every forward transaction. However, the report points out that forward business and hence revenue from the duty have been falling from year to year. In Samvat 2009 (corresponding approximately to 1953), the State's income from stamp duty was only Rs. 13.16 lakhs, although there were 13 months and 13 settlements in that year. In 2008 (1952) it was Rs. 14.55 lakhs, even though the market remained closed for two months because of the slump. In the previous year it was as high as Rs. 29.08 lakhs. Price fluctuations have been fairly wide: last year opened at Rs. 157-1 for 100 tolas of silver and Rs. 86-7 for gold and closed at Rs. 149-0 for silver and Rs. 80-9 for gold. The highest rate recorded for forward gold during the year was Rs. 91-7 and the lowest Rs. 76-14, while silver fluctuated between Rs. 170-12 and Rs. 140-10. The refinery which the Association runs forms one of its constructive activities. The quantity of gold melted and refined in it was reduced by half, while that of silver and platinum showed an increase over the figures for the previous year.

* * * *

Black Markets in Currencies.—The January issue of *Pick's World Currency Report* reviews the movements of metal and currency prices in 1953 and calculates that black, grey and "parallèle" markets of currencies, precious metals and gold had a year of record transactions. The global volume of illegal business reached about $13 billion, an amount equal to the value of American automobile production in the same 12 months. The principal event in these markets was the world-wide decline of gold prices. Accelerated by Soviet sales of the yellow metal, the decline of bar-gold prices averaged between 6 percent and 9 percent, whereas gold coins, the hoarding objects of the little man, dropped between 10 percent and 16 percent and closed the year at a premium of only 20 percent above official prices, as against 35 percent to 40 percent a year ago. Gold hoarding continued unabated. The *Report* also published the principal changes in currency values in free and black markets, which again were the theatre of major events. The U.S. dollar rose in free trading in 24 countries, remained unchanged in 3 and declined in 24 foreign markets. The currencies of the sterling bloc gained between 1¼ percent and 2½ percent, and came near their official value. Among the strongest currencies were the German Eastern Mark, which gained 24 percent; the Argentine Peso up 15 percent; the Spanish Peseta up 10 percent; the Deutsche Mark up 9 percent and the French Franc up 3 percent—all better than gold. Unfortunately, the majority of other currencies again showed heavy losses. The Czech Koruna lost 93 percent of its value. The Boliviano fell 58 percent; Greece's Drachma dropped 50 percent; Poland's Zloty 46 percent; Chile's Peso 38 percent; Brazil's Cruzeiro 34 percent; Indonesia's Rupiah 29 percent; Yugoslavia's Dinar 25 percent; Moscow's Rouble 13 percent; many other units lost 17 percent and less. "Inflation continued to destroy the assets of more than 1.5 billion human beings," says the *Report*. Among the non-ferrous metals, tin lost 40 percent in free markets; copper and zinc 20 percent; nickel dropped 19 percent; platinum 15 percent. Only silver gained 2 percent in value. Security hedges against currency depreciation were also disappointing. Wall Street saw a decline of 16 percent for Rails, 4 percent for Industrials and 1 percent for Public Utilities. Diamonds, an old illusion of hedging quality, dropped in Manhattan, their most important market. Four carat gems declined 8 percent, one carat stones 7 percent and the smaller sizes cheapened about 9 percent to 10 percent since the end of 1952. The year 1953, which saw a world-wide change from boom to recession, was a difficult period of capital conservation and, in general, showed larger losses than gains.

* * * *

Outlook for Wool.—In a world where the artificial product is often as good, and sometimes better, than the natural one, the persistent truth of the slogan "There is no substitute for wool" is all the more surprising. In a recent communication from the International Wool Secretariat it is pointed out that the increased use of synthetic fibres, far from being a source of competition to wool, is actually encouraging its consumption. No fibre yet devised by man has all the qualities of wool, and none has yet proved a complete substitute for it. But many products made from synthetics can be improved enormously by mixing a little wool with the manufactured fibre, and it is this growing practice of mixing which is proving so beneficial to the demand for the natural product. Since the war there has been an annual increase in the consumption of wool, except in 1951, when the fantastic rise in price which followed the opening of the Korean war proved a big check. When the price fell, recovery was rapid, but the lesson should not be lost on producers. Wool is still indispensible over a certain range of textiles, and it is useful as an ingredient in mixtures over another large and increasing range. But the group of textiles for which it is not necessary, and the number in which the proportion of wool can be varied according to current prices, are certainly growing. If wool producers wish to safeguard the demand for their product they must concentrate on keeping prices low and relatively steady. Suppliers emerged from the Korean boom with their markets intact, but they may not be so lucky next time. The immediate prospects of the world demand for wool are of course overshadowed by economic developments in the United States. Any measure of recession there is bound to be reflected in prices, as was seen when the Korean stockpiling was brought to a sudden end. But the long-term demand for wool would appear to depend on the growth of real income throughout the world, and especially in countries like India where per capita consumption among a vast population is strictly limited by the poverty of the mass of consumers. As standards of living improve in countries where wool is still regarded as a luxury fibre, demand will rise, as has been clearly shown in the case of Japan. It is in the best interests of producers that the growth of wool's popularity with this host of marginal consumers should not be impeded by high prices, or the slogan referred to above will be proven wrong and substitutes will capture this latent demand.

* * * *

Land Transformation.—The land irrigation problems of Italy have much in common with those of India. In both countries they involve the reclamation of land from the sea, from swamp, and most important, from aridity and underdevelopment. Italy has a long record of irrigation activity dating back to Roman times, though she can hardly claim to have been earlier in the field than India. What she can claim, probably, is more experience of the modern systems where irrigation is merely one feature in a programme of public works scheduled for a particular undeveloped area. India has much to learn from this experience which will be of inestimable value in the present Community Development Projects and National Extension Schemes. It has of course been realised in Italy that land reclamation has to be carried out as a public project with Government finance, and is not simply the private provision of drainage or irrigation canals. Also included in the schemes must be those works necessary to provide the drained, or freshly watered, land with roads, aqueducts, electric cables, settled townships, and the many types of service needed for the full utilisation of the land. This idea that land reclamation is really land transformation has been specially important in dealing with the problems of Southern Italy where land already utilised, and supporting a large agricultural population, was still underdeveloped, for reasons relating to its physical, historical, economic and social background. In this area a network of 26,000 km. of drainage canals carries the water, formerly stagnant or flowing too slowly, to the sea, rivers, and water pumping stations. Water pumping stations numbering 500 serve an area of one million hectares, where the low level of land prevents the waters from finding their natural way of discharge. Several thousand kilometers of embankment works have either been built new, or consolidated or elevated in order to protect the reclaimed areas from the danger of floods. One hundred rural hamlets, one of which has been raised to a provincial chief town, and some others to communal centres, have been built to promote the settlement of populations on lands that were formerly fast reverting to desert. A network of roads some 10,000 km. in length, has been opened to traffic, together with those services which often represent the first steps in land transformation, aqueducts and electric power lines. The long-term advantages have not been the only ones associated with these schemes. The economic and social outcome of the initial expenditure is easily identified in the increase of gross marketable production, in labour income, and in the temporary and permanent employment of manpower. As this man-power has been responsible, under Italian conditions, for at least 50 percent of the cost of the operations, it was easy to determine the volume of new employment involved. But in addition to this temporary advantage which is common to all public works, the programmes increased the permanent employment of man-power in agriculture and in the related economic activities derived from the transformation of the agrarian structure, and the recovery of new lands. The realisation of these facts has conferred on irrigation and reclamation work a precedency over all other activities in Italy, as it has in India.

* * * *

International Sugar Agreement.—The International Sugar Agreement, concluded by the United Nations Sugar Conference in London last summer, came into force on 1st January, by which date the necessary number of countries had either ratified the agreement or given notice of their intention to do so. Final arrangements for bringing the agreement into operation, it will be remembered, were made at a series of meetings in London last December by the International Sugar Council, which was established by the earlier conference to administer the agreement. Acting under the powers conferred upon it, the Council decided to reduce by 15 percent in 1954 the basic export quotas assigned in the agreement to the sugar-exporting countries. These quotas may be varied from time to time in accordance with market conditions. The Council's decision was arrived at after considering the 1954 supply and demand for sugar on the free market, and the amount of sugar likely to be exported by countries not participating in the agreement. The "free market" had as its main objects: to assure supplies to importing nations, and markets to exporting nations, at equitable and stable prices: to increase the world consumption of sugar; and to maintain the purchasing power in world markets of countries or areas whose economies are largely dependent upon the production or export of sugar.

Company Meetings

MERGUI CROWN ESTATES LTD.

The Twenty-second Annual General Meeting of Mergui Crown Estates Ltd., was held on January 19th, 1954 in London. Mr. W. J. C. Richards (Chairman of the company) presided. The following is an extract from the Chairman's Review :—

I regret to say that the only favourable feature in the report for the year which ended on the 30th June is the large increase in crop in Burma. It was 747,149 lbs. against 460,396 lbs. in the previous year, and the crop in Malaya rose slightly by 7,300 lbs. to 443,600 lbs. The combined crop was 1,190,749 lbs. which is 33% higher than in the year before, but due to the catastrophic fall in the value of rubber the net proceeds fell by £18,941, a reduction of 16% compared with the previous year.

The cost per pound of production declined in Burma, as it should as the crop expanded. The cost of production in Malaya increased and this emphasises the fact that the arrangement in Malaya by which wages are supposed to be linked to the price of rubber is not effective.

We have received no income during the year from our Burma subsidiary company, Consolidated Plantations Limited. The Directors of that Company reluctantly decided to retain the whole of the profit for the year, £16,862, as the conditions under which the Company is operating are hazardous, and as far as can be seen an early improvement is improbable.

The subsidiary company operating in Malaya made, a profit of £3,835 and after providing £2,250 for taxation the Company paid 15% dividend which brought in £1,500 gross.

Including this dividend the net profits of the parent company amounted to £388 before taxation, making the available balance at credit of Profit and Loss Account £2,267. The Directors recommend that all except £51 of this balance should be distributed by the payment of a 5% dividend. They recognise that profits have been made in Burma although they have not come under the control of the parent company and if the worst happens in Burma, and the possibility must not be dismissed, the parent company will be entitled to the Burma company's liquid assets, the remittance of which, however, would be subject to Burma exchange control regulations.

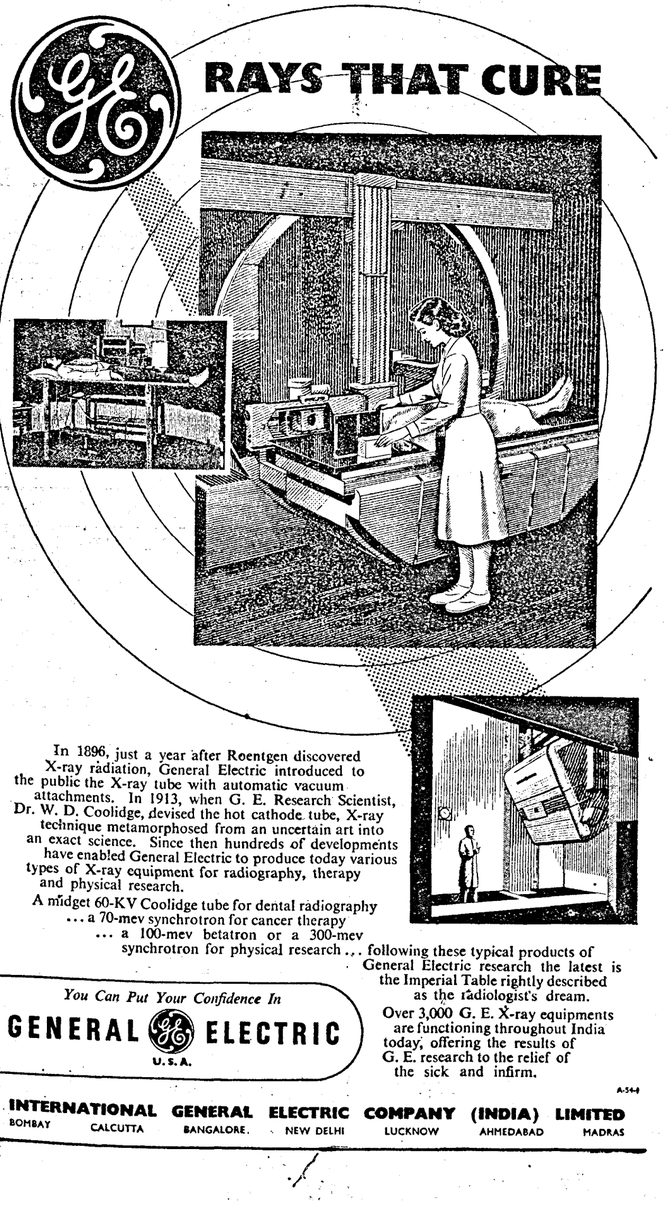
The conditions of lawlessness in that part of Lower Burma in which the estates are located and which I described to you last year still prevail. Since the plantation manager was driven from the property at the point of a pistol early in 1951, the Government has requested him and his successor not to return to the plantation while it is beyond Government's effective administration. Exercising indirect control from Rangoon and Mergui, both estates were kept in production throughout the tapping season. The Company were forced to pay such wages as the labour force, backed by the rebels, required. Rubber was impounded and not released until each successive demand was met. Government forces are at present in control of the area in which the Palaw Division is situated and production is proceeding. In an endeavour to regain control of the Milaungchaung area last August, Government prevented the movement of food and stores to the district and, deprived of the means of subsistence, the labour force was compelled to leave. Since then the Milaungchaung estate has not been in production.

The local Board's policy, with which we agree, is still based on protecting the property and it is believed that this can best be secured by keeping the estates in production Until the evacuation of the Milaungchaung area this policy was followed profitably but the loss of half the crop and the artificially depressed price of rubber now makes this impossible.

The estate in Malaya has again not directly suffered from banditry. At the request of Government, simple defences were erected at the Company's expense. There is an armed force on the estate consisting of one-third Special Constables employed by Government and two-thirds Home Guard recruited from employees. New buildings have been erected and the plantation is reported to be in excellent condition. This is demonstrated by the overall yield per acre of 606 lbs. although nearly half the producing area is forty years old.

I think the results demonstrate that if our subsidiary companies can again operate without disturbance we shall be able to produce profitably in times of depression such as we are now facing in the rubber plantation industry.

The Report and Accounts were adopted.



In 1896, just a year after Roentgen discovered X-ray radiation, General Electric introduced to the public the X-ray tube with automatic vacuum attachments. In 1913, when G. E. Research Scientist, Dr. W. D. Coolidge, devised the hot cathode tube, X-ray technique metamorphosed from an uncertain art into an exact science. Since then hundreds of developments have enabled General Electric to produce today various types of X-ray equipment for radiography, therapy and physical research.

A midget 60-KV Coolidge tube for dental radiography ... a 70-mev synchrotron for cancer therapy ... a 100-mev betatron or a 300-mev synchrotron for physical research ... following these typical products of General Electric research the latest is the Imperial Table rightly described as the radiologist's dream.

Over 3,000 G. E. X-ray equipments are functioning throughout India today, offering the results of G. E. research to the relief of the sick and infirm.

LLOYDS BANK LIMITED

PROGRESS OF INDUSTRIAL DEVELOPMENT

LORD BALFOUR OF BURLEIGH'S REVIEW

The annual general meeting of Lloyds Bank Limited will be held on February 12 at the head office, 71, Lombard Street, London, E.C. In his statement accompanying the report and accounts for the year ended December 31, 1953, the Chairman, The Rt. Hon. Lord Balfour of Burleigh, D.C.L., D.L., states :

Our profit at £2,083.781 is £119,116 higher than last year, but should the steady decline in our Loans and Advances persist and the growth of our staff costs and running expenses continue, our future earnings may not be maintained at the present level.

With regard to the increase of 2 per cent. in the dividend, making 14 per cent. for the year, which members will be asked to approve, I emphasise what I have indicated on previous occasions, that it has been considerations of public policy which have been largely in your directors' mind in recent years in refraining from altering our rate of distribution. But—and especially in our own case, as our reduction was more drastic than that of others—it has become at last a matter of simple justice to the shareholder that we should permit some alleviation of the restraint which we have so long imposed on ourselves and on him.

It is considered desirable to strengthen our published reserves, and a sum of £500,000 has been added to General Reserve, making the total of the Reserve Fund £16,500,000. An amount of £300,000 has been allocated to Reserve for Future Contingencies.

Current, Deposit and Other Accounts at £1,204 millions show an increase of £35 millions. The principal changes in our assets are increases of £50 millions in our holding of Treasury Bills and £4 millions in our investments.

In conformity with the general trend of bankers' advances, as a result of the restrictive lending policy our Loans and Advances show a reduction of £21 millions, the largest falls being in the categories of Public Utilities and Personal and Professional borrowers.

India, Pakistan And Burma

There was no pronounced improvement in trading conditions in India and Pakistan during the past year and import and export trade remained at a low level, with a consequent reduction in the activities of the British Exchange Banks. There are, however, some encouraging signs, including an improvement in the prices of certain of the primary products which bulk so large in the economy of both countries.

Industrial development, too, both in India and Pakistan, is proceeding at an increasing pace which in the long run should increase the demand for British exports, which it is essential should be competitive both in price and delivery with those of other European countries: at the same time these developments should give rise to an increase in the demand for banking services.

Our branches in both countries have maintained their position and the high standard of service they have always shown in the past.

In Burma there has been relatively little change, our branch in Rangoon having maintained its business at about the same level; conditions generally have, however, militated against any expansion.

My warm thanks go to the officials and staff of all our Eastern branches who continue to give of their best in very trying conditions

Effects of New Policies

There has undoubtedly been some improvement in the financial climate since the return to more orthodox monetary techniques two years ago. The cost of living has been steady for many months past. It has been possible to remove many important commodities from rationing or control without untoward effects. Externally, the balance of payments has been steadily on the credit side for eighteen months. Sterling holds firm in relation to the dollar and is no longer quoted in any market at more than a trifling discount.

All this makes a heartening catalogue of improvement; nevertheless the level of public expenditure and the dead weight of taxation remain one of the chief obstacles to our future stability and progress. Moreover, it is a matter for regret that the new monetary policies introduced in November 1951 have not in fact meant a reduction in bank deposits. I should be happier if we had been funding bank deposits over the past year instead of creating some £200 millions of additional purchasing power, particularly as it is the official view that the general situation calls for the maintenance of the restrictions on bank lending.

I cannot escape the conclusion that our position must still occasion grave concern. It is true that the acute peril of two years ago has been surmounted. The immediate threat to the stability of the pound sterling has receded. We have a breathing space gained by our own efforts, with the help of some good fortune. But before we can face the future with confidence, two things are necessary, both of them dependent upon an adequate supply of savings.

First, we need a great increase in the volume of productive investment at home, for we cannot hope to hold our position in world markets unless the rate of modernisation of our industrial equipment at least keeps pace with that of our competitors. Secondly, our overseas earnings must somehow be increased until these are sufficient not merely to pay for our food and raw materials in a good year but to leave a substantial surplus year in year out.

In this context, I recall Mr. Butler's statement that an annual surplus of the order of £300 millions is needed if we are to play our proper part in the development of the Commonwealth. Notwithstanding the progress made in checking inflation during the past two years, the continuance of the wages spiral is sufficient evidence that inflation persists. We have to ask ourselves whether the last two budgets have after all been sufficiently realistic. Moreover, it is clear that monetary policy in the sense of higher rates of interest alone cannot do everything. It is the inescapable duty of the Government to put a stop to inflation at its source, which is the additional supply of money derived from Government spending. The question which still awaits an answer is whether any Government can today hope to survive the unpopularity which effective disinflation would provoke.

Without effective disinflation, maximum production of the right things is not within our reach, though in addition it requires the fullest co-operation of capital and labour. To secure this co-operation is more than ever the essential task of management. Utterly dependent as we are on the sale of exports in a buyers' market, nothing will get us through but tremendous efficiency and the fullest competitive power.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT PERSISTS

Wednesday, 27th January.

CONDITIONS in the money markets have not changed this week, which was interrupted by two holidays. Money is a shade tighter, but there are no reports of actual stringency. A good deal of money is going out against cotton in Western India and against sugar in Eastern India. The interbank call rate stands at 2½ percent.

Moderate bills have been seen in the exchange market, and remittance has been normal. The principal exchange rates are unchanged.

* * * *

Tenders for the offer of Rs. 1 crore of three-month Government of India treasury bills were amounted to Rs. 1,31,50,000 this week. Tenders at Rs. 99-6-0 percent were allotted approximately 76 percent, the average rate of acceptance being Rs. 2-8-0 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received at Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to Monday, 1st February. During the week ended 22nd January, treasury bills for Rs. 10,00,25,000 were sold in favour of the Reserve Bank.

* * * *

Bullion was firm last week and silver in particular rose sharply from the previous week's level of Rs. 157-14 to Rs. 160-8 quoted to-day. Bull operators bought heavily in anticipation of further inflation and there was keen offtake of ready stocks. The price was, however, unchanged at 73⅝d. in London and at 85¼ cents in New York.

Gold also moved up from Rs. 84-1 to Rs. 84-10 in sympathy with silver. Reports of seizure of contraband gold also helped sentiment. The sovereign at Rs. 56-10 showed a gain of 2 annas.

* * * *

A fall of Rs. 3.60 crores in notes in circulation to Rs. 1154.84 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 22nd January, 1954, while the total note issue was fractionally up by Rs. 34 lakhs to Rs. 1174.24 crores. Notes held in the Banking Department consequently rose by Rs. 3.94 crores to total Rs. 19.40 crores. Deposits of the Government of India and other Government accounts improved by Rs. 66 lakhs and Rs. 43 lakhs to stand at Rs. 98.85 crores and Rs. 21.90 crores, respectively, while balances of commercial banks fell by Rs. 43 lakhs to Rs. 42.10 crores. Investments at Rs. 72.81 crores disclosed a decline of Rs. 1.13 crores. Other loans and advances increased from Rs. 20.11 crores to Rs. 21.57 crores, of which advances to scheduled banks against usance bills were unchanged at Rs. 1.19 crores. Ways and means advances were shown at Rs. 72 lakhs (Rs. 1.26 crores).

* * * *

The statement of the position of Scheduled Banks for the week ended 15th January, 1954, disclosed Demand and Time liabilities at Rs. 518.10 crores (Rs. 8.93 crores on account of borrowings from Banks) and Rs. 328.03 crores (Rs. 1.40 crores) compared with Rs. 513.64 crores (Rs. 8.02 crores) and Rs. 329.04 crores (Rs. 1.43 crores) respectively in the previous week. Cash has risen by Rs. 1.02 crores to aggregate Rs. 33.12 crores as also balances with Reserve Bank by Rs. 1.45 crores to Rs. 41.17 crores. There is a decline of Rs. 4.33 crores in investments to Rs. 324.69 crores. Advances including bills discounted at Rs. 487.42 crores reveal a rise of Rs. 4.93 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, consequently, shown at 11.4 percent and 57.6 percent against 11.7 percent and 57.3 percent.

* * * *

Deposits at Rs. 206.86 crores show little change according to the return of the Imperial Bank of India for the week ended 15th January, 1954. Investments in Government securities are down by Rs. 4.51 crores to Rs. 79.52 crores. Loans, cash credits and overdrafts have risen by Rs. 2.68 crores to Rs. 97.91 crores, while bills discounted and purchased have fallen by Rs. 20 lakhs to Rs. 16.54 crores. Cash and balances are in consequence, shown at Rs. 15.37 crores or about Rs. 1.19 crores higher than in the previous week.

* * * *

The profit of the BANK OF BARODA LTD., for the year 1953, subject to audit, including the sum of Rs. 2,38,382-5-5 brought forward amounts to Rs. 24,83,388-10-0 which the directors have disposed of as under: An ad interim dividend was paid for the half-year ended 30th June, 1953, at the rate of 10 percent per annum free of income tax and this absorbed Rs. 5,00,000-0-0, provision for taxation Rs. 3,00,000-0-0, investment account Rs. 1,50,000-0-0 and bonus to staff Rs. 6,00,000-0-0. It has been proposed to pay a final dividend for the half-year ended 31st December, 1953 at the rate of 10 per cent per annum free of income tax amounting to Rs. 5,00,000 and a bonus of Re. 1 per share free of income tax amounting to Rs. 2,00,000 and to carry forward Rs. 2,33,388-10-0.

LONDON FINANCIAL LETTER

DOUBTFUL PROGRESS TOWARDS CONVERTIBILITY?

THE attitude of the Commonwealth Finance Ministers, in Sydney, towards the convertibility of sterling seemed, in London, much more apathetic than on comparable occasions previously. When the president of the Royal Bank of Canada said that we seemed to be nearer to convertibility today than we had been since the imposition of wartime exchange control, it was assumed that he had in mind, among other things, the initiative of the Executive Board of the International Monetary Fund in agreeing, in principle, that stand-by credits could be made available for extended periods to support currencies newly convertible. The apparent change in the Fund's policy aroused uncommon interest here, but it was recognised as conditional on a general broadening of American policy on international economic affairs. It has been calculated here that if the Fund provided the fullest assistance at present available, and if $4,000 million were regarded as the minimum reserve for the sterling area that would be needed to support convertibility, the gap between resources available and resources needed for convertibility, would be appreciably less than $1,000 million. It is still insisted, however, that the only solid foundation for a convertible sterling is an adequate reserve of gold and dollars. During 1953 the reserve increased from $1,846 million to $2,518 million. This improvement has undoubtedly lifted the currency nearer to convertibility, but it has by no means brought it to that desirable condition. The question whether the primary products of the sterling area and—not less important now—the manufactured products of the United Kingdom will be able to maintain and increase their dollar earnings, is as vital as ever: unless it can be seriously supposed that a substantial part of the rouble area's gold reserve will be used to buy goods from the sterling area.

Confidence Growing

Britain's prospect for the early months of 1954 is curiously confused. The visible deficit on external trade was reduced last year by a contraction of the value of imports by £132 million to £3,347 million while the value of total exports diminished by only £39 million to £2,687 million—re-exports declined by that amount, while direct exports were, by coincidence, unchanged. These figures conceal, of course, an increase in the volume of oversea trade, at lower prices. Estimation of the overall surplus is cautious; however, in view of the disappointing half-year figures published in October. And no-one pretends to take a clear view of the export prospect for 1954. What can be said is that Britain, and other countries, have shown remarkable resistance to the downturn of American business, and that the mood here, in trade and industry and on the Stock Exchange, has been more confident in recent weeks than for some months previously. Total industrial production was slightly higher in 1953 than in the previous best year, 1951, despite the resurgence of the labour problem on a considerable scale in the later months. Labour disputes are still not visibly affecting output; but they are beginning to affect costs, because some wage-increases are necessarily being granted. If manufacturers attempt accordingly to raise their prices, or resist the downward movement of prices, they will certainly lose business, at home as well as abroad. If, on the other hand, they absorb the rise in costs, the narrowing of profit-margins that has been observable in many trades in the past year may be a serious element in the business position in 1954. Some companies are in a strong position, and are even extending their delivery periods because they cannot promptly meet demands. But others are laying off workers because demand has slackened.

Last year was prosperous; not evenly, but in general more prosperous than most people dared to hope. But the home market, which accounts for most of the prosperity, is now amply supplied

with most goods: the increase in production has had its natural deflationary effect. And oversea demand is uncertain. For individual businesses, as well as for the national balance of payments, exports are the soft spot. The increase in the active note circulation by £90 million between the Christmas peaks of 1952 and of 1953, while internal prices were mainly stable, certainly does not suggest a weakening of activity at home. However, while increased industrial activity played a major part in the increase, hoarding of notes after the authorities began their probe into payment of interest on savings deposits must have exaggerated the movement.

Bank Dividends Rise

Interest in the bank's preliminary statements for 1953 was centred on dividend policy. Would they consolidate the rise in dividends which one of them initiated a year previously? The answer was yes, and no. Three of the "Big Five" declared higher dividends; one had made its decision known before the year-end, and their smaller brethren followed the upward trend. But the relaxation from the levels of dividend established decades ago was not consistent and complete. Increases in published profits also varied considerably, though there was no divergence from the upward trend. It is usually assumed that the operating experience of all the banks is approximately the same, because monetary conditions are the same for all of them—excepting, of course, smaller banks specialising in, say, a textile area; and that differences in published profits are due almost entirely to differences in appropriations to contingency reserves. But it should not be overlooked that the banks' customers are not all the same. At least one of the banks which held down their dividends does a relatively large proportion of its business with private individuals, for whom credit conditions have not been appreciably relaxed. The average increase in published profits by 6½ percent for the "Big Five"—a little more for all the clearing banks together—reflects the favourable average rates obtainable on loans and the increased turnover of other banking services. But the most important change last year compared with 1952 must have been the recovery of the gilt-edged market: the special allocations to contingencies after the slump of 1952 were a serious element in the banking situation a year ago.

A FELLOW-GUEST at the luncheon given on Monday by the Chambers of Commerce to Mr Rab Butler on his way back from the Commonwealth talks in Sydney has pointed out that as the guest of honour arrived the band played "South Pacific" and "Bewitched, Bothered and Bewildered." Certainly his speech did not suggest that his talks in the South Pacific had had that effect upon him, though he seemed at some pains to have us understand that if nothing startling had happened down there it was only because there was nothing to get worried about. For the four hundred odd business men who foregathered at the Grand there was no doubt comfort in hearing from the Chancellor of the Exchequer in person familiar reassurances that would have appeared unremarkable in print. There was of course also the pleasure of hearing a practised speaker (who did the meeting the honour of preparing some notes for it); Mr Butler's oratory still bears the mark of his presidency of the Cambridge Union despite 25 years in the Commons. Reconsidering his reassurances later, one realised that they did not amount to much—"no major slump," "no deep depression," though no one has forecast either of those things. Something much more moderate than a severe decline in the United States could wipe out most of the good work Mr Butler has done for the sterling area's reserves in the last few years. But what was truly encouraging was his conviction that the sterling area as a whole was determined to face whatever trials the future held as a co-operating team; if things do go wrong, there will be no panic and no treading on each other's toes. The Australians showed two years ago what harm can be done by leaving remedies too late and then applying the most stringent; if they were to repeat the performance, or any other member of the sterling area to imitate it, just when American imports were declining, the damage could be immense. If the Sydney talks led to no more than a firm resolve that this should not happen, then they have been eminently satisfactory, and Mr Butler's fortitude is justified. His other significant assurance—though I was not quite clear whether by "we," here, he meant his Government or the members of the sterling area: I suppose the former—was that if the sterling convoy did run into white water there would be no panic resort to controls and regulations. Even if the Chancellor was referring only to the United Kingdom, this was a very bold statement but to judge from the earnestness with which he stressed the virtues of free markets, he has confidence in the ability of Britain to survive at least a moderate recession without undoing the work of liberation accomplished since 1951. This is a crucial point and I think it will decide the shape of the British economy for the rest of this century: if stresses from the United States this year force Mr Butler to scurry for shelter in controlled markets, the advocates of a regimented economy will have won much new ground, but if it can be demonstrated in 1954 that liberal economics are not for fair weather only, the price-fixers and bulk-buyers will find it hard to make a come-back.

* * * *

Lord Balfour of Burleigh provides an antidote to Mr. Butler's optimism. (His speech to the meeting of Lloyds Bank is summarised elsewhere, and some of his views are referred to in a leading article.) The chairman of Lloyds recalled Mr. Butler's target of a £300 million surplus per year, and said: "In fact we are still barely paying our way, even though world trading conditions could scarcely be more favourable. Unless we can do much better than we are doing, even a minor recession in world trade—such as can hardly be avoided at some time during the next few years—would mean a fresh relapse into acute difficulties, while the long-term outlook would be bleak indeed". I think Lord Balfour here singles out the two most important aspects of current economic affairs: the fact that things could not be better for the sterling area than they have been in the last twelve months, and the certainty that the minor recession the crystal-gazers have been forecasting—wrongly—for so long is bound to come in the next few years.

* * * *

Of the 61 years of M. N. Roy's eventful life, which ended with his death in Dehra Dun on Monday, the majority were spent in countries shaken by revolution, like Russia, China and Mexico, and not a few in hiding. In India his influence was never great, and towards the end he seemed to have been living in virtual seclusion. Mr. Nehru recalls in his autobiography how he first met Roy in Moscow in 1927, was impressed by his "remarkable intellectual capacity," and how, in subsequent meetings many years later, found him a very lonely man—in whom nationalist India was not interested, whom the Communists called a renegade and the British Government treated as a dangerous revolutionary. With the last-named he later came to terms, and during the war secured for the Government the co-operation of the few labour unions he used to control. This did not enhance his popularity either with the Congress which opposed the war effort or with the Communists who, though belatedly, did not. Just what his theoretical differences with the Communists were I do not know, and although right to the end he swore by Marx, age and isolation attracted him to a contrary and mellower creed, humanism. Whatever may have been the content of his brand of Marxian humanism, it may have comforted him in his last illness to think that it was thanks to the old bourgeois humanism of Nehru that he was going to meet a less violent death than many of his former colleagues in a long life of opposition to authority.

* * * *

Another former Marxist who has found his way to a gentler view of the world is Louis Fischer who is now on a visit to India. Mr. Fischer is well known as the biographer of Stalin, Gandhi, Hitler and Mr. Fischer. In my meeting with him I found him much concerned at the declining influence of the Gandhian ideology in high places and I could not help recalling the totally dissimilar case of his earlier disappointment with a very different ideology—"the God that failed". It is a hard world for idolaters. The idols die or the epigones lose faith, and there follows for those who need to believe that some men are like gods an empty era when no one looks like more than a mere man. I suppose we are in such an era now. Think back fifteen years or so, and remember the figures who were held by greater or smaller sections of the human race to be utterly and completely right: Hitler, Stalin, Mussolini, Keynes, Shaw, Churchill, Major Douglas and the rest. These idols have all fallen, and the one who still lives looks more like a tired old man whom his country badly needs but who definitely does not have all the answers. I suppose Mr. Nehru is the only real idol we have left. To get back to Louis Fischer, he looks none the worse for the want of a mid-century hero to worship, and his touch with the more enduring things in life seems to be intact for I see he gives as his recreation in *Who's Who*—poker.

* * * *

When Mr. E. G. Spooner, C.I.E. departed from Calcutta on Sunday he left behind more friends regretting his going than it is given to most Europeans to make, even in 30 years' stay. I think no one was surprised except himself at the evident sincerity of the many tokens of affection he received in his last month here, especially from the community of Indian business men with whom he had dealt in the steel trade. He was a bluff and vigorous man with no frills, a short patience with fools and an obvious pleasure in speaking his mind—and he was often somewhat astonished when people saw through this curt exterior to the good heart, honesty, and enthusiam for getting things done that lay beneath. It was on these qualities that was founded the respect he earned when he did important administrative work at the Iron and Steel Control during and after the war. His long service in India was with the house we now know as Martin Burn; a steel salesman by training, he was associated with the direction of the old Steel Corporation of Bengal and then of the amalgamated Indian Iron and Steel Company. He has left India to take up an appointment with a leading British steel company.

* * * *

Some of the eminent British bankers who will be visiting Calcutta in the near future have connections with this country dating back quite some years. Sir Jeremy Raisman, the Deputy Chairman of Lloyds, is of course well known in India, having joined the Indian Civil Service in 1916 and worked here up to 1945. He was the Finance Member of the Government of India all during the war; this is not his first return visit to India since he left eight years ago. Sir Harry Greenfield, who is now touring India in the course of a visit to the Asian branches of the Chartered Bank of which he is now a director, is no less familiar with India for he served in the I.C.S. from 1919 to 1947, retiring in the latter year from the office of Chairman of the Central Board of Revenue. The link with India of Mr. Cameron Cobbold, Governor of the Bank of England, some may think more tenuous, but he married the daughter of a Governor of Bengal, the second Earl of Lytton, and I remember hearing that he was a frequent visitor on this account to Government House in Calcutta in the late twenties.

* * * *

The bell has not tolled for Hemingway; not yet; not among the green hills of Africa. If Hemingway had died in either of the air crashes in the African jungle which he so romantically survived last week, many would have remarked how typical of the tough man of literature to die with his boots on. Now it seems far more characteristic of him to have emerged alive. If any novelist has held to the view that the writer must live the life he is writing about, it has been Ernest Hemingway, and if the Hemingway legend is to be believed, none has been more conscientious in putting his views into practice no matter what dangers they entail for him. Mr. Hemingway can congratulate himself on the good he will have done his reputation by outwitting death so spectacularly, though by now he must want to bid a farewell to aeroplanes. The growing Hemingway legend must have sold many books that would have remained on the shelves if they had had only their literary merit to commend them. But his satisfaction must be mixed with doubt. After two such miraculous deliverances the horrible suspicion may already be haunting him that fate has decided that, when the bell tolls at last for him to move across the river and into the trees, he is going to die—this unsentimental tough, this diarist of sex, alcohol and physical violence—he is going to die quietly in bed.

VISCOUNT SIMON OF STACKPOLE

CAREER OF A GREAT LAWYER

(FROM OUR LEGAL CORRESPONDENT)

LAWYERS make industrious, competent, able politicians of the first rank. Parliaments everywhere are full of them. But it is a curious fact that, however eminent in the law, the lawyer-politician hardly ever becomes a statesman. Men like Brougham, Halsbury, Haldane, Carson, Joynson-Hicks and Birkenhead spring to the mind as near misses. The one solitary instance of a British lawyer-statesman of world stature is David Lloyd George; and writing with profound respect and admiration for a fellow townsman of whom he has some personal knowledge, the writer is constrained regretfully to submit that John Allsebrook Simon, his great and indeed noble qualities notwithstanding, was no exception to the general rule. Perhaps the limitations implicit in the words "respect and admiration" supply, in part, a reason and a clue. They are not enough. The statesman must inspire affection, personal allegiance, even love. Simon had not the magic touch. Lesser men had it. Far lesser men. His great rival Lord Birkenhead had it and was affectionately known to friend and foe alike as "F.E." It is a sad reflection this. No one—not even one imagines his closest associates and certainly not the Press or the public—would have dreamed of alluding to Simon by a nickname. They would say "Winnie" but would not venture on "Simmie." Nor is it possible to visualise him in a time of dire crisis cheerfully striding through a crowd of the common people smoking a large cigar and giving the famous victory sign. The plain fact is that John Simon lacked what a poet, whose muse he would have wholeheartedly despised, described as "the common touch," and, so lacking, one of the wisest men and certainly the greatest British lawyer of the past hundred years failed through no remediable fault to make his full contribution to the common weal. Many of us still in this country who have witnessed the emergence of India into a Republic remember his visit as Chairman of the Statutory Commission of 1927. It was a complete failure. One wonders whether it would have been, had there been a Mountbatten to preside over it. One thing is certain. The latter forceful personality would not have allowed the Government to consign his commission's report to the wastepaper basket and completely ignore it. Nor would Simon's old friend "F.E." who, as Secretary of State, had appointed him to the task just before he himself finally abandoned politics and the law for a career in the City and premature death.

Simon and Birkenhead

It was fascinating at the time to watch the neck-and-neck race between these two great advocates so splendidly endowed physically and mentally. They were a complete contrast. F.E., a *bon vivant*, burning the candle at both ends, stories of whose joyous insolence are legion. There was no insolence, sparkling or otherwise, about Simon and there are no anecdotes about him. If he ever joked at all he assuredly did not in public. He was the soul of courtesy, remote and austere in manner and in fact. He was always just ahead of F.E. in the race. And if F.E. became Lord Chancellor at the unprecedentedly early age of forty-four it was only after Simon had refused the same exalted position, the greatest prize the law can offer, four years before. Perhaps the writer is prejudiced through having had the privilege as a boy of having, as we used to say, "sat under" his greatly revered father, but it has always seemed to him that Simon was by far the greater because he was the better man of the two. There was a spiritual strength in him which appeared to be lacking in the other. John Simon was "dated." He was a Puritan dating right back to his Cromwellian forefathers and with all their inflexible principles. In his case they were indeed inflexible. The man who could have it in him to refuse the Lord Chancellorship, incur odium, unpopularity and abuse by taking the lead in the midst of a great war in opposing the Conscription Act supported by his own party and then himself join the armed forces in the relatively humble rank of major may not have been a great statesman and was indeed showing himself a poor politician. But he was also showing himself a great man.

It is remarkable how these two careers of these so different men progressed side by side. Major Sir John Simon, K.C., went to France in the R.A.F. But so did Major Sir Frederick Smith, K.C., of the Oxford Yeomanry, throwing up some twenty thousand or so a year to do so. It is difficult to know which to admire most, the austere Puritan impelled by stern principle or the gay D'Artagnan of the law, professing none but joining up just the same seemingly as a mere joyous gesture. The fact is, of course, that both men acted as they did because each loved his country and was prepared to sacrifice everything for it. They were great men.

Reading a number of obituary notices in the Press what strikes one is that, although they all recount Lord Simon's public career in considerable detail, hardly a word appears about the man himself. Probably no other politician of the first rank, not even the equally remote and ascetic Stafford Cripps, has been so little known as a personality to the public he served; and as the writer chances to know a certain amount about his early days a few details may be not without interest.

The impression seems to be held by many that Simon was a Jew. At one time the idea was so prevalent that he had to take notice of it; and in typically graceful language he disclaimed what he described as an honour. He was in fact the son of the Reverend Edwin Simon, minister of Percy Chapel Bath, a scholarly and eloquent nonconformist divine well known throughout the West of England. His school was Fettes, Edinburgh, and though he was the last man to have any "old school tie" complex he was, with reason, proud of the fact. One remembers that when the honorary secretary of the Bath Old Edwardians Association wrote inviting him to join it in view of his early years at King Edward's School in that city, the reply was a genial and courteous refusal on the ground that he owed everything to Fettes and could not divide his allegiance. A small thing in itself perhaps. But most young barristers would have taken the easy way and joined, especially when proposed by a great leader of their profession, in this case Dr Blake Odgers, K.C., Recorder of Bristol. Not so, young Simon. It was a matter of principle and illustrates his whole character.

It has been frequently stated that his first great case was the Alaska Boundary Arbitration. Technically this is true. But he was in that case only as one of the junior counsel for the British Government. The first big case in which he acted alone was entrusted to him by the Corporation of Bath and his selection occasioned a good deal of criticism on account of his youth. The Boundaries Extension Bill of that city was bitterly opposed by the Somerset County Council and the surrounding townlets and villages and a formidable array of K.C. specialists and their juniors appeared in opposition. Against these young John Simon appeared virtually alone and he secured the passage of the Bill. It was a signal triumph and it made his name in the West at any rate. Every biographical sketch of Lord Simon mentions the Malcolm murder case in which he secured the acquittal of a young army officer on a charge of murder. One wonders why. The lieutenant was clearly innocent and Press and public were clamouring for his acquittal. Any competent criminal advocate would have got him off and Marshall Hall would have looked upon the case as child's play. But Marshall Hall would not have had the courage to do what the younger man did. The old hypnotist would have swept the jury off their feet with the unwritten law plea with which the papers were full. He would have secured an acquittal but with his client's name tarnished. What Simon did illustrates again his courage and his rigid principles. There is no such legal defence as the so-called unwritten law and he would not be a party to its invocation. He boldly pleaded that Malcolm acted in self-defence, with the result that when the jury accepted this the accused left the dock without a stain on his character. The writer only once had the privilege of hearing Simon in a case, and is constrained to pay his reluctant tribute to the mesmeric powers of a most consummate rascal by admitting that all his sympathies—they were those of youth—were with Simon's opponent.

The Case Against Bottomley

Horatio Bottomley, M. P., may be little more than a name today. But he was the biggest and cleverest financial crook and one of the few real orators of his generation. During more than forty years the criminal and civil authorities had been trying to "get" him; and during a great part of that period the misguided electors of South Hackney had continued to return him to Parliament as their member—independent member be it said for none of the parties would or dared own him. Jury after jury had vindicated Bottomley, spellbound by his real gift of eloquence. One experienced Alderman of the City actually shed tears in declining to commit him for trial on the ground that no jury would convict him on the evidence. He always acted as his own advocate and his scalps in the way of unsuccessful Crown Counsel included Avory, Richard Muir, and, if one remembers rightly, Travers Humphreys, all great advocates. At last it came to John Simon's turn, this time in a civil suit for fraud brought by an old gentleman named Masters, swindled, so he alleged, by Bottomley out of many thousands of pounds. Simon appeared for Mr Masters and Bottomley as his own lawyer demonstrated as usual that he had not a fool for his client. It is a pity one has to cut a long story short. Without a discourteous word, indeed with icy politeness throughout, Simon gradually wore down his redoubtable opponent. The jury's verdict was against Bottomley—for fraud. It would have finished any other career. Not so, Bottomley's. South Hackney remained faithful.

We may see John Simon's like again. But not two, at the same time, of the same calibre as he and F.E. Smith, Earl of Birkenhead.

Mr H. R. Prytz, Special Director and Overseas Manager of Powers-Samas Accounting Machines (Sales) Ltd, is now on a visit to India. He is responsible for the promotion of sales by branches and agents overseas and expansion throughout the world of the Company's activities. During the early part of his career, Mr. Pritz travelled widely over the Continent studying production and accounting procedures. He joined Powers-Samas in 1935, and was promoted District Manager of a London Commercial District in 1945, when he gained experience of specialist sales and a "wide basic knowledge of the Company's general work." Asked to create and manage the Southern Area Specialists in 1949, he was made Home Sales Manager in 1951, a Special Director in January, 1953 and Overseas Manager this year.

TURNOVER LIMITED BUT UNDERTONE STEADIER

PAPER SHARES FIRM UP: HEAVY BULL ACCOUNT IN IRONS

Wednesday Evening.

THE share market has been very steady, with particular attention being paid to paper shares and selected tea and low-priced coal shares. The market leader, Indian Irons, moved up sharply before the weekend and then steadied at around Rs. 27-8, at which price they closed this afternoon. After hours, however, they took another jump and were last reported at Rs. 27-15 with heavy buying both in Bombay and Calcutta.

Titaghur Paper gained 1½ points, despite the continuance of the strike, to Rs. 37-4, while Shree Gopal Paper gained one point to Rs. 21-8. Other miscellaneous shares are generally steady. Jutes are largely neglected, though feeling seems slightly better.

There is sustained enquiry for sound investment stock, preference shares other than in jute companies being readily absorbed. Gilt-edged are firm but little business is passing.

The Exchange was open only for four days during the week under review, 23rd and 26th January being public holidays. Details of the week's trading follow.

* * * *

Steady conditions prevailed in the gilt-edged section but the volume of business was restricted. Three percent Conversion Loan 1986 met with support improving from Rs. 82-6 to Rs. 82-10, but 3% Non-terminable Paper was stagnant at around Rs. 82-6. In short-dated loans, there were buyers for 2¼% 1954 at Rs. 99-1 and 2½% 1955 was enquired for at around Rs. 98-6-6. Both 3% 1957 and 1958 were unchanged at Rs. 98-5 and Rs. 98-2. Among medium-dated loans, there was a small investment enquiry for most issues and apart from 2½% 1961 and 2¾% 1962, which improved by one anna in each case to Rs. 90-11 and Rs. 91-11, prices showed little change. Long-dated loans were also supported, but here again there were no price changes. Among Provincials, 4% State loans maturing in 1964 had buyers because of the approach of the interest date, but in the absence of sellers no business was reported. Four percent U.P. 63 was traded at Rs. 99-11, while 4% West Bengal 1963 was on offer at Rs. 100-6-6.

Selected miscellaneous preference shares continued to meet with demand but preference shares of jute companies continued to find more sellers than buyers. Among jutes, a small lot of Anglo-India changed hands at Rs. 115 and Barnagore were quoted at Rs. 45. In the miscellaneous group, Bathgates receded further to Rs. 31 and Rallis were crossed at Rs. 73-10. Bharat Collieries were done up to Rs. 49-12, Calcutta Trams were marked at Rs. 8, Burrakur 2nd Preference at Rs. 8-8, Indian Iron & Steel at Rs. 107 and Martin Burn at around Rs. 104. New Victoria were offered at Rs. 4 but Rohtas Industries 'B' were taken at Rs. 57-8. Shree Gopal were transacted at Rs. 119-8.

The feature in the banking section was Punjab National which improved to Rs. 22-8. Imperial Bank Fully-Paid and Contributory were quoted at Rs. 1782 ex-dividend and Rs. 432 ex-dividend. United Commercial receded to Rs. 42 and United Bank of India 'D' Class shares were marked at Rs. 3-15.

* * * *

In the railway section, Bankura-Damodar changed hands at Rs. 55 and Howrah-Sheakhala at Rs. 62.

The feature in the cotton section was Kesoram which improved from Rs. 21 to Rs. 22. Bengal Nagpur were quoted at Rs. 13-4 and Dunbar were steady at Rs. 200. Elgins came to hand at Rs. 16 and New Victoria at Re. 1-9.

Business in coal shares was on a restricted scale. Burrakur were steady at Rs. 8-11, Bengal were transacted at around Rs. 505, Amalgamated were marked at Rs. 19-15, Bhalgora at Rs. 5 and East Indian at Rs. 25-9. Central India improved to Rs. 6-3 and Equitable were steady at Rs 31-12. Hurriladih were done at Rs. 15-8, Katras Jherriah were scarce at Rs. 40-8 and New Beerbhoom were wanted at Rs. 18-6. Other transactions included Pench Valley at Rs. 23-12, Raneegunge at Rs. 11-5, West Jamuria at Rs. 18-12 and Western Bengal at Rs. 5-2. Talcher were steady at Rs. 2-15.

Jute shares were a shade better but there was no expansion in the volume of business. Howrah improved from Rs. 23-7 to Rs. 24-1. Here is a table showing representative price movements:—

		Opening 21-1-54.	Closing 27-1-54.
Anglo-India	...	Rs. 198	Rs. 199
Belvedere	...	197	199
Delta	...	220	223
India	...	121	123
National	...	23-14	24-8
Nuddea	...	44	45
Reliance	...	14-10	14-14

The solitary feature in this section was Fort Gloster which spurted from Rs. 400 to Rs. 425.

* * * *

Electric supply shares were fairly steady with buyers of Bareilly at Rs. 14, Calcutta at Rs. 13-4, Jubbulpore at Rs. 14 and Patna at Rs. 11-4.

The outstanding feature in the sugar section was Cawnpore which was strong at Rs. 38-8 ex-dividend (Rs. 2 per share, same as last year) following the recommendation of the directors to issue bonus shares in the proportion of one for one, for which an application has already been made to the Government of India. Belsund were quoted at Rs. 9, Balrampur at Rs. 7-8, Carew at Rs. 7-6 and Samastipur at Rs. 13. U.P. were taken at Rs. 14-1.

Under the influence of powerful bull support, Indian Iron & Steel shares improved steadily to Rs. 27-9 but closed slightly easier at Rs. 27-7. Business was reported after hours up to Rs. 27-14. Bhartia Steel were steady at Rs. 11-4, as were Braithwaites at Rs. 13-14. Indian Galvanizing improved from Rs. 15-13 to Rs. 16-7. Jessops were marked at Rs. 25-12, Kumardhubi Engineering at Rs. 8-5, Marshalls at Rs. 6-9 and Burn & Company at Rs. 327. Britannia Engineering improved today from Rs. 25 to Rs. 25-8.

Paper shares provided the outstanding feature in the miscellaneous section with buyers of Orient Paper at the higher rate of Rs. 48-8, and Shree Gopal at Rs. 21-8. India Paper Pulp improved from Rs. 176 to Rs. 185, and Titaghur were better at Rs. 37-4. Sone Valley were dealt in at around Rs. 6-13, New Asiatic at Rs. 4-10 and India Steamship at Rs. 7-6. Alkali & Chemical were steady at Rs. 16 as were British Burma Petroleum at Rs. 2-13. Assam Saws changed hands at Rs. 7-5 and British India Corporation at Rs. 9. Bathgates, after being enquired for up to Rs. 2-2, turned sellers at Re. 1-10. Cherra Chhatak were marked at Rs. 7-6, Dunlop Rubber at Rs. 30-4 and Indian Cables at Rs. 20-2. Indian National Airways were steady at Rs. 4-7, Martin Burn improved to Rs. 20-2 and Rohtas Industries to Rs. 11-10. Metal Box were steady at Rs. 17-10 as were Shaw Wallace at Rs. 11-10 and Textile Machinery at Rs. 9-9. Tide Water Oil were scarce at Rs. 13-8. The outstanding feature was provided by Indo-Burma Petroleum which rose from Rs. 75-8 to Rs. 79-8.

There was some activity in the mining section this week, with Consolidated Tin improving from Re. 1-11 to Re. 1-14, Tavoy Tin from 8 annas to 13 annas and Indian Copper from Rs. 2-11 to Rs. 2-13. Non-Ferrous Metals and Burma Mines were steady at 14 annas and Re. 1-7.

* * * *

Although the tea section has been rather subdued and the volume of business has dwindled, price fluctuations have been small. Among Assam scrip, Ananda Assam were slightly better at Rs. 20-4, Bateli had buyers at Rs. 15-6 and Bishnauth and Brooke Bond were unchanged at Rs. 34-8 and Rs. 12-4. Betjan were marked down to Rs. 27-14, Dhelakhat were taken at Rs. 13-8 and Namburnadi were marked at Rs. 8-12. Sapoi were better at Rs. 13-12 as were Teloijan at Rs. 15-6. Tengpani were sold down to Rs. 23-6 from their previous quotation of Rs. 24. In the Dooars area, Banarhat had buyers at Rs. 392, Choonabhutti showed a sharp rise to be quoted at Rs. 302, and Hantapara were taken higher at Rs. 192. Killcott were better at Rs. 16-8 while Rajabhat showed no change at Rs. 20-6. Among Darjeeling scrips, Gielle and Longview were unchanged at Rs. 10-6 and Rs. 9-8. Central Cachar had buyers up to Rs. 63 and Hattikhira and Roopacherra were marked at Rs. 14-4 and Rs. 8-14. Patrakola after being marked up to Rs. 168 closed easier at Rs. 166, whilst Jay Shree were maintained at Rs. 12 and New Terai better at Rs. 14.

Mr. W. J. C. Richards' address from the chair at the annual general meeting of MERGUI CROWN ESTATES LTD in London on 19th January indicates that security conditions in Malaya and Lower Burma are still far from satisfactory. The rubber crop on the company's Burma estates showed a big rise during the year ended 30th June last and the average cost of production declined. The Malayan crops were only a little bigger but the average cost of production rose, which showed that "the arrangement in Malaya by which wages are supposed to be linked to the price of rubber is not effective." Total production of the company was 33 percent higher at 1,190,749 lbs, but because of the catastrophic decline in values the net proceeds were 16 percent less. Mr. Richards reported that no income had been received from the company's Burma subsidiary, Consolidated Plantations Ltd; its directors had decided to retain the entire profit of £16,862 since the conditions under which it was operating were hazardous and were not likely to improve soon. The Malayan subsidiary made a profit of £3,835 and Mr. Richards stated: "I think the results demonstrate that if our subsidiary companies can again operate without disturbances we shall be able to produce profitably in times of depression such as we are now facing in the rubber plantation industry."

Adding Rs. 6,650 brought in there remains an available balance of Rs. 4,55,020. Taxation reserve absorbs Rs. 1.80 lakhs (Rs. 2.25 lakhs), general reserve Rs. 1½ lakhs (Rs. 6 lakhs) and the ordinary dividend has been halved to 5 percent to leave a carry-forward of Rs. 27,633.

* * * *

There is a rise of more than Rs. 62,000 in the profit of the PURTABPORE COMPANY to Rs. 2.70 lakhs for the year ended 31st October, 1953, as against the previous year. Depreciation absorbs Rs. 65,000 (same), rehabilitation reserve Rs. 50,000 and Contingencies reserve Rs. 4,778 leaving a balance of Rs. 1,50,388. To this is added Rs. 19,435 brought in. The ordinary dividend has been maintained at 10 percent to leave a carry-forward of Rs. 19,823. The cane crushed was 19,39,270 maunds (19,04,375 maunds) with an extraction of 10.30 percent (10.32 percent).

* * * *

THE KHARDAH COMPANY earned a profit of Rs. 10.22 lakhs for the half-year ended 31st March, 1953, as compared with Rs. 20.06 lakhs in the preceding half-year. Adding Rs. 4,00,592 brought forward there is Rs. 14,22,185. Doubtful debts absorb Rs. 18,000, taxation Rs. 3.80 lakhs (Rs. 8.25 lakhs) and depreciation Rs. 1½ lakhs (same). The ordinary dividend has been reduced by Rs. 5 to Rs. 10 per share to leave a carry-forward of Rs. 3,07,185.

* * * *

The net profit of the NATIONAL ROLLING & STEEL ROPES LTD. for the year ended 30th June, 1953, has shot up from Rs. 5.24 lakhs in 1952 to Rs. 18.66 lakhs. Bringing in Rs. 24,520, providing Rs. 9,68,979 (Rs. 2.40 lakhs) for taxation, transferring Rs. 5 lakhs (Rs. 3 lakhs) to general reserve, Rs. 2½ lakhs to redemption reserve and Rs. 50,000 (Rs. 5,000) to investment reserve there remains Rs. 1,21,098 of which the ordinary dividend has been cut from 10 annas to 9-6 annas per share as the company cannot pay a higher dividend than 6% till their loan from the Industrial Finance Corporation of India is repaid. The carry-forward is Rs. 31,723.

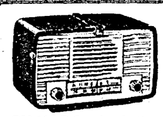
PRICE REDUCTIONS in the 1954 RANGE

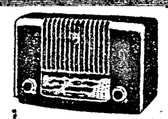
PHILIPS

Philips and the Radio Customer.

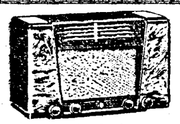
Philips have the pleasure to announce that all Authorised Dealers everywhere have modernised their Showrooms, improved their Service Departments and reduced prices in the 1954 range. In their own interests customers are reminded that the prices as shown below allow of no discounts.



BX 115 B for dry battery. Medium waveband only. Rs. 150/-

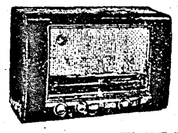


BCA 316 B/U for dry battery or AC/DC mains 3 wavebands. New price Rs. 250/-



BCA 405 B for dry battery. 7 valves, 5 waveranges. New price Rs. 475/-

BCA 416 A/U for AC or AC/DC mains. Bandspread on 20, 25 and 30 m. New price Rs. 365/-

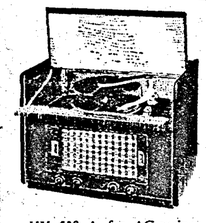


BCA 526 A/U for AC or AC/DC mains. Arbolite cabinet. New price Rs. 495/-

BX 626 A for AC mains. Infinite Bandspread on quadrant dial. New price Rs. 725/-

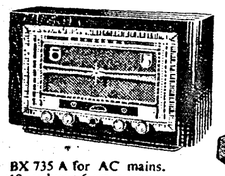
PHILIPS always dependable

HX 428 A for AC mains. 5 valve radio, 3-speed record-player. Mahogany cabinet New price Rs. 525/-



HX 538 A for AC mains. 7 valve radio, 3-speed record changer. Improved styling. Latest release. Rs. 1200/-

PHILIPS always dependable



BX 735 A for AC mains. 10 valves, 6 waveranges. Infinite Bandspread. Built-in aerials. Luxury cabinet. Latest release. Rs. 895/-

Disc-Jockey. 3-speed record-player in leatherette case. Choice of 3 colours. Latest release. Rs. 165/-

PHILIPS always dependable

AG 1000. 3-speed record-changer for AC mains. Plays up to 10 records, all sizes intermixed. Rs. 290/- AG 1001 for AC/DC Rs. 375/-

NX 596/V Autoradio. 6 or 12 volts. 1 medium, 4 S.W. bands. New price Rs. 575/-

FX 618 A for AC mains. Console model. 6-valve radio, 3-speed record-changer. New price Rs. 1450/-

PHILIPS always dependable

Quality in Philips radioplayers is long-established. Philips has in 27 years of research provided an impressive list of improvements from aerial to loudspeaker.

Service is a most important factor. All Philips Authorised Dealers are equipped with the most efficient servicing departments.

Guarantee of all that is associated with the name "Philips" is assured: Philips radioplayers are Philips through and through—every component being Philips made and tested. Ask for your Guarantee Card.

PHILIPS always dependable

POLITICAL EVENTS KEEP STOCK MARKETS QUIET

DOUBTS EXPRESSED ON THE FUTURE OF TEA PRICES

London, 26th January.

MARKETS were generally quiet during the past week, with the opening of the Berlin Conference and the continuance of the electrical trades dispute inducing caution. There were however several individual points of interest which attracted the attention of operators. Toward the end of the period the Government announced an offer to convert 2½ percent National War Bonds 1952-54 into a new 3½ percent conversion stock 1969 with a one percent bonus. The prospect of this conversion operation had been overhanging the market for some time and the announcement, which was well received by observers, cleared the air, and British Government stocks as a whole went ahead. Teas had to contend with profit-taking following their recent sustained rise, but showed considerable resistance and losses were not great. The statement of the Chairman of Twining Crosfield, the tea distributors, in which he revealed that the group's trading profit in the last financial year was the highest on record, aroused some interest. He did point out however that it was earned at a time of sharply rising tea prices, and he seems to doubt whether the present level of prices could be held. Germans were the most active issues in the foreign bond section, with Continent buying quite actively while Europeans as a whole were generally maintained. There was however some profit-taking in the latter part of the period which reduced gains. Gold shares were quieter than of late though there was selective buying of some popular issues. Industrials and oils were maintained.

The money market has had a generally difficult week. The market has had to rely on assistance from authorities on several days as tax transfers were exceptionally heavy and apparent bill maturities were only just equal to the week's offtake of new Treasury bills. On Wednesday the stringency caused by the banks calling for their monthly make-up almost forced several houses to resort to the Bank of England, but this was just avoided. The week finished on a more comfortable note. The Bank of England Return shows a further reflux of notes of £20 million, bringing the total reflux since Christmas to £97.1 million, which was slightly more than in the corresponding week a year ago. Applications for £210 million of Treasury bills totalled £3,43,815,000. An allotment of £210 million was made at the average rate of 41s 11.78d percent. This week £220 million will be offered.

The Investor's Chronicle market news letter says: The London Stock Exchange has been busiest since early 1951, helped by the enthusiasm for Kaffirs. Industrial shares have been unsettled by the labour situation. After reaching the highest since 1951 some pause for consolidation is natural. Japanese bonds are returning to favour. Resumption of New York dealings in German bonds raised prices of Germans in London and made the yields on Japan bonds attractive. The Japanese Government is making serious efforts to restore the economy helped by the expected arms orders from the United States. Other favourable factors include sinking fund purchases, Swiss buying and London buying on hopes that Japan's sterling position will improve.

Deteriorating Balance of Payments

Figures showing a serious worsening in the position of the sterling area were placed before the Commonwealth Finance Ministers' meeting in Sydney. Although they show that the sterling area's balances continue to increase, the surplus of exports over imports is shrinking. During the year ending 30th June, 1954, it will be little more than half of the surplus for the year ended 30th June, 1953. It was learned officially that the figure this year is estimated at only £233 million compared with £430 million last year. The figure is the more serious since more than half the surplus, or approximately £128 million, will be made up by Australian exports and principally by one product—wool.

Russian Gold in Paris

Soviet gold has made its appearance on the Paris free market this week, helping to depress prices to their lowest since the opening of the market in 1948. The quantity involved is not known but it is reported that the Soviet gold was included in Monday's turnover of 1,750 ingots and again in Tuesday's turnover of 1,300 ingots. Dealers believed that the Bank of France has had difficulty in absorbing the increased arrivals and the one kilo fine gold ingot has dropped to 427,000 francs.

Hongkong Gold

The recent continual downtrend of Hongkong gold was arrested last week. After opening the period at 247¼ Hongkong dollars per tael, values climbed to 249⅞ but reacted slightly to close at 249⅜. The factors contributing to the recovery included the steadiness in the international markets and short covering by bears. Official offtake was 4,150 taels and unofficial 16,070. Arrivals in Macao totalled 45,000 ounces. There were no forward contracts.

Indian Coir Market

The Indian coir yarn market continues to be firm and, as expected, buying interest is reviving. Buyers started to give orders for important quantities at quotations slightly under the present ones which are likely to be accepted. For special qualities, however, shippers are not now inclined to consider any counter bids. Ceylon coconut fibre prices further improved. Shippers reported to be unable to sell earlier than March-April shipment. Buying interest was very active but most of it was for early shipment.

Linseed Oil Trading

Trading in linseed oil was quiet and finally prices of American oil were inclined to be easier for more distants. Indian castor oil for shipment was lower with only occasional trade. On the firmer side was groundnut oil and sales of South African early February shipment took place at £163. Palm oil was stronger and practically all descriptions were dearer to buy as was also palm kernel oil.

Japanese Exchange Adjustments

The Japanese Finance Ministry has announced that the yen-sterling cross rate will be 1011 yen 60 sen effective immediately. This compares with 1008 yen previously, and results from the new policy of fixing the rate after taking into consideration the fact that the sterling-dollar exchange rate fluctuates between 2.78 and 2.82 dollars to the pound sterling. The Ministry said that other official buying and selling rates for sterling have also been altered accordingly. He added that the new policy does not mean that the yen-sterling cross rate will change automatically according to London fluctuations. It will be altered only when there is a substantial change in London. Financial circles say this is merely a technical adjustment although it may to a small extent help Japan's balance of trade with the sterling area.

Rubber Buffer Stock Proposal

Malaya is to make an attempt to get Indonesia to agree to the establishment of an international rubber buffer stock according to Singapore rubber sources. If Indonesians agree the two countries will make a joint demand at the Rubber Study Group Conference in Colombo in May that such a stock be established. A buffer stock proposal was abandoned by a group conference in London last October. However, the Malayan industry, at a high level conference, agreed that a buffer stock is the only hope of stabilising prices.

Insurance Risk Tolls

The Institute of London Underwriters announced that war and strike riot and civil commotion risk rates to and from or between Korean ports for both imports and exports have been reduced from 5s to 3s per £100 except to or from destinations which are rated higher.

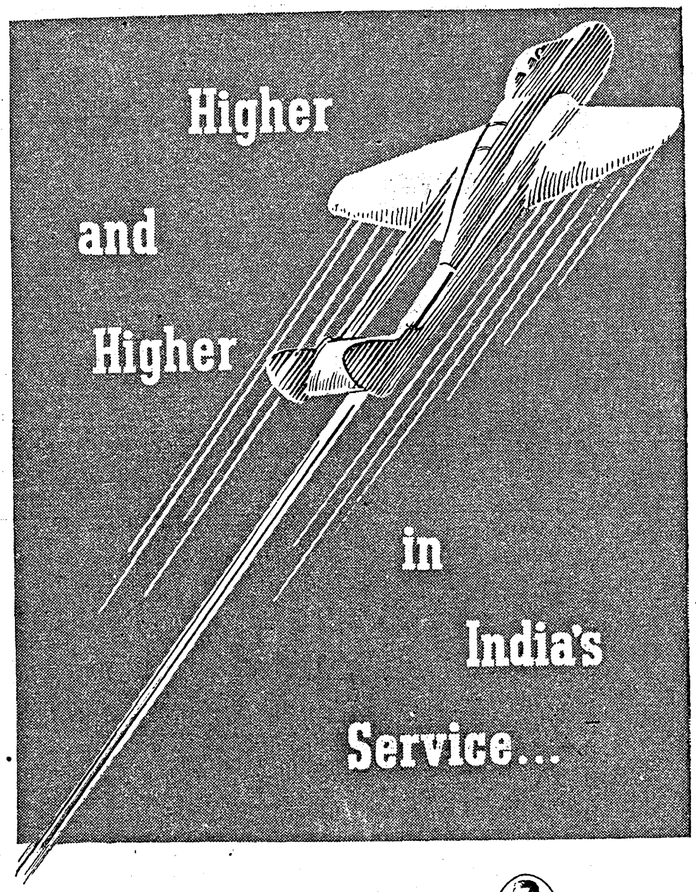
U. K. Price Indices

The index figure which measures changes in the average level of retail prices was 140 on December 15. (June 17, 1947=100), the same as it was in August, September and November. It was 138 a year ago.

After remaining almost stationary for four months, the index number of basic materials prices fell by 0.6 percent in December. The main falls were in the prices of raw wool, hides and skins, copper, zinc and tungsten ore, which more than offset increases for raw cotton, raw rubber and certain varieties of flax. The December figure was 141.8, the lowest of the year, to give an average for 1953 of 145.9, against 162.1 in 1952.

Marking of Textiles

A standing committee set up under the Merchandise Marks Acts reported last week on applications for changes in the marking of imported woven cotton grey cloth and imported woven jute goods. Its recommendations, to the effect that jute piece-goods should be exempted from the requirement to bear an indication of origin, and that the method of applying the indication to cotton grey cloth should be altered, have been accepted by the President of the Board of Trade and given effect to in a draft amending Order in Council laid before Parliament.



Jet fighters of the Indian Air Force need special tyres. These tyres are now being made for the first time in India by Dunlop, founders of the tyre industry.

NEED FOR READJUSTMENT OF WORLD TRADE AND PAYMENTS

HOW ASIA AND EUROPE COULD HELP EACH OTHER

"MUTUAL aid" is a phrase which, perhaps unfortunately in view of its importance towards providing a ready solution of many if not all of the economic ills which afflict the world today, has taken on a quite undeserved opprobrium as representing a cloak for the granting of financial or other assistance by a prosperous or advanced country to one less prosperous or backward with two objects in view, either to hoodwink the people of the first country into believing that they are receiving something in return for what they are giving, or alternatively, to disguise what is no more really than charity, or a *quid pro quo* for services to be rendered later, by making the recipients feel that they are in fact giving an adequate return for what they may be getting. To suggest that such aid never has had such a basis would be foolish, and certainly not in accordance with fact. To say that it always has, however, would be equally false, for more often than not is not the case. An atmosphere of world peace and of high-level economic activity would be beneficial to all countries, and if this can be brought about by the "haves" giving money or technical aid to the "have-nots," even without any specific demand for a like return, the benefits are certainly mutual and by no means one-sided. Fortunately, there is more evidence today that deep-rooted suspicions on this score are giving way to more reasoned thinking, and for this welcome development no little credit goes to the functioning of the various special bodies set up under the aegis of the United Nations.

Three of these bodies, the Economic Commission for Asia and the Far East, the Economic Commission for Europe and the Food and Agricultural Organisation, have just made another valuable contribution towards a better understanding of the economic interdependence of the East and the West. It takes the form of a study* of trade between Asia and Europe which points out the advantages of expansion and suggests measures to help bring this about. It examines the history and setting of trade between the two regions over recent decades and considers methods by which Europe can assist the countries of Asia and the Far East in their common aspirations for economic development and improved living standards. At the same time, it considers ways in which Asia and the Far East can assist Western European countries solve their post-war economic problems by an increase in the volume of their exports compared with imports and by shifts in supply sources which would relieve their dependence on the dollar area.

"Desirable" Adjustments

After stressing that both the volume and the composition of trade between the two regions depend on the levels and structure of world demand and external finance available, as well as on the size and economies of production, the study urges the need for a readjustment of world trade and payments. It offers three types of "desirable" adjustments:

(1) Increased exports from Asia and the Far East to the United States combined with a smaller increase in imports from this source. "The resulting dollar surplus could then, in turn, be used for larger Asian purchases in Europe, thus contributing to Europe's dollar problem," the extent of the dollar earnings spent in Europe depending "on the ability of European countries to supply the Asian import needs at competitive prices."

(2) An increase in Europe's own dollar earnings in the United States and the rest of the dollar area with a simultaneous shift in European imports of raw materials from dollar sources to Asia and the Far East. Generally speaking, "the longer term prospects of such shifts to Asian sources of supply appear to be fairly good if increased production and reduced costs are achieved under conditions of reasonable stability in demand and prices."

(3) Substantially greater capital movements to supplement merchandise balances. "From the point of view of trade expansion, national policies in Asian countries for the encouragement of investment into new or widening avenues rather than simple substitution for existing foreign investment would appear to be more constructive."

The study suggests practical steps which the Asian and European countries themselves might take to facilitate trade between them. These measures include: increased efforts to expand sales, for example by sending governmental or private trade missions to countries in Asia and the Far East, studies of their specific import needs and technical and economic means of meeting them, the development of joint enterprises and direct investments by European firms, increased diversification of export commodities as well as greater standardisation and control of quality and packaging of Asian export products, and simplified customs procedures and trade regulations and administration.

Commodity Trade Prospects

The main body of the U.N. study is followed by appendices which discuss market trends and prospects for rice, tea, oilseeds and oils, rubber, tin, jute and jute manufactures, cotton and cotton manufactures, carpet wool, and by a series of statistical tables showing, according to commodities, imports and exports by the countries in the two regions, as well as tables on trade between Asia and the United States.

While trade between the countries of Asia and those of Europe is important to each, the respective roles of their mutual trade is not the same for the two regions. Although Europe has provided markets for nearly one-third of the exports from Asian countries and has been the source of supply of a similar proportion of their imports, trade with Asian countries has accounted for a relatively small share—about 7 percent—of the total exports or imports of European countries. One of the most striking developments revealed by the study is the marked decrease of some 25 percent in the volume of Western Europe's imports from Asia (not counting Japan) as compared with the pre-war level. On the other hand, Western European exports to those Asian countries exceeded the 1938 level after 1948 and were nearly equal to the 1928 total in 1951 and 1952, an increase of approximately two-thirds since 1938.

The leading European trader (see Table), generally accounting for about one-half of the total trade between the two regions, has always been the United Kingdom, followed by France, Germany and the Netherlands. Apart from the trade shift of the mainland of China towards the U.S.S.R. and the other Eastern European countries since 1949, the Eastern European countries, including the U.S.S.R., have played an insignificant part in trade between Europe and Asia and the Far East.

Japanese Competition

The post-war position of Japan, an Asian country but a direct competitor with Europe in other Asian markets, has considerably changed. In the pre-war period about two-thirds of the Japanese foreign trade was with Asia and the Far East and over 60 percent of this was with China and Korea. By contrast, in 1951 China's share of Japan's trade declined to less than 1 percent, and the resumption of this trade is dependent upon political developments. Japan has taken various steps to strengthen its position in the other Asian markets, but the immediate results of these efforts, which were partly frustrated by internal inflation, had not greatly changed Japan's relative position up to 1953. Japan's dependence on imports from the United States increased without a corresponding increase in exports to that country.

Figures in the study show that in the immediate post-war period, Asian trade has failed to keep up with the expansion in world trade, with the result that Asian exports by 1952 had dropped to about 10 percent of world exports as against about 15 percent in the years 1928 and 1938, while Asian imports just maintained their share (12 percent). In the 1920's, countries in Asia and the Far East formed part of a global network of multilateral trade and payments. The region had a consistent export surplus with the United States and continental European countries and a deficit with the United Kingdom. This pattern of trade and payments was disrupted by the world depression and the Second World War dislocated it further. Until the end of 1949, Asian countries recorded considerable deficits on merchandise trade, and the raw materials boom after the outbreak of war in Korea, although causing temporary improvements in the terms of trade, was short-lived and not accompanied by such changes in international capital movements as would facilitate the return to convertibility and the old system of trade and payments.

For many reasons, including the increased importance of the dollar area and the low level of United States investment abroad, the U.N. study states that a return to the "traditional" trade patterns of the 'twenties is difficult. With the decline in demand for silk and with the problematic long-run future of rubber and tin, the prospects for any substantial increase in Asian exports to the United States are somewhat uncertain, and the extent of dollar earnings being spent in Europe depends on the ability of European products to compete in the Asian import market. Another type of adjustment towards a more rational pattern of world trade would be an increase in Europe's own dollar earnings with a simultaneous shift in European imports of raw materials from dollar sources to the Asian region. The study believes there is considerable room for such a shift: the possibilities of increased exports of fats and oils, oilseeds, tobacco and cotton to Europe appear to be considerable and the longer term prospects appear to be fairly good if increased production and reduced costs in Asia are achieved.

Capital Movements

Just as the international network of trade of the 'twenties depended on capital movements to offset current surpluses and deficits, the new patterns of trade will require capital movements to supplement merchandise trade. Financial assistance will be needed not only from the International Bank and the Monetary Fund, but also from national bodies such as the United States and Japanese export-import banks and the recently established Commonwealth Finance Corporation. In the interest of developing trade between Asia and Europe, it is essential that financial assistance by countries of Europe, both by Governments and private or public financial institutions, should be forthcoming in greater amounts.

In all cases, the problem is to seek a sound basis for developing future trade between the two regions. The study examines in detail past trade and prospects by commodities and by direction and volume of flow. A few agricultural and industrial raw materials and food products are shown to dominate exports from Asia. Striking developments in the post-war period have been the increased importance of rubber, tea, and, to a lesser extent, jute and jute products, and the very considerable decline in the relative importance of petroleum products and rice. The other principal export commodities are oils and oilseeds, tin metal and concentrates, tobacco, pepper and silk. The overall decline in the volume of exports is related primarily to a reduction in Asian production, though it has also been affected by increases in consumption in the Asian countries (the population in the region outside China has increased by 23 percent since pre-war), as well as by competition from alternative supply sources and from new products. More recently, however, prospects have appeared to be more favourable, as in the case of tin and jute after 1951, and in the long run there are good prospects for production increases.

For commodities such as rubber, jute, tea, rice, tin and tungsten, for which Asian countries are the major sources of world supply, future export possibilities are dependent mainly upon the general growth of the economies of industrialised countries, the development of new uses for the commodities as well as the effect of synthetic or other substitutes. For rubber in particular, the growth in world demand is expected to continue, but considerable competition will be met from synthetic rubber. For rice, increased sales to Europe appear to be practicable, but the main result of an increase in rice production would probably be to reduce imports of grains into the region rather than an expansion of exports. For other commodities, Asia's share of the world market is relatively modest and lower than prewar, primarily because of production decreases. For coffee and tobacco it appears quite probable that, if production were expanded, it could find ready markets in Europe as substitutes for dollar imports. The export demand for other products, including hides and skins and carpet wool, could be stimulated through quality improvements, the U.N. experts believe. As far as cotton is concerned, the requirements of Asian countries will probably absorb the additional quantities.

Instability of Earnings

One characteristic of this export trade has been the extreme instability of export proceeds resulting from the wide variations both in prices and in quantities of exports, and from the concentration on a relatively small number of export commodities. The results of international efforts with respect to the stability of these proceeds have been discouraging, such efforts deserve a more prominent place in the policies of Asian supplying countries as well as of importing countries, the study suggests. On the other hand, European countries may help in many other fields, such as tariffs, price policies, ocean transport charges and other matters directly affecting the marketing of Asian products. The instability in Asia's import capacity in the past had serious effects on its standard of living and economic development. This instability is shown by the behaviour of post-war imports into the Asian countries and by their violent short-run fluctuations, explained mainly by the fluctuations in export proceeds but also by the priority given to alternating emergency measures of a stop-gap nature, such as improving the supply position or rectifying the payments position. The capacity to pay for imports was, however, maintained at a high level in relation to export earnings through releases of sterling balances accumulated during the war by the sterling area countries and through foreign aid.

In the field of textiles and other consumer goods, the underlying tendency for European markets in the Asian and Far Eastern region to shrink has been overshadowed by acute shortages and the temporary disappearance of Japan as a competitor. Production is likely to increase further in the three huge centres of the textile industry—Japan, an old exporter, India, a new one, and China which will probably remain self-sufficient, at least in the field of cotton textiles. It is not often realised that the region as a whole is a major net exporter of textiles even when jute products are left out of account. The expansion of Asian textile production will, therefore, affect Europe partly by competition in third markets such as Africa or South America.

Needs of Capital Goods

Further expansion of the needs of capital goods depends on the pace at which development plans in Asia and the Far East can be got under way and this is determined, as has already been mentioned, by the future of the countries' terms of trade and the availability to them of foreign finance. In fact, imports of capital goods from all sources into the countries (excluding China and Hong Kong) have increased by more than 1 percent in volume since 1938. In 1951, 40 percent of these capital goods were transport equipment—railway material for India and road vehicles for all countries. Other important items were textile machinery, power generating machinery and engines and constructional machinery for road building. There is no great demand for labour-saving mechanised equipment for agriculture in these countries, most of which are faced with a huge problem of surplus rural population.

One important problem concerning exports of capital goods from Europe, closely connected with the problem of competition between European and United States exporters, is the question of technical adaptation of European engineering industries to the particular needs of the underdeveloped countries in Asia and the Far East. What is required in these countries is to economise the scarce amounts of capital available in such a way as to secure a maximum output per unit of capital invested rather than per man employed. Industrialisation depends to a large extent on deliveries of equipment from engineering industries. But in Asia's special economic environment development does not aim at saving labour but at employing it. In this respect, as a general rule, equipment from European industries may have an advantage over that of the United States, though its advantage is probably less great than Japan's, according to the *Study of Trade Between Asia and Europe*.

EXPORT ACHIEVEMENTS DURING 1953

IMPORTANT EFFECTS OF THE IMPROVED TERMS OF TRADE

(FROM OUR LONDON CORRESPONDENT)

A GENERAL picture of British overseas trade was presented in last week's despatch on the basis of the provisional figures for the month of December. The Board of Trade has this week filled in some of the details in a survey of trade in 1953. It is evident from this that exports reached a new peak at the end of the year, being 9 percent above 1952, in the third quarter and 8 percent higher in the fourth quarter. That the total value of exports for the two years was roughly the same at £2,582 million was due entirely to the fact that export prices were roughly 4 percent lower at the end of 1953 than they were at the beginning of 1952. The varied experience of the different groups of industries is not without interest. Gains over 1952 were recorded by iron and steel manufactures (from £191 million to £197 million), non-ferrous metals (£82 million to £90 million), woollen and worsted manufactures (£124 million to £140 million), oils, fats and resins (£62 million to £80 million) and miscellaneous (£150 million to £161 million). On the other hand, electrical goods and machinery recorded a loss (£110 million to £104 million), as did cotton manufactures (£148 million to £133 million) though the smaller silk and apparel groups made a better showing, and the important vehicles group, which includes locomotives, ships and aircraft, was £10 million lower than both 1951 and 1952 at £470 million. Having set out the details, the survey proceeds to bring the export record of the last two years into perspective. Between 1950 and 1952, it points out, Western Germany increased her exports to a level over 40 percent higher by volume than before the war, compared with an increase of 50 percent for the United Kingdom and over 70 percent for Switzerland. In 1953 there was a marked degree of stability in world trade, marked by stiffer competition in many markets. "In the first half of the year," it continues, "the volume of the United Kingdom's exports was maintained at the level of the year 1952. Exports from the United States declined a little in volume in this period, but those of Western Germany, Switzerland and Japan were still increasing." The disturbing factor, however, was that this country's share of trade in a number of markets, particularly in South America, Finland and Egypt, was contracting, and showed little signs of improvement.

Import Prices Still Falling

While, then, the British record on the export side was by no means unsatisfactory, though certain features of it still gave rise to some anxiety, the real encouragement for the future was the fact that the drop in import prices "enabled us to import in 1953 a much greater volume of supplies than in 1952, and almost as great as in 1951, at a much lower cost." The actual saving on imports in 1953 over 1952, it will be remembered was £134 million, but the survey shows that this conceals "a large increase in the volume of supplies" which is officially estimated at about 10 percent, to a level higher than the previous post-war peak in 1951. The main increase was in supplies of raw wool, but imports of raw cotton and other materials were also substantially heavier, more iron ore and manganese ore came in to support growing steel production and greater quantities of softwood also arrived. The value of this improvement in the terms of trade cannot be overemphasised, and it is therefore all the more welcome that after remaining steady since August, they have again moved slightly in our favour in December.

The Board of Trade index number of import prices for that month (1952=100) moved down from 86 to 85—mainly due to lower prices in the index for food, drink and tobacco, representing seasonally lower prices of some fruit and vegetables and cheaper grain, while the export prices index was unchanged at 96, slightly higher prices for textiles being insufficient to affect the index number for exports as a whole. In consequence, the index of the terms of trade fell from 90 to 89. The latter figure shows an improvement of about 6 percent from January 1953, and of as much as 15 percent compared with January, 1952. No one would be prepared to predict that we may expect still further help to this country's economy from this particular factor, especially as the rate of improvement has now slowed down almost to a halt, but if we do no more than hold the balance and perhaps derive odd benefits from seasonal factors, it will be invaluable.

The Bank Chairmen's Views

A useful corrective to over-optimism in regard to the economic outlook has been furnished by the annual statements of the chairmen of the "Big Five" banks, whose related and yet quite distinct approaches to the situation will be dealt with more fully elsewhere in *Capital*. There is general agreement, for instance, on the need for reducing Government expenditure and the burdens of taxation still further, though what has already been done meets with approval, even though it may be qualified. The dangers of the wages spiral and the shortage of capital for industrial investment find common appreciation. Where there is some divergence is on the methods to be adopted in achieving the stable economy which everyone would like. Mr D. J. Roberts, of the National Provincial, puts forward the suggestion that sterling should be made convertible, at least for current transactions, "as soon as practicable." An unexceptionable request in that form, but it is apparent that Mr. Roberts does not mean merely that, and indeed wants action to be taken at once, arguing that international conditions are at present favourable for the restoration of a free exchange and pointing to the lead already given by Germany, Belgium and Holland. Lord Balfour of Burleigh, of Lloyds, on the other hand, comes out strongly in favour of the adoption of a policy of "effective disinflation," contending that "the combination of over-taxation and creeping inflation is the source of a great many of our post-war problems." Mr. A. W. Tuke, of Barclays, makes a particular appeal for tax relief to the middle classes—though he does not tell us how they are to be defined—and Sir Thomas Barlow of the District warns Lancashire that the textile revival "owes far too little to expansion of business overseas" and maintains that in the long run the trade's prosperity depends on an expanding export business.

Plan to End Strikes

Unfortunately, it is not very likely that these warnings will attract the attention of more than a fraction of the population. The labour relations situation will certainly not show any variation as a result of them, though it is interesting to learn that Sir Godfrey Ince, the top man in the Ministry of Labour, is having a plan worked out that aims at ending strikes and lock-outs for good. Briefly, it is that all employers' and workers' organisations should agree among themselves to write into their rules: "We will accept an arbitration decision as final settlement of any dispute." This state of affairs does, of course, exist in several industries, but it will take considerable negotiation, to say nothing of a much more conciliatory attitude on the part of both employers and the trade unions, to secure its application in all industries throughout the country. In the meantime, the E.T.U. guerilla strikes, with reprisals by some employers, continue, though perhaps not on quite so large a scale and with at least some slight indication that the two sides may be brought together for fresh negotiations, though these will be made all the more difficult by the ill-feeling that has been created in the past two weeks. The miners on the other hand, have been offered, and have been advised to accept by the N.U.M., an offer of 8s. 6d. a week extra for underground men and 7s. 6d. a week for surface workers, which will probably involve some increase in the prices of coal to offset the additional expenditure of some £9½ million.

Denationalising Road Transport

The denationalisation of the road haulage interests of the British Transport Commission does not promise to be an easy operation. The results of the first auction of nationalised transport vehicles has just been announced by the Road Haulage Disposals Board. There were 217 units on offer, and certainly no lack of tenders, which are understood to have numbered some 2,000 in all, but the majority of these would appear to have been of the bargain counter variety. Only two units attracted no bid whatever; the Board accepted the highest tender for 136 units, while offers for a further 14 are still under consideration. All tenders were rejected in the case of 65 units. The withdrawal of these lots is permitted under the Transport Act, which lays down that the Board is not expected to give its approval to a tender unless it thinks that "the price is a reasonable one." They will no doubt be offered again later.

The Commission has done well to indicate the way it proposes to operate the fleet of vehicles which it will retain after the bulk of the fleet has been sold back to private owners. As it will be keeping only some 10 percent of the total, rather more than 3,000 vehicles, these are to be divided and operated in three main sections: General haulage vehicles engaged on trunk and regular services; specialised vehicles engaged on furniture removals and abnormal loads as well as road tankers under the name "Pickfords"; and vehicles provided under period contract for the exclusive use of traders. The biggest disruption is anticipated, however, in the break-up of the national network of parcels and "smalls" services, so the Commission and the Disposals Board are getting together to see whether an integrated fleet of vehicles created around the original Carter Paterson fleet, but now three times as large, might be sold as a unit, or alternatively divided up into eight regional companies linked together by working agreements. As a further means of reducing inconvenience to traders, British Road Services will operate a clearing house accepting bookings and placing orders with private operators or with the railway if they themselves cannot execute them. A strong reassurance is given to the staff that every effort will be made to minimise hardship and inconvenience to them also, and continuous consultation is being maintained with the trade unions and other bodies concerned.

SPEEDY ACTION AWAITED ON DEVELOPMENT CORPORATION

LAY-OFF COMPENSATION FOR PLANTATION WORKERS

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Government has decided to launch in the Industrial Development Corporation almost at once. A private limited company is being floated and will be registered at an early date. The idea at present seems to be to set up a private company under the Indian Companies Act with a capital of about Rs. 1 crore. The Corporation will have a board of directors consisting of leading industrialists and officials to be nominated by the Government of India. The Government of India will subscribe a part of the capital, while the rest will be open to subscription by institutional investors like banks and insurance companies. To begin with, a Minister or an official will be the Chairman of the Corporation but at a later stage the Corporation may have a whole-time Chairman. Besides its share capital, the Corporation will be able to raise finance through debentures guaranteed by the Government, or will obtain loans directly from the Government.

The Corporation will confine its activities to the industries now neglected by the private sector. It will make a beginning by starting a few industries in various parts of the country, with or without the help of outsiders, and running them. After these industries get going, and if private enterprise comes forward to take them over, the Corporation will transfer them to private parties and start new industries. The concerns which are not taken over by private enterprise will be transferred to the public sector. Registration of the company under the Indian Companies Act will be resorted to in order to achieve a degree of flexibility. After experience has been gathered, however, it is the intention of the Government to bring forward suitable legislation and place the Corporation on a better footing.

More Dispute about Cane Prices

Sugar has a new problem to face. The Uttar Pradesh Sugarcane Growers' Co-operative Federation has decided to stop the supply of sugarcane to the mills from 1st February, unless the supply rates are raised by annas five a maund to Rs. 1-12-0 per maund. The Federation bases its claim on the ground that the mills, following decontrol, failed to keep sugar prices at Rs. 27 a maund, on the basis of which cane prices had been fixed. The Federation has therefore demanded a share in the excess profits made by the sugar mills from sale of sugar at rates exceeding Rs. 27 a maund.

One view here has been that the Uttar Pradesh Government has had too much influence over the policies of the Government of India in general and over sugar policy in particular. It agitated for higher prices for sugarcane and succeeded to a large extent in resisting their reduction. It earns large revenues from the cess on sugarcane, which it largely uses in easing its ways and means position. It was the Central Government which had to agree to subsidise sugar prices from its own revenues. The sugar industry's record is not very bright either. Up to June last year there was a glut of sugar and efforts were made to export sugar from India. Suddenly the situation changed and conditions were created for a sugar famine. Fortunately, the Government's foreign exchange position was comfortable enough to permit the import of sugar.

There is also that much neglected element, the Indian consumer. He gladly bore the burden of making India self-sufficient in sugar, but he was bewildered last year when he was asked to accept a heavier burden—in order to subsidise exports. On limited imports of sugar the Government has earned a profit of crores of rupees: this shows how uneconomic Indian sugar prices are.

The present tussle is between the cane-growers and the mills, but in the ultimate analysis, the Central Government is involved, for it is the Central Government which fixes cane prices. The Federation has advanced another reason for enhancement of cane prices—the 50 percent increase in water charges. To hope that the Uttar Pradesh Government will forgo any revenue from the sugarcane cess is to expect the impossible. The Federation has decided to manufacture jaggery till the price issue is settled; this means that the price of jaggery should go down and the price of sugar should go up. The only way to avoid this is to import more sugar, which would help the Centre to increase the falling revenue from Customs, but would also mean closure of sugar mills leading to large-scale unemployment. The Government may not worry about loss to the industry, but it does mind unemployment. Peasants and workers are the determining factors and the mere consumer will have to be sacrificed. There does not appear to be any escape from higher prices for sugar.

Automobile Programmes

The Union Cabinet will shortly approve the automobile manufacturing programmes of Hindustan Motors, Premier Automobiles and Standards: all of these firms have been permitted to manufacture baby cars. As already reported, Automobile Products and Asoka Motors have been eliminated from the list of units authorised to manufacture motor cars. Asokas and Tatas have been permitted to manufacture trucks, the former in a tie-up with Leylands and the latter with the German firm Mercedes Benz.

Easier Food Position

The 1952-53 food crops were good but the 1953-54 crops will be even better, according to official sources. This has led to a general fall in prices everywhere, a decrease in demand for foodgrains from deficit areas and an increase in exports from surplus areas. The fall in the price of coarse grains has been sharp. On 1st January, 1954, coarse grains were completely decontrolled except in three comparatively small regions of Saurashtra, Madhya Bharat and eleven districts of Uttar Pradesh. Gram was decontrolled completely, in all areas without exception. Some months ago, wheat was similarly decontrolled but restrictions on inter-State movement were retained temporarily. The States' distribution controls over wheat are being gradually withdrawn and the trade has started to regain its previous rôle. Only in the case of rice, controlled distribution continues. The rice supply position, however, has also improved, as will be seen by the fact that as against an import of over 7 lakh tons of rice in recent years, only 1.9 lakh tons were imported in 1953. In 1954 the requirements of the country are expected to be fully met by internal surpluses. The Government wants to import rice only for a reserve.

The decision to decontrol was taken because of a marked improvement in the production of coarse grains. In 1951-52, production amounted to 15.7 million tons, rising to 17.4 million tons in 1952-53. During the year 1953-54 this improvement is not only being maintained but enhanced as indicated by statistics of area under cultivation; the first estimate for 1953-54 was 65,941 acres as against 60,122 acres in 1952-53. After the announcement of complete decontrol there has been a slight increase in the price of grain, which was necessary to prevent prices slipping below economic levels.

There are at present 130,000 tons of coarse grains in the hands of the Government. Direct sales of wheat from the Central Government's godowns to the trade at a price of Rs. 15-8 per maund have already started in some places, for example West Bengal and Orissa. This will soon be followed in other places. At present, there is a stock of over 5 lakh tons of wheat in Central Government depôts and over 3 lakh tons with the State Governments. It is estimated that these stocks will carry the country through several months to come. The need for extra stocks for wheat during this period is very negligible, but if prices are suitable, a reserve will be built up. The coming wheat crop is expected to be good.

Exportable quantities from States surplus in rice are estimated at about 14 lakh tons, which is a few lakhs more than the requirements of deficit areas. The availability in deficit areas is now greater with an open market in rice in most places. The rice ration in Bombay will be increased from 1st February 1954. It may generally be said that rice prices everywhere are below those prevailing about the same time last year. The areas which are surplus in rice normally produce raw rice and the people of the two main rice-deficit areas (Travancore-Cochin and West Bengal) have a very strong predilection for boiled rice. Efforts are being made to introduce par-boiling.

Administrative Reform

A meeting of Senior Secretaries has been convened by the Cabinet Secretary, Mr. Y. N. Sukthankar, to meet here on 28th January to discuss the progress of the five year plan in general and procedural difficulties in its implementation in particular. This follows the Prime Minister's note and the Congress Working Committee's resolution on the subject. The Congress Working Committee 'noted with concern the fact that there has been, in many cases a short-fall in the execution of projects which have been approved and for which money has actually been sanctioned. This appears to be due principally to administrative difficulties and to the fact that the rules of procedure both at the Centre and in the States are elaborate and complicated and lead to delays." The Prime Minister has directed the Auditor-General-designate, Mr. A. K. Chanda to undertake a detailed survey of existing Secretariat rules and procedures, with a view to securing efficient and speedy disposal of cases.

The subjects suggested for review are: Revision and codification of fundamental rights and supplementary rules; better financial procedure to expedite government business; revision of the civil service (classification, control and appeal) rules in regard to conditions of employment, conduct, discipline and appeal; arrangements for manning higher Secretariat posts in the Union and State Governments for the purpose of securing maximum adminstrative efficiency, flexibility and interchangeability.

In a note which has been circulated to all Ministries, Mr. Nehru has urged "gearing up the administrative machinery to meet the present situation." He has suggested that methods should be evolved by which younger officers would have a chance of widening their knowledge and training themselves for higher responsibilities. There should be greater contact between officers of various grades, and the class and rank character of services must be done away with, Mr. Nehru feels. Besides emphasising the need for officers of the Government to read books and to keep themselves abreast of current developments, the Prime Minister has also stressed that officers entering the Foreign Service must be given a chance to understand and acquire an intimate knowledge of the country of service before they are sent abroad.

Lay-off Compensation on Plantations

The Industrial Committee on Plantations, when it meets at Calcutta at the end of this month, in addition to the question of enforcing the Plantation Labour Act, will discuss the Government's proposal to extend the Industrial Disputes Amendment Act, in respect of lay-off compensation, to plantation labour. The scale of compensation for lay-off is 50 percent of the total of the basic wages and dearness allowance. Ordinarily, lay-off compensation will be admissible for not more than 45 days in a period of 12 months. Compensation for lay-off beyond 45 days will be admissible in certain circumstances if the worker is laid off for continuous periods of more than one week at a time. It is explained that the Labour Investigation Committee, commenting on the conditions of work in plantations, mentions that under-employment is a serious problem. In the case of rubber plantations, it is said, workers lose up to 20 days' work in a month during the monsoon months, the average being 10 days. The Committee has recommended that employers should give a small allowance for the days on which work is held up because of the inclemency of the weather, because forced unemployment of workers is a risk which brings about indebtedness, malnutrition, etc.

The International Labour Organisation Committee on Work on Plantations, at its first session in Indonesia in 1950, passed a resolution which recommends that workers settled in plantations should, if they present themselves for work, be guaranteed a minimum wage for 24 days in a month throughout the year, provided the contract has not expired. It has been the Government's intention to place this matter before a tripartite conference. The question of involuntary unemployment of plantation workers has also been examined by the Advisory Committees set up by certain State Governments in connection with the fixation of minimum wages. The Minimum Wages Committee for Plantations in Travancore-Cochin observed that, in fixing the minimum wage at the subsistence level, it is very important that the worker should be assured of his subsistence during days of unemployment. As workers attached to estates are not in a position to seek outside employment during off days, the Committee considered the following courses to solve this problem: (i) raising the minimum wage to cover the needs of the worker during days of unemployment; (ii) giving an allowance for the days of unemployment; (iii) giving full employment. (i) and (ii) above were not acceptable on the ground that they raised questions regarding the number of working days in a year and the sufficiency of an allowance less than the minimum wage itself. The third course was, therefore, recommended by the Committee. The Notification issued by the Government of Travancore-Cochin regarding minimum wages of plantation workers accordingly stipulates that employers will provide work for their labour force throughout the year, failing which the labourers will be given their minimum wage for the days on which they are involuntarily unemployed. In view of the fact, however, that employers may not be in a position to provide every worker through the year with the same type of work which he or she is generally accustomed to do, the State Government have directed that the obligation of employers is only to offer some kind of work connected with the estate and that a worker who refuses to accept that work will automatically forfeit the claim for wages.

In Madras no lay-off compensation is paid to plantation workers. The Minimum Wages Committee for Plantations set up by the Government of Madras in 1950 observed that it was not competent to express an opinion on the question of the guarantee of a quantum of employment for estate workers by statute. In their minute of dissent appended to the Committee's report, the workers' representatives on the Committee, however, urged the need to guarantee work for six days in a week, payment at weekly rates, or payment of a compensation of at least Re 1 per day as subsistence allowance for the days of involuntary unemployment. The issues relating to the demand of workers for provision of six days' work in a week or fixation of a minimum wage for the week have been referred to an Industrial Tribunal for adjudication.

In Mysore, lay-off compensation is governed by agreements between managements and workers.

The present position in Assam and West Bengal is somewhat similar to that in Travancore-Cochin where plantation workers are assured of six days' work in a week. A number of tea gardens closed down in North-East India towards the end of 1952 and early in 1953 because of the slump in the tea industry. Several planters provided work for three or four days in a week to their workers while some others laid off workers. In February 1953, as a temporary measure to check closure of more gardens, and to induce gardens which had closed down to re-open, the Governments of Assam and West Bengal permitted planters in certain places to discontinue the concessional supply of food grains to workers. To make up for the higher prices charged for foodgrains, an increase in the dearness allowance of these workers was allowed. The State Governments have also directed that so long as workers are denied full compensation for loss of the foodgrain concessions, the industry should not resort to retrenchment and should provide six days' work in a week. According to a report received from Assam, employers have agreed to pay compensation for lay-off in economic gardens at the rate of 50 percent of wages. In West

Bengal no compensation is paid for periods of lay-off.

In Coorg, if a temporary stoppage of work is ordered in the whole or in any part of the estate for reasons of seasonal variation or on account of adverse climatic conditions, the workers affected are not eligible for wages. If they have worked for an hour or two, they are paid half a day's wages for that day. This has been incorporated in some of the Standing Orders issued by employers under the Industrial Employment Standing Orders) Act. Only estates employing 100 or more workers are required to issue such orders. In the case of estates which do not employ 100 workers on any day in the year, certain customary practices which vary from plantation to plantation are followed.

As for other States no system of payment of lay-off compensation to plantation workers exists in the States of Tripura and Uttar Pradesh. There has been no lay-off in the plantations of Bihar.

Menon Committee on Plantations

Meanwhile the work of the P. M. Menon Committee on plantations is being held up because the Labour Ministry has been insisting that it should be a tripartite commitee, representative of the Government, planters and labour. It is intended that this committee should make an enquiry into the costs of production of tea, coffee and rubber, and methods of marketing and of financing. Such an enquiry surely needs imperial experts, not partisan interests. It will be possible to find labour leaders to join the committee (which is expected to be at work for 18 months, but it will be almost impossible for a planter to be away from his business for such a long peroid. Mr. P. M. Menon has been cooling his heels here awaiting the constitution of his committee, the personnel of which is under dispute.

More Tube-wells

An agreement signed at Chandigarh on 23rd January will ensure more water for the Punjabi farmer's fields. The agreement, which will be between the Punjab Government and a French group of drilling companies, will relate to the construction of 175 tubewells. Of this number, 65 will be constructed in the Shahabad-Pipli area, 50 in the Jullundur area, 45 in Dera Baba Nanak and 15 in Aliwal. Together, they will bring under irrigation 70,000 acres of land which will produce 14,000 tons of additional foodgrains every year. The agreement will be the second between a State Government and the French group, the first having been signed in Delhi by the PEPSU Government on 16th January for the construction of 160 wells.

A third agreement for the construction of 150 tubewells in Uttar Pradesh will be signed in Lucknow on 29th January. Of these, 105 will be constructed in the Azamgarh-Ballia-Ghazipur area and 45 in the Banaras-Jaunpur area, bringing 60,000 acres under irrigation and resulting in an additional foodgrain yield of 12,000 tons per year. Besides the 485 tubewells to be drilled by the French companies, 130 will be constructed departmentally by the Government of Uttar Pradesh and 35 by the Government of Bihar with their own equipment and staff.

Thus, in all, 650 tubewells are to be constructed in the four States of PEPSU, Punjab, Uttar Pradesh and Bihar. Together, these wells will bring under irrigation an area of 260,000 acres, with an additional foodgrain yield of 52,000 tons per year. All these wells are scheduled for completion by December, 1955. The Government of India will give financial aid to State Governments for their construction and electrification.

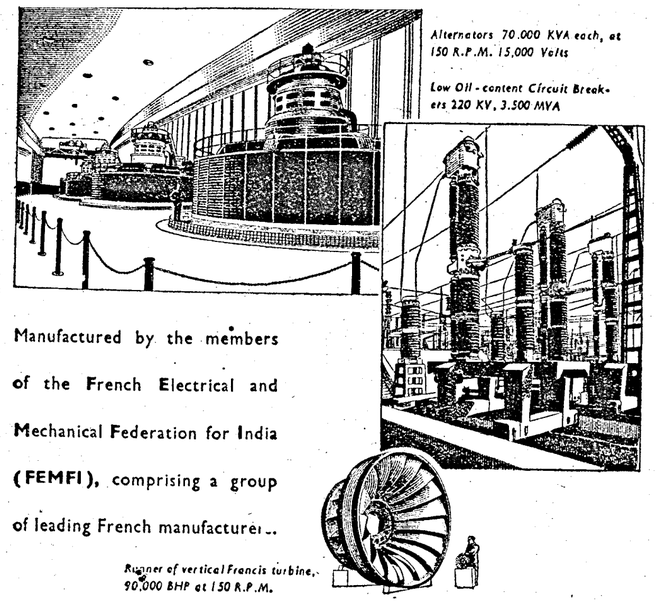
Refugees in the Andamans

Mr. H. M. Patel, Secretary of the Union Ministry of Food and Agriculture, and Mr. M. D. Chaturvedi, Inspector-General of Forests, Government of India, will be leaving for the Andamans on 27th January to make a detailed study of the scheme for rehabilitating East Bengal refugees in the islands. The colonisation scheme has already been in operation for about a year and nearly 450 families, including about 1,300 adults and 570 minors, had been settled there by the middle of 1953. The plan comprises clearance of jungles and allotment to each family five acres of paddy land and five acres of forest land on a co-operative basis. Messrs. Patel and Chaturvedi will make an on-the-spot study of the working of the new band saw-mill at Port Blair erected by the Forest Department of the Andamans at a cost of about Rs. 20 lakhs. This is the biggest saw-mill in the Indian Union if not in the East. Other questions awaiting their attention relate to the operation of the lease of the North Andaman virgin forests and the appointment of an agent for Andaman timbers in London.

States Commission Secretary

Mr. P. C. Chaudhury, I.C.S., at present Secretary of the Ministry of Information and Broadcasting, has been appointed Secretary of the States Re-organisation Commission, it is learned. The headquarters of the Commission will be located at New Delhi. It will have a Secretariat of its own consisting of a Joint Secretary, a couple of Deputy Secretaries and a number of advisers. The first meeting of the Commission is expected to be held here on 10th February. The question of a successor to Mr. Chaudhury in the Ministry of Information and Broadcasting is now engaging the attention of the Government.

Complete Plant and Equipment for THERMAL and HYDRO-POWER STATIONS



Alternators 70,000 KVA each, at 150 R.P.M. 15,000 Volts

Low Oil-content Circuit Breakers 220 KV, 3,500 MVA

Manufactured by the members of the French Electrical and Mechanical Federation for India (FEMFI), comprising a group of leading French manufacturers.

Runner of vertical Francis turbine, 90,000 BHP at 150 R.P.M.

WORKING OF THE INDUSTRIAL DISPUTES ACT IN PAKISTAN

A CURIOUS TRIBUNAL DECISION ON CASUAL LEAVE

(FROM OUR KARACHI CORRESPONDENT).

EVER since the Industrial Disputes Act became operative in the sub-continent, much argument has ensued about the quantum and the quality of leave, with its cumbersome and antiquated divisions into casual, festival, sick and privilege leave. It has always been maintained on the part of the employers that casual leave was given for a specific purpose, such as a family celebration or urgent family business and the request for leave had to be submitted to an employer for his decision whether the leave should be granted or not. Further conditions governing casual leave as a rule included that it should not be added on to festival or privilege leave and should not be for more than three or four days at a time. So far the principles underlying the definition and the regulation of casual leave have been followed by most tribunals, but a recent decision by Mr. Mansur Alam in his capacity as the Industrial Tribunal in the dispute between Messrs. Hyesons Electric Company Limited, Karachi, and the Karachi Factories Workers' Union seems, to say the least of it, rather capricious. One of the demands of the employees in this case was that the seven days' casual leave hitherto allowed by the company should be converted into privilege leave, on the ground that most of the employees of the company were men from up-country and required a longer duration of leave to visit their homes. The Tribunal in one breath was of the opinion that casual leave had its own well-recognised advantages and held that it would not be in the interest of workers to abolish it altogether and, in the next, undermined the whole character of such leave by directing the company to allow its up-country employees to combine casual leave with privilege leave.

The Quran and the Constitution

What might be described as the shadow of the shape of things to come in the forensic world of Pakistan when the new Constitution becomes effective is being provided by what is known locally as the Jumma case. During the last session of the Constituent Assembly one of the most important of the agreed Basic Principles was that there should be no legislation which was repugnant to the Quran or to the Sunnah. The decision as to the repugnancy was vested in the Supreme Court, thus driving home the last nail into the coffin of the much-debated "mullah boards". The Minister of Law, Mr. A. K. Brohi, when dealing with the applicability of the Muslim Personal Law to the non-Muslims of Pakistan stressed that only the secular portion of the law which was common to other countries would be applicable to non-Muslims who would be unaffected by the Muslim Personal Law.

Jumma was convicted of murder and sentenced to death. A mercy petition, on the ground that he had been pardoned and forgiven by the descendants of his victim, through the rights vested in them according to the Holy Quran and Sunnah, was submitted to the Chief Commissioner of Karachi, Mr A. T. Naqvi. The petition was rejected by the Chief Commissioner but the execution was stayed by the Governor-General on 3rd January. Legal notice has now been served on the Prime Minister, Mr. Mohammad Ali, the Interior Minister Mr. Mushtaq Armad Gurmani, and the Chief Commissioner of Karachi, demanding the immediate release of Jumma otherwise a case would be filed against them and the Federation of Pakistan "jointly and severally for permanent injunctions declaration and damage of Rs. 1 lakh for illegal detention."

Whereas it is true that the legal proceedings and the eventual sentence were regular under the law as it exists at present it is a nice problem how far the declared intentions of the supreme legislative body to alter the law should be taken into consideration at this stage in the matter of exercise of prerogative.

East and West Pakistan Freight War

Last year the Karachi shipping companies concerned formed a freight pool to regulate priority of berthing at Karachi as well as to institute a uniform freight rate of Rs. 61 per ton for public general cargo between East and West Pakistan. The move was greatly resented by various trade organisations and the Government was urged to fix reasonable rates for all commodities to encourage trade between the two wings. The Government was reluctant to move but when the P. I. D. C appeared on the stage as a major shipper, on behalf of the products of the Karanphuli Paper Mill, the energetic Mr. Ghulam Faruque took a hand and in a remarkably short space of time the Freight Pool Committee disappeared in smoke, Last week the companies decided to terminate the agreement and the freight market has become a free-for-all, with the Mohammadi Steamship Company coming out with an announcement of a cut of 80 percent in the rates, which are now oscillating between Rs. 16

Bombay

CAPITAL FOR ELECTRICAL UNDERTAKINGS

PRODUCERS SUBMIT DATA TO GOVERNMENT

(FROM OUR BOMBAY CORRESPONDENT).

24th January.

AS suggested by the Ministry for Irrigation and Power, in connection with the persistent request of the Federation of Electric Undertakings of India for the early introduction of an amending Bill in Parliament to allow an enhanced standard rate, the Federation has now collected State-wise data from its constituents providing specific instances of failure on their part to raise money and has submitted it to the Government in the form of comprehensive broad-sheets last week. Apart from supplying the information asked for by the authorities regarding the success of efforts to raise capital, the broad-sheets also include useful information about the additional capital required by these undertakings and the fears and forebodings they entertain in this regard. According to the Federation, though this enquiry has been confined to about one-third of the representative companies, the data obtained is so clear in its indication about the impossibility of raising capital to any significant extent under the present statutory restrictions that it is certain that extending the investigation to the remaining units would not change the picture in any manner. In forwarding this data the Federation has observed that the survey confirms the views of its President at the last general meeting that what little success has been achieved has been entirely because of the confidence of investors that the Government would soon raise the rate of return and it has warned the Government that if they are disappointed even the most favourably placed undertakings will fail to get any response to their appeals for finance. The Federation has therefore requested that, in view of the extreme urgency of the matter, a Bill upgrading the standard rate and dealing with the other major points regarding deferred taxation reserve, rehabilitation reserve, and other forms of internal finance might be introduced and passed in the budget session of Parliament.

Bonus for Textile Workers

While mill shares have been staging a small boomlet in anticipation of inflationary conditions and heavy deficit spending by Governments during coming years, the textile industry in Bombay had a couple of heavy shocks to bear last week. As usual, the bonus award for textile workers has failed to satisfy them, both with regard to the quantum of the award and the exclusion of mills making losses. There is a strong move now amongst leftist unions in the Bombay textile industry to use this dissatisfaction to foment a strike. The workers are being asked not to accept payment of bonus due tomorrow pending the decision of the appeal before the Appellate Tribunal filed by the Rashtriya Mill Mazdoor Sangh (I.N.T.U.C.), which is the representative union for mill workers. On the other hand, the Communist-controlled Mill Mazdoor Union (red flag) is busy organising "united bonus committees in the mills" to prepare for an all-out struggle if the demand for a higher and uniform bonus from all mills is not accepted by the industry. The Managing Committee of the textile labour union has asked the various unions in the industry to attend a joint conference which is being called to chalk out a programme of action on the bonus issue. This union wants that the Government should appoint an independent committee of experts, including trade unionists, to enquire into the financial position of the textile industry and to decide upon a permanent basis for bonus to workers; it wants this basis to be changed from the profit earned by the industry to production in the industry as a matter of right for the workers. At one time bonus was being asked for as a share in profits. Now when the profits are disappearing it is being claimed practically as deferred wages. The Socialist unions are also holding meetings to prepare the workers for the coming struggle. Their demand is to raise the quantum to 25 percent of the earnings against the 15 percent awarded by the Industrial Tribunal. The only possibility of averting a disastrous strike lies in the difference of opinion amongst the competing unions with regard to the demands to be made before calling a strike.

Power Cut and Workers' Compensation

The second shock to the industry came from the wholly unexpected award by the full bench of the Bombay Industrial Court last Thursday, giving compensation to textile workers in Bombay to the extent of half their earnings by way of wages and dearness allowance, for the loss of wages suffered by them because of the compulsory closing of textile mills for one extra day every week during a 8½-month period in 1951-52, when a power cut was imposed by the State Government in view of the supply position created by absence of rainfall in the hydro-electric lake areas. This closure was ordered by the Government and it was resented as much by the industry as by the workers since it involved losses for both. Workers' organisations kept up an agitation for compensation, but the Government was reluctant to entertain any such proposal as the closure had resulted from its own orders. However, it had to yield to the pressure brought on it during this long period and was almost compelled to refer the question to the Industrial Court, without taking any sides for compulsory adjudication. It was hoped by the industry that the Court would not make any award because the losses resulted not through any voluntary action on the part of the mills; in fact, they had of themselves suffered a loss in production and profits because of this compulsory closure from a cause over which they had no control. The Court has, however, ruled that this closure did not appear to have affected to any substantial extent the profits or losses of the mills, and that as the textile industry in Bombay had been well-established and had good reserves from which it was in a position to pay compensation to its workers it would not be adjudicating equitably if it rejected the claim of the workers for compensation. The award, apart from imposing a fresh burden at this late stage, when books for the year have been closed and balance-sheets presented and passed raises certain very important questions of principle. The Mill-owners' Association is likely to file an appeal before the Industrial Appellate Tribunal against this award. The real shock to the industry comes from the enunciating of a new principle and the setting up of a new precedent which might be applied in other cases of stoppage of production for reasons completely beyond the control of the management, during periods of civil strife or natural calamities etc. There is also a further complication in as much as additional bonus for the year might have to be paid in view of this grant of wages in compensation. This is a major issue of principle affecting all the industries and it is felt here that this is not a fit case for decision by a local tribunal but for clear legislation by Parliament.

Free Trade in Coarse Grains

Mr. Y. B. Chavan, Minister for Civil Supplies, ceremoniously inaugurated the free market in coarse grains in the State after ten years at a function organised by the Indian Grain Merchants' Federation and the Grains and Oilseeds Merchants' Association. He appealed to the business community and the people in general to help in making a complete success of the experiment of decontrol, the responsibility for which lay on them. He asked business men to hold the price line of foodgrains now freed from control at a reasonable level and in moulding their activities to keep the welfare of the citizens in mind. He also warned them that the Government would watch their activities closely and hoped that there would be no need for it to think in terms of reimposition of controls. He explained to grain merchants that as Bombay State was heavily deficit and more particularly as scarcity conditions still prevailed over large areas of Maharashtra and Karnatak, they had to follow a more cautious policy than other States in regard to lifting controls over the trade in foodgrains.

Ceylon Invites Indian Capital

On his way back from New Delhi to Colombo, Sir John Kotelawala paid a comparatively long visit to Bombay last week. Apart from the formal civic welcome to this distinguished guest by the Municipal Corporation at a special reception, some business organisations also arranged functions in his honour. One of the most important of these was organised by the Indian Merchants' Chamber. It seems Sir John has been very assiduous in wooing the business community here. He invited industrialists to come and start some industries in Ceylon and assured them of every possible assistance, saying that as long as he was at the head of the Government their capital would be safe and they would be allowed all privileges. He explained that he asked for this help from India because Ceylon could not exist only on its agricultural economy and in order to feed the growing population of his country, participation of Indian capital in industrialising Ceylon would be beneficial both to Ceylon and to India. He also gave an assurance to the business community here that he would find a solution to the problem of double taxation between the two countries within a week; negotiations in this connection had already progressed well. When he attended a lunch given by the All-India Manufacturers' Organisation in his honour, the Ceylon Prime Minister spoke about the need for rapid industrialisation in South-East Asian countries.

Unemployment Enquiry

The report of the enquiry undertaken by the Indian Chamber of Commerce here with regard to the unemployment situation in the State makes some interesting disclosures. Besides the questionnaire issued to its members to ascertain facts about the nature and extent of unemployment in various sectors of the economy, which also sought suggestions regarding ways to achieve increased employment, the Chamber also sent trained investigators on a tour for discussions with about 30 associations representing industries and about 200 important industrial and commercial firms. The most important conclusion arrived at by the Chamber is that acute power shortage in industrial areas has led to a substantial reduction in industrial activity and has therefore been partially responsible for unemployment. It suggests that plans for the generation of additional thermal power in the Bombay-Poona area should be completed as expeditiously as possible, to supply the growing needs of this region during the period that is bound to elapse between now and the completion of the Koyna project. Amongst the other causes leading to unemployment, the report mentions shortages of raw materials and suggests the need for a thorough overhaul in the policy for the allocation to various States, as unemployment in the engineering industry is of a marked nature. This investigation by the Chamber has also disclosed an impression amongst industrialists that the labour policy of the Government has contributed greatly to the fall in employment. In this connection, it is suggested that there is a strong case for factories employing less than 50 persons being exempted from the application of the various labour laws such as the Factories Act, etc., in order to provide more employment. The report goes on to say that the Government should take steps to make building activities more economic and provide an incentive to private enterprises in this field, for they can offer immediate employment to a large number of people. In any case, the Chamber thinks that one great contribution which the Government can make at a time of reduced employment is to refrain from placing fresh obstacles in the path of private enterprise. It has also something to say about the effect of sales tax on employment and recommends to the Government that the administration and the basis of this levy should not be allowed to disturb the economic cohesion and established trade of any area.

Location of Steel Plant

The neighbouring State of Madhya Pradesh fears that its ambition to have the new iron and steel plant, to be set up in co-operation with the German combine of Krupps-Demag, is going to be frustrated. The State Assembly and the Ministry, including the Chief Minister himself, have been very vehement in their denunciation of what they call the machinations and intrigues of private vested interests and foreign influences in trying to pursuade the Central Government to pass over the claims of this State in favour of some other State. The State legislature passed a resolution demanding that the Central Government should appoint a committee of disinterested and competent experts to examine the question. Pandit Ravishankar Shukla, the Chief Minister, threatened in the open session of the legislature that, whether he remained in power or not, if injustice was done to his State in respect of the location of this plant he would expose it before the public. It is believed that strong representations have been made to the Prime Minister at the time of the Congress session at Kalyani to seek an assurance that the claims of Madhya Pradesh would be given full consideration. Curiously enough, though the location of the plant in this area might be of some advantage to many industries in Bombay State, industrial and political circles here have taken no interest in this question.

Competition in Soap Industry

The old controversy between the indigenous soap industry and the section controlled by Lever Bros. is being kept alive by the Indian Soap and Toiletries Makers' Association. Last week, the Association suggested the appointment of either a Development Council under the Industries (Development and Regulation) Act, or an *ad hoc* enquiry committee to go into the question of protection of the indigenous section. The complaint of the Association was that while the units of the international combine in India were being operated at full capacity, the Indian factories could hardly use one-fifth of their installed capacity. It, therefore, wanted an independent Governmental enquiry into the various causes leading to this position. In their disappointment, the soap manufacturers are now inclined to blame also the people of this country as a whole because, as Mr. N. S. Tata, one of their spokesmen, said, the people had not shown the requisite spirit of *swadeshi* in encouraging indigenous industries. Mr. Tata complained that adequate encouragement was also not forthcoming from the Government.

NEWLY REGISTERED COMPANIES

West Bengal Power Supply Co. Ltd.—Director, Mr. N. B. Elias, 1 & 2, Old Court House Corner. Capital Rs. 30 lakhs.

Metal Agents Ltd.—Director, Mr. R. L. Thirani, 203/1, Harrison Road. Steel and iron dealers. Capital Rs. 5 lakhs.

India Ferro Alloy Industry Ltd.—Director, Mr. M. Shamsuddin, P-16, Bentinck Street. To acquire mines, etc. Capital Rs. 5 lakhs.

Estate Mineral Development Co. Ltd.—Director, Mr. M. Shamsuddin, P-17, Mission Row Extension. Capital Rs. 5 lakhs.

Kayar Ltd.—Director, Mr. R. P. Kayan, 103, Park Street. Import-export business. Capital Rs. 5 lakhs.

Universal Commercial Agencies Ltd.—Director, Mr. R. P. Kayan, 3, Jagmohan Mullick Lane. Import-export business. Capital Rs. 5 lakhs.

Hindustan-Thai Trading Co. Ltd.—Director, Mr. S. Bujakowski, 25B, Park Street. Jute spinners. Capital Rs. 5 lakhs.

Francis Klein & Co. Ltd.—Director, Mr. W. Elmenhorst, 1, Royal Exchange Place. Mechanical and structural engineers. Capital Rs. 10 lakhs.

Antoine Bentz Ltd.—Director, Mr. P. Raj Bakshi, 9, Stephen House, Merchants. Capital Rs. 5 lakhs.

Nirahah Khas Colliery Ltd.—Director, Mr. Kumar K. N. Maliah, 14, Cullen Place. Coal dealers. Capital Rs. 5 lakhs.

Jemehari Khas East Colliery Ltd.—Director, Mr. Kumar K. N. Maliah, 14, Cullen Place. Coal dealers. Capital Rs. 5 lakhs.

New Jemehari Khas Colliery Ltd.—Diretor, Mr. Kumar K. N. Maliah, 14, Cullen Place. Coal dealers. Capital Rs. 5 lakhs.

Indian River Transport Co. Ltd.—Director, Mr. N. C. Ghosh, 4, Lyons Range. Steamer services. Capital Rs. 5 lakhs.

J. C. Company Ltd.—Director, Mr. J. K. Saha, P-98, B. K. Pal Avenue. Raw materials business. Capital Rs. 5 lakhs.

WHAT SELF-HELP CAN DO

KAIRA SHOWS THE WAY TO EFFICIENT AGRICULTURE

(By Taya Zinkin)

TO those who believe that East is East and West is West, and never shall the underdeveloped develop, the achievements of Kaira district will come as a surprise. In most of Asia, agriculture is an unprofitable way of life. In Kaira the peasants treat it as a business, and they make it pay. In most of Asia, risk-taking and initiative in agriculture are left to Governments. In Kaira the peasant does everything, the Government nothing. In most of Asia, villages are mud huts, the people illiterate. Kaira has three-storeyed houses and village high schools. The people there are more like European farmers than Asian peasants.

Kaira is 250 miles north of Bombay. There is nothing special about it—except the people. The country is flat, the soil fertile, but not exceptionally so; the holdings are not large—the average being seven acres per family; the rains, as in the rest of monsoon Asia, are unpredictable. There is drought in Kaira about once every ten years. The villages are isolated because the roads are few and bad. Peasants go bare-foot, bare-chested, a turban on their head, a primitive sickle in their hand, just as in the rest of India. but the resemblance stops there.

Kaira looks like a bit of West in the East. Many houses are modern, with neon lights, ceiling fans and running water. Some houses cost as much as Rs. 2 to Rs. 3 lakhs, and the villages have that new look mingling with the old which makes it difficult to say at first glance whether one is in a large village or a small town. A number of farmers have cars, jeeps and tractors; even the smaller villages have a public library and a school; the bigger villages have a high school. The surrounding countryside is dotted with water towers fed from diesel-operated tube wells and almost every village is on the railway line.

How was it done?

Being Businesslike

Firstly—by being businesslike, by calculating profit and loss. "We grow what pays us most; we sell our cash crops to buy food and we are up on the deal," said one farmer who thought nothing of putting Rs. 1,000 worth of fertiliser on one acre under tobacco. "I get Rs. 500 back net; had I grown millet instead, I would have got only Rs. 50 profit in a good year". In most of India the Government has to subsidise the sale of fertilisers and coax peasants to use improved seeds. In Kaira only improved seeds are used because it pays to use them. Some of the farmers even grow the latest type of rust-resistant American wheat flown from the United States. This willingness to try new methods is one of the secrets of success. "The Japanese having nothing on us", explained the head of one of the agricultural institutes. "The Government of India is pushing this method because it gives a yield of 4,000 lbs. per acre. We already get 3,500 lbs. and above that our strain of rice lodges, so we are trying to introduce a new type of rice, but have failed so far". What is significant is not that Kaira yields are high, but that whereas in the rest of India the Government has to introduce the new method by community projects, in Kaira it has already been tried as a matter of course by private institutions; they are already one step ahead of the Government, they are trying to improve the strain while weighing costs against returns, which the Government does not always do. It is this truly practical attitude which alone pays.

Secondly—by showing enterprise. In the rest of India people are reluctant to leave their villages so, with every new son, the handkerchief of land shrinks, more are underemployed and underfed. Not so in Kaira. Land is not really fragmented. The extra sons go in for trade, they run shops, they scatter to the four corners of India selling cigarettes, bidis and spices, running textile mills and shops. As many as 40 families have gone from the average village to settle in Africa where they control a fair portion of the trade. They go to Kenya, East Africa, Ceylon, the Sudan, even Britain.

Better Roads Necessary

The same enterprise which drives the Kaira peasant abroad can be seen at home. Kaira has Asia's largest rural co-operative, the Anand milk producer's co-operative which collects and pasteurises milk for Bombay City. In 1948 (the first year), it handled 1,200 tons of milk. In 1952-53, it sent 10,000 tons of milk to Bombay, and a new pasteurising plant which is to triple the co-operative's output will be set up as soon as the Government builds milk collection roads. Now, the milk is collected over the 600 square miles which the few roads make accessible to lorries. It is carried in head-loads from the villages to the co-operative lorries. Obviously the people of Kaira cannot build their own roads; they are too expensive because metal is far away and they cost Rs. 50,000 a mile. In the old days Kaira was a Congress strong-hold, the home of Sardar Patel, and it "non-co-operated" with the Government, so the Government also boycotted it and built no roads. Now, under the national Congress Government, Kaira is considered a developed area and therefore gets no grants or other aid. Fortunately before the railways were nationalised they built a run through the area so that most of the villages are on the railway line.

Everywhere in India the Government is expected to educate and irrigate. In Kaira the people do it themselves. A hundred high schools serve a million people. There are 3,000 private tube-wells. "If we had waited for the Government to build canals, we would have gone dry years ago, so we invested in water," said the owner of a tube-well (each tube-well costs Rs. 2 lakhs) from which he sells water at Rs. 8 per "clock". Kaira is one of the few places in India where water is sold, as it should be, on a volumetric basis.

A Rural University

Perhaps the most spectacular example of what self-help can do is the Vallabh Vidyanagar Rural University where 2,500 boys and girls are educated in the arts, sciences and the crafts. The founder of the University, Mr. Patel, had no money. He went round the villages and sold the idea of giving land and money for development on the basis of enlightened self-interest; there would be a university and the value of the surrounding land would appreciate. So Mr. Patel got 550 acres plus Rs. 700,000 from 600 donors and built the university. The land around the university has risen ten times in value, while the young are spared the overcrowding and squalor of town life. There is no Gandhian teaching at the University; it tries to promote small-scale modern industry, not cottage industry. Already there are attached to the University a cement castings plant, a tile factory, small machines and agricultural implements. What India needs is Kairas all over the country. Not until then will she be really on the way to prosperity.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales the 71,286 packages on offer realised an average price of 4s 3.74d a pound, against 4s 4.92d in the previous week and 3s 3.31d a year ago Clean plain broken pekoe was quoted at 4s 0½d, in the previous week 4s 3½d.

Results obtained by some of the companies are given below :

	No. of packages	Average per lb.
Amalgamated	1,283	4/2½
Anglo-Ceylon	504	4/5½
Assam Co.	1,570	4/4½
Assam Frontier	1,086	4/4
Attaree Khat	870	4/2½
Bagracote	392	4/
Bargang	492	4/4½
Borhat	401	4/3½
Budla Beta	546	4/3½

Tea stocks in London and provincial bonded warehouses on 15th January totalled 114,099,084 pounds compared with 108,895,428 on 8th January. Landings during the period 9th to 15th January totalled 16,149,132 and deliveries in the same period 10,945,476 pounds.

INDONESIAN TEA OUTPUT DOWN

Indonesian tea production last year tot lled about 75 million against 81 million lbs in 1952 and 103 million lbs in 1951, according to I. Elink Schuurman, Rotterdam tea merchants. This decrease was mainly due to a continued drop in production in Java (from 85 million lbs in 1951 to 61 million in 1952 and 56 million last year). Output this year is not expected to exceed 80 million lbs. Quality of the tea last year was generally good. Exports in 1953 are estimated at about 63 million lbs. against 70 million in 1952 and 68 million in 1951.

COCHIN TEA SALES

At sale No. 2 held on 19th January 1954, there was quite a fair selection, which included some useful invoices from the Nilgiris. A very strong and active demand was maintained throughout. Common descriptions were an irregular 3½ to 5 annas dearer, Mediums showed advances of about 5 annas, while Best Liquoring kinds also came to an irregular market and were 2 to 5 annas dearer. Whole leaf grades were a strong feature and sold at several annas above last prices.

Quotations

		1954 Rs. as. ps.	1953 Rs. as. ps.
Low Grown Travancore	B.O.P.	2 6 6	1 5 0
Medium	B.O.P.	2 7 6	1 13 0
Anamallais	B.O.P.	2 11 0	2 0 6
Best Liquoring Nilgiris	B.O.P.	3 8 0	3 12 0
Black Well-made	O.P.	2 12 0	2 3 0

In the market for the Export Quota sellers are quoted at 45 pies, and the trend is easier.

NATURAL RUBBER CONSUMPTION CONTINUES TO INCREASE

Natural rubber continued to capture an increasingly larger share of the U.S. rubber market as 1953 drew toward a close. The U.S. Department of Commerce has reported that America's consumption of natural rubber during November 1953 totalled 43,167 long tons, or more than 45 percent of all new rubber used in that month. American natural rubber consumption came to 41,749 long tons in November 1952, about 39 percent of total new rubber use, and to 35,037 long tons in November 1951, about 35 percent of total new rubber use. For the first 11 months of 1953, consumption of natural rubber in the United States totalled 510,989 long tons, against 409,056 long tons in the first 11 months of 1952. For 1953 as a whole, the Rubber Manufacturers Association, American industry organisation, has estimated U.S. consumption of new rubber, natural and synthetic, at a record 1,341,000 long tons, surpassing the previous record of 1,261.413 long tons established in 1952. Of this total, 555,000 long tons, or nearly 42 percent, are estimated as natural and 768,000 long tons as synthetic. In 1952, consumption of natural rubber came to 453,846 long tons, or 36 percent of total new rubber use, and consumption of synthetic came to 807,567 long tons. Average annual consumption of natural rubber in the United States since World War II has been about 525,000 long tons. The Natural Rubber Bureau, another industry organisation, estimates that in 1954 America's consumption of new rubber will total about 1,280.000 long tons, of which 600,000 long tons, or nearly 50 percent, will be natural. Some industrialists have estimated 1954 U.S. consumption of new rubber at 1,300,000 long tons, of which nearly half is expected to be natural.

COLOMBO RUBBER PRICES

The following prices have been issued by the India Rubber Board from the weekly rubber market report of the Colombo Broker's Association, for the week ended 16th January, 1954:

Closing prices on 15-1-54.	(Rupees per lb.)	Average for week. (Rupees per lb.)
Sheet:		
No. 1	1.10½	1.10½
No. 2	1.07½	1.07½
No. 3	1.04½	1.04½
No. 4	.80½	.80½
No. 5	.75½	.75½
Sht. Cutts 1		43
Sht. Cutts 2		40
Crepe:		
R.M.A. 1X	cts. 92	cts. 92½
R.M.A. 1	cts. 88/91	cts. 88½
Crepe 2		77½
Crepe 3		67½

Sc. Crepe No. 2	cts. 48/52	cts 49½
Flat Bark	cts. 44/46	cts. 44½
Sc. Crepe 3X		46½

To arrive at f.o.b. Colombo prices, add 20 cents per lb. to the above market prices.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN DECEMBER

Indian rubber output in December was 2,569 tons, according to the Indian Rubber Board. Exports amounted to 21 tons 1,360 lbs ; the quantity of rubber imported during the month was nil. Consumption by manufacturers was 2,075 tons of which 2 tons were imported. Stocks with estates and dealers on the last day of December totalled 6,523 tons including 1,409 ons in transit. Stocks with manufacturers at the end of the month were 2,798 tons. Manufacturers also used 203 tons of reclaimed rubber, the month-end stock being 228 tons, and consumed 1 ton 790 lbs. of synthetic rubber. of which manufacturers held a total stock of 13 tons 854 lbs.

Jute

RAW JUTE SUPPLIES

SMALL INCREASE IN MILLS' STOCKS: INDIAN CROP WILL LAST TILL JUNE

WITH more than half the jute year gone, consideration of the supply of jute for the mills in India is of some interest. Readers will have noticed in last week's report that the imports of jute into Calcutta and mills' stations in the six months July-December, 1953, were, roughly, the same as in the corresponding period in 1952—29,07,600 bales in 1953 and 29,27,000 bales in 1952. It will also have been noted that I.J.M.A. consumption in July-December, 1953, was 25,25,600 bales compared with 27,20,000 bales in the corresponding six months in 1952. In other words the arrivals in the current season are down by 19,400 bales and the mills' consumption is down by 1,94,400 bales. All the arrivals do not, of course, go direct to mills but they must ultimately find their way to mills because there is no export of raw jute abroad. It is believed, however, that stocks in the local bazars are considerably higher than they were at this time last year, so it is unlikely that mills' stocks have increased to the extent indicated by the fact that arrivals are, approximately, the same while consumption is substantially lower. Mills have, of course, another source of supply which is not included in the figure of arrivals, namely, daissee jute bought at mill gates and jetties. It is believed that these purchases are heavier this year than they were last year. It would appear, therefore, that the mills' stock position may be a little better than it was at the corresponding time last season but that the increase is probably only in the neighbourhood of the equivalent of half to one month's consumption.

On the other side of the picture it will be seen that the arrivals of jute of Indian origin (which includes mesta and bimli) were 29,07,600 bales against the forecast of 31,23,000 bales of jute and 5,39,000 bales of mesta, a total of 36,62,000 bales. The forecast of the bimli crop is not yet available but that has to be added to the supply; while the arrivals, it must be remembered, include carry-over from the previous crop. Assuming that these two factors may cancel each other out, there would appear to be still available from Indian sources only some 7½ lakh bales from the current crops, or less than two months' consumption by the mills. If it is granted that the mills have in hand jute sufficient to last to the end of April the supplies available in India would barely carry them on to the end of June. For their requirements to carry them into the new season with a safe margin the mills will then be dependent on supplies from Pakistan.

In reaching this conclusion two further assumptions have been made. The first is that the mills will use all the mesta produced in India and the second that the forecast figures are correct. As to the former it is probable that the bulk of the mesta will be consumed, though the proportion of mesta to Indian jute is greater than normally consumed. The mills will, however, have Pakistani jute to help them out. As regards the assumption that the forecast figures are correct, it is not possible at this date to make any definite statement. It is thought that the crop in Upper Assam has been less than was originally estimated. On the other hand the crop in Lower Assam and Northern Bengal appears to have been bigger. At first it was thought to be less than that of 1952 but the dispatches from stations in lower Assam up to the end of December already exceed the total for the whole season 1952-53. That seems to indicate a bigger crop than was expected especially as last year's dispatches included a large quantity of jute smuggled from Pakistan whereas smuggling this season has been negligible. On the other hand there is no doubt a lot of Upper Assam jute has been brought down to Dhubri and shipped from there because of the better prices obtainable for Dhubri jute. The daissee crop also appears to have been bigger than originally expected but other districts appear to be turning out according to expectations.

Pakistan Likely to Grow More Jute

According to a report from Karachi, Pakistan is expected to double her acreage under jute in the coming season. The Jute Board is believed to have informed the Government that there is a steady demand for Pakistani jute and no carry-over is likely to remain from the present season, so the area under jute should be increased next season. Estimated world demand for jute is about 9 million bales, and Indian production this season amounted to just over 3 million bales Pakistani production was officially estimated at 2.5 million bales, although the trade put it at 1 million bales higher (the target under the crop regulation scheme was fixed at 4.2 million bales); to this was added a carry-over of 2.5 million bales. It is thought that Pakistan will need to produce 6 million bales during the next season; under the Trade Agreement, India will buy 1.8 million to 2.5 million bales and Pakistan will require 800,000 to 1 million bales for her own consumption.

THE JUTE MARKETS

SPECULATION IN SACKING

With holiday interruptions it has been a short week but there was one outstanding feature. That was the heavy selling of B Twills in the speculative market which was reported to be due to unloading by a large speculator followed by the smaller fry. It will be recalled that before the last settlement in the speculative market there had been some nervousness whether the bulls would be able to take up their commitments. The settlement was, however, successfully tided over but very soon afterwards heavy selling of B Twills began in spite of the fact that good business was being done with shippers in other classes of heavy sacking. Prices of these eased, of course, in sympathy with those of B Twills but did not fall to the same extent, though nervousness was created. This is a clear illustration of the way in which the fatka markets destroy holding power. It also demonstrated the absurdity of the Government's paying lip service to the suppression of fatka or katni markets, or whatever one may call them, while at the same time turning a blind eye to their existence.

Manufactured Goods. Good business has been reported with overseas buyers in a variety of heavy goods which included Heavy C's, Liverpools, Cubans, Cornsacks and Woolpacks. Small but steady buying of hessian for the U.S.A. and the U.K. has also been reported. This business tended to keep the market steady when a steep fall in prices might have resulted from the heavy selling of B Twills in the speculative market. The indications are that there will continue to be steady buying of heavy goods in sufficient quantities to take up all that the mills are producing and, with raw material not in excessive supply, there appears to be no justification for any attempt to force prices downward. Closing quotations on Monday were as under :

	Jan. Rs.	Feb-March Rs.	April-June Rs.
40" 8 oz	38-4	37-4	36-8
40" 10 oz	46-7	45-12	45-4
B Twills	103-8	104-2	104-14
Heavy C's	103-12	105-0	105-0
Cornsacks	106-12	107-0	107-4

Raw Jute. There has been moderate buying by mills from day to day. On Friday quotations were lowered by eight annas because of weakness in the gunny fatka market but buyers who tried to buy at the quoted rates found difficulty in getting sellers and prices went up again to the previous levels. There has been steady enquiry throughout the week for high grade jute. Mill Reds were bought at Rs. 210 and picked marks of Mill Firsts at Rs. 195 Northern Tops fetched Rs. 41 and Middles free from samla Rs. 36 to Rs. 38. Ordinary marks were done as follows :

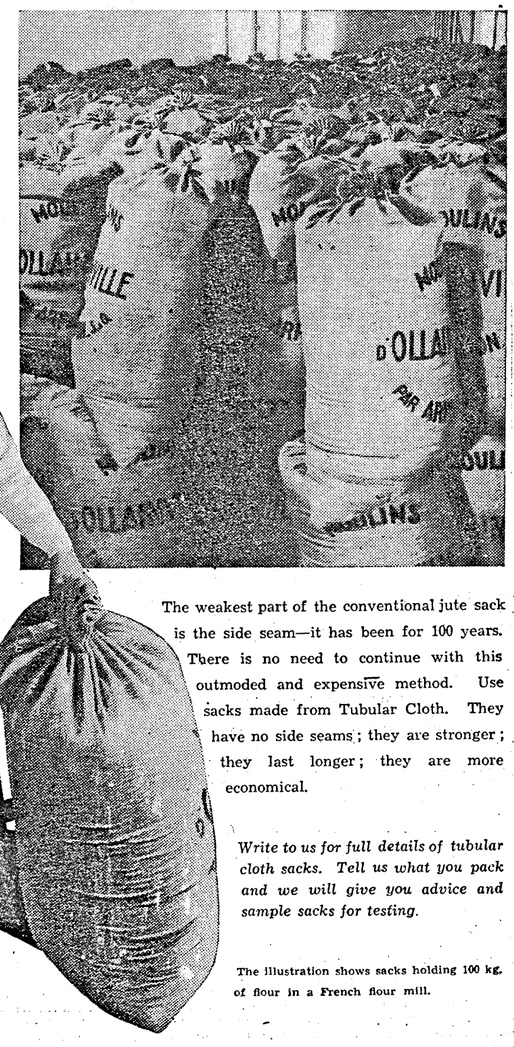
Northern & Dhubri Rs. 27-8 to Rs. 28-8 basis Bottoms
Northern Middles alone Rs. 31-8
Assam Rs. 28 basis Bottoms
Bimli Rs. 25-4 F.A.Q.
Daissee Mesta Middles alone Rs. 26-8 to Rs. 27-8
Mill Firsts Rs. 175 per bale
Dundee Daissee 2/3 Rs. 180 for Short Group
Dundee Daisee 2/3 Rs. 165 for Long Group

Tuesday being a holiday there was no business reported.

Quotations were as under :

Indian Jute :	Landed at Mills Rs. per maund basis Bots. Rs.	Shipment.
Lower Assam	28-8	Jan-Feb.
Upper Assam	28	Do
Northern	28-8	Do
Purnea	28	Do

Tubular cloth sacks don't split



The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

SAINT FRÈRES S.A., 34 RUE DU LOUVRE, PARIS

236-43

	Landed at Mills Rs. per md. basis Bols.	Shipment

Tossa prices are Rs. 2 per maund above the prices of white jute.

Pucca Bales	Rs. per bale	
Mills Firsts	175	Jan-Feb
Mill Lightnings	160	Do
Dundee Daissee 2/3 SG	180	Do
Dundee Daissee 2/3 LG	165	Do
Pakistani Jute ex Pakistan	Rs. (I) per md basis Bots	
Jat	30-8	Feb-Mar
District	29-8	Do
Northern	28-8	Do

In the case of Pakistani jute there is a difference of Rs. 3-8 between Tops and Middles and Rs. 4 between Middles and Bottoms.

Mofussil. Conditions in Indian markets are unchanged. There is not much movement of loose jute and most purchases have to be made in kutcha bales sold by stockists who are slowly parting with their holdings. It is reported that the stocks now held in the villages are of better quality than has been on sale lately but holders are asking full prices and selling only when they require money. The general idea among them is that they will get better prices by waiting.

In Pakistan there is no change of importance. In spite of business reported recently with Poland, Russia and the U.K. prices remain unchanged on the basis of Rs.(P)24 basis Bottoms for jat jute in kutcha bales in Narayanganj. Imports have increased a little but quality remains poor. Tossa continues in demand at Rs.(P)4-8 above the price of white jute. Other quotations are not to hand at the time of writing.

Imports into Cossipur are about the same and consist mostly of Purnea and jungli jute along with some North Bengal jute and Murshidabad tossa. Imports from the daissee districts are small and the bulk is going direct to mills which continue to take up all they can get.

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail

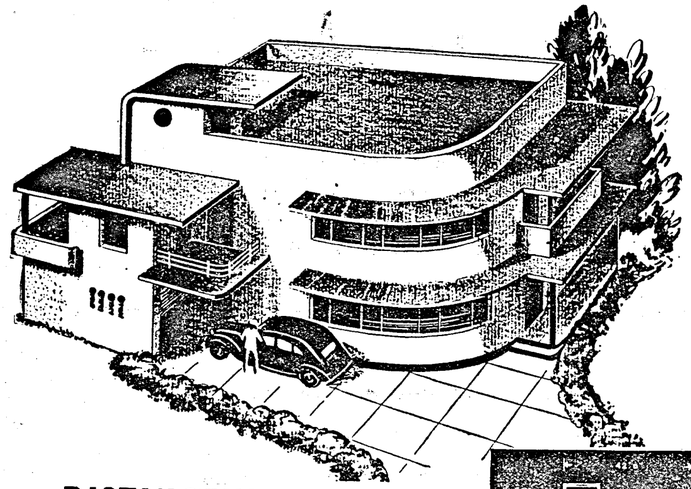
THE jute markets continue with very little change noticeable in the level of prices. Pakistan shippers maintain a very firm undertone for the raw material, and one remarkable feature this season is the small amount of business that has been done with the big firms. They have been very reluctant to reduce their terms to the level of the smaller men and, of course, the latter have been favoured. Take Mill Firsts, for instance, for which the quoted rates rule from £108 per ton to £114 and Mill Lightnings from £97 to £102, c. and f. U.K. Naturally, the Jute Controller-2/3 buys at the keenest prices, and there have been very few complaints regarding the quality of the fibre received. Good marks of Daissee-2/3 are offered at from £103 and grade from £93, and grade Tossa-2/3 from £111 and fours from £101, but the quantities available are small, only 100 to 250 bales or so from each seller, which are being picked up from day to day.

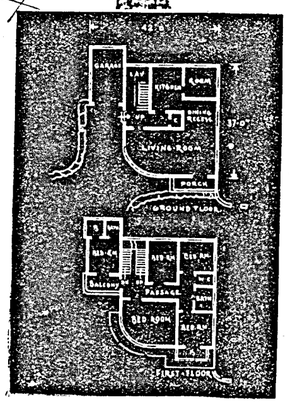
Calcutta goods prices fluctuate only slightly, without showing much change at 74s 0d for 10 oz. 40 in. hessians and 56s 6d for 7½ oz., February-March and 73s 6d and 55s 6d April-June, f.o.b. Calcutta. "B" twills are at 174s 0d February-March and 175s 0d April-June, f.o.b. Some speculative sellers quote less without attracting buyers.

Jute yarns are still in urgent demand, but reasonably early delivery is impossible to obtain, and spinners are not keen to sell further ahead than May, being practically booked up till then. Prices are all very firm and unchanged, which is also the case with jute cloth and bags, with delivery well forward.

Jute Industries, Ltd., published their financial statement for the year to 30th September last, showing group profits of £408,352, against £318,507 for the previous year, including sundry revenue £21,700 (£1,889), and after providing for depreciation and obsolescence £120,000 (£145,000), amount written off trade investment nil (£16,665), taxation £545,910 (£483,491). Brought in £86,603 (£102,658), taxation provision of previous years no longer required £97,352 (nil), available £592,307 (£421,165). To general reserve £352,500 (£212,500). Dividends recommended non-cumulative participating preference final of 10 percent., making 14 percent. for the year (12 percent.) plus bonus of 2 percent (same)—absorbing £132,000 (£110,250). Ordinary shares 15 percent. (10 percent)., plus bonus 5 percent. (same)—£16,500 (£11,812), Carry forward £91,307.

The annual meeting is to be held in Dundee on 15th March.





DISTINCTIVE HOMES with ACC CEMENT

With concrete hollow-block walls, concrete floors and roof, your house will have the three essentials of the perfect house — Economy because its first cost is moderate and upkeep is negligible; Firesafety because concrete cannot burn; Durability because of its inherent structural strength.

Commodity Markets

GROWING TEXTILE EXPORT DIFFICULTIES

COTTON CORPORATION'S BEST DIVIDEND

London (By Air Mail).

WHEN Sir Raymond Streat, Chairman of the Cotton Board, returned early in December from a visit to Canada and the U.S.A. he reported that Lancashire's efforts in the North American markets were bearing fruit. He added, however, that both the Canadian and the American markets were well supplied, and that the better types of cotton goods, especially the characteristically English styles, offered the best opportunities for Lancashire. A few days later the Customs Act amendment that will protect Canadian textiles from end-of-season dumping came into effect. It was understood here as relating primarily to American goods, and it was not regarded as a protective measure in the normal sense; but it was a reminder that Commonwealth as well as foreign countries are sensitive about competition in the textile trades, and that the dollar area would become more difficult to penetrate as competition became keener. Later in the month the wool-textile industry in Yorkshire was more rudely awakened to reality when it read the special pleading of the National Association of Wool Manufacturers, U.S.A., for a vigorous wool-textile industry as being "essential to our defence industry," recommending a tariff policy that would evidently be so flexible that it could promptly check foreign competition wherever it appeared in the trade. Such portents are discouraging to British textile firms that are trying to plan long-term selling in the North American markets, and the constant talk of a general business recession in that region never allows it to be forgotten that demand there is precarious. It is recognised, too, that the products of America's mass-producing textile industries, particularly cotton and rayon, will press more strongly on to the world market if trading conditions in the home market deteriorate further. Some countries (Indonesia is relevant to the cotton-textile trade, having lately become the principal export outlet for Japan and the U.S.A.) have now more dollars than sterling to pay for their imports. But it is Japan that the Cotton Board singles out in its latest survey of cotton and rayon trade which covers the third quarter of 1953: in point of volume Japan is now well ahead of her rivals in the export field, with India and the U.K. roughly equal and the U.S.A. a long way behind in fourth place.

In his annual review to the shareholders of the Lancashire Cotton Corporation, Sir John Grey, the Chairman, said at the end of December that much more business had been offered during the past six months, and that the company's order-book was much strengthened. The preceding profit statement, showing a decline in the group's total profit, in the year to October, from £4,359,000 to £3,401,000, was surprising evidence of the persistence of the textile recession's effects, which had been so obvious in the preceding accounts. The Corporation was born in depression, 25 years ago. The purpose of its creators—which they carried out—was to form the biggest cotton-spinning combine in the world, but with the emphasis on efficiency as much as on size. Not until a decade later, in 1939, did the Corporation pay its first ordinary dividend; the payment for 1953 (20 percent including 5 percent Coronation bonus) is the best yet. The Lancashire Cotton Corporation has amply justified itself as a stabilising foctor in the British spinning industry; and in the uncertain conditions now in prospect, planning for stability is again needed. But the cotton-textile industry is no longer evolving along the lines followed by the Corporation. This body, a horizontal combine grouping many spinners, is in the British tradition; but the benefits of vertical organisation proved in other countries have gradually impressed themselves on Lancashire's thinking. An organisation that combines the whole procedure from spinning the raw material to marketing the finished goods is not, of course, protected from a recession in the trade itself, but it is less vulnerable to particular factors affecting a particular section of the trade. Vertical integration is now in progress here, and it will undoubtedly proceed further.

The Shirley Institute is another form of organisation of increasing value to Lancashire. The Institute is the headquarters of the British Cotton Industry Research Association. Many practical men in various industries regard such associations as theoretical and abstract; but the Shirley Institute, especially since it was reinforced by Shirley Developments to promote its inventions, has completely won the confidence of the cotton and synthetic-fibre industries. At the Association's annual meeting in December, the Institute's Director of Research, Dr. S. C. Toy, stressed the work that was being done on the blending of natural and synthetic fibres. There is a comprehensive programme of research into spinning, weaving, and finishing, yarns and fabrics made of various proportions of cotton and of nylon staple. But the organisation's activities are perhaps better known on the mechanical side. In active co-operation with its members, it initiates inventions—instruments and pieces of equipment and, through Shirley Developments, sponsors their manufacture by companies that specialise in making instruments or machinery. About 40 such inventions are at present being sponsored—all after exhaustive tests to prove that they are practical.

These developments help not only the textile but also the textile-machinery industries, which are not finding conditions easy in the export markets. The value of exports of textile machinery in 1952 exceeded £50 million, but the figure for 1953 will evidently not appear as much above £40 million, although the average value per ton has been higher in the past year than ever before. India remains the best buyer, with Pakistan, Italy, and Brazil, some way behind. Particular interest was aroused by a visit of Soviet technicians to textile-machinery makers in Lancashire and Yorkshire, and by the inclusion of British experts from the industry among the business men visiting Moscow to negotiate contracts. Both the cotton—and the wool-textile industries in the Soviet Union seem to be interested in British equipment, and, in the present state of the world market, the British machinery industry is very willing to do business there.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August 1939 as 100), advanced further by 0.6 percent to 397.4 during the week ended 9th January 1954. Relative to the corresponding weeks of the last month, and a year ago, the index was higher by 2.7 and 5.1 percent respectively. During the week under review, Foodstuffs witnessed a rise of 0.8 percent to 380.1 owing to higher prices of gram (+8%), rice at Patna (+3%), wheat at Hapur and sugar (+1% each). Jowar and coffee, however, declined by 2 percent each. Industrial Raw Materials also advanced by 1.9 percent to 480.4 as a result of increases in the export prices of manganese ore (+20%), raw cotton (+5%), groundnuts and copra (+4% each), rapeseed at Kanpur (+2%), cottonseed at Amravati and gingelly seed (+1% each), although prices of rapeseed in Bombay (—4%), cottonseed in Bombay and castorseed (—3% each), rapeseed in Calcutta, lac and linseed (—1% each) moved down during the week. The index for Semi-Manufactures registered a rise of 0.6 percent to 359.9. Items, which recorded noticeable variations during the week were: groundnut cake (+7%), tanned goat skins (+5%), groundnut oil (+4%), tanned buff hides and coconut oil (+3% each), castor oil in Madras (+2%), cotton yarn, brass and copper (+1% each), linseed oil —4%), castor oil in Calcutta (—3%) and tanned sheep skins (—2%). The Manufactures group index, however, declined by 0.2 percent to 363.4 because of lower prices of jute manufactures supported by a fall of 2 percent in the prices of paints. Lower prices of chillies (—4%), black pepper and turmeric (—1% each), brought down the Miscellaneous group index by 0.3 percent to 709.9 during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: Year ended August 1939=100)

"Five wonderful years! Time to build, time to create. For my child it will bring health, free schooling. For my family, security . . . may be, with hard work, a home to call our own!"

Nearly a quarter of the funds of the Five Year Plan will be used in increasing, improving and widening the scope of our Social Services.

Rs. 425 crores will go to raising the standard of living of the people, training 13,000 new doctors, 20,000 new nurses and midwives. By 1956, more than 60% of all children over six years of age will be in our 2,02,142 primary schools.

This long-range planning makes manifest our faith in the future. Here, indeed, is . . .

a pledge to posterity

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

THE TATA IRON AND STEEL COMPANY LIMITED

Calcutta Markets

LITTLE ACTIVITY IN EASTERN FREIGHT MARKETS

RATES FOR AMERICAN COALS STRENGTHENED

THE activity in the Plate chartering for grain continued and a number of fixtures were recorded for Poland. There was more interest shown in American coals for Continental destinations where rates showed a tendency to harden. In the Eastern markets there is little activity to report. Ore continues to be moved from Mormugao, two vessels being fixed for Japan, a February loader accepting $7.70 and a March ship being concluded at the slightly higher rate of $7.85. Three vessels were also fixed for Antwerp or Rotterdam discharge, one being done at 55s. 6d. and the other two at 56 shillings. Rice from Whampoa to Colombo was arranged at 46 shillings and a cargo of mixed cereals from North China was fixed at 67s. 6d. to Antwerp-Hamburg range with the option of Gdansk-Gdynia or Szczecin at 72s. 6d. In the Australian section flour in bags from South Australia to Ceylon was done at the previous rate of 66s. 3d. and a cargo of barley in bulk to Rotterdam paid 95 shillings. Two further cargoes of barley for U.K. were concluded at 100 shillings, an increase of 2s. 6d. over the last business done. American coals were fixed freely from Hampton Roads and in view of the lack of vessels in an early position, the rates strengthened. Coals were fixed to Trieste at rates between $5.30 and $5.50 and to Holland between 28 shillings and 28s 3d. Payment to a ship for Kiel discharge was 32 shillings. In other directions $3.80 was paid for two cargoes to Rio de Janeiro and a third was concluded at $4 while three vessels were fixed to Japan at $9.20, $9.30 and $9.90.

An interesting feature this week was the continued chartering of grain from the River Plate which was on a heavy scale. Vessels loading at San Lorenzo completing at Buenos Aires accepted 67s. 6d. for Antwerp-Hamburg discharge and the same rate was paid for a cargo to Venice. Ten cargoes to Gdansk-Gdynia or Szczecin were arranged at 77s. 6d. and a February-March vessel accepted $12.25 for Japan.

Elsewhere the market continued steady with a firm undertone, and it is generally anticipated that the present tendency of freights to strengthen will continue. Interest was shown in the time Charter market and representative fixtures were that of a motorship at 16s. 3d. for one West African round voyage delivery Bremen and that of an oilburner, delivery Antwerp, for one Persian Gulf round voyage at 15s. 6d. Payment for an oil-burner delivery Vizagapatam redelivery Northern Range was 14 shillings, and 18 shillings was paid for a motor vessel delivery Bristol Channel, redelivery New Zealand voyage out.

FAIR GENERAL DEMAND IN EXPORT SALE

PRICES DECLINE IN INTERNAL AUCTION

AT Sale No. 31, held on 25th and 27th January, offerings in the Export auction's consisted of approximately 59,000 cases. There was a fair general demand though at lower rates for most descriptions. Tippy teas were an exception to the rest of the teas offered for they were a very strong feature at higher rates. Well made and stylish leaf grades were about steady, but the less attractive sorts were up to 1 anna easier. Common and Medium Brokens and Fannings were a full two annas easier, but the best liquoring sorts with brighter liquors were only slightly easier. The few stylish Broken Pekoes Souchong for sale were in good demand and they sold well. For small breaks, i.e. under 18 chests, the market was 3 annas and sometimes more easier.

Quotations

	1954	1953
	Rs.	Rs.
Clean Black Pekoe	2-3-6	1- -0
Clean Common Broken Pekoe	2-4-3	0-15-6 to 1-0-0
Medium Assam Broken Pekoe	2-5-6	1 -1-0
Good Assam Broken Pekoe	2-7-6 to 2-8-0	1-15-0

Internal Market

At the Internal Sale, 21,220 packages of Dusts were on offer. There was a limited demand and only a few of the bigger buyers operated. Prices for all sorts showed an initial decline of 1¼ to 2 annas per pound and closed fully two annas under last rates. Very commonest kinds came in for good support at times and sold only one anna under valuations.

Quotations

	1954	1943
	Rs.	Rs.
Medium Dooars Dust	1-15-3	1-7-0 to 1-8-0
Medium Assam Grainy Dust	1-15-9	1-9-0 to 1-9-6
Best Assam C.T.C. Dust	2- 2-6	1-14-6

Offerings of other grades consisted of approximately 11,500 packages. Demand was irregular and prices eased from 2 to 3 annas per pound for ordinary offerings whilst the very poorest stalky kinds were difficult of sale and had at times to be withdrawn. No quotations are given.

LINSEED

There was little change in the market last week, and firm conditions were maintained although trading was rather restricted. Supplies were still scarce owing to poor despatches from upcountry. Sellers were very reserved and despite keen enquiries from crushers for ready and forward delivery, a very small daily turnover took place. The oil market was stagnant and the offtake was very poor locally despite keener offerings from sellers. Latest quotations were as follows: Ready Rs. 21/12/- per maund.

HIDES AND SKINS

The hides and skins market was firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 19th and 25th January, 1954)

Cowhides :—Wet salted (Ord) 16,000 pcs. on the basis of Annas 8-6 to Annas 9-6 : Wet salted (Ord) 20,000 pcs. on the basis of Rs. 8-4 to Rs. 9 : Wet salted (Slaughtered) 10,000 pcs. on the basis of Rs. 12-8 to Rs. 22-8.

Goatskins :—Wet salted (Daisee, Killed) 43,600 pcs. on the basis of Rs. 280 to Rs. 425 ; Assam-Dinajpur-Murshidabad 2,830 pcs. on the basis of Rs. 285 to Rs. 350 : Purneah-Kissenganj 500 pcs. on the basis of Rs. 305 : Patna (Ord) 2,200 pcs. on the basis of Rs. 240 ; Muzafferpore-Darbhanga-Patna-Pakur 11,720 pcs. on the basis of Rs. 280 to Rs. 300.

Bazar Stocks

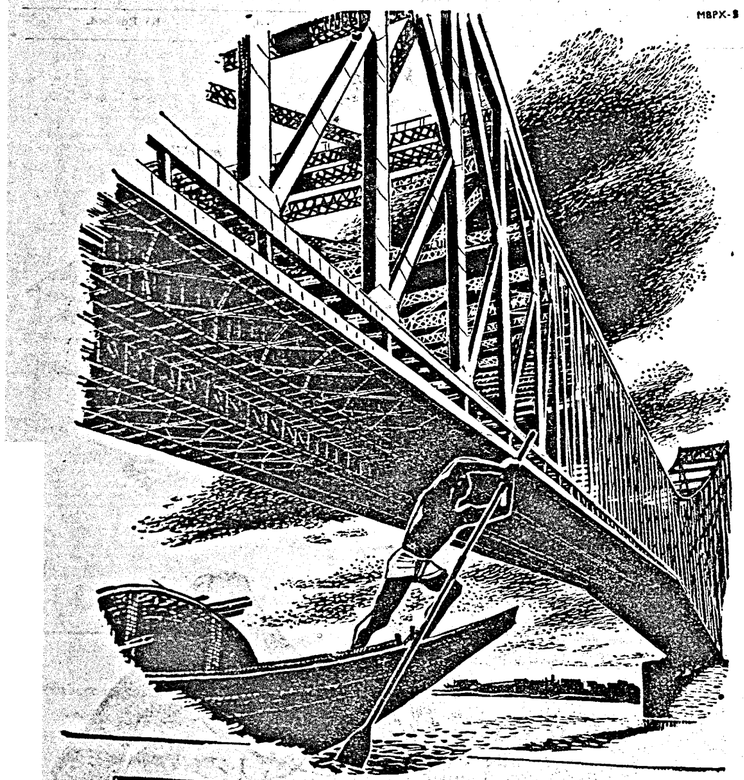
(25th January, 1954)

Cowhides :—Wet salted 1,37,500 pcs.

Goatskins :—Wet salted (Daisee, Killed) 31,500 Assam-Dinajpur-Murshidabad 37,700 pcs ; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 2,94,000 pcs.

THE SUGAR MARKET

During the week ended 25th January, sugar sales in the Calcutta market averaged 3,000 bags. Arrivals were 600 bags daily, and stocks amounted to 25,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-4 a maund for ordinary grain, and Rs. 32-14 a maund for big grain. Ex-mill delivery price for D-28 grain was Rs. 30-4



Engineering and Transport

ECAFE'S INLAND TRANSPORT COMMITTEE

REGION'S DEPENDENCE ON WORLD ECONOMIC FLUCTUATIONS

CEYLON'S Acting Minister of Transport and Works, the Hon. Major Montague Jayawickreme, opened the third session of the inland transport committee of the United Nations Economic Commission for Asia and the Far East (ECAFE) at the Queen's Hotel, Kandy, Ceylon, this afternoon. Some 70 representatives, observers and advisers from 17 Asian and non-Asian countries and territories, and various United Nations specialised agencies and non-governmental organisations were present. The session of ECAFE Transport Committee is the first in a series of three major ECAFE conferences to take place at Kandy in the following four weeks. The two other conferences are the sixth session of ECAFE's committee on industry and trade (26 Jan.-5 Feb.) and the tenth session of the Commission (8—18 Feb.).

After welcoming the delegates to Ceylon on behalf of the Government, Major Montague Jayawickreme paid tribute to ECAFE's activities in the field of inland transport. Much valuable work has been done, he said, pointing out that ECAFE, through its meetings, provides an opportunity for the exchange of ideas, experience and knowledge. Asian countries can thus aid and assist one another and bring their own goals nearer attainment than could be done by their own limited efforts. The inland transport committee had made a real contribution to the amassing of knowledge and acquiring of experience in the field of inland transport, and there could be no doubt about the governments being indebted to ECAFE.

Asian Countries and World Economic Conditions

The committee was meeting in troublesome times, he went on, and under the shadow of a possible economic depression. The countries of the region were well aware of their dependence on the fluctuations of world economic conditions. Ceylon in particular was keenly alive to this weakness in her own economic structure. The Government was making a brave effort towards securing economic independence This necessitated the development of agriculture, transport, power, industries, etc. Here, Ceylon, was coming up against the growing needs which are manifest throughout the region; the need for greater technical skill, more complete technical knowledge, improvement in production and training methods and the need of skilled personnel These efforts strain the resources of countries to their limits but were dwarfed into insignificance by the enormity of the task ahead.

Efficient transport systems are, he observed, a very vital necessity in any development programme. The construction of highways and the improvement and expansion of railways are the sure means of opening up backward areas, facilitating communication between peoples and the movement of merchandise. Referring to Ceylon's nationalised railways, Major Montague Jayawickreme said that the recent war had a disastrous effect on the country's railways which are dependent on supplies from outside of locomotives and essential rolling stock, heavy machinery for workshops and essential materials for the railway tracks. Ceylon has only recently introduced diesel traction on railways. Ceylon's road transport, particularly her passenger transport system, is unique in the region, being based on controlled monopoly introduced in 1943 to prevent cut-throat competition and to provide the public with a better service. The network of highways may be considered satisfactory, but the Government is aware of possible improvements in methods of maintenance, lay-out of junctions, better road suffacing materials and techniques, etc.

Statement by Acting Executive Secretary

Speaking on behalf of ECAFE's Executive Secretary, Dr. P. S. Lokanathan, a welcome to the representatives was extended by Dr. C. H. Schaaf, ECAFE's Acting Executive Secretary. He conveyed to the meeting Dr. Lokanathan's regret at not being able to be present at the opening of the session. The executive secretary was attending the housing seminar in Delhi, the first of this kind with which ECAFE has been associated. Dr. Schaaf then put before the Committee certain observations of the Executive Secretary concerning outstanding aspects of ECAFE's work in the field of Asian inland transport. Generally, they have been characterised by keen regional co-operation In 1953 ECAFE's railway sub-committee met in Paris. This was the first ECAFE meeting ever held in Europe. In the view of the executive secretary ECAFE meetings outside the region would never be frequent. The Paris session was followed by an inspection trip through France, the United Kingdom, the Netherlands, West Germany, and Switzerland. The experts who attended the sub-committee meeting in Paris were unanimously of the view that a study tour in the United States of America by senior Asian railway officials be organised as early as possible in conjunction with the United Nations programme of technical assistance.

Railway Training Centre at Lahore

Preparations for the railway operations and signalling training centre at Lahore were now virtually completed, Dr. Schaaf reported, and the centre is expected to open in March. An advisory board is to be established through which countries of the region and the ECAFE secretariat will continue to guide the broad policy and operation of the centre. It will constitute one of the most significant and costly regional projects so far financed under the United Nations technical assistance programme. The final success of the centre will depend upon the extent to which its training services are utilised by the countries of the region, and ECAFE's executive secretary therefore expressed the earnest hope that Asian governments and the railway administrations will make full use of the regional centre by filling all available places which it has for operating and signalling officials.

In the field of highways, four important technical aids have been finalised. These concern the highway register, the highway bridge register, the register for recording data on cement concrete road pavements, and the standard form for the preparation and presentation of highway project schemes. Some 2,000 copies of each of these forms have now been printed and are being distributed to the countries of the region. They should be of very great assistance to Asian highway officials in the coming years.

Simplified Instruction Manual

A simplified instruction manual for drivers and mechanics, first envisaged by ECAFE's highway sub-committee, has been completed by a special expert appointed by the International Labour Organisation (ILO) who worked in co-operation with the ECAFE secretariat. The manual has been prepared in such a way that translations into languages of the region can be easily accomplished. This, together with clear illustrations, should increase the usefulness of the manual and prolong the life and increase the serviceability of highway vehicles. The manual should also help to improve highway safety.

Operating costs in inland waterways transport should be considerably reduced as a result of entirely new methods which have been tested at trials conducted by the Pakistan Joint Steamer Companies in East Pakistan These trials, aimed at increasing operating efficiency, were initiated as a result of a study trip by Asian waterway experts organised by ECAFE and the United Nations Technical Assistance programme in 1951. Rapid progress has been made, Dr. Schaaf said, at the recent working party meeting at Dacca, East Pakistan, at which a draft convention designed to bring about a uniform measurement for vessels employed in inland navigation was discussed.

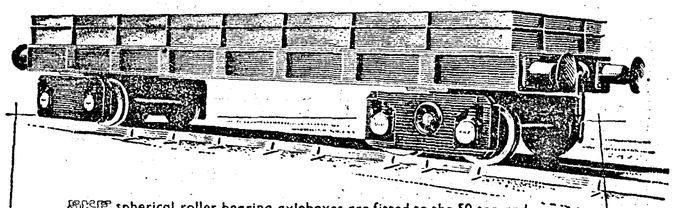
PLASTIC DRIVING BELTS

The Dutch concern of Koninklijke Delftsche Leerlooierij & Driefriemenfabriek, at Delft (the Netherlands) is now supplying a thin driving belt of a polyamide-base plastic, which is especially suitable for driving small high-speed pulleys. Compared with the usual belts, the new material has certain advantages. It is practically non-stretching and very flexible. The grip on the pulleys is said to be remarkably good, so that slipping is reduced to a minimum. The material can be repaired simply, with a smooth joint. As the welded joint is very strong, the high tensile strength of the material (1,200 kg/sq. cm.—17,100 lbs/sq. in.) can be used to full advantage. It has been found that the new material can be successfully applied on various drives, with speeds of about 55 m/sec. (180 ft./sec.), at which other belts failed. The belts can be used, for instance, for sharpening and polishing machines in the textile industry. The concern supplies the belts, which have a standard thickness of 1 mm (0.04 in.), as endless belts to measure. If desired however the material can be obtained on rolls up to 100 mm (4 ins.) wide, while 100—200 mm (4-7¾ ins.) widths can be made to order.

According to the Labour bureau, the All-Indian Working Class cost of living index number (base 1944=100) for the month of October 1953, dropped by three points to 147. In Madhya Pradesh, there was a general decline in the indices. In two industrial centres, Akola and Jabalpur, the index number dropped by three points and one point respectively In Akola it receded to 162 because the food index dropped by three points. In the food and lighting and the miscellaneous group indices, the decline recorded was by five points and one point respectively. In Jabalpur the index number stood at 153 ; the food index rose by one point while the miscellaneous group index declined by eight points.

Heavy Wagons

WITH SKF ROLLER-BEARING AXLEBOXES



SKF spherical roller bearing axleboxes are fitted to the 50-ton and 60-ton double-bogie pig-iron wagons and steel-works wagons built by Consett Iron Company Ltd., Durham, England, for their own use.

- Reliability — no hot boxes
- Longer mileage between overhauls
- Economy of lubricant

COMPANY AND PUBLIC NOTICES

THE GROB TEA COMPANY, LIMITED.

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

NOTICE is hereby given that an Extraordinary General Meeting of The Grob Tea Company, Limited, will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 19th day of February, 1954, at 3 o'clock in the afternoon, for the purpose of considering, and if thought fit, of passing with or without modifications, the following Resolutions:—

I. As a Special Resolution:

That the Articles of Association of the Company be amended as follows, that is to say:—

(i) By inserting a full stop after the words "in any one or more of such ways" in the 5th line in Article 157 and by deleting the remainder of that Article immediately following those quoted words.

(ii) By inserting immediately following Article 157 the following three Articles numbered respectively 157A, 157B and 157C.

"157A. Any General Meeting upon the recommendation of the Directors may resolve that any moneys, investments or other assets forming part of the undivided profits of the Company standing to the credit of any Reserve, or other Fund or in the hands of the Company and available for dividend (or representing premiums received on the issue of shares and standing to the credit of share premium account) be capitalised and distributed amongst such of the shareholders as would be entitled to receive the same if distributed by way of dividend and in the same proportions on the footing that they become entitled thereto as capital and that all or any part of such capitalised fund be applied on behalf of such shareholders in paying up in full any unissued shares, debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares, and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said capitalised sum."

"157B. A general meeting may upon the recommendation of the Directors resolve that any surplus moneys arising from the realisation of any capital assets of the Company or any investments representing the same, or any other undistributed profits of the Company not subject to charge for income-tax be distributed among the members on the footing that they receive the same as capital and that all or any part thereof be applied on behalf of such shareholders in paying up in full either at par or at such premium as the resolution may provide, any unissued shares or debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares or debentures or debenture-stock, and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said money, investments or profits so distributed."

"157C. For the purpose of giving effect to any resolution under the three last preceding Articles the Directors may settle any difficulty which may arise in regard to the distribution as they think expedient and in particular may issue fractional certificates, and may fix the value for distribution of any specific assets, and may determine that cash payments shall be made to any members upon the footing of the value so fixed in order to adjust the rights of all parties and may vest any such cash or specific assets in trustees upon such trusts for the persons entitled to the dividend or capitalised fund as may seem expedient to the Directors. Where requisite a proper contract shall be filed in accordance with Section 104 of the Act, and the Directors may appoint any person or persons to sign such contract on behalf of the persons entitled to the dividend or capitalised fund, and such appointment shall be effective."

II. As Ordinary Resolutions:

(1) That the Authorised Capital of the Company be increased from Rs. 9,00,000 to Rs. 15,00,000 by the creation of 40,000 New "A" Ordinary shares of Rs. 10/- each, and 40,000 New "B" Ordinary shares of Rs. 5/- each.

(2) That upon the recommendation of the Directors it is desirable to capitalise the sum of Rs. 3,67,575/- being part of the Reserve Account of the Company and representing undivided profits of the Company and accordingly that the said sum of Rs. 3,67,575/- be capitalised and distributed among the members on the footing that they become entitled thereto as capital in pursuance of Article 157A of the Articles of Association of the Company and that the said Capital sum be applied on behalf of the persons who are on the 19th day of February 1954, holders of 49,436 "A" Ordinary shares of Rs. 10/- each and 48,158 "B" Ordinary shares of Rs. 5/- each in payment in full for 24,718 "A" Ordinary shares of Rs. 10/- each and 24,079 "B" Ordinary shares of Rs. 5/- each respectively and that such 24,718 "A" Ordinary shares and 24,079 "B" Ordinary shares credited as fully paid be accordingly allotted to such persons respectively in the proportion of one share for every two shares held by the holders of the existing "A" Ordinary and "B" Ordinary shares respectively on the 19th day of February 1954, and that the shares so distributed shall rank in all respects *pari passu* with the existing "A" and "B" shares respectively save and except that they shall not participate in any dividend declared prior to the passing of this Resolution and shall also be treated for all purposes as an increase of the Capital of the Company held by each Shareholder and not as income.

(3) That pursuant to and in accordance with the last mentioned Resolution and in satisfaction of the said Capital sum the Directors be and are hereby directed to allot and distribute 24,718 new "A" Ordinary shares of Rs. 10/- each and 24,079 new "B" Ordinary shares of Rs. 5/- each credited as fully paid among the persons who are respectively on the 19th day of February 1954, holders of 49,436 issued "A" Ordinary shares of Rs. 10/- each and 48,158 issued "B" Ordinary shares of the Company of Rs. 5/- each. PROVIDED that the issue of such shares by the Company shall be subject in the case of members not resident in India, to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of the Foreign Exchange Regulations Act 1947, for the time being in force PROVIDED ALSO that in the event of such consent not being obtained the Directors be and are hereby authorised to dispose of such New shares which cannot be offered to members not resident in India in such manner and to such persons (including the Directors and the Managing Agents) and upon such terms as they may think fit in the interest of the Company.

(4) That the draft Agreement providing for the allotment of 24,718 "A" Ordinary shares of Rs. 10/- each and 24,079 "B" Ordinary shares of Rs. 5/- each in satisfaction of the said Capital sum submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and the Directors be and are hereby authorised to affix the Common Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding the existing issued "A" Ordinary and issued "B" Ordinary shares respectively in the Company on the 19th day of February, 1954, by some person or persons on their behalf as may be appointed by the Directors in that behalf under Article 157C of the Articles of Association of the Company.

III. As a Special Resolution:

That having regard to the increase of capital the following alterations shall be made in the Articles of Association of the Company, that is to say:—

"By deleting in Article 9 the figure '9,00,000/-' and inserting in place thereof the figure '15,00,000/-' and by deleting in the said Article the figure '60,000' in each place where it appears and inserting in place thereof the figure '1,00,000' ".

By Order of the Board,
OCTAVIUS STEEL & CO., LTD.,
Managing Agents.

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land etc., for the purpose of building factories mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

EGYPT'S FIVE-YEAR ECONOMIC PLAN

MANY NEW PROJECTS FOR INDUSTRIALISATION

EGYPT'S Revolution Command Council, which is made up of the leaders of the Army Liberation Movement, has drawn up a five-year economic, industrialisation and production plan. The plan, which includes several projects already under way, is to come into force immediately. The Revolution Command Council is also understood to have approved in principle several important projects drawn up by the National Production Council. The plan is the outcome of recent meetings of the Revolution Command Council, the Egyptian Joint Congress (which consists of both the Cabinet and the Revolution Command Council) and the Minister and Deputy Minister of Finance. The broad lines of the policy to be followed to obtain the hard currency needed for the purchase of the capital equipment and the raw materials with which to carry out the schemes already approved were laid down during the course of these meetings.

The main projects approved by the Revolution Command Council include the following :—

1. The improvement of the quality of wheat, rice and maize seeds in order to increase the yield per acre.

2. Intensification of the fight against plant pests and diseases.

3. Reclamation of 350,000 acres, for which a credit of £E12m. has already been approved.

4. Improvement of storage space for cereals and the erection of silos. The National Production Council postponed the last date for the reception of foreign and local tenders for the erection of silos, from December 31, 1953, to March 31, 1954.

5. Construction of a fertiliser factory at Aswan.

6. Electrification of the Aswan Dam (work which is already under way).

7. Erection of an iron and steel mill (tenders for which are still being examined).

8. Erection of a paper factory (tenders for which are also under study).

Progress Reviewed

The Revolution Command Council also reviewed the progress made, or the steps being taken, to implement such projects as the erection of a sugar beet factory, the erection of a factory for the production of tyre inner tubes, the enlargement of the national petroleum refinery at Suez, the laying of a heavy furnace-oil pipeline from Suez to Cairo, the building of an electric power plant in South Cairo, the erection of factories for the production of cables and electric wire and for the production of nuts and bolts, and an increase in production of artificial silk, fine yarns and tinned and preserved foodstuffs.

The Revolution Command Council is also reported to have decided to start work on the Aswan High Dam with funds to be raised by means of an internal loan, while negotiating for loans from external sources (probably from the World Bank) and capital equipment (which West German firms are willing to supply on comparatively favourable terms).

The total expenditure for the building of the duction of tyre inner tubes, the enlargement of dam has been estimated officially at £E200m., of which £E60m. would represent the actual building costs, £E10m. in indemnities to the inhabitants of the area who would have to be displaced, £E35m. for the erection of the hydro-electric power plants, and £E80m. for the erection of the fertiliser factory and other subsidiary works. Preliminary work is expected to start some time in August, when the Nile flood will be at its climax.

SHELLAC MARKET REPORT

For the week ended 25th January, the opening market was easier, ruled steadier mid-week, but became quiet at the end. A small business passed. The range of quotations was as follows :

Standard Pure Buttonlac	Rs. 125 value.
Pure Buttonlac	Rs. 115 value.
Lemon No. 1 Shellac	Rs. 118-121-118 done & buyers.
Lemon No. 2 Shellac	Rs. 110 done: 112 value.
F. O. Std. I. Shellac	Rs. 101-105-104 buyers.
Pure TN Shellac	Rs. 96-101-100 basis done & buyers.
4% I.T.N. Shellac	Rs. 92-94-93 value.
No. 1 Kusmi Seedlac 3%	Rs. 114 to 115 value.
No. 2 Kusmi Seedlac 3%	Rs. 105 to 107 buyers: 106 value.
Fine Bysaky Seedlac (Manbhum) 3%	Rs. 98-100-98 value.
Fine Bysaky Seedlac (C.P.) 3%	Rs. 90 value: 92 buyers: 90 done.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 82 value; 85 buyers; 84 done.
Ordinary Bysaky Seedlac (C.P.) 5%	Rs. 77-80-78 buyers.
Kireelac	Rs. 54 value.

Shipments during January until the 21st were 18,667 packages.

Option of Repayment
(t) 6 months notice (v) 1 month's notice (w) Any int day (x) 6 months notice (y) 3 months notice (z) 12 months notice
(A) Repayable at par between the years 1924 and 1942 in instalments of not less than Rs 1,00,000 per annum by drawings to be held in June of each year
(B) But before 21st December 1966 Also redeemable out of a cumulative sinking fund of 1½ per cent per annum by purchase at any price less than par or by annual drawing at par
(C) Redeemable at par in the event of the undertaking being purchased by the Corporation of Calcutta or Bengal or 1st January 1945 or every seventh year thereafter
(D) These Bonds are deposited with Imperial Bank of India as security against overdraft
(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 1939 and 31st December 1949 on giving 6 months' notice One Bond being exchangeable for 50 Ordinary Shares
(F) Redeemable (a) at 102 per cent on 1st October 1974 or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent
(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs of payable in cash and this option expires at the end of 5 months from the date of notice of repayment by the Company
(H) Up to and including the year 1948 holders may at any time convert into fully paid Ordinary Shares at the rate of Shar of Rs 10 for every £1½ of the stock All Ordinary Shares thus converted will rank for dividend participate in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised
(I) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1942 convert into fully paid up Ordinary Shares each £50 debenture for 40 Ordinary Shares of Rs 10 each on 1 month's notice
(J) If this option is not exercised before 30th September, 1942 the Company will not be entitled to exercise the option before 30th September 1946
(K) Repayable at par by 1988 by annual drawings on 1st July each year
(L) Option of repayment in part out of gross profits every year to a maximum of Rs 1,50,000 Notified to be redeemed at par on 1st November 1945.
(M) At par by 17 annual drawings
(N) Option of repayment on 6 months notice after 31st July, 1953 at Rs 1-8 per cent Prem
(O) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date
(P) May be redeemed on 30th June 1958 or any subsequent half yearly date for payment of interest up to 30th June, 1964 at a premium of 1% on giving 6 Calendar months' notice
(R) Option of repayment within 5 years from the date of issue on one month's notice
(S) The Company has the option to repay all or any at par by giving notice on 1 months expiring on any interest date after 30th September 1952 Any time on or after 1st October 1947 holders may convert each notice of Rs 100 into 25 Ordinary Shares to take effect on 1st October in each year on giving 15 days notice prior to such day
(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 on three months' notice
(U) May be redeemed on 30th June 1952 at 2 per cent Prem. on 30th June 1957 at a premium of 1 per cent or on 30th June 1962 at premium of 1 per cent
(V) Redeemable at a premium of 2 per cent at 31-12-64 with option to redeem on 6 months notice on any interest date after 30-6-58 at same premium These Debentures are registered and are transferable by Transfer Deeds.
(W) At per cent premium between 1-1-60 and 31-12-64.
(X) Any time on six months notice.
(XX) At par on or after 1-12-59
(XZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of per cent
(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years
N—Nominal

(xx) To be redeemed at a premium of 10 per cent Rs 10,000 to be redeemed annually by drawing on 3 months notice with option to redeem all after from date of issue on 6 months notice Option not exercised repayment to be made after full term.
(Y) These Debentures are registered and are transferable by transfer Deed.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

T=Dividend Taxable

BANKS

H indicates that Share capital is half paid. O, C and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O Po F and Dd. indicate Ordinary, Preferred Ordinary. Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TWO PHASES OF FOOD POLICY

THE SUCCESS OF DECONTROL: PLANNING FOR THE 1960's

MR. Rafi Ahmed Kidwai's success at the Central Food Ministry has been the most heartening achievement of the Congress Government since the last elections, and if it is true that the future of governments in this country depends on their success in dealing with the food problem, Mr Kidwai must be counted among the party's greatest assets. His colleagues, and his supporters outside the party, are now naturally willing to share the credit of his accomplishments, but one need not have a long memory to recall the opposition Mr. Kidwai encountered when he first entered the Ministry with his plans for decontrol—the split within the Congress that his uncompromising programme caused, the almost unanimous doubts of the Press, the warnings that he and Mr. Rajagopalachari were handing the hungry over to the profiteers, and the umbrage of the statisticians when the new Minister rejected their figures in favour of his own hunches. Mr. Kidwai has proven them all wrong. Decontrol has caused no famines but on the contrary has eased the food situation and lowered prices. Looking back, the persistent demand that the Centre restore food subsidies seems particularly odd—now that the Government has had to offer to support food prices, to subsidise cultivators rather than consumers.

Of course Mr. Kidwai's policies are not the whole story. The weather in India and the course of markets abroad have worked in his favour. But in the sphere of economic policy, no one man's calculations and actions can ever be held to be the sole cause of subsequent events. If the surrounding conditions, which consist of thousands of variables, are not favourable, the best laid plan will go agley; and if they are sufficiently favourable, even the worst conceived plan of action might cause little damage. This is a truism, but it does not alter the fact that there is a difference between sensible and foolish policy. And Mr. Kidwai's approach to the Indian food shortage has undoubtedly been sensible; it must be reckoned among the causes of the substantial and obvious improvement that has taken place in the last three years. We do not believe (as Mr. Kidwai came near to saying earlier this week) that worries about food are now behind us for good and all, that India will continue to produce more food than she can consume, that bad monsoons will henceforth cause no inconvenience because of the progress of irrigation. But to the extent that further improvement can be expected, the prevailing policy of freer trade in grains is designed to make the most of an easier situation and to encourage efforts to perpetuate it.

*

The Food Minister has expressed so much contempt for Indian food statistics that one is puzzled what value to place on his own when he produces them. Like the Russians, though perhaps for different reasons, he avoids absolute figures, and evidently does not pretend to know how much wheat or rice was grown in India in any one year. This is reasonable, for one can never be sure. So little of the total volume of foodgrains grown in this country ever enters into trade, and even less of it is traded against money. And in any case, the absolute total hardly matters from the point of view of the Food Ministers, the planners, whose job is to see that certain surpluses are moved from here to there. They are concerned, at least in the short run, with the difference between the troughs and the depressions, not with the height of the wave. There is probably enormous variation between the quantities of foodgrains consumed by the producers from one year to another; especially if they regard food as a cash crop and aspire to a more varied style of living (as is happening in wider areas of the country), their sales to the market are probably more constant than their personal consumption. No doubt there are still altogether too many cultivators whose prime interest in growing grain is to ensure subsistence, and who market only the variable surplus over and above that necessarily fixed minimum. In these circumstances, he is a rash statistician who claims to know how much grain is produced in the country in one year or another. The only reliable method of estimating, by means of a national sample survey, seems to have run into practical difficulties and has temporarily at least lost the confidence of Ministers. Meantime we do know that there are grounds to suspect that in years marked by severe and regional famine, the total production of cereals might have been higher than in years in which supply and demand on a national scale were in better balance.

Once we see that the politicians' problem in regard to food is to move surpluses from one point to another, while promoting whatever methods are best suited to ensure a steady rise in the unknown total level of production, we can understand that the task of Mr. Kidwai and his colleagues in the States falls into two parts. First there is the short-term problem of expanding the marketable (or, under controls, the procureable) surplus of grain and of balancing supplies in different parts of the country. The essence of this problem is movement—that is, decontrol, the removal of barriers and better transport—plus incentive—that is, to bring a greater proportion of the crop (whether it be a bigger or smaller crop) into the market. Secondly, there is the different and long-term problem of raising the total volume of food supplies to keep pace with the increase in population. This is a different task altogether, partly (and obviously) because the greatest increase in the population is taking place in rural areas which do not purchase supplies from the marketable surplus but take grain direct from the gross crop; and partly because the methods of increasing total production are not by any means necessarily the same as the technique required to bring more grain to the markets.

*

This last-mentioned point is important. The ways of increasing total production of grains to keep pace with the rising population are not the same as the ways of coaxing surpluses out of prosperous areas for consumption in the cities and in less fortunate rural districts. Though not the same, they must not be inconsistent; measures aimed at the one object might not greatly help toward the other, but at least they should not frustrate one another. The weakness of the food policy of the Government in the years immediately before Mr. Kidwai (or to do justice, before the close of Mr. Munshi's term) was that it did entail this mutual inconsistency, as well as proving inadequate to the short-term task of equating surpluses and deficits. Mr. Kidwai has solved the problem of smoothing out inequalities and of bringing more grain to market (even when it is only the artificial market of exchanges between the States and a Central pool). Furthermore he has done nothing inconsistent with the object of raising the production of grain in India as a whole.

Whether he has done enough, actively and positively, toward the second objective, whether he has set Indian agriculture on a course that will ensure that total food output keeps pace with total population, is another matter. Let us drop Mr. Kidwai from the discussion of this wider question with the judgment that he has done nothing to frustrate efforts in this direction, and that in any event the most important factors in the case do not depend on the Food Ministry. They do not depend on that Ministry because they are not, to any important extent, matters of prices, controls and transport, but rather of irrigation, river valley development, land policy, weather and birth control. It does appear to be the case that the total output of grain has increased in the last two years and that it will go on increasing for the next few years, despite the fall in price. (A fall in price affects first and mainly the marketed surplus, but its effects on total output are not important as long as so much new land is being brought under irrigation, etc.). The most useful of India's planned projects, from the point of view of food production, are coming into operation now and in the next five years or so. During this period it is almost assured that the rate of increase of food production will be equal to if not significantly greater than the rate of increase in the population. So the Government's optimism about the immediate prospect is warranted—in the sense that we are all entitled to feel affluent on pay-day, when our receipts are so much larger than our outlay on the day's supplies. But this outdistancing of population growth is only temporary.

*

This is not a wilfully pessimistic statement, of the order of "Don't be too cheerful today because you might be sad next week." Study of the Government's plans for agricultural development will show that all the most fruitful projects have naturally been tackled first and they are to be completed in the fifties; after that, progress will be much slower—but the growth of population will continue nevertheless at its present relentless rate. It looks to be a fair expectation that food supplies will be comparatively easy in the next few years, granted no major failure of the monsoon, but that by the early sixties the returns in agriculture will be diminishing in relation to the increase in population. The sixties are still a long way off, as politicians' foresight goes, but it should not be forgotten that many of the river-valley improvement schemes that are just now bearing fruit were planned well before independence. The sort of project that will be required to expand food supplies even further six or seven years from now will be much more elaborate and expensive than the projects now nearing completion. So there is every reason for beginning to think about them now. The cost of some of them, for example the Kosi scheme, will be massive, but if revenues expand in the comparatively prosperous few years immediately ahead, it will not be impossibly large. Planning can accordingly afford to be ambitious. It is also time that the States gave thought to guaranteeing future revenues by charging cultivators for the benefits they are already beginning to receive from projects now being completed. There are obvious difficulties about taxing peasants before improvement schemes are actually working, in order to raise money, but in the second half of the decade State Governments will have many concrete achievements to show for the revenues they collect, and the peasantry will be relatively well off. A determined effort by the States to collect some of the cultivator's surplus in taxes for further development is urgently necessary; the political caution that has so far inhibited action in this direction by far-seeing State legislatures should be overcome once and for all.

The most ambitious of irrigation schemes, even supposing that the immense costs involved can be met, will not of course meet the country's needs. Radically improved agricultural and husbandry techniques, a diversification of the rural economy and steady progress in industrialisation will all be required simultaneously. Whether all these methods, combined with the best of luck as regards weather and international commodity prices, will cover the case remains doubtful as long as the rate of increase in the population continues unrestricted. The plan put forward by the Census Commissioner, Mr. R. A. Gopalaswami, last November for a national birth control programme appears to have dropped out of public discussion altogether. A few complacent words from Mr. Nehru were enough to give it the quietus among politicians. But the truths it was based on remain true nonetheless. Even supposing that Mr. Gopalaswami (who-after all knows more about demography than his facile critics) was wrong by a couple of crores either way, the general picture of future food and population trends in India that he drew is substantially intact, and it would be a useful exercise for economists and politicians to re-read it every month or so lest they mistake Mr. Kidwai's undoubted success with the near-range problem for a permanent solution of India's most pressing difficulties.

CAPITAL FOR ELECTRICITY PRODUCERS

INDUSTRY'S STUDY OF EFFECTS OF PROFIT LIMITATION

THE electricity supply industry has, in response to a tardy invitation from Government, committed to paper the facts which it considers prove its case against the Electricity (Supply) Act, 1948. The industry's dissatisfaction with the Act is now of long standing, and the need to have it amended has intensified as the provisions have become more onerous. The complaints against the Act can be grouped under three heads, the inadequacy of the standard rate of dividend, the inequitable effects of the conflict between the income tax law and the electric supply laws, and the delay in the establishment of Electricity Boards. Of these the first mentioned is by far the most important.

The background of the trouble can be stated briefly: During the war a host of mushroom organisations, having neither efficiency, nor a firm financial basis to recomend them, grew up on the fringe of electricity supply. Government policy after partition was aimed at establishing soundness and stability in that part of the industry left to private enterprise. This aim was embodied in the Electricity (Supply) Act 1948, and the particular instrument designed to achieve it was the clause restricting the return to the investor to a "standard rate" dividend of 5 percent on the capital base. Conditions in the capital market at the time made this condition reasonable, though not generous, and the industry accepted it, confidently anticipating that a change in circumstances would bring the appropriate adjustment. But circumstances have changed radically and the standard rate has remained the same. The industry complains that a 5 percent return is now an insufficient inducement to new capital required. In appeals to the Government for an amendment to the Act it is pointed out that firms are unable to raise the capital they require, and that not only are the expansion plans of the industry in danger, but the whole question of the industrial development of the country is now involved. The industry has put forward a modest claim for an increase of 1 percent in the standard rate, on the sole basis that without this adjustment it will be impossible to attract the required amount of new capital. It could well quote in its favour the fact that present shareholders are also entitled to a reward which the judgment of the capital market considers appropriate for the risk they are taking; but this might not prove a popular approach to the issue. It has not been a stated intention to replace the private supply of electricity by public enterprise, it has always been appreciated that there is a big field of activity centred on the large-scale public projects which could only be adequately exploited by private companies.

* * * *

It is difficult to see how action can be justifiably postponed in the face of the evidence contained in the report on the capital situation prepared by the industry at the Government's request. It shows clearly that the situation is a serious one. The data in the report cover 79 undertakings, which is about one-third of the total membership of 266 of the Federation of Electricity Undertakings of India. It is claimed that the most representative units have been chosen, and that the picture would not have differed substantially if the full membership had been covered. The undertakings have been grouped State-wise, and their capital-raising position is analysed. In some cases the capital required has been raised by the proprietors or the managing agents; in others it has come from reserves, or special appropriations. It has sometimes come in the form of bank advances or short-term loans. But in almost all the cases where an approach was made to the capital market the issues were undersubscribed, in some instances woefully so. Other companies have not approached the market at all because their shares are already quoted well below par. Excluding considerations of the credit-worthiness of individual companies, the report shows clearly both in its findings and its comments that the provisions of the Electricity Supply Act, especially that establishing a standard rate of 5 percent, have hampered the industry in raising the capital it needs if it is to play the part planned for it in the national economy. Fears of future nationalisation are also quoted as being a cause of the shyness of capital. The difficulties encountered with the income tax law are referred to. But the recurrent reason is the simple one that 5 percent is no longer regarded as a fair return for this type of risk taking.

There is no doubt that the present conditions are harder on some firms than on others. If these were always the inefficient ones the problem might be simple enough, but it is rather the concerns which have no large and secure organisations to underwrite their creditworthiness which are suffering. Having a large and powerful backer is not necessarily a guarantee of efficiency. The present conditions are also impeding the firms most eager to expand, a fact which is scarcely in the national interest. With a deficiency of Rs. 1,70,84,250 in capital raised against capital required over the last two years, and a further Rs. 26,78,68,100 of capital needed during the next three years by the undertakings included in the report alone, the situation is large and serious enough to command the Government's immediate attention. The evidence of its present policy is adequately summarised in the report. If the industry's claim that this is a representative sample is true, both in the size and the efficiency of the concerns chosen, then it is impossible to square the present position with the Government's stated intention of preserving and encouraging the private section of the industry. If it has changed its policy then it should say so. The national interest in itself is adequate to justify a reconsideration of the matter. But if the original 5 percent was considered a reasonable and just return when it was established, in the present changed circumstances, the evidence of deliberate unfairness against a particular section of private industry, is overpowering.

CURRENT COIN

Purchasing Power and Wants.—In his presidential address before the Indian Chamber of Commerce last week, Lala Karam Chand Thapar, besides dealing with many of the immediate problems facing economic progress, said that no "modest approach" to economic development would be adequate to India's needs, and that if minimum requirements were to be met the necessary purchasing power must be made available. It is true that a modest approach to economic development would be inadequate to the task of making India a rich and prosperous country, and that it is essential that purchasing power is made available; but that is still not enough to guarantee progress if it is intended to be the full extent of the effort made. The wealth of the Western world has not been built on the satisfaction of minimum needs, nor on its governments supplying their economies with the necessary purchasing power. One of the established facts of economic progress, and one which is too readily overlooked in India, is that the two constituents of economic demand, the desire for an article, and the power to satisfy that desire, are not always to be found in that order. After a certain stage of economic development the order is reversed, and no matter how much purchasing power the consumer has, he still has to be persuaded to part with it. At the present stage in India there is no doubt which of these constituents comes first, but if Indian industrialists are determined to think in big terms, as Lala Karam Chand Thapar rightly feels they should, they will sooner or later have to face this problem. An economy of the size of the United States has not been built up on the satisfaction of minimum human needs as India understands them, but rather on a steadily growing collection of needs which have been created by society rather than established by nature. In the United States there has been little difficulty in ensuring that the "minimum" continues to rise because of the character of the people. But it was not so easy in pre-war Europe, and that is one of the reasons why economies there did not expand at the same rate as that of the United States. The time is fast approaching in India when industrialists will have to give serious attention to creating the demand for the goods they manufacture. Such a warning may seem premature, but the trouble is that there is no obvious point at which the change takes place. In fact it is not so much a point in time as a stage in development and may well be marked by a long period of industrial slackness which neither public investments nor the improved supply of purchasing power can cure. India must realise that in all but the most controlled war economies consumer demand is paramount, and that it is the desire of the individual consumer for an ever increasing number of objects which is at the basis of all peacetime economic advance. Government monetary policy must follow this demand as closely as it can, but we do know from experience that it cannot lead it. Investment too will follow, provided the government does nothing actively to discourage it, and investors realise that advanced economies require a generous supply of risk capital. India has a long way to go before she reaches the two-cars-in-every-garage stage, and she will only get there along a road strewn with artificially created wants. It is for industrialists and business men to assist in the creation of those wants (by advertising, by promoting literacy, and so on)—and not simply to rely on Government induced inflation of purchasing power.

* * * *

Health on the Tea Gardens.—The large and well organised plantation industries of India have been subjected to a good deal of official interference simply because they are large and well organised. Action is usually explained as being in the interests of the worker, and consequently plantations have often been forced to carry a burden of welfare commitments which less efficient industries have escaped, and which have frequently interfered with their economic operation and progress. The fact that the long-term interests of the plantation worker, or any other worker for that matter, may not always be served by imposing special burdens on enterprise and efficiency usually escapes politicians. Whatever the labour conditions on plantations may have been in the last century, there is no basis for supposing that they are the same today. The facts show that in few other sections of Indian industry are the working conditions of the manual worker so carefully supervised, and his welfare so largely cared for, as in the tea industry today. A recent report on the activities of the India and Pakistan branch of the Ross Institute of Tropical Hygiene reviews some of the medical treatment and research carried out among workers on tea plantations. The vital statistics show that between 1947 and 1951, dealing with a sample population of 200,000 on Assam estates, the birth rate had risen 4.6 per thousand, the death rate had fallen by 1.6 per thousand, and the infant mortality rate by 19 per thousand. The latter was well below that for India as a whole. Some of the most impressive figures for improved health are in the field of malaria control, where improved techniques, insecticides, and preventive medicines have helped to reduce incidence often by startling proportions. In the East Boroi section of the Bishnauth Medical Association malaria has been reduced from the 1945 figure of 561 per thousand of the estate population, to 45 per thousand in 1952. In achieving these results it has not always been the mosquito which has hindered progress. On the administration of paludrine prophylaxis the Institute reports from a sample investigation, that out of every 100 persons given tablets, 52 swallow them, 10 spit them out, and 38 throw them away. This means that an estate with a total population of 2,000 persons would spend about Rs. 2,250 for a year's supply of paludrine, and of this Rs. 1,080 would be wasted. Another important field of the Institute's work is that of tuberculosis testing and vaccination. Some idea of its scale can be gathered from the fact that by July 1952 over one million people had been tested. Vaccination is still going ahead, and a constant check is maintained on new recruits to the labour forces on the estates, and on immigrants into the districts. These are only a few examples of the work undertaken at the expense of a well organised and efficient industry for the welfare of its workers, without any Government interference or coercion.

* * * *

Economic Trends in Pakistan.—In his presidential address at the fifth annual conference of the Associated Chambers of Commerce of Pakistan in Karachi last Thursday, Mr. T. W. Cree, president, reviewed the prospects for a number of commodities which are of close interest to India as well. Jute exports during the new season, he said, had been satisfactory and prices were likely to remain at "the present satisfactory levels" because supply and demand would be in approximate balance. Since the carry-over into 1954-55 was likely to be negligible, he thought that about 60 lakh bales should be produced during the next season; "it is just as important to ensure a sufficiency of supplies as it is to ensure against overproduction." Referring to the complaint made by jute interests that internal freight rates were too high, Mr. Cree urged a speeding up of police and Customs checking procedure. The price of coal in East Bengal was also too high and it was necessary either to reduce its "pooled" price or to decontrol its procurement and sale completely. The past year had been favourable to the tea industry, which made some progress "towards regaining its strength and restoring some of the very heavy losses incurred during the last two years." Its chief problems related to tea chests, machinery, fertilisers, cloth supply for labour and the expeditious refund of excise duty on exported teas. Turning to cotton, Mr. Cree said that at the close of the last season about one lakh bales had remained unsold. Cotton markets all over the world had been rather dull since the middle of 1953, and large surpluses had accumulated in the United States and Brazil. In regard to cotton sent from Pakistan, many buyers abroad complained about seed, oil stains and foreign admixture. These deficiencies, said Mr. Cree, resulted from the dilapidated condition of factories and ginning machinery, carelessness and unskilled labour. Discussing broader economic problems, Mr. Cree declared: "There is no doubt that during the year the full impact of Pakistan's adjustment to world conditions has been felt at all levels . . . . . The food crisis came at a most unfortunate time, when external finance could ill be spared for the purchase of foodgrains overseas. Grave consequences were averted, however, by generous gifts of wheat by other countries," such as Canada, Australia and the United States. The food shortage, Mr. Cree said, was closely associated with the fast increasing population, but the Boyd-Orr Committee had proposed some realistic measures to alleviate it.

Ship Purchases by India and Pakistan.—The appearance of *The Syren and Shipping's* annual review of the highlights of the past year furnishes an opportunity of ascertaining the extent of the operations of Indian and Pakistani shipowners in the second-hand tonnage market during the year 1953. One finds that the position in 1952, when Pakistan was a keen buyer whereas India held off, has been completely reversed. Indian purchases last year totalled 12 vessels, including one of 6,000 tons gross for breaking up, with an aggregate tonnage of 63,478 and for an expenditure something in excess of £2 million. Eight of these ships were built between the years 1942 and 1950, and of the four pre-war vintage ones the largest was that to be broken up and the others obviously intended for the coastal trade. To offset these acquisitions, three older vessels in the merchant fleet were sold, two to Japan and one to the U.S.A., having a total tonnage of 22,852. India thus secured a net increase to her merchant tonnage from this source alone of somewhere around 35,000 tons deadweight. Pakistan, on the other hand, purchased only two vessels, each of something over 7,000 tons but built in 1914 and 1921, at a total expenditure of £184,000. No sales by Pakistan are recorded. Some interesting features with regard to the Indian purchases are worthy of mention. Three of the vessels had a tonnage exceeding 10,000, but whereas the *Goalpara* built in 1943 and sold early in the year fetched £270,000, and the *London Artisan* built in 1942 but sold a few months later fetched £300,000, the *Baccarat* built in 1944 and acquired from France late in the year made no more than £173,200. On the other hand, two purchases from Norway, the *Atna* (3,700 tons dw.) built 1950 and the *Bowgran* (7,650 tons dw.) built 1947, cost £300,000 and £500,000, respectively. Both the Pakistan purchases were from Panama.

New Lease of Life for GATT.—According to an announcement by the Legal Department of the United Nations, an 18-month extension of life for the tariff schedules covering some 55,000 items of world trade—negotiated at the various conferences of GATT at Geneva, Annecy and Torquay—has been approved by 31 of the 34 contracting parties to the General Agreement on Tariffs and Trade. These were to have expired on 31st December last, but at Geneva last autumn it was suggested that they be extended until 30th June, 1955, it being left to the various countries to record their approval before the end of the year. The only three who failed to do so were Australia, Brazil and Peru. Since then, Australia has changed her mind and joined the majority. It will be no surprise if Brazil and Peru follow suit, for the bulk of their trade too is with the contracting parties.

* * * *

Prosperity in the Antipodes.—The economic progress of Australia and New Zealand during the coming year will depend, like that of other trading nations, on the extent of the recession in world trade which current adjustments in the United States economy are expected to bring about. At present the domestic trends in those two countries are most favourable. In Australia, internal inflation has been held in check by rising imports of consumer goods, deliberately encouraged by government policy, while it is forecast that exports during this financial year should at least reach the levels of the previous one. The black spot on the export picture is wheat. Unshipped orders at the end of November were 80 percent below their level at the same time in the previous season. Australia's position as the major supplier of wheat in the sterling area is overshadowed by the large stocks and good current supply position in North America. In any forecast for the future, the possibilities to be considered are, on the one hand, a possible deterioration in the balance of payments, a rise in labour costs, and a renewal of internal inflation; on the other hand, the continued growth of population, and the rising tide of internal activity. Conditions on the world's markets in the coming year are going to decide which factors will predominate; it is no coincidence that Australia is leading the movement towards an increase in Imperial Preference. The same verdict is even more applicable to the case of New Zealand, committed as she is to large expansion programmes based on the continued growth in the world's demand for foodstuffs. Exports have fallen slightly during the last year, and imports are still being held down in order to reduce the balance of payments deficit. This control will remain necessary until exports can be expanded, because of the need to encourage foreign capital for financing expansion schemes. Although the long-term demand for New Zealand's exports seems assured, the prospect is affected by the tendency for the price and wage level to rise steadily at home, and for an increase in competition from the highly organised Western European food producers to threaten N.Z. markets abroad. The exports of both Australia and New Zealand are of the type which, though sensitive to short-term fluctuations on the world's markets, will meet a high level of demand for as long as the world food shortage persists. Internal policy in the two countries is dedicated to the task of increasing the level of exports as an incentive to foreign investment, while imports will generally be allowed to rise as high as the balance of payments permits in order to maintain a high standard of living, support an increasing population, and expand the industrial structure. It is with the short-term demand fluctuations of individual commodities, as in the case of wheat this year, that the danger to continued advancement lies.

* * * *

Tanker Tonnage.—The interest displayed recently by Indian shipowners in acquiring a tanker fleet lends interest to the latest half-yearly analysis of world tanker tonnage, compiled for vessels of 500 tons gross and over afloat on 1st January, excluding U.S. Government-owned tonnage, prepared by Davies and Newman Ltd. This shows that the world total during the past six months has shown an increase of about 2,000,000 tons deadweight. The total increase during 1953, of about 3,650,000 tons deadweight, is the biggest so far recorded for any one year. In the last six months, however, a further 32 vessels totalling 327,000 tons deadweight were reported sold for scrap. The British fleet increased by about 160,000 tons, despite the scrapping or sale abroad of 27 vessels totalling about 292,000 tons deadweight. The United States fleet also increased, by about 113,000 tons, and the Norweigian fleet by as much as 420,000 tons. From the analysis it is seen that steamers still represent about 51 percent of the total; 12.5 percent of the world total is tonnage 19 years old or more; while owing to the increased tonnage the percentage built during the war years has fallen to 34.4 percent. Tonnage built since the war has now risen to 45.1 percent of the total. With regard to the three largest fleets, the proportions built during and since the war years are: U.S.A. 77.2 percent and 11.4 percent, British 33.2 percent and 49.1 percent, Norwegians 12.5 percent and 65.4 percent. The firm's estimate of tonnage contracted or building but not yet launched in Europe, the United States and Japan, shows a total of about 11,500,000 tons, a further decrease of some 1,800,000 tons deadweight during the past half-year. A smaller analysis illustrates very clearly the fact that the 16,000 to 18,999-ton vessel has become the "standard" tanker, and this class forms no less than two-fifths of the total number of vessels contracted for and in service.

CORRESPONDENCE

A BIRTH CONTROL TECHNIQUE FOR INDIA

To THE EDITOR OF "CAPITAL"

Sir,

Your issue of 12th November has just reached me and I welcome the announcement on your front page by Mr. R. A. Gopalaswami urging a birth control programme for India.

To achieve an effective campaign for birth control in India involves the adoption of a very simple method of control, easy to understand and reliable, as the majority of poor Indians live in isolated villages quite out of reach of clinical help for birth control. Clinical methods moreover generally involve the purchase of rather expensive foreign articles, whereas the majority of Indian families require something cheap, indeed costless. For this purpose I devised a very simple method which can be used by any woman out of reach of clinics. It costs nothing, materials found in most homes being utilised, and is very reliable. Full details are given in a special four-page leaflet I have written which will be sent free on request to anyone.

Yours faithfully,
MARIE C. STOPES.
President & Founder of the Mothers' Clinics.
108 Whitfield Street,
London, W.1., England.
30th December, 1953.

STOCK MARKET QUIET EXCEPT FOR FOREIGN BONDS

TEAS QUIET

London, 2nd February.

FOREIGN bonds were the feature during the past week with markets otherwise quiet. Apart from a late spurt in Japanese bonds Far-Eastern issues were generally quiet throughout. Greek bonds attracted the main interest early, on a report from Athens that the Government had decided to appoint a committee to study the country's foreign loan situation. When the report was confirmed these issues moved sharply higher in very active trading. Foreigns were again featured around mid-week when Bulgarian, Polish, and Czechoslovakian issues all rose on a Government announcement of impending trade talks with these countries. Japanese bonds which had improved early, on anticipation of the announcement of the results of the recent Anglo-Japanese payments talks spurted sharply after the terms of the new trade pact became known. Although profit-taking pared some of the gains in these issues they showed renewed hardness at the end of the week. German potash loans suffered sharp losses towards the end of the week but staged a quick recovery. There was some interest in Chinese bonds but these seem to have suffered generally from a shift of interest to lower priced issues in the foreign section Late in the week Greeks attracted renewed interest.

Teas were generally quiet while activity in rubbers was small. Tin were the cinderella of the market. Among domestic industries textile showed numerous small declines after its announcement of its pact with Japan. This easiness was shortlived however, and textiles were an active market with the tendency upwards at the end of the week. Among oils Anglo-Iranian made good gains during the week, partly on the latest efforts to get Persian oil flowing again. Kaffirs were a generally quiet market throughout.

The week opened in money market with conditions easy and on Tuesday there was actually a surplus of funds though the authorities made no attempt to mop up idle balances through sales of bills. Conditions later became stringent and official assistance was found necessary—mostly via the indirect route. These difficulties were largely attributable to tax payments. A feature of the Bank of England Return was the reduction in fiduciary issue by further £25 million to £1,575 million which is now maximum statutory level under the new Currency and Bank Notes Bill, presently going through Parliament. In banking department bankers' deposits are down by 5.3 million to 278.6 million. Applications for £220 million of Treasury Bills totalled £381,975,000. £220 million were allotted at an average rate of 41sh 11.04d percent. Next week £220 million will be offered.

Coconut Oil

Coconut oil prices are falling away slightly following the trend in Copra and Straits oil is now offered at £134 c.i.f. per ton, with Ceylon produce £2 above that. Business in palm kernels included French West African at 68,500 French francs and Liberian afloat at $183 both c.i.f. per ton.

Transfers from W. Germany

The Bank Deutscher Laender announced that as from 28th January, current earnings from foreign investments in West Germany such as interests, dividends or payments arising from drawing of bonds can be transferred without special permission regardless of the kind of capital which is used for investment. The bank said that foreign owners of investments made after 8th August, 1950 out of "original" or "acquired" blocked mark accounts may also apply for free transfer of their earnings. This means that all earnings from blocked mark investment can now be transferred freely as permission to transfer earnings from blocked mark investments made before 8th August, 1950 was given in 1952.

U.S. Production Falls

The Federal Reserve Board reported that 1953 ended with a production dip but there were "favourable factors for business prospects." The Board's January bulletin said these factors included tax reductions, high income, readily available credit and readjustments business men have already made by cutting down their stocks of goods on hand. Although the last five months of the year saw a steady decline in production, the Board said that 1953 as whole broke the 1952 post-war record and exceeded any world war two year. Production for the year as a whole was 134 percent compared with 1952's 124 percent of the 1947-49 base period.

U.S Bank Returns

Federal Reserve Return for the week ended 27th January shows gold stock unchanged. Foreign deposits rose by $50 million and foreign investments rose by $7 million Fed's portfolio dropped by $704 million as it sold $380 million bills and $324 million certificates. Member bank borrowings rose by $40 to $110 million, while their excess reserves nose-dived from $468 million to $630 million. The reserve ratio rose to 45.7 percent. Business loans of the New York City Bank fell by $91 million compared with fall of 24 years ago. Since the beginning of the year they have fallen by $440 million against $139 million a year ago.

Finance in India & Abroad

REPURCHASE OF EXCESS RUPEES FROM THE I.M.F.

BACKGROUND TO INDIA'S MOVE

(By Sarup Nath)

ACCORDING to a recent Press report, the Government of India will shortly take a decision on the question of repurchasing excess Indian rupees from the International Monetary Fund. It would be useful to recount here how the Fund came in possession of excess Indian currency. One of the functions of the Fund is to help its members tide over their short-term balance of payments difficulties by selling them, against home currency, the foreign currency needed by them to settle their international transactions. Under these arrangements, India purchased from the Fund $99.98 million in 1948-49, which was about all that she could purchase over a period of twelve months, under the Articles of Agreement of the Fund [Art. V, Sec. 3 (A) iii]. Apart from a part payment in gold and U.S. dollars, India had paid her subscription to the Fund in Indian rupees to the extent of over $372 million[1]. This purchase of dollars against rupees, therefore, resulted in the rise of the Indian rupee holding of the Fund to over $472 million[2], that is, $72 million in excess of India's quota. India has been paying interest to the Fund on this excess.

The genesis of the idea of making use of the Fund's resources is to be traced back to the Indo-U.K. financial discussions early in 1948. The Agreement resulting from these discussions restricted for the first time India's right to draw upon the gold and dollar reserves of the sterling area. For the first half of 1948, convertible sterling allowed to her was only £10 ($40) million—a sum wholly inadequate in view of the necessity for heavy imports of foodgrains and anti-inflationary supplies of consumer goods. The Agreement, therefore, also provided that "the Government of India will take steps to purchase part of their requirement of U.S. dollars from the International Monetary Fund"[3].

Restricting Dollar Expenditure

India accepted "the low limit of convertibility forced upon us" even though it placed an extra burden on her already strained financial resources in the shape of commission and other charges payable to the Fund. She did so in a spirit of co-operation, fully realising that "the gold and dollar reserves of the sterling area are small, are rapidly being exhausted, and require to be husbanded with the greatest care." As a matter of fact, ever since the end of the war, and especially since the suspension of convertibility in August 1947, India had been restricting her dollar expenditure to the barest minimum—and continues to do so to this day.

The interest payable by the purchasing member to the Fund varies with the period for which the obligation has been outstanding and the percentage of the excess holding. The rate of interest payable by India increases by 0.5 percent every year, and at present stands at 3 percent. When the 4 percent stage is reached, which will be in 1955-56, India will be under obligation to consult the Fund on the means of reducing the Fund's holding of her currency.

India's repurchase of her currency from the Fund at present is therefore voluntary. There are several reasons why India should put through this reverse transaction, not the least of which is the mounting interest charges that become due for payment to the Fund year after year. The amounts that India has been providing in her budget for this purpose are as follows[4]:

	(Rs. lakhs)
1948-49 (actuals)	... 17 49
1949-50 (actuals)	... 15.82
1950-51 (actuals)	... 38.17
1951-52 (actuals)	... 54.45
1952-53 (revised estimates)	... 73.00
1953-54 (budget estimates)	... 89.73

The amount is likely to be over Rs. 1 crore for each of the two years until the stage of compulsory repurchase is reached.

Sterling Area Reserves

India purchased dollars from the Fund at a time when the level of the central reserves of the sterling area was dangerously low. These reserves have since increased, and stood at $2,518 million[5] at the end of December 1953. Although the reserves are not large enough, it would appear that the sterling area has weathered the storm. The reserves are again looking up, as is clear from the following table[6]:

End of Year	($ million) Level
1948 ...	... 1,856
1949 ...	... 1,688
1950	... 3,300
1951 ...	... 2,335
1952 ...	... 1,846
1953 ...	... 2,518

[4]Demands for Grants of the Central Govt.

[5]Recent Press reports.

[6]Command Paper No. Cmd. 8976, presented to the British Parliament in October 1953.

Apart from this, the amount that India will require for buying back the excess Indian rupees from the Fund will not cause any undue strain on these reserves.

India herself has been having a surplus in her balance of payments with the dollar area for some time. Her current balance of payments position with that area since 1950 has been as follows[7]:

	(Rs. crores) 1950*	1951	1952 I half	1952 II half	1953 I half
Imports, c.i.f.	159.5	247.5	205.0	74.7	59.7
Exports, f.o.b.	185.2	183.2	77.0	77.0	61.3
Trade balance	+25.7	—64.3	—127.3	+2.3	+1.6
Invisibles (net)	—2.5	+2.5	+7.7	+6.1	+8.6
Current Account (net)	+23.2	—61.8	—119.6	+8.4	+10.2

*Includes negligible amounts in respect of other hard currency countries, which it is not possible to show separately.

It is therefore advisable that she pay off in a period of comparative prosperity the obligations she incurred in lean years. This will strengthen her credit in the world generally and with the Fund particularly. She will thereby be enabled to borrow from the Fund should the need arise in future. It is true that the Fund will examine her economic position again at that time, but one consideration that will weigh with them will be India's record of having avoided large and continued use of the Fund's resources. In this context, the decision of the Executive Board of the Fund, dated 13th February, 1951, is worth quoting: "The Fund should pay attention to a member's general credit worthiness, particularly its record with the Fund. In this respect, the member's record of prudence in drawing, its willingness to offer voluntary payment when its situation permitted, and its promptness in fulfilling the obligations to transmit monetary reserves data and its discharge of repurchase obligations would be important."[8]

Full Borrowing Powers

By buying back her excess currency from the Fund, India will be helping not only herself but also the sterling area as a whole. This action will restore her full borrowing powers with the Fund, and, being a member of the sterling area, she will be able to place a larger borrowing capacity at the area's disposal.

India's offer to repurchase excess Indian rupees would be in keeping with the Fund's objectives. Considering "the revolving character of the Fund's resources," exchange purchased from the Fund should not remain outstanding beyond the period reasonably related to the payments problem for which it was purchased. This period, the Fund says, "should fall within an outside range of three to five years." As a matter of fact, the Fund adopted with effect from 1st December, 1951, a new schedule of charges in order to shorten considerably the period which may elapse before a member is obliged to consult the Fund on the means of reducing the latter's holding of that member's currency[9]. If this new schedule were to apply to India, the obligatory repurchase stage would be reached after three, and not as at present, seven years.

India purchased dollars from the Fund to meet the emergency caused by the limit placed on the convertibility of free sterling available to her. This limit has long since been withdrawn and India has been a full member of the sterling area since July, 1949. Her dollar problem is not what it once was. This position has been achieved as a result of drastic cuts in imports from the dollar area, and her food imports from that area are, barring natural calamities, not likely to be of the same size as previously. She has, in addition, contributed some dollars to the central reserves in the last few years, as follows[10]:

Period.	($ million) Contribution to (+) or withdrawal from (—) the Central Reserves.
January-December 1950	+ 77
January-December 1951	— 12
January-December 1952	—118
January-June 1953 (preliminary)	+ 9

It is time India discharged her obligations to the Fund. Not only will it save her the interest charges; it will also increase the creditworthiness of the sterling area as a whole. On the other hand, it will not cause any undue strain on the central reserves out of which will have to come all the dollars needed for this transaction. The U.K. Government has also started repaying its debt, amounting to $5,000 million, to the U.S. and Canadian Governments, and has paid three annual instalments amounting to around $175 million each. What India would require to draw from the Central reserves for the repurchase transaction will only be a fraction of the U.K.'s annual instalments of debt repayment.

THE CALCUTTA MONEY MARKET

SIGNS OF STRINGENCY

Wednesday, 3rd February.

MONEY has been in strong demand and the banks report that there are now signs of stringency. There has not been much change in advances to industries in Eastern India, jute and tea, but accommodation is being provided in North and West India for the movement of sugar, foodgrains and cotton. In the Calcutta interbank market, the call rate is unchanged at 2½ percent.

There have been some good tea bills in the exchange department, but otherwise conditions are quiet. Remittance has been moderate. The principal exchange rates are steady.

* * * *

Tenders for Rs. 1 crore of three months Government of India treasury bills were opened on Tuesday, 2nd February, 1954. Total amount offered was Rs. 1,13,75,000. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 88 percent. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2-8-0 percent per annum. Tenders for Rs. 1 crore of three months' Government of India treasury bills will be received at Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore up to 11 a.m. on Tuesday, 9th February, 1954. Successful tenderers should make payment on Friday, the 12th February, 1954. Other conditions are as usual. During the week ended 29th January, 1954 Government of India treasury bills for Rs. 2,07,25,000 were sold in favour of the Reserve Bank of India.

* * * *

Silver was quietly steady last week and the price fluctuated within a narrow range. After rising to Rs. 161 from the previous week's level of Rs. 160-8 silver reacted to Rs. 160-9 today on profit-taking. The price was unchanged at 74¾d, in London and at 85¼ cents in New York.

Gold was steady on good offtake of ready stocks, followed by the lack of arrivals. The price rose from Rs. 84-10 to Rs. 85-8. The sovereign at Rs. 56-12 showed a gain of 2 annas.

* * * *

There was a rise of Rs. 1.17 crores in notes in circulation to Rs. 1156.01 crores according to the return of the Reserve Bank of India for the week ended 29th January, 1954, and the total note issue at Rs. 1174.38 crores showed a small rise of Rs. 14 lakhs. Notes held in the Banking Department consequently fell by Rs. 1.03 crores to total Rs. 18.37 crores. Deposits of the Government of India and other Government accounts rose by Rs. 2.75 crores and Rs. 1.39 crores to stand at Rs. 101.60 crores and Rs. 23.29 crores, respectively, while balances of commercial banks decreased by Rs. 3.60 crores to Rs. 38.50 crores due to good demand in funds. Balances held abroad were about Rs. 1.98 crores up at Rs. 116.17 crores. Other loans and advances improved from Rs. 21.57 crores to Rs. 23.93 crores [illegible] advances to scheduled banks against usance bills were Rs. 1.10 crores (Rs. 1.19 crores). Investments declined by Rs. 24 lakhs to total Rs. 72.47 crores. There were no ways and means advances against Rs. 72 lakhs.

* * * *

The statement of the position of Scheduled Banks for the week ended 22nd January, 1954, discloses Demand and Time liabilities at Rs. 523.20 crores (Rs. 8.91 crores on account of borrowings from Banks) and Rs. 328.98 crores (Rs. 1.42 crores) compared with Rs. 518.10 crores (Rs. 8.93 crores) and Rs. 328.03 crores (Rs. 1.40 crores) respectively in the previous week. Cash and balances with the Reserve Bank have fallen by Rs. 1 crore and Rs. 93 lakhs to Rs. 32.12 crores and Rs. 40.24 crores, respectively. There is a drop of Rs. 53 lakhs in investments to Rs. 324.16 crores. Advances and bills discounted at Rs. 492.12 crores reveal an increase of Rs. 4.70 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.5 percent and 57.7 percent against 8.8 percent and 57.6 percent.

* * * *

The return of the Imperial Bank of India for the week ended 22nd January, 1954, shows a rise of Rs. 2.56 crores in total deposits to Rs.. 209.42 crores. Investments in Government securities are up by Rs. 98 lakhs to Rs. 80.50 crores, while other authorised investments remain unchanged at Rs. 10.74 crores. Bills discounted and purchased have decreased by Rs. 3 lakhs to aggregate Rs. 16.51 crores, while loans, cash credits and overdrafts remain unchanged at Rs. 97.91 crores. Cash and balances are, in consequence, shown at Rs. 16.19 crores or Rs. 82 lakhs higher than in the previous week.

* * * *

Government promissory notes of the following loans, interest on which falls due for payment during March 1954, will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for payment of interest from the 16th February 1954.

Central Government Loans. 2½ percent 1976, 4 percent 1960-70, 4½ percent 1955-60, 3 percent Conversion Loan 1946.

State Government Loans. 3 percent U.P. 1961-66, 3 percent U.P. 1960, 3 percent Bombay 1955, 3 percent Madras 1955 and 1956, 3 percent Madhya Pradesh 1955, 3 percent Bombay 1956, 3 percent Madhya Pradesh 1956, 3 percent Madras 1960, 3½ percent West Bengal 1962, 3½ percent U.P. 1962, 3½ percent Madras 1962. 3½ percent Bombay State Dev. 1962, 3½ percent Madhya Pradesh 1962.

Holders of these loans are advised to lodge their holdings well in advance of the due dates to facilitate delivery of their securities and interest warrant on the due dates.

The net profit of the CENTRAL BANK OF INDIA, LTD., for the year ended 31st December, 1953, subject to audit, including the sum of Rs. 17,23,014-9-9 brought forward from the previous year amounted to Rs. 93,74,378-5-2 which the directors have disposed of as follows: and ad-interim dividend paid for the half-year ended 30th June, 1953, at the rate of 6 percent free of income tax, i.e. Rs. 1-8-0 per share on 12,58,170 shares Rs. 18,87,255, transferred to bank's investments Rs. 20,00,000, provided for taxation Rs. 6,50,000 and provided for bonus to staff Rs. 13,00,000 to leave a balance of Rs. 35,37,123-5-2. The directors propose to recommend to the shareholders to pay a final dividend for the half-year ended 31st December, 1953 at the rate of 6 percent free of income tax i.e. Rs. 1-8-0 per share on 12,58,170 shares (making in all 12 percent per annum for the whole year Rs. 18,87,255) and to carry forward Rs. 16,49,868-5-2.

* * * *

The profit of the UNITED COMMERCIAL BANK LTD., for the year 1953 subject to audit, including the amount brought forward from last year's accounts, is Rs. 24,52,320-7-3. Out of this sum, the directors have appropriated Rs. 9,50,000 as provision made for taxes, Rs. 50,000 for donations paid for public and charitable purposes, and have transferred Rs. 5,00,000 to the Reserve Fund, leaving a balance of Rs. 9,52,320-7-3. Out of this balance, the directors propose to recommend payment of dividend at Rs. 2 per share free of income tax, which will absorb Rs. 8,00,000 leaving Rs. 1,52,320-7-3 to be carried forward to next year's accounts. The securities and investments of the bank appear in the accounts on 31st December 1953 at or below market rate ruling on that date.

* * * *

The profit of the PUNJAB NATIONAL BANK LTD. has shown an increase of Rs. 5.74 lakhs over that of 1952. The amount at disposal together with a sum of Rs. 1.92 lakhs brought forward totals Rs. 41.79 lakhs. Deposits at over Rs. 65 crores have increased by more than Rs. 6 crores.

* * * *

The net profit of the INDIAN OVERSEAS BANK LTD., subject to audit, for the year ended 31st December, 1953 after providing for contingencies and expenses amounts to Rs. 15,14,792-12-6 including the sum of Rs. 1,89,917-7-4 brought forward. The directors have made the following allocations: provision for taxation Rs. 6,45,000 and transfer to reserve fund Rs 3,50,000. The directors also propose to recommend to the shareholders the payment of dividend of 6 percent (free of tax) to absorb Rs. 2,94,522, leaving a carry-forward of Rs. 2,25,270-12-6.

* * * *

The result of the BANK OF MYSORE LTD., for the year ended 31st December, 1953, is a surplus of Rs. 17,90,687-3-7 which, added to the balance brought forward of Rs. 86,306-7-3 aggregates Rs. 18,76,993-10-10. An interim dividend at the rate of 12 percent per annum and a bonus at the rate of 4 percent per annum free of income tax absorbed Rs 4,00,000 and income tax and super tax Rs. 3,50,000. The directors have proposed to pay a final dividend at the rate of 12 percent per annum free of tax to absorb Rs. 4,00,000, income tax and super tax Rs. 2,50,000, bonus to staff Rs. 2,50,000 and to carry forward Rs. 2,26,993-10-10.

A DITCHER'S DIARY

THE sharp rise in temperature of the last week came as a rude reminder of the brevity of Calcutta's "directors' weather". Capricious as ever, this year it did bring us a few weeks of chilly mornings and evenings, but already the fur and the serge are being reluctantly folded away till next year. Optimists will leave them hanging in the wanted-on-deck section of the wardrobe for a week or two yet, in the hope that February might produce one of its rare snaps of cool weather, but the rest of us are reconciled to the fact that "somer is ycumen in." One of the sadder features of this period of rising temperatures is the annual exodus of old hands from the senior ranks of business, and my impression is that this year the losses by retirement are going to be heavier than usual. The first, and one that will be most widely regretted, was the departure yesterday of Mr. and Mrs A. W. (Bill) Taylor. Mr. Taylor had been in India for 30 years and retired from the position of Chairman of the Board of Macneill and Barry, where he succeeded Mr. H. C. Bannerman in early 1951. He had already been a partner in the house of Macneill and Company, so he was associated with the direction of this firm throughout the changes in its structure that occurred after the war and which were typical of the transformation of British business in India into Indo-British business—the merger in 1949, the entry of a substantial Indian interest, the association with Kettlewell Bullen and then with Kilburn and Company. In addition to an active life in industry, Mr. Taylor was concerned with the work of several important business associations, notably the Bengal Chamber and the IJMA; he served as a member of the old Bengal Legislative Assembly and gave a great deal of his time to charitable organisations, in which latter sphere he was enthusiastically joined by his charming wife. After a period of uncertain health, his many friends will hope that he enjoys the holiday he is taking in Australia before going home.

* * * *

The letter published on another page from Miss Marie Stopes will come as a surprise to those, like myself, who did not realise that this remarkable woman was still active in the humane cause to which she has given so much of her life. The reference books do not betray her age, but I do know that it is just half a century this year since she was appointed, after prolonged studies in Edinburgh, London and Munich, to the staff of the University of Manchester. She was the first woman ever to be appointed to a science department of that university, which by British standards was far from backward in admitting women to its faculties. I imagine she was certainly the first woman to specialise in paleobotany, a field which (as I need not explain to those of my readers with an interest in coal) is of great importance to our basic industry. It is over 40 years since she offered to the scientific world her classification of the four distinct bands in bituminous coal which I think is still used by scientists and which gave considerable impetus to research in this field in Britain. Her offer to supply information on cheap birth control methods to those who wish to assist and instruct the Indian poor will, I hope, meet with a ready response; Sir Jeremy Raisman has been the latest to remind us of the urgency of doing something in this direction before the country becomes much more populous. I think that Miss Stopes can be relied upon to have taken account of the limited resources of the Asian poor, for she has lived in this continent—she was on the staff of the Imperial University in Tokyo when Japan was at a similar stage of development to India's present condition.

* * * *

Next Saturday I expect to see the Russian ballet at the New Empire, and I am anxiously hoping that I will like it, for if I do not I shall be accused of capitalist prejudice. Still, that does not seem a good enough reason for withholding a reference to the extra-æsthetic activities of Russia's other admirers in this country. These form the subject of a large quantity of printed and cyclo-styled matter which has been reaching my desk from the Democratic Research Service, Bombay, a "non-profit" organisation interested in the "spread of democratic values and information." The Service also claims to be "non-partisan," which can be conceded only in the sense in which, according to the Socialists, a British civil servant is entirely non-political when he is a Conservative. But why make the claim at all? Surely there is no shame in the free world organising itself to meet the organised attack of totalitarianism. As Irving Kristol points out in a fighting editorial to *Encounter 4*, for all its failures Communist propaganda has succeeded in inducing "a bad conscience about opposing Communism." This apart, the Democratic Research Service has set about its job in what seems to me a far better way than that devised by Senator McCarthy. It is not suppressing Communist literature; it is distributing Communist documents including some which the party would have liked to hide from the public view. The easiest victims of Communism are precisely those who know only a little about it, or at least not all that can be known about the party. From the secret documents published by the D. R. S. (aren't these abbreviations another minor triumph of infectious Communist practice?) it is now clear what lies behind the Democratic Front, the Peace Front, and the Cultural Front. The lesson for parties like the Praja Socialists and others similarly inclined to buy Communist support for electoral success is obvious. There is a Latin phrase for it: *Caveat emptor.*

* * * *

In recent weeks the bamboo scaffolding has been taken down from the several large new buildings that have been projecting into Calcutta's skyline and we can now see what sort of structure we shall have to look at for the rest of our lives here. The rigid simplicity and perpendicular lines of the State Government Secretariat in Strand Road, the Telephone Exchange in Dalhousie Square and the I. C. I. Office in Chowringhee I find very pleasing. Indeed before I came to India I had expected that all the big buildings would look just like these, a notion I probably formed from pictures of tropical American architecture; I was horrified to discover instead the debased and incongruous Gothic an earlier age had thrown up. The new buildings look cool and I don't doubt they are inside; from the outside the aggressively straight lines and light colours will achieve a dramatic effect in the hard light of the Indian summer sun. The I. C. I. builders have been particularly successful in blending this new style into the august surroundings of the famous Chowringhee frontage. The two decorative round towers atop the Secretariat building, which I know have excited a certain amount of speculation among sunbathers in a nearby enclosure, are neither ice-cream parlours nor bomb-spotters' eyries; they are simply houses for lift machinery done up to look as though they aren't.

* * * *

India will be indirectly concerned in an early opportunity to test how far the U. S. Administration is willing to go in relaxing the restrictions of the Buy American Act, along the lines recommended late last month by the Randall Commission. As we all know, India has recently been granted aid to the extent of $20 million by the U. S. Foreign Operations Administration in the form of railway equipment, and it is reported from Washington that there is a struggle going on about whether competition for the contracts involved should be limited to American firms or thrown open to all countries. The Foreign Operations Administration does not usually practise discrimination, but in view of the gentle decline in American economic activity it is not surprising that pressure is being exerted to see that this attractive contract does not go abroad. British, Belgian, German, Austrian, Italian and Japanese manufacturers could all undercut the Americans if the field were free, and it will be remembered that the last four of these countries all obtained a share of the Indian Railways' awards last year when Britain was priced out of the running. India's interest in the case is simply to see that she gets the most railway equipment for the money she is being given. But apart from that, it will be informative to follow the bidding, if the Americans allow it to be fully competitive, for this will give some indication of what is likely to happen to the global tenders for the erection of the Government's steel plant which will involve orders that a number of European countries must be watching for with some anticipation.

* * * *

Speaking of the Government's steel plant, I gather from a report in yesterday morning's papers that the German technical experts have not yet taken a final decision on what site should be chosen for it. It had earlier been said that they had plumped for Rourkela in Orissa, and that it only remained for the Cabinet to see whether its estimate of political and strategic necessities coincided with the technicians' estimate of economic desiderata. If the later report is true, then West Bengal need not give up hope that the claims of Durgapur will be overlooked, for I imagine that its strong point is the economic considerations, whereas neighbouring States are relying on the vaguer matters that lie outside the technicians' purview. I do not envy the Germans their job since they must be subjected to a certain amount of competitive salesmanship from the State capitals. I must not add to the din, and in any case I know very little about these matters—but it is not only my second-hand Bengali patriotism that makes me hope that the arguments about "dispersal" of industries are not being overvalued. Industry in most parts of the world just is not dispersed, and for very good reasons. It would be ridiculous to suppose that the mere beginnings of industrialism now to be found in this State amount to undesirable over-concentration, for the full advantages of what economists call "economies of scale" are yet to be derived, even in West Bengal. But the question is still under discussion and we can repose in the confidence that it will be decided on the real economic merits of the case.

* * * *

Feminine attitudes to finance have been the subject of discussion at several masculine gatherings I have attended lately. At one I heard of a lady holidaying in the Himalayas who assured an anxiously enquiring husband that she had plenty of money to be going on with; the bank was being most obliging except that it had suddenly taken to the curious practice of recording transactions in her passbook in red ink. At another I was told of a gentle creature who received a telephone call from her bank manager saying that there was no money left in her account for her to draw upon to which she replied, "Don't be a silly man—there are still three cheques left in my book." Finally there was a report of a lady triumphantly closing her 1953 accounts with the virtuous remark, "Yes, dear, I've spent more money this year but I've used fewer cheques".

PAMPHLETS ON PLANNING

FIVE pamphlets have been issued by the Ministry of Information and Broadcasting, Government of India:

Industrial Policy and Planning. An outline of present industrial policy in India in both public and private sectors, and in the important section of Cottage Industry, a brief review of past development, before and since partition, and a description of the various plans for the future. Interesting photographs and helpful charts. 26 pages. Price 6 annas.

Building for Tomorrow. A report on the first year's working of the Community Development Programme. This important expression of India's desire for a welfare state is dealt with in its various aspects, the most important being the fact that nothing on this scale has ever been attempted before anywhere else in the world "... nowhere has the experiment been tried for a vast rural population ... and in an underdeveloped economy with so many intractable problems." The illustrations are interesting. 40 pages. Price 6 annas.

India has a Plan. The five year plan is set out in language which children between the ages of 12 and 16 years can understand. An important piece of reading for the young Indian on whose aspirations and enthusiasm the future of his country will depend. The theme is enlivened with instructive pictures, and not too much encumbered by the adult tendency to see every plan as the solution of intractible difficulties. Perhaps it is important in a book of this kind that the last word should be had by Burns "the best laid plans of mice and men gang aft agley." It is important to safeguard against disillusionment in such tender years. 72 pages. Price 10 annas.

Finance for the Plan. Brings the five year plan down to earth, where all such plans must be dealt with if they are not to lead to disappointment. For all those sceptics who wonder how India is going to achieve what she has set out to do, this is important reading. 24 pages. Price 6 annas.

Interim Compensation Scheme. An outline of the efforts which have been made, and are still to be made, to settle the problem of the more urgent cases among those families displaced by partition. Interesting illustrations, and a table showing scale of payments under the Interim Plan. 43 pages. Price 4 annas.

* * * *

Directory of Chambers of Commerce and Associations. (Published by the Indian Merchant's Chamber, Bombay. 280 Pages, Price Rs. 2.) A useful little book containing a list of Chambers of Commerce and Commercial Associations in India, indicating names and addresses of respective organisations, telegraphic addresses and telephone numbers, including the name of the Secretary etc., wherever available. Also a list of Chambers of Commerce and Commercial Organisations abroad with their names and addresses, together with a list of Indian and Foreign Missions, Embassies, Legations, Consulates and Trade Representatives.

* * * *

The Indian Bankers' Annual 1954 (published by the Indian Press Publications, 585, Pyerofts Road, Madras, 5; Price Rs. 10.) The present edition of this useful and reliable annual brings the usual information on Indian banking up-to-date. The edition has been further enriched by narratives on exchange control in India and remittance facilities offered by the Reserve Bank of India to banks and the public.

* * * *

Indian Cables and Tables. (Published by the Indian Cable Company Ltd., 9, Hare St., Calcutta. 57 pages. Free on request.) This little booklet should be useful to electrical engineers throughout India. It contains invaluable data on copper wires and strands, flexibles, carrying-capacity of cables, fuse wires, amperage of motors, capacity of conduits and other information, including extracts from I.E.E. Regulations.

* * * *

The Indian Estate Duty Journal, the first issue of a monthly which has just appeared, claims to be "the pioneer journal on estate duty law and practice" in India. Its declared purpose is to print "information regarding the law, practice and procedure on estate duty in an easily understandable and, as far as possible, non-technical language". The annual subscription is Rs. 10, and the journal is published from the Indian Estate Duty Journal Office, 3, Daryaganj, Delhi 7.

* * * *

India Magasin (Published by Verlang India Magazin, Bielefeld, Germany, 48 pages. Price per copy DM 3.) This is the first issue of a new magazine printed in English and German, and intended to promote and strengthen Indo-German understanding.

BOOKS RECEIVED

Economic Development in the United Kingdom Dependencies. (Published by the Central Office of Information, London. Price not stated. 42 pages.)

* * * *

Some Aspects of the Development of Kenya Government Services for the Benefit of Africans from 1946 Onwards. (Published by the Government of Kenya. Price 1s. 24 pages.)

Digest of the 1951 Census Report for Bombay, Saurashtra and Kutch. By J. B. Bowman, Superintendent of Census Operations for Bombay, Saurashtra and Kutch. (Price As. 12. 36 pages.)

* * * *

Commodities Chart. (Published by C. Mehta & Co., cotton, bullion, share and seed merchants, Bombay.)

* * * *

Taxation's Estate Duty Manual 1954. By R. Bhargava. (Published by Taxation Publishing Co. (India) Ltd., 3, Daryaganj, Delhi. Price Rs. 17-8. 380 + 102 + clxxix pages).

* * * *

Some Important Developments During 1953 in Iron and Steel Technology. (Published by the United Nations. Price $0.25. 35 pages.)

* * * *

Annual Bulletin of Transport Statistics 1952. (Published by the United Nations. Price $1.25. 110 pages.)

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

SCIENCE AND EXPERIENCE IN INDUSTRIAL MANAGEMENT

WITH the economic background, though not stable, yet fairly assured, and technical activities at the stage of getting ready for the next significant move, the chief topic of discussion in the industrial world at the moment is that of management. The subject is not one which ordinarily commands the attention of men holding high positions in industrial companies, despite the existence of management institutes and an outpouring of books on the subject. Many highly successful industrialists contend that management is chiefly common sense, born of special experience and put into practice in particular situations. So they hold—although they would not put it in quite this way—that there is, in every company's affairs, the differential, or something like it, which cannot be known to the writers of textbooks on management and whose existence makes them mere generalisers. What these writers proclaim, so it is rather contemptuously alleged, are the platitudes which everyone knows, and on which no profits are earned. Only the man right inside the business can be aware of all the factors involved, personal and non-personal, and know how to handle them.

There is a great deal of truth in this point of view, ultra-conservative, even pig-headed, though it may sometimes be. But, on the other hand, in the absence of a generous temperament, such a point of view can become the enemy of progress, it can, indeed, become no more than an autocracy attempting to ride rough-shod over that which it does not understand.

One of the difficulties about the matter is the seeming impossibility of getting a satisfactory and concise definition of what management is. Many of the very great number of very large books which are published in America upon how to run a business consist of little else than an attempted definition of management, and the effect is rather like that of wandering in a maze. Usually, the Englishman finds that the meaning given in a standard dictionary is sufficiently helpful to get him going where light is needed upon such terms as these. But here, it seems, is an exception; for the root of the word management takes him back to the riding school. Certainly, looking after a horse is not altogether dissimilar from looking after a business—one can, with advantage, think in both cases of being well in the saddle, keeping a firm hold of the reins, avoiding nasty spills and so on. But the resemblances, if beguiling, are hardly adequate in a scientific age. There is more in it than that. One thing you cannot do to a horse is to administer him—and good administration is among the essentials of management. It is true that there have been writers who have insisted upon drawing a distinction between administration and management, claiming that the two functions are separate and that the great virtues of the latter is that it is subject to the former. But where the post of an administrator is vital, and not merely nominal, there must be an exercise of management, and business administration is becoming increasingly recognised as consisting of management at the highest level. Undoubtedly, the creating of an artificial division between administration and management was a fine art, and a very convenient one, in the Victorian days, making possible many sinecures for nonentities who knew how to surround themselves with an air of mystery. It is a deception more difficult to practise today.

The Choice between Knowledge and Experience

Of the papers published during the past year on management, three may be commended to the study of those in control of expanding businesses. None is concerned with matters of ordinary routine. All endeavour to elucidate principles upon which government of a firm's affairs should be broadly based. A paper by Mr I. S. Lloyd, a member of the South African Board of Trade, challenges those who seek to exalt the value of experience and argues that knowledge should be substituted for experience wherever it is possible to do so. It is a corrective worth heeding. Experience can be limited and localised, to the damage of individual business and to that of an industry as a whole. The British cotton textile industry suffered a great deal from this attitude until the last few years. It was quite common to hear directors of cotton companies declare that they never read a technical journal, because the day's work provided them with all the information they wanted. As for studying what was happening in another industry, in case it might have a bearing upon their own, that was ridiculous. The cotton industry stood on its own feet. With the advent of young men from the universities, young men often widely travelled, the old attitude is disappearing to the immense advantage of the cotton textile industry. If one alters Mr. Lloyd's claim a little and says instead that experience must be supplemented by knowledge, or even that knowledge is a criterion with which to measure the value of individual experience, then his position is incontestable. It should be clear in these changing days that many wholly fresh developments have to be faced and dealt with. To search within one's own experience for a precedent is often to search in vain. What is worse, one is liable to draw analogies where none exist. A moral to be drawn is that every business of fair size should have its own specialised library, that the directors should use it and encourage their staffs to do so.

The Limits of Technical Advance

Dr. Baldamus of Birmingham University has been at pains to modify the impression that technical advance is the sole dynamic of industrial progress. The broad social inferences he draws are outside of the scope of this article. But one of the lesser rejections he makes is worth noting by business men, namely, that mechanisation will necessarily bring about an increase in the size of production units. He stresses the factor of utilisation—which is not identical with that of mechanisation. How the machinery is to be used is, he thinks, more of a fundamental question than what it can produce. A subsidiary question, was not dealt with by Dr. Baldamus, is that mechanisation does not necessarily bring about an increase of sales. This is a fact that is often overlooked by younger men visiting machinery exhibitions and who are rightly impressed by the demonstrations given. But the machine cannot solve marketing problems, it cannot provide the large sums which are often needed for advertising products and it cannot ensure the existence of sufficient consumer demand if the conditions are unfavourable. It has been frequently happened that purchases of up-to-date machinery have been made in the belief that this alone can transform a firm's business situation. A result of this failure to take into account all the factors involved has been the imposing of an onerous financial burden which has, in fact, raised costs of production.

Attributes for Management

A pamphlet issued by the Education Committee of the Federation of British Industries attempts to discover what are the personal attributes which should exist in a manager. There are, of course, the ones of tact and discretion. But these alone cannot bring about that team work which has been set down as the ideal towards which every modern business should strive. Indeed, tact and discretion, unless offset by other qualities, can often have a damping effect. Team work does not long continue unless there is a constant engendering of a rational enthusiasm. It cannot be said that the Committee answers the problem which is its main concern. That is hardly a matter for surprise. Supposing a list of all the desirable personal qualities could be enumerated —how could their possession by any one man be ensured? He would have to be saint or genius, and perhaps both.

Nevertheless, useful conclusions are reached. One is that management should not be regarded as akin to a formal exercise, an unexciting matter of manipulation and adjustment. Those concerned with management must have a quality which, for want of a better term, can only at present be called the right spirit. They need to have broad human sympathies and an understanding of the problems of individuals, but they must never fail to recognise also that the problems of the individuals with whom they are concerned in the day's work will become aggravated if their company does not prosper. In other words, the interest of an individual must never be set against that of the company as a whole. The Committee notes with approval the lectures on management which are now given in universities and colleges, but it recognises the danger of these courses becoming remote from realities. It suggests that this drawback would probably be removed if men who have had a lengthy experience of industry from within could be encouraged to lecture at these institutions or to lead discussion groups there. The suggestion is constructive; for it is by the blending of the academic and practical points of view that industry can be continuously creative.

Jute Profits Up

Jute Industries reports a rise of £90,000 in profits for the year to September 30th, 1953. "The Quality Control of Jute Manufactures" is now one of the subjects upon which lectures are being given to the local textile societies. The lecturer is provided by Low and Bonar Ltd. The British Rayon and Synthetic Fibres Federation has just opened an exhibition of Modern Fibres in Men's Wear. The aim is chiefly to get an acceptance of light weight suitings wholly of rayon for men's summer wear comparable to that which has been already achieved in the United States. A step forward in Terylene fabrics had been made by the Calico Printers' Association which is now showing "lace" curtains of this material.

Stocks and Shares

BUOYANT CONDITIONS IN SHARES

PAPER AND MISCELLANEOUS SCRIP FIRM: IRONS EASE ON PROFIT-TAKING: JUTES NEGLECTED

Wednesday Evening.

THE week under review can be described as the brightest in the Calcutta Stock Exchange since the New Year. Buoyancy was the keynote of trading and business was put through in most sections of the market at advancing rates. The main reasons offered for the cheerful conditions which prevail are the strong bull position in Indian Iron and Steel shares, the record cloth shipments last month and the firmness of Bombay's principal speculative counter, Tata Iron & Steel Deferred shares. Price gains were recorded principally in the engineering, paper and miscellaneous sections of the market.

Jute and coal shares have been conspicuously neglected and this gives some grounds for doubting how far the present improvement is going to be maintained. However it is not only gambling counters that have gained ground; good industrial features were Dunlops at Rs. 33-12, Titaghur Paper at Rs. 39-2, Indian Copper at Rs. 3-3, British Burma Petroleum at Rs 3-5, Kesoram Cotton at Rs. 24, Carew Sugar at Rs. 8-6 and Ramnugger Cane at Rs. 22. Indian Irons eased on profit-taking to Rs. 28-6 and although at this price these shares seem vulnerable it cannot yet be said that there is any sign of weakening.

The volume of business has been rather better but there has been no genuine outside support and there scarcely could be until jutes pick up. A halt in the rise of the last ten days can be expected shortly, but the undertone will remain definitely steady.

There follow the details of the week's trading.

The gilt-edged market continued steady throughout but the volume of business was restricted. Buying enquiry was limited but even so there were few sellers to meet the market. Three percent Conversion Loan 1986 improved slightly to Rs. 82-11 but 3% 1896 was unchanged at around Rs. 82-6. In short-dated, the enquiry for 2½% 1954 was maintained and the price improved to Rs. 99-2 while 2½% 1955 was steady at Rs. 98-6-6. Both 3% 1957 and 1958 were steady at Rs. 98-6 and Rs. 98-2. In the medium-dated group there was some enquiry for 3% 1959-61 at around Rs. 96-2 because of the approach of the interest date (15th February), but 3½% National Plan Bonds 1961 were freely offered at Rs. 98-14. The outstanding feature in this section was 2½% 1961 which rose to Rs. 99-14 cum-voucher and were later traded at Rs. 90-12 ex-voucher. The 2¾% Loan 1960 was on offer at Rs. 93-10 and 2¾% 1962 was marked at Rs. 91-11-6. Both 3% 1963-65 and 1964 were unchanged at Rs. 92-8 while 4% 1960-70 was taken higher at Rs. 101-15 with few declared sellers. Long-dated loans were unchanged though there was a very good enquiry for 3% 1970-75 at around Rs. 86-8. The recent enquiry for 4% Provincial Loans maturing in 1964 petered out after the payment of the half-yearly interest on 1st instant.

Demand for miscellaneous preference shares continued but sellers were not forthcoming. Jute preference shares found more sellers than buyers. In jute, Anglo-India were quoted at Rs. 113 and Nellimarla were marked at Rs. 103. Allahabad Bank were taken at Rs. 136, Bharat Collieries at Rs. 50, Calcutta Electric at Rs. 12 and Indian Iron & Steel had unsatisfied buyers at Rs. 108. Associated Hotels were crossed at Rs. 65, Jardine Henderson were done at Rs. 80 and New Victoria Cotton moved up again from Rs. 3-11 to Rs. 4-6.

In the bank section, Imperial Bank Fully-Paid was steady at Rs. 1,798 as were the Contributories at Rs. 430. Punjab National Bank were done at Rs. 23-4 and United Commercial at Rs. 42. Hind Bank was a feature improving from Rs. 23 to Rs. 25-8. Business was reported in the United Bank of India 'D' class shares at Rs. 3-15.

* * * *

In the railway section, small lots of Burdwan-Cutwa and Shahdara (Delhi) were taken up at Rs. 56 and Rs. 175. Dehri Rohtas were steady at Rs. 7-3.

Featuring the cotton section were Kesoram, Bowreah and Dunbar which improved in each case to Rs. 24, Rs. 410 and Rs. 205 respectively, against last week's quotations of Rs. 22-2, Rs. 325 and Rs. 200. Cawnpore Textiles were done at around Rs. 8-8 and New Victoria at Rs. 1-9.

There was a slightly better feeling in the coal section with buyers of Katras Jherriah, Rewa and Bengal at slightly above last quotations. Burrakur was steady at Rs. 8-13 as were Bokaro & Ramgur at Rs. 10, Dhemo Main at Rs. 8-10 and Central India at Rs. 6-2. East Indian were crossed at Rs. 25-8, Equitable were marked at Rs. 32 and New Beerbhoom at Rs. 18-8. Business was done in Raneegunge at Rs. 11-4, South Karanpura at Rs. 10 and Western Bengal at Rs. 5-4. There was some activity in Jainty Central Collieries with the price spurting from Rs. 1-14 to Rs. 3-7. Because of reports about selection of a site for the Government's steel plant, shares of Talcher Coalfields Limited which is situated in the State of Orissa, and which is reported to have at least 52 million tons of first-grade coal available, spurted from Rs. 2-8 to Rs. 3-8.

Jute shares lagged behind the rest of the market and the whole section, with the exception of Fort Gloster which on interested buying rose sharply from Rs. 425 to Rs. 475, was stagnant. Howrah were quietly steady around Rs. 24-8.

In the electric section, Calcutta Electric changed hands freely around Rs. 13-4. Jubbulpore were crossed at Rs 14-4 and Shahjahanpur at Rs. 7-12. Patna were quoted at Rs. 11-7 and U.P. at Rs. 155.

* * * *

Special features in the sugar section were Carew, Cawnpore, Ramnugger, and Belsund which were all taken at the higher rates of Rs. 8-4, Rs. 39-10, Rs. 22-6 and Rs. 9-1. New Savan were reported at Rs. 6.

The bulls were in full control of Indian Iron and Steel shares during the period covered by these and the price rose steadily to Rs. 28-12; tonight's closing quotation is Rs. 28-6. Bhartia Steel were wanted at Rs. 11-8, Braithwaite improved to Rs. 14-3 and Indian Galvanizing to Rs. 17. Indian Standard Wagon were quoted at Rs. 62, Jessops was steady at Rs. 26 as were Kumardhubi Engineering at 8-8. There was some investment buying of Marshalls and the price improved today to Rs. 6-11 on reports of better working. Saran Engineering changed hands at Rs. 10-4.

Paper shares provided the best feature in the miscellaneous section with buyers of Bengal at Rs. 55, India Pape: Pulp at Rs. 187, Orient Paper at Rs. 50 and Shree Gopal Paper at Rs. 21-12 ex-dividend (dividend maintained at 12 annas per share). Titaghur Paper improved further to Rs. 39-2, Sone Valley Cement changed hands at Rs. 7-2, New Asiatic Insurance were steady at Rs. 5 and Ruby General at Rs. 6-7. Triton Insurance improved Rs. 3 to Rs. 170 and Calcutta Landing & Shipping were scarce at Rs. 19. India Steamship were steady at Rs. 7-8, Alkali Chemical were done at Rs. 16-4 and Angelo Brothers were offered at Rs. 19. British Burma Petroleum met with keen enquiry improving from Rs. 2-12 to Rs. 3-5. British India Corporation were neglected at Rs. 8-15 but Dunlop Rubber and Indian Cables were steady at Rs. 33-10 and Rs. 20-2. Indo-Burma Petroleum were scarce at Rs. 83 and Martin Burn were steady at Rs. 20-4. Jardine Henderson were done at Rs. 115-8 and Metal Box at Rs. 17-11. Following the news that Rallis (India) were once again passing the Ordinary dividend (the preference dividend has also been passed) the shares found sellers at Rs. 56. Rohtas Industries were steady at Rs. 12 as was Shaw Wallace at Rs. 12-6 and Textile Machinery at Rs. 9-12. Indian Wood Products were taken at Rs. 34-10, Godfrey Phillips were crossed at Rs. 29-12 and F. & C. Osler on the publication of a better report improved from Rs. 7-4 to Rs. 8-1.

The feature in the mining section was Orissa Minerals which improved from Rs. 38-12 to Rs. 40 following the directors' recommendation of a half-yearly dividend of Rs. 2 per share (same as the previous half-year). Burma Mines were unchanged at Rs. 1-6, Non-Ferrous Metal were done at 14 annas and Tavoy Tin at 11 annas. Indian Copper improved from Rs. 2-14 to Rs. 3-2-6.

* * * *

Although the volume of business has been limited, prices in the tea section have remained quite steady. Among Assam scrip Ananda Assam had buyers at Rs. 20-10 as did Basmatia at Rs. 35-4 and Bateli were crossed at Rs. 15-8. Bormah Jan and Jutlibari were unchanged at Rs. 13-8 and Rs. 13-4 while Hoograjuli were asked for at Rs. 34-4. Sapoi were slightly easier at Rs. 13-8. Teen Ali changed hands at Rs. 25-4 and Teloijan were marked at Rs. 15-4.

Dooars scrip provided the feature of the section and on publication of excellent crop figures and sales the following rates were recorded:—

	Opening Rs.	Highest Rs.	Closing Rs.
Banarhat	402	425	418
Choonabhutti	308	321	318
New Dooars	392	425	418

Other shares in estates in this area were unchanged, Ethelbari being marked at Rs. 7-12, Hasimara at Rs. 33, Jaybirpara at Rs. 31-8 and Killcott at Rs. 16-12. Among Darjeeling shares, only two were quoted: Margaret's Hope at Rs. 11-8 and Tukvar at Rs. 7-14. Of the remainder Hattikhira were slightly better at Rs. 14-6, Sonai River were asked for at Rs. 7-10, Dauracherra were taken at Rs. 8-6 and Teliapara were noted at Rs. 157. New Chumta had buyers at Rs. 26-8 and after a long lapse of time Tirrihannah were taken at Rs. 18-12.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

THE EASTERN ECONOMIST
Annual Number
1953
INDIA IN ASIA

The Annual Number of "The Eastern Economist" which has just been published is a study of political, economic and cultural factors which determine India's place in Asia as well as Asia's place in the world today. This may justly be claimed to be the first comprehensive study of this nature presented both for the general and the specialist reader, for whom graphs and statistics are provided on an elaborate scale.

Part II "India in 1953" deals with economic events in 1953 in the form which has won worldwide recognition as the most authoritative assessment of India's economic position.

Copies are available at Rs. 5/-
By Registered Post Rs. 5/10/-

Remittances to:

The Eastern Economist Ltd.
52, Queensway, New Delhi.

The working of the Bird-Heilgers group of jute mills for the half-year ended 30th September, 1953, has produced better results than those of the previous half-year chiefly because the mills held large stocks of raw jute at lower prices. The management was also able to adjust the production of sacking to the declining demand of this category of goods. Except in the case of Standard, profits were better and the distribution is improved in most cases. The electrification of Dalhousie was completed and the directors were considering the question of modernising the mills. The hessian section of Auckland is likely to be modernised with Mackie's mill machinery at an early date. The electrification of Kinnison was making good progress. The electrification of Naihati, which is expected to be complete at an early date, is expected to improve efficiency and reduce costs. The north mill in Union is likely to become a 100 percent hessian unit soon with the installation of Mackie's mill machinery. Lawrence was reported to be negotiating for the supply of power from the Damodar Valley Corporation through the Calcutta Electric Supply Corporation. Details of the accounts are published below :—

Calcutta Markets

GOOD GENERAL DEMAND IN TEA EXPORT AUCTION

RATES WEAKEN IN INTERNAL SALE

AT Sale No. 32 held on 1st February offerings in the Export sale consisted of approximately 44,000 cases. There was a good general demand at lower levels except for flavoury Darjeelings, well made Leaf grades, good autumnals and Best CTC's which often sold at dearer rates. BOP's with tip met with a good enquiry and were only half an anna easier. Fannings grades were irregularly one to two annas easier but the Broken Pekoes were the weakest feature and were from two to three annas easier, stalkier kinds showing the biggest drop.

Quotations

	1954	1953
	Rs.	Rs.
Clean Black Pekoe	... 2 9 0	1 9 0
Clean Common B.P.	... 2 2 2	1 6 6 (Nominal)
Medium Assam B.P.	... 2 3 0	1 9 0 to 1 10 0
Best Assam CTC B.P.	... 2 7 0 (Nominal).	

Internal Market

At the Internal Sale approximately 23,300 cases of Dusts were offered. Fewer buyers were operating this week and there was much less general demand, particularly at the close of the sale. Common and Medium Dusts were selling 2 to 3 annas below last rates, with the best C.T.C. Dusts 1 to 2 annas easier. Towards the end of sale however prices declined even further and all descriptions were fully 3 annas down on the previous week. Withdrawals at this stage were also heavy.

Quotations

	1954
	Rs.
Medium Dooars Dust	... 1 12 6
Medium Assam Grainy Dust	... 1 13 0
Best Assam CTC Dust	... 2 0 0

The Internal Leaf offerings consisted of approximately 9,400 cases. There was a limited demand and most sorts were fully 2 to 3 annas easier. There was an irregular demand for the Green teas on offer.

STEADY TIME CHARTER DEMAND IN FREIGHT MARKET

INCREASED CHARGES CONTEMPLATED

EXCHANGES over the past week have favoured owners despite a reduction in the volume of business towards the end of the week. Owners with tonnage in early positions benefited in most trades and increased rates were conceded in a few trades. Grain from Gulf to Japan was fixed at $12.25 for early February shipment compared with $11.50 for February-March whilst lumber and generals from British Columbia to U.K. showed a sharp increase at 80 shillings f.i.o. Coal from Calcutta to Colombo was fixed at 43s 9d and to Hong Kong at 50 shillings although a further cargo to Japan was arranged at 57 shillings. Grain from the River Plate to U.K.-Continental destinations was arranged at higher rates, up to 87s 6d being paid for a vessel giving 75 cu. ft. There was a steady time charter demand covering a variety of trades and representative fixtures are as follows: *Eptanissos*:—10910 tons oilburner 14 shillings per d.w. ton, one Indo-China round voyage, delivery Japan, spot. *Queen Maud*:—10100 tons oilburner, 13s 6d per d.w. ton one West African round voyage delivery Continent, spot. *Santa Irene*:—10490 tons oilburner, 15 shillings per d.w. ton, voyage out, delivery Marseilles redelivery Indo-China, early February. *Alendi Hill*:—10790 tons oilburner, 13s 6d per d.w. ton one South African round voyage, delivery U.K. end February.

It is understood that in view of the slow loading of general cargo in this Port Liner Companies are contemplating freight increases to all destinations

THE SUGAR MARKET

During the week ended 2nd February, sugar sales in the Calcutta market averaged 300 tons daily. Arrivals were 3,000 bags, and stocks amounted to 6,000 tons. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-6 a maund for ordinary grain, Rs. 32-14 a maund for big grain, Rs. 30 a maund for coming ordinary grain and Rs. 30 a maund for coming big grain. Ex-mill delivery price for D-28 grade was Rs. 30-4. Markets everywhere, namely, Assam, North Bengal and South India are dull. Prices have come down considerably due to heavy imports in this month from foreign countries. Tendency is weak. Sugarcane prices have not been increased.

LINSEED

An easier tendency prevailed last week and prices lost some ground chiefly due to poor enquiries. Although upcountry markets were slightly quieter, transport difficulties resulted in very poor arrivals to this centre but ready goods were scarce. Sellers were consequently more in evidence for forward delivery. Crushers showed a limited interest and the daily turnover was small. In the oil section very dull conditions prevailed. In spite of a further decline in prices, the offtake was very poor. Latest quotations were based on Ready Rs. 21-4 per maund

SHELLAC MARKET RULES QUIET

The market opened easier, became steadier mid-week and ruled quiet at the end. A small business passed. The range of quotations was as follows:—

Standard Pure Buttonlac	Rs. 120 to Rs. 122 to Rs. 120 value
Pure Buttonlac	Rs. 110 to Rs. 112 to Rs. 110 value
Lemon No. 1 Shellac	Rs. 110 to Rs. 115 buyers, Rs. 117 to Rs. 118 done, Rs. 115 value.
Lemon No. 2 Shellac	Rs. 105 to Rs. 110 to Rs. 108 value.
F. O. Std. I Shellac	Rs. 98 to Rs.104 buyers; Rs. 103 done.
Pure TN Shellac	Rs. 92 to Rs. 100 basis done and buyers; Rs. 98 value.
4% I. T. N. Shellac	Rs. 88 to Rs 92 to Rs. 90 value.
No. 1 Kusmi Seedlac 3%	Rs. 110 to Rs. 112 to Rs. 110 value.
No. 2 Kusmi Seedlac 3%	Rs. 100 value; Rs. 104 to Rs. 103 buyers.
Fine Bysaky Seedlac Manbhum) 3%	Rs. 90 value; Rs. 92 to Rs. 95 to Rs. 92 buyers.
Fine Bysaky Seedlac (C. P.) 3%	Rs. 85 to Rs. 90 to Rs. 87 buyers.
Ordinary Bysaky Seedlac (C. P.) under 5%	Rs. 80 to Rs. 83 to Rs. 82 done and buyers.
Ordinary Bysaky Seedlac (C. P.) 5%	Rs. 75 to Rs. 78 buyers.
Kireelac	Rs. 50 value; Rs. 49 buyers.

Shipments during January were 25590 packages.

this amazing protective packing material — gives you all the answers

'Alkathene' Film, the revolutionary new packaging material, now made in India, has *just* the properties you demand to meet your specific baling problems.

★ 'Alkathene' Film is flexible and yet tough enough to stand up to the pressure and strain of packing operations. Ordinary waterproof papers may crack, split or burst at this stage.

★ 'Alkathene' Film has a lower water permeability factor than any other alternative material. By using 'Alkathene' Film you can obtain complete protection for your textile bales during the long exposure which they inevitably undergo in transit.

★ In addition to saving on costs of packaging materials, featherweight 'Alkathene' Film reduces the weight of packaging material used in each bale, and saves on freight costs too.

★ 'Alkathene' Film can be cut and heat-sealed easily. The elimination of tar-lamination prevents any possibility of textiles being stained and spoiled.

★ 'Alkathene' Film is transparent and shows the contents of bales to advantage at first glance when the outer wrappings are removed.

And, best on all counts, 'Alkathene' Film costs no more than any waterproof packing material. Test 'Alkathene' Film, try it, prove its utility for yourself, as many other Textile manufacturers have already done.

the revolutionary new protective packaging material

'ALKATHENE' Film

TOUGH • WATERPROOF • INEXPENSIVE

Surely you will want to know more about 'Alkathene' Film! Write, phone or call for free detailed literature and samples. Our Technical Service Department will be glad to help you put 'Alkathene' Film to best use.

CENTRAL PLANNING AND AMERICAN EXPERIENCE

T.V.A. EXPERT'S WARNING TO PLANNING COMMISSION

(FROM OUR NEW DELHI CORRESPONDENT.)

THE former chairman of the Tennessee Valley Authority and a member of the Indian University Commission, Dr. A. E. Morgan, has written a stimulating letter to the Planning Commission, which should set the Commission re-thinking its basic problems. To begin with, Dr. Morgan holds that a national plan is highly undesirable. "I think it is a mistake to try to put a living, growing people into the framework of a plan. Planning should consist of removing the incongruities of a social order and of bringing out the possibilities of existing situations. I think the plans should grow out of the aspiration and the will of the people and not be imposed. Your Commission frequently emphasises the desirability of having your programme spring from the people, yet in the mechanical set-up of the programme you tend to a type of organisation which would naturally lead to a large degree of centralisation. On two occasions I have observed American programmes which were set up to be democratically organised, but because of organisation from the centre, drifted into becoming centralised bureaucratic organisations. The reason was that the centre became a place for the people in the villages to look for ready-made programmes. People do not think if there is any alternative to thinking." Dr. Morgan goes on, "Every dictatorship, benevolent or otherwise, holds its plan to be an expression of a basic unity of purpose in the community. The discussion in the Plan of public co-operation has a little of the flavour of benevolent dictatorship put in pleasant language. The Commission says that the plan is to be carried into every home in the language and the symbols of the people and expressed in terms of their needs and problems. The people are not asked to participate in creating the plan, but in carrying it out."

Denmark Suggests the Answer

Dealing with the extension service Dr. Morgan says: "Whenever a large body of public employees is in contact with the people, some politicians will soon discover that here is a source of political power and they will try to see that their own followers are appointed. One way to help the selection is to have such village workers chosen by the least political parts of your social structure." Dr. Morgan holds that "Because of the very wide extent of the extension service of the United States Department of Agriculture, and partly because of the American power and prestige, the rest of the world seems inclined to copy the American method as though there were no alternative." He thinks the Danes have provided an alternative. In Denmark, about a hundred farmers unite to employ an extension worker. They pay him privately and he is in more intimate touch with his farmers than the American country agricultural agent.

The Education Plan

Dr. Morgan's next onslaught is on the eduction plan. In his own country demand for teachers far outstripped the supply of those who were trained. The result was that teaching standards were reduced and often the teacher was scarcely more literate than the child being taught. All America has suffered from that deterioration of taching quality. Referring to the emphasis on technical and vocational training in all stages of the educational programme, Dr. Morgan says that there was a danger of creating one shortcoming by correcting another. What is needed is an effort to achieve all-round preparation for life in good proportion. There is a great need for vocational and technical education, but it is highly important to keep the whole life picture in view, not just that of making a living, or promoting the technical advance of the country.

Village Industries

Referring to village industries emphasised in the Plan Dr. Morgan says, "India may crawl along in its industrial development of village life, in which case mass industry will take over most industrial development." He holds that it is entirely possible to develop highly efficient industry on a small scale suitable for village life, and in which a man-hour of work would be much more productive. Referring to "the reservation of spheres of production" and the Industries Development Act, he says:

"Your Government should check unfair competition by big industry, such as by underselling a small industry until it is killed, and then raising prices, but beyond that, well planned little industry with co-operative technical services, such as have been developed in Finland and Denmark, would enable it to hold its own and to grow in competition with big industry. Trying to regulate industry by handicapping the large and subsidising the small industries will, I think, not lead to the most efficient or beneficial production."

The Place of the Public Sector

Dr. Morgan is similarly opposed to giving private capital all profitable opportunities, leaving only the unprofitable undertakings to the public sector. He regards the Industries Regulation Act as a very unwise law. "No Government," he says, "is wise enough to know whether additional plants will be of public benefit." Then again, to take over an undertaking "may not help, as the government bureaucracy may be poorly equipped to bring about the most economical production." By quoting American examples, Dr. Morgan shows how the Act will retard inventions and pioneering. He adds, "British industry has been handicapped by certain bad habits of price arrangements within the industry and by an inclination to seek large profits in relatively small production. It seems to me that the policy you describe is largely an effort to overcome certain defects you have seen in British industry as repeated in India. The methods used to cure those defects may be putting Indian industry into a framework of low productive capacity and high costs."

Coalfields Tribunal to be Set Up

The Union Labour Ministry has won over the issue of arbitration in the coal industry. The Ministries consuming coal and the Planning Commission, it will be recalled, had demanded a commission of enquiry, which would not only arbitrate in the labour dispute, but would appraise the economic consequences, if any, of a change in the wage structure. The Law Ministry held that such an enquiry was outside the scope of the Industrial Disputes Act and could not be undertaken. There was also the issue of *face* so far as the Labour Ministry was concerned; it had already announced its decision to set up an arbitration tribunal. It has, therefore, been decided to set up the tribunal. It is now expected that the Industrial Disputes Act will be amended, to provide for appraisement of the effect the award will have on the economic life of the country.

Agricultural Land Census

The Government of India, in the shape of the Ministry of Agriculture, has asked the State Governments to undertake the census of agricultural land comprised in owners' holdings of all sizes. For the purpose of the basic record of holdings, as owner's holding is defined as the area of land owned by an individual owner in the villages included in the circle of a village accountant. It is explained that in making its recommendations on land policy in the first five year plan, the Planning Commission drew attention to the inadequate information available regarding the distribution and size of holdings. It was pointed out that the available data do not distinguish between cultivated and uncultivated land, and in respect of land under cultivation, between different classes of land. Nor is it generally known how much area is held by tenants and how much under the personal cultivation of owners. This aspect is of great importance in view of measures taken in recent years to abolish intermediary rights and secure greater protection for tenants. With these considerations in view, the Planning Commission recommended that all States should co-operate in undertaking a census of land holdings and cultivation.

Census Proposals

Certain preliminary questions relating to the proposed census of land holdings and cultivation have been under the consideration of the Central Government. It is proposed that 1. The census should relate to agricultural lands comprised in owners' holdings. 2. It would be carried out by the revenue agency in each State as a special operation. 3. The responsibility for carrying out the census will rest with State Governments. In a number of States there are large tracts which have not been cadastrally surveyed or for which village records are not available. These States have been requested to supply further information.

Rourkela Favoured for Steel Plant

Rourkela in Orissa is tipped here for the location of the State steel plant. The Government of India has received technical advice on this point from their German consultants and are now considering it. The economic sub-committee of the Cabinet will meet shortly to take a final decision. Economic considerations more than any other are expected to govern the Centre's verdict. Although there is a respectable case for taking into account other factors such as the desirability of favouring industrially less developed States, it is argued that since steel is the basic raw material for a wide range of industries, the main object should be to assure the new plant optimum advantages for low cost production. The Government of India has no intention of deliberately hatching lame ducks, it is said.

Three guiding principles are emphasised in this connection: the cost of construction should be as low as possible: raw material, transport and other facilities available at the selected site should be such that steel could be produced and marketed at the lowest cost and the project should be completed and brought into operation within as short a period as possible. The German consultants are understood to have gone into these aspects thoroughly before making their technical assessment of the respective merits of the different sites. They had been supplied with all necessary details on the quantity and quality of ores, coal and other raw materials as well as on ground conditions at the site, which were needed for their decision.

Cane Price Agitation

The sugarcane price tussle had fresh developments during the week. The trouble, it will be recalled, is over the price of sugarcane in Uttar Pradesh and the demand of the cane-growers for a share in the profits of the sugar industry. The Cane-growers' Federation had given notice to the industry that unless the price of cane were raised from Rs. 1-7 a maund to Rs. 1-12 a maund, its members would stop the supply of cane to the mills with effect from 1st February but has since deferred action on the decision. It is explained that the sugarcane price was fixed at Rs. 1-7 a maund on the assurance that the price of sugar would rule at Rs. 27 a maund. This assurance, it is alleged, has not been honoured, and notwithstanding imports of sugar, sugar prices have exceeded the agreed ceiling of Rs. 27 a maund. The Union Government has asked the Chief Minister of Uttar Pradesh, Pandit Govind Ballabh Pant, to mediate in the dispute. Meanwhile, the Union Minister for Food and Agriculture, Mr. Rafi Ahmed Kidwai, while emphatically expressing himself against any rise in the sugarcane prices, has stated that the Government was working out a formula for profit sharing for the cane-growers.. The industry has also offered to accept any reasonable formula for profit-sharing, which took into account various factors, such as sugar prices at the end of last season, the duration of the season, which varied from factory to factory, and the recovery percentage. In short, the industry has demanded the slab system in preference to the step system.

The Consumers' View

Two issues arise. Firstly, the principle of profit-sharing if accepted in the case of sugarcane may be extended to other industries, such as cotton, jute and oilseeds. Its implications, therefore, should be fully appraised by Indian industrialists as a whole. Secondly, as it has often been stressed in these columns, there is an unprotected and much exploited element, called the consumer. He is exploited, because he can never be organised. It is the primary function of a Government to balance various interests. It should be a matter for some regret that the Government of India's efforts to hold on to the price-line have not been very successful. In its dealings, it has generally favoured peasants and workers. Incidentally, the socialists are fully exploiting the situation to their advantage. They appear to have captured the Cane-growers' Federation and are dictating their terms to the Government. Politics have entered the sugar trade, and in the game of party politics, the consumer has little hope of a fair deal.

The Food Minister, Mr. Kidwai, has been talking of giving price-support to foodgrains, in view of their falling prices. With this end in view he has schemes for creating a Central reserve and for building storage accommodation on modern lines, the idea being that the Government should enter the market if and when prices fell below a specified level. The sugarcane price controversy should knock down any such scheme, for if the prices are related, not to the cost of production, but to the profits an industry makes, there should be no justification for a price support plan.

Civil Service Problems

Streamlining the services has become a popular phrase. It means overhauling the services to suit the conditions ushered in by the Constitution. To quote Lord Winterton, "The restrictive effect upon the freedom and initiative of the individual, caused by the modern welfare State with its highly organised system of control has placed hidden power in the hands of the higher civil service and local authorities. They alone possess the expert knowledge necessary to interpret and carry out the vast mass of legislative enactments and administrative powers which are nominally vested in the Ministers." The Constitution aims to make India a welfare State. As a corollary, the services have been entrusted with vast responsibilities to carry out schemes of development and social welfare. To undertake this task, this reorganisation is urgently called for. The loss of the British and Muslim personnel had created serious shortages in the ranks of the all-India services. To meet these shortages, members of provincial services were upgraded as a temporary measure. The Government also set up a special recruitment board to locate and import talent from the open market. This Board examined 20,000 applications from which it selected 2,500 candidates for interview and chose 200 for recruitment. The ages of these candidates ranged between 27 and 45. After some training these new recruits were allotted to the I.A.S cadres of the various States and, according to reports, are doing well.

The Work of Reorganisation

The central secretariat was in a really bad way in August 1947, when power was transferred to Indians. Indiscriminate recruitment to meet the war requirements, and unplanned promotions following partition, had led to considerable inefficiency in the secretariat services. Departmental committees were set up in each Ministry which screened and graded its staff. A special recruitment board co-ordinated and finalised this grading. This work of reorganising has now been completed. Side by side the All-India Administrative Services competitive examination was instituted in 1947, which has been recruiting 30 to 35 candidates every year. The selected candidates are trained at the Administrative Training School for one year, after which they receive practical training in successively more responsible posts for six years before they are given charge of a district. Unlike the Indian Civil Service, the Indian Administrative Service has no judicial wing.

Two New Branches

Two new cadres are being organised, namely economic administrative service and industrial management service. The recruitment for these services will be partly from the open market and

partly from the existing services and from the private sector of industry. Pay scale will be such as to attract men of ability to the services, but would be within the range recommended by the Central Pay Commission. Conditions of service, which are under discussion, will not be such as would enable an inefficient man to continue in his job. Unfair promotion is sometimes another cause for discontent in the services. To introduce impartiality, promotion committees have been set up in each Ministry with which a member of the Public Service Commission is associated. Seniority alone is no longer the yardstick for promotion, merit is given a greater weight. For superior services up to the posts of joint secretaries, a selection board consisting of senior secretaries has been set up. Recommendations of this Board in regard to posts of deputy secretaries and above, and all proposals for appointments carrying Rs. 2000 and above, are submitted to the appointment committee of the Cabinet, consisting of the Prime Minister, the Home Minister and the Minister of the Ministry concerned.

Discipline and Economy

Fundamental rules are being re-codified, pay, pension and leave rules having already been revised, and concerning discipline, orders have been issued to expedite enquiries against a serviceman under suspension. These orders lay down that an officer shall be earmarked for the enquiry, that the officer concerned shall be relieved of his other official work, that he would hold the enquiry on a day to day basis and that he must remain in constant touch with the Ministry of Home Affairs. Office procedure is being simplified to eliminate undue notings and delays. Economy in expenditure is not lost sight of and an economy team has been making Ministry-wide detailed examination of the organisation in relation to personnel. This examination has been completed in respect of the Ministries of Food and Agriculture, Commerce and Industry, Communications and Transport. Substantial economies in personnel have been recommended. It is for political considerations that these recommendations have not yet been implemented.

Organisation and Management Section

Lastly an organisation and management section is being created in the cabinet secretariat. To quote Mr. Appleby, "It will be charged with the responsibility for giving both extensive and intensive leadership in respect of structure, management and procedures. At one level of highly technical and specific sort it would give attention to work measurement, work flow, office management, filing systems, space arrangements and the like, at another level it would be charged with general governmental structural studies and proposals." To achieve its objectives, it will assist in regular and periodical inspections of all Ministries. Inspections will start soon after the organisation and management section is established.

Linguistic Zones

The Registrar-General has issued a census of linguistic zones in south, central and west India. Marhatti zone consists of thirteen districts in Bombay state, eight in Madhya Pradesh and five in Hyderabad. The total population of the zone is 28,884,572 in which Marhatti speaking people were 80 percent. The Marhatti speaking population within the zone varied from 67 percent in Bhandara in Madhya Pradesh to 96 percent in Dangs and Ratnagari in Bombay. Aurangabad, Parbhani, Nanded, Bhir Osmanabad are predominantly Marhatti speaking districts in Hyderabad. Telugu zone consists of 11 districts in Madras, now the Andhra state, Kolar in Mysore and eight districts in Hyderabad. The total population of the zone is 31,275,636 in which Telugu speaking people were 85 percent. Kolar had 54 percent Telugu speaking population. In Hyderabad the Telugu speaking population varied from 53 percent in Hyderabad District to 94 percent in Karimnagar District. Kannada speaking zone includes eight districts in Mysore, Belgaum, Bijapur, Dharwar and Kanara in Bombay and Raichur and Gulbarga in Hyderabad. The total population of the zone is 14,678,750 in which Kannada speaking people were 72 percent.

Malayalam zone: Malabar district, with 96 percent Malayalam speaking population in Madras and four districts of Trivandrum, Quilon, Kottayam and Trichur in Travancore-Cochin state. The total population of the zone is 14,038,767 in which Malayalam speaking population was 89 percent. The Hindi zone includes 11 districts in Madhya Pradesh, 13 districts in Madhya Bharat, eight districts in Vindhya Pradesh and two districts of Bhopal. The total population of the zone is 22,470,281 in which 85 percent are Hindi speaking people.

The Gujrati zone includes 10 districts in Bombay state, five in Saurashtra and Kutch. The total population of the zone is 16,101,754 in which Gujrati speaking population is 94 percent. The Tamil zone includes 11 districts of Madras state with a population of 28,915,427 in which Tamil speaking people are 82 percent.

No language has an absolute majority in Greater Bombay, in the districts of South Kanara and Nilgiris in Madras state, in Coorg, in Bangalore in Mysore state, in Bidar District in Hyderabad state, in the districts of Bastar, Betul and Kimar in Madhya Pradesh and in the districts of Nimar, Dhar and Jhabna in Madhya Bharat. The Greater Bombay has 44 percent Marhatti speaking population, 18 percent Gujrati speaking population and 10 percent Urdu speaking population. Coorg has 35 percent Kannada speaking population, 29 per cent Coorgi speaking population, and 14 percent Malayalam speaking population. Bangalore has 49 percent Kannada speaking population, 18 percent Telugu speaking population, 17 percent Tamil speaking population and 10 percent Hindustani speaking population.

Coal Export Restrictions

Indian shipowners' claim that the Government should lay down a condition that Indian exports should be carried in Indian bottoms only, was recently found impracticable in the case of coal exports. Indian coal was in demand in Ceylon and Indian shippers, having failed to get the necessary guarantee that Indian owned ships would be available in time, had to hire non-Indian bottoms for the carriage of coal to Ceylon. The choice was between patronising Indian shipping, and losing the contract. It was decided to retain the Ceylon market for coal.

World Bank Mission

A World Bank mission, headed by Mr. George Woods arrived here on 31st January. It will discuss with the Government its proposals for loans to finance the new steel plant and Industrial Development Corporation. The mission, accompanied by the Joint Secretary, Ministry of Commerce and Industry, Mr. S. Boothalingam will leave on 4th February for a three-day stay in Bombay and a two-day stay in Calcutta, returning to New Delhi on 11th February.

The World Bank mission has come to India to help private enterprise stimulate industrialisation, it is learned. Subject to an agreement, it will be prepared to ask its Board to advance money to a development bank, which in turn would finance industries in the private sector on terms more liberal than are prescribed by the Industrial Finance Corporation. The development bank of its conception will have to be a non-governmental organisation, whose share capital will be partly contributed by private enterprise, with a guarantee from the Government of India so far as the Bank's contribution is concerned. The mission is at present engaged in discussions with the Government of India, after which it will visit Bombay and Calcutta to appraise the response to its plan from industrialists and financiers.

Uttar Pradesh

DISPUTE BETWEEN SUGARCANE GROWERS AND MILLOWNERS

POLITICAL FACTORS INFLUENCING ECONOMIC DISCUSSION

(FROM OUR LUCKNOW CORRESPONDENT).

30th January

THE Government of India has referred the dispute between sugar mill owners and cane growers to Pandit Pant for mediation but, judging by present indications, it would appear that already the millowners have lost half the battle. For one thing, not all of them want to fight it out; for another, the industry's main objection has been to any ad hoc increase in cane prices and not so much to letting the growers gain on the roundabouts what they lose in the swings. The crux of the growers' case that a five-annas increase in the present price of cane is irresistible if it is to be linked to the prevailing sugar prices. The present price of Rs. 1-5 per maund (Rs. 1-7 at the factory gate) was fixed on the understanding that sugar would be sold at Rs. 27 per maund. The Government of India also arranged to import two lakh tons of sugar in an effort to keep sugar price at this level, but their calculations have gone awry. In 1950 the Tariff Board had recommended that the price of sugar should be Rs. 24-12 per maund when the price of cane was Rs. 1-7 per maund. The growers charge the Government with breach of faith in fixing the sugar price at Rs. 27 when the cane producer is asked to observe the Tariff Board limit. They also charge the millowners with selling sugar at a higher rate than that recommended to and accepted by them.

The demands of the growers have been backed by the U.P. Cane Co-operative Unions Federation which has a membership of 1,400,000 who grow 19.52 crore maunds of cane annually. The Federation some days ago served notice on all the mills in the State that unless they were prepared to pay Re. 1-12 per maund all cane deliveries would be stopped from 1st February. That threat has since been deferred, and Pandit Pant's proposal that a tripartite conference meet on or after 15th February has been accepted. Uttar Pradesh produces 54 percent of the sugar in India while Bihar, Bombay and Madras produce 21 percent, 11 percent and 6 percent respectively. In Madras the growers have already secured an increase in the price of cane but, as Mr. Rafi Ahmed Kidwai has pointed out, any formula based on the recovery percentage of the cane cannot be applied to North India as a whole. If it were applied, most growers would stand to lose. The consequence of cutting off the raw material to the mills would not be of a wholly beneficial nature to the growers either, for they would have to sell the cane to gur manufacturers at bearish rates; and when there is such a glut of gur, there is nothing to prevent the mills from buying gur and refining it. These imaginary dangers, however, leave the growers cold because they know that, as a political factor, they cannot be ignored, especially when the Praja Socialist Party in the State is more than ready to espouse their cause. Their morale is also sustained by the fact that though Madras is a far cry, in the district of Bareilly in U.P. itself the growers have actually succeded in forcing an increase of 2 annas per maund in the price of cane.

On the millowners' side, there seems to be some inability on the part of the industry in western U.P. and eastern U.P. to agree between themselves whether or not to give in gracefully. They have expressed their opposition to an ad hoc increase on the ground that there is no knowing if sugar prices may not slump in the event of Government importing more stocks. The industry is also understandably opposed to granting an indiscriminate increase to the growers irrespective of the recovery percentage of their produce. But they have, albeit indirectly, admitted the case of the growers to a share in the industry's present prosperity by signifying their willingness to entertain any "reasonable" profit-sharing scheme, which the Government of India is said to be considering. For any such scheme to be acceptable, they insist that due regard will have to be paid to the price of sugar prevailing at the end of the season, recovery percentage of the cane, and other factors which determine the profit or loss of a particular mill. The growers profess to see in the whole scheme an attempt to shelve their demand for increased prices here and now, while the industry is also not a little perturbed at the prospect of their having to swallow a formula on the line followed in determining bonus to workers by way of their share of the profits.

The rates of bonus which have been fixed on a liberal scale have brought hardship to some individual mills. The rates for the 1952-53 season were fixed by a nine-man committee presided over by the Labour Commissioner and having four representatives each from labour and industry nominated by the Government. The committee has exempted the first 1 lakh maunds in calculating the rates which are: Above 1 lakh maunds and up to 2 lakh maunds, 2¼ annas per maund; above 2 lakhs maunds and up to 3½ lakhs maunds, 5 annas per maund; above 3½ lakhs maunds and up to 5 lakhs maunds, 7½ annas per maund; above 5 lakhs maunds, 10 annas per maund. There are 66 sugar factories in U.P. but the above rates apply only to 50 mills. The case of the remaining 16 was referred to a sub-committee which reported this week, exempting six of them altogether as they showed losses and prescribing concession rates for the rest.

The Step System

The main grouse of the industry is that the rates, high as they already are, have a crippling effect when the levy is made on the basis of the step system. There are, for instance, many mills whose production is only a little in excess of two lakh maunds, but under the step system they would have to pay bonus on their entire production at the higher rate. On the face of it, this amounts to a penalty on efficiency and encourages the big producer to produce less in order to obtain the benefit of lower rates. Representatives of industry expressed their opposition to the step system at the committee stage, but it is stated that they were compelled to give in to the demands of labour representatives who hinted at other means, failing compliance by the industry. The recommendations of the committee were given out as unanimous, and accepted by the Government, and this has placed the industry in a weak position. Having given in at the committee stage, allegedly under duress, the industry cannot now easily repudiate the rates without laying itself open to charges of breach of faith, which both workers and growers are so fond of hurling at each other.

Uniform Rates for Varying Quality

Undoubtedly, the step system of enforcing the rates is bad for the industry, and the State Government cannot legitimately object to the introduction of the slab system when the Government of India is satisfied with it for purposes of income tax. If a factory earns a higher profit on a higher production, it is elementary that the profit is solely due to the extra production which alone, in fairness should come under the mischief of the higher rates of bonus. The industry further complains that in determining the rates of bonus no consideration has been given to the quality of cane crushed by an individual mill. It is possible that even in the case of two mills with an equal production of sugar one might have used inferior and, therefore, more cane than the other which was fortunate enough to get cane with a higher recovery percentage. The cost of production in the case of these two mills for the same amount of sugar naturally varies, but no thought was given to it by the committee which has prescribed uniform rates of bonus depending on the quantity of production only.

While the sugar industry is resigned to the fact that profit-sharing has come to stay, it considers the rates penal, especially when compared to bonus payable in other industries. According to one estimate, whereas a textile worker in Bombay gets a bonus of 15 percent of his basic wages of 1.8 month's wages after working for a whole year, in some of the sugar factories of U.P. the workers get nearly four months' consolidated wages as bonus—and that after working a season of six months. There can be little doubt that the distribution of bonus at the present rates is excessive, and unless the Government revise the basis of calculation, at least from the next season, the incentive will be taken out of many mills, which may prefer to close down. But the prospect does not seem to worry the cane growers or the workers who are even now insisting that, if the worst comes to the worst, the mills should be nationalised and handed over to co-operatives.

London

REVENUE GAP CLOSING

STEEL DENATIONALISATION SLOWED UP

(FROM OUR LONDON CORRESPONDENT).

MR. BUTLER returned to this country last Thursday from the Commonwealth Finance Ministers' Conference and his stop-off visits to Pakistan and India, apparently well satisfied with the results of his journey, though he was careful to confine himself to generalities when he was questioned by pressmen at London airport. That was hardly surprising, for apart from the obvious necessity of first reporting on developments to the Cabinet, and then perhaps to Parliament—if indeed, there is anything more that he can say other than was disclosed in the final Conference communiqué—the Chancellor would undoubtedly like to relate anything he might have to say to other events which have transpired since his departure and which he has yet to study in detail. Among the most important of these is the report of the Randall Commission on United States foreign economic policy. The full report, together with the comments thereon of Treasury officials, was awaiting him. Generally speaking, it might be said that the report has been well received here as at least encouraging to the Chancellor's plans for a cautious progress towards convertibility. It is realised, however, and indeed is made very clear in the assessments made of it by British correspondents in America, that to persuade Congress to translate its recommendations into action will prove extremely difficult. The many minutes of dissent are the big handicap, but some reassurance is derived from the fact that they have not prevented President Eisenhower from favouring a "forward" economic policy. The impression at the moment is that things will be allowed to take a normal course to see what transpires, and that the next international approach to the seeking of a solution may be left until next autumn, when the International Monetary Fund and the World Bank will be holding their annual meetings.

The Chancellor was also anxious, no doubt, to check up as to how the British economy was working out. He must have derived some satisfaction from the rate at which revenue has been flowing into the Exchequer during the first few weeks of the new year. On 31st December there was a revenue deficit of £546 million. By last week this had been reduced to £121 million. That was quite an achievement in three weeks, and although the figure for the third week was lower than those for the two which preceded it, all three weeks were better than the same weeks a year ago. If the rate can be maintained, this week's figures should show a surplus "above the line." For the first three weeks of 1954 income-tax payments flowed into the Exchequer at the rate of £20.4 million a day, against £18.8 million in 1953, while total revenue yielded £29.5 million a day against £27.9 million. In the current financial year to that date the "overall" cumulative deficit amounted to £440.9 million, compared with £598.9 million at the same stage in the previous financial year.

There are other gratifying developments—the success of his measures for adjusting the credit situation is disclosed in the final banking figures for the year; private savings are at last showing a steady upward trend; Government loan operations so far have been carried through without creating any cash problems and that is expected to apply also to the latest conversion offer to holders of the £412 million of 2½ percent National War Bonds, 1952-4, of a £100 to £100 exchange into 3½% Conversion Stock, 1969, with a £1 cash bonus payable on 1st March. These are to some extent offset by disappointments in other directions. One of these was the poor public response to the Iron and Steel Realisation Agency's offer of 9,000,000 £1 shares, half Preference and half Ordinary, in the Lancashire Steel Corporation, which amounted to no more than £500,000 of ordinary and £2.7 million of preference, leaving the syndicate of City issuing houses who had already submitted applications for the full amount to take up the remainder. This was the second public offer of nationalised steel undertakings, and in view of the fact that the United Steel stock, which owed its sucess to the operations of stags, is still quoted at a discount on the issue price and has therefore yet to find a permanent home, the failure will probably mean an end to any further issues for some months.

Shipbuilding Orders

Disquieting also is the news released by the Shipbuilding Conference this week that British shipyards have had few new orders of any size for well over twelve months. The total orders received in 1953 amounted to only 169 ships of 520,000 tons, against 244 ships of 1,200,000 tons in 1952 and 709 ships of 4,150,000 tons in the peak year of 1951. It is true that the industry still has a considerable back-log of orders to complete—850 ships of 5,500,000 tons—which would ordinarily be sufficient to keep the yards busy for at least three or four years, even allowing for some speeding up of production with the easing of steel supplies. The real cause for concern is that there is an increasing tendency to cancel earlier orders. In the whole of 1953 orders for over 250,000 tons were cancelled. "In addition," the Conference points out, "it is known that some further cancellations are under discussion with a few firms. It is probably true that this slowing down of orders is a world-wide feature, occasioned by the unprofitability of present freight rates, but the fact remains that it has affected this country a lot earlier than it has foreign shipyards, which have probably only just passed the peak of activity for their tonnage output continued to rise throughout last year.

This situation may not be a sufficient warning light to the Confederation of Shipbuilding and Engineering Unions, but it does at least offer some justification of the employers' rejection of their claim for a 15 percent increase in wages, which is still under examination by a Court of Inquiry. The latest issue of the Ministry of Labour Gazette covers the period to the end of last year, and discloses that whereas the average weekly rates of wages paid during the year rose by about 3 percent, the retail price index rose by only 1 percent. Incidentally, it also discloses that the token strike by the engineers on 2nd December cost the engineering industry 1,050,000 working days, nearly one-half of the total days lost during the year.

There is still little sign of any easing in the sphere of industrial relations. The railwaymen are seeking a further advance in the Transport Commission's offer of a 6 percent rise on their minimum rates (worth about 7s. to 10s. per week) but insist that they are not giving rise to any crisis, while the Commission is awaiting the Minister of Transport's decision with regard to its application to increase freight rates by 10 percent to meet the cost of its offer. By 537,000 votes to 227,000, a delegate conference of the National Union of Mineworkers has recommended acceptance of the National Coal Board's offer of an increase of 8s. 6d. a week for underground day-wage workers and 7s. 6d. a week for surface workers, as well as the conditions about continuing Saturday working and greater efficiency, but the final result will not be known until a ballot of all workers has been taken by 10th February. The "guerrilla" warfare in the electrical contracting industry continues, but behind-the-scenes developments in the last few days suggest that it may be possible for some agreement to be reached if some means of bringing the parties together without either losing prestige could be found. Tentative moves have been made, and there may be an opportunity for the Minister of Labour to act as mediator.

Spending Habits

As a sidelight on the spate of wage claims, and the Labour "campaign" in connection with the rise in the cost of living which is now being prosecuted by every possible means, the annual report of the Customs and Excise Commissioners for the year ended last March makes interesting reading. It discloses the following illuminating changes in our spending habits. As compared with the previous twelve months, we gambled £10 million more on the pools to raise the total to £68 million; smoked over a million pounds more tobacco to total 220 million lb.; drank 500,000 gallons more of spirits, but less wine and beer; and bought over 5 million gallons more petrol to make a total of 2,388 million gallons. On the other hand, we saved £1½ million in entertainment tax by going less often to the races, cinemas and football matches, and paid £23 million less in purchase tax.

In spite of the campaign referred to above, the Minister of Food has gone ahead with his plans for bringing rationing to an end. Butter and cheese are to go up in price by 4d. and 2d. a pound, respectively, next month, as a preliminary to both them and other fats coming off the ration in May, while it is expected that meat rationing will come to an end in July.

The first move in the British Productivity Council's campaign to educate industry in the need for greater efficiency for the economic good of the country took the form of an address by Mr. Graham Hutton, the well-known economist, to a large gathering drawn from all levels of industry in Manchester this week. His contention was that saving in Britain since the war had been insufficient to maintain and expand total productive capacity fast enough to keep her abreast of other industrial countries. Each British worker to-day had probably the same, or slightly less, productive capital apparatus to help him as before 1939. American, Canadian, Swiss, Scandinavian, Belgian, and even German industrial workers had now more capital equipment per head than they had before the war. Britain must support and extend social services and defence, install new labour-helping machinery and develop sterling resources abroad. If she did these things, there would have to be drastic revision of notions by both sides of industry and by Governments, and by producers and consumers, of their attitudes, demands and desires. Management methods would have to become more of a professional skill, using modern methods to measure performances by machines, capital, raw materials and personnel.

Management must seek out talent and train it and promote it on merit. Britain must look also to trade unions to improve productivity and lower prices. The best American and British unions had found it paid to keep accountants and experts to check managements and keep them on their toes. But improvement in management would not have good results unless "external conditions" were reformed. Under these conditions he named the attitudes and practices of organised labour, Governments and the nation as a body of consumers and human beings with definite tastes and values. Many of Britain's higher executives were unwilling to work at the pressure of American managers, since the strain had proved a "killing" one in middle age and because tax reduced the incentive, as it did down the industrial scale, to the foreman and skilled or piecework.

Brevities

Four senior executives of Air India International have arrived at the Hatfield works of the de Havilland Aircraft Company for a course on "Comet" jet airliners. Most of their time will be spent on ground studies, but they will also do some flying. The executives are Mr. A. C. Gazdar, Operations Manager, Mr. K. Vishvanath, Assistant Operations Manager, Mr. K. R. Gazdar, London Flight Superintendent, and Mr. V. N. Shirodkar, Chief Pilot. Air India International has ordered two "Comet III" aircraft for its London-Bombay-Tokyo service.

The two largest liners to be launched in Britain this year, the P. & O. ships "Arcadia" and "Iberia," are of higher tonnage than the 28,000 previously announced. The former, now in dry dock in Liverpool and due to undergo trials this week-end, is 29,734 tons gross, and the latter, launched last week in Belfast, 29,500 tons.

PROFITEERING IN IMPORTED SUGAR

WIDESPREAD SCRAMBLE FOR ALLOCATIONS

(FROM OUR BOMBAY CORRESPONDENT).

31st January.

THE distribution by the Food Ministry of imported sugar in Bombay has caused considerable controversy. The whole idea of importing sugar at the outset was not only to fill up the gap in the supply position but to bring down prices which were then very high. Imported sugar was being given to the trade direct in small quantities to avoid cornering by powerful groups with large resources. The calculations of the Food Ministry, however, went completely wrong and the cheaper imported sugar, instead of bringing down the price of Indian sugar, itself began to creep up nearer to the price of home-made sugar. The margin between the price at which the Government releases this sugar to the trade direct from the docks and that at which it is sold finally to the consumers has widened so much that there is a virtual scramble for obtaining a part of it from the Government at the fixed price. Whenever a steamer is due, the authorities invite applications from the trade and allot sugar in units of 200 bags to the applicants on a "first come, first served" basis. Apart from many in the trade, a large number of people in a position to invest a few thousands for a week or so began gradually to queue up for submitting these applications for allotments with their cheques for the price of the quantity applied for. As soon as they get their allotments they are able to hand them over to regular dealers at a handsome profit. This scramble became so intense last week, when 8,500 tons of Czechoslovakian sugar was expected to arrive here on 2nd February by s.s. *Maria*, that a queue of applicants began to form overnight at the office of the Regional Food Director and grew to 2,000 by 10 a.m. the next day, quite a large number having passed the whole night there. With such a rush, the arrangements for receiving applications and deposits broke down completely and the authorities had to suspend the usual procedure and ask for instructions from New Delhi.

From the start the arrangement for distribution of imported sugar was very crude and unbusiness-like. Sugar of widely varying qualities was imported from sources all over the world, but the price fixed by the authorities was uniform. As the quality of sugar was not known in advance because there had been no imports for years, it was a gamble on the part of applicants as to the kind of sugar they would receive. Moreover, although the sugar was given at near cost price by the authorities in order to bring down prices, there were no stipulations as to the price at which this sugar was to be sold by the trade, even though the authorities knew that the prices prevailing in the market were considerably higher and that the sugar so given would immediately fetch a handsome premium. It must have been obvious to the Food Ministry officials after some time that their method of distribution and the lack of a programme of arrivals in any given port, (with steamers being diverted from one port to another from time to time), had created a new speculative element in the sugar trade of Bombay. On the rumours of the probable arrival of a new steamer, prices began to come down for a few days, only to rise again as soon as the supply is distributed. The same thing has been happening with the releases from factories. Instead of a slow, uniform and continuous release, the Ministry has been releasing sugar manufactured by the factories spasmodically in large lots which goes to reduce the price for four or five days by a few rupees per bag, with prices going up as soon as the supply is absorbed. Though forward trading in sugar has been suspended, there is a good deal of kerb activity of this nature and speculation in this commodity is much more today than it was when forward trading was indulged in openly, because of the new uncertainties introduced by official measures to replenish the markets.

Rumours regarding a possible increase in excise duties in the coming budget, to mop up the additional profits made by factories because of the prevailing high prices of sugar, are circulating here. In the meantime, sugar factory shares in forward trading in the stock market have been experiencing a boom. Consumers have also been behaving in a somewhat strange manner. Even though imported sugar is cheaper, they have all of a sudden become "crystal conscious" and choose to pay as much as Rs. 10 to Rs. 16 more per bag for Indian sugar, because imported sugar has smaller crystals. It is generally felt here that the trouble with the distribution of both imported and Indian sugar has reached a point where the authorities should think again and devise some means of securing a rationalised and streamlined machinery for distribution, instead of the present policy of administering jerks and shocks from time to time to the market.

Textile Bonus Payment

One of the unexpected effects of the Republic Day holiday mood was the acceptance of the bonus under the recent award given by the Industrial Court to workers of 40 cotton textile mills in the city which had made profits during 1952. In spite of propaganda by the Congress-affiliated Mill Mazdoor Sangh and the Red Flag Union amongst mill workers not to accept this payment on the day preceding Republic Day, when it fell due, almost all workers queued up to collect their bonus so as to be able to spend it in celebrating this extra holiday with pay, which they were to receive the next day. This has pushed back the threat of a strike to protest against the award which loomed large in the industrial life of the city during the previous week. Both the Mill-owners' Association and the Rashtriya Mill Mazdoor Sangh (which is the representative union of textile workers) have filed appeals against the award before the Labour Appellate Tribunal here. It is now certain that nothing will be heard about the proposed strike, at least till after the decision of the Appellate Court.

In the meantime, the State Government, goaded by the Congress-sponsored textile units in Bombay and Ahmedabad, is testing the ground for amending the Bombay Industrial Relations Act in such a manner as to bring about a pooling of the bonus which a tribunal might award and distributing it to all the workers in the industry concerned, including those in units making losses. This proposal was mooted by the State Labour Minister Mr. Shantilal S. Shah, at the meeting of the State Labour Advisory Board which met here last Wednesday and Thursday. It was, however, opposed bitterly by representatives of employers as well as by those of other textile units and it is understood that no decision was taken in view of this opposition. Amongst the other important steps discussed at this meeting was one relating to a comprehensive amendment of the Act on the basis of the recommendations of the Industrial Conditions Enquiry Committee in its final report in general; and to give wider binding power to agreements entered into with the industry by a representative union in particular. Explaining the Government's intention Mr. Shah told the Board that one of the objects of the Industrial Relations Act passed by the State was to foster trade unionism and the scheme of the Act, therefore, implied that a registered trade union, which was taken as representative of the employees, should be authorised to represent and act on behalf of all employees in the industry, whether they were all enrolled as members of the union or not. The Government aimed at amending the Act to provide that any agreement, settlement, submission or award to which a representative union was party should be binding on all employees. In a recent case regarding rationalisation, though the representative union was party to an understanding with regard to certain measures under specified conditions for increasing the number of looms to be worked by an operator in a textile mill, the Industrial Tribunal had ruled that this agreement between the representative union and the unit of the industry concerned was not binding on operatives who were not members of the union. While the Board discussed this question generally and appeared to favour the suggestion, no decision was taken in view of opposition from some representatives of workers.

Scindia's Passenger Service

Shipping circles in Bombay feel a little dispressed that the sailing of s.s. *Jal Jawahar*, one of the luxury ships in the fleet of the Scindia Steam Navigation Co. Ltd, at midday yesterday marked the end of the only Indian regular passenger service between Bombay and the U.K. It is now definitely announced that Scindias are withdrawing this service as a result of losses incurred and the disappointment at their failure to persuade the Government to subsidise it. After its return trip from London, this ship along with its sister ship, s.s. *Jal Azad*, which is expected here at the end of this week, will undergo suitable changes for conversion into deck passenger carriers by the Eastern Shipping Corporation to which they have been sold. After this conversion *Jal Jawahar* will be placed on the Bombay-Singapore run and *Jal Azad* will travel between Bombay and East African ports. It may be recalled that Indian shipping first entered into the field of international passenger services in March 1920 with s.s. *Loyalty*, the only ship in the fleet of Scindia at the time. This venture comes to an end after 34 years, but the Company hopes to resume its passenger service to Europe at some time in the near future.

The Bullion Market

The gold section of the bullion market experienced a sense of relief during this week-end at the news that the Government of India had finally decided not to sell the smuggled gold in its possession in the open market either by auction or offerings through the Reserve Bank of India, as announced earlier here by Mr. A. C. Guha, Deputy Minister for Finance. The gold, amounting to about 200,000 tolas, it is now understood, will be delivered to the Reserve Bank to be retained by it to consolidate its gold reserves. The news, however, has had no immediate effect in kerb trading on the price of gold. But the lifting of this cloud from over the market might lead to more confident trading and a large turnover this week.

Appeal on Shastry Award

The long-drawn-out hearing before a Special Bench of the Labour Appellate Tribunal of the main appeal against the Shastry Award in the dispute which has been going on between the banks and their employees was concluded last week. The hearing has lasted more than four months. The submission of the All-India Bank Employees' Association, which is the central organisation of workers in this field, was that the Appellate Tribunal should discard the Shastry Award as a whole and hold a fresh hearing on all the issues so that a valid award might be given. It will be some time before the award is given by the Special Bench, which consists of Mr. E. Jeejeebhoy (President) and Messrs. A. Das Gupta and D. E. Reuben, as members.

Tariff Enquiry on Sheet Glass

Opening the public enquiry into the case for the continuance of protection and Government assistance at the existing level for a further period of three to five years to the sheet glass industry, Mr. M. D. Bhat, Chairman of the Tariff Commision, said that the industry was now on trial and was required to prove that it was making the best use of the protection granted to it by utilising its installed capacity to the utmost and improving the quality of its products as well as lowering its costs of production. The industry has also asked for further assistance by way of prohibition of imports of sheet glass, rebate of customs duty on imported soda ash used by it and special station-to-station freight rates for its raw materials and finished goods.

Millowners' Association Committee

The elections of the Millowners' Association have been completed this week. As already announced, Sir Vithal N. Chandavarkar, has been elected Chairman. Mr. Neville N. Wadia, the outgoing Chairman, has been elected Deputy Chairman for 1954. He began his career in this Association nearly a score of years ago when he was elected for the first time to its Committee, since when he has held the office of Deputy Chairman four times. Besides being Chairman of the Cotton Advisory Board, Mr. Wadia took a prominent part along with Mr. Kasturbhai Lalbhai in the International Cotton Textile Conference at Buxton in 1952 as a member of the Indian delegation. Amongst those elected to serve on the Committee of the Association for the coming year are Messrs. T. V. Baddeley, D. M. Khatau, Krishnaraj M. D. Thackersey, J. C. Burns, G. D. Somani, Ramnath A. Podar, S. P. Jain, E. D. Shepperd, Naval H. Tata, F. H. Kemple and Arvind N. Mafatlal.

There have been also some changes in the Committee of the Indian Merchants' Chamber, the results of the elections for which were announced last Friday. The most prominent amongst newcomers is Mr. Lalchand Hirachand of Premier Automobiles Ltd.

Visitors to Bombay

Amongst the prominent visitors from the U.K. to Bombay during the last week were Lord and Lady Clydesmuir, with their daughter, and Mr. R. M. Lee, Chairman of the Calico Printers' Association Ltd, Manchester. As Sir John Colville, Lord Clydesmuir was Governor here at a very critical time in the history of British rule in India. The Bombay branch of the Commonwealth Parliamentary Association held an "at home" in his honour on the grounds of the Council Hall where the State Legislature meets. Mr. G. V. Mavlankar, Speaker of the House of the People, was present in Bombay and attended this pleasant function. Lord Clydesmuir invited State legislators and members of Parliament to visit the office of the Association in London whenever they happened to be there. Mr. Lee, besides being Chairman of the Calico Printers' Association Ltd., is also Chairman of the North-Western Regional Council of the Federation of British Industries and a director of the Lancashire Cotton Corporation. He proposes to visit Madras and Calcutta later.

A general decline in the working class cost of living was noticed in some industrial towns of Bihar, West Bengal, Assam, Ajmer, Orissa, Madhya Pradesh and Punjab in November 1953. According to the Labour Bureau, the index number (base 1944=100), dropped in Jharia, Dehri-on-Sone and Monghyr in Bihar by 24, 14 and 3 points respectively; in Kharagpur by 7 points; in Silchar and Tinsukia by 4 points and 1 point respectively; in Ajmer by 4 points; in Berhampur by 3 points and in Akola and Ludhiana (Punjab) by 1 point each. In Gauhati, a fractional decline was recorded. In most of these places, the indices dropped because of a fall in food prices.

GROWERS CRITICISE OFFICIAL COFFEE POLICY

NEED FOR HIGHER RATE OF RETURN URGED

THE Wynad Coffee Growers' Association recently called a conference of growers to consider the coffee policy of the Central Government. The following is a Press Note issued by the Association:

"Coffee growers are keenly alive to the interests of the consumers and recognise that a high price for the consumer will adversely affect consumption and the interests of the growers. But higher coffee production is in the best interests of the consumers and the country, as it will employ more labour, allow more coffee for the home market and export, a larger income to the Central and State Governments by way of sales tax, excise duty etc., more money in the hands of the people of this region and a reduction in the home market price of coffee.

"During the last 15 years, cultivation of coffee in the Wynad increased by 15,000 acres over the 20,000 acres level in 1940. This is the highest rate of increase for any coffee district and when the whole area comes into bearing, Wynad will produce no less than 6,000 tons. There is a considerable area of suitable land in Wynad, Coorg, Mysore and Nilgiri-Wynad for the further expansion of coffee acreage and this should add substantially to our exports and national wealth.

"Since December 1952, the Central Government in the Ministry of Commerce and Industry has been directly controlling the distribution of coffee and in advance of the Government Cost Accountant's report, the Ministry announced a price of Rs. 2-4 arbitrarily fixed by it, as return to the grower. The Ministry had made several public statements which were inaccurate or misleading and had helped to undermine the confidence of the distribution trade and large quantities of coffee offered by the Board had to be withdrawn at the auctions. Whereas over 19,000 tons were sold in 1952 when prices were admittedly higher, only 15,000 tons were sold throughout 1953 when coffee prices were about Rs. 50 per cwt. lower. The benefit of this reduction did not reach the consumers in the rural areas as the Government's policy had disturbed the trade.

"The growers feel that unless there is a free and open examination of the whole coffee question, a satisfactory settlement will be impossible, and have proposed that a Special Committee outside of the Ministry of Commerce and Industry should be appointed. Pending the decision of that Committee, coffee prices should be fixed at Rs. 2-7-1 per point. The growers have also agreed that the Board may be allowed to hold 3 as. 1 ps. per point until the Special Committee's report is available while the Government-fixed Rs. 2-4 may be paid.

Export Policy

"The Coffee Board had requested the Government to allow the export of the surplus coffee above India's requirements and no decision was taken until October 1953 by which time a surplus of about 10,000 tons of coffee was visible, which according to current foreign valuations is worth nearly Rs. 6 crores. Another consequence of the delay in taking a decision on export was that most of the growers became heavily indebted to agents and others and in some cases are in debt to an extent more than their crop is worth. The Board's payment has been delayed and new crop payments will be at half the rates.

"All these have caused serious distrust to the producers of coffee and the Convention has appealed to the concerned State Governments to receive deputations of coffee growers and to make to the Central Government their joint representation to transfer coffee to the Ministry of Food and Agriculture, so that coffee may receive the sympathy and attention it deserves as a purely agricultural crop in which the vast majority are small growers. A surplus of 7,300 tons of coffee has been found at the end of 1953 and the Convention feels this should be exported immediately without allowing further deterioration and storage charges.

"The Convention is against Mr. T. T. Krishnamachari's proposal to subsidise the small grower at the expense of the big grower and to make the return per acre equal as this was intended not to help the small producer but to divide the ranks of the growers. The effect of this proposal is too serious to contemplate for the entire coffee industry as no inducement will exist for raising the efficiency of production. The Convention has decided to appoint deputations in each coffee growing State to meet the respective governments."

LONDON TEA SALES

A REPORT from London says: The recent downward movement in tea prices which was welcomed in trade circles does not reflect any significant change in the present supply and demand position but is largely concerned with the move by big buyers at the auctions to share out lots rather than to compete for them individually. This "splitting" of lots was undoubtedly introduced in view of the past spectacular rise in prices. Also contributing to the down-trend is less active export demand resulting from high prices. Stocks of tea moreover have risen further around 116.5 million lbs on 22nd January from 114 million lbs at the beginning of the year and around 90 million lbs towards the end of last year. However, although some further easing in prices would not surprise traders, they do not envisage any substantial break in the near future.

The recent downward trend was however halted on Monday when improved demand caused prices of most descriptions to harden. Common kinds gained a farthing to half-penny per lb, while Mediums were irregularly half-penny to a penny per lb dearer. Best invoices were cleared at steady rates. Thin liquory stalk broken were the only weak feature. The recent sharing of lots was less in evidence, while there was quite good export demand especially on the United States and Netherlands account. Common Broken Pekoe was indicated at 47½d. per lb against 47d. previously. Offerings totalled 33,416 packages of North Indian and other miscellaneous teas. At last week's London tea sales the 69,680 packages on offer realised an average price of 4s. 1.53d. a lb. against 4s. 3.74d. in the previous week and 3s. 3.87d a year ago. Results obtained by some of the companies are given below:

	No. of packages	Average per lb
Amalgamated	1,042	4/0½

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly rubber market report of the Colombo Brokers Association, for the week ended 23rd January, 1954:

Sheet:	Closing prices on 22-1-54: (Rupees per lb.)	Average prices for week (Rupees per lb.)
No. 1	1.10¾	1.10¾
No. 2	1.07¾	1.07¾
No. 3	1.04¾	1.04¾
No. 4	—80¾	—80¾
No. 5	—75¾	—75¾
	Sheet cuttings 1.	—43
	Sheet cuttings 2.	—40
Crepe:		
R.M.A. 1X	cts. 88/90	cts. 86
R.M.A. 1	cts. 85/87	cts. 84¾
	Crepe 2.	75
	Crepe 3.	65¾
Scrap Crepe:		
Scrap Crepe No. 1	cts. 52 Nom.	cts. 51¾
Scrap Crepe No. 2	cts. 45/48	cts. 46¾
Flat Bark	cts. 40/44	cts. 41¾
	Sc. crepe 3X	cts. 44

To arrive at f.o.b. Colombo prices add 20 cents per lb. to the above market prices.

Engineering and Transport

OBSOLETE POWER PLANTS

THE GAS TURBINE REVOLUTION

PUBLICATION by the British Government last month of "Britain's Atomic Factories" and the launching of the Nautilus in the U.S.A. may be seen as a landmark in the progress towards new modes of power. Much new information has been presented in this book, and it shows that in the space of a few years a major new industry, valued at scores of millions of pounds, has been developed for producing power. Atomic energy appeals to the imagination as something entirely new. But it is not the only development in fuel and power in the past few years implying big changes in the capital structure of the British economy. The latest information reveals that atomic power is now past the stage of experiments and prototypes and is already capable of becoming a major element in industry and transport. But the gas-turbine industry is further advanced: it is already providing power for civil and military aircraft that makes petrol-driven aviation seem old-fashioned. These two developments, which originated in a practical form during the war and matured after it, will profoundly change many economies, first of all, perhaps, Britain's. The atomic power converter now under construction in Britain,—to produce plutonium fuel, and heat for generating electricity,—will probably be the first of its kind in the world; and power breeders, to convert uranium 238 into fissile uranium 235, and also to produce heat and power retractors, solely to produce heat, are in an advanced stage of planning. Simultaneously, a new stage has been reached in the evolution of gas-turbines. Experimentally, they have been proved successful on sea and on land as well as in the air, and they are already replacing other engines motived by petrol, oil, or steam.

The Importance of New Techniques

Such developments in technology should be kept clearly in perspective. That new materials as well as new methods have had to be evolved for atomic power and gas-turbines does not necessarily put these developments into a category of their own. Throughout industry, in varying degrees, technique is—or should be—constantly evolving. Moreover, even where the process is relatively rapid, it does not bring about profound changes within the space of a year or two. There is, however, a specially important element in these developments in fuel and power: the capital equipment and other resources that they may render obsolete or surplus is uncommonly large. The National Coal Board, in Britain, is engaged at present on a development plan scheduled to cost well over £500 million over a period of years. Is such a plan realistic if an entirely new source of energy is deliberately planned to replace coal? Again, the question must be kept in perspective. The immediate objective, and even that is spread over 20 years, is an annual saving of coal of approximately 20 million tons. The figure compares with an annual production of some 224 million tons, and it is, moreover, only the amount by which estimated production will fall short of estimated needs.

The Future of Coal

It is envisaged that all Britain's electricity will later be generated by nuclear energy. The British Electricity Authority has estimated that, generating electricity by conventional methods, it will be using annually 63 million tons of coal 15 years hence. "A saving of this magnitude," the official study says, "would transform the nation's economy." It would, indeed. But has the character of that transformation been clearly understood? Producing at the presnt rate, Britain would have abundant coal for export; but would oversea markets, many of them also using nuclear energy, want the extra coal? A factor that cannot yet be calculated is the relative cost of nuclear power, when fully developed. It is, however, known, from the experience already gained, that the capital expenditure needed to develop this new industry would be immense. At Britain's present rate of capital formation, it will probably be for that reason, rather than for technical reasons, if the change proceeds slowly for many decades.

The Problem of Oil

The oil industry's problem is different. Oil-refining in Britain, far from being an age-old activity like coal-mining, is practically a postwar growth. Postwar capital expenditure (some of it American) of more than £150 million on U.K. refineries has put Britain in the premier position among West-European refiners, with an annual output approaching 30 million tons. A major new export has thus been created: in 1953 British exports of oil products earned more than British exports of coal. Capital investment in oil-refineries, not only in Britain but generally, has been planned particularly to increase the yield of high-octane petrol from every ton of crude oil treated, so that the increasing number of petrol engines in motor-cars and aircraft can be adequately supplied. But both diesel-engines and gas-turbines run on heavier "fractions" of oil; and gas-turbines can burn solid fuels, including coal-waste, vegetable-waste, and peat, also gases. While the diesel-engine, already well established, is being applied increasingly to ordinary motor-cars, the gas-turbine, already proved for aircraft, is being adapted for use in ships and for innumerable industrial applications; and the turbine, too, has been experimentally proved as practicable for motor-cars. In the thriving new gas-turbine industry there are technical problems yet to be overcome, but the lightness and simplicity of the products seem to ensure that they will be readily received. The oil industry will evidently have to devote itself in future to its heavier "fractions."

THE HIND BANK LIMITED

WORKING RESULTS FOR 1953

THE Profit of the Hind Bank Limited for the year 1953 subject to audit, including the amount brought forward from last year's account is Rs. 8,77,223-5-10. Out of this sum the Directors have made the following appropriations:

Provision for Taxes	...	Rs. 3,86,000-0- 0
Transferred to Reserve Fund	...	Rs. 2,00,000-0- 0
Bonus to Staff	...	Rs. 40,000-0- 0
Balance	...	Rs. 2,51,223-5-10
		Rs. 8,77,223-5-10

Out of the above balance, the Directors propose to recommend to shareholders at the next General Meeting payment of dividend at Rs. 1-8-0 per share, free of income-tax which will absorb Rs. 1,50,000 leaving Rs. 1,01,223-5-10 to be carried forward to the next year's accounts.

The securities and investments of the Bank appear in the accounts on 31st December, 1953 at or below market rate ruling on that date.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August 1939 as 100), rose by 0.5 percent to 399.5, during the week ended 16th January. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 2.3 and 6.2 percent respectively. During the week under review, Foodstuffs advanced further by 0.9 percent to 383.5 as a result of increases in the prices of tea (+14%), jowar (+3%), wheat and gram (+2% each) and sugar (+1%), notwithstanding declines in gur (—7%) and coffee —1%). The index for Industrial Raw Materials rose by 0.6 percent to 483.2 on account of higher prices of cottonseed (+5%), raw wool (+4%), linseed (+2%), groundnuts at Cuddalore, castorseed and rapeseed (+1% each) although the export price of manganese ore (—9%), lac (—2%), groundnuts in Bombay, gingellyseed and copra (—1% each) declined during the week. The Semi-Manufactures group moved up by 0.3 percent to 361.4 from 360.2 (revised) for the previous week owing to advances in the prices of copper (+3%), linseed oil in Bombay, coconut oil and castor oil (+2% each), groundnut oil in Calcutta and cotton yarn (+1% each). Prices of linseed oil in Calcutta (—3%), groundnut oil in Bombay (—2%) and gingelly oil (—1%), however, showed decrease. Higher prices of rayon and silk manufactures (+5%) and dyestuffs (+2%), raised the Manufactures group index by 0.3 percent to 364.6. The index for Miscellaneous declined further by 0.5 percent to 706.6 because of decreases in the prices of black pepper in Calcutta (—9%), chillies (—3%) and turmeric (—2%). Black pepper at Cochin, however, moved up by 2 percent.

RELIABILITY TRIAL FOR MOTOR CYCLES

A reliability and endurance trial for standard production model motor cycles open to competitors all over India is to take place on 20th and 21st February. The event will start from the Red Road, Calcutta, to Ranchi via Dhanbad and back to the starting point via Hazaribagh, a distance of about 589 miles. There are numerous check points en route to check that the speeds of entrants do not exceed local traffic regulations, whereas on the open roads riders will be given a safe maximum touring speed to maintain or better, and on which is based the handicaps of the different classes of motor cycles. These handicaps which range from a scratch start for the 500 cc and over, to over 8½ hrs. for the 125 cc bikes, will be a test both for man and machine. Again, since the handicaps are adjusted at the start, theoretically all machines should finish together, and hence the first rider to cross the finishing line at Calcutta will be declared the winner provided he has not broken any rules and regulations. The trial is sponsored by *Sportlight* under the auspices of the Automobile Association of Bengal. The sponsors are awarding about Rs. 3,000 in cash prizes ranging from Rs. 1,500 for the winner, down to Rs. 25 for sixth position. A number of valuable trophies are also expected as donations from various mercantile and trades firms. Entry forms and full particulars are available from *Sportlight*. 5, Mission Row, or the Secretary, Automobile Association of Bengal, 13, Ballygunge Circular Road, Calcutta.

NEW RECORD FOR AIR FRANCE SUPER CONSTELLATION

An Air France Super Constellation has established a new speed record for flight between New York and Paris, flying the distance in 9 hours 55 minutes. The aircraft left Idlewild Airport (New York) on Tuesday 12th January, at 23 hours 26 minutes, and reached Orly (Paris) on 13th January, at 9 hours 21 minutes.

INDIAN AND PAKISTAN WOOL SALES AT LIVERPOOL

At the first series of sales of this year of Indian and Pakistan wool held recently at Liverpool, 9070 bales were offered. The selection was unattractive as it included a considerable quantity of wasty parcels. The competition was slow and withdrawals were heavy owing to higher limits imposed by the consignors. Prices for good clean white and yellow wools were unchanged by comparison with the December sales. Greys were steady and other sorts were 5 to 7½ percent down. It is understood about 3200 bales were sold from the selection.

Statistics issued by the Commonwealth Economic Committee show that the imports of wool tops into India from the United Kingdom reached a record figure of 9,097,000 lbs. for the eleven month period of January-November 1953.

This illustrates the increasing development of the worsted industry in India.

RUSSIAN COTTON

A group of Italian cotton operators who left for Moscow some weeks ago are reported to have purchased 6,300 tons of Russian cotton for about 3,300 million lire. This is reported to be the largest quantity ever sold by the Soviet Union to any one single nation. This cotton is to included in the quota lists fixed by the Italian and Soviet Governments last October and the translation represents the first step taken to balance Italo-Soviet clearing which at present shows a credit balance of some thousands of millions of lire in Italy's favour.

Jute

LITTLE ACTIVITY IN JUTE MARKETS

THERE has been very little activity during the week just closing in either the finished goods or raw jute sections of the market and prices have not shown much change over the week. At the time of writing last week it was noted that a steady demand appeared to have developed for heavy goods, which indicated that there was no apparent justification for speculators to attempt to force prices down, but during the current week overseas demand again appears to have dropped off and, at one stage, prices were once again depressed to low levels by speculative selling pressure from weak holders. Raw jute has remained comparatively steady throughout the week in spite of the fact that only small buying interest has been shown by mills.

THE JUTE MARKETS

Manufactured Goods: Following good business from overseas during the previous week in both hessians and heavy goods, the market for manufactured goods opened on a steady tone. Hessian in particular was strong because of regular business with the U.K. and the U.S.A. and the market for "spot" hessian in the U.S.A. was particularly firm as a result of bear covering activity. Later in the week, however, a quieter tendency developed and not much business has been reported during the past few days. Business in heavy goods was reported during the early part of the week in woolpacks with Australia and in heavy Cees with Burma but it appears that the business done with Burma was much smaller than the market had expected. As with hessian very little overseas business has been reported in the heavy goods section during the past few days and the market is quiet. The end of the month "settlement day" passed off without incident and only minor price fluctuations were recorded. In fact, the past week has been somewhat featureless and prices for both hessians and heavy goods have remained more or less steady at last week's closing levels, except for those ruling on Thursday afternoon when prices were depressed by speculative selling activity. At the lower levels, however, there was more shipper interest and this, together with bear covering business, resulted in prices again moving up to almost the previous levels. Towards the close this week business in hessians is again reported with the U.K. but this is about the only business in the market. Some shipper interest is being displayed in heavy goods at the lower levels but mills are not at present showing much selling interest at present price levels. The market closes quiet but steady and opening quotations on Wednesday morning were as follows:

	Ready	Feb.	March	April-June	
	Rs.	Rs.	Rs.	Rs.	
40" 8 oz.	38-0	37-0	36-10	36-4	per 100 yds.
40" 10 oz.	45-12	45-10	45-4	44-12	,,
B Twills	103-12	104-2	104-12	105-8	per 100 bags.
Heavy Cees	104-4	104-12	105-8	105-8	,,
Cornsacks	106-8	106-12	107-0	107-4	,,

Raw Jute: There has been very little business with mills in raw jute although, at the beginning of the week, some mills were displaying interest. Mills were, however, inclined to indicate rates at which sellers were not prepared to do business. There was a small mill demand for good quality and some small business was reported done early in the week. Later in the week, however, because of a quieter tendency having developed in the market for manufactured goods, mills withdrew entirely from the market for raw jute and no business of any kind was reported for several days. Over the week-end, however, a steadier tendency was again apparent in the market for manufactured goods and mills again took a little more interest in raw jute. Generally speaking, however, the market for raw jute has been dull and featureless throughout the week. Prices were shaded slightly in sympathy with the market for manufactured goods and also in the absence of mill buying interest but sellers are showing reluctance to reduce rates because of the small imports and higher prices which continue to rule upcountry. Business reported during the week with mills was done at the following rates:

Dhubri and Northern—Rs. 31-4 to 32 for Middles alone.
Dhubri and Northern—Rs. 28 to 29 basis Bottoms.
Assam—Rs. 27-8 and 28 basis Bottoms.
Murshidabad Tossa—Rs. 28-8 and 29 basis Bottoms.
Bimli—Rs. 25 for F.A.Q.
Dundee Daissee 2/3—Rs. 170 for Long Group Marks.

At the close this week the market for raw jute is quiet but steady. Quotations on Wednesday morning were as under and these are about eight annas per maund below the highest levels reached during the week.

Indian Jute:	Landed at Mills Rs. per md. basis Bottoms.	Shipment February-March
Lower Assam	28-8	,,
Upper Assam	28-0	,,
Northern	28-8	,,
Purnea	28-0	,,
Murshidabad Tossa	29-0	,,
Daissee ex Agencies	32-0	,,
Daissee ex Calcutta	31-0	,,
Daissee Mesta ex Calcutta	27-8	,,
Bihar Mesta	24-0	,,
Bihar Jute	25-0	,,

Indian Jute:	Landed at Mills Rs. per md. basis Bottoms.	Shipment February-March
Local Packing Northern	28-8	,,
Local Packing free from Jungli	25-8	,,
Local Packing Jungli	25-0	,,
Bimli	25-8	for F.A.Q. ,,

Tossa prices are Rs. 2 per maund above the prices of white jute and Middles alone are being offered and bought at a premium of eight annas to one rupee.

Pucca Bales:			
Mill Firsts	175-0	per bale for Feb-March shipment	
Mill Lightnings	160-0	,,	,,
Dundee Daissee 2/3 S.G.	180-0	,,	,,
Dundee Daissee 2/3 L.G.	165-0	,,	,,

Pakistani Jute ex Pakistan:	Rs. (P) per md. basis Bottoms	Shipment February-March.
Sat	30-0	,,
District	29-0	,,
Northern	28-0	,,

In the case of Pakistan jute there is a difference of Rs. 3 per md. between Tops and Middles and Rs. 3-8 to Rs. 4 between Middles and Bottoms.

Mofussil: There has been little change in conditions in Indian markets during the week and prices there are being well maintained. Imports from the villages are practically negligible and almost the only business passing is in kutcha bales between stockists. Remaining stocks of jute appear to be fairly firmly held and there is no pressure to sell. As a result, prices generally upcountry are still well above parity with the mill quotations in Calcutta and this factor makes sellers in Calcutta most reluctant to reduce quotations to mills.

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT).

By Air Mail.

THE production of jute yarns and cloth is being maintained at a fairly satisfactory level at most centres to meet the sustained demand from

Imports into the Cossipore market fell off during the early part of the week but improved later and are now in the region of 80 wagons daily. The bulk of the present imports is of Purnea and jungli jute, together with smaller quantities from Northern agencies and Murshidabad District Tossa. Imports from the Daissee districts are negligible and the bulk of these still go direct to mills, several of which continue to buy regularly at mill gates and jetties.

In Pakistan imports have fallen a little during the week probably because prices are a little easier in the main centres. Reports indicate that dealers in the main centres are at present holding fairly large stocks and are not inclined to increase these meantime. Consequently there is very little buying activity and markets are quiet and inclined easier. Tossa qualities are, however, still in good demand and quotations for Tossa are about Rs. 4-8 (P) above the corresponding grades of white jute. Very little business has been reported during the past week with overseas buyers but quotations have remained steady and are, generally, a little above prices being indicated by buyers so that not much business is possible.

Quotations are as follows, all f.o.b. Narayanganj.

Jat	Rs. (P)	23-8	basis Bottoms.
District	Rs. (P)	22-8	,,
Northern	Rs. (P)	20-0	,,
Mill Firsts	Rs. (P)	144-0	per bale
Export Firsts		124-0	,,
Export Lightnings		110-0	,,
Export Hearts		84-0	,,
Dacca Tossa 4's		174-0	,,
Dacca Tossa 5's		154-0	,,
Output Tossa 4's		98-0	,,
Cuttings N. C.		38-0	,,

Tubular cloth sacks don't split

The weakest part of the conventional jute sack is the side seam—it has been for 100 years. There is no need to continue with this outmoded and expensive method. Use sacks made from Tubular Cloth. They have no side seams; they are stronger; they last longer; they are more economical.

Write to us for full details of tubular cloth sacks. Tell us what you pack and we will give you advice and sample sacks for testing.

The illustration shows sacks holding 100 kg. of flour in a French flour mill.

SAINT FRERES S.A., 34 RUE DU LOUVRE, PARIS

consumers. Though some may consider that values of jute and its productions are high, they are on a basis which obviates competition from substitutes. Whether there will be any scarcity of the fibre this season cannot yet be determined, but so far Pakistan authorities are refraining from creating any undue advance. The fact that some of the larger firms of shippers are still quoting a few pounds per ton higher for their jute, at which they are doing little or no business, leads to the belief in some quarters that they are waiting for still higher terms, but they may be wrong. Seven months of the present season have now gone and, though reports of imports from up-country markets state that these are smaller than usual for the period, there has so far been no sign of scarcity. Some countries on the Continent are finding competition with Calcutta not so easy and they are more anxious sellers. This is borne out by the increasing number of offers of jute yarns being made to the U.K. by France and Belgium. One large firm of French spinners has been offering weaving yarns to Dundee manufacturers direct at prices which compare more favourably with local rates than those quoted hitherto, but the quality of some of the Continental yarns is not so good as Dundee spins. There are very few complaints about the latter nowadays because of the good quality of jute being supplied to spinners.

Raw jute has ruled entirely unchanged at from £108 per ton for Mill Firsts, £97 for Mill Lightnings, £122 for crack Tossa-2/3 and £111 for grade, with fours grade at £101, crack Daisee-2/3 at £102 and grade from £92, all c. and f. U.K. Calcutta goods have eased slightly this week to 74s. 9d. for 10 oz. 40 in. and 57s. 6d. for 7½ oz. February, 74s. and 56s. 6d. March, and 73s. 6d. and 55s. 6d. April/June, f.o.b. Calcutta.

James Scott & Sons, Ltd., jute spinners and manufacturers, Dundee, opened a new factory on 27th January, in which they have installed 43 circular looms of the Saint Frères type, at a cost of over £100,000.

Chartered Bank Buildings,
Calcutta, 29th January, 1954.

BURN & COMPANY LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, 12, Mission Row, Calcutta, on Monday, the 1st day of March, 1954, at 11 A.M. to consider and if thought fit to pass, with or without modification, the following resolutions, namely:—

1. (As an Extraordinary Resolution)—That the Authorised Capital of the Company be increased from Rs.70,00,000 to Rs.1,20,00,000 by the creation of 50,000 Ordinary Shares of Rs. 100 each.

2. (As a Special Resolution)—That the Articles of Association of the Company be altered in manner following:—

In Article 4, the words "at the date of adoption of these articles" shall be deleted and in the same article the figures "70,00,000" and "42,000" shall be deleted and the figures "1,20,00,000" and "92,000" substituted therefor respectively.

3. (a) That it is desirable to capitalise a sum of Rs. 42,00,000 being part of the undivided profits of the Company standing at the credit of the General Reserves and accordingly that the said sum of Rs.42,00,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 1st day of March, 1954, holders of the 42,000 issued Ordinary Shares of Rs. 100 each in payment in full for 42,000 new Ordinary Shares of Rs. 100 each and that such 42,000 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share for every issued Ordinary Share held on the 1st day of March, 1954, by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they will not participate in dividends declared in respect of any period ending on or before 30th April, 1953, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 42,000 new Ordinary Shares credited as fully paid up amongst the persons who are on the 1st day of March, 1954, holders of the 42,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 1st day of March, 1954, by some persons to be appointed by the Directors in that behalf under Article 168 of the Articles of Association of the Company.

The Share Registers of the Company will be closed from 19th February, 1954 to 1st March, 1954, inclusive.

By Order of the Board.

BANKS

H indicates that Share capital is half paid. O, C and Dd, indicate Ordinary. Contributory and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O Po F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE I.M.F.'S SOUND ADVICE TO THE GOVERNMENT OF INDIA

REVISION OF TAX POLICIES URGED: SHORTAGE OF FUNDS FOR THE PLAN

THE report submitted to the Government of India by the International Monetary Fund Mission, which visited India last year, was published on Monday under the title *Economic Development with Stability;* it is a document of the first imporance. Frank, terse and brilliantly written, there has been nothing to compare with it as an economic study of this country's development plans. Mr. E. M. Bernstein and his colleagues are to be congratulated on an excellent piece of research and analysis, and the Government of India for having commissioned an impartial and expert study by the Fund. There was a time when one suspected that New Delhi was looking for external support for a policy of revived inflation, and it is still possible that some such use will be made of isolated passages in this report. But taken as a whole, the report is a final and complete disproof of the theory that India can pull herself up by her bootstraps, inflating her currency in the hope of activating resources while relying on a draconian system of controls to protect consumers from the effects of debased money. Some of the clearest and longest passages in the report are devoted to discrediting this notion once and for all. The danger, injustice and inefficacy of inflation as a technique of development could not be more vividly described; the limitations and the eventual uselessness of official controls could not be more clearly stated. Opponents of these two evils—and that includes most business men, bankers, trade unionists and anyone who has the welfare of the poor at heart—will find in this I.M.F. study all the ammunition they require to meet any attempt by the inflationists and price-fixers—and that includes many politicians, officials and a minority of industrialists and economic "experts"—to take the "short cut" to prosperity.

Some sections of the report can be read with comfort only by economists but that should not restrict its readership to professionals, for the basic findings are simple enough. The first, and official, essays in publicity and popularisation that accompanied the publication of the report unfortunately slurred over the most important parts of the document and gave prominence to relatively minor comments. It is to be hoped that this was not intentional, and that there will be no effort to conceal the fundamental meaning of the I.M.F. analysis. In a word it is this: *India just has not got the resources to fulfil the five year plan.* The cost of the plan may have been under-estimated by the Planning Commission; it is certainly no less than has been officially calculated. But the extent of the resources available to meet that cost has been over-estimated. The Mission does not draw from this the pessimistic conclusion that therefore the plan has to be cut back; on the contrary it says that the plan is a modest one and that the objectives it sets out are the minimum. It *has* to be fulfilled, but the wherewithal to do so is not yet in sight. So there will have to be a revision of domestic policies designed to increase revenues and savings and to channel investment into more productive uses. But even when this has been done, even when the most "forceful measures" have been taken to raise domestic revenues, there will still be a large deficiency and the only hope of meeting it is to secure further foreign assistance. And this, says the Mission rather vaguely but quite truthfully, should be possible. This is the kernel of the study, and a publicity machine more concerned to emphasise the unpleasant truth than to single out bouquets for the Government would lose no time in making it known to the country.

*

As those who read the report will see, we do not extract this theme by some process of refinement; it is repeatedly stated in as many words by the Mission itself. Thus after examining all the sources from which the Government hopes to secure revenues, and several which it has not yet fully tapped, the study says: "Two conclusions emerge clearly from this analysis. First, home resources even as estimated are not adequate for carrying out the plan without resorting to measures that would risk serious inflation. Second, even the estimate of resources to be secured through home savings will not be realised unless positive action is taken to divert more of the expected increase in output into public or private savings . . . Even after every reasonable effort has been made, it is certain that available home resources will still fall short of the amount needed to proceed with the modest development programme, and to start the economy of India towards steady, if slow, progress in expanding production and attaining higher living standards." Later, after discussing foreign aid, the study says: "The estimate of resources set forth in the plan is probably in excess of the amount that can be realised on the basis of present policies. It should be possible however to increase the domestic resources for the development programme by policies designed to increase tax revenues and savings and to divert investment from less productive to more productive uses. Even with the most forceful measures, however, there is likely to be a large deficiency of resources for the five year plan. If investment is curtailed, the deficiency of resources may not be apparent; nevertheless, it will be real and will hamper economic progress."

*

We dwell on this major conclusion of the study not only because it is the most important thing in the report, and not only because the inadequate coverage it has had in the Press has tended to hide it, but because it is the fact that will have to be brought home most vigorously to the country if the "foreful measures" referred to are to be politically possible. The nation needs to be told as plainly as can be that the Government of India has had the five year plan examined by a team of leading economists who have reported that the plan simply is not feasible unless certain unpleasant things are done at home and unless more aid is forthcoming from abroad. Since one of the most likely sources of aid from abroad is the World Bank, whose sister organisation supplied the economic experts, the foreign help is more likely to be offered if the domestic revisions suggested are first carried out. The things that need to be done at home, according to the I.M.F. Mission, are heavier taxation on people who are now undertaxed, a restriction on Government spending that is not directly productive, a higher rate of land revenue, further taxes on consumption goods either home-produced or imported, higher agricultural income taxation, the imposition of betterment levies and full-cost irrigation and power charges, and a re-examination of the rates now charged for services supplied by the Government.

This is the opposite of the mistaken "soak-the-rich" tax policies the Government has been applying for some years. It amounts to saying that if the plan is to progress there must be a heavier contribution from those who will benefit directly by it: from agriculturalists, from people of modest means, and from the users of Government services. The Mission says quite definitely that the attempt to raise a major part of revenues from the higher-income groups and from business firms has now reached the limit: "As regards higher income groups and business firms, increased taxation would not augment resources for development by the full amount of its yield because a considerable part of the revenue would be at the expense of private savings." Far from suggesting any increase in these forms of revenue, the Mission says that in the absence of exemptions for dependents, Indian income tax at the higher levels is "comparatively heavy" on large families; while in the case of business corporations it suggests "liberal amortisation provisions for new depreciable assets acquired either for replacement or expansion." Pointing out that self-financing by business firms, the re-investment of profits, must continue to be a major source of capital formation, the Mission says: "Business will not be able to save if price controls squeeze profit margins too tightly or if taxes are excessive. Both the remaining price controls and taxes on corporate profits should be re-examined with a view to facilitating internal financing by business of capital outlays for replacement and expansion."

*

Another recommendation of the Mission, and one that has been presented completely out of its context in the Press, concerns the extension of a social security system to all commercial and industrial concerns employing ten or more persons. Some may think that the Mission's reasons for making this suggestion are rather machiavellian, so it is better that they be understood. Wider social security is suggested not because of the benefits the workers will get out of it, but precisely because of the benefits they will *not* get out of it. In other words, the Mission is proposing that workers and employers contribute to a fund of which the receipts will "for an extended period" exceed the disbursements, and thus give rise to net savings which will be available for investment in government loans. The idea is not to give something to the worker but, at least for years to come, to take something from him. This will be possible not simply because the actuarial basis of the benefit scheme will be devised to ensure this result, but because when the scheme is new the recruits will exceed the beneficiaries, and because as industry expands and wage levels rise contributions will continue to exceed payments. It has been explained on this page before how the provident funds scheme has supported the gilt-edged market exactly because it is a new scheme, with more money going in than is coming out; the Mission proposes that this now be extended to a wider area of the country's industrial economy. Whether the unions will welcome a system designed with this end in view remains to be seen.

On the residual but crucial question of attracting more foreign assistance, the Mission has fewer suggestions to offer. It simply says: "The five year plan is so essential to the well-being of the people of India that it should be possible to find an agreed basis for additional foreign aid to India." This is not as naive as it sounds, and the agreements that have been signed since the report was written with the United States and Canada, and the present investigations of the World Bank team in India, show that assistance from abroad can reasonably be expected to continue and to expand. Whether it will be on a scale large enough to fill the gaps in resources that the Mission has drawn attention to, is another question altogether. Two things that the Indian Government can do to attract foreign aid, according to the Mission, are to seek some arrangement with the wheat producing countries whereby grain would be available in the event of a crop failure at home, and to maintain a steadily favourable balance of payments on dollar account. The usefulness of the former is obvious, and in view of the emerging surplus of wheat supplies in world markets, it should not be impossible of achievement. The second is important because "no factor is weighted more heavily by U.S. investors in the determination of the credit-worthiness of a country than that country's dollar payments position." This is somewhat visionary if it is based on the belief that private investors in the United States are looking for places to invest their funds in India; there is little sign of that yet. But a favourable dollar balance is urgently desirable on other grounds, and it would be an added incentive if efforts in this direction were thought likely eventually to interest American lenders of capital. These matters are secondary both in time and in importance to the domestic revisions proposed by the Mission and it is to them that the Government should give its first attention. The report was presumably in the Government's hands some time before publication and it would be encouraging if some of its findings were reflected in the budget to be presented at the end of this month.

THE INTENTIONS OF INDIA'S COMMUNISTS

THE "ANDHRA THESIS" AND BRITISH BUSINESS

A NOT uninteresting sidelight of the recent Congress session at Kalyani was that Raja Ghazanfar Ali Khan, Pakistani High Commissioner in India, was in the distinguished visitors' gallery when the proposed U.S. military aid to his country was being debated. There were also reporters and photographers to record the presence. At the less recent conference of the Communist Party of India at Madurai there were no observers at all. What was known of the proceedings of that conference was what the party bosses thought fit to make public. That this latter was not the truth, the whole truth, and nothing but the truth, must have been suspected by everyone acquainted with the well known methods of that party the world over. There is evidence now that the suspicion was by no means unfounded, that the C.P.I. is in no important respect different from its sister parties in Indo-China and Malaya, thanks to whom those regions have known no peace since the end of World War II. In 1848 the Manifesto said, "The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions." They have changed their minds since, and conquered the disdain for concealment, for no political organisation in the world works more secretly, sometimes making of secrecy a virtue in itself when even tactical needs do not warrant it. In this country, however, there would appear to be a number of good reasons for especial secrecy. In spite of noisy, local successes in the elections here and there, the party's popularity is of limited proportions. The cult is fundamentally opposed to the national genius and tradition, and there is, as the C.P.I. recognises, "the powerful influence that Gandhian ideology is still able to exercise over masses of people, including sections of the working class." The enduring strength of the family tie, the continuing influence of religion as the basis of life, and the existence of a high level of political maturity are other objective factors from which the Communists can not derive much unmixed satisfaction. Having to work in these circumstances and against such odds, the party has been obliged to indulge in not a little "doublespeak." As will be pointed out presently, embarrassment resulted when militant party men heard, and believed, what the country was being told.

More embarrassing must be the present situation in which the country has an opportunity of hearing what the party has been told in secret. What may be called the "inner contradictions" of the party have now made available to the Democratic Research Service of Bombay a mass of very significant documents, which conclusively expose not only the deception the party plans to work on the country and on some guileless political groups, but also the dishonesty obtaining inside the party itself. The Draft Political Resolution, intended chiefly for other people's consumption, talks of a Government of Democratic Unity. The Tactical Line (significantly sub-titled: Not Peaceful But Revolutionary Path), the Andhra Thesis, and the Review Report of the Polit Bureau, all three meant for party members only, make it abundantly clear just what they mean by Unity and what they do not mean by Democracy. When the war came in 1939, politicians were blamed for not reading *Mein Kampf*. Omission to read the documents mentioned above carries the possibility of heavier penalties.

* * * *

There are, it must be admitted, severe obstacles to reading them. The style is throughout repetitive and turgid, and no man with any love for language can go through them without pain. Abuses pour forth from the Communist pen "like bees from a hive, pollen from poplars, smoke from a cigarette, nudes from the staircase of the Moulin Rouge, platitudes from statesmen, or paintings from Picasso." Worst of all, words are drained out of all meaning until one wonders if language was not really devised for the concealment of thoughts rather than for their expression. In the discussion of internal problems India's freedom and sovereignty are "so-called;" the hyphenated adjective takes flight and the two become very real entitites when they have to be protected against the machinations of Anglo-American imperialists. The party is urged to concoct United Fronts whenever possible, even without "insisting on the acceptance of our minimum programme," and only a few lines away it is stated that the party "must not submerge itself in U.D.F. legislature party or bloc," and that it "must function in its own name with its own spokesman or leader." It is not surprising that this logic was found confusing by the naive Dr. N. M. Jaisoorya and Mr. G. M. Shroff who, having flirted with the Communists for some time, are now told where they "get off." Writing on behalf of the Central Committee of the Communist Party of India Mr. P. Ramamurthy tells the two doubting gentlemen, "We despair to convince you of the fantastic formulations made" in their letter: Mr. Ramamurthy's concluding paragraph opens with the words, "This letter, we hope, will clear any misunderstanding."

The greatest misunderstanding is perhaps within the party. The present leadership is pleased with itself because of the party's electoral successes, and would like to try the parliamentary way a little longer, while keeping other irons in the fire; the militants are less patient, less tactful, but perhaps not much less powerful among the rank and file. B. T. Randive, the extremist, polled 145 votes, while his friend, G. Adhikari got into the Central Committee with 194 votes after defeating an official candidate. The case of this extreme left is stated clearly in the Andhra thesis, according to which "the present Anglo-American contradictions are the chief inner imperialist contradictions of the day," and this must be exploited to the full; it is unreal to talk of American imperialism because American capital does not form more than 3 or 4 percent of foreign investments in India whilst more than 80 percent of the foreign capital in the country belongs to the British; and finally, "We concentrate fire on British imperialism and figure it as the chief and immediate enemy of our national freedom, and stop talking of Anglo-American imperialism in a general way." As far as is known, this Andhra thesis was not accepted by the party, but it certainly represents the feelings of a large number of Communists whom the leadership has to placate if the party is not to disintegrate. It would perhaps suit the present

requirements of the Soviet Union's foreign policy to play down its hostility to the British (for they were good enough to recognise Communist China), to defer an all-out conflict with the Nehru Government (which Russia has occasionally found useful), and to concentrate on America as the chief enemy, but the field workers of the party, who perhaps constitute the majority of the militant section, may well have found these considerations remote and academic. For them the nearest landlord, tea planter and mine manager are better targets and, although the hold of Moscow on the Indian party is not to be underestimated, it would be foolish to ignore the possibility of this section indulging in local adventurism—and, carrying the party with it.

The party itself is not wholly unwilling, or so it would appear from the Tactical Line. The immediate main objectives of the party are complete liquidation of feudalism, distribution of all land among the peasants, and achievement of "full national independence and freedom," meaning leaving the Commonwealth and probably confiscation of all foreign assets. "These objectives," the document says with candour reminiscent of 1848, "cannot be realised by a peaceful, parliamentary way. These objectives can be realised only through a revolution, through the overthrow of the present Indian State.... While resorting to all forms of struggle, including the most elementary forms.... the Communist Party has always held that in the present colonial set-up in India... legal and parliamentary possibilities are restricted and that therefore the replacement of the present State upholding the imperialist-feudal order by a People's Democratic State is possible through an armed revolution of the people.... It is also necessary that, while utilising all legal possibilities, the existing illegal apparatus of the Party is strengthened enormously."

This, then, is the threat. The pattern of Communist revolution is always the same, and even the details are obligingly supplied by the party. "Partisan war must be one of the major weapons in our armoury as in the case of all colonial countries. But this weapon alone cannot ensure victory. It has to be combined with other major weapons—that of strikes of the working class, general strike and uprising in the cities led by armed detachments of the working class... it is absolutely essential to combine two basic factors—the partisan war of the peasants, and workers' uprising in the cities." It is not difficult to explain, in the light of the foregoing, why a city stands still when there is a one-pice increase in the second class tram fares, or why the second largest steel works in the country can be idle for months for the flimsiest reasons. Next time it may be a country that will be held to ransom, a nation's life that will be brought to a standstill. It is against this background of the party's declared intentions, and with those possibilities clearly in view, that the Communist Party's call for a United Front and its participation in the elections have to be judged. When freedom is used to foster totalitarianism, democracy is exploited to wipe itself out of existence, liberalism may be obliged to limit itself for its very survival. The parliamentary game is much like any other. You cannot play tennis with a man who will not return your service, or cricket with a team which, once in to bat, will hold on to the pitch for all time. It will then be too late, and rather risky, to cry, "How's that?" *That* will be that.

CURRENT COIN

Inventory Cuts in the U.S.A.—Writing before the U.S. Federal Reserve reduced its discount rate from 2 to 1½ percent (a decision which will have a stimulating effect on business), the National City Bank of New York said in its February letter: "The opening weeks of the new year have brought no pronounced change in business. Further reports of factory curtailment, with rising claims for unemployment compensation, have emphasised the recession in industrial operations. New orders for steel and non-ferrous metals, which reflect conditions in a great many industries, have been sluggish. Projected automobile assembly schedules have been cut down somewhat. Nevertheless, automobile output during January has been larger than in December, and the same is true of some other important lines. It is safe to say that the decline in the industrial production index, which averaged a little over 1 percent a month in the second half of 1953, has been comparably modest. Merchandise markets and retail sales generally have made a good showing. Both in industry and trade these developments accord with most ideas about the business outlook. It is clear that a change of policy from inventory build-up to inventory reduction set in last fall, representing an adjustment to increased supplies, prompter deliveries, and, relatively speaking, buyers' markets. This is still in effect. With demand diminished, production has naturally slackened. Most people think the contraction will go farther. On the other hand, the opinion that consumption will be relatively sustained, and that a high level of everyday trade will provide an anchor against spiralling downward tendencies, has found support in current sales figures. In the fourth quarter of 1953, consumers purchased goods and services at the annual rate of $230,500 million, approximately the same as in the previous two record-breaking quarters. For January, reports indicate little slackening. Department store sales have matched those of a year ago, despite severe weather, and seasonal white sales showed a pronounced gain. More buyers were in the New York wholesale markets during the month, and they bought more goods than many had expected. Government figures indicate that inventory accumulation had ceased by the end of September last year. During the peak second quarter of 1953, business was adding to stocks at the rate of about $7,000 million a year (seasonally adjusted). In the fourth quarter, according to the President's Economic Report, inventories showed no change. This drop in demand for inventory purposes was a little greater than the drop in the aggregate production of goods and services (gross national product) in the same period, which was $5,700 million, annual rate. Thus the change in the business situation is measured essentially by the decline in inventory buying. The demand for goods and services otherwise—including personal consumption, construction, plant and equipment, and government purchases—has remained at or close to peak levels."

* * * *

Asia in 1953.—The ECAFE Economic Survey for 1953 describes that year as one of adjustment from the post-Korean boom conditions, to a level of general stability. In the region as a whole internal inflationary and deflationary forces were in comparative equilibrium, and external payments were in balance. In other words, 1953 could be called a normal year in the present growth of the Asian and Far Eastern economy. As the emphasis throughout this region at the moment is on development and growth, it is convenient to use the findings of the survey as a basis for the analysis of the various factors of progress. The problem of food is fundamental to Asian prosperity, and on this point the survey was most reassuring. The sellers' market has now disappeared, and this may be the most significant economic feature of the next few years. Various national efforts to increase the output of food are now having their effect, and although prices are rising, the food situation seems set fair, at least until these first efforts have been increased to the point of diminishing returns. But not until the whole of Asia is adequately fed in good years as well as bad, and the increase in output can be relied on to keep pace with the population figures, can it be said that this problem is solved. In the meantime agricultural surpluses are helping to free labour for growing industries. Industrialisation has been going ahead, stimulated chiefly by

government expenditure. The movement is now being hampered by falling export earnings due to deteriorating terms of trade, and rising internal consumption. Budget deficits are beginning to appear, or are increasing, and except in a few cases there was a general decline in the import of capital goods during the year. The movement in the terms of trade can probably be considered a normal feature, and so can the pressure of rising internal consumption. The indication is then that the future development of the region will depend on either an increase in exports to offset the fall in prices, cuts in internal consumption with all their social and political complications, or more borrowing from abroad. In the present state of the world economy the latter would seem to be the most likely solution. Here the shadow of the present American readjustment hovers in the background. With all the care in the world being exercised in the management of internal finances, it may still be inevitable that the immediate future will bring a sharp fall in export earnings and therefore increased budget deficits, and a slow-down in industrial growth. The Indian internal economy was of course dominated in 1953 by the five year plan, which has now passed its half-way mark, but the general situation was among the most healthy of any country in the region. The small part played by exports in the Indian economy accounts for the fact that the country was not seriously affected by the Korean boom and the subsequent recession. The inflationary danger had passed by 1952, and contractionist policies had helped to bring down the internal price level. The result has been a comparative absence of inflation, despite a high rate of public investment, and a budget deficit. Agricultural output had expanded for reasons similar to those applying in the region as a whole. In the opinion of the ECAFE, attention must once again be turned to industrial development, and more incentive and opportunity should be given to the development of local private enterprise. Government investment and foreign capital inflow need to be increased, however, to provide the types of industries and facilities for which the Indian business community has neither the resources nor the technical experience. The general verdict for India was that it was a good year.

* * * *

The Roads Congress.—The address to the eighteenth session of the Indian Roads Congress, made by its president, Mr. R. K. Batra, gives some small reassurance that authoritative thinking on the subject of roads is striving to keep its feet on the ground. We have consistently opposed the sort of unpractical dreaming about attractive economic projects which under-developed countries are all too ready to indulge in. Unfortunately few subjects lend themselves more completely to this habit than that of roads, and there are few which call for a more practical assessment of their present and future rôle in the economy. Mr. Batra approaches his problems from the right direction (though rather reluctantly one feels) by emphasising the importance of costs; first of all, the accountant's concept of cost, that involved in the building of the roads themselves; then the economist's concept, where he accepts regretfully that roads can expect no larger share of the available finances at present. It must be admitted that a first-class road system would be a wonderful thing to have if only India were able to make full use of it. The calls of the economy are not at the moment sufficient to utilise fully a national road system, and the outlays under the five year plan are as much as the country can afford for the foreseeable future. For many years to come there will be few enough vehicles to use a large road system. In limiting his aims to an integrated transport system, with a skeleton national road network operated on a bare maintenance basis, but with a large network of local roads feeding the various railway centres, Mr. Batra is fairly realistic. But in dwelling on the undoubted cultural and welfare advantages of a large system of local roads, he illustrates the current tendency to regard roads as social assets rather than economic factors. No nation which seriously desires to develop itself industrially with the least possible waste of time can afford this confusion of thought. Perhaps the most practical part of the address, from the economic point of view, was that which dealt with the complaint against the present vehicle taxation policy. It might well be that the best start to a national policy for the roads would be an adjustment of vehicle taxes to the level where road transport could operate on more or less equal terms with the railways. If this were to be done, the growth of road transport would call forth its own road improvement and development, and there would be no risk of saddling the country with the impressive network of white elephants of which the road planners seem to dream. In the meantime the points laid out in Mr Batra's address form an excellent foundation for a school of thought dedicated to the building, maintenance, and development of roads as and when the country requires them.

* * * *

Farmers' Viewpoint on Sugar.—The presidential address of S. Lal Singh, at the Second Biennial Conference of Sugarcane Research and Development Workers in Jullunder last Sunday, was an outspoken expression of views on behalf of the cultivator. Some of them are sensible; others less so. Mr Singh stated that although the research work done on sugarcane had been "worthy of the highest praise", the results had not reached the vast majority of cultivators. In some development areas and Government farms, yields were more than five times the countrywide average; "yet the overall picture of the sugar industry, in regard to yield of cane per acre and recovery of sugar from cane, has remained more or less the same for over two decades, and in some cases has deteriorated in spite of natural factors being favourable for its development." The maximum advantage of research in regard to varieties, use of fertilisers, insecticides, artificial irrigation and cultural practices would be derived by the farmer only when his crop brought him a reasonable return. It was the economic aspect of farming that required the foremost consideration. Cultivators, said Mr. Singh, should not only get a reasonable price for their cane, but should also share in the extra profits made by mills when recovery of sugar was better or its price higher in the market. India could easily achieve self-sufficiency and even produce a surplus of sugar. A reasonable price for cane based on the cost of production would encourage farmers to improve agricultural practices and grow more. Mills would receive ample supplies of cane and would be able to increase their production. Industries dependent on sugar supplies would benefit and any surplus could be exported, if necessary with the aid of subsidies—the Government forgoing part of the income it had derived from the sugar industry. The present policy indicated that there was no proper plan; the haphazard fixing of prices had already caused immense harm and, if continued, might prove fatal to the industry. Mr Singh felt that there could be no serious objection to the levy of cesses and taxes, provided they were utilised for the development of the industry; but to absorb them in the general revenues was hardly justified. The industry's greatest need was to develop the use of its by-products by intensive research, "accompanied by subsidised or protected commercial enterprises." Mr Singh also thought that cultivators should be provided with facilities for obtaining cheap and ready credit; they should be enabled to buy fertilisers, labour-saving appliances, etc. at subsidised rates; more economical and effective control measures were necessary to combat pests and diseases; and transport should be improved.

* * * *

Currency Depreciation Continues.—In spite of encouraging signs of monetary reconstruction in the sterling area and Western Europe, currency depreciation continued in many parts of the world. During the last four months, about a dozen important trade currencies declined in value substantially and these depreciations again darkened the world's hope for convertibility. The February issue of Pick's World Currency Report publishes a summary of the depreciations, measured in the free market value of the American Dollar in foreign trading centres, as follows:

FREE OR BLACK MARKET RATE PER U. S. DOLLAR

Country	Currency	Sept. 30, 1953	Jan. 30, 1954	Increased
Montevideo, Uruguay	Pesos	2.85	3.11	9.1%
Tokyo, Japan	Yen	415.00	475.00	14.2%
Belgrade, Yugoslavia	Dinars	530.00	615.00	16.0%
Santiago Chile	Pesos	210.00	244.00	16.2%
Lima, Peru	Soles	18.25	21.25	16.5%
Bangkok, Thailand	Bahts	18.30	21.40	16.9%
Shanghai, Com. China	Jen Min Piaos	37,775.00	45,050.00	19.2%
Rio de Janeiro, Brazil	Cruzeiros	39.60	55.00	39.3%
La Paz, Bolivia	Bolivares	600.00	1,120.00	86.6%

Of these currencies, the units of Uruguay, Japan, Yugoslavia, Chile, Peru, Communist China and Bolivia fell to their lowest levels of the post-war period.

CORRESPONDENCE

DRIED GINGER ROOT NOT INCLUDED IN U.S. IMPORT PROHIBITION

TO THE EDITOR OF "CAPITAL"

Sir,

According to the United States Department of the Treasury's Foreign Assets Control Regulations the importation into the United States of merchandise of Chinese or Tibetan type from any country is prohibited without a license at the present time, even though the merchandise was produced elsewhere than in China or Tibet. One of the commodities to which these regulations are applicable is "ginger root, candied or otherwise prepared of preserved". The United States Department of the Treasury has informed the American Embassy in New Delhi that dried ginger root is considered within customs category "ginger root, unground, not preserved or candied" and that the above mentioned prohibitory regulations are not applicable to it.

Very truly yours,
For the Consular Officer in Charge:
ROBERT J. BARNARD,
American Vice Consul

ASSESSING A FIRM FOR EARNINGS NOT RECEIVED

SUPREME COURT'S DECISION IN INCOME-TAX CASE

(FROM OUR LEGAL CORRESPONDENT)

THIS is a Supreme Court decision on a point on which two judges of the Madras High Court disagreed and on which there had been hitherto not much in the way of Indian precedents to afford guidance. Put shortly, the point is this: Can income be brought to charge for income-tax purposes where it has not been actually received? There are a number of English decisions on the subject, most of them in favour of the assessee. For instance, there is Rowlatt J.'s epigrammatic summing up in *Leigh* v *I.R.*, later approved in the Court of Appeal: "For income-tax purposes 'receivability' without receipt is nothing." But the Indian income-tax law contains provisions which are absent from the English one and it is only where the provisions of the former Act or the assessee's method of accounting render receipt the sole test of taxability that the principle enunciated by Rowlatt J. applies in this country. Where the principle does apply, however, income cannot be brought to charge whether the non-receipt is due to the deafult of the person who should pay or whether it is due to the assessee himself electing not to receive it. In the case which it is now proposed to discuss, which concerned a firm of managing agents, one of these English decisions was strongly relied on, to wit *Dewar* v *I.R.* There a legatee under a will was entitled to interest on his legacy in case of delay in payment of it. He received the legacy after a period during which he was also entitled to receive interest, and on the advice of his accountant he did not demand payment of the interest but let it stand over. He adopted this course to avoid surtax. The non-receipt of interest was through his own intentional act. The Department sought to assess him on the interest he could have if he had wanted to do so. The Court of Appeal held that an assessee is entitled to retain the corpus of an interest-bearing security and release the interest in any year in order to avoid a higher rate of tax. Said Romer L. J.: "The question is what income the man has received and not what income he might have received but for his wilful default. For the purpose of income-tax one does not take an account of an impossible income on the footing of wilful default." All of which, with Rowlatt J.'s succinct *dictum*, made, no doubt, encouraging reading for the advisers of the firm of managing agents whose case we are considering and also doubtless influenced the Appellate Tribunal and the Madras High Court in holding in their favour that certain income had not accrued to their firm and that the amount should be excluded from taxation as not having been received during the accounting year.

* * * *

Nevertheless, long before this decision, the learned authors of *Kanga and Palkhivala on Income-tax* had in their monumental work advised that the English authorities on this point should be approached with great caution and reserve. "The English cases laying down the general rule that receipt is the sole test of taxability and income which has accrued but has not been received cannot be brought to charge and, secondly, that it is the income of the year of receipt and not of the year when it accrues or arises, would be misleading under this Act....." Sir Jamshedji then enumerates several distinctions between the two Acts. Considerations of space prevent their quotation in full but their effect is to shew that receipt is not under the Indian Act the sole test of chargeability; and that an assessee may be taxed on income which may have "accrued or arisen" though it may not have been received. In this particular case the Income-tax Officer held that the firm followed the mercantile method of accounting and not the cash basis and that the income having accrued became assessable whether received or not. The Commissioner upheld this view. But the Appellate Tribunal reversed it, holding that the income had not accrued to the firm and should be excluded from taxation as not having been received during the accounting year. The Madras High Court found for the assessee firm and the I.T. Commissioner appealed to the Supreme Court.

The facts were these. The assessee was a registered firm consisting of K.R.M.T.T. Thiagaraja Chetty and his two sons. The firm was the managing agent of Shri Meenakshi Mills Ltd., which from now on we will refer to as the company, owning a spinning mill at Madura. The firm also conducted insurance business and the business of ginning cotton in a ginning factory at another place. Under the terms of the agreement the managing agents were entitled to a remuneration of Rs. 1,000 a month and a commission of ½ percent on all purchases, 1 percent on all sales and 10 percent commission on the net profits of the mills before allowing for depreciation. The firm had plenary powers of management of the affairs of the company, subject to the general supervision of the directors. It was to have charge and custody on behalf of the company of all the property books of account, papers and documents and effects belonging to the company. Clause 16 was the most important one in the agreement and laid down that the firm should be at liberty to retain, reimburse and pay themselves out of the funds of the company, all charges and expenses, legal or otherwise, and all the costs and expenses of providing and maintaining offices for the company and the salaries of clerks, servants, agents or workmen and all moneys expended by them on behalf of the company and "all sums due to the firm for commission or otherwise."

* * * *

Such being the set-up, we now come to the financial position of the company. It had done extremely well in the assessment year 1942-43 and the firm became entitled to commission to the tune of Rs. 2,26,850-5. The firm did not show this sum in the return on the ground that it was not actually received in the year of account, viz., by 31st March, 1942. It relied upon a resolution of the Board of Directors of the company, dated 30th March, 1942, by which they had decided to keep the amount in suspense without paying it on the ground that an amount of two lakhs odd was due to the company from the firm. It appeared that the firm did owe a debt to the company and that it had been outstanding for a long time past.

The firm wrote on 30th March, 1942, to the company requesting that the debt be written off. The firm also wrote that on account of the extraordinary increase in the volume of business it found it difficult to bestow adequate attention to all the aspects of the mill business and proposed that the direct responsibility for sales and purchases should be transferred to some other agency leaving the general supervision over the entire management in the firm's hands. The firm agreed to forgo its commission on purchases and sales and agreed to take half the commission on the net profits. The Directors, by their resolution passed on the same date, refused to write off the amount without consulting the general body of shareholders, and pending the settlement of the dispute resolved to keep the amount in suspense. The Income-tax Officer, confirmed later in his view by the Appellate Assistant Commissioner and the Commissioner, held that the income, having accrued, became assessable whether actually received or not, but, as has been stated, these decisions were reversed by the Appellate Tribunal and the High Court, both of which found for the assessee.

The only question with which this note is concerned is whether the sum ceased to be income by reason of the fact that on 30th March the sum was carried to a suspense account by a resolution of the Directors as a result of the request made by the firm that the outstanding debt due from it might be written off. Or, in other words, did the fact that the sum was not drawn by the firm by reason of the company withholding payment of it on account of a pending dispute mean that the amount had not "accrued" to the firm?

"No," said the Supreme Court. "The resolution of the Directors itself shows beyond doubt that the amount in question was treated as belonging to the firm, though its payment was deferred on account of a pending dispute. As Viswanatha Sastri J. (whose view had not prevailed in the High Court) tersely put it: 'The sum had irrevocably entered the debit side of the company's account as a disbursement of managing agency commission and had been appropriated to the firm's dues and the same sum could not again be entered in a suspense account at a later date. The sum therefore belonged to the firm and had to be included in the computation of the profits and gains that had accrued to it unless the firm had regularly kept its accounts on a cash basis, which is not the case here.'"

The Supreme Court accepted the above view of Sastri J. and allowed the appeal of the I.T. Commissioner. [*I.T. Commissioner* v *Thiagaraja*, A.I.R. (Supreme Court), December 1953. 527].

I.M.F. MISSION ON BANK LOANS TO INDUSTRY

COLLABORATION WITH INDUSTRIAL FINANCE CORPORATION

THE subject of investment by the commercial banks in long or medium-term loans to industry has been under discussion lately in India, and is in fact now the chief problem before the Shroff Committee. Interest therefore attaches to some references made to this question by the Mission of the International Monetary Fund which has submitted to the Government of India a report entitled *Economic Development With Stability*. The paragraphs reprinted below are found on pages 51 and 52 of the Mission's report. It will be seen that the Mission gives full credit to the Indian banking system for its sound traditions and recognises that those traditions, precisely because they are sound, are inconsistent with the banks taking too close an interest in longer term industrial finance. However, the Mission suggests that the subject is worth further study by the Reserve Bank, the Industrial Finance Corporation and by private bankers, with a view to increasing bank aid to industry without jeopardising the bank's liquidity.

"The commercial banking system of India has a conservative tradition based on the concept that deposit banks should remain exceptionally liquid and their lending operations confined primarily to short period credit for commercial purposes. The maintenance of high banking standards is important to a sound economy: and the Reserve Bank should be encouraged in its effort to raise banking standards in India. A well-balanced portfolio of loans, including a large proportion of short maturities, is evidence of high banking standards. An excessive proportion of short-period loans for commercial purposes may merely indicate that the banking system is not providing loans to industry for the modernisation and expansion of the economy.

"The purpose of having short-dated, liquid loans, as distinguished from sound loans with longer maturities, is to enable banks to contract credit if this should become necessary. For an individual bank, such a contraction of credit might become necessary if it loses deposits and must meet large cash withdrawals or adverse clearings with other banks. For the banking system as a whole, a contraction of credit may be necessary if there is a balance of payments deficit involving a decline in reserves that is not matched by an expansion of Reserve Bank credit: or if there is a contraction of Reserve Bank credit to avoid a balance of payments deficit or for other reasons.

"When the cash reserves of banks are as large as in India, even a moderate proportion of their loans in short-dated maturities provides ample liquidity for all practical purposes. A higher ratio of short-dated loans can be justified on other grounds—that such loans are safer or that they are eligible for rediscount at the Reserve Bank. This is a matter of banking practice, not of credit policy. In India the preference for short-dated commercial loans is based on a tradition which emphasises the need for liquidity by the banking system. As a consequence, the bulk of the available bank credit goes to financing the holding of goods; and very little goes to financing the expansion of production. The need for liquidity is, of course, greater for the exchange banks, which are more engaged in financing foreign trade and whose deposits may fluctuate more sharply with changes in the balance of payments of India.

"Although banks give preference to commercial loans, in practice some of their lending does finance industrial expansion. This is obviously so in the case of loans for periods of two or three years or longer for acquiring equipment; and it is so in the case of short-period loans made nominally for holding inventories. Such loans enable borrowers to use more of their own resources for acquiring equipment. As the loans are often renewed at maturity, they are actually two-year or three-year loans rather than three-month or six-month loans. Such loans, when made to good borrowers, are consistent with high banking standards. They would be equally good loans if made for two or three years and specifically for the purpose of acquiring equipment.

Collaboration with I.F.C.

"The institutional arrangements for financing private industrial enterprise in India are not adequate. This situation is common to nearly all under-developed countries. The reason is that the limited industrial sector cannot provide enough savings out of business profits to finance industrial expansion even on a modest scale. At the same time, the capital markets are not designed to finance the expansion of small and moderate-sized businesses. In the United States, the commercial banks regard two-year and three-year loans for equipment as consistent with good banking practice, provided the aggregate of such loans is not excessive and the borrowers are good credit risks. This is a problem of adjusting banking standards to needs and traditions of the country. It should be studied by the Reserve Bank of India.

"The need to make more adequate provision for industrial credit has been recognised by the establishment of the Industrial Finance Corporation by the Central Government and similar institutions by some of the States. The need may not be fully met by these institutions for two reasons—they may deal primarily with larger industrial firms and their resources may not be adequate. These difficulties could be considerably alleviated if the Industrial Finance Corporation could collaborate with the banks in making industrial loans. There are many ways in which this collaboration could take place. The banks could participate with the Industrial Finance Corporation in loans to their own clients, with or without guarantee. The banks could take the early maturities of loans and the Industrial Finance Corporation could take the later maturities. This is a matter that should be studied by the Reserve Bank of India, the Industrial Finance Corporation, and representatives of the banking system."

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT: SHARP RISE IN ACTIVE NOTES

Wednesday, 10th February.

THERE has been sustained demand for money, especially from upcountry centres where funds are needed to finance the movement of grains, cotton, sugar and textiles. Locally, the mills are buying raw jute conservatively and their advances are about steady. In turn the commercial banks have been borrowing heavily from the Imperial. In the interbank market, money has been tighter, though conditions are less stringent here than in Bombay where the interbank market is almost stripped of cash. It was reported this morning that there was more money about in Calcutta. The interbank call rate stands at 2½ percent.

There has been very little exchange business. Export bills have been few, and remittance only fair. The principal exchange rates are steady.

* * * *

Rises of Rs. 8.87 crores and Rs. 17.81 crores in the total note issue and notes in circulation to Rs. 1183.25 crores and Rs. 1172.82 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 5th February, 1954. The expansion in currency was duly adjusted by raising foreign securities bp Rs. 10 crores to Rs. 628.15 crores and this was partly done by reducing balances held abroad by Rs. 8.03 crores to Rs. 108.14 crores. Notes held in the Banking Department consequently fell by Rs. 8.94 crores to stand at Rs. 9.43 crores. Deposits disclosed an all-round decline. Deposits of the Government of India and other Government accounts diminished by Rs. 8.32 crores and Rs. 3.78 crores to Rs. 93.28 crores and Rs. 19.51 crores. Balances of commercial banks at Rs. 38.03 crores showed a decrease of Rs. 42 lakhs. Other loans and advances rose from Rs. 23.93 crores to Rs. 28.35 crores of which advances to scheduled banks against usance bills increased from Rs. 1.10 crores to Rs. 4.40 crores. Investments were down by Rs. 75 lakhs to total Rs. 71.72 crores. Ways and means advances were shown at Rs. 55 lakhs (nil).

* * * *

Tenders for Rs. 1 crore of three months' Government of India treasury bills were opened on Tuesday, 9th February 1954. Total amount offered was Rs. 1,01,00,000. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 99 percent. Total amount accepted was Rs. 1 crore the average rate of accepted tenders being Rs. 2-9-0 percent per annum. Tenders for Rs. 1 crore of three months' Government of India treasury bills will be received at Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore, up to the close of business on Monday, 15th February 1954. Successful tenderers should make payment on Friday, 19th February 1954. Other conditions are as usual. During the week ended 5th February 1954 Government of India treasury bills for Rs. 6,05,00,000 were sold in favour of the Reserve Bank of India.

* * * *

Bullion was steady last week. After remaining idle in the beginning silver rose from the previous week's level of Rs. 160-9 to Rs. 161-1 being quoted today especially due to short-covering. The price was, however, unchanged at 73⅞d. in London and at 85½ cents in New York. Gold met with good demand followed by the lack of arrivals and the price improved from Rs. 85-8 to Rs. 86-8. The sovereign at Rs. 56-13 showed a gain of ·3 annas.

* * * *

The return of the Imperial Bank of India for the week ended 29th January, 1954, shows a fall of Rs. 72 lakhs in total deposits to Rs. 208.70 crores. Investments in Government Securities are down by Rs. 1.05 crores to Rs. 79.45 crores, while other authorised investments remain unchanged at Rs. 10.74 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 4.85 crores and Rs. 5 lakhs to aggregate Rs. 102.76 crores and Rs. 16.56 crores, respectively. Cash and balances are, in consequence, shown at Rs. 12.62 crores or Rs. 3.57 crores less than in the previous week.

* * * *

The statement of the position of Scheduled Banks for the week ended 29th January, 1954, discloses Demand and Time liabilities at Rs. 520.09 crores (Rs. 7.66 crores on account of borrowings from Banks) and Rs. 327.97 crores (Rs. 1.62 crores) compared with Rs. 523.20 crores (Rs. 8.91 crores) and Rs. 328.98 crores (Rs. 1.42

CONSTRUCTION OF INDUSTRIAL SIDINGS

PLEASE DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the Railway authorities before you decide to acquire land, etc., for the purpose of building factories, mills, working mines or such other projects as may require the construction of special sidings. Please consult the Railways in advance to find out if the Railways are in a position to transport your raw materials and finished products by rail.

The Railways will extend all possible help and advice to you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railways experts. This will save you unnecessary delay and expenditure.

IF, as Mr. Mohammed Ali is said to have told Mr. Nehru, U.S. military aid to Pakistan is now a settled fact, there seems to be nothing India can do but accept it as such, as nations so often have to accept unpleasant realities. As long as there was some hope that Washington could be persuaded not to prosecute a scheme so offensive to Indian opinion, the campaign led by Mr. Nehru was justified, but there is little to be gained by maintaining public opinion at fever pitch on a subject that now requires to be dealt with at quite another level. I do not say that Indian leaders should not make whatever adjustments they think called for by the new disposition of strength in the subcontinent, but just what those adjustments are will be for the Government to judge when it learns exactly what assistance Pakistan is to receive. It is still quite possible, in fact very likely, that the adjustments required will be small since most of the evidence suggests that Pakistan is to receive very little. In the meantime there seems to be no warrant whatsoever for statements such as Dr. Katju is reported to have made on Tuesday, that the pact "would certainly destroy the peace of the whole world". (The Home Minister was speaking in an out-of-the-way place, so I should emphasise that this is what he is reported to have said.) The pact might be all sorts of bad things (and it has been argued in this newspaper that from India's point of view it is), but to claim that it will inevitably bring global war is nothing less than wildly irresponsible. Dr. Katju could scarcely have meant just this, for I see that he is supposed to have gone on at once to "hope that the people would not get alarmed", which would be a curious aspiration to place before an audience who had just been advised of the end of world peace. Anyone who has any understanding of what Mr. Nehru has been aiming at in his foreign policy must see that the pact will come as a serious disappointment to India, and must entail a revision of some of her present attitudes, but it most definitely is not a proper ground for alarm and despondency, least of all in high places.

* * * *

The story is told of Field-Marshal de Bassompierre that he once worded a battle despatch in terms of ballet. Comments on the Russian ballet now in the city have tended to be phrased in terms of the cold war. On Saturday one of the speakers at the New Empire thought it necessary to say that art had nothing to do with politics, meaning, perhaps, that she wished it hadn't; the political commentator of my morning newspaper told Americans the following morning that they should not find "in India's enthusiasm for Russian culture yet more proof of this country's political bias for Communism;" a Communist's disapproving remark on a section of the first night audience was: "The chief factor here is Max rather than Marx;" another spectator, obviously of a contrary political persuasion, thought it ominous that an Azerbaijanian was already singing the famous Iqbal song *Hindustan hamara*—this after persistent reports that parts of India are included in a map of China circulated in that country; and a Bombay anti-Communist bulletin has called the whole thing "Ballet-hoo." The visiting troupe was content to present a varied but patchy repertoire which, *qua* artists, they could scarcely have approved. The criterion seems to have been not what was best in Russia but what was likely to be enjoyed by the largest number of people. Maxim Mikhailov's deep, rich bass voice was a pleasure to hear. Maya Plisetskaya's waltz was nothing to write to Moscow about, but her Dying Swan, even without such essentials of ballet as décor and music, was enough to suggest that she was worthy of a less indiscriminate award than the Stalin Prize, which appears to have been won by at least five in the visiting party. The rest, though not all of them geese, may well have been selected mainly for giving representation to the backward states of the far-flung Soviet empire. The Bashkir humorous dance, because it was Bashkir, amused even those sophisticated folk who would not deign to see better Punjabi or Bihari dances. The Andrew Sisters, being American, are lowbrow; but the Fyodorov Sisters, in no way superior, are of course a different proposition. Indians who are unimpressed by Vishnudas Shirali's deft handling of 32 tablas were "sent" on Saturday night by Avner Baraev's tomskyfoolery with buben, for the latter comes from Uzbek. Nor was Mukaram Turgunbaeva's Khorezm folk dance noticeably different from or more graceful than some of the Rajasthani and Gujerati dances one has seen in the documentary films produced by the Government of India. But, as those ample figures ambled in and out, one reassuring thought got a lodgment in the mind; whatever the position of the arts in the Soviet Union today, (and it's a pity we were not given a fuller picture of it), the food position must be very good.

* * * *

A demonstration of Hollywood's latest answer to television was given to a select audience at the Globe Cinema last Sunday, and will be shown to paying custom from next week. The technique resembles that of the panoramic screen already in use here, but with "CinemaScope", as this innovation is called, the screen is even wider, in fact about two-and-a-half times as wide as it is high. It gives a three-dimensional effect without the bother of the special glasses required by the now old fashioned 3-D. Apart from some trouble with focus at the edges of the picture, and with the distortion of straight lines caused by such a curved screen, the effect is an improvement on any of the novelties Hollywood has put out so far. The images seems more lifelike than life itself, so I fear it is doomed to be used for the spectacular action type of film. To the Indian film industry these frantic efforts by Hollywood to stay ahead in the competitive race must appear remote and unnecessarily feverish. But in the United States, and lately in Britain, television has been stealing a large audience from the cinemas, and the film business seems to think it is fighting for its life. Perhaps—if really faced with starvation—the producers might try the last resort of making more intelligent movies.

* * * *

Fifty-odd French experts, I learn from an article by Sir Harold Nicolson in the *Spectator*, have filled a long-felt want by producing a handbook called *Savoir-Vivre International*, which means when translated International Savoir-Vivre. It has the sub-title, "Code of Sore Points and Good Manners around the World", and lists all the bricks the traveller should not drop in each of the various countries he is ever likely to visit. According to Sir Harold, who is himself an acknowledged expert both on travelling and on good form, the innocent abroad is warned: "When in Austria it is wiser not to wear leather shorts; in Belgium you should avoid mention of dynastic matters and M. Spaak; in Italy it is a mistake to address questions to the *carabinieri*, who are there for decorative purposes only: when in Ireland it is important for a foreigner to avoid all anti-British sentiments, which are the preserve of the natives; when in Sweden the traveller should eschew all praise of Norway and when in Norway all praise of Sweden; it is better when in Athens to be silent upon such subjects as the Acropolis and Epidaurus; the expression 'Asia Minor' is not one that should be used in Turkey; when a Persian starts to abuse his own Government, the visitor should neither agree nor disagree, but merely change the conversation; it is wounding to the sensibility of the Brazilians to appear in shirt-sleeves; remember when in Israel that Jerusalem is regarded as *terriblement province*; never pretend not to be sea-sick when you are; if you are invited to dine in Australia, be careful to keep your hands under the table when not actually consuming food; when paying visits in Ethiopa you should always announce your arrival by firing cannon; complain of the cold when in Siam..." The section on England appears to be moderate and accurate: the visitor is admonished never to speak to a stranger except in the event of fire or shipwreck, not to get really drunk before 2 in the morning, and to refer to ugly women as "good sports". I remember that Air India International put out a similar guide some years ago for the benefit of Indian visitors to England, in which the Indian was advised to look unconcerned if an Englishman mentioned his wife's death but to prepare to weep if he mentioned the demise of his dog. Though liable to the fault of over-statement such handbooks can serve a useful purpose, as the U.S. armed services' books did during the war, and failing a translation of the French compendium someone might prepare a social *vade mecum* for the new chum in India, mentioning such things as...but there, the wisest thing is that you should never mention them.

* * * *

I spent years of my schooldays under the impression that the English word "literally" meant "figuratively" because most of the people who said "literally" seemed to mean "figuratively", quite literally. Eventually escaping from this misapprehension, I retained an eye for the misuse of the word, but I regret that I did not make a collection of the idiotic sentences its abuse gives rise to. This gap, I now discover to my surprise, has been filled by Lord Samuel and Sir Compton Mackenzie, both of whom according to the latter's recent confession have long been collectors of literallys. So I am able to quote several of their gems. From Sir Compton's brace I take the following: Sir "Plum" Warner's remark that W. G. Grace "literally killed the fast bowlers of the seventies" (this, says Mackenzie, must have added considerably to the work of his brother, Dr. E. M. Grace, who was a coroner); a critic's statement that "our eyes were literally pinned to the curtain till it went up"; another critic's judgement on a performance of Julius Caesar that "the audience was literally transported to ancient Rome" (no wonder old playgoers take a poor view of contemporary Shakespeare productions, comments the collector); and finally *The Times* racing correspondent's report that a horse had "literally run away with the Two Thousand Guineas at Newmarket". Lord Samuel offers a report of Lady Astor "with daggers literally shooting from her eyes"; another of a successful journalist described as having been "born literally with printer's ink in his veins" and one of Zapotek having "literally pulverised the ace distance runners of the world". My favourites remain Emil Ludwig's description of the Kaiser rising to speak "with everyone literally hanging on his lips" and somebody else's account of a British Governor of Jerusalem rebuking malcontents "with their tails literally between their legs".

I.M.F. MISSION'S CRITICISM OF INDIAN TAX SYSTEM

HIGHER LAND TAXES AND GENEROUS INITIAL ALLOWANCES RECOMMENDED

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Report of the Mission of the International Monetary Fund which toured India last year was published here on Monday. The Mission makes interesting observations on India's taxation system. It says: "In 1950-51 the yield of Central and State taxes was only about 7 percent of national income. The five year plan assumes that this relationship will be approximately maintained, with tax revenues rising by about Rs. 700—800 million a year by 1955-56, and national income by Rs. 10,000 million. Although the increase in revenue would only parallel the projected rise in national income, an increase in present tax rates would be required to maintain this ratio, in view of the fact that some non-recurrent receipts from export duties and arrears of income tax were collected in 1950-51.

"The ratio of taxation to national income is much lower in India than in the industrialised countries, and appears also to be considerably lower than in some neighbouring countries (Ceylon and Burma, for example) and in some of the larger Latin American countries. Although this comparison is of limited significance, in view of economic differences among the countries and shortcomings in the basic statistics, it does suggest the feasibility of larger tax revenues in India. Admittedly, the scope for additional taxation is limited, because a reduction of consumption brought about by heavier taxes on lower income groups would cause great hardship and might impair health and working efficiency. As regards higher income groups and business firms, increased taxation would not augment resources for development by the full amount of its yield because a considerable part of the revenue would be at the expense of private savings . . .

"The Central and State Governments should give special attention to the possibility of increasing (a) taxes that have not kept pace with rising prices and revenue requirements over the past ten or fifteen years, (b) taxes and charges that will claim a part of additional income directly attributable to the five year plan, and (c) taxes that will restrain unnecessary consumption . . . "

Need to Increase Land Taxes

"Land revenue.—This source of revenue has lagged conspicuously behind other major taxes and behind the rise in money incomes and prices. Since 1937-38 it has fallen from second to fourth place among tax sources. Before the war, land revenue accounted for almost one third of the revenue that the Provinces of undivided India raised from their own sources, namely, total Provincial revenue minus devolution of revenue and grants from the Centre. In 1951-52 land revenue represented less than one sixth of State revenue from own sources.

"This trend is the continuation of a longterm downward movement in the proportion of receipts from land revenue. The trend is partly attributable to the rise of new sources of revenue; but the change is also attributable to the failure to adjust land revenue to the rising price level. Although land revenue has increased in money amount, it represents less buying power and a smaller proportion of agricultural output than before the war. The most consistent statistical series on Provincial-State finances is that for the seven Part A States that were not partitioned. In 1951-52 these States collected about 50 percent more land revenue than in 1938-39, whereas the index of wholesale prices of major agricultural commodities averaged more than five and one-half times the 1938-39 average. Since 1951-52 land revenue has increased to some extent and agricultural prices have receded. Nevertheless, a great discrepancy persists between the rise in prices and the yield of land revenue.

"The rise in prices of both agricultural and other commodities and the consequent reduction in the real yield and real burden create a strong presumption in favour of a substantial increase in land revenue. The case for increased land revenue does not rest on any assumption that farmers' real incomes have increased proportionately to agricultural prices. Clearly they have not. Nevertheless, regardless of the size of the producer's marketable surplus or the development of other prices and costs, the rise in agricultural prices has lightened the real burden of land revenue simply because the payment now represents a much smaller amount of agricultural produce and a smaller proportion of the gross yield of land. Furthermore, the decrease in real yield of land revenue has come about by default rather than by deliberate decision.

"It may not be desirable to attempt to raise land revenue proportionately to the increase in agricultural prices, as the levy may have been unduly burdensome in the late 1930's and prices of agricultural commodities may fall somewhat below the present level. Even so, it should be possible to raise significantly more from land revenue than the Rs. 340 million which the five year plan calls on the States to raise over the whole period of the Plan from taxation on land, that is, land revenue and agricultural income tax. Since 1951-52, the States have increased land revenue appreciably, by more than Rs. 100 million in 1952-53 revised estimates and by a further Rs. 70 million according to the 1953-54 budgets. A considerable fraction of this increase, however, has been realised in connection with the abolition of intermediaries (zamindars) and is earmarked for their compensation. This part of the land revenue represents neither an increase in the burden on cultivators nor an addition to the net receipts of the States.

"It probably will not be feasible to restore the real yield of land revenue immediately. But it is desirable to act as promptly as possible to obtain more from this source, both because of the urgent financial needs of the States and because further delay will strengthen economic and political objections to the adjustment. A systematic reassessment of land is a time-consuming process. It may be feasible, however, to adopt a system of surcharges to existing land revenue pending completion of new assessments . . .

Indian Income Taxation

"Income and profits taxes.—If incomes are converted at the official exchange rates it appears that income and supertax rates are higher in India than in the United States and Canada and only a little lower than in the United Kingdom at most income levels. This method of comparison, however, exaggerates the severity of the Indian income tax. One reason is that the internal purchasing power of the rupee is probably greater for the goods and services bought by higher income groups than is indicated by the official exchange rates. More important is the fact that a given amount of money income places a person higher in the social and economic scale in India than it does in the United States or the United Kingdom. An income of Rs. 15,000 for example, "means more" in India than an income of $3,150 in the United States. This income would be rather less than the average wage for factory workers in the United States, but in India it would place its recipient well toward the top of the income pyramid. On the other hand, the absence of exemptions for dependents and the practice of taxing Hindu undivided families as a unit (with only twice the usual exemption limit) make for a comparatively heavy tax on large families.

"The Constitution reserves to Part A and Part B States the power to levy taxes on agricultural income. Several States have not used this power; and in the States where agricultural income taxes are imposed, the rates are generally lower than those of the Central Government tax on non-agricultural income, especially in the higher ranges of income. The failure to make full use of agricultural income taxes seems anomalous in view of the dominant rôle of agriculture in the economy. Land revenue, which is in the nature of a fixed charge, does not seem to be an adequate substitute for a graduated tax on net income. If land revenue and other expenses are deductible, there is a strong case for taxing net agricultural income at the same rates as income from other sources. With the present exemptions, the tax would apply mainly to the diminishing group of landlords and to plantations. Although the yield would probably be small, the tax appears to be justifiable in principle.

Depreciation Allowances

"In appraising the severity of taxes on business profits, it is important to take into account the adequacy of allowable deductions. The rise in prices during the war and postwar years has provoked a debate in India and in many other countries regarding the adequacy of depreciation allowances base on the original cost of plant and equipment. It is argued that when depreciation is based on historical cost, as is the rule in India, profits are over-stated and the income tax makes it difficult for firms to finance replacement from internal funds. Some countries—for example, France and Belgium—have permitted a general revaluation of capital assets and a corresponding adjustment of depreciation allowances. Other countries, where there has also been a considerable rise in prices, have held fast to the original cost principle.

"This is a complicated issue that cannot be easily resolved. It is true that historical-cost depreciation allowances do not measure the current value of capital consumed in the process of production and are insufficient to finance replacement of assets acquired before the price rise. On the other hand, it must be recognised that the increase in prices of buildings and machinery is itself an indication that ownership of these assets has served as at least a partial hedge against inflation. A tax reduction for those who acquired depreciable property when prices were lower than they now are would accentuate the advantage that this group already enjoys in comparison with holders of savings accounts, bonds, and other fixed money claims and recipients of inflexible salaries. From the point of view of maximising public and private savings and capital formation, it seems desirable to link any tax adjustment directly to replacement or expansion. Unless accompanied by a requirement that the funds be reinvested, an increase in depreciation allowances on existing assets would permit larger distributions of profits, which would be used in part for additional consumption.

"These considerations seem to indicate that the best approach is to allow liberal amortisation provisions for new depreciable assets acquired either for replacement or expansion. This approach limits the tax concession and at the same time offers important assistance to firms wishing to modernise or expand. The 'initial allowances' that have been granted in India and the United Kingdom are examples of this type of measure. Under this arrangement the taxpayer is permitted to deduct from taxable income a substantial percentage of the cost of a new asset immediately after its acquisition. In the United Kingdom the Tucker Committee on the Taxation of Trading Profits concluded that suitable initial allowances, but with total deductions limited to the actual cost of the asset, are the most appropriate form of tax adjustment for increased costs of capital assets."

Betterment Levies

Betterment levies and water charges, which have been proposed by the Planning Commission in connection with multi-purpose irrigation projects, are considered by the Mission to be "amongst the most desirable means of capturing by Government a part of the additional income directly attributable to the five year plan."

Home Resources Inadequate

The I.M.F. report says finally: "It is hazardous to attempt to set quantitative standards for a country's capacity to save and to pay taxes. Nevertheless, it is evident that India can and should attack with renewed energy and ingenuity the problem of securing additional home resources for development. With greater effort it should be possible at least to approximate the goal set for public saving in the five year plan. It will be much harder to assure the projected level of private saving and investment or to expand public saving still further to make up for a deficiency in the private sphere. Even after every reasonable effort has been made, it is certain that available home resources will still fall short of the amount needed to proceed with the modest development programme, and to start the economy of India towards steady, if slow, progress in expanding production and attaining higher living standards."

Stocks and Shares

PRICES MAINTAINED THOUGH VOLUME OF BUSINESS SHRINKS

Wednesday Evening.

THERE has been a marked decline in the amount of share business put through in Calcutta in the past week but rates are holding up well. Usually when a boomlet, such as appeared to be gathering force in January, fades out, prices react rather sharply but at present the market presents a generally firm front. Indian Irons have been maintained at around Rs. 28-4.

There has been more enquiry for selected jute mill shares but business has been on a limited scale. Coals have been neglected, with Bengal Coal steady at Rs. 515. The tea section has relapsed into quietude. Engineering and miscellaneous shares have held their ground well: the features have been F. & C. Osler at Rs. 9-4 and Martin Burn at Rs. 21-2.

Government loans have been inactive, mainly because money has been tight, but rates are virtually unchanged.

Details of the week's trading follow.

* * * *

Trading in the gilt-edged section was rather dull though on the whole the undertone was steady. Three percent Conversion Loan 1986 reacted slightly to Rs. 82-10 but buyers appeared at this level, while 3 percent 1896 was slightly better at Rs. 82-8. In short-dated, 2½ percent 1954 was steady at Rs. 99-2 and there were buyers of 2½ percent 1955 at Rs. 98-6-6. Both 3 percent's 1957 and 1958 were enquired for at Rs. 98-6 and Rs. 98-2. In contrast, 4½ percent 1955-60 was weak at Rs. 102-9. In the medium-dated group, 3 percent 1959-61 was unchanged at Rs. 96-3, but 3½ percent 1961 was a trifle easier at Rs. 98-13-6; 2½ percent 1961 was taken at around Rs. 90-12, but 2¾ percent 1962 was on offer at Rs. 91-11. Four percent 1960-70 was a feature, and was asked for up to Rs. 102-1, with few declared sellers. Long-dated loans were unchanged. Provincial loans were a dull market with sellers predominating and practically no business was reported.

There were a number of buyers of selected miscellaneous preference shares at around previous quotations but few declared sellers. Jute shares were, once again, neglected. In jutes, only two transactions were recorded, namely Anglo-India at Rs. 114-8 and Reliance at Rs. 115. Among miscellaneous preference shares, Alkali & Chemical were steady at Rs. 109, Bharat Collieries were better at Rs. 50-8, and Birds Investments were taken at Rs. 76-8. Indian Iron were steady at Rs. 108, Jenson & Nicholson were done at Rs. 110 and Jardine Henderson were taken at Rs. 81. Jessops were quoted at Rs. 107, Orient Paper 1st at Rs. 101 and Shaw Wallace at Rs. 81-4. New Victoria Cotton improved from Rs. 3-11 to Rs. 4-6.

In the banking section, Imperial Bank Fully-Paid and Contributory were steady at Rs. 1790 and Rs. 434. Hindustan Commercial met with some enquiry at Rs. 9, but there were few shares offering. Hind Bank were steady at Rs. 24-8.

* * * *

Among railway shares, Burdwan-Cutwa were crossed at Rs. 62, Dehri-Rohtas improved to Rs. 8-4, Kalighat-Falta were quoted at Rs. 57 and Katakhal-Lalabazar met with investment enquiry at Rs. 72.

Kesoram provided the best feature in the cotton section, improving from Rs. 22-4 to Rs. 24-8 but later reacted to Rs. 23-12. Cawnpore Textiles were steady at Rs. 8-8, Dunbar at Rs. 203, Elgins were done at Rs. 16 and New Victoria at Re. 1-11.

With the exception of a few selected shares, the coal section was neglected. Bengal were steady at Rs. 515, Burrakur were marked at Rs. 8-10, Bharat Collieries were taken at Rs. 6-15, and Dhemo Main were quoted at Rs. 8-10. Central India Collieries changed hands at Rs. 6 and East Indian at Rs. 25-8. Deals were reported in Equitable at Rs. 31-10, New Beerbhoom at Rs. 17-15 and Raneegunge at Rs. 11-6. Rewa were better at Rs. 25-2, but South Karanpura were easier at Rs. 9-15. Talcher were steady at Rs: 3-4, as were Western Bengal Coalfields at Rs. 5-3.

Slightly more interest was shown in jute shares during the past week, though business was limited. The following table illustrates the more important price movements:—

	Opening 3-2-54.	Closing 10-2-54.
Agarpara	15-14	16-3
India	124	127
Delta	226	235
Ganges	69	72
Nuddea	45-12	47
Orient	174	180
Reliance	14-11	14-1
Howrah	24-6	24-6

There were few changes to report in the electric supply section. Calcutta improved to Rs. 13-10 but reacted at the close to Rs. 13-5. Shahjahanpur were crossed at Rs. 7-12 and Agra were quoted at Rs. 150.

* * * *

Features in the sugar section were Carew which improved from Rs. 7-4 to Rs. 8-2, and Cawnpore from Rs. 39 to Rs. 39-8. Belsund were done at Rs. 9, as were Darbhanga at Rs. 11-10 and New Savan at Rs. 6-4. Ramnugger changed hands at around Rs. 22-6.

In the engineering section, Indian Iron & Steel shares kept fairly steady around Rs. 28-4, to close at Rs. 28-6. Braithwaite were taken at Rs. 14-8 and Burn at Rs. 339. Britannia Engineering were scarce at Rs. 26-12. Indian Standard Wagon were done at Rs. 63-4, Indian Steel & Wire Products Deferred were steady at Rs. 45-6 and Jessops were dealt in freely at around Rs. 26-2. Kumardhubi Engineering changed hands at Rs. 8-10 and Marshalls were steady at Rs. 6-12.

Paper shares met with minor profit-taking and closing prices were below the highest levels touched last week. Orient Paper eased to Rs. 48-12, Shree Gopal to Rs. 21 and Titaghur to Rs. 37-14. Sone Valley were dealt in around Rs. 7-1, Concord were marked at Rs. 11, New Asiatic at Rs. 4-13 and Ruby General at Rs. 6-3. A small lot of Triton changed hands at Rs. 167-8. Calcutta Landing & Shipping were steady at Rs. 19-9 as were India Steamship at Rs. 7-10. Alkali & Chemical were offered at Rs. 15-14. Assam Saws were marked at Rs. 7-4, and Bengal Flour at Rs 21-8. British Burma Petroleum were steady at Rs. 3-3 as were British India Corporation at Rs. 9. The outstanding feature in this section was

F. & C. Osler which rose from Rs. 8 to Rs. 9-4. Indian Cables were unchanged at Rs. 20-2, while Indo-Burma Petroleum were steady at Rs. 85 Indian Wood Products at Rs. 34-8 and Jardine Henderson at Rs. 115-8. Martin Burn met with good enquiry and the price improved from Rs. 20-8 to Rs. 21-2. National Insulated Cables were taken at Rs. 15-8 and National Tobacco at Rs. 10-7. Rallis met with some support at the lower level of Rs. 56. Shaw Wallace were steady at Rs. 12-6 as were Textile Machinery at Rs. 9-10.

In the mining section, Orissa Minerals were scarce at Rs. 40-4. Consolidated Tin were steady at Rs. 2-3 and there was some investment enquiry for Indian Copper at Rs. 3-1.

The tea section has been completely neglected and the volume of business negligible. Amongst Assam scrips, Bateli had buyers at Rs. 15-6, Dhelakhat were taken up to Rs. 13-12 but later had sellers at Rs. 13-8. Dhunseri were marked at Rs. 13-14 and Hoograjuli at Rs. 34-4. Ledo were better at Rs. 9-12 as were Sapoi at Rs. 13-10. Amongst Dooars scrips, Banarhat receded to Rs. 410, sellers, and Oodlabari were marked up to Rs. 26. Business was also reported in Eastern Cachar at Rs. 4-5 and Sonai River at Rs. 7-6. From the Sylhet and Terai districts only four shares were quoted. Lackatoorah were unchanged at Rs. 9-10, Loobah were better at Rs. 3-8, while *Hansqua* were marked at Rs. 17 and New Terai were slightly easier at Rs. 13-14.

* * * *

The FORT GLOSTER JUTE MANUFACTURING COMPANY made a profit of Rs. 3,35 lakhs for the half-year ended 30th September, 1953, and this compares favourably with the previous half-year's loss of Rs. 2.93 lakhs. Taxation absorbs Rs. 6,200 and sinking fund Rs. 1.75 lakhs. Bringing in Rs. 3,970, paying the usual preference dividends and meeting other charges there is a balance of Rs. 5,050 which is carried forward.

* * * *

The NORTH-WEST COAL COMPANY incurred a loss of Rs. 98,547 for the half-year ended 30th September, 1953. Allowing Rs. 18,500 (Rs. 24,500) for depreciation, Rs. 4,500 (Rs. 13,000) for cesses, transferring Rs. 90,000 from general reserve, Rs. 8,000 from cess provision and bringing in Rs. 6,603 there is a balance of Rs. 552 which is carried forward. There is no distribution (2½%). Raisings totalled 44,065 tons (42,196 tons) and despatches 34,818 tons (46,842 tons). The management was reported to have succeeded in concluding agreements with contractors for the raising and selling of coal mined at Ena Colliery.

* * * *

The BOWREAH COTTON MILLS incurred a loss of Rs. 3.41 lakhs against Rs. 5.77 lakhs and DUNBAR MILLS Rs. 3.50 lakhs (Rs. 2.26 lakhs) for the half-year ended 30th June, 1953. Both passed dividends again and carried forward debit balances of Rs. 9,68,728 and Rs. 5,24,085, respectively.

* * * *

RALLIS INDIA LTD., incurred a loss of Rs. 14,07,198 for the year ended 31st August, 1953, including Rs. 10.35 lakhs (Rs. 11.08 lakhs) for depreciation as compared with the previous year's loss of Rs. 3.05 lakhs and this was due to the slump in commodities. Bringing in Rs. 24,847, transferring Rs. 3 lakhs from contingencies reserve, Rs. 11 lakhs from general reserve and making other adjustments there remains Rs. 17,649 which is carried forward. Dividends have been passed.

* * * *

The BHARAT COLLIERIES LTD. made a profit of Rs. 14.71 lakhs for the year ended 30th June, 1953, and this compares favourably with the previous year's Rs. 14.62 lakhs. Providing Rs. 6.41 lakhs (Rs. 6.61 lakhs) for depreciation and bringing in Rs. 23,813 there is an available balance of Rs. 8,52,967. The ordinary dividend has been maintained at 6¼ percent. Taxation absorbs Rs. 3.75 lakhs (same) and general reserve Rs. 1 lakh (Rs. 50,000) leaving a carry-forward of Rs. 6,280.

* * * *

Martin Burn Ltd., managing agents of the Indian Iron and Steel Company Limited, report the approximate production of the Company for January, 1954 as follows (in tons):

	January '54		December '53
Pig iron ...	... 63,100		64,510
Steel ingots	... 42,600		43,080
Semi-finished steel for sale 12,640	39,870	12,430	41,740
Finished steel 27,230		29,310	

* * * *

Messrs. Tata Industries Limited, managing agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of January 1954 was: Pig iron 102,800 tons; steel ingots 99,800 tons; semi and finished saleable steel 21,000 tons and 50,400 tons respectively.

The working of the MACNEILL & BARRY group of jute mills for the half-year ended 30th September, 1953, has produced better results than those of the previous half-year. Gourepore and Nuddea have declared ordinary dividends of 3¾ percent and 1 percent, respectively, against nil. Details of the accounts are published below:—

Half-year ended	Sales Rs.	Depreciation Rs.	Reserve for Taxation Rs.	Profit including Taxation Rs.	Dividend percent P.	Dividend percent O.	Carried forward Rs.

CANE PRICES IN DECEMBER

On the basis of returns received from the Central Sugar Factories, the Director, Indian Institute of Sugar Technology, Kanpur, in an abstract statement of cane prices paid during the month of December 1953, gives figures for (a) the total price of cane per maund (including co-operative society's commission, transport charges, etc., but excluding cane cess) at the factory as follows:

	Maximum Rs. a p.	Minimum Rs. a p.	Average Rs. a p.
Uttar Pradesh	1 9 7	1 6 6	1 8 1
Bihar	1 10 2	1 6 11	1 8 2
Madras	1 7 0	1 7 0	1 7 0
Andhra	1 7 0	1 6 10	1 7 0
Bombay	1 12 8	1 4 8	1 9 4
All India	1 12 8	1 4 8	1 8 1

(b) the portion of the total price per maund of cane actually received (cash or deferred or both) by the grower as under:

	Maximum Rs. a p.	Minimum Rs. a p.	Average Rs. a p.
Uttar Pradesh	1 7 0	1 5 1	1 6 3
Bihar	1 6 9	1 5 7	1 6 4
Madras	1 7 0	1 7 0	1 7 9
Andhra	1 7 0	1 6 10	1 7 0
Bombay	1 10 3	1 8 0	1 9 0
All India	1 10 3	1 5 1	1 6 5

Detailed figures are being published in the *Indian Trade Journal* and *Agricultural Situation in India*. The figures relate only to 90 and 87 for (a) and (b) respectively of the Central Sugar Factories in India.

HOLLERITH REGD.
ELECTRICAL PUNCHED CARD ACCOUNTING

PROGRESS ON oiled WHEELS

The Locomotive Works of the Government at Chittaranjan and of Tata at Tatanagar, move, as might be expected, with the times. Both have installed Hollerith machines. At Chittaranjan they handle analysis of wages and stores. At Tatanagar, they handle every aspect of Cost and Stores Accounting. (There are some 12,000 items of stores.) These are but two typical Hollerith installations in a vital industry All over Asia, in industries heavy and light, in commerce, in Government Departments—Hollerith installations are at work, oiling the wheels of progress.

GOOD WEEK IN STOCK MARKETS

RECORD SHARE INDEX VALUE EXPECTED ANY DAY

London, 9th February.

STOCK markets have had a very good week and, yesterday the number of bargains recorded at 1,714 was the highest for seven years. On the same day the *Financial Times* industrial ordinary index was only 0.5 of a point below its all-time peak of 140.6 reached on 17th January, 1947. Market quarters are saying it is no longer a question of whether the index will go through the ceiling, but on which day it will happen. The boom if it is a boom, appears to be well based. This week the customary dip in prices in front of the ending of the account, was almost non-existent. A goodly number of buyers appeared to be waiting for any signs of price deterioration so they could step in, and profit-taking was generally well absorbed. Another encouraging factor was that brokers reported there was little new time buying in front of the ending of the account. This seemed to indicate that much of the recent buying which has helped to lift prices, has been cash buying rather than short term speculation. During the week there was some good buying of gilt-edged, particularly the long-dated and irredeemable issues, on hopes of a reduction in the bank rate in the near future. Industrials secured useful gains over a wide front with several leaders registering new high levels. Elsewhere European bonds were extremely active with Greeks featured on the news that the Greek Government had set up two committees to study the position of foreign loans and negotiate with creditors. Japanese and German bonds were also favoured although they suffered somewhat from occasional profit-taking and switching. Oils were a firm market throughout on hopes of an early settlement of the Persian dispute and the opening of marketing talks between the major international companies. Kaffirs also followed a generally higher trend with dominion reefs a firm feature.

The week opened in the money market with credit conditions stringent. Banks were reluctant to provide accommodation and a moderate amount of direct and indirect help was given by the authorities. Later, the position became considerably easier and no form of official assistance was required until towards the end of the week when fairly substantial calling by some of the clearing banks caused slight difficulty. Bill business was on a small scale for most of the time although there was slightly more activity towards midweek. The Bank of England Return showed a rise in note circulation of nearly £4 million to around £1,539 million, while bankers' deposits rose by £5 million to £284 million. Applications for £220 million of Treasury Bills totalled £386,430,000, £220 million were allotted at an approximate rate of 41s. 3.68d. percent. Next week £230 million will be offered. Fine Trade bills were unchanged.

Sterling Area Surplus

The sterling area during January had a surplus of $25 million compared with the deficit of 43 million in December. This brings total gold and dollar reserves at the end of January to $2,543 million against 2,518 million at the end of 1953. Provisional January European Payments Union figures show that the United Kingdom had a surplus of 4.7 million sterling compared with the deficit of 3.1 million sterling in December.

Platinum Market

Platinum continues to be quoted at 90 to 92 dollars but the tendency continues lower. New buying activity was restricted and Colombia is apparently shading prices on platinum grain and nuggets from around $89 to $88 an ounce. Some European offerings to the United States were also reported at well under $90 minimum quoted in New York. A spokesman for the Soviet group said that the Soviet Union is still anxious to sell platinum direct to New York but so far not a single sale has been consummated. New York platinum dealers are still banking on an increase in the United States consumption this year primarily because of increasing usage by the petroleum industry. At the same time they anticipate a stiffening in the United Kingdom internal price. They think an advance to perhaps £32 to £33 is possible and would place the British market on approximate parity with New York.

Trading in Silk

Trading in raw silk futures is expected to be resumed on the New York Commodity Exchange in the next four to six weeks, according to usually reliable sources. Discussion within the exchange as well as within the American Silk Council has been going on for some time. The trading is expected to be in 20-22 denier raw silk from Japan only and the deliverable grade is expected to be the grade A. The contract, as in the past, will be for 1,300 pounds of raw silk Trading in raw silk futures on the Commodity Exchange was suspended on 25th July, 1941. Trade circles believe that the restoration of hedging facilities in New York will encourage larger imports.

Vegetable Oils

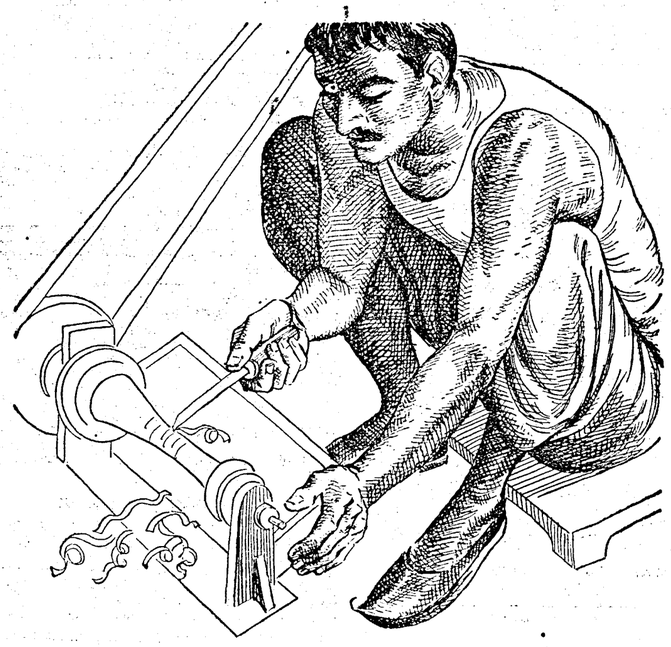
Vegetable oils were quiet and virtually inactive, influenced by the Chinese New Year. Resellers of coconut oil were offering Straits at £133 and Ceylon at £135 c.i.f. but there were no takers. It was rumoured that South American linseed oil was offered at £71½ c.i.f. but these offers were not yet general and probably refer to special business. Seeds held steady with business done in Brazilian castorseed at £47½ French West African palm kernels at 70,000 French francs and in British East African sunflower seed £42 all c.i.f.

Reserve Banks Lower Discount Rate

Leading Federal Reserve Banks have reduced the discount rate to 1¾ percent from 2 percent with effect from 5th February. Other Reserve Banks will follow suit shortly. The rate was raised from 1½ to 2 percent on 15th January, 1953. A high Federal Reserve Board official said that it would be a "mistake" to attach much significance to the lowering of the rate. He described it as a step to bring Federal Reserve banks abreast of the nation's credit requirements. When the Federal Reserve raised the rate last year the nation's banks were borrowing about 1,400 million dollars weekly from the reserve system. The average in January was only slightly over 200 million indicating much lower demand for funds. The prime rate for money in the New York market is now 3¼ percent and bankers believe that there might now be slight lowering in that rate. The new rate is effective at the Federal Reserve banks at New York, Boston, Philadelphia, St. Louis and San Francisco. Another seven are expected to follow the suit.

Linseed and Castor Oil

Cheaper offers of Argentine linseed oil were available at the close of the week, while after fairly good business at the outset for American oil, enquiries dwindled and final prices seemed hard to maintain. Coconut oil remained uninteresting and prices sagged 10s. to 30s. per ton on the week. Demand for groundnut oil switched to Portuguese in which good business resulted. The trade is awaiting the announcement of Indian export quotas for castor oil and in the meantime some low prices are being quoted with the proviso "subject to export licences" but buyers were not easy to find on these terms. For other oils demand was mostly quiet. Tung was somewhat firmer at the close on reduced offers. Both rapeseed and soyabean oils were easier to buy.



yes, it is my plan!

Lights will be switched on in a thousand villages. Handlooms, lathes will hum and spin. Every small community will become the hub of a growing village industry. There will be work for everyone. The Five Year Plan provides for Rs. 127 crores to be spent on developing and adding to our power resources. Multi-purpose hydro-electric schemes will supply cheap power to industry. Here is proof of a nation's determination to take its place amongst the leaders of the world.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

New Delhi

PROPOSALS ON INDUSTRIAL DEVELOPMENT BODY

FURTHER DETAILS OF WORLD BANK MISSION'S SCHEME

(FROM OUR NEW DELHI CORRESPONDENT.)

6th February.

FURTHER details are now available of the World Bank Mission's plan to stimulate industrialisation in India. Under its scheme, the Mission would like to assist in establishing an industrial development corporation with a capital of Rs. 5 crores, of which Rs. 3 crores would be subscribed by Indians and Rs. 2 crores by British and American investors. The corporation would be a non-Governmental organisation; the World Bank would give it Rs 5 crores as a loan and would like the Government of India to advance, interest-free for 30 years, Rs. 7½ crores or the equivalent from the steel supplied to India by the U.S. Government under its Technical Aid Programme. The corporation would thus have Rs. 17½ crores in the initial stages to finance industrial development in the private sector. The U.S. Government, it will be recalled, under an Operational Agreement, has agreed to supply to India 200,000 tons of steel of the following categories: sheets 80,000 tons; plates 50,000 tons; rails 50,000 tons; and sleeper bars 20,000 tons. The amount involved is $25.5 million. The rupee cost of this operation, which will be borne by the Government of India, is Rs. 1.5 crores.

The Mission envisages that the World Bank would later be able to advance another Rs. 50 crores to the corporation. It is understood to be opposed to any one interest or group dominating the corporation, and has gone to Bombay and Calcutta to appraise the response to its plan. The Government of India thus has two plans for a development corporation. The Commerce Minister, Mr. T. T. Krishnamachari, has proposed a wholly state-owned and State-managed body, while the World Bank is in favour of wholly non-Governmental corporation or bank. The Commerce Minister's scheme has meanwhile undergone some modifications. The idea of assisting present or new private industries has now been abandoned, it is learned. The proposed corporation would take up for development such industries in the private sector as it considers desirable, and would later decide whether to hand them over to private enterprise or to run them itself. It is not unlikely that both the schemes will be launched at an early date.

Copper, Aluminium and Engines from Canada

Canada has agreed to provide India with $5 million worth of copper and aluminium as part of her Colombo Plan contribution for the current fiscal year. She will also send $1,200,000 worth of equipment for the Umtau hydro-electric project in Assam. Some time ago, she announced that she would provide India with $20 million worth of steam locomotives, of which $11 million would come out of this year's Colombo Plan contribution. According to the tentative schedule, the delivery of these 120 steam (WP type) locomotives will commence ten months from the date of the order and will continue at the rate of six locomotives a month. The contract for the locomotives is being negotiated with the Canadian Locomotive Co Ltd. of Kingston, Ontario. As in the case of the Candian raw materials that are supplied to India under the Colombo Plan, the amount the Government charges the railways for these locomotives will be paid into a Special Development Fund to be used for other economic development projects. The exact amount of the counterpart funds to be established, the administrative arrangements for their establishment and the projects for which they may be used will be decided later by the two Governments.

Oil Prospecting in West Bengal

Representatives of Burmah-Shell and Caltex will meet Central Government officials next week to discuss their proposals for oil prospecting in the West Bengal basin, it is learned. The Government of India has already signed an agreement for oil exploration in the Bengal basin with the Standard Vacuum Oil Company. Under it the two parties have agreed to contribute jointly the funds required for the operations. The Government will bear one-quarter of the expenditure and Standard-Vacuum will contribute the rest. The aggregate contribution of the Government will not, however, exceed $52,500,000 unless it wishes to provide further sums for continued expenditure on the project. Standard-Vacuum has given the assurance that if commercial production of oil in sufficient quantities is possible, it will consider the erection and operation of a refinery with a minimum capacity of 10,000 barrels per day. Standard-Vacuum will manage the enterprise but each party will nominate an official to discuss from time to time the programme of operations. Other important points in the agreement are:

1. The share of the two partners in production will be 25 percent for the Government of India and 75 percent for Standard-Vacuum. It has, however, been agreed that Standard-Vacuum will buy the Government's share of oil if the latter so desires.

2. The loss, if any, will be apportioned between the Government of India and Standard-Vacuum in the ratio of one to three.

3 The proposed company will be permitted to deduct, for income-tax purpose, from its marketing income only the difference between the amount of loss allocated to Standard-Vacuum and that allocated to the Government of India.

4. For a period of five years, Standard-Vacuum is allowed a special deductible allowance equal to 33½ percent of the net income derived from its share of production before the assessment of income-tax. This deductible allowance will be fixed anew for each period of five years on the basis of the relationship between total costs of operation and total value of production.

5. For a period of 12 months after the project goes into production on a commercial basis, the company will be allowed to import goods needed for its operations at a specially reduced rate of 5½ percent.

6. The Government has guaranteed that there will be no nationalisation of the undertaking for a period of 30 years.

7. The Government has also exempted the undertaking from the operation of the Industries Regulation Act

The forthcoming negotiations ar eexpected to lead to similar agreements with Burmah-Shell and Caltex.

Diesel Engine Factory in Faridabad

The diesel engine factory at Faridabad, near New Delhi, will soon go into full production, it is learned. It will be operated by Tatas, who have secured a link with th German firm of Deutz. The plant and machinery for this factory was received by India as its share of German reparations. It was owned by Deutz in Germany, who have now joined Tatas to operate it in Faridabad. The factory is already producing about 70 diesel engines a year. It is now intended to work it to its full capacity of 1,800 a year. The engines will be manufactured in four stages and after the last stage the factory will either manufacture or purchase locally all the parts required for them. Production costs, as compared to those in Germany, will be lower by Rs. 65 per unit. When fully developed, the factory will be able to manufacture marine engines required by the shipbuilding industry. The capital cost of the factory is placed at Rs. 50 lakhs.

Bills for the Budget Session

The Shipping Control Act, which is due to expire shortly, will be extended by two years. Legislation will be promoted during the Budget session of Parliament. The Cinematograph Bill, implementing some of the recommendations of the Film Enquiry Committee, and the Motor Vehicles (Amendment) Bill will also be introduced in Parliament during the coming session. As for pending measures, early steps will be taken to refer the Companies Bill to a select committee. As indicated by the Finance Minister, the intention apparently is to add a new chapter dealing with companies in the public sector. The larger question of amending the Constitution is engaging the attention of the authorities, and it is possible that an amendment might be introduced to deal with the specific issue raised when the Sholapur Mills Act was invalidated by the Supreme Court.

Sholapur Mills to be Handed Back.

The Government has abandoned its proposal to issue an ordinance to meet the Supreme Court's objections to the Sholapur Mills Act. Enquiries show that the objects of such an ordinance have been fully secured by an agreement with the former directors of the Mills. Under this agreement, the Government will hand back the undertaking to its original directors. It will not be called upon to pay any compensation and the directors will idemnify the present directors against all acts done in good faith by them. They will also accept the liability for loans advanced by the Government to the Mills and specify the conditions of repayment. A shareholders' meeting is being convened shortly to ratify this agreement. It may be added that the intention of the Government even under an ordinance was to hand back the Mills to the original board of directors.

The Government is examining the implications of the Supreme Court's judgment in relation to the Industries Regulation Act in general and the taking over of the industrial and financial undertakings in particular. There appears to be no escape from amending the Constitution, in order to remove the lacuna in the law pointed out by the Supreme Court.

No Sales Tax on Handloom Cloth.

The Government of India has suggested to the State Governments that they exempt handloom cloth from sales tax, it is learned. The Government of India has been subsiding sales of handloom cloth by giving a rebate ranging between nine pies to enghteen pies on all purchases of Rs. 5 and above. The levy of sales tax largely neutralises this subsidy, it is explained. A similar rebate is given on khadi sales, which are already exempt from sales tax.

Internal Customs in Part B States

The question of finally abolishing the internal customs system in some Part B States, particulariy Hyderabad and Rajasthan, is being examined by the Government of India. In Hyderabad, for example, all customs duties and surcharges were to be abolished by 31st March, 1953, "or as soon as the net revenue from sales tax reaches Rs. 350 lakhs, whichever may be earlier." The Krishnamachari Committee on Indian States' Finances unequivocally stated that the loss of revenue from "the total abolition of internal customs duties is not, strictly speaking, a consequence of federal financial integration as such, but arises from the operation of Articles 16 and 244 of the Constitution. There can, therefore, be no question of the Central Government extending any financial assistance to the States concerned in regard to this matter. The loss must be made good by the State itself, by developing alternative sources of revenue in the State field." The abolition of internal customs barriers was intended to be gradual but in no case was it to take longer than five years from the date of financial integration. In Hyderabad, as stated, it was to be completed by 31st March, 1953.

Enquiries show that Madhya Bharat and Saurashtra have been developing alternative sources of revenue to replace internal customs duties within the scheduled time. Hyderabad, however, has been demanding an indefinite extension. Two issues arise. Firstly, if an extension is given to Hyderabad it will also be demanded by other States. Secondly, as pointed out by the Krishnamachari Committee, the retention of internal customs is contrary to the Constitution and can on no account be permitted. As an alternative, the Hyderabad Government has demanded a grant of Rs. 2 crores a year as compensation for the loss. Here again, a grant to compensate the loss from internal customs, if given to Hyderabad, would be demanded by other Part B States. It would also be contrary to the Constitution. The State should itself first show that it has made an honest effort to mobilise to the maximum other sources of revenue. It should also show that the lack of money resulting from the loss of internal customs would hinder its development. These and other cognate issues are being examined.

Wagon Building Capacity Idle

The interim report on idle capacity in the engineering industries has disclosed that there is considerable idle capacity among wagon manufacturers which, if utilised, would save foreign exchange. The industry is reluctant to employ additional hands, because under the law it would not be allowed to retrench them in slack periods.

SUI GAS COMPANY TO ISSUE PROSPECTUS THIS MONTH

INCREASE IN ASSOCHAP'S PRESTIGE AND INFLUENCE

(FROM OUR KARACHI CORRESPONDENT).

CONSIDERABLE interest has been aroused here by the news that towards the end of this month the prospectus of the Sui Gas Transmission Company will be published with an invitation to the public to subscribe. This is a project which will have an immense effect, the extent of which it is difficult to estimate, on the industrialisation of West Pakistan particularly, and the future economic life of Pakistan as a whole. Financially the immediate gain will be a considerable easement of the present heavy drain on foreign exchange arising from the necessity to import coal, and the availability of what is confidently expected to be the cheapest power in Asia will act as a stimulant to industrial investment. The total capital required for this important venture is in the region of £9 million. It is understood that the International Bank for Reconstruction and Development has agreed in principle (the details are still awaited) to put up a loan of £5 million, and the equity capital will be found as to approximately £1 million each from the P.I.D.C., the Burmah Oil Company Limited and the Commonwealth Development Finance Company. The balance of the money required to complete the equity will be raised from the public and there seems no doubt but that the issue will be over-subscribed. The participation of the Commonwealth Development Finance Company is particularly interesting as it is the first time that this Company has made an investment in a major development project in a Commonwealth country. Mr. Ghulam Faruque, the Chairman of the Pakistan Industrial Development Corporation, is leaving for London at the end of the month primarily on a purchasing mission on behalf of the new company for which the Burmah Oil Company (Pakistan Trading) Limited will be the Managing Agents.

Reorganisation of Ministries

The long delayed reorganisation of Ministeries as recommended by the Administrative Enquiry Committee is now in progress. A new Ministry is in process of formation, known tentatively as the Ministry of Works and Power, although the title will probably be altered. The new Ministry will have charge of such functions of the Ministry of Industries as do not impinge on industrial matters proper and it will also take over the Works Division from the Ministry of Health. It is expected that it will also deal with mining and all natural resources, as well as irrigation projects. On paper the proposals appear to be a healthy piece of rationalisation.

Mr. Abbas Khaleeli has now taken over as Secretary of the Ministry of Industries. His departure from East Pakistan, where he was Industrial Development Commissioner and Secretary, Industries, Commerce and Labour of the Government for East Bengal, will be greatly regretted; his energy and drive have made a valuable contribution to the progress of that Province in the past two years. The Secretary of the new Ministry will be Mr. Nazir Ahmad who was Industries Secretary but who, because of his pre-occupation with the canal waters dispute, has had to spend most of his time in recent months in Washington.

The "Assochap" Meeting

The fifth annual general meeting of the Associated Chambers of Commerce of Pakistan was held in the Sind Club of Karachi in the last week of January, under the chairmanship of the President, Mr. T. W. Cree, who is also the Chairman of the Karachi Chamber. The chief guest was Mr. Ghulam Mohammad, the Governor-General of Pakistan, and there was a large gathering of diplomatic representatives, Government Ministers and Government officials, and delegates from East Pakistan and the Punjab, in addition to the representatives of the Karachi Chamber and local associations. Mr. Cree, in his address, pointed to the fact that during the year under review the full impact of Pakistan's adjustment to world conditions had been felt at all levels. The grim struggle to achieve a balanced economy had been anxiously watched and it was accepted as inevitable that trade and commercial interests had to shoulder their part of the burden arising from the reduction in imports and the consequent loss of business. The burden had been accepted with confidence that the country would win through. The position had been aggravated by the fact that at the same time a world recession in raw material prices occurred and Pakistan had to face the threat of a food crisis. However, serious consequences had been averted by generous gifts of wheat from other countries—140,000 tons from Canada and Australia under the Colombo Plan and 700,000 tons, with a possible further 300,000 tons, from the United States. "Other forms of aid," Mr. Cree said, "are forthcoming and we look forward to a resurgence of activity in all spheres of commerce. Government are, I know, fully conscious of the hampering effect of controls on commercial development and, I am sure, as concerned as are the business community to have these relaxed or removed as soon as it is possible to do so."

Governor-General's Address

The Associated Chambers, or "Assochap" as it is generally known, has considerably broadened its base in recent years, with a corresponding increase in its influence and prestige. The founder membership which consisted of the Karachi, Punjab and N.W.F.P., Chittagong, and Dacca-Narayanganj Chambers of Commerce, has been extended to include more specialised organisations and has now within its fold the Jute, Tea, Insurance, Automobile Importers' and Karachi Cotton Associations. The result has been that the Association has evolved into a vigorous and authoritative body with a pre-eminent position in the commercial and industrial life of Pakistan. The Governor-General made a special reference to this in the concluding remarks of his reply to the President's speech when he said, "I would like you to realise that your Association has as much of its importance and responsibilities as any Department or Agency of Government. You are an important part of the entire machinery of economic and fiscal life of the country and you have your own duties and responsibility to discharge in that connection. You cannot sit back and look at the development in the country as a detached observer." The meeting can be characterised as an unqualified success both on account of the excellent staff work and the pervasive atmosphere of goodwill and co-operation between Government and private enterprise.

$20 MILLION RAILWAY CONTRACTS MAY BE OPEN TO FOREIGN BIDS

It is learnt from the Washington correspondent of *The Financial Times* that foreign manufacturers will be permitted to bid on contracts to supply $20 million (£7,143,000) of railway equipment for India, the Foreign Operations Administration having authorised the General Services Administration to ask for bids on a "world sources" basis. This means that American producers' efforts to obtain the allocation of a substantial portion of the $20 million to domestic manufacturers have been rejected by the F.O.A. in favour of retaining a non-discriminatory bid invitation policy. Whether foreign companies will actually get awards to supply the full $20 million of locomotives and box-cars if they successfully underbid American companies will not be known for certain until the awards are made.

GOVERNMENT'S APPEAL IN BANK DISPUTE HEARING

EMPLOYEES' UNIONS SAY MOVE IS TIME-BARRED

(FROM OUR BOMBAY CORRESPONDENT).

7th February.

AN unexpected development has occurred here during the last week in connection with the banks' appeal against the Sastry award in the disputes between them and their employees, which have been going on for the last six years. Sir Jamshedji Kanga, Counsel for the Government of India, submitted an application which amounts to an appeal to the Labour Appellate Tribunal, which had completed the hearing of the appeal filed by the employers, seeking to prevent any increase in the pay of employees of banks in towns with a population of less than 30,000. Section 13 of the Industrial Disputes (Appellate Tribunal) Act, 1950, empowers the Government to appeal against any award before the Appellate Tribunal. The Central Government's Counsel in submitting this application argued that the report of the Rural Banking Enquiry Committee, which was the most authoritative review of the position of Indian banking, and dealt with this point, and that the Government considered it necessary that the recommendations of the Committee should be brought to the notice of the Tribunal. His submission was that, as the employers had failed to raise this issue before the Tribunal, it had become incumbent on the Government to make this application. The application states that owing to the high overheads resulting from the enforcement of the Tribunal's awards, banking was not making progress in the rural areas. The Government believed that the expansion of rural banking had great significance for the development of the economy. It had a direct bearing on the promotion of savings and towards their investment. All these in the final analysis were directly linked with the level of employment. The application was admitted by the Tribunal on condition that the Counsel obtained a reply from the Government of India by tomorrow with regard to its acceptance of the travelling and subsistence allowance bills of the representatives of the banks and the employees' unions, who had returned to their places after the hearing was completed last week.

Consternation Among Employees' Unions

This application has naturally caused some consternation among bank employees' unions here. Their first reaction is to oppose it on the purely technical ground that the appeal was time-barred, as any appeal against an award has to be filed within 30 days of its publication. The Sastry Award was published more than nine months ago. On the substantive side, the application is likely to be opposed by the employees' representatives on the ground that the issue regarding rural banking and the report of the Enquiry Committee were exhaustively discussed before the Sastry Tribunal itself, and that the argument for excluding branches of the banks in small towns and villages from the scope of the award was specifically rejected by it. The likely effect of this last minute intervention by the Government of India, the first of its kind, will be that the hearing which had already concluded will be further prolonged and the Appellate Tribunal's award will be consequently delayed. On the other hand not only bank managements but industry in general is gratified at this development as it indicates a vague but welcome change in the attitude of the Government with regard to employer-employee relations.

World Bank Mission in Bombay

After visiting New Delhi and conferring with the Central Finance and Commerce and Industry Ministers there, the World Bank Mission has been in Bombay for the last four days. The Mission is led by Mr. George Woods, Chairman of the First Boston Corporation, and consists of Mr. Robert Craft, Vice-President of the American Security Corporation, and Mr. P. Rucinsky, of the World Bank. As defined by Mr. Woods, the aim of the Mission is to evolve a practical method of making capital available for the private sector in this country for the modernisation and expansion of existing industries and the creation of new ones. Even though lack of adequate finance might be only one of the many important reasons for the private sector not doing better than it had done so far, Mr. Woods explained that the World Bank was interested in examining the possibility of rendering help at least in this limited field of finance. The members of the Mission have been meeting the Governor of the Reserve Bank and prominent industrialists, bank executives and representatives of various trade organisations here. The mission has no clear-cut scheme at present for making capital available for industrial expansion. It proposes to formulate a plan only after it has had similar discussions, as in Bombay, with business men in Calcutta and Madras. Mr. Woods however made it clear that the funds to be provided as capital for the private sector of industry would be from private sources and not only from Government agencies. The Mission is leaving for Calcutta tomorrow.

Cotton and the Sales Tax

The Indian Central Cotton Committee has been meeting here during the last week. Whil most of its deliberations were of a technical nature connected with schemes in several regions aiming at improving the quality and increasing the yield of cotton, the Committee took an important decision which is of direct interest to all—producers, the cotton trade, and the textile industry. The Committee considered the levy of sales tax on cotton in several States and passed a resolution requesting all the State Governments not to impose any sales tax on cotton, as that amounted to double taxation, because both cloth and yarn were also subjected to sales tax. The question regarding this tax in Madhya Pradesh, one of the largest cotton producing areas, came up for special consideration, as this had resulted in a prolonged strike by producers and local traders as a result of which the levy of tax was suspended till the end of June 1954.

The Committee told the State Government of Madhya Pradesh that, in the interests of cotton growers, it should permanently exempt cotton, which is an essential commodity, from the schedule of sales tax. Another important thing which emerged from the discussions was that production during the current season would not fall much short of the target of 4.2 million bales. Possibly this view, together with the Government's announcement allowing import of cotton from the U.S.A. for the present had a very bearish effect on the cotton market here. It was also proposed to revise the Planning Commission's target of 4.2 million bales for the final year of the plan to 4.5 million bales in view of the increased production of cloth in the country, and the increasing trend of exports of cloth of medium counts requiring Indian cotton. Mr. Chimanlal B. Parikh was re-elected Vice-President of the Committee for 1954-55.

Praja Socialists Declare for Militant Action

Dr. Ram Manohar Lohia's announcement at a Press conference last week at the central office of the Praja Socialist Party, of which he is the General Secretary, that his party was working on a scheme for a programme of militant mass action on a national scale to emphasise the miseries of and the discontent amongst the workers and farmers, has caused some uneasiness here in industrial circles. Another important announcement made by Dr. Lohia in the course of outlining the party's policy for reorganising and revitalising itself was that its members in U.P. and Bihar had been instructed to throw themselves into what he called the sugarcane strikes regardless of consequences. A greater part of his discourse was, however, confined not so much to economic policies as to foreign relations, the Kashmir problem,

and especially to a defence of his party's understanding with the other leftist parties, including the Communists, in the coming general elections in Travancore-Cochin.

Civic Exhibition in Bombay

A novel display called the Civic Exhibition was declared open in Bombay by the Speaker of the House of the People last Friday afternoon. The Exhibition contains large models of the Vaitarna Dam, those showing the evolution of municipal housing, of the major town planning schemes, and of a neighbourhood union. The Corporation's public transport undertaking, the B.E.S.T., has a section showing services provided to the citizens by it. The exhibition also includes a stall showing and selling the products of the women's rehabilitation centres run by the State Government.

New Chemical Plants

Bombay industrialists seem to be concentrating at present on installing new industries connected with chemicals for industrial uses. Some five firms, including Tatas, the Bombay Dyeing and Manufacturing Co. Ltd., Mr. Kasturbhai Lalbhai of Ahmedabad, and one or two other interests are understood to have applied for licence to set up plants for this purpose, each with capital ranging from one to two crores of rupees. German experts were believed to be behind one or two of these projects, but it is understood that their terms with regard to control, not merely over manufacturing operations, but buying of raw materials and selling of the finished products, were found to be too stiff. The negotiations appear to have broken down and efforts are being made to seek technical aid for this purpose from other sources such as Japan and the U.K. The proposal which has progressed farthest is that of Messrs. Nowrosjee Wadia & Sons, who are the managing agents for the leading textile concern in the city, the Bombay Dyeing and Manufacturing Co. Ltd., and will soon float a company for the manufacture of hydrogen peroxide. The plant of this proposed company, which will soon be registered, is designed for an initial capacity of 720 tons a year for use as a bleaching medium for the cotton textile industry here to replace imported bleaching powder and chlorine which are the media for the purpose at present. The plans of the other projects have not progressed far as yet, but it is almost certain that at least two or three of them will materialise at an early date.

Road Transport

Mr. E. A. Nadirshaw, President of the Indian Roads and Transport Development Association, has recommended in a statement issued by him, the formation of a Central Road Board for removing the disabilities of the road transport industry and for accelerating its development. This statement has been occasioned by the discussion on this question by Congress legislators initiated by a member of the Bombay State Assembly at the time of the Congress session at Kalyani. Commenting on this discussion, Mr. Nadirshaw points out that the position with regard to road transport was vitiated by the restrictions imposed on the development of this industry by the Indian Motor Vehicles Act of 1939, which had resulted in the State transport authorities refusing permits for new vehicles as well as curtailing inter-regional and inter-State operation of goods transport by road. Mr. Nadirshaw has also urged a clear statement of policy regarding the intentions of the State Governments for nationalising goods transport by road, because the insecurity arising from this, together with crippling taxes on road transport are the two obstacles preventing development in this field. Mr. Nadirshaw thinks that absence of adequate transport facilities threatens the very roots of the five year plan and he, therefore, urges the removal of restrictions under the Motor Vehicles Act, lowering of taxes and safeguards for private capital which might be invested in this industry.

Ship Salvage

For the first time in shipping history, an Indian concern, the Cauvary Corporation, has undertaken to salvage a ship which had sunk in Bombay Harbour. This enterprise is concerned with the lifting of the former H.M.I.S. *Maratha*, a 1,000-ton corvette which is lying on the seabed about 15 miles from the harbour since being sunk in 1947. Two or three years ago two important European firms undertook to reclaim the three other bigger vessels—*Ramdas, Deepavati* and *Lakshmi*—but for some reason or other, their efforts came to nought. The present enterprise is being carried on under the supervision of Italian technicians with the help of four pressure tanks with a lifting capacity of 300 tons each built locally. If these operations are successful, they will be directed later towards the other three vessels which are still submerged.

Irrigation

Inaugurating the construction work on a minor irrigation project, estimated to cost about Rs. 50 lakhs, near Ahmedabad, Dr. Jivraj Mehta, State Finance and Industry Minister, reviewed the progress made in providing irrigation in the State. Dr. Mehta believes that the irrigation development schemes commenced by the State and the Centre would ultimately result in near self-sufficiency in food in the State. When the present Government came to power in 1946, there were only 40 irrigation projects, covering 45,700 acres in the State. The schemes under construction, together with some which will soon commence, will double this acreage when completed.

Dissatisfaction Among Defence Workers

Some of the ordnance factories are concentrated round about Poona in this State. Dissatisfaction amongst workers is once again in evidence because of the alleged failure of the Government to implement the assurances given to them for certain concessions on pay scales, and other amenities which were promised at the termination of the strike last year. There is therefore a move to ask the executive committee of the All-India Defence Employees' Federation, which is meeting at Jubulpore this week, to consider the advisability of launching a general strike of defence workers. Mr. S. M. Joshi, the Poona Praja Socialist Party's leader, who is also general secretary of this federation, said that the main demands of the workers were for a revision in their pay scales, conveyance allowance, removal of discrimination between industrials and non-industrials with regard to leave, permanency, contributory provident fund etc., and the establishment of a negotiating machinery between the management and the workers.

Opposition to Ban on Teaching of English

Though not directly concerned, the business community here is keenly interested in the petitions filed in the Bombay High Court challenging the policy of the State Government preventing admission of children of non-Anglo-Indian origin, to schools teaching English in the primary standards. The business community is interested in this question and opposed to the policy because of its apprehension with regard to the future of technical and technological education in this industrial State. One of the petitions is from the Barnes High School at Deolali, claiming the right to admit children of Asian descent or those belonging to Indian communities other than Anglo-Indians, and to instruct these pupils through English as the medium of instruction. It has prayed for the issue of a writ of *mandamus* to restrain the State from enforcing their orders and circulars imposing such prohibition. Other petitions which have been admitted by the Chief Justice are from minor children themselves pointing out that the Government's order was an act of discrimination against the spirit, letter and intention of the Constitution. All these petitions have been admitted and a rule issued on the State Government. The first of these will come up for hearing next Wednesday.

The 38th Swiss Industries Fair will be held in Basle from 8th to 18th May, 1954. It offers an excellent display of the extremely varied production of Swiss industry. On a total area of 1,300,000 sq. ft. some 2,500 factories will present their combined display which is considered to be one of the finest of its kind in Europe. Prominent will be the traditional Swiss exports, such as watches, textiles, textile machinery, electrical equipment, machinery, instruments apparatus, chemicals etc.

CHANCELLOR'S REPORT ON SYDNEY CONFERENCE

PROPOSALS FOR A EUROPEAN INVESTMENT INSTITUTE

(FROM OUR LONDON CORRESPONDENT).

THE Chancellor of the Exchequer, having reported to the Prime Minister as well as to the Cabinet, and presumably having also digested all the developments which have occurred since his departure to Sydney, has faced the House of Commons twice in the past week to give an account of what transpired at the Commonwealth Finance Ministers' Conference. On the first occasion he made a statement, which followed very closely the lines of the communiqué which was issued by the Conference itself, and explained that neither of these could reveal the full value of the meetings, which lay principally in the maintenance of general agreement and the successful sharing of the experience gained from following out the general policies laid down at earlier conferances. Three major decisions were reached: Firstly, confirmation of the wisdom of the decision of a year ago to work towards a freer system of trade and payments between the dollar and non-dollar worlds; secondly, to concentrate on the immediate necessity of increasing our own strength and our sense of self-reliance as the most powerful unit of our type in the world; and thirdly, how best to provide means for developing the huge latent resources of the Commonwealth and Colonial territories and thereby maintain the health of the Commonwealth's balance of payments. Mr. Butler explained that British industry was accorded high priority in the matter of investment, while capital available for overseas development would be spread over a large area and the projects must be remunerative. Practically the only departure from the communiqué was Mr. Butler's mentioning of the fact that the United Kingdom's visible and invisible exports accounted for 60 percent of the gross earnings of the sterling area last year, and that at the same time this country had authorised loans and grants totalling some £120 million for investment in the sterling Commonwealth.

The questions to which the Chancellor's statement gave rise occasioned him little difficulty. They came mainly from the Labour benches, and expressed uneasiness about future purchases of Australian wheat now that buying had been transferred to private hands, fears of a recession, the lessening of Empire trade and the future of Imperial preference, and the competition from Germany and Japan. Mr. Butler did not share these fears, all of which had been carefully considered, but his confidence was not shared by the Opposition, with result that the whole ground was covered all over again in an entirely inconclusive debate last Thursday. On this second occasion Mr. Butler covered a somewhat wider field—the outlook for world trade, including America: the balance of payments; the development of Commonwealth resources; and the Commonwealth's long-term policy, particularly in the matter of freeing trade and preferences. The Sydney conference, he said, had merely registered success—he mentioned that the sterling area deficit of £1,000 million in 1951-52 had been converted by the middle of 1952-53 into a surplus of over £400 million, while the level of the reserves at mid-June, 1952, shortly after his first Budget, stood at £600 million, but last December they were £890 million—and success was apt to be dull. He quoted from President Eisenhower's economic report to show that it confirmed the Sydney conference's analysis that the recession or "minor adjustment" in the United States is approaching its close, which meant that the sterling area and this country had in fact held the position of the reserves through the recession. The combination of all these circumstances was Mr. Butler's reason for thinking that the economic outlook for the Commonwealth gives ground for sober confidence. The Labour speakers were still not convinced, but they made little impression with their doubts and fears, and least impression of all upon Mr. Butler.

Labour Party's Concern

It looks as though Labour is concerned, seriously concerned, about developments on the economic front. The concern is not so much for the future of the country, or of the Commonwealth, but that its prognostications of disaster which would follow the coming into power of a Conservative Government are not being realised and the danger that the still comparatively limited successes of the Government's new policies are being more widely recognised. For the moment, therefore, the Opposition is concentrating on a series of sorties against the Government's economic policies. The conclusion of the Anglo-Japanese financial agreement, which is being strenuously fought by Lancashire and potteries groups, provided the opportunity for another sally. The matter is to be debated next week, but on balance the consensus of opinion appears to be that British exports as a whole to Japan will benefit from the new agreement, even though it may have an adverse effect on the exports of some particular industries to Commonwealth and Colonial markets but not quite so large an effect as they seem to anticipate at the moment. The weakness of the opposition to the agreement lies in the fact that there have been innumerable complaints from exporters lately of the increasing shortage of sterling in many markets, which led to quota restrictions and insolvencies. Indeed, many of them have gone so far as to accuse the Treasury of being responsible for this so as to strengthen the exchange rate. One market particularly affected by the shortage has been Japan, and she was adamant against making dollars available to cover this shortfall, the alternative was either to accept a halving of the sterling area exports to Japan or to make more sterling available by buying more from that country. Indeed, the agreement has done rather more than that, for it makes it reasonably certain that our strongly favourable trade balance with Japan will be maintained and our total exports to her increased, besides ensuring a continuance of Japan's offtake of Colonial raw materials. The import bar is lifted to only a limited extent, and that only for a year. It is not without some significance that the conclusion of this agreement has been followed by indications from other Commonwealth countries to open trade negotiations with the Japanese.

Business Men in Moscow

The contrast between the criticism of the Anglo-Japanese agreement and the laudatory welcome which has been accorded to the reported statement of the Soviet Foreign Trade Minister to a group of British industrial representatives in Moscow, to the effect that Russia was prepared to take capital goods to the value of £400 million from this country over the next three years, is remarkable. Of the 61 items which Russia is anxious to import, it is unlikely that more than half would get past the export restrictions on strategic products. Even so, it would represent a considerable increase of something like fifteen-fold on the present volume of exports, and at the same time it must be remembered that Russia also needs sterling for raw material purchases, such as wool and rubber, in other sterling area countries. In the past year or two these have been covered by sales of gold, silver and platinum in addition to a limited quantity of other goods, but that that state of affairs cannot continue indefinitely was made clear when the Trade Minister intimated that Russia also wanted to increase the sale of Soviet goods to Britain, though he did not go into details. Last year Russia had no coarse grain surplus for export, and that is the commodity which has always provided the basis of her trade with this country.

Reserves Continue to Increase

Meantime, it is satisfactory to report that there was a continuation of the gradual increase in the gold and dollar reserves of the sterling area during January. It was only a moderate increase of $25 million, to carry the total to $2,543 million, and it included American defence aid amounting to $15 million, but the important facts are that progress is still being made, that well over a third of the gold lost in the disastrous autumn and winter of 1951 have now been replaced, and that after meeting a $4 million deficit with the European Payments Union for December transactions in January again turned in our favour to show a surplus of £4.7 million, which will all $6.5 million to the February gold total and reduce our debt to the E.P.U. by a similar amount. Seasonal purchases of sterling raw materials by E.P.U. countries may well keep our balances there on the right side for the next few months, but it is obvious that Mr. Butler's earlier warnings that the rate of the increase of the reserves would show a levelling off tendency during this year are being realised.

European Preference Plan Mooted

The European Movement Economic Conference, which ended its session in London this week, has attracted perhaps less interest than it should have done—even allowing for the fact that its resolutions and recommendations are completely unofficial and therefore unlikely to be accepted in international trading activities. The representatives, on the other hand, are all leading political and economic figures in their own countries, so if is not unfair to regard it as possible that they may to some extent be able to influence their policies of their governments. The delegates were divided into three commissions, which discussed production, investment and trade, respectively. The first two had little difficulty in reaching unanimous conclusions. It was agreed that Europe should direct its effort towards self-sufficiency in raw materials and that there should also be the promotion of a more competitive spirit in European industry, including agriculture. It was also decided that a body should be established by member nations of the Council of Europe and any others who might wish to join to be known as the European Investment Institute to put forward plans for investments of common interest. The commission dealing with trade, however, ran into many difficulties, and although it finally passed a unanimous resolution, this represented a considerable watering down of a strongly-worded proposal from one group of British delegates that envisaged a so-called "Big Europe" which would function as a trading block.

PROVISION OF FINANCE FOR PRIVATE INDUSTRY

MEMORANDA SUBMITTED TO SHROFF COMMITTEE

(FROM OUR MADRAS CORRESPONDENT).

8th February.

ON his return from the Sydney Conference of Commonwealth Finance Ministers, Mr. C. D. Deshmukh, Union Finance Minister, made some significant observations regarding the financial aspects of the five year plan. These coincided more or less in point of time with the evidence submitted here in the last week to the Reserve Bank's Committee on finance for the private sector. Mr. Deshmukh remarked that financial limitations were not as important as those connected with the physical and technological resources that were available or could be made available for the purpose of development. The size of the plan, he said, was determined on the principle of "development without inflation but not necessarily development without the creation of money." Mr. Deshmukh referred to the difficulties in the matter of allocation or allotment of resources, largely by financial means, as between the public sector and the private sector. The five year plan was largely a plan for the public sector, and although it indicated targets for private industry, it did not prescribe the means by which those targets could be attained, except through some very loose directions and regulations. In connection with the attainment of these targets, the private sector had been generally complaining that it had been starved of resources for the benefit of the public sector. The Finance Minister, however, held the view that whatever the Government abstracted from the common pool would not only develop public utilities, but would also provide social capital and the foundation on which private industry could develop within the field that might be assigned to it from time to time. In another connection, the Finance Minister stated that India would have to depend on created money and tap hidden resources to implement her development plans in case external aid should fail to reach expectations.

Incidentally, the Andhra Chamber of Commerce, in a memorandum to the Finance Minister, remarked that deficit financing within limits was the proper remedy against recession and that there was no danger of unbridled inflation. The Chamber also hoped that the Government would rely more on borrowing. The memorandum urged that measures be devised for giving special treatment to Andhra State in regard to its development. Economic justice, the memorandum continued, required a wider distribution of industries among the various States; but the Chamber realised that they would have to wait for tax reliefs until the Matthai Commission on taxation had made its recommendations. The memorandum stated that sales tax on inter-State trade was another problem agitating business men. While thanking the Central Government for urging States not to collect taxes with retrospective effect, the Chamber suggested that a formula be devised to have the respective States collect the tax and remit them to the original States or, in the alternative, the Constitution amended to convert this into a purchase tax. Mr. Deshmukh, replying to the memorandum, said that the extent to which taxes were imposed and borrowing was resorted to were matters of judgment about which no previous undertaking could be given. There might be conditions, he continued, in which, in order to counter inflationary tendencies, taxation might be the proper remedy. Referring to Andhra's demand for special treatment, he said that the new State could not be considered as a class apart from the other Part A States. As for sales tax on inter-State trade, the Finance Minister said that he did not agree, on constitutional grounds, with the idea of the jurisdiction of a State in this matter being extra-territorial. From the point of view of the States, it was a fact that certain items were escaping taxation because of the confusion in regard to places of delivery and consumption. Mr. Deshmukh wondered what great difference it would make to them whether the State of consumption collected the tax, or whether the State of origin or location collected it.

Industrial Development Corporation

The Reserve Bank's Committee on finance for the private sector heard representations here from different institutions. The Madras Stock Exchange Association welcomed the suggestion to start an industrial development corporation under the auspices of the Government of India. The Association suggested that the corporation should participate to an exent of 25 percent of equity capital, with the usual safeguards. Guarantee of a minimum return of 3½ percent by the Corporation for a period specified would provide additional stimulus; the initiative would continue to rest in private hands; the Corporation could finance a greater number of new enterprises than at present envisaged; it removed the possibility of the Government becoming a potential competitor and Government participation would ensure the continuity of tariff and tax policy conducive to a healthy growth of industries.

The Stock Exchange Association's memorandum pointed out that investment in the private sector had not reached the level envisaged in the plan. In view of the difficulties in the way of banks directly financing new enterprises, a more liberal policy of advances against the shares of a joint stock company would contribute to the revival of investment activity in the stock markets. The memorandum suggested that the Reserve Bank should keep a careful watch on market movements as they did with Government securities and advise the scheduled banks from time to time, instead of merely issuing general directives to restrict credit. The Association also urged that the Government should make a positive declaration regarding the proper place of capital and labour in industry, besides enunciating a reasonably settled tariff and tax policy. In the view of the Association, present market conditions afforded an excellent opportunity for creating a favourable climate to attract private capital and to ensure the success of new issues with the assistance of the industrial development corporation. The Association's memorandum described the conditions in Madras State which had only a cash market and no clearing house; there had been a considerable shrinkage of turnover in the Madras market for several reasons.

Yield on Gilt-edged

The memorandum of the Southern India Chamber of Commerce to the Shroff Committee stated that the problem of provision of bank finance for industry in India should be studied from the point of view of the trend of money supply with the banks, the change in the pattern of bank deposits, the increase in industrial production, etc. The proportion of bank finance to private lending in the financing of trade and commerce had never been correctly determined. The disparity between the banks' actual lending rates on the one hand and the bazaar money rates on the other was a proper measure of the inadequacy of bank finance for both trade and industry. The memorandum continued that interest charges had become a significant item in industrial balance sheets. Bank finance accounted for only a part of the finances of industry, and the position had been greatly altered by the wartime growth of new banks. State Governments had been bringing out loan issues and importuning the banks to take up lange amounts—which they had done, thus keeping up fairly heavy portfolios of securities. Apart from this, the yield available on Government securities was over 4 percent today, and banks had every inducement to increase their gilt-edged holdings.
